

APPENDIX 7A

Technical Specifications – Divisions 2 through 33

SECTION 024116 - STRUCTURE DEMOLITION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Demolition and removal of buildings and structures[**and site improvements**].
2. Demolition and removal of site improvements adjacent to a building or structure to be demolished.
3. **[Abandoning in-place] [Removing]** below-grade construction.
4. Disconnecting, capping or sealing, and **[abandoning in-place] [removing]** site utilities.
5. Salvaging items for reuse by Owner.

B. Related Sections:

1. Section 011000 "Summary" for use of the premises and phasing requirements.
2. Section 013233 ""Photographic Documentation" for preconstruction photographs taken before building demolition.
3. Section 024119 "Selective Demolition" for partial demolition of buildings, structures, and site improvements.
4. Section 311000 "Site Clearing" for site clearing and removal of above- and below-grade site improvements not part of building demolition.
5. Section 330500 "Common Work Results for Utilities" for shutting off, disconnecting, removing, and sealing or capping utilities.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Remove: Detach items from existing construction and legally dispose of them off-site unless indicated to be removed and salvaged.
- B. Remove and Salvage: Carefully detach from existing construction, in a manner to prevent damage, and deliver to Owner[**ready for reuse**]. Include fasteners or brackets needed for reattachment elsewhere.

- C. Existing to Remain: Existing items of construction that are not to be removed and that are not otherwise indicated to be removed, removed and salvaged, or recycled.

1.4 MATERIALS OWNERSHIP

- A. Unless otherwise indicated, demolition waste becomes property of Contractor.
- B. Historic items, relics, antiques, and similar objects including, but not limited to, cornerstones and their contents, commemorative plaques and tablets, and other items of interest or value to Owner that may be uncovered during demolition remain the property of Owner.
 - 1. Carefully salvage in a manner to prevent damage and promptly return to Owner.
- C. Coordinate with Owner's **[archaeologist]** **[historical adviser]**, who will establish special procedures for removal and salvage.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified refrigerant **[demolition firm]** **[professional engineer]** **[recovery technician]**.
- B. Proposed **[Protection]** **[Environmental-Protection]** **[Dust-Control]** **[and]** **[Noise-Control]** Measures: Submit informational report, including Drawings, that indicates the measures proposed for protecting individuals and property[, **for environmental protection**] [, **for dust control**] **[and]** [, **for noise control**]. Indicate proposed locations and construction of barriers.
 - 1. Adjacent Buildings: Detail special measures proposed to protect adjacent buildings to remain[**including means of egress from those buildings**].
- C. Schedule of Building Demolition Activities: Indicate the following:
 - 1. Detailed sequence of demolition work, with starting and ending dates for each activity.
 - 2. Temporary interruption of utility services.
 - 3. Coordination for shutoff and capping[**or re-routing**] and continuation of utility services.
 - 4. Locations of temporary protection and means of egress[, **including for other tenants affected by building demolition operations**].
 - 5. Coordination of Owner's continuing occupancy of adjacent buildings and partial use of premises.
- D. Inventory: Submit a list of items to be removed and salvaged and deliver to Owner prior to start of demolition.
- E. Predemolition **[Photographs]** **[or]** **[Video]**: Show existing conditions of adjoining construction and site improvements, including finish surfaces that might be

misconstrued as damage caused by demolition operations. Comply with Section 013233 "Photographic Documentation." Submit before the Work begins.

- F. Landfill Records: Indicate receipt and acceptance of hazardous wastes by a landfill facility licensed to accept hazardous wastes.
- G. Statement of Refrigerant Recovery: Signed by refrigerant recovery technician responsible for recovering refrigerant, stating that all refrigerant that was present was recovered and that recovery was performed according to EPA regulations. Include name and address of technician and date refrigerant was recovered.

1.6 QUALITY ASSURANCE

- A. Demolition Firm Qualifications: An experienced firm that has specialized experience in demolition work similar in material and extent to that indicated for this Project.
- B. Refrigerant Recovery Technician Qualifications: Certified by EPA-approved certification program.
- C. Regulatory Requirements: Comply with governing EPA notification regulations before beginning demolition. Comply with hauling and disposal regulations of authorities having jurisdiction.
- D. Standards: Comply with ANSI/ASSE A10.6 and NFPA 241.
- E. Predemolition Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager] <Insert location>**.
 - 1. Inspect and discuss condition of construction to be demolished.
 - 2. Review structural load limitations of existing structures.
 - 3. Review and finalize building demolition schedule and verify availability of demolition personnel, equipment, and facilities needed to make progress and avoid delays.
 - 4. Review and finalize protection requirements.
 - 5. Review procedures for **[noise control] [and] [dust control]**.
 - 6. Review procedures for protection of adjacent buildings.
 - 7. Review items to be salvaged and returned to Owner.

1.7 PROJECT CONDITIONS

- A. Buildings to be demolished will be vacated and their use discontinued before start of the Work.
- B. Buildings immediately adjacent to demolition area will be occupied. Conduct building demolition so operations of occupied buildings will not be disrupted.
 - 1. Provide not less than **[72] <Insert number>** hours' notice of activities that will affect operations of adjacent occupied buildings.

2. Maintain access to existing walkways, exits, and other facilities used by occupants of adjacent buildings.
 - a. Do not close or obstruct walkways, exits, or other facilities used by occupants of adjacent buildings without written permission from authorities having jurisdiction.
 - C. Owner **[tenant]** assumes no responsibility for buildings and structures to be demolished.
 1. Conditions existing at time of inspection for bidding purpose will be maintained by **[Owner] [tenant]** as far as practical.
 2. Before building demolition, Owner will remove the following items:
 - a. **<Insert items to be removed by Owner and or tenant>**.
 - D. Hazardous Materials: It is not expected that hazardous materials will be encountered in the Work.
 1. Hazardous materials will be removed by **[Owner] [tenant]** before start of the Work.
 2. If materials suspected of containing hazardous materials are encountered, do not disturb; immediately notify DEN Project Manager **[and tenant]** . Hazardous materials will be removed by Owner under a separate contract.
 - E. Hazardous Materials: Hazardous materials are present in buildings and structures to be demolished. A report on the presence of hazardous materials is on file for review and use. Examine report to become aware of locations where hazardous materials are present.
 1. Hazardous material remediation is specified elsewhere in the Contract Documents.
 2. Do not disturb hazardous materials or items suspected of containing hazardous materials except under procedures specified elsewhere in the Contract Documents.
 3. **[Owner] [Tenant]** will provide material safety data sheets for materials that are known to be present in buildings and structures to be demolished because of building operations or processes performed there.
 - F. On-site storage or sale of removed items or materials is not permitted.
- 1.8 COORDINATION
- A. Arrange demolition schedule so as not to interfere with **[Owner's on-site operations] [tenant's on-site operations] [or] [operations of adjacent occupied buildings]**.
- 1.9 CONSTRUCTION WASTE MANAGEMENT
- A. Construction waste shall be managed in accordance with provisions of Section 017419

"Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS [Not Used]

2.1 SOIL MATERIALS

- A. Satisfactory Soils: Comply with requirements in Section 312000 "Earth Moving."

PART 3 - EXECUTION

3.1 DEMOLITION CONTRACTOR

- A. Demolition Contractor: Subject to compliance with requirements, provide one of the following:
 - 1. **<Insert, in separate subparagraphs, name of Contractor prequalified to perform the Work of this Section>.**
 - 2. or approved equal.

3.2 EXAMINATION

- A. Survey existing conditions and correlate with requirements indicated to determine extent of building demolition required.
- B. Verify that utilities have been disconnected and capped before starting demolition operations.
- C. Review Project Record Documents of existing construction provided by [**Owner**] [**tenant**]. Owner does not guarantee that existing conditions are same as those indicated in Project Record Documents.
- D. Inventory and record the condition of items to be removed and salvaged. Provide [**photographs**] [**or**] [**video**] of conditions that might be misconstrued as damage caused by salvage operations. Comply with Section 013233 "Photographic Documentation."
- E. When unanticipated mechanical, electrical, or structural elements are encountered, investigate and measure the nature and extent of the element. Promptly submit a written report to DEN Project Manager.
- F. [**Perform**] [**Engage a professional engineer to perform**] an engineering survey of condition of building to determine whether removing any element might result in structural deficiency or unplanned collapse of any portion of structure or adjacent structures during building demolition operations.

1. Steel Tendons: Locate tensioned steel tendons and include recommendations for de-tensioning.
- G. Verify that hazardous materials have been remediated before proceeding with building demolition operations.

3.3 PREPARATION

- A. Refrigerant: Remove refrigerant from mechanical equipment according to 40 CFR 82 and regulations of authorities having jurisdiction before starting demolition.
- B. Existing Utilities: Locate, identify, disconnect, and seal or cap off indicated utilities serving buildings and structures to be demolished.
1. **[Owner] [Tenant]** will arrange to shut off indicated utilities when requested by Contractor.
 2. Arrange to shut off indicated utilities with utility companies.
 3. If removal, relocation, or abandonment of utility services will affect adjacent occupied buildings, then provide temporary utilities that bypass buildings and structures to be demolished and that maintain continuity of service to other buildings and structures.
 4. Cut off pipe or conduit a minimum of **24 inches (610 mm)** below grade. Cap, valve, or plug and seal remaining portion of pipe or conduit after bypassing according to requirements of authorities having jurisdiction.
- C. Existing Utilities: See plumbing and electrical Sections for shutting off, disconnecting, removing, and sealing or capping utilities. Do not start demolition work until utility disconnecting and sealing have been completed and verified in writing.
1. Remove **[and recycle]** refrigerant from air-conditioning equipment before starting demolition.
- D. Temporary Shoring: Provide and maintain interior and exterior shoring, bracing, or structural support to preserve stability and prevent unexpected movement or collapse of construction being demolished.
1. Strengthen or add new supports when required during progress of demolition.
- E. Salvaged Items: Comply with the following:
1. Clean salvaged items of dirt and demolition debris.
 2. Pack or crate items after cleaning. Identify contents of containers.
 3. Store items in a secure area until delivery to Owner.
 4. Transport items to storage area **[designated by Owner] [designated by tenant] [indicated on Drawings]**.
 5. Protect items from damage during transport and storage.

3.4 PROTECTION

- A. Existing Facilities: Protect adjacent walkways, loading docks, building entries, and other building facilities during demolition operations. Maintain exits from existing buildings.
- B. Existing Items to Remain: Protect construction indicated to remain against damage and soiling during demolition. When permitted by DEN Project Manager, items may be removed to a suitable, protected storage location during demolition [**and cleaned**] and reinstalled in their original locations after demolition operations are complete.
- C. Existing Utilities: Maintain utility services to remain and protect from damage during demolition operations.
 - 1. Do not interrupt existing utilities serving adjacent occupied or operating facilities unless authorized in writing by [**Owner**] [**tenant**] and authorities having jurisdiction.
 - 2. Provide temporary services during interruptions to existing utilities, as acceptable to [**Owner**] [**tenant**] and authorities having jurisdiction.
 - a. Provide at least [**72**] <Insert number> hours' notice to DEN Project Manager if shutdown of service is required during changeover.
- D. Temporary Protection: Erect temporary protection, such as walks, fences, railings, canopies, and covered passageways, where required by authorities having jurisdiction and as indicated. Comply with requirements in Section 015210 "Temporary Facilities."
 - 1. Protect adjacent buildings and facilities from damage due to demolition activities.
 - 2. Protect existing site improvements, appurtenances, and landscaping to remain.
 - 3. Erect a plainly visible fence around drip line of individual trees or around perimeter drip line of groups of trees to remain.
 - 4. Provide temporary barricades and other protection required to prevent injury to people and damage to adjacent buildings and facilities to remain.
 - 5. Provide protection to ensure safe passage of people around building demolition area and to and from occupied portions of adjacent buildings and structures.
 - 6. Protect walls, windows, roofs, and other adjacent exterior construction that are to remain and that are exposed to building demolition operations.
 - 7. Erect and maintain dustproof partitions and temporary enclosures to limit dust, noise, and dirt migration to occupied portions of adjacent buildings.
- E. Remove temporary barriers and protections where hazards no longer exist. Where open excavations or other hazardous conditions remain, leave temporary barriers and protections in place.

3.5 DEMOLITION, GENERAL

- A. General: Demolish indicated buildings and structures [**and site improvements**] completely. Use methods required to complete the Work within limitations of governing regulations and as follows:

1. Do not use cutting torches until work area is cleared of flammable materials. Maintain portable fire-suppression devices during flame-cutting operations.
 2. Maintain fire watch during and for at least **<Insert number>** hours after flame cutting operations.
 3. Maintain adequate ventilation when using cutting torches.
 4. Locate building demolition equipment and remove debris and materials so as not to impose excessive loads on supporting walls, floors, or framing.
- B. Engineering Surveys: During demolition, perform surveys to detect hazards that may result from building demolition activities.
- C. Site Access and Temporary Controls: Conduct building demolition and debris-removal operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.
1. Do not close or obstruct streets, walks, walkways, or other adjacent occupied or used facilities without permission from **[Owner] [tenant]** and authorities having jurisdiction. Provide alternate routes around closed or obstructed traffic ways if required by authorities having jurisdiction.
 2. Use water mist and other suitable methods to limit spread of dust and dirt. Comply with governing environmental-protection regulations. Do not use water when it may damage adjacent construction or create hazardous or objectionable conditions, such as ice, flooding, and pollution.
- D. Explosives: Use of explosives is not permitted.

3.6 DEMOLITION BY MECHANICAL MEANS

- A. Remove **[buildings and structures] [and] [site improvements]** intact when permitted by authorities having jurisdiction.
- B. Proceed with demolition of structural framing members systematically, from higher to lower level. Complete building demolition operations above each floor or tier before disturbing supporting members on the next lower level.
- C. Remove debris from elevated portions of the building by chute, hoist, or other device that will convey debris to grade level in a controlled descent.
1. Remove structural framing members and lower to ground by method suitable to minimize ground impact and dust generation.
- D. Salvage: Items to be removed and salvaged are indicated **[on Drawings.] [below:]**
1. Doors and door hardware.
 2. Windows.
 3. Cabinets.
 4. Mirrors.
 5. Chalkboards.
 6. Tackboards.

7. Marker boards.
 8. Plumbing fixtures.
 9. **<Insert items to be salvaged>**.
- E. Concrete: Cut concrete full depth at junctures with construction indicated to remain, using power-driven saw, then remove concrete between saw cuts.
- F. Masonry: Cut masonry at junctures with construction indicated to remain, using power-driven saw, then remove masonry between saw cuts.
- G. Concrete Slabs-on-Grade: Saw-cut perimeter of area to be demolished at junctures with construction indicated to remain, then break up and remove.
- H. Structural Steel: Dismantle field connections without bending or damaging steel members. Do not use flame-cutting torches unless otherwise authorized by [**DEN Project Manager**] [**authorities having jurisdiction**].
- I. Transport steel trusses and joists as whole units without dismantling them further.
- J. Carpet[**and Pad**]: Remove in large pieces and roll tightly after removing demolition debris, trash, adhesive, and tack strips.
- K. Building Components: Remove [**metal gratings**] [**metal ladders**] [**doors**] [**windows**] [**door hardware**] [**cabinets**] [**mirrors**] [**chalkboards and marker boards**] [**tackboards**] [**toilet accessories**] [**plumbing fixtures**] [**and**] [**light fixtures**], as whole units, intact and undamaged.
- L. Elevators: Remove as whole units as much as practical.
- M. Equipment: Disconnect equipment at nearest fitting connection to services, complete with service valves. Remove as whole units, complete with controls.
- N. Below-Grade Construction: Abandon foundation walls and other below-grade construction. Cut below-grade construction flush with grade.
- O. Below-Grade Construction: Demolish foundation walls and other below-grade construction that are within footprint of new construction and extending [**5 feet (1.5 m)**] **<Insert dimension>** outside footprint indicated for new construction. Abandon below-grade construction outside this area.
1. Remove below-grade construction, including basements, foundation walls, and footings, [**completely**] [**to at least 6 inches (150 mm) below grade**] [**to at least 12 inches (300 mm) below grade**] [**to depths indicated**].
- P. Below-Grade Construction: Demolish foundation walls and other below-grade construction.
1. Remove below-grade construction, including basements, foundation walls, and footings, [**completely**] [**to at least 6 inches (150 mm) below grade**] [**to at least 12 inches (300 mm) below grade**] [**to depths indicated**].

- Q. Existing Utilities: Abandon existing utilities and below-grade utility structures. Cut utilities flush with grade.
- R. Existing Utilities: Demolish existing utilities and below-grade utility structures that are within **[5 feet (1.5 m)] <Insert dimension>** outside footprint indicated for new construction. Abandon utilities outside this area.
1. Fill abandoned utility structures with **[satisfactory soil materials] [recycled pulverized concrete]** according to backfill requirements in Section 312000 "Earth Moving."
 2. Piping: Disconnect piping at unions, flanges, valves, or fittings.
 3. Wiring Ducts: Disassemble into unit lengths and remove plug-in and disconnecting devices.
- S. Existing Utilities: Demolish and remove existing utilities and below-grade utility structures.
1. Piping: Disconnect piping at unions, flanges, valves, or fittings.
 2. Wiring Ducts: Disassemble into unit lengths and remove plug-in and disconnecting devices.

3.7 DEMOLITION BY EXPLOSIVES

- A. Explosives: Use of explosives is not permitted.
- B. Explosives: Perform explosive demolition according to governing regulations.
1. Obtain written permission from authorities having jurisdiction before bringing explosives to, or using explosives on, Project site.
 2. Do not damage adjacent structures, property, or site improvements when using explosives.
- C. Comply with recommendation in specialty explosives consultant's report.

3.8 SITE RESTORATION

- A. Below-Grade Areas: Rough grade below-grade areas ready for further excavation or new construction.
- B. Below-Grade Areas: Completely fill below-grade areas and voids resulting from building demolition operations with **[satisfactory soil materials] [recycled pulverized concrete] [recycled pulverized masonry]** according to backfill requirements in Section 312000 "Earth Moving."
- C. Site Grading: Uniformly rough grade area of demolished construction to a smooth surface, free from irregular surface changes. Provide a smooth transition between adjacent existing grades and new grades.

3.9 REPAIRS

- A. Promptly repair damage to adjacent buildings caused by demolition operations.
- B. Where repairs to existing surfaces are required, patch to produce surfaces suitable for new materials.
- C. Restore exposed finishes of patched areas and extend restoration into adjoining construction in a manner that eliminates evidence of patching and refinishing.

3.10 RECYCLING DEMOLISHED MATERIALS

- A. General: Separate recyclable demolished materials from other demolished materials to the maximum extent possible. Separate recyclable materials by type.
 - 1. Provide containers or other storage method approved by DEN Project Manager for controlling recyclable materials until they are removed from Project site.
 - 2. Stockpile processed materials on-site without intermixing with other materials. Place, grade, and shape stockpiles to drain surface water. Cover to prevent windblown dust.
 - 3. Stockpile materials away from demolition area. Do not store within drip line of remaining trees.
 - 4. Store components off the ground and protect from the weather.
 - 5. Transport recyclable materials off [**Owner**] [**Tenant**]'s property and legally dispose of them.
- B. Recycling Haulers and Markets: List below is provided for information only. Subject to compliance with requirements, provide one of the following:
 - 1. **<Insert names and telephone numbers of local recycling haulers and firms buying re-recyclable materials.>**
 - 2. or approved equal.
- C. Recycling Incentives: Revenues, savings, rebates, tax credits, and other incentives received for recycling building demolition materials shall accrue to[**Owner**] [**Tenant**] [**Contractor**].
- D. Asphalt: Grind asphalt to maximum 4-inch size.
- E. Asphalt: Break up and transport asphalt to asphalt recycling facility.
- F. Concrete: Remove reinforcement and other metals from concrete and sort with other metals. Pulverize concrete to maximum [**1-1/2-inch**] [**4-inch**] size.
- G. Masonry: Remove metal reinforcement, anchors, and ties from masonry and sort with other metals.
 - 1. Pulverize masonry to maximum [**3/4-inch**] [**1-inch**] [**1-1/2-inch**] [**4-inch**] size.
 - 2. Clean and stack undamaged, whole masonry units on wood pallets.

- H. Wood Materials: Sort and stack members according to size, type, and length. Separate dimensional and engineered lumber, panel products, and treated wood materials.
- I. Metals: Separate metals by type.
 - 1. Structural Steel: Stack members according to size, type of member, and length.
 - 2. Remove and dispose of bolts, nuts, washers, and other rough hardware.
- J. Roofing: Separate organic and glass-fiber shingles and felts. Remove nails, staples, and accessories.
- K. Doors and Hardware: Brace open end of door frames. Except for removing door closers, leave door hardware attached to doors.
- L. Carpet[**and Pad**]: Store clean, dry carpet [**and pad**] in a closed container or trailer provided by Carpet Reclamation Agency.
- M. Equipment: Drain tanks, piping, and fixtures. Seal openings with caps or plugs.
- N. Piping: Reduce piping to straight lengths and store by type and size. Separate supports, hangers, valves, sprinkler heads, and other components by type and size.
- O. Lighting Fixtures: Separate lamps by type and protect from breakage.
- P. Electrical Devices: Separate switches, receptacles, switchgear, transformers, meters, panelboards, circuit breakers, and other devices by type.
- Q. Conduit: Reduce conduit to straight lengths and store by type and size.

3.11 DISPOSAL OF DEMOLISHED MATERIALS

- A. Except for items or materials indicated to be [**recycled,**] reused, salvaged, reinstalled, or otherwise indicated to remain on [**Owner's**] [**tenant's**] property, remove demolition waste materials from Project site [**and legally dispose of them in an EPA-approved landfill acceptable to authorities having jurisdiction**]. See Section 017419 "Construction Waste Management and Disposal" for recycling and disposal of demolition waste.
 - 1. Do not allow demolished materials to accumulate on-site.
 - 2. Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.
- B. Do not burn demolished materials.
- C. Disposal: Transport demolished materials and dispose of at designated spoil areas on [**Owner's**] [**Tenant's**] property.
- D. Disposal: Transport demolished materials off [**Owner's**] [**Tenant's**] property and legally dispose of them.

3.12 CLEANING

- A. Clean adjacent structures and improvements of dust, dirt, and debris caused by building demolition operations. Return adjacent areas to condition existing before building demolition operations began.
 - 1. Clean roadways of debris caused by debris transport.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION **024116**

SECTION 024119 - SELECTIVE DEMOLITION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Demolition and removal of selected portions of building or structure.
2. Demolition and removal of selected site elements.
3. Salvage of existing items to be reused or recycled.
4. Repair procedures for selective demolition operations.

- B. Related Requirements:

1. Section 011000 "Summary" for restrictions on the use of the premises, Owner-occupancy requirements, and phasing requirements.
2. Section 024116 "Structure Demolition" for demolition of buildings and structures.
3. Section 311000 "Site Clearing" for site clearing and removal of above- and below-grade improvements.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Remove: Detach items from existing construction and legally dispose of them off-site unless indicated to be removed and salvaged or removed and reinstalled.
- B. Remove and Salvage: Carefully detach from existing construction, in a manner to prevent damage, and deliver to Owner ready for reuse.
- C. Remove and Reinstall: Detach items from existing construction, prepare for reuse, and reinstall where indicated.
- D. Existing to Remain: Existing items of construction that are not to be permanently removed and that are not otherwise indicated to be removed, removed and salvaged, or removed and reinstalled.

1.4 MATERIALS OWNERSHIP

- A. Except for items or materials indicated to be reused, salvaged, reinstalled, or otherwise indicated to remain DEN's property, demolished materials shall become the Contractor's property and shall be removed from the Project site.
- B. Historic items, relics, antiques, and similar objects including, but not limited to, cornerstones and their contents, commemorative plaques and tablets, and other items of interest or value to Owner that may be uncovered during demolition remain the property of Owner.
 - 1. Carefully salvage in a manner to prevent damage and promptly return to Owner.

1.5 PREINSTALLATION MEETINGS

- A. Predemolition Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]<Insert location>**.
 - 1. Inspect and discuss condition of construction to be selectively demolished.
 - 2. Review structural load limitations of existing structure.
 - 3. Review and finalize selective demolition schedule and verify availability of materials, demolition personnel, equipment, and facilities needed to make progress and avoid delays.
 - 4. Review requirements of work performed by other trades that rely on substrates exposed by selective demolition operations.
 - 5. Review areas where existing construction is to remain and requires protection.
 - 6. **<Insert agenda items>**.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data:
 - 1. For firms and persons specified in Section 014510 "Contractor Quality Control" to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.
 - 2. For refrigerant recovery technician.
- B. Proposed Protection Measures: Submit report, including drawings, that indicates the measures proposed for protecting individuals and property [, **for environmental protection**] [, **for dust control**] [**and**] [, **for noise control**], and proposed time frame for their operation. Identify options if proposed measures are later determined to be inadequate. Indicate proposed locations and construction of barriers.
- C. Submit Schedule of Selective Demolition Activities. Indicate the Following:
 - 1. Detailed sequence of selective demolition and removal work, with starting and ending dates for each activity. Ensure Owner's DEN's and other tenant's on-site operations are uninterrupted.

2. Interruption of utility services. Indicate how long utility services will be interrupted.
 3. Do not interrupt utility services without prior written request and approval from DEN Project Manager and authorities having jurisdiction.
 4. Coordination for shutoff, capping, and continuation of utility services.
 5. Use of elevator and stairs.
 6. Coordination of Owner's continuing occupancy of portions of existing building and of Owner's partial occupancy of completed Work.
- D. Inventory: Submit a list of items to be removed and salvaged and deliver to Owner prior to start of demolition.
- E. Predemolition Photographs or Video: Submit before Work begins.
- F. Statement of Refrigerant Recovery: Signed by refrigerant recovery technician responsible for recovering refrigerant, stating that all refrigerant that was present was recovered and that recovery was performed according to EPA regulations. Include name and address of technician and date refrigerant was recovered.
- G. Warranties: Documentation indicated that existing warranties are still in effect after completion of selective demolition.

1.7 CLOSEOUT SUBMITTALS

- A. Inventory: Submit a list of items that have been removed and salvaged.
- B. Landfill Records: Indicate receipt and acceptance of hazardous wastes by a landfill facility licensed to accept hazardous wastes.
- C. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 QUALITY ASSURANCE

- A. Regulatory Requirements: Comply with governing EPA notification regulations before beginning selective demolition. Comply with hauling and disposal regulations of authorities having jurisdiction.
- B. Standards: Comply with ANSI A10.6 and NFPA 241.
- C. Refrigerant Recovery Technician Qualifications: Certified by an EPA-approved certification program.

1.9 FIELD CONDITIONS

- A. When there are occupied portions of buildings immediately adjacent to selective demolition area, conduct selective demolition so DEN's or tenant's operations will not be disrupted.
1. Provide not less than 72 hours' notice to DEN Project Manager of activities that will affect DEN's or tenant's operations.
- B. Maintain access to existing walkways, corridors, and other adjacent occupied or used facilities. Do not close or obstruct walkways, corridors, or other occupied or used facilities without written permission from authorities having jurisdiction.
- C. DEN assumes no responsibility for condition of areas to be selectively demolished. DEN will maintain conditions existing at time of inspection for bidding purpose as far as practical.
- D. Conditions existing at time of inspection for bidding purpose will be maintained by Owner as far as practical.
1. Before selective demolition, Owner will remove the following items:
 - a. **<Insert items to be removed by Owner>.**
- E. Notify DEN Project Manager of discrepancies between existing conditions and Drawings before proceeding with selective demolition.
- F. Hazardous Materials: It is not expected that hazardous materials will be encountered in the Work.
1. Hazardous materials will be removed by Owner before start of the Work.
 2. If suspected hazardous materials are encountered, do not disturb; immediately notify DEN Project Manager. Hazardous materials will be removed by Owner under a separate contract.
- G. Hazardous Materials: Hazardous materials are present in buildings and structures to be selectively demolished. A report on the presence of hazardous materials is on file for review and use. Examine report to become aware of locations where hazardous materials are present.
1. Hazardous material remediation is specified elsewhere in the Contract Documents.
 2. Do not disturb hazardous materials or items suspected of containing hazardous materials except under procedures specified elsewhere in the Contract Documents.
 3. Owner will provide material safety data sheets for suspected hazardous materials that are known to be present in buildings and structures to be selectively demolished because of building operations or processes performed there.

- H. Historic Areas: Demolition and hauling equipment and other materials shall be of sizes that clear surfaces within historic spaces, areas, rooms, and openings, including temporary protection, by [**12 inches (300 mm)**] <Insert dimension> or more.
- I. Storage or sale of removed items or materials on-site is not permitted.
- J. Utility Service: Maintain existing utilities indicated to remain in service and protect them against damage during selective demolition operations.
 - 1. Maintain fire-protection facilities in service during selective demolition operations.

1.10 WARRANTY

- A. Existing Warranties: Remove, replace, patch, and repair materials and surfaces cut or damaged during selective demolition, by methods and with materials so as not to void existing warranties. Notify warrantor before proceeding. Existing warranties include the following:
 - 1. <Insert warranted system>.
- B. Notify warrantor on completion of selective demolition, and obtain documentation verifying that existing system has been inspected and warranty remains in effect. Submit documentation at Project closeout.
 - 1. If possible, retain original installer or fabricator to patch the exposed Work listed below that is damaged during selective demolition. If it is impossible to engage the original installer or fabricator, engage another recognized experienced and specialized firm.
 - a. Ornamental metal.
 - b. Preformed metal panels.
 - c. Firestopping.
 - d. Terrazzo.
 - e. Wall covering.
 - f. ProCoat paint finishes.
 - g. HVAC enclosures, cabinets, or covers.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 REPAIR MATERIALS

- A. Use repair materials identical to existing materials.
- B. If identical materials are unavailable or cannot be used for exposed surfaces, use materials that, when installed, will match the visual and functional performance of existing materials, as approved by DEN Project Manager.
- C. Use materials whose installed performance equal or surpass that of existing materials.
- D. Comply with material and installation requirements specified in individual specification sections.

2.2 PERFORMANCE REQUIREMENTS

- A. Regulatory Requirements: Comply with governing EPA notification regulations before beginning selective demolition. Comply with hauling and disposal regulations of authorities having jurisdiction.
- B. Standards: Comply with ANSI/ASSE A10.6 and NFPA 241.
- C. LEED Requirements for Building Reuse:
 - 1. Credit MR 1.1[**and Credit MR 1.2**]: Maintain existing building structure (including structural floor and roof decking) and envelope (exterior skin and framing, excluding window assemblies and nonstructural roofing material) not indicated to be demolished; do not demolish such existing construction beyond indicated limits.
 - 2. Credit MR 1.3: Maintain existing interior nonstructural elements (interior walls, doors, floor coverings, and ceiling systems) not indicated to be demolished; do not demolish such existing construction beyond indicated limits.
 - 3. Credit MR 1.2[**and Credit MR 1.3**]: Maintain existing nonshell, nonstructural components (walls, flooring, and ceilings) not indicated to be demolished; do not demolish such existing construction beyond indicated limits.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that utilities have been disconnected and capped before starting selective demolition operations.
- B. Review record documents of existing construction provided by Owner. Owner does not guarantee that existing conditions are same as those indicated in record documents.

- C. Survey existing conditions and correlate with requirements indicated to determine extent of selective demolition required.
- D. Inventory and record the condition of items to be removed and reinstalled and items to be removed and salvaged.
- E. When unanticipated mechanical, electrical, or structural elements that conflict with intended function or design are encountered, investigate and measure the nature and extent of conflict. Promptly submit a written report to DEN Project Manager.
- F. **[Perform] [Engage a professional engineer to perform]** an engineering survey of condition of building to determine whether removing any element might result in structural deficiency or unplanned collapse of any portion of structure or adjacent structures during selective building demolition operations.
 - 1. Perform surveys as the Work progresses to detect hazards resulting from selective demolition activities.
 - 2. Steel Tendons: Locate tensioned steel tendons and include recommendations for de-tensioning.
- G. Survey of Existing Conditions: Record existing conditions by use of **[measured drawings] [preconstruction photographs] [preconstruction videotapes] [and] [templates]**.
 - 1. Comply with requirements specified in Section 013233 "Photographic Documentation."
 - 2. Inventory and record the condition of items to be removed and salvaged. Provide **[photographs] [or] [video]** of conditions that might be misconstrued as damage caused by salvage operations.
 - 3. Before selective demolition or removal of existing building elements that will be reproduced or duplicated in final Work, make permanent record of measurements, materials, and construction details required to make exact reproduction.

3.2 UTILITY SERVICES AND MECHANICAL/ELECTRICAL SYSTEMS

- A. Existing Services/Systems to Remain: Maintain services/systems indicated to remain and protect them against damage.
 - 1. Comply with requirements for existing services/systems interruptions specified in Section 011000 "Summary."
 - 2. Do not interrupt existing utilities serving occupied or operating facilities unless authorized in writing by the DEN Project Manager and authorities having jurisdiction.
- B. Existing Services/Systems to Be Removed, Relocated, or Abandoned: Locate, identify, disconnect, and seal or cap off indicated utility services and mechanical/electrical systems serving areas to be selectively demolished.

1. Arrange to shut off indicated utilities and obtain prior written approval with DEN Project Manager and utility companies.
 2. If services/systems are required to be removed, relocated, or abandoned, provide temporary services/systems that bypass area of selective demolition and that maintain continuity of services/systems to other parts of building.
 3. Disconnect, demolish, and remove fire-suppression systems, plumbing, and HVAC systems, equipment, and components indicated to be removed.
 - a. Piping to Be Removed: Remove portion of piping indicated to be removed and cap or plug remaining piping with same or compatible piping material.
 - b. Piping to Be Abandoned in Place: Drain piping and cap or plug piping with same or compatible piping material.
 - c. Equipment to Be Removed: Disconnect and cap services and remove equipment.
 - d. Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make equipment operational.
 - e. Equipment to Be Removed and Salvaged: Disconnect and cap services and remove equipment and deliver to Owner.
 - f. Ducts to Be Removed: Remove portion of ducts indicated to be removed and plug remaining ducts with same or compatible ductwork material.
 - g. Ducts to Be Abandoned in Place: Cap or plug ducts with same or compatible ductwork material.
- C. Refrigerant: Remove refrigerant from mechanical equipment to be selectively demolished according to 40 CFR 82 and regulations of authorities having jurisdiction.

3.3 PREPARATION

- A. Site Access and Temporary Controls: Conduct selective demolition and debris-removal operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.
1. Comply with requirements for access and protection specified in Section 015210 "Temporary Facilities."
 2. Do not close or obstruct roads, streets, walks, walkways, or other adjacent occupied or used facilities without written authorization from the DEN Project Manager and authorities having jurisdiction. Provide alternate routes around closed or obstructed traffic ways if required by governing regulations.
 3. Erect temporary protection, such as walks, fences, railings, canopies, and covered passageways, where required by authorities having jurisdiction.
 4. Protect existing site improvements, appurtenances, and landscaping.
 5. Erect a plainly visible fence around drip lines of individual trees or around perimeter drip lines of groups of trees.
- B. Temporary Facilities: Provide temporary barricades and other protection required to prevent injury to people and damage to adjacent buildings and facilities to remain.

1. Provide protection to ensure safe passage of people around selective demolition area and to and from occupied portions of building.
 2. Provide temporary weather protection, during interval between selective demolition of existing construction on exterior surfaces and new construction, to prevent water leakage and damage to structure and interior areas.
 3. Protect walls, ceilings, floors, and other existing finish work that are to remain or that are exposed during selective demolition operations.
 4. Cover and protect furniture, furnishings, and equipment that have not been removed.
 5. Comply with requirements for temporary enclosures, dust control, heating, and cooling specified in Section 015000 "Temporary Facilities and Controls."
- C. Temporary Shoring: Provide and maintain shoring, bracing, and structural supports as required to preserve stability and prevent movement, settlement, or collapse of construction and finishes to remain, and to prevent unexpected or uncontrolled movement or collapse of construction being demolished.
1. Strengthen or add new supports when required during progress of selective demolition.
- D. Temporary Enclosures: Provide temporary enclosures for protection of existing buildings and construction projects, both in progress and completed, from exposure, foul weather and other construction operations. Provide temporary weather tight enclosures for building exteriors.
1. Where heating or cooling is needed and permanent enclosures are not complete, provide insulated temporary enclosures. Coordinate enclosure with ventilating and material drying or curing requirements to avoid dangerous conditions and effects.
 2. Contractor shall be responsible for any damage to existing conditions due to inadequate temporary enclosures or due to failure of temporary enclosures.
- E. Temporary Partitions: Erect and maintain dustproof partitions and temporary enclosures to limit dust and dirt migration and to separate areas from fumes and noise.
- ### 3.4 SELECTIVE DEMOLITION, GENERAL
- A. General: Demolish and remove existing construction only to the extent required by new construction and as indicated. Use methods required to complete the Work within limitations of governing regulations and as follows:
1. Proceed with selective demolition systematically, from higher to lower level. Complete selective demolition operations above each floor or tier before disturbing supporting members on the next lower level.
 2. Neatly cut openings and holes plumb, square, and true to dimensions required. Use cutting methods least likely to damage construction to remain or adjoining construction. Use hand tools or small power tools designed for sawing or grinding, not hammering and chopping, to minimize disturbance of adjacent surfaces. Temporarily cover openings to remain.

3. Cut or drill from the exposed or finished side into concealed surfaces to avoid marring existing finished surfaces.
 4. Do not use cutting torches until work area is cleared of flammable materials. At concealed spaces, such as duct and pipe interiors, verify condition and contents of hidden space before starting flame-cutting operations. Maintain[**fire watch and**] portable fire-suppression devices during flame-cutting operations.
 5. Maintain adequate ventilation when using cutting torches.
 6. Remove decayed, vermin-infested, or otherwise dangerous or unsuitable materials and promptly dispose of off-site.
 7. Remove structural framing members and lower to ground by method suitable to avoid free fall and to prevent ground impact or dust generation.
 8. Locate selective demolition equipment and remove debris and materials so as not to impose excessive loads on supporting walls, floors, or framing.
 9. Dispose of demolished items and materials promptly.[**Comply with requirements in Section 017419 "Construction Waste Management and Disposal."**]
- B. Reuse of Building Elements: Project has been designed to result in end-of-Project rates for reuse of building elements as follows. Do not demolish building elements beyond what is indicated on Drawings without DEN Project Manager's approval.
1. Building Structure and Shell: **[75] [100]** percent.
 2. Nonshell Elements: 50 percent.
 3. Nonshell Elements: **[40] [60]** percent.
- C. Removed and Salvaged Items:
1. Clean salvaged items.
 2. Pack or crate items after cleaning. Identify contents of containers.
 3. Store items in a secure area until delivery to DEN.
 4. Transport items to DEN's storage area as designated by the DEN Project Manager.
 5. Protect items from damage during transport and storage.
- D. Removed and Reinstalled Items:
1. Clean and repair items to functional condition adequate for intended reuse.
 2. Paint equipment to match new equipment, with coatings of equal color, finish and performance of new equipment.
 3. Pack or crate items after cleaning and repairing. Identify contents of containers.
 4. Protect items from damage during transport and storage.
 5. Reinstall items in locations indicated. Comply with installation requirements for new materials and equipment. Provide connections, supports, and miscellaneous materials necessary to make item functional for use indicated.
- E. Existing Items to Remain: Protect construction indicated to remain against damage and soiling during selective demolition. When permitted by DEN Project Manager, items may be removed to a suitable, protected storage location during selective demolition[**and cleaned**] and reinstalled in their original locations after selective demolition operations are complete.

3.5 PATCHING AND REPAIRS

- A. General: Promptly repair damage to adjacent construction caused by selective demolition operations.
- B. Patching: Comply with Specification Section 017330 "Cutting and Patching".
- C. Repairs: Where repairs to existing surfaces are required, patch to produce surfaces suitable for new materials.
 - 1. Completely fill holes and depressions in existing masonry walls that are to remain with an approved masonry patching material applied according to manufacturer's written recommendations.
- D. Finishes: Restore exposed finishes of patched areas and extend restoration into adjoining construction in a manner that eliminates evidence of patching and refinishing.
- E. Floors and Walls: Where walls or partitions that are demolished extend one finished area into another, patch and repair floor and wall surfaces in the new space. Provide an even surface of uniform finish color, texture, and appearance. Remove existing floor and wall coverings and replace with new materials, if necessary, to achieve uniform color and appearance.
 - 1. Patch with durable seams that are as invisible as possible. Provide materials and comply with installation requirements as specified in other sections of these specifications.
 - 2. Where patching occurs on a painted surface, apply primer and intermediate paint coats over the patch and apply a final paint coat over the entire unbroken surface containing the patch. Provide additional coats until the patch blends with adjacent surfaces.
 - 3. Where feasible, test and inspect patched areas after completion to demonstrate integrity of installation.
- F. Ceilings: Patch, repair or rehang existing ceilings as necessary to provide an even-plane surface of uniform appearance.

3.6 SELECTIVE DEMOLITION PROCEDURES FOR SPECIFIC MATERIALS

- A. Concrete: Demolish in small sections. Using power-driven saw, cut concrete to a depth of at least **3/4 inch (19 mm)** at junctures with construction to remain. Dislodge concrete from reinforcement at perimeter of areas being demolished, cut reinforcement, and then remove remainder of concrete. Neatly trim openings to dimensions indicated.
- B. Concrete: Demolish in sections. Cut concrete full depth at junctures with construction to remain and at regular intervals using power-driven saw, then remove concrete between saw cuts.
- C. Masonry: Demolish in small sections. Cut masonry at junctures with construction to remain, using power-driven saw, and then remove masonry between saw cuts.

- D. Concrete Slabs-on-Grade: Saw-cut perimeter of area to be demolished, then break up and remove.
- E. Resilient Floor Coverings: Remove floor coverings and adhesive according to recommendations in RFCI's "Recommended Work Practices for the Removal of Resilient Floor Coverings." [**Do not use methods requiring solvent-based adhesive strippers.**]
- F. Roofing: Remove no more existing roofing than what can be covered in one day by new roofing and so that building interior remains watertight and weathertight. See Section <Insert Section number> "<Insert Section title>" for new roofing requirements.
 - 1. Remove existing roof membrane, flashings, copings, and roof accessories.
 - 2. Remove existing roofing system down to substrate.

3.7 DISPOSAL OF DEMOLISHED MATERIALS

- A. General: Except for items or materials indicated to be [**recycled,**] reused, salvaged, reinstalled, or otherwise indicated to remain Owner's property, remove demolished materials from Project site [**and legally dispose of them in an EPA-approved landfill**].
 - 1. Do not allow demolished materials to accumulate on-site.
 - 2. Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.
 - 3. Remove debris from elevated portions of building by chute, hoist, or other device that will convey debris to grade level in a controlled descent.
 - 4. Comply with requirements specified in Section 017419 "Construction Waste Management and Disposal."
 - 5. Disposal shall be in accordance with Division 32 requirements.
- B. Burning: Do not burn demolished materials.
- C. Disposal: Transport demolished materials off Owner's property and legally dispose of them.

3.8 CLEANING

- A. Clean adjacent structures and improvements of dust, dirt, and debris caused by selective demolition operations. Return adjacent areas to condition existing before selective demolition operations began.

3.9 SELECTIVE DEMOLITION SCHEDULE

- A. Existing [Items] [Construction] to be Removed: <Insert description of items and construction to be removed>.

- B. Existing Items to Be Removed and Salvaged: **<Insert description of items to be removed and salvaged>**.
- C. Existing Items to Be Removed and Reinstalled: **<Insert description of items to be removed and reinstalled>**.
- D. Existing Items to Remain: **<Insert description of items to remain>**.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION **024119**

SECTION 033000 - CAST-IN-PLACE CONCRETE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes cast-in-place concrete, including formwork, reinforcement, concrete materials, mixture design, placement procedures, and finishes, for the following:
 - 1. Footings.
 - 2. Foundation walls.
 - 3. Slabs-on-grade.
 - 4. Suspended slabs.
 - 5. Concrete toppings.
 - 6. Building frame members.
 - 7. Building walls.
- B. Related Sections:
 - 1. Section 033300 "Architectural Concrete" for general building applications of specially finished formed concrete.
 - 2. Section 035320 "Concrete Topping" for emery- and iron-aggregate concrete floor toppings.
 - 3. Section 312000 "Earth Moving" for drainage fill under slabs-on-grade.
 - 4. Section 321313 "Concrete Paving (CDOT)" for concrete pavement and walks.
 - 5. Section 321316 "Decorative Concrete Paving" for decorative concrete pavement and walks.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

- A. Cementitious Materials: Portland cement alone or in combination with one or more of the following: blended hydraulic cement, fly ash and other pozzolans, ground granulated blast-furnace slag, and silica fume; subject to compliance with requirements.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
 2. Product Data for Credit IEQ 4.3: For **[liquid floor treatments] [and] [curing and sealing compounds]**, documentation including printed statement of VOC content.
 3. Design Mixtures for Credit ID 1.1: For each concrete mixture containing fly ash as a replacement for Portland cement or other Portland cement replacements, and for equivalent concrete mixtures that do not contain Portland cement replacements.
- C. Design Mixtures: For each concrete mixture. Submit alternate design mixtures when characteristics of materials, project conditions, weather, test results, or other circumstances warrant adjustments. Concrete materials representing current production shall be tested and used to fabricate trial mix data. The testing lab shall submit and certify the results of all tests and/or certificates of all materials and calculations used to develop the 7-day and 28-day compressive strength test results and applicable reference specifications.
1. Indicate amounts of mixing water to be withheld for later addition at Project site.
- D. Steel Reinforcement Shop Drawings: Placing drawings that detail fabrication, bending, and placement according to ACI 315 "Details and Detailing of Concrete Reinforcement". Include bar sizes, lengths, material, grade, bar schedules, stirrup spacing, bent bar diagrams, bar arrangement, splices and laps, mechanical connections, tie spacing, hoop spacing, and supports for concrete reinforcement. Include special reinforcement required for openings through concrete structures.
- E. Formwork Shop Drawings: Prepared by or under the supervision of a qualified professional engineer detailing fabrication, assembly, and support of formwork.
1. Design and engineering of formwork are Contractor's responsibility.
 2. Submit shop drawings showing all formwork and sequencing of all vertical concrete walls 8 feet or more in height. Coordinate pour breaks in architectural exposed exterior concrete walls so that pour breaks occur at the top or bottom of a reveal. Show form tie locations. Provide uniform form tie spacing at architecturally exposed exterior concrete walls.
 3. Shop drawings to be prepared by a Colorado Professional Engineer.
 4. Shoring and Reshoring: Indicate proposed schedule and sequence of stripping formwork, shoring removal, and reshoring installation and removal.

- F. Construction Joint Layout: Indicate proposed construction joints required to construct the structure.
 - 1. Location of construction joints is subject to approval of the DEN Project Manager. Do not proceed with work unless construction joint shop drawings are approved by Owner.
- G. Samples: For [waterstops] [vapor retarder] <Insert products>.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For [Installer] [manufacturer] [testing agency].
- B. Welding certificates.
- C. Material Certificates: For each of the following, signed by manufacturers:
 - 1. Cementitious materials.
 - 2. Admixtures.
 - 3. Form materials and form-release agents.
 - 4. Steel reinforcement and accessories.
 - 5. Fiber reinforcement.
 - 6. Waterstops.
 - 7. Curing compounds.
 - 8. Floor and slab treatments.
 - 9. Bonding agents.
 - 10. Adhesives.
 - 11. Vapor retarders.
 - 12. Semirigid joint filler.
 - 13. Joint-filler strips.
 - 14. Repair materials.
 - 15. Structural epoxy for reinforcing.
- D. Material Test Reports: For the following, from a qualified testing agency, indicating compliance with requirements:
 - 1. Aggregates.[**Include service record data indicating absence of deleterious expansion of concrete due to alkali aggregate reactivity.**]
- E. Floor surface flatness and levelness measurements indicating compliance with specified tolerances.
- F. Field quality-control reports.
- G. Minutes of preinstallation conference.

1.6 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: A qualified installer who employs on Project personnel qualified as ACI-certified Flatwork Technician and Finisher and a supervisor who is an ACI-certified Concrete Flatwork Technician.
- B. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for formwork and shoring and reshoring installations that are similar to those indicated for this Project in material, design, and extent.
- C. Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C 94/C 94M requirements for production facilities and equipment.
1. Manufacturer certified according to NRMCA's "Certification of Ready Mixed Concrete Production Facilities."
- D. Testing Agency Qualifications: An independent testing agency, acceptable to the DEN Project Manager and the City of Denver, and all authorities having jurisdiction, qualified according to ASTM C 1077 and ASTM E 329 for testing indicated.
1. Personnel conducting field tests shall be qualified as ACI Concrete Field Testing Technician, Grade 1, according to ACI CP-1 or an equivalent certification program.
 2. Personnel performing laboratory tests shall be ACI-certified Concrete Strength Testing Technician and Concrete Laboratory Testing Technician - Grade I. Testing Agency laboratory supervisor shall be an ACI-certified Concrete Laboratory Testing Technician - Grade II.
- E. Source Limitations: Obtain each type or class of cementitious material of the same brand from the same manufacturer's plant, obtain aggregate from single source, and obtain admixtures from single source from single manufacturer.
- F. Welding Qualifications: Qualify procedures and personnel according to AWS D1.4/D 1.4M, "Structural Welding Code - Reinforcing Steel."
- G. ACI Publications: Comply with the following unless modified by requirements in the Contract Documents:
1. ACI 301, "Specifications for Structural Concrete," [**Sections 1 through 5.**] [**Sections 1 through 5 and Section 7, "Lightweight Concrete."**]
 2. ACI 117, "Specifications for Tolerances for Concrete Construction and Materials."

- H. Concrete Testing Service: Engage a qualified independent testing agency to perform material evaluation tests and to design concrete mixtures.
- I. Mockups: Cast concrete [**slab-on-grade**] [**and**] [**formed-surface**] panels to demonstrate typical joints, surface finish, texture, tolerances, floor treatments, and standard of workmanship.
1. Build panel approximately [**200 sq. ft. (18.6 sq. m) for slab-on-grade**] [**and**] [**100 sq. ft. (9.3 sq. m) for formed surface**] <Insert area> in the location indicated or, if not indicated, as directed by DEN Project Manager.
 2. Notify DEN Project Manager minimum seven (7) days in advance of dates and times when mockups will be constructed.
 3. Obtain DEN Project Manager's approval of mockups before starting construction.
 4. If DEN Project Manager determines that mockups do not meet requirements, demolish and remove them from the site and cast another until the mockup is approved.
 5. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
 6. Demolish and remove mockups when directed by DEN Project Manager.
 7. Approved mockups may become part of the completed Work if approved by DEN Project Manager, and undisturbed at time of Substantial Completion.
- J. Preinstallation Conference: Conduct conference at [**Project site**] [**location and time as determined by DEN Project Manager**] <Insert location>.
1. Before submitting design mixtures, review concrete design mixture and examine procedures for ensuring quality of concrete materials. Require representatives of each entity directly concerned with cast-in-place concrete to attend, including the following:
 - a. Contractor's superintendent.
 - b. Independent testing agency responsible for concrete design mixtures.
 - c. Ready-mix concrete manufacturer.
 - d. Concrete subcontractor.
 - e. Special concrete finish subcontractor.
 2. Review [**special inspection and testing and inspecting agency procedures for field quality control,**] [**concrete finishes and finishing,**] [**cold- and hot-weather concreting procedures,**] [**curing procedures,**] [**construction contraction and isolation joints, and joint-filler strips,**] [**semirigid joint fillers,**] [**forms and form removal limitations,**] [**shoring and reshoring procedures,**] [**vapor-retarder installation,**] [**anchor rod and anchorage device installation tolerances,**] [**steel reinforcement installation,**] [**floor and slab flatness and levelness measurement,**] [**concrete repair procedures,**] and concrete protection.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Steel Reinforcement: Deliver, store, and handle steel reinforcement to prevent bending

and damage.[**Avoid damaging coatings on steel reinforcement.**] Store reinforcement above the ground on platforms, skids or other supports.

- B. Waterstops: Store waterstops under cover to protect from moisture, sunlight, dirt, oil, and other contaminants.
- C. Avoid damaging coatings on steel reinforcement.
- D. Repair damaged epoxy coatings on steel reinforcement according to ASTM D 3963/D 3963M.
- E. Damaged or non-conforming materials shall be removed from the Project Site and replaced with new satisfactory materials at no additional cost to Owner.
- F. Deliver packaged materials to Project Site in original, unopened, and undamaged containers plainly labeled with manufacturer's name, product name and designation, expiration period for use, mixing instructions for multi-component materials and other pertinent data. Store and handle materials to prevent their deterioration or damage due to moisture, temperature changes, contaminants, corrosion, breakage, and other causes.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 FORM-FACING MATERIALS

- A. Smooth-Formed Finished Concrete: Form-facing panels that will provide continuous, true, and smooth concrete surfaces. Furnish in largest practicable sizes to minimize number of joints.
 - 1. Plywood, metal, or other approved panel materials.
 - 2. Exterior-grade plywood panels, suitable for concrete forms, complying with DOC PS 1, and as follows:
 - a. High-density overlay, Class 1 or better.
 - b. Medium-density overlay, Class 1 or better; mill-release agent treated and edge sealed.
 - c. Structural 1, B-B or better; mill oiled and edge sealed.
 - d. B-B (Concrete Form), Class 1 or better; mill oiled and edge sealed.
- B. Rough-Formed Finished Concrete: Plywood, lumber, metal, or another approved material. Provide lumber dressed on at least two edges and one side for tight fit.

- C. Forms for Cylindrical Columns, Pedestals, and Supports: Metal, glass-fiber-reinforced plastic, paper, or fiber tubes that will produce surfaces with gradual or abrupt irregularities not exceeding specified formwork surface class. Provide units with sufficient wall thickness to resist plastic concrete loads without detrimental deformation.
- D. Pan-Type Forms: Glass-fiber-reinforced plastic or formed steel, stiffened to resist plastic concrete loads without detrimental deformation.
- E. Void Forms: Biodegradable paper surface, treated for moisture resistance, structurally sufficient to support weight of plastic concrete and other superimposed loads.
- F. Chamfer Strips: Wood, metal, PVC, or rubber strips, **3/4 by 3/4 inch** (19 by 19 mm), minimum.
- G. Rustication Strips: Wood, metal, PVC, or rubber strips, kerfed for ease of form removal.
- H. Form-Release Agent: Commercially formulated form-release agent that will not bond with, stain, or adversely affect concrete surfaces and will not impair subsequent treatments of concrete surfaces.
 - 1. Formulate form-release agent with rust inhibitor for steel form-facing materials.
- I. Form Ties: Factory-fabricated, removable or snap-off metal or glass-fiber-reinforced plastic form ties designed to resist lateral pressure of fresh concrete on forms and to prevent spalling of concrete on removal.
 - 1. Furnish units that will leave no corrodible metal closer than **1 inch** (25 mm) to the plane of exposed concrete surface.
 - 2. Furnish ties that, when removed, will leave holes no larger than **1 inch** (25 mm) in diameter in concrete surface.
 - 3. Furnish ties with integral water-barrier plates to walls indicated to receive dampproofing or waterproofing.

2.2 STEEL REINFORCEMENT

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25] [60] <Insert number>** percent.
- B. Reinforcing Bars: ASTM A 615/A 615M, **Grade 60** (Grade 420), deformed.
- C. Low-Alloy-Steel Reinforcing Bars: ASTM A 706/A 706M, deformed.
- D. Galvanized Reinforcing Bars: **[ASTM A 615/A 615M, Grade 60 (Grade 420)] [ASTM A 706/A 706M]**, deformed bars, ASTM A 767/A 767M, **[Class I] [Class II]** zinc coated after fabrication and bending.
- E. Epoxy-Coated Reinforcing Bars: **[ASTM A 615/A 615M, Grade 60 (Grade 420)] [ASTM A 706/A 706M]**, deformed bars, **[ASTM A 775/A 775M] [or] [ASTM A 934/A 934M]**,

epoxy coated, with less than 2 percent damaged coating in each 12-inch (300-mm) bar length.

- F. Stainless-Steel Reinforcing Bars: ASTM A 955/A 955M, **Grade 60** (Grade 420), [**Type 304**] [**Type 316L**], deformed.
- G. Steel Bar Mats: ASTM A 184/A 184M, fabricated from [**ASTM A 615/A 615M, Grade 60** (Grade 420)] [**ASTM A 706/A 706M**], deformed bars, assembled with clips.
- H. Plain-Steel Wire: ASTM A 82/A 82M, [**as drawn**] [**galvanized**].
- I. Deformed-Steel Wire: ASTM A 496/A 496M.
- J. Epoxy-Coated Wire: ASTM A 884/A 884M, Class A, Type 1 coated, [**as-drawn, plain**] [**deformed**]-steel wire, with less than 2 percent damaged coating in each 12-inch (300-mm) wire length.
- K. Plain-Steel Welded Wire Reinforcement: ASTM A 185/A 185M, plain, fabricated from as-drawn steel wire into flat sheets.
- L. Deformed-Steel Welded Wire Reinforcement: ASTM A 497/A 497M, flat sheet.
- M. Galvanized-Steel Welded Wire Reinforcement: ASTM A 185/A 185M, plain, fabricated from galvanized-steel wire into flat sheets.
- N. Epoxy-Coated Welded Wire Reinforcement: ASTM A 884/A 884M, Class A coated, Type 1, [**plain**] [**deformed**] steel.

2.3 REINFORCEMENT ACCESSORIES

- A. Joint Dowel Bars: ASTM A 615/A 615M, **Grade 60** (Grade 420), plain-steel bars, cut true to length with ends square and free of burrs.
- B. Epoxy-Coated Joint Dowel Bars: ASTM A 615/A 615M, **Grade 60** (Grade 420), plain-steel bars, ASTM A 775/A 775M epoxy coated.
- C. Epoxy Repair Coating: Liquid, two-part, epoxy repair coating; compatible with epoxy coating on reinforcement and complying with ASTM A 775/A 775M.
- D. Zinc Repair Material: ASTM A 780, zinc-based solder, paint containing zinc dust, or sprayed zinc.
- E. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded wire reinforcement in place. Manufacture bar supports from steel wire, plastic, or precast concrete according to CRSI's "Manual of Standard Practice," of greater compressive strength than concrete and as follows:
 - 1. For concrete surfaces exposed to view where legs of wire bar supports contact forms, use CRSI Class 1 plastic-protected steel wire or CRSI Class 2 stainless-steel bar supports.

2. For epoxy-coated reinforcement, use epoxy-coated or other dielectric-polymer-coated wire bar supports.
3. For zinc-coated reinforcement, use galvanized wire or dielectric-polymer-coated wire bar supports.

2.4 CONCRETE MATERIALS

- A. Cementitious Material: Use the following cementitious materials, of the same type, brand, and source, throughout Project:
1. Portland Cement: ASTM C 150, [Type I] [Type II] [Type I/II] [Type III] [Type V], [gray] [white]. [Supplement with the following:]
 - a. Fly Ash: ASTM C 618, [Class F] [Class F or C].
 - b. Ground Granulated Blast-Furnace Slag: ASTM C 989, Grade 100 or 120.
 2. Blended Hydraulic Cement: ASTM C 595, [Type IS, Portland blast-furnace slag] [Type IP, Portland-pozzolan] [Type I (PM), pozzolan-modified Portland] [Type I (SM), slag-modified Portland] cement.
- B. Silica Fume: ASTM C 1240, amorphous silica.
- C. Normal-Weight Aggregates: ASTM C 33, [Class 3S] [Class 3M] [Class 1N] <Insert class> coarse aggregate or better, graded. Provide aggregates from a single source [with documented service record data of at least 10 years' satisfactory service in similar applications and service conditions using similar aggregates and cementitious materials].
1. Maximum Coarse-Aggregate Size: [1-1/2 inches (38 mm)] [1 inch (25 mm)] [3/4 inch (19 mm)] nominal.
 2. Fine Aggregate: Free of materials with deleterious reactivity to alkali in cement.
 3. Combined Aggregate Gradation: Well graded from coarsest to finest with not more than 18 percent and not less than 8 percent retained on an individual sieve, except that less than 8 percent may be retained on coarsest sieve and on No. 50 sieve, and less than 8 percent may be retained on sieves finer than No. 50.
- D. Lightweight Aggregate: ASTM C 330, [1-inch (25-mm)] [3/4-inch (19-mm)] [1/2-inch (13-mm)] [3/8-inch (10-mm)] nominal maximum aggregate size.
- E. Water: ASTM C 94/C 94M [and potable].

2.5 ADMIXTURES

- A. Air-Entraining Admixture: ASTM C 260.
- B. Chemical Admixtures: Provide admixtures certified by manufacturer to be compatible with other admixtures and that will not contribute water-soluble chloride ions exceeding those permitted in hardened concrete. Do not use calcium chloride or admixtures containing calcium chloride.

1. Water-Reducing Admixture: ASTM C 494/C 494M, Type A.
 2. Retarding Admixture: ASTM C 494/C 494M, Type B.
 3. Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type D.
 4. High-Range, Water-Reducing Admixture: ASTM C 494/C 494M, Type F.
 5. High-Range, Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type G.
 6. Plasticizing and Retarding Admixture: ASTM C 1017/C 1017M, Type II.
- C. Set-Accelerating Corrosion-Inhibiting Admixture: Commercially formulated, anodic inhibitor or mixed cathodic and anodic inhibitor; capable of forming a protective barrier and minimizing chloride reactions with steel reinforcement in concrete and complying with ASTM C 494/C 494M, Type C.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Axim Italcementi Group, Inc.; CATEXOL CN-CI.
 - b. BASF Construction Chemicals - Building Systems; Rheocrete CNI.
 - c. Euclid Chemical Company (The), an RPM company; [**ARRMATECT**] [**EUCON BCN**] [**EUCON CIA**].
 - d. Grace Construction Products, W. R. Grace & Co.; DCI.
 - e. Sika Corporation; Sika CNI.
 - f. **<Insert manufacturer's name>**
 - g. or approved equal.
- D. Non-Set-Accelerating Corrosion-Inhibiting Admixture: Commercially formulated, non-set-accelerating, anodic inhibitor or mixed cathodic and anodic inhibitor; capable of forming a protective barrier and minimizing chloride reactions with steel reinforcement in concrete.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. BASF Construction Chemicals - Building Systems; Rheocrete 222+.
 - b. Cortec Corporation; MCI- [**2000**] [**2005NS**].
 - c. Grace Construction Products, W. R. Grace & Co.; DCI-S.
 - d. Sika Corporation; FerroGard 901.
 - e. **<Insert manufacturer's name>**
 - f. or approved equal.
- E. Color Pigment: ASTM C 979, synthetic mineral-oxide pigments or colored water-reducing admixtures; color stable, [**free of carbon black,**] nonfading, and resistant to lime and other alkalis.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ChemMasters.
 - b. Davis Colors.
 - c. Dayton Superior Corporation.
 - d. Hoover Color Corporation.
 - e. Lambert Corporation.

- f. QC Construction Products.
- g. Rockwood Pigments NA, Inc.
- h. Scofield, L. M. Company.
- i. Solomon Colors, Inc.
- j. **<Insert manufacturer's name>**
- k. or approved equal.

2. Color: **[As indicated by manufacturer's designation] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range].**

2.6 FIBER REINFORCEMENT

- A. Carbon-Steel Fiber: ASTM A 820/A 820M, deformed, minimum of **[1.5 inches (38 mm)] [2 inches (50 mm)] [2.4 inches (60 mm)] <Insert dimension>** long, and aspect ratio of **[35 to 40] [45 to 50] [60 to 65] <Insert ratio>**.

1. Products: Subject to compliance with requirements, provide one of the following:

- a. Fiber: Type 1, Cold-Drawn Wire:

- 1) Bekaert; Dramix.
- 2) Fibercon International, Inc.; Fibercon Drawn Wire.
- 3) Nycon, Inc.; Nycon SF Type I.
- 4) Propex Concrete Systems Corp.; Novocon 1050.
- 5) Sika Corporation; Sika Fiber SH.
- 6) **<Insert manufacturer's name>**
- 7) or approved equal.

- b. Fiber: Type 2, Cut Sheet:

- 1) Bekaert; Wiremix.
- 2) Fibercon International, Inc.; Fibercon Cut Sheet.
- 3) Nycon, Inc.; Nycon SF Type II.
- 4) **<Insert manufacturer's name>**
- 5) or approved equal.

- B. Synthetic Micro-Fiber: **[Monofilament] [or] [fibrillated]** polypropylene micro-fibers engineered and designed for use in concrete, complying with ASTM C 1116/C 1116M, Type III, **[1/2 to 1-1/2 inches (13 to 38 mm)] [1 to 2-1/4 inches (25 to 57 mm)] <Insert dimensions>** long.

1. Products: Subject to compliance with requirements, provide one of the following:

- a. Monofilament Micro-Fibers:

- 1) Axim Italcementi Group, Inc.; Fibrasol II P.
- 2) Euclid Chemical Company (The), an RPM company; Fiberstrand **[100] [150]**.
- 3) FORTA Corporation; FORTA Econo-Mono.

- 4) Grace Construction Products, W. R. Grace & Co.; Grace MicroFiber.
- 5) Metalcrete Industries; Polystrand 1000.
- 6) Nycon, Inc.; ProConM.
- 7) Propex Concrete Systems Corp.; Fibermesh 150.
- 8) Sika Corporation; Sika Fiber PPM.
- 9) **<Insert manufacturer's name>**
- 10) or approved equal.

b. Fibrillated Micro-Fibers:

- 1) Axim Italcementi Group, Inc.; Fibrasol F.
- 2) Euclid Chemical Company (The), an RPM company; Fiberstrand F.
- 3) FORTA Corporation; FORTA [**Econo-Net**] [**Ultra-Net**].
- 4) Grace Construction Products, W. R. Grace & Co.; Grace Fibers.
- 5) Nycon, Inc.; ProConF.
- 6) Propex Concrete Systems Corp.; Fibermesh 300.
- 7) Sika Corporation; Sika Fiber PPF.
- 8) **<Insert manufacturer's name>**
- 9) or approved equal.

C. Synthetic Macro-Fiber: Polyolefin macro-fibers engineered and designed for use in concrete, complying with ASTM C 1116/C 1116M, Type III, [**1 to 2-1/4 inches (25 to 57 mm)**] **<Insert dimensions>** long.

1. Products: Subject to compliance with requirements, provide one of the following:

- a. 3M; Scotchcast Polyolefin Fibers [**1"**] [**2"**].
- b. Euclid Chemical Company (The), an RPM company; Tuf-Strand SF.
- c. FORTA Corporation; FORTA FERRO.
- d. Grace Construction Products, W. R. Grace & Co.; Strux 90/40.
- e. Nycon, Inc.; XL.
- f. Propex Concrete Systems Corp.; Fibermesh 650.
- g. Sika Corporation; Sika Fiber [**MS**] [**MS10**].
- h. **<Insert manufacturer's name>**
- i. or approved equal.

2.7 WATERSTOPS

A. Flexible Rubber Waterstops: CE CRD-C 513, [**with factory-installed metal eyelets,**] for embedding in concrete to prevent passage of fluids through joints. Factory fabricate corners, intersections, and directional changes.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Greenstreak.
- b. Williams Products, Inc.
- c. **<Insert manufacturer's name>**
- d. or approved equal.

2. Profile: **[Flat, dumbbell with center bulb] [Flat, dumbbell without center bulb] [Ribbed with center bulb] [Ribbed without center bulb] [As indicated] <Insert profile>**.
 3. Dimensions: **[4 inches by 3/16 inch thick (100 mm by 4.75 mm thick)] [6 inches by 3/8 inch thick (150 mm by 10 mm thick)] [9 inches by 3/8 inch thick (225 mm by 10 mm thick)] <Insert dimensions>**; nontapered.
- B. Chemically Resistant Flexible Waterstops: Thermoplastic elastomer rubber waterstops[**with factory-installed metal eyelets**], for embedding in concrete to prevent passage of fluids through joints; resistant to oils, solvents, and chemicals. Factory fabricate corners, intersections, and directional changes.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. JP Specialties, Inc.; Earth Shield TPE-Rubber.
 - b. Vinylex Corp.; PetroStop.
 - c. WESTEC Barrier Technologies, Inc.; 600 Series TPE-R.
 - d. **<Insert manufacturer's name>**
 - e. or approved equal.
 2. Profile: **[Flat, dumbbell with center bulb] [Flat, dumbbell without center bulb] [Ribbed with center bulb] [Ribbed without center bulb] [As indicated] <Insert profile>**.
 3. Dimensions: **[4 inches by 3/16 inch thick (100 mm by 4.75 mm thick)] [6 inches by 3/16 inch thick (150 mm by 4.75 mm thick)] [6 inches by 3/8 inch thick (150 mm by 10 mm thick)] [9 inches by 3/16 inch thick (225 mm by 4.75 mm thick)] [9 inches by 3/8 inch thick (225 mm by 10 mm thick)] <Insert dimensions>**; nontapered.
- C. Flexible PVC Waterstops: CE CRD-C 572,[**with factory-installed metal eyelets**], for embedding in concrete to prevent passage of fluids through joints. Factory fabricate corners, intersections, and directional changes.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. BoMetals, Inc.
 - b. Greenstreak.
 - c. Paul Murphy Plastics Company.
 - d. Vinylex Corp.
 - e. **<Insert manufacturer's name>**
 - f. or approved equal.
 2. Profile: **[Flat, dumbbell with center bulb] [Flat, dumbbell without center bulb] [Ribbed with center bulb] [Ribbed without center bulb] [As indicated] <Insert profile>**.
 3. Dimensions: **[4 inches by 3/16 inch thick (100 mm by 4.75 mm thick)] [6 inches by 3/8 inch thick (150 mm by 10 mm thick)] [9 inches by 3/8 inch thick (225 mm by 10 mm thick)] <Insert dimensions>**; nontapered.

- D. Self-Expanding Butyl Strip Waterstops: Manufactured rectangular or trapezoidal strip, butyl rubber with sodium bentonite or other hydrophilic polymers, for adhesive bonding to concrete, **3/4 by 1 inch** (19 by 25 mm).
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Carlisle Coatings & Waterproofing, Inc.; MiraSTOP.
 - b. CETCO; Volclay Waterstop-RX.
 - c. Concrete Sealants Inc.; Conseal CS-231.
 - d. Greenstreak; Swellstop.
 - e. Henry Company, Sealants Division; Hydro-Flex.
 - f. JP Specialties, Inc.; Earth Shield Type 20.
 - g. **<Insert manufacturer's name>**
 - h. or approved equal.

- E. Self-Expanding Rubber Strip Waterstops: Manufactured rectangular or trapezoidal strip, bentonite-free hydrophilic polymer modified chloroprene rubber, for adhesive bonding to concrete, **3/8 by 3/4 inch** (10 by 19 mm).
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Adeka Ultra Seal/OCM, Inc.; Adeka Ultra Seal.
 - b. Greenstreak; Hydrotite.
 - c. Vinylex Corp.; Swellseal.
 - d. **<Insert manufacturer's name>**
 - e. or approved equal.

2.8 VAPOR RETARDERS

- A. Sheet Vapor Retarder: ASTM E 1745, Class A[, **except with maximum perm rating of <Insert rating>**]. Include manufacturer's recommended adhesive or pressure-sensitive tape.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Carlisle Coatings & Waterproofing, Inc.; Blackline 400.
 - b. Fortifiber Building Systems Group; Moistop Ultra [15] [10].
 - c. Grace Construction Products, W. R. Grace & Co.; Florprufe 120.
 - d. Insulation Solutions, Inc.; Viper VaporCheck [16] [10] [6.5].
 - e. Meadows, W. R., Inc.; Perminator [15 mil] [10 mil].
 - f. Raven Industries Inc.; Vapor Block [15] [10].
 - g. Reef Industries, Inc.; Griffolyn [Type-105] [Type-65G] [15 mil Green] [10 mil Green].
 - h. Stego Industries, LLC; Stego Wrap [15 mil Class A] [10 mil Class A].
 - i. **<Insert manufacturer's name>**
 - j. or approved equal.
- B. Sheet Vapor Retarder: ASTM E 1745, Class B[, **except with maximum perm rating of <Insert rating>**]. Include manufacturer's recommended adhesive or

pressure-sensitive tape.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Fortifiber Building Systems Group; Moistop Ultra 6.
 - b. Raven Industries Inc.; Griffolyn [**Type-65**] [**10 mil Green**].
 - c. Stego Industries, LLC; Stego Wrap, 10 mil Class A.
 - d. <Insert manufacturer's name>
 - e. or approved equal.

- C. Sheet Vapor Retarder: ASTM E 1745, Class C[, **except with maximum perm rating of <Insert rating>**]. Include manufacturer's recommended adhesive or pressure-sensitive joint tape.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Fortifiber Building Systems Group; Moistop Plus.
 - b. Raven Industries Inc.; Vapor Block 6.
 - c. Reef Industries, Inc.; Griffolyn [**Type-65**] [**Type-85**].
 - d. Stego Industries, LLC; Stego Wrap, 10 mil Class C.
 - e. <Insert manufacturer's name>
 - f. or approved equal.

- D. Bituminous Vapor Retarder: **110-mil-** (2.8-mm-) thick, semiflexible, 7-ply sheet membrane consisting of reinforced core and carrier sheet with fortified asphalt layers, protective weathercoating, and removable plastic release liner. Furnish manufacturer's accessories including bonding asphalt, pointing mastics, and self-adhering joint tape.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Meadows, W. R., Inc.; Premoulded Membrane Vapor Seal.
 - b. <Insert manufacturer's name>
 - c. or approved equal.
 2. Water-Vapor Permeance: **0.00 grains/h x sq. ft. x inches Hg** (0.00 ng/Pa x s x sq. m); ASTM E 154.
 3. Tensile Strength: **140 lbf/inch** (24.5 kN/m); ASTM E 154.
 4. Puncture Resistance: **90 lbf** (400N); ASTM E 154.

- E. Granular Fill: Clean mixture of crushed stone or crushed or uncrushed gravel; ASTM D 448, Size 57, with 100 percent passing a **1-1/2-inch** (37.5-mm) sieve and 0 to 5 percent passing a **No. 8** (2.36-mm) sieve.

- F. Fine-Graded Granular Material: Clean mixture of crushed stone, crushed gravel, and manufactured or natural sand; ASTM D 448, Size 10, with 100 percent passing a **3/8-inch** (9.5-mm) sieve, 10 to 30 percent passing a **No. 100** (0.15-mm) sieve, and at least 5 percent passing **No. 200** (0.075-mm) sieve; complying with deleterious substance limits of ASTM C 33 for fine aggregates.

2.9 FLOOR AND SLAB TREATMENTS

- A. Slip-Resistive Emery Aggregate Finish: Factory-graded, packaged, rustproof, nonglazing, abrasive, crushed emery aggregate containing not less than 50 percent aluminum oxide and not less than 20 percent ferric oxide; unaffected by freezing, moisture, and cleaning materials with 100 percent passing [**3/8-inch (9.5-mm)**] [**No. 4 (4.75-mm)**] [**No. 8 (2.36-mm)**] **<Insert size or gradation>** sieve.
- Products: Subject to compliance with requirements, provide one of the following:
 - Anti-Hydro International, Inc.; Emery.
 - Dayton Superior Corporation; Emery Tuff Non-Slip.
 - Lambert Corporation; EMAG-20.
 - L&M Construction Chemicals, Inc.; Grip It.
 - Metalcrete Industries; Metco Anti-Skid Aggregate.
 - <Insert manufacturer's name>**
 - or approved equal.
- B. Slip-Resistive Aluminum Granule Finish: Factory-graded, packaged, rustproof, nonglazing, abrasive aggregate of not less than 95 percent fused aluminum-oxide granules.
- Products: Subject to compliance with requirements, provide one of the following:
 - Anti-Hydro International, Inc.; A-H Alox.
 - BASF Construction Chemicals - Building Systems; Frictex NS.
 - L&M Construction Chemicals, Inc.; Grip It AO.
 - <Insert manufacturer's name>**
 - or approved equal.
- C. Emery Dry-Shake Floor Hardener: [**Pigmented**] [**Unpigmented**], factory-packaged, dry combination of Portland cement, graded emery aggregate, and plasticizing admixture; with emery aggregate consisting of no less than 60 percent of total aggregate content.
- Color: [**As indicated by manufacturer's designation**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**].
- D. Metallic Dry-Shake Floor Hardener: [**Pigmented**] [**Unpigmented**], factory-packaged, dry combination of Portland cement, graded metallic aggregate, rust inhibitors, and plasticizing admixture; with metallic aggregate consisting of no less than 65 percent of total aggregate content.
- Color: [**As indicated by manufacturer's designation**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**].
- E. Unpigmented Mineral Dry-Shake Floor Hardener: Factory-packaged dry combination of Portland cement, graded quartz aggregate, and plasticizing admixture.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. BASF Construction Chemicals - Building Systems; Maximent.
 - b. ChemMasters; ConColor.
 - c. Conspec by Dayton Superior; Conshake 500.
 - d. Dayton Superior Corporation; Quartz Tuff.
 - e. Edoco by Dayton Superior; Burke Non Metallic Floor Hardener 250.
 - f. Euclid Chemical Company (The), an RPM company; Surfex.
 - g. Kaufman Products, Inc.; Tycron.
 - h. Lambert Corporation; Colorhard.
 - i. L&M Construction Chemicals, Inc.; Quartzplate FF.
 - j. Metalcrete Industries; Floor Quartz.
 - k. Scofield, L. M. Company; Lithochrome Color Hardener.
 - l. Symons by Dayton Superior; Hard Top.
 - m. **<Insert manufacturer's name>**
 - n. or approved equal.

- F. Pigmented Mineral Dry-Shake Floor Hardener: Factory-packaged, dry combination of Portland cement, graded quartz aggregate, color pigments, and plasticizing admixture. Use color pigments that are finely ground, nonfading mineral oxides interground with cement.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. BASF Construction Chemicals - Building Systems; Mastercron.
 - b. ChemMasters; ConColor.
 - c. Conspec by Dayton Superior; Conshake 600 Colortone.
 - d. Dayton Superior Corporation; Quartz Tuff.
 - e. Edoco by Dayton Superior; Burke Non Metallic Floor Hardener 200 - 205.
 - f. Euclid Chemical Company (The), an RPM company; Surfex.
 - g. Kaufman Products, Inc.; Tycron.
 - h. Lambert Corporation; Colorhard.
 - i. L&M Construction Chemicals, Inc.; Quartz Plate FF.
 - j. Metalcrete Industries; Floor Quartz.
 - k. Scofield, L. M. Company; Lithochrome Color Hardener.
 - l. Symons by Dayton Superior; Color Hardener.
 - m. **<Insert manufacturer's name>**
 - n. or approved equal.

2. Color: **[As indicated by manufacturer's designation] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range].**

2.10 LIQUID FLOOR TREATMENTS

- A. VOC Content: Liquid floor treatments shall have a VOC content of 200 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

B. Penetrating Liquid Floor Treatment: Clear, chemically reactive, waterborne solution of inorganic silicate or silicate materials and proprietary components; odorless; that penetrates, hardens, and densifies concrete surfaces.

1. Products: Subject to compliance with requirements, provide one of the following:

- a. ChemMasters; Chemisil Plus.
- b. ChemTec Int'l; ChemTec One.
- c. Conspec by Dayton Superior; Intraseal.
- d. Curecrete Distribution Inc.; Ashford Formula.
- e. Dayton Superior Corporation; Day-Chem Sure Hard (J-17).
- f. Edoco by Dayton Superior; Titan Hard.
- g. Euclid Chemical Company (The), an RPM company; Euco Diamond Hard.
- h. Kaufman Products, Inc.; SureHard.
- i. L&M Construction Chemicals, Inc.; Seal Hard.
- j. Meadows, W. R., Inc.; LIQUI-HARD.
- k. Metalcrete Industries; Floorsaver.
- l. Nox-Crete Products Group; Duro-Nox.
- m. Symons by Dayton Superior; Buff Hard.
- n. US SPEC, Division of US Mix Products Company; US SPEC Industraseal.
- o. Vexcon Chemicals, Inc.; Vexcon StarSeal PS Clear.
- p. **<Insert manufacturer's name>**
- q. or approved equal.

C. Penetrating Liquid Floor Treatments for Polished Concrete Finish: Clear, waterborne solution of inorganic silicate or silicate materials and proprietary components; odorless; that penetrates, hardens, and is suitable for polished concrete surfaces.

1. Products: Subject to compliance with requirements, provide one of the following:

- a. Advanced Floor Products; Retro-Plate 99.
- b. L&M Construction Chemicals, Inc.; FGS Hardener Plus.
- c. QuestMark, a division of CentiMark Corporation; DiamondQuest Densifying Impregnator Application.
- d. **<Insert manufacturer's name>**
- e. or approved equal.

2.11 CURING MATERIALS

A. Evaporation Retarder: Waterborne, monomolecular film forming, manufactured for application to fresh concrete.

1. Products: Subject to compliance with requirements, provide one of the following:

- a. Axim Italcementi Group, Inc.; CATExOL CimFilm.
- b. BASF Construction Chemicals - Building Systems; Confilm.
- c. ChemMasters; SprayFilm.
- d. Conspec by Dayton Superior; Aquafilm.
- e. Dayton Superior Corporation; Sure Film (J-74).

- f. Edoco by Dayton Superior; BurkeFilm.
 - g. Euclid Chemical Company (The), an RPM company; Eucobar.
 - h. Kaufman Products, Inc.; Vapor-Aid.
 - i. Lambert Corporation; LAMBCO Skin.
 - j. L&M Construction Chemicals, Inc.; E-CON.
 - k. Meadows, W. R., Inc.; EVAPRE.
 - l. Metalcrete Industries; Waterhold.
 - m. Nox-Crete Products Group; MONOFILM.
 - n. Sika Corporation; SikaFilm.
 - o. SpecChem, LLC; Spec Film.
 - p. Symons by Dayton Superior; Finishing Aid.
 - q. TK Products, Division of Sierra Corporation; TK-2120 TRI-FILM.
 - r. Unitex; PRO-FILM.
 - s. Vexcon Chemicals, Inc.; Certi-Vex Envio Set.
 - t. **<Insert manufacturer's name>**
 - u. or approved equal.
- B. Absorptive Cover: AASHTO M 182, Class 2, burlap cloth made from jute or kenaf, weighing approximately 9 oz./sq. yd. (305 g/sq. m) when dry.
- C. Moisture-Retaining Cover: ASTM C 171, polyethylene film or white burlap-polyethylene sheet.
- D. Water: Potable.
- E. Clear, Waterborne, Membrane-Forming Curing Compound: ASTM C 309, Type 1, Class B, dissipating.
- 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Anti-Hydro International, Inc.; AH Curing Compound #2 DR WB.
 - b. BASF Construction Chemicals - Building Systems; Kure 200.
 - c. ChemMasters; Safe-Cure Clear.
 - d. Conspec by Dayton Superior; W.B. Resin Cure.
 - e. Dayton Superior Corporation; Day-Chem Rez Cure (J-11-W).
 - f. Edoco by Dayton Superior; Res X Cure WB.
 - g. Euclid Chemical Company (The), an RPM company; Kurez W VOX; TAMMSCURE WB 30C.
 - h. Kaufman Products, Inc.; Thinfilm 420.
 - i. Lambert Corporation; AQUA KURE - CLEAR.
 - j. L&M Construction Chemicals, Inc.; L&M Cure R.
 - k. Meadows, W. R., Inc.; 1100-CLEAR.
 - l. Nox-Crete Products Group; Resin Cure E.
 - m. Right Pointe; Clear Water Resin.
 - n. SpecChem, LLC; Spec Rez Clear.
 - o. Symons by Dayton Superior; Resi-Chem Clear.
 - p. TK Products, Division of Sierra Corporation; TK-2519 DC WB.
 - q. Vexcon Chemicals, Inc.; Certi-Vex Enviocure 100.
 - r. **<Insert manufacturer's name>**
 - s. or approved equal.

- F. Clear, Waterborne, Membrane-Forming Curing Compound: ASTM C 309, Type 1, Class B, nondissipating[, **certified by curing compound manufacturer to not interfere with bonding of floor covering**].
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Anti-Hydro International, Inc.; AH Clear Cure WB.
 - b. BASF Construction Chemicals - Building Systems; Kure-N-Seal WB.
 - c. ChemMasters; Safe-Cure & Seal 20.
 - d. Conspec by Dayton Superior; Cure and Seal WB.
 - e. Cresset Chemical Company; Crete-Trete 309-VOC Cure & Seal.
 - f. Dayton Superior Corporation; Safe Cure and Seal (J-18).
 - g. Edoco by Dayton Superior; Spartan Cote WB II.
 - h. Euclid Chemical Company (The), an RPM company; Aqua Cure VOX; Clearseal WB 150.
 - i. Kaufman Products, Inc.; Cure & Seal 309 Emulsion.
 - j. Lambert Corporation; Glazecote Sealer-20.
 - k. L&M Construction Chemicals, Inc.; Dress & Seal WB.

 - m. Vexcon Chemicals, Inc.; Vexcon Starseal 1315.
 - n. **<Insert manufacturer's name>**
 - o. or approved equal.
 2. VOC Content: Curing and sealing compounds shall have a VOC content of 200 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method

24).

2.12 RELATED MATERIALS

- A. Expansion- and Isolation-Joint-Filler Strips: [**ASTM D 1751, asphalt-saturated cellulosic fiber**] [or] [**ASTM D 1752, cork or self-expanding cork**].
- B. Semirigid Joint Filler: Two-component, semirigid, 100 percent solids, [**epoxy resin with a Type A shore durometer hardness of 80**] [**aromatic polyurea with a Type A shore durometer hardness range of 90 to 95**] per ASTM D 2240.
- C. Bonding Agent: ASTM C 1059/C 1059M, Type II, non-redispersible, acrylic emulsion, or styrene butadiene.
- D. Epoxy Bonding Adhesive: ASTM C 881, two-component epoxy resin, capable of humid curing and bonding to damp surfaces, of class suitable for application temperature and of grade to suit requirements, and as follows:
 - 1. [**Types I and II, non-load bearing**] [**Types IV and V, load bearing**], for bonding hardened or freshly mixed concrete to hardened concrete.
- E. Reglets: Fabricate reglets of not less than **0.022-inch- (0.55-mm-)** thick, galvanized-steel sheet. Temporarily fill or cover face opening of reglet to prevent intrusion of concrete or debris.
- F. Dovetail Anchor Slots: Hot-dip galvanized-steel sheet, not less than **0.034 inch (0.85 mm)** thick, with bent tab anchors. Temporarily fill or cover face opening of slots to prevent intrusion of concrete or debris.

2.13 REPAIR MATERIALS

- A. Repair Underlayment: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from **1/8 inch (3.2 mm)** and that can be feathered at edges to match adjacent floor elevations.
 - 1. Cement Binder: ASTM C 150, Portland cement or hydraulic or blended hydraulic cement as defined in ASTM C 219.
 - 2. Primer: Product of underlayment manufacturer recommended for substrate, conditions, and application.
 - 3. Aggregate: Well-graded, washed gravel, **1/8 to 1/4 inch (3.2 to 6 mm)** or coarse sand as recommended by underlayment manufacturer.
 - 4. Compressive Strength: Not less than [**4100 psi (29 MPa)**] **<Insert strength>** at 28 days when tested according to ASTM C 109/C 109M.
- B. Repair Overlayment: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from **1/4 inch (6.4 mm)** and that can be filled in over a scarified surface to match adjacent floor elevations.
 - 1. Cement Binder: ASTM C 150, Portland cement or hydraulic or blended hydraulic

- cement as defined in ASTM C 219.
2. Primer: Product of topping manufacturer recommended for substrate, conditions, and application.
3. Aggregate: Well-graded, washed gravel, **1/8 to 1/4 inch** (3.2 to 6 mm) or coarse sand as recommended by topping manufacturer.
4. Compressive Strength: Not less than **[5000 psi (34.5 MPa)]** <Insert strength> at 28 days when tested according to ASTM C 109/C 109M.

2.14 CONCRETE MIXTURES, GENERAL

- A. Prepare design mixtures for each type and strength of concrete, proportioned on the basis of laboratory trial mixture or field test data, or both, according to ACI 301.
 1. Use a qualified independent testing agency for preparing and reporting proposed mixture designs based on laboratory trial mixtures.
- B. Cementitious Materials: **[Use fly ash, pozzolan, ground granulated blast-furnace slag, and silica fume as needed to reduce the total amount of Portland cement, which would otherwise be used, by not less than 40 percent.] [Limit percentage, by weight, of cementitious materials other than Portland cement in concrete as follows:]**
 1. Fly Ash: 25 percent.
 2. Combined Fly Ash and Pozzolan: 25 percent.
 3. Ground Granulated Blast-Furnace Slag: 50 percent.
 4. Combined Fly Ash or Pozzolan and Ground Granulated Blast-Furnace Slag: 50 percent Portland cement minimum, with fly ash or pozzolan not exceeding 25 percent.
- C. Retain three subparagraphs below if silica fume is permitted. Limits of silica fume alone or in combination with other cementitious materials below are based on ACI 301 and ACI 318 (ACI 318M).
 1. Silica Fume: 10 percent.
 2. Combined Fly Ash, Pozzolans, and Silica Fume: 35 percent with fly ash or pozzolans not exceeding 25 percent and silica fume not exceeding 10 percent.
 3. Combined Fly Ash or Pozzolans, Ground Granulated Blast-Furnace Slag, and Silica Fume: 50 percent with fly ash or pozzolans not exceeding 25 percent and silica fume not exceeding 10 percent.
- D. Limit water-soluble, chloride-ion content in hardened concrete to **[0.06] [0.15] [0.30] [1.00]** percent by weight of cement.
- E. Admixtures: Use admixtures according to manufacturer's written instructions.
 1. Use **[water-reducing] [high-range water-reducing] [or] [plasticizing]** admixture in concrete, as required, for placement and workability.
 2. Use water-reducing and retarding admixture when required by high temperatures, low humidity, or other adverse placement conditions.

3. Use water-reducing admixture in pumped concrete, concrete for heavy-use industrial slabs and parking structure slabs, concrete required to be watertight, and concrete with a water-cementitious materials ratio below 0.50.
 4. Use corrosion-inhibiting admixture in concrete mixtures where indicated.
- F. Color Pigment: Add color pigment to concrete mixture according to manufacturer's written instructions and to result in hardened concrete color consistent with approved mockup.

2.15 CONCRETE MIXTURES FOR BUILDING ELEMENTS

A. Footings: Proportion normal-weight concrete mixture as follows:

1. Minimum Compressive Strength: [**5000 psi (34.5 MPa)**] [**4500 psi (31 MPa)**] [**4000 psi (27.6 MPa)**] [**3500 psi (24.1 MPa)**] [**3000 psi (20.7 MPa)**] <Insert strength> at 28 days.
2. Maximum Water-Cementitious Materials Ratio: [**0.50**] [**0.45**] [**0.40**] <Insert ratio>.
3. Slump Limit: [**4 inches (100 mm)**] [**5 inches (125 mm)**] [**8 inches (200 mm)**] for **concrete with verified slump of 2 to 4 inches (50 to 100 mm) before adding high-range water-reducing admixture or plasticizing admixture**] <Insert dimension>, plus or minus 1 inch (25 mm).
4. Air Content: [**5.5**] <Insert number> percent, plus or minus 1.5 percent at point of delivery for 1-1/2-inch (38-mm) nominal maximum aggregate size.
5. Air Content: [**6**] <Insert number> percent, plus or minus 1.5 percent at point of delivery for [**1-inch (25-mm)**] [**3/4-inch (19-mm)**] nominal maximum aggregate size.

B. Foundation Walls: Proportion normal-weight concrete mixture as follows:

1. Minimum Compressive Strength: [**5000 psi (34.5 MPa)**] [**4500 psi (31 MPa)**] [**4000 psi (27.6 MPa)**] [**3500 psi (24.1 MPa)**] [**3000 psi (20.7 MPa)**] <Insert strength> at 28 days.
2. Maximum Water-Cementitious Materials Ratio: [**0.50**] [**0.45**] [**0.40**] <Insert ratio>.
3. Slump Limit: [**4 inches (100 mm)**] [**5 inches (125 mm)**] [**8 inches (200 mm)**] for **concrete with verified slump of 2 to 4 inches (50 to 100 mm) before adding high-range water-reducing admixture or plasticizing admixture**] <Insert dimension>, plus or minus 1 inch (25 mm).
4. Air Content: [**5.5**] <Insert number> percent, plus or minus 1.5 percent at point of delivery for 1-1/2-inch (38-mm) nominal maximum aggregate size.
5. Air Content: [**6**] <Insert number> percent, plus or minus 1.5 percent at point of delivery for [**1-inch (25-mm)**] [**3/4-inch (19-mm)**] nominal maximum aggregate size.

C. Slabs-on-Grade: Proportion normal-weight concrete mixture as follows:

1. Minimum Compressive Strength: [**5000 psi (34.5 MPa)**] [**4500 psi (31 MPa)**] [**4000 psi (27.6 MPa)**] [**3500 psi (24.1 MPa)**] [**3000 psi (20.7 MPa)**] <Insert strength> at 28 days.

2. Minimum Cementitious Materials Content: **[470 lb/cu. yd. (279 kg/cu. m)] [520 lb/cu. yd. (309 kg/cu. m)] [540 lb/cu. yd. (320 kg/cu. m)]**.
3. Slump Limit: **[4 inches (100 mm)] [5 inches (125 mm)]**, plus or minus **1 inch (25 mm)**.
4. Air Content: **[5.5] <Insert number>** percent, plus or minus 1.5 percent at point of delivery for **1-1/2-inch (38-mm)** nominal maximum aggregate size.
5. Air Content: **[6] <Insert number>** percent, plus or minus 1.5 percent at point of delivery for **[1-inch (25-mm)] [3/4-inch (19-mm)]** nominal maximum aggregate size.
6. Air Content: Do not allow air content of trowel-finished floors to exceed 3 percent.
7. Steel-Fiber Reinforcement: Add to concrete mixture, according to manufacturer's written instructions, at a rate of **[50 lb/cu. yd. (29.7 kg/cu. m)] <Insert weight>**.
8. Synthetic Micro-Fiber: Uniformly disperse in concrete mixture at manufacturer's recommended rate, but not less than **[1.0 lb/cu. yd. (0.60 kg/cu. m)] [1.5 lb/cu. yd. (0.90 kg/cu. m)] <Insert dosage>**.
9. Synthetic Macro-Fiber: Uniformly disperse in concrete mixture at manufacturer's recommended rate, but not less than **[4.0 lb/cu. yd. (2.4 kg/cu. m)] [5 lb/cu. yd. (3 kg/cu. m)] <Insert dosage>**.

D. Suspended Slabs: Proportion normal-weight concrete mixture as follows:

1. Minimum Compressive Strength: **[5000 psi (34.5 MPa)] [4500 psi (31 MPa)] [4000 psi (27.6 MPa)] [3500 psi (24.1 MPa)] [3000 psi (20.7 MPa)] <Insert strength>** at 28 days.
2. Minimum Cementitious Materials Content: **[470 lb/cu. yd. (279 kg/cu. m)] [520 lb/cu. yd. (309 kg/cu. m)] [540 lb/cu. yd. (320 kg/cu. m)]**.
3. Slump Limit: **[4 inches (100 mm)] [5 inches (125 mm)]**, plus or minus **1 inch (25 mm)**.
4. Air Content: **[5.5] <Insert number>** percent, plus or minus 1.5 percent at point of delivery for **1-1/2-inch (38-mm)** nominal maximum aggregate size.
5. Air Content: **[6] <Insert number>** percent, plus or minus 1.5 percent at point of delivery for **[1-inch (25-mm)] [3/4-inch (19-mm)]** nominal maximum aggregate size.
6. Air Content: Do not allow air content of trowel-finished floors to exceed 3 percent.
7. Steel-Fiber Reinforcement: Add to concrete mixture, according to manufacturer's written instructions, at a rate of **[50 lb/cu. yd. (29.7 kg/cu. m)] <Insert weight>**.
8. Synthetic Micro-Fiber: Uniformly disperse in concrete mixture at manufacturer's recommended rate, but not less than **[1.0 lb/cu. yd. (0.60 kg/cu. m)] [1.5 lb/cu. yd. (0.90 kg/cu. m)] <Insert dosage>**.
9. Synthetic Macro-Fiber: Uniformly disperse in concrete mixture at manufacturer's recommended rate, but not less than **[4.0 lb/cu. yd. (2.4 kg/cu. m)] [5 lb/cu. yd. (3 kg/cu. m)] <Insert dosage>**.

E. Suspended Slabs: Proportion structural lightweight concrete mixture as follows:

1. Minimum Compressive Strength: **[5000 psi (34.5 MPa)] [4500 psi (31 MPa)] [4000 psi (27.6 MPa)] [3500 psi (24.1 MPa)] [3000 psi (20.7 MPa)] <Insert strength>** at 28 days.

2. Calculated Equilibrium Unit Weight: [**115 lb/cu. ft. (1842 kg/cu. m)**] [**110 lb/cu. ft. (1762 kg/cu. m)**] [**105 lb/cu. ft. (1682 kg/cu. m)**], plus or minus 3 lb/cu. ft. (48.1 kg/cu. m) as determined by ASTM C 567.
3. Slump Limit: [**4 inches (100 mm)**] [**5 inches (125 mm)**], plus or minus 1 inch (25 mm).
4. Air Content: 6 percent, plus or minus 2 percent at point of delivery for nominal maximum aggregate size greater than 3/8 inch (10 mm).
5. Air Content: 7 percent, plus or minus 2 percent at point of delivery for nominal maximum aggregate size 3/8 inch (10 mm) or less.
6. Air Content: Do not allow air content of trowel-finished floors to exceed 3 percent.
7. Steel-Fiber Reinforcement: Add to concrete mixture, according to manufacturer's written instructions, at a rate of [**50 lb/cu. yd. (29.7 kg/cu. m)**] <Insert weight>.
8. Synthetic Micro-Fiber: Uniformly disperse in concrete mixture at manufacturer's recommended rate, but not less than [**1.0 lb/cu. yd. (0.60 kg/cu. m)**] [**1.5 lb/cu. yd. (0.90 kg/cu. m)**] <Insert dosage>.
9. Synthetic Macro-Fiber: Uniformly disperse in concrete mixture at manufacturer's recommended rate, but not less than [**4.0 lb/cu. yd. (2.4 kg/cu. m)**] [**5 lb/cu. yd. (3 kg/cu. m)**] <Insert dosage>.

F. Concrete Toppings: Proportion normal-weight concrete mixture as follows:

1. Minimum Compressive Strength: [**5000 psi (34.5 MPa)**] [**4500 psi (31 MPa)**] [**4000 psi (27.6 MPa)**] [**3500 psi (24.1 MPa)**] [**3000 psi (20.7 MPa)**] <Insert strength> at 28 days.
2. Minimum Cementitious Materials Content: [**470 lb/cu. yd. (279 kg/cu. m)**] [**520 lb/cu. yd. (309 kg/cu. m)**] [**540 lb/cu. yd. (320 kg/cu. m)**].
3. Slump Limit: [**4 inches (100 mm)**] [**5 inches (125 mm)**], plus or minus 1 inch (25 mm).
4. Air Content: [**5.5**] <Insert number> percent, plus or minus 1.5 percent at point of delivery for 1-1/2-inch (38-mm) nominal maximum aggregate size.
5. Air Content: [**6**] <Insert number> percent, plus or minus 1.5 percent at point of delivery for [**1-inch (25-mm)**] [**3/4-inch (19-mm)**] nominal maximum aggregate size.
6. Air Content: Do not allow air content of trowel-finished toppings to exceed 3 percent.
7. Steel-Fiber Reinforcement: Add to concrete mixture, according to manufacturer's written instructions, at a rate of [**50 lb/cu. yd. (29.7 kg/cu. m)**] <Insert weight>.
8. Synthetic Micro-Fiber: Uniformly disperse in concrete mixture at manufacturer's recommended rate, but not less than [**1.0 lb/cu. yd. (0.60 kg/cu. m)**] [**1.5 lb/cu. yd. (0.90 kg/cu. m)**] <Insert dosage>.
9. Synthetic Macro-Fiber: Uniformly disperse in concrete mixture at manufacturer's recommended rate, but not less than [**4.0 lb/cu. yd. (2.4 kg/cu. m)**] [**5 lb/cu. yd. (3 kg/cu. m)**] <Insert dosage>.

G. Building Frame Members: Proportion normal-weight concrete mixture as follows:

1. Minimum Compressive Strength: [**5000 psi (34.5 MPa)**] [**4500 psi (31 MPa)**] [**4000 psi (27.6 MPa)**] [**3500 psi (24.1 MPa)**] [**3000 psi (20.7 MPa)**] <Insert strength> at 28 days.
2. Maximum Water-Cementitious Materials Ratio: [**0.50**] [**0.45**] [**0.40**] <Insert ratio>.

3. Slump Limit: **[4 inches (100 mm)] [5 inches (125 mm)] [8 inches (200 mm) for concrete with verified slump of 2 to 4 inches (50 to 100 mm) before adding high-range water-reducing admixture or plasticizing admixture]** <Insert dimension>, plus or minus 1 inch (25 mm).
4. Air Content: **[5.5]** <Insert number> percent, plus or minus 1.5 percent at point of delivery for **1-1/2-inch (38-mm)** nominal maximum aggregate size.
5. Air Content: **[6]** <Insert number> percent, plus or minus 1.5 percent at point of delivery for **[1-inch (25-mm)] [3/4-inch (19-mm)]** nominal maximum aggregate size.

H. Building Walls: Proportion normal-weight concrete mixture as follows:

1. Minimum Compressive Strength: **[5000 psi (34.5 MPa)] [4500 psi (31 MPa)] [4000 psi (27.6 MPa)] [3500 psi (24.1 MPa)] [3000 psi (20.7 MPa)]** <Insert strength> at 28 days.
2. Maximum Water-Cementitious Materials Ratio: **[0.50] [0.45] [0.40]** <Insert ratio>.
3. Slump Limit: **[4 inches (100 mm)] [5 inches (125 mm)] [8 inches (200 mm) for concrete with verified slump of 2 to 4 inches (50 to 100 mm) before adding high-range water-reducing admixture or plasticizing admixture]** <Insert dimension>, plus or minus 1 inch (25 mm).
4. Air Content: **[5.5]** <Insert number> percent, plus or minus 1.5 percent at point of delivery for **1-1/2-inch (38-mm)** nominal maximum aggregate size.
5. Air Content: **[6]** <Insert number> percent, plus or minus 1.5 percent at point of delivery for **[1-inch (25-mm)] [3/4-inch (19-mm)]** nominal maximum aggregate size.

2.16 FABRICATING REINFORCEMENT

- A. Fabricate steel reinforcement according to CRSI's "Manual of Standard Practice."

2.17 CONCRETE MIXING

- A. Ready-Mixed Concrete: Measure, batch, mix, and deliver concrete according to ASTM C 94/C 94M[**and ASTM C 1116/C 1116M**], and furnish batch ticket information.

1. When air temperature is between **85 and 90 deg F (30 and 32 deg C)**, reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above **90 deg F (32 deg C)**, reduce mixing and delivery time to 60 minutes.

- B. Project-Site Mixing: Measure, batch, and mix concrete materials and concrete according to ASTM C 94/C 94M. Mix concrete materials in appropriate drum-type batch machine mixer.

1. For mixer capacity of **1 cu. yd. (0.76 cu. m)** or smaller, continue mixing at least 1-1/2 minutes, but not more than 5 minutes after ingredients are in mixer, before any part of batch is released.
2. For mixer capacity larger than **1 cu. yd. (0.76 cu. m)**, increase mixing time by 15 seconds for each additional **1 cu. yd. (0.76 cu. m)**.

3. Provide batch ticket for each batch discharged and used in the Work, indicating Project identification name and number, date, mixture type, mixture time, quantity, and amount of water added. Record approximate location of final deposit in structure.

PART 3 - EXECUTION

3.1 FORMWORK

- A. Design, erect, shore, brace, and maintain formwork, according to ACI 301, to support vertical, lateral, static, and dynamic loads, and construction loads that might be applied, until structure can support such loads.
- B. Construct formwork so concrete members and structures are of size, shape, alignment, elevation, and position indicated, within tolerance limits of ACI 117.
- C. Limit concrete surface irregularities, designated by ACI 347 as abrupt or gradual, as follows:
 1. **[Class A, 1/8 inch (3.2 mm)]** <Insert dimension> for smooth-formed finished surfaces.
 2. **[Class B, 1/4 inch (6 mm)] [Class C, 1/2 inch (13 mm)] [Class D, 1 inch (25 mm)]** <Insert dimension> for rough-formed finished surfaces.
- D. Construct forms tight enough to prevent loss of concrete mortar.
- E. Fabricate forms for easy removal without hammering or prying against concrete surfaces. Provide crush or wrecking plates where stripping may damage cast concrete surfaces. Provide top forms for inclined surfaces steeper than 1.5 horizontal to 1 vertical.
 1. Install keyways, reglets, recesses, and the like, for easy removal.
 2. Do not use rust-stained steel form-facing material.
- F. Set edge forms, bulkheads, and intermediate screed strips for slabs to achieve required elevations and slopes in finished concrete surfaces. Provide and secure units to support screed strips; use strike-off templates or compacting-type screeds.
- G. Provide temporary openings for cleanouts and inspection ports where interior area of formwork is inaccessible. Close openings with panels tightly fitted to forms and securely braced to prevent loss of concrete mortar. Locate temporary openings in forms at inconspicuous locations.
- H. **[Chamfer] [Do not chamfer]** exterior corners and edges of permanently exposed concrete.
- I. Form openings, chases, offsets, sinkages, keyways, reglets, blocking, screeds, and bulkheads required in the Work. Determine sizes and locations from trades providing such items.

- J. Clean forms and adjacent surfaces to receive concrete. Remove chips, wood, sawdust, dirt, and other debris just before placing concrete.
- K. Retighten forms and bracing before placing concrete, as required, to prevent mortar leaks and maintain proper alignment.
- L. Coat contact surfaces of forms with form-release agent, according to manufacturer's written instructions, before placing reinforcement.

3.2 EMBEDDED ITEMS

- A. Place and secure anchorage devices and other embedded items required for adjoining work that is attached to or supported by cast-in-place concrete. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - 1. Install anchor rods, accurately located, to elevations required and complying with tolerances in Section 7.5 of AISC's "Code of Standard Practice for Steel Buildings and Bridges."
 - 2. Install reglets to receive waterproofing and to receive through-wall flashings in outer face of concrete frame at exterior walls, where flashing is shown at lintels, shelf angles, and other conditions.
 - 3. Install dovetail anchor slots in concrete structures as indicated.

3.3 REMOVING AND REUSING FORMS

- A. General: Formwork for sides of beams, walls, columns, and similar parts of the Work that does not support weight of concrete may be removed after cumulatively curing at not less than **50 deg F (10 deg C)** for **[24] <Insert number>** hours after placing concrete. Concrete has to be hard enough to not be damaged by form-removal operations and curing and protection operations need to be maintained.
 - 1. Leave formwork for beam soffits, joists, slabs, and other structural elements that supports weight of concrete in place until concrete has achieved[**at least 70 percent of**] its 28-day design compressive strength.
 - 2. Remove forms only if shores have been arranged to permit removal of forms without loosening or disturbing shores.
- B. Clean and repair surfaces of forms to be reused in the Work. Split, frayed, delaminated, or otherwise damaged form-facing material will not be acceptable for exposed surfaces. Apply new form-release agent.
- C. When forms are reused, clean surfaces, remove fins and laitance, and tighten to close joints. Align and secure joints to avoid offsets. Do not use patched forms for exposed concrete surfaces unless approved by DEN Project Manager.

3.4 SHORES AND RESHORES

- A. Comply with **ACI 318 (ACI 318M)** and ACI 301 for design, installation, and removal of

shoring and reshoring.

1. Do not remove shoring or reshoring until measurement of slab tolerances is complete.

B. In multistory construction, extend shoring or reshoring over a sufficient number of stories to distribute loads in such a manner that no floor or member will be excessively loaded or will induce tensile stress in concrete members without sufficient steel reinforcement.

C. Plan sequence of removal of shores and reshore to avoid damage to concrete. Locate and provide adequate reshoring to support construction without excessive stress or deflection.

3.5 VAPOR RETARDERS

A. Sheet Vapor Retarders: Place, protect, and repair sheet vapor retarder according to ASTM E 1643 and manufacturer's written instructions.

1. Lap joints **6 inches** (150 mm) and seal with manufacturer's recommended tape.

B. Bituminous Vapor Retarders: Place, protect, and repair bituminous vapor retarder according to manufacturer's written instructions.

C. Granular Course: Cover vapor retarder with [**granular fill**] [**fine-graded granular material**], moisten, and compact with mechanical equipment to elevation tolerances of plus **0 inch** (0 mm) or minus **3/4 inch** (19 mm).

1. Place and compact a **1/2-inch-** (13-mm-) thick layer of fine-graded granular material over granular fill.

3.6 STEEL REINFORCEMENT

A. General: Comply with CRSI's "Manual of Standard Practice" for placing reinforcement.

1. Do not cut or puncture vapor retarder. Repair damage and reseal vapor retarder before placing concrete.

B. Clean reinforcement of loose rust and mill scale, earth, ice, and other foreign materials that would reduce bond to concrete.

C. Accurately position, support, and secure reinforcement against displacement. Locate and support reinforcement with bar supports to maintain minimum concrete cover. Do not tack weld crossing reinforcing bars.

1. Weld reinforcing bars according to AWS D1.4/D 1.4M, where indicated.

D. Set wire ties with ends directed into concrete, not toward exposed concrete surfaces.

- E. Install welded wire reinforcement in longest practicable lengths on bar supports spaced to minimize sagging. Lap edges and ends of adjoining sheets at least one mesh spacing. Offset laps of adjoining sheet widths to prevent continuous laps in either direction. Lace overlaps with wire.
- F. Epoxy-Coated Reinforcement: Repair cut and damaged epoxy coatings with epoxy repair coating according to ASTM D 3963/D 3963M. Use epoxy-coated steel wire ties to fasten epoxy-coated steel reinforcement.
- G. Zinc-Coated Reinforcement: Repair cut and damaged zinc coatings with zinc repair material according to ASTM A 780. Use galvanized steel wire ties to fasten zinc-coated steel reinforcement.

3.7 JOINTS

- A. General: Construct joints true to line with faces perpendicular to surface plane of concrete.
- B. Construction Joints: Install so strength and appearance of concrete are not impaired, at locations indicated, and as approved by DEN Project Manager. Coordinate locations of all construction joints with flooring materials, and review with DEN Project Manager.
 - 1. Place joints perpendicular to main reinforcement. Continue reinforcement across construction joints unless otherwise indicated. Do not continue reinforcement through sides of strip placements of floors and slabs.
 - 2. Form keyed joints as indicated. Embed keys at least **1-1/2 inches (38 mm)** into concrete.
 - 3. Locate joints for beams, slabs, joists, and girders in the middle third of spans. Offset joints in girders a minimum distance of twice the beam width from a beam-girder intersection.
 - 4. Locate horizontal joints in walls and columns at underside of floors, slabs, beams, and girders and at the top of footings or floor slabs.
 - 5. Space vertical joints in walls [**as indicated**] **<Insert spacing>**. Locate joints beside piers integral with walls, near corners, and in concealed locations where possible.
 - 6. Use a bonding agent at locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.
 - 7. Use epoxy-bonding adhesive at locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.
- C. Contraction Joints in Slabs-on-Grade: Form weakened-plane contraction joints, sectioning concrete into areas as indicated, and as approved by DEN Project Manager. Coordinate locations of all construction joints with flooring materials, and review with DEN Project Manager. Construct contraction joints for a depth equal to at least [**one-fourth**] **<Insert depth>** of concrete thickness as follows:
 - 1. Grooved Joints: Form contraction joints after initial floating by grooving and finishing each edge of joint to a radius of **1/8 inch (3.2 mm)**. Repeat grooving of contraction joints after applying surface finishes. Eliminate groover tool marks on concrete surfaces.

2. Sawn Joints: Form contraction joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut **1/8-inch- (3.2-mm-)** wide joints into concrete when cutting action will not tear, abrade, or otherwise damage surface and before concrete develops random contraction cracks.
- D. Isolation Joints in Slabs-on-Grade: After removing formwork, install joint-filler strips at slab junctions with vertical surfaces, such as column pedestals, foundation walls, grade beams, and other locations, as indicated.
1. Extend joint-filler strips full width and depth of joint, terminating flush with finished concrete surface unless otherwise indicated.
 2. Terminate full-width joint-filler strips not less than **1/2 inch (13 mm)** or more than **1 inch (25 mm)** below finished concrete surface where joint sealants, specified in Section 079200 "Joint Sealants," are indicated.
 3. Install joint-filler strips in lengths as long as practicable. Where more than one length is required, lace or clip sections together.
- E. Doweled Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or asphalt coat one-half of dowel length to prevent concrete bonding to one side of joint.

3.8 WATERSTOPS

- A. Flexible Waterstops: Install in construction joints and at other joints indicated to form a continuous diaphragm. Install in longest lengths practicable. Support and protect exposed waterstops during progress of the Work. Field fabricate joints in waterstops according to manufacturer's written instructions.
- B. Self-Expanding Strip Waterstops: Install in construction joints and at other locations indicated, according to manufacturer's written instructions, adhesive bonding, mechanically fastening, and firmly pressing into place. Install in longest lengths practicable.

3.9 CONCRETE PLACEMENT

- A. Before placing concrete, verify that installation of formwork, reinforcement, and embedded items is complete and that required inspections have been performed.
- B. Do not add water to concrete during delivery, at Project site, or during placement unless approved by DEN Project Manager.
- C. Before test sampling and placing concrete, water may be added at Project site, subject to limitations of ACI 301.
1. Do not add water to concrete after adding high-range water-reducing admixtures to mixture.
- D. Deposit concrete continuously in one layer or in horizontal layers of such thickness that no new concrete will be placed on concrete that has hardened enough to cause

seams or planes of weakness. If a section cannot be placed continuously, provide construction joints as indicated. Deposit concrete to avoid segregation.

1. Deposit concrete in horizontal layers of depth to not exceed formwork design pressures and in a manner to avoid inclined construction joints.
 2. Consolidate placed concrete with mechanical vibrating equipment according to ACI 301.
 3. Do not use vibrators to transport concrete inside forms. Insert and withdraw vibrators vertically at uniformly spaced locations to rapidly penetrate placed layer and at least **6 inches (150 mm)** into preceding layer. Do not insert vibrators into lower layers of concrete that have begun to lose plasticity. At each insertion, limit duration of vibration to time necessary to consolidate concrete and complete embedment of reinforcement and other embedded items without causing mixture constituents to segregate.
- E. Deposit and consolidate concrete for floors and slabs in a continuous operation, within limits of construction joints, until placement of a panel or section is complete.
1. Consolidate concrete during placement operations so concrete is thoroughly worked around reinforcement and other embedded items and into corners.
 2. Maintain reinforcement in position on chairs during concrete placement.
 3. Screed slab surfaces with a straightedge and strike off to correct elevations.
 4. Slope surfaces uniformly to drains where required.
 5. Begin initial floating using bull floats or darbies to form a uniform and open-textured surface plane, before excess bleedwater appears on the surface. Do not further disturb slab surfaces before starting finishing operations.
- F. Cold-Weather Placement: Comply with ACI 306.1 and as follows. Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures.
1. When average high and low temperature is expected to fall below **40 deg F (4.4 deg C)** for three successive days, maintain delivered concrete mixture temperature within the temperature range required by ACI 301.
 2. Do not use frozen materials or materials containing ice or snow. Do not place concrete on frozen subgrade or on subgrade containing frozen materials.
 3. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved by DEN Project Manager in mixture designs.
- G. Hot-Weather Placement: Comply with ACI 301 and as follows:
1. Maintain concrete temperature below **90 deg F (32 deg C)** at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated to total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
 2. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade uniformly moist without standing water, soft spots, or dry areas.

3.10 FINISHING FORMED SURFACES

- A. Rough-Formed Finish: As-cast concrete texture imparted by form-facing material with tie holes and defects repaired and patched. Remove fins and other projections that exceed specified limits on formed-surface irregularities.
1. Apply to concrete surfaces [**not exposed to public view**] **<Insert locations>**.
- B. Smooth-Formed Finish: As-cast concrete texture imparted by form-facing material, arranged in an orderly and symmetrical manner with a minimum of seams. Repair and patch tie holes and defects. Remove fins and other projections that exceed specified limits on formed-surface irregularities.
1. Apply to concrete surfaces [**exposed to public view,**] [**to receive a rubbed finish,**] [**to be covered with a coating or covering material applied directly to concrete**] **<Insert locations>**.
- C. Rubbed Finish: Apply the following to smooth-formed finished as-cast concrete where indicated:
1. Smooth-Rubbed Finish: Not later than one day after form removal, moisten concrete surfaces and rub with carborundum brick or another abrasive until producing a uniform color and texture. Do not apply cement grout other than that created by the rubbing process.
 2. Grout-Cleaned Finish: Wet concrete surfaces and apply grout of a consistency of thick paint to coat surfaces and fill small holes. Mix one part Portland cement to one and one-half parts fine sand with a 1:1 mixture of bonding admixture and water. Add white Portland cement in amounts determined by trial patches so color of dry grout will match adjacent surfaces. Scrub grout into voids and remove excess grout. When grout whitens, rub surface with clean burlap and keep surface damp by fog spray for at least 36 hours.
 3. Cork-Floated Finish: Wet concrete surfaces and apply a stiff grout. Mix one part Portland cement and one part fine sand with a 1:1 mixture of bonding agent and water. Add white Portland cement in amounts determined by trial patches so color of dry grout will match adjacent surfaces. Compress grout into voids by grinding surface. In a swirling motion, finish surface with a cork float.
- D. Related Unformed Surfaces: At tops of walls, horizontal offsets, and similar unformed surfaces adjacent to formed surfaces, strike off smooth and finish with a texture matching adjacent formed surfaces. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces unless otherwise indicated.

3.11 FINISHING FLOORS AND SLABS

- A. General: Comply with ACI 302.1R recommendations for screeding, restraightening, and finishing operations for concrete surfaces. Do not wet concrete surfaces.

- B. Scratch Finish: While still plastic, texture concrete surface that has been screeded and bull-floated or darbied. Use stiff brushes, brooms, or rakes to produce a profile amplitude of **1/4 inch (6 mm)** in one direction.
1. Apply scratch finish to surfaces **[indicated] [and] [to receive concrete floor toppings] [to receive mortar setting beds for bonded cementitious floor finishes] <Insert locations>**.
- C. Float Finish: Consolidate surface with power-driven floats or by hand floating if area is small or inaccessible to power driven floats. Restraighten, cut down high spots, and fill low spots. Repeat float passes and restraightening until surface is left with a uniform, smooth, granular texture.
1. Apply float finish to surfaces **[indicated] [to receive trowel finish] [and] [to be covered with fluid-applied or sheet waterproofing, built-up or membrane roofing, or sand-bed terrazzo] <Insert locations>**.
- D. Trowel Finish: After applying float finish, apply first troweling and consolidate concrete by hand or power-driven trowel. Continue troweling passes and restraighten until surface is free of trowel marks and uniform in texture and appearance. Grind smooth any surface defects that would telegraph through applied coatings or floor coverings.
1. Apply a trowel finish to surfaces **[indicated] [exposed to view] [or] [to be covered with resilient flooring, carpet, ceramic or quarry tile set over a cleavage membrane, paint, or another thin-film-finish coating system] <Insert locations>**.
 2. Finish surfaces to the following tolerances, according to **ASTM E 1155 (ASTM E 1155M)**, for a randomly trafficked floor surface:
 - a. Specified overall values of flatness, F(F) 25; and of levelness, F(L) 20; with minimum local values of flatness, F(F) 17; and of levelness, F(L) 15.
 - b. Specified overall values of flatness, F(F) 35; and of levelness, F(L) 25; with minimum local values of flatness, F(F) 24; and of levelness, F(L) 17; for slabs-on-grade.
 - c. Specified overall values of flatness, F(F) 30; and of levelness, F(L) 20; with minimum local values of flatness, F(F) 24; and of levelness, F(L) 15; for suspended slabs.
 - d. Specified overall values of flatness, F(F) 45; and of levelness, F(L) 35; with minimum local values of flatness, F(F) 30; and of levelness, F(L) 24.
 3. Finish and measure surface so gap at any point between concrete surface and an unleveled, freestanding, **10-ft.- (3.05-m-)** long straightedge resting on two high spots and placed anywhere on the surface does not exceed **[1/4 inch (6 mm)] [3/16 inch (4.8 mm)] [1/8 inch (3.2 mm)]**.
- E. Trowel and Fine-Broom Finish: Apply a first trowel finish to surfaces **[indicated] [where ceramic or quarry tile is to be installed by either thickset or thin-set method]**. While concrete is still plastic, slightly scarify surface with a fine broom.
1. Comply with flatness and levelness tolerances for trowel-finished floor surfaces.

- F. Broom Finish: Apply a broom finish to exterior concrete platforms, steps, ramps, and elsewhere as indicated.
1. Immediately after float finishing, slightly roughen trafficked surface by brooming with fiber-bristle broom perpendicular to main traffic route. Coordinate required final finish with DEN Project Manager before application.
- G. Slip-Resistive Finish: Before final floating, apply slip-resistive [**aggregate**] [**aluminum granule**] finish where indicated and to concrete stair treads, platforms, and ramps. Apply according to manufacturer's written instructions and as follows:
1. Uniformly spread [**25 lb/100 sq. ft. (12 kg/10 sq. m)**] <Insert rate> of dampened slip-resistive [**aggregate**] [**aluminum granules**] over surface in one or two applications. Tamp aggregate flush with surface, but do not force below surface.
 2. After broadcasting and tamping, apply float finish.
 3. After curing, lightly work surface with a steel wire brush or an abrasive stone and water to expose slip-resistive [**aggregate**] [**aluminum granules**].
- H. Dry-Shake Floor Hardener Finish: After initial floating, apply dry-shake floor hardener to surfaces according to manufacturer's written instructions and as follows:
1. Uniformly apply dry-shake floor hardener at a rate of [**100 lb/100 sq. ft. (49 kg/10 sq. m)**] <Insert rate> unless greater amount is recommended by manufacturer.
 2. Uniformly distribute approximately two-thirds of dry-shake floor hardener over surface by hand or with mechanical spreader, and embed by power floating. Follow power floating with a second dry-shake floor hardener application, uniformly distributing remainder of material, and embed by power floating.
 3. After final floating, apply a trowel finish. Cure concrete with curing compound recommended by dry-shake floor hardener manufacturer and apply immediately after final finishing.

3.12 MISCELLANEOUS CONCRETE ITEMS

- A. Filling In: Fill in holes and openings left in concrete structures after work of other trades is in place unless otherwise indicated. Mix, place, and cure concrete, as specified, to blend with in-place construction. Provide other miscellaneous concrete filling indicated or required to complete the Work.
- B. Curbs: Provide monolithic finish to interior curbs by stripping forms while concrete is still green and by steel-troweling surfaces to a hard, dense finish with corners, intersections, and terminations slightly rounded.
- C. Equipment Bases and Foundations: Provide machine and equipment bases and foundations as shown on Drawings. Set anchor bolts for machines and equipment at correct elevations, complying with diagrams or templates from manufacturer furnishing machines and equipment.

- D. Steel Pan Stairs: Provide concrete fill for steel pan stair treads, landings, and associated items. Cast-in inserts and accessories as shown on Drawings. Screed, tamp, and trowel finish concrete surfaces.

3.13 CONCRETE PROTECTING AND CURING

- A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures. Comply with ACI 306.1 for cold-weather protection and ACI 301 for hot-weather protection during curing.
- B. Evaporation Retarder: Apply evaporation retarder to unformed concrete surfaces if hot, dry, or windy conditions cause moisture loss approaching $0.2 \text{ lb/sq. ft.} \times \text{h}$ ($1 \text{ kg/sq. m} \times \text{h}$) before and during finishing operations. Apply according to manufacturer's written instructions after placing, screeding, and bull floating or darbying concrete, but before float finishing.
- C. Formed Surfaces: Cure formed concrete surfaces, including underside of beams, supported slabs, and other similar surfaces. If forms remain during curing period, moist cure after loosening forms. If removing forms before end of curing period, continue curing for the remainder of the curing period.
- D. Unformed Surfaces: Begin curing immediately after finishing concrete. Cure unformed surfaces, including floors and slabs, concrete floor toppings, and other surfaces.
- E. Cure concrete according to ACI 308.1, by one or a combination of the following methods:
 - 1. Moisture Curing: Keep surfaces continuously moist for not less than seven days with the following materials:
 - a. Water.
 - b. Continuous water-fog spray.
 - c. Absorptive cover, water saturated, and kept continuously wet. Cover concrete surfaces and edges with **12-inch** (300-mm) lap over adjacent absorptive covers.
 - 2. Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width, with sides and ends lapped at least **12 inches** (300 mm), and sealed by waterproof tape or adhesive. Cure for not less than seven days. Immediately repair any holes or tears during curing period using cover material and waterproof tape.
 - a. Moisture cure or use moisture-retaining covers to cure concrete surfaces to receive floor coverings.
 - b. Moisture cure or use moisture-retaining covers to cure concrete surfaces to receive penetrating liquid floor treatments.

- c. Cure concrete surfaces to receive floor coverings with either a moisture-retaining cover or a curing compound that the manufacturer certifies will not interfere with bonding of floor covering used on Project.
3. Curing Compound: Apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating and repair damage during curing period.
 - a. Removal: After curing period has elapsed, remove curing compound without damaging concrete surfaces by method recommended by curing compound manufacturer[**unless manufacturer certifies curing compound will not interfere with bonding of floor covering used on Project**].
4. Curing and Sealing Compound: Apply uniformly to floors and slabs indicated in a continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Repeat process 24 hours later and apply a second coat. Maintain continuity of coating and repair damage during curing period.

3.14 LIQUID FLOOR TREATMENTS

- A. Penetrating Liquid Floor Treatment: Prepare, apply, and finish penetrating liquid floor treatment according to manufacturer's written instructions.
 1. Remove curing compounds, sealers, oil, dirt, laitance, and other contaminants and complete surface repairs.
 2. Do not apply to concrete that is less than **[three] [seven] [14] [28]** days' old.
 3. Apply liquid until surface is saturated, scrubbing into surface until a gel forms; rewet; and repeat brooming or scrubbing. Rinse with water; remove excess material until surface is dry. Apply a second coat in a similar manner if surface is rough or porous.
- B. Polished Concrete Floor Treatment: Apply polished concrete finish system to cured and prepared slabs to match accepted mockup.
 1. Machine grind floor surfaces to receive polished finishes level and smooth **[and to depth required to reveal aggregate to match approved mockup]**.
 2. Apply penetrating liquid floor treatment for polished concrete in polishing sequence and according to manufacturer's written instructions, allowing recommended drying time between successive coats.
 3. Continue polishing with progressively finer grit diamond polishing pads to gloss level to match approved mockup.
 4. Control and dispose of waste products produced by grinding and polishing operations.
 5. Neutralize and clean polished floor surfaces.

- C. Sealing Coat: Uniformly apply a continuous sealing coat of curing and sealing compound to hardened concrete by power spray or roller according to manufacturer's written instructions.

3.15 JOINT FILLING

- A. Prepare, clean, and install joint filler according to manufacturer's written instructions.
 - 1. Defer joint filling until concrete has aged at least **[one] [six] <Insert number>** month(s). Do not fill joints until construction traffic has permanently ceased.
- B. Remove dirt, debris, saw cuttings, curing compounds, and sealers from joints; leave contact faces of joint clean and dry.
- C. Install semirigid joint filler full depth in saw-cut joints and at least **2 inches** (50 mm) deep in formed joints. Overfill joint and trim joint filler flush with top of joint after hardening.

3.16 CONCRETE SURFACE REPAIRS

- A. Defective Concrete: Repair and patch defective areas when approved by DEN Project Manager. Remove and replace concrete that cannot be repaired and patched to DEN Project Manager's approval.
- B. Patching Mortar: Mix dry-pack patching mortar, consisting of one part Portland cement to two and one-half parts fine aggregate passing a **No. 16** (1.18-mm) sieve, using only enough water for handling and placing.
- C. Repairing Formed Surfaces: Surface defects include color and texture irregularities, cracks, spalls, air bubbles, honeycombs, rock pockets, fins and other projections on the surface, and stains and other discolorations that cannot be removed by cleaning.
 - 1. Immediately after form removal, cut out honeycombs, rock pockets, and voids more than **1/2 inch** (13 mm) in any dimension to solid concrete. Limit cut depth to **3/4 inch** (19 mm). Make edges of cuts perpendicular to concrete surface. Clean, dampen with water, and brush-coat holes and voids with bonding agent. Fill and compact with patching mortar before bonding agent has dried. Fill form-tie voids with patching mortar or cone plugs secured in place with bonding agent.
 - 2. Repair defects on surfaces exposed to view by blending white Portland cement and standard Portland cement so that, when dry, patching mortar will match surrounding color. Patch a test area at inconspicuous locations to verify mixture and color match before proceeding with patching. Compact mortar in place and strike off slightly higher than surrounding surface.
 - 3. Repair defects on concealed formed surfaces that affect concrete's durability and structural performance as determined by DEN Project Manager.
- D. Repairing Unformed Surfaces: Test unformed surfaces, such as floors and slabs, for finish and verify surface tolerances specified for each surface. Correct low and high areas. Test surfaces sloped to drain for trueness of slope and smoothness; use a

sloped template.

1. Repair finished surfaces containing defects. Surface defects include spalls, popouts, honeycombs, rock pockets, crazing and cracks in excess of 0.01 inch (0.25 mm) wide or that penetrate to reinforcement or completely through unreinforced sections regardless of width, and other objectionable conditions.
2. After concrete has cured at least 14 days, correct high areas by grinding.
3. Correct localized low areas during or immediately after completing surface finishing operations by cutting out low areas and replacing with patching mortar. Finish repaired areas to blend into adjacent concrete.
4. Correct other low areas scheduled to receive floor coverings with a repair underlayment. Prepare, mix, and apply repair underlayment and primer according to manufacturer's written instructions to produce a smooth, uniform, plane, and level surface. Feather edges to match adjacent floor elevations.
5. Correct other low areas scheduled to remain exposed with a repair topping. Cut out low areas to ensure a minimum repair topping depth of 1/4 inch (6 mm) to match adjacent floor elevations. Prepare, mix, and apply repair topping and primer according to manufacturer's written instructions to produce a smooth, uniform, plane, and level surface.
6. Repair defective areas, except random cracks and single holes 1 inch (25 mm) or less in diameter, by cutting out and replacing with fresh concrete. Remove defective areas with clean, square cuts and expose steel reinforcement with at least a 3/4-inch (19-mm) clearance all around. Dampen concrete surfaces in contact with patching concrete and apply bonding agent. Mix patching concrete of same materials and mixture as original concrete except without coarse aggregate. Place, compact, and finish to blend with adjacent finished concrete. Cure in same manner as adjacent concrete.
7. Repair random cracks and single holes 1 inch (25 mm) or less in diameter with patching mortar. Groove top of cracks and cut out holes to sound concrete and clean off dust, dirt, and loose particles. Dampen cleaned concrete surfaces and apply bonding agent. Place patching mortar before bonding agent has dried. Compact patching mortar and finish to match adjacent concrete. Keep patched area continuously moist for at least 72 hours.

E. Perform structural repairs of concrete, subject to DEN Project Manager's approval, using epoxy adhesive and patching mortar.

F. Repair materials and installation not specified above may be used, subject to DEN Project Manager's approval.

3.17 FIELD QUALITY CONTROL

A. Testing and Inspecting: Owner will engage a special inspector [**and qualified testing and inspecting agency**] to perform field tests and inspections and prepare test reports.

B. Testing and Inspecting: Engage a qualified testing and inspecting agency to perform tests and inspections and to submit reports.

C. Inspections:

1. Steel reinforcement placement.
2. Steel reinforcement welding.
3. Headed bolts and studs.
4. Verification of use of required design mixture.
5. Concrete placement, including conveying and depositing.
6. Curing procedures and maintenance of curing temperature.
7. Verification of concrete strength before removal of shores and forms from beams and slabs.

D. Concrete Tests: Testing of composite samples of fresh concrete obtained according to ASTM C 172 shall be performed according to the following requirements:

1. Testing Frequency: Obtain one composite sample for each day's pour of each concrete mixture exceeding 5 cu. yd. (4 cu. m), but less than 25 cu. yd. (19 cu. m), plus one set for each additional 50 cu. yd. (38 cu. m) or fraction thereof.
 - a. When frequency of testing will provide fewer than five compressive-strength tests for each concrete mixture, testing shall be conducted from at least five randomly selected batches or from each batch if fewer than five are used.
2. Slump: ASTM C 143/C 143M; one test at point of placement for each composite sample, but not less than one test for each day's pour of each concrete mixture. Perform additional tests when concrete consistency appears to change.
3. Air Content: ASTM C 231, pressure method, for normal-weight concrete; **[ASTM C 173/C 173M, volumetric method, for structural lightweight concrete;]**one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.
4. Concrete Temperature: ASTM C 1064/C 1064M; one test hourly when air temperature is 40 deg F (4.4 deg C) and below and when 80 deg F (27 deg C) and above, and one test for each composite sample.
5. Unit Weight: ASTM C 567, fresh unit weight of structural lightweight concrete; one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.
6. Compression Test Specimens: ASTM C 31/C 31M.
 - a. Cast and laboratory cure one set of five (5) standard cylinder specimens for each composite sample.
 - b. Cast and field cure one set of five (5) standard cylinder specimens for each composite sample.
7. Compressive-Strength Tests: ASTM C 39/C 39M.
 - a. Test one (1) set of two (2) field-cured specimens at 7 days and one (1) set of two (2) specimens at 28 days. One (1) specimen shall be held in reserve for additional testing as needed.
 - b. A compressive-strength test shall be the average compressive strength from a set of two specimens obtained from same composite sample and tested at age indicated.

8. When strength of field-cured cylinders is less than 85 percent of companion laboratory-cured cylinders, Contractor shall evaluate operations and provide corrective procedures for protecting and curing in-place concrete.
 9. Strength of each concrete mixture will be satisfactory if every average of any three consecutive compressive-strength tests equals or exceeds specified compressive strength and no compressive-strength test value falls below specified compressive strength by more than **500 psi (3.4 MPa)**.
 10. Test results shall be reported in writing to DEN Project Engineer, concrete manufacturer, and Contractor within 48 hours of testing. Reports of compressive-strength tests shall contain Project identification name and number, date of concrete placement, name of concrete testing and inspecting agency, location of concrete batch in Work, design compressive strength at 28 days, concrete mixture proportions and materials, compressive breaking strength, and type of break for both 7- and 28-day tests.
 11. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by DEN Project Manager but will not be used as sole basis for approval or rejection of concrete.
 12. Additional Tests: Testing and inspecting agency shall make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed by DEN Project Manager. Testing and inspecting agency may conduct tests to determine adequacy of concrete by cored cylinders complying with ASTM C 42/C 42M or by other methods as directed by DEN Project Manager.
 13. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
 14. Correct deficiencies in the Work that test reports and inspections indicate do not comply with the Contract Documents.
- E. Measure floor and slab flatness and levelness according to **ASTM E 1155 (ASTM E 1155M)** within **[24] [48] <Insert number>** hours of finishing.

3.18 PROTECTION OF LIQUID FLOOR TREATMENTS

- A. Protect liquid floor treatment from damage and wear during the remainder of construction period. Use protective methods and materials, including temporary covering, recommended in writing by liquid floor treatments installer.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 033000

SECTION 033053 - MISCELLANEOUS CAST-IN-PLACE CONCRETE (LIMITED APPLICATIONS)

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes cast-in-place concrete, including reinforcement, concrete materials, mixture design, placement procedures, and finishes.
- B. Related Sections:
 - 1. Section 312000 "Earth Moving" for drainage fill under slabs-on-grade.
 - 2. Section 321313 "Concrete Paving (CDOT)" for concrete pavement and walks.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 ACTION SUBMITTALS

- A. General: In addition to the following, comply with submittal requirements in ACI 301.
- B. Product Data: For each type of product indicated.
 - 1. Include data substantiating that materials comply with requirements.
- C. LEED Submittals:
 - 1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
 - 2. Design Mixtures for Credit ID 1.1: For each concrete mixture containing fly ash as a replacement for Portland cement or other Portland cement replacements. For each design mixture submitted, include an equivalent concrete mixture that does not contain Portland cement replacements, to determine amount of Portland cement replaced.
- D. Other Action Submittal:

1. Design Mixtures: For each concrete mixture.

1.4 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: An experienced installer who has completed concrete work similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.
- B. Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products complying with ASTM C 94 requirements for production facilities and equipment.
- C. Source Limitations: Obtain each type of cement of the same brand from the same manufacturer's plant, each aggregate from one source, and each admixture from the same manufacturer.
- D. Ready-Mix-Concrete Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C 94/C 94M requirements for production facilities and equipment.
- E. Comply with the following sections of [ACI 301](#) (ACI 301M), unless modified by requirements in the Contract Documents:
 1. "General Requirements."
 2. "Formwork and Formwork Accessories."
 3. "Reinforcement and Reinforcement Supports."
 4. "Concrete Mixtures."
 5. "Handling, Placing, and Constructing."
 6. "Lightweight Concrete."
- F. Comply with ACI 117, "Specifications for Tolerances for Concrete Construction and Materials."

1.6 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 FORMWORK

- A. Furnish formwork and formwork accessories according to [ACI 301](#) (ACI 301M).

2.2 STEEL REINFORCEMENT

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25] [60] <Insert number>** percent.
- B. Reinforcing Bars: ASTM A 615/A 615M, [Grade 60](#) (Grade 420), deformed.
- C. Plain-Steel Wire: ASTM A 82/A 82M, as drawn.
- D. Plain-Steel Welded Wire Reinforcement: ASTM A 185/A 185M, fabricated from as-drawn steel wire into flat sheets.
- E. Deformed-Steel Welded Wire Reinforcement: ASTM A 497/A 497M, flat sheet.

2.3 CONCRETE MATERIALS

- A. Cementitious Material: Use the following cementitious materials, of the same type, brand, and source throughout Project:
1. Portland Cement: ASTM C 150, **[Type I] [Type II] [Type I/II] [Type III] [Type V].**
Supplement with the following:
 - a. Fly Ash: ASTM C 618, Class C or F.
 - b. Ground Granulated Blast-Furnace Slag: ASTM C 989, Grade 100 or 120.
 2. Blended Hydraulic Cement: ASTM C 595, **[Type IS, Portland blast-furnace slag] [Type IP, Portland-pozzolan] [Type I (PM), pozzolan-modified Portland] [Type I (SM), slag-modified Portland]** cement.
- B. Normal-Weight Aggregate: ASTM C 33, graded, **[1-1/2-inch (38-mm)] <Insert dimension>** nominal maximum aggregate size.
- C. Lightweight Aggregate: ASTM C 330, **[1-inch (25-mm)] <Insert dimension>** nominal maximum aggregate size.
- D. Water: ASTM C 94/C 94M.
- E. Synthetic Fiber: **[Monofilament] [or] [fibrillated]** polypropylene fibers engineered and designed for use in concrete, complying with ASTM C 1116/C 1116M, Type III, **[1/2 to 1-1/2 inches (13 to 38 mm)] <Insert dimensions>** long.

2.4 ADMIXTURES

- A. General: Admixtures certified by manufacturer to contain not more than 0.1 percent water-soluble chloride ions by mass of cement and to be compatible with other admixtures.
- B. Air-Entraining Admixture: ASTM C 260.
- C. Chemical Admixtures: Provide admixtures certified by manufacturer to be compatible with other admixtures and that will not contribute water-soluble chloride ions exceeding those permitted in hardened concrete. Do not use calcium chloride or admixtures containing calcium chloride.
 - 1. Water-Reducing Admixture: ASTM C 494/C 494M, Type A.
 - 2. Retarding Admixture: ASTM C 494/C 494M, Type B.
 - 3. Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type D.
 - 4. High-Range, Water-Reducing Admixture: ASTM C 494/C 494M, Type F.
 - 5. High-Range, Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type G.
 - 6. Plasticizing and Retarding Admixture: ASTM C 1017/C 1017M, Type II.

2.5 RELATED MATERIALS

- A. Vapor Retarder: Multi-ply reinforced polyethylene sheet, ASTM E 1745, Class C, not less than 7.8 mils thick; or polyethylene sheet, ASTM D 4397, not less than 10 mils thick.
- B. Joint-Filler Strips: ASTM D 1751, asphalt-saturated cellulosic fiber, or ASTM D 1752, cork or self-expanding cork.
- C. Fine-Graded Granular Material: Clean mixture of crushed stone, crushed gravel, and man-ufactured or natural sand; ASTM D 448, Size 10, with 100 percent passing a No. 4 sieve and 10 to 30 percent passing a No. 100 sieve; complying with deleterious substance limits of ASTM C 33 for fine aggregates.

2.6 CURING MATERIALS

- A. Evaporation Retarder: Waterborne, monomolecular film forming; manufactured for application to fresh concrete.
- B. Absorptive Cover: AASHTO M 182, Class 3, burlap cloth or cotton mats.
- C. Moisture-Retaining Cover: ASTM C 171, polyethylene film or white burlap-polyethylene sheet.
- D. Water: Potable.

- E. Clear, Waterborne, Membrane-Forming Curing Compound: ASTM C 309, Type 1, Class B.
- F. Clear, **[Waterborne] [Solvent-Borne]**, Membrane-Forming Curing and Sealing Compound: ASTM C 1315, Type 1, Class A.

2.7 CONCRETE MIXTURES

- A. Comply with **ACI 301 (ACI 301M)** requirements for concrete mixtures.
- B. Normal-Weight Concrete: Prepare design mixes, proportioned according to **ACI 301 (ACI 301M)**, as follows:
 - 1. Minimum Compressive Strength: **[4500 psi (31 MPa)] [4000 psi (27.6 MPa)] [3500 psi (24.1 MPa)] [3000 psi (20.7 MPa)] <Insert strength>** at 28 days.
 - 2. Maximum Water-Cementitious Materials Ratio: **[0.50] [0.45] <Insert ratio>**.
 - 3. Cementitious Materials: Use fly ash, pozzolan, ground granulated blast-furnace slag, and silica fume as needed to reduce the total amount of Portland cement, which would otherwise be used, by not less than 40 percent.
 - 4. Slump Limit: **[4 inches (100 mm)] [5 inches (125 mm)] [8 inches (200 mm)] for concrete with verified slump of 2 to 4 inches (50 to 100 mm) before adding high-range water-reducing admixture or plasticizing admixture] <Insert dimension>**, plus or minus 1 inch (25 mm).
 - 5. Add air-entraining admixture at manufacturer's prescribed rate to result in concrete at point of placement having an air content of 2.5 to 4.5 percent.
 - 6. Add air-entraining admixture at manufacturer's prescribed rate to result in concrete at point of placement having an air content of 6.0 percent within a tolerance of plus 1.0 or minus 1.5 percent.
 - 7. Air Content: Maintain within range permitted by **ACI 301 (ACI 301M)**. Do not allow air content of trowel-finished floor slabs to exceed 3 percent.
- C. Structural Lightweight Concrete Mix: ASTM C 330, proportioned to produce concrete with a minimum compressive strength of **[3000 psi (20.7 MPa)] <Insert strength>** at 28 days and a calculated equilibrium unit weight of **[110 lb/cu. ft. (1762 kg/cu. m)] <Insert weight>** plus or minus 3 lb/cu. ft. (48.1 kg/cu. m), as determined by ASTM C 567. Concrete slump at point of placement shall be the minimum necessary for efficient mixing, placing, and finishing.
 - 1. Limit slump to 5 inches (125 mm) for troweled slabs and 4 inches (100 mm) for other slabs.
- D. Synthetic Fiber: Uniformly disperse in concrete mix at manufacturer's recommended rate but not less than a rate of **[1.0 lb/cu. yd. (0.60 kg/cu. m)] [1.5 lb/cu. yd. (0.90 kg/cu. m)] <Insert rate>**.

2.8 CONCRETE MIXING

- A. Ready-Mixed Concrete: Measure, batch, mix, and deliver concrete according to ASTM

C 94/C 94M[**and ASTM C 1116/C 1116**], and furnish batch ticket information.

1. When air temperature is between 85 and 90 deg F, reduce mixing and delivery time from 1-1/2 hours to 75 minutes.
 2. When air temperature is above **90 deg F (32 deg C)**, reduce mixing and delivery time to 60 minutes.
- B. Project-Site Mixing: Measure, batch, and mix concrete materials and concrete according to ASTM C 94/C 94M. Mix concrete materials in appropriate drum-type batch machine mixer.
1. For mixer capacity of **1 cu. yd. (0.76 cu. m)** or smaller, continue mixing at least 1-1/2 minutes, but not more than 5 minutes after ingredients are in mixer, before any part of batch is released.
 2. For mixer capacity larger than **1 cu. yd. (0.76 cu. m)**, increase mixing time by 15 seconds for each additional **1 cu. yd. (0.76 cu. m)**.
 3. Provide batch ticket for each batch discharged and used in the Work, indicating Project identification name and number, date, mix type, mix time, quantity, and amount of water added. Record approximate location of final deposit in structure.

PART 3 - EXECUTION

3.1 FORMWORK

- A. Design, construct, erect, brace, and maintain formwork according to **ACI 301**.

3.2 EMBEDDED ITEMS

- A. Place and secure anchorage devices and other embedded items required for adjoining work attached to or supported by cast-in-place concrete. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.

3.3 VAPOR RETARDERS

- A. Install, protect, and repair vapor retarders according to ASTM E 1643; place sheets in position with longest dimension parallel with direction of pour.
1. Lap joints **6 inches (150 mm)** and seal with manufacturer's recommended adhesive or joint tape.
 2. Cover vapor retarder with fine-graded granular material, moisten, and compact with mechanical equipment to elevation tolerances of plus 0 inch or minus 3/4 inch.

3.4 STEEL REINFORCEMENT

- A. Comply with CRSI's "Manual of Standard Practice" for fabricating, placing, and supporting reinforcement.
 - 1. Do not cut or puncture vapor retarder. Repair damage and reseal vapor retarder before placing concrete.

3.5 JOINTS

- A. General: Construct joints true to line with faces perpendicular to surface plane of concrete.
- B. Construction Joints: Locate and install so strength and appearance of concrete are not impaired, at locations indicated or as approved by DEN Project Manager.
- C. Contraction Joints in Slabs-on-Grade: Form weakened-plane contraction joints, sectioning concrete into areas as indicated. Construct contraction joints for a depth equal to at least **[one-fourth]** <Insert depth> of concrete thickness, as follows:
 - 1. Grooved Joints: Form contraction joints after initial floating by grooving and finishing each edge of joint with groover tool to a radius of **1/8 inch (3.2 mm)**. Repeat grooving of contraction joints after applying surface finishes. Eliminate groover marks on concrete surfaces.
 - 2. Sawed Joints: Form contraction joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut **1/8-inch- (3.2-mm-)** wide joints into concrete when cutting action will not tear, abrade, or otherwise damage surface and before concrete develops random contraction cracks.
- D. Isolation Joints: Install joint-filler strips at junctions with slabs-on-grade and vertical surfaces, such as column pedestals, foundation walls, grade beams, and other locations, as indicated.
 - 1. Extend joint fillers full width and depth of joint, terminating flush with finished concrete surface, unless otherwise indicated.

3.6 CONCRETE PLACEMENT

- A. Comply with **ACI 301 (ACI 301M)** for placing concrete.
- B. Before test sampling and placing concrete, water may be added at Project site, subject to limitations of **ACI 301 (ACI 301M)**.
- C. Do not add water to concrete during delivery, at Project site, or during placement.
- D. Consolidate concrete with mechanical vibrating equipment.

3.7 FINISHING FORMED SURFACES

- A. Rough-Formed Finish: As-cast concrete texture imparted by form-facing material with tie holes and defective areas repaired and patched. Remove fins and other projections exceeding $1/4$ inch (7 mm).
1. Apply to concrete surfaces [**not exposed to public view**] <Insert locations>.
- B. Smooth-Formed Finish: As-cast concrete texture imparted by form-facing material, arranged in an orderly and symmetrical manner with a minimum of seams. Repair and patch tie holes and defective areas. Completely remove fins and other projections.
1. Apply to concrete surfaces exposed to public view or to be covered with a coating or covering material applied directly to concrete, such as waterproofing, dampproofing, veneer plaster, or painting.
 2. Do not apply rubbed finish to smooth-formed finish.
 3. Rubbed Finish: Apply the following rubbed finish, defined in [ACI 301 \(ACI 301M\)](#), to smooth-formed finished as-cast concrete where indicated:
 - a. Smooth-rubbed finish.
 - b. Grout-cleaned finish.
 - c. Cork-floated finish.
- C. Related Unformed Surfaces: At tops of walls, horizontal offsets, and similar unformed surfaces adjacent to formed surfaces, strike off smooth and finish with a texture matching adjacent formed surfaces. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces, unless otherwise indicated.

3.8 FINISHING UNFORMED SURFACES

- A. General: Comply with ACI 302.1R for screeding, restraightening, and finishing operations for concrete surfaces. Do not wet concrete surfaces.
- B. Screed surfaces with a straightedge and strike off. Begin initial floating using bull floats or darbies to form a uniform and open-textured surface plane before excess moisture or bleedwater appears on surface.
1. Do not further disturb surfaces before starting finishing operations.
- C. Scratch Finish: Apply scratch finish to surfaces indicated and surfaces to receive concrete floor topping or mortar setting beds for ceramic or quarry tile, Portland cement terrazzo, and other bonded cementitious floor finishes, unless otherwise indicated.
- D. Float Finish: Apply float finish to surfaces indicated, to surfaces to receive trowel finish, and to floor and slab surfaces to be covered with fluid-applied or sheet waterproofing, fluid-applied or direct-to-deck-applied membrane roofing, or sand-bed terrazzo.

- E. Trowel Finish: Apply a hard trowel finish to surfaces indicated and to floor and slab surfaces exposed to view or to be covered with resilient flooring, carpet, ceramic or quarry tile set over a cleavage membrane, paint, or another thin film-finish coating system.
- F. Trowel and Fine-Broom Finish: Apply a partial trowel finish, stopping after second troweling, to surfaces indicated and to surfaces where ceramic or quarry tile is to be installed by either thickset or thin-set methods. Immediately after second troweling, and when concrete is still plastic, slightly scarify surface with a fine broom.
- G. Nonslip Broom Finish: Apply a nonslip broom finish to surfaces indicated and to exterior concrete platforms, steps, and ramps. Immediately after float finishing, slightly roughen trafficked surface by brooming with fiber-bristle broom perpendicular to main traffic route.

3.9 TOLERANCES

- A. Comply with ACI 117, "Specifications for Tolerances for Concrete Construction and Materials."

3.10 CONCRETE PROTECTING AND CURING

- A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures. Comply with ACI 306.1 for cold-weather protection and with ACI 301 (ACI 301M) for hot-weather protection during curing.
- B. Evaporation Retarder: Apply evaporation retarder to concrete surfaces if hot, dry, or windy conditions cause moisture loss approaching 0.2 lb/sq. ft. x h (1 kg/sq. m x h) before and during finishing operations. Apply according to manufacturer's written instructions after placing, screeding, and bull floating or darbying concrete, but before float finishing.
- C. Begin curing after finishing concrete but not before free water has disappeared from concrete surface.
- D. Curing Methods: Cure formed and unformed concrete for at least seven days by one or a combination of the following methods:
 - 1. Moisture Curing: Keep surfaces continuously moist for not less than seven days with the following materials:
 - a. Water.
 - b. Continuous water-fog spray.
 - c. Absorptive cover, water saturated and kept continuously wet. Cover concrete surfaces and edges with 12-inch (300-mm) lap over adjacent absorptive covers.
 - 2. Moisture-Retaining-Cover Curing: Cover concrete surfaces with

moisture-retaining cover for curing concrete, placed in widest practicable width, with sides and ends lapped at least **12 inches** (300 mm), and sealed by waterproof tape or adhesive. Cure for not less than seven days. Immediately repair any holes or tears during curing period using cover material and waterproof tape.

3. Curing Compound: Apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating and repair damage during curing period.
4. Curing and Sealing Compound: Apply uniformly to floors and slabs indicated in a continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Repeat process 24 hours later and apply a second coat. Maintain continuity of coating and repair damage during curing period.

3.11 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
- B. Tests: Perform according to **ACI 301** (ACI 301M).
 1. Testing Frequency: One composite sample shall be obtained for each day's pour of each concrete mix exceeding **5 cu. yd.** (4 cu. m) but less than **25 cu. yd.** (19 cu. m), plus one set for each additional **50 cu. yd.** (38 cu. m) or fraction thereof.
 2. Testing Frequency: One composite sample shall be obtained for each **100 cu. yd.** (76 cu. m) or fraction thereof of each concrete mix placed each day.

3.12 REPAIRS

- A. Remove and replace concrete that does not comply with requirements in this Section.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

TECHNICAL SPECIFICATIONS

MISCELLANEOUS CAT-IN-PLACE CONCRETE (LIMITED
APPLICATIONS)

DENVER INTERNATIONAL AIRPORT
DEN TECH SPECS 2016
CONTRACT NO.00000

END OF SECTION 033053

SECTION 033300 - ARCHITECTURAL CONCRETE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes cast-in-place architectural concrete including form facings, reinforcement accessories, concrete materials, concrete mixture design, placement procedures, and finishes.
- B. Comply with all requirements of Section 033000 "Cast-In-Place Concrete".
- C. Related Requirements:
 - 1. Section 033000 "Cast-In-Place Concrete" for general building and structural concrete applications, mixtures, formwork, reinforcing, finishing, and curing.
 - 2. Section 079200 "Joint Sealants" for elastomeric joint sealants in contraction and other joints in cast-in-place architectural concrete.
 - 3. Section 321313 "Concrete Paving (CDOT)" for concrete pavement and flatwork finishes.
 - 4. Section 321316 "Decorative Concrete Paving" for surface-imprinted concrete pavement and finishes.
- D. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

- A. Cast-in-Place Architectural Concrete: Formed concrete that is exposed to view on surfaces of completed structure or building and that requires special concrete materials, formwork, placement, or finishes to obtain specified architectural appearance.
- B. Cementitious Materials: Portland cement alone or in combination with one or more of the following: blended hydraulic cement, fly ash and other pozzolans, ground granulated blast-furnace slag, and silica fume; subject to compliance with requirements.
- C. Retain "Design Reference Sample" Paragraph below if design reference sample, chosen by DEN Project Manager during Contract documentation, is proposed.

- D. Design Reference Sample: Sample designated by DEN Project Manager in the Contract Documents that reflects acceptable surface quality and appearance of cast-in-place architectural concrete.
- E. Reveal: Projection of coarse aggregate from matrix or mortar after completion of exposure operations.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]<Insert location>**.
 - 1. Before submitting design mixtures, review concrete design mixture and examine procedures for ensuring quality of concrete materials. Require representatives of each entity directly concerned with cast-in-place architectural concrete to attend, including the following:
 - a. Contractor's superintendent.
 - b. Independent testing agency responsible for concrete design mixtures.
 - c. Ready-mix concrete manufacturer.
 - d. Cast-in-place architectural concrete subcontractor.
 - 2. Review **[concrete finishes and finishing,] [cold- and hot-weather concreting procedures,] [curing procedures,] [construction joints,] [forms and form-removal limitations,] [reinforcement accessory installation,] [concrete repair procedures,]** and protection of cast-in-place architectural concrete.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Credit MR 4.1[**and Credit MR 4.2**]: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
 - 2. Design Mixtures for Credit ID 1.1: For each concrete mixture containing fly ash as a replacement for Portland cement or other Portland cement replacements and for equivalent concrete mixtures that do not contain Portland cement replacements.
- C. Design Mixtures: For each concrete mixture. Submit alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.
 - 1. Indicate amounts of mixing water to be withheld for later addition at Project site.

- D. Formwork Shop Drawings: Show formwork construction including form-facing joints, rustications, construction and contraction joints, form joint-sealant details, form tie locations and patterns, inserts and embedments, cutouts, cleanout panels, and other items that visually affect cast-in-place architectural concrete.
- E. Placement Schedule: Submit concrete placement schedule before start of placement operations. Include locations of all joints including construction joints.
- F. Samples: For each of the following materials:
 - 1. Form-facing panel.
 - 2. Form ties.
 - 3. Form liners.
 - 4. Coarse- and fine-aggregate gradations.
 - 5. Chamfers and rustications.
- G. Samples for Verification: Architectural concrete Samples, cast vertically, approximately **18 by 18 by 2 inches** (450 by 450 by 50 mm), of finishes, colors, and textures to match design reference sample. Include Sample sets showing the full range of variations expected in these characteristics. Review by DEN Project Manager will be for color and texture only.
- H. Product data: Submit product data for concrete sealer.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For **[manufacturer] [testing agency]**.
- B. Material Certificates: For each of the following:
 - 1. Cementitious materials.
 - 2. Admixtures.
 - 3. Form materials and form-release agents.
 - 4. Repair materials.
- C. Material Test Reports: For the following, by a qualified testing agency:
 - 1. Aggregates. **[Include service record data indicating absence of deleterious expansion of concrete due to alkali-aggregate reactivity].**

1.7 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 QUALITY ASSURANCE

- A. Requirements of Regulatory Agencies: Comply with air pollution regulations of governing authorities.
- B. Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C 94/C 94M requirements for production facilities and equipment.
1. Manufacturer certified according to NRMCA's "NRMCA Quality Control Manual - Section 3, Certification of Ready Mixed Concrete Production Facilities."
- C. Testing Agency Qualifications: Qualified according to ASTM C 1077 and ASTM E 329 for testing indicated, as documented according to ASTM E 548.
1. Personnel conducting field tests shall be qualified as ACI Concrete Field Testing Technician, Grade 1, according to ACI CP-01 or an equivalent certification program.
 2. Personnel performing laboratory tests shall be an ACI-certified Concrete Strength Testing Technician and Concrete Laboratory Testing Technician - Grade I. Testing Agency laboratory supervisor shall be an ACI-certified Concrete Laboratory Testing Technician - Grade II.
- D. Source Limitations for Cast-in-Place Architectural Concrete: Obtain each color, size, type, and variety of concrete material and concrete mixture from single manufacturer with resources to provide cast-in-place architectural concrete of consistent quality in appearance and physical properties.
- E. ACI Publications: Comply with the following unless modified by requirements in the Contract Documents:
1. ACI 301, "Specification for Structural Concrete," [**Sections 1 through 5.**] [**Sections 1 through 5 and Section 6, "Architectural Concrete."**]
 2. ACI 303.1, "Specification for Cast-in-Place Architectural Concrete."
- F. Concrete Testing Service: Engage a qualified independent testing agency to perform material evaluation tests and to design concrete mixtures.
- G. Field Sample Panels: After approval of verification sample and before casting architectural concrete, produce field sample panels to demonstrate the approved range of selections made under Sample submittals. Produce a minimum of three sets of full-scale panels, cast vertically, approximately **48 by 48 by 6 inches** (1200 by 1200 by 150 mm) minimum, to demonstrate the expected range of finish, color, and texture variations.
1. Locate panels as indicated or, if not indicated, as directed by DEN Project Manager.
 2. Demonstrate methods of curing, aggregate exposure, sealers, and coatings, as applicable.

3. In presence of DEN Project Manager, damage part of an exposed-face surface for each finish, color, and texture, and demonstrate materials and techniques proposed for repair of tie holes and surface blemishes to match adjacent undamaged surfaces.
 4. Maintain field sample panels during construction in an undisturbed condition as a standard for judging the completed Work.
 5. Demolish and remove field sample panels when directed.
- H. Mockups: Before casting architectural concrete, build mockups to verify selections made under Sample submittals and to demonstrate typical joints, surface finish, texture, tolerances, and standard of workmanship. Build mockups to comply with the following requirements, using materials indicated for the completed Work:
1. Build mockups in the location and of the size indicated or, if not indicated, as directed by DEN Project Manager. Provide workmanship and procedures as required to match DEN Project Manager's finish samples.
 2. Build mockups of typical exterior wall of cast-in-place architectural concrete as shown on Drawings.
 3. Demonstrate curing, cleaning, and protecting of cast-in-place architectural concrete, finishes, and contraction joints, as applicable.
 4. In presence of DEN Project Manager, damage part of the exposed-face surface for each finish, color, and texture, and demonstrate materials and techniques proposed for repair of tie holes and surface blemishes to match adjacent undamaged surfaces.
 5. Obtain DEN Project Manager's approval of mockups before casting architectural concrete.
 6. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- I. Installer to submit a certificate evidencing a minimum three (3) years experience successfully providing finishes of types required.
- J. Liquid Waterproofing Manufacturer's Service:
1. Prior to commencement of liquid waterproofing work, manufacturer shall inspect all surfaces to be treated. All deficiencies or flaws in the overall construction of the substrate at issue which would ultimately effect the performance or application of the liquid waterproof coating shall be noted in writing and a copy delivered to the following parties:
 - a. Waterproofing Contractor.
 - b. General Contractor.
 - c. DEN Project Manager.
 2. Manufacturer's representative shall be present at commencement of liquid waterproofing material application to assure utilization of proper equipment, verify material quantities, supervise material application techniques, and supervise the onset application of liquid waterproofing material upon a substantial wall section which shall act as a comparative standard for the project.
 3. Manufacturer's representative will inspect all treated surfaces after application of

liquid waterproofing materials to assure complete product utilization and material performance.

- K. Liquid Waterproofing Contractor's Requirements: Contractor shall comply with recommendations and instructions set forth by manufacturer as part of manufacturer's service and the following:
1. Contractor shall certify that quantity of liquid waterproofing is sufficient to meet manufacturer's minimum surface area coverage recommendations.
 2. Contractor shall not proceed with application of liquid waterproofing material until such time that all deficiencies previously noted in the manufacturer's pre-application inspection have been properly corrected.
 3. Contractor shall notify manufacturer no less than 72 hours prior to commencement of waterproofing work. Manufacturer's representative shall be present at job commencement to verify material quantities, inspect application equipment, and supervise application start-up.
 4. Contractor shall not proceed with material application until such time that the Manufacturer has issued a Certificate of Pre-Application Inspection and written verification of specified material quantity purchase. Submit certificate to the DEN Project Manager.
- L. Provide a certificate stating that final sealer is compatible with curing sealing compound.

1.9 PROJECT CONDITIONS

- A. Perform abrasive blasting within 240 hours after casting. Coordinate with formwork construction, concrete placement schedule, and formwork removal to ensure that surfaces to be blast finished are blasted at same age for uniform results.
- B. Allow concrete to cure not less than 24 hours before commencing surface finish operations, unless otherwise acceptable to DEN Project Manager.
- C. Protect adjacent materials and finishes from dust, dirt and other surface or physical damage during finishing operations. Provide protections as required and remove from site at completion of work.
- D. Repair or replace other work damaged by finishing operations, as directed by DEN Project Manager.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 FORM-FACING MATERIALS

- A. General: Comply with Section 033000 "Cast-in-Place Concrete" for formwork and other form-facing material requirements.
- B. Use materials and methods for project work as used to produce sample finishes acceptable to DEN Project Manager.
- C. Form-Facing Panels for **[As-Cast] [Exposed-Aggregate]** Finishes: Steel, glass-fiber-reinforced plastic, or other approved nonabsorptive panel materials that will provide continuous, true, and smooth architectural concrete surfaces. Furnish in largest practicable sizes to minimize number of joints.
- D. Form-Facing Panels for **[As-Cast] [Exposed-Aggregate]** Finishes: Exterior-grade plywood panels, nonabsorptive, that will provide continuous, true, and smooth architectural concrete surfaces, **[high-density overlay, Class 1, or better] [medium-density overlay, Class 1, or better, mill-applied release agent and edge sealed]**, complying with DOC PS 1[, or Finnish phenolic overlaid birch plywood].
- E. Forms for Cylindrical Columns, Pedestals, and Supports: Metal, glass-fiber-reinforced plastic, paper, or fiber tubes that will provide surfaces with gradual or abrupt irregularities not exceeding specified formwork surface class. Provide units with sufficient wall thickness to resist plastic concrete loads without detrimental deformation.
- F. Pan-Type Forms: Glass-fiber-reinforced plastic or formed steel, stiffened to resist plastic concrete loads without detrimental deformation.
- G. Form Liners: Units of face design, texture, arrangement, and configuration **[indicated] [to match design reference sample]**. Furnish with manufacturer's recommended liquid-release agent that will not bond with, stain, or adversely affect concrete surfaces and will not impair subsequent surface treatments of concrete.
- H. Rustication Strips: Metal, rigid plastic, or dressed wood with sides beveled and back kerfed; nonstaining; in longest practicable lengths.
- I. Chamfer Strips: Metal, rigid plastic, elastomeric rubber, or dressed wood, **3/4 by 3/4 inch (19 by 19 mm)**, minimum; nonstaining; in longest practicable lengths.
- J. Form Joint Tape: Compressible foam tape; pressure sensitive; AAMA 800, "Specification 810.1, Expanded Cellular Glazing Tape"; minimum **1/4 inch (6 mm)** thick.
- K. Form Joint Sealant: Elastomeric sealant complying with ASTM C 920, Type M or Type S, Grade NS that adheres to form joint substrates.
- L. Sealer: Penetrating, clear, polyurethane wood form sealer formulated to reduce absorption of bleed water and prevent migration of set-retarding chemicals from wood.

- M. Form-Release Agent: Commercially formulated, colorless form-release agent that will not bond with, stain, or adversely affect architectural concrete surfaces and will not impair subsequent treatments of those surfaces.
1. Formulate form-release agent with rust inhibitor for steel form-facing materials.
- N. Surface Retarder: Chemical liquid set retarder, for application on form-facing materials, capable of temporarily delaying final hardening of newly placed concrete surface to depth of reveal specified.
- O. Form Ties: Factory-fabricated, **[glass-fiber-reinforced plastic]** **[internally disconnecting]** **[or]** **[removable]** ties designed to resist lateral pressure of fresh concrete on forms and to prevent spalling of concrete on removal.
1. Furnish ties **[with tapered tie cone spreaders]** that, when removed, will leave holes **[3/4 inch (19 mm)]** **[1 inch (25 mm)]** **[1-1/4 inches (32 mm)]** **[1-1/2 inches (38 mm)]** **<Insert dimension>** in diameter on concrete surface.
 2. Furnish internally disconnecting ties that will leave no metal closer than **1-1/2 inches (38 mm)**, **[after exposing aggregate,]** from the architectural concrete surface.
 3. Furnish glass-fiber-reinforced plastic ties, not less than **1/2 inch (13 mm)** in diameter, of color **[to match DEN Project Manager's sample]** **[selected by DEN Project Manager]** from manufacturer's full range.
 4. Furnish ties with integral water-barrier plates to walls indicated to receive dampproofing or waterproofing.
- P. Concrete Sealer: Siloxane, 5% to 7% solids, 100% absorption, solvent based. Subject to compliance with requirements, provide one of the following:
1. ProSoCo Siloxane, Rainguard STD with Microloc.
 2. Euclid Chemical Euco Weatherguard.
 3. Tamms Industries Baracade 6%.
 4. Okon W-1.
 5. **<Insert manufacturer's name>**
 6. or approved equal.

2.2 STEEL REINFORCEMENT AND ACCESSORIES

- A. General: Comply with Section 033000 "Cast-in-Place Concrete" for steel reinforcement and other requirements for reinforcement accessories.
- B. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]** **[60]** **<Insert number>** percent.
- C. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded-wire fabric in place; manufacture according to CRSI's "Manual of Standard Practice."
1. Where legs of wire bar supports contact forms, use **[gray, all-plastic]** **[CRSI]**

Class 1, gray, plastic-protected] [or] [CRSI Class 2, stainless-steel] bar supports.

2.3 CONCRETE MATERIALS

- A. Cementitious Material: Use the following cementitious materials, of the same type, brand, and source, throughout Project:
- Portland Cement: ASTM C 150, **[Type I] [Type II] [Type I/II] [Type III], [gray] [white]. [Supplement with the following:]**
 - Fly Ash: ASTM C 618, **[Class C] [Class F]**.
 - Ground Granulated Blast-Furnace Slag: ASTM C 989, Grade 100 or Grade 120.
 - Silica Fume: ASTM C 1240, amorphous silica.
 - Blended Hydraulic Cement: ASTM C 595, **[Type IS, Portland blast-furnace slag] [Type IP, Portland-pozzolan] [Type I (PM), pozzolan-modified Portland] [Type I (SM), slag-modified Portland] cement.**
- B. Normal-Weight Aggregates: ASTM C 33, **[Class 5S] [Class 5M] [Class 1N] <Insert class>** coarse aggregate or better, graded. Provide aggregates from single source **[with documented service record data of at least 10 years' satisfactory service in similar applications and service conditions using similar aggregates and cementitious materials]**.
- Maximum Coarse-Aggregate Size: **[1 inch (25 mm)] [3/4 inch (19 mm)] [1/2 inch (13 mm)] [3/8 inch (10 mm)]**.
 - Gradation: **[Uniformly] [Gap]** graded.
- C. Normal-Weight Fine Aggregate: **[ASTM C 33] [or] [ASTM C 144]**, manufactured or natural sand, from same source for entire Project.
- D. Water: Potable, complying with ASTM C 94/C 94M except free of wash water from mixer washout operations.

2.4 ADMIXTURES

- A. Air-Entraining Admixture: ASTM C 260.
- B. Chemical Admixtures: Provide admixtures certified by manufacturer to be compatible with other admixtures and that will not contribute water-soluble chloride ions exceeding those permitted in hardened concrete. Do not use calcium chloride or admixtures containing calcium chloride.
- Water-Reducing Admixture: ASTM C 494/C 494M, Type A.
 - Retarding Admixture: ASTM C 494/C 494M, Type B.
 - Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type D.
 - High-Range, Water-Reducing Admixture: ASTM C 494/C 494M, Type F.

5. High-Range, Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type G.
6. Plasticizing and Retarding Admixture: ASTM C 1017/C 1017M, Type II.

C. Color Pigment: ASTM C 979, synthetic mineral-oxide pigments or colored water-reducing admixtures; color stable, [**free of carbon black,**] nonfading, and resistant to lime and other alkalis.

1. Color: [**As indicated by manufacturer's designation**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager** from manufacturer's full range].

2.5 CURING MATERIALS

- A. Absorptive Cover: AASHTO M 182, Class 2, burlap cloth made from jute or kenaf, weighing approximately **9 oz./sq. yd.** (305 g/sq. m) when dry.
- B. Moisture-Retaining Cover: ASTM C 171, polyethylene film or white burlap-polyethylene sheet.
- C. Waterborne, Membrane-Forming Curing Compound: ASTM C 309, Type 1, Class B.
 1. For integrally colored concrete, curing compound shall be [**pigmented type**] approved by color pigment manufacturer.
 2. For concrete indicated to be sealed, curing compound shall be compatible with sealer.

2.6 REPAIR MATERIALS

- A. Bonding Agent: ASTM C 1059/C 1059M, Type II, nonredispersible, acrylic emulsion or styrene butadiene.
- B. Epoxy Bonding Adhesive: ASTM C 881/C 881M, two-component epoxy resin, capable of humid curing and bonding to damp surfaces, of class suitable for application temperature and of grade to suit requirements.
 1. [**Types I and II, non-load bearing**] [**Types IV and V, load bearing**], for bonding hardened or freshly mixed concrete to hardened concrete.

2.7 CONCRETE MIXTURES, GENERAL

- A. Prepare design mixtures for each type and strength of cast-in-place architectural concrete proportioned on basis of laboratory trial mixture or field test data, or both, according to ACI 301.
 1. Use a qualified independent testing agency for preparing and reporting proposed design mixtures based on laboratory trial mixtures.

- B. Proportion concrete mixtures as follows:
1. Compressive Strength (28 Days): [**5000 psi (34.5 MPa)**] [**4500 psi (31 MPa)**] [**4000 psi (27.6 MPa)**] [**3500 psi (24.1 MPa)**] [**3000 psi (20.7 MPa)**].
 2. Maximum Water-Cementitious Materials Ratio: 0.46.
 3. Slump Limit: [**3 inches (75 mm)**] [**4 inches (100 mm)**] [**8 inches (200 mm)**] **for concrete with verified slump of 2 to 4 inches (50 to 100 mm) before adding high-range water-reducing admixture or plasticizing admixture** <Insert dimension(s)>, plus or minus 1 inch (25 mm).
 4. Air Content: [**5-1/2**] <Insert number> percent, plus or minus 1.5 percent at point of delivery for 1-1/2-inch (38-mm) nominal maximum aggregate size.
 5. Air Content: [**6**] <Insert number> percent, plus or minus 1.5 percent at point of delivery for [**1-inch (25-mm)**] [**3/4-inch (19-mm)**] nominal maximum aggregate size.
- C. Cementitious Materials: For cast-in-place architectural concrete exposed to deicers, limit percentage, by weight, of cementitious materials other than Portland cement according to ACI 301 requirements. [**Use fly ash, pozzolan, ground granulated blast-furnace slag, and silica fume as needed to reduce the total amount of Portland cement, which would otherwise be used, by not less than 40 percent.**]
- D. Limit water-soluble, chloride-ion content in hardened concrete to [**0.06**] [**0.15**] [**0.30**] [**1.00**] percent by weight of cement.
- E. Admixtures: Use admixtures according to manufacturer's written instructions.
- F. Color Pigment: Add color pigment to concrete mixture according to manufacturer's written instructions and to result in hardened concrete color consistent with approved mockup.

2.8 CONCRETE MIXING

- A. [**Ready-Mixed**] [or] [**Site-Mixed**] Architectural Concrete: Measure, batch, mix, and deliver concrete according to ASTM C 94/C 94M and furnish batch ticket information.
1. Clean equipment used to mix and deliver cast-in-place architectural concrete to prevent contamination from other concrete.
 2. When air temperature is between **85 and 90 deg F (30 and 32 deg C)**, reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above **90 deg F (32 deg C)**, reduce mixing and delivery time to 60 minutes.

PART 3 - EXECUTION

3.1 FORMWORK

- A. General: Comply with Section 033000 "Cast-in-Place Concrete" for formwork, embedded items, and shoring and reshoring.

- B. Limit deflection of form-facing panels to not exceed ACI 303.1 requirements.
- C. In addition to ACI 303.1 limits on form-facing panel deflection, limit cast-in-place architectural concrete surface irregularities, designated by ACI 347 as abrupt or gradual, as follows:
 - 1. **[Class A, 1/8 inch (3.2 mm)] [Class B, 1/4 inch (6 mm)] [Class C, 1/2 inch (13 mm)].**
- D. Fabricate forms to result in cast-in-place architectural concrete that complies with ACI 117, "Specifications for Tolerances for Concrete Construction and Materials."
 - 1. In addition to ACI 117, comply with the following tolerances: **<Insert tolerances>**.
- E. Fabricate forms for easy removal without hammering or prying against concrete surfaces. Provide crush or wrecking plates where stripping may damage cast-in-place surfaces. Provide top forms for inclined surfaces steeper than 1.5 horizontal to 1 vertical. Kerf wood rustications, keyways, reglets, recesses, and the like, for easy removal.
 - 1. Seal form joints and penetrations at form ties with form joint tape or form joint sealant to prevent cement paste leakage.
 - 2. Do not use rust-stained steel form-facing material.
- F. Provide temporary openings for cleanouts and inspection ports where interior area of formwork is inaccessible. Close openings with panels tightly fitted to forms and securely braced to prevent loss of concrete mortar. Locate temporary openings in forms at inconspicuous locations.
- G. **[Chamfer] [Do not chamfer]** exterior corners and edges of cast-in-place architectural concrete.
- H. Coat contact surfaces of wood rustications and chamfer strips with sealer before placing reinforcement, anchoring devices, and embedded items.
- I. Form openings, chases, offsets, sinkages, keyways, reglets, blocking, screeds, and bulkheads required in the Work. Determine sizes and locations from trades providing such items.
- J. Clean forms and adjacent surfaces to receive concrete. Remove chips, wood, sawdust, dirt, and other debris just before placing concrete.
- K. Retighten forms and bracing before placing concrete, as required, to prevent mortar leaks and maintain proper alignment.
- L. Coat contact surfaces of forms with form-release agent, according to manufacturer's written instructions, before placing reinforcement.
- M. Coat contact surfaces of forms with surface retarder, according to manufacturer's written instructions, before placing reinforcement.

- N. Place form liners accurately to provide finished surface texture indicated. Provide solid backing and attach securely to prevent deflection and maintain stability of liners during concreting. Prevent form liners from sagging and stretching in hot weather. Seal joints of form liners and form liner accessories to prevent mortar leaks. Coat form liner with form-release agent.

3.2 REINFORCEMENT AND INSERTS

- A. General: Comply with Section 033000 "Cast-in-Place Concrete" for fabricating and installing steel reinforcement. Securely fasten steel reinforcement and wire ties against shifting during concrete placement.
- B. Set wire ties with ends directed into concrete, not toward exposed concrete surfaces.

3.3 REMOVING AND REUSING FORMS

- A. Formwork for sides of beams, walls, columns, and similar parts of the Work that does not support weight of concrete may be removed after cumulatively curing at not less than **50 deg F (10 deg C)** for 24 hours after placing concrete if concrete is hard enough to not be damaged by form-removal operations and curing and protection operations are maintained.
 - 1. Schedule form removal to maintain surface appearance that matches approved **[field sample panels] [mockups]**.
 - 2. Cut off and grind glass-fiber-reinforced plastic form ties flush with surface of concrete.
- B. Leave formwork for beam soffits, joists, slabs, and other structural elements that support weight of concrete in place until concrete has achieved **[28-day design compressive strength] [at least 70 percent of 28-day design compressive strength]**. Remove forms only if shores have been arranged to permit removal of forms without loosening or disturbing shores.
- C. Clean and repair surfaces of forms to be reused in the Work. Do not use split, frayed, delaminated, or otherwise damaged form-facing material. Apply new form-release agent.
- D. When forms are reused, clean surfaces, remove fins and laitance, and tighten to close joints. Align and secure joints to avoid offsets. Do not use patched forms for cast-in-place architectural concrete surfaces.

3.4 JOINTS

- A. Construction Joints: Install construction joints true to line with faces perpendicular to surface plane of cast-in-place architectural concrete so strength and appearance of concrete are not impaired, at locations indicated or as approved by DEN Project Manager.

1. Place joints perpendicular to main reinforcement. Continue reinforcement across construction joints unless otherwise indicated.
 2. Form keyed joints as indicated. [**Embed keys at least 1-1/2 inches (38 mm) into concrete.**] Align construction joint within rustications attached to form-facing material.
 3. Locate joints for beams, slabs, joists, and girders in the middle third of spans. Offset joints in girders a minimum distance of twice the beam width from a beam-girder intersection.
 4. Locate horizontal joints in walls and columns at underside of floors, slabs, beams, and girders and at the top of footings or floor slabs.
 5. Space vertical joints in walls [**as indicated**] **<Insert spacing>**. Locate joints beside piers integral with walls, near corners, and in concealed locations where possible.
 6. Use [**bonding agent**] [**epoxy-bonding adhesive**] at locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.
- B. Contraction Joints: Form weakened-plane contraction joints true to line with faces perpendicular to surface plane of cast-in-place architectural concrete so strength and appearance of concrete are not impaired, at locations indicated or as approved by DEN Project Manager.

3.5 CONCRETE PLACEMENT

- A. Before placing concrete, verify that installation of formwork, form-release agent, reinforcement, and embedded items is complete and that required inspections have been performed.
- B. Do not add water to concrete during delivery, at Project site, or during placement unless approved by DEN Project Manager.
- C. Before test sampling and placing concrete, water may be added at Project site, subject to limitations of ACI 301.
1. Do not add water to concrete after adding high-range water-reducing admixtures to mixture.
- D. Deposit concrete continuously between construction joints. Deposit concrete to avoid segregation.
1. Deposit concrete in horizontal layers of depth to not exceed formwork design pressures and in a manner to avoid inclined construction joints.
 2. Consolidate placed concrete with mechanical vibrating equipment according to ACI 303.1.
 3. Do not use vibrators to transport concrete inside forms. Insert and withdraw vibrators vertically at uniformly spaced locations to rapidly penetrate placed layer and at least **6 inches (150 mm)** into preceding layer. Do not insert vibrators into lower layers of concrete that have begun to lose plasticity. Do not permit vibrators to contact forms.

- E. Cold-Weather Placement: Comply with ACI 306.1 and as follows. Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures.
1. When average high and low temperature is expected to fall below 40 deg F (4.4 deg C) for three successive days, maintain delivered concrete mixture temperature within the temperature range required by ACI 301.
 2. Do not use frozen materials or materials containing ice or snow. Do not place concrete on frozen subgrade or on subgrade containing frozen materials.
 3. Do not use calcium chloride, salt, or other materials containing antifreeze agents.
 4. Do not use chemical accelerators unless otherwise specified and approved in design mixtures.
- F. Hot-Weather Placement: Comply with ACI 301 and as follows:
1. Maintain concrete temperature below 90 deg F (32 deg C) at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated to total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
 2. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade uniformly moist without standing water, soft spots, or dry areas.

3.6 PREPARATION

- A. Remove and replace defective concrete that is not properly formed, is out of alignment or level, or displays surface defects, unless DEN Project Manager permits patching or other corrective measures. Permission to patch defective concrete is not a waiver of DEN Project Manager's right to require complete removal of defective work if patching does not, in his opinion, satisfactorily restore quality and appearance of surface.
1. Perform patching, when permitted, in compliance with applicable provisions of this Section.
- B. At exterior concrete, cold joints shall only occur at reveals, coordinate on shop drawings.

3.7 FINISHES, GENERAL

- A. Architectural Concrete Finish: Match DEN Project Manager's design reference sample, identified and described as indicated, to satisfaction of DEN Project Manager.
- B. Related Unformed Surfaces: At tops of walls, horizontal offsets, and similar unformed surfaces adjacent to formed surfaces, strike off smooth and finish with a texture matching adjacent formed surfaces.
1. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces unless otherwise indicated.
- C. Maintain uniformity of special finishes over construction joints unless otherwise

indicated.

3.8 AS-CAST FORMED FINISHES

- A. Rough-Formed Finish: As-cast concrete texture imparted by form-facing material with tie holes and defects repaired and patched. Remove fins and other projections exceeding specified limits on formed-surface irregularities.
- B. Smooth-Formed Finish: As-cast concrete texture imparted by form-facing material, arranged in an orderly and symmetrical manner with a minimum of seams. Remove fins and other projections exceeding specified limits on formed-surface irregularities. **[Repair] [Do not repair]** and patch tie holes and defects.
- C. Rubbed Finish: Apply the following to smooth-form-finished as-cast concrete where indicated:
 - 1. Smooth-Rubbed Finish: Not later than one day after form removal, moisten concrete surfaces and rub with carborundum brick or another abrasive until producing a uniform color and texture. Do not apply cement grout other than that created by the rubbing process.
 - 2. Grout-Cleaned Finish: Wet concrete surfaces and apply grout of a consistency of thick paint to coat surfaces and fill small holes. Mix one part Portland cement to one and one-half parts fine sand with a 1:1 mixture of bonding admixture and water. Add white Portland cement in amounts determined by trial patches so color of dry grout will match surrounding concrete. Scrub grout into voids and remove excess grout. When grout whitens, rub surface with clean burlap and keep surface damp by fog spray for at least 36 hours.
 - 3. Cork-Floated Finish: Wet concrete surfaces and apply a stiff grout. Mix one part Portland cement and one part fine sand with a 1:1 mixture of bonding agent and water. Add white Portland cement in amounts determined by trial patches so color of dry grout will match surrounding concrete. Compress grout into voids by grinding surface. In a swirling motion, finish surface with a cork float.
- D. Form-Liner Finish: Produce a textured surface free of pockets, streaks, and honeycombs, and of uniform appearance, color, and texture.

3.9 EXPOSED-AGGREGATE FINISHES

- A. Scrubbed Finish: After concrete has achieved a compressive strength of from **1000 to 1500 psi (6.9 to 10.3 MPa)**, apply scrubbed finish. Wet concrete surfaces thoroughly and scrub with stiff fiber or wire brushes, using water freely, until top mortar surface is removed and aggregate is uniformly exposed. Rinse scrubbed surfaces with clean water. Maintain continuity of finish on each surface or area of Work. Remove only enough concrete mortar from surfaces to match design reference sample or mockup.
- B. High-Pressure Water-Jet Finish: Perform high-pressure water jetting on concrete that has achieved a minimum compressive strength of **4500 psi (31 MPa)**. Coordinate with

formwork removal to ensure that surfaces to be high-pressure water-jet finished are treated at same age for uniform results.

1. Surface Continuity: Perform high-pressure water-jet finishing in as continuous an operation as possible, maintaining continuity of finish on each surface or area of Work. Maintain required patterns or variances in reveal projection to match design reference sample or mockup.
- C. Abrasive-Blast Finish: Perform abrasive blasting after compressive strength of concrete exceeds 2000 psi (13.8 MPa). Coordinate with formwork removal to ensure that surfaces to be abrasive blasted are treated at same age for uniform results.
1. Surface Continuity: Perform abrasive-blast finishing in as continuous an operation as possible, maintaining continuity of finish on each surface or area of Work, utilizing same work crew to maintain continuity of finish on each surface or area of work. Maintain required patterns or variances in depths of blast as indicated on Drawings and to match design reference sample or mockup.
 2. Abrasive Blasting: Abrasive blast corners and edges of patterns carefully, using backup boards, to maintain uniform corner or edge line. Determine type of nozzle, nozzle pressure, and blasting techniques required to match design reference sample or mockup.
 3. Depth of Cut: Use an abrasive grit of proper type and gradation to expose aggregate and surrounding matrix surfaces to match design reference sample or mockup, as follows:
 - a. Brush: Remove cement matrix to dull surface sheen and expose face of fine aggregate; with no significant reveal.
 - b. Light: Expose fine aggregate with occasional exposure of coarse aggregate and uniform color; with maximum reveal of 1/16 inch (1.5 mm).
 - c. Medium: Generally expose coarse aggregate; with slight reveal, a maximum of 1/4 inch (6 mm).
 - d. Heavy: Expose and reveal coarse aggregate to a maximum projection of one-third its diameter; with reveal range of 1/4 to 1/2 inch (6 to 13 mm).
 4. Construction Joints: Use technique acceptable to DEN Project Manager as required to achieve uniform treatment of construction joints.
 5. Power Wash Cleaning: After abrasive blasting to required depth is completed, apply a power wash to clean abrasive blasted surfaces to match DEN Project Manager's sample. Thoroughly neutralize and flush any cleaners used from surfaces with water under pressure. Protect adjacent materials/finishes from power wash.
 - a. Prior to performing power wash cleaning work, Contractor to power wash a test area to verify that concrete surfaces are not damaged by power washing. Contractor shall be responsible to replace or repair all concrete that is damaged by power washing activities, as determined by DEN Project Manager.
- D. Bushhammer Finish: Allow concrete to cure at least 14 days before starting bushhammer surface finish operations.

1. Surface Continuity: Perform bushhammer finishing in as continuous an operation as possible, maintaining continuity of finish on each surface or area of Work. Maintain required patterns or variances of cut as shown on Drawings or to match design reference sample or mockup.
2. Surface Cut: Maintain required depth of cut and general aggregate exposure. Use power tool with hammer attachments for large, flat surfaces, and use hand hammers for small areas, at corners and edges, and for restricted locations where power tools cannot reach.
3. Remove impressions of formwork and form facings with exception of tie holes.

E. Brushed Concrete Finish:

1. Apply scrubbed finish to concrete surfaces where indicated.
2. Strip forms as soon as practicable so that scrubbed finish may be produced on green concrete surfaces.
 - a. Coordinate form removal as specified in this Section.
3. Wet concrete surface thoroughly and scrub with stiff fiber or wire brushes, using water freely, until top mortar surface is removed and aggregate uniformly exposed. Rinse scrubbed surfaces with clean water. Remove only enough concrete mortar from surfaces to match DEN Project Manager's sample.
4. Use a weak cleaning solution while scrubbing where concrete has become too hard to produce required finish with normal scrubbing procedures. Remove cleaner from finished surface by flushing with clean water. Protect adjacent surfaces and finishes from damage by cleaning.

3.10 CONCRETE PROTECTING AND CURING

- A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures. Comply with ACI 306.1 for cold-weather protection and with ACI 301 for hot-weather protection during curing.
- B. Begin curing cast-in-place architectural concrete immediately after [**removing forms from**] [**applying as-cast formed finishes to**] concrete. Cure according to ACI 308.1, by one or a combination of the following methods that will not mottle, discolor, or stain concrete:
 1. Moisture Curing: Keep exposed surfaces of cast-in-place architectural concrete continuously moist for no fewer than seven days with the following materials:
 - a. Water.
 - b. Continuous water-fog spray.
 - c. Absorptive cover, water saturated and kept continuously wet. Cover concrete surfaces and edges with **12-inch (300-mm)** lap over adjacent absorptive covers.
 2. Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width,

with sides and ends lapped at least **12 inches** (300 mm), and sealed by waterproof tape or adhesive. Cure for no fewer than seven days. Immediately repair any holes or tears during curing period; use cover material and waterproof tape.

3. Curing Compound: Mist concrete surfaces with water. Apply curing compound uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating and repair damage during curing period.

3.11 FIELD QUALITY CONTROL

- A. General: Comply with field quality-control requirements in Section 033000 "Cast-in-Place Concrete."

3.12 REPAIRS, PROTECTION, AND CLEANING

- A. Maintain control of concrete chips, dust, and debris in each area of work. Clean up and remove such material at completion of each day of application. Prevent migration of airborne materials by use of tarpaulins, wind breaks and similar containing devices.
- B. Sealer: One coat, install per manufacturer's recommendations. Do not install over wet or damp concrete. Mask-off adjacent surfaces not to receive sealer.
- C. Cooperate with other trades for protection of completed finishes.
- D. Repair and cure damaged finished surfaces of cast-in-place architectural concrete when approved by DEN Project Manager. Match repairs to color, texture, and uniformity of surrounding surfaces and to repairs on approved mockups.
 1. Remove and replace cast-in-place architectural concrete that cannot be repaired and cured to DEN Project Manager's approval.
- E. Protect corners, edges, and surfaces of cast-in-place architectural concrete from damage; use guards and barricades.
- F. Protect cast-in-place architectural concrete from staining, laitance, and contamination during remainder of construction period.
- G. Clean cast-in-place architectural concrete surfaces after finish treatment to remove stains, markings, dust, and debris.
- H. Wash and rinse surfaces according to concrete finish applicator's written instructions. Protect other Work from staining or damage due to cleaning operations.
 1. Do not use cleaning materials or processes that could change the appearance of cast-in-place architectural concrete finishes.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement will be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the lump sum contract price.

END OF SECTION 033300

SECTION 033320 - CONCRETE TOPPING (STANDARD AGGREGATES)

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Extent of concrete floor toppings is shown on drawings and includes all concrete toppings, including those shown at the Central Core portion of the project. Section Includes the following types of concrete floor toppings:
 - 1. Standard aggregate toppings.
- B. Related Sections:
 - 1. Section 03300 "Cast-In-Place Concrete" for concrete work.
 - 2. Section 093000 "Tiling" for medium-set and thickset mortar beds for tile.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Include data substantiating that materials comply with requirements.
- B. Furnish data, samples, laboratory test reports, and materials certificates as specified in Section 033000 "Cast-In-Place Concrete".

1.4 INFORMATIONAL SUBMITTALS

- A. Product Test Reports: Based on evaluation of comprehensive tests performed by **[manufacturer and witnessed by a qualified testing agency] [a qualified testing agency]**, for concrete floor topping.
- B. Field quality-control test reports.

1.5 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Testing Agency Qualifications: An independent agency qualified according to ASTM C 1077 and ASTM E 329 for testing indicated.
- B. Flatness Testing: Contractor to employ an independent testing agency to determine floor flatness and floor levelness per ASTM E 1155. Test Surface: Minimum 50% of all floor areas arrange uniformly. Test as soon as possible after slab installation. Submit written report to DEN Project Manager within 48 hours of tests. Repair per requirements of Section 033000 "Cast-In-Place Concrete".
- C. Mockups: Place concrete floor topping mockups to demonstrate typical joints, surface finish, bonding, texture, tolerances, and standard of workmanship.
 - 1. Build mockups approximately 100 sq. ft. (9.3 sq. m) in the location indicated or, if not indicated, as directed by DEN Project Manager.
 - 2. If DEN Project Manager determines that mockups do not meet requirements, demolish and remove them from the site and cast others until mockups are approved.
 - 3. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- D. Preinstallation Conference: Conduct conference at **[location and time as determined by DEN Project Manager][Project site] <Insert location>**.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials in original packages and containers, with seals unbroken, bearing manufacturer's labels indicating brand name and directions for storage, mixing with other components, and application.
- B. Store materials to comply with manufacturer's written instructions to prevent deterioration from moisture or other detrimental effects.

1.8 PROJECT CONDITIONS

- A. Environmental Limitations: Comply with manufacturer's written instructions for substrate temperature and moisture content, ambient temperature and humidity, ventilation, and other conditions affecting concrete floor topping performance.
 - 1. Place concrete floor topping only when ambient temperature and temperature of base slabs are between 50 and 86 deg F (10 and 30 deg C).

- B. Close areas to traffic during topping application and, after application, for time period recommended in writing by manufacturer.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 CEMENT AND AGGREGATES

- A. Portland Cement: ASTM C 150, Type I or Type III.
- B. Standard Aggregate: ASTM C 33, and as follows:
 - 1. Fine aggregate, consisting of sand or crushed stone screenings, clean, hard, free from deleterious matter. Grade by weight to pass sieves as follows:
 - a. 3/8": 100 percent
 - b. No. 4: 95-100 percent
 - c. No. 8: 80-100 percent
 - d. No. 16: 50-85 percent
 - e. No. 30: 25-60 percent
 - f. No. 50: 10 30 percent
 - g. No. 100: 2 10 percent
 - 2. Coarse aggregate consisting of gravel or crushed stone, clean, hard, free from deleterious matter. Grade by weight to pass sieves as follows:
 - a. 1/2": 100 percent
 - b. 3/8": 85-100 percent
 - c. No. 4: 10-30 percent
 - d. No. 8: 0-10 percent
 - e. No. 16: 0-05 percent
- C. Cast-in-aggregate Hardener:
 - 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering factory pre mixed topping mixes which may be incorporated in the work include the following:
 - a. The Euclid Chemical Co.
 - b. Master Builders.
 - c. Iron Mountain Trap Rock Co.
 - d. <Insert manufacturer>
 - e. or approved equal.

- D. Reinforcement: ASTM A 185, welded steel wire fabric.

2.2 TOPPING MIX

A. Standard Topping:

1. Design mix to produce topping material with the following characteristics:
 - a. Compressive strength; 3500 psi at 28 days.
 - b. Slump; 8" maximum at point of placement for concrete containing high range water reducing admixture (super plasticizer) and 3" maximum for other concrete.
 - c. Maximum W/C ratio; 0.51.

B. MIXING:

1. Provide batch type mechanical mixer for mixing topping material at project site. Equip batch mixer with a suitable charging hopper, water storage tank, and a water measuring device. Use only mixers that are capable of mixing aggregates, cement, and water into a uniform mix within specified time, and of discharging mix without segregation.
2. Mix each batch of 2 cu. yds. or less for at least 1-1/2 minutes after ingredients are in mixer. Increase mixing time 15 secs. for each additional cu. yd. or fraction thereof.
 - a. Ready mixed topping may be used when acceptable to DEN Resident Engineer. When acceptable, furnish ready mixed topping complying with requirements of ASTM C 94.

2.3 CURING MATERIALS

- A. Use curing materials as specified in Section 033000 "Cast-in-Place Concrete".

2.4 RELATED MATERIALS

- A. Use related materials as specified in Section 033000 "Cast-In-Place Concrete".

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, with Installer present, for conditions affecting performance of concrete floor topping.
- B. Verify that base concrete slabs comply with scratch finish requirements specified in Section 033000 "Cast-in-Place Concrete."

- C. Verify that base slabs are visibly dry and free of moisture. Test for capillary moisture by the plastic sheet method according to ASTM D 4263.
- D. Proceed with application only after unsatisfactory conditions have been corrected.

3.2 CONDITION OF SURFACES

- A. Topping Applied to Fresh Concrete: Do not begin placement of topping until water ceases to rise to surface, and water and laitance have been removed from base slab surface.
- B. Topping Applied to Hardened Concrete: Remove dirt, loose material, oil, grease, paint, existing surface treatments and deteriorated and unsound concrete, or other contaminants, leaving a clean surface.
 - 1. When base slab surface is unacceptable for good bonding, roughen surface by chipping or scarifying before cleaning. Mechanically abrade base slabs to produce a heavily scarified surface profile with an amplitude of **1/4 inch (6 mm.)**
 - 2. Fill voids, cracks, and cavities in base slabs.
 - 3. Prior to placing topping mixture, thoroughly dampen slab surface but do not leave standing water.
 - 4. Over dampened surface, apply specified bonding compound (re-wettable or non re-wettable) or epoxy adhesive. Refer to section 033000 "Cast-In-Place Concrete".
 - 5. Place topping mix after re-wettable bonding compound has dried or while non rewettable bonding compound or epoxy adhesive is still tacky.
- C. For reinforced toppings, provide necessary chairs or supports, and maintain position of reinforcing mesh as shown on drawings.
- D. Joints: Mark locations of joints in base slab so that joints in top course will be placed directly over them.

3.3 JOINT PREPARATION

- 1. Saw cut contraction and construction joints in existing concrete to a depth of **1/2 inch (13 mm)** and fill with semirigid joint filler.
- 2. To both sides of joint edges and at perimeter of existing base slab [**mechanically remove a 4-inch- (100-mm-) wide and 0- to 1-inch (0- to 25-mm-) deep, tapered wedge of concrete and retexture surface**] [**install concrete nails in manufacturer's recommended staggered pattern**].
- B. Install joint-filler strips where topping abuts vertical surfaces, such as column pedestals, foundation walls, grade beams, and other locations, as indicated.
 - 1. Extend joint-filler strips full width and depth of joint, terminating flush with topping surface, unless otherwise indicated.
 - 2. Terminate full-width, joint-filler strips **1/2 inch (13 mm)** below topping surface where joint sealants, specified in Section 079200 "Joint Sealants," are indicated.

3. Install joint-filler strips in lengths as long as practicable. Where more than one length is required, lace or clip sections together.
- C. Construction Joints: Construct joints true to line with faces perpendicular to surface plane of concrete floor topping, at locations indicated or as approved by DEN Project Manager.
1. Coat face of construction joint with epoxy adhesive at locations where concrete floor topping is placed against hardened or partially hardened concrete floor topping.
- D. Contraction Joints: Form weakened-plane contraction joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut **1/8-inch- (3-mm-)** wide joints into concrete floor topping when cutting action will not tear, abrade, or otherwise damage surface and before random contraction cracks develop.
1. Form joints in concrete floor topping over contraction joints in base slabs, unless otherwise indicated.
 2. Construct contraction joints for a combined depth equal to topping thickness and not less than one-fourth of base-slab thickness.
 3. Construct contraction joints for a depth equal to one-half of concrete floor topping thickness, but not less than **1/2 inch (13 mm)** deep.

3.4 TOPPING APPLICATION

- A. Monolithic Floor Topping: After textured-float finish is applied to fresh concrete of base slabs specified in Section 033000 "Cast-in-Place Concrete," place concrete floor topping while concrete is still plastic.
- B. Deferred Floor Topping: Within 72 hours of placing base slabs, mix and scrub bonding slurry into dampened concrete to a thickness of **1/16 to 1/8 inch (1.6 to 3 mm)**, without puddling. Place floor topping while slurry is still tacky.
- C. Existing Concrete: Apply epoxy-bonding adhesive, mixed according to manufacturer's written instructions, and scrub into dry base slabs to a thickness of **1/16 to 1/8 inch (1.6 to 3 mm)**, without puddling. Place floor topping while adhesive is still tacky.
- D. Place concrete floor topping continuously in a single layer, tamping and consolidating to achieve tight contact with bonding surface. Do not permit cold joints or seams to develop within pour strip.
1. Screed surface with a straightedge and strike off to correct elevations.
 2. Slope surfaces uniformly where indicated.
 3. Begin initial floating using bull floats to form a uniform and open-textured surface plane free of humps or hollows.

3.5 PLACING AND COMPACTING

- A. Float Finish:

1. Spread topping mixture evenly over prepared base to the required elevation and strikeoff. Use highway straightedge, bull float, or darby to level surface.
2. After the topping has stiffened sufficiently to permit the operation, and water sheen has disappeared, float the surface at least twice to a uniform sandy texture.
3. Restraighten where necessary with highway straightedge. Check and level surface plane per ACI 117-90 to levelness and flatness tolerances of F 25 except, provide flatness only tolerance of F 25 at sloped slab areas. Cut down high spots and fill low spots.
4. Uniformly slope surfaces to drains.
5. Immediately after leveling, refloat surface to a uniform, smooth, granular texture.
6. Install cast-in floor hardener per manufacturers recommendations. Apply at a minimum of 100 pounds per 100 square feet.

3.6 TROWEL FINISH

- A. After floating, begin first trowel finish operation using power driven trowels. Continue troweling until surface is ready to receive final troweling. Begin final troweling when a ringing sound is produced as trowel is moved over surface.
- B. Continue final trowel operation to produce finished surface free of trowel marks, uniform in texture and appearance, achieving an F 25 tolerance when tested in accordance with ACI 117-90 for flatness and levelness.
- C. PROTECTING AND CURING
- D. General: Protect freshly placed concrete floor topping from premature drying and excessive cold or hot temperatures.
- E. Evaporation Retarder: Apply evaporation retarder to concrete floor topping surfaces in hot, dry, or windy conditions before and during finishing operations. Apply according to manufacturer's written instructions after placing, screeding, and bull floating or darbying floor topping, but before float finishing.
- F. Begin curing immediately after finishing concrete floor topping. Cure by one or a combination of the following methods, according to concrete floor topping manufacturer's written instructions:
 1. Moisture Curing: Keep surfaces continuously moist for not less than 7 days with **[water] [continuous water-fog spray] [or] [absorptive cover, water saturated and kept continuously wet. Cover topping surfaces and edges with 12-inch (300-mm) lap over adjacent absorptive covers].**
 2. Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width, with sides and ends lapped at least **12 inches (300 mm)**, and sealed by waterproof tape or adhesive. Cure for not less than seven days. Immediately repair any holes or tears during curing period using cover material and waterproof tape.

3. Curing Compound: Apply uniformly in two coats in continuous operations by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating and repair damage during curing period.

3.7 JOINT FILLING

- A. Prepare and clean contraction joints and install semirigid joint filler, according to manufacturer's written instructions, once topping has fully cured.
- B. Remove dirt, debris, saw cuttings, curing compounds, and sealers from joints; leave contact faces of joint clean and dry.
- C. Install semirigid joint filler full depth of contraction joints. Overfill joint and trim semirigid joint filler flush with top of joint after hardening.

3.8 REPAIRS

- A. Defective Topping: Repair and patch defective concrete floor topping areas, including areas that have not bonded to concrete substrate.
- B. Failure of concrete topping to bond to substrate (as evidenced by a hollow sound when tapped), or disintegration or other failure of topping to perform as a floor finish, will be considered failure of materials and workmanship. Repair or replace toppings in areas of such failures, as directed. Does not apply to topping slab on a waterproof membrane

3.9 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.
- B. Testing Services: Testing and inspecting of completed applications of concrete floor toppings shall take place in successive stages, in areas of extent and using methods as follows:
 1. Sample Sets: At point of placement, a set of 3 molded-cube samples shall be taken from the topping mix for the first **1000 sq. ft. (93 sq. m)**, plus 1 set of samples for each subsequent **5000 sq. ft. (464 sq. m)** of topping, or fraction thereof, but not less than 6 samples for each day's placement. Samples shall be tested according to ASTM C 109/C 109M for compliance with compressive-strength requirements.
 2. Concrete floor topping shall be tested for delamination by dragging a steel chain over the surface.
 3. Concrete floor topping shall be tested for compliance with surface flatness and levelness tolerances.
- C. Remove and replace applications of concrete floor topping where test results indicate

that it does not comply with specified requirements.

- D. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement will be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the lump sum contract price.

END OF SECTION 035300

SECTION 034100 - PRECAST STRUCTURAL CONCRETE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

- 1. Precast structural concrete.
- 2. Precast structural concrete with **[thin-brick]** **[stone]** facings.
- 3. Precast structural concrete with commercial architectural finish.

- B. Related Sections:

- 1. Section 033000 "Cast-in-Place Concrete" for **[concrete topping and]**placing connection anchors in concrete.
- 2. Section 042000 "Unit Masonry" for inserts or anchorages required for precast concrete slab connections.
- 3. Section 044200 "Exterior Stone Cladding" for preconstruction testing of stone anchors and determination of anchor spacing.
- 4. Section 051200 "Structural Steel Framing" for furnishing and installing connections attached to structural-steel framing.
- 5. Section 055000 "Metal Fabrications" for kickers and other miscellaneous steel shapes.
- 6. Section 076200 "Sheet Metal Flashing and Trim" for flashing receivers and reglets.
- 7. Section 078413 "Penetration Firestopping" for joint-filler materials for fire-resistance-rated construction.
- 8. Section 079200 "Joint Sealants" for elastomeric joint sealants and sealant backings.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITION

- A. Design Reference Sample: Sample of approved precast structural concrete color, finish, and texture, preapproved by DEN Project Manager.

1.4 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design precast structural concrete, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. Structural Performance: Precast structural concrete units and connections shall withstand design loads indicated within limits and under conditions indicated.
- C. Structural Performance: Provide precast structural concrete units and connections capable of withstanding the following design loads within limits and under conditions indicated:
1. Dead Loads: **<Insert loads>**.
 2. Concrete Topping Load: **<Insert load>**.
 3. Live Loads: **<Insert loads>**.
 4. Roof Loads: **<Insert loads>**.
 5. Snow Loads: **<Insert loads>**.
 6. Seismic Loads: **<Insert seismic design data including seismic performance category, importance factor, use group, seismic design category, seismic zone, site classification, site coefficient, and drift criteria>**.
 7. Wind Loads: **<Insert wind loads or wind-loading criteria, positive and negative for various parts of the building as required by applicable building code or SEI/ASCE 7, including basic wind speed, importance factor, exposure category, and pressure coefficient>**.
 8. **<Insert loads or load combinations>**.
 9. Design precast structural concrete framing system and connections to maintain clearances at openings, to allow for fabrication and construction tolerances, to accommodate live-load deflection, shrinkage and creep of primary building structure, and other building movements. Maintain precast structural concrete deflections within limits of **ACI 318 (ACI 318M)**.
 - a. Thermal Movements: Allow for in-plane thermal movements resulting from annual ambient temperature changes of **[minus 18 to plus 120 deg F (minus 10 to plus 67 deg C)] [120 deg F (67 deg C)] <Insert temperature>**.
 10. Fire-Resistance Rating: Select material and minimum thicknesses to provide indicated fire rating.
 11. Stone to Precast Anchorages: Provide anchors, as determined through Owner's or stone supplier testing, in numbers, types, and locations as required to satisfy performance criteria specified, but not less than the following:
 - a. Minimum Anchorage Requirement: Not less than 2 anchors per unit of less than **2 sq. ft. (0.19 sq. m)** in area and 4 anchors per unit of less than **12 sq. ft. (1.1 sq. m)** in area and for units larger than **12 sq. ft. (1.1 sq. m)** in area, provide anchors spaced not more than **24 inches (600 mm)** o.c. both horizontally and vertically, all located a minimum of **6 inches (150 mm)** from stone edge.
 12. Vehicular Impact Loads: Design spandrel beams acting as vehicular barriers for

passenger cars to resist a single [6000-lbf (26.7-kN)] <Insert load> service load and [10,000-lbf (44.5-kN)] <Insert load> ultimate load applied horizontally in any direction to the spandrel beam, with anchorages or attachments capable of transferring this load to the structure. Design spandrel beams assuming the load to act at a height of 18 inches (460 mm) above the floor or ramp surface on an area not to exceed 1 sq. ft. (0.93 sq. m).

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
 - 2. Design Mixtures for Credit ID 1: For each concrete mixture containing fly ash as a replacement for Portland cement or other Portland cement replacements and for equivalent concrete mixtures that do not contain Portland cement replacements.
- C. Design Mixtures: For each precast concrete mixture. Include compressive strength and water-absorption tests.
- D. Shop Drawings: Include member locations, plans, elevations, dimensions, shapes and sections, openings, support conditions, and types of reinforcement, including special reinforcement. Detail fabrication and installation of precast structural concrete units.
 - 1. Indicate joints, reveals, and extent and location of each surface finish.
 - 2. Indicate separate face and backup mixture locations and thicknesses.
 - 3. Indicate welded connections by AWS standard symbols. Show size, length, and type of each weld.
 - 4. Detail loose and cast-in hardware, lifting and erection inserts, connections, and joints.
 - 5. Indicate locations, tolerances, and details of anchorage devices to be embedded in or attached to structure or other construction.
 - 6. Include and locate openings larger than by 10 inches (250 mm).
 - 7. Indicate location of each precast structural concrete unit by same identification mark placed on panel.
 - 8. Indicate relationship of precast structural concrete units to adjacent materials.
 - 9. Indicate locations and details of brick units, including corner units and special shapes, and joint treatment.
 - 10. Indicate locations and details of stone facings, anchors, and joint widths.
 - 11. Indicate estimated camber for precast floor slabs with concrete toppings.
 - 12. Indicate shim sizes and grouting sequence.

13. Design Modifications: If design modifications are proposed to meet performance requirements and field conditions, submit design calculations and Shop Drawings. Do not adversely affect the appearance, durability, or strength of units when modifying details or materials and maintain the general design concept.

E. Samples:

1. For each type of finish indicated on exposed surfaces of precast structural concrete units with architectural finish, in sets of 3, illustrating full range of finish, color, and texture variations expected; approximately 12 by 12 by 2 inches (300 by 300 by 50 mm).
 - a. Where other faces of precast concrete unit are exposed, include Samples illustrating workmanship, color, and texture of backup concrete as well as facing concrete.
2. Samples for each thin- or half-brick unit required, showing full range of color and texture expected. Include Samples showing color and texture of joint treatment.
 - a. Grout Samples for Initial Selection: Color charts consisting of actual sections of grout showing manufacturer's full range of colors.
 - b. Grout Samples for Verification: Showing color and texture of joint treatment.

- F. Delegated-Design Submittal: For precast structural concrete indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For [Installer] [fabricator] [testing agency].
- B. Welding certificates.
- C. Material Certificates: For the following, from manufacturer:
 1. Cementitious materials.
 2. Reinforcing materials and prestressing tendons.
 3. Admixtures.
 4. Bearing pads.
 5. Structural-steel shapes and hollow structural sections.
 6. Brick units and accessories.
 7. Stone anchors and accessories.
- D. Material Test Reports: For aggregates.
- E. Source quality-control reports.
- F. Field quality-control[**and special inspection**] reports.

1.7 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 QUALITY ASSURANCE

- A. Fabricator Qualifications: A firm that assumes responsibility for engineering precast structural concrete units to comply with performance requirements. Responsibility includes preparation of Shop Drawings and comprehensive engineering analysis by a qualified professional engineer.
1. Participates in PCI's Plant Certification program[**at time of bidding**] and is designated a PCI-certified plant as follows:
 - a. Group C, [**Category C1 - Precast Concrete Products (no prestressed reinforcement)**] [**Category C2 - Prestressed Hollowcore and Repetitively Produced Products**] [**Category C3 - Prestressed Straight Strand Structural Members**] [**Category C4 - Prestressed Deflected Strand Structural Members**].
 - b. Group CA, [**Category C1A - Precast Concrete Products (no prestressed reinforcement)**] [**Category C2A - Prestressed Hollowcore and Repetitively Produced Products**] [**Category C3A - Prestressed Straight-Strand Structural Members**] [**Category C4A - Prestressed Deflected-Strand Structural Members**].
- B. Installer Qualifications: A precast concrete erector qualified[**at time of bidding**], as evidenced by PCI's Certificate of Compliance, to erect [**Category S1 - Simple Structural Systems**] [**Category S2 - Complex Structural Systems**].
- C. Installer Qualifications: An experienced precast concrete erector who, before erection of precast concrete, has retained a "PCI-Certified Field Auditor" to conduct a field audit of a project installed by erector in [**Category S1 - Simple Structural Systems**] [**Category S2 - Complex Structural Systems**] and who produces an Erectors' Post Audit Declaration, according to PCI MNL 127, "PCI Erector's Manual - Standards and Guidelines for the Erection of Precast Concrete Products."
- D. Testing Agency Qualifications: Qualified according to ASTM C 1077 and ASTM E 329 for testing indicated.
- E. Design Standards: Comply with [ACI 318](#) (ACI 318M) and design recommendations in PCI MNL 120, "PCI Design Handbook - Precast and Prestressed Concrete," applicable to types of precast structural concrete units indicated.
- F. Quality-Control Standard: For manufacturing procedures and testing requirements, quality-control recommendations, and dimensional tolerances for types of units required, comply with PCI MNL 116, "Manual for Quality Control for Plants and Production of Structural Precast Concrete Products."

- G. Welding Qualifications: Qualify procedures and personnel according to the following:
1. AWS D1.1/D.1.1M, "Structural Welding Code - Steel."
 2. AWS D1.4, "Structural Welding Code - Reinforcing Steel."
- H. Fire-Resistance Calculations: Where indicated, provide precast structural concrete units whose fire resistance meets the prescriptive requirements of authorities having jurisdiction or has been calculated according to **[ACI 216.1/TMS 0216.1, "Standard Method for Determining Fire Resistance of Concrete and Masonry Construction Assemblies,"]** **[PCI MNL 124, "Design for Fire Resistance of Precast Prestressed Concrete,"]** and is acceptable to authorities having jurisdiction.
- I. Sample Panels: After sample approval and before fabricating precast structural concrete units with **[architectural finish]** **[thin-brick facing]** **[stone facing]**, produce a minimum of **[2]** **<Insert number>** sample panels approximately **[16 sq. ft. (1.5 sq. m)]** **<Insert size>** in area for review by DEN Project Manager. Incorporate full-scale details of architectural features, finishes, textures, and transitions in sample panels.
1. Locate panels where indicated or, if not indicated, as directed by DEN Project Manager.
 2. Damage part of an exposed-face surface for each finish, color, and texture, and demonstrate adequacy of repair techniques proposed for repair of surface blemishes.
 3. After approval of repair technique, maintain one sample panel at fabricator's plant and one at Project site in an undisturbed condition as a standard for judging the completed Work.
 4. Demolish and remove sample panels when directed.
- J. Mockups: After sample panel approval but before production of precast structural concrete units with **[architectural finish]** **[thin-brick facing]** **[stone facing]**, construct full-sized mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
1. Build mockup as indicated on Drawings including **[sealants]** **<Insert construction>** and precast structural concrete units with an architectural finish complete with anchors, connections, flashings, and joint fillers.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
 3. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- K. Preinstallation Conference: Conduct conference at **[Project site]** **[location and time as determined by DEN Project Manager]** **<Insert location>**.
- 1.9 DELIVERY, STORAGE, AND HANDLING
- A. Support units during shipment on nonstaining shock-absorbing material in same position as during storage.

- B. Store units with adequate bracing and protect units to prevent contact with soil, to prevent staining, and to prevent cracking, distortion, warping or other physical damage.
 - 1. Store units with dunnage across full width of each bearing point unless otherwise indicated.
 - 2. Place adequate dunnage of even thickness between each unit.
 - 3. Place stored units so identification marks are clearly visible, and units can be inspected.
- C. Handle and transport units in a position consistent with their shape and design in order to avoid excessive stresses that would cause cracking or damage.
- D. Lift and support units only at designated points shown on Shop Drawings.

1.10 COORDINATION

- A. Furnish loose connection hardware and anchorage items to be embedded in or attached to other construction before starting that Work. Provide locations, setting diagrams, templates, instructions, and directions, as required, for installation.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Fabricators: Subject to compliance with requirements, provide products by one of the following:
 - 1. **<Insert fabricators' names>**.
 - 2. or approved equal.

2.2 MOLD MATERIALS

- A. Molds: Rigid, dimensionally stable, non-absorptive material, warp and buckle free, that will provide continuous and true precast concrete surfaces within fabrication tolerances indicated; nonreactive with concrete and suitable for producing required finishes.
 - 1. Mold-Release Agent: Commercially produced liquid-release agent that will not bond with, stain or adversely affect precast concrete surfaces and will not impair subsequent surface or joint treatments of precast concrete.

- B. Form Liners: Units of face design, texture, arrangement, and configuration **[indicated [to match those used for precast concrete design reference sample]]**. Furnish with manufacturer's recommended liquid-release agent that will not bond with, stain, or adversely affect precast concrete surfaces and will not impair subsequent surface or joint treatments of precast concrete.
- C. Surface Retarder: Chemical set retarder, capable of temporarily delaying final hardening of newly placed concrete mixture to depth of reveal specified.

2.3 REINFORCING MATERIALS

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25] [60] <Insert number>** percent.
- B. Reinforcing Bars: ASTM A 615/A 615M, **Grade 60** (Grade 420), deformed.
- C. Low-Alloy-Steel Reinforcing Bars: ASTM A 706/A 706M, deformed.
- D. Galvanized Reinforcing Bars: **[ASTM A 615/A 615M, Grade 60** (Grade 420) **][ASTM A 706/A 706M]**, deformed bars, ASTM A 767/A 767M, Class II zinc coated, hot-dip galvanized[, **and chromate wash treated after fabrication and bending]**.
- E. Epoxy-Coated Reinforcing Bars: **[ASTM A 615/A 615M, Grade 60** (Grade 420) **][ASTM A 706/A 706M]**, deformed bars, **[ASTM A 775/A 775M] [or] [ASTM A 934/A 934M]** epoxy coated, with less than 2 percent damaged coating in each **12-inch** (300-mm) bar length.
- F. Steel Bar Mats: ASTM A 184/A 184M, fabricated from **[ASTM A 615/A 615M, Grade 60** (Grade 420) **][ASTM A 706/A 706M]**, deformed bars, assembled with clips.
- G. Plain-Steel Welded Wire Reinforcement: ASTM A 185, fabricated from **[as-drawn steel] [galvanized-steel]** wire into flat sheets.
- H. Deformed-Steel Welded Wire Reinforcement: ASTM A 497/A 497M, flat sheet.
- I. Epoxy-Coated-Steel Wire: ASTM A 884/A 884M, Class A coated, **[plain] [deformed]**, flat sheet, **[Type 1 bendable] [Type 2 nonbendable]** coating.
- J. Supports: Suspend reinforcement from back of mold or use bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded wire reinforcement in place according to PCI MNL 116.

2.4 PRESTRESSING TENDONS

- A. Pretensioning Strand: **[ASTM A 416/A 416M, Grade 250** (Grade 1720) **or Grade 270** (Grade 1860), **uncoated, 7-wire] [or] [ASTM A 886/A 886M, Grade 270** (Grade 1860), **indented, 7-wire]**, low-relaxation strand.

- B. Unbonded Post-Tensioning Strand: ASTM A 416/A 416M, **Grade 270** (Grade 1860), uncoated, 7-wire, low-relaxation strand.
 - 1. Coat unbonded post-tensioning strand with post-tensioning coating complying with ACI 423.6 and sheath with polypropylene tendon sheathing complying with ACI 423.6. Include anchorage devices and coupler assemblies.
- C. Post-Tensioning Bars: ASTM A 722, uncoated high-strength steel bar.

2.5 CONCRETE MATERIALS

- A. Portland Cement: ASTM C 150, Type I or Type III, gray, unless otherwise indicated.
 - 1. For surfaces exposed to view in finished structure, mix gray with white cement, of same type, brand, and mill source.
- B. Supplementary Cementitious Materials:
 - 1. Fly Ash: ASTM C 618, Class C or F, with maximum loss on ignition of 3 percent.
 - 2. Metakaolin Admixture: ASTM C 618, Class N.
 - 3. Silica Fume Admixture: ASTM C 1240, with optional chemical and physical requirement.
 - 4. Ground Granulated Blast-Furnace Slag: ASTM C 989, Grade 100 or 120.
- C. Normal-Weight Aggregates: Except as modified by PCI MNL 116, ASTM C 33, with coarse aggregates complying with **[Class 5S] [Class 5M] [Class 4S] [Class 4M]**. Stockpile fine and coarse aggregates for each type of exposed finish from a single source (pit or quarry) for Project.
 - 1. Face-Mixture-Coarse Aggregates: Selected, hard, and durable; free of material that reacts with cement or causes staining; to match selected finish sample.
 - a. Gradation: **[Uniformly graded] [Gap graded] [To match design reference sample]**.
 - 2. Face-Mixture-Fine Aggregates: Selected, natural or manufactured sand of same material as coarse aggregate unless otherwise approved by DEN Project Manager.
- D. Lightweight Aggregates: Except as modified by PCI MNL 116, ASTM C 330, with absorption less than 11 percent.
- E. Coloring Admixture: ASTM C 979, synthetic or natural mineral-oxide pigments or colored water-reducing admixtures, temperature stable, and nonfading.
- F. Water: Potable; free from deleterious material that may affect color stability, setting, or strength of concrete and complying with chemical limits of PCI MNL 116.
- G. Air-Entraining Admixture: ASTM C 260, certified by manufacturer to be compatible with other required admixtures.

- H. Chemical Admixtures: Certified by manufacturer to be compatible with other admixtures and to not contain calcium chloride or more than 0.15 percent chloride ions or other salts by weight of admixture.
1. Water-Reducing Admixtures: ASTM C 494/C 494M, Type A.
 2. Retarding Admixture: ASTM C 494/C 494M, Type B.
 3. Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type D.
 4. Water-Reducing and Accelerating Admixture: ASTM C 494/C 494M, Type E.
 5. High-Range, Water-Reducing Admixture: ASTM C 494/C 494M, Type F.
 6. High-Range, Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type G.
 7. Plasticizing and Retarding Admixture: ASTM C 1017/C 1017M.
- I. Corrosion-Inhibiting Admixture: Commercially formulated, anodic inhibitor or mixed cathodic and anodic inhibitor; capable of forming a protective barrier and minimizing chloride reactions with steel reinforcement in concrete.

2.6 STEEL CONNECTION MATERIALS

- A. Carbon-Steel Shapes and Plates: ASTM A 36/A 36M.
- B. Carbon-Steel-Headed Studs: ASTM A 108, AISI 1018 through AISI 1020, cold finished, AWS D1.1/D1.1M, Type A or B, with arc shields and with minimum mechanical properties of PCI MNL 116.
- C. Carbon-Steel Plate: ASTM A 283/A 283M.
- D. Malleable-Iron Castings: ASTM A 47/A 47M.
- E. Carbon-Steel Castings: ASTM A 27/A 27M, [Grade 60-30](#) (Grade 415-205).
- F. High-Strength, Low-Alloy Structural Steel: ASTM A 572/A 572M.
- G. Carbon-Steel Structural Tubing: ASTM A 500, Grade B.
- H. Wrought Carbon-Steel Bars: ASTM A 675/A 675M, [Grade 65](#) (Grade 450).
- I. Deformed-Steel Wire or Bar Anchors: ASTM A 496 or ASTM A 706/A 706M.
- J. Carbon-Steel Bolts and Studs: [ASTM A 307, Grade A](#) (ASTM F 568M, Property Class 4.6); carbon-steel, hex-head bolts and studs; carbon-steel nuts, [ASTM A 563](#) (ASTM A 563M); and flat, unhardened steel washers, ASTM F 844.
- K. High-Strength Bolts and Nuts: [ASTM A 325](#) (ASTM A 325M) or [ASTM A 490](#) (ASTM A 490M), Type 1, heavy hex steel structural bolts; heavy hex carbon-steel nuts, [ASTM A 563](#) (ASTM A 563M); and hardened carbon-steel washers, [ASTM F 436](#) (ASTM F 436M).
1. Do not zinc coat [ASTM A 490](#) (ASTM A 490M) bolts.
- L. Zinc-Coated Finish: For exterior steel items[, **steel in exterior walls,**] and items

indicated for galvanizing, apply zinc coating by [**hot-dip process according to ASTM A 123/A 123M or ASTM A 153/A 153M**] [**electrodeposition according to ASTM B 633, SC 3, Types 1 and 2**].

1. For steel shapes, plates, and tubing to be galvanized, limit silicon content of steel to less than 0.03 percent or to between 0.15 and 0.25 percent or limit sum of silicon and 2.5 times phosphorous content to 0.09 percent.
 2. Galvanizing Repair Paint: High-zinc-dust-content paint with dry film containing not less than 94 percent zinc dust by weight, and complying with DOD-P-21035B or SSPC-Paint 20.
- M. Shop-Primed Finish: Prepare surfaces of nongalvanized-steel items, except those surfaces to be embedded in concrete, according to requirements in SSPC-SP 3, and shop apply [**lead- and chromate-free, rust-inhibitive primer, complying with performance requirements in MPI 79**] [**SSPC-Paint 25**] according to SSPC-PA 1.
- N. Welding Electrodes: Comply with AWS standards.
- O. Precast Accessories: Provide clips, hangers, plastic or steel shims, and other accessories required to install precast structural concrete units.

2.7 STAINLESS-STEEL CONNECTION MATERIALS

- A. Stainless-Steel Plate: ASTM A 666, Type 304, of grade suitable for application.
- B. Stainless-Steel Bolts and Studs: ASTM F 593, Alloy 304 or 316, hex-head bolts and studs; stainless-steel nuts; and flat, stainless-steel washers. Lubricate threaded parts of stainless-steel bolts with an antiseize thread lubricant during assembly.
- C. Stainless-Steel-Headed Studs: ASTM A 276, with minimum mechanical properties of PCI MNL 116.

2.8 BEARING PADS

- A. Provide one of the following bearing pads for precast structural concrete units[**as recommended by precast fabricator for application**]:
 1. Elastomeric Pads: AASHTO M 251, plain, vulcanized, 100 percent polychloroprene (neoprene) elastomer, molded to size or cut from a molded sheet, 50 to 70 Shore, Type A durometer hardness, ASTM D 2240; minimum tensile strength **2250 psi (15.5 MPa)**, ASTM D 412.
 2. Random-Oriented, Fiber-Reinforced Elastomeric Pads: Preformed, randomly oriented synthetic fibers set in elastomer. 70 to 90 Shore, Type A durometer hardness, ASTM D 2240; capable of supporting a compressive stress of **3000 psi (20.7 MPa)** with no cracking, splitting, or delaminating in the internal portions of pad. Test 1 specimen for every 200 pads used in Project.
 3. Cotton-Duck-Fabric-Reinforced Elastomeric Pads: Preformed, horizontally layered cotton-duck fabric bonded to an elastomer; 80 to 100 Shore, Type A durometer hardness, ASTM D 2240; complying with AASHTO's "AASHTO Load

and Resistance Factor Design (LRFD) Bridge Specifications," Division II, Section 18.10.2; or with MIL-C-882E.

4. Frictionless Pads: Tetrafluoroethylene, glass-fiber reinforced, bonded to stainless- or mild-steel plate, of type required for in-service stress.
5. High-Density Plastic: Multimonomer, nonleaching, plastic strip.

2.9 GROUT MATERIALS

- A. Sand-Cement Grout: Portland cement, ASTM C 150, Type I, and clean, natural sand, ASTM C 144 or ASTM C 404. Mix at ratio of 1 part cement to 2-1/2 parts sand, by volume, with minimum water required for placement and hydration.
- B. Nonmetallic, Nonshrink Grout: Premixed, nonmetallic, noncorrosive, nonstaining grout containing selected silica sands, Portland cement, shrinkage-compensating agents, plasticizing and water-reducing agents, complying with ASTM C 1107, Grade A for drypack and Grades B and C for flowable grout and of consistency suitable for application within a 30-minute working time.
- C. Epoxy-Resin Grout: Two-component, mineral-filled epoxy resin; ASTM C 881/C 881M, of type, grade, and class to suit requirements.

2.10 THIN-BRICK UNITS AND ACCESSORIES

- A. Thin-Brick Units: ASTM C 216, Type FBX or ASTM C 1088, Grade Exterior, Type TBX, **[not less than 1/2 inch (13 mm)] [3/4 inch (19 mm)] [1 inch (25 mm)]** thick with a tolerance of plus or minus **1/16 inch (1.6 mm)**, and as follows:
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.
 - b. or approved equal.
 2. Face Color and Texture: **[Match DEN Project Manager's samples] [Medium brown, wire cut] [Full-range red, sand molded] [Gray, velour]**.
 3. Face Size: **2-1/4 inches (57 mm)** high by **8 inches (203 mm)** long.
 4. Face Size: **2-1/4 inches (57 mm)** high by **7-1/2 to 7-5/8 inches (190 to 194 mm)** long.
 5. Face Size: **2-3/4 to 2-13/16 inches (70 to 71 mm)** high by **7-1/2 to 7-5/8 inches (190 to 194 mm)** long.
 6. Face Size: **3-1/2 to 3-5/8 inches (89 to 92 mm)** high by **7-1/2 to 7-5/8 inches (190 to 194 mm)** long.
 7. Face Size: **3-1/2 to 3-5/8 inches (89 to 92 mm)** high by **11-1/2 to 11-5/8 inches (292 to 295 mm)** long.
 8. Face Size: **<Insert dimensions>**.
 9. **[Where indicated to "match existing,"]**provide thin brick matching color, texture, and face size of existing adjacent brick work.

a. <Insert information on existing brick if known>.

10. Face Size: 57 mm high by 190 mm long.
11. Face Size: 70 mm high by 190 mm long.
12. Face Size: 90 mm high by 190 mm long.
13. Face Size: 90 mm high by 290 mm long.
14. Face Size: <Insert dimensions>.
15. Special Shapes: Include corners, edge corners, and end edge corners.
16. Initial Rate of Absorption: Less than 30 g/30 sq. in. (30 g/194 sq. cm) per minute; ASTM C 67.
17. Efflorescence: Tested according to ASTM C 67 and rated "not effloresced."
18. Surface Coating: Thin brick with colors or textures applied as coatings shall withstand 50 cycles of freezing and thawing; ASTM C 67 with no observable difference in applied finish when viewed from 10 feet (3 m).
19. Back Surface Texture: Scored, combed, wire roughened, ribbed, keybacked, or dovetailed.

B. Sand-Cement Mortar: Portland cement, ASTM C 150, Type I, and clean, natural sand, ASTM C 144. Mix at ratio of 1 part cement to 4 parts sand, by volume, with minimum water required for placement.

C. Latex-Portland Cement Pointing Grout: ANSI A118.6 and as follows:

1. Dry-grout mixture, factory prepared, of Portland cement, graded aggregate, and dry, redispersible, ethylene-vinyl-acetate additive for mixing with water; uniformly colored.
2. Commercial Portland cement grout, factory prepared, with liquid styrene-butadiene rubber or acrylic-resin latex additive; uniformly colored.
3. Colors: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range].**

2.11 STONE MATERIALS AND ACCESSORIES

A. Stone facing for precast structural concrete is specified in Section 044200 "Exterior Stone Cladding."

B. Anchors are generally supplied by stone fabricator or, in some cases, by precaster. Specify supplier. Anchors may be toe in, toe out, or dowels.

C. Anchors: Stainless steel, ASTM A 666, Type 304, of temper and diameter required to support loads without exceeding allowable design stresses.

1. Fit each anchor leg with neoprene grommet collar of width at least twice the diameter and of length at least five times the diameter of anchor.

D. Sealant Filler: ASTM C 920, low-modulus, multicomponent, nonsag urethane sealant complying with requirements in Section 079200 "Joint Sealants" and that is nonstaining to stone substrate.

- E. Epoxy Filler: ASTM C 881/C 881M, 100 percent solids, sand-filled nonshrinking, nonstaining of type, class, and grade to suit application.
 - 1. Elastomeric Anchor Sleeve: 1/2 inch (13 mm) long; 60 Shore, Type A durometer hardness; ASTM D 2240.
- F. Bond Breaker: [**Preformed, compressible, resilient, nonstaining, nonwaxing, closed-cell polyethylene foam pad, nonabsorbent to liquid and gas, 1/8 inch (3.2 mm) thick**] [**Polyethylene sheet, ASTM D 4397, 6 to 10 mils (0.15 to 0.25 mm) thick**].

2.12 INSULATED FLAT WALL PANEL ACCESSORIES

- A. Molded-Polystyrene Board Insulation: ASTM C 578, [**Type I, 0.90 lb/cu. ft. (15 kg/cu. m)**] [**Type VIII, 1.15 lb/cu. ft. (18 kg/cu. m)**] [**Type II, 1.35 lb/cu. ft. (22 kg/cu. m)**]; [**square**] [**ship-lap**] edges; with R-value of <Insert value> and thickness of <Insert dimension>.
- B. Extruded-Polystyrene Board Insulation: ASTM C 578, [**Type IV, 1.60 lb/cu. ft. (26 kg/cu. m)**] [**Type X, 1.30 lb/cu. ft. (21 kg/cu. m)**] [**Type VI, 1.80 lb/cu. ft. (29 kg/cu. m)**]; [**square**] [**ship-lap**] edges; with R-value of <Insert value> and thickness of <Insert dimension>.
- C. Polyisocyanurate Board Insulation: ASTM C 591, [**Type I, 1.8 lb/cu. ft. (29 kg/cu. m)**] [**Type IV, 2 lb/cu. ft. (32 kg/cu. m)**] [**Type II, 2.5 lb/cu. ft. (40 kg/cu. m)**] unfaced, with R-value of <Insert value> and thickness of <Insert dimension>.
- D. Wythe Connectors: [**Glass-fiber connectors**] [**Vinyl-ester polymer connectors**] [**Polypropylene pin connectors**] [**Stainless-steel pin connectors**] [**Bent galvanized reinforcing bars**] [**Galvanized welded wire trusses**] [**Galvanized bent wire connectors**] [**Cylindrical metal sleeve anchors**] manufactured to connect wythes of precast concrete panels.

2.13 CONCRETE MIXTURES

- A. Prepare design mixtures for each type of precast concrete required.
 - 1. Use fly ash, pozzolan, ground granulated blast-furnace slag, and silica fume as needed to reduce the total amount of Portland cement, which would otherwise be used, by not less than 40 percent.
 - 2. Limit use of fly ash to 25 percent replacement of Portland cement by weight and granulated blast-furnace slag to 40 percent of Portland cement by weight; metakaolin and silica fume to 10 percent of Portland cement by weight.
- B. Design mixtures may be prepared by a qualified independent testing agency or by qualified precast plant personnel at precast structural concrete fabricator's option.
- C. Limit water-soluble chloride ions to maximum percentage by weight of cement permitted by **ACI 318 (ACI 318M)** or **PCI MNL 116** when tested according to **ASTM C 1218/C 1218M**.

- D. Normal-Weight Concrete Mixtures: Proportion **[face mixtures] [face and backup mixtures] [full-depth mixture] [face and backup mixtures or full-depth mixtures, at fabricator's option]** by either laboratory trial batch or field test data methods according to ACI 211.1, with materials to be used on Project, to provide normal-weight concrete with the following properties:
1. Compressive Strength (28 Days): **5000 psi (34.5 MPa)**.
 2. Maximum Water-Cementitious Materials Ratio: 0.45.
- E. Water Absorption: 6 percent by weight or 14 percent by volume, tested according to PCI MNL 116.
- F. Lightweight Concrete Backup Mixtures: Proportion mixtures by either laboratory trial batch or field test data methods according to ACI 211.2, with materials to be used on Project, to provide lightweight concrete with the following properties:
1. Compressive Strength (28 Days): **5000 psi (34.5 MPa)**.
 2. Unit Weight: Calculated equilibrium unit weight of **115 lb/cu. ft. (1842 kg/cu. m)**, plus or minus **3 lb/cu. ft. (48 kg/cu. m)**, according to ASTM C 567.
- G. Add air-entraining admixture at manufacturer's prescribed rate to result in concrete at point of placement having an air content complying with PCI MNL 116.
- H. When included in design mixtures, add other admixtures to concrete mixtures according to manufacturer's written instructions.
- I. Concrete Mix Adjustments: Concrete mix design adjustments may be proposed if characteristics of materials, Project conditions, weather, test results, or other circumstances warrant.

2.14 MOLD FABRICATION

- A. Molds: Accurately construct molds, mortar tight, of sufficient strength to withstand pressures due to concrete-placement operations and temperature changes and for prestressing and detensioning operations. Coat contact surfaces of molds with release agent before reinforcement is placed. Avoid contamination of reinforcement and prestressing tendons by release agent.
1. Place form liners accurately to provide finished surface texture indicated. Provide solid backing and supports to maintain stability of liners during concrete placement. Coat form liner with form-release agent.
- B. Maintain molds to provide completed precast structural concrete units of shapes, lines, and dimensions indicated, within fabrication tolerances specified.
1. Form joints are not permitted on faces exposed to view in the finished work.
 2. Edge and Corner Treatment: Uniformly **[chamfered] [radiused]**.

2.15 THIN-BRICK FACINGS

- A. Place form-liner templates accurately to provide grid for thin-brick facings. Provide solid backing and supports to maintain stability of liners while placing thin bricks and during concrete placement.
- B. Securely place thin-brick units face down into form-liner pockets and place concrete backing mixture.
- C. Completely fill joint cavities between thin-brick units with sand-cement mortar, and place precast concrete backing mixture while sand-cement mortar is still fluid enough to ensure bond.
- D. Mix and install pointing grout according to ANSI A108.10. Completely fill joint cavities between thin-brick units with pointing grout, and compress into place without spreading pointing grout onto faces of thin-brick units. Remove excess pointing grout immediately to prevent staining of brick.
 - 1. Tool joints to a **[slightly concave] [grapevine] [V-]**shape when pointing grout is thumbprint hard.
- E. Clean faces and joints of brick facing.

2.16 STONE FACINGS

- A. Clean stone surfaces before placing in molds to remove soil, stains, and foreign materials. Use cleaning methods and materials recommended by stone supplier.
- B. Accurately position stone facings to comply with requirements and in locations indicated on Shop Drawings. Install anchors, supports, and other attachments indicated or necessary to secure stone in place. Keep concrete reinforcement a minimum of **3/4 inch (19 mm)** from the back surface of stone. Use continuous spacers to obtain uniform joints of widths indicated and with edges and faces aligned according to established relationships and indicated tolerances.
 - 1. Stone to Precast Anchorages: Provide anchors in numbers, types and locations required to satisfy specified performance criteria, but not less than 2 anchors per stone unit of less than **2 sq. ft. (0.19 sq. m)** in area and 4 anchors per unit of less than **12 sq. ft. (1.1 sq. m)** in area; for units larger than **12 sq. ft. (1.1 sq. m)** in area, provide anchors spaced not more than **24 inches (600 mm)** o.c. horizontally and vertically. Locate anchors a minimum of **6 inches (150 mm)** from stone edge.
- C. Fill anchor holes with **[sealant filler and install anchors] [epoxy filler and install anchors with elastomeric anchor sleeve at back surface of stone]**.
 - 1. Install polyethylene sheet to prevent bond between back of stone facing and concrete substrate and to ensure no passage of precast matrix to stone surface.
 - 2. Install **1/8-inch (3-mm)** polyethylene-foam bond breaker to prevent bond between back of stone facing and concrete substrate and to ensure no passage of precast

matrix to stone surface. Maintain minimum projection requirements of stone anchors into concrete substrate.

2.17 FABRICATION

- A. Cast-in Anchors, Inserts, Plates, Angles, and Other Anchorage Hardware: Fabricate anchorage hardware with sufficient anchorage and embedment to comply with design requirements. Accurately position for attachment of loose hardware, and secure in place during precasting operations. Locate anchorage hardware where it does not affect position of main reinforcement or concrete placement.
1. Weld-headed studs and deformed bar anchors used for anchorage according to AWS D1.1/D1.1M and AWS C5.4, "Recommended Practices for Stud Welding."
- B. Furnish loose hardware items including steel plates, clip angles, seat angles, anchors, dowels, cramps, hangers, and other hardware shapes for securing precast structural concrete units to supporting and adjacent construction.
- C. Cast-in reglets, slots, holes, and other accessories in precast structural concrete units as indicated on the Contract Drawings.
- D. Cast-in openings larger than **10 inches (250 mm)** in any dimension. Do not drill or cut openings or prestressing strand without DEN Project Manager's approval.
- E. Reinforcement: Comply with recommendations in PCI MNL 116 for fabricating, placing, and supporting reinforcement.
1. Clean reinforcement of loose rust and mill scale, earth, and other materials that reduce or destroy the bond with concrete. When damage to epoxy-coated reinforcement exceeds limits specified, repair with patching material compatible with coating material and epoxy coat bar ends after cutting.
 2. Accurately position, support, and secure reinforcement against displacement during concrete-placement and consolidation operations. Completely conceal support devices to prevent exposure on finished surfaces.
 3. Place reinforcement to maintain at least **3/4-inch (19-mm)** minimum coverage. Increase cover requirements according to **ACI 318 (ACI 318M)** when units are exposed to corrosive environment or severe exposure conditions. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position while placing concrete. Direct wire tie ends away from finished, exposed concrete surfaces.
 4. Place reinforcing steel and prestressing strand to maintain at least **3/4-inch (19-mm)** minimum concrete cover. Increase cover requirements for reinforcing steel to **1-1/2 inches (38 mm)** when units are exposed to corrosive environment or severe exposure conditions. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position while placing concrete. Direct wire tie ends away from finished, exposed concrete surfaces.
 5. Install welded wire fabric in lengths as long as practicable. Lap adjoining pieces at least one full mesh spacing and wire tie laps, where required by design. Offset laps of adjoining widths to prevent continuous laps in either direction.

- F. Reinforce precast structural concrete units to resist handling, transportation, and erection stresses.
- G. Prestress tendons for precast structural concrete units by either pretensioning or post-tensioning methods. Comply with PCI MNL 116.
 - 1. Delay detensioning or post-tensioning of precast, prestressed structural concrete units until concrete has reached its indicated minimum design release compressive strength as established by test cylinders cured under same conditions as concrete.
 - 2. Detension pretensioned tendons either by gradually releasing tensioning jacks or by heat cutting tendons, using a sequence and pattern to prevent shock or unbalanced loading.
 - 3. If concrete has been heat cured, detension while concrete is still warm and moist to avoid dimensional changes that may cause cracking or undesirable stresses.
 - 4. Protect strand ends and anchorages with bituminous, zinc-rich, or epoxy paint to avoid corrosion and possible rust spots.
 - 5. Protect strand ends and anchorages with a minimum of 1-inch- (25-mm-) thick, nonmetallic, nonshrink, grout mortar and sack rub surface. Coat or spray the inside surfaces of pocket with bonding agent before installing grout.
- H. Comply with requirements in PCI MNL 116 and in this Section for measuring, mixing, transporting, and placing concrete. After concrete batching, no additional water may be added.
- I. Place face mixture to a minimum thickness after consolidation of the greater of 1 inch (25 mm) or 1.5 times the maximum aggregate size, but not less than the minimum reinforcing cover specified.
- J. Place concrete in a continuous operation to prevent seams or planes of weakness from forming in precast concrete units.
 - 1. Place backup concrete mixture to ensure bond with face-mixture concrete.
- K. Thoroughly consolidate placed concrete by internal and external vibration without dislocating or damaging reinforcement and built-in items, and minimize pour lines, honeycombing, or entrapped air on surfaces. Use equipment and procedures complying with PCI MNL 116.
 - 1. Place self-consolidating concrete without vibration according to PCI TR-6, "Interim Guidelines for the Use of Self-Consolidating Concrete in Precast/Prestressed Concrete Institute Member Plants."
- L. Comply with ACI 306.1 procedures for cold-weather concrete placement.
- M. Comply with PCI MNL 116 procedures for hot-weather concrete placement.
- N. Identify pickup points of precast structural concrete units and orientation in structure with permanent markings, complying with markings indicated on Shop Drawings.

Imprint or permanently mark casting date on each precast structural concrete unit on a surface that will not show in finished structure.

- O. Cure concrete, according to requirements in PCI MNL 116, by moisture retention without heat or by accelerated heat curing using low-pressure live steam or radiant heat and moisture. Cure units until compressive strength is high enough to ensure that stripping does not have an effect on performance or appearance of final product.
- P. Discard and replace precast structural concrete units that do not comply with requirements, including structural, manufacturing tolerance, and appearance, unless repairs meet requirements in PCI MNL 116 and meet DEN Project Manager's approval.

2.18 CASTING INSULATED WALL PANELS

- A. Cast and screed wythe supported by mold.
- B. Place insulation boards abutting edges and ends of adjacent boards. Insert wythe connectors through insulation, and consolidate concrete around connectors according to connector manufacturer's written instructions.
- C. Cast and screed top wythe to meet required finish.

2.19 FABRICATION TOLERANCES

- A. Fabricate precast structural concrete units straight and true to size and shape with exposed edges and corners precise and true so each finished unit complies with PCI MNL 116 product dimension tolerances.
- B. Brick-Faced Precast Structural Concrete Units: Restrict the following misalignments to 2 percent of number of bricks in a unit:
 - 1. Alignment of Mortar Joints:
 - a. Jog in Alignment: **1/8 inch (3 mm)**.
 - b. Alignment with Panel Centerline: Plus or minus **1/8 inch (3 mm)**.
 - 2. Variation in Width of Exposed Mortar Joints: Plus or minus **1/8 inch (3 mm)**.
 - 3. Tipping of Individual Bricks from the Panel Plane of Exposed Brick Surface: Plus **1/16 inch (1.6 mm)**; minus **1/4 inch (6 mm)** less than or equal to depth of form-liner joint.
 - 4. Exposed Brick Surface Parallel to Primary Control Surface of Panel: Plus **1/4 inch (6 mm)**; minus **1/8 inch (3 mm)**.
 - 5. Individual Brick Step in Face from Panel Plane of Exposed Brick Surface: Plus **1/16 inch (1.6 mm)**; minus **1/4 inch (6 mm)** less than or equal to depth of form-liner joint.
- C. Stone Veneer-Faced Precast Structural Concrete Units:

1. Variation in Cross-Sectional Dimensions: For thickness of walls from dimensions indicated: Plus or minus **1/4 inch (6 mm)**.
2. Variation in Joint Width: **1/8 inch in 36 inches (3 mm in 900 mm)** or a quarter of nominal joint width, whichever is less.
3. Variation in Plane between Adjacent Stone Units (Lipping): **1/16-inch (1.6-mm)** difference between planes of adjacent units.

2.20 COMMERCIAL FINISHES

- A. Commercial Grade: Remove fins and large protrusions and fill large holes. Rub or grind ragged edges. Faces must have true, well-defined surfaces. Air holes, water marks, and color variations are permitted. Limit form joint offsets to **3/16 inch (5 mm)**.
- B. Standard Grade: Normal plant-run finish produced in molds that impart a smooth finish to concrete. Surface holes smaller than **1/2 inch (13 mm)** caused by air bubbles, normal color variations, form joint marks, and minor chips and spalls are permitted. Fill air holes greater than **1/4 inch (6 mm)** in width that occur more than once per **2 sq. in (1300 sq. mm)**. Major or unsightly imperfections, honeycombs, or structural defects are not permitted. Limit joint offsets to **1/8 inch (3 mm)**.
- C. Grade B Finish: Fill air pockets and holes larger than **1/4 inch (6 mm)** in diameter with sand-cement paste matching color of adjacent surfaces. Fill air holes greater than **1/8 inch (3 mm)** in width that occur more than once per **2 sq. in. (1300 sq. mm)**. Grind smooth form offsets or fins larger than **1/8 inch (3 mm)**. Repair surface blemishes due to holes or dents in molds. Discoloration at form joints is permitted.
- D. Grade A Finish: Fill surface blemishes with the exception of air holes **1/16 inch (1.6 mm)** in width or smaller, and form marks where the surface deviation is less than **1/16 inch (1.6 mm)**. Float apply a neat cement-paste coating to exposed surfaces. Rub dried paste coat with burlap to remove loose particles. Discoloration at form joints is permitted. Grind smooth all form joints.
- E. Screed or float finish unformed surfaces. Strike off and consolidate concrete with vibrating screeds to a uniform finish. Hand screed at projections. Normal color variations, minor indentations, minor chips, and spalls are permitted. Major imperfections, honeycombing, or defects are not permitted.
- F. Smooth, steel trowel finish unformed surfaces. Consolidate concrete, bring to proper level with straightedge, float, and trowel to a smooth, uniform finish.
- G. Apply roughened surface finish according to **ACI 318 (ACI 318M)** to precast concrete units that will receive concrete topping after installation.

2.21 COMMERCIAL ARCHITECTURAL FINISHES

- A. Manufacture member faces free of joint marks, grain, and other obvious defects with corners, including false joints, uniform, straight, and sharp. Finish exposed-face surfaces of precast concrete units to match approved [**design reference sample**]

[sample panels] [mockups] and as follows:

1. Design Reference Sample: <Insert description and identify fabricator and code number of sample>.
2. PCI's "Architectural Precast Concrete - Color and Texture Selection Guide," of plate numbers indicated.
3. Smooth-Surface Finish: Provide surfaces free of excessive air voids, sand streaks, and honeycombs, with uniform color and texture.
4. Textured-Surface Finish: Impart by form liners or inserts to provide surfaces free of pockets, streaks, and honeycombs, with uniform color and texture.
5. Bushhammer Finish: Use power or hand tools to remove matrix and fracture coarse aggregates.
6. Exposed-Aggregate Finish: Use chemical-retarding agents applied to concrete molds and washing and brushing procedures to expose aggregate and surrounding matrix surfaces after form removal.
7. Abrasive-Blast Finish: Use abrasive grit, equipment, application techniques, and cleaning procedures to expose aggregate and surrounding matrix surfaces.
8. Acid-Etched Finish: Use acid and hot-water solution, equipment, application techniques, and cleaning procedures to expose aggregate and surrounding matrix surfaces. Protect hardware, connections, and insulation from acid attack.
9. Honed Finish: Use continuous mechanical abrasion with fine grit, followed by filling and rubbing procedures.
10. Polished Finish: Use continuous mechanical abrasion with fine grit, followed by filling and rubbing procedures.
11. Sand-Embedment Finish: Use selected stones placed in a sand bed in bottom of mold, with sand removed after curing.

2.22 SOURCE QUALITY CONTROL

- A. Testing Agency: [Owner will engage] [Engage] a qualified testing agency to evaluate precast structural concrete fabricator's quality-control and testing methods.
 1. Allow testing agency access to material storage areas, concrete production equipment, concrete placement, and curing facilities. Cooperate with testing agency and provide samples of materials and concrete mixtures as may be requested for additional testing and evaluation.
- B. Testing: Test and inspect precast structural concrete according to PCI MNL 116 requirements.
 1. Test and inspect self-consolidating concrete according to PCI TR-6.
- C. Strength of precast structural concrete units will be considered deficient if units fail to comply with [ACI 318](#) ([ACI 318M](#)) requirements for concrete strength.
- D. If there is evidence that strength of precast concrete units may be deficient or may not comply with [ACI 318](#) ([ACI 318M](#)) requirements, employ a qualified testing agency to obtain, prepare, and test cores drilled from hardened concrete to determine compressive strength according to ASTM C 42/C 42M.

1. A minimum of three representative cores will be taken from units of suspect strength, from locations directed by DEN Project Manager.
 2. Cores will be tested in an air-dry condition or, if units will be wet under service conditions, test cores after immersion in water in a wet condition.
 3. Strength of concrete for each series of 3 cores will be considered satisfactory if average compressive strength is equal to at least 85 percent of 28-day design compressive strength and no single core is less than 75 percent of 28-day design compressive strength.
 4. Test results will be made in writing on same day that tests are performed, with copies to DEN Project Manager, Contractor, and precast concrete fabricator. Test reports will include the following:
 - a. Project identification name and number.
 - b. Date when tests were performed.
 - c. Name of precast concrete fabricator.
 - d. Name of concrete testing agency.
 - e. Identification letter, name, and type of precast concrete unit(s) represented by core tests; design compressive strength; type of break; compressive strength at breaks, corrected for length-diameter ratio; and direction of applied load to core in relation to horizontal plane of concrete as placed.
- E. Patching: If core test results are satisfactory and precast structural concrete units comply with requirements, clean and dampen core holes and solidly fill with same precast concrete mixture that has no coarse aggregate, and finish to match adjacent precast concrete surfaces.
- F. Defective Units: Discard and replace precast structural concrete units that do not comply with requirements, including strength, manufacturing tolerances, and color and texture range. Chipped, spalled, or cracked units may be repaired, subject to DEN Project Manager's approval. DEN Project Manager reserves the right to reject precast units that do not match approved samples, sample panels, and mockups.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine supporting structural frame or foundation and conditions for compliance with requirements for installation tolerances, true and level bearing surfaces, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.
- C. Do not install precast concrete units until supporting, cast-in-place, building structural framing has attained minimum allowable design compressive strength or until supporting steel or other structure is complete.

3.2 INSTALLATION

- A. Install clips, hangers, bearing pads, and other accessories required for connecting precast structural concrete units to supporting members and backup materials.
- B. Erect precast structural concrete level, plumb, and square within specified allowable tolerances. Provide temporary structural framing, supports, and bracing as required to maintain position, stability, and alignment of units until permanent connection.
 - 1. Install temporary steel or plastic spacing shims or bearing pads as precast structural concrete units are being erected. Tack weld steel shims to each other to prevent shims from separating.
 - 2. Maintain horizontal and vertical joint alignment and uniform joint width as erection progresses.
 - 3. Remove projecting lifting devices and grout fill voids within recessed lifting devices flush with surface of adjacent precast surfaces when recess is exposed.
 - 4. For hollow-core slab voids used as electrical raceways or mechanical ducts, align voids between units and tape butt joint at end of slabs.
- C. Connect precast structural concrete units in position by bolting, welding, grouting, or as otherwise indicated on Shop Drawings. Remove temporary shims, wedges, and spacers as soon as practical after connecting and grouting are completed.
 - 1. Do not permit connections to disrupt continuity of roof flashing.
- D. Field cutting of precast units is not permitted without approval of the DEN Project Manager.
- E. Fasteners: Do not use drilled or powder-actuated fasteners for attaching accessory items to precast, prestressed concrete units.
- F. Welding: Comply with applicable AWS D1.1/D1.1M and AWS D1.4 for welding, welding electrodes, appearance, quality of welds, and methods used in correcting welding work.
 - 1. Protect precast structural concrete units and bearing pads from damage by field welding or cutting operations, and provide noncombustible shields as required.
 - 2. Clean weld-affected steel surfaces with chipping hammer followed by brushing, and apply a minimum 4.0-mil- (0.1-mm-) thick coat of galvanized repair paint to galvanized surfaces according to ASTM A 780.
 - 3. Clean weld-affected steel surfaces with chipping hammer followed by brushing, and reprime damaged painted surfaces.
 - 4. Remove, reweld, or repair incomplete and defective welds.
- G. At bolted connections, use lock washers, tack welding, or other approved means to prevent loosening of nuts after final adjustment.
 - 1. Where slotted connections are used, verify bolt position and tightness. For sliding connections, properly secure bolt but allow bolt to move within connection slot. For friction connections, apply specified bolt torque and check 25 percent of bolts

at random by calibrated torque wrench.

- H. Grouting: Grout connections and joints and open spaces at keyways, connections, and joints where required or indicated on Shop Drawings. Retain grout in place until hard enough to support itself. Pack spaces with stiff grout material, tamping until voids are completely filled.
1. Place grout to finish smooth, level, and plumb with adjacent concrete surfaces.
 2. Fill joints completely without seepage to other surfaces.
 3. Trowel top of grout joints on roofs smooth and uniform. Finish transitions between different surface levels not steeper than 1 to 12.
 4. Place grout end cap or dam in voids at ends of hollow-core slabs.
 5. Promptly remove grout material from exposed surfaces before it affects finishes or hardens.
 6. Keep grouted joints damp for not less than 24 hours after initial set.

3.3 ERECTION TOLERANCES

- A. Erect precast structural concrete units level, plumb, square, true, and in alignment without exceeding the noncumulative erection tolerances of PCI MNL 135.
- B. Minimize variations between adjacent slab members by jacking, loading, or other method recommended by fabricator and approved by DEN Project Manager.

3.4 FIELD QUALITY CONTROL

- A. Special Inspections: **[Owner will engage] [Engage]** a qualified special inspector to perform the following special inspections:
1. Erection of precast structural concrete members.
 2. **<Insert special inspections>**.
- B. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections.
- C. Field welds will be visually inspected and nondestructive tested according to ASTM E 165 or ASTM E 709. High-strength bolted connections will be subject to inspections.
- D. Testing agency will report test results promptly and in writing to Contractor and DEN Project Manager.
- E. Repair or remove and replace work where tests and inspections indicate that it does not comply with specified requirements.
- F. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
- G. Prepare test and inspection reports.

3.5 REPAIRS

- A. Repair precast structural concrete units if permitted by DEN Project Manager.
 - 1. Repairs may be permitted if structural adequacy, serviceability, durability, and appearance of units has not been impaired.
- B. Mix patching materials and repair units so cured patches blend with color, texture, and uniformity of adjacent exposed surfaces and show no apparent line of demarcation between original and repaired work, when viewed in typical daylight illumination from a distance of 20 feet (6 m).
- C. Prepare and repair damaged galvanized coatings with galvanizing repair paint according to ASTM A 780.
- D. Wire brush, clean, and paint damaged prime-painted components with same type of shop primer.
- E. Remove and replace damaged precast structural concrete units that cannot be repaired or when repairs do not comply with requirements as determined by DEN Project Manager.

3.6 CLEANING

- A. Clean mortar, plaster, fireproofing, weld slag, and other deleterious material from concrete surfaces and adjacent materials immediately.
- B. Clean exposed surfaces of precast concrete units after erection and completion of joint treatment to remove weld marks, other markings, dirt, and stains.
 - 1. Perform cleaning procedures, if necessary, according to precast concrete fabricator's written recommendations. Clean soiled precast concrete surfaces with detergent and water, using stiff fiber brushes and sponges, and rinse with clean water. Protect other work from staining or damage due to cleaning operations.
 - 2. Do not use cleaning materials or processes that could change the appearance of exposed concrete finishes or damage adjacent materials.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 034100

SECTION 034500 - PRECAST ARCHITECTURAL CONCRETE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:

1. Architectural precast concrete cladding[**and load-bearing**] units.
2. Insulated, architectural precast concrete units.
3. Brick-faced, architectural precast concrete units.
4. Stone-faced, architectural precast concrete units.

- B. Related Sections include the following:

1. Section 033000 "Cast-In-Place Concrete" for installing connection anchors in concrete.
2. Section 034900 "Glass-Fiber-Reinforced Concrete (GFRC)."
3. Section 047200 "Cast Stone Masonry" for wet or dry cast stone facings, trim, and accessories.
4. Section 042000 "Unit Masonry" for thin brick setting materials and installation after precast concrete panel production.
5. Section 051200 "Structural Steel Framing" for furnishing and installing connections attached to structural-steel framing.
6. Section 055000 "Metal Fabrications" for kickers and other miscellaneous steel shapes.
7. Section 071900 "Water Repellents" for water-repellent finish treatments.
8. Section 085113 "Aluminum Windows" for windows set into architectural precast concrete units.
9. Section 093000 "Tiling" for ceramic tile setting materials and installation.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITION

- A. Design Reference Sample: Sample of approved architectural precast concrete color, finish, and texture, preapproved by DEN Project Manager.

1.4 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Provide architectural precast concrete units and connections capable of withstanding the following design loads within limits and under conditions indicated:
1. Loads: As indicated.
 2. Dead Loads: **<Insert applicable dead loads.>**
 3. Live Loads: **<Insert applicable live loads.>**
 4. Wind Loads: **<Insert applicable wind loads or wind-load criteria, positive and negative for various parts of building as required by applicable building code or ASCE 7, including basic wind speed, importance factor, exposure category, and pressure coefficient.>**
 5. Seismic Loads: **<Insert applicable seismic design data including seismic performance category, importance factor, use group, seismic design category, seismic zone, site classification, site coefficient, and drift criteria.>**
 6. Project Specific Loads: **<Insert applicable loads.>**
 7. Design framing system and connections to maintain clearances at openings, to allow for fabrication and construction tolerances, to accommodate live-load deflection, shrinkage and creep of primary building structure, and other building movements as follows:
 - a. Upward and downward movement of **[1/2 inch (13 mm)] [3/4 inch (19 mm)] [1 inch (25 mm)]**.
 8. Thermal Movements: Provide for in-plane thermal movements resulting from annual ambient temperature changes of **[80 deg F (26 deg C)] [120 deg F (67 deg C)] <Insert temperature range>**.
 9. Fire-Resistance Rating: Select material and minimum thicknesses to provide **[1] [2] <Insert number>**-hour fire rating.
 10. Window Washing System: Design precast units supporting window washing system indicated to resist pull-out and horizontal shear forces transmitted from window washing equipment.
 11. Vehicular Impact Loads: Design spandrel beams acting as vehicular barriers for passenger cars to resist a single **[6000-lb (26.7-kN)] <Insert load>** service load and **[10,000-lb (44.5-kN)] <Insert load>** ultimate load applied horizontally in any direction to the spandrel beam, with anchorages or attachments capable of transferring this load to the structure. Design spandrel beams assuming the load to act at a height of **18 inches (460 mm)** above the floor or ramp surface on an area not to exceed **1 sq. ft. (0.93 sq. m)**.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:

1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
- C. Design Mixtures: For each precast concrete mixture. Include compressive strength and water-absorption tests.
- D. Shop Drawings: Detail fabrication and installation of architectural precast concrete units. Indicate locations, plans, elevations, dimensions, shapes, and cross sections of each unit. Indicate joints, reveals, and extent and location of each surface finish. Indicate details at building corners.
1. Indicate separate face and backup mixture locations and thicknesses.
 2. Indicate welded connections by AWS standard symbols. Detail loose and cast-in hardware and connections.
 3. Indicate locations, tolerances, and details of anchorage devices to be embedded in or attached to structure or other construction.
 4. Indicate locations, extent, and treatment of dry joints if two-stage casting is proposed.
 5. Include plans and elevations showing unit location and sequence of erection for special conditions.
 6. Indicate location of each architectural precast concrete unit by same identification mark placed on panel.
 7. Indicate relationship of architectural precast concrete units to adjacent materials.
 8. Indicate locations and details of brick units, including corner units and special shapes, and joint treatment.
 9. Indicate locations and details of stone facings, anchors, and joint widths.
 10. Design Modifications: If design modifications are proposed to meet performance requirements and field conditions, submit design calculations and Shop Drawings. Do not adversely affect the appearance, durability, or strength of units when modifying details or materials and maintain the general design concept.
 11. Comprehensive engineering analysis [**signed and sealed**] [**certified**] by the qualified professional engineer responsible for its preparation. Show governing panel types, connections, and types of reinforcement, including special reinforcement. Indicate location, type, magnitude, and direction of loads imposed on the building structural frame from architectural precast concrete.
- E. Samples: For each type of finish indicated on exposed surfaces of architectural precast concrete units, in sets of 3, illustrating full range of finish, color, and texture variations expected; approximately 12 by 12 by 2 inches (300 by 300 by 50 mm).
1. When other faces of precast concrete unit are exposed, include Samples illustrating workmanship, color, and texture of backup concrete as well as facing concrete.
 2. Samples for each brick unit required, showing full range of color and texture expected. Include Sample showing color and texture of joint treatment.
 - a. Grout Samples for Initial Selection: Color charts consisting of actual sections of grout showing manufacturer's full range of colors.

- b. Grout Samples for Verification: Showing color and texture of joint treatment.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For **[Installer]** **[fabricator]** **[testing agency]**.
- B. Welding certificates.
- C. Material Certificates: For the following items, signed by manufacturers:
1. Cementitious materials.
 2. Reinforcing materials and prestressing tendons.
 3. Admixtures.
 4. Bearing pads.
 5. Structural-steel shapes and hollow structural sections.
 6. Brick units and accessories.
 7. Stone anchors.
- D. Material Test Reports: For aggregates.
- E. Source quality-control test reports.
- F. Field quality-control test[**and special inspection**] reports.

1.7 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 QUALITY ASSURANCE

- A. Installer Qualifications: A precast concrete erector qualified and designated by PCI's Certificate of Compliance to erect Category **[A (Architectural Systems) for non-load]** **[S2 (Complex Structural Systems) for load]**-bearing members.
- B. Installer Qualifications: A precast concrete erector who has retained a "PCI-Certified Field Auditor" to conduct a field audit of a project in same category as this Project before erection of precast concrete and who can produce an Erectors' Post-Audit Declaration.
- C. Fabricator Qualifications: A firm that assumes responsibility for engineering architectural precast concrete units to comply with performance requirements. This responsibility includes preparation of Shop Drawings and comprehensive engineering analysis by a qualified professional engineer.
1. Participates in PCI's plant certification program[**at time of bidding**] and is designated a PCI-certified plant for Group A, Category A1 - Architectural

Cladding and Load Bearing Units[**or participates in APA's "Plant Certification Program for Production of Architectural Precast Concrete Products" and is designated an APA-certified plant**].

- D. Testing Agency Qualifications: An independent testing agency[, **acceptable to authorities having jurisdiction,**] qualified according to ASTM C 1077 and ASTM E 329 for testing indicated.
- E. Design Standards: Comply with **ACI 318** (ACI 318M) and design recommendations of PCI MNL 120, "PCI Design Handbook - Precast and Prestressed Concrete," applicable to types of architectural precast concrete units indicated.
- F. Quality-Control Standard: For manufacturing procedures and testing requirements, quality-control recommendations, and dimensional tolerances for types of units required, comply with PCI MNL 117, "Manual for Quality Control for Plants and Production of Architectural Precast Concrete Products."
- G. Welding: Qualify procedures and personnel according to AWS D1.1/D.1.1M, "Structural Welding Code - Steel"; and AWS D1.4, "Structural Welding Code - Reinforcing Steel."
- H. Calculated Fire-Test-Response Characteristics: Where indicated, provide architectural precast concrete units whose fire resistance has been calculated according to **[ACI 216.1/TMS 0216.1, "Standard Method for Determining Fire Resistance of Concrete and Masonry Construction Assemblies,"]** **[PCI MNL 124, "Design for Fire Resistance of Precast Prestressed Concrete,"]** and is acceptable to authorities having jurisdiction.
- I. Sample Panels: After sample approval and before fabricating architectural precast concrete units, produce a minimum of **[2]** **<Insert number>** sample panels approximately **[16 sq. ft. (1.5 sq. m)]** **<Insert size>** in area for review by DEN Project Manager. Incorporate full-scale details of architectural features, finishes, textures, and transitions in sample panels.
1. Locate panels where indicated or, if not indicated, as directed by DEN Project Manager.
 2. Damage part of an exposed-face surface for each finish, color, and texture, and demonstrate adequacy of repair techniques proposed for repair of surface blemishes.
 3. After acceptance of repair technique, maintain one sample panel at manufacturer's plant and one at Project site in an undisturbed condition as a standard for judging the completed Work.
 4. Demolish and remove sample panels when directed.
- J. Range Samples: After sample panel approval and before fabricating architectural precast concrete units, produce a minimum of **[3]** **[5]** **<Insert number>** sets of samples, approximately **[16 sq. ft. (1.5 sq. m)]** **<Insert number>** in area, representing anticipated range of each color and texture on Project's units. Following range sample, maintain one set of samples at Project site and remaining sample sets at manufacturer's plant as color and texture approval reference.

- K. Mockups: After sample panel[**and range sample**] approval but before production of architectural precast concrete units, construct full-sized mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
1. Build mockup as indicated on Drawings including [**aluminum framing, glass, sealants,**] **<Insert construction>** and architectural precast concrete complete with anchors, connections, flashings, and joint fillers.
 2. Approved mockups may become part of the completed Work if undamaged at time of Substantial Completion.
 3. Approval of mockups does not constitute approval of deviations from the Contract Documents unless such deviations are specifically approved by DEN Project Manager in writing.
- L. Preconstruction Testing Mockup: Provide a full-size mockup of architectural precast concrete indicated on Drawings for preconstruction testing. Refer to Division **[01] [08]** **<Insert Division number>** Section "**<Insert Section title>**" for preconstruction testing requirements.
1. Build preconstruction testing mockup as indicated on Drawings including [**aluminum framing, glass, sealants,**] **<Insert construction>** and architectural precast concrete complete with anchors, connections, flashings, and joint fillers.
 2. Build preconstruction testing mockup at testing agency facility.
- M. Preinstallation Conference: Conduct conference at **[Project site]** **[location and time as determined by DEN Project Manager]** to comply with requirements in Section 013100 "Project Management And Coordination."

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver architectural precast concrete units in such quantities and at such times to limit unloading units temporarily on the ground.
- B. Support units during shipment on nonstaining shock-absorbing material.
- C. Store units with adequate dunnage and bracing and protect units to prevent contact with soil, to prevent staining, and to prevent cracking, distortion, warping or other physical damage.
- D. Place stored units so identification marks are clearly visible, and units can be inspected.
- E. Handle and transport units in a position consistent with their shape and design in order to avoid excessive stresses which would cause cracking or damage.
- F. Lift and support units only at designated points shown on Shop Drawings.

1.10 SEQUENCING

- A. Furnish loose connection hardware and anchorage items to be embedded in or attached to other construction without delaying the Work. Provide locations, setting diagrams, templates, instructions, and directions, as required, for installation.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Available Fabricators: Subject to compliance with requirements, fabricators offering products that may be incorporated into the Work include, but are not limited to, the following:
- B. Fabricators: Subject to compliance with requirements, provide products by one of the following:
 - 1. **<Insert, in separate subparagraphs, fabricator's name; product name or designation.>**
 - 2. or approved equal.

2.2 MOLD MATERIALS

- A. Molds: Rigid, dimensionally stable, non-absorptive material, warp and buckle free, that will provide continuous and true precast concrete surfaces within fabrication tolerances indicated; nonreactive with concrete and suitable for producing required finishes.
 - 1. Mold-Release Agent: Commercially produced liquid-release agent that will not bond with, stain or adversely affect precast concrete surfaces and will not impair subsequent surface or joint treatments of precast concrete.
- B. Form Liners: Units of face design, texture, arrangement, and configuration **[indicated] [to match those used for precast concrete design reference sample]**. Furnish with manufacturer's recommended liquid-release agent that will not bond with, stain, or adversely affect precast concrete surfaces and will not impair subsequent surface or joint treatments of precast concrete.
- C. Surface Retarder: Chemical set retarder, capable of temporarily delaying final hardening of newly placed concrete mixture to depth of reveal specified.

2.3 REINFORCING MATERIALS

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [25] [60] <Insert number> percent.
- B. Reinforcing Bars: ASTM A 615/A 615M, Grade 60 (Grade 420), deformed.
- C. Low-Alloy-Steel Reinforcing Bars: ASTM A 706/A 706M, deformed.
- D. Galvanized Reinforcing Bars: [ASTM A 615/A 615M, Grade 60 (Grade 420)] [ASTM A 706/A 706M], deformed bars, ASTM A 767/A 767M, Class II zinc coated, hot-dip galvanized[, and chromate wash treated after fabrication and bending].
- E. Epoxy-Coated Reinforcing Bars: [ASTM A 615/A 615M, Grade 60 (Grade 420)] [ASTM A 706/A 706M], deformed bars, [ASTM A 775/A 775M] [or] [ASTM A 934/A 934M] epoxy coated.
- F. Steel Bar Mats: ASTM A 184/A 184M, fabricated from [ASTM A 615/A 615M, Grade 60 (Grade 420)] [ASTM A 706/A 706M], deformed bars, assembled with clips.
- G. Plain-Steel Welded Wire Reinforcement: ASTM A 185, fabricated from [as-drawn] [galvanized] steel wire into flat sheets.
- H. Deformed-Steel Welded Wire Reinforcement: ASTM A 497/A 497M, flat sheet.
- I. Epoxy-Coated-Steel Wire: ASTM A 884/A 884M, Class A coated, [plain] [deformed], flat sheet, Type [1 bendable] [2 nonbendable] coating.
- J. Supports: Suspend reinforcement from back of mold or use bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded wire reinforcement in place according to PCI MNL 117.

2.4 PRESTRESSING TENDONS

- A. Prestressing Strand: ASTM A 416/A 416M, Grade 270 (Grade 1860), uncoated, 7-wire, low-relaxation strand.
 - 1. Coat unbonded post-tensioning strand with corrosion inhibitor passing ASTM D 1743 and sheath with polypropylene tendon sheathing. Include anchorage devices and coupler assemblies.

2.5 CONCRETE MATERIALS

- A. Portland Cement: ASTM C 150, Type I or Type III, gray, unless otherwise indicated.
 - 1. For surfaces exposed to view in finished structure, mix gray with white cement, of same type, brand, and mill source.
- B. Supplementary Cementitious Materials:

1. Fly Ash: ASTM C 618, Class C or F, with maximum loss on ignition of 3 percent.
 2. Metakaolin Admixture: ASTM C 618, Class N.
 3. Silica Fume Admixture: ASTM C 1240, with optional chemical and physical requirement.
 4. Ground Granulated Blast-Furnace Slag: ASTM C 989, Grade 100 or 120.
- C. Normal-Weight Aggregates: Except as modified by PCI MNL 117, ASTM C 33, with coarse aggregates complying with Class 5S. Stockpile fine and coarse aggregates for each type of exposed finish from a single source (pit or quarry) for Project.
1. Face-Mixture-Coarse Aggregates: Selected, hard, and durable; free of material that reacts with cement or causes staining; to match selected finish sample.
 - a. Gradation: [**Uniformly graded**] [**Gap graded**] [**To match design reference sample**].
 2. Face-Mixture-Fine Aggregates: Selected, natural or manufactured sand of same material as coarse aggregate, unless otherwise approved by DEN Project Manager.
- D. Lightweight Aggregates: Except as modified by PCI MNL 117, ASTM C 330, with absorption less than 11 percent.
- E. Coloring Admixture: ASTM C 979, synthetic or natural mineral-oxide pigments or colored water-reducing admixtures, temperature stable, and nonfading.
- F. Water: Potable; free from deleterious material that may affect color stability, setting, or strength of concrete and complying with chemical limits of PCI MNL 117.
- G. Air-Entraining Admixture: ASTM C 260, certified by manufacturer to be compatible with other required admixtures.
- H. Chemical Admixtures: Certified by manufacturer to be compatible with other admixtures and to not contain calcium chloride, or more than 0.15 percent chloride ions or other salts by weight of admixture.
1. Water-Reducing Admixtures: ASTM C 494/C 494M, Type A.
 2. Retarding Admixture: ASTM C 494/C 494M, Type B.
 3. Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type D.
 4. Water-Reducing and Accelerating Admixture: ASTM C 494/C 494M, Type E.
 5. High-Range, Water-Reducing Admixture: ASTM C 494/C 494M, Type F.
 6. High-Range, Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type G.
 7. Plasticizing and Retarding Admixture: ASTM C 1017/C 1017 M.

2.6 STEEL CONNECTION MATERIALS

- A. Carbon-Steel Shapes and Plates: ASTM A 36/A 36M.

- B. Carbon-Steel-Headed Studs: ASTM A 108, AISI 1018 through AISI 1020, cold finished, AWS D1.1/D1.1M, Type A or B, with arc shields and with minimum mechanical properties of PCI MNL 117, Table 3.2.3.
 - C. Carbon-Steel Plate: ASTM A 283/A 283M.
 - D. Malleable Iron Castings: ASTM A 47/A 47M.
 - E. Carbon-Steel Castings: ASTM A 27/A 27M, [Grade 60-30](#) (Grade 415-205).
 - F. High-Strength, Low-Alloy Structural Steel: ASTM A 572/A 572M.
 - G. Carbon-Steel Structural Tubing: ASTM A 500, Grade B.
 - H. Wrought Carbon-Steel Bars: ASTM A 675/A 675M, [Grade 65](#) (Grade 450).
 - I. Deformed-Steel Wire or Bar Anchors: ASTM A 496 or ASTM A 706/A 706M.
 - J. Carbon-Steel Bolts and Studs: [ASTM A 307, Grade A](#) (ASTM F 568M, Property Class 4.6); carbon-steel, hex-head bolts and studs; carbon-steel nuts, [ASTM A 563](#) (ASTM A 563M); and flat, unhardened steel washers, ASTM F 844.
 - K. High-Strength Bolts and Nuts: [ASTM A 325](#) (ASTM A 325M), Type 1, heavy hex steel structural bolts; heavy hex carbon-steel nuts, [ASTM A 563](#) (ASTM A 563M); and hardened carbon-steel washers, [ASTM F 436](#) (ASTM F 436M).
 - L. Zinc-Coated Finish: For exterior steel items[, **steel in exterior walls,**] and items indicated for galvanizing, apply zinc coating by [**hot-dip process according to ASTM A 123/A 123M or ASTM A 153/A 153M**] [**electrodeposition according to ASTM B 633, SC 3, Types 1 and 2**].
 - 1. For steel shapes, plates, and tubing to be galvanized, limit silicon content of steel to less than 0.03 percent or to between 0.15 and 0.25 percent or limit sum of silicon and 2.5 times phosphorous content to 0.09 percent.
 - 2. Galvanizing Repair Paint: High-zinc-dust-content paint with dry film containing not less than 94 percent zinc dust by weight, and complying with DOD-P-21035A or SSPC-Paint 20.
 - M. Shop-Primed Finish: Prepare surfaces of nongalvanized steel items, except those surfaces to be embedded in concrete, according to requirements in SSPC-SP 3 and shop-apply [**lead- and chromate-free, rust-inhibitive primer, complying with performance requirements in MPI 79**] [**SSPC-Paint 25**] according to SSPC-PA 1.
 - N. Welding Electrodes: Comply with AWS standards.
- 2.7 STAINLESS-STEEL CONNECTION MATERIALS
- A. Stainless-Steel Plate: ASTM A 666, Type 304, of grade suitable for application.

- B. Stainless-Steel Bolts and Studs: ASTM F 593, Alloy 304 or 316, hex-head bolts and studs; stainless-steel nuts; and flat, stainless-steel washers.
 - 1. Lubricate threaded parts of stainless-steel bolts with an antiseize thread lubricant during assembly.
- C. Stainless-Steel-Headed Studs: ASTM A 276, with minimum mechanical properties of PCI MNL 117, Table 3.2.3.

2.8 BEARING PADS

- A. Provide one of the following bearing pads for architectural precast concrete units[**as recommended by precast fabricator for application**]:
 - 1. Elastomeric Pads: AASHTO M 251, plain, vulcanized, 100 percent polychloroprene (neoprene) elastomer, molded to size or cut from a molded sheet, Type A durometer hardness of 50 to 70, ASTM D 2240, minimum tensile strength **2250 psi (15.5 MPa)**, ASTM D 412.
 - 2. Random-Oriented, Fiber-Reinforced Elastomeric Pads: Preformed, randomly oriented synthetic fibers set in elastomer. Type A durometer hardness of 70 to 90, ASTM D 2240; capable of supporting a compressive stress of **3000 psi (20.7 MPa)** with no cracking, splitting, or delaminating in the internal portions of pad. Test one specimen for every 200 pads used in Project.
 - 3. Cotton-Duck-Fabric-Reinforced Elastomeric Pads: Preformed, horizontally layered cotton-duck fabric bonded to an elastomer; Type A durometer hardness of 80 to 100, ASTM D 2240; complying with AASHTO's "AASHTO Load and Resistance Factor Design (LRFD) Bridge Design Specifications, Division II, Section 18.10.2, or with MIL-C-882E.
 - 4. Frictionless Pads: Tetrafluoroethylene (Teflon), glass-fiber reinforced, bonded to stainless or mild-steel plate, of type required for in-service stress.
 - 5. High-Density Plastic: Multimer, nonleaching, plastic strip.

2.9 ACCESSORIES

- A. Reglets: Specified in Section 076200 "Sheet Metal Flashing And Trim."
- B. Reglets: [**PVC extrusions,**] [**Stainless steel, Type 302 or 304,**] [**Copper,**] felt or fiber filled, or with face opening of slots covered.
- C. Precast Accessories: Provide clips, hangers, plastic or steel shims, and other accessories required to install architectural precast concrete units.

2.10 GROUT MATERIALS

- A. Sand-Cement Grout: Portland cement, ASTM C 150, Type I, and clean, natural sand, ASTM C 144 or ASTM C 404. Mix at ratio of 1 part cement to 2-1/2 parts sand, by volume, with minimum water required for placement and hydration.

- B. Nonmetallic, Nonshrink Grout: Premixed, nonmetallic, noncorrosive, nonstaining grout containing selected silica sands, Portland cement, shrinkage-compensating agents, plasticizing and water-reducing agents, complying with ASTM C 1107, Grade A for drypack and Grades B and C for flowable grout and of consistency suitable for application within a 30-minute working time.
- C. Epoxy-Resin Grout: Two-component, mineral-filled epoxy resin; ASTM C 881/C 881M, of type, grade, and class to suit requirements.

2.11 THIN BRICK UNITS AND ACCESSORIES

- A. Thin Brick Units: ASTM C 216, Type FBX or ASTM C 1088, Grade Exterior, Type TBX, [not less than 1/2 inch (13 mm)] [3/4 inch (19 mm)] [1 inch (25 mm)] thick with a tolerance of plus or minus 1/16 inch (1.6 mm), and as follows:
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. <Insert, in separate subparagraphs, manufacturer's name; product name or designation.>
 - b. or approved equal.
 - 2. Face Size: 2-1/4 inches (57 mm) high by 8 inches (203 mm) long.
 - 3. Face Size: 2-1/4 inches (57 mm) high by 7-1/2 to 7-5/8 inches (190 to 194 mm) long.
 - 4. Face Size: 2-3/4 to 2-13/16 inches (70 to 71 mm) high by 7-1/2 to 7-5/8 inches (190 to 194 mm) long.
 - 5. Face Size: 3-1/2 to 3-5/8 inches (89 to 92 mm) high by 7-1/2 to 7-5/8 inches (190 to 194 mm) long.
 - 6. Face Size: 3-1/2 to 3-5/8 inches (89 to 92 mm) high by 11-1/2 to 11-5/8 inches (292 to 295 mm) long.
 - 7. Face Size: <Insert dimensions.>
 - 8. [Where indicated to "match existing,"]provide thin brick matching color, texture, and face size of existing adjacent brick work.
 - a. <Insert information on existing brick if known.>
 - 9. Face Size: 57 mm high by 190 mm long.
 - 10. Face Size: 70 mm high by 190 mm long.
 - 11. Face Size: 90 mm high by 190 mm long.
 - 12. Face Size: 90 mm high by 290 mm long.
 - 13. Face Size: <Insert dimensions.>
 - 14. Special Shapes: Include corners, edge corners, and end edge corners.
 - 15. Initial Rate of Absorption: Less than 30 g/30 sq. in. (30 g/194 sq. cm) per minute; ASTM C 67.
 - 16. Efflorescence: Tested according to ASTM C 67 and rated "not effloresced."
 - 17. Surface Coating: Thin brick with colors or textures applied as coatings shall withstand 50 cycles of freezing and thawing; ASTM C 67 with no observable difference in applied finish when viewed from 10 feet (3 m).
 - 18. Face Color and Texture: [Match DEN Project Manager's samples] [Medium brown, wire cut] [Full-range red, sand molded] [Gray, velour].

19. Back Surface Texture: Scored, combed, wire roughened, ribbed, keybacked, or dovetailed.
- B. Sand-Cement Mortar: Portland cement, ASTM C 150, Type I, and clean, natural sand, ASTM C 144. Mix at ratio of 1 part cement to 4 parts sand, by volume, with minimum water required for placement.
- C. Latex-Portland Cement Pointing Grout: ANSI A118.6 and as follows:
 1. Dry-grout mixture, factory prepared, of Portland cement, graded aggregate, and dry, redispersible, ethylene-vinyl-acetate additive for mixing with water; uniformly colored.
 2. Commercial Portland cement grout, factory prepared, with liquid styrene-butadiene rubber or acrylic-resin latex additive; uniformly colored.
 3. Colors: **[As indicated by manufacturer's designations] [Match Project Manager's samples] [As selected by Project Manager from manufacturer's full range].**

2.12 STONE MATERIALS AND ACCESSORIES

- A. Stone facing for architectural precast concrete is specified in Section 044200 "Exterior Stone Cladding."
- B. Anchors are generally supplied by stone fabricator or, in some cases, by precaster. Specify supplier. Anchors may be toe in, toe out, or dowels.
- C. Anchors: Stainless steel, ASTM A 666, Type 304, of temper and diameter required to support loads without exceeding allowable design stresses.
 1. Fit each anchor leg with neoprene grommet collar of width at least twice the diameter and of length at least five times the diameter of anchor.
- D. Sealant Filler: ASTM C 920, low-modulus, multicomponent, nonsag urethane sealant complying with requirements in Section 079200 "Joint Sealants" and that is nonstaining to stone substrate.
- E. Epoxy Filler: ASTM C 881/C 881M, 100 percent solids, sand-filled nonshrinking, nonstaining of type, class, and grade to suit application.
 1. Elastomeric Anchor Sleeve: **1/2 inch (13 mm)** long, Type A durometer hardness of 60, ASTM D 2240.
- F. Bond Breaker: **[Preformed, compressible, resilient, nonstaining, nonwaxing, closed-cell polyethylene foam pad, nonabsorbent to liquid and gas, 1/8 inch (3.2 mm) thick] [Polyethylene sheet, ASTM D 4397, 6 to 10 mils (0.15 to 0.25 mm) thick].**

2.13 INSULATED PANEL ACCESSORIES

- A. Molded-Polystyrene Board Insulation: ASTM C 578, Type [I, 0.90 lb/cu. ft. (15 kg/cu. m)] [VIII, 1.15 lb/cu. ft. (18 kg/cu. m)] [II, 1.35 lb/cu. ft. (22 kg/cu. m)]; [square] [ship-lap] edges; with R-value of <Insert value> and thickness of <Insert dimension>.
- B. Extruded-Polystyrene Board Insulation: ASTM C 578, Type [IV, 1.60 lb/cu. ft. (26 kg/cu. m)] [X, 1.30 lb/cu. ft. (21 kg/cu. m)] [VI, 1.80 lb/cu. ft. (29 kg/cu. m)]; [square] [ship-lap] edges; with R-value of <Insert value> and thickness of <Insert dimension>.
- C. Polyisocyanurate Board Insulation: ASTM C 591, Type [I, 1.8 lb/cu. ft. (29 kg/cu. m)] [IV, 2 lb/cu. ft. (32 kg/cu. m)] [II, 2.5 lb/cu. ft. (40 kg/cu. m)] unfaced, with R-value of <Insert value> and thickness of <Insert dimension>.
- D. Wythe Connectors: [Glass-fiber and vinyl-ester polymer connectors] [Polypropylene pin connectors] [Stainless-steel pin connectors] [Bent galvanized reinforcing bars or galvanized welded wire trusses] [Cylindrical metal sleeve anchors] manufactured to connect wythes of precast concrete panels.

2.14 CONCRETE MIXTURES

- A. Prepare design mixtures for each type of precast concrete required.
 - 1. Limit use of fly ash and silica fume to 20 percent of Portland cement by weight; limit metakaolin and silica fume to 10 percent of Portland cement by weight.
- B. Design mixtures may be prepared by a qualified independent testing agency or by qualified precast plant personnel at architectural precast concrete fabricator's option.
- C. Limit water-soluble chloride ions to maximum percentage by weight of cement permitted by ACI 318 (ACI 318M) or PCI MNL 117 when tested according to ASTM C 1218/C 1218M.
- D. Normal-Weight Concrete Mixtures: Proportion [face mixtures] [face and backup mixtures] [full-depth mixture] [face and backup mixtures or full-depth mixtures, at fabricator's option] by either laboratory trial batch or field test data methods according to ACI 211.1, with materials to be used on Project, to provide normal-weight concrete with the following properties:
 - 1. Compressive Strength (28 Days): 5000 psi (34.5 MPa) minimum.
 - 2. Maximum Water-Cementitious Materials Ratio: 0.45.
- E. Water Absorption: 6 percent by weight or 14 percent by volume, tested according to PCI MNL 117.
- F. Lightweight Concrete Backup Mixtures: Proportion mixtures by either laboratory trial batch or field test data methods according to ACI 211.2, with materials to be used on Project, to provide lightweight concrete with the following properties:
 - 1. Compressive Strength (28 Days): 5000 psi (34.5 MPa).

2. Unit Weight: Calculated equilibrium unit weight of **115 lb/cu. ft.** (1842 kg/cu. m), plus or minus **3 lb/cu. ft.** (48 kg/cu. m), according to ASTM C 567.

- G. Add air-entraining admixture at manufacturer's prescribed rate to result in concrete at point of placement having an air content complying with PCI MNL 117.
- H. When included in design mixtures, add other admixtures to concrete mixtures according to manufacturer's written instructions.

2.15 MOLD FABRICATION

- A. Molds: Accurately construct molds, mortar tight, of sufficient strength to withstand pressures due to concrete-placement operations and temperature changes and for prestressing and detensioning operations. Coat contact surfaces of molds with release agent before reinforcement is placed. Avoid contamination of reinforcement and prestressing tendons by release agent.
 - 1. Place form liners accurately to provide finished surface texture indicated. Provide solid backing and supports to maintain stability of liners during concrete placement. Coat form liner with form-release agent.
- B. Maintain molds to provide completed architectural precast concrete units of shapes, lines, and dimensions indicated, within fabrication tolerances specified.
 - 1. Form joints are not permitted on faces exposed to view in the finished work.
 - 2. Edge and Corner Treatment: Uniformly [**chamfered**] [**radiused**].

2.16 THIN BRICK FACINGS

- A. Place form liner templates accurately to provide grid for thin brick facings. Provide solid backing and supports to maintain stability of liners while placing thin bricks and during concrete placement.
- B. Securely place thin brick units face down into form liner pockets and place concrete backing mixture.
- C. Completely fill joint cavities between thin brick units with sand-cement mortar, and place precast concrete backing mixture while sand-cement mortar is still fluid enough to ensure bond.
- D. Mix and install grout according to ANSI A108.10. Completely fill joint cavities between thin brick units with grout, and compress into place without spreading grout onto faces of thin brick units. Remove excess grout immediately to prevent staining of brick.
 - 1. Tool joints to a [**slightly concave**] [**grapevine**] [**V-**]shape when pointing grout is thumbprint hard.
- E. Clean faces and joints of brick facing.

2.17 STONE FACINGS

- A. Accurately position stone facings to comply with requirements and in locations indicated on Shop Drawings. Install anchors, supports, and other attachments indicated or necessary to secure stone in place. Keep concrete reinforcement a minimum of **3/4 inch (19 mm)** from the back surface of stone. Use continuous spacers to obtain uniform joints of widths indicated and with edges and faces aligned according to established relationships and indicated tolerances.
1. Stone to Precast Anchorages: Provide anchors in numbers, types and locations required to satisfy specified performance criteria, but not less than 2 anchors per stone unit of less than **2 sq. ft. (0.19 sq. m)** in area and 4 anchors per unit of less than **12 sq. ft. (1.1 sq. m)** in area; for units larger than **12 sq. ft. (1.1 sq. m)** in area, provide anchors spaced not more than **24 inches (600 mm)** o.c. horizontally and vertically. Locate anchors a minimum of **6 inches (150 mm)** from stone edge.
- B. Fill anchor holes with **[sealant filler and install anchors] [epoxy filler and install anchors with elastomeric anchor sleeve at back surface of stone]**.
1. Install polyethylene sheet to prevent bond between back of stone facing and concrete substrate and to ensure no passage of precast matrix to stone surface.
 2. Install **1/8-inch (3-mm)** polyethylene-foam bond breaker to prevent bond between back of stone facing and concrete substrate and to ensure no passage of precast matrix to stone surface. Maintain minimum projection requirements of stone anchors into concrete substrate.

2.18 FABRICATION

- A. Cast-in Anchors, Inserts, Plates, Angles, and Other Anchorage Hardware: Fabricate anchorage hardware with sufficient anchorage and embedment to comply with design requirements. Accurately position for attachment of loose hardware, and secure in place during precasting operations. Locate anchorage hardware where it does not affect position of main reinforcement or concrete placement.
1. Weld-headed studs and deformed bar anchors used for anchorage according to AWS D1.1/D1.1M and AWS C5.4, "Recommended Practices for Stud Welding."
- B. Furnish loose hardware items including steel plates, clip angles, seat angles, anchors, dowels, cramps, hangers, and other hardware shapes for securing architectural precast concrete units to supporting and adjacent construction.
- C. Cast-in reglets, slots, holes, and other accessories in architectural precast concrete units as indicated on the Contract Drawings.
- D. Cast-in openings larger than **10 inches (250 mm)** in any dimension. Do not drill or cut openings or prestressing strand without DEN Project Manager's approval.
- E. Reinforcement: Comply with recommendations in PCI MNL 117 for fabricating, placing, and supporting reinforcement.

1. Clean reinforcement of loose rust and mill scale, earth, and other materials that reduce or destroy the bond with concrete. When damage to epoxy-coated reinforcing exceeds limits specified in ASTM A 775/A 775M, repair with patching material compatible with coating material and epoxy coat bar ends after cutting.
 2. Accurately position, support, and secure reinforcement against displacement during concrete-placement and consolidation operations. Completely conceal support devices to prevent exposure on finished surfaces.
 3. Place reinforcement to maintain at least **3/4-inch (19-mm)** minimum coverage. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position while placing concrete. Direct wire tie ends away from finished, exposed concrete surfaces.
 4. Place reinforcing steel and prestressing strand to maintain at least **3/4-inch (19-mm)** minimum concrete cover. Increase cover requirements for reinforcing steel to **1-1/2 inches (38 mm)** when units are exposed to corrosive environment or severe exposure conditions. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position while placing concrete. Direct wire tie ends away from finished, exposed concrete surfaces.
 5. Install welded wire fabric in lengths as long as practicable. Lap adjoining pieces at least one full mesh spacing and wire tie laps, where required by design. Offset laps of adjoining widths to prevent continuous laps in either direction.
- F. Reinforce architectural precast concrete units to resist handling, transportation, and erection stresses.
- G. Prestress tendons for architectural precast concrete units by either pretensioning or post-tensioning methods. Comply with PCI MNL 117.
1. Delay detensioning or post-tensioning of precast, prestressed architectural concrete units until concrete has reached its indicated minimum design release compressive strength as established by test cylinders cured under same conditions as concrete.
 2. Detension pretensioned tendons either by gradually releasing tensioning jacks or by heat-cutting tendons, using a sequence and pattern to prevent shock or unbalanced loading.
 3. If concrete has been heat cured, detension while concrete is still warm and moist to avoid dimensional changes that may cause cracking or undesirable stresses.
 4. Protect strand ends and anchorages with bituminous, zinc-rich, or epoxy paint to avoid corrosion and possible rust spots.
- H. Comply with requirements in PCI MNL 117 and requirements in this Section for measuring, mixing, transporting, and placing concrete. After concrete batching, no additional water may be added.
- I. Place face mixture to a minimum thickness after consolidation of the greater of **1 inch (25 mm)** or 1.5 times the maximum aggregate size, but not less than the minimum reinforcing cover specified.
- J. Place concrete in a continuous operation to prevent seams or planes of weakness from forming in precast concrete units.

1. Place backup concrete mixture to ensure bond with face-mixture concrete.
 - K. Thoroughly consolidate placed concrete by internal and external vibration without dislocating or damaging reinforcement and built-in items, and minimize pour lines, honeycombing, or entrapped air on surfaces. Use equipment and procedures complying with PCI MNL 117.
 1. Place self-consolidating concrete without vibration according to PCI TR-6, "Interim Guidelines for the Use of Self-Consolidating Concrete in Precast/Prestressed Concrete Institute Member Plants."
 - L. Comply with PCI MNL 117 for hot- and cold-weather concrete placement.
 - M. Identify pickup points of architectural precast concrete units and orientation in structure with permanent markings, complying with markings indicated on Shop Drawings. Imprint or permanently mark casting date on each architectural precast concrete unit on a surface that will not show in finished structure.
 - N. Cure concrete, according to requirements in PCI MNL 117, by moisture retention without heat or by accelerated heat curing using low-pressure live steam or radiant heat and moisture. Cure units until compressive strength is high enough to ensure that stripping does not have an effect on performance or appearance of final product.
 - O. Discard and replace architectural precast concrete units that do not comply with requirements, including structural, manufacturing tolerance, and appearance, unless repairs meet requirements in PCI MNL 117 and DEN Project Manager's approval.
- 2.19 INSULATED PANEL CASTING
- A. Cast and screed supported wythe over mold.
 - B. Place insulation boards abutting edges and ends of adjacent boards. Insert wythe connectors through insulation, and consolidate concrete around connectors according to connector manufacturer's written instructions.
 - C. Cast and screed top wythe to meet required finish.
- 2.20 FABRICATION TOLERANCES
- A. Fabricate architectural precast concrete units straight and true to size and shape with exposed edges and corners precise and true so each finished panel complies with PCI MNL 117 product tolerances as well as position tolerances for cast-in items.
 - B. Fabricate architectural precast concrete units straight and true to size and shape with exposed edges and corners precise and true so each finished panel complies with the following product tolerances:
 1. Overall Height and Width of Units, Measured at the Face Exposed to View: As follows:

- a. 10 feet (3 m) or under, plus or minus 1/8 inch (3 mm).
 - b. 10 to 20 feet (3 to 6 m), plus 1/8 inch (3 mm), minus 3/16 inch (5 mm).
 - c. 20 to 40 feet (6 to 12 m), plus or minus 1/4 inch (6 mm).
 - d. Each additional 10 feet (3 m), plus or minus 1/16 inch (1.5 mm).
2. Overall Height and Width of Units, Measured at the Face Not Exposed to View:
As follows:
- a. 10 feet (3 m) or under, plus or minus 1/4 inch (6 mm).
 - b. 10 to 20 feet (3 to 6 m), plus 1/4 inch (6 mm), minus 3/8 inch (10 mm).
 - c. 20 to 40 feet (6 to 12 m), plus or minus 3/8 inch (10 mm).
 - d. Each additional 10 feet (3 m), plus or minus 1/8 inch (3 mm).
3. Total Thickness or Flange Thickness: Plus 1/4 inch (6 mm), minus 1/8 inch (3 mm).
4. Rib Thickness: Plus or minus 1/8 inch (3 mm).
5. Rib to Edge of Flange: Plus or minus 1/8 inch (3 mm).
6. Distance between Ribs: Plus or minus 1/8 inch (3 mm).
7. Variation from Square or Designated Skew (Difference in Length of the Two Diagonal Measurements): Plus or minus 1/8 inch per 72 inches (3 mm per 1830 mm) or 1/2 inch (13 mm) total, whichever is greater.
8. Length and Width of Block-outs and Openings within One Unit: Plus or minus 1/4 inch (6 mm).
9. Location and Dimension of Block-outs Hidden from View and Used for HVAC and Utility Penetrations: Plus or minus 3/4 inch (19 mm).
10. Dimensions of Haunches: Plus or minus 1/4 inch (6 mm).
11. Haunch Bearing Surface Deviation from Specified Plane: Plus or minus 1/8 inch (3 mm).
12. Difference in Relative Position of Adjacent Haunch Bearing Surfaces from Specified Relative Position: Plus or minus 1/4 inch (6 mm).
13. Bowing: Plus or minus L/360, maximum 1 inch (25 mm).
14. Local Smoothness: 1/4 inch per 10 feet (6 mm per 3 m).
15. Warping: 1/16 inch per 12 inches (1.5 mm per 300 mm) of distance from nearest adjacent corner.
16. Tipping and Flushness of Plates: Plus or minus 1/4 inch (6 mm).
17. Dimensions of Architectural Features and Rustications: Plus or minus 1/8 inch (3 mm).
- C. Position Tolerances: For cast-in items measured from datum line location, as indicated on Shop Drawings.
1. Weld Plates: Plus or minus 1 inch (25 mm).
 2. Inserts: Plus or minus 1/2 inch (13 mm).
 3. Handling Devices: Plus or minus 3 inches (75 mm).
 4. Reinforcing Steel and Welded Wire Fabric: Plus or minus 1/4 inch (6 mm) where position has structural implications or affects concrete cover; otherwise, plus or minus 1/2 inch (13 mm).
 5. Reinforcing Steel Extending out of Member: Plus or minus 1/2 inch (13 mm) of plan dimensions.

6. Tendons: Plus or minus **1/4 inch (6 mm)**, vertical; plus or minus **1 inch (25 mm)**, horizontal.
 7. Location of Rustication Joints: Plus or minus **1/8 inch (3 mm)**.
 8. Location of Opening within Panel: Plus or minus **1/4 inch (6 mm)**.
 9. Location of Flashing Reglets: Plus or minus **1/4 inch (6 mm)**.
 10. Location of Flashing Reglets at Edge of Panel: Plus or minus **1/8 inch (3 mm)**.
 11. Reglets for Glazing Gaskets: Plus or minus **1/8 inch (3 mm)**.
 12. Electrical Outlets, Hose Bibs: Plus or minus **1/2 inch (13 mm)**.
 13. Location of Bearing Surface from End of Member: Plus or minus **1/4 inch (6 mm)**.
 14. Allowable Rotation of Plate, Channel Inserts, and Electrical Boxes: 2-degree rotation or **1/4 inch (6 mm)** maximum over the full dimension of unit.
 15. Position of Sleeve: Plus or minus **1/2 inch (13 mm)**.
 16. Location of Window Washer Track or Buttons: Plus or minus **1/8 inch (3 mm)**.
- D. Brick-Faced Architectural Precast Concrete Units: Restrict the following misalignments to 2 percent of number of bricks in a unit.
1. Alignment of Mortar Joints:
 - a. Jog in Alignment: **1/8 inch (3 mm)**.
 - b. Alignment with Panel Centerline: Plus or minus **1/8 inch (3 mm)**.
 2. Variation in Width of Exposed Mortar Joints: Plus or minus **1/8 inch (3 mm)**.
 3. Tipping of Individual Bricks from the Panel Plane of Exposed Brick Surface: Plus **1/16 inch (1.5 mm)**; minus **1/4 inch (6 mm)** less than or equal to depth of form liner joint.
 4. Exposed Brick Surface Parallel to Primary Control Surface of Panel: Plus **1/4 inch (6 mm)**; minus **1/8 inch (3 mm)**.
 5. Individual Brick Step in Face from Panel Plane of Exposed Brick Surface: Plus **1/16 inch (1.5 mm)**; minus **1/4 inch (6 mm)** less than or equal to depth of form liner joint.
- E. Stone Veneer-Faced Architectural Precast Concrete Units:
1. Variation in Cross-Sectional Dimensions: For thickness of walls from dimensions indicated: Plus or minus **1/4 inch (6 mm)**.
 2. Variation in Joint Width: **1/8 inch in 36 inches (3 mm in 900 mm)** or a quarter of nominal joint width, whichever is less.
 3. Variation in Plane between Adjacent Stone Units (Lipping): **1/16 inch (1.5 mm)** difference between planes of adjacent units.

2.21 FINISHES

- A. Panel faces shall be free of joint marks, grain, and other obvious defects. Corners, including false joints shall be uniform, straight, and sharp. Finish exposed-face surfaces of architectural precast concrete units to match approved [**design reference sample**] [**sample panels**] [**mockups**] and as follows:

1. Design Reference Sample: **<Insert description and identify fabricator and code number of sample.>**
2. PCI's "Architectural Precast Concrete - Color and Texture Selection Guide," of plate numbers indicated.
3. As-Cast Surface Finish: Provide surfaces free of pockets, sand streaks, and honeycombs.
4. Textured-Surface Finish: Impart by form liners or inserts to provide surfaces free of pockets, streaks, and honeycombs, with uniform color and texture.
5. Bushhammer Finish: Use power or hand tools to remove matrix and fracture coarse aggregates.
6. Exposed-Aggregate Finish: Use chemical retarding agents applied to concrete forms and washing and brushing procedures to expose aggregate and surrounding matrix surfaces after form removal.
7. Abrasive-Blast Finish: Use abrasive grit, equipment, application techniques, and cleaning procedures to expose aggregate and surrounding matrix surfaces.
8. Acid-Etched Finish: Use acid and hot-water solution, equipment, application techniques, and cleaning procedures to expose aggregate and surrounding matrix surfaces. Protect hardware, connections, and insulation from acid attack.
9. Honed Finish: Use continuous mechanical abrasion with fine grit, followed by filling and rubbing procedures.
10. Polished Finish: Use continuous mechanical abrasion with fine grit, followed by filling and rubbing procedures.
11. Sand-Embedment Finish: Use selected stones placed in a sand bed in bottom of mold, with sand removed after curing.

B. Finish exposed **[top] [bottom] [and back]** surfaces of architectural precast concrete units to match face-surface finish.

C. Finish exposed **[top] [bottom] [and back]** surfaces of architectural precast concrete units by smooth, steel-trowel finish.

D. Finish unexposed surfaces of architectural precast concrete units by float finish.

2.22 SOURCE QUALITY CONTROL

A. Quality-Control Testing: Test and inspect precast concrete according to PCI MNL 117 requirements. If using self-consolidating concrete, also test and inspect according to PCI TR-6, "Interim Guidelines for the Use of Self-Consolidating Concrete in Precast/Prestressed Concrete Institute Member Plants."

B. Owner will employ an independent testing agency to evaluate architectural precast concrete fabricator's quality-control and testing methods.

1. Allow Owner's testing agency access to material storage areas, concrete production equipment, concrete placement, and curing facilities. Cooperate with Owner's testing agency and provide samples of materials and concrete mixtures as may be requested for additional testing and evaluation.

- C. Strength of precast concrete units will be considered deficient if units fail to comply with **ACI 318 (ACI 318M)** requirements for concrete strength.
- D. Testing: If there is evidence that strength of precast concrete units may be deficient or may not comply with **ACI 318 (ACI 318M)** requirements, precaster will employ an independent testing agency to obtain, prepare, and test cores drilled from hardened concrete to determine compressive strength according to ASTM C 42/C 42M.
1. A minimum of three representative cores will be taken from units of suspect strength, from locations directed by DEN Project Manager.
 2. Cores will be tested in an air-dry condition.
 3. Strength of concrete for each series of 3 cores will be considered satisfactory if average compressive strength is equal to at least 85 percent of 28-day design compressive strength and no single core is less than 75 percent of 28-day design compressive strength.
 4. Test results will be made in writing on same day that tests are performed, with copies to DEN Project Manager, Contractor, and precast concrete fabricator. Test reports will include the following:
 - a. Project identification name and number.
 - b. Date when tests were performed.
 - c. Name of precast concrete fabricator.
 - d. Name of concrete testing agency.
 - e. Identification letter, name, and type of precast concrete unit(s) represented by core tests; design compressive strength; type of break; compressive strength at breaks, corrected for length-diameter ratio; and direction of applied load to core in relation to horizontal plane of concrete as placed.
- E. Patching: If core test results are satisfactory and precast concrete units comply with requirements, clean and dampen core holes and solidly fill with precast concrete mixture that has no coarse aggregate, and finish to match adjacent precast concrete surfaces.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine supporting structural frame or foundation and conditions for compliance with requirements for installation tolerances, true and level bearing surfaces, and other conditions affecting performance.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.
- C. Do not install precast concrete units until supporting cast-in-place building structural framing has attained minimum allowable design compressive strength or supporting steel or other structure is complete.

3.2 INSTALLATION

- A. Install clips, hangers, bearing pads, and other accessories required for connecting architectural precast concrete units to supporting members and backup materials.
- B. Erect architectural precast concrete level, plumb, and square within specified allowable tolerances. Provide temporary supports and bracing as required to maintain position, stability, and alignment as units are being permanently connected.
1. Install temporary steel or plastic spacing shims or bearing pads as precast concrete units are being erected. Tack weld steel shims to each other to prevent shims from separating.
 2. Maintain horizontal and vertical joint alignment and uniform joint width as erection progresses.
 3. Remove projecting lifting devices and grout fill voids within recessed lifting devices flush with surface of adjacent precast surfaces when recess is exposed.
 4. Unless otherwise indicated, maintain uniform joint widths of **3/4 inch (19 mm)**.
- C. Connect architectural precast concrete units in position by bolting, welding, grouting, or as otherwise indicated on Shop Drawings. Remove temporary shims, wedges, and spacers as soon as practical after connecting and grouting are completed.
1. Do not permit connections to disrupt continuity of roof flashing.
- D. Welding: Comply with applicable AWS D1.1/D1.1M and AWS D1.4 for welding, welding electrodes, appearance, quality of welds, and methods used in correcting welding work.
1. Protect architectural precast concrete units and bearing pads from damage by field welding or cutting operations, and provide noncombustible shields as required.
 2. Welds not specified shall be continuous fillet welds, using no less than the minimum fillet as specified by AWS.
 3. Clean weld-affected metal surfaces with chipping hammer followed by brushing, and apply a minimum **4.0-mil- (0.1-mm-)** thick coat of galvanized repair paint to galvanized surfaces according to ASTM A 780.
 4. Clean weld-affected metal surfaces with chipping hammer followed by brushing, and reprime damaged painted surfaces.
 5. Remove, reweld, or repair incomplete and defective welds.
- E. At bolted connections, use lock washers, tack welding, or other approved means to prevent loosening of nuts after final adjustment.
1. Where slotted connections are used, verify bolt position and tightness. For sliding connections, properly secure bolt but allow bolt to move within connection slot. For friction connections, apply specified bolt torque and check 25 percent of bolts at random by calibrated torque wrench.
- F. Grouting Connections: Grout connections where required or indicated. Retain grout in place until hard enough to support itself. Pack spaces with stiff grout material, tamping

until voids are completely filled. Place grout to finish smooth, level, and plumb with adjacent concrete surfaces. Keep grouted joints damp for not less than 24 hours after initial set. Promptly remove grout material from exposed surfaces before it affects finishes or hardens.

3.3 ERECTION TOLERANCES

- A. Erect architectural precast concrete units level, plumb, square, true, and in alignment without exceeding the noncumulative erection tolerances of PCI MNL 117, Appendix I.
- B. Erect architectural precast concrete units level, plumb, square, and true, without exceeding the following noncumulative erection tolerances:
1. Plan Location from Building Grid Datum: Plus or minus **1/2 inch (13 mm)**.
 2. Plan Location from Centerline of Steel: Plus or minus **1/2 inch (13 mm)**.
 3. Top Elevation from Nominal Top Elevation: As follows:
 - a. Exposed Individual Panel: Plus or minus **1/4 inch (6 mm)**.
 - b. Non-Exposed Individual Panel: Plus or minus **1/2 inch (13 mm)**.
 - c. Exposed Panel Relative to Adjacent Panel: **1/4 inch (6 mm)**.
 - d. Non-Exposed Panel Relative to Adjacent Panel: **1/2 inch (13 mm)**.
 4. Support Elevation from Nominal Support Elevation: As follows:
 - a. Maximum Low: **1/2 inch (13 mm)**.
 - b. Maximum High: **1/4 inch (6 mm)**.
 5. Maximum Plumb Variation over the Lesser of Height of Structure or **100 Feet (30 m)**: **1 inch (25 mm)**.
 6. Plumb in Any **10 Feet (3 m)** of Element Height: **1/4 inch (6 mm)**.
 7. Maximum Jog in Alignment of Matching Edges: **1/4 inch (6 mm)**.
 8. Joint Width (Governs over Joint Taper): Plus or minus **1/4 inch (6 mm)**.
 9. Maximum Joint Taper: **3/8 inch (10 mm)**.
 10. Joint Taper in **10 Feet (3 m)**: **1/4 inch (6 mm)**.
 11. Maximum Jog in Alignment of Matching Faces: **1/4 inch (6 mm)**.
 12. Differential Bowing or Camber, as Erected, between Adjacent Members of Same Design: **1/4 inch (6 mm)**.
 13. Opening Height between Spandrels: Plus or minus **1/4 inch (6 mm)**.

3.4 FIELD QUALITY CONTROL

- A. Special Inspections: **[Owner will engage] [Engage]** a qualified special inspector to perform the following special inspections and prepare reports:
1. Erection of precast concrete members.
 2. **<Insert special inspections.>**
- B. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections and prepare test reports.

- C. Field welds will be subject to visual inspections and nondestructive testing according to ASTM E 165 or ASTM E 709. High-strength bolted connections will be subject to inspections.
- D. Testing agency will report test results promptly and in writing to Contractor and DEN Project Manager.
- E. Repair or remove and replace work where tests and inspections indicate that it does not comply with specified requirements.
- F. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.5 REPAIRS

- A. Repair architectural precast concrete units if permitted by DEN Project Manager. The DEN Project Manager reserves the right to reject repaired units that do not comply with requirements.
- B. Mix patching materials and repair units so cured patches blend with color, texture, and uniformity of adjacent exposed surfaces and show no apparent line of demarcation between original and repaired work, when viewed in typical daylight illumination from a distance of **20 feet (6 m)**.
- C. Prepare and repair damaged galvanized coatings with galvanizing repair paint according to ASTM A 780.
- D. Wire brush, clean, and paint damaged prime-painted components with same type of shop primer.
- E. Remove and replace damaged architectural precast concrete units when repairs do not comply with requirements.

3.6 CLEANING

- A. Clean surfaces of precast concrete units exposed to view.
- B. Clean mortar, plaster, fireproofing, weld slag, and other deleterious material from concrete surfaces and adjacent materials immediately.
- C. Clean exposed surfaces of precast concrete units after erection and completion of joint treatment to remove weld marks, other markings, dirt, and stains.
 - 1. Perform cleaning procedures, if necessary, according to precast concrete fabricator's recommendations. Clean soiled precast concrete surfaces with detergent and water, using stiff fiber brushes and sponges, and rinse with clean water. Protect other work from staining or damage due to cleaning operations.
 - 2. Do not use cleaning materials or processes that could change the appearance of exposed concrete finishes or damage adjacent materials.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 034500

SECTION 042000 - UNIT MASONRY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Concrete masonry units.
2. Concrete building brick.
3. Decorative concrete masonry units.
4. Pre-faced concrete masonry units.
5. Concrete facing brick.
6. Face brick.
7. Building (common) brick.
8. Hollow brick.
9. Glazed brick.
10. Structural-clay facing tile.
11. Stone trim units.
12. Mortar and grout.
13. Steel reinforcing bars.
14. Masonry joint reinforcement.
15. Ties and anchors.
16. Embedded flashing.
17. Miscellaneous masonry accessories.
18. Masonry-cell insulation.
19. Cavity-wall insulation.

- B. Related Sections:

1. Section 033000 "Cast-in-Place Concrete" for [**installing**] dovetail slots for masonry anchors.
2. Section 042300 "Glass Unit Masonry" for glass block.
3. Section 047200 "Cast Stone Masonry" for furnishing cast stone trim.
4. Section 051200 "Structural Steel Framing" for installing anchor sections of adjustable masonry anchors for connecting to structural steel frame.
5. Section 055000 "Metal Fabrications" for furnishing steel [**lintels**] [**and**] [**shelf angles**] for unit masonry.
6. Section 071900 "Water Repellents" for water repellents applied to unit masonry.

7. Section 076200 "Sheet Metal Flashing and Trim" for [**exposed**] sheet metal flashing and for furnishing manufactured reglets installed in masonry joints.
8. Section 079200 "Joint Sealants" for sealants and related products.
9. Section 089000 "Louvers and Vents" for wall vents (brick vents).
10. Section 096313 "Brick Flooring" for interior brick flooring.
11. Section 096313.35 "Chemical-Resistant Brick Flooring" for chemical-resistant, interior brick flooring.
12. Section 097500 "Stone Facing" for stone window stools.
13. Section 321400 "Unit Paving" for exterior unit masonry paving.
14. Section 323223 "Segmental Retaining Walls" for dry-laid, concrete unit retaining walls.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

- A. CMU(s): Concrete masonry unit(s).
- B. Reinforced Masonry: Masonry containing reinforcing steel in grouted cells.

1.4 PERFORMANCE REQUIREMENTS

- A. Provide[**structural**] unit masonry that develops indicated net-area compressive strengths at 28 days.
 1. Determine net-area compressive strength of masonry from average net-area compressive strengths of masonry units and mortar types (unit-strength method) according to Tables 1 and 2 in ACI 530.1/ASCE 6/TMS 602.
 2. Determine net-area compressive strength of masonry by testing masonry prisms according to ASTM C 1314.

1.5 PRECONSTRUCTION TESTING

- A. Preconstruction Testing Service: [**Owner will**] Engage a qualified independent testing agency to perform preconstruction testing indicated below. Retesting of materials that fail to comply with specified requirements shall be done at Contractor's expense.
 1. Clay Masonry Unit Test: For each type of unit required, according to ASTM C 67 for compressive strength.
 2. Concrete Masonry Unit Test: For each type of unit required, according to ASTM C 140 for compressive strength.
 3. Mortar Test (Property Specification): For each mix required, according to ASTM C 109/C 109M for compressive strength[, **ASTM C 1506 for water retention, and ASTM C 91 for air content**].
 4. Mortar Test (Property Specification): For each mix required, according to ASTM C 780 for compressive strength.

5. Grout Test (Compressive Strength): For each mix required, according to ASTM C 1019.
6. Prism Test: For each type of construction required, according to ASTM C 1314.

1.6 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated or required, including certifications that each type complies with specified requirements.
 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 1. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
- C. Shop Drawings: For the following:
 1. Masonry Units: Show sizes, profiles, coursing, and locations of special shapes.
 2. Stone Trim Units: Show sizes, profiles, and locations of each stone trim unit required.
 3. Reinforcing Steel: Detail bending and placement of unit masonry reinforcing bars. Comply with ACI 315, "Details and Detailing of Concrete Reinforcement." [**Show elevations of reinforced walls.**]
 4. Fabricated Flashing: Detail corner units, end-dam units, and other special applications.
- D. Samples for Initial Selection:
 1. Decorative CMUs, in the form of small-scale units.
 2. Pre-faced CMUs.
 3. Concrete facing brick, in the form of small-scale units.
 4. **[Face] [Hollow] brick[, in the form of straps of five or more bricks].**
 5. Glazed brick.
 6. Glazed structural-clay tile.
 7. Stone trim.
 8. Colored mortar.
 9. Weep holes/vents.
- E. Samples for Verification: For each type and color of the following:
 1. **[Exposed] [Decorative] CMUs.**
 2. Pre-faced CMUs.
 3. Concrete facing brick.
 4. **[Face] [Hollow] brick[, in the form of straps of five or more bricks].**
 5. Special brick shapes.

6. Glazed brick.
7. Glazed structural-clay tile.
8. Unglazed structural-clay tile.
9. Stone trim.
10. **[Pigmented] [and] [colored-aggregate]** mortar. Make Samples using same sand and mortar ingredients to be used on Project.
11. Weep holes **[and vents]**.
12. Accessories embedded in masonry.

1.7 INFORMATIONAL SUBMITTALS

- A. List of Materials Used in Constructing Mockups: List generic product names together with manufacturers, manufacturers' product names, model numbers, lot numbers, batch numbers, source of supply, and other information as required to identify materials used. Include mix proportions for mortar and grout and source of aggregates.
 1. Submittal is for information only. Neither receipt of list nor approval of mockup constitutes approval of deviations from the Contract Documents unless such deviations are specifically brought to the attention of DEN Project Manager and approved in writing.
- B. Qualification Data: For testing agency.
- C. Certificate from the manufacturer stating that all materials are per contract requirements and proof of minimum five (5) years experience manufacturing same.
- D. Certificate from installer evidencing minimum three (3) years experience successfully installing this type of work.
- E. Material Certificates: For each type and size of the following:
 1. Masonry units.
 - a. Include **[data on material properties] [material test reports substantiating compliance with requirements]**.
 - b. For brick, include size-variation data verifying that actual range of sizes falls within specified tolerances.
 - c. For exposed brick, include test report for efflorescence according to ASTM C 67.
 - d. For surface-coated brick, include test report for durability of surface appearance after 50 cycles of freezing and thawing per ASTM C 67 **[or a list of addresses of buildings in Project's area where proposed brick has been used successfully and with a history of durability]**.
 - e. For masonry units **[used in structural masonry]**, include data and calculations establishing average net-area compressive strength of units.
 2. Cementitious materials. Include brand, type, and name of manufacturer.
 3. Preblended, dry mortar mixes. Include description of type and proportions of ingredients.

4. Grout mixes. Include description of type and proportions of ingredients.
 5. Reinforcing bars.
 6. Joint reinforcement.
 7. Anchors, ties, and metal accessories.
- F. Mix Designs: For each type of mortar[**and grout**]. Include description of type and proportions of ingredients.
1. Include test reports for mortar mixes required to comply with property specification. Test according to ASTM C 109/C 109M for compressive strength, ASTM C 1506 for water retention, and ASTM C 91 for air content.
 2. Include test reports, according to ASTM C 1019, for grout mixes required to comply with compressive strength requirement.
- G. Statement of Compressive Strength of Masonry: For each combination of masonry unit type and mortar type, provide statement of average net-area compressive strength of masonry units, mortar type, and resulting net-area compressive strength of masonry determined according to Tables 1 and 2 in ACI 530.1/ASCE 6/TMS 602.
- H. Cold-Weather[**and Hot-Weather**] Procedures: Detailed description of methods, materials, and equipment to be used to comply with requirements.
- 1.8 CLOSEOUT SUBMITTALS
- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
- 1.9 QUALITY ASSURANCE
- A. Testing Agency Qualifications: Qualified according to ASTM C 1093 for testing indicated.
- B. Source Limitations for Masonry Units: Obtain exposed masonry units of a uniform texture and color, or a uniform blend within the ranges accepted for these characteristics, from single source from single manufacturer for each product required.
- C. Source Limitations for Mortar Materials: Obtain mortar ingredients of a uniform quality, including color for exposed masonry, from single manufacturer for each cementitious component and from single source or producer for each aggregate.
- D. Masonry Standard: Comply with ACI 530.1/ASCE 6/TMS 602 unless modified by requirements in the Contract Documents.
- E. Sample Panels: Build sample panels to verify selections made under sample submittals and to demonstrate aesthetic effects. Comply with requirements in Section 014000 "Quality Requirements" for mockups.
1. Build sample panels for [**each type of exposed unit masonry construction**]

- [**typical exterior wall**] [**typical interior wall**] [**typical exterior and interior walls**] in sizes approximately [48 inches (1200 mm)] [60 inches (1500 mm)] <Insert size> long by [36 inches (900 mm)] [48 inches (1200 mm)] <Insert size> high[**by full thickness**].
2. Where masonry is to match existing, erect panels adjacent and parallel to existing surface.
 3. Clean[**one-half of**] exposed faces of panels with masonry cleaner indicated.
 4. Protect approved sample panels from the elements with weather-resistant membrane.
 5. Approval of sample panels is for color, texture, and blending of masonry units; relationship of mortar and sealant colors to masonry unit colors; tooling of joints; aesthetic qualities of workmanship; and other material and construction qualities specifically approved by DEN Project Manager in writing.
 - a. Approval of sample panels does not constitute approval of deviations from the Contract Documents contained in sample panels unless such deviations are specifically approved by DEN Project Manager in writing.
- F. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution. Build mockups in locations as directed by DEN Project Manager.
1. Build mockup of typical wall area as shown on Drawings.
 2. Build mockups for [**each type of exposed unit masonry construction**] [**typical exterior wall**] [**typical interior wall**] [**typical exterior and interior walls**] in sizes approximately [48 inches (1200 mm)] [60 inches (1500 mm)] [72 inches (1800 mm)] [96 inches (2400 mm)] <Insert size> long by [36 inches (900 mm)] [48 inches (1200 mm)] [60 inches (1500 mm)] [72 inches (1800 mm)] <Insert size> high by full thickness, including face and backup wythes and accessories.
 - a. Include a sealant-filled joint at least 16 inches (400 mm) long in [**each**] [**exterior wall**] mockup.
 - b. Include lower corner of window opening[**framed with stone trim**] at upper corner of exterior wall mockup. Make opening approximately 12 inches (300 mm) wide by 16 inches (400 mm) high.
 - c. Include through-wall flashing installed for a 24-inch (600-mm) length in corner of exterior wall mockup approximately 16 inches (400 mm) down from top of mockup, with a 12-inch (300-mm) length of flashing left exposed to view (omit masonry above half of flashing).
 - d. Include [**metal**] [**wood**] studs, sheathing, [**building paper**] [**building wrap**] [**sheathing joint-and-penetration treatment**] [**air barrier**], veneer anchors, flashing[, **cavity drainage material**], and weep holes in exterior masonry-veneer wall mockup.
 - e. Include [**glazed structural-clay tile**] [**pre-faced CMUs**] on one face of interior unit masonry wall mockup.
 3. Where masonry is to match existing, erect mockups adjacent and parallel to existing surface.
 4. Clean[**one-half of**] exposed faces of mockups with masonry cleaner as indicated.

5. Protect accepted mockups from the elements with weather-resistant membrane.
6. Approval of mockups is for color, texture, and blending of masonry units; relationship of mortar and sealant colors to masonry unit colors; tooling of joints; and aesthetic qualities of workmanship.
 - a. Approval of mockups is also for other material and construction qualities specifically approved by DEN Project Manager in writing.
 - b. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless such deviations are specifically approved by DEN Project Manager in writing.
- G. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]** to comply with requirements in Section 013100 "Project Management and Coordination."
- H. Manufacturer of sealer shall:
 1. Pre-approve CMU substrate condition. Submit letter to DEN Project Manager accepting substrate.
 2. Be present at job-site when sealer is initially installed.
 3. Certify that sealer has been applied per manufacturers recommendations.
- I. Warranty: Installer to warrant installation, masonry units, grout and accessories for minimum **[two (2)] <Insert number>** years.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Store masonry units on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied. If units become wet, do not install until they are dry.
- B. Store and handle masonry units to prevent their deterioration or damage due to moisture, temperature changes, contaminants, corrosion or other causes.
- C. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.
- D. Store aggregates where grading and other required characteristics can be maintained and contamination avoided.
- E. Deliver preblended, dry mortar mix in moisture-resistant containers designed for use with dispensing silos. Store preblended, dry mortar mix in delivery containers on elevated platforms, under cover, and in a dry location or in covered weatherproof dispensing silos.
- F. Store masonry accessories, including metal items, to prevent corrosion and accumulation of dirt and oil.

1.11 PROJECT CONDITIONS

- A. Protection of Masonry: During construction, cover tops of walls, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed masonry when construction is not in progress.
1. Extend cover a minimum of **24 inches (600 mm)** down both sides of walls and hold cover securely in place.
 2. Where one wythe of multiwythe masonry walls is completed in advance of other wythes, secure cover a minimum of **24 inches (600 mm)** down face next to unconstructed wythe and hold cover in place.
- B. Do not apply uniform floor or roof loads for at least 12 hours and concentrated loads for at least three (3) days after building masonry walls or columns.
- C. Stain Prevention: Prevent grout, mortar, and soil from staining the face of masonry to be left exposed or painted. Immediately remove grout, mortar, and soil that come in contact with such masonry.
1. Protect base of walls from rain-splashed mud and from mortar splatter by spreading coverings on ground and over wall surface.
 2. Protect sills, ledges, and projections from mortar droppings.
 3. Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings.
 4. Turn scaffold boards near the wall on edge at the end of each day to prevent rain from splashing mortar and dirt onto completed masonry.
- D. Cold-Weather Requirements: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Remove and replace unit masonry damaged by frost or by freezing conditions. Comply with cold-weather construction requirements contained in ACI 530.1/ASCE 6/TMS 602.
1. Cold-Weather Cleaning: Use liquid cleaning methods only when air temperature is **40 deg F (4 deg C)** and higher and will remain so until masonry has dried, but not less than seven days after completing cleaning.
- E. Cold Weather Protection:
1. Do not lay masonry units which are wet or frozen.
 2. Remove any ice or snow formed on masonry bed by carefully applying heat until top surface is dry to the touch.
 3. Remove masonry damaged by freezing conditions.
 4. Perform the following construction procedures while masonry work is progressing. Temperature ranges indicated below apply to air temperatures existing at time of installation except for grout. The contractor is to keep a thermometer at each site for use by the field crew and the inspectors.
 - a. For grout, temperature ranges apply to anticipated minimum night temperatures. In heating mortar and grout materials, maintain mixing temperature selected within **10 deg. F (6 deg. C)**.

- 1) 40 deg. F (4 deg. C) to 32 deg. F (0 deg. C):
 - a) Mortar: Heat mixing water to produce mortar temperature between 40 deg. F (4 deg. C) and 120 deg. F (49 deg. C).
 - b) Grout: Follow normal masonry procedures.
- 2) 32 deg. F (0 deg. C) to 25 deg. F (4 deg. C):
 - a) Mortar: Heat mixing water and sand to produce mortar temperatures between 40 deg. F (4 deg. C) and 120 deg. F (49 deg. C); maintain temperature of mortar on boards above freezing.
 - b) Grout: Heat grout materials to 90 deg. F (32 deg. C) to produce in place grout temperature of 70 deg. F (21 deg. C) at end of work day.
- 3) 25 deg. F (4 deg. C) to 20 deg. F (7 deg. C):
 - a) Mortar: Heat mixing water and sand to produce mortar temperatures between 40 deg. F (4 deg. C) and 120 deg. F (49 deg. C); maintain temperature of mortar on boards above freezing.
 - b) Grout: Heat grout materials to 90 deg. F (32 deg. C) to produce in place grout temperature of 70 deg. F (21 deg. C) at end of work day.
 - c) Heat both sides of walls under construction using salamanders or other heat sources.
 - d) Use windbreaks or enclosures when wind is in excess of 15 mph.
- 4) 20 deg. F (7 deg. C) and below:
 - a) Mortar: Heat mixing water and sand to produce mortar temperatures between 40 deg. F (4 deg. C) and 120 deg. F (49 deg. C).
 - b) Grout: Heat grout materials to 90 deg. F (32 deg. C) to produce in place grout temperature of 70 deg. F (21 deg. C) at end of work day.
 - c) Masonry Units: Heat masonry units so that they are above 20 deg. F (7 deg. C) at time of laying.
 - d) Provide enclosure and auxiliary heat to maintain an air temperature of at least 40 deg. F (4 deg. C) for 24 hours after laying units.
 - e) Do not heat water for mortar and grout to above 160 deg. F (71 deg. C).
5. Protect completed masonry and masonry not being worked on in the following manner. Temperature ranges indicated apply to mean daily air temperatures except for grouted masonry. For grouted masonry, temperature ranges apply to anticipated minimum night temperatures.

- a. 40 deg. F (4 deg. C) to 32 deg. F (0 deg. C):
 - 1) Protect masonry from rain or snow for at least 24 hours by covering with weather resistive membrane.
 - b. 32 deg. F (0 deg. C) to 25 deg. F (4 deg. C):
 - 1) Completely cover masonry with weather resistive membrane for at least 24 hours.
 - c. 25 deg. F (4 deg. C) to 20 deg. F (7 deg. C):
 - 1) Completely cover masonry with weather resistive insulating blankets or similar protection for at least 24 hours, 48 hours for grouted masonry.
 - d. 20 deg. F (7 deg. C) and below:
 - 1) Except as otherwise indicated, maintain masonry temperature above 32 deg. F (0 deg. C) for 24 hours using enclosures and supplementary heat, electric heating blankets, infrared lamps or other methods proven to be satisfactory. For grouted masonry maintain heated enclosure to 40 deg. F (4 deg. C) for 48 hours.
- F. Hot-Weather Requirements: Comply with hot-weather construction requirements contained in ACI 530.1/ASCE 6/TMS 602.
- G. CONSTRUCTION WASTE MANAGEMENT
1. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MASONRY UNITS, GENERAL

- A. Defective Units: Referenced masonry unit standards may allow a certain percentage of units to contain chips, cracks, or other defects exceeding limits stated in the standard. Do not use units where such defects will be exposed in the completed Work.
- B. Fire-Resistance Ratings: Where indicated, provide units that comply with requirements for fire-resistance ratings indicated as determined by testing according to ASTM E 119, by equivalent masonry thickness, or by other means, as acceptable to authorities having jurisdiction.

2.2 CONCRETE MASONRY UNITS

- A. Regional Materials: CMUs shall be manufactured within **500 miles (800 km)** of Project site from aggregates[**and cement**] that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site.
- B. Shapes: Provide shapes indicated and as follows, with exposed surfaces matching exposed faces of adjacent units unless otherwise indicated.
1. Provide special shapes for lintels, corners, jambs, sashes, movement joints, headers, bonding, and other special conditions.
 2. Provide [**square-edged**] [**bullnose**] units for outside corners unless otherwise indicated.
- C. Integral Water Repellent: Provide units made with integral water repellent [**for exposed units**] [**and**] [**where indicated**].
1. Integral Water Repellent: Liquid polymeric, integral water-repellent admixture that does not reduce flexural bond strength. Units made with integral water repellent, when tested according to ASTM E 514 as a wall assembly made with mortar containing integral water-repellent manufacturer's mortar additive, with test period extended to 24 hours, shall show no visible water or leaks on the back of test specimen.
 - a. Products: Subject to compliance with requirements, provide products by one of the following:
 - 1) ACM Chemistries; RainBloc.
 - 2) BASF Aktiengesellschaft; Rheapel Plus.
 - 3) Grace Construction Products, W. R. Grace & Co. - Conn.; Dry-Block.
 - 4) **<Insert manufacturer>**
 - 5) or approved equal.
- D. CMUs: ASTM C 90.
1. Unit Compressive Strength: Provide units with minimum average net-area compressive strength of [**2150 psi (14.8 MPa)**] [**2800 psi (19.3 MPa)**] [**3050 psi (21.0 MPa)**] **<Insert value>**.
 2. Density Classification: [**Lightweight**] [**Medium weight**] [**Normal weight**][**unless otherwise indicated**].
 3. Size (Width): Manufactured to dimensions 3/8 inch less than nominal dimensions.
 4. Size (Width): Manufactured to the following dimensions:
 - a. 100 mm nominal; [**90**] [**92**] mm actual.
 - b. 150 mm nominal; [**140**] [**143**] mm actual.
 - c. 200 mm nominal; [**190**] [**194**] mm actual.
 - d. 250 mm nominal; [**240**] [**244**] mm actual.
 - e. 300 mm nominal; [**290**] [**295**] mm actual.
 - f. 400 mm nominal; [**390**] [**396**] mm actual.

5. Exposed Faces: Provide color and texture matching the range represented by DEN Project Manager's sample.
 6. Faces to Receive Plaster: Where units are indicated to receive a direct application of plaster, provide textured-face units made with gap-graded aggregates.
- E. Concrete Building Brick: ASTM C 55.
1. Unit Compressive Strength: Provide units with minimum average net-area compressive strength of [2800 psi (19.31 MPa)] [3050 psi (21.03 MPa)] [3750 psi (25.86 MPa)] [4050 psi (27.92 MPa)] <Insert value>.
 2. Density Classification: [Lightweight] [Medium weight] [Normal weight].
 3. Size (Actual Dimensions): 3-5/8 inches (92 mm) wide by [2-1/4 inches (57 mm)] [2-3/4 inches (70 mm)] [3-5/8 inches (92 mm)] high by 7-5/8 inches (194 mm) long.
 4. Size (Actual Dimensions): 90 mm wide by [57] [70] [90] mm high by 190 mm long.
- F. Decorative CMU's: ASTM C 90.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. <Insert, in separate subparagraphs, manufacturer's name; product name or designation>.
 - b. or approved equal.
 2. Unit Compressive Strength: Provide units with minimum average net-area compressive strength of [2150 psi (14.8 MPa)] [2800 psi (19.3 MPa)] [3050 psi (21.0 MPa)] <Insert value>.
 3. Density Classification: [Lightweight] [Medium weight] [Normal weight].
 4. Size (Width): Manufactured to dimensions specified in "CMUs" Paragraph.
 5. Pattern and Texture:
 - a. Standard pattern, ground-face finish.[Match DEN Project Manager's samples.]
 - b. Standard pattern, split-face finish.[Match DEN Project Manager's samples.]
 - c. Standard pattern, split-ribbed finish.[Match DEN Project Manager's samples.]
 - d. Scored vertically so units laid in running bond appear as square units laid in stacked bond, standard finish.[Match DEN Project Manager's samples.]
 - e. Triple scored vertically so units laid in running bond appear as vertical units laid in stacked bond (soldier courses), standard finish.[Match DEN Project Manager's samples.]
 6. Colors: [As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range].
 7. Special Aggregate: Provide units made with aggregate matching aggregate in DEN Project Manager's sample.

- G. Pre-faced CMUs: Lightweight [**hollow**] [**solid**] concrete units complying with ASTM C 90, with manufacturer's standard smooth resinous facing complying with ASTM C 744.
1. Products: Subject to compliance with requirements, provide products by one of the following:
 - a. <Insert, in separate subparagraphs, manufacturer's name; product name or designation>.
 - b. or approved equal.
 2. Unit Compressive Strength: Provide units with minimum average net-area compressive strength of [2150 psi (14.8 MPa)] [2800 psi (19.3 MPa)] [3050 psi (21.0 MPa)] <Insert value>.
 3. Size: Manufactured to dimensions specified in "CMUs" Paragraph but with pre-faced surfaces having 1/16-inch- (1.5-mm-) wide returns of facing to create 1/4-inch- (6.5-mm-) wide mortar joints with modular coursing.
 4. Colors and Patterns: [As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range].

H. Concrete Facing Brick: ASTM C 1634.

1. Unit Compressive Strength: Provide units with minimum average net-area compressive strength of [3750 psi (25.86 MPa)] [4050 psi (27.92 MPa)] <Insert value>.
2. Density Classification: [Lightweight] [Medium weight] [Normal weight].
3. Size (Actual Dimensions): 3-5/8 inches (92 mm) wide by [2-1/4 inches (57 mm)] [2-3/4 inches (70 mm)] [3-5/8 inches (92 mm)] high by [7-5/8 inches (194 mm)] [11-5/8 inches (295 mm)] [15-5/8 inches (397 mm)] long.
4. Size (Actual Dimensions): 90 mm wide by [57] [70] [90] mm high by [190] [290] [390] mm long.
5. Texture: [Split-face finish] [Ground-face finish] <Insert description>.
 - a. Match DEN Project Manager's samples.
6. Colors: [As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range].
7. Special Aggregate: Provide units made with aggregate matching aggregate in DEN Project Manager's sample.

2.3 [CONCRETE] [AND] [MASONRY] LINTELS

- A. General: Provide one of the following:
- B. Concrete Lintels: ASTM C 1623, matching CMUs in color, texture, and density classification; and with reinforcing bars indicated. [Provide lintels with net-area compressive strength not less than CMUs.]

- C. Concrete Lintels: Precast or formed-in-place concrete lintels complying with requirements in Section 033000 "Cast-in-Place Concrete," and with reinforcing bars indicated.
- D. Masonry Lintels: Prefabricated or built-in-place masonry lintels made from bond beam CMUs with reinforcing bars placed as indicated and filled with coarse grout. Cure precast lintels before handling and installing. Temporarily support built-in-place lintels until cured.

2.4 BRICK

- A. Regional Materials: Brick shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site.
- B. General: Provide shapes indicated and as follows, with exposed surfaces matching finish and color of exposed faces of adjacent units:
 - 1. For ends of sills and caps and for similar applications that would otherwise expose unfinished brick surfaces, provide units without cores or frogs and with exposed surfaces finished.
 - 2. Provide special shapes for applications where stretcher units cannot accommodate special conditions, including those at corners, movement joints, bond beams, sashes, and lintels.
 - 3. Provide special shapes for applications requiring brick of size, form, color, and texture on exposed surfaces that cannot be produced by sawing.
 - 4. Provide special shapes for applications where shapes produced by sawing would result in sawed surfaces being exposed to view.
- C. Face Brick: Facing brick complying with ASTM C 216[**or hollow brick complying with ASTM C 652, Class H40V (void areas between 25 and 40 percent of gross cross-sectional area)**].
 - 1. Products: Subject to compliance with requirements, provide products by one of the following:
 - a. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation for acceptable face brick>**.
 - b. or approved equal.
 - 2. Grade: **[SW] [MW or SW]**.
 - 3. Type: **[FBX] [FBS] [FBA] [FBX or HBX] [FBS or HBS] [FBA or HBA]**.
 - 4. Unit Compressive Strength: Provide units with minimum average net-area compressive strength of **[3350 psi (23.10 MPa)] [4150 psi (28.61 MPa)] [4950 psi (34.13 MPa)] [6200 psi (42.75 MPa)] [6600 psi (45.51 MPa)] [8250 psi (56.88 MPa)] <Insert value>**.
 - 5. Initial Rate of Absorption: Less than **30 g/30 sq. in. (30 g/194 sq. cm)** per minute when tested per ASTM C 67.

6. Efflorescence: Provide brick that has been tested according to ASTM C 67 and is rated "not effloresced."
7. Surface Coating: Brick with colors or textures produced by application of coatings shall withstand 50 cycles of freezing and thawing per ASTM C 67 with no observable difference in the applied finish when viewed from 10 feet (3 m) [or shall have a history of successful use in Project's area].
8. Size (Actual Dimensions): [3-1/2 inches (89 mm) wide by 2-1/4 inches (57 mm) high by 7-1/2 inches (190 mm) long] [or] [3-5/8 inches (92 mm) wide by 2-1/4 inches (57 mm) high by 7-5/8 inches (194 mm) long].
9. Size (Actual Dimensions): [3-1/2 inches (89 mm)] [or] [3-5/8 inches (92 mm)] wide by 2-1/4 inches (57 mm) high by 8 inches (203 mm) long.
10. Size (Actual Dimensions): [3-1/2 inches (89 mm) wide by 2-1/4 inches (57 mm) high by 11-1/2 inches (292 mm) long] [or] [3-5/8 inches (92 mm) wide by 2-1/4 inches (57 mm) high by 11-5/8 inches (295 mm) long].
11. Size (Actual Dimensions): [2-3/4 inches (70 mm) wide by 2-3/4 inches (70 mm) high by 8 inches (203 mm) long] [or] [3 inches (76 mm) wide by 2-3/4 inches (70 mm) high by 8 inches (203 mm) long].
12. Size (Actual Dimensions): [2-3/4 inches (70 mm) wide by 2-5/8 inches (67 mm) high by 9-5/8 inches (244 mm) long] [or] [3 inches (76 mm) wide by 2-3/4 inches (70 mm) high by 9-5/8 inches (244 mm) long].
13. Size (Actual Dimensions): [3-1/2 inches (89 mm) wide by 2-3/4 inches (70 mm) high by 7-1/2 inches (190 mm) long] [or] [3-5/8 inches (92 mm) wide by 2-13/16 inches (71 mm) high by 7-5/8 inches (194 mm) long].
14. Size (Actual Dimensions): [3-1/2 inches (89 mm) wide by 2-3/4 inches (70 mm) high by 8 inches (203 mm) long] [or] [3-5/8 inches (92 mm) wide by 2-13/16 inches (71 mm) high by 8 inches (203 mm) long].
15. Size (Actual Dimensions): 3-5/8 inches (92 mm) wide by 2-5/8 inches (67 mm) high by 9-5/8 inches (244 mm) long.
16. Size (Actual Dimensions): [3-1/2 inches (89 mm) wide by 2-3/4 inches (70 mm) high by 11-1/2 inches (292 mm) long] [or] [3-5/8 inches (92 mm) wide by 2-13/16 inches (71 mm) high by 11-5/8 inches (295 mm) long].
17. Size (Actual Dimensions): [2-3/4 inches (70 mm) wide by 3-5/8 inches (92 mm) high by 11-5/8 inches (295 mm) long] [or] [3 inches (76 mm) wide by 3-5/8 inches (92 mm) high by 11-5/8 inches (295 mm) long].
18. Size (Actual Dimensions): [3-1/2 inches (89 mm) wide by 3-1/2 inches (89 mm) high by 7-1/2 inches (190 mm) long] [or] [3-5/8 inches (92 mm) wide by 3-5/8 inches (92 mm) high by 7-5/8 inches (194 mm) long].
19. Size (Actual Dimensions): [3-1/2 inches (89 mm) wide by 3-1/2 inches (89 mm) high by 11-1/2 inches (292 mm) long] [or] [3-5/8 inches (92 mm) wide by 3-5/8 inches (92 mm) high by 11-5/8 inches (295 mm) long].
20. Size (Actual Dimensions): [3-1/2 inches (89 mm) wide by 7-1/2 inches (190 mm) high by 7-1/2 inches (190 mm) long] [or] [3-5/8 inches (92 mm) wide by 7-5/8 inches (194 mm) high by 7-5/8 inches (194 mm) long].
21. Size (Actual Dimensions): 90 mm wide by [57] [70] [90] [190] mm high by [190] [290] mm long.
22. Application: Use where brick is exposed unless otherwise indicated.
23. [Where shown to "match existing,"]provide face brick matching color range, texture, and size of existing adjacent brickwork.
 - a. <Insert information on existing brick if known>.

24. Color and Texture: **[Medium brown, wire-cut] [Full-range red, sand molded] [Buff, velour] [Match DEN Project Manager's samples] [As selected by DEN Project Manager].**
- D. Building (Common) Brick: ASTM C 62, **[Grade SW] [Grade MW or SW] [Grade NW, MW, or SW].**
1. Unit Compressive Strength: Provide units with minimum average net-area compressive strength of **[1700 psi (11.72 MPa)] [2100 psi (14.48 MPa)] [3350 psi (23.10 MPa)] [4150 psi (28.61 MPa)] [4950 psi (34.13 MPa)] [6200 psi (42.75 MPa)] [6600 psi (45.51 MPa)] [8250 psi (56.88 MPa)] <Insert value>.**
 2. Size: Match size of face brick.
 3. Size (Actual Dimensions): **[3-1/2 inches (89 mm) wide by 2-1/4 inches (57 mm) high by 7-1/2 inches (190 mm) long] [or] [3-5/8 inches (92 mm) wide by 2-1/4 inches (57 mm) high by 7-5/8 inches (194 mm) long].**
 4. Size (Actual Dimensions): 90 mm wide by 57 mm high by 190 mm long.
 5. Application: Use where brick is indicated for concealed locations.**[Face brick complying with requirements for grade, compressive strength, and size indicated for building brick may be substituted for building brick.]**
- E. Hollow Brick: ASTM C 652, **[Grade SW] [Grade MW or SW], [Class H40V (void areas between 25 and 40 percent of gross cross-sectional area)] [Class H60V (void areas between 40 and 60 percent of gross cross-sectional area)], [Type HBX] [Type HBS] [Type HBA] [Type HBB].**
1. Products: Subject to compliance with requirements, provide products by one of the following:
 - a. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation for acceptable hollow brick>.**
 - b. or approved equal.
 2. Unit Compressive Strength: Provide units with minimum average net-area compressive strength of **[3350 psi (23.10 MPa)] [4150 psi (28.61 MPa)] [4950 psi (34.13 MPa)] [6200 psi (42.75 MPa)] [6600 psi (45.51 MPa)] [8250 psi (56.88 MPa)] <Insert value>.**
 3. Efflorescence: Provide brick that has been tested according to ASTM C 67 and is rated "not effloresced."
 4. Surface Coating: Brick with colors or textures produced by application of coatings shall withstand 50 cycles of freezing and thawing per ASTM C 67 with no observable difference in the applied finish when viewed from **10 feet (3 m)****[or shall have a history of successful use in Project's area].**
 5. Size (Actual Dimensions): **[5-1/2 inches (140 mm) wide by 3-1/2 inches (89 mm) high by 11-1/2 inches (292 mm) long] [or] [5-5/8 inches (143 mm) wide by 3-5/8 inches (92 mm) high by 11-5/8 inches (295 mm) long].**
 6. Size (Actual Dimensions): **[7-1/2 inches (190 mm) wide by 3-1/2 inches (89 mm) high by 11-1/2 inches (292 mm) long] [or] [7-5/8 inches (194 mm) wide by 3-5/8 inches (92 mm) high by 11-5/8 inches (295 mm) long].**

7. Size (Actual Dimensions): [5-1/2 inches (140 mm) wide by 3-1/2 inches (89 mm) high by 15-1/2 inches (394 mm) long] [or] [5-5/8 inches (143 mm) wide by 3-5/8 inches (92 mm) high by 15-5/8 inches (397 mm) long].
 8. Size (Actual Dimensions): [7-1/2 inches (190 mm) wide by 3-1/2 inches (89 mm) high by 15-1/2 inches (394 mm) long] [or] [7-5/8 inches (194 mm) wide by 3-5/8 inches (92 mm) high by 15-5/8 inches (397 mm) long].
 9. Size (Actual Dimensions): 4-5/8 inches (117 mm) wide by 2-3/4 inches (70 mm) high by 9-5/8 inches (244 mm) long.
 10. Size (Actual Dimensions): 90 mm wide by [57] [70] [90] [190] mm high by [190] [290] mm long.
 11. Size (Actual Dimensions): [140] [190] mm wide by 90 mm high by 290 mm long.
 12. Application: Use where brick is exposed unless otherwise indicated.
 13. [Where shown to "match existing,"]provide hollow brick matching color range, texture, and size of existing adjacent brickwork.
 - a. <Insert information on existing brick if known>.
 14. Color and Texture: [Medium brown, wire-cut] [Full-range red, smooth texture] [Buff, velour] [Match DEN Project Manager's samples] [As selected by DEN Project Manager].
- F. Glazed Face Brick: [Facing brick complying with ASTM C 216, with glaze complying with ASTM C 126;] [single-fired glazed brick complying with ASTM C 1405, Division Solid;] [hollow brick complying with ASTM C 652, Class H40V (void areas between 25 and 40 percent of gross cross-sectional area), with glaze complying with ASTM C 126;] [or] [single-fired glazed brick complying with ASTM C 1405, Division H40V (void areas between 25 and 40 percent of gross cross-sectional area)].
1. Products: Subject to compliance with requirements, provide products by one of the following:
 - a. <Insert, in separate subparagraphs, manufacturer's name; product name or designation for acceptable glazed face brick>.
 - b. or approved equal.
 2. ASTM C 216 Grade: [SW] [MW or SW].
 3. ASTM C 216 Type: [FBX] [FBS] [FBA].
 4. ASTM C 652 Grade: [SW] [MW or SW].
 5. ASTM C 652 Type: [HBX] [HBS] [HBA].
 6. ASTM C 1405 Class: [Exterior] [Interior].
 7. ASTM C 1405 Grade: [S (Select)] [SS (Select Sized)].
 8. Size (Actual Dimensions): [3-1/2 inches (89 mm) wide by 2-1/4 inches (57 mm) high by 7-1/2 inches (190 mm) long] [or] [3-5/8 inches (92 mm) wide by 2-1/4 inches (57 mm) high by 7-5/8 inches (194 mm) long].
 9. Size (Actual Dimensions): [3-1/2 inches (89 mm)] [or] [3-5/8 inches (92 mm)] wide by 2-1/4 inches (57 mm) high by 8 inches (203 mm) long.
 10. Size (Actual Dimensions): [3-1/2 inches (89 mm) wide by 2-3/4 inches (70 mm) high by 7-1/2 inches (190 mm) long] [or] [3-5/8 inches (92 mm) wide by 2-13/16 inches (71 mm) high by 7-5/8 inches (194 mm) long].

11. Size (Actual Dimensions): [3-1/2 inches (89 mm) wide by 2-3/4 inches (70 mm) high by 8 inches (203 mm) long] [or] [3-5/8 inches (92 mm) wide by 2-13/16 inches (71 mm) high by 8 inches (203 mm) long].
 12. Size (Actual Dimensions): [3-1/2 inches (89 mm) wide by 2-3/4 inches (70 mm) high by 11-1/2 inches (292 mm) long] [or] [3-5/8 inches (92 mm) wide by 2-13/16 inches (71 mm) high by 11-5/8 inches (295 mm) long].
 13. Size (Actual Dimensions): [3-1/2 inches (89 mm) wide by 7-1/2 inches (190 mm) high by 7-1/2 inches (190 mm) long] [or] [3-5/8 inches (92 mm) wide by 7-5/8 inches (194 mm) high by 7-5/8 inches (194 mm) long].
 14. Size (Actual Dimensions): 90 mm wide by [57] [70] [90] [190] mm high by [190] [290] mm long.
 15. Provide Type I (single-faced units) where only one finished face is exposed when units are installed, and Type II (double-faced units) where two opposite finished faces are exposed when units are installed.
 16. Application: Use where [brick is exposed unless otherwise indicated] [indicated].
 17. Colors: [As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range].
 18. [Where shown to "match existing,"]provide glazed brick matching color range, texture, and size of existing adjacent brickwork.
 - a. <Insert information on existing brick if known>.
- G. Glazed Hollow Brick: [Hollow brick complying with ASTM C 652, with glaze complying with ASTM C 126] [or] [single-fired glazed brick complying with ASTM C 1405].
1. Products: Subject to compliance with requirements, provide products by one of the following:
 - a. <Insert, in separate subparagraphs, manufacturer's name; product name or designation for acceptable glazed hollow brick>.
 - b. or approved equal.
 2. ASTM C 652 Grade: [SW] [MW or SW].
 3. ASTM C 652 Type: [HBX] [HBS] [HBA].
 4. ASTM C 652 Class: [H40V (void areas between 25 and 40 percent of gross cross-sectional area)] [H60V (void areas between 40 and 60 percent of gross cross-sectional area)].
 5. ASTM C 1405 Class: [Exterior] [Interior].
 6. ASTM C 1405 Grade: [S (Select)] [SS (Select Sized)].
 7. ASTM C 1405 Division: [H40V (void areas between 25 and 40 percent of gross cross-sectional area)] [H60V (void areas between 40 and 60 percent of gross cross-sectional area)].
 8. Size (Actual Dimensions): 5-5/8 inches (143 mm) wide by 3-5/8 inches (92 mm) high by 11-5/8 inches (295 mm) long.
 9. Size (Actual Dimensions): 7-5/8 inches (194 mm) wide by 3-5/8 inches (92 mm) high by 11-5/8 inches (295 mm) long.
 10. Size (Actual Dimensions): [140] [190] mm wide by 90 mm high by 290 mm long.

11. Provide Type I (single-faced units) where only one finished face is exposed when units are installed, and Type II (double-faced units) where two opposite finished faces are exposed when units are installed.
12. Application: Use where **[brick is exposed unless otherwise indicated]** **[indicated]**.
13. Colors: **[As indicated by manufacturer's designations]** **[Match DEN Project Manager's samples]** **[As selected by DEN Project Manager from manufacturer's full range]**.
14. **[Where shown to "match existing,"]**provide glazed brick matching color range, texture, and size of existing adjacent brickwork.
 - a. **<Insert information on existing brick if known>**.

2.5 STRUCTURAL-CLAY FACING TILE

A. General:

1. Provide solid, multicored, or hollow units, with shape and direction of cores optional unless otherwise indicated.
2. Where reinforced masonry is indicated, provide multicored units designed for use in reinforced, grouted masonry; either with vertical cores and with webs notched to receive horizontal reinforcement, or with horizontal cores and with holes in bed shells for placement of grout and to receive vertical reinforcement.
3. Where indicated for exterior applications, provide units recommended by manufacturer for exterior use in Project's location.
4. Provide special shapes where required for corners, jambs, coved bases, sills, and other special conditions indicated, including applications that cannot be produced by sawing standard units.
 - a. Provide **[bullnose]** **[square-edged]** units for outside corners unless otherwise indicated.
 - b. Provide coved internal corners.
 - c. Provide recessed, coved base units.
5. Where direct application of plaster is indicated or where bonded to backup masonry, provide units with rough, combed, or scored faces.

B. Glazed Structural-Clay Facing Tile: ASTM C 126, **[Grade S (select)]** **[Grade SS (select sized or ground edge)]**.

1. Products: Subject to compliance with requirements, provide products by one of the following:
 - a. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.
 - b. or approved equal.
2. Sizes: 6T Series with actual face dimensions of **5-1/6 inches** (128.6 mm) high by **11-3/4 inches** (298.5 mm) long by widths indicated.

3. Sizes: 8W Series with actual face dimensions of **7-3/4 inches** (196.9 mm) high by **15-3/4 inches** (400.1 mm) long by widths indicated.
 4. Width: Manufactured to dimensions **1/4 inch** (6.4 mm) less than nominal dimensions.
 5. Provide Type I (single-faced units) where only one finished face is exposed when units are installed, and Type II (double-faced units) where two opposite finished faces are exposed when units are installed.
 6. Provide special units glazed on ends and tops, as well as faces for corners, jambs, sills, pilasters, columns, and other applications indicated, where glazed units are exposed on other surfaces and faces.
 7. Colors and Patterns: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range]**.
- C. Unglazed Structural-Clay Facing Tile: ASTM C 212, **[Type FTX] [Type FTS], [Standard] [Special-Duty]** class.
1. Products: Subject to compliance with requirements, provide products by one of the following:
 - a. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.
 - b. or approved equal.
 2. Number of Faces: Single faced **[where only one finished face is exposed when units are installed. Double faced where both finished faces are exposed when units are installed]**.
 3. Size: **[As indicated] [Match existing] <Insert size>**.

2.6 STONE TRIM UNITS

- A. Granite: ASTM C 615.
1. Description: **[Fine] [Medium]-grained, [white] [pink] [gray] [black] stone.[Uniform pattern, without veining]**.
- B. Limestone: ASTM C 568, **[Classification I Low] [Classification II Medium] [Classification III High]** Density.
1. Variety and Sources: Indiana oolitic limestone quarried in Lawrence, Monroe, or Owen Counties, Indiana.
 - a. Grade and Color: **[Select, buff] [Select, gray] [Standard, buff] [Standard, gray] [Rustic, buff] [Rustic, gray] [Variegated]**, according to grade and color classification established by ILI.
- C. Marble: ASTM C 503, **[Classification I Calcite] [Classification II Dolomite]**.
1. Description: Uniform, fine- to medium-grained, white stone with only slight veining.

- D. Quartz-Based Stone: ASTM C 616, [**Classification I Sandstone**] [**Classification II Quartzitic Sandstone**] [**III Quartzite**].
- E. Varieties and Sources: Subject to compliance with requirements, provide[**one of**] the following:
1. <Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>.
 2. or approved equal.
- F. Finish: [**Polished**] [**Honed**] [**Smooth**] [**Machine tooled, 4 bats per 1 inch (25 mm)**] [**Machine tooled, 6 bats per 1 inch (25 mm)**] [**Machine tooled, 8 bats per 1 inch (25 mm)**] [**Chat sawed**] [**Split face**] [**Rock face (pitched face)**] <Insert finish>.
1. Finish for [**Tops of Sills**] [**Jamb Returns**] [**and**] [**Soffits of Lintels**]: [**Sand rubbed**] [**Split face**] <Insert finish>.
- G. Provide stone units accurately shaped, with exposed faces dressed true, and with beds and joints at right angles to faces.
1. For limestone, comply with recommendations in ILI's "Indiana Limestone Handbook."
 2. For marble, comply with recommendations in MIA's "Dimensional Stone--Design Manual VI."

2.7 MORTAR AND GROUT MATERIALS

- A. Regional Materials: Aggregate for mortar and grout[, **cement, and lime**] shall be extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site.
- B. Portland Cement: ASTM C 150, Type I or II, except Type III may be used for cold-weather construction. Provide natural color or white cement as required to produce mortar color indicated.
- C. Hydrated Lime: ASTM C 207, Type S.
- D. Portland Cement-Lime Mix: Packaged blend of portland cement and hydrated lime containing no other ingredients.
- E. Masonry Cement: ASTM C 91.
1. Products: Subject to compliance with requirements, provide products by one of the following:
 - a. Capital Materials Corporation; Flamingo Color Masonry Cement.
 - b. Cemex S.A.B. de C.V.; [**Brikset Type N**] [**Citadel Type S**] [**Dixie Type S**] [**Kosmortar Type N**] [**Richmortar**] [**Victor Plastic Cement**].
 - c. Essroc, Italcementi Group; [**Brixment**] [**or**] [**Velvet**].

- d. Holcim (US) Inc.; [**Mortamix Masonry Cement**] [**Rainbow Mortamix Custom Buff Masonry Cement**] [**White Mortamix Masonry Cement**].
 - e. Lafarge North America Inc.; [**Magnolia Masonry Cement**] [**Lafarge Masonry Cement**] [**Trinity White Masonry Cement**].
 - f. Lehigh Cement Company; [**Lehigh Masonry Cement**] [**Lehigh White Masonry Cement**].
 - g. National Cement Company, Inc.; Coosa Masonry Cement.
 - h. or approved equal.
- F. Mortar Cement: ASTM C 1329.
1. Products: Subject to compliance with requirements, provide products by one of the following:
 - a. Lafarge North America Inc.; [**Lafarge Mortar Cement**] [or] [**Magnolia Superbond Mortar Cement**].
 - b. or approved equal.
- G. Mortar Pigments: Natural and synthetic iron oxides and chromium oxides, compounded for use in mortar mixes and complying with ASTM C 979. Use only pigments with a record of satisfactory performance in masonry mortar.
1. Products: Subject to compliance with requirements, provide products by one of the following:
 - a. Davis Colors; True Tone Mortar Colors.
 - b. Lanxess Corporation; Bayferrox Iron Oxide Pigments.
 - c. Solomon Colors, Inc.; SGS Mortar Colors.
 - d. <Insert manufacturer>
 - e. or approved equal.
- H. Colored Cement Product: Packaged blend made from [**portland cement and hydrated lime**] [**masonry cement**] and mortar pigments, all complying with specified requirements, and containing no other ingredients.
1. Products: Subject to compliance with requirements, provide products by one of the following:
 - a. Colored Portland Cement-Lime Mix:
 - 1) Capital Materials Corporation; Riverton Portland Cement Lime Custom Color.
 - 2) Holcim (US) Inc.; Rainbow Mortamix Custom Color Cement/Lime.
 - 3) Lafarge North America Inc.; Eaglebond Portland & Lime.
 - 4) Lehigh Cement Company; Lehigh Custom Color Portland/Lime Cement.
 - 5) <Insert manufacturer>
 - 6) or approved equal.
 - b. Colored Masonry Cement:

- 1) Capital Materials Corporation; Flamingo Color Masonry Cement.
 - 2) Cemex S.A.B. de C.V.; Richcolor Masonry Cement.
 - 3) Essroc, Italcementi Group; Brixment-in-Color.
 - 4) Holcim (US) Inc.; Rainbow Mortamix Custom Color Masonry Cement.
 - 5) Lafarge North America Inc.; U.S. Cement Custom Color Masonry Cement.
 - 6) Lehigh Cement Company; Lehigh Custom Color Masonry Cement.
 - 7) National Cement Company, Inc.; Coosa Masonry Cement.
 - 8) **<Insert manufacturer>**
 - 9) or approved equal.
2. Formulate blend as required to produce color indicated or, if not indicated, as selected from manufacturer's standard colors.
 3. Pigments shall not exceed 10 percent of portland cement by weight.
 4. Pigments shall not exceed 5 percent of **[masonry cement]** **[or]** **[mortar cement]** by weight.
- I. Aggregate for Mortar: ASTM C 144.
1. For mortar that is exposed to view, use washed aggregate consisting of natural sand or crushed stone.
 2. For joints less than **1/4 inch (6 mm)** thick, use aggregate graded with 100 percent passing the **No. 16 (1.18-mm)** sieve.
 3. White-Mortar Aggregates: Natural white sand or crushed white stone.
 4. Colored-Mortar Aggregates: Natural sand or crushed stone of color necessary to produce required mortar color.
- J. Aggregate for Grout: ASTM C 404.
- K. Epoxy Pointing Mortar: ASTM C 395, epoxy-resin-based material formulated for use as pointing mortar for structural-clay tile facing units (and approved for such use by manufacturer of units); in color indicated or, if not otherwise indicated, as selected by DEN Project Manager from manufacturer's colors.
- L. Cold-Weather Admixture: Nonchloride, noncorrosive, accelerating admixture complying with ASTM C 494/C 494M, Type C, and recommended by manufacturer for use in masonry mortar of composition indicated.
1. Products: Subject to compliance with requirements, provide products by one of the following:
 - a. Euclid Chemical Company (The); Accelguard 80.
 - b. Grace Construction Products, W. R. Grace & Co. - Conn.; Morset.
 - c. Sonneborn Products, BASF Aktiengesellschaft; Trimix-NCA.
 - d. **<Insert manufacturer>**
 - e. or approved equal.
- M. Water-Repellent Admixture: Liquid water-repellent mortar admixture intended for use with CMUs containing integral water repellent by same manufacturer.

1. Products: Subject to compliance with requirements, provide products by one of the following:
 - a. ACM Chemistries; RainBloc for Mortar.
 - b. BASF Aktiengesellschaft; Rheopel Mortar Admixture.
 - c. Grace Construction Products, W. R. Grace & Co. - Conn.; Dry-Block Mortar Admixture.
 - d. **<Insert manufacturer>**
 - e. or approved equal.

N. Water: Potable.

2.8 REINFORCEMENT

A. Uncoated Steel Reinforcing Bars: ASTM A 615/A 615M or ASTM A 996/A 996M, **Grade 60** (Grade 420).

B. Masonry Joint Reinforcement, General: ASTM A 951/A 951M.

1. Interior Walls: Hot-dip galvanized, carbon steel.
2. Exterior Walls: Hot-dip galvanized, carbon steel.
3. Wire Size for Side Rods: [0.187-inch (4.76-mm)] diameter.
4. Wire Size for Cross Rods: [0.187-inch (4.76-mm)] diameter.
5. Wire Size for Veneer Ties: [0.187-inch (4.76-mm)] diameter.
6. Spacing of Cross Rods, Tabs, and Cross Ties: Not more than **16 inches** (407 mm) o.c.
7. Provide in lengths of not less than **10 feet** (3 m)[, **with prefabricated corner and tee units**].

C. Masonry Joint Reinforcement for Single-Wythe Masonry: Ladder type with single pair of side rods.

D. Masonry Joint Reinforcement for Multiwythe Masonry:

1. Ladder type with 1 side rod at each face shell of hollow masonry units more than **4 inches** (100 mm) wide, plus [**1 side rod**] [**2 side rods**] at each wythe of masonry **4 inches** (100 mm) wide or less.
2. Tab type, ladder design, with 1 side rod at each face shell of backing wythe and with rectangular tabs sized to extend at least halfway through facing wythe but with at least **5/8-inch** (16-mm) cover on outside face.
3. Adjustable (two-piece) type, ladder design, with one side rod at each face shell of backing wythe and with separate adjustable ties with pintle-and-eye connections having a maximum adjustment of **1-1/4 inches** (32 mm). Size ties to extend at least halfway through facing wythe but with at least **5/8-inch** (16-mm) cover on outside face.[**Ties have hooks or clips to engage a continuous horizontal wire in the facing wythe.**]

E. Masonry Joint Reinforcement for Veneers Anchored with Seismic Masonry-Veneer Anchors: Single **0.187-inch-** (4.76-mm-) diameter, hot-dip galvanized, carbon -steel

continuous wire.

2.9 TIES AND ANCHORS

- A. Materials: Provide ties and anchors specified in this article that are made from materials that comply with the following unless otherwise indicated.
1. Hot-Dip Galvanized, Carbon-Steel Wire: ASTM A 82/A 82M; with ASTM A 153/A 153M, Class B-2 coating.
 2. Steel Sheet, Galvanized after Fabrication: ASTM A 1008/A 1008M, Commercial Steel, with ASTM A 153/A 153M, Class B coating.
 3. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.
- B. Wire Ties, General: Unless otherwise indicated, size wire ties to extend at least halfway through veneer but with at least **5/8-inch (16-mm)** cover on outside face. Outer ends of wires are bent 90 degrees and extend **2 inches (50 mm)** parallel to face of veneer.
- C. Individual Wire Ties: Rectangular units with closed ends and not less than **4 inches (100 mm)** wide.
1. Z-shaped ties with ends bent 90 degrees to provide hooks not less than **2 inches (50 mm)** long may be used for masonry constructed from solid units.
 2. Where wythes **[do not align] [are of different materials]**, use adjustable ties with pintle-and-eye connections having a maximum adjustment of **1-1/4 inches (32 mm)**.
 3. Wire: Fabricate from **[3/16-inch- (4.76-mm-)] [1/4-inch- (6.35-mm-)]** diameter, **[hot-dip galvanized steel]** wire.
- D. Adjustable Anchors for Connecting to Structural Steel Framing: Provide anchors that allow vertical or horizontal adjustment but resist tension and compression forces perpendicular to plane of wall.
1. Anchor Section for Welding to Steel Frame: Crimped **1/4-inch- (6.35-mm-)** diameter, **[hot-dip galvanized steel]** wire.
 2. Tie Section: Triangular-shaped wire tie, sized to extend within **1 inch (25 mm)** of masonry face, made from **[0.187-inch- (4.76-mm-)] [0.25-inch- (6.35-mm-)]** diameter, **[hot-dip galvanized steel]** wire.
- E. Adjustable Anchors for Connecting to Concrete: Provide anchors that allow vertical or horizontal adjustment but resist tension and compression forces perpendicular to plane of wall.
1. Connector Section: Dovetail tabs for inserting into dovetail slots in concrete and attached to tie section; formed from **[0.105-inch- (2.66-mm-)] thick, steel sheet, galvanized after fabrication]**
 - a. **[0.108-inch- (2.74-mm-)]** thick, galvanized sheet may be used at interior walls unless otherwise indicated.

2. Tie Section: Triangular-shaped wire tie, sized to extend within **1 inch (25 mm)** of masonry face, made from **[0.187-inch- (4.76-mm-)]** diameter, hot-dip galvanized steel wire.
- F. Partition Top anchors: **0.105-inch- (2.66-mm-)** thick metal plate with **3/8-inch- (9.5-mm-)** diameter metal rod **6 inches (152 mm)** long welded to plate and with closed-end plastic tube fitted over rod that allows rod to move in and out of tube. Fabricate from steel, hot-dip galvanized after fabrication.
- G. Rigid Anchors: Fabricate from steel bars **[1-1/2 inches (38 mm) wide by 1/4 inch (6.35 mm) thick by 24 inches (610 mm) long, with ends turned up 2 inches (51 mm) or with cross pins unless otherwise indicated] [bent to configuration indicated]**.
1. Corrosion Protection: Hot-dip galvanized to comply with ASTM A 153/A 153M.
- H. Adjustable Masonry-Veneer Anchors:
1. General: Provide anchors that allow vertical adjustment but resist tension and compression forces perpendicular to plane of wall, for attachment over sheathing to wood or metal studs, and as follows:
 - a. Structural Performance Characteristics: Capable of withstanding a **100-lbf (445-N)** load in both tension and compression without deforming or developing play in excess of **0.05 inch (1.3 mm)**.
 2. Contractor's Option: Unless otherwise indicated, provide any of the following types of anchors:
 3. Screw-Attached, Masonry-Veneer Anchors: Units consisting of a wire tie and a metal anchor section.
 - a. Products: Subject to compliance with requirements, provide products by one of the following:
 - 1) Dayton Superior Corporation, Dur-O-Wal Division; **[D/A 213] [or] [D/A 210 with D/A 700-708]**.
 - 2) Heckmann Building Products Inc.; **[315-D with 316] [or] [Pos-I-Tie]**.
 - 3) Hohmann & Barnard, Inc.; **[DW-10] [DW-10HS] [or] [DW-10-X]**.
 - 4) Wire-Bond; **[1004, Type III] [RJ-711] [or] [SureTie]**.
 - 5) or approved equal.
 - b. Anchor Section: Rib-stiffened, sheet metal plate with screw holes top and bottom, **2-3/4 inches (70 mm)** wide by **3 inches (76 mm)** high; with projecting tabs having slotted holes for inserting vertical legs of wire tie specially formed to fit anchor section.
 - c. Anchor Section: Sheet metal plate, **1-1/4 inches (32 mm)** wide by **[6 inches (152 mm)] [9 inches (229 mm)]** long, with screw holes top and bottom and with raised rib-stiffened strap, **5/8 inch (16 mm)** wide by **[3-5/8 inches (92 mm)] [5-1/2 inches (140 mm)]** long, stamped into center to provide a slot between strap and plate for inserting wire tie.

- d. Anchor Section: Gasketed sheet metal plate, **1-1/4 inches (32 mm)** wide by **6 inches (152 mm)** long, with screw holes top and bottom; top and bottom ends bent to form pronged legs of length to match thickness of insulation or sheathing; and raised rib-stiffened strap, **5/8 inch (16 mm)** wide by **6 inches (152 mm)** long, stamped into center to provide a slot between strap and plate for inserting wire tie. Provide anchor manufacturer's standard, self-adhering, modified bituminous gaskets manufactured to fit behind anchor plate and extend beyond pronged legs.
 - e. Anchor Section: Corrosion-resistant, self-drilling, eye-screw designed to receive wire tie. Eye-screw has spacer that seats directly against framing and is same thickness as sheathing and has gasketed, washer head that covers hole in sheathing.
 - f. Fabricate sheet metal anchor sections and other sheet metal parts from **[0.105-inch- (2.66-mm-) thick, steel sheet, galvanized after fabrication]** .
 - g. Wire Ties: Triangular-, rectangular-, or T-shaped wire ties fabricated from **[0.187-inch- (4.76-mm-)] [0.25-inch- (6.35-mm-)]** diameter, **[hot-dip galvanized steel] [stainless-steel]** wire.
4. Slip-in, Masonry-Veneer Anchors: Units consisting of a wire tie section and an anchor section designed to interlock with metal studs and be slipped into place as sheathing is installed.
- a. Products: Subject to compliance with requirements, provide products by one of the following:
 - 1) Hohmann & Barnard, Inc.; AA308.
 - 2) **<Insert manufacturer>**
 - 3) or approved equal.
 - b. Wire-Type Anchor: Bent wire anchor section with an eye to receive the wire tie. Wire tie has a vertical leg that slips into the eye of anchor section and allows vertical adjustment. Both sections are made from **3/16-inch (4.76-mm)**, hot-dip galvanized wire.
5. Seismic Masonry-Veneer Anchors: Units consisting of a metal anchor section and a connector section designed to engage a continuous wire embedded in the veneer mortar joint.
- a. Products: Subject to compliance with requirements, provide products by one of the following:
 - 1) Dayton Superior Corporation, Dur-O-Wal Division; D/A 213S.
 - 2) Hohmann & Barnard, Inc.; DW-10-X-Seismicclip.
 - 3) Wire-Bond; RJ-711 with Wire-Bond clip.
 - 4) **<Insert manufacturer>**
 - 5) or approved equal.
 - b. Anchor Section: Rib-stiffened, sheet metal plate with screw holes top and bottom, **2-3/4 inches (70 mm)** wide by **3 inches (76 mm)** high; with projecting tabs having slotted holes for inserting vertical leg of connector section.

- c. Connector Section: Rib-stiffened, sheet metal bent plate with down-turned leg designed to fit in anchor section slot and with integral tabs designed to engage continuous wire. Size connector to extend at least halfway through veneer but with at least **5/8-inch (16-mm)** cover on outside face.
 - d. Anchor Section: Rib-stiffened, sheet metal plate with screw holes top and bottom, **2-3/4 inches (70 mm)** wide by **3 inches (76 mm)** high; with projecting tabs having slotted holes for inserting vertical legs of wire tie specially formed to fit anchor section. Size wire tie to extend at least **1-1/2 inches (38 mm)** into veneer but with at least **5/8-inch (16-mm)** cover on outside face.
 - e. Connector Section: Sheet metal clip welded to wire tie with integral tabs designed to engage continuous wire.
 - f. Anchor Section: Gasketed sheet metal plate, **1-1/4 inches (32 mm)** wide by **6 inches (152 mm)** long, with screw holes top and bottom; top and bottom ends bent to form pronged legs to bridge insulation or sheathing and contact studs; and raised rib-stiffened strap, **5/8 inch (16 mm)** wide by **6 inches (152 mm)** long, stamped into center to provide a slot between strap and plate for inserting wire tie. Provide anchor manufacturer's standard, self-adhering, modified bituminous gaskets manufactured to fit behind anchor plate and extend beyond pronged legs.
 - g. Connector Section: Triangular wire tie and rigid PVC extrusion with snap-in grooves for inserting continuous wire. Size wire tie to extend at least halfway through veneer but with at least **5/8-inch (16-mm)** cover on outside face.
 - h. Fabricate sheet metal anchor sections and other sheet metal parts from **[0.105-inch- (2.66-mm-) thick, steel sheet, galvanized after fabrication]** .
 - i. Fabricate wire connector sections from **[0.187-inch- (4.76-mm-)] [0.25-inch- (6.35-mm-)]** diameter, hot-dip galvanized, carbon -steel wire.
6. Polymer-Coated, Steel Drill Screws for Steel Studs: ASTM C 954 except manufactured with hex washer head and neoprene or EPDM washer, **No. 10 (4.83-mm)** diameter by length required to penetrate steel stud flange with not less than three exposed threads, and with organic polymer coating with salt-spray resistance to red rust of more than 800 hours per ASTM B 117.
- a. Products: Subject to compliance with requirements, provide products by one of the following:
 - 1) ITW Buildex; Teks Maxiseal with Climaseal finish.
 - 2) Textron Inc., Textron Fastening Systems; Elco Dril-Flex with Stalgard finish.
 - 3) **<Insert manufacturer>**
 - 4) or approved equal.
7. Stainless-Steel Drill Screws for Steel Studs: Proprietary fastener consisting of carbon-steel drill point and 300 Series stainless-steel shank, complying with ASTM C 954 except manufactured with hex washer head and neoprene or EPDM washer, **No. 10 (4.83-mm)** diameter by length required to penetrate steel stud flange with not less than three exposed threads.
- a. Products: Subject to compliance with requirements, provide products by

one of the following:

- 1) Dayton Superior Corporation, Dur-O-Wal Division; Stainless Steel SX Fastener.
- 2) ITW Buildex; Scots long life Tekes.
- 3) **<Insert manufacturer>**
- 4) or approved equal.

2.10 MISCELLANEOUS ANCHORS

- A. Unit Type Inserts in Concrete: Cast-iron or malleable-iron wedge-type inserts.
- B. Dovetail Slots in Concrete: Furnish dovetail slots with filler strips, of slot size indicated, fabricated from **0.034-inch** (0.86-mm), galvanized steel sheet.
- C. Anchor Bolts: **[Headed] [or] [L-shaped]** steel bolts complying with **ASTM A 307, Grade A** (ASTM F 568M, Property Class 4.6); with **ASTM A 563** (ASTM A 563M) hex nuts and, where indicated, flat washers; hot-dip galvanized to comply with ASTM A 153/A 153M, Class C; of dimensions indicated.
- D. Postinstalled Anchors: **[Torque-controlled expansion anchors] [or] [chemical anchors]**.
 1. Load Capacity: Capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing according to ASTM E 488, conducted by a qualified independent testing agency.
 2. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B 633 or **ASTM F 1941** (ASTM F 1941M), Class Fe/Zn 5 unless otherwise indicated.
 3. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy **[Group 1 (A1)] [Group 2 (A4)]** stainless-steel bolts, **ASTM F 593** (ASTM F 738M), and nuts, **ASTM F 594** (ASTM F 836M).

2.11 EMBEDDED FLASHING MATERIALS

- A. Metal Flashing: Provide metal flashing complying with **[SMACNA's "Architectural Sheet Metal Manual"] [Section 076200 "Sheet Metal Flashing and Trim"]** and as follows:
 1. Stainless Steel: ASTM A 240/A 240M, Type 304, **0.016 inch** (0.40 mm) thick.
 2. Copper: ASTM B 370, Temper H00, cold-rolled copper sheet, **16-oz./sq. ft.** (4.9-kg/sq. m) weight or **0.0216 inch** (0.55 mm) thick or ASTM B 370, Temper H01, high-yield copper sheet, **12-oz./sq. ft.** (3.7-kg/sq. m) weight or **0.0162 inch** (0.41 mm) thick.
 3. Fabricate continuous flashings in sections **96 inches** (2400 mm) long minimum, but not exceeding **12 feet** (3.7 m). Provide splice plates at joints of formed, smooth metal flashing.

4. Fabricate through-wall metal flashing embedded in masonry from [**stainless steel**] [**copper**], with ribs at 3-inch (76-mm) intervals along length of flashing to provide an integral mortar bond.
 - a. Products: Subject to compliance with requirements, provide products by one of the following:
 - 1) Cheney Flashing Company; [**Cheney Flashing (Dovetail)**] [or] [**Cheney 3-Way Flashing (Sawtooth)**].
 - 2) Keystone Flashing Company, Inc.; Keystone 3-Way Interlocking Thruwall Flashing.
 - 3) Sandell Manufacturing Co., Inc.; Mechanically Keyed Flashing.
 - 4) <Insert manufacturer>
 - 5) or approved equal.
5. Fabricate through-wall flashing with snaplock receiver on exterior face where indicated to receive counterflashing.
6. Fabricate through-wall flashing with drip edge [**where**] [**unless otherwise**] indicated. Fabricate by extending flashing 1/2 inch (13 mm) out from wall, with outer edge bent down 30 degrees[**and hemmed**].
7. Fabricate through-wall flashing with sealant stop [**where**] [**unless otherwise**] indicated. Fabricate by bending metal back on itself 3/4 inch (19 mm) at exterior face of wall and down into joint 1/4 inch (6 mm) to form a stop for retaining sealant backer rod.
8. Fabricate metal [**drip edges**] [**and**] [**sealant stops**] for ribbed metal flashing from plain metal flashing of same metal as ribbed flashing and extending at least 3 inches (76 mm) into wall with hemmed inner edge to receive ribbed flashing and form a hooked seam. Form hem on upper surface of metal so that completed seam will shed water.
9. Metal Drip Edge: Fabricate from stainless steel. Extend at least 3 inches (76 mm) into wall and 1/2 inch (13 mm) out from wall, with outer edge bent down 30 degrees[**and hemmed**].
10. Metal Sealant Stop: Fabricate from stainless steel. Extend at least 3 inches (76 mm) into wall and out to exterior face of wall. At exterior face of wall, bend metal back on itself for 3/4 inch (19 mm) and down into joint 1/4 inch (6 mm) to form a stop for retaining sealant backer rod.
11. Metal Expansion-Joint Strips: Fabricate from [**stainless steel**] [**copper**] to shapes indicated.

B. Flexible Flashing: Use[**one of**] the following unless otherwise indicated:

1. Copper-Laminated Flashing: [7-oz./sq. ft. (2-kg/sq. m)] copper sheet bonded between 2 layers of glass-fiber cloth. Use only where flashing is fully concealed in masonry.
 - a. Products: Subject to compliance with requirements, provide products by one of the following:
 - 1) Advanced Building Products Inc.; [**Copper Fabric Flashing**] [**Copper Sealtite 2000**].

- 2) Dayton Superior Corporation, Dur-O-Wal Division; Copper Fabric Thru-Wall Flashing.
 - 3) Hohmann & Barnard, Inc.; H & B C-Fab Flashing.
 - 4) Phoenix Building Products; Type FCC-Fabric Covered Copper.
 - 5) Sandell Manufacturing Co., Inc.; Copper Fabric Flashing.
 - 6) York Manufacturing, Inc.; Multi-Flash 500.
 - 7) **<Insert manufacturer>**
 - 8) or approved equal.
2. Asphalt-Coated Copper Flashing: [7-oz./sq. ft. (2-kg/sq. m)] copper sheet coated with flexible asphalt. Use only where flashing is fully concealed in masonry.
- a. Products: Subject to compliance with requirements, provide one of the following:
- 1) Advanced Building Products Inc.; Cop-R-Cote.
 - 2) Dayton Superior Corporation, Dur-O-Wal Division; Copper Coated Thru-Wall Flashing.
 - 3) Hohmann & Barnard, Inc.; H & B C-Coat Flashing.
 - 4) Phoenix Building Products; Type ACC-Asphalt Bituminous Coated.
 - 5) Sandell Manufacturing Co., Inc.; Coated Copper Flashing.
 - 6) **<Insert manufacturer>**
 - 7) or approved equal.
3. Rubberized-Asphalt Flashing: Composite flashing product consisting of a pliable, adhesive rubberized-asphalt compound, bonded to a high-density, cross-laminated polyethylene film to produce an overall thickness of not less than [0.040 inch (1.02 mm)].
- a. Products: Subject to compliance with requirements, provide products by one of the following:
- 1) Advanced Building Products Inc.; Peel-N-Seal.
 - 2) Carlisle Coatings & Waterproofing; CCW-705-TWF Thru-Wall Flashing.
 - 3) Dayton Superior Corporation, Dur-O-Wal Division; Dur-O-Barrier Thru-Wall Flashing.
 - 4) Fiberweb, Clark Hammerbeam Corp.; Aquaflash 500.
 - 5) Grace Construction Products, W. R. Grace & Co. - Conn.; Perm-A-Barrier Wall Flashing.
 - 6) Heckmann Building Products Inc.; No. 82 Rubberized-Asphalt Thru-Wall Flashing.
 - 7) Hohmann & Barnard, Inc.; Textroflash.
 - 8) W. R. Meadows, Inc.; Air-Shield Thru-Wall Flashing.
 - 9) Polyguard Products, Inc.; **[Polyguard 300] [Polyguard 400]**.
 - 10) Sandell Manufacturing Co., Inc.; Sando-Seal.
 - 11) Williams Products, Inc.; Everlastic MF-40.
 - 12) **<Insert manufacturer>**
 - 13) or approved equal.

- b. Accessories: Provide preformed corners, end dams, other special shapes, and seaming materials produced by flashing manufacturer.
 4. Elastomeric Thermoplastic Flashing: Composite flashing product consisting of a polyester-reinforced ethylene interpolymer alloy.
 - a. Products: Subject to compliance with requirements, provide products by one of the following:
 - 1) DuPont; Thru-Wall Flashing.
 - 2) Hohmann & Barnard, Inc.; Flex-Flash.
 - 3) Hyload, Inc.; Hyload Cloaked Flashing System.
 - 4) Mortar Net USA, Ltd.; Total Flash.
 - 5) **<Insert manufacturer>**
 - 6) or approved equal.
 - b. Monolithic Sheet: Elastomeric thermoplastic flashing, **0.040 inch** (1.0 mm) thick.
 - c. Self-Adhesive Sheet: Elastomeric thermoplastic flashing, **0.025 inch** (0.64 mm) thick, with a **0.015-inch-** (0.38-mm-) thick coating of adhesive.
 - d. Self-Adhesive Sheet with Drip Edge: Elastomeric thermoplastic flashing, **0.025 inch** (0.64 mm) thick, with a **0.015-inch-** (0.38-mm-) thick coating of rubberized-asphalt adhesive. Where flashing extends to face of masonry, rubberized-asphalt coating is held back approximately **1-1/2 inches** (38 mm) from edge.
 - 1) Color: **[Gray] [White] [Tan/buff] [Black]**.
 - e. Accessories: Provide preformed corners, end dams, other special shapes, and seaming materials produced by flashing manufacturer.
 5. EPDM Flashing: Sheet flashing product made from ethylene-propylene-diene terpolymer, complying with ASTM D 4637, **0.040 inch** (1.0 mm) thick.
 - a. Products: Subject to compliance with requirements, provide products by one of the following:
 - 1) Carlisle Coatings & Waterproofing; Pre-Kleened EPDM Thru-Wall Flashing.
 - 2) Firestone Specialty Products; FlashGuard.Heckmann Building Products Inc.; No. 81 EPDM Thru-Wall Flashing.
 - 3) Hohmann & Barnard, Inc.; Epra-Max EPDM Thru-Wall Flashing.
 - 4) Sandell Manufacturing Co., Inc.; EPDM Flashing.
 - 5) **<Insert manufacturer>**
 - 6) or approved equal.
- C. Application: Unless otherwise indicated, use the following:
1. Where flashing is indicated to receive counterflashing, use metal flashing.

2. Where flashing is indicated to be turned down at or beyond the wall face, use metal flashing.
 3. Where flashing is partly exposed and is indicated to terminate at the wall face, use metal flashing [**with a drip edge**] [**with a sealant stop**] [**or flexible flashing with a metal drip edge**] [**or elastomeric thermoplastic flashing with drip edge**] [**or flexible flashing with a metal sealant stop**].
 4. Where flashing is fully concealed, use [**metal flashing**] [**or**] [**flexible flashing**].
- D. Single-Wythe CMU Flashing System: System of CMU cell flashing pans and interlocking CMU web covers made from high-density polyethylene incorporating chemical stabilizers that prevent UV degradation. Cell flashing pans have integral weep spouts that are designed to be built into mortar bed joints and weep collected moisture to the exterior of CMU walls and that extend into the cell to prevent clogging with mortar.
1. Products: Subject to compliance with requirements, provide products by one of the following:
 - a. Mortar Net USA, Ltd.; Blok-Flash.
 - b. **<Insert manufacturer>**
 - c. or approved equal.
- E. Solder and Sealants for Sheet Metal Flashings:[**As specified in Section 076200 "Sheet Metal Flashing and Trim."**]
1. Solder for Stainless Steel: ASTM B 32, Grade Sn60, with acid flux of type recommended by stainless-steel sheet manufacturer.
 2. Solder for Copper: ASTM B 32, Grade Sn50, 50 percent tin and 50 percent lead.
 3. Elastomeric Sealant: ASTM C 920, chemically curing [**urethane**] [**polysulfide**] [**silicone**] sealant; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.
- F. Adhesives, Primers, and Seam Tapes for Flashings: Flashing manufacturer's standard products or products recommended by flashing manufacturer for bonding flashing sheets to each other and to substrates.
- 2.12 MISCELLANEOUS MASONRY ACCESSORIES
- A. Compressible Filler: Premolded filler strips complying with ASTM D 1056, Grade 2A1; compressible up to 35 percent; of width and thickness indicated; formulated from [**neoprene**] [**urethane**] [**or**] [**PVC**].
 - B. Preformed Control-Joint Gaskets: Made from [**styrene-butadiene-rubber compound, complying with ASTM D 2000, Designation M2AA-805**] [**or**] [**PVC, complying with ASTM D 2287, Type PVC-65406**] and designed to fit standard sash block and to maintain lateral stability in masonry wall; size and configuration as indicated.
 - C. Bond-Breaker Strips: Asphalt-saturated, organic roofing felt complying with ASTM D 226, Type I (No. 15 asphalt felt).

- D. Weep/Vent Products: Use[**one of**] the following unless otherwise indicated:
1. Vinyl Weep Hole/Vent: One-piece, offset, T-shaped units made from flexible PVC, designed to fit into a head joint and consisting of a louvered vertical leg, flexible wings to seal against ends of masonry units, and a top flap to keep mortar out of the head joint; in color selected by DEN Project Manager.
 - a. Products: Subject to compliance with requirements, provide products by one of the following:
 - 1) Hohmann & Barnard, Inc.; #343 Louvered Weep Hole.
 - 2) Williams Products, Inc.; Williams-Goodco Brick Vent.
 - 3) Wire-Bond; Louvered Weepholes.
 - 4) **<Insert manufacturer>**
 - 5) or approved equal.
- E. Cavity Drainage Material: Free-draining mesh, made from polymer strands that will not degrade within the wall cavity.
1. Products: Subject to compliance with requirements, provide products by one of the following:
 - a. Advanced Building Products Inc.; **[Mortar Break] [Mortar Break II]**.
 - b. Archovations, Inc.; CavClear Masonry Mat.
 - c. Dayton Superior Corporation, Dur-O-Wal Division; Polytite MortarStop.
 - d. Mortar Net USA, Ltd.; Mortar Net.
 - e. **<Insert manufacturer>**
 - f. or approved equal.
 2. Provide one of the following configurations:
 - a. Strips, full-depth of cavity and **10 inches (250 mm)** high, with dovetail shaped notches **7 inches (175 mm)** deep that prevent clogging with mortar droppings.
 - b. Strips, not less than **[3/4 inch (19 mm)] [1-1/2 inches (38 mm)]** thick and **10 inches (250 mm)** high, with dimpled surface designed to catch mortar droppings and prevent weep holes from clogging with mortar.
 - c. Sheets or strips full depth of cavity and installed to full height of cavity.
 - d. Sheets or strips not less than **[3/4 inch (19 mm)] [1 inch (25 mm)]** **<Insert thickness>** thick and installed to full height of cavity with additional strips **4 inches (100 mm)** high at weep holes and thick enough to fill entire depth of cavity and prevent weep holes from clogging with mortar.
- F. Reinforcing Bar Positioners: Wire units designed to fit into mortar bed joints spanning masonry unit cells and hold reinforcing bars in center of cells. Units are formed from **0.148-inch (3.77-mm)** steel wire, hot-dip galvanized after fabrication. Provide units designed for number of bars indicated.
1. Products: Subject to compliance with requirements, provide products by one of the following:

- a. Dayton Superior Corporation, Dur-O-Wal Division; D/A 810, D/A 812 or D/A 817.
- b. Heckmann Building Products Inc.; No. 376 Rebar Positioner.
- c. Hohmann & Barnard, Inc.; #RB or #RB-Twin Rebar Positioner.
- d. Wire-Bond; O-Ring or Double O-Ring Rebar Positioner.
- e. <Insert manufacturer>
- f. or approved equal.

2.13 MASONRY-CELL INSULATION

- A. Loose-Granular Fill Insulation: Perlite complying with ASTM C 549, Type II (surface treated for water repellency and limited moisture absorption) or Type IV (surface treated for water repellency and to limit dust generation).
- B. Molded-Polystyrene Insulation Units: Rigid, cellular thermal insulation formed by the expansion of polystyrene-resin beads or granules in a closed mold to comply with ASTM C 578, Type I. Provide specially shaped units designed for installing in cores of masonry units.
 1. Products: Subject to compliance with requirements, provide products by one of the following:
 - a. Concrete Block Insulating Systems; Korfil.
 - b. Shelter Enterprises Inc.; Omni Core.
 - c. <Insert manufacturer>
 - d. or approved equal.

2.14 CAVITY-WALL INSULATION

- A. Extruded-Polystyrene Board Insulation: ASTM C 578, [Type IV] [Type X], closed-cell product extruded with an integral skin.
- B. Extruded-Polystyrene Board Insulation with Increased R-Value: ASTM C 578, Type IV, but with an aged thermal resistance (R-value) for 1-inch (25-mm) thickness of 5.6 deg F x h x sq. ft./Btu at 75 deg F (1.0 K x sq. m/W at 24 deg C) at 5 years; closed-cell product with a carbon-black filler and extruded with an integral skin.
- C. Molded-Polystyrene Board Insulation: ASTM C 578, Type I.
- D. Polyisocyanurate Board Insulation: ASTM C 1289, Type I (aluminum-foil-faced), Class 2 (glass-fiber-reinforced).
- E. Adhesive: Type recommended by insulation board manufacturer for application indicated.

2.15 MASONRY CLEANERS

- A. Proprietary Acidic Cleaner: Manufacturer's standard-strength cleaner designed for

removing mortar/grout stains, efflorescence, and other new construction stains from new masonry without discoloring or damaging masonry surfaces. Use product expressly approved for intended use by cleaner manufacturer and manufacturer of masonry units being cleaned.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Diedrich Technologies, Inc.
- b. EaCo Chem, Inc.
- c. ProSoCo, Inc.
- d. **<Insert manufacturer>**
- e. or approved equal.

B. Exercise caution when cleaning masonry to protect all other adjacent materials from damage. Protect all adjacent materials prior to and during all masonry cleaning operations. Contractor shall replace any damaged materials.

2.16 MORTAR AND GROUT MIXES

A. General: Do not use admixtures, including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, antifreeze compounds, or other admixtures, unless otherwise indicated.

1. Do not use calcium chloride in mortar or grout.
2. Use [**portland cement-lime**] mortar unless otherwise indicated.
3. For exterior masonry, use [**portland cement-lime**] mortar.
4. For reinforced masonry, use [**portland cement-lime**] mortar.
5. Add cold-weather admixture (if used) at same rate for all mortar that will be exposed to view, regardless of weather conditions, to ensure that mortar color is consistent.

B. Preblended, Dry Mortar Mix: Furnish dry mortar ingredients in form of a preblended mix. Measure quantities by weight to ensure accurate proportions, and thoroughly blend ingredients before delivering to Project site.

C. Mortar for Unit Masonry: Comply with ASTM C 270, [**Proportion**] [**Property**] Specification. Provide the following types of mortar for applications stated unless another type is indicated[**or needed to provide required compressive strength of masonry**].

1. For masonry below grade or in contact with earth, use [**Type S**].
2. For reinforced masonry, use [**Type S**] [**Type N**].
3. For mortar parge coats, use [**Type N**].
4. For exterior, above-grade, load-bearing and non-load-bearing walls and parapet walls; for interior load-bearing walls; for interior non-load-bearing partitions; and for other applications where another type is not indicated, use Type N.

D. Pigmented Mortar: Use colored cement product[**or select and proportion pigments**

with other ingredients to produce color required. Do not add pigments to colored cement products].

1. Pigments shall not exceed 10 percent of portland cement by weight.
 2. Mix to match DEN Project Manager's sample.
 3. Application: Use pigmented mortar for exposed mortar joints with the following units:
 - a. Decorative CMUs.
 - b. Pre-faced CMUs.
 - c. Concrete facing brick.
 - d. Face brick.
 - e. Hollow brick.
 - f. Glazed brick.
 - g. Glazed structural-clay facing tile.
 - h. Stone trim units.
 - i. Cast stone trim units.
- E. Colored-Aggregate Mortar: Produce required mortar color by using colored aggregates and natural color or white cement as necessary to produce required mortar color.
1. Mix to match DEN Project Manager's sample.
 2. Application: Use colored aggregate mortar for exposed mortar joints with the following units:
 - a. Decorative CMUs.
 - b. Pre-faced CMUs.
 - c. Concrete facing brick.
 - d. Face brick.
 - e. Hollow brick.
 - f. Glazed brick.
 - g. Glazed structural-clay facing tile.
 - h. Stone trim units.
 - i. Cast stone trim units.
- F. Grout for Unit Masonry: Comply with ASTM C 476.
1. Use grout of type indicated or, if not otherwise indicated, of type (fine or coarse) that will comply with Table 1.15.1 in ACI 530.1/ASCE 6/TMS 602 for dimensions of grout spaces and pour height.
 2. Proportion grout in accordance with ASTM C 476, **[Table 1] [or] [paragraph 4.2.2 for specified 28-day compressive strength indicated, but not less than 2000 psi (14 MPa)]**.
 3. Provide grout with a slump of **[8 to 11 inches (203 to 279 mm)] [10 to 11 inches (254 to 279 mm)]** as measured according to ASTM C 143/C 143M.
- G. Epoxy Pointing Mortar: Mix epoxy pointing mortar to comply with mortar manufacturer's written instructions.
1. Application: Use epoxy pointing mortar for exposed mortar joints with the

following units:

- a. Pre-faced CMUs.
- b. Glazed brick.
- c. Glazed structural-clay facing tile.

2.17 MASONRY SEALER

- A. Apply masonry sealer in strict compliance with manufacturer's recommendations and under required project and weather conditions.
 1. Criteria:
 - a. Minimal darkening and color change of masonry surfaces.
 - b. Minimum 10% chemical solids consisting of a siloxane/acrylic emulsion solution.
 2. Products: Subject to compliance with requirements, provide products by one of the following:
 - a. Okon W-2
 - b. <Insert manufacturer>
 - c. or approved equal.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
 1. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of work.
 2. Verify that foundations are within tolerances specified.
 3. Verify that reinforcing dowels are properly placed.
- B. Before installation, examine rough-in and built-in construction for piping systems to verify actual locations of piping connections.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.
- D. Do not wet concrete masonry units.
- E. Cleaning Reinforcing: Before placing, remove loose rust, ice and other coatings from reinforcing.

- F. Thickness: Build cavity and composite walls, floors and other masonry construction to the full thickness shown. Build single wythe walls (if any) to the actual thickness of the masonry units, using units of nominal thickness indicated.
- G. Build chases and recesses as shown or required for the work of other trades. Provide not less than 8" of masonry between chase or recess and jamb of openings, and between adjacent chases and recesses.
- H. Leave openings for equipment to be installed before completion of masonry work. After installation of equipment, complete masonry work to match work immediately adjacent to the opening.
- I. Cut masonry units using motor driven saws to provide clean, sharp, unchipped edges. Cut units as required to provide continuous pattern and to fit adjoining work. Use full size units without cutting where possible. Cut masonry as required to allow passage of utilities, but maintain integrity of masonry and fire rating of wall.
- J. Use dry or wet cutting saws to cut concrete masonry units.
- K. At Split-Faced CMU: Provide color matching non-split face units where indicated and at light fixtures attached directly to the CMU. Provide special shapes or sizes where indicated or required to achieve design intent.

3.2 INSTALLATION, GENERAL

- A. Thickness: Build cavity and composite walls and other masonry construction to full thickness shown. Build single-wythe walls to actual widths of masonry units, using units of widths indicated.
- B. Build chases and recesses to accommodate items specified in this and other Sections.
- C. Leave openings for equipment to be installed before completing masonry. After installing equipment, complete masonry to match the construction immediately adjacent to opening.
- D. Use full-size units without cutting if possible. If cutting is required to provide a continuous pattern or to fit adjoining construction, cut units with motor-driven saws; provide clean, sharp, unchipped edges. Allow units to dry before laying unless wetting of units is specified. Install cut units with cut surfaces and, where possible, cut edges concealed.
- E. Select and arrange units for exposed unit masonry to produce a uniform blend of colors and textures.
 - 1. Mix units from several pallets or cubes as they are placed.
- F. Matching Existing Masonry: Match coursing, bonding, color, and texture of existing masonry.

- G. Wetting of Brick: Wet brick before laying if initial rate of absorption exceeds 30 g/30 sq. in. (30 g/194 sq. cm) per minute when tested per ASTM C 67. Allow units to absorb water so they are damp but not wet at time of laying.

3.3 TOLERANCES

A. Dimensions and Locations of Elements:

1. For dimensions in cross section or elevation do not vary by more than plus 1/2 inch (12 mm) or minus 1/4 inch (6 mm).
2. For location of elements in plan do not vary from that indicated by more than plus or minus 1/2 inch (12 mm).
3. For location of elements in elevation do not vary from that indicated by more than plus or minus 1/4 inch (6 mm) in a story height or 1/2 inch (12 mm) total.

B. Lines and Levels:

1. For bed joints and top surfaces of bearing walls do not vary from level by more than 1/4 inch in 10 feet (6 mm in 3 m), or 1/2 inch (12 mm) maximum.
2. For conspicuous horizontal lines, such as lintels, sills, parapets, and reveals, do not vary from level by more than 1/8 inch in 10 feet (3 mm in 3 m), 1/4 inch in 20 feet (6 mm in 6 m), or 1/2 inch (12 mm) maximum.
3. For vertical lines and surfaces do not vary from plumb by more than 1/4 inch in 10 feet (6 mm in 3 m), 3/8 inch in 20 feet (9 mm in 6 m), or 1/2 inch (12 mm) maximum.
4. For conspicuous vertical lines, such as external corners, door jambs, reveals, and expansion and control joints, do not vary from plumb by more than 1/8 inch in 10 feet (3 mm in 3 m), 1/4 inch in 20 feet (6 mm in 6 m), or 1/2 inch (12 mm) maximum.
5. For lines and surfaces do not vary from straight by more than 1/4 inch in 10 feet (6 mm in 3 m), 3/8 inch in 20 feet (9 mm in 6 m), or 1/2 inch (12 mm) maximum.
6. For vertical alignment of exposed head joints, do not vary from plumb by more than 1/4 inch in 10 feet (6 mm in 3 m), or 1/2 inch (12 mm) maximum.
7. For faces of adjacent exposed masonry units, do not vary from flush alignment by more than 1/16 inch (1.5 mm) except due to warpage of masonry units within tolerances specified for warpage of units.

C. Joints:

1. For bed joints, do not vary from thickness indicated by more than plus or minus 1/8 inch (3 mm), with a maximum thickness limited to 1/2 inch (12 mm).
2. For exposed bed joints, do not vary from bed-joint thickness of adjacent courses by more than 1/8 inch (3 mm).
3. For head and collar joints, do not vary from thickness indicated by more than plus 3/8 inch (9 mm) or minus 1/4 inch (6 mm).
4. For exposed head joints, do not vary from thickness indicated by more than plus or minus 1/8 inch (3 mm). [Do not vary from adjacent bed-joint and head-joint thicknesses by more than 1/8 inch (3 mm).]

5. For exposed bed joints and head joints of stacked bond, do not vary from a straight line by more than **1/16 inch (1.5 mm)** from one masonry unit to the next.

3.4 LAYING MASONRY WALLS

- A. Lay out walls in advance for accurate spacing of surface bond patterns with uniform joint thicknesses and for accurate location of openings, movement-type joints, returns, and offsets. Avoid using less-than-half-size units, particularly at corners, jambs, and, where possible, at other locations.
- B. Bond Pattern for Exposed Masonry: Unless otherwise indicated, lay exposed masonry in **[running bond] [stack bond] [one-third running bond] [Flemish bond] [English bond] [bond pattern indicated on Drawings]**; do not use units with less than nominal **4-inch (100-mm)** horizontal face dimensions at corners or jambs.
- C. Lay concealed masonry with all units in a wythe in running bond or bonded by lapping not less than **[2 inches (50 mm)] [4-inches (100-mm)]**. Bond and interlock each course of each wythe at corners. Do not use units with less than nominal **4-inch (100-mm)** horizontal face dimensions at corners or jambs.
- D. Stopping and Resuming Work: Stop work by racking back units in each course from those in course below; do not tooth. When resuming work, clean masonry surfaces that are to receive mortar, remove loose masonry units and mortar, and wet brick if required before laying fresh masonry.
- E. Built-in Work: As construction progresses, build in items specified in this and other Sections. Fill in solidly with masonry around built-in items.
- F. Fill space between steel frames and masonry solidly with mortar unless otherwise indicated.
- G. Where built-in items are to be embedded in cores of hollow masonry units, place a layer of metal lath, wire mesh, or plastic mesh in the joint below and rod mortar or grout into core.
- H. Fill cores in hollow CMUs with grout **24 inches (600 mm)** under bearing plates, beams, lintels, posts, and similar items unless otherwise indicated.
- I. Build non-load-bearing interior partitions full height of story to underside of solid floor or roof structure above unless otherwise indicated.
 1. Install compressible filler in joint between top of partition and underside of structure above.
 2. Fasten partition top anchors to structure above and build into top of partition. Grout cells of CMUs solidly around plastic tubes of anchors and push tubes down into grout to provide **1/2-inch (13-mm)** clearance between end of anchor rod and end of tube. Space anchors **[48 inches (1200 mm)] <Insert spacing>** o.c. unless otherwise indicated.

3. At fire-rated partitions, treat joint between top of partition and underside of structure above to comply with Section 078446 "Fire-Resistive Joint Systems."

3.5 MORTAR BEDDING AND JOINTING

- A. Lay hollow **[brick]** **[and]** **[CMUs]** as follows:
 1. With face shells fully bedded in mortar and with head joints of depth equal to bed joints.
 2. With webs fully bedded in mortar in all courses of piers, columns, and pilasters.
 3. With webs fully bedded in mortar in grouted masonry, including starting course on footings.
 4. With entire units, including areas under cells, fully bedded in mortar at starting course on footings where cells are not grouted.
- B. Lay solid masonry units with completely filled bed and head joints; butter ends with sufficient mortar to fill head joints and shove into place. Do not deeply furrow bed joints or slush head joints.
- C. Lay hollow concrete masonry units with full mortar coverage on horizontal and vertical face shells. Bed webs in mortar in starting course on footings and in all courses of piers, columns and pilasters, and where adjacent to cells or cavities to be reinforced or filled with concrete or grout. For starting course on footings where cells are not grouted, spread out full mortar bed including areas under cells.
- D. Maintain joint widths shown, except for minor variations required to maintain bond alignment. If not shown, lay walls with 3/8" joints.
- E. Cut joints flush for masonry walls which are to be concealed or to be covered by other materials, unless otherwise indicated.
- F. Tool exposed joints slightly concave using a jointer larger than joint thickness, unless otherwise indicated tool unexposed joints concave, where possible.
- G. Remove masonry units disturbed after laying; clean and reset in fresh mortar. Do not pound corners or jambs to shift adjacent stretcher units which have been set in position. If adjustments are required, remove units, clean off mortar and reset in fresh mortar.
- H. Collar Joints: After each course is laid, fill the vertical longitudinal joint between wythes solidly and with mortar for the following masonry work:
 1. Exterior walls, except cavity walls.
 2. Non loadbearing interior walls or partitions where metal ties or horizontal reinforcing are indicated for structural bonding and nominal thickness of wall or partition is required to meet code requirements for height to thickness ratio.
- I. Lay structural-clay tile as follows:
 1. Lay vertical-cell units with full head joints unless otherwise indicated. Provide bed

- joints with full mortar coverage on face shells and webs.
2. Lay horizontal-cell units with full bed joints unless otherwise indicated. Keep drainage channels, if any, free of mortar. Form head joints with sufficient mortar so excess will be squeezed out as units are placed in position. Butter both sides of units to be placed, or butter one side of unit already in place and one side of unit to be placed.
 3. Maintain joint thicknesses indicated except for minor variations required to maintain bond alignment. If not indicated, lay walls with **1/4- to 3/8-inch-** (6- to 10-mm-) thick joints.
 4. Where epoxy-mortar pointed joints are indicated, rake out setting mortar to a uniform depth of **1/4 inch (6 mm)** and point with epoxy mortar to comply with epoxy-mortar manufacturer's written instructions.
- J. Set **[stone]** **[cast-stone]** trim units in full bed of mortar with full vertical joints. Fill dowel, anchor, and similar holes.
1. Clean soiled surfaces with fiber brush and soap powder and rinse thoroughly with clear water.
 2. Allow cleaned surfaces to dry before setting.
 3. Wet joint surfaces thoroughly before applying mortar.
- K. Tool exposed joints slightly concave when thumbprint hard, using a jointer larger than joint thickness unless otherwise indicated.
1. For glazed masonry units, use a nonmetallic jointer **3/4 inch (19 mm)** or more in width.
- L. Cut joints flush for masonry walls to receive plaster or other direct-applied finishes (other than paint) unless otherwise indicated.

3.6 COMPOSITE MASONRY

- A. Bond wythes of composite masonry together using one of the following methods:
1. Individual Metal Ties: Provide ties as shown installed in horizontal joints, but not less than one metal tie for **[4.5 sq. ft. (0.42 sq. m)] [2.67 sq. ft. (0.25 sq. m)] [1.77 sq. ft. (0.16 sq. m)]** of wall area spaced not to exceed **[36 inches (914 mm)] [24 inches (610 mm)] [16 inches (406 mm)]** o.c. horizontally and **16 inches (406 mm)** o.c. vertically. Stagger ties in alternate courses. Provide additional ties within **12 inches (305 mm)** of openings and space not more than **36 inches (914 mm)** apart around perimeter of openings. At intersecting and abutting walls, provide ties at no more than **24 inches (610 mm)** o.c. vertically.
 - a. Where bed joints of wythes do not align, use adjustable (two-piece) type ties.
 2. Masonry Joint Reinforcement: Installed in horizontal mortar joints.
 - a. Where bed joints of both wythes align, use **[ladder-type reinforcement**

- extending across both wythes] [tab-type reinforcement].**
- b. Where bed joints of wythes do not align, use adjustable (two-piece) type reinforcement[**with continuous horizontal wire in facing wythe attached to ties**].
3. Header Bonding: Provide masonry unit headers extending not less than **3 inches (76 mm)** into each wythe. Space headers not over **[8 inches (203 mm)] [12 inches (305 mm)]** clear horizontally and **16 inches (406 mm)** clear vertically.
- B. Bond wythes of composite masonry together using bonding system indicated on Drawings.
- C. Collar Joints: Solidly fill collar joints by parging face of first wythe that is laid and shoving units of other wythe into place.
- D. Collar Joints in Clay Tile Masonry: After each course is laid, fill the vertical, longitudinal joint between wythes solidly with mortar at **[exterior walls, except cavity walls] [, and] [interior walls and partitions]**.
- E. Corners: Provide interlocking masonry unit bond in each wythe and course at corners unless otherwise indicated.
1. Provide continuity with masonry joint reinforcement at corners by using prefabricated L-shaped units as well as masonry bonding.
- F. Intersecting and Abutting Walls: Unless vertical expansion or control joints are shown at juncture, bond walls together as follows:
1. Provide individual metal ties not more than **[8 inches (203 mm)] o.c.**
2. Provide continuity with masonry joint reinforcement by using prefabricated T-shaped units.
3. Provide rigid metal anchors not more than **[24 inches (610 mm)] o.c.** If used with hollow masonry units, embed ends in mortar-filled cores.

3.7 CAVITY WALLS

- A. Bond wythes of cavity walls together using one of the following methods:
1. Individual Metal Ties: Provide ties as shown installed in horizontal joints, but not less than one metal tie for **[4.5 sq. ft. (0.42 sq. m)] [2.67 sq. ft. (0.25 sq. m)] [1.77 sq. ft. (0.16 sq. m)]** of wall area spaced not to exceed **[36 inches (914 mm)] [24 inches (610 mm)] [16 inches (406 mm)] o.c.** horizontally and **16 inches (406 mm) o.c.** vertically. Stagger ties in alternate courses. Provide additional ties within **12 inches (305 mm)** of openings and space not more than **36 inches (915 mm)** apart around perimeter of openings. At intersecting and abutting walls, provide ties at no more than **24 inches (610 mm) o.c.** vertically.
- a. Where bed joints of wythes do not align, use adjustable (two-piece) type ties.

- b. Where one wythe is of clay masonry and the other of concrete masonry, use adjustable (two-piece) type ties to allow for differential movement regardless of whether bed joints align.
 2. Masonry Joint Reinforcement: Installed in horizontal mortar joints.
 - a. Where bed joints of both wythes align, use [**ladder-type reinforcement extending across both wythes**] [**tab-type reinforcement**].
 - b. Where bed joints of wythes do not align, use adjustable (two-piece) type reinforcement[**with continuous horizontal wire in facing wythe attached to ties**].
 - c. Where one wythe is of clay masonry and the other of concrete masonry, use adjustable (two-piece) type reinforcement[**with continuous horizontal wire in facing wythe attached to ties**] to allow for differential movement regardless of whether bed joints align.
 3. Header Bonding: Provide masonry unit headers extending not less than **3 inches (76 mm)** into each wythe. Space headers not over [**8 inches (203 mm)**] [**12 inches (305 mm)**] clear horizontally and **16 inches (406 mm)** clear vertically.
 4. Masonry Veneer Anchors: Comply with requirements for anchoring masonry veneers.
 - B. Bond wythes of cavity walls together using bonding system indicated on Drawings.
 - C. Keep cavities clean of mortar droppings and other materials during construction. Bevel beds away from cavity, to minimize mortar protrusions into cavity. Do not attempt to trowel or remove mortar fins protruding into cavity.
 - D. Parge cavity face of backup wythe in a single coat approximately **3/8 inch (10 mm)** thick. Trowel face of parge coat smooth.
 - E. Coat cavity face of backup wythe to comply with Section 071113 "Bituminous Dampproofing."
 - F. Apply air barrier to face of backup wythe to comply with [**Section 072713 "Modified Bituminous Sheet Air Barriers."**] [**Section 072726 "Fluid-Applied Membrane Air Barriers."**]
 - G. Installing Cavity-Wall Insulation: Place small dabs of adhesive, spaced approximately **12 inches (300 mm)** o.c. both ways, on inside face of insulation boards, or attach with plastic fasteners designed for this purpose. Fit courses of insulation between wall ties and other confining obstructions in cavity, with edges butted tightly both ways. Press units firmly against inside wythe of masonry or other construction as shown.
 1. Fill cracks and open gaps in insulation with crack sealer compatible with insulation and masonry.
- ### 3.8 MASONRY-CELL INSULATION
- A. Pour granular insulation into cavities to fill void spaces. Maintain inspection ports to

show presence of insulation at extremities of each pour area. Close the ports after filling has been confirmed. Limit the fall of insulation to 1 story high, but not more than 20 feet (6 m).

- B. Install molded-polystyrene insulation units into masonry unit cells before laying units.

3.9 MASONRY JOINT REINFORCEMENT

- A. General: Install entire length of longitudinal side rods in mortar with a minimum cover of 5/8 inch (16 mm) on exterior side of walls, 1/2 inch (13 mm) elsewhere. Lap reinforcement a minimum of 6 inches (150 mm).
1. Space reinforcement not more than 16 inches (406 mm) o.c.
 2. Space reinforcement not more than 8 inches (203 mm) o.c. in foundation walls and parapet walls.
 3. Provide reinforcement not more than 8 inches (203 mm) above and below wall openings and extending 12 inches (305 mm) beyond openings[**in addition to continuous reinforcement**].
- B. Interrupt joint reinforcement at control and expansion joints unless otherwise indicated.
- C. Provide continuity at wall intersections by using prefabricated T-shaped units.
- D. Provide continuity at corners by using prefabricated L-shaped units.
- E. Cut and bend reinforcing units as directed by manufacturer for continuity at[**corners,**] returns, offsets, column fireproofing, pipe enclosures, and other special conditions.

3.10 ANCHORING MASONRY WORK

- A. General: Provide anchor devices of type indicated.
- B. Anchor masonry to floor slab 36" o.c. unless otherwise noted on drawings.
- C. Anchor masonry to structural members, (includes steel or concrete columns or beams and underside of metal deck), where masonry abuts or faces structural members to comply with the following:
1. Provide an open space not less than 1" in width between masonry and structural member, unless otherwise indicated. Keep open space free of mortar or other rigid materials.
 2. Anchor masonry to structural members with flexible anchors embedded in masonry joints and attached to structure.
 3. Space anchors not more than 24" o.c. vertically and 36" o.c. horizontally except at exterior masonry walls provide anchors 8 inch o.c. vertically and 24 inch o.c. horizontally unless otherwise indicated.
- D. Anchor single Wythe masonry veneer to metal studs with masonry veneer anchors to comply with the following requirements:

1. Fasten each anchor section through sheathing to metal studs with 2 metal fasteners of type indicated.
2. Embed tie section in masonry joints. Provide not less than 1" air space between back of masonry veneer wythe and face of sheathing.
3. Locate anchor section relative to course in which tie section is embedded to allow maximum vertical differential movement of tie up and down.
4. Space anchors not more than 16" o.c. vertically and 24" o.c. horizontally unless otherwise noted. At masonry opening locate first anchor not more than 8" above lintel. Install additional anchors within 1' 0" of openings and at intervals around perimeter not exceeding 3' 0".

3.11 ANCHORING MASONRY TO STRUCTURAL STEEL AND CONCRETE

- A. Anchor masonry to structural steel and concrete where masonry abuts or faces structural steel or concrete to comply with the following:

1. Provide an open space not less than [1 inch (25 mm)] [2 inches (50 mm)] wide between masonry and structural steel or concrete unless otherwise indicated. Keep open space free of mortar and other rigid materials.
2. Anchor masonry with anchors embedded in masonry joints and attached to structure.
3. Space anchors as indicated, but not more than 24 inches (610 mm) o.c. vertically and 36 inches (915 mm) o.c. horizontally.

3.12 ANCHORING MASONRY VENEERS

- A. Anchor masonry veneers to [wall framing] [and] [concrete and masonry backup] with [seismic] masonry-veneer anchors to comply with the following requirements:

1. Fasten [screw-attached] [and] [seismic] anchors [through sheathing to wall framing] [and] [to concrete and masonry backup] with metal fasteners of type indicated. Use two fasteners unless anchor design only uses one fastener.
2. Insert slip-in anchors in metal studs as sheathing is installed. Provide one anchor at each stud in each horizontal joint between sheathing boards.
3. Embed [tie sections] [connector sections and continuous wire] in masonry joints. Provide not less than 2 inches (50 mm) of air space between back of masonry veneer and face of sheathing.
4. Locate anchor sections to allow maximum vertical differential movement of ties up and down.
5. Space anchors as indicated, but not more than 18 inches (458 mm) o.c. vertically and 24 inches (610 mm) o.c. horizontally, with not less than 1 anchor for each 2 sq. ft. (0.2 sq. m) of wall area. Install additional anchors within 12 inches (305 mm) of openings and at intervals, not exceeding 8 inches (203 mm), around perimeter.
6. Space anchors as indicated, but not more than 16 inches (406 mm) o.c. vertically and [32 inches (813 mm)] [24 inches (610 mm)] o.c. horizontally with not less than 1 anchor for each [3.5 sq. ft. (0.33 sq. m)] [2.67 sq. ft. (0.25 sq. m)] of wall area. Install additional anchors within 12 inches (305 mm) of openings and at intervals, not exceeding 36 inches (914 mm), around perimeter.

3.13 CONTROL AND EXPANSION JOINTS

- A. General: Install control and expansion joint materials in unit masonry as masonry progresses. Do not allow materials to span control and expansion joints without provision to allow for in-plane wall or partition movement.
- B. Provide vertical control and isolation joints in masonry minimum 20'-0" O.C. unless indicated more often. Build in related items as the masonry work progresses.
- C. Construct joint equal to mortar joint width. Seal joint with sealer matching mortar color. Seal both sides of joint. Provide a compressible filler.
- D. Grout each CMU cell either side of control joint full height with number 4 re-bar or provide continuous tee shaped PVC control joint with CMU shaped to accept control joint.
- E. At exterior walls align control joint with a preformed siding joint.
- F. Horizontal joint reinforcement is not to extend thru control joint.
- G. Form control joints in concrete masonry [as follows] [using one of the following methods]:
 - 1. Fit bond-breaker strips into hollow contour in ends of CMUs on one side of control joint. Fill resultant core with grout and rake out joints in exposed faces for application of sealant.
 - 2. Install preformed control-joint gaskets designed to fit standard sash block.
 - 3. Install interlocking units designed for control joints. Install bond-breaker strips at joint. Keep head joints free and clear of mortar or rake out joint for application of sealant.
 - 4. Install temporary foam-plastic filler in head joints and remove filler when unit masonry is complete for application of sealant.
- H. Form expansion joints in brick as follows:
 - 1. Build flanges of metal expansion strips into masonry. Lap each joint 4 inches (100 mm) in direction of water flow. Seal joints below grade and at junctures with horizontal expansion joints if any.
 - 2. Build flanges of factory-fabricated, expansion-joint units into masonry.
 - 3. Build in compressible joint fillers where indicated.
 - 4. Form open joint full depth of brick wythe and of width indicated, but not less than [3/8 inch (10 mm)] [1/2 inch (13 mm)] <Insert minimum width> for installation of sealant and backer rod specified in Section 079200 "Joint Sealants."
- I. Provide horizontal, pressure-relieving joints by either leaving an air space or inserting a compressible filler of width required for installing sealant and backer rod specified in Section 079200 "Joint Sealants," but not less than [3/8 inch (10 mm)] <Insert minimum width>.
 - 1. Locate horizontal, pressure-relieving joints beneath shelf angles supporting

masonry.

3.14 LINTELS

- A. Install steel lintels where indicated.
- B. Provide **[concrete]** **[or]** **[masonry]** lintels where shown and where openings of more than **12 inches (305 mm)** for brick-size units and **24 inches (610 mm)** for block-size units are shown without structural steel or other supporting lintels.
- C. Provide minimum bearing of **8 inches (200 mm)** at each jamb unless otherwise indicated.

3.15 FLASHING, WEEP HOLES, CAVITY DRAINAGE, AND VENTS

- A. General: Install embedded flashing and weep holes in masonry at shelf angles, lintels, ledges, other obstructions to downward flow of water in wall, and where indicated. **[Install vents at shelf angles, ledges, and other obstructions to upward flow of air in cavities, and where indicated.]**
- B. Install flashing as follows unless otherwise indicated:
 - 1. Prepare masonry surfaces so they are smooth and free from projections that could puncture flashing. Where flashing is within mortar joint, place through-wall flashing on sloping bed of mortar and cover with mortar. Before covering with mortar, seal penetrations in flashing with adhesive, sealant, or tape as recommended by flashing manufacturer.
 - 2. At multiwythe masonry walls, including cavity walls, extend flashing through outer wythe, turned up a minimum of **[4 inches (100 mm)] [8 inches (200 mm)]**, and through inner wythe to within **1/2 inch (13 mm)** of the interior face of wall in exposed masonry. Where interior face of wall is to receive furring or framing, carry flashing completely through inner wythe and turn flashing up approximately **2 inches (50 mm)** on interior face.
 - 3. At multiwythe masonry walls, including cavity walls, extend flashing through outer wythe, turned up a minimum of **[4 inches (100 mm)] [8 inches (200 mm)]**, and **1-1/2 inches (38 mm)** into the inner wythe. **[Form 1/4-inch (6-mm) hook in edge of flashing embedded in inner wythe.]**
 - 4. At masonry-veneer walls, extend flashing through veneer, across air space behind veneer, and up face of sheathing at least **8 inches (200 mm)**; with upper edge tucked under building paper or building wrap, lapping at least **4 inches (100 mm)**.
 - 5. At lintels and shelf angles, extend flashing a minimum of **6 inches (150 mm)** into masonry at each end. At heads and sills, extend flashing **6 inches (150 mm)** at ends and turn up not less than **2 inches (50 mm)** to form end dams.
 - 6. Interlock end joints of ribbed sheet metal flashing by overlapping ribs not less than **1-1/2 inches (38 mm)** or as recommended by flashing manufacturer, and seal lap with elastomeric sealant complying with requirements in Section 079200 "Joint Sealants" for application indicated.

7. Install metal **[drip edges]** **[and]** **[sealant stops]** with ribbed sheet metal flashing by interlocking hemmed edges to form hooked seam. Seal seam with elastomeric sealant complying with requirements in Section 079200 "Joint Sealants" for application indicated.
 8. Install metal drip edges beneath flexible flashing at exterior face of wall. Stop flexible flashing **1/2 inch (13 mm)** back from outside face of wall and adhere flexible flashing to top of metal drip edge.
- C. Install metal flashing termination beneath flexible flashing at exterior face of wall. Stop flexible flashing **1/2 inch (13 mm)** back from outside face of wall and adhere flexible flashing to top of metal flashing termination.
1. Cut flexible flashing off flush with face of wall after masonry wall construction is completed.
- D. Install single-wythe CMU flashing system in bed joints of CMU walls where indicated to comply with manufacturer's written instructions. Install CMU cell pans with upturned edges located below face shells and webs of CMUs above and with weep spouts aligned with face of wall. Install CMU web covers so that they cover upturned edges of CMU cell pans at CMU webs and extend from face shell to face shell.
- E. Install reglets and nailers for flashing and other related construction where they are shown to be built into masonry.
- F. Install weep holes in head joints in exterior wythes of first course of masonry immediately above embedded flashing and as follows:
1. Use **[specified weep/vent products]** to form weep holes.
 2. Space weep holes maximum **[32 inches (800 mm)] [16inches (400 mm)]** o.c. for CMUs unless otherwise indicated.
 3. Space weep holes maximum 24 inches (600 mm) o.c. for brick unless otherwise indicated.
 4. Cover cavity side of weep holes with plastic insect screening at cavities insulated with loose-fill insulation.
- G. Place cavity drainage material in cavities to comply with configuration requirements for cavity drainage material in "Miscellaneous Masonry Accessories" Article.
- H. Install vents in head joints in exterior wythes at spacing indicated. Use **[specified weep/vent products]** to form vents.
1. Close cavities off vertically and horizontally with blocking in manner indicated. Install through-wall flashing and weep holes above horizontal blocking.
- 3.16 REINFORCED UNIT MASONRY INSTALLATION
- A. Temporary Formwork and Shores: Construct formwork and shores as needed to support reinforced masonry elements during construction.
1. Construct formwork to provide shape, line, and dimensions of completed

masonry as indicated. Make forms sufficiently tight to prevent leakage of mortar and grout. Brace, tie, and support forms to maintain position and shape during construction and curing of reinforced masonry.

2. Do not remove forms and shores until reinforced masonry members have hardened sufficiently to carry their own weight and other loads that may be placed on them during construction.

B. Placing Reinforcement: Comply with requirements in ACI 530.1/ASCE 6/TMS 602.

C. Grouting: Do not place grout until entire height of masonry to be grouted has attained enough strength to resist grout pressure.

1. Comply with requirements in ACI 530.1/ASCE 6/TMS 602 for cleanouts and for grout placement, including minimum grout space and maximum pour height.
2. Limit height of vertical grout pours to not more than [60 inches (1520 mm)] [12.67 ft. (3.86 m)] <Insert height>.

3.17 FIELD QUALITY CONTROL

A. Testing and Inspecting: [Owner will] Engage special inspectors to perform tests and inspections and prepare reports. Allow inspectors access to scaffolding and work areas, as needed to perform tests and inspections. Retesting of materials that fail to comply with specified requirements shall be done at Contractor's expense.

B. The Owner may employ a laboratory to perform quality assurance to assure that the contractor and his laboratory are performing in accordance with contract documents.

C. Inspections: [Level 1] [Level 2] special inspections according to the "International Building Code."

1. Begin masonry construction only after inspectors have verified proportions of site-prepared mortar.
2. Place grout only after inspectors have verified compliance of grout spaces and of grades, sizes, and locations of reinforcement.
3. Place grout only after inspectors have verified proportions of site-prepared grout.

D. Testing Prior to Construction: One set of tests.

E. Testing Frequency: One set of tests for each 5000 sq. ft. (464 sq. m) of wall area or portion thereof.

F. Clay Masonry Unit Test: For each type of unit provided, according to ASTM C 67 for compressive strength.

G. Concrete Masonry Unit Test: For each type of unit provided, according to ASTM C 140 for compressive strength.

H. Mortar Aggregate Ratio Test (Proportion Specification): For each mix provided, according to ASTM C 780.

- I. Mortar Test (Property Specification): For each mix provided, according to ASTM C 780. Test mortar for **[mortar air content] [and] [compressive strength]**.
- J. Grout Test (Compressive Strength): For each mix provided, according to ASTM C 1019.
- K. Prism Test: For each type of construction provided, according to ASTM C 1314 at **[7 days and at]28 days**.
- L. Report test results in writing and in form requested by the DEN Project Manager to DEN Project Manager and Contractor, on same day tests are made. Include on form or plan location of test, name of contractor and person performing test, laboratory performing test.
- M. Evaluation of Quality Control Tests: Masonry work, in absence of other indications of noncompliance with requirements, will be considered satisfactory if results from construction quality control tests comply with minimum requirements indicated.

3.18 PARGING

- A. Parge exterior faces of below-grade masonry walls, where indicated, in 2 uniform coats to a total thickness of **3/4 inch (19 mm)**. Dampen wall before applying first coat and scarify first coat to ensure full bond to subsequent coat.
- B. Use a steel-trowel finish to produce a smooth, flat, dense surface with a maximum surface variation of **1/8 inch per foot (3 mm per 300 mm)**. Form a wash at top of parging and a cove at bottom.
- C. Damp-cure parging for at least 24 hours and protect parging until cured.

3.19 REPAIRING, POINTING, AND CLEANING

- A. Remove and replace masonry units that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units. Install new units to match adjoining units; install in fresh mortar, pointed to eliminate evidence of replacement.
- B. Pointing: During the tooling of joints, enlarge voids and holes, except weep holes, and completely fill with mortar. Point up joints, including corners, openings, and adjacent construction, to provide a neat, uniform appearance. Prepare joints for sealant application, where indicated.
- C. In-Progress Cleaning: Clean unit masonry as work progresses by dry brushing to remove mortar fins and smears before tooling joints.
- D. Final Cleaning: After mortar is thoroughly set and cured, clean exposed masonry as follows:
 - 1. Remove large mortar particles by hand with wooden paddles and nonmetallic scrape hoes or chisels.

2. Test cleaning methods on sample wall panel; leave one-half of panel uncleaned for comparison purposes. Obtain DEN Project Manager's approval of sample cleaning before proceeding with cleaning of masonry.
 3. Protect adjacent stone and nonmasonry surfaces from contact with cleaner by covering them with liquid strippable masking agent or polyethylene film and waterproof masking tape.
 4. Wet wall surfaces with water before applying cleaners; remove cleaners promptly by rinsing surfaces thoroughly with clear water.
 5. Clean brick by bucket-and-brush hand-cleaning method described in BIA Technical Notes 20.
 6. Clean masonry with a proprietary acidic cleaner applied according to manufacturer's written instructions.
 7. Clean concrete masonry by cleaning method indicated in NCMA TEK 8-2A applicable to type of stain on exposed surfaces.
 8. Clean stone trim to comply with stone supplier's written instructions.
 9. Clean limestone units to comply with recommendations in ILI's "Indiana Limestone Handbook."
- E. Sealer: Provide sealer at all CMU exposed to the exterior, and on all split face CMU, on the side exposed. Two coats. Install per Manufacturer's recommendations, after cleaning. Do not install over wet or damp masonry.
- F. Protection: Provide final protection and maintain conditions in a manner acceptable to Installer and DEN Project Manager, which ensures unit masonry work being without damage and deterioration at time of substantial completion.

3.20 MASONRY WASTE DISPOSAL

- A. Salvageable Materials: Unless otherwise indicated, excess masonry materials are Contractor's property. At completion of unit masonry work, remove from Project site.
- B. Waste Disposal as Fill Material: Dispose of clean masonry waste, including excess or soil-contaminated sand, waste mortar, and broken masonry units, by crushing and mixing with fill material as fill is placed.
1. Crush masonry waste to less than **4 inches (100 mm)** in each dimension.
 2. Mix masonry waste with at least two parts of specified fill material for each part of masonry waste. Fill material is specified in Section 312000 "Earth Moving."
 3. Do not dispose of masonry waste as fill within **18 inches (450 mm)** of finished grade.
- C. Excess Masonry Waste: Remove excess clean masonry waste that cannot be used as fill, as described above, and other masonry waste, and legally dispose of off Owner's property.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

SECTION 042300 - GLASS UNIT MASONRY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

- 1. Glass block set in mortar.
- 2. Glass block set in silicone sealant.
- 3. Glass block set in glass-block grid systems.

- B. Related Sections:

- 1. Section 055000 "Metal Fabrications" for [**steel channel frames**] [**and**] [**loose steel lintels**] at glass unit masonry assemblies.
- 2. Section 085113 "Aluminum Windows" for aluminum windows installed within glass unit masonry assemblies.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design glass-block grid systems, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

- B. Structural Performance: Glass-block grid systems shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:

- 1. Wind Load: 115 mph with gust factor of 1.3, acting inward or outward.
- 2. Floor Live Load: <Insert load>.
- 3. Roof Live Load: <Insert load>.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
1. Product Data for Credit IEQ 4.1: For sealants used inside the weatherproofing system, documentation including printed statement of VOC content.
 2. Laboratory Test Reports for Credit IEQ 4: For sealants used inside the weatherproofing system, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: Show fabrication and installation details for **[glass unit masonry, including vertical and horizontal coursing, anchors, reinforcement, and expansion strips]** **[and]** **[glass-block grid systems]**.
- D. Samples for Initial Selection: **[Manufacturer's actual glass-block units]** **[glass-block grid material]** **[and]** **[joint materials involving color selection]**.
- E. Samples for Verification: **[Glass-block units]** **[glass-block grid material]** **[and]** **[joint materials involving color selection]**.
- F. Samples for Verification: Panels consisting of four full-size glass-block units with **[glass-block grid]** **[mortar]** **[and]** **[sealant]** joints.
1. Provide Samples for each form, pattern, and color of glass block and color of joint material **[and glass-block grid material]** indicated or selected by DIA Project Manager.
- G. Delegated-Design Submittal: For installed products indicated to comply with performance requirements and design criteria, documentation including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- 1.5 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For qualified professional engineer.
- 1.6 CLOSEOUT SUBMITTALS
- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
- 1.7 QUALITY ASSURANCE
- A. Source Limitations for Glass Block: Obtain **[each type and pattern of]** glass

block through single source from single manufacturer.

- B. Source Limitations for Accessory Materials: Obtain each [**cementitious material**] [**admixture**] [**and**] [**accessory component**] through single source from single manufacturer[**and each aggregate from single source or producer**].
- C. Fire-Rated Glass Unit Masonry Assemblies: Assemblies listed by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on testing at positive pressure according to NFPA 257.
- D. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Build mockup of typical [**exterior**] [**and**] [**interior**] panel, **48 by 48 inches** (1200 by 1200 mm) in size.
 - 2. Build mockup of typical [**exterior wall area**] [**and**] [**interior partition**] containing glass unit masonry assembly as shown on Drawings.
 - 3. Notify DIA Project Manager seven (7) days in advance of the dates and times when mockups will be constructed.
 - 4. Demonstrate the proposed range of aesthetic effects and workmanship.
 - 5. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
 - 6. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Store glass block in unopened cartons on elevated platforms, under cover, and in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied.
- B. Store glass-block grid materials in unopened cartons in an enclosed, dry location.
- C. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.
- D. Store aggregates where grading and other required characteristics can be maintained and contamination avoided.
- E. Store accessories, including metal items, to prevent corrosion and accumulation of dirt and oil.

1.9 PROJECT CONDITIONS

- A. Environmental Limitations for Sealants: Do not install sealants when ambient

and substrate temperatures are outside limits permitted by sealant manufacturer or below 40 deg F (5 deg C) or when joint substrates are wet.

- B. Weather Limitations: Proceed with installation of glass unit masonry assemblies only when ambient and material temperatures are 40 deg F (5 deg C) or higher.
 - 1. Maintain temperature in installation areas at 40 deg F (5 deg C) or above for 48 hours after installing.

1.10 SEQUENCING AND SCHEDULING

- A. Sequence and coordinate completion of glass unit masonry assemblies so sealants can be installed immediately after mortar has attained final set.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GLASS BLOCK

- A. Hollow Glass Block [**GB-<#>**]: Hollow units made from transparent glass, with manufacturer's standard edge coating.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Mulia Inc. (Distributed by Glass Blocks Unlimited and Mulia, Inc.).
 - b. Nippon Electric Glass Co., Ltd. (Distributed by Glass Blocks Unlimited and Nippon Electric Glass America, Inc.).
 - c. Oberland Glas AG, Bauglas Div.; Solaris Glasstein (Distributed by Glass Blocks Unlimited and North America Glass).
 - d. Pittsburgh Corning Corporation.
 - e. Seves (Distributed by Glass Blocks Unlimited, International Product Supply, and Seves North America).
 - f. Vegla Vereinigte Glaswerke GmbH (Saint-Gobain).
 - g. J. Weck GmbH (Distributed by Glashauss, Inc. and Glass Blocks Unlimited).
 - h. **<Insert manufacturer's name>**.
 - i. or approved equal.
 - 2. Glass Color: [**Colorless**] [**As indicated by manufacturer's designations**] [**Match DIA Project Manager's samples**] [**As selected by DIA Project Manager from manufacturer's full range**].

3. Pattern: Smooth, undistorted inner and outer faces.
4. Pattern: Wavy, light-diffusive design on inner faces, and smooth outer faces.
5. Pattern: Fluted, light-diffusive design, horizontal on one inner face, vertical on other, and smooth outer faces.
6. Pattern: Linear prismatic design, horizontal on one inner face, vertical on other, and smooth outer faces.
7. Pattern: Prismatic pyramid, light-diffusive design on inner faces, and smooth outer faces.
8. Pattern: As indicated by manufacturer's designation.
9. Pattern: Manufacturer's standard decorative pattern to match DIA Project Manager's sample.
10. Pattern: As selected by DIA Project Manager from manufacturer's full range.
11. Pattern: Custom decorative pattern to match DIA Project Manager's design.
12. Edge-Coating Color: **[White] [As indicated by manufacturer's designations] [Match DIA Project Manager's sample] [As selected by DIA Project Manager from manufacturer's full range].**
 - a. Provide one color throughout for each pattern indicated.
 - b. Provide multiple colors as indicated for each size and pattern.
13. Sizes: Manufacturer's standard sizes corresponding to nominal sizes indicated on Drawings.
14. Square-Block Size: **[5-3/4 inches (146 mm)] [7-3/4 inches (197 mm)]** square by **3-1/8 inches (79 mm)** thick.
15. Square-Block Size: **[5-3/4 inches (146 mm)] [7-3/4 inches (197 mm)] [11-3/4 inches (299 mm)]** square by **3-7/8 inches (98 mm)** thick.
16. Square-Block Size: **[4-1/2 inches (115 mm)] [7-1/2 inches (190 mm)] [9-13/16 inches (240 mm)] [11-13/16 inches (300 mm)]** square by **3-1/8 inches (80 mm)** thick.
17. Square-Block Size: **7-1/2 inches (190 mm)** square by **3-3/4 inches (95 mm)** thick.
18. Square-Block Size: **[7-1/2 inches (190 mm)] [11-13/16 inches (300 mm)]** square by **3-15/16 inches (100 mm)** thick.
19. Rectangular-Block Size: **[3-3/4 by 7-3/4 inches (95 by 197 mm)] [5-3/4 by 7-3/4 inches (146 by 197 mm)]** by **[3-1/8 inches (79 mm)] [3-7/8 inches (98 mm)]** thick.
20. Rectangular-Block Size: **4-1/2 by 9-13/16 inches (115 by 240 mm)** by **3-1/8 inches (80 mm)** thick.
21. Corner-Block Sizes and Shapes: Manufacturer's standard units designed to form **[90] [45] [22.5]**-degree corners when joined with straight units of same height.
22. End-Block Size and Shape: **[7-3/4 inches (197 mm) square] [3-3/4 by 7-3/4 inches (95 by 197 mm)]** by **[3-7/8 inches (98 mm)] [3-1/8 inches (79 mm)]** thick, actual size.
23. Top-Corner-Block Sizes and Shapes: End unit with top matching finished end and with rounded finished corner in manufacturer's standard size to match end units.

24. Thick-Faced Block: **[5-3/4 inches** (146 mm)] **[7-3/4 inches** (197 mm)] square by **3-7/8 inches** (98 mm) thick, actual size, with faces at least **3/4 inch** (19 mm) thick.
 25. Thick-Faced Block: **7-1/2 inches** (190 mm) square by **3-1/8 inches** (80 mm) thick, actual size, with faces at least **3/4 inch** (19 mm) thick.
- B. Solid Glass Block [**GB-#**]: Colorless, transparent, solid glass blocks with [**smooth**] [**stippled**] faces and manufacturer's standard edge coating.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Pittsburgh Corning Corporation.
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.
 2. Square-Block Size: **[5-3/4 inches** (146 mm)] **[7-3/4 inches** (197 mm)] **[11-3/4 inches** (299 mm)] square by **[1-1/2 inches** (38 mm)] **[3 inches** (76 mm)] thick, actual size.
 3. Rectangular-Block Size: **[3 by 7-3/4 inches** (76 by 197 mm)] **[5-3/4 by 7-3/4 inches** (146 by 197 mm)] by **[1-1/2 inches** (38 mm)] **[3 inches** (76 mm)] thick, actual size.
- C. Glass-Paver Block [**GB-#**]: Transparent, colorless, pressed glass units, with a smooth top surface and a decorative, light-diffusing, patterned bottom surface; **[6 inches** (152 mm) square by **1 inch** (25 mm)] **[4-3/4 inches** (120 mm) square by **1-9/16 inches** (40 mm)] **[6-5/16 inches** (160 mm) square by **1-3/16 inches** (30 mm)] **[7-1/2 inches** (190 mm) square by **1-1-15/16 inches** (50 mm)] **[7-1/2 inches** (190 mm) square by **2-3/4 inches** (70 mm)] **[7-7/8 inches** (200 mm) square by **7/8 inch** (22 mm)] **[7-7/8 inches** (200 mm) square by **1-15/16 inches** (50 mm)] **[4-5/8 inches** (117 mm) in diameter by **2-3/8 inches** (60 mm)] thick, actual size.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Oberland Glas AG, Bauglas Div.; Solaris Glasstein (Distributed by Glass Blocks Unlimited and North America Glass).
 - b. Pittsburgh Corning Corporation.
 - c. L. E. Smith Glass Company.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.

2.2 GLASS-BLOCK GRID SYSTEMS

- A. General: Aluminum extrusions complying with **ASTM B 221** (ASTM B 221M), Alloy 6063-T6 or Alloy 6463-T6, forming a grid system and frame designed for application indicated.
1. Manufacturers: Subject to compliance with requirements, provide

products by one of the following:

- a. IBP; a Berkshire Hathaway company.
 - b. Innovative Building Products, Inc.
 - c. <Insert manufacturer's name>.
 - d. or approved equal.
- B. Window and Wall System: Aluminum T-bar grid with tubular frame and vinyl glass-block boots.
1. Finish: **[White] [Satin aluminum] [Bronze] [Taupe] [Gold] [Silver] [Black] [As selected by DIA Project Manager from manufacturer's full range]**.
 2. Finish: Custom-color, polyester powder-coat finish complying with AAMA 2604 and matching DIA Project Manager's sample.
 3. Glass-Block Size: **7-3/4 inches** (197 mm) square by **3-1/8 inches** (79 mm) thick.
 4. Provide **[self-flashing]** aluminum exterior frame covers with vinyl thermal break.
 5. Provide extruded-aluminum frame receivers (corner starters) at heads, jambs, and sills.
 6. Provide extruded-aluminum mullions where indicated.
 7. Provide aluminum trim and closures as indicated.
- C. Skylight System: Aluminum T-bar grid with tubular frame; vinyl thermal break; extruded-aluminum, curb-mounting frame and counterflashing; and vinyl glass-block boots.
1. Finish: **[White] [Satin aluminum] [Bronze] [Taupe] [Gold] [Silver] [Black] [As selected by DIA Project Manager from manufacturer's full range]**.
 2. Finish: Custom-color, polyester powder-coat finish; complying with AAMA 2604 and Glass-Block Size: **7-3/4 inches** (197 mm) square by **3-1/8 inches** (79 mm) thick.
- D. Floor System: Aluminum T-bar grid and frame with glass-block boots made from UV- and oil-resistant EPDM.
1. Finish: Class II, clear-anodized finish complying with AAMA 611.
 2. Glass-Paver-Block Size: **6 inches** (152 mm) square by **1 inch** (25 mm) thick.
- E. Sealant: Product recommended by glass-block grid system manufacturer.
1. Sealants used inside the weatherproofing system shall have a VOC content of **[250] <Insert value>** g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 2. Sealants used inside the weatherproofing system shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.3 MORTAR MATERIALS

- A. Portland Cement: ASTM C 150, Type I or Type II. Provide natural color or white cement as required to produce mortar color indicated.
- Where joints are indicated to be raked out and pointed, gray cement may be used for setting mortar.
- B. Hydrated Lime: ASTM C 207, Type S.
- C. Portland Cement-Lime Mix: Packaged blend of portland cement and hydrated lime containing no other ingredients.
- D. Masonry Cement: ASTM C 91.
- Products: Subject to compliance with requirements, provide products by one of the following:
 - Capital Materials Corporation; Flamingo Color Masonry Cement.
 - Cemex S.A.B. de C.V.; [**Brikset Type N**] [**Citadel Type S**] [**Dixie Type S**] [**Kosmortar Type N**] [**Richmortar**] [**Victor Plastic Cement**].
 - Essroc, Italcementi Group; [**Brixment**] [**or**] [**Velvet**].
 - Glen-Gery Corporation.
 - Holcim (US) Inc.; [**Mortamix Masonry Cement**] [**Rainbow Mortamix Custom Buff Masonry Cement**] [**White Mortamix Masonry Cement**].
 - Lafarge North America Inc.; [**Magnolia Masonry Cement**] [**Lafarge Masonry Cement**] [**Trinity White Masonry Cement**].
 - Lehigh Cement Company; [**Lehigh Masonry Cement**] [**Lehigh White Masonry Cement**].
 - National Cement Company, Inc.; Coosa Masonry Cement.
 - <**Insert manufacturer's name; product name or designation**>.
 - Riverton Corporation (The).
 - <**Insert manufacturer**>
 - or approved equal.
- E. Mortar Pigments: Natural and synthetic iron oxides and chromium oxides, compounded for use in mortar mixes and complying with ASTM C 979. Use only pigments with a record of satisfactory performance in masonry mortar.
- Products: Subject to compliance with requirements, provide products by one of the following:
 - Davis Colors; True Tone Mortar Colors.
 - Lanxess Corporation; Bayferrox Iron Oxide Pigments.
 - Solomon Colors, Inc.; SGS Mortar Colors.
 - <**Insert manufacturer's name; product name or designation**>.
 - or approved equal.
- F. Colored Cement Product: Packaged blend made from [**portland cement and**

hydrated lime] [or] [masonry cement] and mortar pigments, all complying with specified requirements, and containing no other ingredients.

1. Products: Subject to compliance with requirements, provide products by one of the following:

a. Colored Portland Cement-Lime Mix:

- 1) Capital Materials Corporation; Riverton Portland Cement Lime Custom Color.
- 2) Holcim (US) Inc.; Rainbow Mortamix Custom Color Cement/Lime.
- 3) Lafarge North America Inc.; Eaglebond Portland & Lime.
- 4) Lehigh Cement Company; Lehigh Custom Color Portland/Lime Cement.
- 5) **<Insert manufacturer's name; product name or designation>**.
- 6) or approved equal.

b. Colored Masonry Cement:

- 1) Capital Materials Corporation; Flamingo Color Masonry Cement.
- 2) Cemex S.A.B. de C.V.; Richcolor Masonry Cement.
- 3) Essroc, Italcementi Group; Brixment-in-Color.
- 4) Holcim (US) Inc.; Rainbow Mortamix Custom Color Masonry Cement.
- 5) Lafarge North America Inc.; U.S. Cement Custom Color Masonry Cement.
- 6) Lehigh Cement Company; Lehigh Custom Color Masonry Cement.
- 7) National Cement Company, Inc.; Coosa Masonry Cement.
- 8) **<Insert manufacturer's name; product name or designation>**.
- 9) or approved equal.

2. Formulate blend as required to produce color indicated or, if not indicated, as selected from manufacturer's standard colors.

3. Pigments shall not exceed 10 percent of portland cement by weight.

4. Pigments shall not exceed 5 percent of masonry cement by weight.

G. Aggregate: ASTM C 144, with 100 percent passing **No. 8** (2.36-mm) sieve.

1. For **[pointing mortar] [and] [joints narrower than 1/4 inch (6 mm)]**, use aggregate graded with 100 percent passing **No. 16** (1.18-mm) sieve.

2. White Aggregates: Natural white sand or crushed white stone.

3. Colored Aggregates: Natural sand or crushed stone of color necessary to produce required mortar color.

H. Water-Repellent Admixture: Manufacturer's standard dry mixture of stearates, water-reducing agents, and fine aggregates intended to reduce capillarity in

mortar.

1. Products: Subject to compliance with requirements, provide products by one of the following:
 - a. BASF Aktiengesellschaft; Hydrocide Powder.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
- I. Water-Repellent Admixture: Liquid polymeric water-repellent mortar admixture that does not reduce flexural bond strength of mortar.
 1. Products: Subject to compliance with requirements, provide products by one of the following:
 - a. ACM Chemistries; RainBloc for Mortar.
 - b. BASF Aktiengesellschaft; Rheopel Mortar Admixture.
 - c. Grace Construction Products, W. R. Grace & Co. - Conn.; Dry-Block Mortar Admixture.
 - d. **<Insert manufacturer's name; product name or designation>**.
 - e. or approved equal.
- J. Water: Potable.

2.4 GLASS UNIT MASONRY ACCESSORIES

- A. Panel Reinforcement: Ladder-type units, butt welded, not lapped and welded; complying with ASTM A 951 in straight lengths of not less than **10 feet** (3 m), and as follows:
 1. Interior Walls: Hot-dip galvanized, carbon-steel wire.
 2. Exterior Walls: **[Hot-dip galvanized, carbon] [Stainless]**-steel wire.
 3. Wire Size: W1.7 or **0.148-inch** (3.8-mm) diameter.
 4. Width: **[2 inches** (50 mm)] **[1-5/8 inches** (40 mm)].
 5. Spacing of Cross Rods: Not more than **16 inches** (407 mm) apart.
- B. Panel Anchors: Glass-block manufacturer's standard perforated steel strips, **0.0359 inch** (0.9 mm) by **1-3/4 inches** (44 mm) wide by **24 inches** (600 mm) long, hot-dip galvanized after fabrication to comply with ASTM A 153/A 153M.
- C. Mortarless Installation System: System of **[aluminum] [or] [plastic]** perimeter framing, anchors, and spacers designed for installing glass block with sealant-filled joints.
 1. Products: Subject to compliance with requirements, provide products by one of the following:
 - a. Coleman Enterprises; SwiftTrack Glass Block System.
 - b. Pittsburgh Corning Corporation; **[ProVantage] [Thinline Track Spacer System]**.

- c. J. Weck GmbH (Distributed by Glashaus, Inc. and Glass Blocks Unlimited); BlokUp.
 - d. <Insert manufacturer's name; product name or designation>.
 - e. or approved equal.

- D. Fasteners, General: Unless otherwise indicated, provide Type 304 or Type 316 stainless-steel fasteners at exterior walls and zinc-plated fasteners with coating complying with ASTM B 633, Class Fe/Zn 5, at interior walls. Select fasteners for type, grade, and class required.

- E. Carbon-Steel Bolts: **ASTM A 307, Grade A** (ASTM F 568M, Property Class 4.6) with hex nuts, **ASTM A 563** (ASTM A 563M) if applicable.

- F. Stainless-Steel Bolts: **ASTM F 593** (ASTM F 738M), Alloy Group **1 or 2** (A1 or A4) with hex nuts, **ASTM F 594** (ASTM F 836M) if applicable.

- G. Postinstalled Anchors: Provide [**metal expansion sleeve anchors**] [**or**] [**metal impact expansion anchors**] of type and size necessary for installation indicated, according to manufacturer's written instructions unless otherwise indicated.

- H. Asphalt Emulsion: Cold-applied asphalt emulsion complying with ASTM D 1187 or ASTM D 1227.

- I. Mineral-Fiber Expansion Strips: Comply with requirements of fire-rated assembly listing and glass-block manufacturer.
 - 1. Use for fire-rated assemblies.

- J. Plastic-Foam Expansion Strips: Polyethylene foam complying with requirements of glass-block manufacturer; **3/8 inch** (9 mm) thick by [**4 inches** (100 mm)] [**3-1/2 inches** (89 mm)] [**2-1/2 inches** (63 mm)] wide.
 - 1. Use plastic-foam expansion strips for[**fire-rated and**] non-fire-rated assemblies.

- K. Sealants: Manufacturer's standard chemically curing, elastomeric sealants of base polymer and characteristics indicated below that comply with applicable requirements in Section 079200 "Joint Sealants."
 - 1. Single-component, [**neutral**] [**acid**]-curing silicone sealant[**ES-<#>**].
 - 2. Single-component, nonsag urethane sealant[**ES-<#>**].
 - 3. Multicomponent, nonsag polysulfide sealant[**ES-<#>**].
 - 4. Sealants used inside the weatherproofing system shall have a VOC content of [**250**] <Insert value> g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - 5. Sealants used inside the weatherproofing system shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- L. Sealant Accessories: Provide sealant accessories, including primers, bond-breaker tape, and cylindrical sealant backing, that comply with applicable requirements in Section 079200 "Joint Sealants."

2.5 MORTAR MIXES

- A. General: Do not use admixtures, including pigments, air-entraining agents, accelerators, retarders, or antifreeze compounds unless otherwise indicated.
 - 1. Do not use calcium chloride in mortar.
 - 2. For mortar in exterior panels, use water-repellent admixture according to admixture manufacturer's written instructions.
 - 3. For pointing mortar in exterior panels, use water-repellent admixture according to admixture manufacturer's written instructions.
 - 4. Limit cementitious materials in mortar to portland cement and lime.
- B. Mortar for Glass Unit Masonry Assemblies: Provide mortar, mixed according to glass-block manufacturer's listing with testing and inspecting agency, for fire-resistance rating indicated.
- C. Mortar for Glass Unit Masonry Assemblies: Comply with ASTM C 270, Proportion Specification for Type S mortar.
 - 1. Combine and thoroughly mix cementitious materials, water, and aggregates in a mechanical batch mixer unless otherwise indicated. Mix mortar to produce a stiff but workable consistency that is drier than mortar for brick or concrete masonry. Discard mortar when it has reached initial set.
- D. Pigmented Mortar: Use colored cement product[**or select and proportion pigments with other ingredients to produce color required. Do not add pigments to colored cement products**].
 - 1. Pigments shall not exceed 10 percent of portland cement by weight.
 - 2. Pigments shall not exceed 5 percent of masonry cement by weight.
 - 3. Mix to match DIA Project Manager's sample.
- E. Colored-Aggregate Mortar: Produce required mortar color by using colored aggregates and natural color or white cement as necessary to produce required mortar color.
 - 1. Mix to match DIA Project Manager's sample.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine sills, jambs, and heads surrounding glass unit masonry assemblies for compliance with requirements for installation tolerances and other

conditions affecting performance.

1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Advise installers of other construction about specific requirements for placement of dovetail slots and other inserts required to anchor and support glass unit masonry assemblies. Furnish installers of other construction with drawings or templates showing locations of these items.

3.3 INSTALLING GLASS BLOCK WITH MORTAR

- A. Apply a heavy coat of asphalt emulsion to sill and adhere expansion strips to jambs and heads with asphalt emulsion. Allow asphalt emulsion to dry before placing mortar. Trim expansion strips to width required to fit glass block and to full lengths of heads and jambs.
- B. Set glass block with completely filled bed and head joints, with no furrowing, accurately spaced and coordinated with other construction. Maintain [**1/4-inch** (6-mm)] [**3/8-inch** (10-mm)] exposed joint widths unless otherwise indicated.
- C. Install panel reinforcement in horizontal joints at spacing indicated and continuously from end to end of panels; comply with the following requirements:
 1. Vertical Spacing of Panel Reinforcement for Exterior Panels: [**Every other course but not more than 16 inches** (407 mm) o.c., starting with first course above sill] [**As indicated on Drawings**].
 2. Vertical Spacing of Panel Reinforcement for Interior Panels: [**Not more than 16 inches** (407 mm) o.c.] [**As indicated on Drawings**].
 3. Do not bridge expansion joints with panel reinforcement.
 4. Place panel reinforcement in joints immediately above and below all openings within glass unit masonry assemblies.
 5. Lap panel reinforcement not less than **6 inches** (150 mm) if more than one length is necessary.
 6. Embed panel reinforcement in mortar bed by placing lower half of mortar bed first, pressing panel reinforcement into place and covering with upper half of mortar bed.
- D. Install panel anchors at locations indicated and in same horizontal joints where panel reinforcement occurs. Extend panel anchors at least **12 inches** (300 mm) into joints, and bend within expansion joints at edges of panels and across the head. Attach panel anchors as follows:
 1. For in-place unit masonry assemblies and concrete, attach panel anchors with **1/4-inch-** (6-mm-) diameter bolt-size, postinstalled anchors, two per panel anchor.

2. For new unit masonry assemblies, embed other ends of panel anchors, after bending portions crossing expansion joint, in horizontal mortar joints closest in elevation to joints in glass unit masonry assemblies containing panel anchors.
 3. For steel members, attach panel anchors with **1/4-inch-** (6-mm-) diameter through bolts and nuts or bolts in tapped holes in steel members.
- E. Use rubber mallet to tap units into position. Do not use steel tools, and do not allow units to come into contact with metal accessories and frames.
- F. Use **[plastic spacers]** **[or]** **[temporary wedges]** in mortar joints to produce uniform joint widths and to prevent mortar from being squeezed out of joints.
1. If temporary wedges are used, remove them after mortar has set and fill voids with mortar.
- G. Keep expansion joints free of mortar.
- H. Rake out joints indicated to be pointed to a uniform depth sufficient to accommodate pointing material, but not less than joint width.
1. If temporary wedges are used, remove them before raking out and pointing joints.
 2. Point joints at **[exterior face]** **[both faces]** of exterior panels with mortar.
 3. Point joints at **[exterior face]** **[both faces]** of exterior panels with sealant.
 4. Point joints at both faces of exterior and interior panels with sealant.
- I. Point joints with mortar by filling raked joints and voids. Place and compact pointing mortar in layers not more than **3/8 inch** (10 mm) thick. Compact each layer thoroughly and allow to become thumbprint hard before applying next layer.
1. Tool exposed joints slightly concave when pointing mortar is thumbprint hard. Use a smooth plastic jointer larger than joint width.
- J. Point joints by filling with sealant to comply with requirements in Section 079200 "Joint Sealants."
- K. Clean glass unit masonry assemblies as work progresses. Remove mortar fins and smears immediately, using a clean, wet sponge or a scrub brush with stiff fiber bristles. Do not use harsh cleaners, acids, abrasives, steel wool, or wire brushes when removing mortar or cleaning glass unit masonry assemblies.
- L. Install sealant at jambs, heads, mullions and other locations indicated. Prepare joints, including installation of primer and bond-breaker tape or cylindrical sealant backing, and apply elastomeric sealants to comply with requirements in Section 079200 "Joint Sealants."
- M. Construction Tolerances: Set glass block to comply with the following tolerances:

1. Variation from Plumb: For vertical lines and surfaces, do not exceed [**1/4 inch in 10 feet** (6 mm in 3 m), **3/8 inch in 20 feet** (9 mm in 6 m), **or 1/2 inch in 40 feet** (12 mm in 12 m)] [**1/8 inch in 10 feet** (3 mm in 3 m), **1/4 inch in 20 feet** (6 mm in 6 m), **or 3/8 inch in 40 feet** (9 mm in 12 m)] or more.
2. Variation from Level: For bed joints, and other conspicuous lines, do not exceed **1/8 inch in 10 feet** (3 mm in 3 m), **1/4 inch in 20 feet** (6 mm in 6 m) or **1/2 inch in 40 feet** (12 mm in 12 m) or more.
3. Variation of Location in Plan: For location of elements in plan do not vary from that indicated by more than plus or minus **1/4 inch** (6 mm).
4. Variation in Mortar-Joint Thickness: Do not vary from joint thickness indicated by more than plus or minus **1/16 inch** (1.5 mm).
5. For faces of adjacent exposed units, do not vary from flush alignment by more than **1/16 inch** (1.5 mm).

3.4 INSTALLING GLASS BLOCK WITH SEALANT

- A. General: Install mortarless glass-block systems in strict accordance with manufacturer's written instructions.
 1. Fasten frames and anchors or clips securely to surrounding construction.
 2. Shim starting track as needed to make it level.
 3. Adhere glass block to starting track and spacers with silicone sealant.
- B. After glass blocks are installed, apply sealant to completely fill channel around each glass block, and tool flush with exterior surface. Remove excess sealant and smears.

3.5 GLASS-BLOCK GRID SYSTEM INSTALLATION

- A. General: Install glass-block grid systems in strict accordance with manufacturer's written instructions.
- B. Window and Wall System Installation: Assemble grid system, apply continuous sealant bead to back of window Z-bar, place in position, adjust as needed to make grid level and plumb, and fasten to substrate.
 1. Insert glass blocks into vinyl glass-block boots and carefully insert into grid from exterior side. Install blocks firmly against T-bars without deforming boots.
 2. Apply sealant to completely fill channel around each glass block, and tool flush with exterior surface. Remove excess sealant and smears.
- C. Skylight System Installation: Assemble grid system, apply continuous sealant bead to top of supporting curb, place in position, adjust as needed to bring grid true to line, and fasten to substrate.
 1. Insert glass blocks into vinyl glass-block boots and carefully insert into grid from exterior side. Install blocks firmly against T-bars without deforming boots.

2. Apply sealant to completely fill channel around each glass block, and tool flush with exterior surface. Remove excess sealant and smears.
- D. Floor System Installation: Assemble grid system in position, adjusting supports as needed to level grid as system is assembled, and fasten to substrate.
1. Insert glass blocks into vinyl glass-block boots and install into grid. Install blocks flush with adjoining floor surfaces and aluminum grid.
 2. Apply sealant to completely fill channel around each glass block and joints of aluminum grid. Tool flush with exterior surface and remove excess sealant and smears.

3.6 CLEANING

- A. On surfaces adjacent to glass unit masonry assemblies, remove mortar, sealants, and other residue resulting from glass-block installation, in a manner approved by manufacturers of materials involved.
- B. Remove excess sealants with commercial solvents according to sealant manufacturer's written instructions. Exercise care not to damage sealant in joints.
- C. Perform final cleaning of glass unit masonry assemblies when surface is not exposed to direct sunlight. Start at top of panel using generous amounts of clean water. Remove water with clean, dry, soft cloths; change cloths frequently to eliminate dried mortar particles and aggregate.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 042300

SECTION 044200 - EXTERIOR STONE CLADDING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Dimension stone panels set with individual anchors.
2. Dimension stone panels mechanically anchored on steel trusses.
3. Dimension stone panels mechanically anchored on steel strongback frames.
4. Dimension stone panels mechanically anchored on steel stud frames.
5. Dimension stone panels mechanically anchored (field installed) on a metal-grid system.
6. Dimension stone panels set in architectural precast concrete.
7. Dimension stone panels glazed into aluminum curtain-wall framing system.
8. Dimension stone trim units, including [**bands**] [**copings**] [**sills**] [**jamb**s] [**and**] [**soffits**].
9. Dimension stone with carving or inscriptions.

B. Related Requirements:

1. Section 033000 "Cast-in-Place Concrete" for installing [**inserts**] [**and**] [**weld plates**] in concrete for anchoring dimension stone cladding.
2. Section 034500 "Precast Architectural Concrete" for setting dimension stone panels in architectural precast concrete units.
3. Section 042000 "Unit Masonry" [**for installing inserts in unit masonry for anchoring dimension stone cladding**] [**and**] [**for stone trim in unit masonry walls**].
4. Section 054000 "Cold-Formed Metal Framing" for steel stud frames supporting dimension stone cladding.
5. Section 079200 "Joint Sealants" for sealing joints in dimension stone cladding system with elastomeric sealants.
6. Section 084413 "Glazed Aluminum Curtain Walls" for installing dimension stone panels in aluminum curtain-wall systems.
7. Section 096340 "Stone Flooring" for dimension stone used as paving and flooring.
8. Section 097513 "Stone Paneling" for dimension stone applied as trim and paneling on building interiors.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 ALLOWANCES

- A. **[Preconstruction] [and] [quality-control]** testing is part of testing and inspecting allowance.

1.4 DEFINITIONS

- A. Definitions contained in ASTM C 119 apply to this Section.
- B. Dimension Stone Cladding Assembly: An exterior wall covering system consisting of dimension stone panels[**and trim**] together with anchors, **[backup structure,] [secondary weather barrier (sheathing),] [mortar,] [adhesives,]** fasteners, and sealants used to secure the stone to the building structure and to produce a weather-resistant covering.
 - 1. Backup structure includes **[steel trusses] [steel strongback frames] [steel stud frames] [metal-grid system] [and] [miscellaneous steel framing required to secure stone to the building structure].**
- C. IBC: International Building Code.

1.5 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DIA Project Manager] <Insert location>**.

1.6 ACTION SUBMITTALS

- A. Product Data: For each[**variety of stone,**] stone accessory, and manufactured product.
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating distance to Project, cost for each regional material, and fraction by weight that is considered regional.
- C. Shop Drawings: Show fabrication and installation details for dimension stone cladding assembly, including dimensions and profiles of stone units.

1. Show locations and details of joints both within dimension stone cladding assembly and between dimension stone cladding assembly and other construction.
 2. Include details of **[mortar joints] [sealant joints] [and] [mortar joints pointed with sealant]**.
 3. Show locations and details of anchors **[and backup structure]**.
 4. Show direction of veining, grain, or other directional pattern.
 5. Include large-scale shaded elevations and details of decorative surfaces and inscriptions.
- D. Samples for Initial Selection: For joint materials involving color selection.
- E. Stone Samples for Verification: Sets for each variety, color, and finish of stone required; not less than **12 inches** (300 mm) square.
1. Sets shall consist of at least **[two] [three] [four] [five] <Insert number>** Samples, exhibiting extremes of the full range of color and other visual characteristics expected and will establish the standard by which stone will be judged.
- F. Colored Pointing Mortar Samples for Verification: For each color required. Make Samples using same sand and mortar ingredients to be used on Project.
- G. Sealant Samples for Verification: For each type and color of joint sealant required.
- H. Delegated- Design Submittal: For dimension stone cladding assembly.

1.7 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For **[Installer] [fabricator] [professional engineer] [and] [testing agency]**.
- B. Welding certificates.
- C. Material Test Reports:
1. Stone Test Reports: For **[each]** stone variety proposed for use on Project, by a qualified testing agency, indicating compliance with required physical properties, other than abrasion resistance, according to referenced ASTM standards. Base reports on testing done within previous **[five] [three] <Insert number>** years.
 2. For metal components, by a qualified testing agency, indicating chemical and physical properties of metal.
 3. Sealant Compatibility and Adhesion Test Report: From sealant manufacturer complying with requirements in Section 079200 "Joint Sealants" and indicating that sealants will not stain or damage stone. Include interpretation of test results and recommendations for primers and substrate preparation needed for adhesion.

- D. Preconstruction test reports.
- E. Source quality-control reports.
- F. Cold-Weather Procedures: Detailed description of methods, materials, and equipment to be used to comply with cold-weather requirements.

1.8 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.9 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Dimension Stone Units: Furnish **<Insert number>** finished stone panels **<Insert required dimensions>** for each finish and variety of stone specified.

1.10 QUALITY ASSURANCE

- A. Fabricator Qualifications: Shop that employs skilled workers who custom fabricate dimension stone cladding assemblies similar to that required for this Project and whose products have a record of successful in-service performance.
- B. Installer Qualifications: A firm or individual experienced in installing dimension stone cladding assemblies similar in material, design, and extent to that indicated for this Project, whose work has a record of successful in-service performance.
- C. Testing Agency Qualifications: Qualified according to ASTM E 329 for testing indicated.
- D. Welding Qualifications: Qualify procedures and personnel according to [**AWS D1.1/D1.1M, "Structural Welding Code - Steel"**] [**AWS D1.2/D1.2M, "Structural Welding Code - Aluminum"**] [**AWS D1.3, "Structural Welding Code - Sheet Steel"**].
- E. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Build mockups of typical exterior wall area [**as shown on Drawings**] [**not less than 72 inches** (1800 mm) **long by 48 inches** (1200 mm) **high**] [**not less**

than 15 feet (4.5 m) long by 10 feet (3 m) high].

- a. Include typical components, attachments to building structure, and methods of installation.
 - b. Include window opening with stone [returns] [trim].
 - c. Include sealant-filled joint complying with requirements in Section 079200 "Joint Sealants."
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DIA Project Manager specifically approves such deviations in writing.
 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.11 PRECONSTRUCTION TESTING

- A. Preconstruction Stone Testing: **[Owner will engage] [Engage]** a qualified independent testing agency to perform preconstruction testing.
 1. Retesting of materials that fail to meet specified requirements shall be done at Contractor's expense.
 2. Furnish test specimens that are representative of materials proposed for incorporation into the Work.
 3. Physical Property Tests: For **[each]** stone variety proposed for use on Project, tested for compliance with physical property requirements, other than abrasion resistance, according to referenced ASTM standards.
 4. Flexural Strength Tests: For **[each combination of]** stone variety, thickness, orientation of cut, and finish, proposed for use on Project, tested according to ASTM C 880/C 880M, in both wet and dry conditions.
 5. Anchorage Tests: For **[each combination of]** stone variety, orientation of cut, finish, and anchor type proposed for use on Project, tested according to ASTM C 1354/C 1354M.
 6. Anchoring System Mockup Test: For stone anchoring system, tested according to ASTM C 1201/C 1201M, Procedure B, with a maximum test load equal to 3 times the design load. Build laboratory mockup at testing agency facility; use personnel, materials, and methods of construction that will be used at Project site. Mockup shall consist of one panel **<Insert dimensions>** in size.
- B. Preconstruction Sealant Compatibility and Adhesion Testing: Submit to joint-sealant manufacturers, for compatibility and adhesion testing according to sealant manufacturer's standard testing methods and Section 079200 "Joint Sealants" Samples of materials that will contact or affect joint sealants.
- C. Preconstruction Field Testing of Sealants: Before installing joint sealants, field test their adhesion to joint substrates according to Section 079200 "Joint Sealants."

1.12 DELIVERY, STORAGE, AND HANDLING

- A. Store and handle stone and related materials to prevent deterioration or damage due to moisture, temperature changes, contaminants, corrosion, breaking, chipping, and other causes.
 - 1. Lift stone with wide-belt slings; do not use wire rope or ropes that might cause staining. Move stone, if required, using dollies with cushioned wood supports.
 - 2. Store stone on wood skids or pallets with nonstaining, waterproof covers. Arrange to distribute weight evenly and to prevent damage to stone. Ventilate under covers to prevent condensation.
- B. Mark stone units, on surface that will be concealed after installation, with designations used on Shop Drawings to identify individual stone units. Orient markings on vertical panels so that they are right side up when units are installed.
- C. Deliver sealants to Project site in original unopened containers labeled with manufacturer's name, product name and designation, color, expiration period, pot life, curing time, and mixing instructions for multicomponent materials.
- D. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.
- E. Store aggregates in locations where grading and other required characteristics can be maintained and where contamination can be avoided.

1.13 FIELD CONDITIONS

- A. Protect dimension stone cladding during erection by doing the following:
 - 1. Cover tops of dimension stone cladding installation with nonstaining, waterproof sheeting at end of each day's work. Cover partially completed structures when work is not in progress. Extend cover a minimum of **24 inches** (600 mm) down both sides and hold securely in place.
 - 2. Prevent staining of stone from mortar, grout, sealants, and other sources. Immediately remove such materials without damaging stone.
 - 3. Protect base of walls from rain-splashed mud and mortar splatter by coverings spread on ground and over wall surface.
 - 4. Protect sills, ledges, and projections from mortar and sealant droppings.
- B. Cold-Weather Requirements: Do not use frozen materials or materials mixed or coated with ice or frost. Remove and replace dimension stone cladding damaged by frost or freezing conditions. Comply with cold-weather construction and protection requirements for masonry contained in ACI 530.1/ASCE 6/TMS 602.

- C. Hot-Weather Requirements: Comply with hot-weather construction and protection requirements for masonry contained in ACI 530.1/ASCE 6/TMS 602.
- D. Environmental Limitations for Sealants: Do not install sealants when ambient and substrate temperatures are outside limits permitted by sealant manufacturer or below 40 deg F (5 deg C) or when joint substrates are wet.

1.14 COORDINATION

- A. Coordinate installation of inserts that are to be embedded in concrete or masonry, flashing reglets, and similar items to be used by dimension stone cladding Installer for anchoring, supporting, and flashing of dimension stone cladding assembly. Furnish setting drawings, templates, and directions for installing such items and deliver to Project site in time for installation.
- B. Time delivery and installation of dimension stone cladding to avoid extended on-site storage and to coordinate with work adjacent to dimension stone cladding.

1.15 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations for Stone: Obtain[**each variety of**] stone[, **regardless of finish,**] from single quarry[, **whether specified in this Section or in another Section of the Specifications,**] with resources to provide materials of consistent quality in appearance and physical properties.
 - 1. For stone types that include same list of varieties and sources, provide same variety from same source for each.
 - 2. Make quarried blocks available for examination by DIA Project Manager.
- B. Source Limitations for Mortar Materials: Obtain mortar ingredients of uniform quality for each cementitious component from single manufacturer and each aggregate from single source or producer.
- C. Source Limitations for Other Materials: Obtain each type of stone accessory[, **sealant,**] and other material from single manufacturer for each product.

2.2 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design dimension stone cladding assembly.
- B. General: Design stone anchors and anchoring systems according to ASTM C 1242.
 - 1. Stone anchors shall withstand not less than two (2) times the weight of the stone cladding in both compression and tension.
- C. Structural Performance: Dimension stone cladding assembly shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
 - 1. Wind Loads: 115 mph with gust factor of 1.3.
 - 2. Altitude: 5,500 feet (1677 m) above sea level.
 - 3. Ambient Temperature Range: Minus 30 deg F (minus 35 deg C) to 120 deg F (49 deg C).
 - 4. Equipment Loads: Allow for loads due to window cleaning and maintenance equipment.
- D. Seismic Performance: Dimension stone cladding assembly shall withstand the effects of earthquake motions determined according to [ASCE/SEI 7] <Insert requirement>.
 - 1. Component Importance Factor: [1.5] [1.0].
- E. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
 - 1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.
- F. Horizontal Building Movement (Interstory Drift): Allow for maximum horizontal building movement equal to quotient resulting from dividing floor-to-floor height at any floor by 400.
- G. Shrinkage and Creep: Allow for progressive vertical shortening of building frame equal to <Insert value> in 10 feet (3 m).
- H. Safety Factors for Stone: Design dimension stone cladding assembly to withstand loads indicated without exceeding stone's allowable working stress determined by dividing stone's average ultimate strength, as established by testing, by the following safety factors:
 - 1. Safety Factor for Granite: [3] <Insert number>.
 - 2. Safety Factor for Oolitic Limestone: [8] <Insert number>.
 - 3. Safety Factor for Dolomitic Limestone: [6] <Insert number>.
 - 4. Safety Factor for Marble: [5] <Insert number>.

5. Safety Factor for Quartz-Based Stone: [6] <Insert number>.
 6. Safety Factor for Serpentine: [6] <Insert number>.
 7. Safety Factor for Slate: [5] <Insert number>.
 8. Safety Factor for Travertine: [8] <Insert number>.
 9. Safety Factor for Concentrated Stresses: [4] [for granite] [and] [10] [for stone varieties other than granite].
- I. Design stone anchors[**and backup structure**] to withstand loads indicated without exceeding allowable working stresses established by the following:
1. For Structural Steel: AISC 360.
 2. For Cold-Formed Steel: AISI's "North American Specification for the Design of Cold-Formed Steel Structural Members."
 3. For Cold-Formed Stainless Steel: ASCE 8, "Specification for the Design of Cold-Formed Stainless Steel Structural Members."
 4. For Aluminum: AA ADM-1, "The Aluminum Design Manual."
 5. For Cast-in-Place and Postinstalled Fasteners in Concrete: One-fourth of tested capacity when installed in concrete with compressive strength indicated.
- J. For Postinstalled Fasteners in Masonry: One-sixth of tested capacity when installed in masonry units indicated.
- K. Limit deflection in each prefabricated assembly caused by indicated loads and thermal movements, acting singly or in combination with one another, to not more than [1/720] <Insert ratio> of assembly's clear span or the following, whichever is smaller:
1. 1/16 inch (1.5 mm), measured in plane of wall.
 2. 1/4 inch (6 mm), measured perpendicular to wall.
- L. Provisions for Fabrication and Erection Tolerances: Allow for fabrication and erection tolerances of building's structural system. [**Concrete fabrication and erection tolerances are specified in Section 033000 "Cast-in-Place Concrete."**] [**Structural-steel fabrication and erection tolerances are specified in Section 051200 "Structural Steel Framing."**]
- M. Provision for Deflection of Building Structure:
1. Deflection Due to Weight of Dimension Stone Cladding Assembly: Allow for [1/4-inch (6-mm)] <Insert dimension> vertical deflection in 20-foot (6-m) span of structural members supporting dimension stone cladding assembly.
 2. Live Load Deflection: Allow for [1/4-inch (6-mm)] <Insert dimension> vertical deflection, in 20-foot (6-m) span of structural members supporting dimension stone cladding assembly, due to live loads imposed on building's structural frame after stone installation.
- N. Corrosion and Staining Control: Prevent galvanic and other forms of corrosion as well as staining by isolating metals and other materials from direct contact with incompatible materials. Materials shall not stain exposed surfaces of

stone and joint materials.

2.3 GRANITE <Insert drawing designation>

- A. Material Standard: Comply with ASTM C 615.
- B. Regional Materials: Granite shall be fabricated within 500 miles (800 km) of Project site from stone that has been extracted within 500 miles (800 km) of Project site.
- C. Description: Uniform, [fine] [medium]-grained, [white] [pink] [gray] [black] <Insert color> stone [without veining].
- D. Varieties and Sources: Subject to compliance with requirements, [provide the following] [provide one of the following] [available stone varieties that may be incorporated into the Work include, but are not limited to, the following]:
 - 1. <Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>.
 - 2. or approved equal.
- E. Cut: [Vein] [Fleuri].
 - 1. Orientation of Veining: [Horizontal] [Vertical] [As indicated].
- F. Cut stone from one block or contiguous, matched blocks in which natural markings occur.
- G. Finish: [Polished] [Honed] [Thermal] [As indicated] [Match DIA Project Manager's sample] <Insert finish>.
- H. Match DIA Project Manager's samples for color, finish, and other stone characteristics relating to aesthetic effects.
- I. Thickness: Not less than [3/4 inch (20 mm)] [30 mm] [1-1/4 inches (32 mm)] [1-5/8 inches (40 mm)] [2 inches (50 mm)] unless otherwise indicated.

2.4 LIMESTONE <Insert drawing designation>

- A. Material Standard: Comply with ASTM C 568.
 - 1. Classification: [I Low-Density] [II Medium-Density] [II Medium-Density except as follows: absorption, 5 percent by weight maximum; density, 150 lb/cu. ft. (2400 kg/cu. m) minimum; compressive strength, 8000 psi (55 MPa) minimum; and modulus of rupture 800 psi (5.5 MPa) minimum] [III High-Density].
- B. Regional Materials: Limestone shall be fabricated within 500 miles (800 km) of Project site from stone that has been extracted within 500 miles (800 km) of

Project site.

- C. Description: **[Dolomitic]** **[Oolitic]** **[Shell]** limestone.
- D. Varieties and Sources: Subject to compliance with requirements, provide one of the following:
 - 1. **<Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>**.
 - 2. or approved equal.
- E. Varieties and Sources: Indiana limestone quarried in Lawrence, Monroe, or Owen Counties, Indiana.
 - 1. Indiana Limestone Grade and Color: **[Select, buff]** **[Select, gray]** **[Standard, buff]** **[Standard, gray]** **[Rustic, buff]** **[Rustic, gray]** **[Variegated]**, according to grade and color classification established by ILI.
- F. Cut: **[Vein]** **[Fleuri]**.
 - 1. Orientation of Veining: **[Horizontal]** **[Vertical]** **[As indicated]**.
- G. Cut stone from one block or contiguous, matched blocks in which natural markings occur.
- H. Finish: **[Smooth finish]** **[Sand rubbed]** **[Machine tooled, four bats per 1 inch (25 mm)]** **[Machine tooled, six bats per 1 inch (25 mm)]** **[Machine tooled, eight bats per 1 inch (25 mm)]** **[As indicated]** **[Match DIA Project Manager's sample]** **<Insert finish>**, matching standard ILI finish.
- I. Match DIA Project Manager's samples for color, finish, and other stone characteristics relating to aesthetic effects.
- J. Thickness: Not less than **[1-1/4 inches (32 mm)]** **[2 inches (50 mm)]** **[2-1/2 inches (64 mm)]** **[3 inches (75 mm)]** **[4 inches (100 mm)]** unless otherwise indicated.

2.5 MARBLE **<Insert drawing designation>**

- A. Material Standard: Comply with ASTM C 503, **[Classification I Calcite]** **[Classification II Dolomite]**, **[Group A]**.
- B. Regional Materials: Marble shall be fabricated within **500 miles (800 km)** of Project site from stone that has been extracted within **500 miles (800 km)** of Project site.
- C. Description: Uniform, fine- to medium-grained, **[white]** **<Insert color>** stone with only slight veining.
- D. Varieties and Sources: Subject to compliance with requirements, provide one of the following:

1. **<Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>.**
 2. or approved equal.
- E. Cut: **[Vein] [Fleuri]**.
1. Orientation of Veining: **[Horizontal] [Vertical] [As indicated]**.
- F. Cut stone from one block or contiguous, matched blocks in which natural markings occur.
- G. Finish: **[Polished] [Honed] [As indicated] [Match DIA Project Manager's sample] <Insert finish>.**
- H. Match DIA Project Manager's samples for color, finish, and other stone characteristics relating to aesthetic effects.
- I. Thickness: Not less than **[1 inch (25 mm)] [30 mm] [1-1/4 inches (32 mm)] [1-5/8 inches (40 mm)] [2 inches (50 mm)]** unless otherwise indicated.

2.6 QUARTZ-BASED STONE **<Insert drawing designation>**

- A. Material Standard: Comply with ASTM C 616, **[Classification I Sandstone] [Classification II Quartzitic Sandstone] [Classification III Quartzite]****[except for minimum free silica content].**
- B. Regional Materials: Quartz-based stone shall be fabricated within **500 miles (800 km)** of Project site from stone that has been extracted within **500 miles (800 km)** of Project site.
- C. Varieties and Sources: Subject to compliance with requirements, provide one of the following:
1. **<Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>.**
 2. or approved equal.
- D. Finish: **[Sand rubbed] [Natural cleft] [Thermal] [As indicated] [Match DIA Project Manager's sample] <Insert finish>.**
- E. Match DIA Project Manager's samples for color, finish, and other stone characteristics relating to aesthetic effects.
- F. Thickness: Not less than **[2 inches (50 mm)] [2-1/2 inches (64 mm)] [3 inches (75 mm)] [4 inches (100 mm)]** unless otherwise indicated.

2.7 SERPENTINE **<Insert drawing designation>**

- A. Material Standard: Comply with ASTM C 1526, **[Classification I Exterior] [Classification II Interior]**.

- B. Regional Materials: Serpentine shall be fabricated within **500 miles** (800 km) of Project site from stone that has been extracted within **500 miles** (800 km) of Project site.
- C. Varieties and Sources: Subject to compliance with requirements, provide one of the following:
 - 1. **<Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>.**
 - 2. or approved equal.
- D. Cut stone from one block or contiguous, matched blocks in which natural markings occur.
- E. Finish: [**Polished**] [**Honed**] [**As indicated**] [**Match DIA Project Manager's sample**] **<Insert finish>.**
- F. Match DIA Project Manager's samples for color, finish, and other stone characteristics relating to aesthetic effects.
- G. Thickness: Not less than [**1 inch** (25 mm)] [**30 mm**] [**1-1/4 inches** (32 mm)] [**1-5/8 inches** (40 mm)] [**2 inches** (50 mm)] unless otherwise indicated.

2.8 SLATE **<Insert drawing designation>**

- A. Material Standard: Comply with ASTM C 629, [**Classification I Exterior**] [**Classification II Interior**].
- B. Regional Materials: Slate shall be fabricated within **500 miles** (800 km) of Project site from stone that has been extracted within **500 miles** (800 km) of Project site.
- C. Description: [**Black**] [**Blue-black**] [**Gray**] [**Blue-gray**] [**Green**] [**Purple**] [**Mottled purple and green**] [**Red**] slate with a fine, even grain[**and unfading color,**] from clear, sound stock.
- D. Varieties and Sources: Subject to compliance with requirements, provide one of the following:
 - 1. **<Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>.**
 - 2. or approved equal.
- E. Finish: [**Honed**] [**Sand rubbed**] [**Natural cleft**] [**As indicated**] [**Match DIA Project Manager's sample**] **<Insert finish>.**
- F. Match DIA Project Manager's samples for color, finish, and other stone characteristics relating to aesthetic effects.
- G. Thickness: Not less than [**1 inch** (25 mm)] [**1-1/4 inches** (32 mm)] [**1-1/2 inches** (38 mm)] unless otherwise indicated.

2.9 TRAVERTINE <Insert drawing designation>

- A. Material Standard: Comply with ASTM C 1527, [**Classification I Exterior**] [**Classification II Interior**].
- B. Regional Materials: Travertine shall be fabricated within **500 miles** (800 km) of Project site from stone that has been extracted within **500 miles** (800 km) of Project site.
- C. Varieties and Sources: Subject to compliance with requirements, provide one of the following:
 - 1. <Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>.
 - 2. or approved equal.
- D. Cut: [**Vein**] [**Fleuri**].
 - 1. Orientation of Veining: [**Horizontal**] [**Vertical**] [**As indicated**].
- E. Cut stone from one block or contiguous, matched blocks in which natural markings occur.
- F. Filling: Fill pores on faces of stone with cementitious filler of color [**selected by DIA Project Manager**] [**matching DIA Project Manager's sample**].
- G. Finish: [**Polished**] [**Honed**] [**As indicated**] [**Match DIA Project Manager's sample**] <Insert finish>.
- H. Match DIA Project Manager's samples for color, finish, and other stone characteristics relating to aesthetic effects.
- I. Thickness: Not less than [**1 inch** (25 mm)] [**30 mm**] [**1-1/4 inches** (32 mm)] [**1-5/8 inches** (40 mm)] [**2 inches** (50 mm)] unless otherwise indicated.

2.10 OTHER STONE <Insert drawing designation>

- A. Material Standards:
 - 1. Maximum Absorption per ASTM C 97/C 97M: <Insert value>.
 - 2. Minimum Compressive Strength per ASTM C 170/C 170M: <Insert value>.
 - 3. Minimum Flexural Strength per ASTM C 880/C 880M: <Insert value>.
- B. Regional Materials: Other stone shall be fabricated within **500 miles** (800 km) of Project site from stone that has been extracted within **500 miles** (800 km) of Project site.
- C. Varieties and Sources: Subject to compliance with requirements, provide one of the following:

1. <Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>.
 2. or approved equal.
- D. Finish: [Polished] [Honed] [Sand rubbed] [Natural cleft] [As indicated] [Match DIA Project Manager's sample] <Insert finish>.
- E. Match DIA Project Manager's samples for color, finish, and other stone characteristics relating to aesthetic effects.
- F. Thickness: Not less than [2 inches (50 mm)] [2-1/2 inches (64 mm)] [3 inches (75 mm)] [4 inches (100 mm)] unless otherwise indicated.

2.11 FRAMING FOR BACKUP STRUCTURE

- A. [Steel Trusses] [Strongback Frames] [and] [Miscellaneous Steel Framing]: For framing members in contact with stone, fabricate from same material and finish specified for anchors. For framing members not in contact with stone, comply with requirements indicated below:
1. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M or ASTM A 992/A 992M, minimum thickness of 3/16 inch (5 mm).
 2. Steel Tubing: ASTM A 500/A 500M or ASTM A 513, minimum thickness of 3/16 inch (5 mm).
 3. Slotted Channel Framing: Cold-formed metal channels with continuous slot complying with MFMA-4, made from [galvanized steel complying with ASTM A 653/A 653M, structural steel, Grade 33 (Grade 230), with G90 (Z275) coating, and not less than 0.108-inch (2.74-mm) nominal thickness] [steel sheet complying with ASTM A 1008/A 1008M, structural steel, Grade 33 (Grade 230), not less than 0.105-inch (2.66-mm) nominal thickness, hot-dip galvanized after fabrication to comply with ASTM A 123/A 123M].
- B. Steel Stud Frames: Galvanized-steel wall framing complying with Section 054000 "Cold-Formed Metal Framing."
1. Secondary Weather Barrier (Sheathing): Galvanized-steel sheet complying with ASTM A 653/A 653M, commercial steel, coating designation G90 (Z275).
- C. Metal-Grid Systems: Manufacturer's standard integrated system that combines metal struts, fittings, fasteners, and stone anchors and is engineered expressly for mechanically installing dimension stone cladding.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Canaren Inc.; A-Metal System.
 - b. Hohmann & Barnard, Inc.; HB Stone Support System.
 - c. Meadow Burke; Halfen Anchoring System.

- d. <Insert manufacturer's name; product name or designation>.
 - e. or approved equal.
2. Struts: Cold-formed metal channels with continuous slot complying with MFMA-4, of size and shape required for application indicated, made from **[galvanized steel complying with ASTM A 653/A 653M, with G90 (Z275) coating, and not less than 0.108-inch (2.74-mm) nominal thickness]** **[steel sheet complying with ASTM A 1008/A 1008M, not less than 0.105-inch (2.66-mm) nominal thickness, hot-dip galvanized after fabrication to comply with ASTM A 123/A 123M]**.
 3. Fittings and Fasteners: System manufacturer's standard components of design, size, and material required to securely attach struts to building structure, by method indicated or selected, and stone anchors to struts, as well as to prevent galvanic corrosion. Fabricate components in contact with stone from same material specified for anchors.
 4. Stone Anchors: Shapes and sizes standard with system manufacturer, complying with "Anchors and Fasteners" Article.

2.12 ANCHORS AND FASTENERS

- A. Fabricate anchors[, **including shelf angles,**] from stainless steel, ASTM A 240/A 240M or ASTM A 666, **[Type 304] [Type 316]**; temper as required to support loads imposed without exceeding allowable design stresses. Fabricate dowels and pins for anchors from stainless steel, ASTM A 276, **[Type 304] [Type 316]**.
- B. Fabricate shelf angles for limestone from hot-dip galvanized steel, ASTM A 36/A 36M for materials and ASTM A 123/A 123M for galvanizing.
- C. Fabricate anchors, including shelf angles, from extruded aluminum, **ASTM B 221** (ASTM B 221M), alloy and temper as required to support loads imposed without exceeding allowable design stresses, but not less than strength and durability properties of Alloy 6063-T6.
- D. Cast-in-Place Concrete Inserts: Either threaded or wedge type unless otherwise indicated; galvanized ferrous castings, either ASTM A 47/A 47M malleable iron or ASTM A 27/A 27M cast steel, with capability to sustain, without failure, a load equal to 4 times the loads imposed as determined by testing per ASTM E 488, conducted by a qualified independent testing agency. Provide bolts, washers, and shims as needed, all hot-dip galvanized per ASTM F 2329.
- E. Postinstalled Anchor Bolts for Concrete and Masonry: **[Chemical anchors] [torque-controlled expansion anchors] [or] [undercut anchors]** made from stainless-steel components complying with **ASTM F 593 and ASTM F 594, Alloy Group 1 or 2** (ASTM F 738M and ASTM F 836M, Alloy Group A1 or A4) for bolts and nuts; ASTM A 240/A 240M, ASTM A 276, or ASTM A 666, Type 304 or 316, for anchors, with capability to sustain, without failure, a load equal to 4 times the loads imposed, for concrete, or 6 times the load imposed, for masonry, as

determined by testing per ASTM E 488, conducted by a qualified independent testing agency.

- F. Threaded Fasteners: Heavy hexagon structural bolts, heavy hexagon nuts, and hardened washers.
 - 1. For **[stainless steel] [and] [aluminum]**, use annealed stainless-steel bolts, nuts, and washers; for bolts, **ASTM F 593** (ASTM F 738M); and for nuts, **ASTM F 594** (ASTM F 836M), Alloy **[Group 1 (A1)] [Group 2 (A4)]**.
 - 2. For **[galvanized-steel shelf angles] [and] [backup structure]**, use carbon-steel bolts, nuts, and washers; for bolts, **ASTM A 307, Grade A** (ASTM F 568M, Property Class 4.6); for nuts, **ASTM A 563** (ASTM A 563M), Grade A; and for washers, **ASTM F 436** (ASTM F 436M); all hot-dip or mechanically zinc coated.
- G. Weld Plates for Installation in Concrete: Comply with Section 055000 "Metal Fabrications."

2.13 MORTAR MATERIALS

- A. Portland Cement: ASTM C 150, Type I or Type II, except Type III may be used for cold-weather construction, natural color or white as required to produce mortar color indicated.
 - 1. Low-Alkali Cement: Portland cement for use with limestone shall contain not more than 0.60 percent total alkali when tested according to ASTM C 114.
- B. Hydrated Lime: ASTM C 207.
- C. Mortar Pigments: Natural and synthetic iron oxides and chromium oxides, compounded for use in mortar mixes and complying with ASTM C 979. Pigments shall have a record of satisfactory performance in mortar.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Davis Colors; True Tone Mortar Colors.
 - b. Lanxess Corporation; Bayferrox Iron Oxide Pigments.
 - c. Solomon Colors; SGS Mortar Colors.
 - d. **<Insert manufacturer's name; product name or designation>**.
 - e. or approved equal.
- D. Portland Cement-Lime Mix: Packaged blend of portland cement and hydrated lime.
- E. Colored Portland Cement-Lime Mix: Packaged blend of portland cement, hydrated lime, and mortar pigments. Mix shall produce color indicated or, if not indicated, as selected from manufacturer's standard colors. Pigments shall not exceed 10 percent of portland cement by weight.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Holcim (US) Inc.; Rainbow Mortamix Custom Color Cement/Lime.
 - b. Lafarge North America Inc.; Eaglebond.
 - c. Lehigh Cement Company; Lehigh Custom Color Portland/Lime Cement.
 - d. **<Insert manufacturer's name; product name or designation>**.
 - e. or approved equal.

- F. Aggregate: ASTM C 144; except for [**joints narrower than 1/4 inch** (6 mm)] [**and**] [**pointing mortar**], 100 percent shall pass **No. 16** (1.18-mm) sieve.
 1. White Aggregates: Natural white sand or ground white stone.
 2. Colored Aggregates: Natural-colored sand or ground marble, granite, or other durable stone; of color necessary to produce required mortar color.

- G. Water: Potable.

2.14 STONE ACCESSORIES

- A. Setting Shims: Strips of [**resilient plastic**] [**or**] [**vulcanized neoprene, Type A Shore durometer hardness of 50 to 70**], nonstaining to stone, of thickness needed to prevent point loading of stone on anchors and of depths to suit anchors without intruding into required depths of pointing materials.

- B. Setting Buttons: Resilient plastic buttons, nonstaining to stone, sized to suit joint thicknesses and bed depths of stone units without intruding into required depths of pointing materials.

- C. Concealed Sheet Metal Flashing: Fabricated from [**zinc-tin, alloy-coated**] stainless steel in thicknesses indicated, but not less than **0.0156 inch** (0.4 mm) thick, and complying with Section 076200 "Sheet Metal Flashing and Trim."

- D. Cementitious Dampproofing[**for Limestone**]: Cementitious formulation recommended by ILI and nonstaining to stone; compatible with joint sealants and noncorrosive to anchors and attachments.

- E. Weep and Vent Tubes: [**Medium-density polyethylene tubing, 1/4-inch** (6-mm) **OD**] [**Rectangular, cellular, polypropylene or clear butyrate extrusion, 3/8 by 1-1/2 inches** (9 by 38 mm)], of length required to extend from exterior face of stone to cavity behind.

- F. Cellular Plastic Weep Hole/Vents: One-piece, flexible extrusion made from UV-resistant polypropylene copolymer, of length required to extend from exterior face of stone to cavity behind, in color selected from manufacturer's standard.

- G. Mesh Weep/Vent: Free-draining mesh; made from polyethylene strands, of length required to extend from exterior face of stone to cavity behind, in color selected from manufacturer's standard.
- H. Sealants for Joints in Dimension Stone Cladding: Manufacturer's standard chemically curing, elastomeric sealants of base polymer and characteristics indicated below that comply with applicable requirements in Section 079200 "Joint Sealants" and do not stain stone:
1. Silicone Joint Sealant: [**Single component, nonsag, neutral curing, Class 100/50**] [**Single component, nonsag, neutral curing, Class 50**] [**Single component, nonsag, neutral curing, Class 25**] [**Single component, nonsag, acid curing**] [**Multicomponent, nonsag, neutral curing**].
 2. Urethane Joint Sealant: [**Single component, nonsag, Class 100/50**] [**Single component, nonsag, Class 50**] [**Single component, nonsag, Class 25**] [**Multicomponent, nonsag, Class 50**] [**Multicomponent, nonsag, Class 25**].
 3. Polysulfide Joint Sealant: [**Single component**] [**Multicomponent**], nonsag.
 4. Preformed Joint Sealant: Preformed [**silicone**] [**foam**].
 5. Joint Sealant: <Insert joint sealant>.
 6. Joint-Sealant Colors: [**As indicated by manufacturer's designations**] [**Match DIA Project Manager's sample**] [**As selected by DIA Project Manager from manufacturer's full range of colors**] [**Match color of stone**] <Insert color>.
- I. Sealant for Filling Kerfs: [**Same sealant used for joints in dimension stone.**] [**Manufacturer's standard chemically curing, elastomeric sealants of base polymer and characteristics indicated below that comply with applicable requirements in Section 079200 "Joint Sealants" and that do not stain stone:**]
1. Single-component, nonsag, neutral-curing, medium- to high-modulus silicone sealant; Class 25, Use NT (nontraffic), and Use M (masonry).
 2. Single-component, nonsag, urethane sealant; Class 25, Use T (traffic), and Use M (masonry).
 3. Products: Subject to compliance with requirements, provide one of the following:
 - a. BASF Building Systems; Omniseal 50.
 - b. Dow Corning Corporation; 756 SMS.
 - c. General Electric Company; GE Advanced Materials - Silicones; SilPruf NB SCS9000.
 - d. Tremco Incorporated; Spectrem 2.
 - e. <Insert manufacturer's name; product name or designation>.
 - f. or approved equal
 - g. BASF Building Systems; Sonolastic NP 1.
 - h. BASF Building Systems; Sonolastic Ultra.
 - i. Sika Corporation; Sikaflex - 1a.
 - j. Tremco Incorporated; Vulkem 116.

- k. **<Insert manufacturer's name; product name or designation>**.
- l. or approved equal.

2.15 STONE FABRICATION

- A. General: Fabricate stone units in sizes and shapes required to comply with requirements indicated.
 - 1. For granite, comply with recommendations in NBGQA's "Specifications for Architectural Granite."
 - 2. For limestone, comply with recommendations in ILI's "Indiana Limestone Handbook."
 - 3. For marble, serpentine, and travertine, comply with recommendations in MIA's "Dimension Stone - Design Manual VII."
- B. Control depth of stone and back check to maintain minimum clearance of **[1 inch (25 mm)] [1-1/2 inches (38 mm)] <Insert dimension>** between backs of stone units and surfaces or projections of structural members, fireproofing (if any), backup walls, and other work behind stone.
- C. Dress joints (bed and vertical) straight and at right angle to face unless otherwise indicated. Shape beds to fit supports.
- D. Cut and drill sinkages and holes in stone for anchors, fasteners, supports, and lifting devices as indicated or needed to set stone securely in place.
- E. Finish exposed faces and edges of stone[, **except sawed reveals,**] to comply with requirements indicated for finish and to match approved samples[**and mockups**].
- F. Quirk-miter corners unless otherwise indicated; provide for cramp anchorage in top and bottom bed joints of corner pieces.
- G. Cut stone to produce uniform joints [**3/8 inch (10 mm)] [1/2 inch (13 mm)] <Insert dimension>** wide and in locations indicated.
- H. Contiguous Work: Provide chases, reveals, reglets, openings, and similar features as required to accommodate contiguous work.
- I. Fabricate molded work, including washes and drips, to produce stone shapes with a uniform profile throughout entire unit length, with precisely formed arris slightly eased to prevent snipping, and with matching profile at joints between units.
 - 1. Produce moldings and molded edges with machines that use abrasive shaping wheels made to reverse contour of molding shape.
- J. Carve and cut [**inscriptions**] [**and**] [**decorative surfaces**]. Use skilled stone carvers experienced in the successful performance of work similar to that indicated.

- K. Abrasively etch [**inscriptions**] [**and**] [**decorative surfaces**].
- L. Laser etch [**inscriptions**] [**and**] [**decorative surfaces**].
- M. Clean backs of stone to remove rust stains, iron particles, and stone dust.
- N. Inspect finished stone units at fabrication plant for compliance with requirements for appearance, material, and fabrication. Replace defective units.
 - 1. Grade and mark stone for overall uniform appearance when assembled in place. Natural variations in appearance are acceptable if installed stone units match range of colors and other appearance characteristics represented in approved samples and mockups.

2.16 FABRICATION OF BACKUP STRUCTURE

- A. Fabrication of [**Steel Trusses**] [**Strongback Frames**] [**and**] [**Miscellaneous Steel Framing**]: Fabricate in shop to comply with AISC 303.
 - 1. Weld shop connections to comply with applicable provisions of AWS D1.1/D1.1M.
 - 2. Fabricate joints to exclude water or to permit its escape to building exterior, at locations where water could accumulate because of condensation or other causes.
 - 3. Hot-dip galvanize backup structure after fabrication to comply with ASTM A 123/A 123M.
- B. Fabrication of Steel Stud Frames: Fabricate and assemble by welding to comply with requirements in Section 054000 "Cold-Formed Metal Framing."
 - 1. Weld secondary weather barrier (sheathing) to outside face of steel stud frames. Use continuous welds at all four edges of sheets to provide continuous weather seal.
 - 2. Clean welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780/A 780M.

2.17 SHOP-PAINTED STEEL FINISHES

- A. General: Paint uncoated steel backup structure before delivering to Project site to comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel."
- B. Surface Preparation: After fabricating steel items, prepare surfaces to comply with SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
- C. Apply one coat of fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#76.[**After primer has dried,**

apply one coat of exterior alkyd enamel complying with MPI#96 of a different color than primer.]

D. Apply two-coat, high-performance coating system consisting of epoxy zinc-rich primer, complying with MPI#20 and topcoat of high-build epoxy coating, complying with MPI#108.

1. Products: Subject to compliance with requirements, provide one of the following:

- a. Cloverdale Paint; ClovaZinc 3, 83003, and ClovaGuard, 83150.
- b. Columbia Paint & Coatings; Carbozinc 859 and Polyamide Epoxy 07-910.
- c. Coronado Paint; Polyamide Epoxy Zinc Rich Primer, 101-152, and Polyamide Epoxy Coating Semi-Gloss, 101-251.
- d. Frazee Paint; Ameron 68HS and Ameron 400.
- e. General Paint; Ameron 68HS Epoxy Zinc Rich Coating and Amercoat 385 or Amerlock 400, 96 line.
- f. ICI Paints; Catha-Coat 313 and Bar-Rust 235, Bar-Rust 236, or Devran 224HS.
- g. Kwal Paint; Coronado Polyamide Epoxy Zinc Rich Primer, 101-152, and Coronado Polyamide Epoxy Coating Semi-Gloss, 101-251B.
- h. Parker Paint Mfg. Co. Inc.; Amercoat Zinc Rich Epoxy Primer, 68HS, and Amerlock 400.
- i. PPG Architectural Finishes, Inc.; Aquapon Zinc-Rich Primer 97-670 and Aquapon High Build Epoxy Marine Coating 97-130/97-139.
- j. Sherwin-Williams Company (The); Zinc Clad IV, B69A8/B69V8, and Macropoxy 646 Fast Cure Epoxy, B58-600 series.
- k. Sico, Inc.; Rust-Oleum Zinc-Sele, 9334, and Rust-Oleum H.P. Epoxy, 9100 Series.
- l. **<Insert manufacturer's name; product name or designation>**.
- m. or approved equal.

2.18 MORTAR MIXES

A. General: Comply with referenced standards and with manufacturers' written instructions for mix proportions, mixing equipment, mixer speeds, mixing containers, mixing time, and other procedures needed to produce mortar of uniform quality and with optimum performance characteristics.

1. Do not use admixtures, including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, antifreeze compounds, or other admixtures unless otherwise indicated. Do not use calcium chloride.
2. Combine and thoroughly mix cementitious materials, water, and aggregates in a mechanical batch mixer unless otherwise indicated. Discard mortar when it has reached initial set.

B. Portland Cement-Lime Setting Mortar: Comply with ASTM C 270, Proportion Specification, **[Type S.] [Type N.] [for types of mortar indicated below:]**

1. Set granite with Type S mortar.
 2. Set limestone with Type N mortar.
 3. Set marble with Type S mortar.
 4. Set quartz-based stone with **[Type S] [Type N]** mortar.
 5. Set serpentine with Type S mortar.
 6. Set slate with Type S mortar.
 7. Set travertine with Type N mortar.
 8. Backparge travertine with Type O mortar.
- C. Pointing Mortar: Comply with ASTM C 270, Proportion Specification, **[Type S] [Type N] [Type O] [for types of mortar indicated]**. Provide pointing mortar mixed to match DIA Project Manager's sample and complying with the following:
1. Pigmented Pointing Mortar: Select and proportion pigments with other ingredients to produce color required. Do not exceed pigment-to-cement ratio of 1:10, by weight.
 2. Packaged Portland Cement-Lime Mix Mortar: Use portland cement-lime mix of selected color.
 3. Colored-Aggregate Pointing Mortar: Produce color required by combining colored aggregates with portland cement of selected color.
 4. Point granite with **[Type S] [Type N]** mortar.
 5. Point limestone with **[Type N] [Type O]** mortar.
 6. Point marble with **[Type N] [Type O]** mortar.
 7. Point quartz-based stone with **[Type N] [Type O]** mortar.
 8. Point serpentine with **[Type N] [Type O]** mortar.
 9. Point slate with Type N mortar.
 10. Point travertine with **[Type N] [Type O]** mortar.

2.19 SOURCE QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform source quality-control testing.
1. Retesting of materials that fail to meet specified requirements shall be done at Contractor's expense.
 2. Furnish test specimens **[randomly selected] [selected by testing agency]** from same blocks as actual materials proposed for incorporation into the Work.
 3. Flexural Strength Tests: ASTM C 880/C 880M, performed on specimens of same thickness, orientation of cut, and finish as installed stone. One set of test specimens is required to be tested for every **[10,000 sq. ft. (1000 sq. m)] [5000 sq. ft. (500 sq. m)] [3000 sq. ft. (300 sq. m)]**, but not fewer than two sets for each stone variety.

PART 3 - EXECUTION

3.1 GENERAL

- A. Do not use stone units with chips, cracks, voids, stains, or other defects which might be visible in the finished Work. Repair minor defects which would detract from overall appearance or impair the effectiveness of the sealant. Major defects will not be acceptable.
- B. Do not use frozen materials or materials mixed or coated with ice or frost. Do not use salt to thaw ice in anchor holes or slots. Do not lower the freezing point or mortar by use of admixtures or antifreeze agents, and do not use calcium chloride in mortar or grout.

3.2 EXAMINATION

- A. Examine surfaces to receive dimension stone cladding and conditions under which dimension stone cladding will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of dimension stone cladding.
- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of dimension stone cladding.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PREPARATION

- A. Advise installers of other work about specific requirements relating to their placement of inserts and flashing reglets for anchoring and supporting and flashing of stonework. Furnish installers of other work with drawings or templates showing location of inserts for stone anchors and supports.
- B. Clean stone before setting by thoroughly scrubbing with fiber brushes followed by a thorough drenching with clear water. Use only mild cleaning compounds that do not contain caustic or harsh fillers or abrasives. If not thoroughly wet at time of setting; drench or sponge stone. Do not wet expansion or control joint surface.

3.4 INSTALLING BACKUP STRUCTURE

- A. Installing [**Steel Trusses**] [**Strongback Frames**] [**and**] [**Miscellaneous Steel Framing**]: Comply with AISC 303 and install to accommodate construction tolerances specified.
 - 1. Maintain erection of backup structure within tolerances in AISC 303.

2. For prefabricated units to which stone has been installed before erection, maintain tolerances of stone faces and edges as specified in "Installation Tolerances" Article.
 3. Install by **[welding to steel weld-plates anchored in concrete] [bolting to inserts cast into concrete] [or] [bolting to structural-steel frame]**.
 4. Clean welds, bolted connections, and abraded areas immediately after erection.
 - a. Repair galvanizing to comply with ASTM A 780/A 780M.
 - b. Apply paint to exposed areas using same material as used for shop painting.
- B. Installing Steel Stud Frames: Install **[by welding to steel weld-plates anchored in concrete] [by welding to structural-steel frame] [by bolting to structural-steel frame]** to comply with requirements in Section 054000 "Cold-Formed Metal Framing."
1. Install steel stud frames level, plumb, and true to line with no variation in plane or alignment exceeding **1/16 inch** (1.5 mm) and no variation in position exceeding **1/8 inch** (3 mm).
 2. For prefabricated frames to which stone has been installed before erection, maintain tolerances of stone faces and edges as specified in "Installation Tolerances" Article.
 3. Clean welds, bolted connections, and abraded areas immediately after erection. Repair galvanizing to comply with ASTM A 780/A 780M.
- C. Installing Metal-Grid Systems: Comply with manufacturer's written instructions to provide integrated system that combines metal struts, fittings, fasteners, and stone anchors.
1. Fasten struts by bolting to **[inserts in concrete] [or] [steel angle clips bolted to steel framing]**.
 2. Fasten stone supports and anchors by bolting to struts.
 3. Shim and adjust struts and stone supports and anchors to provide grid that is level, plumb, and true to line with no variation in plane or alignment exceeding **1/16 inch** (1.5 mm) and no variation in position exceeding **1/8 inch** (3 mm).

3.5 STONE INSTALLATION GENERAL

- A. Employ skilled stone fitters at the Site to do necessary field cutting as stone is set.
- B. Provide chases, reveals, reglets, openings, and other spaces as indicated or required for contiguous work. Close up openings in stonework after other work is in place. Use materials and set to match surrounding stonework.
- C. Where stonework will contact ferrous metal surfaces which will be concealed in back up construction (anchors, supports, structural framing and similar surfaces), apply a heavy coat of bituminous paint on metal surfaces, prior to

setting of stone. Do not extend coating onto portions of ferrous metal which will be exposed in the finished work. Do not apply coating to stainless or nonferrous metals.

- D. Provide expansion joints where indicated. Do not fill with mortar. Install continuous strips of preformed joint filler to allow for installation of backer rod and sealant.
- E. Provide anchors, supports, fasteners, and other attachments indicated or necessary to secure stonework in place. Shim and adjust accessories for proper setting of stone. Completely fill holes, slots, and other sinkages for anchors, dowels, fasteners, and supports with mortar during setting of stones.
- F. SETTING DIMENSION STONE CLADDING, GENERAL
- G. Before setting stone, clean surfaces that are dirty or stained by removing soil, stains, and foreign materials. Clean stone by thoroughly scrubbing with fiber brushes and then drenching with clear water. Use only mild cleaning compounds that contain no caustic or harsh materials or abrasives.
- H. Coat limestone with dampproofing to extent indicated below:
 - 1. Stone at Grade: Beds, joints, and back surfaces to at least **12 inches** (300 mm) above finish-grade elevations.
 - 2. Stone Extending Below Grade: Beds, joints, back surfaces, and face surfaces below grade.
 - 3. Allow dampproofing to cure before setting dampproofed stone. Do not damage or remove dampproofing while handling and setting stone.
- I. Parge back of travertine panels with mortar not less than **3/8 inch** (10 mm) thick.
- J. Execute dimension stone cladding installation by skilled mechanics and employ skilled stone fitters at Project site to do necessary field cutting as stone is set.
 - 1. Use power saws with diamond blades to cut stone. Produce lines cut straight and true, with edges eased slightly to prevent snipping.
- K. Contiguous Work: Provide reveals, reglets, and openings as required to accommodate contiguous work.
- L. Set stone to comply with requirements indicated. Install anchors, supports, fasteners, and other attachments indicated or necessary to secure dimension stone cladding in place. Shim and adjust anchors, supports, and accessories to set stone accurately in locations indicated, with uniform joints of widths indicated, and with edges and faces aligned according to established relationships and indicated tolerances.
- M. Provide expansion, control, and pressure-relieving joints of widths and at locations indicated.
 - 1. Sealing expansion and other joints is specified in Section 079200 "Joint

Sealants."

2. Keep expansion joints free of mortar and other rigid materials.
- N. Install concealed flashing at continuous shelf angles, lintels, ledges, and similar obstructions to downward flow of water, to divert water to building exterior. Extend flashing **6 inches** (150 mm) at ends and turn up not less than **2 inches** (50 mm) to form end dams.
- O. Keep cavities open where unfilled space is indicated between back of stone units and backup wall; do not fill cavities with mortar or grout.
1. Place weep holes in joints where moisture may accumulate, including at base of cavity walls and above shelf angles and flashing. Locate weep holes at intervals not exceeding **24 inches** (600 mm). Use [**weep and vent tubes**] [**plastic weep hole/vents**] [**or**] [**wicking material**].
 2. Place vents in cavity walls at tops of cavities, below shelf angles and flashing, and at intervals not exceeding **20 feet** (6 m) vertically. Locate vents in joints at intervals not exceeding **60 inches** (1500 mm) horizontally. Use [**weep and vent tubes**] [**or**] [**plastic weep hole/vents**].

3.6 SETTING MECHANICALLY ANCHORED DIMENSION STONE CLADDING

- A. Set dimension stone cladding with mechanical anchors without mortar unless otherwise indicated.
- B. Attach anchors securely to stone and to backup surfaces. Comply with recommendations in ASTM C 1242.
- C. Provide compressible filler in ends of dowel holes and bottoms of kerfs to prevent end bearing of dowels and anchor tabs on stone. Fill remainder of anchor holes and kerfs with sealant indicated for filling kerfs.
- D. Set stone supported on clips or continuous angles on resilient setting shims. Use material of thickness required to maintain uniform joint widths and to prevent point loading of stone on anchors. Hold shims back from face of stone a distance at least equal to width of joint.

3.7 SETTING DIMENSION STONE CLADDING WITH MORTAR

- A. Set dimension stone cladding with mortar and mechanical anchors [**where indicated**] [**unless otherwise indicated**].
- B. Set stone in full bed of mortar with head joints filled unless otherwise indicated.
 1. Use setting buttons of adequate size, in sufficient quantity, and of thickness required to maintain uniform joint width and to prevent mortar from extruding. Hold buttons back from face of stone a distance at least equal to width of joint, but not less than depth of pointing materials.

2. Do not set heavy units or projecting courses until mortar in courses below has hardened enough to resist being squeezed out of joint.
 3. Support and brace projecting stones until wall above is in place and mortar has set.
 4. Provide compressible filler in ends of dowel holes and bottoms of kerfs to prevent end bearing of dowels and anchor tabs on stone. Fill remainder of anchor holes and kerfs with mortar.
- C. Fill space between back of stone units and backup wall solidly with mortar or grout.
- D. Embed ends of sills in mortar; leave remainder of joint open until final pointing.
- E. Rake out joints for pointing with mortar to depths of not less than **1/2 inch** (12 mm). Rake joints to uniform depths with square bottoms and clean sides.
- F. Prepare stone-joint surfaces for pointing with mortar by removing dust and mortar particles. Where setting mortar was removed to depths greater than surrounding areas, apply first layer of pointing mortar in layers not more than **3/8 inch** (10 mm) until a uniform depth is formed.
- G. Point stone joints by placing pointing mortar in layers not more than **3/8 inch** (10 mm). Compact each layer thoroughly and allow to become thumbprint hard before applying next layer.
- H. Tool joints with a round jointer having a diameter **1/8 inch** (3 mm) larger than width of joint, when pointing mortar is thumbprint hard.
- I. Rake out mortar from sealant-pointed joints to depths required for sealant and sealant backing but not less than **1/2 inch** (12 mm). Rake joints to uniform depths with square bottoms and clean sides.
- J. Set the following dimension stone cladding with unfilled head joints for installing joint sealants:
1. Cornices.
 2. Copings.
 3. Sills.
 4. Belt and other projecting courses.

3.8 STONE PAVING:

- A. Clean subbase to remove dirt, dust, debris, and loose particles. Saturate concrete subbase with clean water several hours before placing setting bed. About one hour prior to placing setting bed, remove surface water.
- B. Apply slush coat of cement grout over surface of concrete subbase about 15 minutes prior to placing setting bed. Limit area of slush coat to avoid drying out prior to placement of setting bed and apply by trowel or brush. Do not exceed 1/16-inch thickness for cement slush coat.

- C. Setting Bed: Mix one 94 pound bag of cement to 3 cubic feet of sand (measured in a damp, loose condition). Use only enough water to produce a moist surface when setting bed is ready for setting of stone. Spread and screed to a uniform thickness, except for minor variations required to produce a true surface, level in plane or uniformly sloped for drainage indicated. Mix and place only the amount which can be covered with stone prior to initial set of bed. Cut back, level edge, remove and discard setting bed material which has reached initial set prior to placing stone.
- D. Wet stone thoroughly before setting.
- E. Set stone before initial set of cement bed occurs. Do not set stone on dry bed. Apply a thin layer of neat cement paste 1/32-inch to 1/16-inch thick by brushing or troweling over setting bed, or apply 1/32-inch thick to bottom of stone. Tamp and beat stone for complete contact between stone and setting bed. Set and level each unit immediately. Do not set large areas and later level. Set stone in pattern shown with uniform joints of the width shown or, if not shown, provide joints not more than 1/4-inch wide.
- F. Grout joints as soon as possible after initial set of setting bed. Force grout into joints, strike flush and tool slightly concave. Wet joint surfaces, if dry, prior to grouting.
- G. Use portland cement grout mixed in the proportion of one bag of portland cement to 2 cubic feet of sand (measured in a damp, loose condition) mixed with water to the consistency of heavy cream.
- H. Cure grout by maintaining in a moist condition for 7 days.
- I. Remove grout spillage from face of stone as work progresses.
- J. Do not permit traffic on horizontal stone surfaces during setting of units or for at least 24 hours after final grouting of joints.

3.9 JOINT-SEALANT INSTALLATION

- A. Prepare joints and apply sealants of type and at locations indicated to comply with applicable requirements in Section 079200 "Joint Sealants."

3.10 INSTALLATION TOLERANCES

- A. Variation from Plumb: For vertical lines and surfaces of walls, do not exceed **1/4 inch in 10 feet** (6 mm in 3 m), **3/8 inch in 20 feet** (10 mm in 6 m), or **1/2 inch in 40 feet** (12 mm in 12 m) or more. For external corners, corners and jambs within **20 feet** (6 m) of an entrance, expansion joints, and other conspicuous lines, do not exceed **1/8 inch in 10 feet** (3 mm in 3 m), **1/4 inch in 20 feet** (6 mm in 6 m), or **3/8 inch in 40 feet** (10 mm in 12 m) or more.

- B. Variation from Level: For lintels, sills, water tables, parapets, horizontal bands, horizontal grooves, and other conspicuous lines, do not exceed **1/8 inch in 10 feet** (3 mm in 3 m), **1/4 inch in 20 feet** (6 mm in 6 m), or **3/8 inch** (10 mm) maximum.
- C. Variation of Linear Building Line: For positions shown in plan and related portions of walls and partitions, do not exceed **1/4 inch in 20 feet** (6 mm in 6 m) or **1/2 inch in 40 feet** (12 mm in 12 m) or more.
- D. Variation in Cross-Sectional Dimensions: For thickness of walls from dimensions indicated, do not exceed plus or minus **1/4 inch** (6 mm).
- E. Variation in Joint Width: Do not vary from average joint width more than plus or minus **1/8 inch** (3 mm) or a quarter of nominal joint width, whichever is less. For joints within **60 inches** (1500 mm) of each other, do not vary more than **1/8 inch** (3 mm) or a quarter of nominal joint width, whichever is less from one to the other.
- F. Variation in Plane between Adjacent Stone Units (Lipping): Do not exceed **1/16-inch** (1.5-mm) difference between planes of adjacent units.

3.11 ADJUSTING AND CLEANING

- A. Remove and replace broken, chipped, stained, or otherwise damaged stone, defective joints, and dimension stone cladding that does not match approved samples[**and mockups**].
 1. Damaged stone may be repaired if DIA Project Manager approves methods and results. Contractor to provide sample of repair work if requested by DIA Project Manager.
- B. Replace damaged or defective work in a manner that results in dimension stone cladding's matching approved samples[**and mockups**], complying with other requirements, and showing no evidence of replacement.
- C. In-Progress Cleaning: Clean dimension stone cladding as work progresses.[**Remove mortar fins and smears before tooling joints.**] Remove excess sealant and smears as sealant is installed.
- D. Final Cleaning: Clean dimension stone cladding no fewer than six days after completion of pointing and sealing, using clean water and stiff-bristle fiber brushes. Do not use wire brushes, acid-type cleaning agents, cleaning agents containing caustic compounds or abrasives, or other materials or methods that could damage stone.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price

END OF SECTION 044200

SECTION 047200 - CAST STONE MASONRY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

- 1. Cast stone trim[.][**including the following:**]

- a. Window sills.
 - b. Lintels.
 - c. Surrounds.
 - d. Coping.
 - e. Wall caps.
 - f. Belt courses.
 - g. Water tables.
 - h. Quoins.
 - i. Pilasters.
 - j. Column covers.
 - k. Medallions.

- 2. Cast stone steps.
 - 3. Cast stone bollards.
 - 4. Cast stone benches.
 - 5. Cast stone curbing.

- B. Related Sections:

- 1. Section 034500 "Precast Architectural Concrete."
 - 2. Section 042000 "Unit Masonry" for installing cast stone units in unit masonry.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

- 1. Include data substantiating that materials comply with requirements.

2. For cast stone units, include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
- B. LEED Submittals:
1. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
- C. Shop Drawings: Show fabrication and installation details for cast stone units. Include dimensions, details of reinforcement and anchorages if any, and indication of finished faces.
1. Include building elevations showing layout of units and locations of joints and anchors.
- D. Samples for Initial Selection: For colored mortar.
- E. Samples for Verification:
1. For each color and texture of cast stone required, **10 inches** (250 mm) square in size.
 2. For colored mortar. Make Samples using same sand and mortar ingredients to be used on Project. [**Label Samples to indicated types and amounts of pigments used.**]
- F. Full-Size Samples: For each [color] [texture] [and] [shape] of cast stone unit required.
1. Make available for DIA Project Manager's review at Project site [**or at manufacturing plant, if acceptable to DIA Project Manager**].
 2. Make Samples from materials to be used for units used on Project [**immediately before beginning production of units for Project**].
 3. Approved Samples may be installed in the Work.
- 1.4 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For [manufacturer] [and] [testing agency].
1. Include copies of material test reports for completed projects, indicating compliance of cast stone with ASTM C 1364.
- B. Material Test Reports: For each mix required to produce cast stone, based on testing according to ASTM C 1364 [**including test for resistance to freezing and thawing**].
1. Provide test reports based on testing within previous two (2) years.

1.5 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A qualified manufacturer of cast stone units similar to those indicated for this Project, that has sufficient production capacity to manufacture required units, and is a plant certified by **[the Cast Stone Institute] [the Architectural Precast Association] [or] [the Precast/Prestressed Concrete Institute for Group A, Category AT]**.
- B. Testing Agency Qualifications: Qualified according to ASTM E 329 for testing indicated.
- C. Source Limitations for Cast Stone: Obtain cast stone units through single source from single manufacturer.
- D. Source Limitations for Mortar Materials: Obtain mortar ingredients of a uniform quality, including color, from one manufacturer for each cementitious component and from one source or producer for each aggregate.
- E. Mockups: Furnish cast stone for installation in mockups specified in Section 042000 "Unit Masonry."
- F. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects[**and set quality standards for materials and execution**].
 - 1. Build mockup of typical wall area as shown on Drawings.
 - 2. Coordinate mockup with mockups for unit masonry and other systems.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Coordinate delivery of cast stone[**with unit masonry work**] to avoid delaying the Work[**and to minimize the need for on-site storage**].
- B. Pack, handle, and ship cast stone units in suitable packs or pallets.
 - 1. Lift with wide-belt slings; do not use wire rope or ropes that might cause staining. Move cast stone units, if required, using dollies with wood supports.
 - 2. Store cast stone units on wood skids or pallets with nonstaining, waterproof covers, securely tied. Arrange to distribute weight evenly and to prevent damage to units. Ventilate under covers to prevent condensation.

- C. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.
- D. Store mortar aggregates where grading and other required characteristics can be maintained and contamination can be avoided.

1.8 PROJECT CONDITIONS

- A. Cold-Weather Requirements: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Comply with cold-weather construction requirements in ACI 530.1/ASCE 6/TMS 602.
 - 1. Cold-Weather Cleaning: Use liquid cleaning methods only when air temperature is 40 deg F (4 deg C) and above and will remain so until cast stone has dried, but no fewer than seven days after completing cleaning.
- B. Hot-Weather Requirements: Comply with hot-weather construction requirements in ACI 530.1/ASCE 6/TMS 602.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 CAST STONE MATERIALS

- A. General: Comply with ASTM C 1364 and the following:
- B. Portland Cement: ASTM C 150, Type I or Type III, containing not more than 0.60 percent total alkali when tested according to ASTM C 114. Provide natural color or white cement as required to produce cast stone color indicated.
- C. Coarse Aggregates: Granite, quartz, or limestone complying with ASTM C 33; gradation and colors as needed to produce required cast stone textures and colors.
- D. Fine Aggregates: Natural sand or crushed stone complying with ASTM C 33, gradation and colors as needed to produce required cast stone textures and colors.
- E. Color Pigment: ASTM C 979, synthetic mineral-oxide pigments or colored water-reducing admixtures; color stable, [**free of carbon black,**] nonfading, and resistant to lime and other alkalis.

- F. Admixtures: Use only admixtures specified or approved in writing by DIA Project Manager.
1. Do not use admixtures that contain more than 0.1 percent water-soluble chloride ions by mass of cementitious materials. Do not use admixtures containing calcium chloride.
 2. Use only admixtures that are certified by manufacturer to be compatible with cement and other admixtures used.
 3. Air-Entraining Admixture: ASTM C 260.[**Add to mixes for units exposed to the exterior at manufacturer's prescribed rate to result in an air content of 4 to 6 percent, except do not add to zero-slump concrete mixes.**]
 4. Water-Reducing Admixture: ASTM C 494/C 494M, Type A.
 5. Water-Reducing, Retarding Admixture: ASTM C 494/C 494M, Type D.
 6. Water-Reducing, Accelerating Admixture: ASTM C 494/C 494M, Type E.
- G. Reinforcement: Deformed steel bars complying with ASTM A 615/A 615M, **Grade 60** (Grade 420). Use galvanized or epoxy-coated reinforcement when covered with less than **1-1/2 inches** (38 mm) of cast stone material.
1. Epoxy Coating: ASTM A 775/A 775M.
 2. Galvanized Coating: ASTM A 767/A 767M.
- H. Embedded Anchors and Other Inserts: Fabricated from **[stainless steel complying with ASTM A 240/A 240M, ASTM A 276, or ASTM A 666, Type 304]** **[steel complying with ASTM A 36/A 36M, and hot-dip galvanized to comply with ASTM A 123/A 123M]**.

2.2 CAST STONE UNITS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. **<Insert, in separate subparagraphs, manufacturers' names>**.
 2. or approved equal.
- B. Regional Materials: Cast stone units shall be manufactured within **500 miles** (800 km) of Project site from aggregates[**and cement**] that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles** (800 km) of Project site.
- C. Provide cast stone units complying with ASTM C 1364 using either the vibrant dry tamp or wet-cast method.
1. Provide units that are resistant to freezing and thawing as determined by laboratory testing according to ASTM C 666/C 666M, Procedure A, as modified by ASTM C 1364.

- D. Fabricate units with sharp arris and accurately reproduced details, with indicated texture on all exposed surfaces unless otherwise indicated.
1. Slope exposed horizontal surfaces 1:12 to drain unless otherwise indicated.
 2. Provide raised fillets at backs of sills and at ends indicated to be built into jambs.
 3. Provide drips on projecting elements unless otherwise indicated.
- E. Fabrication Tolerances:
1. Variation in Cross Section: Do not vary from indicated dimensions by more than **1/8 inch** (3 mm).
 2. Variation in Length: Do not vary from indicated dimensions by more than 1/360 of the length of unit or **1/8 inch** (3 mm), whichever is greater, but in no case by more than **1/4 inch** (6 mm).
 3. Warp, Bow, and Twist: Not to exceed 1/360 of the length of unit or **1/8 inch** (3 mm), whichever is greater.
 4. Location of Grooves, False Joints, Holes, Anchorages, and Similar Features: Do not vary from indicated position by more than **1/8 inch** (3 mm) on formed surfaces of units and **3/8 inch** (10 mm) on unformed surfaces.
- F. Cure units as follows:
1. Cure units in enclosed moist curing room at 95 to 100 percent relative humidity and temperature of **100 deg F** (38 deg C) for 12 hours or **70 deg F** (21 deg C) for 16 hours.
 2. Keep units damp and continue curing to comply with one of the following:
 - a. No fewer than five days at mean daily temperature of **70 deg F** (21 deg C) or above.
 - b. No fewer than six days at mean daily temperature of **60 deg F** (16 deg C) or above.
 - c. No fewer than seven days at mean daily temperature of **50 deg F** (10 deg C) or above.
 - d. No fewer than eight days at mean daily temperature of **45 deg F** (7 deg C) or above.
- G. Acid etch units after curing to remove cement film from surfaces to be exposed to view.
- H. Colors and Textures: **[Match DIA Project Manager's samples] [Match existing units] [As selected by DIA Project Manager from manufacturer's full range].**
- I. Color and Texture: Provide units with fine-grained texture and buff color resembling Indiana limestone.
- J. Color and Texture: Provide units with fine texture and red-brown color resembling brownstone on adjacent buildings.

2.3 MORTAR MATERIALS

- A. Provide mortar materials that comply with Section 042000 "Unit Masonry."
- B. Regional Materials: Aggregate for mortar[, **cement, and lime**] shall be manufactured within **500 miles** (800 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles** (800 km) of Project site.
- C. Portland Cement: ASTM C 150, Type I or II, except Type III may be used for cold-weather construction. Provide natural color or white cement as required to produce mortar color indicated.
- D. Hydrated Lime: ASTM C 207, Type S.
- E. Portland Cement-Lime Mix: Packaged blend of portland cement and hydrated lime containing no other ingredients.
- F. Masonry Cement: ASTM C 91.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Capital Materials Corporation; Flamingo Color Masonry Cement.
 - b. Cemex S.A.B. de C.V.; [**Brikset Type N**] [**Citadel Type S**] [**Dixie Type S**] [**Kosmortar Type N**] [**Richmortar**] [**Victor Plastic Cement**].
 - c. Essroc, Italcementi Group; [**Brixment**] [**or**] [**Velvet**].
 - d. Holcim (US) Inc.; [**Mortamix Masonry Cement**] [**Rainbow Mortamix Custom Buff Masonry Cement**] [**White Mortamix Masonry Cement**].
 - e. Lafarge North America Inc.; [**Lafarge Masonry Cement**] [**Magnolia Masonry Cement**] [**Trinity White Masonry Cement**].
 - f. Lehigh Cement Company; [**Lehigh Masonry Cement**] [**Lehigh White Masonry Cement**].
 - g. National Cement Company, Inc.; Coosa Masonry Cement.
 - h. <**Insert manufacturer's name; product name or designation**>.
 - i. or approved equal.
- G. Mortar Cement: ASTM C 1329.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Lafarge North America Inc.; [**Lafarge Mortar Cement**] [**or**] [**Magnolia Superbond Mortar Cement**].
 - b. <**Insert manufacturer's name; product name or designation**>.
 - c. or approved equal.

- H. Mortar Pigments: Natural and synthetic iron oxides and chromium oxides, compounded for use in mortar mixes and complying with ASTM C 979. Use only pigments with a record of satisfactory performance in masonry mortar.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Davis Colors; True Tone Mortar Colors.
 - b. Lanxess Corporation; Bayferrox Iron Oxide Pigments.
 - c. Solomon Colors, Inc.; SGS Mortar Colors.
 - d. **<Insert manufacturer's name; product name or designation>**.
 - e. or approved equal.
- I. Colored Cement Product: Packaged blend made from [**portland cement and hydrated lime**] [**masonry cement**] [**or**] [**mortar cement**] and mortar pigments, all complying with specified requirements and containing no other ingredients.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Colored Portland Cement-Lime Mix:
 - 1) Capital Materials Corporation; Riverton Portland Cement Lime Custom Color.
 - 2) Holcim (US) Inc.; Rainbow Mortamix Custom Color Cement/Lime.
 - 3) Lafarge North America Inc.; Eaglebond Portland & Lime.
 - 4) Lehigh Cement Company; Lehigh Custom Color Portland/Lime Cement.
 - 5) **<Insert manufacturer's name; product name or designation>**.
 - 6) or approved equal.
 - b. Colored Masonry Cement:
 - 1) Capital Materials Corporation; Flamingo Color Masonry Cement.
 - 2) Cemex S.A.B. de C.V.; Richcolor Masonry Cement.
 - 3) Essroc, Italcementi Group; Brixment-in-Color.
 - 4) Holcim (US) Inc.; Rainbow Mortamix Custom Color Masonry Cement.
 - 5) Lafarge North America Inc.; U.S. Cement Custom Color Masonry Cement.
 - 6) Lehigh Cement Company; Lehigh Custom Color Masonry Cement.
 - 7) National Cement Company, Inc.; Coosa Masonry Cement.
 - 8) **<Insert manufacturer's name; product name or designation>**.
 - 9) or approved equal.

2. Formulate blend as required to produce color indicated or, if not indicated, as selected from manufacturer's standard colors.
 3. Pigments shall not exceed 10 percent of portland cement by weight.
 4. Pigments shall not exceed 5 percent of [masonry cement] [or] [mortar cement] by weight.
- J. Aggregate for Mortar: ASTM C 144.
1. For mortar that is exposed to view, use washed aggregate consisting of natural sand or crushed stone.
 2. For joints less than 1/4 inch (6 mm) thick, use aggregate graded with 100 percent passing the No. 16 (1.18-mm) sieve.
 3. White-Mortar Aggregates: Natural white sand or crushed white stone.
 4. Colored-Mortar Aggregates: Natural sand or crushed stone of color necessary to produce required mortar color.
- K. Water: Potable.

2.4 ACCESSORIES

- A. Anchors: Type and size indicated, fabricated from [Type 304 stainless steel complying with ASTM A 240/A 240M, ASTM A 276, or ASTM A 666] [steel complying with ASTM A 36/A 36M, and hot-dip galvanized to comply with ASTM A 123/A 123M].
- B. Dowels: 1/2-inch- (12-mm-) diameter, round bars, fabricated from [Type 304 stainless steel complying with ASTM A 240/A 240M, ASTM A 276, or ASTM A 666] [steel complying with ASTM A 36/A 36M, and hot-dip galvanized to comply with ASTM A 123/A 123M].
- C. Proprietary Acidic Cleaner: Manufacturer's standard-strength cleaner designed for removing mortar/grout stains, efflorescence, and other new construction stains from new masonry without discoloring or damaging masonry surfaces. Use product expressly approved for intended use by cast stone manufacturer and expressly approved by cleaner manufacturer for use on cast stone and adjacent masonry materials.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following :
 - a. Diedrich Technologies, Inc.
 - b. EaCo Chem, Inc.
 - c. ProSoCo, Inc.
 - d. <Insert manufacturer's name>.
 - e. or approved equal.

2.5 MORTAR MIXES

- A. Comply with requirements in Section 042000 "Unit Masonry" for mortar mixes.

- B. Do not use admixtures including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, antifreeze compounds, or other admixtures unless otherwise indicated.
 - 1. Do not use calcium chloride in mortar or grout.
 - 2. Use **[portland cement-lime] [masonry cement] [or] [mortar cement]** mortar unless otherwise indicated.
- C. Comply with ASTM C 270, Proportion Specification.
 - 1. For setting mortar, use **[Type S] [Type N]**.
 - 2. For pointing mortar, use **[Type N] [Type O]**.
- D. Pigmented Mortar: Use colored cement product[**or select and proportion pigments with other ingredients to produce color required. Do not add pigments to colored cement products**].
 - 1. Pigments shall not exceed 10 percent of portland cement by weight.
 - 2. Pigments shall not exceed 5 percent of **[masonry cement] [or] [mortar cement]** by weight.
 - 3. Mix to match DIA Project Manager's sample.
 - 4. Application: Use pigmented mortar for exposed mortar joints.
- E. Colored-Aggregate Mortar: Produce required mortar color by using colored aggregates and natural color or white cement as necessary to produce required mortar color.
 - 1. Mix to match DIA Project Manager's sample.
 - 2. Application: Use colored aggregate mortar for exposed mortar joints.

2.6 SOURCE QUALITY CONTROL

- A. Engage a qualified independent testing agency to sample and test cast stone units according to ASTM C 1364.
 - 1. Include one test for resistance to freezing and thawing.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SETTING CAST STONE IN MORTAR

- A. Install cast stone units to comply with requirements in Section 042000 "Unit Masonry."
- B. Set cast stone as indicated on Drawings. Set units accurately in locations indicated with edges and faces aligned according to established relationships and indicated tolerances.
 - 1. Install anchors, supports, fasteners, and other attachments indicated or necessary to secure units in place.
 - 2. Coordinate installation of cast stone with installation of flashing specified in other Sections.
- C. Wet joint surfaces thoroughly before applying mortar or setting in mortar.
- D. Set units in full bed of mortar with full head joints unless otherwise indicated.
 - 1. Set units with joints [**1/4 to 3/8 inch** (6 to 10 mm)] [**3/8 to 1/2 inch** (10 to 13 mm)] **<Insert dimension>** wide unless otherwise indicated.
 - 2. Build anchors and ties into mortar joints as units are set.
 - 3. Fill dowel holes and anchor slots with mortar.
 - 4. Fill collar joints solid as units are set.
 - 5. Build concealed flashing into mortar joints as units are set.
 - 6. Keep head joints in coping and other units with exposed horizontal surfaces open to receive sealant.
 - 7. Keep joints at shelf angles open to receive sealant.
- E. Rake out joints for pointing with mortar to depths of not less than **3/4 inch** (19 mm). Rake joints to uniform depths with square bottoms and clean sides. Scrub faces of units to remove excess mortar as joints are raked.
- F. Point mortar joints by placing and compacting mortar in layers not greater than **3/8 inch** (10 mm). Compact each layer thoroughly and allow it to become thumbprint hard before applying next layer.
- G. Tool exposed joints slightly concave when thumbprint hard, using a jointer larger than joint thickness unless otherwise indicated.
- H. Provide sealant joints at copings and other horizontal surfaces, at expansion, control, and pressure-relieving joints, and at locations indicated.
 - 1. Keep joints free of mortar and other rigid materials.
 - 2. Build in compressible foam-plastic joint fillers where indicated.
 - 3. Form joint of width indicated, but not less than [**3/8 inch** (10 mm)] [**1/2 inch** (13 mm)] **<Insert dimension>**.
 - 4. Prime cast stone surfaces to receive sealant and install compressible backer rod in joints before applying sealant unless otherwise indicated.
 - 5. Prepare and apply sealant of type and at locations indicated to comply with applicable requirements in Section 079200 "Joint Sealants."

3.3 SETTING ANCHORED CAST STONE WITH SEALANT-FILLED JOINTS

- A. Set cast stone as indicated on Drawings. Set units accurately in locations indicated with edges and faces aligned according to established relationships and indicated tolerances.
 - 1. Install anchors, supports, fasteners, and other attachments indicated or necessary to secure units in place.
 - 2. Shim and adjust anchors, supports, and accessories to set cast stone in locations indicated with uniform joints.
- B. Keep cavities open where unfilled space is indicated between back of cast stone units and backup wall; do not fill cavities with mortar or grout.
- C. Fill anchor holes with sealant.
 - 1. Where dowel holes occur at pressure-relieving joints, provide compressible material at ends of dowels.
- D. Set cast stone supported on clip or continuous angles on resilient setting shims. Use material of thickness required to maintain uniform joint widths. Hold shims back from face of cast stone a distance at least equal to width of joint.
- E. Keep joints free of mortar and other rigid materials. Remove temporary shims and spacers from joints after anchors and supports are secured in place and cast stone units are anchored. Do not begin sealant installation until temporary shims and spacers are removed.
 - 1. Form open joint of width indicated, but not less than [3/8 inch (10 mm)] [1/2 inch (13 mm)] <Insert dimension>.
- F. Prime cast stone surfaces to receive sealant and install compressible backer rod in joints before applying sealant unless otherwise indicated.
- G. Prepare and apply sealant of type and at locations indicated to comply with applicable requirements in Section 079200 "Joint Sealants."

3.4 INSTALLATION TOLERANCES

- A. Variation from Plumb: Do not exceed 1/8 inch in 10 feet (3 mm in 3 m), 1/4 inch in 20 feet (6 mm in 6 m), or 1/2 inch (12 mm) maximum.
- B. Variation from Level: Do not exceed 1/8 inch in 10 feet (3 mm in 3 m), 1/4 inch in 20 feet (6 mm in 6 m), or 1/2 inch (12 mm) maximum.
- C. Variation in Joint Width: Do not vary joint thickness more than 1/8 inch in 36 inches (3 mm in 900 mm) or one-fourth of nominal joint width, whichever is less.
- D. Variation in Plane between Adjacent Surfaces (Lipping): Do not vary from flush alignment with adjacent units or adjacent surfaces indicated to be flush

with units by more than **1/16 inch** (1.5 mm), except where variation is due to warpage of units within tolerances specified.

3.5 ADJUSTING AND CLEANING

- A. Remove and replace stained and otherwise damaged units and units not matching approved Samples.
 - 1. Cast stone may be repaired if methods and results are approved by DIA Project Manager. Contractor to provide sample of repair method if requested by DIA Project Manager.
- B. Replace units in a manner that results in cast stone matching approved Samples, complying with other requirements, and showing no evidence of replacement.
- C. In-Progress Cleaning: Clean cast stone as work progresses.
 - 1. Remove mortar fins and smears before tooling joints.
 - 2. Remove excess sealant immediately, including spills, smears, and spatter.
- D. Final Cleaning: After mortar is thoroughly set and cured, clean exposed cast stone as follows:
 - 1. Remove large mortar particles by hand with wooden paddles and nonmetallic scrape hoes or chisels.
 - 2. Test cleaning methods on sample; leave one sample uncleaned for comparison purposes. Obtain DIA Project Manager's approval of sample cleaning before proceeding with cleaning of cast stone.
 - 3. Protect adjacent surfaces from contact with cleaner by covering them with liquid strippable masking agent or polyethylene film and waterproof masking tape.
 - 4. Wet surfaces with water before applying cleaners; remove cleaners promptly by rinsing thoroughly with clear water.
 - 5. Clean cast stone by bucket-and-brush hand-cleaning method described in BIA Technical Notes 20.
 - 6. Clean cast stone with proprietary acidic cleaner applied according to manufacturer's written instructions.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 047200

SECTION 050170 - MAINTENANCE OF DECORATIVE METAL

PART 1 - GENERAL (Not Applicable)

This Section has no Section Text as it has been replaced by the Sections listed below. If Bindings in e-SPECS for Revit have been associated to this Section, they should be updated to refer to the replacement sections below.

- A. SECTION 050170.51 - DECORATIVE METAL CLEANING
- B. SECTION 050170.61 - DECORATIVE METAL REPAIR
- C. SECTION 050170.63 - DECORATIVE METAL REFINISHING

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION (Not Applicable)

END OF SECTION 050170

SECTION 050510 - WELDING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Welding is that work defined in American Welding Society (AWS) "Standard Welding Terms and Definitions - AWS A2.4" and as otherwise shown on Drawings.
 - 1. All welding on this project shall comply with requirement of this Section, and other Contract Documents such as, but not limited to Drawings. If there is a conflict between Project Drawings, codes, and specifications, the more stringent shall apply.
- B. Extent of welding Work is shown on Drawings, including schedules, notes, and details to show size and location of welds. Welding Symbols shall be in accordance with AWS/A2.4-Standard Symbols for Welding, Brazing, and Nondestructive Examination.
- C. Nothing stated in this Section shall be interpreted as diminishing or eliminating requirements stated in other Sections.
- D. Related Sections:
 - 1. This Section 050510 "Welding" will apply to all welding performed under all other sections of this specification.
 - 2. Other Division 5, Division 22, and Division 23 <Insert division> Sections.
- E. Related Requirements:
 - 1. Drawings, General and Special conditions, general requirements and other applicable Technical Specifications apply to Work of this Section.
 - 2. IEEE-1992. Only welding machines that have been tested and comply with harmonic distortion requirements of IEEE-1992 shall be allowed to operate off of DEN electrical power system.

1.3 REFERENCE STANDARDS

- A. Welding shall comply with the requirements of the reference standards noted herein, except where more stringent requirements are listed herein or otherwise required by

the Contract Documents.

1. AISC - American Institute of Steel Construction.
2. AWS - American Welding Society.
3. API - American Petroleum Institute.
4. AWWA - American Water Works Association.
5. ASME - American Society of Mechanical Engineers.
6. ASTM - American Society for Testing and Materials.
7. ASNT - American Society for Nondestructive Testing.

1.4 SUBMITTALS

- A. Product Data: Submit producers or manufacturer's specifications and installation instructions for all products, including, but not limited to those listed below. Include laboratory test reports and other data to show compliance with specifications (including specified standards).
1. Welding Electrodes: Submit manufactures specifications, to include recommended parameters and technique, for each electrode to be used on this project.
 2. Include data substantiating that materials comply with requirements.
- B. Submittal Requirements for Steel Studs:
1. Stud manufacturer's certification that the studs, as delivered, conform to the applicable requirements of AWS D1.1-2000, sections 7.2 and & 7.3.
 2. Certified copies of the stud manufacturer's test reports covering the last completed set of in-plant quality control mechanical tests, required by AWS D1.1-2000, 7.3 for each diameter delivered. The quality control test shall have been made within the six-month period before delivery of the studs.
 3. Certified material test reports (CMTR) from the steel supplier indicating diameter, chemical properties, and grade on each heat number delivered.
 4. In the absence of Quality Control tests the provisions of AWS D1.1-2000, 7.3.4 and 7.3.5 shall apply with the exception that DEN Project Manager or DEN Project Manager's representative will replace engineer in the process. All costs shall be at Contractor's expense.
- C. Submit shop drawings as specified under Section 013325 "Shop and Working Drawings, Product Data and Samples" for all Work specified herein, including complete details and schedules for fabrication and assembly of members, procedures and diagrams. Shop drawings shall indicate how each and every component shall be welded. If another company manufactures a component to be welded to another part(s) or piece(s) to form a larger assembly, then the shop drawings shall include that manufacturer's recommended welding procedures for that component. Design Construction Drawings shall not be re-used as bases for submitted shop drawings. Shop drawings, which use reproductions of design plans or details, will not be reviewed. Drawings shall be submitted in complete units. Do not submit partial sets.
- D. Shop drawings shall clearly indicate profiles, sizes, and locations of structural

members, connections, attachments, anchorage's, framed openings, size and type of fasteners, and clearances. Indicate welded connections using standard AWS welding symbols, per AWS A2.4. Clearly indicate net weld lengths and sizes, root openings, bevel angles and other information required to satisfactorily complete welding operations.

- E. Contractor shall submit fully dimensioned Isometric drawings (spool drawings) for all welded piping work. Drawings shall indicate all weld types, sizes, and materials to be used. The spool drawing size shall match the full size Contract Documents. Spool drawings shall be submitted in in latest format as approved by Owner. Adobe Acrobat files shall not contain security. Other file formats will not be accepted.
- F. Calculations required in other Sections shall show all pertinent members and pieces. Calculations shall be submitted prior to, or with, relevant shop drawing submittals. It is contractor's responsibility to insure that field construction uses connection design as submitted and reviewed.
- G. Test Reports: Submit copies of all test reports conducted on shop and field welded connections. Include data on type(s) of tests conducted and test results. Reports must be sequentially numbered and submitted to the DEN Project Manager within 48 hours of completion.
- H. Individual Welder Qualifications: Submit Welding Performance Qualification Records (WPQR) for all welders, shop and field, prior to any welding per Paragraph 1.5. B below.
- I. Procedures: Submit Welding Procedure Specifications for all shop and field welding prior to any welding per Part 1 of this Section.

1.5 QUALITY REQUIREMENTS

- A. Codes and Standards: Comply with provisions of following, as applicable:
 - 1. AISC - American Institute of Steel Construction:
 - a. AISC "Code of Standard Practice for Steel Buildings and Bridges", 1986.
 - b. AISC "Specifications for the Design, Fabrication, and Erection of Structural Steel for Buildings", including "Commentary" and Supplements thereto as issued.
 - 2. American Welding Society (AWS) D1.1 "Structural Welding Code Steel" and all other applicable A.W.S codes (latest editions).
 - 3. ASTM A 6 "General Requirements for Delivery of Rolled Steel Plates, Shapes, Sheet Piling and Bars for Structural Use".
 - 4. All welding shall be performed in accordance with the latest addition of applicable AWS, API, ASME code, and ASTM Standards.
- B. Qualifications for Welding Work:
 - 1. All Welders shall have been qualified through welding tests in accordance with

- applicable AWS code per paragraph 1.5.A above within one (1) year prior to welding taking place. Evidence of qualification shall be through Welding Performance Qualification Records (WPQR).
2. All welder qualifications test shall be or shall have been administered and witnessed by an Independent Testing Agency (ITA), AWS Certified Welding Inspector, (CWI).
 3. If recertification of welders is required, delay costs and retesting costs shall be borne by the Contractor.
 4. Welding that is to take place at each and every type of joint shall be per approved AWS procedure for that type of joint. Evidence of intended procedure shall be through written Welding Procedure Specifications.
 5. Any welding done without submission to and approval by the DEN Project Manager of Welding Performance Qualification Records of the individual welder(s) doing the welding and Procedure Specifications for the actual welding shall be considered defective and subject to the provisions of Title 17 of the General Conditions.
 6. All WPS and WPQR qualification testing shall be in accordance with this specification and the applicable welding code requirements.
- C. The Contractor shall periodically review each welders work quality and take any steps required to insure high quality work. This is in addition to Quality Control requirements.
- D. Fabricator Qualifications: Minimum of three (3) years experience specializing in fabrication for similar projects.
- E. Design of Members and Connections: Details shown are typical; similar details apply to similar conditions, unless otherwise indicated. Verify dimensions at site whenever possible without causing delay in the Work.
1. Promptly notify DEN Project Manager whenever design of members and connections for any portion of structure are not clearly indicated.
- F. Welding and materials shall be inspected and tested by an Independent Testing Agency furnished and paid for by the Contractor. The Independent Testing Agency will have authority to reject weldments and materials. Such rejection may be based on visual inspection where, in the Inspector's opinion, the weldment or material would not pass more detailed investigation. Reference Article 3.01 below for inspection and testing requirements. DEN's Quality Assurance Inspector(s), per the provisions of General Conditions Title 17, will also inspect welding and materials. Inspections by either the Independent Testing Agency or DEN's Quality Assurance Inspector may take place in the mill, shop, and field.
1. Promptly remove and replace materials or fabricated components that do not comply with requirements as set forth in the Contract Documents.
- 1.6 CONSTRUCTION WASTE MANAGEMENT
- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to

satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Electrodes for Welding: Comply with AWS Code. Use E70 grade minimum unless otherwise approved. Store all electrodes and welding materials inside and protect from moisture, corrosion, and any other damage. Damaged electrodes shall not be used.

2.2 FABRICATION

- A. Shop Fabrication and Assembly: Fabricate and assemble components in shop to greatest extent possible.
 - 1. Properly mark and match-mark materials for field assembly. Fabricate for delivery sequence which will expedite erection and minimize field handling of materials.
 - 2. Where finishing is required, complete assembly, including welding of units, before start of finishing operations. Provide finish surfaces of members exposed in final structure free of markings, burrs, and other defects.
- B. Holes for Other Work: Provide holes required for securing other work to components, and for passage of other work through components, as shown on final shop drawings.
 - 1. Provide threaded nuts welded to framing, and other specialty items as indicated to receive other work.
 - 2. Cut, drill, or punch holes perpendicular to metal surfaces. The DEN Project Manager shall approve any enlarging of holes by flame cutting
- C. Contractor will notify DEN Project Manager or DEN Project Manager's representative at least 48 hours prior to any commencing fabrication. Notification to include starting date and duration of the Work.

2.3 SHOP CLEANING AND PAINTING

- A. Components to be painted are as shown on the Drawings.
 - 1. Do not paint surfaces, which are to be welded.
 - 2. Do not paint over welded joints until after Independent Testing Agency and DEN Quality Assurance Inspector have approved them.

PART 3 - EXECUTION

3.1 ERECTION

- A. Do not enlarge misaligned or undersized holes in members by burning or by use of drift pins, except in secondary bracing members. Ream holes that must be enlarged to admit bolts.
- B. Gas Cutting: Do not use gas cutting torches in field for correcting fabrication errors in primary structural framing. Cutting will be permitted only on secondary members, which are not under stress, as acceptable to DEN Project Manager. Finish gas-cut sections equal to a sheared appearance when permitted.
- C. Touch-Up Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint. Once Independent Testing Agency and DEN Quality Assurance Inspector have approved welds, apply paint to exposed areas using same material as used for shop painting.
- D. No welding machines are to be operated off of DEN power until such machines have been tested for harmonic distortion per IEEE-1992 and approved by DEN Project Manager.
- E. Contractor will notify DEN Project Manager or DEN Project Manager's representative at least 48 hours prior to any inspections to be performed by ITA.

3.2 TESTING AND INSPECTION

- A. Independent Testing Agency (ITA):
 - 1. See Division 1 for Independent Testing Agency requirements.
 - 2. The General Contractor shall provide the ITA for all subcontractors. Subcontractors shall not contract with a separate ITA.
 - 3. Contractor will engage an Independent Testing Agency to inspect welded connections and to perform tests and prepare test reports. The Contractor's Quality Control Inspector will coordinate the inspections and tests performed by the testing lab inspectors and testing personnel.
 - a. The Contractor's Independent Testing Agency and DEN Project Manager's staff shall conduct and interpret tests and state in each report whether test specimens comply with requirements, and specifically state any deviations therefrom. All reports shall be delivered to the DEN Project Manager. Results not complying with requirements are to be brought to the DEN Project Manager's attention within 24 hours of discovery. All reports shall be sequentially numbered.
 - b. Provide access for Independent Testing Agency to places where work is being fabricated or produced so that required inspection and testing can be accomplished.
 - c. The Independent Testing Agency shall inspect Work at the plant before

shipment; however, DEN Project Manager reserves right, at any time before final acceptance, to reject material not complying with specified requirements.

- 1) Inspections and tests conducted by the ITA or DEN shall not in any way relieve the Contractor of the Contractor's responsibility and obligation to meet all specifications and referenced standards. Employment of the ITA does not relieve the Contractor of providing the required Quality Control Program.
 - d. Welding Inspection Personnel Qualifications: All visual welding inspections shall be performed by AWS Certified Welding Inspectors CWI, qualified in accordance with AWS QC1. Inspectors qualified in accordance with the most current edition of the American Society for Nondestructive Testing Recommended Practice No. SNT-TC 1A, shall perform all non-destructive inspections other than visual inspections
 - e. Independent Testing Agency Inspectors working for the Contractor shall identify with a distinguishing mark all parts and joints they have inspected and accepted. Marks to be visible from at least 50 feet. DEN Project Manager and the Quality Control Inspectors shall mutually agree upon identifying marks.
 - f. Independent Testing Agency welding inspector shall be on job site however much time it takes to guaranty that all requirements of Project Specifications and codes are being met and provide written reports showing specific requirements have been met. Shop inspections by ITA welding inspector shall be performed in such a manner as to guaranty that all provisions of Project Specifications and codes are being met and provide written reports showing specific requirements have been met.
4. The Contractor shall furnish such facilities and provide such assistance as may be required for carrying out the inspection prescribed herein. The Contractor shall notify the Independent Testing Agency and the DEN Project Manager at least two weeks in advance of the start of any qualification testing for welding.
 5. The Testing Agency's Inspector will perform the Inspector's duties in such a way that neither fabrication nor erection is unnecessarily delayed or impeded. The Testing Agency shall notify the DEN Project Manager of any scheduled inspections at least 48 hours prior to such time. The DEN Project Manager shall also be notified as soon as possible prior to any unscheduled inspections. In no case will the inspector recommend or prescribe the method of repair of a defect.
 6. Inspection of welding will be such as to assure that all requirements of Project Specifications AWS D1.1, and other applicable welding codes are being complied with. Reports shall show the following items as being in conformance, but not be limited to just the items shown:
 - a. Verify that electrodes used for welding conform to the requirements Manufacturer, AWS, and other applicable Welding Codes and Standards.
 - b. Verify that the approved Welding Procedure Specifications and the approved welding sequence are followed without deviation.
 - c. Verify that only welding operators and welders who have been properly qualified will perform the welding. The inspection agency will witness such

- d. qualification testing of welding operations and welders, as may be required.
 - d. Verify that the fit up, joint preparation, size, contour, extent of reinforcement, and length and location of welds conform to specified requirements such as but not limited to applicable welding codes, Welding Procedure Specifications, and Drawings.
 - e. Review Mill Test Reports of material for compliance with Project Specifications, all applicable Codes, and Drawings.
 - f. ITA inspection reports shall list all inspected, nonconforming, repaired, and accepted welds.
7. DEN Project Manager shall be informed at least 48 hours prior to shop and field welding so random inspections can be performed as stipulated in these specifications and General Conditions, TITLE 17.
8. All welders shall mark their welds with identifying marks. Contractor shall furnish DEN Project Manager with list of welders and their marks. List shall be updated each time a welder is added or subtracted.

B. Structural Steel:

1. The Independent Testing Agency will test shop and field welds per ASTM E 543 and applicable welding code requirements as follows:
- a. All welds: 100% visual.
 - b. Delamination and non-metallic inclusion tests of base metal:
 - 1) Plates and portions of rolled shapes three inches or greater in thickness shall be 100% ultrasonically tested in a zone extending six inches in all directions from any full penetration groove weld which transmits stress through the thickness of the material, or any weld which, because of restraint and/or weld shrinkage will, in the opinion of the inspector, cause significant through-thickness (Z-direction) stress in the material. Such tests shall be made after completion of welding. Acceptance Criteria for such tests shall be in accordance with ASTM A435.
 - c. All full penetration or partial penetration groove welds require 100% ultrasonic testing.
 - d. All fabricated trusses including all fabricated trusses acting, as girders shall be 100% magnetic particle tested.
 - e. Studs on all embed assemblies: 100% of studs tested by hammer method and visual inspection.
 - f. Wall and roof deck connections:
 - 1) 10% Magnetic Particle.
 - g. All other welded connections: 10% Magnetic Particle.
 - h. Additional Testing shall be performed by the Independent Testing Agency.
2. Additional Field Weld Testing:

- a. In addition, if defective welds are discovered, the remaining un-inspected welds shall receive such ultrasonic or magnetic particle inspection as may be required by the DEN Project Manager. If more than 10 percent of a welder's welds fail or when a CWI (Certified Welding Inspector) feels that the quality of the qualified welder's work appears to be below the requirements of the applicable AWS Code, he/she shall be removed from the job and retested to demonstrate compliance with AWS D1.1 (Latest Edition) or other applicable AWS codes and all other applicable AWS codes.
- b. Additional testing shall be required if more than 10% of the Magnetic Particle tested welds are rejected. Then an additional 10% will be tested using either Magnetic Particle or Dye Penetrant Testing. This 10% additional testing shall be repeated until rejection rate drops below one in 10.
- c. When ultrasonic indications arising from the weld root can be interpreted as either a weld defect or the backing strip, the backing strip shall be removed at the expense of the contractor, and if no root defect is indicated on this retest, and no significant amount of the base and weld metal have been removed, the joint needs no further repair or welding. If a defect is still indicated, it shall be repaired.
- d. The welding inspector will have the authority to reject weldments. Such rejection may be based on visual inspection where in the welding inspector's opinion the weldment would not pass a more detailed investigation.
- e. Reports by the Independent Testing Agency inspector will contain, as a minimum, an adequate description of each weld tested, the identifying mark of the welder responsible for the weld, a critique of any defects noted by visual inspection or testing, and a statement regarding the acceptability of the weld tested, as judged by current A.W.S. standards. A copy of all tests results, including ultrasonic and x-ray, shall be provided to the DEN Project Manager within 48 hours of the test occurrence. This requirement includes all failed tests. Any test that shows work not in conformance with the contract requirement shall be retaken after the non-conformity is corrected. The retest shall refer to the failed test. Radiographic testing may be substituted for ultrasonic.

3. Stud Connectors

- a. Stud connectors: The testing agency will inspect headed stud connectors as follows:
 - 1) All studs shall be acoustically inspected. Studs, which do not ring when struck with a hammer, shall be bent 15 degrees. If no fracture occurs, stud is considered acceptable and left bent.
 - 2) In addition to the above, not less than one of each 50 studs shall be tested by bending 15 degrees. If no fracture occurs, stud is considered acceptable and left bent.
 - 3) If at any time the number of rejectable studs on any level of structural steel framing exceeds 3% additional testing in accordance with paragraph above shall be performed on one of each 25 studs at this

level and this increased frequency of testing shall be continued on all succeeding levels until the number of rejectable studs at a level is 3% or less. All cost of additional testing required by this paragraph shall be borne by the Contractor.

- 4) 100% visual inspection to be performed in accordance with AWS D1.1 acceptance criteria.

4. Correct deficiencies in structural steel work, which inspections and laboratory test reports have indicated to be not in compliance with requirements. Perform additional tests, at Contractor's expense, as may be necessary to reconfirm any non-compliance of original work, and as may be necessary to show compliance of corrected work.

C. Metal Decking:

1. Welding shall be performed in accordance with AWS D1.3 and this specification.
2. 100 % visual inspection of all welds, per AWS D1.3 Structural Welding Code Sheet Steel.
 - a. Requires the removal of all slag from welds.
3. 10% Magnetic Particle testing of all welds.
 - a. Additional testing shall be required if more than 10% of the Magnetic Particle tested welds are rejected. Then an additional 10% will be tested using either Magnetic Particle or Dye Penetrant Testing. This 10% additional testing shall be repeated until rejection rate drops below one in 10.
4. All weld areas shall be repaired after inspection. Repair painted decking per Section 053100 "Steel Decking".

D. Metal Fabrications:

1. Welding shall be performed in accordance with applicable AWS welding code and these specifications.
2. 100% visual inspection of all welds.
3. 10% Magnetic Particle testing of all welds.
 - a. Additional testing shall be required if more than 10% of the Magnetic Particle tested welds are rejected. Then an additional 10% will be tested using either Magnetic Particle or Dye Penetrant Testing. This 10% additional testing shall be repeated until rejection rate drops below one in 10.
4. Applicable paragraphs of Structural Steel paragraph above shall be met also.

E. Concrete Reinforcing Bars:

1. Welding shall be performed in accordance with this specification, AWS D1.4, and other applicable AWS Codes and Standards.

2. 100 % visual inspection of all welds, Per AWS D1.4 Structural Welding Code Reinforcing Steel, or other AWS Codes as applicable.
3. 10% Magnetic Particle testing of all welds.
 - a. Additional testing shall be required if more than 10% of the Magnetic Particle tested welds are rejected. Then an additional 10% will be tested using either Magnetic Particle or Dye Penetrant Testing. This 10% additional testing shall be repeated until rejection rate drops below one in 10.

F. Precast Concrete:

1. All Shop and Field welding including embed assemblies, shall be inspected per these specifications, AISC, AWS D1.1, AWS D1.4, and other applicable AWS codes.
2. In addition to the requirements listed below, the requirements of paragraphs for Structural Steel and Concrete Reinforcing Bars above shall apply to this section also.
3. AISC Manual of Steel Construction, Chapter J, Section J2 shall be complied with.
 - a. If welds with larger effective throat thickness than shown in Table J2.2 are to be used, random testing will have to be performed on shop and field welds to insure that effective throats sizes are being met.
 - 1) Three percent of all such welds shop and field will have to be tested by removing, cross sectioning, and Macroetch tested as called out in AWS D1.4-98, Section 6.2.5.2.
 - 2) Welds to be tested will be randomly picked by DEN Project Manager.
4. Weld plates shall NOT be bent by hammering or heating to close up gaps in connections between uneven embeds.
 - a. Filler plates shall be used in accordance with AWS D1.1.
 - b. Designer of Record shall review all connections requiring filler plates 1/4 and thicker for compliance with design load requirements.
 - c. Minimal hammering and bending will be allowed on plate and connection designated as "For Erection Only". Drawings shall clearly designate which welds are for erection only. Drawings shall clearly state that welds indicated as "for erection only", have no value after structure is completed.
 - 1) An assortment of prebent plates shall be furnished by Precast supplier to minimize the amount of beating on connection plates. Plates shall be bent in 1/2-inch increments and no plates shall be bent any more than 1/2 inch after one side is welded in place.
 - 2) All welds, erection or permanent, shall be applied and inspected per applicable AWS code. The only exception will be to allow the connection plates for the "for erection only" welds to be bent a maximum of 1/2 inch.
5. No welding is allowed unless specifically shown on Drawings.

- a. All welds shown on Drawings are structural and shall meet all requirements of Project Specifications and welding codes.

G. Sheet Steel:

1. Welding shall be in accordance with AWS D1.3 Structural Welding Code- Sheet Steel.
2. Inspection:
 - a. 100 % visual in accordance with acceptance criteria of AWS D1.3.
 - b. 10% Magnetic Particle testing of all welds.
 - c. Additional testing shall be required if more than 10% of the Magnetic Particle tested welds are rejected. Then an additional 10% will be tested using either Magnetic Particle or Dye Penetrant Testing. This 10% additional testing shall be repeated until rejection rate drops below one in 10.

H. Division 22 and Division 23 - Basic Mechanical Materials and Methods:

1. All welding in Division 22 and Division 23 shall comply with the applicable AWS, ASME, AWWA, and API codes, latest editions.
2. All shop and field welds will be inspected per these specifications and applicable code for work being performed.
3. All welds shall be 100% visually inspected by ITA supplied by Contractor. Additional testing shall be as required by other parts of this Section, applicable codes, DEN Project Manager and Designer of Record.
 - a. Natural Gas piping (underground and transportation mains upstream of the meter): ASME B31.8
 - 1) 100% visual inspection per acceptance criteria of ASME B31.8.
 - 2) All other requirements of ASME B31.8 as required for the application.
 - b. Natural Gas piping (less than 5 psi and downstream of the meter): ASME B31.9:
 - 1) 100% visual inspection per acceptance criteria of ASME B31.9.
 - 2) All other requirements of ASME B31.9 as required for the application.
 - c. Hot and chilled water piping/Hydronic Piping: ASME B31.9:
 - 1) 100% visual inspection per acceptance criteria of ASME B31.9.
 - 2) All other requirements of ASME B31.9 as required for the application.
 - d. Hot water piping (in excess of 200°F) /Hydronic Piping: ASME B31.3:
 - 1) 100% visual inspection per acceptance criteria of ASME B31.3.
 - 2) All other requirements of ASME B31.1 as required for the application.
 - e. Ductwork applicable AWS Code, such as but not limited to AWS D1.3 Structural Welding Code-Sheet Steel or AWS D9.1M/D9.1-Sheet Metal

Welding Code:

- 1) 100% Visual inspection per acceptance criteria of applicable code.
 - 2) Magnetic Particle Test requirements are the same as paragraph above for Structural Steel.
 - 3) Additional requirements of SMACNA duct construction standards.
- f. Fuel Piping: ASME B31.4:
- 1) 100% visual inspection per acceptance criteria of ASME B31.4.
 - 2) All other requirements of ASME B31.4 as required for the application.
- g. Refrigerant Piping: ASME B31.5:
- 1) 100% visual inspection per acceptance criteria of ASME B31.5.
 - 2) All other requirements of ASME B31.5 as required for the application.
- h. Steam piping: ASME B31.1:
- 1) 100% visual inspection per acceptance criteria of ASME B31.1.
 - 2) All other requirements of ASME B31.1 as required for the application.
- i. Piping, ductwork and mechanical equipment supports: AWS D1.1: and other applicable AWS Codes.
- 1) 100 % visual inspection.
 - 2) Magnetic Particle Test requirements are the same as 4.02 Structural Steel.
- j. Water Lines: Per AWWA, AWS D1.1 latest edition, and Denver Water Board Specifications. If there is a conflict the more stringent shall apply:
- 1) 100% visual inspection per AWS D1.1 visual acceptance criteria.
 - 2) AWWA requires that welds be 100% Dye Penetrant Tested in place of Magnetic Particle testing.
4. Forged fittings, for branch connections and etc. shall be welded in accordance with this specification, ASME B31.1, and manufacturer's recommendations. In the event of a conflict, the more stringent shall apply:
- a. Fittings shall be full penetration welded.
 - b. Inside of fitting shall be inspected for full penetration. This shall be done prior to any welding on inside if so required. If weld is required on inside of full penetration joint, it shall be ground or back gouged to sound base metal.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this section. The cost of the work described in this section shall be included in the applicable unit price item, work order or lump sum bid item.

END OF SECTION 050510

SECTION 051200 - STRUCTURAL STEEL FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Structural steel.
2. Prefabricated building columns.
3. Grout.

B. Related Sections:

1. Section 014000 "Quality Requirements" for independent testing agency procedures and administrative requirements.
2. Section 050510 "Welding" for general welding requirements.
3. Section 051213 "Architecturally Exposed Structural Steel Framing" for additional requirements for architecturally exposed structural steel.
4. Section 053100 "Steel Decking" for field installation of shear connectors through deck.
5. Section 055000 "Metal Fabrications" for **[steel lintels and shelf angles not attached to structural-steel frame] [miscellaneous steel fabrications] [and] [other metal items]** not defined as structural steel.
6. Section 055100 "Metal Stairs."
7. Section 059990 "Welding". Contractor shall comply with requirements of 059990 "Welding" in addition to requirements of this Section. In the case of a conflict between Section 059990 and this Section, the more stringent requirements shall apply.
8. **[Section 099113 "Exterior Painting" and Section 099123 "Interior Painting"] [and] [Section 099600 "High-Performance Coatings"]** for surface-preparation and priming requirements.
9. Section 133419 "Metal Building Systems" for structural steel.

- C. Extent of structural steel Work is shown on drawings, including schedules, notes and details to show size and location of members, typical connections, and type of steel required.

- D. Structural steel is that work defined in American Institute of Steel Construction (AISC) "Code of Standard Practice" and as otherwise shown on drawings.

- E. Members in a structure that carry an imposed load in addition to their own weight.
- F. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

- A. Structural Steel: Elements of structural-steel frame, as classified by AISC 303, "Code of Standard Practice for Steel Buildings and Bridges."
- B. Seismic-Load-Resisting System: Elements of structural-steel frame designated as "SLRS" or along grid lines designated as "SLRS" on Drawings, including columns, beams, and braces and their connections.
- C. Heavy Sections: Rolled and built-up sections as follows:
 - 1. Shapes included in ASTM A 6/A 6M with flanges thicker than **1-1/2 inches** (38 mm).
 - 2. Welded built-up members with plates thicker than **2 inches** (50 mm).
 - 3. Column base plates thicker than **2 inches** (50 mm).
- D. Protected Zone: Structural members or portions of structural members indicated as "Protected Zone" on Drawings. Connections of structural and nonstructural elements to protected zones are limited.
- E. Demand Critical Welds: Those welds, the failure of which would result in significant degradation of the strength and stiffness of the Seismic-Load-Resisting System and which are indicated as "Demand Critical" or "Seismic Critical" on Drawings.

1.4 REFERENCE STANDARDS

- A. Comply with the requirements of the reference standards noted herein, except where more stringent requirements are listed herein or otherwise required by the Contract Documents.

1.5 PERFORMANCE REQUIREMENTS

- A. Connections: Provide details of[**simple shear**] connections required by the Contract Documents to be selected or completed by structural-steel fabricator[, **including comprehensive engineering analysis by a qualified professional engineer,**] to withstand loads indicated and comply with other information and restrictions indicated.
 - 1. Select and complete connections using [**schematic details indicated**] [**and**] [**AISC 360**] <Insert source>.
 - 2. Use [**LRFD; data are given at factored-load level**] [**ASD; data are given at service-load level**].
- B. Moment Connections: Type [**PR, partially**] [**FR, fully**] restrained.

- C. Construction: [**Moment frame**] [**Braced frame**] [**Shear wall system**] [**Combined system of moment frame and braced frame**] [**Combined system of moment frame and shear walls**] [**Combined system of braced frame and shear walls**] [**Combined system of moment frame, braced frame, and shear walls**].

1.6 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Submit producer's or manufacturer's specifications and installation instructions for the following products. Include laboratory test reports and other data to show compliance with specifications, including specified standards.

1. Structural steel (each type), including certified copies of mill reports covering chemical and physical properties.
2. High strength bolts (each type), including nuts and washers.
3. Structural steel primer paint.
4. Shrinkage resistant grout.
5. Welding Electrodes: Per Section 059990 "Welding".
6. Provide fully traceable certificates of compliance with ASTM.
7. Include data substantiating that materials comply with requirements.

- B. LEED Submittals:

1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Laboratory Test Reports for Credit IEQ 4: For primers, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- C. Shop Drawings: Show fabrication of structural-steel components. Submit shop drawings for all Work specified herein, including complete details and schedules for fabrication and assembly of structural steel members, procedures, and diagrams.

1. Submit design calculations and drawings prepared under the supervision and sealed by a professional engineer registered in Colorado for all standard shear connections moment connections, and fabricated truss member connections as shown on drawings.
2. Submit non-standard connections for design review.
3. Design construction drawings shall not be re-used as bases for submitted shop drawings. Shop drawings that use reproductions of design plans or details may not be reviewed.
4. Erection and piece drawings shall be submitted in complete units. Do not submit partial sets. Calculations shall be submitted only with relevant erection plans with clear references between each.
5. Include details of cuts, connections, splices, camber, holes, and other pertinent

- data.
6. Include embedment drawings.
 7. Indicate welds by standard AWS symbols, distinguishing between shop and field welds, and show size, length, and type of each weld. Show backing bars that are to be removed and supplemental fillet welds where backing bars are to remain.
 8. Indicate type, size, and length of bolts, distinguishing between shop and field bolts. Identify pretensioned and slip-critical high-strength bolted connections.
 9. Identify members and connections of the seismic-load-resisting system.
 10. Indicate locations and dimensions of protected zones.
 11. Identify demand critical welds.
 12. Shop drawings shall clearly indicate profiles, sizes, and locations of structural members, connections, attachments, anchorages, framed openings, size and type of fasteners, and clearances. Clearly indicate net weld lengths and sizes, root openings, bevel angles and other information required to satisfactorily complete welding operations.
 13. Calculations shall show all pertinent members and pieces. Calculations shall be submitted prior to, or with, relevant shop drawing submittals. It is contractor's responsibility to insure that field construction uses connection design as submitted and reviewed.
 14. For structural-steel connections indicated to comply with design loads, include structural analysis data [**signed and sealed by the qualified professional engineer responsible for their preparation**].
- D. Welding Procedure Specifications (WPSs) and Procedure Qualification Records (PQRs): Provide according to AWS D1.1/D1.1M, "Structural Welding Code - Steel," for each welded joint [**whether prequalified or qualified by testing**] [**qualified by testing**], including the following:
1. Power source (constant current or constant voltage).
 2. Electrode manufacturer and trade name, for demand critical welds.
- 1.7 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For qualified [**Installer**] [**fabricator**] [**professional engineer**] [**testing agency**].
 - B. Welding certificates.
 - C. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.
 - D. Mill test reports for structural steel, including chemical and physical properties.
 - E. Product Test Reports: For the following:
 1. Bolts, nuts, and washers including mechanical properties and chemical analysis.
 2. Direct-tension indicators.
 3. Tension-control, high-strength bolt-nut-washer assemblies.
 4. Shear stud connectors.

5. Shop primers.
6. Nonshrink grout.
7. **<Insert product>**.

- F. Source quality-control reports.
- G. Surveys: Submit certified copies of each survey conducted by a registered professional engineer, showing elevations and locations of all base plates and anchor bolts to receive structural steel, and final elevations and locations for major members. Indicate discrepancies between actual installation and Contract Documents.
- H. Submit WPS (Welding Procedure Specifications) and WPQR (Welder performance Qualification Records) in accordance with Specification 059990 "Welding".
- I. Submit Quality Control Plan for approval by DEN Project Manager and Designer of Record.

1.8 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.9 QUALITY ASSURANCE

- A. Fabricator Qualifications: A qualified fabricator that participates in the AISC Quality Certification Program and is designated an AISC-Certified Plant, Category STD.
- B. Installer Qualifications: A qualified installer who participates in the AISC Quality Certification Program and is designated an AISC-Certified Erector, Category **[ACSE]** **[CSE]**.
- C. Shop-Painting Applicators: Qualified according to AISC's Sophisticated Paint Endorsement **[P1]** **[P2]** **[P3]** or SSPC-QP 3, "Standard Procedure for Evaluating Qualifications of Shop Painting Applicators."
- D. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel." Reference Section 050510 "Welding" for general welding requirements.
1. Welders and welding operators performing work on bottom-flange, demand-critical welds shall pass the supplemental welder qualification testing, as required by AWS D1.8. FCAW-S and FCAW-G shall be considered separate processes for welding personnel qualification.
- E. Comply with applicable provisions of the following specifications and documents:
1. AISC 303.
 2. AISC 341 and AISC 341s1.

3. AISC 360.
 4. RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts."
- F. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]<Insert location>**.
- G. The erection sequence indicated on the drawing is the basis for bidding the Work. The contractor may submit alternate method(s) for the erection sequence. The alternate method(s) shall be priced as a separate line item and shall be inclusive of cost of the Work complete including:
- H. All engineering required for the alternate design.
- I. Design of connections: Standard shear connections moment connections, and fabricated truss member connections shall be designed by the fabricator for loads indicated in drawings. Calculations shall be prepared by or under the direct supervision of a Colorado registered engineer and submitted to the DEN Project Manager for review prior to fabrication.
- J. An allowance of \$15,000.00 <Insert number> for the Engineer of Record to review the alternate proposal, fabricator-designed connections, and related engineering calculations.
- K. Qualifications for welding work shall be in accordance with Specification Section 059990 "Welding" and applicable welding and inspection codes.
- L. The Contractor shall periodically review each welder's work quality and take any steps required to endure high quality work. This is in addition to Quality Control requirements.
- M. Fabricator Qualifications: Minimum of three (3) <Insert number> years' experience specializing in fabrication of structural steel for similar projects and is an AISC Class III shop.
- N. Fabricator shall provide full traceability of all steel used in the fabrication of this project. Procedures for providing traceability shall be included in the Quality Control Plan.
- O. Source Quality Control: Materials and fabrication procedures are subject to inspection and tests in mill, shop, and field, conducted by a qualified independent inspection agency furnished and paid for by contractor.
- P. Promptly remove and replace materials or fabricated components that do not comply.
- Q. Design of Members and Connections: Details shown are typical; similar details apply to similar conditions, unless otherwise indicated. Verify dimensions at site whenever possible without causing delay in the Work.
- R. Promptly notify DEN Project Manager whenever design of members and connections for any portion of structure are not clearly indicated.
- S. Paint testing: Provide certification that factory applied paint complies with specified

requirements. Submit copy to DEN Project Manager prior to steel erection.

- T. Independent Testing Agency or DEN Project Manager's Quality Control Inspector will have authority to reject weldments. Such rejection may be based on visual inspection where, in the opinion of the Independent Testing Agency or DEN Project Manager, weldment would not pass more detailed investigation.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials to site at such intervals to insure uninterrupted progress of work. All material shall bear easily readable identification mark numbers as noted on shop drawings. Deliveries to the jobsite shall be made in the order that material is being erected. The direction of camber shall be clearly shown.
- B. Deliver anchor bolts and anchorage devices, which are to be embedded in cast in place concrete or masonry, in ample time to not to delay work.
- C. Store materials to permit easy access for inspection and identification. Keep steel members off ground and spaced by using pallets, dunnage, or other supports and spacers. Protect steel members and packaged materials from corrosion and deterioration.
 - 1. Do not store materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures. Repair or replace damaged materials or structures as directed.
- D. Store fasteners in a protected place in sealed containers with manufacturer's labels intact.
 - 1. Fasteners may be repackaged provided Owner's testing and inspecting agency observes repackaging and seals containers.
 - 2. Clean and relubricate bolts and nuts that become dry or rusty before use.
 - 3. Comply with manufacturers' written recommendations for cleaning and lubricating ASTM F 1852 fasteners and for retesting fasteners after lubrication.

1.11 COORDINATION

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' recommendations to ensure that shop primers and topcoats are compatible with one another.
- B. Coordinate installation of anchorage items to be embedded in or attached to other construction without delaying the Work. Provide setting diagrams, sheet metal templates, instructions, and directions for installation.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419

"Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 STRUCTURAL-STEEL MATERIALS

- A. Metal Surfaces, General: For fabrication of steel exposed to view, use only materials that are smooth and free of surface blemishes including pitting, rust and scale seam marks, roller marks, rolled trade names and roughness. Reference Section 051213 "Architecturally exposed Structural Steel Framing" for exposed structural steel framing.
- B. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [25] [50] <Insert number> percent.
- C. Recycled Content of Steel Products: Provide products with an average recycled content of steel products so postconsumer recycled content plus one-half of preconsumer recycled content is not less than the following:
1. W-Shapes: [60] <Insert number> percent.
 2. Channels, Angles[, M] [, S]-Shapes: [60] <Insert number> percent.
 3. Plate and Bar: [25] <Insert number> percent.
 4. Cold-Formed Hollow Structural Sections: [25] <Insert number> percent.
 5. Steel Pipe: [25] <Insert number> percent.
 6. <Insert Category Name>: <Insert number> percent.
 7. All Other Steel Materials: [25] <Insert number> percent.
- D. W-Shapes: [ASTM A 992/A 992M] [ASTM A 572/A 572M, Grade 50 (345)] [ASTM A 529/A 529M, Grade 50 (345)] [ASTM A 913/A 913M, Grade 50 (345)].
- E. Materials complying with third and fourth options in first paragraph below are widely available. Fifth and sixth options include specialty-steel materials; verify availability if required Channels, Angles[, M] [, S]-Shapes: [ASTM A 36/A 36M] [ASTM A 572/A 572M, Grade 50 (345)] [ASTM A 529/A 529M, Grade 50 (345)] [ASTM A 913/A 913M, Grade 50 (345)].
- F. Plate and Bar: [ASTM A 36/A 36M] [ASTM A 572/A 572M, Grade 50 (345)] [ASTM A 529/A 529M, Grade 50 (345)].
- G. Corrosion-Resisting Structural-Steel Shapes, Plates, and Bars: ASTM A 588/A 588M, Grade 50 (345).
- H. Cold-Formed Hollow Structural Sections: ASTM A 500, Grade [B] [C], structural tubing.
- I. Hot Formed Steel Tubing: ASTM A 501.
- J. Corrosion-Resisting Cold-Formed Hollow Structural Sections: ASTM A 847/A 847M, structural tubing.

- K. Steel Pipe: ASTM A 53/A 53M, Type E or S, Grade B.
 - 1. Finish: Black, except where indicated to be galvanized.
 - 2. Weight Class: **[Standard] [Extra strong] [Double-extra strong]**.
 - 3. Finish: **[Black] [Galvanized] [Black except where indicated to be galvanized]**.
- L. Steel Castings: ASTM A 216/A 216M, Grade WCB with supplementary requirement S11.
- M. Steel Forgings: ASTM A 668/A 668M.
- N. Welding Electrodes: Comply with AWS requirements and with Specifications Section 059990 "Welding", and applicable welding codes and specifications.

2.2 BOLTS, CONNECTORS, AND ANCHORS

- A. High-Strength Bolts, Nuts, and Washers: [ASTM A 325](#) (ASTM A 325M), Type 1, heavy-hex steel structural bolts; [ASTM A 563, Grade C](#), (ASTM A 563M, Class 8S) heavy-hex carbon-steel nuts; and [ASTM F 436](#) (ASTM F 436M), Type 1, hardened carbon-steel washers; all with plain finish.
 - 1. Direct-Tension Indicators: [ASTM F 959, Type 325](#) (ASTM F 959M, Type 8.8), compressible-washer type with plain finish.
- B. High-Strength Bolts, Nuts, and Washers: [ASTM A 490](#) (ASTM A 490M), Type 1, heavy-hex steel structural bolts[**or tension-control, bolt-nut-washer assemblies with splined ends**]; [ASTM A 563, Grade DH](#), (ASTM A 563M, Class 10S) heavy-hex carbon-steel nuts; and [ASTM F 436](#) (ASTM F 436M), Type 1, hardened carbon-steel washers with plain finish.
 - 1. Direct-Tension Indicators: [ASTM F 959, Type 490](#) (ASTM F 959M, Type 10.9), compressible-washer type with plain finish.
- C. Zinc-Coated High-Strength Bolts, Nuts, and Washers: [ASTM A 325](#) (ASTM A 325M), Type 1, heavy-hex steel structural bolts; [ASTM A 563, Grade DH](#) (ASTM A 563M, Class 10S) heavy-hex carbon-steel nuts; and [ASTM F 436](#) (ASTM F 436M), Type 1, hardened carbon-steel washers.
 - 1. Finish: **[Hot-dip zinc coating] [Mechanically deposited zinc coating] [Hot-dip or mechanically deposited zinc coating]**.
 - 2. Direct-Tension Indicators: [ASTM F 959, Type 325](#) (ASTM F 959M, Type 8.8), compressible-washer type with **[mechanically deposited zinc coating] [mechanically deposited zinc coating, baked epoxy-coated]** finish.
- D. Tension-Control, High-Strength Bolt-Nut-Washer Assemblies: ASTM F 1852, Type 1, **[heavy-hex] [round]** head assemblies consisting of steel structural bolts with splined ends, heavy-hex carbon-steel nuts, and hardened carbon-steel washers.
 - 1. Finish: **[Plain] [Mechanically deposited zinc coating]**.

- E. Shear Connectors: ASTM A 108, Grades 1015 through 1020, headed-stud type, cold-finished carbon steel; AWS D1.1/D1.1M, Type B.
- F. Unheaded Anchor Rods: **[ASTM F 1554, Grade 36]** **[ASTM F 1554, Grade 55, weldable]** **[ASTM A 354]** **[ASTM A 449]** **[ASTM A 572/A 572M, Grade 50 (345)]** **[ASTM A 36/A 36M]**.
1. Configuration: **[Straight]** **[Hooked]**.
 2. Nuts: **ASTM A 563** (ASTM A 563M) **[heavy-]**hex carbon steel.
 3. Plate Washers: ASTM A 36/A 36M carbon steel.
 4. Washers: **ASTM F 436** (ASTM F 436M), Type 1, hardened carbon steel.
 5. Finish: **[Plain]** **[Hot-dip zinc coating, ASTM A 153/A 153M, Class C]** **[Mechanically deposited zinc coating, ASTM B 695, Class 50]**.
- G. Headed Anchor Rods: **[ASTM F 1554, Grade 36]** **[ASTM F 1554, Grade 55, weldable]** **[ASTM A 354]** **[ASTM A 449]**, straight.
1. Nuts: **ASTM A 563** (ASTM A 563M) **[heavy-]**hex carbon steel.
 2. Plate Washers: ASTM A 36/A 36M carbon steel.
 3. Washers: **ASTM F 436** (ASTM F 436M), Type 1, hardened carbon steel.
 4. Finish: **[Plain]** **[Hot-dip zinc coating, ASTM A 153/A 153M, Class C]** **[Mechanically deposited zinc coating, ASTM B 695, Class 50]**.
- H. Threaded Rods: **[ASTM A 36/A 36M]** **[ASTM A 193/A 193M, Grade B7]** **[ASTM A 354, Grade BD]** **[ASTM A 449]** **[A 572/A 572M, Grade 50 (345)]**.
1. Nuts: **ASTM A 563** (ASTM A 563M) **[heavy-]**hex carbon steel.
 2. Washers: **[ASTM F 436** (ASTM F 436M), **Type 1, hardened]** **[ASTM A 36/A 36M]** carbon steel.
 3. Finish: **[Plain]** **[Hot-dip zinc coating, ASTM A 153/A 153M, Class C]** **[Mechanically deposited zinc coating, ASTM B 695, Class 50]**.
- I. **[Clevises]** **[and]** **[Turnbuckles]**: Made from cold-finished carbon steel bars, ASTM A 108, Grade 1035.
- J. Eye Bolts and Nuts: Made from cold-finished carbon steel bars, ASTM A 108, Grade 1030.
- K. Sleeve Nuts: Made from cold-finished carbon steel bars, ASTM A 108, Grade 1018.
- L. Structural Slide Bearings: Low-friction assemblies, of configuration indicated, that provide vertical transfer of loads and allow horizontal movement perpendicular to plane of expansion joint while resisting movement within plane of expansion joint.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Amscot Structural Products Corp.
 - b. Fluorocarbon Company Limited.
 - c. R.J. Watson Bridge & Structural Engineered Systems.

- d. Seismic Energy Products, L.P.
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.
2. Mating Surfaces: **[PTFE and PTFE] [PTFE and mirror-finished stainless steel]**.
 3. Coefficient of Friction: Not more than **[0.03] [0.04] [0.05] [0.06] [0.10] [0.12] <Insert value>**.
 4. Design Load: Not less than **[2,000 psi (13.7 MPa)] [5,000 psi (34 MPa)] [6,000 psi (41 MPa)] <Insert value>**.
 5. Total Movement Capability: **[2 inches (50 mm)] <Insert value>**.

2.3 PRIMER

- A. Low-Emitting Materials: Paints and coatings shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- B. Primer: Comply with **[Section 099113 "Exterior Painting" and Section 099123 "Interior Painting. "] [Section 099600 "High-Performance Coatings. "] [Section 099113 "Exterior Painting," Section 099123 "Interior Painting," and Section 099600 "High-Performance Coatings. "]**
- C. Primer: SSPC-Paint 25, **[Type I] [Type II]**, zinc oxide, alkyd, linseed oil primer.
- D. Primer: SSPC-Paint 25 BCS, **[Type I] [Type II]**, zinc oxide, alkyd, linseed oil primer.
- E. Primer: SSPC-Paint 23, latex primer.
- F. Primer: Fabricator's standard lead- and chromate-free, nonasphaltic, rust-inhibiting primer complying with MPI#79 and compatible with topcoat.
- G. Galvanizing Repair Paint: **[MPI#18, MPI#19, or SSPC-Paint 20] [ASTM A 780]**.

2.4 GROUT

- A. Metallic, Shrinkage-Resistant Grout: ASTM C 1107, factory-packaged, metallic aggregate grout, mixed with water to consistency suitable for application and a 30-minute working time.
- B. Nonmetallic, Shrinkage-Resistant Grout: ASTM C 1107, factory-packaged, nonmetallic aggregate grout, noncorrosive and nonstaining, mixed with water to consistency suitable for application and a 30-minute working time.

2.5 FABRICATION

- A. Structural Steel: Fabricate and assemble in shop to greatest extent possible. Fabricate

according to AISC's "Code of Standard Practice for Steel Buildings and Bridges" and AISC 360.

1. Camber structural-steel members where indicated.
 2. Fabricate beams with rolling camber up.
 3. Identify high-strength structural steel according to ASTM A 6/A 6M and maintain markings until structural steel has been erected.
 4. Mark and match-mark materials for field assembly.
 5. Complete structural-steel assemblies, including welding of units, before starting shop-priming operations.
 6. Where finishing is required, complete assembly, including welding of units, before start of finishing operations. Provide finish surfaces of members exposed in final structure free of markings, burrs, and other defects.
- B. Thermal Cutting: Perform thermal cutting by machine to greatest extent possible.
1. Plane thermally cut edges to be welded to comply with requirements in AWS D1.1/D1.1M.
- C. Bolt Holes: Cut, drill, [**mechanically thermal cut,**] or punch standard bolt holes perpendicular to metal surfaces.
- D. Finishing: Accurately finish ends of columns and other members transmitting bearing loads.
- E. Cleaning: Clean and prepare steel surfaces that are to remain unpainted according to [**SSPC-SP 1, "Solvent Cleaning"**] [**SSPC-SP 2, "Hand Tool Cleaning"**] [**SSPC-SP 3, "Power Tool Cleaning"**]."
- F. Shear Connectors: Prepare steel surfaces as recommended by manufacturer of shear connectors. Use automatic end welding of headed-stud shear connectors according to AWS D1.1/D1.1M and manufacturer's written instructions.
- G. Steel Wall-Opening Framing: Select true and straight members for fabricating steel wall-opening framing to be attached to structural steel. Straighten as required to provide uniform, square, and true members in completed wall framing.
- H. Welded Door Frames: Build up welded doorframes attached to structural steel. Weld exposed joints continuously and grind smooth. Plug-weld fixed steel bar stops to frames. Secure removable stops to frames with countersunk machine screws, uniformly spaced not more than **10 inches** (250 mm) o.c. unless otherwise indicated.
- I. Holes: Provide holes required for securing other work to structural steel and for other work to pass through steel framing members.
1. Cut, drill, or punch holes perpendicular to steel surfaces. Do not thermally cut boltholes or enlarge holes by burning. Any enlarging of holes by flame cutting shall be performed only if approved by the DEN Project Manager.
 2. Baseplate Holes: Cut, drill, mechanically thermal cut, or punch holes perpendicular to steel surfaces.

3. Weld threaded nuts to framing and other specialty items indicated to receive other work.
 4. Provide threaded nuts welded to framing, and other specialty items as indicated to receive other work.
- J. Expansion Joints: Provide expansion joints in steel shelf angles to match locations of expansion joints in structural steel frame.

2.6 SHOP CONNECTIONS

- A. High-Strength Bolts: Shop install high-strength bolts according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts" for type of bolt and type of joint specified.
1. Joint Type: [**Snug tightened**] [**Pretensioned**] [**Slip critical**].
- B. Weld Connections: Comply with AWS D1.1/D1.1M[**and AWS D1.8/D1.8M**] for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work. Reference Section 050510 "Welding" for general welding requirements.
1. Assemble and weld built-up sections by methods that will maintain true alignment of axes without exceeding tolerances in AISC 303 for mill material.

2.7 PREFABRICATED BUILDING COLUMNS

- A. Prefabricated building columns consisting of load-bearing structural-steel members protected by concrete fireproofing encased in an outer non-load-bearing steel shell.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Black Rock Column, Inc.
 - b. Dean, George H., Inc.
 - c. Dean Lally L. P.; Fire-Trol Division.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
- B. Fire-Resistance Ratings: Provide prefabricated building column listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction for ratings indicated, based on testing according to ASTM E 119.
1. Fire-Resistance Rating: [**4 hours**] [**3 hours**] [**2 hours**] [**As indicated**].

2.8 SHOP PRIMING

- A. Shop prime steel surfaces except the following:

1. Surfaces embedded in concrete or mortar. Extend priming of partially embedded members to a depth of **2 inches** (50 mm).
2. Surfaces to be field welded.
3. Surfaces to be high-strength bolted with slip-critical connections.
4. Surfaces to receive sprayed fire-resistive materials (applied fireproofing).
5. Galvanized surfaces.

B. Surface Preparation: Clean surfaces to be painted. Remove loose rust and mill scale and spatter, slag, or flux deposits. Prepare surfaces according to the following specifications and standards:

1. SSPC-SP 2, "Hand Tool Cleaning."
2. SSPC-SP 3, "Power Tool Cleaning."
3. SSPC-SP 7/NACE No. 4, "Brush-Off Blast Cleaning."
4. SSPC-SP 11, "Power Tool Cleaning to Bare Metal."
5. SSPC-SP 14/NACE No. 8, "Industrial Blast Cleaning."
6. SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
7. SSPC-SP 10/NACE No. 2, "Near-White Blast Cleaning."
8. SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning."
9. SSPC-SP 8, "Pickling."

C. Priming: Immediately after surface preparation, apply primer according to manufacturer's written instructions and at rate recommended by SSPC to provide a minimum dry film thickness of **1.5 mils** (0.038 mm). Use priming methods that result in full coverage of joints, corners, edges, and exposed surfaces.

1. Stripe paint corners, crevices, bolts, welds, and sharp edges.
2. Apply two coats of shop paint to surfaces that are inaccessible after assembly or erection. Change color of second coat to distinguish it from first.

D. Painting: Prepare steel and apply a one-coat, nonasphaltic primer complying with SSPC-PS Guide 7.00, "Painting System Guide 7.00: Guide for Selecting One-Coat Shop Painting Systems," to provide a dry film thickness of not less than **1.5 mils** (0.038 mm).

2.9 GALVANIZING

A. Hot-Dip Galvanized Finish: Apply zinc coating by the hot-dip process to structural steel according to ASTM A 123/A 123M.

1. Fill vent and drain holes that will be exposed in the finished Work unless they will function as weep holes, by plugging with zinc solder and filing off smooth.
2. Galvanize [**lintels**] [**shelf angles**] [**and**] [**welded doorframes**] attached to structural-steel frame and located in exterior walls.

2.10 SOURCE QUALITY CONTROL

A. Testing Agency: Owner will engage an independent testing and inspecting agency to

perform shop tests and inspections and prepare test reports.

1. Provide testing agency with access to places where structural-steel work is being fabricated or produced to perform tests and inspections.
- B. Correct deficiencies in Work that test reports and inspections indicate does not comply with the Contract Documents.
- C. Bolted Connections: Shop-bolted connections will be[**tested and**] inspected according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts."
- D. Welded Connections: In addition to visual inspection, shop-welded connections will be tested and inspected according to AWS D1.1/D1.1M and the following inspection procedures, at testing agency's option:
1. Liquid Penetrant Inspection: ASTM E 165.
 2. Magnetic Particle Inspection: ASTM E 709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration will not be accepted.
 3. Ultrasonic Inspection: ASTM E 164.
 4. Radiographic Inspection: ASTM E 94.
- E. In addition to visual inspection, shop-welded shear connectors will be tested and inspected according to requirements in AWS D1.1/D1.1M for stud welding and as follows:
1. Bend tests will be performed if visual inspections reveal either a less-than-continuous 360-degree flash or welding repairs to any shear connector.
 2. Tests will be conducted on additional shear connectors if weld fracture occurs on shear connectors already tested, according to requirements in AWS D1.1/D1.1M.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify, with steel Erector present, elevations of concrete- and masonry-bearing surfaces and locations of anchor rods, bearing plates, and other embedments for compliance with requirements.
1. Prepare a certified survey of bearing surfaces, anchor rods, bearing plates, and other embedments showing dimensions, locations, angles, and elevations.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Provide temporary shores, guys, braces, and other supports during erection to keep structural steel secure, plumb, and in alignment against temporary construction loads

and loads equal in intensity to design loads. Remove temporary supports when permanent structural steel, connections, and bracing are in place unless otherwise indicated.

1. Do not remove temporary shoring supporting composite deck construction until cast-in-place concrete has attained its design compressive strength.

3.3 ERECTION

- A. Surveys: Employ a registered professional engineer or land surveyor for accurate erection of structural steel. Check elevations of concrete and masonry bearing surfaces, and locations of anchor bolts and similar devices, before erection work proceeds, and report discrepancies to DEN Project Manager along with a suggested plan on how to correct the discrepancy.
1. Do not proceed with erection until corrections have been made, or until compensating adjustments to structural steel work have been agreed upon with DEN Project Manager.
- B. Temporary Shoring and Bracing: Provide temporary shoring and bracing members with connections of sufficient strength to bear imposed loads. Remove temporary members and connections when permanent members are in place and all final connections are made. Provide temporary guidelines to achieve proper alignment of structures as erection proceeds. Temporary shoring and bracing shall be designed by a Licensed Colorado Professional Engineer.
1. The Engineer shall inspect finished shoring and bracing and document compliance with the design plans.
- C. Temporary Planking: Provide temporary planking handrails, nets, anchorages and working platforms as necessary to effectively and safely complete work.
- D. Set structural steel accurately in locations and to elevations indicated and according to AISC 303 and AISC 360.
- E. Base **[Bearing]** **[and]** **[Leveling]** Plates: Clean concrete- and masonry-bearing surfaces of bond-reducing materials, and roughen surfaces prior to setting plates. Clean bottom surface of plates.
1. Set plates for structural members on wedges, shims, or setting nuts as required.
 2. Weld plate washers to top of baseplate.
 3. **[Snug-tighten]** **[Pretension]** anchor rods after supported members have been positioned and plumbed. Do not remove wedges or shims but, if protruding, cut off flush with edge of plate before packing with grout.
 4. Promptly pack grout solidly between bearing surfaces and plates so no voids remain. Neatly finish exposed surfaces; protect grout and allow to cure. **[Comply with manufacturer's written installation instructions for shrinkage-resistant grouts.]**

- F. Maintain erection tolerances of structural steel within AISC's "Code of Standard Practice for Steel Buildings and Bridges."
- G. Set structural frames accurately to lines and elevations indicated. Align and adjust various members that form part of complete frame or structure before permanently fastening. Before assembly, clean bearing surfaces and other surfaces that will be in permanent contact with members. Perform necessary adjustments to compensate for discrepancies in elevations and alignment.
 - 1. Level and plumb individual members of structure within specified AISC tolerances and as follows:
 - a. At all slab edge conditions, provide a maximum deviation from grid line (or dimensioned point from grid line), to beam or column center, on the exterior or open side, of 1/2" at any given point. Grid line shall be considered a theoretically perfect plane.
 - b. Establish required leveling and plumbing measurements on mean operating temperature of structure. Make allowances for difference between temperature at time of erection and mean temperature at which structure will be when completed and in service.
 - 2. Make allowances for difference between temperature at time of erection and mean temperature when structure is completed and in service.
- H. Splice members only where indicated and approved on shop drawings.
- I. Do not use thermal cutting during erection unless approved by DEN Project Manager. Finish thermally cut sections within smoothness limits in AWS D1.1/D1.1M.
- J. Do not enlarge unfair holes in members by burning or using drift pins, except in secondary members. Ream holes that must be enlarged to admit bolts.
- K. Shear Connectors: Prepare steel surfaces as recommended by manufacturer of shear connectors. Use automatic end welding of headed-stud shear connectors according to AWS D1.1/D1.1M and manufacturer's written instructions.
- L. Erection Bolts: On exposed welded construction, remove erection bolts, fill holes with plug welds, and grind smooth at exposed surfaces.
- M. Comply with AISC Specifications for bearing, adequacy of temporary connections, alignment, and removal of paint on surfaces adjacent to field welds. Where welding to existing steel, clean existing steel surfaces prior to welding.
- N. Gas Cutting: Do not use gas cutting torches in field for correcting fabrication errors in primary structural framing. Cutting will be permitted only on secondary members that are not under stress, as acceptable to DEN Project Manager. Finish gas cut sections equal to a sheared appearance when permitted.

- O. Touch Up Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint. Apply paint to exposed areas using same material as used for shop painting.
- P. Beam Members: Deviation of member working point horizontal location and elevation with respect to the supporting member shall not exceed $\pm 1/16$ " from the location and elevation shown on the drawings.
 - 1. Leveling and Plumbing: Based on mean temperature of 70 degrees F.
 - 2. Compensate for difference in temperature at time of erection.
- Q. Headed Stud Shear Connectors: Automatically end weld in accordance with Specification Section 059990 "Welding", AWS D1.1 and manufacturer's printed instructions.

3.4 FIELD CONNECTIONS

- A. High-Strength Bolts: Install high-strength bolts according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts" for type of bolt and type of joint specified.
 - 1. Joint Type: [**Snug tightened**] [**Pretensioned**] [**Slip critical**].
- B. Weld Connections: Comply with AWS D1.1/D1.1M[**and AWS D1.8/D1.8M**] for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work. Reference Section 050510 "Welding" for general welding requirements.
 - 1. Comply with AISC 303 and AISC 360 for bearing, alignment, adequacy of temporary connections, and removal of paint on surfaces adjacent to field welds.
 - 2. Remove backing bars or runoff tabs[**where indicated**], back gouge, and grind steel smooth.
 - 3. Assemble and weld built-up sections by methods that will maintain true alignment of axes without exceeding tolerances in AISC's "Code of Standard Practice for Steel Buildings and Bridges" for mill material.

3.5 PREFABRICATED BUILDING COLUMNS

- A. Install prefabricated building columns to comply with AISC 360, manufacturer's written recommendations, and requirements of testing and inspecting agency that apply to the fire-resistance rating indicated.

3.6 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified independent testing and inspecting agency to inspect [**field welds**] [**and**] [**high-strength bolted connections**].

- B. Bolted Connections: Bolted connections will be [**tested and**] inspected according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts."
- C. Welded Connections: Field welds will be visually inspected according to AWS D1.1/D1.1M.
 - 1. In addition to visual inspection, field welds will be tested and inspected according to AWS D1.1/D1.1M and the following inspection procedures, at testing agency's option:
 - a. Liquid Penetrant Inspection: ASTM E 165.
 - b. Magnetic Particle Inspection: ASTM E 709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration will not be accepted.
 - c. Ultrasonic Inspection: ASTM E 164.
 - d. Radiographic Inspection: ASTM E 94.
- D. In addition to visual inspection, test and inspect field-welded shear connectors according to requirements in AWS D1.1/D1.1M for stud welding and as follows:
 - 1. Perform bend tests if visual inspections reveal either a less-than-continuous 360-degree flash or welding repairs to any shear connector.
 - 2. Conduct tests on additional shear connectors if weld fracture occurs on shear connectors already tested, according to requirements in AWS D1.1/D1.1M.
- E. Correct deficiencies in Work that test reports and inspections indicate does not comply with the Contract Documents.
 - 1. Additional testing, if required, will be performed at Contractor's expense, as may be necessary to reconfirm any non-compliance of original work, and as may be necessary to show compliance of corrected work.

3.7 REPAIRS AND PROTECTION

- A. Galvanized Surfaces: Clean areas where galvanizing is damaged or missing and repair galvanizing to comply with ASTM A 780.
- B. Touchup Painting: Immediately after erection, clean exposed areas where primer is damaged or missing and paint with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 - 1. Clean and prepare surfaces by SSPC-SP 2 hand-tool cleaning or SSPC-SP 3 power-tool cleaning.
- C. Touchup Painting: Cleaning and touchup painting are specified in Section 099113 "Exterior Painting" Section 099123 "Interior Painting."

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 051200

SECTION 051213 - ARCHITECTURALLY EXPOSED STRUCTURAL STEEL FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes architecturally exposed structural steel (AESS) framing.
 - 1. Requirements in Section 051200 "Structural Steel Framing" also apply to AESS framing.
- B. Extent of structural steel work is shown on drawings, including schedules, notes and details to show size and location of members, typical connections, and type of steel required.
- C. Structural steel is that work defined in American Institute of Steel Construction (AISC) "Code of Standard Practice" and as otherwise shown on drawings.
- D. Members in a structure that carries an imposed load in addition to their own weight.
- E. Related Sections:
 - 1. Section 014000 "Quality Requirements" for independent testing agency procedures and administrative requirements.
 - 2. Section 050510 "Welding" for general welding requirements.
 - 3. Section 051200 "Structural Steel Framing" for additional requirements applicable to AESS.
 - 4. Section 055000 "Metal Fabrications" for **[steel lintels and shelf angles not attached to structural-steel frame] [miscellaneous steel fabrications] [and] [other metal items]** not defined as structural steel.
 - 5. Section 055100 "Metal Stairs."
 - 6. Section 059990 "Welding".
 - 7. **[Section 099113 "Exterior Painting" and Section 099123 "Interior Painting"] [and] [Section 099600 "High-Performance Coatings"]** for surface preparation and priming requirements.
- F. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

- A. Architecturally Exposed Structural Steel: Structural steel designated as "architecturally exposed structural steel" or "AESS" in the Contract Documents.
- B. Category 1 AESS: AESS that is within **96 inches** (2400 mm) vertically and **36 inches** (900 mm) horizontally of a walking surface and is visible to a person standing on that walking surface or is designated as "Category 1 architecturally exposed structural steel" or "AESS-1" in the Contract Documents.
- C. Category 2 AESS: AESS that is within **20 feet** (6 m) vertically and horizontally of a walking surface and is visible to a person standing on that walking surface or is designated as "Category 2 architecturally exposed structural steel" or "AESS-2" in the Contract Documents.
- D. Category 3 AESS: AESS that is not defined as Category 1 or Category 2 or that is designated as "Category 3 architecturally exposed structural steel" or "AESS-3" in the Contract Documents.

1.4 ACTION SUBMITTALS

- A. In addition to providing submittals indicated below, comply with submittal requirements of Section 051200 "Structural Steel".
- B. Shop Drawings: Show fabrication of AESS components.[**Shop Drawings for structural steel may be used for AESS provided items of AESS are specifically identified and requirements below are met for AESS.**]
 - 1. Include details of cuts, connections, splices, camber, holes, and other pertinent data.
 - 2. Include embedment drawings.
 - 3. Indicate welds by standard AWS symbols, distinguishing between shop and field welds, and show size, length, and type of each weld. Show backing bars that are to be removed and supplemental fillet welds where backing bars are to remain.[**Indicate grinding, finish, and profile of welds.**]
 - 4. Indicate type, size, and length of bolts, distinguishing between shop and field bolts. Identify pretensioned and slip-critical high-strength bolted connections.[**Indicate orientation of bolt heads.**]
 - 5. Indicate exposed surfaces and edges and surface preparation being used.
 - 6. Indicate special tolerances and erection requirements.
- C. Samples: Submit samples of AESS to set quality standards for exposed welds[**for Category 1 AESS**].
 - 1. Two steel plates, **3/8 by 8 by 4 inches** (9.5 by 200 by 100 mm), with long edges joined by a groove weld[**and with weld ground smooth**].
 - 2. Steel plate, **3/8 by 8 by 8 inches** (9.5 by 200 by 200 mm), with one end of a short length of rectangular steel tube, **4 by 6 by 3/8 inches** (100 by 150 by 9.5 mm),

welded to plate with a continuous fillet weld[**and with weld ground smooth and blended**].

3. Round steel tube or pipe, minimum **8 inches** (200 mm) in diameter, with end of another round steel tube or pipe, approximately **4 inches** (100 mm) in diameter, welded to its side at a 45-degree angle with a continuous fillet weld[**and with weld ground smooth and blended**].

1.5 INFORMATIONAL SUBMITTALS

- A. In addition to providing submittals indicated below, comply with submittal requirements of Section 051200 "Structural Steel".
- B. Qualification Data: For qualified [**Installer**] [**fabricator**].

1.6 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: A qualified installer who participates in the AISC Quality Certification Program and is designated an AISC-Certified Erector, Category [**ACSE**] [**CSE**].
- B. Fabricator Qualifications: A qualified fabricator that participates in the AISC Quality Certification Program and is designated an AISC-Certified Plant, Category STD.
- C. Shop-Painting Applicators: Qualified according to AISC's Sophisticated Paint Endorsement [**P1**] [**P2**] [**P3**] or SSPC-QP 3, "Standard Procedure for Evaluating Qualifications of Shop Painting Applicators."
- D. Mockups: Build mockups of AESS to set quality standards for fabrication and installation.
 1. Build mockup of typical portion of AESS as shown on Drawings.
 2. Coordinate finish painting requirements with Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."
 3. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- E. Retain paragraph below if Work of this Section is extensive or complex enough to justify a preinstallation conference and a preinstallation conference is not required in Section 051200 "Structural Steel Framing." If retaining, coordinate with Division 01 Sections.

- F. Preinstallation Conference: Conduct conference at **[Project site]** <[location and time as determined by DEN Project Manager]Insert location>.
- G. The erection sequence indicated on the drawing is the basis for bidding the Work. The Contractor may submit alternate method(s) for the erection sequence. The alternate method(s) shall be priced as a separate line item and shall be inclusive of cost of the work complete including:
- H. All engineering required for the alternate design.
- I. Design of connections: Standard shear connections moment connections, and fabricated truss member connections shall be designed by the fabricator for loads indicated in drawings. Calculations shall be prepared by or under the direct supervision of a Colorado registered engineer and submitted to the DEN Project Manager for review prior to fabrication.
- J. An allowance of **[\$15,000.00]** <Insert amount> for the Engineer of Record to review the alternate proposal, fabricator-designed connections, and related engineering calculations.
- K. Qualifications for welding work shall be in accordance with Specification Section 0505100 "Welding" and applicable welding and inspection codes.
- L. The Contractor shall periodically review each welder's work quality and take any steps required to endure high quality work. This is in addition to Quality Control requirements.
- M. Fabricator Qualifications: Minimum of three (**three (3)**) <Insert number> years experience specializing in fabrication of structural steel for similar projects and be an AISC Class III shop.
- N. Fabricator shall provide full traceability of all steel used in the fabrication of this project. Procedures for providing traceability shall be included in the Quality Control Plan.
- O. Source Quality Control: Materials and fabrication procedures are subject to inspection and tests in mill, shop, and field, conducted by a qualified independent inspection agency furnished and paid for by contractor.
- P. Promptly remove and replace materials or fabricated components which do not comply.
- Q. Design of Members and Connections: Details shown are typical; similar details apply to similar conditions, unless otherwise indicated. Verify dimensions at site whenever possible without causing delay in the work.
- R. Promptly notify DEN Project Manager whenever design of members and connections for any portion of structure are not clearly indicated.
- S. Paint testing: Provide certification that factory applied paint complies with specified requirements. Submit copy to DEN Project Manager prior to steel erection.

- T. Independent Testing Agency or DEN Project Manager's Quality Control Inspector will have authority to reject weldments. Such rejection may be based on visual inspection where, in the opinion of the Independent Testing Agency or DEN Project Manager, weldment would not pass more detailed investigation.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials to site at such intervals to insure uninterrupted progress of work. All material shall bear easily readable identification mark numbers as noted on shop drawings. Deliveries to the jobsite shall be made in the order that material is being erected. The direction of camber shall be clearly shown.
- B. Deliver anchor bolts and anchorage devices, which are to be embedded in cast in place concrete or masonry, in ample time to not to delay work.
- C. Use special care in handling to prevent twisting, warping, nicking, and other damage. Store materials to permit easy access for inspection and identification. Keep steel members off ground and spaced by using pallets, dunnage, or other supports and spacers. Protect steel members and packaged materials from corrosion and deterioration.
 - 1. Do not store materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures. Repair or replace damaged materials or structures as directed.

1.9 PROJECT CONDITIONS

- A. Field Measurements: Where AESS is indicated to fit against other construction, verify actual dimensions by field measurements before fabrication.

1.10 COORDINATION

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' recommendations to ensure that shop primers and topcoats are compatible with one another.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Metal Surfaces, General: For fabrication of steel exposed to view, use only materials which are smooth and free of surface blemishes including pitting, rust and scale seam marks, roller marks, rolled trade names and roughness, in accordance with requirements of this Section.

2.2 BOLTS, CONNECTORS, AND ANCHORS

- A. Tension-Control, High-Strength Bolt-Nut-Washer Assemblies: ASTM F 1852, Type 1, round-head assemblies, consisting of steel structural bolts with splined ends, heavy-hex carbon-steel nuts, and hardened carbon-steel washers.
1. Finish: **[Plain] [Mechanically deposited zinc coating]**.
- B. Corrosion-Resisting (Weathering Steel), Tension-Control, High-Strength Bolt-Nut-Washer Assemblies: ASTM F 1852, Type 3, round-head assemblies, consisting of steel structural bolts with splined ends, heavy-hex carbon-steel nuts, and hardened carbon-steel washers.

2.3 PRIMER

- A. Primer: Comply with **[Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."]** **[Section 099600 "High-Performance Coatings."]** **[Section 099113 "Exterior Painting," Section 099123 "Interior Painting," and Section 099600 "High-Performance Coatings."]**
- B. Primer: SSPC-Paint 25, **[Type I] [Type II]**, zinc oxide, alkyd, linseed oil primer.
- C. Primer: SSPC-Paint 25 BCS, **[Type I] [Type II]**, zinc oxide, alkyd, linseed oil primer.
- D. Primer: SSPC-Paint 23, latex primer.
- E. Primer: Fabricator's standard lead- and chromate-free, nonasphaltic, rust-inhibiting primer complying with MPI#79 and compatible with topcoat.
- F. Etching Cleaner for Galvanized Metal: Complying with MPI#25.
- G. Galvanizing Repair Paint: **[MPI#18, MPI#19, or SSPC-Paint 20] [ASTM A 780]**.
- H. Shop Primer for Galvanized Steel: **[Cementitious galvanized metal primer complying with MPI#26] [Vinyl wash primer complying with MPI#80] [Water-based galvanized metal primer complying with MPI#134]**.

2.4 FABRICATION

- A. Shop fabricate and assemble AESS to the maximum extent possible. Locate field joints at concealed locations if possible. Detail assemblies to minimize handling and to expedite erection.
- B. In addition to special care used to handle and fabricate AESS, comply with the following:
1. Fabricate with exposed surfaces smooth, square, and free of surface blemishes including pitting, rust, scale, and roughness.
 2. Grind sheared, punched, and flame-cut edges of **[Category 1]** <Insert categories> AESS to remove burrs and provide smooth surfaces and edges.
 3. Fabricate **[Category 1]** <Insert categories> AESS with exposed surfaces free of mill marks, including rolled trade names and stamped or raised identification.
 4. Fabricate **[Category 1 and Category 2]** <Insert categories> AESS with exposed surfaces free of seams to maximum extent possible.
 5. Remove blemishes by filling or grinding or by welding and grinding, before cleaning, treating, and shop priming.
 6. Fabricate with piece marks fully hidden in the completed structure or made with media that permits full removal after erection.
 7. Fabricate **[Category 1]** <Insert categories> AESS to the tolerances specified in AISC 303 for steel that is designated AESS.
 8. Fabricate **[Category 2 and Category 3]** <Insert categories> AESS to the tolerances specified in AISC 303 for steel that is not designated AESS.
 9. Seal-weld open ends of hollow structural sections with **3/8-inch** (9.5-mm) closure plates for **[Category 1]** <Insert categories> AESS.
- C. Curved Members: Fabricate indicated members to curved shape by rolling to final shape in fabrication shop.
1. Distortion of webs, stems, outstanding flanges, and legs of angles shall not be visible from a distance of **20 feet** (6 m) under any lighting conditions.
 2. Tolerances for walls of hollow steel sections after rolling shall be approximately **1/2 inch** (13 mm).
- D. Coping, Blocking, and Joint Gaps: Maintain uniform gaps of **1/8 inch** (3.2 mm) with a tolerance of **1/32 inch** (0.8 mm) for **[Category 1]** <Insert categories> AESS.
- E. Bolt Holes: Cut, drill, **[mechanically thermal cut]**, or punch standard bolt holes perpendicular to metal surfaces.
- F. Cleaning Corrosion-Resisting Structural Steel: Clean and prepare steel surfaces that are to remain unpainted according to SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
- G. Holes: Provide holes required for securing other work to structural steel and for other work to pass through steel framing members.
1. Cut, drill, or punch holes perpendicular to steel surfaces. Do not thermally cut

- bolt holes or enlarge holes by burning.
- 2. Baseplate Holes: Cut, drill, mechanically thermal cut, or punch holes perpendicular to steel surfaces.
- 3. Weld threaded nuts to framing and other specialty items indicated to receive other work.
- 4. Provide threaded nuts welded to framing, and any other specialty items as indicated to receive other work.

H. Expansion Joints: Provide expansion joints in steel shelf angles to match locations of expansion joints in structural steel frame.

2.5 SHOP CONNECTIONS

A. High-Strength Bolts: Shop install high-strength bolts according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts" for type of bolt and type of joint specified.

- 1. Joint Type: [**Snug tightened**] [**Pretensioned**] [**Slip critical**].

B. Weld Connections: Reference Section 050510 "Welding" for general welding requirements. Comply with AWS D1.1/D1.1M[**and AWS D1.8/D1.8M**] for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work, and comply with the following:

- 1. Assemble and weld built-up sections by methods that will maintain true alignment of axes without exceeding specified tolerances.
- 2. Use weld sizes, fabrication sequence, and equipment for AESS that limit distortions to allowable tolerances.
- 3. Provide continuous, sealed welds at angle to gusset-plate connections and similar locations where [**Category 1**] <Insert categories> AESS is exposed to weather.
- 4. Provide continuous welds of uniform size and profile where [**Category 1**] <Insert categories> AESS is welded.
- 5. Grind butt and groove welds flush to adjacent surfaces within tolerance of **plus 1/16 inch, minus 0 inch** (plus 1.5 mm, minus 0 mm) for [**Category 1 and Category 2**] <Insert categories> AESS.
- 6. Make butt and groove welds flush to adjacent surfaces within tolerance of **plus 1/16 inch, minus 0 inch** (plus 1.5 mm, minus 0 mm) for [**Category 1 and Category 2**] <Insert categories> AESS. Do not grind unless required for clearances or for fitting other components, or unless directed to correct unacceptable work.
- 7. Remove backing bars or runoff tabs; back-gouge and grind steel smooth for [**Category 1 and Category 2**] <Insert categories> AESS.
- 8. At locations where welding on the far side of an exposed connection of [**Category 1 and Category 2**] <Insert categories> AESS occurs, grind distortions and marking of the steel to a smooth profile aligned with adjacent material.
- 9. Make fillet welds for [**Category 1 and Category 2**] <Insert categories> AESS oversize and grind to uniform profile with smooth face and transition.

10. Make fillet welds for [**Category 1 and Category 2**] <Insert categories> AESS of uniform size and profile with exposed face smooth and slightly concave. Do not grind unless directed to correct unacceptable work.

2.6 GALVANIZING

- A. Hot-Dip Galvanized Finish: Apply zinc coating by the hot-dip process to structural steel according to ASTM A 123/A 123M.
 1. Do not quench or apply post-galvanizing treatments that might interfere with paint adhesion.
 2. Fill vent and drain holes that will be exposed in the finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.
 3. Galvanize [**lintels**] [**shelf angles**] attached to structural-steel frame and located in exterior walls.

2.7 SHOP PRIMING

- A. Shop prime steel surfaces except the following:
 1. Surfaces embedded in concrete or mortar. Extend priming of partially embedded members to a depth of **2 inches** (50 mm).
 2. Surfaces to be field welded.
 3. Surfaces to be high-strength bolted with slip-critical connections.
 4. Surfaces to receive sprayed fire-resistive materials.
 5. Galvanized surfaces.
- B. Surface Preparation[**for Nongalvanized Steel**]: Clean surfaces to be painted. Remove loose rust and mill scale and spatter, slag, or flux deposits. Prepare surfaces according to the following specifications and standards:
 1. SSPC-SP 2, "Hand Tool Cleaning."
 2. SSPC-SP 3, "Power Tool Cleaning."
 3. SSPC-SP 7/NACE No. 4, "Brush-Off Blast Cleaning."
 4. SSPC-SP 14/NACE No. 8, "Industrial Blast Cleaning."
 5. SSPC-SP 11, "Power Tool Cleaning to Bare Metal."
 6. SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 7. SSPC-SP 10/NACE No. 2, "Near-White Blast Cleaning."
 8. SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning."
 9. SSPC-SP 8, "Pickling."
- C. Preparing Galvanized Steel for Shop Priming: After galvanizing, thoroughly clean steel of grease, dirt, oil, flux, and other foreign matter, and treat with etching cleaner.
- D. Priming: Immediately after surface preparation, apply primer according to manufacturer's written instructions and at rate recommended by SSPC to provide a

minimum dry film thickness of **1.5 mils** (0.038 mm). Use priming methods that result in full coverage of joints, corners, edges, and exposed surfaces.

1. Stripe paint corners, crevices, bolts, welds, and sharp edges.
2. Apply two coats of shop paint to surfaces that are inaccessible after assembly or erection. Change color of second coat to distinguish it from first.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify, with steel erector present, elevations of concrete- and masonry-bearing surfaces and locations of anchor rods, bearing plates, and other embedments for compliance with requirements.
 1. Prepare a certified survey of bearing surfaces, anchor rods, bearing plates, and other embedments showing dimensions, locations, angles, and elevations.
- B. Examine AESS for twists, kinks, warping, gouges, and other imperfections before erecting.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Provide temporary shores, guys, braces, and other supports during erection to keep AESS secure, plumb, and in alignment against temporary construction loads and loads equal in intensity to design loads. Remove temporary supports when permanent structural steel, connections, and bracing are in place unless otherwise indicated.
 1. If possible, locate welded tabs for attaching temporary bracing and safety cabling where they will be concealed from view in the completed Work.
 2. Do not remove temporary shoring supporting composite deck construction until cast-in-place concrete has attained its design compressive strength.

3.3 ERECTION

- A. Set AESS accurately in locations and to elevations indicated and according to AISC 303 and AISC 360.
 1. Erect [**Category 1**] <Insert categories> AESS to the tolerances specified in AISC 303 for steel that is designated AESS.
 2. Erect [**Category 2 and Category 3**] <Insert categories> AESS to the tolerances specified in AISC 303 for steel that is not designated AESS.
- B. Do not use thermal cutting during erection[**unless approved by DEN Project**

Manager. Finish thermally cut sections within smoothness limits in AWS D1.1/D1.1M].

3.4 FIELD CONNECTIONS

- A. High-Strength Bolts: Install high-strength bolts according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts" for type of bolt and type of joint specified.
1. Joint Type: [**Snug tightened**] [**Pretensioned**] [**Slip critical**].
 2. Orient bolt heads [**as indicated on Drawings**] [**in same direction for each connection and to maximum extent possible in same direction for similar connections**].
- B. Weld Connections: Comply with requirements in "Weld Connections" Paragraph in "Shop Connections" Article. Reference Section 050510 "Welding" for general welding requirements.
1. Remove backing bars or runoff tabs; back-gouge and grind steel smooth for [**Category 1 and Category 2**] <Insert categories> AESS.
 2. Remove erection bolts in [**Category 1 and Category 2**] <Insert categories> AESS, fill holes, and grind smooth.
 3. Fill weld access holes in [**Category 1 and Category 2**] <Insert categories> AESS and grind smooth.

3.5 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified independent testing and inspecting agency to inspect AESS as specified in Section 051200 "Structural Steel Framing." The testing agency will not be responsible for enforcing requirements relating to aesthetic effect.
- B. DEN Project Manager will observe all AESS in place to determine acceptability relating to aesthetic effect.

3.6 REPAIRS AND PROTECTION

- A. Remove welded tabs that were used for attaching temporary bracing and safety cabling and that are exposed to view in the completed Work. Grind steel smooth.
- B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780.
- C. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

1. Clean and prepare surfaces by SSPC-SP 2 hand-tool cleaning or SSPC-SP 3 power-tool cleaning.
- D. Touchup Painting: Cleaning and touchup painting are specified in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 051213

SECTION 052100 - STEEL JOIST FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. K-series steel joists.
2. KCS-type K-series steel joists.
3. K-series steel joist substitutes.
4. LH- and DLH-series long-span steel joists.
5. CJ-series composite steel joists.
6. Joist girders.
7. Joist accessories.

- B. Related Requirements:

1. Section 033000 "Cast-in-Place Concrete" for installing bearing plates in concrete.
2. Section 042000 "Unit Masonry" for installing bearing plates in unit masonry.
3. Section 050510 "Welding" for general welding requirements.
4. Section 051200 "Structural Steel Framing" for field-welded shear connectors.
5. Section 078100 "Applied Fireproofing" for spray-applied fireproofing requirements.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

- A. SJI's "Specifications": Steel Joist Institute's "Standard Specifications, Load Tables, and Weight Tables for Steel Joists and Joist Girders."
- B. Special Joists: Steel joists or joist girders requiring modification by manufacturer to support nonuniform, unequal, or special loading conditions that invalidate load tables in SJI's "Specifications."

1.4 ACTION SUBMITTALS

- A. Product Data: Submit manufacturer's specifications and installation instructions for each type of joist and accessories. Include manufacturer's certification that joists comply with SJI "Specifications". Submit product data for primer.
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
 - 2. Laboratory Test Reports for Credit EQ 4: For primers, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings:
 - 1. Include layout, designation, number, type, location, and spacing of joists.
 - 2. Include joining and anchorage details, bracing, bridging, and joist accessories; splice and connection locations and details; and attachments to other construction.
 - 3. Provide templates, location drawings, and details of bearing plates and anchor bolts to be embedded in other construction.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For [manufacturer] [professional engineer].
- B. Welding certificates.
- C. Manufacturer certificates.
- D. Mill Certificates: For each type of bolt.
- E. Comprehensive engineering analysis of special joists signed and sealed by the qualified professional engineer responsible for its preparation.

1.6 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A manufacturer certified by SJI to manufacture joists complying with applicable standard specifications and load tables in SJI's "Specifications[.]" and "**Standard Specifications for Composite Steel Joists, CJ-Series**" in "**Standard Specifications for Composite Steel Joists, Weight Tables and Bridging Tables, Code of Standard Practice.**"

1. Manufacturer's responsibilities include providing professional engineering services for designing special joists to comply with performance requirements.
 - B. Welding Qualifications: Qualify field-welding procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel." Reference Section 050510 "Welding" for general welding requirements.
 - C. Provide joists fabricated in compliance with the following, and as herein specified.
 1. Steel Joist Institute (SJI) "Standard Specifications, Load Tables and Weight Tables" for:
 - a. K Series Open Web Steel Joists
 - b. LH Series Longspan Steel Joists
 - c. DLH Series Deep Longspan Steel Joists
 - d. Joist Girders
 - D. Design of Members and the shop drawings shall be prepared under the direction of a Colorado registered professional engineer. Shop drawings and calculations shall be sealed by the Professional Engineer.
 - E. Members shall be clearly marked with the stated designation as shown on the shop drawings.
 - F. Inspection: Inspect joists and girders in accordance with SJI specifications.
 - G. Performance Test: If required by the DEN Project Manager, conduct performance tests in accordance with procedures described in SJI "Recommended Code of Standard Practice".
 - H. Paint Testing: Contractor to employ a independent testing laboratory to assure that all rust areas, etc., have been removed prior to priming and to test actual dry film paint thickness applied. One sample for each 600 lineal feet of joist. Submit written report.
- 1.7 DELIVERY, STORAGE, AND HANDLING
- A. Deliver, store, and handle joists as recommended in SJI's "Specifications[.]" and **"Standard Specifications for Composite Steel Joists, CJ-Series" in "Standard Specifications for Composite Steel Joists, Weight Tables and Bridging Tables, Code of Standard Practice."**
 - B. Handle and store joists in a manner to avoid deforming members and to avoid excessive stresses. Materials shall be delivered to the worksite in the order they will be installed.
 - C. Protect joists from corrosion, deformation, and other damage during delivery, storage, and handling.

1.8 SEQUENCING

- A. Deliver steel bearing plates to be built into **[cast-in-place concrete] [and] [masonry]** construction.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Provide special joists and connections capable of withstanding design loads indicated.
 - 1. Use **[ASD; data are given at service-load level] [LRFD; data are given at factored-load level]**.
 - 2. Design special joists to withstand design loads with live-load deflections no greater than the following:
 - a. Floor Joists: Vertical deflection of **[1/360] [1/240]** of the span.
 - b. Roof Joists: Vertical deflection of **[1/360] [1/240]** of the span.
- B. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25] [50] [60] <Insert number>** percent.

2.2 K-SERIES STEEL JOISTS

- A. Manufacture steel joists of type indicated according to "Standard Specifications for Open Web Steel Joists, K-Series" in SJI's "Specifications," with steel-angle top- and bottom-chord members, underslung ends, and parallel top chord.
 - 1. Joist Type: **[K-series steel joists] [and] [KCS-type K-series steel joists]**.
- B. Steel Joist Substitutes: Manufacture according to "Standard Specifications for Open Web Steel Joists, K-Series" in SJI's "Specifications," with steel-angle or -channel members.
- C. Provide holes in chord members for connecting and securing other construction to joists.
 - 1. Deduct area of holes from the area of chord when calculating strength of member.

- D. Top-Chord Extensions: Extend top chords of joists with SJI's Type S top-chord extensions where indicated, complying with SJI's "Specifications."
- E. Extended Ends: Extend bearing ends of joists with SJI's Type R extended ends where indicated, complying with SJI's "Specifications."
- F. Do not camber joists.
- G. Camber joists [**according to SJI's "Specifications."**] [**as indicated**] <Insert camber requirements>.
- H. Equip bearing ends of joists with manufacturer's standard beveled ends or sloped shoes if joist slope exceeds **1/4 inch per 12 inches (1:48)**.
- I. End Anchorage: Provide end anchorages including bearing plates, to secure joists to adjacent construction, complying with SJI "Specifications", unless otherwise indicated.
- J. Header Units: Provide header units to support tail joists at openings in floor or roof system not framed with steel shapes.

2.3 LONG-SPAN STEEL JOISTS

- A. Manufacture steel joists according to "Standard Specifications for Longspan Steel Joists, LH-Series and Deep Longspan Steel Joists, DLH-Series" in SJI's "Specifications," with steel-angle top- and bottom-chord members; of joist type and end and top-chord arrangements [**as follows:**] [**as indicated.**]
 - 1. Joist Type: [**LH-series steel joists**] [**and**] [**DLH-series steel joists**].
 - 2. End Arrangement: [**Underslung**] [**Square**].
 - 3. Top-Chord Arrangement: [**Parallel**] [**Pitched 1/8 inch per 12 inches (1:96), one way**] [**Pitched 1/8 inch per 12 inches (1:96), two ways**] <Insert pitch>.
- B. Provide holes in chord members for connecting and securing other construction to joists.
 - 1. Deduct area of holes from the area of chord when calculating strength of member.
- C. Camber long-span steel joists [**according to SJI's "Specifications."**] [**as indicated**] <Insert camber requirements>.
- D. Equip bearing ends of joists with manufacturer's standard beveled ends or sloped shoes if joist slope exceeds **1/4 inch per 12 inches (1:48)**.
- E. End Anchorage: Provide end anchorages including bearing plates, to secure joists to adjacent construction, complying with SJI "Specifications", unless otherwise indicated.
- F. Header Units: Provide header units to support tail joists at openings in floor or roof system not framed with steel shapes.

2.4 COMPOSITE STEEL JOISTS

- A. Manufacture steel joists according to "Standard Specifications for Composite Steel Joists, CJ-Series" in SJI's "Standard Specifications for Composite Steel Joists, Weight Tables and Bridging Tables, Code of Standard Practice," with steel-angle top- and bottom-chord members and parallel top chord, and with **[underslung] [square]** ends.
- B. Camber composite steel joists **[as indicated]** <Insert camber requirements>.

2.5 JOIST GIRDERS

- A. Manufacture joist girders according to "Standard Specifications for Joist Girders" in SJI's "Specifications," with steel-angle top- and bottom-chord members; with end and top-chord arrangements **[as follows:] [as indicated.]**
 - 1. End Arrangement: **[Underslung] [Underslung with bottom-chord extensions] [Square]**.
 - 2. Top-Chord Arrangement: **[Parallel] [Pitched 1/8 inch per 12 inches (1:96), one way] [Pitched 1/8 inch per 12 inches (1:96), two ways]** <Insert pitch>.
- B. Provide holes in chord members for connecting and securing other construction to joist girders.
 - 1. Deduct area of holes from the area of chord when calculating strength of member.
- C. Camber joist girders **[according to SJI's "Specifications."] [as indicated]** <Insert camber requirements>.
- D. Equip bearing ends of joists with manufacturer's standard beveled ends or sloped shoes if joist slope exceeds **1/4 inch per 12 inches (1:48)**.
- E. End Anchorage: Provide end anchorages including bearing plates, to secure joists to adjacent construction, complying with SJI "Specifications", unless otherwise indicated.
- F. Header Units: Provide header units to support tail joists at openings in floor or roof system not framed with steel shapes.

2.6 PRIMERS

- A. Low-Emitting Materials: Paints and coatings shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- B. Primer: SSPC-Paint 15, or manufacturer's standard shop primer complying with performance requirements in SSPC-Paint 15.

- C. Primer: Provide shop primer that complies with **[Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."]** **[Section 099600 "High-Performance Coatings."]**

2.7 JOIST ACCESSORIES

- A. Bridging: Provide bridging anchors and number of rows of **[horizontal] [or] [diagonal]** bridging of material, size, and type required by SJI's "Specifications"[**and "Standard Specifications for Composite Steel Joists, CJ-Series" in "Standard Specifications for Composite Steel Joists, Weight Tables and Bridging Tables, Code of Standard Practice"**] for type of joist, chord size, spacing, and span. Furnish additional erection bridging if required for stability.
- B. Bridging: Schematically indicated. Detail and fabricate according to SJI's "Specifications[.]"[**and "Standard Specifications for Composite Steel Joists, CJ-Series" in "Standard Specifications for Composite Steel Joists, Weight Tables and Bridging Tables, Code of Standard Practice."**] Furnish additional erection bridging if required for stability.
- C. Bridging: Fabricate as indicated and according to SJI's "Specifications[.]"[**and "Standard Specifications for Composite Steel Joists, CJ-Series" in "Standard Specifications for Composite Steel Joists, Weight Tables and Bridging Tables, Code of Standard Practice."**] Furnish additional erection bridging if required for stability.
- D. Fabricate steel bearing plates from ASTM A 36/A 36M steel with integral anchorages of sizes and thicknesses indicated. **[Shop prime paint] [Hot-dip zinc coat according to ASTM A 123/A 123M]**.
- E. Steel bearing plates with integral anchorages are specified in Section 055000 "Metal Fabrications."
- F. Furnish ceiling extensions, either extended bottom-chord elements or a separate extension unit of enough strength to support ceiling construction. Extend ends to within **1/2 inch (13 mm)** of finished wall surface unless otherwise indicated.
- G. Carbon-Steel Bolts and Threaded Fasteners: **ASTM A 307, Grade A** (ASTM F 568M, Property Class 4.6), carbon-steel, hex-head bolts and threaded fasteners; carbon-steel nuts; and flat, unhardened steel washers.
1. Finish: **[Plain, uncoated] [Hot-dip zinc coating, ASTM A 153/A 153M, Class C] [Mechanically deposited zinc coating, ASTM B 695, Class 50]**.
- H. High-Strength Bolts, Nuts, and Washers: **ASTM A 325** (ASTM A 325M), Type 1, heavy hex steel structural bolts; **ASTM A 563** (ASTM A 563M) heavy hex carbon-steel nuts; and **ASTM F 436** (ASTM F 436M) hardened carbon-steel washers.
1. Finish: **[Plain] [Hot-dip zinc coating, ASTM A 153/A 153M, Class C] [Mechanically deposited zinc coating, ASTM B 695, Class 50]**.

- I. Welding Electrodes: Comply with AWS standards.
- J. Galvanizing Repair Paint: **[MPI#18, MPI#19, or SSPC-Paint 20] [ASTM A 780]**.
- K. Furnish miscellaneous accessories including splice plates and bolts required by joist manufacturer to complete joist assembly.
- L. Bedding Mortar: For joist ends bearing on concrete or masonry, provide bedding mortar as follows:
 - 1. Portland cement (ASTM C 150, Type I or Type III) and clean, uniformly graded, natural sand (ASTM C 404, Size No. 2). Mix at a ratio of 1.0 part cement to 3.0 parts sand, by volume, with minimum water required for placement and hydration.
 - 2. Nonmetallic shrinkage resistant mortar; premixed, non-corrosive, non-staining product containing selected silica sands, Portland cement, shrinkage compensating agents, plasticizing and water reducing agents.
 - a. Subject to compliance with requirements, provide one of the following:
 - 1) Euco N.S.; Euclid Chemical Co
 - 2) Crystex; L&M Construction Chemicals
 - 3) Masterflow 713; Master Builders
 - 4) Five Star Grout; U.S. Grout Corp.
 - 5) Upcon; Upco Chem. Div., USM Corp.
 - 6) Propak; Protex Industries, Inc.
 - 7) **<Insert manufacturer's name?**
 - 8) or approved equal.

2.8 CLEANING AND SHOP PAINTING

- A. Clean and remove loose scale, heavy rust, and other foreign materials from fabricated joists and accessories by **[hand-tool cleaning, SSPC-SP 2] [or] [power-tool cleaning, SSPC-SP 3]**.
- B. Do not prime paint joists and accessories **[to receive sprayed fire-resistive materials]**. Reference Section 078100 "Applied Fireproofing" for requirements.
- C. Apply one coat of shop primer to joists and joist accessories to be primed to provide a continuous, dry paint film not less than **1.5 mil (0.038 mm)** thick.
- D. Shop priming of joists and joist accessories is specified in **[Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."]** **[Section 099600 "High-Performance Coatings."]**

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine supporting substrates, embedded bearing plates, and abutting structural framing for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Do not install joists until supporting construction is in place and secured.
- B. Anchors: Furnish anchor bolts, bearing plates, and other devices to be built into concrete and masonry construction.
 - 1. Provide unfinished threaded fasteners for anchor bolts, unless otherwise indicated.
 - 2. Refer to Section 033000, "Cast-In-Place Concrete" for installation of anchors set in concrete.
- C. Placing Joists: Do not start placement of steel joists until supporting work is in place and secured and able to carry the construction loads. Place joists on supporting work, adjust and align in accurate locations, and spacing before permanently fastening.
 - 1. Provide temporary bridging, connections, and anchors to ensure lateral stability during construction.
 - a. Where "open web" joist lengths are 40 feet and longer, install a center row of bolted bridging to provide lateral stability before slackening of hoisting lines.
 - b. Temporary planking: Provide temporary planking, handrails, nets, anchorages, and working platforms as necessary to effectively and safely complete work.
- D. Install joists and accessories plumb, square, and true to line; securely fasten to supporting construction according to SJ's "Specifications,]"[" and "**Standard Specifications for Composite Steel Joists, CJ-Series**" in "**Standard Specifications for Composite Steel Joists, Weight Tables and Bridging Tables, Code of Standard Practice,**]" joist manufacturer's written recommendations, approved shop drawings, and requirements in this Section.
 - 1. Before installation, splice joists delivered to Project site in more than one piece.
 - 2. Space, adjust, and align joists accurately in location before permanently fastening.
 - 3. Install temporary bracing and erection bridging, connections, and anchors to ensure that joists are stabilized during construction.

4. Delay rigidly connecting bottom-chord extensions to columns or supports until dead loads are applied.
- E. Field weld joists to supporting steel [**bearing plates**] [**and**] [**framework**]. Coordinate welding sequence and procedure with placement of joists. Comply with AWS requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work. Field weld joists to supporting steel framework in accordance with SJI "Specifications" for type of joists used. Coordinate welding sequence and procedure with placing of joists.
- F. Bolt joists to supporting steel framework for temporary field erection procedures in accordance with SJI "Specifications" for type of joists used.
- G. Bolt joists to supporting steel framework using carbon-steel bolts.
- H. Bolt joists to supporting steel framework using high-strength structural bolts. Comply with Research Council on Structural Connection's "Specification for Structural Joints Using ASTM A 325 or ASTM A 490 Bolts" for high-strength structural bolt installation and tightening requirements.
- I. Provide unfinished threaded fasteners for bolted connections, unless otherwise required.
- J. Install and connect bridging concurrently with joist erection, before construction loads are applied. Anchor ends of bridging lines at top and bottom chords if terminating at walls or beams.
- K. Field Cutting: Field cutting is not allowed unless previously reviewed and approved by DEN Project Manager.

3.3 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified independent testing and inspecting agency to inspect [**field welds**] [**and**] [**bolted connections**] and to perform field tests and inspections and prepare test and inspection reports.
- B. Visually inspect field welds according to AWS D1.1/D1.1M.
 1. In addition to visual inspection, test field welds according to AWS D1.1/D1.1M and the following procedures, as applicable:
 - a. Liquid Penetrant Inspection: ASTM E 165.
 - b. Magnetic Particle Inspection: ASTM E 709.
 - c. Ultrasonic Testing: ASTM E 164.
 - d. Radiographic Testing: ASTM E 94.
- C. Visually inspect bolted connections.
- D. The DEN Project Manager may visually inspect joist installation including bolted and welded connections before work is closed in. Bolted and welded connections which do

not pass visual inspection shall be tested as specified in Section 051200 "Structural Steel Framing".

- E. Correct deficiencies in Work that test and inspection reports have indicated are not in compliance with specified requirements.
- F. Perform additional testing to determine compliance of corrected Work with specified requirements.

3.4 PROTECTION

- A. Repair damaged galvanized coatings on galvanized items with galvanized repair paint according to ASTM A 780 and manufacturer's written instructions.
- B. Touchup Painting: After installation, promptly clean, prepare, and prime or reprime field connections, rust spots, and abraded surfaces of prime-painted joists[, **bearing plates,**] [**abutting structural steel,**] and accessories.
 - 1. Clean and prepare surfaces by hand-tool cleaning according to SSPC-SP 2, or power-tool cleaning according to SSPC-SP 3.
 - 2. Remove all rust, runs or sags in paint by sanding and by wire brushing surfaces and clean with solvent and paint. All solvent or other foreign matter shall be removed prior to painting.
 - 3. Apply a compatible primer of same type as primer used on adjacent surfaces.
 - 4. Use same type of paint as used for shop painting and apply in minimum 1.5 mil thickness.
- C. Touchup Painting: Cleaning and touchup painting are specified in [**Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."**] [**Section 099600 "High-Performance Coatings."**]
- D. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer that ensure that joists and accessories are without damage or deterioration at time of Substantial Completion.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work

described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 052100

SECTION 053100 - STEEL DECKING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Roof deck.
2. Acoustical roof deck.
3. Cellular roof deck.
4. Acoustical cellular roof deck.
5. Composite floor deck.
6. Electrified cellular floor deck.
7. Noncomposite form deck.
8. Noncomposite vented form deck.

- B. Related Requirements:

1. Section 033000 "Cast-in-Place Concrete" for normal-weight and lightweight structural concrete fill over steel deck.
2. Section 035216 "Lightweight Insulating Concrete" for lightweight insulating concrete fill over steel deck.
3. Section 050510 "Welding" for general welding requirements.
4. Section 051200 "Structural Steel Framing" for shop- and field-welded shear connectors.
5. Section 055000 "Metal Fabrications" for framing deck openings with miscellaneous steel shapes.
6. Section 099113 "Exterior Painting" for repair painting of primed deck and finish painting of deck.
7. Section 099123 "Interior Painting" for repair painting of primed deck and finish painting of deck.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of deck, accessory, product, paint and primer indicated.

1. Provide test data for mechanical fasteners used in lieu of welding for fastening deck to supporting structures.
2. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Laboratory Test Reports for Credit EQ 4: For primers, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

C. Shop Drawings:

1. Include layout and types of deck panels, anchorage details, closure strips, supplementary framing, reinforcing channels, pans, cant strips cut deck openings, special jointing, accessories, and attachments to other construction.

1.4 INFORMATIONAL SUBMITTALS

A. Welding certificates.

B. Product Certificates: For each type of steel deck.

C. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, indicating that each of the following complies with requirements:

1. Powder-actuated mechanical fasteners. Powder-actuated fasteners to be used only if approved by DEN Project Manager.
2. Acoustical roof deck.

D. Evaluation Reports: For steel deck.

E. Field quality-control reports.

F. Submit bill of materials for all items needed to install the material listed in this section for the Project.

1.5 QUALITY ASSURANCE

A. Comply with the following:

1. American Iron and Steel Institute (AISI), "Specification for the Design of Cold Formed Steel Structural Members."

2. Steel Deck Institute (SDI), "Design Manual for Composite Decks, Form Decks, and Roof Decks."
 - B. Testing Agency Qualifications: Qualified according to ASTM E 329 for testing indicated.
 - C. Welding Qualifications: Qualify procedures and personnel according to AWS D1.3, "Structural Welding Code - Sheet Steel." Reference Section 050510 "Welding" for general welding requirements.
 - D. Electrical Raceway Units: Provide UL-labeled cellular floor-deck units complying with UL 209 and listed in UL's "Electrical Construction Equipment Directory" for use with standard header ducts and outlets for electrical distribution systems.
 - E. Underwriters' Label: Provide metal floor deck units listed in Underwriters' Laboratories "Fire Resistance Directory", with each deck unit bearing the UL label and marking for specific system detailed.
 - F. FM Global Listing: Provide steel roof deck evaluated by FM Global and listed in its "Approval Guide, Building Materials" for Class 1 fire rating and Class 1-90 windstorm ratings.
- 1.6 DELIVERY, STORAGE, AND HANDLING
- A. Protect steel deck from corrosion, deformation, and other damage during delivery, storage, and handling.
 - B. Stack steel deck on platforms or pallets and slope to provide drainage. Protect with a waterproof covering and ventilate to avoid condensation.
 1. Protect and ventilate acoustical cellular roof deck with factory-installed insulation to maintain insulation free of moisture.
- 1.7 CONSTRUCTION WASTE MANAGEMENT
- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. AISI Specifications: Comply with calculated structural characteristics of steel deck according to AISI's "North American Specification for the Design of Cold-Formed Steel Structural Members."

- B. Fire-Resistance Ratings: Comply with ASTM E 119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.
- C. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [25] <Insert number> percent.
- D. Low-Emitting Materials: Paints and coatings shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.2 ROOF DECK

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - 1. [ASC Profiles, Inc.; a Blue Scope Steel company.](#)
 - 2. [Canam United States; Canam Group Inc.](#)
 - 3. [CMC Joist & Deck.](#)
 - 4. [Consolidated Systems, Inc.; Metal Dek Group.](#)
 - 5. [Cordeck.](#)
 - 6. [DACS, Inc.](#)
 - 7. [Epic Metals Corporation.](#)
 - 8. [Marlyn Steel Decks, Inc.](#)
 - 9. [New Millennium Building Systems, LLC.](#)
 - 10. [Nucor Corp.; Vulcraft Group.](#)
 - 11. [Roof Deck, Inc.](#)
 - 12. [Valley Joist; Subsidiary of EBSCO Industries, Inc.](#)
 - 13. [Verco Manufacturing Co.](#)
 - 14. [Wheeling Corrugating Company; Div. of Wheeling-Pittsburgh Steel Corporation.](#)
 - 15. <Insert manufacturer's name>.
 - 16. or approved equal.
- B. Roof Deck: Fabricate panels, without top-flange stiffening grooves, to comply with "SDI Specifications and Commentary for Steel Roof Deck," in SDI Publication No. 31, and with the following:
 - 1. Prime-Painted Steel Sheet: ASTM A 1008/A 1008M, Structural Steel (SS), [Grade 33 (230)] [Grade 40 (275)] [Grade 80 (550)] minimum, shop primed with manufacturer's standard baked-on, rust-inhibitive primer.
 - a. Color: [Manufacturer's standard] [Gray] [White] [Gray top surface with white underside].
 - 2. Galvanized-Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), [Grade 33 (230)] [Grade 40 (275)] [Grade 80 (550)], [G60 (Z180)] [G90 (Z275)] zinc coating.

3. Galvanized and Shop-Primed Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), [Grade 33 (230)] [Grade 40 (275)] [Grade 80 (550)], G60 (Z180) zinc coating; cleaned, pretreated, and primed with manufacturer's standard baked-on, rust-inhibitive primer.
 - a. Color: [Manufacturer's standard] [Gray] [White] [Gray top surface with white underside].
4. Aluminum-Zinc-Alloy-Coated Steel Sheet: ASTM A 792/A 792M, Structural Steel (SS), Grade 33 (230) minimum, AZ50 (AZ150) aluminum-zinc-alloy coating.
5. Deck Profile: [As indicated] [Type NR, narrow rib] [Type IR, intermediate rib] [Type WR, wide rib] [Type 3DR, deep rib] [Long span].
6. Cellular Deck Profile: [As indicated] [Type WR, wide rib] [Type 3DR, deep rib] [Long span], with bottom plate.
7. Profile Depth: [As indicated] [1-1/2 inches (38 mm)] [2 inches (51 mm)] [3 inches (76 mm)] [4-1/2 inches (114 mm)] [6 inches (152 mm)] [7-1/2 inches (190 mm)].
8. Design Uncoated-Steel Thickness: [As indicated] [0.0295 inch (0.75 mm)] [0.0358 inch (0.91 mm)] [0.0474 inch (1.20 mm)] [0.0598 inch (1.52 mm)] [0.0747 inch (1.90 mm)].
9. Design Uncoated-Steel Thicknesses; Deck Unit/Bottom Plate: [As indicated] [0.0358/0.0358 inch (0.91/0.91 mm)] [0.0358/0.0474 inch (0.91/1.20 mm)] [0.0474/0.0474 inch (1.20/1.20 mm)] [0.0474/0.0598 inch (1.20/1.52 mm)] [0.0598/0.0474 inch (1.52/1.20 mm)] [0.0598/0.0598 inch (1.52/1.52 mm)].
10. Span Condition: [As indicated] [Simple span] [Double span] [Triple span or more].
11. Side Laps: [Overlapped] [Interlocking seam] [Overlapped or interlocking seam at Contractor's option].

2.3 ACOUSTICAL ROOF DECK

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. [ASC Profiles, Inc.; a Blue Scope Steel company.](#)
2. [Canam United States; Canam Group Inc.](#)
3. [CMC Joist & Deck.](#)
4. [Consolidated Systems, Inc.; Metal Dek Group.](#)
5. [Cordeck.](#)
6. [DACS, Inc.](#)
7. [Epic Metals Corporation.](#)
8. [Marlyn Steel Decks, Inc.](#)
9. [New Millennium Building Systems, LLC.](#)
10. [Nucor Corp.; Vulcraft Group.](#)
11. [Roof Deck, Inc.](#)
12. [Wheeling Corrugating Company; Div. of Wheeling-Pittsburgh Steel Corporation.](#)
13. <Insert manufacturer's name>.
14. or approved equal.

- B. Acoustical Roof Deck: Fabricate panels, without top-flange stiffening grooves, to comply with "SDI Specifications and Commentary for Steel Roof Deck," in SDI Publication No. 31, and with the following:
1. Prime-Painted Steel Sheet: ASTM A 1008/A 1008M, Structural Steel (SS), **[Grade 33 (230)] [Grade 40 (275)] [Grade 80 (550)]** minimum, shop primed with manufacturer's standard baked-on, rust-inhibitive primer.
 - a. Color: **[Manufacturer's standard] [Gray] [White] [Gray top surface with white underside]**.
 2. Galvanized-Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), **[Grade 33 (230)] [Grade 40 (275)] [Grade 80 (550)]**, **[G60 (Z180)] [G90 (Z275)]** zinc coating.
 3. Galvanized and Shop-Primed Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), **[Grade 33 (230)] [Grade 40 (275)] [Grade 80 (550)]**, **G60 (Z180)** zinc coating; cleaned, pretreated, and primed with manufacturer's standard baked-on, rust-inhibitive primer.
 - a. Color: **[Manufacturer's standard] [Gray] [White] [Gray top surface with white underside]**.
 4. Aluminum-Zinc-Alloy-Coated Steel Sheet: ASTM A 792/A 792M, Structural Steel (SS), Grade **33 (230)** minimum, **AZ50 (AZ150)** aluminum-zinc-alloy coating.
 5. Deck Profile: **[As indicated] [Type WR, wide rib] [Type 3DR, deep rib] [Long span]**.
 6. Cellular Deck Profile: **[As indicated] [Type WR, wide rib] [Type 3DR, deep rib] [Long span]**, with bottom plate.
 7. Profile Depth: **[As indicated] [1-1/2 inches (38 mm)] [2 inches (51 mm)] [3 inches (76 mm)] [4-1/2 inches (114 mm)] [6 inches (152 mm)] [7-1/2 inches (190 mm)]**.
 8. Design Uncoated-Steel Thickness: **[As indicated] [0.0295 inch (0.75 mm)] [0.0358 inch (0.91 mm)] [0.0474 inch (1.20 mm)] [0.0598 inch (1.52 mm)]**.
 9. Design Uncoated-Steel Thicknesses; Deck Unit/Bottom Plate: **[As indicated] [0.0358/0.0358 inch (0.91/0.91 mm)] [0.0358/0.0474 inch (0.91/1.20 mm)] [0.0474/0.0358 inch (1.20/0.91 mm)] [0.0474/0.0474 inch (1.20/1.20 mm)] [0.0474/0.0598 inch (1.20/1.52 mm)] [0.0598/0.0474 inch (1.52/1.20 mm)] [0.0598/0.0598 inch (1.52/1.52 mm)]**.
 10. Span Condition: **[As indicated] [Simple span] [Double span] [Triple span or more]**.
 11. Side Laps: **[Overlapped] [Interlocking seam] [Overlapped or interlocking seam at Contractor's option]**.
 12. Acoustical Perforations: **[Deck units with manufacturer's standard perforated vertical webs] [Cellular deck units with manufacturer's standard perforated flat-bottom plate welded to ribbed deck]**.
 13. Sound-Absorbing Insulation: Manufacturer's standard premolded roll or strip of glass or mineral fiber. **<Insert actual physical properties and thicknesses of insulation>**.
 - a. Factory install sound-absorbing insulation into cells of cellular deck.

b. Installation of sound-absorbing insulation is specified in Section <Insert Section number> "<Insert title of applicable roofing Section>."

14. Acoustical Performance: NRC [0.65] [0.75] [0.80] [0.85] [0.90], tested according to ASTM C 423.

2.4 COMPOSITE FLOOR DECK

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [ASC Profiles, Inc.; a Blue Scope Steel company.](#)
2. [Canam United States; Canam Group Inc.](#)
3. [CMC Joist & Deck.](#)
4. [Consolidated Systems, Inc.; Metal Dek Group.](#)
5. [Cordeck.](#)
6. [DACS, Inc.](#)
7. [Epic Metals Corporation.](#)
8. [Marlyn Steel Decks, Inc.](#)
9. [New Millennium Building Systems, LLC.](#)
10. [Nucor Corp.; Vulcraft Group.](#)
11. [Roof Deck, Inc.](#)
12. [Verco Manufacturing Co.](#)
13. [Wheeling Corrugating Company; Div. of Wheeling-Pittsburgh Steel Corporation.](#)
14. <Insert manufacturer's name>.
15. or approved equal.

B. Composite Floor Deck: Fabricate panels, with integrally embossed or raised pattern ribs and interlocking side laps, to comply with "SDI Specifications and Commentary for Composite Steel Floor Deck," in SDI Publication No. 31, with the minimum section properties indicated, and with the following:

1. Prime-Painted Steel Sheet: ASTM A 1008/A 1008M, Structural Steel (SS), [Grade 33 (230)] [Grade 40 (275)] [Grade 80 (550)] minimum, with top surface phosphatized and unpainted and underside surface shop primed with manufacturers' standard [gray] [or] [white] baked-on, rust-inhibitive primer.
2. Galvanized-Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), Grade 33 (230), [G30 (Z90)] [G60 (Z180)] [G90 (Z275)] zinc coating.
3. Galvanized and Shop-Primed Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), Grade 33 (230), [G30 (Z90)] [G60 (Z180)] zinc coating; with unpainted top surface and cleaned and pretreated bottom surface primed with manufacturer's standard [gray] [white] baked-on, rust-inhibitive primer.
4. Profile Depth: [1-1/2 inches (38 mm)] [2 inches (51 mm)] [3 inches (76 mm)] [As indicated].
5. Design Uncoated-Steel Thickness: [0.0295 inch (0.75 mm)] [0.0358 inch (0.91 mm)] [0.0474 inch (1.20 mm)] [0.0598 inch (1.52 mm)].
6. Span Condition: [As indicated] [Simple span] [Double span] [Triple span or more].

2.5 ELECTRIFIED CELLULAR FLOOR DECK

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [Cordeck.](#)
 2. [HH Robertson Floor Systems; a CENTRIA company.](#)
 3. **<Insert manufacturer's name>.**
 4. or approved equal.
- B. Source Limitations for Electrified Cellular Floor Deck: Obtain cellular floor-deck units and compatible electrical components, such as preset inserts, activation kits, afterset inserts, service fittings, header ducts, and trench header ducts, from single manufacturer.
- C. Electrified Cellular Floor Deck: Fabricate steel-sheet cellular floor-deck panels, consisting of a ribbed top section welded to a lower flat-bottom sheet with interlocking side laps, to comply with "SDI Specifications and Commentary for Composite Steel Floor Deck" in SDI Publication No. 31. Fabricate deck to the minimum section properties, width of panel, number and area of cells per panel indicated, and the following:
1. Cellular Deck Type: [**Composite**] [**Noncomposite**].
 2. Galvanized-Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), Grade **33** (230), [**G60 (Z180)**] [**G90 (Z275)**] zinc coating.
 3. Galvanized and Shop-Primed Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), Grade **33** (230), **G60 (Z180)** zinc coating; with underside surface cleaned, pretreated, and primed with manufacturer's standard [**gray**] [**white**] baked-on, rust-inhibitive primer.
 4. Profile Depth: [**1-1/2 inches (38 mm)**] [**2 inches (51 mm)**] [**3 inches (76 mm)**] [**As indicated**].
 5. Design Uncoated-Steel Thicknesses; Deck Unit/Bottom Plate: [**0.0358/0.0358 inch (0.91/0.91 mm)**] [**0.0358/0.0474 inch (0.91/1.20 mm)**] [**0.0358/0.0598 inch (0.91/1.52 mm)**] [**0.0474/0.0358 inch (1.20/0.91 mm)**] [**0.0474/0.0474 inch (1.20/1.20 mm)**] [**0.0474/0.0598 inch (1.20/1.52 mm)**] [**0.0598/0.0474 inch (1.52/1.20 mm)**] [**0.0598/0.0598 inch (1.52/1.52 mm)**].
 6. Span Condition: [**As indicated**] [**Simple span**] [**Double span**] [**Triple span or more**].
 7. Factory punch holes, of size and arrangement indicated, into each deck cell at preset inserts and header duct locations.

2.6 NONCOMPOSITE FORM DECK

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [ASC Profiles, Inc.; a Blue Scope Steel company.](#)
 2. [Canam United States; Canam Group Inc.](#)
 3. [CMC Joist & Deck.](#)

4. [Consolidated Systems, Inc.; Metal Dek Group.](#)
 5. [Cordeck.](#)
 6. [DACS, Inc.](#)
 7. [Marlyn Steel Decks, Inc.](#)
 8. [New Millennium Building Systems, LLC.](#)
 9. [Nucor Corp.; Vulcraft Group.](#)
 10. [Roof Deck, Inc.](#)
 11. [Valley Joist; Subsidiary of EBSCO Industries, Inc.](#)
 12. [Verco Manufacturing Co.](#)
 13. [Wheeling Corrugating Company; Div. of Wheeling-Pittsburgh Steel Corporation.](#)
 14. **<Insert manufacturer's name>.**
 15. or approved equal.
- B. Noncomposite Form Deck: Fabricate ribbed-steel sheet noncomposite form-deck panels to comply with "SDI Specifications and Commentary for Noncomposite Steel Form Deck," in SDI Publication No. 31, with the minimum section properties indicated, and with the following:
1. Uncoated Steel Sheet: ASTM A 1008/A 1008M, Structural Steel (SS), [**Grade 33 (230)**] [**Grade 40 (275)**] [**Grade 80 (550)**] minimum.
 2. Prime-Painted Steel Sheet: ASTM A 1008/A 1008M, Structural Steel (SS), [**Grade 33 (230)**] [**Grade 40 (275)**] [**Grade 80 (550)**] minimum, with [**top and**] underside surface shop primed with manufacturer's standard baked-on, rust-inhibitive primer.
 - a. Color: [**Manufacturer's standard**] [**Gray**] [**White**] [**Gray top surface with white underside**].
 3. Galvanized-Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), [**Grade 33 (230)**] [**Grade 40 (275)**] [**Grade 80 (550)**], [**G30 (Z90)**] [**G60 (Z180)**] [**G90 (Z275)**] zinc coating.
 4. Galvanized and Shop-Primed Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), [**Grade 33 (230)**] [**Grade 80 (550)**], **G60 (Z180)** zinc coating; cleaned, pretreated, and primed with manufacturer's standard baked-on, rust-inhibitive primer.
 - a. Color: [**Manufacturer's standard**] [**Gray**] [**White**] [**Gray top surface with white underside**].
 5. Profile Depth: [**9/16 inch (14 mm)**] [**15/16 inch (24 mm)**] [**1-5/16 inches (33 mm)**] [**1-1/2 inches (38 mm)**].
 6. Design Uncoated-Steel Thickness: [**0.0149 inch (0.38 mm)**] [**0.0179 inch (0.45 mm)**] [**0.0239 inch (0.61 mm)**] [**0.0295 inch (0.75 mm)**] [**0.0358 inch (0.91 mm)**] [**0.0474 inch (1.20 mm)**] [**0.0598 inch (1.52 mm)**].
 7. Span Condition: [**As indicated**] [**Simple span**] [**Double span**] [**Triple span or more**].
 8. Side Laps: [**Overlapped**] [**Interlocking seam**] [**Overlapped or interlocking seam at Contractor's option**].

2.7 NONCOMPOSITE VENTED FORM DECK

A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

1. [ASC Profiles, Inc.; a Blue Scope Steel company.](#)
2. [Canam United States; Canam Group Inc.](#)
3. [CMC Joist & Deck.](#)
4. [Consolidated Systems, Inc.; Metal Dek Group.](#)
5. [Marlyn Steel Decks, Inc.](#)
6. [New Millennium Building Systems, LLC.](#)
7. [Nucor Corp.; Vulcraft Group.](#)
8. [Roof Deck, Inc.](#)
9. [Verco Manufacturing Co.](#)
10. [Wheeling Corrugating Company; Div. of Wheeling-Pittsburgh Steel Corporation.](#)
11. **<Insert manufacturer's name>.**
12. or approved equal.

B. Noncomposite Vented Form Deck: Fabricate ribbed- and vented-steel sheet noncomposite form-deck panels to comply with "SDI Specifications and Commentary for Noncomposite Steel Form Deck," in SDI Publication No. 31, and with the following:

1. Galvanized-Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), [**Grade 33 (230)**] [**Grade 40 (275)**] [**Grade 80 (550)**], [**G30 (Z90)**] [**G60 (Z180)**] [**G90 (Z275)**] zinc coating.
2. Galvanized and Shop-Primed Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), [**Grade 33 (230)**] [**Grade 80 (550)**], [**G30 (Z90)**] [**G60 (Z180)**] zinc coating; cleaned, pretreated, and primed with manufacturer's standard baked-on, rust-inhibitive primer.
 - a. Color: [**Manufacturer's standard**] [**Gray**] [**White**] [**Gray top surface with white underside**].
3. Profile Depth: [**9/16 inch (14 mm)**] [**15/16 inch (24 mm)**] [**1-5/16 inches (33 mm)**] [**1-1/2 inches (38 mm)**].
4. Design Uncoated-Steel Thickness: [**0.0149 inch (0.38 mm)**] [**0.0179 inch (0.45 mm)**] [**0.0239 inch (0.61 mm)**] [**0.0295 inch (0.75 mm)**] [**0.0358 inch (0.91 mm)**] [**0.0474 inch (1.20 mm)**] [**0.0598 inch (1.52 mm)**].
5. Span Condition: [**As indicated**] [**Simple span**] [**Double span**] [**Triple span or more**].
6. Side Laps: [**Overlapped**] [**Interlocking seam**] [**Overlapped or interlocking seam at Contractor's option**].
7. Vent Slot Area: Manufacturer's standard vent slots providing [**1-1/2**] **<Insert number>** percent open area.

2.8 ACCESSORIES

A. General: Provide manufacturer's standard accessory materials for deck that comply with requirements indicated.

- B. Mechanical Fasteners: Corrosion-resistant, low-velocity, power-actuated or pneumatically driven carbon-steel fasteners; or self-drilling, self-threading screws.
- C. Side-Lap Fasteners: Corrosion-resistant, hexagonal washer head; self-drilling, carbon-steel screws, **No. 10 (4.8-mm)** minimum diameter.
- D. Flexible Closure Strips: Vulcanized, closed-cell, synthetic rubber.
- E. Miscellaneous Sheet Metal Deck Accessories: Steel sheet, minimum yield strength of **33,000 psi (230 MPa)**, not less than **0.0359-inch (0.91-mm)** design uncoated thickness, of same material and finish as deck; of profile indicated or required for application.
- F. Pour Stops and Girder Fillers: Steel sheet, minimum yield strength of **33,000 psi (230 MPa)**, of same material and finish as deck, and of thickness and profile **[indicated] [recommended by SDI Publication No. 31 for overhang and slab depth]**.
- G. Column Closures, End Closures, Z-Closures, and Cover Plates: Steel sheet, of same material, finish, and thickness as deck unless otherwise indicated.
- H. Piercing Hanger Tabs: Piercing steel sheet hanger attachment devices for use with floor deck.
- I. Weld Washers: Uncoated steel sheet, shaped to fit deck rib, **[0.0598 inch (1.52 mm)] [0.0747 inch (1.90 mm)]** thick, with factory-punched hole of **3/8-inch (9.5-mm)** minimum diameter.
- J. Flat Sump Plates: Single-piece steel sheet, **0.0747 inch (1.90 mm)** thick, of same material and finish as deck. For drains, cut holes in the field.
- K. Recessed Sump Pans: Single-piece steel sheet, **0.0747 inch (1.90 mm)** thick, of same material and finish as deck, with **3-inch- (76-mm-)** wide flanges and **[level] [sloped]** recessed pans of **1-1/2-inch (38-mm)** minimum depth. For drains, cut holes in the field.
- L. Galvanizing Repair Paint: **[ASTM A 780] [SSPC-Paint 20 or MIL-P-21035B, with dry film containing a minimum of 94 percent zinc dust by weight]**.
- M. Repair Paint: Manufacturer's standard rust-inhibitive primer of same color as primer.
- N. Acoustic Sound Barrier Closures: Manufacturer's standard mineral fiber closures.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine supporting frame and field conditions for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 FABRICATION

- A. General: Form deck units in lengths to span three or more supports, with flush, telescoped, or nested 2-inch laps at ends and interlocking or nested side laps, of metal thickness, depth, and properties as indicated on the drawings.
- B. Roof Deck Units: Provide deck configurations that comply with SDI "Specifications and Commentary for Steel Roof Deck."
- C. Acoustical Roof Deck Units:
 - 1. Single pan units: Single pan fluted units with vertical webs perforated with approximate 5/32 inch diameter holes staggered 3/8 inch o.c. Provide mineral fiber acoustical insulation strips of profile to fit void space between vertical ribs.
 - 2. Multiple pan cellular units: Composite units consisting of upper fluted section combined with lower flat plate section having interlocking side laps and approximate 5/32 inch perforations staggered on 3/8 inch centers under cells formed by upper unit. Provide mineral fiber acoustical insulation strips of profile to fit void space of each cell.
 - 3. Non Composite Steel Form Deck: Provide fluted sections of metal deck as permanent forms for reinforced concrete slabs.
- D. Composite Steel Floor Deck: Fabricate deck units with integral embossing or raised pattern to furnish mechanical bond with concrete slabs. Fabricate open beam deck units with fluted section having interlocking side laps.
- E. Metal Cover Plates: Fabricate metal cover plates for end abutting floor deck units of not less than same thickness as decking. Form to match contour of deck units and approximately 6 inches wide.
- F. Metal Closure Strips: Fabricate metal closure strips, for cell raceways and openings between decking and other construction, of not less than 0.045 inch min. (18 gage) sheet steel. Form to provide tight fitting closures at open ends of cells or flutes and sides of decking.

3.3 INSTALLATION, GENERAL

- A. Install deck panels and accessories according to applicable specifications and commentary in SDI Publication No. 31, manufacturer's written instructions, and requirements in this Section.
- B. Install temporary shoring before placing deck panels if required to meet deflection limitations.
- C. Locate deck bundles to prevent overloading of supporting members.
- D. Place deck panels on supporting frame and adjust to final position with ends accurately aligned and bearing on supporting frame before being permanently fastened. Do not stretch or contract side-lap interlocks.

1. Align cellular deck panels over full length of cell runs and align cells at ends of abutting panels.
- E. Place deck panels flat and square and fasten to supporting frame without warp or deflection.
 - F. Cut and neatly fit deck panels and accessories around openings and other work projecting through or adjacent to deck.
 - G. Provide additional reinforcement and closure pieces at openings as required for strength, continuity of deck, and support of other work.
 - H. Do not place deck units on concrete supporting structure until concrete has cured and is dry.
 - I. Coordinate and cooperate with structural steel erector in locating decking bundles to prevent overloading of structural members.
 - J. Do not use floor deck units for storage or working platforms until permanently secured.
 - K. Comply with AWS requirements and procedures for manual shielded metal arc welding, appearance and quality of welds, and methods used for correcting welding work.
 - L. Mechanical fasteners may be used in lieu of welding to fasten deck. Locate mechanical fasteners and install according to deck manufacturer's written instructions.
 - M. Comply with AWS requirements and procedures for manual shielded metal arc welding, appearance and quality of welds, and methods used in correcting welding work.
 - N. Use welding washers where recommended by deck manufacturer.
 - O. Mechanical fasteners, either powder actuated or pneumatically driven, may be used in lieu of welding if approved by DEN Project Manager.
 1. Locate mechanical fasteners and install in accordance with deck manufacturer's instructions. Where decking will be used to contain fluid materials, such as fresh concrete, deck shall be placed so that fluid will not leak through or underneath.
 - P. Mechanically fasten side laps of adjacent deck units between supports, at intervals not exceeding 36 inches o.c., using self tapping No. 8 or larger machine screws.
 - Q. Keep the interiors of cells that will be used as raceways free of welds having sharp points or edges.
 - R. Cutting and Fitting: Cut and neatly fit deck units and accessories around other work projecting through or adjacent to the decking, as shown.
 - S. Reinforcement at Openings: Provide additional metal reinforcement and closure pieces as required for strength, continuity of decking, and support of other work shown.

- T. Hanger Slots or Clips: Provide UL approved punched hanger slots between cells or flutes of lower element where floor deck units are to receive hangers for support of ceiling construction, air ducts, diffusers, or lighting fixtures.
1. Hanger clips designed to clip over male side lap joints of floor deck units may be used instead of hanger slots.
 2. Locate slots or clips at not more than 14 inches o.c. in both directions, not over 9 inches from walls at ends, and not more than 12 inches from walls at sides, unless otherwise indicated.
 3. Provide manufacturer's standard hanger attachment devices. Submit manufacturer's material data and instructions to DEN Project Manager for acceptance.
- U. Joint Covers: Provide galvanized metal joint covers at abutting ends and changes in direction of floor deck units, except where taped joints are required.
- V. Preparation: Clean top flange of beams to receive studs of all debris. Field weld studs to structural members after all steel framing, deck, and forms are in place. Install deck so that bottom plate or rib is in continuous contact with the surface to receive studs.
- W. Shear Stud Connector Capacity: Number of shear connectors indicated on Drawings is based on 100% of allowable capacity for shear connectors in normal weight or lightweight concrete as listed in the AISC Specification. Determine actual shear connector capacities by tests on each type of deck supplied and number of shear connectors required in each rib. If additional shear connectors are required due to decreases in capacity of shear connectors for type of deck and stud placement supplied, provide additional shear connectors at no additional cost to Owner.
- X. Installation: Install shear connectors in accordance with manufacturer's published instructions. Use only personnel and equipment authorized by deck manufacturer. Use through-deck shear connector welding where deck material thickness permits proper weld fusion to develop required connector capacity.
- Y. Shear stud testing is specified in Section 051200 "Structural Steel Framing".
- Z. Closure Strips: Provide metal closure strips at open uncovered ends and edges of roof decking and in voids between decking and other construction. Weld into position to provide a complete decking installation.
- AA. Provide flexible closure strips instead of metal closures, at Contractor's option, wherever their use will ensure complete closure. Install with adhesive in accordance with manufacturer's instructions.
- BB. Touch Up Painting: After decking installation, wire brush, clean, and paint scarred areas, welds, and rust spots on top and bottom surfaces of decking units and supporting steel members.
- CC. Touch up galvanized surfaces with galvanizing repair paint applied in accordance with manufacturer's instructions.

- DD. Touch up painted surfaces with same type of shop paint used on adjacent surfaces.
- EE. In areas where shop painted surfaces are to be exposed, apply touch up paint to blend into adjacent surfaces.

3.4 ROOF-DECK INSTALLATION

- A. Fasten roof-deck panels to steel supporting members by arc spot (puddle) welds of the surface diameter indicated or arc seam welds with an equal perimeter that is not less than **1-1/2 inches (38 mm)** long, and as follows:
 - 1. Weld Diameter: **[5/8 inch (16 mm)]** , nominal, or elongated welds of equal strength.
 - 2. Weld Spacing: Weld edge and interior ribs of deck units with a minimum of two welds per deck unit at each support. Space welds **12 inches (305 mm) apart in the field of roof and 6 inches (150 mm) apart in roof corners and perimeter, based on roof-area definitions in FMG Loss Prevention Data Sheet 1-28 [as indicated]**, spaced one in each valley at every support, and at closer spacing where indicated.
 - 3. Weld Washers: Install weld washers at each weld location.
 - 4. Reference Section 050510 "Welding" for general welding requirements.
- B. Side-Lap and Perimeter Edge Fastening: Fasten side laps and perimeter edges of panels between supports, at intervals not exceeding the lesser of 1/2 of the span or **[18 inches (457 mm)] [36 inches (914 mm)]**, and as follows:
 - 1. Mechanically fasten with self-drilling, **No. 10 (4.8-mm-)** diameter or larger, carbon-steel screws.
 - 2. Mechanically clinch or button punch.
 - 3. Fasten with a minimum of **1-1/2-inch- (38-mm-)** long welds.
- C. Attach roof deck to support members parallel to deck span with 5/8" diameter welds or screws at 6" on center. Longitudinal joints between deck units shall be fastened together with 5/8" diameter weld or screws at 12"
- D. End Bearing: Install deck ends over supporting frame with a minimum end bearing of **1-1/2 inches (38 mm)**, with end joints as follows:
 - 1. End Joints: **[Lapped 2 inches (51 mm) minimum] [Butted] [Lapped 2 inches (51 mm) minimum or butted at Contractor's option]**.
- E. Roof Sump Pans and Sump Plates: Install over openings provided in roof deck and **[weld] [mechanically fasten]** flanges to top of deck. Space **[welds] [mechanical fasteners]** not more than **12 inches (305 mm)** apart with at least one **[weld] [fastener]** at each corner.
 - 1. Install reinforcing channels or zees in ribs to span between supports and **[weld] [or] [mechanically fasten]**.

- F. Miscellaneous Roof-Deck Accessories: Install ridge and valley plates, finish strips, end closures, and reinforcing channels according to deck manufacturer's written instructions. **[Weld] [or] [mechanically fasten]** to substrate to provide a complete deck installation.
 - 1. Weld cover plates at changes in direction of roof-deck panels unless otherwise indicated.
- G. Flexible Closure Strips: Install flexible closure strips over partitions, walls, and where indicated. Install with adhesive according to manufacturer's written instructions to ensure complete closure.
- H. Sound-Absorbing Insulation: Installation into topside ribs of deck as specified in Section **<Insert Section number> "<Insert title of applicable roofing Section>."**

3.5 FLOOR-DECK INSTALLATION

- A. Fasten floor-deck panels to steel supporting members by arc spot (puddle) welds of the surface diameter indicated and as follows:
 - 1. Weld Diameter: **[5/8 inch (16 mm)]**, nominal, or elongated welds of equal strength..
 - 2. Weld Spacing: Weld edge ribs of panels at each support. Space additional welds an average of **12 inches (305 mm)** apart, or as indicated. .
 - 3. Weld Washers: Install weld washers at each weld location.
 - 4. Reference Section 050510 "Welding" for general welding requirements.
- B. Side-Lap and Perimeter Edge Fastening: Fasten side laps and perimeter edges of panels between supports, at intervals not exceeding the lesser of half of the span or **36 inches (914 mm)**, and as follows:
 - 1. Mechanically fasten with self-drilling, **No. 8 (4.0-mm-)** diameter or larger, carbon-steel screws.
 - 2. Mechanically clinch or button punch.
 - 3. Fasten with a minimum of **1-1/2-inch- (38-mm-)** long welds.
- C. End Bearing: Install deck ends over supporting frame with a minimum end bearing of **[1-1/2 inches (38 mm)] <Insert dimension>**, with end joints as follows:
 - 1. End Joints: **[Lapped] [Butted] [Lapped or butted at Contractor's option]**.
- D. Pour Stops and Girder Fillers: Weld steel sheet pour stops and girder fillers to supporting structure according to SDI recommendations unless otherwise indicated.
- E. Revise "Floor-Deck Closures" Paragraph below to suit Project. Sealing cellular deck openings, butt joints, and junctions with trench headers with tape is not included in this Section. Floor-Deck Closures: Weld steel sheet column closures, cell closures, and Z-closures to deck, according to SDI recommendations, to provide tight-fitting closures at open ends of ribs and sides of deck.

- F. Electrified Cellular Floor Deck: Install cellular floor system with deck assembled from **[all-cellular units] [alternating cellular units with noncellular composite units] [units indicated]**.
1. Coordinate layout and installation of trench headers, preset inserts, duct fittings, and other components specified in Section 260539 "Underfloor Raceways for Electrical Systems" with installation of electrified cellular metal floor deck.
- G. Install piercing hanger tabs at **[14 inches (355 mm)] <Insert spacing>** apart in both directions, within **9 inches (228 mm)** of walls at ends, and not more than **12 inches (305 mm)** from walls at sides unless otherwise indicated.

3.6 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
1. Testing agency shall conduct and interpret inspections and tests and state in written reports all findings and conclusions with reference made to specific deck location, date, ambient conditions, and specific reasons for acceptance, or deviations.
 2. Steel deck shall be inspected and accepted per the "AWS-Sheet Welding Specifications".
- B. Field welds will be subject to inspection. Any steel deck welded connection which is not acceptable per these specifications shall be repaired with screw connections at the ratio of two (2) #8 minimum screws for each deficient weld.
- C. Testing agency will report inspection results promptly and in writing to Contractor and DEN Project Manager.
- D. Remove and replace work that does not comply with specified requirements.
- E. Additional inspecting, at Contractor's expense, will be performed to determine compliance of corrected work with specified requirements.

3.7 PROTECTION

- A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on both surfaces of deck with galvanized repair paint according to ASTM A 780 and manufacturer's written instructions.
- B. Repair Painting: Wire brush and clean rust spots, welds, and abraded areas on **[both surfaces] [top surface]** of prime-painted deck immediately after installation, and apply repair paint.
1. Apply repair paint, of same color as adjacent shop-primed deck, to bottom surfaces of deck exposed to view.

2. Wire brushing, cleaning, and repair painting of bottom deck surfaces are included in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."
- C. Repair Painting: Wire brushing, cleaning, and repair painting of rust spots, welds, and abraded areas of both deck surfaces are included in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."
- D. Provide final protection and maintain conditions to ensure that steel deck is without damage or deterioration at time of Substantial Completion.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 053100

SECTION 054000 - COLD-FORMED METAL FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Load-bearing wall framing.
2. Exterior non-load-bearing wall framing.
3. Floor joist framing.
4. Roof rafter framing.
5. Ceiling joist framing.
6. Soffit framing.

B. Related Requirements:

1. Section 050510 "Welding" for general welding requirements.
2. Section 055000 "Metal Fabrications" for masonry shelf angles and connections.
3. Section 092216 "Non-Structural Metal Framing" for interior non-load-bearing, metal-stud framing and ceiling-suspension assemblies.
4. Section 092116.23 "Gypsum Board Shaft Wall Assemblies" for interior non-load-bearing, metal-stud-framed, shaft-wall assemblies.
5. Section 092216 "Non-Structural Metal Framing" for steel framing for gypsum board and plaster partitions and ceilings.
6. Section 092900 "Gypsum Board" for interior gypsum board, exterior gypsum board for ceilings and soffits, and tile backing boards.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]<Insert location>**.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of cold-formed steel framing product and accessory.

1. Include data substantiating that materials comply with requirements.
 - B. LEED Submittals:
 1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
 - C. Shop Drawings:
 1. Include layout, spacings, sizes, thicknesses, and types of cold-formed steel framing; fabrication; and fastening and anchorage details, including mechanical fasteners.
 2. Indicate reinforcing channels, opening framing, supplemental framing, strapping, bracing, bridging, splices, accessories, connection details, and attachment to adjoining work.
 - D. Samples: Submit one foot long sample of each type of stud, head and runner channels, expansion head track, fasteners, anchors, and accessories.
 - E. Certificate from manufacturer stating that all materials are per Contract requirements and providing proof of minimum five (5) years experience manufacturing products required of similar size.
 - F. Certificate from installer evidencing a minimum five (5) years successful experience installing this type of work on projects.
 - G. Mock-ups: Provide mock-ups of components of this section as follows:
 1. **<Insert requirements for mockups>**
 - H. Structural calculation signed and stamped by a structural engineer registered in the State of Colorado.
 - I. Delegated-Design Submittal: For cold-formed steel framing.
- 1.5 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For testing agency.
 - B. Welding certificates.
 - C. Product Test Reports: For each listed product, for tests performed by **[manufacturer and witnessed by a qualified testing agency] [a qualified testing agency]**.
 1. Steel sheet.
 2. Expansion anchors.
 3. **[Powder actuated fasteners]**
 4. Mechanical fasteners.

5. Vertical deflection clips.
6. Horizontal drift deflection clips
7. Miscellaneous structural clips and accessories.

D. Research Reports: For non-standard cold-formed steel framing, from ICC-ES.

1.6 QUALITY ASSURANCE

- A. Testing Agency Qualifications: Qualified according to ASTM E 329 for testing indicated.
- B. Product Tests: Mill certificates or data from a qualified independent testing agency[, **or in-house testing with calibrated test equipment**] indicating steel sheet complies with requirements, including base-metal thickness, yield strength, tensile strength, total elongation, chemical requirements, and metallic-coating thickness.
- C. Welding Qualifications: Qualify procedures and personnel according to the following:
 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 2. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."
 3. Reference Section 050510 "Welding" for general welding requirements.
- D. Comply with AISI S230 "Standard for Cold-Formed Steel Framing - Prescriptive Method for One and Two Family Dwellings."
- E. Component Design: Calculate structural properties of studs and joists in accordance with American Iron and Steel Institute (AISI) "Specification for Design of Cold Formed Steel Structural Members".
- F. Fire Rated Assemblies: Where framing units are components of assemblies indicated for a fire resistance rating, including those required for compliance with governing regulations, provide units which have been approved by governing authorities having jurisdiction.
- G. Pre-installation conference: Prior to installation of Work, meet at the project site or other mutually agreed location with installer, contractor, DEN Project Manager, DEN Structural Engineer and other job related contractors including representatives of curtain wall installer and preformed siding installer.
- H. Warranty: Installer to warrant system for two (2) years, including framing and finish.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Protect cold-formed steel framing from corrosion, moisture staining, deformation, and other damage during delivery, storage, and handling.
- B. Deliver to project site in manufacturer's unopened containers or bundles, fully identified with name, brand, type, and grade. Store off ground in a dry ventilated space or protect with breathable waterproof tarpaulins.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Alabama Metal Industries Corp.
2. AllSteel & Gypsum Products, Inc.
3. American Studco, Inc.
4. Bostwick Steel Framing Co.
5. California Expanded Metal Products Company (CEMCO).
6. Clark Western Building Systems, Inc.
7. Consolidated Fabricators Corp.; Building Products Division.
8. Consolidated Systems, Inc.
9. Craco Manufacturing, Inc.
10. Custom Stud, Inc.
11. Dale Industries Inc.
12. Design Shapes in Steel.
13. Dietrich Metal Framing; a Worthington Industries Company.
14. Formetal Co. Inc. (The).
15. Marino/WARE.
16. Milcor Division, Inryco Inc.
17. MBA Building Supplies, Inc.
18. Olmar Supply, Inc.
19. Quail Run Building Materials, Inc.
20. SCAFECO Corporation.
21. Southeastern Stud & Components, Inc.
22. State Building Products, Inc.
23. Steel Construction Systems.
24. Steel Structural Systems.
25. Steeler, Inc.
26. Super Stud Building Products, Inc.
27. Telling Industries, LLC.
28. The Steel Network, Inc.
29. United Metal Products, Inc.
30. U.S. Gypsum Co.
31. United Steel Manufacturing
32. Western Metal
33. **<Insert manufacturer's name>**
34. or approved equal.

2.2 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design cold-formed steel framing.
- B. Structural Performance: Provide cold-formed steel framing capable of withstanding design loads within limits and under conditions indicated.
1. Design Loads: **[As indicated.] <Insert design loads>**.
 2. Deflection Limits: Design framing systems to withstand **[design loads]** without deflections greater than the following:
 - a. Exterior Load-Bearing Wall Framing: Horizontal deflection of **[1/240] [1/360] [1/600] [1/720]** of the wall height.
 - b. Interior Load-Bearing Wall Framing: Horizontal deflection of **[1/240] [1/360]** of the wall height under a horizontal load of **5 lbf/sq. ft. (239 Pa)**.
 - c. Exterior Non-Load-Bearing Framing: Horizontal deflection of **[1/240] [1/360] [1/600] [1/720] <Insert ratio>** of the wall height.
 - d. Floor Joist Framing: Vertical deflection of **[1/360] [1/480]** for live loads and **l/360** for total loads of the span.
 - e. Roof Rafter Framing: Horizontal deflection of **[1/240] [1/360]** of the horizontally projected span.
 - f. Ceiling Joist Framing: Vertical deflection of **[1/240] [1/360]** of the span.
 - g. **<Insert deflection limits.>**
 3. Design framing systems to provide for movement of framing members located outside the insulated building envelope without damage or overstressing, sheathing failure, connection failure, undue strain on fasteners and anchors, or other detrimental effects when subject to a maximum ambient temperature change of **120 deg F (67 deg C)**.
 4. Design framing system to maintain clearances at openings, to allow for construction tolerances, and to accommodate live load deflection of primary building structure as follows:
 - a. Upward and downward movement of **[1/2 inch (13 mm)] [3/4 inch (19 mm)] [1 inch (25 mm)] [1-1/2 inches (38 mm)]**.
 5. Design exterior non-load-bearing wall framing to accommodate horizontal deflection without regard for contribution of sheathing materials.
- C. Cold-Formed Steel Framing Design Standards:
1. Floor and Roof Systems: AISI S210.
 2. Wall Studs: AISI S211.
 3. Headers: AISI S212.
 4. Lateral Design: AISI S213.
- D. AISI Specifications and Standards: Unless more stringent requirements are indicated, comply with AISI S100 and AISI S200.

- E. Fire-Resistance Ratings: Comply with ASTM E 119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.

2.3 COLD-FORMED STEEL FRAMING, GENERAL

- A. System Components: With each type of metal framing required, provide manufacturer's standard steel runners (tracks), blocking, lintels, clip angles, shoes, reinforcements, fasteners, and accessories as recommended by manufacturer for applications indicated, as needed to provide a complete metal framing system.
- B. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25] <Insert number>** percent.
- C. Steel Sheet: ASTM A 1003/A 1003M, Structural Grade, Type H, metallic coated, of grade and coating weight as follows:
 - 1. Grade: **[ST33H (ST230H)] [ST50H (ST340H)] [As required by structural performance] <Insert grade>**.
 - 2. Coating: **[G60 (Z180), A60 (ZF180), AZ50 (AZ150), or GF30 (ZGF90)] [G90 (Z275) or equivalent] <Insert coating weight>**.
- D. Steel Sheet for [Vertical Deflection] [Drift] Clips: ASTM A 653/A 653M, structural steel, zinc coated, of grade and coating as follows:
 - 1. Grade: **[33 (230)] [50 (340), Class 1 or 2] [As required by structural performance]**.
 - 2. Coating: **[G60 (Z180)] [G90 (Z275)]**.
- E. Finish of installation accessories to match that of main framing components, unless otherwise indicated.
- F. Fasteners: Provide nuts, bolts washers, screws, and other fasteners with corrosion-resistant plated finish.
- G. Electrodes for Welding: Comply with AWS Code and as recommended by stud manufacturer, and only as allowed by DEN Project Manager. Reference Section 050510 "Welding" for general welding requirements.
- H. Galvanizing Repair: Where galvanized surfaces are damaged, prepare surfaces and repair in accordance with procedures specified in ASTM A 780.

2.4 LOAD-BEARING WALL FRAMING

- A. Steel Studs: Manufacturer's standard C-shaped steel studs, of web depths indicated, punched, with stiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: [0.0428 inch (1.09 mm)] [0.0538 inch (1.37 mm)] [0.0677 inch (1.72 mm)] [0.0966 inch (2.45 mm)].
 2. Flange Width: [1-5/8 inches (41 mm)] [2 inches (51 mm)] [2-1/2 inches (63 mm)].
 3. Section Properties: **<Insert minimum allowable calculated section modulus, moment of inertia, and allowable moment.>**
- B. Steel Track: Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with straight flanges, and as follows:
1. Minimum Base-Metal Thickness: [0.0428 inch (1.09 mm)] [0.0538 inch (1.37 mm)] [0.0677 inch (1.72 mm)] [0.0966 inch (2.45 mm)] **[Matching steel studs]**.
 2. Flange Width: [1-1/4 inches (32 mm)] **<Insert dimension if manufacturer's standard width is insufficient>**.
- C. Steel Box or Back-to-Back Headers: Manufacturer's standard C-shapes used to form header beams, of web depths indicated, punched, with stiffened flanges, and as follows:
1. Minimum Base-Metal Thickness: [0.0428 inch (1.09 mm)] [0.0538 inch (1.37 mm)] [0.0677 inch (1.72 mm)] [0.0966 inch (2.45 mm)].
 2. Flange Width: [1-5/8 inches (41 mm)] [2 inches (51 mm)] [2-1/2 inches (63 mm)].
 3. Section Properties: **<Insert minimum allowable calculated section modulus, moment of inertia, and allowable moment.>**
- D. Steel Single- or Double-L Headers: Manufacturer's standard L-shapes used to form header beams, of web depths indicated, and as follows:
1. Minimum Base-Metal Thickness: [0.0428 inch (1.09 mm)] [0.0538 inch (1.37 mm)] [0.0677 inch (1.72 mm)] [0.0966 inch (2.45 mm)].
 2. Top Flange Width: [1-5/8 inches (41 mm)] [2 inches (51 mm)] [2-1/2 inches (63 mm)].
 3. Section Properties: **<Insert minimum allowable calculated section modulus, moment of inertia, and allowable moment.>**

2.5 EXTERIOR NON-LOAD-BEARING WALL FRAMING

- A. Steel Studs: Manufacturer's standard C-shaped steel studs, of web depths indicated, punched, with stiffened flanges, and as follows:
1. Minimum Base-Metal Thickness: [0.0428 inch (1.09 mm)] [0.0538 inch (1.37 mm)] [0.0677 inch (1.72 mm)] [0.0966 inch (2.45 mm)].
 2. Flange Width: [1-5/8 inches (41 mm)] [2 inches (51 mm)] [2-1/2 inches (63 mm)].
 3. Section Properties: **<Insert minimum allowable calculated section modulus, moment of inertia, and allowable moment.>**
- B. Steel Track: Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with unstiffened flanges, and as follows:
1. Minimum Base-Metal Thickness: [0.0428 inch (1.09 mm)] [0.0538 inch (1.37 mm)]

- [0.0677 inch (1.72 mm)] [0.0966 inch (2.45 mm)] [Matching steel studs].
2. Flange Width: [1-1/4 inches (32 mm)] <Insert dimension if manufacturer's standard width is insufficient>.
- C. Vertical Deflection Clips: Manufacturer's standard [bypass] [head] clips, capable of accommodating upward and downward vertical displacement of primary structure through positive mechanical attachment to stud web.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AllSteel & Gypsum Products, Inc.
 - b. ClarkWestern Bulding Systems, Inc.
 - c. Dietrich Metal Framing; a Worthington Industries Company.
 - d. Marino/WARE.
 - e. SCAFCO Corporation
 - f. Steeler, Inc.
 - g. The Steel Network, Inc.
 - h. <Insert manufacturer's name>
 - i. or approved equal.
- D. Single Deflection Track: Manufacturer's single, deep-leg, U-shaped steel track; unpunched, with unstiffened flanges, of web depth to contain studs while allowing free vertical movement, with flanges designed to support horizontal loads and transfer them to the primary structure, and as follows:
1. Minimum Base-Metal Thickness: [0.0428 inch (1.09 mm)] [0.0538 inch (1.37 mm)] [0.0677 inch (1.72 mm)] [0.0966 inch (2.45 mm)].
 2. Flange Width: [1 inch (25 mm) plus the design gap for 1-story structures] [and] [1 inch (25 mm) plus twice the design gap for other applications] <Insert dimension>.
- E. Double Deflection Tracks: Manufacturer's double, deep-leg, U-shaped steel tracks, consisting of nested inner and outer tracks; unpunched, with unstiffened flanges.
1. Outer Track: Of web depth to allow free vertical movement of inner track, with flanges designed to support horizontal loads and transfer them to the primary structure, and as follows:
 - a. Minimum Base-Metal Thickness: [0.0428 inch (1.09 mm)] [0.0538 inch (1.37 mm)] [0.0677 inch (1.72 mm)] [0.0966 inch (2.45 mm)].
 - b. Flange Width: [1 inch (25 mm) plus the design gap for 1-story structures] [and] [1 inch (25 mm) plus twice the design gap for other applications] <Insert dimension>.
 2. Inner Track: Of web depth indicated, and as follows:
 - a. Minimum Base-Metal Thickness: [0.0428 inch (1.09 mm)] [0.0538 inch (1.37 mm)] [0.0677 inch (1.72 mm)] [0.0966 inch (2.45 mm)].

- b. Flange Width: <Insert dimension equal to sum of outer deflection track flange width plus 1 inch (25 mm).>

- F. Drift Clips: Manufacturer's standard bypass or head clips, capable of isolating wall stud from upward and downward vertical displacement and lateral drift of primary structure.

2.6 FLOOR JOIST FRAMING

- A. Steel Joists: Manufacturer's standard C-shaped steel joists, of web depths indicated, [unpunched,] [punched,] [punched, with enlarged service holes,] with stiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: [0.0428 inch (1.09 mm)] [0.0538 inch (1.37 mm)] [0.0677 inch (1.72 mm)] [0.0966 inch (2.45 mm)].
2. Flange Width: [1-5/8 inches (41 mm)] [2 inches (51 mm)] [2-1/2 inches (63 mm)], minimum.
3. Section Properties: <Insert minimum allowable calculated section modulus, moment of inertia, and allowable moment.>

- B. Steel Joist Track: Manufacturer's standard U-shaped steel joist track, of web depths indicated, unpunched, with unstiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: [0.0428 inch (1.09 mm)] [0.0538 inch (1.37 mm)] [0.0677 inch (1.72 mm)] [0.0966 inch (2.45 mm)] [Matching steel joists].
2. Flange Width: [1-1/2 inches (38 mm)] [2 inches (51 mm)], minimum.

2.7 ROOF-RAFTER FRAMING

- A. Steel Rafters: Manufacturer's standard C-shaped steel sections, of web depths indicated, with stiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: [0.0428 inch (1.09 mm)] [0.0538 inch (1.37 mm)] [0.0677 inch (1.72 mm)] [0.0966 inch (2.45 mm)].
2. Flange Width: [1-5/8 inches (41 mm)] [2 inches (51 mm)] [2-1/2 inches (63 mm)], minimum.
3. Section Properties: <Insert minimum allowable calculated section modulus, moment of inertia, and allowable moment.>

2.8 CEILING JOIST FRAMING

- A. Steel Ceiling Joists: Manufacturer's standard C-shaped steel sections, of web depths indicated, [unpunched,] [punched with enlarged service holes,] [punched with standard holes,] with stiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: [0.0428 inch (1.09 mm)] [0.0538 inch (1.37 mm)] [0.0677 inch (1.72 mm)] [0.0966 inch (2.45 mm)].
2. Flange Width: [1-5/8 inches (41 mm)] [2 inches (51 mm)] [2-1/2 inches (63 mm)], minimum.

3. Section Properties: **<Insert minimum allowable calculated section modulus, moment of inertia, and allowable moment.>**

2.9 SOFFIT FRAMING

- A. Exterior Soffit Frame: Manufacturer's standard C-shaped steel sections, of web depths indicated, with stiffened flanges, and as follows:
 1. Minimum Base-Metal Thickness: [0.0428 inch (1.09 mm)] [0.0538 inch (1.37 mm)] [0.0677 inch (1.72 mm)] [0.0966 inch (2.45 mm)].
 2. Flange Width: [1-5/8 inches (41 mm)] [2 inches (51 mm)] [2-1/2 inches (63 mm)], minimum.
 3. Section Properties: **<Insert minimum allowable calculated section modulus, moment of inertia, and allowable moment.>**

2.10 FRAMING ACCESSORIES

- A. Fabricate steel-framing accessories from steel sheet, ASTM A 1003/A 1003M, Structural Grade, Type H, metallic coated, of same grade and coating weight used for framing members.
- B. Provide accessories of manufacturer's standard thickness and configuration, unless otherwise indicated, as follows:
 1. Supplementary framing.
 2. Bracing, bridging, and solid blocking.
 3. Web stiffeners.
 4. Anchor clips.
 5. End clips.
 6. Foundation clips.
 7. Gusset plates.
 8. Stud kickers and knee braces.
 9. Joist hangers and end closures.
 10. Hole reinforcing plates.
 11. Backer plates.

2.11 ANCHORS, CLIPS, AND FASTENERS

- A. Steel Shapes and Clips: ASTM A 36/A 36M, zinc coated by hot-dip process according to ASTM A 123/A 123M.
- B. Anchor Bolts: ASTM F 1554, Grade [36] [55], threaded carbon-steel [hex-headed bolts] [headless, hooked bolts] [headless bolts, with encased end threaded,] and carbon-steel nuts; and flat, hardened-steel washers; zinc coated by [hot-dip process according to ASTM A 153/A 153M, Class C] [mechanically deposition according to ASTM B 695, Class 50].

- C. Expansion Anchors: Fabricated from corrosion-resistant materials, with allowable load or strength design capacities calculated according to ICC-ES AC193 and ACI 318 greater than or equal to the design load, as determined by testing per ASTM E 488 conducted by a qualified testing agency.
- D. Powder-Actuated Anchors: Powder-actuated anchors are not permitted and shall not be used.
- E. Mechanical Fasteners: ASTM C 1513, corrosion-resistant-coated, self-drilling, self-tapping steel drill screws.
 - 1. Head Type: Low-profile head beneath sheathing, manufacturer's standard elsewhere.
- F. Welding Electrodes: Comply with AWS standards.

2.12 MISCELLANEOUS MATERIALS

- A. Galvanizing Repair Paint: [**SSPC-Paint 20 or MIL-P-21035**] [**ASTM A 780**].
- B. Cement Grout: Portland cement, ASTM C 150, Type I; and clean, natural sand, ASTM C 404. Mix at ratio of 1 part cement to 2-1/2 parts sand, by volume, with minimum water required for placement and hydration.
- C. Nonmetallic, Nonshrink Grout: Premixed, nonmetallic, noncorrosive, nonstaining grout containing selected silica sands, Portland cement, shrinkage-compensating agents, and plasticizing and water-reducing agents, complying with ASTM C 1107, with fluid consistency and 30-minute working time.
- D. Shims: Load bearing, high-density multimonomer plastic, nonleaching; or of cold-formed steel of same grade and coating as framing members supported by shims.
- E. Sealer Gaskets: Closed-cell neoprene foam, **1/4 inch** (6.4 mm) thick, selected from manufacturer's standard widths to match width of bottom track or rim track members.

2.13 FABRICATION

- A. Fabricate cold-formed steel framing and accessories plumb, square, and true to line, and with connections securely fastened, according to referenced AISI's specifications and standards, manufacturer's written instructions, and requirements in this Section.
 - 1. Fabricate framing assemblies using jigs or templates.
 - 2. Cut framing members by sawing or shearing; do not torch cut.
 - 3. Fasten cold-formed steel framing members by welding, screw fastening, clinch fastening, pneumatic pin fastening, or riveting as standard with fabricator. Wire tying of framing members is not permitted.
 - a. Comply with AWS D1.3/D1.3M requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding

- work.
- b. Locate mechanical fasteners and install according to Shop Drawings, with screw penetrating joined members by not less than three exposed screw threads.
4. Fasten other materials to cold-formed steel framing by welding, bolting, pneumatic pin fastening, or screw fastening, according to Shop Drawings.
- B. Reinforce, stiffen, and brace framing assemblies to withstand handling, delivery, and erection stresses. Lift fabricated assemblies to prevent damage or permanent distortion.
- C. Fabrication Tolerances: Fabricate assemblies level, plumb, and true to line to a maximum allowable tolerance variation of **1/8 inch in 10 feet** (1:960) and as follows:
1. Spacing: Space individual framing members no more than plus or minus **1/8 inch** (3 mm) from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.
 2. Squareness: Fabricate each cold-formed steel framing assembly to a maximum out-of-square tolerance of **1/8 inch** (3 mm).

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine supporting substrates and abutting structural framing for compliance with requirements for installation tolerances and other conditions affecting performance.
1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Before sprayed fire-resistive materials are applied, attach continuous angles, supplementary framing, or tracks to structural members indicated to receive sprayed fire-resistive materials.
- B. After applying sprayed fire-resistive materials, remove only as much of these materials as needed to complete installation of cold-formed framing without reducing thickness of fire-resistive materials below that are required to obtain fire-resistance rating indicated. Protect remaining fire-resistive materials from damage.
- C. Install load bearing shims or grout between the underside of load-bearing wall bottom track and the top of foundation wall or slab at locations with a gap larger than **1/4 inch** (6 mm) to ensure a uniform bearing surface on supporting concrete or masonry construction.

- D. Install sealer gaskets at the underside of wall bottom track or rim track and the top of foundation wall or slab at stud or joist locations.

3.3 INSTALLATION, GENERAL

- A. Reference Section 050510 "Welding" for general welding requirements.
- B. Cold-formed steel framing may be shop or field fabricated for installation, or it may be field assembled.
- C. Install cold-formed steel framing according to AISI S200 and to manufacturer's written instructions unless more stringent requirements are indicated.
- D. Powder-actuated fasteners are not permitted and shall not be used.
- E. Install shop- or field-fabricated, cold-formed framing and securely anchor to supporting structure.
 - 1. Screw, bolt, or weld wall panels at horizontal and vertical junctures to produce flush, even, true-to-line joints with maximum variation in plane and true position between fabricated panels not exceeding **1/16 inch** (1.6 mm).
- F. Install cold-formed steel framing and accessories plumb, square, and true to line, and with connections securely fastened.
 - 1. Cut framing members by sawing or shearing; do not torch cut.
 - 2. Fasten cold-formed steel framing members by welding, screw fastening, clinch fastening, or riveting. Wire tying of framing members is not permitted.
 - a. Comply with AWS D1.3/D1.3M requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
 - b. Locate mechanical fasteners and install according to Shop Drawings, and complying with requirements for spacing, edge distances, and screw penetration.
- G. Install framing members in one-piece lengths unless splice connections are indicated for track or tension members.
- H. Install temporary bracing and supports to secure framing and support loads comparable in intensity to those for which structure was designed. Maintain braces and supports in place, undisturbed, until entire integrated supporting structure has been completed and permanent connections to framing are secured.
- I. Do not bridge building expansion joints with cold-formed steel framing. Independently frame both sides of joints.
- J. Install insulation, specified in Section 072100 "Thermal Insulation," in built-up exterior framing members, such as headers, sills, boxed joists, and multiple studs at openings, that are inaccessible on completion of framing work.

- K. Fasten hole reinforcing plate over web penetrations that exceed size of manufacturer's approved or standard punched openings.
- L. Erection Tolerances: Install cold-formed steel framing level, plumb, and true to line to a maximum allowable tolerance variation of **1/8 inch in 10 feet** (1:960) and as follows:
1. Space individual framing members no more than plus or minus **1/8 inch** (3 mm) from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.
 2. Bolt or weld wall panels (at both horizontal and vertical junctures) to produce flush, even, true to line joints.
 3. Step in face and jog in alignment between panels not to exceed 1/16".
- M. Runner Tracks: Install continuous tracks sized to match studs unless otherwise noted. Align tracks accurately to layout at base and tops of studs. Secure tracks as recommended by stud manufacturer for type of construction involved, except do not exceed 24" o.c. spacing for fasteners, or 16" o.c. for other types of attachment. Provide fasteners at corners and ends of tracks.
- N. Where stud system abuts structural columns or walls, including masonry walls, anchor ends of stiffeners to supporting structure.
- O. Install supplementary framing, blocking and bracing in metal framing system wherever walls or partitions are indicated to support fixtures, equipment, services, casework, heavy trim railings and furnishings, and similar work requiring attachment to the wall or partition.
1. Where type of supplementary support is not otherwise indicated, comply with stud manufacturer's recommendations and industry standards in each case, considering weight or loading resulting from item supported. Provide horizontal stiffeners in stud system at 4'-6" O.C.
- P. Installation of Wall Stud System: Secure studs to top and bottom runner tracks by either welding or screw fastening at both inside and outside flanges. Provide head slip connection.
- Q. Frame wall openings larger than 2' 0" square with double stud at each jamb of frame except where more than 2 are either shown or indicated in manufacturer's instructions. Install runner tracks and jack studs above and below wall openings. Anchor tracks to jamb studs with stud shoes or by welding, and space jack studs same as full height studs of wall. Secure stud system wall opening frame in manner indicated.
- R. Frame both sides of expansion and control joints, with separate studs; do not bridge the joint with components of stud system.
- S. Install horizontal stiffeners in stud system, spaced (vertical distance) at not more than 4' 6" o.c. Weld at each intersection.
- T. Field Painting: Touch up shop applied protective coatings damaged during handling and installation. Use compatible primer for prime coated surfaces; use galvanizing

repair paint for galvanized surfaces.

3.4 LOAD-BEARING WALL INSTALLATION

- A. Install continuous top and bottom tracks sized to match studs. Align tracks accurately and securely anchor at corners and ends, and at spacings as follows:
1. Anchor Spacing: [24 inches (610 mm)] [32 inches (813 mm)] [To match stud spacing] [As shown on Shop Drawings].
- B. Squarely seat studs against top and bottom tracks with gap not exceeding of 1/8 inch (3 mm) between the end of wall framing member and the web of track. Fasten both flanges of studs to top and bottom tracks. Space studs as follows:
1. Stud Spacing: [12 inches (305 mm)] [16 inches (406 mm)] [19.2 inches (488 mm)] [24 inches (610 mm)] [As indicated].
 2. Stud Spacing: [300 mm] [400 mm] [600 mm] [As indicated].
- C. Set studs plumb, except as needed for diagonal bracing or required for nonplumb walls or warped surfaces and similar configurations.
- D. Align studs vertically where floor framing interrupts wall-framing continuity. Where studs cannot be aligned, continuously reinforce track to transfer loads.
- E. Align floor and roof framing over studs in accordance with AISI S200, Section C1. Where framing cannot be aligned, continuously reinforce track to transfer loads.
- F. Anchor studs abutting structural columns or walls, including masonry walls, to supporting structure as indicated.
- G. Install headers over wall openings wider than stud spacing. Locate headers above openings as indicated. Fabricate headers of compound shapes indicated or required to transfer load to supporting studs, complete with clip-angle connectors, web stiffeners, or gusset plates.
1. Frame wall openings with not less than a double stud at each jamb of frame as indicated on Shop Drawings. Fasten jamb members together to uniformly distribute loads.
 2. Install runner tracks and jack studs above and below wall openings. Anchor tracks to jamb studs with clip angles or by welding, and space jack studs same as full-height wall studs.
- H. Install supplementary framing, blocking, and bracing in stud framing indicated to support fixtures, equipment, services, casework, heavy trim, furnishings, and similar work requiring attachment to framing.
1. If type of supplementary support is not indicated, comply with stud manufacturer's written recommendations and industry standards in each case, considering weight or load resulting from item supported.

- I. Install horizontal bridging in stud system, spaced vertically [48 inches (1220 mm)] [as indicated] [as indicated on Shop Drawings]. Fasten at each stud intersection.
 - 1. Bridging: Cold-rolled steel channel, welded or mechanically fastened to webs of punched studs with a minimum of 2 screws into each flange of the clip angle for framing members up to 6 inches (150 mm) deep.
 - 2. Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and stud-track solid blocking of width and thickness to match studs. Fasten flat straps to stud flanges and secure solid blocking to stud webs or flanges.
 - 3. Bridging: Proprietary bridging bars installed according to manufacturer's written instructions.
- J. Install steel sheet diagonal bracing straps to both stud flanges, terminate at and fasten to reinforced top and bottom tracks. Fasten clip-angle connectors to multiple studs at ends of bracing and anchor to structure.
- K. Install miscellaneous framing and connections, including supplementary framing, web stiffeners, clip angles, continuous angles, anchors, and fasteners, to provide a complete and stable wall-framing system.

3.5 EXTERIOR NON-LOAD-BEARING WALL INSTALLATION

- A. Install continuous tracks sized to match studs. Align tracks accurately and securely anchor to supporting structure as indicated.
- B. Fasten both flanges of studs to [top and] bottom track, unless otherwise indicated. Space studs as follows:
 - 1. Stud Spacing: [12 inches (305 mm)] [16 inches (406 mm)] [19.2 inches (488 mm)] [24 inches (610 mm)] [As indicated].
 - 2. Stud Spacing: [300 mm] [400 mm] [480 mm] [600 mm] [As indicated].
- C. Set studs plumb, except as needed for diagonal bracing or required for nonplumb walls or warped surfaces and similar requirements.
- D. Isolate non-load-bearing steel framing from building structure to prevent transfer of vertical loads while providing lateral support.
 - 1. Install single deep-leg deflection tracks and anchor to building structure.
 - 2. Install double deep-leg deflection tracks and anchor outer track to building structure.
 - 3. Connect vertical deflection clips to [bypassing] [infill] studs and anchor to building structure.
 - 4. Connect drift clips to cold formed metal framing and anchor to building structure.
- E. Install horizontal bridging in wall studs, spaced vertically in rows indicated on Shop Drawings but not more than 48 inches (1220 mm) apart. Fasten at each stud intersection.

1. Top Bridging for Single Deflection Track: Install row of horizontal bridging within [12 inches (305 mm)] [18 inches (450 mm)] of single deflection track. Install a combination of bridging and stud or stud-track solid blocking of width and thickness matching studs, secured to stud webs or flanges.
 - a. Install solid blocking at [96-inch (2440-mm) centers] [centers indicated] [centers indicated on Shop Drawings].
 2. Bridging: Cold-rolled steel channel, welded or mechanically fastened to webs of punched studs.
 3. Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and stud-track solid blocking of width and thickness to match studs. Fasten flat straps to stud flanges and secure solid blocking to stud webs or flanges.
 4. Bridging: Proprietary bridging bars installed according to manufacturer's written instructions.
- F. Install miscellaneous framing and connections, including stud kickers, web stiffeners, clip angles, continuous angles, anchors, and fasteners, to provide a complete and stable wall-framing system.

3.6 JOIST INSTALLATION

- A. Install perimeter joist track sized to match joists. Align and securely anchor or fasten track to supporting structure at corners, ends, and spacings indicated on Shop Drawings.
- B. Install joists bearing on supporting frame, level, straight, and plumb; adjust to final position, brace, and reinforce. Fasten joists to both flanges of joist track.
 1. Install joists over supporting frame with a minimum end bearing of 1-1/2 inches (38 mm).
 2. Reinforce ends and bearing points of joists with web stiffeners, end clips, joist hangers, steel clip angles, or steel-stud sections as indicated on Shop Drawings.
- C. Space joists not more than 2 inches (51 mm) from abutting walls, and as follows:
 1. Joist Spacing: [12 inches (305 mm)] [16 inches (406 mm)] [19.2 inches (488 mm)] [24 inches (610 mm)] [As indicated].
 2. Joist Spacing: [300 mm] [400 mm] [480 mm] [600 mm] [As indicated].
- D. Frame openings with built-up joist headers consisting of joist and joist track, or another combination of connected joists if indicated.
- E. Install joist reinforcement at interior supports with single, short length of joist section located directly over interior support, with lapped joists of equal length to joist reinforcement, or as indicated [on Shop Drawings].
 1. Install web stiffeners to transfer axial loads of walls above.

- F. Install bridging at intervals indicated[**on Shop Drawings**]. Fasten bridging at each joint intersection as follows:
 - 1. Bridging: Joist-track solid blocking of width and thickness indicated, secured to joist webs.
 - 2. Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and joist-track solid blocking of width and thickness indicated. Fasten flat straps to bottom flange of joists and secure solid blocking to joist webs.
- G. Secure joists to load-bearing interior walls to prevent lateral movement of bottom flange.
- H. Install miscellaneous joist framing and connections, including web stiffeners, closure pieces, clip angles, continuous angles, hold-down angles, anchors, and fasteners, to provide a complete and stable joist-framing assembly.

3.7 FIELD QUALITY CONTROL

- A. Testing: [**Owner will**] Engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.
- B. Field and shop welds will be subject to testing and inspecting.
- C. Testing agency will report test results promptly and in writing to Contractor and DEN Project Manager.
- D. Remove and replace work where test results indicate that it does not comply with specified requirements.
- E. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.8 REPAIRS AND PROTECTION

- A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on fabricated and installed cold-formed steel framing with galvanized repair paint according to ASTM A 780 and manufacturer's written instructions.
- B. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer that ensure that cold-formed steel framing is without damage or deterioration at time of Substantial Completion.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement will be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the lump sum contract price.

END OF SECTION 054000

SECTION 055000 - METAL FABRICATIONS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Steel framing and supports for ceiling-hung toilet compartments.
2. Steel framing and supports for operable partitions.
3. Steel framing and supports for overhead **[doors] [and] [grilles]**.
4. Steel framing and supports for countertops.
5. Steel framing and supports for mechanical and electrical equipment.
6. Steel framing and supports for applications where framing and supports are not specified in other Sections.
7. Steel framing and supports (outriggers) for window-washing equipment including **[mounting brackets] [and] [anchorages]**.
8. **[Mounting brackets] [and] [anchorages]** for window-washing equipment.
9. Elevator machine beams[, **hoist beams,**] **[and] [divider beams]**.
10. Steel shapes for supporting elevator doorsills.
11. Steel girders for supporting wood frame construction.
12. Steel pipe columns for supporting wood frame construction.
13. Steel handrails and guardrails that are not part of or associated with steel stairs.
14. Overhead supports and bracing for toilet partitions and other suspended work.
15. Equipment supports.
16. Equipment screen framing.
17. Formed steel channel support (unistrut) framing.
18. Prefabricated building columns.
19. Shelf angles.
20. Metal ladders.
21. Ladder safety cages.
22. Alternating tread devices.
23. Metal **[ships ladders] and [pipe crossovers]**.
24. Metal floor plate[**and supports]**.
25. Structural-steel door frames.
26. Miscellaneous steel trim including **[steel angle corner guards] [steel edgings] [and] [loading-dock edge angles]**.
27. Metal bollards.
28. **[Pipe] [Downspout]** guards.
29. Abrasive metal **[nosings] [treads] [and] [thresholds]**.

30. Cast-iron wheel guards.
31. Metal downspout boots.
32. Loose bearing and leveling plates for applications where they are not specified in other Sections.
33. Other miscellaneous, non-structural framing as shown on the drawings or required for the bracing or support of the work of other Sections.
34. Anchors, fasteners, and related hardware or accessories required for the installation of work specified herein.

B. Products furnished, but not installed, under this Section:

1. Loose steel lintels.
2. Anchor bolts, steel pipe sleeves, slotted-channel inserts, and wedge-type inserts indicated to be cast into concrete or built into unit masonry.
3. Steel weld plates and angles for casting into concrete for applications where they are not specified in other Sections.

C. Related Sections:

1. Section 033000 "Cast-in-Place Concrete" for installing anchor bolts, steel pipe sleeves, slotted-channel inserts, wedge-type inserts, and other items cast into concrete.
2. Section 042000 "Unit Masonry" for installing loose lintels, anchor bolts, and other items built into unit masonry.
3. Section 050510 "Welding" for general welding requirements.
4. Section 051200 "Structural Steel Framing."
5. Section 055100 "Metal Stairs."
6. Section 055213 "Pipe and Tube Railings."
7. Section 055300 "Metal Gratings."
8. Section 057000 "Decorative Metal."
9. Section 057300 "Decorative Metal Railings."
10. Section 059990 "Welding".
11. Section 329300 "Plants" for tree grates.

D. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design ladders, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. Structural Performance of Aluminum Ladders: Aluminum ladders[, **including landings,**] shall withstand the effects of loads and stresses within limits and under conditions specified in ANSI A14.3.

- C. Structural Performance of Alternating Tread Devices: Alternating tread devices shall withstand the effects of loads and stresses within limits and under conditions specified in ICC's International Building Code.
- D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on exterior metal fabrications by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects.
 - 1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

1.4 ACTION SUBMITTALS

- A. Product Data: For the following:
 - 1. Formed steel channel support (unistrut) framing.
 - 2. Nonslip aggregates and nonslip-aggregate surface finishes.
 - 3. Prefabricated building columns.
 - 4. Metal nosings and treads.
 - 5. Paint products.
 - 6. Grout.
 - 7. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
 - 2. Laboratory Test Reports for Credit IEQ 4: For primers, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: Show fabrication and installation details for metal fabrications.
 - 1. Include plans, elevations, sections, and details of metal fabrications and their connections. Show anchorage and accessory items.
- D. Samples for Verification: For each type and finish of extruded **[nosing] [and] [tread] [insert product]**.
- E. Delegated-Design Submittal: For installed products indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified professional engineer.
- B. Mill Certificates: Signed by manufacturers of stainless-steel certifying that products furnished comply with requirements.
- C. Welding certificates.
- D. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers certifying that shop primers are compatible with topcoats.

1.6 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- B. Welding Qualifications: Qualify procedures and personnel according to the following:
 - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 - 2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
 - 3. AWS D1.6, "Structural Welding Code - Stainless Steel."
- C. Handrails and Guardrails: Rails must be capable of resisting a uniform lateral load of 50 plf applied horizontally to the top rail, plus a concentrated load of 200 lbs applied at any point in any direction, and comply with all requirements of current applicable building codes.
- D. Structural Design: Provide the services of a professional engineer registered in the State of Colorado to design all handrails and guardrails.

1.8 PROJECT CONDITIONS

- A. Field Measurements: Verify actual locations of walls and other construction contiguous with metal fabrications by field measurements before fabrication.

1.9 COORDINATION

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

- B. Coordinate installation of anchorages[**and steel weld plates and angles for casting into concrete**]. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

1.10 DELIVERY, STORAGE AND HANDLING

- A. Storage: Store materials and fabrications in protected areas. Protect from rusting or other damage.
- B. Identification: Properly identify all items or components, including bolts or other loose materials and accessories. Leave manufacturer's labels or tags intact on manufactured products.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 METALS, GENERAL

- A. Metal Surfaces, General: Provide materials with smooth, flat surfaces unless otherwise indicated. For metal fabrications exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.
- B. Fasteners, General:
 - 1. Use same material and finish as parts being joined, except use stainless steel between dissimilar metals and non-corrosive fasteners at exterior connections or joints.
 - 2. Provide fasteners of sufficient strength to support connected members and loads, and to develop full strength of parts fastened or connected.

2.2 FERROUS METALS

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [25] <Insert number> percent.
- B. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.
- C. Stainless-Steel Sheet, Strip, and Plate: ASTM A 240/A 240M or ASTM A 666, [Type 304] [Type 316L].

- D. Stainless-Steel Bars and Shapes: ASTM A 276, **[Type 304] [Type 316L]**.
- E. Rolled-Steel Floor Plate: ASTM A 786/A 786M, rolled from plate complying with ASTM A 36/A 36M or ASTM A 283/A 283M, Grade C or D.
- F. Rolled-Stainless-Steel Floor Plate: ASTM A 793.
- G. Abrasive-Surface Floor Plate: Steel plate **[with abrasive granules rolled into surface] [or] [with abrasive material metallically bonded to steel]**.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. IKG Industries, a division of Harsco Corporation; Mebac.
 - b. SlipNOT Metal Safety Flooring, a W. S. Molnar company; SlipNOT.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.
- H. Steel Tubing: ASTM A 500, cold-formed steel tubing.
- I. Steel Pipe: ASTM A 53/A 53M, standard weight (Schedule 40) unless otherwise indicated.
- J. Slotted Channel Framing: Cold-formed metal box channels (struts) complying with MFMA-4.
1. Size of Channels: **[1-5/8 by 1-5/8 inches (41 by 41 mm)] [As indicated] <Insert size>**.
 2. Material: Galvanized steel, ASTM A 653/A 653M, **[commercial steel, Type B] [structural steel, Grade 33 (Grade 230)]**, with **G90 (Z275)** coating; **[0.108-inch (2.8-mm)] [0.079-inch (2-mm)] [0.064-inch (1.6-mm)]** nominal thickness.
 3. Material: Cold-rolled steel, ASTM A 1008/A 1008M, **[commercial steel, Type B] [structural steel, Grade 33 (Grade 230)]**; **[0.0966-inch (2.5-mm)] [0.0677-inch (1.7-mm)] [0.0528-inch (1.35-mm)]** minimum thickness; **[unfinished] [coated with rust-inhibitive, baked-on, acrylic enamel] [hot-dip galvanized after fabrication]**.
- K. Cast Iron: Either gray iron, ASTM A 48/A 48M, or malleable iron, ASTM A 47/A 47M, unless otherwise indicated.
- 2.3 NONFERROUS METALS
- A. Aluminum Plate and Sheet: **ASTM B 209** (ASTM B 209M), Alloy 6061-T6.
- B. Aluminum Extrusions: **ASTM B 221** (ASTM B 221M), Alloy 6063-T6.
- C. Aluminum-Alloy Rolled Tread Plate: ASTM B 632/B 632M, Alloy 6061-T6.
- D. Aluminum Castings: ASTM B 26/B 26M, Alloy 443.0-F.

- E. Bronze Plate, Sheet, Strip, and Bars: ASTM B 36/B 36M, Alloy UNS No. C28000 (muntz metal, 60 percent copper).
- F. Bronze Extrusions: ASTM B 455, Alloy UNS No. C38500 (extruded architectural bronze).
- G. Bronze Castings: ASTM B 584, Alloy UNS No. C83600 (leaded red brass) or No. C84400 (leaded semired brass).
- H. Nickel Silver Extrusions: ASTM B 151/B 151M, Alloy UNS No. C74500.
- I. Nickel Silver Castings: ASTM B 584, Alloy UNS No. C97600 (20 percent leaded nickel bronze).

2.4 FASTENERS

- A. General: Unless otherwise indicated, provide **[Type 304]** **[Type 316]** stainless-steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B 633 or **ASTM F 1941** (ASTM F 1941M), Class Fe/Zn 5, at exterior walls. Select fasteners for type, grade, and class required.
 - 1. Provide stainless-steel fasteners for fastening aluminum.
 - 2. Provide stainless-steel fasteners for fastening stainless steel.
 - 3. Provide stainless-steel fasteners for fastening nickel silver.
 - 4. Provide bronze fasteners for fastening bronze.
- B. Steel Bolts and Nuts: Regular hexagon-head bolts, **ASTM A 307, Grade A** (ASTM F 568M, Property Class 4.6); with hex nuts, **ASTM A 563** (ASTM A 563M); and, where indicated, flat washers.
- C. Steel Bolts and Nuts: Regular hexagon-head bolts, **ASTM A 325, Type 3** (ASTM A 325M, Type 3); with hex nuts, **ASTM A 563, Grade C3** (ASTM A 563M, Class 8S3); and, where indicated, flat washers.
- D. Stainless-Steel Bolts and Nuts: Regular hexagon-head annealed stainless-steel bolts, **ASTM F 593** (ASTM F 738M); with hex nuts, **ASTM F 594** (ASTM F 836M); and, where indicated, flat washers; Alloy **[Group 1 (A1)]** **[Group 2 (A4)]**.
- E. Anchor Bolts: ASTM F 1554, Grade 36, of dimensions indicated; with nuts, ASTM A 563; and, where indicated, flat washers.
 - 1. Hot-dip galvanize or provide mechanically deposited, zinc coating where item being fastened is indicated to be galvanized.
- F. Eyebolts: ASTM A 489.
- G. Machine Screws: **ASME B18.6.3** (ASME B18.6.7M).
- H. Lag Screws: **ASME B18.2.1** (ASME B18.2.3.8M).

- I. Wood Screws: Flat head, ASME B18.6.1.
- J. Plain Washers: Round, [ASME B18.22.1](#) (ASME B18.22M).
- K. Lock Washers: Helical, spring type, [ASME B18.21.1](#) (ASME B18.21.2M).
- L. Anchors, General: Anchors capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing according to ASTM E 488, conducted by a qualified independent testing agency.
- M. Cast-in-Place Anchors in Concrete: Either threaded type or wedge type unless otherwise indicated; galvanized ferrous castings, either ASTM A 47/A 47M malleable iron or ASTM A 27/A 27M cast steel. Provide bolts, washers, and shims as needed, all hot-dip galvanized per ASTM F 2329.
- N. Post-Installed Anchors: **[Torque-controlled expansion anchors] [or] [chemical anchors]**.
 - 1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B 633 or [ASTM F 1941](#) (ASTM F 1941M), Class Fe/Zn 5, unless otherwise indicated.
 - 2. Material for Exterior Locations and Where Stainless Steel is Indicated: Alloy **[Group 1 (A1)] [Group 2 (A4)]** stainless-steel bolts, [ASTM F 593](#) (ASTM F 738M), and nuts, [ASTM F 594](#) (ASTM F 836M).
- O. Slotted-Channel Inserts: Cold-formed, hot-dip galvanized-steel box channels (struts) complying with MFMA-4, [1-5/8 by 7/8 inches](#) (41 by 22 mm) by length indicated with anchor straps or studs not less than [3 inches](#) (75 mm) long at not more than [8 inches](#) (200 mm) o.c. Provide with temporary filler and tee-head bolts, complete with washers and nuts, all zinc-plated to comply with ASTM B 633, Class Fe/Zn 5, as needed for fastening to inserts.

2.5 MISCELLANEOUS MATERIALS

- A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.
- B. Low-Emitting Materials: Paints and coatings shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Primers: Provide primers that comply with **[Section 099113 "Exterior Painting." [Section 099123 Interior Painting.] [Section 099600 "High-Performance Coatings." [Section 099113 "Exterior Painting," Section 099123 Interior Painting,"and Section 099600 "High-Performance Coatings."]**
- D. Universal Shop Primer for Metal Fabrications: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat.

1. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.
 2. Products: Subject to compliance with requirements, provide one of the following:
 - a. ICI/Devoe "Devshield 4130".
 - b. Tnemec Series 10 Primers.
 - c. **<Insert manufacturer's name>**
 - d. or approved equal.
- E. Epoxy Zinc-Rich Primer for Metal Fabrications Receiving High Performance Finish Coatings: Complying with MPI#20 and compatible with topcoat.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. ICI/Devoe #310 "Catha-Coat".
 - b. Tnemec 90-97 "Tneme-Zinc".
 - c. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.
 - d. or approved equal.
- F. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it, liquid organic zinc compound containing not less than 95% pure zinc metal.
1. Subject to compliance with requirements, provide one of the following:
 - a. ZRC Products Co. "Z.R.C. Cold Galvanizing Compound".
 - b. **<Insert manufacturer's name>**
 - c. or approved equal.
- G. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.
- H. Nonshrink, Metallic Grout: Factory-packaged, ferrous-aggregate grout complying with ASTM C 1107, specifically recommended by manufacturer for heavy-duty loading applications.
- I. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107. Provide grout specifically recommended by manufacturer for interior and exterior applications.
- J. Concrete: Comply with requirements in Section 033000 "Cast-in-Place Concrete" for normal-weight, air-entrained, concrete with a minimum 28-day compressive strength of **3000 psi (20 MPa)**.
- 2.6 FABRICATION, GENERAL
- A. Reference Section 050510 "Welding" for general welding requirements.
 - B. Fabricate work to sizes, shapes, and profiles shown, and in accordance with approved

- shop drawings. Verify all dimensions prior to fabrication.
- C. Fabricate equipment supports and other items penetrating through roof from square, rectangular, or round tubing; angle, channel, or H-shapes will not be permitted.
 - D. Shop Assembly: Preassemble items in the shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.
 - E. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately $1/32$ inch (1 mm) unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
 - F. Do all punching, shearing, cutting, and forming so as to produce clean, true lines, and surfaces with a constant width on each face. Form straight and true edge arises and uniform contours as detailed. Make stampings and perforations with uniformly spaced and sized openings in alignment in both directions. Dress all cuts smooth; make corners square and joints tight.
 - G. Uniformly space and align members. Provide sleeves, inserts, anchors, and other built-in and auxiliary work. Provide welded connections at all joints and intersections; use continuous welds and grind smooth.
 - H. Cut, drill, and tap units to receive hardware. Provide all necessary brackets, anchors, fasteners, and other accessory items required for complete installation.
 - I. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.
 - J. Exposed-to-Public-View Members:
 - 1. Fabricate items that will be exposed to public view with smooth, flat surfaces, free from embedded scale, marks, gouges, or other irregularities.
 - 2. Form exposed work with accurate angles and surfaces and straight edges.
 - 3. Fill depressions with weld metal of same composition as parent metal. Grind welds and raised marks flush with adjacent surfaces. Fill small pit marks with metallic compound and grind smooth.
 - K. Weld corners and seams continuously to comply with the following:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove welding flux immediately.
 - 4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing[**and contour of welded surface matches that of adjacent surface**].
 - L. Form exposed connections with hairline joints, flush and smooth, using concealed

fasteners or welds where possible. Where exposed fasteners are required, use Phillips flat-head (countersunk) fasteners unless otherwise indicated. Locate joints where least conspicuous.

- M. Fabricate seams and other connections that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.
- N. Cut, reinforce, drill, and tap metal fabrications as indicated to receive finish hardware, screws, and similar items.
- O. Provide for anchorage of type indicated; coordinate with supporting structure. Space anchoring devices to secure metal fabrications rigidly in place and to support indicated loads.
 - 1. Where units are indicated to be cast into concrete or built into masonry, equip with integrally welded steel strap anchors, **1/8 by 1-1/2 inches** (3.2 by 38 mm), with a minimum **6-inch** (150-mm) embedment and **2-inch** (50-mm) hook, not less than **8 inches** (200 mm) from ends and corners of units and **24 inches** (600 mm) o.c., unless otherwise indicated.

2.7 MISCELLANEOUS FRAMING AND SUPPORTS

- A. General: Provide steel framing and supports not specified in other Sections as needed to complete the Work.
- B. Fabricate units from steel shapes, plates, and bars of welded construction unless otherwise indicated. Fabricate to sizes, shapes, and profiles indicated and as necessary to receive adjacent construction.
 - 1. Fabricate units from slotted channel framing where indicated.
 - 2. Furnish inserts for units installed after concrete is placed.
- C. Fabricate supports for operable partitions from continuous steel beams of sizes **[indicated] [recommended by partition manufacturer]** with attached bearing plates, anchors, and braces as **[indicated] [recommended by partition manufacturer]**. Drill or punch bottom flanges of beams to receive partition track hanger rods; locate holes where indicated on operable partition Shop Drawings.
- D. Fabricate steel girders for wood frame construction from continuous steel shapes of sizes indicated.
 - 1. Provide bearing plates welded to beams where indicated.
 - 2. Drill or punch girders and plates for field-bolted connections where indicated.
 - 3. Where wood nailers are attached to girders with bolts or lag screws, drill or punch holes at **24 inches** (600 mm) o.c.
- E. Fabricate steel pipe columns for supporting wood frame construction from steel pipe with steel baseplates and top plates as indicated. Drill or punch baseplates and top plates for anchor and connection bolts and weld to pipe with fillet welds all around. Make welds the same size as pipe wall thickness unless otherwise indicated.

- F. Unless otherwise indicated, fabricate from Schedule 40 steel pipe.
 - 1. Unless otherwise indicated, provide **1/2-inch** (12.7-mm) baseplates with four **5/8-inch** (16-mm) anchor bolts and **1/4-inch** (6.4-mm) top plates.
- G. Galvanize miscellaneous framing and supports where indicated.
- H. Prime miscellaneous framing and supports with [**zinc-rich primer**] [**primer specified in Section 099600 "High-Performance Coatings"**] where indicated.

2.8 MANUFACTURED PRODUCTS

- A. Formed Steel Channel Support Framing System:
 - 1. Manufactured system consisting of roll-formed steel channels fabricated from structural grade steel complying with ASTM A653, Grade 33, minimum 12 gage, weighing 190 lbs per 100 lineal feet. Provide channels with manufacturer's finish consisting of thermally-cured, rust inhibiting acrylic enamel applied by electrodeposition after cleaning and phosphating, per Federal Standard 595a.
 - 2. Unless otherwise indicated, provide channels with dimensions of 1-5/8" x 1-5/8", with 7/8" clear opening between lip returns.
 - 3. Provide all required fittings, anchors, and accessories or incidental materials
 - 4. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Unistrut, with Permagreen II finish, color No. 14109.
 - b. **<Insert manufacturer's name>**
 - c. or approved equal.

2.9 PREFABRICATED BUILDING COLUMNS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Black Rock Column, Inc.
 - 2. Dean, George H., Inc.
 - 3. Fire-Trol Division; Dean Lally L. P.
 - 4. **<Insert manufacturer's name>**.
 - 5. or approved equal.
- B. General: Provide prefabricated building columns consisting of load-bearing structural-steel members protected by concrete fireproofing encased in an outer non-load-bearing steel shell. Fabricate connections to comply with details shown or as needed to suit type of structure indicated.
- C. Fire-Resistance Ratings: Provide prefabricated building columns listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction for ratings indicated, based on testing according to ASTM E 119.

1. Fire-Resistance Rating: **[4 hours] [3 hours] [2 hours] [As indicated]**.

2.10 SHELF ANGLES

- A. Fabricate shelf angles from steel angles of sizes indicated and for attachment to concrete framing. Provide horizontally slotted holes to receive **3/4-inch (19-mm)** bolts, spaced not more than **6 inches (150 mm)** from ends and **24 inches (600 mm)** o.c., unless otherwise indicated.
 1. Provide mitered and welded units at corners.
 2. Provide open joints in shelf angles at expansion and control joints. Make open joint approximately **2 inches (50 mm)** larger than expansion or control joint.
- B. For cavity walls, provide vertical channel brackets to support angles from backup masonry and concrete.
- C. Hot-dip galvanize shelf angles located in exterior walls.
- D. Prime shelf angles located in interior walls with **[zinc-rich primer.] [primer specified in Section 099600 "High-Performance Coatings."]**
- E. Furnish wedge-type concrete inserts, complete with fasteners, to attach shelf angles to cast-in-place concrete.

2.11 METAL LADDERS

- A. General:
 1. Comply with ANSI A14.3 unless otherwise indicated.
 2. For elevator pit ladders, comply with ASME A17.1.
- B. Steel Ladders:
 1. Space siderails **[16 inches (406 mm)] [18 inches (457 mm)]** apart unless otherwise indicated.
 2. Space siderails of elevator pit ladders **12 inches (300 mm)** apart.
 3. Siderails: Continuous, **3/8-by-2-1/2-inch (9.5-by-64-mm)** steel flat bars, with eased edges.
 4. Rungs: **1-inch- (25-mm-) square]** steel bars.
 5. Fit rungs in centerline of siderails; plug-weld and grind smooth on outer rail faces.
 - a. Rungs shall be capable of carrying a load of 1000 pounds each without failing or permanently deforming. Side rails shall be capable of carrying the load of a single rung.
 6. Bolt or weld all anchors and connections; grind welds smooth.
 7. Ladder shall not deflect horizontally or vertically more than 1/240 of its span between anchorage points.
 8. Provide nonslip surfaces on top of each rung, either by coating rung with

- aluminum-oxide granules set in epoxy-resin adhesive or by using a type of manufactured rung filled with aluminum-oxide grout.
9. Provide nonslip surfaces on top of each rung by coating with abrasive material metallurgically bonded to rung.
 - a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) IKG Industries, a division of Harsco Corporation; Mebac.
 - 2) SlipNOT Metal Safety Flooring, a W. S. Molnar company; SlipNOT.
 - 3) **<Insert manufacturer's name; product name or designation>**.
 - 4) or approved equal.
 10. Provide platforms as indicated fabricated from welded or pressure-locked steel bar grating, supported by steel angles. Limit openings in gratings to no more than **1/2 inch (12 mm)** [**3/4 inch (19 mm)**] in least dimension.
 11. Support each ladder[**at top and bottom and not more than 60 inches** (1500 mm) **o.c.**] with welded or bolted steel brackets.
 12. Hot-dip galvanize [**exterior**] ladders, including brackets and fasteners.
 13. Prime interior ladders, including brackets and fasteners, with [**zinc-rich primer.**] [**primer specified in Section 099600 "High-Performance Coatings."**]

C. Aluminum Ladders:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ACL Industries, Inc.
 - b. Alco-Lite Industrial Products.
 - c. Halliday Products.
 - d. O'Keeffe's Inc.
 - e. Precision Ladders, LLC.
 - f. Royalite Manufacturing, Inc.
 - g. Thompson Fabricating, LLC.
 - h. **<Insert manufacturer's name>**.
2. Space siderails [**16 inches (406 mm)**] [**18 inches (457 mm)**] apart unless otherwise indicated.
3. Siderails: Continuous extruded-aluminum channels or tubes, not less than **2-1/2 inches** (64 mm) deep, **3/4 inch** (19 mm) wide, and **1/8 inch** (3.2 mm) thick.
4. Rungs: Extruded-aluminum tubes, not less than **3/4 inch** (19 mm) deep and not less than **1/8 inch** (3.2 mm) thick, with ribbed tread surfaces.
5. Fit rungs in centerline of siderails; fasten by welding or with stainless-steel fasteners or brackets and aluminum rivets.
6. Provide platforms as indicated fabricated from [**pressure-locked aluminum bar grating**] [**or**] [**extruded-aluminum plank grating**], supported by extruded-aluminum framing. Limit openings in gratings to no more than **1/2 inch (12 mm)** [**3/4 inch (19 mm)**] in least dimension.
7. Support each ladder[**at top and bottom and not more than 60 inches** (1500 mm) **o.c.**] with welded or bolted aluminum brackets.

8. Provide minimum **72-inch-** (1830-mm-) high, hinged security door with padlock hasp at foot of ladder to prevent unauthorized ladder use.

2.12 LADDER SAFETY CAGES

A. General:

1. Fabricate ladder safety cages to comply with ANSI A14.3. Assemble by welding or with stainless-steel fasteners.
2. Provide primary hoops at tops and bottoms of cages and spaced not more than **20 feet** (6 m) o.c. Provide secondary intermediate hoops spaced not more than **48 inches** (1200 mm) o.c. between primary hoops.
3. Fasten assembled safety cage to ladder rails and adjacent construction by welding or with stainless-steel fasteners unless otherwise indicated.

B. Steel Ladder Safety Cages:

1. Primary Hoops: **1/4-by-4-inch** (6.4-by-100-mm) flat bar hoops.
2. Secondary Intermediate Hoops: **1/4-by-2-inch** (6.4-by-50-mm) flat bar hoops.
3. Vertical Bars: **3/16-by-1-1/2-inch** (4.8-by-38-mm) flat bars secured to each hoop.
4. Hot-dip galvanize ladder safety cages, including brackets and fasteners.
5. Prime interior ladder safety cages, including brackets and fasteners, with **[zinc-rich primer.] [primer specified in Section 099600 "High-Performance Coatings."]**

C. Aluminum Ladder Safety Cages:

1. Primary Hoops: **1/4-by-4-inch** (6.4-by-100-mm) flat bar hoops.
2. Secondary Intermediate Hoops: **1/4-by-2-inch** (6.4-by-50-mm) flat bar hoops.
3. Vertical Bars: **1/4-by-2-inch** (6.4-by-50-mm) flat bars secured to each hoop.

2.13 ALTERNATING TREAD DEVICES

A. Alternating Tread Devices: Fabricate alternating tread devices to comply with ICC's International Building Code. Fabricate of open-type construction with channel or plate stringers and pipe and tube railings unless otherwise indicated. Provide brackets and fittings for installation.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Lapeyre Stair Inc.
 - b. Schmidt Structural Products; a subsidiary of Penco Products, Inc.
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.
2. Fabricate from **[steel] [stainless steel] [aluminum]** and assemble by welding or with stainless-steel fasteners.

3. Comply with applicable railing requirements in Section 055213 "Pipe and Tube Railings."
- B. Hot-dip galvanize exterior steel alternating tread devices, including treads, railings, brackets, and fasteners.
- C. Prime interior steel alternating tread devices, including treads, railings, brackets, and fasteners, with **[zinc-rich primer.] [primer specified in Section 099600 "High-Performance Coatings."]**

2.14 METAL [SHIPS' LADDERS] [AND] [PIPE CROSSOVERS]

- A. Provide metal **[ships' ladders] [and] [pipe crossovers]** where indicated. Fabricate of open-type construction with channel or plate stringers and pipe and tube railings unless otherwise indicated. Provide brackets and fittings for installation.
 1. Fabricate **[ships' ladders] [and] [pipe crossovers]**, including railings from **[steel] [stainless steel] [aluminum]**.
 2. Fabricate treads **[and platforms]** from **[welded or pressure-locked steel bar grating] [pressure-locked stainless-steel bar grating] [pressure-locked aluminum bar grating] [extruded-aluminum plank grating]**. Limit openings in gratings to no more than **[1/2 inch (12 mm)] [3/4 inch (19 mm)]** in least dimension.
 3. Fabricate treads **[and platforms]** from **[rolled-steel floor plate] [rolled-stainless-steel floor plate] [rolled-aluminum-alloy tread plate] [abrasive-surface floor plate]**.
 4. Comply with applicable railing requirements in Section 055213 "Pipe and Tube Railings."
- B. Hot-dip galvanize **[exterior]** steel **[ships' ladders] [and] [pipe crossovers]**, including treads, railings, brackets, and fasteners.
- C. Prime interior steel **[ships' ladders] [and] [pipe crossovers]**, including treads, railings, brackets, and fasteners, with **[zinc-rich primer.] [primer specified in Section 099600 "High-Performance Coatings."]**

2.15 METAL FLOOR PLATE

- A. Fabricate from **[rolled-steel floor] [rolled-stainless-steel floor] [rolled-aluminum-alloy tread] [abrasive-surface floor]** plate of thickness indicated below:
 1. Thickness: **[1/8 inch (3.2 mm)] [3/16 inch (4.8 mm)] [1/4 inch (6.4 mm)] [5/16 inch (8 mm)] [3/8 inch (9.5 mm)] [As indicated]**.
- B. Provide grating sections where indicated fabricated from **[welded or pressure-locked steel bar grating] [pressure-locked stainless steel bar grating] [pressure-locked aluminum bar grating] [extruded-aluminum plank grating]**. Limit openings in gratings to no more than **[1/2 inch (12 mm)] [3/4 inch (19 mm)] [1 inch (25 mm)]** in least dimension.

- C. Provide **[steel]** **[stainless-steel]** **[aluminum]** angle supports as indicated.
- D. Include **[steel]** **[stainless-steel]** **[aluminum]** angle stiffeners, and fixed and removable sections as indicated.
- E. Provide flush **[steel]** **[stainless-steel]** **[aluminum]** bar drop handles for lifting removable sections, one at each end of each section.

2.16 STRUCTURAL-STEEL DOOR FRAMES

- A. Fabricate structural-steel doorframes from steel shapes, plates, and bars of size and to dimensions indicated, fully welded together, with **5/8-by-1-1/2-inch** (16-by-38-mm) steel channel stops, unless otherwise indicated. Plug-weld built-up members and continuously weld exposed joints. Secure removable stops to frame with countersunk machine screws, uniformly spaced at not more than **10 inches** (250 mm) o.c. Reinforce frames and drill and tap as necessary to accept finish hardware.
 - 1. Provide with integrally welded steel strap anchors for securing doorframes into adjoining concrete or masonry.
- B. Extend bottom of frames to floor elevation indicated with steel angle clips welded to frames for anchoring frame to floor with expansion shields and bolts.
- C. Hot-dip galvanize exterior steel frames.
- D. Prime interior steel frames with **[zinc-rich primer.] [primer specified in Section 099600 "High-Performance Coatings."]**

2.17 MISCELLANEOUS STEEL TRIM

- A. Unless otherwise indicated, fabricate units from steel shapes, plates, and bars of profiles shown with continuously welded joints and smooth exposed edges. Miter corners and use concealed field splices where possible.
- B. Provide cutouts, fittings, and anchorages as needed to coordinate assembly and installation with other work.
 - 1. Provide with integrally welded steel strap anchors for embedding in concrete or masonry construction.
- C. Hot-dip galvanize exterior miscellaneous steel trim.
- D. Prime interior miscellaneous steel trim with **[zinc-rich primer.] [primer specified in Section 099600 "High-Performance Coatings."]**

2.18 METAL BOLLARDS

- A. Fabricate metal bollards from **[Schedule 40 steel pipe]** **[Schedule 80 steel pipe]**

[1/4-inch (6.4-mm) wall-thickness rectangular steel tubing] [steel shapes, as indicated].

1. Cap bollards with 1/4-inch- (6.4-mm-) thick steel plate.
 2. Where bollards are indicated to receive controls for door operators, provide necessary cutouts for controls and holes for wire.
 3. Where bollards are indicated to receive light fixtures, provide necessary cutouts for fixtures and holes for wire.
- B. Fabricate bollards with 3/8-inch- (9.5-mm-) thick steel baseplates for bolting to concrete slab. Drill baseplates at all four corners for 3/4-inch (19-mm) anchor bolts.
1. Where bollards are to be anchored to sloping concrete slabs, angle baseplates for plumb alignment of bollards.
- C. Fabricate sleeves for bollard anchorage from steel **[pipe] [or] [tubing]** with 1/4-inch- (6.4-mm-) thick steel plate welded to bottom of sleeve. Make sleeves not less than 8 inches (200 mm) deep and 3/4 inch (19 mm) larger than OD of bollard.
- D. Fabricate internal sleeves for removable bollards from Schedule 40 steel pipe or 1/4-inch (6.4-mm) wall-thickness steel tubing with an OD approximately 1/16 inch (1.5 mm) less than ID of bollards. Match drill sleeve and bollard for 3/4 inch (19 mm) steel machine bolt.
- E. Prime bollards with **[zinc-rich primer.] [primer specified in Section 099600 "High-Performance Coatings."]**

2.19 **[PIPE] [DOWNSPOUT] GUARDS**

- A. Fabricate **[pipe] [downspout]** guards from 3/8-inch- (9.5-mm-) thick by 12-inch- (300-mm-) wide steel plate, bent to fit flat against the wall or column at both ends and to fit around pipe with 2-inch (50-mm) clearance between pipe and pipe guard. Drill each end for two 3/4-inch (19-mm) anchor bolts.
- B. Galvanize **[pipe] [downspout]** guards.
- C. Prime **[pipe] [downspout]** guards with **[zinc-rich primer.] [primer specified in Section 099600 "High-Performance Coatings."]**

2.20 **ABRASIVE METAL [NOSINGS] [TREADS] [AND] [THRESHOLDS]**

- A. Cast-Metal Units: Cast **[iron] [aluminum] [bronze (lead red or semired brass)] [nickel silver (lead nickel bronze)]**, with an integral-abrasive, as-cast finish consisting of aluminum oxide, silicon carbide, or a combination of both. Fabricate units in lengths necessary to accurately fit openings or conditions.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. American Safety Tread Co., Inc.
 - b. Balco Inc.
 - c. Barry Pattern & Foundry Co., Inc.
 - d. Granite State Casting Co.
 - e. Safe-T-Metal Company, Inc.
 - f. Wooster Products Inc.
 - g. <Insert manufacturer's name>.
 - h. or approved equal.
2. Nosings: Cross-hatched units, 4 inches (100 mm) wide with [1/4-inch (6-mm)] [1-inch (25-mm)] lip, for casting into concrete steps.
 3. Nosings: Cross-hatched units, 1-1/2 by 1-1/2 inches (38 by 38 mm), for casting into concrete curbs.
 4. Treads: Cross-hatched units, full depth of tread with 3/4-by-3/4-inch (19-by-19-mm) nosing, for application over bent plate treads or existing stairs.
 5. Thresholds: Fluted-saddle-type units, 5 inches (125 mm) wide by 1/2 inch (12 mm) high, with tapered edges.
 6. Thresholds: Fluted-interlocking- (hook-strip-) type units, 5 inches (125 mm) wide by 5/8 inch (16 mm) high, with tapered edge.
 7. Thresholds: Plain-stepped- (stop-) type units, 5 inches (125 mm) wide by 1/2 inch (12 mm) high, with 1/2-inch (12-mm) step.
- B. Extruded Units: [Aluminum] [Bronze], with abrasive filler consisting of aluminum oxide, silicon carbide, or a combination of both, in an epoxy-resin binder. Fabricate units in lengths necessary to accurately fit openings or conditions.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ACL Industries, Inc.
 - b. American Safety Tread Co., Inc.
 - c. Amstep Products.
 - d. Armstrong Products, Inc.
 - e. Balco Inc.
 - f. Granite State Casting Co.
 - g. Wooster Products Inc.
 - h. <Insert manufacturer's name>.
 - i. or approved equal.
 2. Provide ribbed units, with abrasive filler strips projecting 1/16 inch (1.5 mm) above aluminum extrusion.
 3. Provide solid-abrasive-type units without ribs.
 4. Nosings: Square-back units, [1-7/8 inches (48 mm)] [3 inches (75 mm)] [4 inches (100 mm)] wide, for casting into concrete steps.
 5. Nosings: Beveled-back units, [3 inches (75 mm)] [4 inches (100 mm)] wide with 1-3/8-inch (35-mm) lip, for surface mounting on existing stairs.
 6. Nosings: Two-piece units, 3 inches (75 mm) wide, with subchannel for casting into concrete steps.
 7. Treads: [Square] [Beveled]-back units, full depth of tread with 1-3/8-inch (35-mm) lip, for application over existing stairs.

- C. Provide anchors for embedding units in concrete, either integral or applied to units, as standard with manufacturer.
- D. Drill for mechanical anchors and countersink. Locate holes not more than **4 inches** (100 mm) from ends and not more than **12 inches** (300 mm) o.c., evenly spaced between ends, unless otherwise indicated. Provide closer spacing if recommended by manufacturer.
 - 1. Provide two rows of holes for units more than **5 inches** (125 mm) wide, with two holes aligned at ends and intermediate holes staggered.
- E. Apply bituminous paint to concealed surfaces of cast-metal units.
- F. Apply clear lacquer to concealed surfaces of extruded units.

2.21 CAST-IRON WHEEL GUARDS

- A. Provide wheel guards made from cast iron, **3/4 inch** (19 mm) thick, hollow-core construction, of size and shape indicated. Provide holes for countersunk anchor bolts and grouting.
- B. Prime cast iron wheel guards with **[zinc-rich primer.] [primer specified in Section 099600 "High-Performance Coatings."]**

2.22 METAL DOWNSPOUT BOOTS

- A. Provide downspout boots made from **[cast iron] [cast aluminum]** in heights indicated with inlets of size and shape to suit downspouts. Provide units with flanges and holes for countersunk anchor bolts.
 - 1. Outlet: **[Vertical, to discharge into pipe] [Horizontal, to discharge into pipe] [At 35 degrees from horizontal, to discharge onto splash block or pavement].**
- B. Prime cast iron downspout boots with **[zinc-rich primer.] [primer specified in Section 099600 "High-Performance Coatings."]**

2.23 LOOSE BEARING AND LEVELING PLATES

- A. Provide loose bearing and leveling plates for steel items bearing on masonry or concrete construction. Drill plates to receive anchor bolts and for grouting.
- B. Hot-dip galvanize plates.
- C. Prime plates with **[zinc-rich primer.] [primer specified in Section 099600 "High-Performance Coatings."]**

2.24 LOOSE STEEL LINTELS

- A. Fabricate loose steel lintels from steel angles and shapes of size indicated for openings and recesses in masonry walls and partitions at locations indicated. Fabricate in single lengths for each opening unless otherwise indicated. Weld adjoining members together to form a single unit where indicated.
- B. Refer to Structural Drawings for lintel schedules and sizes.
- C. Size loose lintels to provide bearing length at each side of openings equal to 1/12 of clear span but not less than 8 inches (200 mm) unless otherwise indicated.
- D. Hot-dip galvanize loose steel lintels located in exterior walls.
- E. Prime loose steel lintels located in interior walls with **[zinc-rich primer.] [primer specified in Section 099600 "High-Performance Coatings."]**

2.25 STEEL WELD PLATES AND ANGLES

- A. Provide steel weld plates and angles not specified in other Sections, for items supported from concrete construction as needed to complete the Work. Provide each unit with no fewer than two integrally welded steel strap anchors for embedding in concrete.

2.26 EMBEDMENTS

- A. Provide miscellaneous weld plates and anchor plates as indicated or required for embedding in concrete or building into masonry for attachment of the work of other trades.

2.27 HANDRAILS AND GUARDRAILS

- A. Unless otherwise indicated, fabricate handrails and guardrails from 1-1/2" outside diameter smooth steel pipe or round tubing as indicated. Uniformly space posts and rails as shown, and provide rounded safety caps at all exposed rail terminations.
 - 1. Weld all connections.
- B. Fabricate intermediate guardrail pickets from steel bars of size and configuration indicated on the Drawings. Space intermediate rails or pickets with clear dimension not exceeding 3-15/16", as required by UBC or applicable local code.
- C. Provide all necessary brackets, escutcheons or cover plates, and anchors required for anchoring to substrates indicated.

2.28 SCREEN FRAMING

- A. Provide welded steel frames in accordance with detailed drawings.
- B. Fabricate from angles and tubular or bar shapes as indicated. Punch or drill for bolts and other attachments, and provide any additional internal bracing required to resist wind or other imposed loads.
- C. Provide minimum 12 gauge steel flashing collars at all members penetrating roof; furnish collars loose for field welding after erection.

2.29 EQUIPMENT SUPPORTS

- A. Provide welded steel supports in accordance with Detailed Drawings. Verify dimensions and sizes with manufacturer of equipment to be supported.
- B. Fabricate from angles, tubes, or shapes as indicated. Punch or drill for bolts or other attachment, and provide all required internal bracing to prevent deflection or racking under load.
- C. Provide minimum 12 gauge steel flashing collars at all members penetrating roof; furnish collars loose for field welding after erection.

2.30 FINISHES, GENERAL

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Finish metal fabrications after assembly.
- C. Finish exposed surfaces to remove tool and die marks and stretch lines, and to blend into surrounding surface.

2.31 STEEL AND IRON FINISHES

- A. Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A 153/A 153M for steel and iron hardware and with ASTM A 123/A 123M for other steel and iron products.
 - 1. Do not quench or apply post galvanizing treatments that might interfere with paint adhesion.
- B. Shop prime iron and steel items[**not indicated to be galvanized**] unless they are to be embedded in concrete, sprayed-on fireproofing, or masonry, or unless otherwise indicated.
 - 1. Shop prime with [**universal shop primer**] [**primers specified in Section 099113 "Exterior Painting"**] [**primers specified in Section 099123 "Interior Painting"**]

unless [zinc-rich primer is] [primers specified in Section 099600 "High-Performance Coatings" are] indicated.

- C. Preparation for Shop Priming: Prepare surfaces to comply with [SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."] [SSPC-SP 3, "Power Tool Cleaning."] [requirements indicated below:]
1. Exterior Items: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 2. Items Indicated to Receive Zinc-Rich Primer: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 3. Items Indicated to Receive Primers Specified in Section 099600 "High-Performance Coatings": SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 4. Other Items: SSPC-SP 3, "Power Tool Cleaning."
- D. Shop Priming: Apply shop primer to comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.
1. Stripe paint corners, crevices, bolts, welds, and sharp edges.

2.32 ALUMINUM FINISHES

- A. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
- B. As-Fabricated Finish: AA-M10 (Mechanical Finish: as fabricated, unspecified).
- C. Class I, Clear Anodic Finish: AA-M12C22A41 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verification of Conditions: Examine areas and conditions under which the work of this Section will be performed.
- B. Do not proceed with the work until unsatisfactory conditions have been corrected. Commencement of work implies acceptance of all areas and conditions

3.2 INSTALLATION, GENERAL

- A. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal fabrications. Set metal fabrications accurately in location, alignment, and elevation; with edges and surfaces level, plumb, true, and free of rack; and measured from established lines and levels.

- B. Install metal fabrications in accordance with approved shop drawings.
 - C. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.
 - D. Field Welding: Comply with the following requirements:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove welding flux immediately.
 - 4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.
 - 5. Reference Section 050510 "Welding" for general welding requirements.
 - E. Fastening to In-Place Construction: Provide anchorage devices and fasteners where metal fabrications are required to be fastened to in-place construction. Provide threaded fasteners for use with concrete and masonry inserts, toggle bolts, through bolts, lag screws, wood screws, and other connectors.
 - F. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction. Remove all temporary braces or erection clips when no longer needed and restore affected surface finishes.
 - G. Insulate between dissimilar metals at connections.
 - H. Corrosion Protection: Coat concealed surfaces of aluminum that will come into contact with grout, concrete, masonry, wood, or dissimilar metals with the following:
 - 1. Cast Aluminum: Heavy coat of bituminous paint.
 - 2. Extruded Aluminum: Two coats of clear lacquer.
 - I. Install flashing collars at members penetrating roofing. Coordinate installation with roofing trades.
- 3.3 INSTALLING MISCELLANEOUS FRAMING AND SUPPORTS
- A. General: Install framing and supports to comply with requirements of items being supported, including manufacturers' written instructions and requirements indicated on Shop Drawings.
 - B. Anchor supports for operable partitions securely to and rigidly brace from building structure.

C. Support steel girders on solid grouted masonry, concrete, or steel pipe columns. Secure girders with anchor bolts embedded in grouted masonry or concrete or with bolts through top plates of pipe columns.

1. Where grout space under bearing plates is indicated for girders supported on concrete or masonry, install as specified in "Installing Bearing and Leveling Plates" Article.

D. Install pipe columns on concrete footings with grouted baseplates. Position and grout column baseplates as specified in "Installing Bearing and Leveling Plates" Article.

1. Grout baseplates of columns supporting steel girders after girders are installed and leveled.

3.4 INSTALLING PREFABRICATED BUILDING COLUMNS

A. Install prefabricated building columns to comply with AISC's "Specification for Structural Steel Buildings" and with requirements applicable to listing and labeling for fire-resistance rating indicated.

3.5 INSTALLING METAL BOLLARDS

A. Fill metal-capped bollards solidly with concrete and allow concrete to cure seven days before installing.

1. Do not fill removable bollards with concrete.

B. Anchor bollards to existing construction with **[expansion anchors] [anchor bolts] [through bolts]**. Provide four **3/4-inch** (19-mm) bolts at each bollard unless otherwise indicated.

1. Embed anchor bolts at least **4 inches** (100 mm) in concrete.

C. Anchor bollards in concrete **[with pipe sleeves preset and anchored into concrete] [in formed or core-drilled holes not less than 8 inches** (200 mm) **deep and 3/4 inch** (19 mm) **larger than OD of bollard]**. Fill annular space around bollard solidly with nonshrink, nonmetallic grout; mixed and placed to comply with grout manufacturer's written instructions. Slope grout up approximately **1/8 inch** (3 mm) toward bollard.

D. Anchor bollards in place with concrete footings. Center and align bollards in holes **3 inches** (75 mm) above bottom of excavation. Place concrete and vibrate or tamp for consolidation. Support and brace bollards in position until concrete has cured.

E. Anchor internal sleeves for removable bollards in **[concrete by inserting into pipe sleeves preset into concrete] [formed or core-drilled holes not less than 8 inches** (200 mm) **deep and 3/4 inch** (19 mm) **larger than OD of sleeve]**. Fill annular space around internal sleeves solidly with nonshrink, nonmetallic grout; mixed and placed to comply with grout manufacturer's written instructions. Slope grout up approximately **1/8 inch** (3 mm) toward internal sleeve.

- F. Anchor internal sleeves for removable bollards in place with concrete footings. Center and align sleeves in holes **3 inches** (75 mm) above bottom of excavation. Place concrete and vibrate or tamp for consolidation. Support and brace sleeves in position until concrete has cured.
- G. Place removable bollards over internal sleeves and secure with **3/4-inch** (19-mm) machine bolts and nuts. After tightening nuts, drill holes in bolts for inserting padlocks. Owner will furnish padlocks.
- H. Fill bollards solidly with concrete, mounding top surface to shed water.
 - 1. Do not fill removable bollards with concrete.

3.6 INSTALLING PIPE GUARDS

- A. Provide pipe guards at exposed vertical pipes in parking garage where not protected by curbs or other barriers. Install by bolting to wall or column with expansion anchors. Provide four **3/4-inch** (19-mm) bolts at each pipe guard. Mount pipe guards with top edge **26 inches** (660 mm) above driving surface.

3.7 INSTALLING NOSINGS, TREADS, AND THRESHOLDS

- A. Center nosings on tread widths unless otherwise indicated.
- B. For nosings embedded in concrete steps or curbs, align nosings flush with riser faces and level with tread surfaces.
- C. Seal thresholds exposed to exterior with elastomeric sealant complying with Section 079200 "Joint Sealants" to provide a watertight installation.

3.8 INSTALLING CAST-IRON WHEEL GUARDS

- A. Anchor wheel guards to concrete or masonry construction to comply with manufacturer's written instructions. Fill cores solidly with concrete.

3.9 INSTALLING BEARING AND LEVELING PLATES

- A. Clean concrete and masonry bearing surfaces of bond-reducing materials, and roughen to improve bond to surfaces. Clean bottom surface of plates.
- B. Set bearing and leveling plates on wedges, shims, or leveling nuts. After bearing members have been positioned and plumbed, tighten anchor bolts. Do not remove wedges or shims but, if protruding, cut off flush with edge of bearing plate before packing with grout.
 - 1. Use nonshrink grout, either metallic or nonmetallic, in concealed locations where not exposed to moisture; use nonshrink, nonmetallic grout in exposed locations

unless otherwise indicated.

2. Pack grout solidly between bearing surfaces and plates to ensure that no voids remain.

3.10 FIELD QUALITY CONTROL

- A. Visual Inspection: The testing and inspection agency will visually inspect shop and field welding and bolting of handrails, ladders, and other items requiring structural connections. Welds or bolts that do not pass visual inspection will be tested as specified herein at the Contractor's expense.
- B. Welding Materials and Procedures
 1. Verify that electrodes used for manual shielded metal-arc welding conform to requirements of the Contract Documents, and that welding procedures and welding sequences are followed without deviation.
 2. Verify certification of welding operators under AWS qualification procedures within previous twelve (12) months.
 3. Verify that fit up, joint preparation, size, contour, extent of reinforcement, and length and location of welds conform to specified requirements.
 4. Inspect and test field welds as follows:
 - a. Visually inspect all (100%) welds.
 - b. If more than 10% of the tested welds of any type are rejected, an additional 10% of all such welds will be re-tested using the same test method. This 10% additional testing procedure will be continued until the rejection rate drops below 10%.
 - c. In addition, the DEN Project Manager reserves the right to require additional ultrasonic or magnetic testing of uninspected welds of the same type.
 - 1) All costs of additional testing shall be borne by the Contractor.
 - d. Radiographic (X-ray) testing (ASTM E94 and E390) may be substituted for ultrasonic testing at the option of the testing agency and with the approval of the DEN Project Manager.
 5. Authority for Rejection: The testing and inspections agency is authorized to reject welding materials and procedures. Rejection may be based on visual inspection if, in the opinion of the inspector, the weld would not pass a more detailed investigation.

3.11 ADJUSTING AND CLEANING

- A. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas. Paint uncoated and abraded areas with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 1. Apply by brush or spray to provide a minimum **2.0-mil** (0.05-mm) dry film

thickness.

- B. Touchup Painting: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in [**Section 099113 "Exterior Painting."**] [**Section 099123 "Interior Painting."**]
- C. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780.

3.12 PROTECTION

- A. Protection of Work in Place: Protect all work in place, and replace damaged finished work without cost to Owner.
- B. Touch-up and Repair of Galvanized Coating:
 - 1. Welds: Wire brush to remove slag residue, weld splatter, and similar deleterious materials. If surface is oily, clean with phosphoric acid base compound as recommended by galvanizing repair compound manufacturer. Apply galvanizing repair compound in accordance with manufacturer's instructions.
 - 2. Scratches and Other Surface Damage: Thoroughly wash damaged area with water or mild detergent to remove any zinc oxides that may have formed. Apply galvanizing repair compound in accordance with manufacturer's instructions.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 055000

SECTION 055100 - METAL STAIRS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Preassembled steel stairs with [**concrete-filled**] [**precast concrete**] [**epoxy-resin-filled**] [**and**] [**abrasive-coating-finished formed-metal**] treads.
2. Industrial-type stairs with steel [**floor plate**] [**grating**] treads.
3. Ornamental steel-framed stairs.
4. [**Steel tube**] railings attached to metal stairs.
5. [**Steel tube**] handrails attached to walls adjacent to metal stairs.
6. Railing gates at the level of exit discharge.

B. Related Sections:

1. Section 033000 "Cast-in-Place Concrete" for concrete fill for stair treads and platforms.
2. Section 050510 "Welding" for general welding requirements.
3. Section 055000 "Metal Fabrications" for [**metal treads and nosings installed at locations other than in metal stairs**] [**and**] [**alternating tread devices**].
4. Section 055213 "Pipe and Tube Railings" for pipe and tube railings[**not attached to metal stairs or to walls adjacent to metal stairs**].
5. Section 057113 "Fabricated Metal Spiral Stairs."
6. Section 057300 "Decorative Metal Railings" for ornamental metal railings.
7. [**Section 061000 "Rough Carpentry"**] [**Section 061053 "Miscellaneous Rough Carpentry"**] for wood blocking for anchoring railings.
8. Section 092216 "Non-Structural Metal Framing" for metal backing for anchoring railings.
9. Section 093000 "Tiling" for ceramic-tile treads and landings[**for ornamental steel-framed stairs**].
10. Section 096340 "Stone Flooring" for stone treads and landings[**for ornamental steel-framed stairs**].
11. Section 096400 "Wood Flooring" for wood treads and landings[**for ornamental steel-framed stairs**].
12. [**Section 096613 "Portland Cement Terrazzo Flooring"**] [**Section 096623 "Resinous Matrix Terrazzo Flooring"**] for terrazzo treads and landings[**for ornamental steel-framed stairs**].

13. Section 102213 "Wire Mesh Partitions" for wire mesh security partitions and doors.

C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 PERFORMANCE REQUIREMENTS

A. Delegated Design: Design metal stairs, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

B. Structural Performance of Stairs: Metal stairs shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated.

1. Uniform Load: 100 lbf/sq. ft. (4.79 kN/sq. m).
2. Concentrated Load: 300 lbf (1.33 kN) applied on an area of 4 sq. in. (2580 sq. mm).
3. Uniform and concentrated loads need not be assumed to act concurrently.
4. Stair Framing: Capable of withstanding stresses resulting from railing loads in addition to loads specified above.
5. Limit deflection of treads, platforms, and framing members to [L/240] [L/360] <Insert deflection ratio> or 1/4 inch (6.4 mm), whichever is less.

C. Structural Performance of Railings: Railings shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated.

1. Handrails and Top Rails of Guards:

- a. Uniform load of 50 lbf/ ft. (0.73 kN/m) applied in any direction.
- b. Concentrated load of 200 lbf (0.89 kN) applied in any direction.
- c. Uniform and concentrated loads need not be assumed to act concurrently.

2. Infill of Guards:

- a. Concentrated load of 50 lbf (0.22 kN) applied horizontally on an area of 1 sq. ft. (0.093 sq. m).
- b. Infill load and other loads need not be assumed to act concurrently.

D. Seismic Performance: Metal stairs shall withstand the effects of earthquake motions determined according to [ASCE/SEI 7] <Insert requirement>.

1. Component Importance Factor is 1.5.

1.4 ACTION SUBMITTALS

A. Product Data: For metal stairs and the following:

1. Prefilled metal-pan stair treads.
2. Precast concrete treads.

3. Epoxy-resin-filled stair treads.
4. Nonslip aggregates and nonslip-aggregate finishes.
5. Abrasive nosings.
6. Metal floor plate treads.
7. Paint products.
8. Grout.
9. Photoluminescent exit pathway markings.
10. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Laboratory Test Reports for Credit IEQ 4: For primers, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

D. Samples for Initial Selection: For products involving selection of color, texture, or design.

E. Samples for Verification: For the following products, in manufacturer's standard sizes:

1. Precast concrete treads.
2. Epoxy-resin-filled stair treads.
3. Stair treads with nonslip-aggregate surface finish.
4. Metal floor plate treads.
5. Grating treads.
6. Abrasive nosings.

F. Delegated-Design Submittal: For installed products indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified [**professional engineer**] [**testing agency**].
- B. Welding certificates.
- C. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers certifying that shop primers are compatible with topcoats.

- D. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for **[stairs] [and] [railings]**.

1. Test railings according ASTM E 894 and ASTM E 935.

1.6 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: Fabricator of products.
- B. NAAMM Stair Standard: Comply with "Recommended Voluntary Minimum Standards for Fixed Metal Stairs" in NAAMM AMP 510, "Metal Stairs Manual," for class of stair designated, unless more stringent requirements are indicated.
1. Preassembled Stairs: Commercial class.
 2. Industrial-Type Stairs: Industrial class.
 3. Ornamental Stairs: Architectural class.
- C. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- D. Welding Qualifications: Qualify procedures and personnel according to the following:
1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 2. AWS D1.3, "Structural Welding Code - Sheet Steel."

1.8 COORDINATION

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.
- B. Coordinate installation of anchorages for metal stairs. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.
- C. Coordinate locations of hanger rods and struts with other work so that they will not encroach on required stair width and will be within the fire-resistance-rated stair enclosure.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 METALS, GENERAL

- A. Metal Surfaces, General: Provide materials with smooth, flat surfaces unless otherwise indicated. For components exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.

2.2 FERROUS METALS

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25] <Insert number>** percent.
- B. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.
- C. Steel Tubing: **[ASTM A 500 (cold formed)] [or] [ASTM A 513]**.
- D. Rolled-Steel Floor Plate: ASTM A 786/A 786M, rolled from plate complying with ASTM A 36/A 36M or ASTM A 283/A 283M, Grade C or D.
- E. Abrasive-Surface Floor Plate: Steel plate **[with abrasive granules rolled into surface] [or] [with abrasive material metallically bonded to steel]**.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. IKG Industries, a division of Harsco Corporation; Mebac.
 - b. SlipNOT Metal Safety Flooring, a W. S. Molnar company; SlipNOT.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.
- F. Steel Bars for Grating Treads: ASTM A 36/A 36M or steel strip, ASTM A 1011/A 1011M or ASTM A 1018/A 1018M.
- G. Wire Rod for Grating Crossbars: **ASTM A 510** (ASTM A 510M).
- H. Cast Iron: Either gray iron, ASTM A 48/A 48M, or malleable iron, ASTM A 47/A 47M, unless otherwise indicated.
- I. Uncoated, Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, **[either commercial steel, Type B, or] structural steel, Grade 25** (Grade 170), unless another grade is required by design loads; exposed.

- J. Uncoated, Hot-Rolled Steel Sheet: ASTM A 1011/A 1011M, [**either commercial steel, Type B, or**] structural steel, **Grade 30** (Grade 205), unless another grade is required by design loads.
- K. Galvanized-Steel Sheet: ASTM A 653/A 653M, **G90** (Z275) coating, [**either commercial steel, Type B, or**] structural steel, **Grade 33** (Grade 230), unless another grade is required by design loads.
- L. Expanded-Metal, Carbon Steel: ASTM F 1267, [**Type I (expanded)**] [**Type II (expanded and flattened)**], Class 1 (uncoated).
1. Style Designation: [**3/4 number 13**] [**1-1/2 number 10**] <Insert designation>.
- M. Perforated Metal: Cold-rolled steel sheet, ASTM A 1008/A 1008M, or hot-rolled steel sheet, ASTM A 1011/A 1011M, commercial steel Type B, [**0.060 inch** (1.52 mm)] <Insert thickness> thick, [**with 1/4-inch** (6.4-mm) **holes 3/8 inch** (9.5 mm) **o.c. in staggered rows**] [**with 1/8-by-1-inch** (3.2-by-25.4-mm) **round end slotted holes in staggered rows**] <Insert description>.
- N. Perforated Metal: Galvanized-steel sheet, ASTM A 653/A 653M, **G90** (Z275) coating, commercial steel Type B, [**0.064 inch** (1.63 mm)] <Insert thickness> thick, [**with 1/4-inch** (6.4-mm) **holes 3/8 inch** (9.5 mm) **o.c. in staggered rows**] <Insert description>.
- O. Woven-Wire Mesh: Intermediate-crimp, [**diamond**] [**square**] pattern, **2-inch** (50-mm) woven-wire mesh, made from **0.135-inch** (3.5-mm) nominal diameter wire complying with **ASTM A 510** (ASTM A 510M).

2.3 NONFERROUS METALS

- A. Aluminum Extrusions: **ASTM B 221** (ASTM B 221M), Alloy 6063-T6.
- B. Aluminum Castings: ASTM B 26/B 26M, Alloy 443.0-F.
- C. Bronze Extrusions: ASTM B 455, Alloy UNS No. C38500 (extruded architectural bronze).
- D. Bronze Castings: ASTM B 584, Alloy UNS No. C83600 (leaded red brass) or No. C84400 (leaded semired brass).
- E. Nickel Silver Castings: ASTM B 584, Alloy UNS No. C97600 (20 percent leaded nickel bronze).

2.4 ABRASIVE NOSINGS

- A. Cast-Metal Units: Cast [**iron**] [**aluminum**] [**bronze**] [**nickel silver**], with an integral abrasive, as-cast finish consisting of aluminum oxide, silicon carbide, or a combination of both. Fabricate units in lengths necessary to accurately fit openings or conditions.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Safety Tread Co., Inc.
 - b. Balco Inc.
 - c. Barry Pattern & Foundry Co., Inc.
 - d. Granite State Casting Co.
 - e. Safe-T-Metal Company, Inc.
 - f. Wooster Products Inc.
 - g. **<Insert manufacturer's name>**.
 - h. or approved equal.
 2. Configuration: Cross-hatched units, [3 inches (75 mm)] [4 inches (100 mm)] wide without lip.
 3. Configuration: Cross-hatched angle-shaped units, same depth as bar-grating treads and 1 to 1-1/2 inches (25 to 38 mm) wide.
- B. Extruded Units: **[Aluminum]** **[Bronze]** units with abrasive filler consisting of aluminum oxide, silicon carbide, or a combination of both, in an epoxy-resin binder. Fabricate units in lengths necessary to accurately fit openings or conditions.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ACL Industries, Inc.
 - b. American Safety Tread Co., Inc.
 - c. Amstep Products.
 - d. Armstrong Products, Inc.
 - e. Balco Inc.
 - f. Granite State Casting Co.
 - g. Wooster Products Inc.
 - h. **<Insert manufacturer's name>**.
 - i. or approved equal.
 2. Provide ribbed units, with abrasive filler strips projecting 1/16 inch (1.5 mm) above aluminum extrusion.
 3. Provide solid-abrasive-type units without ribs.
 4. Nosings: Square-back units, [1-7/8 inches (48 mm)] [3 inches (75 mm)] [4 inches (100 mm)] wide, without lip.
 5. Nosings: Two-piece units, 3 inches (75 mm) wide, with subchannel for casting into concrete.
- C. Provide anchors for embedding units in concrete, either integral or applied to units, as standard with manufacturer.
- D. Apply bituminous paint to concealed surfaces of cast-metal units set into concrete.
- E. Apply clear lacquer to concealed surfaces of extruded units set into concrete.

2.5 FASTENERS

- A. General: Provide zinc-plated fasteners with coating complying with ASTM B 633 or [ASTM F 1941](#) (ASTM F 1941M), Class Fe/Zn 12 for exterior use, and Class Fe/Zn 5 where built into exterior walls. Select fasteners for type, grade, and class required.
- B. Bolts and Nuts: Regular hexagon-head bolts, [ASTM A 307, Grade A](#) (ASTM F 568M, Property Class 4.6); with hex nuts, [ASTM A 563](#) (ASTM A 563M); and, where indicated, flat washers.
- C. Anchor Bolts: ASTM F 1554, Grade 36, of dimensions indicated; with nuts, [ASTM A 563](#) (ASTM A 563M); and, where indicated, flat washers.
1. Provide mechanically deposited or hot-dip, zinc-coated anchor bolts for **[exterior stairs] [stairs indicated to be galvanized] [stairs indicated to be shop primed with zinc-rich primer]**.
- D. Machine Screws: [ASME B18.6.3](#) (ASME B18.6.7M).
- E. Lag Screws: [ASME B18.2.1](#) (ASME B18.2.3.8M).
- F. Plain Washers: Round, [ASME B18.22.1](#) (ASME B18.22M).
- G. Lock Washers: Helical, spring type, [ASME B18.21.1](#) (ASME B18.21.2M).
- H. Post-Installed Anchors: **[Torque-controlled expansion anchors] [or] [chemical anchors]** capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing according to ASTM E 488, conducted by a qualified independent testing agency.
1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B 633 or [ASTM F 1941](#) (ASTM F 1941M), Class Fe/Zn 5, unless otherwise indicated.
 2. Material for Exterior Locations and Where Stainless Steel is Indicated: Alloy **[Group 1 (A1)] [Group 2 (A4)]** stainless-steel bolts, [ASTM F 593](#) (ASTM F 738M), and nuts, [ASTM F 594](#) (ASTM F 836M).

2.6 MISCELLANEOUS MATERIALS

- A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.
- B. Low-Emitting Materials: Paints and coatings shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Primers: Provide primers that comply with **[Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."]** **[Section 099600 "High-Performance**

Coatings.]" [Section 099113 "Exterior Painting," Section 099123 "Interior Painting," and Section 099600 "High-Performance Coatings."]

- D. Universal Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat.
 - 1. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.
- E. Epoxy Zinc-Rich Primer: Complying with MPI#20 and compatible with topcoat.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.
 - b. or approved equal.
- F. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.
- G. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.
- H. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107. Provide grout specifically recommended by manufacturer for interior and exterior applications.
- I. Concrete Materials and Properties: Comply with requirements in Section 033000 "Cast-in-Place Concrete" for normal-weight, air-entrained, ready-mix concrete with a minimum 28-day compressive strength of **3000 psi** (20 MPa) unless otherwise indicated.
- J. Nonslip-Aggregate Concrete Finish: Factory-packaged abrasive aggregate made from fused, aluminum-oxide grits or crushed emery; rustproof and nonglazing; unaffected by freezing, moisture, or cleaning materials.
- K. Welded Wire Fabric: ASTM A 185/A 185M, **6 by 6 inches** (152 by 152 mm), W1.4 by W1.4, unless otherwise indicated.

2.7 PRECAST CONCRETE TREADS

- A. Concrete Materials and Properties: Comply with requirements in Section 033000 "Cast-in-Place Concrete" for normal-weight, ready-mixed concrete with a minimum 28-day compressive strength of **5000 psi** (35 MPa) and a total air content of not less than 4 percent or more than 6 percent.
- B. Reinforcing Wire Fabric: Galvanized, welded wire fabric, **2 by 2 inches** (50 by 50 mm) by **0.062-inch-** (1.6-mm-) diameter wire; comply with ASTM A 185/A 185M and ASTM A 82/A 82M, except for minimum wire size.

2.8 FABRICATION, GENERAL

- A. Provide complete stair assemblies, including metal framing, hangers, struts, [**railings,**] clips, brackets, bearing plates, and other components necessary to support and anchor stairs and platforms on supporting structure.
1. Join components by welding unless otherwise indicated.
 2. Use connections that maintain structural value of joined pieces.
 3. Fabricate treads and platforms of exterior stairs so finished walking surfaces slope to drain.
- B. Preassembled Stairs: Assemble stairs in shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.
- C. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately **1/32 inch** (1 mm) unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- D. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.
- E. Form exposed work with accurate angles and surfaces and straight edges.
- F. Weld connections to comply with the following:
1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 2. Obtain fusion without undercut or overlap.
 3. Remove welding flux immediately.
 4. Weld exposed corners and seams continuously unless otherwise indicated.
 5. At exposed connections, finish exposed welds to comply with NOMMA's "Voluntary Joint Finish Standards" for [**Type 1 welds: no evidence of a welded joint**] [**Type 2 welds: completely sanded joint, some undercutting and pinholes okay**] [**Type 3 welds: partially dressed weld with spatter removed**] [**Type 4 welds: good quality, uniform undressed weld with minimal splatter**].
- G. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible. Where exposed fasteners are required, use Phillips flat-head (countersunk) screws or bolts unless otherwise indicated. Locate joints where least conspicuous.
- H. Fabricate joints that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.

2.9 STEEL-FRAMED STAIRS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Alfab, Inc.
 2. American Stair, Inc.
 3. Sharon Companies Ltd. (The).
 4. **<Insert manufacturer's name>**.
 5. or approved equal.
- B. Stair Framing:
1. Fabricate stringers of steel **[plates] [channels] [plates or channels] [tubes]**.
 - a. Provide closures for exposed ends of **[channel] [tube]** stringers.
 2. Construct platforms of steel **[plate] [channel] [plate or channel] [tube]** headers and miscellaneous framing members as **[needed to comply with performance requirements] [indicated]**.
 3. Weld **[or bolt]** stringers to headers; weld **[or bolt]** framing members to stringers and headers. **[If using bolts, fabricate and join so bolts are not exposed on finished surfaces.]**
 4. Where stairs are enclosed by gypsum board **[shaft-wall]** assemblies, provide hanger rods or struts to support landings from floor construction above or below. Locate hanger rods and struts where they will not encroach on required stair width and will be within the fire-resistance-rated stair enclosure.
 5. Where masonry walls support metal stairs, provide temporary supporting struts designed for erecting steel stair components before installing masonry.
- C. Metal-Pan Stairs: Form risers, subtread pans, and subplatforms to configurations shown from steel sheet of thickness **[needed to comply with performance requirements but not less than 0.067 inch (1.7 mm)] [indicated]**.
1. Steel Sheet: Uncoated **[cold] [hot]**-rolled steel sheet **[unless otherwise indicated]**.
 2. Steel Sheet: Galvanized-steel sheet **[, where indicated]**.
 3. Directly weld metal pans to stringers; locate welds on top of subtreads where they will be concealed by concrete fill. Do not weld risers to stringers.
 4. Attach risers and subtreads to stringers with brackets made of steel angles or bars. Weld brackets to stringers and attach metal pans to brackets by welding, riveting, or bolting.
 5. Shape metal pans to include nosing integral with riser.
 6. Attach abrasive nosings to risers.
 7. At Contractor's option, provide stair assemblies with metal-pan subtreads filled with reinforced concrete during fabrication.
 8. Provide epoxy-resin-filled treads, reinforced with glass fibers, with slip-resistant, abrasive surface.
 9. Provide subplatforms of configuration indicated or, if not indicated, the same as subtreads. Weld subplatforms to platform framing.
 - a. Smooth Soffit Construction: Construct subplatforms with flat metal under surfaces to produce smooth soffits.

- D. Abrasive-Coating-Finished, Formed-Metal Stairs: Form risers, treads, and platforms to configurations shown from steel sheet of thickness **[needed to comply with performance requirements but not less than 0.097 inch (2.5 mm)] [indicated]**.
1. Steel Sheet: Uncoated hot-rolled steel sheet unless otherwise indicated.
 2. Directly weld risers and treads to stringers; locate welds on underside of stairs.
 3. Provide platforms of configuration indicated or, if not indicated, the same as treads. Weld platforms to platform framing.
 4. Finish tread and platform surfaces with manufacturer's standard epoxy-bonded abrasive finish.
- E. Metal Floor Plate Stairs: Form treads and platforms to configurations shown from **[rolled-steel] [abrasive-surface]** floor plate of thickness **[needed to comply with performance requirements, but not less than 1/4 inch (6.4 mm)] [needed to comply with performance requirements, but not less than 3/16 inch (4.8 mm)] [needed to comply with performance requirements, but not less than 1/8 inch (3.2 mm)] [indicated]**.
1. Form treads with integral nosing and back edge stiffener. Form risers of same material as treads.
 2. Form treads with integral nosing and back edge stiffener. Form risers from steel sheet not less than **0.097 inch (2.5 mm)** thick, welded to tread nosings and stiffeners and to platforms.
 3. Form treads with integral nosing and back edge stiffener, and with open risers.
 4. Weld steel supporting brackets to stringers and weld treads to brackets.
 5. Fabricate platforms with integral nosings matching treads and weld to platform framing.
- F. Metal Bar-Grating Stairs: Form treads and platforms to configurations shown from metal bar grating; fabricate to comply with NAAMM MBG 531, "Metal Bar Grating Manual."
1. Fabricate treads and platforms from **[welded] [or] [pressure-locked]** steel grating with **[1-1/4-by-3/16-inch (32-by-5-mm) bearing bars at 15/16 inch (24 mm) o.c.] [1-by-3/16-inch (25-by-5-mm) bearing bars at 11/16 inch (17 mm) o.c.] [1-by-1/8-inch (25-by-3-mm) bearing bars at 7/16 inch (11 mm) o.c.]** and crossbars at **4 inches (100 mm) o.c.**
 2. Fabricate treads and platforms from **[welded] [or] [pressure-locked]** steel grating with openings in gratings no more than **[5/16 inch (8 mm)] [1/2 inch (12 mm)] [3/4 inch (19 mm)]** in least dimension.
 3. Surface: **[Plain] [Serrated]**.
 4. Finish: **[Shop primed] [Painted] [Galvanized]**.
 5. Fabricate grating treads with **[rolled-steel floor plate] [cast abrasive]** nosing and with steel angle or steel plate carrier at each end for stringer connections. Secure treads to stringers with bolts.
 6. Fabricate grating platforms with nosing matching that on grating treads. Provide toeplates at open-sided edges of grating platforms. Weld grating to platform framing.

2.10 STAIR RAILINGS

- A. Comply with applicable requirements in **[Section 055213 "Pipe and Tube Railings]** **[Section 057300 "Decorative Metal Railings]."**
1. Fabricate newels of square steel tubing and provide newel caps of **[pressed steel]** **[gray-iron castings]**, as shown.
 2. Rails may be bent at corners, rail returns, and wall returns, instead of using prefabricated fittings.
 3. Connect posts to stair framing by direct welding unless otherwise indicated.
- B. Steel Tube Railings: Fabricate railings to comply with requirements indicated for design, dimensions, details, finish, and member sizes, including wall thickness of tube, post spacings, and anchorage, but not less than that needed to withstand indicated loads.
1. Rails and Posts: **[1-5/8-inch- (41-mm-) diameter]** **[1-1/2-inch- (38-mm-) square]** top and bottom rails and **1-1/2-inch- (38-mm-) square** posts.
 2. Picket Infill: **1/2-inch- (13-mm-) square** pickets spaced less than **4 inches (100 mm)** clear.
 3. Expanded-Metal Infill: Expanded-metal panels edged with U-shaped channels made from steel sheet not less than **0.043 inch (1.1 mm)** thick. Orient expanded metal with long dimension of diamonds **[parallel to top rail]** **[perpendicular to top rail]** **[vertical]**.
 4. Perforated-Metal Infill: Perforated-metal panels edged with U-shaped channels made from metal sheet, of same metal as perforated metal and not less than **0.043 inch (1.1 mm)** thick. Orient perforated metal with pattern **[parallel to top rail]** **[perpendicular to top rail]** **[horizontal]** **[vertical]** **[as indicated on Drawings]**.
 5. Mesh Infill: Woven wire mesh crimped into **1-by-1/2-by-1/8-inch (25-by-13-by-3-mm)** steel channel frames. Orient wire mesh with **[diamonds vertical]** **[wires perpendicular and parallel to top rail]** **[wires horizontal and vertical]**.
 6. Intermediate Rails Infill: **[1-5/8-inch- (41-mm-) diameter]** **[1-1/2-inch- (38-mm-) square]** intermediate rails spaced less than **[12 inches (305 mm)]** **[21 inches (533 mm)]** clear.
 7. Gates: Form gates from steel tube of same size and shape as top rails, with infill to match guards. Provide with **[cam-type, self-closing]** **[spring]** hinges for fastening to wall and overlapping stop with rubber bumper to prevent gate from opening in direction opposite egress.
- C. Welded Connections: Fabricate railings with welded connections. Cope components at connections to provide close fit, or use fittings designed for this purpose. Weld all around at connections, including at fittings.
1. Finish welds to comply with NOMMA's "Voluntary Joint Finish Standards" for **[Type 1 welds: no evidence of a welded joint]** **[Type 2 welds: completely sanded joint, some undercutting and pinholes okay]** **[Type 3 welds: partially dressed weld with spatter removed]** **[Type 4 welds: good quality, uniform undressed weld with minimal splatter]**.

- D. Form changes in direction of railings as follows:
1. As detailed.
 2. By bending[**or by inserting prefabricated elbow fittings**].
 3. By flush bends[**or by inserting prefabricated flush-elbow fittings**].
 4. By radius bends of radius indicated[**or by inserting prefabricated elbow fittings of radius indicated**].
 5. By inserting prefabricated [**elbow fittings**] [**flush-elbow fittings**] [**elbow fittings of radius indicated**].
- E. Form simple and compound curves by bending members in jigs to produce uniform curvature for each repetitive configuration required; maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.
- F. Close exposed ends of railing members with prefabricated end fittings.
- G. Provide wall returns at ends of wall-mounted handrails unless otherwise indicated. Close ends of returns unless clearance between end of rail and wall is **1/4 inch** (6 mm) or less.
- H. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, end closures, flanges, miscellaneous fittings, and anchors for interconnecting components and for attaching to other work. Furnish inserts and other anchorage devices for connecting to concrete or masonry work.
1. Connect posts to stair framing by direct welding unless otherwise indicated.
 2. For galvanized railings, provide galvanized fittings, brackets, fasteners, sleeves, and other ferrous-metal components.
 3. For nongalvanized railings, provide nongalvanized ferrous-metal fittings, brackets, fasteners, and sleeves, except galvanize anchors embedded in exterior masonry and concrete construction.
- I. Fillers: Provide fillers made from steel plate, or other suitably crush-resistant material, where needed to transfer wall bracket loads through wall finishes to structural supports. Size fillers to suit wall finish thicknesses and to produce adequate bearing area to prevent bracket rotation and overstressing of substrate.

2.11 FINISHES

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Finish metal stairs after assembly.
- C. Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A 153/A 153M for steel and iron hardware and with ASTM A 123/A 123M for other steel and iron products.

1. Do not quench or apply post galvanizing treatments that might interfere with paint adhesion.
 2. Fill vent and drain holes that will be exposed in finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.
- D. Preparation for Shop Priming: Prepare uncoated ferrous-metal surfaces to comply with **[SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning. "] [SSPC-SP 3, "Power Tool Cleaning. "] [minimum requirements indicated below for SSPC surface preparation specifications and environmental exposure conditions of installed products:]**
1. Exterior Stairs: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 2. Interior Stairs: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 3. Interior Stairs: SSPC-SP 3, "Power Tool Cleaning."
- E. Apply shop primer to uncoated surfaces of metal stair components, except those with galvanized finishes and those to be embedded in concrete or masonry unless otherwise indicated. Comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.
1. Stripe paint corners, crevices, bolts, welds, and sharp edges.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing metal stairs to in-place construction. Include threaded fasteners for concrete and masonry inserts, through-bolts, lag bolts, and other connectors.
- B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal stairs. Set units accurately in location, alignment, and elevation, measured from established lines and levels and free of rack.
- C. Install metal stairs by welding stair framing to steel structure or to weld plates cast into concrete unless otherwise indicated.
- D. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.
- E. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.
- F. Field Welding: Comply with requirements for welding in "Fabrication, General" Article. Reference Section 050510 "Welding" for general welding requirements.

- G. Place and finish concrete fill for treads and platforms to comply with Section 033000 "Cast-in-Place Concrete."
 - 1. Install abrasive nosings with anchors fully embedded in concrete. Center nosings on tread width.
- H. Install precast concrete treads with adhesive supplied by manufacturer.

3.2 INSTALLING METAL STAIRS WITH GROUTED BASEPLATES

- A. Clean concrete and masonry bearing surfaces of bond-reducing materials, and roughen to improve bond to surfaces. Clean bottom surface of baseplates.
- B. Set steel stair baseplates on wedges, shims, or leveling nuts. After stairs have been positioned and aligned, tighten anchor bolts. Do not remove wedges or shims but, if protruding, cut off flush with edge of bearing plate before packing with grout.
 - 1. Use nonmetallic, nonshrink grout unless otherwise indicated.
 - 2. Pack grout solidly between bearing surfaces and plates to ensure that no voids remain.

3.3 INSTALLING RAILINGS

- A. Adjust railing systems before anchoring to ensure matching alignment at abutting joints. Space posts at spacing indicated or, if not indicated, as required by design loads. Plumb posts in each direction. Secure posts and rail ends to building construction as follows:
 - 1. Anchor posts to steel by welding directly to steel supporting members.
 - 2. Anchor handrail ends to concrete and masonry with steel round flanges welded to rail ends and anchored with postinstalled anchors and bolts.
- B. Attach handrails to wall with wall brackets. Use type of bracket [**with flange tapped for concealed anchorage to threaded hanger bolt**] [**with predrilled hole for exposed bolt anchorage**]. Provide bracket with **1-1/2-inch** (38-mm) clearance from inside face of handrail and finished wall surface. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads. Secure wall brackets to building construction [**as required to comply with performance requirements.**] [**as follows:**]
 - 1. For concrete and solid masonry anchorage, use drilled-in expansion shields and hanger or lag bolts.
 - 2. For hollow masonry anchorage, use toggle bolts.
 - 3. For wood stud partitions, use hanger or lag bolts set into studs or wood backing between studs. Coordinate with carpentry work to locate backing members.
 - 4. For steel-framed partitions, use hanger or lag bolts set into [**fire-retardant-treated**] wood backing between studs. Coordinate with stud installation to locate backing members.

5. For steel-framed partitions, use self-tapping screws fastened to steel framing or to concealed steel reinforcements.
6. For steel-framed partitions, use toggle bolts installed through flanges of steel framing or through concealed steel reinforcements.

3.4 ADJUSTING AND CLEANING

- A. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 1. Apply by brush or spray to provide a minimum **2.0-mil** (0.05-mm) dry film thickness.
- B. Touchup Painting: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in [**Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."**] [**Section 099600 "High-Performance Coatings."**] [**Section 099113 "Exterior Painting," Section 099123 "Interior Painting," and Section 099600 "High-Performance Coatings."**]
- C. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 055100

SECTION 055213 - PIPE AND TUBE RAILINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Steel **[pipe] [and] [tube]** railings.
2. Aluminum **[pipe] [and] [tube]** railings.
3. Stainless-steel **[pipe] [and] [tube]** railings.

- B. Related Sections:

1. Section 050510 "Welding" for general welding requirements.
2. Section 055100 "Metal Stairs" for steel tube railings associated with metal stairs.
3. Section 057300 "Decorative Metal Railings" for ornamental railings fabricated from pipes and tubes.
4. **[Section 061000 "Rough Carpentry"] [Section 061053 "Miscellaneous Rough Carpentry"]** for wood blocking for anchoring railings.
5. Section 092216 "Non-Structural Metal Framing" for metal backing for anchoring railings.
6. Section 096900 "Access Flooring" for railings included with access flooring.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design railings, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. General: In engineering railings to withstand structural loads indicated, determine allowable design working stresses of railing materials based on the following:
1. Steel: 72 percent of minimum yield strength.
 2. Aluminum: The lesser of minimum yield strength divided by 1.65 or minimum ultimate tensile strength divided by 1.95.
 3. Stainless Steel: 60 percent of minimum yield strength.

- C. Structural Performance: Railings shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
1. Handrails and Top Rails of Guards:
 - a. Uniform load of 100 lbf/ ft. (1.46 kN/m) applied in any direction.
 - b. Concentrated load of 300 lbf (1.34 kN) applied in any direction.
 - c. Uniform and concentrated loads need not be assumed to act concurrently.
 2. Infill of Guards: Capable of withstanding a horizontal concentrated load at any point in the system including panels, intermediate rails balusters, or other elements composing the infill area.
 - a. Concentrated load of 200 lbf (0.88 kN) applied horizontally on an area of 1 sq. ft. (0.093 sq. m).
 - b. Infill load and other loads need not be assumed to act concurrently.
- D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on exterior metal fabrications by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects.
1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.
- E. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.

1.4 ACTION SUBMITTALS

- A. Product Data: For the following:
1. Manufacturer's product lines of mechanically connected railings.
 2. Railing brackets.
 3. Grout, anchoring cement, and paint products.
 4. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
 2. Laboratory Test Reports for Credit IEQ 4: For primers, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
- D. Samples for Initial Selection: For products involving selection of color, texture, or design[, **including mechanical finishes on stainless steel**].
- E. Samples for Verification: For each type of exposed finish required.
 - 1. Sections of each distinctly different linear railing member, including handrails, top rails, posts, and balusters.
 - 2. Fittings and brackets.
 - 3. Assembled Sample of railing system, made from full-size components, including top rail, post, handrail, and infill. Sample need not be full height.
 - a. Show method of **[finishing]** **[connecting]** members at intersections.
- F. Delegated-Design Submittal: For installed products indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified **[professional engineer]** **[testing agency]**.
- B. Mill Certificates: Signed by manufacturers of stainless-steel products certifying that products furnished comply with requirements.
- C. Welding certificates.
- D. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers certifying that shop primers are compatible with topcoats.
- E. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, according to ASTM E 894 and ASTM E 935.

1.6 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Source Limitations: Obtain each type of railing from single source from single manufacturer.
- B. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

- C. Welding Qualifications: Qualify procedures and personnel according to the following:
1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
 3. AWS D1.6, "Structural Welding Code - Stainless Steel."

1.8 PROJECT CONDITIONS

- A. Field Measurements: Verify actual locations of walls and other construction contiguous with metal fabrications by field measurements before fabrication.

1.9 COORDINATION AND SCHEDULING

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.
- B. Coordinate installation of anchorages for railings. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.
- C. Schedule installation so wall attachments are made only to completed walls. Do not support railings temporarily by any means that do not satisfy structural performance requirements.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Steel Pipe and Tube Railings:
 - a. Pisor Industries, Inc.
 - b. Wagner, R & B, Inc.; a division of the Wagner Companies.
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.

2. Aluminum Pipe and Tube Railings:
 - a. ATR Technologies, Inc.
 - b. Blum, Julius & Co., Inc.
 - c. Braun, J. G., Company; a division of the Wagner Companies.
 - d. CraneVeyor Corp.
 - e. Hollaender Manufacturing Company.
 - f. Kee Industrial Products, Inc.
 - g. Moultrie Manufacturing Company.
 - h. Pisor Industries, Inc.
 - i. Sterling Dula Architectural Products, Inc.; Div. of Kane Manufacturing.
 - j. Superior Aluminum Products, Inc.
 - k. Thompson Fabricating, LLC.
 - l. Tri Tech, Inc.
 - m. Tubular Specialties Manufacturing, Inc.
 - n. Tuttle Railing Systems; Div. of Tuttle Aluminum & Bronze, Inc.
 - o. Wagner, R & B, Inc.; a division of the Wagner Companies.
 - p. **<Insert manufacturer's name>**.
 - q. or approved equal.

3. Stainless-Steel Pipe and Tube Railings:
 - a. Blum, Julius & Co., Inc.
 - b. Paragon Aquatics; Division of Pentair, Inc.
 - c. Pisor Industries, Inc.
 - d. Stainless Fabricators, Inc.
 - e. Sterling Dula Architectural Products, Inc.; Div. of Kane Manufacturing.
 - f. Tri Tech, Inc.
 - g. Tubular Specialties Manufacturing, Inc.
 - h. Tuttle Railing Systems; Div. of Tuttle Aluminum & Bronze, Inc.
 - i. Wagner, R & B, Inc.; a division of the Wagner Companies.
 - j. **<Insert manufacturer's name>**.
 - k. or approved equal.

2.2 METALS, GENERAL

- A. Metal Surfaces, General: Provide materials with smooth surfaces, without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.
- B. Brackets, Flanges, and Anchors: Cast or formed metal of same type of material and finish as supported rails unless otherwise indicated.

2.3 STEEL AND IRON

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [25] **<Insert number>** percent.
- B. Tubing: **[ASTM A 500 (cold formed)] [or] [ASTM A 513]**.

- C. Pipe: ASTM A 53/A 53M, Type F or Type S, Grade A, Standard Weight (Schedule 40), unless another grade and weight are required by structural loads.
1. Provide galvanized finish for exterior installations and where indicated.
- D. Plates, Shapes, and Bars: ASTM A 36/A 36M.
- E. Cast Iron: Either gray iron, ASTM A 48/A 48M, or malleable iron, ASTM A 47/A 47M, unless otherwise indicated.
- F. Expanded Metal: ASTM F 1267, **[Type I (expanded)] [Type II (expanded and flattened)]**, Class 1 (uncoated).
1. Style Designation: **[3/4 number 13] [1-1/2 number 10] <Insert designation>**.
- G. Perforated Metal: Cold-rolled steel sheet, ASTM A 1008/A 1008M, or hot-rolled steel sheet, ASTM A 1011/A 1011M, commercial steel Type B, **[0.060 inch (1.52 mm)] <Insert thickness> thick, [with 1/4-inch (6.4-mm) holes 3/8 inch (9.5 mm) o.c. in staggered rows] <Insert description>**.
- H. Perforated Metal: Galvanized-steel sheet, ASTM A 653/A 653M, **G90 (Z275)** coating, commercial steel Type B, **[0.064 inch (1.63 mm)] <Insert thickness> thick, [with 1/4-inch (6.4-mm) holes 3/8 inch (9.5 mm) o.c. in staggered rows] [with 1/8-by-1-inch (3.2-by-25.4-mm) round end slotted holes in staggered rows] <Insert description>**.
- I. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. **<Insert manufacturer's name; product name or designation>**.
 2. or approved equal.
- J. Woven-Wire Mesh: Intermediate-crimp, **[diamond] [square]** pattern, **2-inch (50-mm)** woven-wire mesh, made from **0.135-inch (3.5-mm)** nominal diameter wire complying with **ASTM A 510 (ASTM A 510M)**.

2.4 ALUMINUM

- A. Aluminum, General: Provide alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with not less than the strength and durability properties of alloy and temper designated below for each aluminum form required.
- B. Extruded **[Bars] [and] [Tubing]**: **ASTM B 221 (ASTM B 221M)**, Alloy 6063-T5/T52.
- C. Extruded Structural **[Pipe] [and] [Round Tubing]**: **ASTM B 429/B 429M**, Alloy 6063-T6.
1. Provide Standard Weight (Schedule 40) pipe, unless otherwise indicated.
- D. Drawn Seamless Tubing: **ASTM B 210 (ASTM B 210M)**, Alloy 6063-T832.

- E. Plate and Sheet: **ASTM B 209** (ASTM B 209M), Alloy 6061-T6.
- F. Die and Hand Forgings: **ASTM B 247** (ASTM B 247M), Alloy 6061-T6.
- G. Castings: ASTM B 26/B 26M, Alloy A356.0-T6.
- H. Perforated Metal: Aluminum sheet, **ASTM B 209** (ASTM B 209M), Alloy 6061-T6, [**0.063 inch (1.60 mm)**] <Insert thickness> thick, [with **1/4-inch (6.4-mm) holes 3/8 inch (9.5 mm) o.c. in staggered rows**] <Insert description>.
- I. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. <Insert manufacturer's name; product name or designation>.
 - 2. or approved equal.
- J. Woven-Wire Mesh: Intermediate-crimp, [**diamond**] [**square**] pattern, **2-inch (50-mm)** woven-wire mesh, made from **0.162-inch (4.1-mm)** nominal diameter wire complying with **ASTM B 211** (ASTM B 211M), Alloy 6061-T94.

2.5 STAINLESS STEEL

- A. Tubing: ASTM A 554, [**Grade MT 304**] [**Grade MT 316L**].
- B. Pipe: ASTM A 312/A 312M, [**Grade TP 304**] [**Grade TP 316L**].
- C. Castings: ASTM A 743/A 743M, [**Grade CF 8 or CF 20**] [**Grade CF 8M or CF 3M**].
- D. Plate and Sheet: ASTM A 240/A 240M or ASTM A 666, [**Type 304**] [**Type 316L**].
- E. Expanded Metal: ASTM F 1267, [**Type I (expanded)**] [**Type II (expanded and flattened)**], Class 3 (corrosion-resistant steel), made from stainless-steel sheet, ASTM A 240/A 240M or ASTM A 666, [**Type 304**] [**Type 316**].
 - 1. Style Designation: [**3/4 number 13**] [**1-1/2 number 10**] <Insert designation>.
- F. Perforated Metal: Stainless-steel sheet, ASTM A 240/A 240M or ASTM A 666, [**Type 304**] [**Type 316L**], [**0.062 inch (1.59 mm)**] <Insert thickness> thick, [with **1/4-inch (6.4-mm) holes 3/8 inch (9.5 mm) o.c. in staggered rows**] <Insert description>.
- G. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. <Insert manufacturer's name; product name or designation>.
 - 2. or approved equal.
- H. Woven-Wire Mesh: Intermediate-crimp, [**diamond**] [**square**] pattern, **2-inch (50-mm)** woven-wire mesh, made from **0.135-inch (3.5-mm)** nominal diameter wire complying with ASTM A 580/A 580M, [**Type 304**] [**Type 316**].

2.6 FASTENERS

A. General: Provide the following:

1. Ungalvanized-Steel Railings: Plated steel fasteners complying with ASTM B 633 or [ASTM F 1941](#) (ASTM F 1941M), Class Fe/Zn 5 for zinc coating.
2. Hot-Dip Galvanized Railings: Type 304 stainless-steel or hot-dip zinc-coated steel fasteners complying with ASTM A 153/A 153M or ASTM F 2329 for zinc coating.
3. Aluminum Railings: **[Type 304]** **[Type 316]** stainless-steel fasteners.
4. Stainless-Steel Railings: **[Type 304]** **[Type 316]** stainless-steel fasteners.

B. Fasteners for Anchoring Railings to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings to other types of construction indicated **[and capable of withstanding design loads]**.

C. Fasteners for Interconnecting Railing Components:

1. Provide concealed fasteners for interconnecting railing components and for attaching them to other work, unless otherwise indicated.
2. Provide concealed fasteners for interconnecting railing components and for attaching them to other work, unless exposed fasteners are unavoidable or are the standard fastening method for railings indicated.
3. Provide **[Phillips]** **[tamper-resistant]** **[square or hex socket]** flat-head machine screws for exposed fasteners unless otherwise indicated.

D. Post-Installed Anchors: **[Torque-controlled expansion anchors]** **[or]** **[chemical anchors]** capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing according to ASTM E 488, conducted by a qualified independent testing agency.

1. Material for Interior Locations: Carbon-steel components zinc-plated to comply with ASTM B 633 or [ASTM F 1941](#) (ASTM F 1941M), Class Fe/Zn 5, unless otherwise indicated.
2. Material for Exterior Locations and Where Stainless Steel is Indicated: Alloy **[Group 1 (A1)]** **[Group 2 (A4)]** stainless-steel bolts, [ASTM F 593](#) (ASTM F 738M), and nuts, [ASTM F 594](#) (ASTM F 836M).

2.7 MISCELLANEOUS MATERIALS

A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

1. For **[aluminum]** **[and]** **[stainless-steel]** railings, provide type and alloy as recommended by producer of metal to be welded and as required for color match, strength, and compatibility in fabricated items.

- B. Low-Emitting Materials: Paints and coatings shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Etching Cleaner for Galvanized Metal: Complying with MPI#25.
- D. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.
- E. Shop Primers: Provide primers that comply with [Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."] [Section 099600 "High-Performance Coatings."] [Section 099113 "Exterior Painting,"Section 099123 "Interior Painting," and Section 099600 "High-Performance Coatings."]
- F. Universal Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat.
1. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.
- G. Epoxy Zinc-Rich Primer: Complying with MPI#20 and compatible with topcoat.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. <Insert, in separate subparagraphs, manufacturer's name; product name or designation>.
 - b. or approved equal.
- H. Shop Primer for Galvanized Steel: [Cementitious galvanized metal primer complying with MPI#26] [Vinyl wash primer complying with MPI#80] [Water based galvanized metal primer complying with MPI#134].
- I. Intermediate Coats and Topcoats: Provide products that comply with [Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."] [Section 099600 "High-Performance Coatings."] [Section 099113 "Exterior Painting,"Section 099123 "Interior Painting,"and Section 099600 "High-Performance Coatings."]
- J. Epoxy Intermediate Coat: Complying with MPI #77 and compatible with primer and topcoat.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. <Insert, in separate subparagraphs, manufacturer's name; product name or designation>.
 - b. or approved equal.
- K. Polyurethane Topcoat: Complying with MPI #72 and compatible with undercoat.
1. Products: Subject to compliance with requirements, provide one of the following:

- a. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
 - b. or approved equal.
- L. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.
- M. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107. Provide grout specifically recommended by manufacturer for interior and exterior applications.
- N. Anchoring Cement: Factory-packaged, nonshrink, nonstaining, hydraulic-controlled expansion cement formulation for mixing with water at Project site to create pourable anchoring, patching, and grouting compound.
1. Water-Resistant Product: **[At exterior locations] [and] [where indicated]** provide formulation that is resistant to erosion from water exposure without needing protection by a sealer or waterproof coating and that is recommended by manufacturer for exterior use.

2.8 FABRICATION

- A. General: Fabricate railings to comply with requirements indicated for design, dimensions, member sizes and spacing, details, finish, and anchorage[, **but not less than that required to support structural loads**].
- B. Assemble railings in the shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation. Use connections that maintain structural value of joined pieces.
- C. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately **1/32 inch** (1 mm) unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- D. Form work true to line and level with accurate angles and surfaces.
- E. Fabricate connections that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.
- F. Cut, reinforce, drill, and tap as indicated to receive finish hardware, screws, and similar items.
- G. Connections: Fabricate railings with **[welded] [nonwelded] [either welded or nonwelded]** connections unless otherwise indicated.
- H. Welded Connections: Cope components at connections to provide close fit, or use fittings designed for this purpose. Weld all around at connections, including at fittings. Reference Section 050510 "Welding" for general welding requirements.

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 2. Obtain fusion without undercut or overlap.
 3. Remove flux immediately.
 4. At exposed connections, finish exposed surfaces smooth and blended so no roughness shows after finishing and welded surface matches contours of adjoining surfaces.
- I. Welded Connections for Aluminum Pipe: Fabricate railings to interconnect members with concealed internal welds that eliminate surface grinding, using manufacturer's standard system of sleeve and socket fittings.
- J. Nonwelded Connections: Connect members with concealed mechanical fasteners and fittings. Fabricate members and fittings to produce flush, smooth, rigid, hairline joints.
1. Fabricate splice joints for field connection using an epoxy structural adhesive if this is manufacturer's standard splicing method.
- K. Form changes in direction as follows:
1. As detailed.
 2. **[By bending] [or] [by inserting prefabricated elbow fittings].**
 3. **[By flush bends] [or] [by inserting prefabricated flush-elbow fittings].**
 4. **[By radius bends of radius indicated] [or] [by inserting prefabricated elbow fittings of radius indicated].**
- L. Bend members in jigs to produce uniform curvature for each configuration required; maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.
- M. Close exposed ends of railing members with prefabricated end fittings.
- N. Provide wall returns at ends of wall-mounted handrails unless otherwise indicated. Close ends of returns unless clearance between end of rail and wall is **1/4 inch** (6 mm) or less.
- O. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, flanges, miscellaneous fittings, and anchors to interconnect railing members to other work unless otherwise indicated.
1. At brackets and fittings fastened to plaster or gypsum board partitions, provide crush-resistant fillers, or other means to transfer loads through wall finishes to structural supports and prevent bracket or fitting rotation and crushing of substrate.
- P. Provide inserts and other anchorage devices for connecting railings to concrete or masonry work. Fabricate anchorage devices capable of withstanding loads imposed by railings. Coordinate anchorage devices with supporting structure.

- Q. For railing posts set in concrete, provide **[steel] [stainless-steel]** sleeves not less than **6 inches** (150 mm) long with inside dimensions not less than **1/2 inch** (13 mm) greater than outside dimensions of post, with metal plate forming bottom closure.
- R. For removable railing posts, fabricate slip-fit sockets from **[steel] [stainless-steel]** tube or pipe whose ID is sized for a close fit with posts; limit movement of post without lateral load, measured at top, to not more than one-fortieth of post height. Provide socket covers designed and fabricated to resist being dislodged.
1. Provide chain with eye, snap hook, and staple across gaps formed by removable railing sections at locations indicated. Fabricate from same metal as railings.
- S. Expanded-Metal Infill Panels: Fabricate infill panels from expanded metal made from same metal as railings in which they are installed.
1. Edge panels with U-shaped channels made from metal sheet, of same metal as expanded metal and not less than **0.043 inch** (1.1 mm) thick.
 2. Orient expanded metal with long dimension of diamonds **[parallel to top rail] [perpendicular to top rail] [horizontal] [vertical]**.
- T. Perforated-Metal Infill Panels: Fabricate infill panels from perforated metal made from **[steel] [galvanized steel] [aluminum] [stainless steel] [same metal as railings in which they are installed]**.
1. Edge panels with U-shaped channels made from metal sheet, of same metal as perforated metal and not less than **0.043 inch** (1.1 mm) thick.
 2. Orient perforated metal with pattern **[parallel to top rail] [perpendicular to top rail] [horizontal] [vertical] [as indicated on Drawings]**.
- U. Woven-Wire Mesh Infill Panels: Fabricate infill panels from woven-wire mesh crimped into **1-by-1/2-by-1/8-inch** (25-by-13-by-3-mm) metal channel frames. Make wire mesh and frames from same metal as railings in which they are installed.
1. Orient wire mesh with **[diamonds vertical] [wires perpendicular and parallel to top rail] [wires horizontal and vertical]**.
- V. Toe Boards: Where indicated, provide toe boards at railings around openings and at edge of open-sided floors and platforms. Fabricate to dimensions and details indicated.
- 2.9 FINISHES, GENERAL
- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples.

Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

- D. Provide exposed fasteners with finish matching appearance, including color and texture, of railings.

2.10 STEEL AND IRON FINISHES

A. Galvanized Railings:

1. Hot-dip galvanize[**exterior**] steel and iron railings, including hardware, after fabrication.
2. Hot-dip galvanize indicated steel and iron railings, including hardware, after fabrication.
3. Comply with ASTM A 123/A 123M for hot-dip galvanized railings.
4. Comply with ASTM A 153/A 153M for hot-dip galvanized hardware.
5. Do not quench or apply post galvanizing treatments that might interfere with paint adhesion.
6. Fill vent and drain holes that will be exposed in the finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.

- B. For galvanized railings, provide hot-dip galvanized fittings, brackets, fasteners, sleeves, and other ferrous components.

- C. Preparing Galvanized Railings for Shop Priming: After galvanizing, thoroughly clean railings of grease, dirt, oil, flux, and other foreign matter, and treat with etching cleaner.

- D. For nongalvanized steel railings, provide nongalvanized ferrous-metal fittings, brackets, fasteners, and sleeves, except galvanize anchors to be embedded in exterior concrete or masonry.

- E. Preparation for Shop Priming: Prepare uncoated ferrous-metal surfaces to comply with **[SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning.]" [SSPC-SP 3, "Power Tool Cleaning.]" [requirements indicated below:]**

1. Exterior Railings: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
2. Railings Indicated to Receive Zinc-Rich Primer: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
3. Railings Indicated to Receive Primers Specified in Section 099600 "High-Performance Coatings": SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
4. Other Railings: SSPC-SP 3, "Power Tool Cleaning."

- F. Primer Application: Apply shop primer to prepared surfaces of railings unless otherwise indicated. Comply with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting. Primer need not be applied to surfaces to be embedded in concrete or masonry.

1. Shop prime uncoated railings with **[universal shop primer] [primers specified in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting"]** unless **[zinc-rich primer is] [primers specified in Section 099600 "High-Performance Coatings" are]** indicated.
 2. Do not apply primer to galvanized surfaces.
- G. Shop-Painted Finish: Comply with **[Section 099113 "Exterior Painting."]** **[Section 099600 "High-Performance Coatings."]**
1. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range].**
- H. High-Performance Coating: Apply epoxy intermediate and polyurethane topcoats to prime-coated surfaces. Comply with coating manufacturer's written instructions and with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting. Apply at spreading rates recommended by coating manufacturer.
1. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range].**

2.11 ALUMINUM FINISHES

- A. Mechanical Finish: AA-M12 (Mechanical Finish: nonspecular as fabricated).
- B. Clear Anodic Finish: AAMA 611, **[AA-M12C22A41, Class I, 0.018 mm] [AA-M12C22A31, Class II, 0.010 mm]** or thicker.
- C. Color Anodic Finish: AAMA 611, **[AA-M12C22A42/A44, Class I, 0.018 mm] [AA-M12C22A32/A34, Class II, 0.010 mm]** or thicker.
1. Color: **[Light bronze] [Medium bronze] [Dark bronze] [Black].**
 2. Color: **[Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors and color densities].**
- D. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of **1.5 mils** (0.04 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
1. Color and Gloss: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and gloss>.**
- E. High-Performance Organic Finish: Two-coat fluoropolymer finish complying with **[AAMA 2604] [AAMA 2605]** and containing not less than **[50] [70]** percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

1. Color and Gloss: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and gloss>.**

- F. High-Performance Organic Finish: **[Three] [Four]**-coat fluoropolymer finish complying with AAMA 2605 and containing not less than **[50] [70]** percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

1. Color and Gloss: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and gloss>.**

2.12 STAINLESS-STEEL FINISHES

- A. Remove tool and die marks and stretch lines, or blend into finish.
- B. Grind and polish surfaces to produce uniform, directionally textured, polished finish indicated, free of cross scratches. Run grain with long dimension of each piece.
- C. 180-Grit Polished Finish: Oil-ground, uniform, directionally textured finish.
- D. 320-Grit Polished Finish: Oil-ground, uniform, fine, directionally textured finish.
- E. Polished and Buffed Finish: Oil-ground, 180-grit finish followed by buffing.
- F. Directional Satin Finish: No. 4.
- G. Dull Satin Finish: No. 6.
- H. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine plaster and gypsum board assemblies, where reinforced to receive anchors, to verify that locations of concealed reinforcements have been clearly marked for Installer. Locate reinforcements and mark locations if not already done.

3.2 INSTALLATION, GENERAL

- A. Fit exposed connections together to form tight, hairline joints.

- B. Perform cutting, drilling, and fitting required for installing railings. Set railings accurately in location, alignment, and elevation; measured from established lines and levels and free of rack.
 - 1. Do not weld, cut, or abrade surfaces of railing components that have been coated or finished after fabrication and that are intended for field connection by mechanical or other means without further cutting or fitting.
 - 2. Set posts plumb within a tolerance of **1/16 inch in 3 feet** (2 mm in 1 m).
 - 3. Align rails so variations from level for horizontal members and variations from parallel with rake of steps and ramps for sloping members do not exceed **1/4 inch in 12 feet** (5 mm in 3 m).
- C. Corrosion Protection: Coat concealed surfaces of aluminum that will be in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.
- D. Adjust railings before anchoring to ensure matching alignment at abutting joints.
- E. Fastening to In-Place Construction: Use anchorage devices and fasteners where necessary for securing railings and for properly transferring loads to in-place construction.

3.3 RAILING CONNECTIONS

- A. Nonwelded Connections: Use mechanical or adhesive joints for permanently connecting railing components. Seal recessed holes of exposed locking screws using plastic cement filler colored to match finish of railings.
- B. Welded Connections: Use fully welded joints for permanently connecting railing components. Comply with requirements for welded connections in "Fabrication" Article whether welding is performed in the shop or in the field. Reference Section 050510 "Welding" for general welding requirements.
- C. Expansion Joints: Install expansion joints at locations indicated but not farther apart than required to accommodate thermal movement. Provide slip-joint internal sleeve extending **2 inches** (50 mm) beyond joint on either side, fasten internal sleeve securely to one side, and locate joint within **6 inches** (150 mm) of post.

3.4 ANCHORING POSTS

- A. Use metal sleeves preset and anchored into concrete for installing posts. After posts have been inserted into sleeves, fill annular space between post and sleeve with **[nonshrink, nonmetallic grout] [or] [anchoring cement]**, mixed and placed to comply with anchoring material manufacturer's written instructions.
- B. Form or core-drill holes not less than **5 inches** (125 mm) deep and **3/4 inch** (20 mm) larger than OD of post for installing posts in concrete. Clean holes of loose material, insert posts, and fill annular space between post and concrete with **[nonshrink,**

nonmetallic grout] [or] [**anchoring cement**], mixed and placed to comply with anchoring material manufacturer's written instructions.

- C. Cover anchorage joint with flange of same metal as post, [**welded to post after placing anchoring material**] [**attached to post with set screws**].
- D. Leave anchorage joint exposed with [**1/8-inch (3-mm) buildup, sloped away from post**] [**anchoring material flush with adjacent surface**].
- E. Anchor posts to metal surfaces with oval flanges, angle type, or floor type as required by conditions, connected to posts and to metal supporting members as follows:
 - 1. For aluminum pipe railings, attach posts using fittings designed and engineered for this purpose.
 - 2. For stainless-steel pipe railings, weld flanges to post and bolt to supporting surfaces.
 - 3. For steel pipe railings, weld flanges to post and bolt to metal supporting surfaces.
- F. Install removable railing sections, where indicated, in slip-fit metal sockets cast in concrete.

3.5 ATTACHING RAILINGS

- A. Anchor railing ends at walls with round flanges anchored to wall construction and [**welded to railing ends**] [or] [**connected to railing ends using nonwelded connections**].
- B. Anchor railing ends to metal surfaces with flanges bolted to metal surfaces and [**welded to railing ends**] [or] [**connected to railing ends using nonwelded connections**].
- C. Attach railings to wall with wall brackets[, **except where end flanges are used**]. Provide brackets with **1-1/2-inch (38-mm)** clearance from inside face of handrail and finished wall surface. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.
 - 1. Use type of bracket with [**flange tapped for concealed anchorage to threaded hanger bolt**] [**predrilled hole for exposed bolt anchorage**].
 - 2. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.
- D. Secure wall brackets and railing end flanges to building construction as follows:
 - 1. For concrete and solid masonry anchorage, use drilled-in expansion shields and hanger or lag bolts.
 - 2. For hollow masonry anchorage, use toggle bolts.
 - 3. For wood stud partitions, use hanger or lag bolts set into studs or wood backing between studs. Coordinate with carpentry work to locate backing members.

4. For steel-framed partitions, use hanger or lag bolts set into **[fire-retardant-treated]**wood backing between studs. Coordinate with stud installation to locate backing members.
5. For steel-framed partitions, use self-tapping screws fastened to steel framing or to concealed steel reinforcements.
6. For steel-framed partitions, use toggle bolts installed through flanges of steel framing or through concealed steel reinforcements.

3.6 ADJUSTING AND CLEANING

- A. Clean **[aluminum] [and] [stainless steel]** by washing thoroughly with clean water and soap and rinsing with clean water.
- B. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 1. Apply by brush or spray to provide a minimum **2.0-mil** (0.05-mm) dry film thickness.
- C. Touchup Painting: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in **[Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."]** **[Section 099600 "High-Performance Coatings."]** **[Section 099113 "Exterior Painting," Section 099123 "Interior Painting," and Section 099600 "High-Performance Coatings."]**
- D. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780.

3.7 PROTECTION

- A. Protect finishes of railings from damage during construction period with temporary protective coverings approved by railing manufacturer. Remove protective coverings at time of Substantial Completion.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 055213

SECTION 055300 - METAL GRATINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Metal bar gratings.
2. Expanded-metal gratings.
3. Formed-metal plank gratings.
4. Extruded-aluminum plank gratings.
5. Glass-fiber-reinforced plastic gratings.
6. Metal frames and supports for gratings.

- B. Related Sections:

1. Section 050510 "Welding" for general welding requirements.
2. Section 051200 "Structural Steel Framing" for structural-steel framing system components.
3. Section 055100 "Metal Stairs" for grating treads and landings of steel-framed stairs.
4. Section 055213 "Pipe and Tube Railings" for metal pipe and tube handrails and railings.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design gratings, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. Structural Performance: Gratings shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated.
 1. Floors: Uniform load of **125 lbf/sq. ft.** (6.00 kN/sq. m) or concentrated load of **2000 lbf** (8.90 kN), whichever produces the greater stress.

2. Floors: Uniform load of **250 lbf/sq. ft.** (11.97 kN/sq. m) or concentrated load of **3000 lbf** (13.40 kN), whichever produces the greater stress.
3. Walkways and Elevated Platforms Other Than Exits: Uniform load of **60 lbf/sq. ft.** (2.87 kN/sq. m).
4. Walkways and Elevated Platforms Used as Exits: Uniform load of **100 lbf/sq. ft.** (4.79 kN/sq. m).
5. Sidewalks and Vehicular Driveways, Subject to Trucking: Uniform load of **250 lbf/sq. ft.** (11.97 kN/sq. m) or concentrated load of **8000 lbf** (35.60 kN), whichever produces the greater stress.
6. Limit deflection to **[L/240] [L/360] <Insert deflection ratio>** or **1/4 inch** (6.4 mm), whichever is less.

- C. Seismic Performance: Provide gratings capable of withstanding the effects of earthquake motions determined according to **[ASCE/SEI 7] <Insert requirement>**.

1.4 ACTION SUBMITTALS

- A. Product Data: For the following:

1. Formed-metal plank gratings.
2. Extruded-aluminum plank gratings.
3. Glass-fiber-reinforced plastic gratings.
4. Clips and anchorage devices for gratings.
5. Paint products.
6. Include data substantiating that materials comply with requirements.

- B. LEED Submittals:

1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Laboratory Test Reports for Credit IEQ 4: For primers, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- C. Shop Drawings: Include plans, sections, details, and attachments to other work.

- D. Delegated-Design Submittal: For installed products indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified professional engineer.

- B. Mill Certificates: Signed by manufacturers of stainless-steel sheet certifying that products furnished comply with requirements.
- C. Welding certificates.
- D. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers certifying that shop primers are compatible with topcoats.

1.6 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Metal Bar Grating Standards: Comply with **[NAAMM MBG 531, "Metal Bar Grating Manual]" and [NAAMM MBG 532, "Heavy-Duty Metal Bar Grating Manual]."**
- B. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- C. Welding Qualifications: Qualify procedures and personnel according to the following:
 - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 - 2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
 - 3. AWS D1.3, "Structural Welding Code - Sheet Steel."
 - 4. AWS D1.6, "Structural Welding Code - Stainless Steel."

1.8 PROJECT CONDITIONS

- A. Field Measurements: Verify actual locations of walls and other construction contiguous with gratings by field measurements before fabrication.

1.9 COORDINATION

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.
- B. Coordinate installation of anchorages for gratings, grating frames, and supports. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 FERROUS METALS

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [25] <Insert number> percent.
- B. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.
- C. Steel Bars for Bar Gratings: ASTM A 36/A 36M or steel strip, ASTM A 1011/A 1011M or ASTM A 1018/A 1018M.
- D. Wire Rod for Bar Grating Crossbars: [ASTM A 510](#) (ASTM A 510M).
- E. Uncoated Steel Sheet: ASTM A 1011/A 1011M, structural steel, [Grade 30](#) (Grade 205).
- F. Galvanized-Steel Sheet: ASTM A 653/A 653M, structural quality, [Grade 33](#) (Grade 230), with [G90](#) (Z275) coating.
- G. Expanded-Metal Carbon Steel: ASTM F 1267, Class 1.
- H. Expanded-Metal Galvanized Steel: ASTM F 1267, Class 2, Grade A.
- I. Stainless-Steel Sheet, Strip, Plate, and Flat Bars: ASTM A 666, [**Type 304**] [**Type 316**].
- J. Stainless-Steel Bars and Shapes: ASTM A 276, [**Type 304**] [**Type 316**].
- K. Expanded-Metal Stainless Steel: ASTM F 1267, Class 3, made from stainless-steel sheet, ASTM A 666, [**Type 304**] [**Type 316**].

2.2 ALUMINUM

- A. Aluminum, General: Provide alloy and temper recommended by aluminum producer for type of use indicated, and with not less than the strength and durability properties of alloy and temper designated below for each aluminum form required.
- B. Extruded Bars and Shapes: [ASTM B 221](#) (ASTM B 221M), alloys as follows:
 - 1. 6061-T6 or 6063-T6, for bearing bars of gratings and shapes.
 - 2. 6061-T1, for grating crossbars.

- C. Aluminum Sheet: [ASTM B 209](#) (ASTM B 209M), Alloy 5052-H32.

2.3 FASTENERS

- A. General: Unless otherwise indicated, provide [**Type 304**] [**Type 316**] stainless-steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B 633 or [ASTM F 1941](#) (ASTM F 1941M), Class Fe/Zn 5, at exterior walls. Select fasteners for type, grade, and class required.

1. Provide stainless-steel fasteners for fastening aluminum.
2. Provide stainless steel fasteners for fastening stainless steel.

- B. Steel Bolts and Nuts: Regular hexagon-head bolts, [ASTM A 307, Grade A](#) (ASTM F 568M, Property Class 4.6); with hex nuts, [ASTM A 563](#) (ASTM A 563M); and, where indicated, flat washers.

- C. Stainless-Steel Bolts and Nuts: Regular hexagon-head annealed stainless-steel bolts, nuts, and, where indicated, flat washers; [ASTM F 593](#) (ASTM F 738M) for bolts and [ASTM F 594](#) (ASTM F 836M) for nuts, Alloy [**Group 1 (A1)**] [**Group 2 (A4)**].

- D. Anchor Bolts: ASTM F 1554, Grade 36, of dimensions indicated; with nuts, [ASTM A 563](#) (ASTM A 563M); and, where indicated, flat washers.

1. Hot-dip galvanize or provide mechanically deposited, zinc coating where item being fastened is indicated to be galvanized.

- E. Plain Washers: Round, [ASME B18.22.1](#) (ASME B18.22M).

- F. Lock Washers: Helical, spring type, [ASME B18.21.1](#) (ASME B18.21.2M).

- G. Post-Installed Anchors: [**Torque-controlled expansion anchors**] [**or**] [**chemical anchors**] capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing according to ASTM E 488, conducted by a qualified independent testing agency.

1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B 633 or [ASTM F 1941](#) (ASTM F 1941M), Class Fe/Zn 5, unless otherwise indicated.
2. Material for Exterior Locations and Where Stainless Steel is Indicated: Alloy [**Group 1 (A1)**] [**Group 2 (A4)**] stainless-steel bolts, [ASTM F 593](#) (ASTM F 738M), and nuts, [ASTM F 594](#) (ASTM F 836M).

2.4 MISCELLANEOUS MATERIALS

- A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy that is welded.

- B. Low-Emitting Materials: Paints and coatings shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Primers: Provide primers that comply with [**Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."**] [**Section 099600 "High-Performance Coatings."**] [**Section 099113 "Exterior Painting" and Section 099123 "Interior Painting," and Section 099600 "High-Performance Coatings."**]
- D. Universal Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat.
 - 1. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.
- E. Epoxy Zinc-Rich Primer: Complying with MPI#20 and compatible with topcoat.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
 - b. or approved equal.
- F. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.
- G. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

2.5 FABRICATION

- A. Shop Assembly: Fabricate grating sections in shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.
- B. Cut, drill, and punch material cleanly and accurately. Remove burrs and ease edges to a radius of approximately **1/32 inch** (1 mm) unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- C. Form from materials of size, thickness, and shapes indicated, but not less than that needed to support indicated loads.
- D. Fit exposed connections accurately together to form hairline joints.
- E. Welding: Reference Section 050510 "Welding" for general welding requirements. Comply with AWS recommendations and the following:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.

2. Obtain fusion without undercut or overlap.
3. Remove welding flux immediately.

F. Provide for anchorage of type indicated; coordinate with supporting structure. Fabricate and space the anchoring devices to secure gratings, frames, and supports rigidly in place and to support indicated loads.

1. Fabricate toeplates to fit grating units and weld to units in shop unless otherwise indicated.
2. Fabricate toeplates for attaching in the field.
3. Toeplate Height: **4 inches** (100 mm) unless otherwise indicated.

2.6 METAL BAR GRATINGS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Alabama Metal Industries Corporation; a Gibraltar Industries company.
2. All American Grating.
3. BarnettBates Corporation.
4. Borden Metal Products (Canada) Limited.
5. Fisher & Ludlow; Division of Harris Steel Limited.
6. Grating Pacific, Inc.
7. Grupo Metelmex, S.A. de C.V.
8. IKG Industries; a division of Harsco Corporation.
9. Marwas Steel Co.; Laurel Steel Products Division.
10. Ohio Gratings, Inc.
11. Seidelhuber Metal Products; Division of Brodhead Steel Products.
12. **<Insert manufacturer's name>**.
13. or approved equal.

B. Welded Steel Grating [**MBG-#>**]:

1. Bearing Bar Spacing: [**7/16 or 1/2 inch** (11 or 13 mm)] [**11/16 inch** (17 mm)] [**15/16 inch** (24 mm)] [**1-3/16 inches** (30 mm)] [**1-3/8 inches** (35 mm)] [**1-7/8 inches** (48 mm)] [**2-3/8 inches** (60 mm)] **<Insert dimension(s)> o.c.**
2. Bearing Bar Depth: [**3/4 inch** (19 mm)] [**1 inch** (25 mm)] [**1-1/4 inches** (32 mm)] [**1-1/2 inches** (38 mm)] [**1-3/4 inches** (44 mm)] [**2 inches** (51 mm)] [**2-1/4 inches** (57 mm)] [**2-1/2 inches** (64 mm)] [**3 inches** (76 mm)] [**3-1/2 inches** (89 mm)] [**4 inches** (102 mm)] [**4-1/2 inches** (114 mm)] [**5 inches** (127 mm)] [**As required to comply with structural performance requirements**].
3. Bearing Bar Thickness: [**1/8 inch** (3.2 mm)] [**3/16 inch** (4.8 mm)] [**1/4 inch** (6.4 mm)] [**3/8 inch** (9.5 mm)] [**As required to comply with structural performance requirements**].
4. Crossbar Spacing: [**2 inches** (51 mm)] [**4 inches** (102 mm)] o.c.
5. Grating Mark W-11-4 (1 x 3/16) STEEL: **1-by-3/16-inch** (25-by-4.8-mm) bearing bars at **11/16 inch** (18 mm) o.c., and crossbars at **4 inches** (102 mm) o.c.
6. Grating Mark W-15-4 (1 x 1/8) STEEL: **1-by-1/8-inch** (25-by-3.2-mm) bearing bars at **15/16 inch** (24 mm) o.c., and crossbars at **4 inches** (102 mm) o.c.

7. Grating Mark W-19-4 (1-1/4 x 3/16) STEEL: 1-1/4-by-3/16-inch (32-by-4.8-mm) bearing bars at 1-3/16 inches (30 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
 8. Grating Mark W-19-4 (1-1/2 x 3/16) STEEL: 1-1/2-by-3/16-inch (38-by-4.8-mm) bearing bars at 1-3/16 inches (30 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
 9. Grating Mark W-19-4 (2 x 1/4) STEEL: 2-by-1/4-inch (51-by-6.4-mm) bearing bars at 1-3/16 inches (30 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
 10. Grating Mark W-30-4 (5 x 3/8) STEEL: 5-by-3/8-inch (127-by-9.5-mm) bearing bars at 1-7/8 inches (60 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
 11. Grating Mark: As indicated.
 12. Traffic Surface: **[Plain] [Serrated] [Knurled] [Applied abrasive finish consisting of aluminum-oxide aggregate in an epoxy-resin adhesive] [As indicated]**.
 13. Steel Finish: **[Shop primed] [Hot-dip galvanized with a coating weight of not less than 1.8 oz./sq. ft. (550 g/sq. m) of coated surface]**.
- C. Pressure-Locked Steel Grating **[MBG-<#>]**: Fabricated by **[pressing rectangular flush-top crossbars into slotted bearing bars] [or] [swaging crossbars between bearing bars]**.
1. Bearing Bar Spacing: **[7/16 or 1/2 inch (11 or 13 mm)] [11/16 inch (17 mm)] [15/16 inch (24 mm)] [1-3/16 inches (30 mm)] <Insert dimension(s)> o.c.**
 2. Bearing Bar Depth: **[3/4 inch (19 mm)] [1 inch (25 mm)] [1-1/4 inches (32 mm)] [1-1/2 inches (38 mm)] [1-3/4 inches (44 mm)] [2 inches (51 mm)] [2-1/4 inches (57 mm)] [2-1/2 inches (64 mm)] [As required to comply with structural performance requirements] <Insert depth>.**
 3. Bearing Bar Thickness: **[1/8 inch (3.2 mm)] [3/16 inch (4.8 mm)] [As required to comply with structural performance requirements] <Insert thickness>.**
 4. Crossbar Spacing: **[2 inches (51 mm)] [4 inches (102 mm)] o.c.**
 5. Grating Mark P-11-4 (1 x 3/16) STEEL: 1-by-3/16-inch (25-by-4.8-mm) bearing bars at 11/16 inch (18 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
 6. Grating Mark P-15-4 (1-1/4 x 1/8) STEEL: 1-1/4-by-1/8-inch (32-by-3.2-mm) bearing bars at 15/16 inch (24 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
 7. Grating Mark P-19-4 (1-1/2 x 3/16) STEEL: 1-1/2-by-3/16-inch (38-by-4.8-mm) bearing bars at 1-3/16 inches (30 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
 8. Grating Mark: As indicated.
 9. Traffic Surface: **[Plain] [Serrated] [Knurled] [Applied abrasive finish consisting of aluminum-oxide aggregate in an epoxy-resin adhesive] [As indicated]**.
 10. Steel Finish: **[Shop primed] [Hot-dip galvanized with a coating weight of not less than 1.8 oz./sq. ft. (550 g/sq. m) of coated surface]**.
- D. Riveted Steel Grating **[MBG-<#>]**:
1. Bearing Bar Spacing: **[3/4 inch (19 mm)] [1-1/8 inches (29 mm)] [2-5/16 inches (59 mm)] <Insert dimension>, clear.**
 2. Bearing Bar Depth: **[3/4 inch (19 mm)] [1 inch (25 mm)] [1-1/4 inches (32 mm)] [1-1/2 inches (38 mm)] [1-3/4 inches (44 mm)] [2 inches (51 mm)] [2-1/4 inches (57**

- mm)] [2-1/2 inches (64 mm)] [3 inches (76 mm)] [3-1/2 inches (89 mm)] [4 inches (102 mm)] [4-1/2 inches (114 mm)] [5 inches (127 mm)] [As required to comply with structural performance requirements].
3. Bearing Bar Thickness: [1/8 inch (3.2 mm)] [3/16 inch (4.8 mm)] [1/4 inch (6.4 mm)] [3/8 inch (9.5 mm)] [As required to comply with structural performance requirements].
 4. Rivet Spacing: [3-1/2 inches (89 mm)] [5 inches (127 mm)] [7 inches (178 mm)] o.c. along bearing bar.
 5. Grating Mark R-12-3-1/2 (1 x 1/8) STEEL: 1-by-1/8-inch (25-by-3.2-mm) bearing bars with 3/4-inch (19-mm) clear space between bearing bars, and rivets at 3-1/2 inches (89 mm) o.c. along bearing bar.
 6. Grating Mark R-18-7 (1-1/2 x 3/16) STEEL: 1-1/2-by-3/16-inch (38-by-4.8-mm) bearing bars with 1-1/8-inch (29-mm) clear space between bearing bars, and rivets at 7 inches (178 mm) o.c. along bearing bar.
 7. Grating Mark R-37-5 (4 x 1/4) STEEL: 4-by-1/4-inch (102-by-6.4-mm) bearing bars with 2-5/16-inch (59-mm) clear space between bearing bars, and rivets at 5 inches (127 mm) o.c. along bearing bar.
 8. Grating Mark R-37-5 (5 x 3/8) STEEL: 5-by-3/8-inch (127-by-9.5-mm) bearing bars with 2-5/16-inch (59-mm) clear space between bearing bars, and rivets at 5 inches (127 mm) o.c. along bearing bar.
 9. Grating Mark: As indicated.
 10. Traffic Surface: [Plain] [Serrated] [Knurled] [Applied abrasive finish consisting of aluminum-oxide aggregate in an epoxy-resin adhesive] [As indicated].
 11. Steel Finish: [Shop primed] [Hot-dip galvanized with a coating weight of not less than 1.8 oz./sq. ft. (550 g/sq. m) of coated surface].
- E. Pressure-Locked, Stainless-Steel Grating [MBG-<#>]: Fabricated by [pressing rectangular flush-top crossbars into slotted bearing bars] [or] [swaging crossbars between bearing bars].
1. Bearing Bar Spacing: [7/16 or 1/2 inch (11 or 13 mm)] [11/16 inch (17 mm)] [15/16 inch (24 mm)] [1-3/16 inches (30 mm)] [1-3/8 inches (35 mm)] [1-7/8 inches (48 mm)] [2-3/8 inches (60 mm)] <Insert dimension(s)> o.c.
 2. Bearing Bar Depth: [3/4 inch (19 mm)] [1 inch (25 mm)] [1-1/4 inches (32 mm)] [1-1/2 inches (38 mm)] [1-3/4 inches (44 mm)] [2 inches (51 mm)] [2-1/4 inches (57 mm)] [2-1/2 inches (64 mm)] [3 inches (76 mm)] [3-1/2 inches (89 mm)] [4 inches (102 mm)] [4-1/2 inches (114 mm)] [5 inches (127 mm)] [As required to comply with structural performance requirements].
 3. Bearing Bar Thickness: [1/8 inch (3.2 mm)] [3/16 inch (4.8 mm)] [1/4 inch (6.4 mm)] [3/8 inch (9.5 mm)] [As required to comply with structural performance requirements].
 4. Crossbar Spacing: [2 inches (51 mm)] [4 inches (102 mm)] o.c.
 5. Grating Mark P-11-4 (1 x 3/16) STAINLESS STEEL: 1-by-3/16-inch (25-by-4.8-mm) bearing bars at 11/16 inch (18 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
 6. Grating Mark P-15-2 (1 x 1/8) STAINLESS STEEL: 1-by-1/8-inch (25-by-3.2-mm) bearing bars at 15/16 inch (24 mm) o.c., and crossbars at 2 inches (51 mm) o.c.

7. Grating Mark P-19-4 (1-1/2 x 3/16) STAINLESS STEEL: 1-1/2-by-3/16-inch (38-by-4.8-mm) bearing bars at 1-3/16 inches (30 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
 8. Grating Mark P-30-4 (3 x 3/8) STAINLESS STEEL: 3-by-3/8-inch (76-by-9.5-mm) bearing bars at 1-7/8 inches (48 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
 9. Grating Mark: As indicated.
 10. Traffic Surface: **[Plain] [Serrated] [Knurled] [Applied abrasive finish consisting of aluminum-oxide aggregate in an epoxy-resin adhesive] [As indicated].**
 11. Finish: **[Mill finish] [Abrasive blasted] [Electropolished].**
- F. Pressure-Locked, Rectangular Bar Aluminum Grating **[MBG-<#>]**: Fabricated by **[pressing rectangular flush-top crossbars into slotted bearing bars] [or] [swaging crossbars between bearing bars].**
1. Bearing Bar Spacing: **[7/16 or 1/2 inch (11 or 13 mm)] [11/16 inch (17.5 mm)] [15/16 inch (24 mm)] [1-3/16 inches (30 mm)] <Insert dimension(s)> o.c.**
 2. Bearing Bar Depth: **[1 inch (25 mm)] [1-1/4 inches (32 mm)] [1-1/2 inches (38 mm)] [1-3/4 inches (44 mm)] [2 inches (51 mm)] [2-1/4 inches (57 mm)] [2-1/2 inches (64 mm)] [As required to comply with structural performance requirements].**
 3. Bearing Bar Thickness: **[1/8 inch (3.2 mm)] [3/16 inch (4.8 mm)] [1/4 inch (6.4 mm)] [As required to comply with structural performance requirements].**
 4. Crossbar Spacing: **[2 inches (51 mm)] [4 inches (102 mm)] o.c.**
 5. Grating Mark P-7-4 (1 x 1/8) ALUMINUM: 1-by-1/8-inch (25-by-3.2-mm) bearing bars at 7/16 inch (11 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
 6. Grating Mark P-11-4 (1 x 3/16) ALUMINUM: 1-by-3/16-inch (25-by-4.8-mm) bearing bars at 11/16 inch (18 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
 7. Grating Mark P-15-4 (1-1/2 x 3/16) ALUMINUM: 1-1/2-by-3/16-inch (38-by-4.8-mm) bearing bars at 15/16 inch (24 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
 8. Grating Mark P-19-4 (2 x 3/16) ALUMINUM: 2-by-3/16-inch (51-by-4.8-mm) bearing bars at 1-3/16 inches (30 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
 9. Grating Mark: As indicated.
 10. Traffic Surface: **[Plain] [Applied abrasive finish consisting of aluminum-oxide aggregate in an epoxy-resin adhesive] [As indicated].**
 11. Aluminum Finish: **[Mill finish] [Class I, clear, anodized finish].**
- G. Pressure-Locked, Aluminum I-Bar Grating **[MBG-<#>]**: Fabricated by swaging crossbars between bearing bars.
1. Bearing Bar Spacing: **[7/16 or 1/2 inch (11 or 13 mm)] [11/16 inch (17 mm)] [15/16 inch (24 mm)] [1-3/16 inches (30 mm)] <Insert dimension(s)> o.c.**
 2. Bearing Bar Depth: **[1 inch (25 mm)] [1-1/4 inches (32 mm)] [1-1/2 inches (38 mm)] [1-3/4 inches (44 mm)] [2 inches (51 mm)] [2-1/4 inches (57 mm)] [2-1/2 inches (64 mm)] [As required to comply with structural performance requirements].**
 3. Bearing Bar Flange Width: **1/4 inch (6.4 mm).**
 4. Crossbar Spacing: **[2 inches (51 mm)] [4 inches (102 mm)] o.c.**
 5. Grating Mark P-11-4 (1 I-Bar) ALUMINUM: 1-inch (25-mm) I-bar bearing bars at 11/16 inch (18 mm) o.c., and crossbars at 4 inches (102 mm) o.c.

6. Grating Mark P-15-2 (1 I-Bar) ALUMINUM: **1-inch** (25-mm) I-bar bearing bars at **15/16 inch** (24 mm) o.c., and crossbars at **2 inches** (51 mm) o.c.
 7. Grating Mark P-19-4 (1-1/2 I-Bar) ALUMINUM: **1-1/2-inch** (38-mm) I-bar bearing bars at **1-3/16 inches** (30 mm) o.c., and crossbars at **4 inches** (102 mm) o.c.
 8. Grating Mark: As indicated.
 9. Traffic Surface: **[Plain] [Grooved] [Applied abrasive finish consisting of aluminum-oxide aggregate in an epoxy-resin adhesive] [As indicated]**.
 10. Aluminum Finish: **[Mill finish] [Class I, clear, anodized finish]**.
- H. Removable Grating Sections: Fabricate with banding bars attached by welding to entire perimeter of each section. Include anchors and fasteners of type indicated or, if not indicated, as recommended by manufacturer for attaching to supports.
1. Provide no fewer than four weld lugs for each heavy-duty grating section, with each lug shop welded to two bearing bars.
 2. Provide no fewer than four saddle clips for each grating section composed of rectangular bearing bars **3/16 inch** (4.8 mm) or less in thickness and spaced **15/16 inch** (24 mm) or more o.c., with each clip designed and fabricated to fit over two bearing bars.
 3. Provide no fewer than four weld lugs for each grating section composed of rectangular bearing bars **3/16 inch** (4.8 mm) or less in thickness and spaced less than **15/16 inch** (24 mm) o.c., with each lug shop welded to three or more bearing bars. Interrupt intermediate bearing bars as necessary for fasteners securing grating to supports.
 4. Provide no fewer than four flange blocks for each section of aluminum I-bar grating, with block designed to fit over lower flange of I-shaped bearing bars.
 5. Furnish threaded bolts with nuts and washers for securing grating to supports.
 6. Furnish self-drilling fasteners with washers for securing grating to supports.
 7. Furnish galvanized malleable-iron flange clamp with galvanized bolt for securing grating to supports. Furnish as a system designed to be installed from above grating by one person.
- a. Products: Subject to compliance with requirements, provide one of the following:
- 1) Kee Industrial Products, Inc.; Grating Clip.
 - 2) Lindapter North America, Inc.; Grate-Fast.
 - 3) **<Insert manufacturer's name; product name or designation>**.
 - 4) or approved equal.
- I. Fabricate cutouts in grating sections for penetrations indicated. Arrange cutouts to permit grating removal without disturbing items penetrating gratings.
1. Edge-band openings in grating that interrupt four or more bearing bars with bars of same size and material as bearing bars.
- J. Do not notch bearing bars at supports to maintain elevation.

2.7 EXPANDED-METAL GRATINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Alabama Metal Industries Corporation; a Gibraltar Industries company.
 2. All American Grating.
 3. Central Expanded Metal, Inc.
 4. Fisher & Ludlow; Division of Harris Steel Limited.
 5. Grating Pacific, Inc.
 6. **<Insert manufacturer's name>**.
 7. or approved equal.
- B. Provide expanded-metal gratings in material, finish, style, size, thickness, weight, and type indicated or, if not indicated, as recommended by manufacturer for indicated applications and as needed to support indicated loads.
1. Material: [**Steel**] [**Stainless steel**] [**Aluminum**].
 2. Steel Finish: [**Unfinished, oiled**] [**Shop primed**] [**Galvanized**].
 3. Stainless-Steel Finish: Mill finish, as fabricated.
 4. Aluminum Finish: Mill finish, as fabricated.
 5. Style Designation: [**4.27 lb**] [**3/4 number 9**].
 6. Style Designation: [**1-1/2 number 9**] [**3/4 number 9**].
 7. Size: [**2 lb**] [**3/4 0.188**] [**1-1/2 0.125**].
 8. Type: [**I, expanded**] [**II, expanded and flattened**].
- C. Fabricate cutouts in grating sections for penetrations of sizes and at locations indicated. Cut openings neatly and accurately to size. Edge-band openings with bars having a thickness not less than overall grating thickness at contact points.
- D. Where gratings are pierced by pipes, ducts, and structural members, cut openings neatly and accurately to size and weld a strap collar not less than **1/8 inch** (3 mm) thick to the cut ends. Divide panels into sections only to extent required for installation where grating platforms and runways are to be placed around previously installed pipe, ducts, and structural members.

2.8 FORMED-METAL PLANK GRATINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Alabama Metal Industries Corporation; a Gibraltar Industries company.
 2. Fisher & Ludlow; Division of Harris Steel Limited.
 3. Grating Pacific, Inc.
 4. GS Metals Corp.
 5. IKG Industries; a division of Harsco Corporation.
 6. Morton Manufacturing Company.
 7. Unistrut.
 8. **<Insert manufacturer's name>**.

9. or approved equal.
- B. C-shaped channels rolled from heavy sheet metal of thickness indicated, and punched in serrated diamond shape to produce raised slip-resistant surface and drainage holes.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Alabama Metal Industries Corporation, a Gibraltar Industries company; Diamond Grip.
 - b. Fisher & Ludlow, Division of Harris Steel Limited; Grip Span.
 - c. GS Metals Corp.; Grip Strut.
 - d. IKG Industries, a division of Harsco Corporation; Deck Span.
 - e. Morton Manufacturing Company; Grip-Tac.
 - f. **<Insert manufacturer's name; product name or designation>**.
 - g. or approved equal.
 2. Channel Width: [4-3/4 inches (121 mm)] [7 inches (178 mm)] [9-1/2 inches (241 mm)] [11-3/4 inches (298 mm)] [18-3/4 inches (476 mm)] [24 inches (610 mm)] [**As indicated**] [**As required to comply with structural performance requirements**].
 3. Channel Depth: [1-1/2 inches (38 mm)] [2 inches (51 mm)] [2-1/2 inches (64 mm)] [3 inches (76 mm)] [**As indicated**] [**As required to comply with structural performance requirements**].
 4. Material: [0.074-inch- (1.9-mm-) **thick steel sheet, shop primed**] [0.104-inch- (2.65-mm-) **thick steel sheet, shop primed**] [0.079-inch- (2.0-mm-) **thick, hot-dip galvanized-steel sheet**] [0.108-inch- (2.8-mm-) **thick, hot-dip galvanized-steel sheet**] [0.074-inch- (1.9-mm-) **thick steel sheet, hot-dip galvanized after fabrication**] [0.104-inch- (2.65-mm-) **thick steel sheet, hot-dip galvanized after fabrication**] [0.062-inch- (1.6-mm-) **thick, stainless-steel sheet**] [0.078-inch- (2.0-mm-) **thick, stainless-steel sheet**] [0.080-inch- (2.0-mm-) **thick aluminum sheet**] [0.100-inch- (2.5-mm-) **thick aluminum sheet**].
- C. Fabricate cutouts in grating sections for penetrations of sizes and at locations indicated. Cut openings neatly and accurately to size. Edge-band openings with metal sheet or bars having a thickness not less than grating material.
- D. Where gratings are pierced by pipes, ducts, and structural members, cut openings neatly and accurately to size and weld a strap collar not less than 1/8 inch (3 mm) thick to the cut ends. Divide panels into sections only to extent required for installation where grating platforms and runways are to be placed around previously installed pipe, ducts, and structural members.
- ## 2.9 EXTRUDED-ALUMINUM PLANK GRATINGS
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Alabama Metal Industries Corporation; a Gibraltar Industries company.
 2. IKG Industries; a division of Harsco Corporation.

3. Ohio Gratings, Inc.
 4. Seidelhuber Metal Products; Division of Brodhead Steel Products.
 5. **<Insert manufacturer's name>**.
 6. or approved equal.
- B. Provide extruded-aluminum plank gratings in type, size, and finish indicated or, if not indicated, as recommended by manufacturer for indicated applications and as needed to support indicated loads.
1. Type: Extruded-aluminum planks approximately **6 inches** (152 mm) wide with multiple flanges approximately **1.2 inches** (30 mm) o.c., acting as bearing bars connected by a web that serves as a walking surface. Top surface has raised ribs to increase slip resistance.
 2. Depth: [**1 inch** (25 mm)] [**1-1/2 inches** (38 mm)] [**2 inches** (51 mm)] [**As required to comply with structural performance requirements**].
 3. Perforations: [**None**] [**Rectangular, 19/32 by 3 inches** (15 by 76 mm), **with adjacent rows staggered**] [**19/32 inch** (15 mm) **square, with adjacent rows aligned**].
 4. Finish: Mill finish, as fabricated.
- C. Fabricate cutouts in grating sections for penetrations indicated. Arrange cutouts to permit grating removal without disturbing items penetrating gratings.

2.10 GLASS-FIBER-REINFORCED PLASTIC GRATINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. American Grating, LLC.
 2. Creative Pultrusions, Inc.
 3. Enduro Systems Inc.; Composite Products Division.
 4. Fibergrate Composite Structures Inc.
 5. Fisher & Ludlow; Division of Harris Steel Limited.
 6. Grating Pacific, Inc.
 7. Seasafe, Inc.; a Gibraltar Industries company.
 8. Strongwell Corporation.
 9. **<Insert manufacturer's name>**.
 10. or approved equal.
- B. Molded Glass-Fiber-Reinforced Gratings: Bar gratings made by placing glass-fiber strands that have been saturated with thermosetting plastic resin in molds in alternating directions to form interlocking bars without voids and with a high resin content.
1. Configuration: [**1-1/2-inch-** (38-mm-) **square mesh, 1 inch** (25 mm) **thick**] [**1-1/2-inch-** (38-mm-) **square mesh, 1-1/4 inches** (32 mm) **thick**] [**1-1/2-inch-** (38-mm-) **square mesh, 1-1/2 inches** (38 mm) **thick**] [**2-inch-** (51-mm-) **square mesh, 2 inches** (51 mm) **thick**] [**1-1/2-inch-** (38-mm-) **square mesh, thickness as required to comply with structural performance requirements**] [**As required**]

to comply with structural performance requirements] <Insert configuration>.

2. Weight: [2.5 lb/sq. ft. (12.2 kg/sq. m)] [2.7 lb/sq. ft. (13.2 kg/sq. m)] [3.2 lb/sq. ft. (15.6 kg/sq. m)] [3.5 lb/sq. ft. (17.1 kg/sq. m)] [3.7 lb/sq. ft. (18.1 kg/sq. m)] [4.1 lb/sq. ft. (20.0 kg/sq. m)] [5.0 lb/sq. ft. (24.4 kg/sq. m)] <Insert value>.
3. Resin: [Polyester] [Vinylester] <Insert description>.
 - a. Flame-Spread Index: 25 or less when tested according to ASTM E 84.
 - b. U.S.D.A. Acceptance: Accepted for food-processing applications.
4. Color: [Beige] [Gray] [Green] [Orange] [Yellow] [Manufacturer's standard].
5. Traffic Surface: [Plain, meniscus] [Applied abrasive finish] [As indicated].

C. Pultruded Glass-Fiber-Reinforced Gratings: Bar gratings assembled from components made by simultaneously pulling glass fibers and extruding thermosetting plastic resin through a heated die under pressure to produce a product without voids and with a high glass-fiber content.

1. Configuration: [I4010; 1-inch (25-mm) I-bars spaced 1 inch (25 mm) o.c. (40 percent open)] [I6010; 1-inch (25-mm) I-bars spaced 1-1/2 inches (38 mm) o.c. (60 percent open)] [I4015; 1-1/2-inch (38-mm) I-bars spaced 1 inch (25 mm) o.c. (40 percent open)] [I6015; 1-1/2-inch (38-mm) I-bars spaced 1-1/2 inches (38 mm) o.c. (60 percent open)] [T3320; 2-inch (51-mm) T-bars spaced 1-1/2 inches (38 mm) o.c. (33 percent open)] [T5020; 2-inch (51-mm) T-bars spaced 2 inches (51 mm) o.c. (50 percent open)] [As required to comply with structural performance requirements] <Insert configuration>.
2. Weight: [2.35 lb/sq. ft. (11.5 kg/sq. m)] [2.83 lb/sq. ft. (13.8 kg/sq. m)] [3.10 lb/sq. ft. (15.1 kg/sq. m)] [3.41 lb/sq. ft. (16.6 kg/sq. m)] [4.10 lb/sq. ft. (20.0 kg/sq. m)] [4.13 lb/sq. ft. (20.2 kg/sq. m)] <Insert value>.
3. Resin Type: [Polyester] [Vinylester] <Insert description>.
 - a. Flame-Spread Index: 25 or less when tested according to ASTM E 84.
 - b. U.S.D.A. Acceptance: Accepted for food processing applications.
4. Color: [Beige] [Gray] [Green] [Orange] [Yellow] [Manufacturer's standard].
5. Traffic Surface: [Plain, grooved] [Applied abrasive finish] [As indicated].

D. Fabricate cutouts in grating sections for penetrations indicated. Arrange cutouts to permit grating removal without disturbing items penetrating gratings.

2.11 GRATING FRAMES AND SUPPORTS

A. Frames and Supports for Metal Gratings: Fabricate from metal shapes, plates, and bars of welded construction to sizes, shapes, and profiles indicated and as necessary to receive gratings. Miter and weld connections for perimeter angle frames. Cut, drill, and tap units to receive hardware and similar items.

1. Unless otherwise indicated, fabricate from same basic metal as gratings.

2. Equip units indicated to be cast into concrete or built into masonry with integrally welded anchors. Unless otherwise indicated, space anchors **24 inches** (600 mm) o.c. and provide minimum anchor units in the form of steel straps **1-1/4 inches** (32 mm) wide by **1/4 inch** (6 mm) thick by **8 inches** (200 mm) long.
- B. Frames and Supports for Glass-Fiber-Reinforced Plastic Gratings: Fabricate from glass-fiber-reinforced plastic shapes of sizes, shapes, and profiles indicated and as necessary to receive gratings. Miter connections for perimeter angle frames. Cut, drill, and tap units to receive hardware and similar items.
1. Unless otherwise indicated, use shapes made from same resin as gratings.
 2. Equip units indicated to be cast into concrete or built into masonry with integral anchors.
- C. Galvanize steel frames and supports in the following locations:
1. Exterior.
 2. Interior[, **where indicated**].

2.12 ALUMINUM FINISHES

- A. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
- B. Class I, Clear Anodic Finish: AA-M12C22A41 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.

2.13 STEEL FINISHES

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Finish gratings, frames, and supports after assembly.
- C. Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A 153/A 153M for steel and iron hardware and with ASTM A 123/A 123M for other steel and iron products.
1. Do not quench or apply post galvanizing treatments that might interfere with paint adhesion.
- D. Shop prime gratings, frames and supports[**not indicated to be galvanized**] unless otherwise indicated.
1. Shop prime with [**universal shop primer**] [**primers specified in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting"**] unless [**zinc-rich primer is**] [**primers specified in Section 099600 "High-Performance Coatings" are**] indicated.

- E. Preparation for Shop Priming: Prepare surfaces to comply with [**SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."**] [**SSPC-SP 7/NACE No. 4, "Brush-off Blast Cleaning."**] [requirements indicated below:]
1. Exterior Items: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 2. Items Indicated to Receive Zinc-Rich Primer: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 3. Items Indicated to Receive Primers Specified in Section 099600 "High-Performance Coatings": SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 4. Other Items: SSPC-SP 7/NACE No. 4, "Brush-off Blast Cleaning."
- F. Shop Priming: Apply shop primer to comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing gratings to in-place construction. Include threaded fasteners for concrete and masonry inserts, through-bolts, lag bolts, and other connectors.
- B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing gratings. Set units accurately in location, alignment, and elevation; measured from established lines and levels and free of rack.
- C. Provide temporary bracing or anchors in formwork for items that are to be built into concrete or masonry.
- D. Fit exposed connections accurately together to form hairline joints.
1. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade the surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.
- E. Attach toeplates to gratings by welding at locations indicated.
- F. Field Welding: Reference Section 050510 "Welding" for general welding requirements. Comply with the following requirements:
1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 2. Obtain fusion without undercut or overlap.
 3. Remove welding flux immediately.

- G. Corrosion Protection: Coat concealed surfaces of aluminum that will come into contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.

3.2 INSTALLING METAL BAR GRATINGS

- A. General: Install gratings to comply with recommendations of referenced metal bar grating standards that apply to grating types and bar sizes indicated, including installation clearances and standard anchoring details.
- B. Attach removable units to supporting members with type and size of clips and fasteners indicated or, if not indicated, as recommended by grating manufacturer for type of installation conditions shown.
- C. Attach nonremovable units to supporting members by welding where both materials are same; otherwise, fasten by bolting as indicated above.

3.3 INSTALLING EXPANDED-METAL GRATINGS

- A. General: Comply with manufacturer's written instructions for installing gratings.
- B. Place units with straight edge of bond up and with long direction of diamond-shaped openings parallel to direction of span.
- C. Attach removable units to supporting members by bolting at **6-inch** (150-mm) intervals.
- D. Attach nonremovable units to supporting members by welding unless otherwise indicated. Space welds at **6-inch** (150-mm) intervals.
- E. Attach aluminum units to steel supporting members by bolting at **6-inch** (150-mm) intervals.
- F. Butt edges parallel to long direction of diamond-shaped openings and weld at every second bond point. Place individual grating sections so diamonds of one piece are aligned with those of adjacent sections.

3.4 INSTALLING METAL PLANK GRATINGS

- A. General: Comply with manufacturer's written instructions for installing gratings. Use manufacturer's standard anchor clips and hold-down devices for bolted connections.
- B. Attach removable units to supporting members by bolting at every point of contact.
- C. Attach nonremovable units to supporting members by welding unless otherwise indicated. Comply with manufacturer's written instructions for size and spacing of welds.

- D. Attach aluminum units to steel supporting members by bolting at side channels at every point of contact and by bolting intermediate planks at each end on alternate sides. Bolt adjacent planks together at midspan.

3.5 INSTALLING GLASS-FIBER-REINFORCED PLASTIC GRATINGS

- A. Comply with manufacturer's written instructions for installing gratings. Use manufacturer's standard stainless-steel anchor clips and hold-down devices for bolted connections.

3.6 ADJUSTING AND CLEANING

- A. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with same material as used for shop painting to comply with SSPC-PA 1 requirements for touching up shop-painted surfaces.

- 1. Apply by brush or spray to provide a minimum **2.0-mil** (0.05-mm) dry film thickness.

- B. Touchup Painting: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."

- C. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 055300

SECTION 055813 - COLUMN COVERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes [**spackled-seam**] [**and**] [**snap-together**] metal column covers.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product, including finishing materials.
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Credit IEQ 4.1: For [**adhesives**] [**and**] [**sealants**], documentation including printed statement of VOC content.
 - 2. Laboratory Test Reports for Credit IEQ 4.1: For [**adhesives**] [**and**] [**sealants**], documentation indicating that products comply with the testing and product requirements of the California Department of Public Health's (formerly, the California Department of Health Services') "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 - 3. Laboratory Test Reports for Credit IEQ 4.2: For paints and coatings, documentation indicating that products comply with the testing and product requirements of the California Department of Public Health's (formerly, the California Department of Health Services') "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- C. Shop Drawings: Show fabrication and installation details for column covers.
- D. Samples for Initial Selection: For products involving selection of color, texture, or design[, **including mechanical finishes**].
- E. Samples for Verification: For each type of exposed finish required, prepared on **6-inch-**
(150-mm-) square Samples of metal of same thickness and material indicated for the Work.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For **[fabricator] [organic-coating applicator] [anodic finisher] [and] [powder-coating applicator]**.
- B. Mill Certificates: Signed by stainless-steel manufacturers certifying that products furnished comply with requirements.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For **[mirrorlike stainless-steel finish] [and] [statuary conversion coating copper-alloy finish]** to include in maintenance manuals.

1.6 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Fabricator Qualifications: A firm experienced in producing column covers similar to that indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.
- B. Organic-Coating Applicator Qualifications: A firm experienced in successfully applying organic coatings of type indicated to metals of types indicated and that employs competent control personnel to conduct continuing, effective quality-control program to ensure compliance with requirements.
- C. Anodic Finisher Qualifications: A firm experienced in successfully applying anodic finishes of type indicated and that employs competent control personnel to conduct continuing, effective quality-control program to ensure compliance with requirements.
- D. Powder-Coating Applicator Qualifications: A firm experienced in successfully applying powder coatings of type indicated to metals of types indicated and that employs competent control personnel to conduct continuing, effective quality-control program to ensure compliance with requirements.
- E. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
 - 1. Build mockups of typical column covers.
 - 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver column covers wrapped in protective coverings and strapped together in suitable packs or in heavy-duty cartons. Remove protective coverings before they stain or bond to finished surfaces.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 SPACKLED-SEAM COLUMN COVERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
- [Fry Reglet Corporation.](#)
 - [MM Systems Corporation.](#)
 - [Pittcon Industries.](#)
 - <Insert manufacturer's name>.**
 - or approved equal.
- B. Form column covers from **0.125-inch (3.2-mm)** aluminum sheet complying with **ASTM B 209 (ASTM B 209M)**, with not less than strength and durability properties of Alloy 5005-H32; rolled to radii indicated. Taper edges of adjoining pieces of column covers, for taping and spackling, to **0.094-inch (2.4-mm)** thickness in approximately **1 inch (25 mm)** of width. Punch tapered edges for gypsum board screws at **1/2 inch (12 mm)** o.c., and mill grooves in tapered edge to improve bond with joint compound.
- Support Framing: At vertical joints, provide **1-1/2-by-3-5/8-inch (38-by-89-mm)** steel channel support posts formed from **0.040-inch (1.0-mm)** galvanized steel.
 - Joint Treatment Materials: Provide joint treatment compounds and reinforcing tape complying with requirements in Section 092900 "Gypsum Board."

2.2 SNAP-TOGETHER COLUMN COVERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
- [ATAS International, Inc.](#)
 - [Ceilings Plus.](#)
 - [Construction Services, Inc.](#)
 - [Firestone Metal Products, LLC; Una-Clad.](#)
 - [Fry Reglet Corporation.](#)

6. [Hi-Tech Metals, Inc.](#)
7. [Industrial Louvers Inc.](#)
8. [Kanalco Ltd.](#)
9. [Leed Himmel Industries, Inc.](#)
10. [Metal Sales & Service, Inc.; Metalwerks Division.](#)
11. [MM Systems Corporation.](#)
12. [Pittcon Industries.](#)
13. [Protean Construction Products, Inc.](#)
14. [Southwest Metalsmiths.](#)
15. <Insert manufacturer's name>.
16. or approved equal.

B. Form column covers to shapes indicated from metal of type and minimum thickness indicated below. Return vertical edges and bend to form hook that engages continuous mounting clips.

1. Aluminum Sheet: [ASTM B 209](#) (ASTM B 209M), with not less than strength and durability properties of Alloy 5005-H32, [[0.063 inch](#) (1.60 mm)] <Insert dimension> thick.
 - a. Finish: [**Baked enamel or powder coat**] [**Siliconized polyester**] [**High-performance organic coating**] [**Mill**] [**Clear anodic**] [**Color anodic**].
2. Steel Sheet: Uncoated, cold-rolled, ASTM A 1008/A 1008M, commercial steel, exposed, [[0.060 inch](#) (1.52 mm)] <Insert dimension> thick.
 - a. Finish: [**Factory primed**] [**Baked enamel**] [**Powder coat**].
3. Stainless-Steel Sheet: ASTM A 240/A 240M or ASTM A 666, [**Type 304**] [**Type 316**], [[0.050 inch](#) (1.27 mm)] <Insert dimension> thick.
 - a. Finish: [**No. 2B**] [**No. 4**] [**No. 6**] [**No. 7**] [**No. 8**].
4. Bronze Sheet: ASTM B 36/B 36M, Alloy UNS C28000 (muntz metal, 60 percent copper) or Alloy UNS C23000 (red brass, 85 percent copper), [[0.051 inch](#) (1.29 mm)] <Insert dimension> thick.
 - a. Finish: [**Buffed finish, lacquered**] [**Hand-rubbed finish, lacquered**] [**Statuary conversion coating over satin finish**].
5. Brass Sheet: ASTM B 36/B 36M, Alloy UNS C26000 (cartridge brass, 70 percent copper), [[0.051 inch](#) (1.29 mm)] <Insert dimension> thick.
 - a. Finish: [**Buffed**] [**Hand-rubbed**] finish, lacquered.
6. Column covers may be fabricated from prefinished metal sheet in lieu of finishing after fabrication provided unfinished edges are concealed from view.
7. Increase metal thickness or reinforce with concealed stiffeners, backing materials, or both, as needed to provide flat surfaces where indicated.

8. Support joints with concealed stiffeners as needed to hold exposed faces of adjoining sheets in flush alignment.
9. Form returns at vertical joints to provide hairline V-joints.
10. Form returns at vertical joints to provide [1/2-inch- (12-mm-)] [3/4-inch- (18-mm-)] wide reveal at joints. Provide snap-in metal filler strips at reveals that leave reveals [1/2 inch (12 mm) **deep**] [**flush**].
11. Form returns at vertical joints to accommodate backer rod and sealant.
12. Fabricate column covers with hairline horizontal V-joints produced by forming returns on mating ends of column cover sections. Locate horizontal joints as indicated.
13. Fabricate column covers without horizontal joints.
14. Fabricate column covers with horizontal butt joints, tightly fitted and backed with a sleeve for field splicing with adhesive.
15. Fabricate column covers with [1/2-inch- (12-mm-) **wide**] reveals at horizontal joints produced by forming returns on mating ends of column cover sections. Provide snap-in metal filler strips at reveals matching reveals at vertical joints. Locate horizontal joints as indicated.
16. Fabricate [**base**] [**ceiling**] ring to [**match**] [**contrast with**] column covers.
17. Fabricate with calk stop/stiffener ring.
18. Apply manufacturer's recommended sound-deadening [**insulation**] [**mastic**] to backs of column covers.

2.3 MISCELLANEOUS MATERIALS

- A. Fasteners: Fabricated from same basic metal and alloy as fastened metal unless otherwise indicated. Do not use metals that are incompatible with materials joined.
 1. Provide concealed fasteners for interconnecting column covers and for attaching them to other work unless[**otherwise indicated**][**exposed fasteners are unavoidable or are the standard fastening method**].
 2. Provide [**Phillips**] [**tamper-resistant**] [**square or hex socket**] flat-head machine screws for exposed fasteners unless otherwise indicated.
- B. Sound-Deadening Materials:
 1. Insulation: Unfaced, mineral-fiber blanket insulation complying with ASTM C 665, Type I, and passing ASTM E 136 test.
 2. Mastic: Cold-applied asphalt emulsion complying with ASTM D 1187/D 1187M.
- C. Backing Materials: Provided or recommended by column cover manufacturer.

2.4 PAINTS AND COATINGS

- A. Low-Emitting Materials: Paints and coatings applied to interior decorative formed metal items shall comply with the testing and product requirements of the California Department of Public Health's (formerly, the California Department of Health Services') "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

- B. Lacquer for Copper Alloys: Clear, acrylic lacquer specially developed for coating copper-alloy products.
- C. Shop Primers: Comply with [**Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."**] [**Section 099600 "High-Performance Coatings."**]
- D. Universal Shop Primer for Ferrous Metal: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat.
- E. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187/D 1187M.

2.5 FABRICATION, GENERAL

- A. Coordinate dimensions and attachment methods of column covers with those of adjoining construction to produce integrated assemblies with closely fitting joints and with edges and surfaces aligned unless otherwise indicated.
- B. Form metal to profiles indicated, in maximum lengths to minimize joints. Produce flat, flush surfaces without cracking or grain separation at bends.

2.6 GENERAL FINISH REQUIREMENTS

- A. Complete mechanical finishes of flat sheet metal surfaces before fabrication where possible. After fabrication, finish all joints, bends, abrasions, and other surface blemishes to match sheet finish.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Apply organic and anodic finishes to formed metal after fabrication unless otherwise indicated.
- D. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.7 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, [**AA-M12C22A41, Class I, 0.018 mm**] [**AA-M12C22A31, Class II, 0.010 mm**] or thicker.
- B. Color Anodic Finish: AAMA 611, [**AA-M12C22A42/A44, Class I, 0.018 mm**] [**AA-M12C22A32/A34, Class II, 0.010 mm**] or thicker.

1. Color: [**Champagne**] [**Light bronze**] [**Medium bronze**] [**Dark bronze**] [**Black**] <Insert color>.
 2. Color: [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry colors and color densities**].
- C. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of **1.5 mils** (0.04 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
1. Color and Gloss: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color and gloss>.
- D. Siliconized Polyester Finish: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than **0.2 mil** (0.005 mm) for primer and **0.8 mil** (0.02 mm) for topcoat.
1. Color and Gloss: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color and gloss>.
- E. High-Performance Organic Finish: Two-coat fluoropolymer finish complying with [**AAMA 2604**] [**AAMA 2605**] and containing not less than [**50**] [**70**] percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
1. Color and Gloss: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color and gloss>.
- F. High-Performance Organic Finish: [**Three**] [**Four**]-coat fluoropolymer finish complying with AAMA 2605 and containing not less than [**50**] [**70**] percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
1. Color and Gloss: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color and gloss>.
- 2.8 STEEL SHEET FINISHES
- A. Surface Preparation: Clean surfaces to comply with SSPC-SP 1, "Solvent Cleaning," to remove dirt, oil, grease, or other contaminants that could impair paint bond. Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning," or with SSPC-SP 8, "Pickling."
 - B. Pretreatment: Immediately after cleaning, apply a conversion coating of type suited to organic coating applied over it.

- C. Factory Priming for Field-Painted Finish: Where field painting after installation is indicated, apply shop primer to prepared surfaces of items unless otherwise indicated. Comply with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.
- D. Baked-Enamel Finish: After cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat to a minimum dry film thickness of **2 mils** (0.05 mm).
 - 1. Color and Gloss: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and gloss>**.
- E. Powder-Coat Finish: After cleaning and pretreating, apply manufacturer's standard thermosetting polyester or acrylic urethane powder coating with cured-film thickness not less than **1.5 mils** (0.04 mm). Prepare, treat, and coat metal to comply with resin manufacturer's written instructions.
 - 1. Color and Gloss: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and gloss>**.

2.9 STAINLESS-STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 1. Run grain of directional finishes with long dimension of each piece.
 - 2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
- C. Bright, Cold-Rolled, Unpolished Finish: No. 2B.
- D. Directional Satin Finish: No. 4.
- E. Dull Satin Finish: No. 6.
- F. Satin, Reflective, Directional Polish: No. 7.
- G. Mirrorlike Reflective, Nondirectional Polish: No. 8 finish.

2.10 COPPER-ALLOY FINISHES

- A. Buffed Finish, Lacquered: M21-O6x (Mechanical Finish: buffed, smooth specular; Coating: clear, organic, air dried, as specified below).

1. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of **1 mil** (0.025 mm).
- B. Hand-Rubbed Finish, Lacquered: M31-M34-O6x (Mechanical Finish: directionally textured, fine satin; Mechanical Finish: directionally textured, hand rubbed; Coating: clear, organic, air dried, as specified below).
 1. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of **1 mil** (0.025 mm).
- C. Statuary Conversion Coating over Satin Finish: M31-C55 (Mechanical Finish: directionally textured, fine satin; Chemical Finish: conversion coating, sulfide)[, **with color matching DEN Project Manager's sample**].

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of column covers.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Locate and place column covers plumb and in alignment with adjacent construction. Perform cutting, drilling, and fitting required to install column covers.
 1. Do not cut or abrade finishes that cannot be completely restored in the field. Return items with such finishes to the shop for required alterations, followed by complete refinishing, or provide new units as required.
- B. Use concealed anchorages where possible.
- C. Form tight joints with exposed connections accurately fitted together. Provide reveals and openings for sealants and joint fillers as indicated.
- D. Corrosion Protection: Apply bituminous paint or other permanent separation materials on concealed surfaces where metals would otherwise be in direct contact with substrate materials that are incompatible or could result in corrosion or deterioration of either material or finish.
- E. Apply joint treatment at joints of spackled-seam metal column covers. Comply with requirements in Section 092900 "Gypsum Board."

3.3 ADJUSTING AND CLEANING

- A. Clean copper alloys according to metal finisher's written instructions in a manner that leaves an undamaged and uniform finish matching approved Sample.
- B. Touchup Painting: Immediately after erection, clean abraded areas of shop paint and paint exposed areas with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 - 1. Apply by brush or spray to provide a minimum **2.0-mil (0.05-mm)** dry film thickness.
- C. Touchup Painting: Cleaning and touchup painting of shop paint are specified in **[Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."]** **[Section 099600 "High-Performance Coatings."]** **[Section 099113 "Exterior Painting" Section 099123 "Interior Painting," and Section 099600 "High-Performance Coatings."]**
- D. Restore finishes damaged during installation and construction period so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit or provide new units.

3.4 PROTECTION

- A. Protect finishes from damage during construction period. Remove temporary protective coverings at time of Substantial Completion.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 055813

SECTION 057300 - DECORATIVE METAL RAILINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Aluminum decorative railings[**with stainless-steel, wire-rope guard infill**].
2. Copper-alloy decorative railings.
3. Stainless-steel decorative railings[**with stainless-steel, wire-rope guard infill**].
4. Steel and iron decorative railings[**with stainless-steel, wire-rope guard infill**].
5. Glass- and plastic-supported railings.
6. Post-supported railings with glass infill.
7. Illuminated decorative railings.

B. Related Sections:

1. Section 055100 "Metal Stairs" for steel tube railings included with metal stairs.
2. Section 055213 "Pipe and Tube Railings" for railings fabricated from pipe and tube components.
3. Section 057500 "Decorative Formed Metal" for other decorative formed metal items.
4. **[Section 061000 "Rough Carpentry"] [Section 061053 "Miscellaneous Rough Carpentry"]** for wood blocking for anchoring railings.
5. **[Section 062013 "Exterior Finish Carpentry"] [Section 062023 "Interior Finish Carpentry"] [Section 064023 "Interior Architectural Woodwork"]** for wood railings.
6. Section 092216 "Non-Structural Metal Framing" for metal backing for anchoring railings.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

- A. Railings: Guards, handrails, and similar devices used for protection of occupants at open-sided floor areas, pedestrian guidance and support, visual separation, or wall protection.

1.4 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design railings, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. General: In engineering railings to withstand structural loads indicated, determine allowable design working stresses of railing materials based on the following:
1. Aluminum: The lesser of minimum yield strength divided by 1.65 or minimum ultimate tensile strength divided by 1.95.
 2. Copper Alloys: 60 percent of minimum yield strength.
 3. Stainless Steel: 60 percent of minimum yield strength.
 4. Steel: 72 percent of minimum yield strength.
 5. Glass: 25 percent of mean modulus of rupture (50 percent probability of breakage), as listed in "Mechanical Properties" in AAMA's Aluminum Curtain Wall Series No. 12, "Structural Properties of Glass."
- C. Structural Performance: Design, engineer, fabricate, and install handrails and railing systems to withstand the following structural loads without exceeding the allowable design working stress of the materials for handrails, railing systems, anchors, and connections. Apply each load to produce the maximum stress in each of the respective components comprising handrails and railing systems. Railings shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
1. Handrails and Top Rails of Guards:
 - a. Uniform load of 100 **lbf/ft.** (1.46 kN/m) applied in any direction.
 - b. Concentrated load of 300 **lbf** (1.34 kN) applied in any direction.
 - c. Uniform and concentrated loads need not be assumed to act concurrently.
 2. Infill of Guards: Capable of withstanding a horizontal concentrated load at any point in the system including panels, intermediate rails balusters, or other elements composing the infill area.
 - a. Concentrated load of 200 **lbf** (0.88 kN) applied horizontally on an area of 1 **sq. ft.** (0.093 sq. m).
 - b. Infill load and other loads need not be assumed to act concurrently.
 3. Glass-Supported Railings: Support each section of top rail by a minimum of three glass panels or by other means so top rail will remain in place if any one panel fails.
- D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on exterior metal fabrications by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects.

1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

- E. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.

1.5 PRECONSTRUCTION TESTING

- A. Preconstruction Testing Service: **[Owner will engage] [Engage]** a qualified testing agency to perform preconstruction testing on laboratory mockups. Payment for these services will be made **[by Owner] [from the testing and inspecting allowance, as authorized by Change Orders] [by Contractor]**. Retesting of products that fail to meet specified requirements shall be done at Contractor's expense.

1. Build laboratory mockups at testing agency facility; use personnel, materials, and methods of construction that will be used at Project site.
2. Test railings according to ASTM E 894 and ASTM E 935.
3. Notify DEN Project Manager **[seven] <Insert number>** days in advance of the dates and times when laboratory mockups will be tested.

1.6 ACTION SUBMITTALS

- A. Product Data: For the following:

1. Manufacturer's product lines of railings assembled from standard components.
2. Grout, anchoring cement, and paint products.
3. Finishing materials and methods, and detailed sequence of installation.
4. Include data substantiating that materials comply with requirements.

- B. LEED Submittals:

1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Certificates for **[Credit MR 6] [Credit MR 7]**: Chain-of-custody certificates indicating that wood rails comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
3. Laboratory Test Reports for Credit IEQ 4: For paints and coatings on interior decorative metal items, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work. Indicate materials, profiles of each ornamental metalwork member and fitting, joinery, finishes, fasteners, anchorages and accessory items.
 - 1. Include setting drawings, templates, and directions for installation of anchor bolts and other anchorages to be installed as unit of Work of other sections.
 - 2. For illuminated railings, include wiring diagrams and roughing-in details.
- D. Samples for Initial Selection: For products involving selection of color, texture, or design[, **including mechanical finishes**].
- E. Samples for Verification: For each type of exposed finish required.
 - 1. Sections of each distinctly different linear railing member, including handrails, top rails, posts, and balusters.
 - 2. Each type of glass required.
 - 3. Fittings and brackets.
 - 4. Welded connections.
 - 5. Brazed connections.
 - 6. Assembled Samples of entire section of each type of railing system, made from full-size components, including top rail, post, handrail, and infill. Show method of finishing members at intersections.
- F. Delegated-Design Submittal: For installed products indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.7 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified [**professional engineer**] [**testing agency**].
- B. Qualification data for firms and persons specified "Quality Assurance" article to demonstrate their capabilities and experience. Include list of completed projects with project name, addresses, names of Owners, plus other information specified.
- C. Mill Certificates: Signed by manufacturers of stainless-steel products certifying that products furnished comply with requirements.
- D. Installer certificates signed by Contractor certifying that welders comply with requirements specified under "Quality Assurance" article.
- E. Welding certificates.
- F. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, according to ASTM E 894 and ASTM E 935.
- G. Preconstruction test reports.

1.8 QUALITY ASSURANCE

- A. Fabricator Qualifications: Firm experienced in successfully producing ornamental metalwork similar to that indicated for this Project, with sufficient production capacity to produce required units without causing delay in the Work.
- B. Installer Qualifications: Arrange for installation of ornamental work specified in this section by same firm that fabricated them.
- C. Testing for recertification is Contractor's responsibility.
- D. Engineer Qualifications: Professional engineer licensed to practice in jurisdiction where project is located and experienced in providing engineering services of the kind indicated which has resulted in the successful installation of assemblies similar in material, design, and extent to that indicated for this Project.
- E. Field Test: Field test mock-up per structural requirements indicated. DEN Project Manager to be present during testing.
- F. Source Limitations: Obtain each type of railing from single source from single manufacturer.
- G. Product Options: Information on Drawings and in Specifications establishes requirements for system's aesthetic effects and performance characteristics. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction. Performance characteristics are indicated by criteria subject to verification by one or more methods including structural analysis, preconstruction testing, field testing, and in-service performance.
 - 1. Do not modify intended aesthetic effects, as judged solely by DEN Project Manager, except with DEN Project Manager's approval. If modifications are proposed, submit comprehensive explanatory data to DEN Project Manager for review.
- H. Product Options: Drawings indicate size, profiles, and dimensional requirements of railings and are based on the specific system indicated. Refer to Section 016000 "Product Requirements."
 - 1. Do not modify intended aesthetic effects, as judged solely by DEN Project Manager, except with DEN Project Manager's approval. If modifications are proposed, submit comprehensive explanatory data to DEN Project Manager for review.
- I. Welding Qualifications: Certify that each welder employed in unit of Work of this section has satisfactorily passed AWS qualification tests for welding processes involved and, if pertinent, has undergone recertification. Qualify procedures and personnel according to the following:
 - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."

2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
 3. AWS D1.6, "Structural Welding Code - Stainless Steel."
- J. Safety Glazing Labeling: Permanently mark glass with certification label of **[the SGCC]** **[the SGCC or another certification agency acceptable to authorities having jurisdiction]** **[or]** **[manufacturer]**. Label shall indicate manufacturer's name, type of glass, thickness, and safety glazing standard with which glass complies.
- K. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- L. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
1. Build mockups as shown on Drawings.
 2. Build mockups for each form and finish of railing consisting of two posts, top rail, infill area, and anchorage system components that are full height and are not less than **24 inches** (600 mm) in length.
 3. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- M. Preinstallation Conference: Conduct conference at **[Project site]** **[location and time as determined by DEN Project Manager]** **<Insert location>**

1.9 PROJECT CONDITIONS

- A. Field Measurements: Verify actual locations of walls and other construction contiguous with railings by field measurements before fabrication and indicate measurements on Shop Drawings.
1. Do not delay job progress; allow for adjustments and fitting where taking of field measurements before fabrication might delay Work.

1.10 COORDINATION AND SCHEDULING

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.
- B. Coordinate installation of anchorages for railings. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.
- C. Schedule installation so wall attachments are made only to completed walls. Do not support railings temporarily by any means that do not suit structural performance requirements.

1.11 DELIVERY, STORAGE, AND HANDLING

- A. Store components and materials in clean, dry location, away from uncured concrete and masonry. Cover with waterproof paper, tarpaulin, or polyethylene sheeting in a manner that permits air circulation within covering.
- B. Handle ornamental work on site to a minimum; exercise care to avoid damaging metal finishes.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 METALS

- A. General: Provide ornamental work composed of forms and types which comply with requirements of referenced standards and which are free from surface blemishes where exposed to view in the finished unit. Exposed to view surfaces exhibiting pitting, seam marks, roller marks, "oil canning," stains, discolorations or other imperfections on finished units are not acceptable.

2.2 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Aluminum Decorative Railings:
 - a. Architectural Metal Works.
 - b. Architectural Railings & Grilles, Inc.
 - c. ATR Technologies, Inc.
 - d. Blum, Julius & Co., Inc.
 - e. Blumcraft of Pittsburgh.
 - f. Braun, J. G., Company; a division of the Wagner Companies.
 - g. CraneVeyor Corp.
 - h. Laurence, C. R. Co., Inc.
 - i. Livers Bronze Co.
 - j. Newman Brothers, Inc.
 - k. Pisor Industries, Inc.
 - l. Platers Polishing Company; a division of Rippel Architectural Metals.
 - m. Poma Corporation.
 - n. Sterling Dula Architectural Products, Inc.; Div. of Kane Manufacturing.
 - o. Superior Aluminum Products, Inc.

- p. Wagner, R & B, Inc.; a division of the Wagner Companies.
 - q. Wylie Systems.
 - r. **<Insert manufacturer's name>**.
 - s. or approved equal.
2. Copper-Alloy Decorative Railings:
- a. Architectural Metal Works.
 - b. Blum, Julius & Co., Inc.
 - c. Blumcraft of Pittsburgh.
 - d. Braun, J. G., Company; a division of the Wagner Companies.
 - e. CraneVeyor Corp.
 - f. Lavi Industries.
 - g. Livers Bronze Co.
 - h. Newman Brothers, Inc.
 - i. Platers Polishing Company; a division of Rippel Architectural Metals.
 - j. Tri Tech, Inc.
 - k. Wagner, R & B, Inc.; a division of the Wagner Companies.
 - l. Wylie Systems.
 - m. **<Insert manufacturer's name>**.
 - n. or approved equal.
3. Stainless-Steel Decorative Railings:
- a. Architectural Metal Works.
 - b. Architectural Railings & Grilles, Inc.
 - c. Atlantis Rail Systems; Division of Suncor Stainless.
 - d. Blum, Julius & Co., Inc.
 - e. Blumcraft of Pittsburgh.
 - f. CraneVeyor Corp.
 - g. Livers Bronze Co.
 - h. Newman Brothers, Inc.
 - i. P & P Artec.
 - j. Pisor Industries, Inc.
 - k. Platers Polishing Company; a division of Rippel Architectural Metals.
 - l. Tri Tech, Inc.
 - m. Wagner, R & B, Inc.; a division of the Wagner Companies.
 - n. Wylie Systems.
 - o. **<Insert manufacturer's name>**.
 - p. or approved equal.
4. Stainless-Steel and Glass Decorative Railings:
- a. Architectural Arts Mfg., Inc.
 - b. Julius Blum & Co., Inc.
 - c. Downey Architectural Systems
 - d. Zephyr Metal Craft, Inc.
 - e. Tri-Tech, Inc.
 - f. Rippel Architectural Metals, Inc.
 - g. Newman Brothers, Inc.

- h. Livers Bronse Co., Inc.
 - i. Lavi Industries
 - j. York Metal Fabricators, Inc.
 - k. Custom Enclosures, Inc.
 - l. Clover Glazing Corp., Clear View Rail
 - m. Clearail, Inc.
 - n. **<Insert manufacturer>**
 - o. or approved equal.
5. Steel and Iron Decorative Railings:
- a. Architectural Iron Designs, Inc.
 - b. Artezzi.
 - c. Bavarian Iron Works Co.; TT Triebenbacher.
 - d. Blum, Julius & Co., Inc.
 - e. Braun, J. G., Company; a division of the Wagner Companies.
 - f. Indital USA; a division of Ind.i.a. SPA.
 - g. Lawler Foundry Corporation.
 - h. Livers Bronze Co.
 - i. Olin Wrought Iron.
 - j. Regency Railings.
 - k. Wagner, R & B, Inc.; a division of the Wagner Companies.
 - l. Wiemann Ironworks.
 - m. **<Insert manufacturer's name>**.
 - n. or approved equal.
6. Glass- and Plastic-Supported Railings:
- a. Architectural Metal Works.
 - b. Blum, Julius & Co., Inc.
 - c. Blumcraft of Pittsburgh.
 - d. Clearail, Inc.
 - e. CraneVeyor Corp.
 - f. Livers Bronze Co.
 - g. Newman Brothers, Inc.
 - h. Platers Polishing Company; a division of Rippel Architectural Metals.
 - i. TACO Metals Inc.
 - j. Tri Tech, Inc.
 - k. **<Insert manufacturer's name>**.
 - l. or approved equal.
7. Illuminated Decorative Railings:
- a. Blumcraft of Pittsburgh.
 - b. Cole, C. W., & Company, Inc.
 - c. L & J Specialty Corp.; Lumirail Division.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.

2.3 METALS, GENERAL

- A. Metal Surfaces, General: Provide materials with smooth surfaces, without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.
- B. Brackets, Flanges, and Anchors: Same metal and finish as supported rails unless otherwise indicated.
 - 1. Provide cast-metal brackets with flange tapped for concealed anchorage to threaded hanger bolt.
 - 2. Provide either formed- or cast-metal brackets with predrilled hole for exposed bolt anchorage.
 - 3. Provide formed-steel brackets with predrilled hole for bolted anchorage and with snap-on cover that matches rail finish and conceals bracket base and bolt head.
 - 4. Provide extruded-aluminum brackets with interlocking pieces that conceal anchorage. Locate set screws on bottom of bracket.

2.4 ALUMINUM

- A. Aluminum, General: Provide alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with strength and durability properties for each aluminum form required not less than that of alloy and temper designated below.
- B. Extruded Bars and Shapes[, **Including Extruded Tubing**]: [ASTM B 221](#) (ASTM B 221M), Alloy 6063-T5/T52.
- C. Extruded Structural [**Pipe**] [**and**] [**Round Tubing**]: ASTM B 429/B 429M, Alloy 6063-T6.
 - 1. Provide Standard Weight (Schedule 40) pipe unless otherwise indicated.
- D. Drawn Seamless Tubing: [ASTM B 210](#) (ASTM B 210M), Alloy 6063-T832.
- E. Plate and Sheet: [ASTM B 209](#) (ASTM B 209M), [**Alloy 5005-H32**] [**Alloy 6061-T6**].
- F. Die and Hand Forgings: [ASTM B 247](#) (ASTM B 247M), Alloy 6061-T6.
- G. Castings: ASTM B 26/B 26M, Alloy A356.0-T6.
- H. Perforated Metal: Aluminum sheet, [ASTM B 209](#) (ASTM B 209M), Alloy 6061-T6, [**0.063 inch** (1.60 mm)] **<Insert thickness>** thick, [**with 1/4-inch** (6.4-mm) **holes 3/8 inch** (9.5 mm) **o.c. in staggered rows**] **<Insert description>**.
 - 1. Basis-of-Design Product: Provide product with perforations matching **<Insert manufacturer's name; product name or designation>**.
- I. Woven-Wire Mesh: Intermediate-crimp, [**diamond**] [**square**] pattern, **2-inch** (50-mm) woven-wire mesh, made from **0.162-inch** (4.1-mm) nominal diameter wire complying with [ASTM B 211](#) (ASTM B 211M), Alloy 6061-T94.

2.5 COPPER ALLOYS

- A. Copper and Copper Alloys, General: Provide alloys indicated and with temper to suit application and forming methods, but with strength and stiffness not less than Temper H01 (quarter hard) for plate, sheet, strip, and bars and Temper H55 (light drawn) for tube and pipe.
- B. Extruded Shapes, Bronze: ASTM B 455, Alloy UNS No. C38500 (architectural bronze).
- C. Extruded Shapes, Brass: ASTM B 249/B 249M, Alloy UNS No. C36000 (free-cutting brass).
- D. Extruded Shapes, Nickel Silver: ASTM B 249/B 249M, Alloy UNS No. C79600.
- E. Seamless Pipe, Bronze: ASTM B 43, Alloy UNS No. C23000 (red brass, 85 percent copper).
- F. Seamless Tube, Bronze: [ASTM B 135](#) (ASTM B 135M), Alloy UNS No. C23000 (red brass, 85 percent copper).
- G. Seamless Tube, Brass: [ASTM B 135](#) (ASTM B 135M), Alloy UNS No. C26000 (cartridge brass, 70 percent copper).
- H. Seamless Tube, Copper: [ASTM B 75](#) (ASTM B 75M), Alloy UNS No. C12200 (phosphorous deoxidized, high residual phosphorous copper).
- I. Castings, Bronze: [**Composition bronze castings complying with ASTM B 62, Alloy UNS No. C83600 (85-5-5-5 or No. 1 composition commercial red brass)**] [or] [**sand castings complying with ASTM B 584, Alloy UNS No. C86500 (No. 1 manganese bronze)**].
- J. Castings, Brass: Sand castings complying with ASTM B 584, Alloy UNS No. C85200 (high-copper yellow brass).
- K. Castings, Copper: ASTM B 824, with a minimum of 99.9 percent copper.
- L. Castings, Nickel Silver: ASTM B 584, Alloy UNS No. C97300 (12 percent leaded nickel silver).
- M. Plate, Sheet, Strip, and Bars; Bronze: ASTM B 36/B 36M, Alloy UNS No. C28000 (muntz metal, 60 percent copper).
- N. Plate, Sheet, Strip, and Bars; Brass: ASTM B 36/B 36M, Alloy UNS No. C26000 (cartridge brass, 70 percent copper).
- O. Plate, Sheet, Strip, and Bars; Copper: ASTM B 152/B 152M, Alloy UNS No. C11000 (electrolytic tough pitch copper) or Alloy UNS No. C12200 (phosphorous deoxidized, high-residual phosphorous copper).

2.6 STAINLESS STEEL

- A. Tubing: ASTM A 554, [**Grade MT 304**] [**Grade MT 316**] [**Grade MT 316L**].
- B. Pipe: ASTM A 312/A 312M, [**Grade TP 304**] [**Grade TP 316**] [**Grade TP 316L**].
- C. Castings: ASTM A 743/A 743M, [**Grade CF 8 or CF 20**] [**Grade CF 8M or CF 3M**].
- D. Sheet, Strip, Plate, and Flat Bar: ASTM A 666, [**Type 304**] [**Type 316**] [**Type 316L**].
- E. Bars and Shapes: ASTM A 276, [**Type 304**] [**Type 316**] [**Type 316L**].
- F. Wire Rope and Fittings:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Cable Connection (The).
 - b. Carl Stahl DecorCable, Inc.
 - c. Esmet, Inc.
 - d. Feeney Wire Rope & Rigging.
 - e. Hayn Enterprises, LLC.
 - f. Johnson, C. Sherman, Co., Inc.
 - g. Loos & Co., Inc.; Cableware Division.
 - h. Ronstan International Inc.
 - i. Secosouth, Inc.
 - j. **<Insert manufacturer's name>**.
 - k. or approved equal.
 - 2. Wire Rope: [**1-by-19**] [**7-by-7**] [**7-by-19**] **<Insert configuration>** wire rope made from wire complying with ASTM A 492, Type 316.
 - 3. Wire-Rope Fittings: Connectors of types indicated, fabricated from stainless steel, and with capability to sustain, without failure, a load equal to minimum breaking strength of wire rope with which they are used.
- G. Expanded Metal: ASTM F 1267, [**Type I (expanded)**] [**Type II (expanded and flattened)**], Class 3 (corrosion-resisting steel), made from stainless-steel sheet complying with ASTM A 666, [**Type 304**] [**Type 316**].
 - 1. Style Designation: [**3/4 number 13**] [**1-1/2 number 10**] **<Insert designation>**.
- H. Perforated Metal: Stainless-steel sheet, ASTM A 240/A 240M or ASTM A 666, [**Type 304**] [**Type 316L**], [**0.062 inch** (1.59 mm)] **<Insert thickness>** thick, [**with 1/4-inch** (6.4-mm) **holes 3/8 inch** (9.5 mm) **o.c. in staggered rows**] **<Insert description>**.
 - 1. Basis-of-Design Product: Provide product with perforations matching **<Insert manufacturer's name; product name or designation>**.
- I. Woven-Wire Mesh: Intermediate-crimp, [**diamond**] [**square**] pattern, **2-inch** (50-mm) woven-wire mesh, made from **0.135-inch** (3.5-mm) nominal diameter wire complying with ASTM A 580/A 580M, [**Type 304**] [**Type 316**].

2.7 STEEL AND IRON

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]** **<Insert number>** percent.
- B. Tubing: **[ASTM A 500 (cold formed)] [or] [ASTM A 513]**.
- C. Bars: Hot-rolled, carbon steel complying with ASTM A 29/A 29M, Grade 1010.
- D. Plates, Shapes, and Bars: ASTM A 36/A 36M.
- E. Cast Iron: Either gray iron, ASTM A 48/A 48M, or malleable iron, ASTM A 47/A 47M, unless otherwise indicated.
- F. Expanded Metal: ASTM F 1267, **[Type I (expanded)] [Type II (expanded and flattened)]**, Class 1 (uncoated).
 - 1. Style Designation: **[3/4 number 13] [1-1/2 number 10]** **<Insert designation>**.
- G. Perforated Metal: Cold-rolled steel sheet, ASTM A 1008/A 1008M, or hot-rolled steel sheet, ASTM A 1011/A 1011M, commercial steel Type B, **[0.060 inch (1.52 mm)] <Insert thickness>** thick, **[with 1/4-inch (6.4-mm) holes 3/8 inch (9.5 mm) o.c. in staggered rows]** **<Insert description>**.
- H. Perforated Metal: Galvanized-steel sheet, ASTM A 653/A 653M, **G90 (Z275)** coating, commercial steel Type B, **[0.064 inch (1.63 mm)] <Insert thickness>** thick, **[with 1/4-inch (6.4-mm) holes 3/8 inch (9.5 mm) o.c. in staggered rows]** **[with 1/8-by-1-inch (3.2-by-25.4-mm) round end slotted holes in staggered rows]** **<Insert description>**.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.
 - b. or approved equal.
- I. Woven-Wire Mesh: Intermediate-crimp, **[diamond] [square]** pattern, **2-inch (50-mm)** woven-wire mesh, made from **0.135-inch (3.5-mm)** nominal diameter wire complying with **ASTM A 510 (ASTM A 510M)**.

2.8 GLASS AND GLAZING MATERIALS

- A. Tempered Glass: ASTM C 1048, Kind FT (fully tempered), Condition A (uncoated), Type 1 (transparent flat glass), Quality-Q3. Provide products that have been tested for surface and edge compression according to ASTM C 1048 and for impact strength according to 16 CFR 1201 for Category II materials.
 - 1. Glass Color: **[Clear] [Blue] [Blue-green] [Bronze] [Green] [Gray]** **<Insert color>**.
 - 2. Thickness for Structural Glass Balusters: **[12.0] [19.0]** mm.

3. Thickness for Structural Glass Balusters: As required by structural loads, but not less than **[12.0] [19.0]** mm.
 4. Thickness for Glass Infill Panels: **[6.0] [10.0]** mm.
 5. Thickness for Glass Infill Panels: As required by structural loads, but not less than **[6.0] [10.0]** mm.
 6. Thickness: As indicated on Drawings.
- B. Laminated Glass: ASTM C 1172, Condition A (uncoated), Type I (transparent flat glass), Quality-Q3 with two plies of glass and polyvinyl butyral interlayer not less than **0.060 inch** (1.52 mm) thick.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.
 - b. or approved equal.
 2. Kind: **[LA (laminated annealed)] [LHS (laminated heat strengthened)] [LT (laminated tempered)] [As indicated]**.
 3. Glass Color: **[Clear] [Blue] [Blue-green] [Bronze] [Green] [Gray]** **<Insert color>**.
 4. Interlayer Color: **[Clear] [Blue-green] [Bronze light] [Gray]** **<Insert color>**.
 5. Interlayer Color and Pattern: **[As selected by DEN Project Manager from manufacturer's full range] [Match] [Provide]** **<Insert manufacturer's color and pattern designation>**.
 6. Glass Plies for Structural Glass Balusters: **[6.0] [8.0] [10.0]** mm thick, each.
 7. Glass Plies for Structural Glass Balusters: Thickness required by structural loads, but not less than **[6.0] [8.0]** mm thick, each.
 8. Glass Plies for Glass Infill Panels: **[3.0] [4.0] [5.0]** mm thick, each.
 9. Glass Plies for Glass Infill Panels: Thickness required by structural loads, but not less than **[3.0] [4.0] [5.0]** mm, each.
- C. Ceramic-Coated Glass: Heat-treated float glass, Condition C; with ceramic enamel applied by silk-screened process; complying with Specification No. 95-1-31 in GANA's "Engineering Standards Manual" and with other requirements specified.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.
 - b. or approved equal.
 2. Glass Color: **[Clear] [Blue] [Blue-green] [Bronze] [Green] [Gray]** **<Insert color>**.
 3. Ceramic Coating Color and Pattern: **[As selected by DEN Project Manager from manufacturer's full range] [Match] [Provide]** **<Insert manufacturer's color and pattern designation>**.

- D. Plastic Structural Glazing: Uncoated, transparent, monolithic acrylic sheet complying with ASTM D 4802, Category A-1 or A-2 (cell cast or continuous cast), Finish 1 (smooth or polished), and as follows:
1. Color: [**Colorless (clear)**] [**Blue**] [**Blue-green**] [**Bronze**] [**Gray**] [**Green**] [**Match glass**] <Insert color>.
 2. Thickness: [**12.0 mm**] [**Match glass thickness**].
- E. Glazing Cement and Accessories for Structural Glazing: Glazing cement, setting blocks, shims, and related accessories as recommended or supplied by railing manufacturer for installing structural glazing in metal subrails.
1. Glazing Cement: Nonshrinking organic cement designed for curing by passing an electric current through metal subrail holding glass panel, as standard with manufacturer.
- F. Glazing Gaskets for Glass Infill Panels: Glazing gaskets and related accessories recommended or supplied by railing manufacturer for installing glass infill panels in post-supported railings.

2.9 FASTENERS

- A. Fastener Materials: Unless otherwise indicated, provide the following:
1. Aluminum Components: [**Type 304**] [**Type 316**] stainless-steel fasteners.
 2. Copper-Alloy (Bronze) Components: Silicon bronze (Alloy 651 or Alloy 655) fasteners[**where concealed; muntz metal (Alloy 280) fasteners where exposed**].
 3. Copper-Alloy (Brass) Components: Silicon bronze (Alloy 651 or Alloy 655) fasteners[**where concealed; brass (Alloy 260 or Alloy 360) fasteners where exposed**].
 4. Stainless-Steel Components: [**Type 304**] [**Type 316**] stainless-steel fasteners.
 5. Uncoated Steel Components: Plated-steel fasteners complying with ASTM B 633, Class Fe/Zn 25 for electrodeposited zinc coating where concealed; Type 304 stainless-steel fasteners where exposed.
 6. Galvanized-Steel Components: Plated-steel fasteners complying with ASTM B 633, Class Fe/Zn 25 for electrodeposited zinc coating.
 7. Dissimilar Metals: [**Type 304**] [**Type 316**] stainless-steel fasteners.
- B. Fasteners for Anchoring to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings to other types of construction indicated[**and capable of withstanding design loads**].
- C. Provide concealed fasteners for interconnecting railing components and for attaching railings to other work unless [**otherwise indicated**] [**exposed fasteners are unavoidable**] [**exposed fasteners are the standard fastening method for railings indicated**].

1. Provide **[Phillips] [tamper-resistant] [square or hex socket]** flat-head machine screws for exposed fasteners unless otherwise indicated.
- D. Anchors, General: Anchors capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing according to ASTM E 488, conducted by a qualified independent testing agency.
- E. Post-Installed Anchors: **[Torque-controlled expansion anchors] [or] [chemical anchors]**.
 1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B 633 or **ASTM F 1941** (ASTM F 1941M), Class Fe/Zn 5, unless otherwise indicated.
 2. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy **[Group 1 (A1)] [Group 2 (A4)]** stainless-steel bolts, **ASTM F 593** (ASTM F 738M), and nuts, **ASTM F 594** (ASTM F 836M).

2.10 MISCELLANEOUS MATERIALS

- A. Wood Rails: Clear, straight-grained hardwood rails secured to **[recessed] [exposed]** metal subrail.
 1. Species: **[Ash] [Cherry] [Red oak] [Walnut] [White oak] <Insert species>**.
 2. Finish: **[Manufacturer's standard] [Transparent polyurethane] [Penetrating oil] [Acrylic impregnated]**.
 3. Staining: **[None] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert description or manufacturer's name and product designation>**.
 4. Profile: **[Square, 1-3/4 by 1-3/4 inches (45 by 45 mm) with edges eased to 1/4-inch (6-mm) radius] [Rectangular, 1-3/4 by 5 inches (45 by 127 mm) with edges eased to 1/4-inch (6-mm) radius] [Round, 2-inch (50-mm) diameter] [As indicated] <Insert description>**.
 5. Certified Wood: Fabricate wood rails from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."
- B. Wood Rails: Hardwood rails complying with Section 064023 "Interior Architectural Woodwork."
- C. Electrical Components: Provide internal, fluorescent light fixtures and electrical components, required as part of illuminated railings, that comply with NFPA 70 and that are listed and labeled by UL.
- D. Plastic Handrail Caps: Thermoplastic rail covering, color as indicated or, if not indicated, as selected by DEN Project Manager from manufacturer's standard colors.
- E. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

1. For aluminum railings, provide type and alloy as recommended by producer of metal to be welded and as required for color match, strength, and compatibility in fabricated items.
- F. Brazing Rods: For copper-alloy railings, provide type and alloy as recommended by producer of metal to be brazed and as required for color match, strength, and compatibility in fabricated items.
- G. Low-Emitting Paints and Coatings: Paints and coatings applied to interior decorative metal railings shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- H. Lacquer for Copper Alloys: Clear acrylic lacquer specially developed for coating copper-alloy products.
- I. Etching Cleaner for Galvanized Metal: Complying with MPI#25.
- J. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.
- K. Shop Primers: Provide primers that comply with **[Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."]** **[Section 099600 "High-Performance Coatings."]** **[Section 099113 "Exterior Painting," Section 099123 "Interior Painting," and Section 099600 "High-Performance Coatings."]**
- L. Universal Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat.
1. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.
- M. Epoxy Zinc-Rich Primer: Complying with MPI#20 and compatible with topcoat.
- N. Shop Primer for Galvanized Steel: **[Cementitious galvanized metal primer complying with MPI#26]** **[Vinyl wash primer complying with MPI#80]** **[Water-based galvanized metal primer complying with MPI#134].**
- O. Intermediate Coats and Topcoats: Provide products that comply with **[Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."]** **[Section 099600 "High-Performance Coatings."]** **[Section 099113 "Exterior Painting," Section 099123 "Interior Painting," and Section 099600 "High-Performance Coatings."]**
- P. Epoxy Intermediate Coat: Complying with MPI#77 and compatible with primer and topcoat.
- Q. Polyurethane Topcoat: Complying with MPI#72 and compatible with undercoat.
- R. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

- S. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107. Provide grout specifically recommended by manufacturer for interior and exterior applications.
- T. Anchoring Cement: Factory-packaged, nonshrink, nonstaining, hydraulic-controlled expansion cement formulation for mixing with water at Project site to create pourable anchoring, patching, and grouting compound.
 - 1. Water-Resistant Product: **[At exterior locations] [and] [where indicated]** provide formulation that is resistant to erosion from water exposure without needing protection by a sealer or waterproof coating and that is recommended by manufacturer for exterior use.

2.11 FABRICATION

- A. General: Fabricate railings to comply with requirements indicated for design, dimensions, member sizes and spacing, details, finish, and anchorage[, **but not less than that required to support structural loads**].
- B. Form ornamental work to required shapes and sizes, with true curves, lines, and angles. Provide components in sizes and profiles indicated, but not less than required to comply with requirements indicated for structural performance.
- C. Allow for thermal movement resulting from the following maximum change (range) in ambient temperature, in the design, fabrication, and installation of installed metal assemblies to prevent buckling, opening up of joints and overstressing of welds and fasteners. Base design calculations on actual surface temperatures of metals due to both solar heat gain and nighttime sky heat loss.
 - 1. Temperature Change (Range): 100 deg F (55.5 deg C).
- D. Assemble railings in the shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation. Use connections that maintain structural value of joined pieces.
- E. Make up wire-rope assemblies in the shop to field-measured dimensions with fittings machine swaged. Minimize amount of turnbuckle take-up used for dimensional adjustment so maximum amount is available for tensioning wire ropes. Tag wire-rope assemblies and fittings to identify installation locations and orientations for coordinated installation.
- F. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately **1/32 inch** (1 mm) unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- G. Form work true to line and level with accurate angles and surfaces.
- H. Provide necessary rebates, lugs, and brackets for assembly of units. Use concealed fasteners wherever possible.

- I. Fabricate connections that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate. Locate weep holes in inconspicuous locations.
- J. Cut, reinforce, drill, and tap as indicated to receive finish hardware, screws, and similar items.
- K. Connections: Fabricate railings with **[welded]** **[or]** **[nonwelded]** connections unless otherwise indicated.
- L. Welded Connections: Cope components at connections to provide close fit, or use fittings designed for this purpose. Weld all around at connections, including at fittings.
 - 1. Comply with AWS for recommended practices in shop welding. Provide welds behind finished surfaces without distortion or discoloration of exposed side. Clean exposed welded joints of all welding flux, and dress on all exposed and contact surfaces.
 - 2. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 3. Obtain fusion without undercut or overlap.
 - 4. Remove flux immediately.
 - 5. At exposed connections, finish exposed welds to comply with NOMMA's "Voluntary Joint Finish Standards" for Type 1 welds: no evidence of a welded joint.
- M. Welded Connections for Aluminum Pipe: Fabricate railings to interconnect members with concealed internal welds that eliminate surface grinding, using manufacturer's standard system of sleeve and socket fittings.
- N. Brazed Connections: Connect copper-alloy railings by brazing. Cope components at connections to provide close fit, or use fittings designed for this purpose. Braze corners and seams continuously.
 - 1. Use materials and methods that match color of base metal, minimize distortion, and develop maximum strength and corrosion resistance.
 - 2. Remove flux immediately.
 - 3. At exposed connections, finish exposed surfaces smooth and blended so no roughness shows after finishing and brazed surface matches contours of adjoining surfaces.
- O. Mechanical Connections: Connect members with concealed mechanical fasteners and fittings. Fabricate members and fittings to produce flush, smooth, rigid, hairline joints.
 - 1. Fabricate splice joints for field connection using an epoxy structural adhesive if this is manufacturer's standard splicing method.
- P. Form changes in direction as follows:
 - 1. As detailed.
 - 2. **[By bending]** **[or]** **[by inserting prefabricated elbow fittings]**.

3. **[By flush bends] [or] [by inserting prefabricated flush-elbow fittings].**
 4. **[By radius bends of radius indicated] [or] [by inserting prefabricated elbow fittings of radius indicated].**
 5. By bending to smallest radius that will not result in distortion of railing member.
- Q. Mill joints to a tight, hairline fit. Cope or miter corner joints. Form joints exposed to weather to exclude water penetration.
- R. Finish exposed surfaces to smooth, sharp, well defined lines and arrises.
- S. Preassemble items in shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.
- T. Bend members in jigs to produce uniform curvature for each configuration required; maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.
- U. Close exposed ends of hollow railing members with prefabricated end fittings.
- V. Provide wall returns at ends of wall-mounted handrails unless otherwise indicated. Close ends of returns, unless clearance between end of rail and wall is **1/4 inch** (6 mm) or less.
- W. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, flanges, miscellaneous fittings, and anchors to interconnect railing members to other work unless otherwise indicated.
1. At brackets and fittings fastened to plaster or gypsum board partitions, provide crush-resistant fillers, or other means to transfer loads through wall finishes to structural supports and prevent bracket or fitting rotation and crushing of substrate.
- X. Provide inserts and other anchorage devices for connecting railings to concrete or masonry work. Fabricate anchorage devices capable of withstanding loads imposed by railings. Coordinate anchorage devices with supporting structure.
- Y. For railing posts set in concrete, provide **[steel] [stainless-steel]** sleeves not less than **6 inches** (150 mm) long with inside dimensions not less than **1/2 inch** (13 mm) greater than outside dimensions of post, with metal plate forming bottom closure.
- Z. For removable railing posts, fabricate slip-fit sockets from **[steel] [stainless-steel]** tube or pipe whose ID is sized for a close fit with posts; limit movement of post without lateral load, measured at top, to not more than one-fortieth of post height. Provide socket covers designed and fabricated to resist being dislodged.
1. Provide chain with eye, snap hook, and staple across gaps formed by removable railing sections at locations indicated. Fabricate from same metal as railings.
- AA. Expanded-Metal Infill Panels: Fabricate infill panels from **[stainless-steel] [steel]** expanded metal[**unless otherwise indicated**].

1. Edge panels with U-shaped channels made from same metal as infill; not less than **0.043 inch** (1.1 mm) thick.
 2. Orient expanded metal with long dimension of diamonds [**parallel to top rail**] [**perpendicular to top rail**] [**horizontal**] [**vertical**].
- BB. Perforated-Metal Infill Panels: Fabricate infill panels from perforated metal made from [**steel**] [**galvanized steel**] [**aluminum**] [**stainless steel**] [**same metal as railings in which they are installed**].
1. Edge panels with U-shaped channels made from metal sheet, of same metal as perforated metal and not less than **0.043 inch** (1.1 mm) thick.
 2. Orient perforated metal with pattern [**parallel to top rail**] [**perpendicular to top rail**] [**horizontal**] [**vertical**] [**as indicated on Drawings**].
- CC. Woven-Wire Mesh Infill Panels: Fabricate infill panels from woven-wire mesh crimped into **1-by-1/2-by-1/8-inch** (25-by-13-by-3-mm) metal channel frames.
1. Make wire mesh and frames from [**aluminum**] [**stainless steel**] [**steel**] [**unless otherwise indicated**].
 2. Orient wire mesh with [**diamonds vertical**] [**wires perpendicular and parallel to top rail**] [**wires horizontal and vertical**].
- DD. Toe Boards: Where indicated, provide toe boards at railings around openings and at edge of open-sided floors and platforms. Fabricate to dimensions and details indicated.

2.12 GLAZING PANEL FABRICATION

- A. General: Fabricate to sizes and shapes required; provide for proper edge clearance and bite on glazing panels.
1. Clean-cut or flat-grind edges at butt-glazed sealant joints to produce square edges with slight chamfers at junctions of edges and faces
 2. Grind smooth exposed edges, including those at open joints, to produce square edges with slight chamfers at junctions of edges and faces.
- B. Structural Glass Balusters: Factory-bond glass to aluminum base and top-rail channels in railing manufacturer's plant using glazing cement to comply with manufacturer's written specifications[, **unless field glazing is standard with manufacturer**].
- C. Structural Balusters: Provide [**tempered**] [**laminated, heat-strengthened**] [**laminated, tempered**] glass panels[**for both straight and curved sections**].
- D. Structural Balusters: Provide thermoformed, curved, plastic glazing panels for curved sections and [**tempered**] [**laminated, heat-strengthened**] [**laminated, tempered**] glass panels for straight sections.
- E. Infill Panels: Provide [**tempered**] [**laminated, annealed**] [**laminated, heat-strengthened**] [**laminated, tempered**] glass panels[**for both straight and curved sections**].

2.13 ILLUMINATED RAILINGS

- A. General: Comply with requirements in this Section for aluminum railings with welded connections.
- B. Illuminated Units: Provide internal illumination using concealed, internally wired, fluorescent-strip fixture system to illuminate walking surfaces adjacent to railings without light leaks. Make provisions for servicing and for concealed connection to electric service. Coordinate electrical characteristics with those of the power supply provided.
 - 1. Fluorescent Tubes: Provide number of tubes indicated or required by railing length.
 - 2. Diffusers: UV-stabilized acrylic diffusers matching profile of railings.
 - 3. Ballasts: Energy-saving, high power factor, Class P, electromagnetic type; designed for use with high-output lamps, and with automatic-reset thermal protection. Ballasts comply with ANSI C82.1, bear Certified Ballast Manufacturer Certification labels, and are rated for [0 deg F (minus 17 deg C)] [minus 20 deg F (minus 29 deg C)] starting temperature.

2.14 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipment.
- C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- D. Provide exposed fasteners with finish matching appearance, including color and texture, of railings.

2.15 ALUMINUM FINISHES

- A. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
- B. Mechanical Finish: AA-M3x (Mechanical Finish: as specified); sand top rails, handrails, and intermediate rails in one direction only, parallel to length of railing, with 120- and 320-grit abrasive. After installation, polish railings with No. 0 steel wool immersed in paste wax, then rub to a luster with a soft dry cloth.
- C. Clear Anodic Finish: AAMA 611, [**AA-M12C22A41, Class I, 0.018 mm**] [**AA-M12C22A31, Class II, 0.010 mm**] or thicker.

- D. Color Anodic Finish: AAMA 611, **[AA-M12C22A42/A44, Class I, 0.018 mm]** **[AA-M12C22A32/A34, Class II, 0.010 mm]** or thicker.
1. Color: **[Champagne]** **[Light bronze]** **[Medium bronze]** **[Dark bronze]** **[Black]** **<Insert color>**.
 2. Color: **[Match DEN Project Manager's sample]** **[As selected by DEN Project Manager from full range of industry colors and color densities]**.
- E. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of **1.5 mils** (0.04 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
1. Color and Gloss: **[As indicated by manufacturer's designations]** **[Match DEN Project Manger's sample]** **[As selected by DEN Project manager from manufacturer's full range]** **<Insert color and gloss>**.
- F. Siliconized Polyester Finish: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than **0.2 mil** (0.005 mm) for primer and **0.8 mil** (0.02 mm) for topcoat.
1. Color and Gloss: **[As indicated by manufacturer's designations]** **[Match DEN Project Manager's sample]** **[As selected by DEN Project Manager from manufacturer's full range]** **<Insert color and gloss>**.
- G. High-Performance Organic Finish: Two-coat fluoropolymer finish complying with **[AAMA 2604]** **[AAMA 2605]** and containing not less than **[50]** **[70]** percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
1. Color and Gloss: **[As indicated by manufacturer's designations]** **[Match DEN Project Manager's sample]** **[As selected by DEN Project Manager from manufacturer's full range]** **<Insert color and gloss>**.
- H. High-Performance Organic Finish: **[Three]** **[Four]**-coat fluoropolymer finish complying with AAMA 2605 and containing not less than **[50]** **[70]** percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
1. Color and Gloss: **[As indicated by manufacturer's designations]** **[Match DEN Project Manager's sample]** **[As selected by DEN Project Manager from manufacturer's full range]** **<Insert color and gloss>**.

2.16 COPPER-ALLOY FINISHES

- A. Finish designations for copper alloys comply with the system for designating copper-alloy finish systems defined in NAAMM's "Metal Finishes Manual for Architectural and Metal Products."
- B. Buffed Finish: M21 (Mechanical Finish: buffed, smooth specular).

- C. Hand-Rubbed Finish: M31-M34 (Mechanical Finish: directionally textured, fine satin; Mechanical Finish: directionally textured, hand rubbed).
 - D. Medium-Satin Finish: M32 (Mechanical Finish: directionally textured, medium satin).
 - E. Fine-Matte Finish: M42 (Mechanical Finish: nondirectional finish, fine matte).
 - F. Buffed Finish, Lacquered: M21-O6x (Mechanical Finish: buffed, smooth specular; Coating: clear organic, air drying, as specified below).
 - 1. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of **1 mil** (0.025 mm).
 - G. Hand-Rubbed Finish, Lacquered: M31-M34-O6x (Mechanical Finish: directionally textured, fine satin; Mechanical Finish: directionally textured, hand rubbed; Coating: clear organic, air drying, as specified below).
 - 1. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of **1 mil** (0.025 mm).
 - H. Medium-Satin Finish, Lacquered: M32-O6x (Mechanical Finish: directionally textured, medium satin; Coating: clear organic, air drying, as specified below).
 - 1. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of **1 mil** (0.025 mm).
 - I. Fine-Matte Finish, Lacquered: M42-O6x (Mechanical Finish: nondirectional finish, fine matte; Coating: clear organic, air drying, as specified below).
 - 1. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of **1 mil** (0.025 mm).
 - J. Statuary Conversion Coating over Satin Finish: M31-C55 (Mechanical Finish: directionally textured, fine satin; Chemical Finish: conversion coating, sulfide)[, **with color matching DEN Project Manager's sample**].
 - K. Patina Conversion Coating: M36-C12-C52 (Mechanical Finish: directionally textured, uniform; Chemical Finish: nonetched cleaned, degreased; Chemical Finish: conversion coating, ammonium sulfate)[, **with color matching DEN Project Manager's sample**].
- 2.17 STAINLESS-STEEL FINISHES
- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
 - B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.

1. Run grain of directional finishes with long dimension of each piece.
- C. Directional Satin Finish: No. 4.
- D. Dull Satin Finish: No. 6.
- E. Satin, Reflective, Directional Polish: No. 7.
- F. Mirrorlike Reflective, Nondirectional Polish: No. 8.
- G. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
- H. Sputter-Coated Finish: Titanium nitride coating deposited by magnetic sputter-coating process over indicated mechanical finish.

2.18 STEEL AND IRON FINISHES

- A. Galvanized Railings:
 1. Hot-dip galvanize[**exterior**] steel and iron railings, including hardware, after fabrication.
 2. Hot-dip galvanize indicated steel and iron railings, including hardware, after fabrication.
 3. Comply with ASTM A 123/A 123M for hot-dip galvanized railings.
 4. Comply with ASTM A 153/A 153M for hot-dip galvanized hardware.
 5. Do not quench or apply post galvanizing treatments that might interfere with paint adhesion.
 6. Fill vent and drain holes that are exposed in the finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.
- B. For galvanized railings, provide hot-dip galvanized fittings, brackets, fasteners, sleeves, and other ferrous components.
- C. Preparing Galvanized Railings for Shop Priming: After galvanizing, thoroughly clean railings of grease, dirt, oil, flux, and other foreign matter, and treat with etching cleaner.
- D. For nongalvanized-steel railings, provide nongalvanized ferrous-metal fittings, brackets, fasteners, and sleeves, except galvanize anchors to be embedded in exterior concrete or masonry.
- E. Preparing Nongalvanized Items for Shop Priming: Prepare uncoated ferrous-metal surfaces to comply with [**SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."**] [**SSPC-SP 7/NACE No. 4, "Brush-off Blast Cleaning."**] [**requirements indicated below:**]
 1. Exterior Railings: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 2. Railings Indicated to Receive Zinc-Rich Primer: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."

3. Railings Indicated to Receive Primers Specified in Section 099600 "High-Performance Coatings": SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 4. Other Railings: SSPC-SP 7/NACE No. 4, "Brush-off Blast Cleaning."
- F. Primer Application: Apply shop primer to prepared surfaces of railings unless otherwise indicated. Comply with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting. Primer need not be applied to surfaces to be embedded in concrete or masonry.
1. Shop prime uncoated railings with **[universal shop primer] [primers specified in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting"]** unless **[zinc-rich primer is] [primers specified in Section 099600 "High-Performance Coatings" are]** indicated.
 2. Do not apply primer to galvanized surfaces.
- G. Shop-Painted Finish: Comply with **[Section 099113 "Exterior Painting."]** **[Section 099600 "High-Performance Coatings."]**
1. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range].**
- H. High-Performance Coating: Apply epoxy intermediate and polyurethane topcoats to prime-coated surfaces. Comply with coating manufacturer's written instructions and with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting. Apply at spreading rates recommended by coating manufacturer.
1. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range].**
- I. Powder-Coat Finish: Prepare, treat, and coat nongalvanized ferrous metal to comply with resin manufacturer's written instructions and as follows:
1. Prepare uncoated ferrous-metal surfaces to comply with SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 2. Treat prepared metal with iron-phosphate pretreatment, rinse, and seal surfaces.
 3. Apply thermosetting polyester or acrylic urethane powder coating with cured-film thickness not less than **1.5 mils (0.04 mm)**.
 4. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range].**
- J. Powder-Coat Finish: Prepare, treat, and coat galvanized metal to comply with resin manufacturer's written instructions and as follows:
1. Prepare galvanized metal by thoroughly removing grease, dirt, oil, flux, and other foreign matter.

2. Treat prepared metal with zinc-phosphate pretreatment, rinse, and seal surfaces.
3. Apply thermosetting polyester or acrylic urethane powder coating with cured-film thickness not less than **1.5 mils** (0.04 mm).
4. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range].**

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine plaster and gypsum board assemblies, where reinforced to receive anchors, to verify that locations of concealed reinforcements have been clearly marked for Installer. Locate reinforcements and mark locations if not already done.

3.2 PREPARATION

- A. Coordinate and furnish anchorages and setting drawings, diagrams, templates, instructions and directions for installation of items having integral anchors that are to be embedded in concrete or masonry construction. Coordinate delivery of such items to the project site.

3.3 INSTALLATION, GENERAL

- A. Provide anchorage devices and fasteners where necessary for securing ornamental metal items to in place construction; including, threaded fasteners for concrete and masonry inserts, toggle bolts, through bolts, lag bolts, wood screws and other connectors as required.
- B. Fit exposed connections together to form tight, hairline joints, or, where indicated, with uniform reveals and spaces for sealants and joint fillers. Where cutting, welding and grinding are required for proper shop fitting and jointing of ornamental metal items, restore finishes to eliminate any evidence of such corrective work.
- C. Perform cutting, drilling, and fitting required for installing railings. Set railings accurately in location, alignment, and elevation; measured from established lines and levels and free of rack. Provide temporary bracing or anchors in formwork for items which are to be built into concrete, masonry or similar construction
 1. Do not weld, cut, or abrade surfaces of railing components that have been coated or finished after fabrication and that are intended for field connection by mechanical or other means without further cutting or fitting.
 2. Set posts plumb within a tolerance of **1/16 inch in 3 feet** (2 mm in 1 m).
 3. Align rails so variations from level for horizontal members and variations from parallel with rake of steps and ramps for sloping members do not exceed **1/4 inch in 12 feet** (5 mm in 3 m).

- D. Corrosion Protection: Coat concealed surfaces of **[aluminum] [and] [copper alloys]** that will be in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.
- E. Install concealed gaskets, joint fillers, insulation, and flashings as the work progresses, so as to make work weathertight, soundproof or lightproof as required.
- F. Adjust railings before anchoring to ensure matching alignment at abutting joints.
- G. Fastening to In-Place Construction: Use anchorage devices and fasteners where necessary for securing railings and for properly transferring loads to in-place construction.
- H. Restore protective coverings that have been damaged during shipment or installation of the work. Remove protective coverings only when there is no possibility of damage from other work yet to be performed at the same location.
- I. Retain protective coverings intact and remove simultaneously from similarly finished items to preclude nonuniform oxidation and discoloration.
- J. Field Welding: Comply with applicable AWS specification for procedures of manual shielded metal arc welding, for appearance and quality of welds made, and for methods used in correcting welding work. Weld connections that are not to be left as exposed joints, but cannot be shop welded because of shipping size limitations. Grind exposed welded joints smooth and restore finish to match finish of adjacent rail surfaces.

3.4 RAILING CONNECTIONS

- A. Nonwelded Connections: Use mechanical or adhesive joints for permanently connecting railing components. Use wood blocks and padding to prevent damage to railing members and fittings. Seal recessed holes of exposed locking screws using plastic cement filler colored to match finish of railings.
- B. Welded Connections: Use fully welded joints for permanently connecting railing components. Comply with requirements for welded connections in "Fabrication" Article whether welding is performed in the shop or in the field.
- C. Expansion Joints: Install expansion joints at locations indicated but not farther apart than required to accommodate thermal movement. Provide slip-joint internal sleeve extending **2 inches (50 mm)** beyond joint on either side, fasten internal sleeve securely to one side, and locate joint within **6 inches (150 mm)** of post.

3.5 ANCHORING POSTS

- A. Use steel pipe sleeves preset and anchored into concrete for installing posts. After posts have been inserted into sleeves, fill annular space between post and sleeve with **[nonshrink, nonmetallic grout] [or] [anchoring cement]**, mixed and placed to comply with anchoring material manufacturer's written instructions.

- B. Form or core-drill holes not less than **5 inches** (125 mm) deep and **3/4 inch** (20 mm) larger than OD of post for installing posts in concrete. Clean holes of loose material, insert posts, and fill annular space between post and concrete with **[nonshrink, nonmetallic grout] [or] [anchoring cement]**, mixed and placed to comply with anchoring material manufacturer's written instructions.
- C. Cover anchorage joint with flange of same metal as post, **[welded to post after placing anchoring material] [attached to post with set screws]**.
- D. Leave anchorage joint exposed with **[1/8-inch** (3-mm) **buildup, sloped away from post] [anchoring material flush with adjacent surface]**.
- E. Anchor posts to metal surfaces with flanges, angle type, or floor type as required by conditions, connected to posts and to metal supporting members as follows:
 - 1. For aluminum railings, attach posts as indicated using fittings designed and engineered for this purpose.
 - 2. For copper-alloy railings, attach posts as indicated using fittings designed and engineered for this purpose.
 - 3. For stainless-steel railings, weld flanges to posts and bolt to metal-supporting surfaces.
 - 4. For steel railings, weld flanges to posts and bolt to metal-supporting surfaces.
- F. Install removable railing sections, where indicated, in slip-fit metal sockets cast in concrete.

3.6 ATTACHING RAILINGS

- A. Anchor railing ends to concrete and masonry with **[sleeves concealed within] [flanges connected to] [brackets on underside of rails connected to]** railing ends and anchored to wall construction with anchors and bolts.
- B. Anchor railing ends to metal surfaces with flanges bolted to metal surfaces and **[welded to railing ends] [or] [connected to railing ends using nonwelded connections]**.
- C. Attach handrails to walls with wall brackets **[except where end flanges are used]**. Provide brackets with **1-1/2-inch** (38-mm) clearance from inside face of handrail and finished wall surface. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.
 - 1. Use type of bracket with **[flange tapped for concealed anchorage to threaded hanger bolt] [predrilled hole for exposed bolt anchorage]**.
 - 2. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.
- D. Secure wall brackets **[and railing end flanges]** to building construction as follows:
 - 1. For concrete and solid masonry anchorage, use drilled-in expansion shields and hanger or lag bolts.

2. For hollow masonry anchorage, use toggle bolts.
3. For wood stud partitions, use hanger or lag bolts set into wood backing between studs. Coordinate with carpentry work to locate backing members.
4. For steel-framed partitions, use hanger or lag bolts set into[**fire-retardant-treated**] wood backing between studs. Coordinate with stud installation to locate backing members.
5. For steel-framed partitions, fasten brackets directly to steel framing or concealed steel reinforcements using self-tapping screws of size and type required to support structural loads.
6. For steel-framed partitions, fasten brackets with toggle bolts installed through flanges of steel framing or through concealed steel reinforcements.

3.7 INSTALLING GLASS PANELS

- A. Glass-Supported Railings: Install assembly to comply with railing manufacturer's written instructions.
1. Attach base channel to building structure, then insert and connect factory-fabricated and -assembled glass panels[**if glass was bonded to base and top rail channels in factory**].
 2. Attach base channel to building structure, then insert glass into base channel and bond with glazing cement[**unless glass was bonded to base and top rail channels in factory**].
 - a. Support glass panels in base channel at quarter points with channel-shaped setting blocks that also act as shims to maintain uniform space for glazing cement. Fill remaining space in base channel with glazing cement for uniform support of glass.
 3. Adjust spacing of glass panels so gaps between panels are equal before securing in position.
 4. Erect glass railings under direct supervision of manufacturer's authorized technical personnel.
- B. Post-Supported Glass Railings: Install assembly to comply with railing manufacturer's written instructions and with requirements in other Part 3 articles. Erect posts and other metal railing components, then set factory-cut glass panels. Do not cut, drill, or alter glass panels in field. Protect edges from damage.

3.8 INSTALLING PLASTIC HANDRAIL CAPS

- A. Apply plastic handrail caps to top rails and handrails, where indicated, complying with manufacturer's written instructions for cutting, mounting, forming, welding, cleaning, applying end caps, and finishing.
- B. Minimize number of joints in plastic caps by installing in lengths as long as possible. Allow for shortening of plastic cap caused by welding and splicing process; butt ends together to produce hairline joint.

1. Continuously weld, splice, miter, and end-cap joints using cap manufacturer's electric welding iron designed for this purpose. Remove welding flash while material is still soft.
2. Weld only prongs on underside of plastic cap at splice, miter, and end-cap joints. After cutting plastic cap, dress ends with file to produce a hairline fit between abutting sections. After mounting cap, polish top surface with cap manufacturer's solvent designed for this purpose until joint becomes almost invisible.

3.9 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing and inspecting agency to perform field tests and inspections and prepare test reports. Payment for these services will be made **[by Owner] [from the testing and inspecting allowance, as authorized by Change Orders]**.
- B. Extent and Testing Methodology: Testing agency will randomly select completed railing assemblies for testing that are representative of different railing designs and conditions in the completed Work. Railings will be tested according to ASTM E 894 and ASTM E 935 for compliance with performance requirements.
- C. Remove and replace railings where test results indicate that they do not comply with specified requirements unless they can be repaired in a manner satisfactory to DEN Project Manager and will comply with specified requirements.
- D. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.10 CLEANING

- A. Clean aluminum and stainless steel by washing thoroughly with clean water and soap, rinsing with clean water, and wiping dry.
- B. Clean copper alloys according to metal finisher's written instructions in a manner that leaves an undamaged and uniform finish matching approved Sample.
- C. Clean and polish **[glass] [and] [plastic glazing]** as recommended in writing by manufacturer. Wash both exposed surfaces in each area of Project not more than four days before date scheduled for inspections that establish date of Substantial Completion.
- D. Clean **[wood rails] [and] [plastic handrail caps]** by wiping with a damp cloth and then wiping dry.
- E. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

1. Apply by brush or spray to provide a minimum **2.0-mil** (0.05-mm) dry film thickness.
 - F. Touchup Painting: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in [**Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."**] [**Section 099600 "High-Performance Coatings."**] [**Section 099113 "Exterior Painting," Section 099123 "Interior Painting," and Section 099600 "High-Performance Coatings."**]
 - G. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780.
- 3.11 PROTECTION
- A. Protect finishes of railings from damage during construction period with temporary protective coverings approved by railing manufacturer. Remove protective coverings at time of Substantial Completion.
 - B. Restore finishes damaged during installation and construction period so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit, or provide new units.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 057300

SECTION 057500 - DECORATIVE FORMED METAL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Beam wraps.
2. Closures and trim.
3. Column covers and bases.
4. Chair rails.
5. Corner guards.
6. Decorative-metal-clad, hollow-metal doors and frames.
7. Diamond plate wainscot.
8. Elevator [**cab**] [**and**] [**entrance**] finishes.
9. Escalator enclosures.
10. Filler panels [**at demountable partitions**] [**between dissimilar construction**].
11. Gate Portal/Check-in backwall.
12. Heating-cooling unit enclosures.
13. Lighting coves.
14. Mechanical duct enclosures at Holdrooms.
15. Metal base.
16. Mullion cladding.
17. Pipe system covers.
18. Pockets for window treatment.
19. Sign Shelf at Subcore.
20. Subcore accent wall.
21. Support system for ceiling-hung Way Finding Signage.
22. Support system for Flight Information Display System (FIDS).
23. Miscellaneous items not specified in other Sections.
24. Window stools.
25. Exterior fins.
26. Exterior formed-metal-shaped panels.
27. Exterior sunshades.
28. Exterior trellises.
29. Exterior window covers.
30. Metal shapes as part of roof construction.

- B. Related Sections:

1. Section 055000 "Metal Fabrications" for non-decorative metal fabrications.
 2. Section 057000 "Decorative Metal" for items made primarily from plate, bars, extrusions, tubes, castings, and other forms of metal, but which may include sheet metal components.
 3. Section 057300 "Decorative Metal Railings."
 4. Section 076100 "Sheet Metal Roofing" for items made of formed metal for roofing.
 5. Section 076200 "Sheet Metal Flashing and Trim" for items made of formed metal for flashings and trim.
 6. Section 077100 "Roof Specialties" for items made of formed metal for parapets and copings.
 7. Section 081113 "Hollow Metal Doors and Frames" for flush hollow-metal doors and frames receiving decorative metal cladding.
 8. Section 089000 "Louvers and Vents" for louvers made of formed metal.
 9. **[Section 142100 "Electric Traction Elevators"] [and] [Section 142400 "Hydraulic Elevators"]** for elevator cab and entrance components made from sheet metal.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design exterior decorative formed metal items, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. Structural Performance: Decorative formed metal items, including anchors and connections, shall withstand the effects of gravity loads and the following loads and stresses without exceeding the allowable design working stress of materials involved and without exhibiting permanent deformation in any components:
1. Wind Loads on Exterior Items: **[As indicated on Drawings] [20 lbf/sq. ft. (957 Pa)] [30 lbf/sq. ft. (1436 Pa)] <Insert specific loads>**.
 2. Live Loads on Heating-Cooling Unit Enclosures: **100 lbf/sq. ft. (4.8 kN/sq. m)** or a concentrated load of **300 lbf (1.3 kN)** on an area of **4 sq. in. (26 sq. cm)**, whichever produces the greater stress.
- C. Seismic Performance: Exterior decorative formed metal items, including anchors and connections, shall withstand the effects of earthquake motions determined according to **[ASCE/SEI 7] <Insert requirement>**.
1. Component Importance Factor is 1.0.
- D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on exterior metal fabrications by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects.

1. Temperature Change: **120 deg F** (67 deg C), ambient; **180 deg F** (100 deg C), material surfaces.

- E. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include finishing materials.

1. Include data substantiating that materials comply with requirements.

- B. LEED Submittals:

1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Data for Credit IEQ 4.1: For **[adhesives] [and] [sealants]**, documentation including printed statement of VOC content.
3. Laboratory Test Reports for Credit IEQ 4: For **[adhesives] [sealants] [and] [paints and coatings]**, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- C. Shop Drawings: Show fabrication and installation details for decorative formed metal.

1. Include plans, elevations, component details, and attachments to other work.
2. Indicate materials and profiles of each decorative formed metal member, fittings, joinery, finishes, fasteners, anchorages, and accessory items.
 - a. Include setting drawings, templates, and directions for installation of anchor bolts and other anchorages to be installed as unit of Work of other sections.

- D. Samples for Initial Selection: For products involving selection of color, texture, or design[, **including mechanical finishes**].

- E. Samples for Verification: For each type of exposed finish required, prepared on **6-inch-** (150-mm-) square Samples of metal of same thickness and material indicated for the Work.

1. Include 12 inch long samples of linear shapes.
2. **<Insert other samples>**.
3. Include entire column section for each type
4. **<Insert other samples>**.

- F. Delegated-Design Submittal: For installed products indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: For decorative formed metal elements that house items specified in other Sections. Show dimensions of housed items, including locations of housing penetrations and attachments, and necessary clearances.
- B. Qualification Data: For qualified [**Installer**] [**fabricator**] [**organic-coating applicator**] [**anodic finisher**] [**powder-coating applicator**] [**and**] [**professional engineer**].
- C. Mill Certificates: Signed by stainless-steel manufacturers certifying that products furnished comply with requirements.
- D. Welding certificates.
- E. Warranty: Submit copy of manufacturer's product warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For [**mirrorlike stainless-steel finish**] [**and**] [**statuary conversion coating copper-alloy finish**] to include in maintenance manuals.

1.7 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 MAINTENANCE MATERIAL

- A. Provide minimum two (2) gallons of each type of paint, primer or finish coating. Store in location as directed by DEN Project Manager.
 - 1. Instruct Owner's personnel in appropriate paint touch-up techniques.

1.9 QUALITY ASSURANCE

- A. Fabricator Qualifications: A firm experienced in producing decorative formed metal similar to that indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.
- B. Installer Qualifications: Arrange for installation of ornamental work specified in this section by same firm that manufactured products, to highest degree possible.
- C. Organic-Coating Applicator Qualifications: A firm experienced in successfully applying organic coatings of type indicated to metals of types indicated and that employs competent control personnel to conduct continuing, effective quality-control program to ensure compliance with requirements.

- D. Anodic Finisher Qualifications: A firm experienced in successfully applying anodic finishes of type indicated and that employs competent control personnel to conduct continuing, effective quality-control program to ensure compliance with requirements.
- E. Powder-Coating Applicator Qualifications: A firm experienced in successfully applying powder coatings of type indicated to metals of types indicated and that employs competent control personnel to conduct continuing, effective quality-control program to ensure compliance with requirements.
- F. Installer Qualifications: Fabricator of products.
- G. Welding Qualifications: Qualify procedures and personnel according to the following:
1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
 3. AWS D1.3, "Structural Welding Code - Sheet Steel."
 4. AWS D1.6, "Structural Welding Code - Stainless Steel."
- H. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
1. Build mockups for the following types of decorative formed metal:
 - a. **<Insert, in separate subparagraphs, description of each decorative metal type including mockup size>.**
 2. Where installed products are indicated to comply with certain design loadings including glass support, include structural computations, material properties, and other information needed for structural analysis that has been prepared by, or under the supervision of, a qualified professional engineer.
 3. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- I. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager] <Insert location>.**
- J. Paint testing: Provide certification that factory applied paint complies with specified requirements.
- 1.10 DELIVERY, STORAGE, AND HANDLING
- A. Deliver decorative formed metal products wrapped in protective coverings and strapped together in suitable packs or in heavy-duty cartons. Remove protective coverings before they stain or bond to finished surfaces.
 - B. Store products on elevated platforms in a dry location.

1.11 PROJECT CONDITIONS

- A. Field Measurements: Verify actual locations of walls, columns, beams, and other construction contiguous with decorative formed metal by field measurements before fabrication and indicate measurements on Shop Drawings.
 - 1. Coordinate fabrication schedule with construction progress to avoid delay of Work.

1.12 COORDINATION

- A. Coordinate installation of anchorages for decorative formed metal items. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.
- B. Coordinate installation of decorative formed metal with adjacent construction to ensure that wall assemblies, flashings, trim, and joint sealants, are protected against damage from the effects of weather, age, corrosion, and other causes.

1.13 WARRANTY

- A. Warranty: Installer to warrant all elements of fabrication, including material, anchors, and finish. Provide minimum three (3) year **<Insert number>** system warranty and five (5) year **<Insert number>** finish warranty.

1.14 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 SHEET METAL

- A. General: Provide sheet metal without pitting, seam marks, roller marks, stains, discolorations, or other imperfections where exposed to view on finished units.
- B. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25] <Insert number>** percent.
- C. Aluminum Sheet: Flat sheet complying with [ASTM B 209](#) (ASTM B 209M), alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with not less than strength and durability properties of Alloy 5005-H32.

- D. Galvanized-Steel Sheet: ASTM A 653/A 653M, **G90 (Z275)** coating, either commercial steel or forming steel.
- E. Steel Sheet: **[Uncoated, cold-rolled, ASTM A 1008/A 1008M, commercial steel, exposed] [or] [electrolytic zinc-coated, ASTM A 879/A 879M, with steel sheet substrate complying with ASTM A 1008/A 1008M, commercial steel, exposed].**
- F. Stainless-Steel Sheet: ASTM A 240/A 240M or ASTM A 666, **[Type 304] [Type 316]**, stretcher-leveled standard of flatness.
- G. Bronze Sheet: ASTM B 36/B 36M, Alloy UNS No. C28000 (muntz metal, 60 percent copper) or Alloy UNS No. C23000 (red brass, 85 percent copper).
- H. Brass Sheet: ASTM B 36/B 36M, Alloy UNS No. C26000 (cartridge brass, 70 percent copper).
- I. Copper Sheet: ASTM B 370, cold-rolled copper sheet, H00 temper.
- J. Titanium Sheet: ASTM B 265, Grade 1.

2.2 MISCELLANEOUS MATERIALS

- A. Gaskets: As required to seal joints in decorative formed metal and remain **[airtight] [weathertight]**; as recommended in writing by decorative formed metal manufacturer.
 - 1. ASTM D 1056, Type 1, Class A, grade as recommended by gasket manufacturer to obtain seal for application indicated.
 - 2. Closed-cell polyurethane foam, adhesive on two sides, release paper protected.
- B. Sealants, Exterior: ASTM C 920; elastomeric **[silicone] [polyurethane] [or] [polysulfide]** sealant; of type, grade, class, and use classifications required to seal joints in decorative formed metal and remain weathertight; and as recommended in writing by decorative formed metal manufacturer.
- C. Sealants, Interior: Nonsag, paintable, nonstaining, latex sealant complying with ASTM C 834; of type and grade required to seal joints in decorative formed metal; and as recommended in writing by decorative formed metal manufacturer.
 - 1. Sealants shall have a VOC content of not more than 250 g/L when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - 2. Sealants shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- D. Filler Metal and Electrodes: Provide type and alloy of filler metal and electrodes as recommended by producer of metal to be welded or brazed and as necessary for strength, corrosion resistance, and compatibility in fabricated items.
 - 1. Use filler metals that will match the color of metal being joined and will not cause

discoloration.

- E. Fasteners: Fabricated from same basic metal and alloy as fastened metal unless otherwise indicated. Do not use metals that are incompatible with materials joined.
1. Provide concealed fasteners for interconnecting decorative formed metal items and for attaching them to other work unless **[otherwise indicated] [exposed fasteners are unavoidable or are the standard fastening method]**.
 2. Provide **[Phillips] [tamper-resistant] [square or hex socket]** flat-head machine screws for exposed fasteners unless otherwise indicated.
- F. Structural Anchors: For applications indicated to comply with certain design loads, provide **[chemical] [or] [torque-controlled expansion]** anchors with capability to sustain, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing per ASTM E 488 conducted by a qualified independent testing agency.
- G. Nonstructural Anchors: For applications not indicated to comply with design loads, provide **[powder-actuated fasteners] [metal expansion sleeve anchors] [or] [metal-impact expansion anchors]** of type, size, and material necessary for type of load and installation indicated, as recommended by manufacturer, unless otherwise indicated.
- H. Anchor Materials:
1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B 633 or [ASTM F 1941](#) (ASTM F 1941M), Class Fe/Zn 5, unless otherwise indicated.
 2. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy **[Group 1 (A1)] [Group 2 (A4)]** stainless-steel bolts, [ASTM F 593](#) (ASTM F 738M), and nuts, [ASTM F 594](#) (ASTM F 836M).
- I. Sound-Deadening Materials:
1. Insulation: Unfaced, mineral-fiber blanket insulation complying with ASTM C 665, Type I, and passing ASTM E 136 test.
 2. Mastic: Cold-applied asphalt emulsion complying with ASTM D 1187.
- J. Backing Materials: Provided or recommended by decorative formed metal manufacturer.
- K. Laminating Adhesive: Adhesive recommended by metal fabricator that will fully bond metal to metal and that will prevent telegraphing and oil canning and is compatible with substrate and noncombustible after curing.
1. Contact Adhesive: VOC content of not more than 80 g/L when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 2. Metal-to-Metal Adhesive: VOC content of not more than 30 g/L when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

3. Multipurpose Construction Adhesive: VOC content of not more than 70 g/L when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 4. Special-Purpose Contact Adhesive: (Contact adhesive used to bond melamine-covered board, metal, unsupported vinyl, ultrahigh molecular weight polyethylene, and rubber or wood veneer, 1/16 inch thick or less, to any surface): 250 g/L.
 5. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- L. Isolation Coating: Manufacturer's standard [**alkali-resistant coating**] [**bituminous paint**] [**epoxy coating**].
1. Coating shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.3 PAINTS AND COATINGS

- A. Low-Emitting Materials: Paints and coatings shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- B. Etching Cleaner for Galvanized Metal: Complying with MPI#25.
- C. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.
- D. Lacquer for Copper Alloys: Clear, acrylic lacquer specially developed for coating copper-alloy products.
- E. Shop Primers: Comply with [**Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."**] [**Section 099600 "High-Performance Coatings."**]
- F. Universal Shop Primer for Ferrous Metal: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat.
1. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.
- G. Epoxy Zinc-Rich Primer: Complying with MPI#20 and compatible with topcoat.
- H. Shop Primer for Galvanized Steel: [**Cementitious galvanized metal primer complying with MPI#26**] [**Vinyl wash primer complying with MPI#80**] [**Water-based galvanized metal primer complying with MPI#134**].
- I. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

2.4 FABRICATION, GENERAL

- A. Shop Assembly: Preassemble decorative formed metal items in shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.
- B. Coordinate dimensions and attachment methods of decorative formed metal items with those of adjoining construction to produce integrated assemblies with closely fitting joints and with edges and surfaces aligned unless otherwise indicated.
- C. Allow for thermal movement resulting from the following maximum change (range) in ambient temperature, in the design, fabrication, and installation of installed metal assemblies to prevent buckling, opening up of joints and overstressing of welds and fasteners. Base design calculations on actual surface temperatures of metals due to both solar heat gain and nighttime sky heat loss.
 - 1. Temperature Change (Range): 100 deg F, (55.5 deg C).
- D. Form metal to profiles indicated, in maximum lengths to minimize joints. Produce flat, flush surfaces without cracking or grain separation at bends. Fold back exposed edges of unsupported sheet metal to form a **1/2-inch** (12-mm-) wide hem on the concealed side, or ease edges to a radius of approximately **1/32 inch** (1 mm) and support with concealed stiffeners.
- E. Increase metal thickness or reinforce with concealed stiffeners, backing materials, or both, as needed to provide surface flatness equivalent to stretcher-leveled standard of flatness and sufficient strength for indicated use.
 - 1. Support joints with concealed stiffeners as needed to hold exposed faces of adjoining sheets in flush alignment.
 - 2. Mill joints to a tight, hairline fit. Cope or miter corner joints. Form joints exposed to weather to exclude water penetration.
 - 3. Provide adequate separation of dissimilar metals subject to galvanic corrosion.
- F. Build in straps, plates, and brackets as needed to support and anchor fabricated items to adjoining construction. Reinforce decorative formed metal items as needed to attach and support other construction.
- G. Provide support framing, mounting and attachment clips, splice sleeves, fasteners, and accessories needed to install decorative formed metal items.
- H. Where welding or brazing is indicated, weld, or braze joints and seams continuously. Grind, fill, and dress to produce smooth, flush, exposed surfaces in which joints are not visible after finishing is completed.
 - 1. Use welding and brazing procedures that will blend with and not cause discoloration of metal being joined.

2.5 BEAM WRAPS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Hi-Tech Metals, Inc.
 2. Industrial Louvers Inc.
 3. Metal Sales & Service, Inc.; Metalwerks Division.
 4. MM Systems Corporation.
 5. Southwest Metalsmiths.
 6. **<Insert manufacturer's name>**.
 7. or approved equal.
- B. Form beam wraps from metal of type and thickness indicated below. Fabricate to fit tightly to adjoining construction.
1. Aluminum Sheet: [**0.063 inch (1.60 mm)**] [**Thickness required to comply with performance requirements**] **<Insert thickness>**.
 - a. Finish: [**Baked enamel or powder coat**] [**Siliconized polyester**] [**High-performance organic coating**] [**Mill**] [**Clear anodic**] [**Color anodic**].
 2. Steel Sheet: [**0.060 inch (1.52 mm)**] [**Thickness required to comply with performance requirements**] **<Insert thickness>**.
 - a. Finish: [**Factory primed**] [**Baked enamel**] [**Powder coat**].
 3. Stainless-Steel Sheet: [**0.050 inch (1.27 mm)**] [**Thickness required to comply with performance requirements**] **<Insert thickness>**.
 - a. Finish: [**No. 2B**] [**No. 4**] [**No. 6**] [**No. 7**] [**No. 8**].
- C. Fabricate with calk stop angle to retain backer rod and sealant.

2.6 CLOSURES AND TRIM

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Fry Reglet Corporation.
 2. Pittcon Industries.
 3. **<Insert manufacturer's name>**.
 4. or approved equal.
- B. Form closures and trim from metal of type and thickness indicated below. Fabricate to fit tightly to adjoining construction[, **with weathertight joints at exterior installations**].
1. Aluminum Sheet: [**0.063 inch (1.60 mm)**] [**Thickness required to comply with performance requirements**] **<Insert thickness>**.

- a. Finish: **[Baked enamel or powder coat] [Siliconized polyester] [High-performance organic coating] [Mill] [Clear anodic] [Color anodic].**
 2. Galvanized-Steel Sheet: **[0.052 inch (1.32 mm)] [Thickness required to comply with performance requirements] <Insert thickness>.**
 - a. Finish: **[Factory primed] [Baked enamel] [Siliconized polyester] [High-performance organic coating] [Powder coat].**
 3. Steel Sheet: **[0.048 inch (1.21 mm)] [Thickness required to comply with performance requirements] <Insert thickness>.**
 - a. Finish: **[Factory primed] [Baked enamel] [Powder coat].**
 4. Closures and trim may be fabricated from prefinished metal sheet in lieu of finishing after fabrication provided unfinished edges are concealed from view and not exposed to weather.
- C. Conceal fasteners where possible; otherwise, locate where they are as inconspicuous as possible. Size fasteners to support closures and trim, with fasteners spaced to prevent buckling or waviness in finished surfaces.
- D. Drill and tap holes needed for securing closures and trim to other surfaces.
- E. Incorporate gaskets where indicated or needed for concealed, continuous seal at abutting surfaces.
- F. Miter or cope trim members at corners and reinforce with bent metal splice plates to form tight joints.

2.7 COLUMN COVERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. ATAS International, Inc.
 2. Ceilings Plus.
 3. Construction Services, Inc.
 4. Couturier Iron Craft, Inc.
 5. Firestone Metal Products, LLC; Una-Clad.
 6. Fry Reglet Corporation.
 7. Hi-Tech Metals, Inc.
 8. Industrial Louvers Inc.
 9. Kanalco Ltd.
 10. Leed Himmel Industries, Inc.
 11. Metal Sales & Service, Inc.; Metalwerks Division.
 12. MM Systems Corporation.
 13. Nelson Industrial Inc.
 14. Pittcon Industries.
 15. Protean Construction Products, Inc.

16. Southwest Metalsmiths.
 17. <Insert manufacturer's name>.
 18. or approved equal.
- B. Spackled-Seam Type: Form column covers from 0.125-inch (3.2-mm) aluminum, rolled to radii indicated. Taper edges of adjoining pieces of column covers, for taping and spackling, to 0.094-inch (2.4-mm) thickness in approximately 1 inch (25 mm) of width. Punch tapered edges for gypsum board screws at 1/2 inch (12 mm) o.c., and mill grooves in tapered edge to improve bond with joint compound.
1. Support Framing: At vertical joints, provide 1-1/2-by-3-5/8-inch (38-by-89-mm) steel channel support posts formed from 0.040-inch (1.0-mm) galvanized steel.
 2. Joint Treatment Materials: Provide joint treatment compounds and reinforcing tape complying with requirements in Section 092900 "Gypsum Board."
- C. Snap-Together Type: Form column covers to shapes indicated from metal of type and minimum thickness indicated below. Return vertical edges and bend to form hook that will engage continuous mounting clips.
1. Aluminum Sheet: [0.063 inch (1.60 mm)] [Thickness required to comply with performance requirements] <Insert thickness>.
 - a. Finish: [Baked enamel or powder coat] [Siliconized polyester] [High-performance organic coating] [Mill] [Clear anodic] [Color anodic].
 2. Steel Sheet: [0.060 inch (1.52 mm)] [Thickness required to comply with performance requirements] <Insert thickness>.
 - a. Finish: [Factory primed] [Baked enamel] [Powder coat].
 3. Stainless-Steel Sheet: [0.109 inch (2,78 mm)] [Thickness required to comply with performance requirements] <Insert thickness>.
 - a. Finish: [No. 2B] [No. 4] [No. 6] [No. 7] [No. 8].
 4. Bronze Sheet: [0.051 inch (1.29 mm)] [Thickness required to comply with performance requirements] <Insert thickness>.
 - a. Finish: [Buffed finish, lacquered] [Hand-rubbed finish, lacquered] [Statuary conversion coating over satin finish].
 5. Brass Sheet: [0.051 inch (1.29 mm)] [Thickness required to comply with performance requirements] <Insert thickness>.
 - a. Finish: [Buffed] [Hand-rubbed] finish, lacquered.
 - b. Delete first subparagraph below if not acceptable or not applicable.
 6. Column covers may be fabricated from prefinished metal sheet in lieu of finishing after fabrication provided unfinished edges are concealed from view.
 7. Form returns at vertical joints to provide hairline V-joints.

8. Form returns at vertical joints to provide [**1/2-inch- (12-mm-)**] [**3/4-inch- (18-mm-)**] wide reveal at joints. Provide snap-in metal filler strips at reveals that leave reveals [**1/2 inch (12 mm) deep**] [**flush**].
9. Form returns at vertical joints to accommodate backer rod and sealant.
10. Fabricate column covers with hairline horizontal V-joints produced by forming returns on mating ends of column cover sections. Locate horizontal joints as indicated.
11. Fabricate column covers without horizontal joints.
12. Fabricate column covers with horizontal butt joints, tightly fitted and backed with a sleeve for field splicing with adhesive.
13. Fabricate column covers with [**1/2-inch- (12-mm-) wide**] reveals at horizontal joints produced by forming returns on mating ends of column cover sections. Provide snap-in metal filler strips at reveals matching reveals at vertical joints. Locate horizontal joints as indicated.
14. Fabricate [**base**] [**ceiling**] ring to [**match**] [**contrast with**] column covers.
15. Fabricate with calk stop/stiffener ring.
16. Apply manufacturer's recommended sound-deadening [**insulation**] [**mastic**] [**mastic and insulation**] to backs of column covers.

2.8 STAINLESS STEEL CORNER GUARDS

- A. Surface-mounted, Metal Corner Guards: Fabricated from one-piece, formed or extruded metal with formed edges; with 90 degree or 135 degree turn to match wall condition

1. Manufacturers: Subject to compliance with requirements, provide one of the following:
 - a. Construction Specialties, Inc.
 - b. IPC Door and Wall Protection Systems; Division of InPro Corp.
 - c. Pawling Corp.
 - d. **<Insert manufacturer's name>**
 - e. or approved equal.
2. Material: Stainless steel, Type 304.
 - a. Thickness: Minimum 0.0625 in. (1.6 mm).
 - b. Finish: Directional satin, No. 4
3. Wing Size: **<Insert number> <Refer to Drawings>**.
4. Corner Radius: 1/8 inch (3 mm).
5. Mounting: Flat-head, stainless steel, countersunk screws through factory-drilled mounting holes.

2.9 STAINLESS STEEL CHAIR RAILS

- A. Form custom chair rails from metal of type and thickness indicated below. Coordinate size of chair rails, location, and method of attachment to adjoining construction with

details on Drawings.

1. Stainless Steel Sheet Thickness: **<Insert number> <Refer to Drawings>**.
 - a. Finish: Refer to Drawings.
 - b. Attachment: Refer to Drawings.
 - c. Form and pattern: Refer to Drawings.

2.10 STAINLESS STEEL SUPPORT FOR FLIGHT INFORMATION DISPLAY SYSTEMS (FIDS)

- A. Monitor Brackets and cable/connector covers shall be as designed and manufactured by Display Devices, 5880 Sheridan Blvd., Arvada, CO.
- B. Stainless steel cable and cable fittings shall be Ronstan Stainless Steel 316g, spiral strand, 1 x 19 cable, WR6119 with Ronstan Stainless Steel threaded swage ends, RF 1511-3222, with nuts and washers.
 1. Hardware: Stainless steel, as described on Drawings. Use security screws at panel fasteners.
 2. Finish: AISI No. 4.

2.11 DIAMOND PLATE, CHROME-PLATED STEEL WAINSCOT

- A. **<Insert requirements or refer to Drawings>**.

2.12 DUCT ENCLOSURES AT HOLD ROOMS

- A. **<Insert requirements or refer to Drawings>**.

2.13 SIGN SHELF AT SUBCORE

- A. **<Insert requirements or refer to Drawings>**.

2.14 SUBCORE ACCENT WALL

- A. **<Insert requirements or refer to Drawings>**.

2.15 SUPPORT SYSTEM FOR WAY FINDING SIGNAGE

- A. **<Insert requirements or refer to drawings>**.

2.16 DECORATIVE-METAL-CLAD DOORS AND FRAMES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Dawson Metal Co., Inc.
 2. InKan Limited.
 3. Krieger Specialty Products Company.
 4. **<Insert manufacturer's name>**.
 5. or approved equal.
- B. Laminate metal sheets, of type and thickness indicated below, to faces of **[hollow-metal doors and frames] [and] [elevator entrances]** where indicated:
1. Bronze Sheet: **[0.040 inch (1.02 mm)] <Insert thickness>**.
 - a. Finish: **[Buffed finish, lacquered] [Hand-rubbed finish, lacquered] [Statuary conversion coating over satin finish, lacquered]**.
 2. Brass Sheet: **[0.040 inch (1.02 mm)] <Insert thickness>**.
 - a. Finish: **[Buffed] [Hand-rubbed]** finish lacquered.
 3. Stainless-Steel Sheet: **[0.038 inch (0.95 mm)] <Insert thickness>**.
 - a. Finish: **[No. 2B] [No. 4] [No. 6] [No. 7] [No. 8]**.
 4. Titanium Sheet: **[0.025 inch (0.64 mm)] <Insert thickness>**.
 - a. Finish: **[Dull] [Bright]** matte.

2.17 ESCALATOR ENCLOSURES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Hi-Tech Metals, Inc.
 2. KPK Stainless.
 3. Metal Sales & Service, Inc.; Metalwerks Division.
 4. Southwest Metalsmiths.
 5. **<Insert manufacturer's name>**.
 6. or approved equal.
- B. Form escalator enclosures from metal of type and thickness indicated below. Coordinate size of enclosures, location of cutouts, and method of attachment to adjoining construction.
1. Stainless-Steel Sheet: **[0.062 inch (1.59 mm)] [Thickness required to comply with performance requirements] <Insert thickness>**.

- a. Finish: **[No. 2B] [No. 4] [No. 6] [No. 7] [No. 8]**.
2. Bronze Sheet: **[0.081 inch (2.05 mm)] [Thickness required to comply with performance requirements] <Insert thickness>**.
 - a. Finish: **[Buffed finish, lacquered] [Hand-rubbed finish, lacquered] [Statuary conversion coating over satin finish]**.

2.18 FILLER PANELS

- A. Form filler panels for closing ends of partition systems and for other applications indicated. Form from two sheets of metal of type and thickness indicated below, separated by channels formed from the same material, producing a panel of same thickness as **[partitions] [mullions]** unless otherwise indicated. Incorporate reveals, trim, and concealed anchorages for attaching to adjacent surfaces.
 1. Galvanized-Steel Sheet: **[0.064 inch (1.63 mm)] <Insert thickness>**.
 - a. Finish: **[Factory primed] [Baked enamel] [Siliconized polyester] [High-performance organic coating] [Powder coat]**.
 2. Steel Sheet: **[0.060 inch (1.52 mm)] <Insert thickness>**.
 - a. Finish: **[Factory primed] [Baked enamel] [Powder coat]**.
 3. Filler panels may be fabricated from prefinished metal sheet in lieu of finishing after fabrication provided unfinished edges are concealed from view.
- B. Fill interior of panel with sound-deadening insulation permanently attached to inside panel faces.
- C. Adhesively attach gaskets to filler panel edges where they abut mullions or glazing. Use **1-inch-** (25-mm-) square material, unless otherwise indicated, set approximately **1/4 inch** (6 mm) into channeled edge of filler panel.
- D. Attach gaskets to all edges of panels that abut adjacent surfaces to form a continuous seal. Use compressible gaskets or mastic sealing tape, applied to center of panel edges to be concealed from view, unless otherwise indicated.
- E. Do not mechanically fasten filler panels to mullions.

2.19 HEATING-COOLING UNIT ENCLOSURES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Airflex Industries, Inc.
 2. Architectural Grille; Div. of Giumenta Corp.
 3. Arsko Manufacturing Company.

4. Kees, Inc.
 5. Precision Metal Fabricators, Inc.
 6. **<Insert manufacturer's name>**.
 7. or approved equal.
- B. Fabricate heating-cooling unit enclosures from metal of type and thickness indicated below:
1. Galvanized-Steel Sheet:
 - a. Framing: **[0.108 inch (2.74 mm)] [Thickness required to comply with performance requirements] <Insert thickness>**.
 - b. Sills and Stools: **[0.079 inch (2.01 mm)] [Thickness required to comply with performance requirements] <Insert thickness>**.
 - c. Front Panels and Bases: **[0.064 inch (1.63 mm)] <Insert thickness>**.
 - d. Concealed Panels and Trim: **[0.040 inch (1.02 mm)] <Insert thickness>**.
 - e. Finish: **[Factory primed] [Baked enamel] [Siliconized polyester] [High-performance organic coating] [Powder coat]**.
 2. Steel Sheet:
 - a. Framing: **[0.105 inch (2.66 mm)] [Thickness required to comply with performance requirements] <Insert thickness>**.
 - b. Sills and Stools: **[0.075 inch (1.90 mm)] [Thickness required to comply with performance requirements] <Insert thickness>**.
 - c. Front Panels and Bases: **[0.060 inch (1.52 mm)] <Insert thickness>**.
 - d. Concealed Panels and Trim: **[0.036 inch (0.91 mm)] <Insert thickness>**.
 - e. Finish: **[Factory primed] [Baked enamel] [Powder coat]**.
- C. Weld seams and connections unless otherwise indicated or unless other methods are necessary for access to heating and cooling equipment.
- D. Incorporate stiffeners or laminated backing using noncombustible materials as needed for strength and rigidity.
1. Fill space between stiffeners with sound-deadening insulation attached to face sheet with insulation adhesive unless otherwise indicated.
 2. Coat concealed faces of metal panels more than **6 inches (150 mm)** wide with a heavy coating of sound-deadening mastic applied at the minimum rate of **20 sq. ft./gal. (0.5 sq. m/L)**.
- E. Provide louvers and grilles of size, type, and materials indicated.
1. For removable grilles, use modular units with recessed openings formed into surfaces of enclosures and without blank filler panels between grilles, so face panels and stools are continuous. Fabricate removable grilles and openings to precise tolerances to produce well-fitted assemblies free of warp or rattle, with grilles supported continuously along parallel edges and with tops flush with top of enclosure.

- F. Incorporate removable tops and fronts where indicated or needed for access to heating-cooling units and to piping, ductwork, controls, and electrical service, with panels and openings as follows:
1. Fabricate with a fitting tolerance of not less than **1/32 inch** (0.8 mm) and not more than **1/16 inch** (1.6 mm) at each edge, with face of panels flush with adjoining fixed surfaces of enclosure.
 2. Form panels for easy removal without interfering with adjoining construction or furniture. Hold panels in place with concealed clips and hardware that prevent warp and rattle.
- G. Incorporate hinged access panels in enclosures for access to heating-cooling unit controls, as either separate elements or integrated with grille openings, as indicated or needed.
- H. Coordinate construction, configuration, and dimensions of enclosures with those of heating-cooling units. Provide support for heating-cooling units and controls where indicated. Provide blind knockouts and supports for piping, ductwork, control lines, electrical conduit, and wiring where indicated or needed.
- I. Locate fixed surfaces of enclosure to coincide precisely with window mullions and partition system terminations. Provide closures at ends of units, at recessed openings in base of units, and at other locations where needed to conceal unfinished wall or floor surfaces, piping, conduit, ductwork, or heating-cooling units.
1. Provide built-in partitions (bulkheads) within enclosures between heating-cooling units, located to coincide with mullions and partition system terminations. Seal partitions to faces of enclosures with compressible gaskets or mastic sealing tape, and cover both sides of partitions with sound-deadening insulation attached to partitions with insulation adhesive.

2.20 LIGHTING COVES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Fry Reglet Corporation.
 2. Gordon, Inc.; Gordon Interior Specialties Division.
 3. Hi-Tech Metals, Inc.
 4. MM Systems Corporation.
 5. Pittcon Industries.
 6. **<Insert manufacturer's name>**.
 7. or approved equal.
- B. Form lighting coves from metal of type and thickness indicated below. Coordinate size of coves, location of cutouts for electrical wiring, and method of attachment to adjoining construction.
1. Aluminum Sheet: [**0.063 inch** (1.60 mm)] **<Insert thickness>**.

- a. Finish: [**Baked enamel or powder coat**] [**Siliconized polyester**] [**High-performance organic coating**] [**Mill**] [**Clear anodic**] [**Color anodic**].
2. Galvanized-Steel Sheet: [**0.052 inch (1.32 mm)**] <Insert thickness>.
 - a. Finish: [**Factory primed**] [**Baked enamel**] [**Siliconized polyester**] [**High-performance organic coating**] [**Powder coat**].
3. Steel Sheet: [**0.048 inch (1.21 mm)**] <Insert thickness>.
 - a. Finish: [**Factory primed**] [**Baked enamel**] [**Powder coat**].
4. Fabricate light covers with [**hairline butt joints**] [**tapered edges for taping and spackling**].
5. Provide [**mitered corners, factory welded with backplates**] [**factory endcaps**].
6. Lighting covers may be fabricated from prefinished metal sheet in lieu of finishing after fabrication provided unfinished edges are concealed from view.

2.21 METAL BASE

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Fry Reglet Corporation.
 2. Pittcon Industries.
 3. <Insert manufacturer's name>.
 4. or approved equal.
- B. Form metal base from metal of type and thickness indicated below:
 1. Aluminum Sheet: [**0.063 inch (1.60 mm)**] <Insert thickness>.
 - a. Finish: [**Baked enamel or powder coat**] [**Siliconized polyester**] [**High-performance organic coating**] [**Mill**] [**Clear anodic**] [**Color anodic**].
 2. Stainless-Steel Sheet: [**0.050 inch (1.27 mm)**] <Insert thickness>.
 - a. Finish: [**No. 2B**] [**No. 4**] [**No. 6**] [**No. 7**] [**No. 8**].

2.22 MULLION CLADDING

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Hi-Tech Metals, Inc.
 2. International Metal Worksw.
 3. KPK Stainless.
 4. Metal Sales & Service, Inc.; Metalwerks Division.
 5. Southwest Metalsmiths.

6. **<Insert manufacturer's name>**.
7. or approved equal.

B. Form mullion cladding from metal of type and thickness indicated below. Fabricate to fit tightly to adjoining construction.

1. Aluminum Sheet: **[0.063 inch (1.60 mm)] <Insert thickness>**.
 - a. Finish: **[Baked enamel or powder coat] [Siliconized polyester] [High-performance organic coating] [Mill] [Clear anodic] [Color anodic]**.
2. Galvanized-Steel Sheet: **[0.052 inch (1.32 mm)] <Insert thickness>**.
 - a. Finish: **[Factory primed] [Baked enamel] [Siliconized polyester] [High-performance organic coating] [Powder coat]**.
3. Stainless-Steel Sheet: **[0.050 inch (1.27 mm)] <Insert thickness>**.
 - a. Finish: **[No. 2B] [No. 4] [No. 6] [No. 7] [No. 8]**.

2.23 PIPE SYSTEM COVERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Arscos Manufacturing Company.
2. Grice Engineering, Inc.
3. **<Insert manufacturer's name>**.
4. or approved equal.

B. Form pipe system covers from metal of type and thickness indicated below. Coordinate size of covers, location of cutouts for piping, and method of attachment to adjoining construction.

1. Galvanized-Steel Sheet: **[0.052 inch (1.32 mm)] <Insert thickness>**.
 - a. Finish: **[Factory primed] [Baked enamel] [Siliconized polyester] [High-performance organic coating] [Powder coat]**.
2. Steel Sheet: **[0.048 inch (1.21 mm)] <Insert thickness>**.
 - a. Finish: **[Factory primed] [Baked enamel] [Powder coat]**.

2.24 POCKETS FOR WINDOW TREATMENT

A. Form pockets from metal of type and thickness indicated below, with end closures. Coordinate dimensions and attachment methods with window treatment equipment, window frames, ceiling suspension system, and other related construction to produce a coordinated, closely fitting assembly.

1. Aluminum Sheet: **[0.063 inch (1.60 mm)] <Insert thickness>**.
 - a. Finish: **[Baked enamel or powder coat] [Siliconized polyester] [High-performance organic coating] [Mill] [Clear anodic] [Color anodic]**.
 2. Galvanized-Steel Sheet: **[0.052 inch (1.32 mm)]**.
 - a. Finish: **[Factory primed] [Baked enamel] [Siliconized polyester] [High-performance organic coating] [Powder coat]**.
 3. Steel Sheet: **[0.048 inch (1.21 mm)] <Insert thickness>**.
 - a. Finish: **[Factory primed] [Baked enamel] [Powder coat]**.
 4. Pockets for window treatment may be fabricated from prefinished metal sheet in lieu of finishing after fabrication provided unfinished edges are concealed from view.
- B. Reinforce pockets for attaching window treatment equipment and hardware, or increase metal thickness.
- C. Divide continuous pockets with built-in partitions located to separate adjoining drapery and blind units, to coincide with window mullions, and to receive filler panels at ends of partitions.

2.25 WINDOW STOOLS

- A. Form window stools from metal of type and thickness indicated below, with end closures:
1. Aluminum Sheet: **[0.063 inch (1.60 mm)] <Insert thickness>**.
 - a. Finish: **[Baked enamel or powder coat] [Siliconized polyester] [High-performance organic coating] [Mill] [Clear anodic] [Color anodic]**.
 2. Galvanized-Steel Sheet: **[0.052 inch (1.32 mm)] <Insert thickness>**.
 - a. Finish: **[Factory primed] [Baked enamel] [Siliconized polyester] [High-performance organic coating] [Powder coat]**.
 3. Stainless-Steel Sheet: **[0.050 inch (1.27 mm)] [1.3 mm] <Insert thickness>**.
 - a. Finish: **[No. 2B] [No. 4] [No. 6] [No. 7] [No. 8]**.
 4. Bronze Sheet: **[0.051 inch (1.29 mm)] <Insert thickness>**.
 - a. Finish: **[Buffed finish, lacquered] [Hand-rubbed finish, lacquered] [Statuary conversion coating over satin finish]**.
- B. Weld seams at end closures.

- C. Braze seams at end closures.
- D. Apply sound-deadening [**insulation**] [**mastic**] to underside of window stools.

2.26 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Complete mechanical finishes of flat sheet metal surfaces before fabrication where possible. After fabrication, finish all joints, bends, abrasions, and other surface blemishes to match sheet finish.
- C. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- D. Apply organic and anodic finishes to formed metal after fabrication unless otherwise indicated.
- E. Finish [**items indicated on Drawings**] <Insert product> after assembly.
- F. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.27 ALUMINUM FINISHES

- A. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
- B. Clear Anodic Finish: AAMA 611, [**AA-M12C22A41, Class I, 0.018 mm**] [**AA-M12C22A31, Class II, 0.010 mm**] or thicker.
- C. Color Anodic Finish: AAMA 611, [**AA-M12C22A42/A44, Class I, 0.018 mm**] [**AA-M12C22A32/A34, Class II, 0.010 mm**] or thicker.
 - 1. Color: [**Champagne**] [**Light bronze**] [**Medium bronze**] [**Dark bronze**] [**Black**] <Insert color>.
 - 2. Color: [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry colors and color densities**].
- D. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of **1.5 mils** (0.04 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
 - 1. Color and Gloss: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from**

manufacturer's full range] <Insert color and gloss>.

- E. Siliconized Polyester Finish: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than **0.2 mil** (0.005 mm) for primer and **0.8 mil** (0.02 mm) for topcoat.
1. Color and Gloss: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager** from manufacturer's full range] <Insert color and gloss>.
- F. High-Performance Organic Finish: Two-coat fluoropolymer finish complying with **[AAMA 2604] [AAMA 2605]** and containing not less than **[50] [70]** percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
1. Color and Gloss: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager** from manufacturer's full range] <Insert color and gloss>.
- G. High-Performance Organic Finish: **[Three] [Four]**-coat fluoropolymer finish complying with AAMA 2605 and containing not less than **[50] [70]** percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
1. Color and Gloss: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager** from manufacturer's full range] <Insert color and gloss>.

2.28 GALVANIZED-STEEL SHEET FINISHES

- A. Preparing Galvanized Items for Factory Priming: Thoroughly clean galvanized decorative formed metal of grease, dirt, oil, flux, and other foreign matter, and treat with etching cleaner.
- B. Preparing Galvanized Items for Factory Finishing: Clean surfaces with nonpetroleum solvent so surfaces are free of oil and other contaminants. After cleaning, apply a conversion coating suited to the organic coating to be applied over it.
- C. Repairing Galvanized Surfaces: Clean welds and abraded areas and repair galvanizing to comply with ASTM A 780.
- D. Factory Priming for Field-Painted Finish: Where field painting after installation is indicated, apply shop primer to prepared surfaces of items unless otherwise indicated. Comply with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.
- E. Factory-Painted Finish: Comply with **[Section 099113 "Exterior Painting."]** **[Section 099600 "High-Performance Coatings."]**
1. Color: **[As indicated by manufacturer's designations] [Match DEN Project**

Manager's sample] [As selected by DEN Project Manager from manufacturer's full range].

- F. Baked-Enamel Finish: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-enamel finish consisting of prime coat and thermosetting topcoat, with a minimum dry film thickness of **1 mil** (0.025 mm) for topcoat. Comply with paint manufacturer's written instructions for applying and baking to achieve a minimum dry film thickness of **2 mils** (0.05 mm).
1. Color and Gloss: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and gloss>.**
- G. Powder-Coat Finish: Immediately after cleaning and pretreating, apply manufacturer's standard thermosetting polyester or acrylic urethane powder coating with cured-film thickness not less than **1.5 mils** (0.04 mm). Prepare, treat, and coat metal to comply with resin manufacturer's written instructions.
1. Color and Gloss: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and gloss>.**
- H. Siliconized-Polyester Coating: Immediately after cleaning and pretreating, apply manufacturer's standard epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than **0.2 mil** (0.005 mm) for primer and **0.8 mil** (0.02 mm) for topcoat.
1. Color and Gloss: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and gloss>.**
- I. High-Performance Organic Finish: Two-coat fluoropolymer finish complying with **[AAMA 2604] [AAMA 2605]** and containing not less than **[50] [70]** percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
1. Color and Gloss: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and gloss>.**
- J. High-Performance Organic Finish: **[Three] [Four]**-coat fluoropolymer finish complying with AAMA 2605 and containing not less than **[50] [70]** percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
1. Color and Gloss: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and gloss>.**

2.29 STEEL SHEET FINISHES

- A. Surface Preparation: Clean surfaces to comply with SSPC-SP 1, "Solvent Cleaning," to remove dirt, oil, grease, or other contaminants that could impair paint bond. Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning," or with SSPC-SP 8, "Pickling."
- B. Pretreatment: Immediately after cleaning, apply a conversion coating of type suited to organic coating applied over it.
- C. Factory Priming for Field-Painted Finish: Where field painting after installation is indicated, apply shop primer to prepared surfaces of items unless otherwise indicated. Comply with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.
- D. Baked-Enamel Finish: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-enamel finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for applying and baking to achieve a minimum dry film thickness of **2 mils** (0.05 mm).
 - 1. Color and Gloss: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and gloss>**.
- E. Powder-Coat Finish: Immediately after cleaning and pretreating, apply manufacturer's standard thermosetting polyester or acrylic urethane powder coating with cured-film thickness not less than **1.5 mils** (0.04 mm). Prepare, treat, and coat metal to comply with resin manufacturer's written instructions.
 - 1. Color and Gloss: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and gloss>**.

2.30 STAINLESS-STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 1. Run grain of directional finishes with long dimension of each piece.
- C. Bright, Cold-Rolled, Unpolished Finish: No. 2B.
- D. Directional Satin Finish: No. 4.
- E. Dull Satin Finish: No. 6.
- F. Satin, Reflective, Directional Polish: No. 7.

- G. Mirrorlike Reflective, Nondirectional Polish: No. 8 finish.
- H. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

2.31 COPPER-ALLOY FINISHES

- A. Finish designations for copper alloys comply with the system established for designating copper-alloy finish systems defined in NAAMM's "Metal Finishes Manual for Architectural and Metal Products."
- B. Buffed Finish: M21 (Mechanical Finish: buffed, smooth specular).
- C. Hand-Rubbed Finish: M31-M34 (Mechanical Finish: directionally textured, fine satin; Mechanical Finish: directionally textured, hand rubbed).
- D. Medium-Satin Finish: M32 (Mechanical Finish: directionally textured, medium satin).
- E. Fine-Matte Finish: M42 (Mechanical Finish: nondirectional finish, fine matte).
- F. Buffed Finish, Lacquered: M21-O6x (Mechanical Finish: buffed, smooth specular; Coating: clear organic, air drying, as specified below).
 - 1. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of **1 mil** (0.025 mm).
- G. Hand-Rubbed Finish, Lacquered: M31-M34-O6x (Mechanical Finish: directionally textured, fine satin; Mechanical Finish: directionally textured, hand rubbed; Coating: clear organic, air drying, as specified below).
 - 1. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of **1 mil** (0.025 mm).
- H. Medium-Satin Finish, Lacquered: M32-O6x (Mechanical Finish: directionally textured, medium satin; Coating: clear organic, air drying, as specified below).
 - 1. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of **1 mil** (0.025 mm).
- I. Fine-Matte Finish, Lacquered: M42-O6x (Mechanical Finish: nondirectional finish, fine matte; Coating: clear organic, air drying, as specified below).
 - 1. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of **1 mil** (0.025 mm).
- J. Statuary Conversion Coating over Satin Finish: M31-C55 (Mechanical Finish:

directionally textured, fine satin; Chemical Finish: conversion coating, sulfide)[, **with color matching DEN Project Manager's sample**].

- K. Statuary Conversion Coating over Satin Finish, Lacquered: M31-C55-O6x (Mechanical Finish: directionally textured, fine satin; Chemical Finish: conversion coating, sulfide; Coating: clear, organic, air drying, as specified below) [, **with color matching DEN Project Manager's sample**]:
1. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of **1 mil** (0.025 mm).

2.32 TITANIUM FINISHES

- A. General: Fabricate items from finished titanium sheet, taking care not to damage finish during fabrication. Protect finish as needed during fabrication by applying a strippable, temporary protective covering.
- B. Dull Matte Finish: Pickled and annealed.
- C. Bright Matte Finish: Vacuum annealed.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of decorative formed metal.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Restore protective coverings that have been damaged during shipment or installation of the work. Remove protective coverings only when there is no possibility of damage from other work yet to be performed at the same location.
1. Retain protective coverings intact and remove simultaneously from similarly finished items to preclude nonuniform oxidation and discoloration.
- B. Locate and place decorative formed metal items level and plumb and in alignment with adjacent construction. Perform cutting, drilling, and fitting required to install decorative formed metal.

1. Do not cut or abrade finishes that cannot be completely restored in the field. Return items with such finishes to the shop for required alterations, followed by complete refinishing, or provide new units as required.
 - C. Use concealed anchorages where possible. Provide brass or lead washers fitted to screws where needed to protect metal surfaces and to make a weathertight connection.
 - D. Form tight joints with exposed connections accurately fitted together. Provide reveals and openings for sealants and joint fillers as indicated.
 - E. Install concealed gaskets, joint fillers, insulation, sealants, and flashings, as the Work progresses, to make exterior decorative formed metal items weatherproof.
 - F. Install concealed gaskets, joint fillers, sealants, and insulation, as the Work progresses, to make interior decorative formed metal items soundproof or lightproof as applicable to type of fabrication indicated.
 - G. Corrosion Protection: Apply bituminous paint or other permanent separation materials on concealed surfaces where metals would otherwise be in direct contact with substrate materials that are incompatible or could result in corrosion or deterioration of either material or finish.
 - H. Install decorative-formed-metal-clad doors and frames to comply with requirements specified in Section 081113 "Hollow Metal Doors and Frames."
 - I. Apply joint treatment at joints of spackled-seam-type metal column covers. Comply with requirements in Section 092900 "Gypsum Board."
 - J. Field Welding: Comply with applicable AWS specification for procedures of manual shielded metal arc welding, for appearance and quality of welds made, and for methods used in correcting welding work. Weld connections that are not to be left as exposed joints, but cannot be shop welded because of shipping size limitations. Grind exposed welded joints smooth and restore finish to match finish of adjacent rail surfaces.
 1. Do not field weld without prior approval from DEN Project Manager, with DEN approved safety precautions in place.
- 3.3 ADJUSTING AND CLEANING
- A. Unless otherwise indicated, clean metals by washing thoroughly with clean water and soap, rinsing with clean water, and drying with soft cloths.
 - B. Clean copper alloys according to metal finisher's written instructions in a manner that leaves an undamaged and uniform finish matching approved Sample.
 - C. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material as

used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

1. Apply by brush or spray to provide a minimum **2.0-mil** (0.05-mm) dry film thickness.
- D. Touchup Painting: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in [**Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."**] [**Section 099600 "High-Performance Coatings."**] [**Section 099113 "Exterior Painting" Section 099123 "Interior Painting,"and Section 099600 "High-Performance Coatings."**]
- E. Restore finishes damaged during installation and construction period so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit or provide new units.
- 3.4 PROTECTION
- A. Protect finishes of decorative formed metal items from damage during construction period. Remove temporary protective coverings at time of Substantial Completion.

PART 4 - MEASUREMENT

A. METHOD OF MEASUREMENT

1. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

A. METHOD OF PAYMENT

1. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 057500

SECTION 061000 - ROUGH CARPENTRY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Framing with dimension lumber.
2. Framing with engineered wood products.
3. Shear wall panels.
4. Rooftop equipment bases and support curbs.
5. Wood blocking[, **cants,**] and nailers.
6. Wood furring[**and grounds**].
7. Wood sleepers.
8. Utility shelving.
9. Plywood backing panels.

B. Related Requirements:

1. Section 061063 "Exterior Rough Carpentry" for elevated decks and other exterior construction made of wood.
2. Section 061600 "Sheathing."
3. Section 061753 "Shop-Fabricated Wood Trusses" for wood trusses made from dimension lumber.
4. Section 062000 "Finish Carpentry" for finish carpentry.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

- A. Exposed Framing: Framing not concealed by other construction.
- B. Dimension Lumber: Lumber of **2 inches nominal** (38 mm actual) or greater but less than **5 inches nominal** (114 mm actual) in least dimension.
- C. Timber: Lumber of **5 inches nominal** (114 mm actual) or greater in least dimension.

- D. Lumber grading agencies, and the abbreviations used to reference them, include the following:
1. NeLMA: Northeastern Lumber Manufacturers' Association.
 2. NLGA: National Lumber Grades Authority.
 3. RIS: Redwood Inspection Service.
 4. SPIB: The Southern Pine Inspection Bureau.
 5. WCLIB: West Coast Lumber Inspection Bureau.
 6. WWPA: Western Wood Products Association.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of process and factory-fabricated product. Indicate component materials and dimensions and include construction and application details.
1. Include data for wood-preservative treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Indicate type of preservative used and net amount of preservative retained.
 2. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Include physical properties of treated materials based on testing by a qualified independent testing agency.
 3. For fire-retardant treatments, include physical properties of treated lumber both before and after exposure to elevated temperatures, based on testing by a qualified independent testing agency according to ASTM D 5664.
 4. For products receiving a waterborne treatment, include statement that moisture content of treated materials was reduced to levels specified before shipment to Project site.
 5. Include copies of warranties from chemical treatment manufacturers for each type of treatment.
 6. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
1. Certificates for [**Credit MR 6**] [**Credit MR 7**]: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
 2. Product Data for Credit IEQ 4.1: For adhesives, documentation including printed statement of VOC content.
 3. Product Data for Credit IEQ 4.4: For composite wood products, documentation indicating that product contains no urea formaldehyde.
 4. Laboratory Test Reports for Credit IEQ 4: For [**adhesives**] [**and**] [**composite-wood products**], documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- C. Fastener Patterns: Full-size templates for fasteners in exposed framing.

1.5 INFORMATIONAL SUBMITTALS

- A. Material Certificates: For dimension lumber specified to comply with minimum allowable unit stresses. Indicate species and grade selected for each use and design values approved by the ALSC Board of Review.
- B. Evaluation Reports: For the following, from ICC-ES:
 - 1. Wood-preservative-treated wood.
 - 2. Fire-retardant-treated wood.
 - 3. Engineered wood products.
 - 4. Shear panels.
 - 5. Power-driven fasteners.
 - 6. Expansion anchors.
 - 7. Metal framing anchors.
- C. Manufacturer to provide a certificate that the Manufacturer has not less than five (5) years experience in the manufacturing of the types of products specified and that all materials are per Contract requirements.
- D. Installer to provide a certificate that the installer has not less than three (3) years experience in the installation of types of products specified.

1.6 QUALITY ASSURANCE

- A. Testing Agency Qualifications: For testing agency providing classification marking for fire-retardant treated material, an inspection agency acceptable to authorities having jurisdiction that periodically performs inspections to verify that the material bearing the classification marking is representative of the material tested.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Stack lumber flat with spacers beneath and between each bundle to provide air circulation. Protect lumber from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings.
 - 1. For lumber pressure treated with waterborne chemicals, space between each course to provide air circulation.

1.8 PROJECT CONDITIONS

- A. Coordination: Fit carpentry work to other work; scribe and cope as required for accurate fit.
 - 1. Correlate location of furring, nailers, blocking, grounds, and similar supports with

all other trades to allow attachment of other work.

1.9 WARRANTY

- A. Warranty: Installer to provide a minimum two (2) <Insert number> year warranty for materials and workmanship.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 WOOD PRODUCTS, GENERAL

- A. Certified Wood: Materials shall be produced from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship[.]"["for the following:"]
1. Dimension lumber framing.
 2. Timber.
 3. Laminated-veneer lumber.
 4. Parallel-strand lumber.
 5. Prefabricated wood I-joists.
 6. Rim boards.
 7. Miscellaneous lumber.
- B. Lumber: DOC PS 20 and applicable rules of grading agencies indicated. If no grading agency is indicated, provide lumber that complies with the applicable rules of any rules-writing agency certified by the ALSC Board of Review. Provide lumber graded by an agency certified by the ALSC Board of Review to inspect and grade lumber under the rules indicated.
1. Factory mark each piece of lumber with grade stamp of grading agency.
 2. For exposed lumber indicated to receive a stained or natural finish, [**mark grade stamp on end or back of each piece**] [or] [**omit grade stamp and provide certificates of grade compliance issued by grading agency**].
 3. Where nominal sizes are indicated, provide actual sizes required by DOC PS 20 for moisture content specified. Where actual sizes are indicated, they are minimum dressed sizes for dry lumber.
 4. Provide dressed lumber, S4S, unless otherwise indicated.
- C. Maximum Moisture Content of Lumber: [**19 percent**] unless otherwise indicated.

- D. Engineered Wood Products: Provide engineered wood products acceptable to authorities having jurisdiction and for which current model code research or evaluation reports exist that show compliance with building code in effect for Project.
1. Allowable Design Stresses: Provide engineered wood products with allowable design stresses, as published by manufacturer, which meet or exceed those indicated. Manufacturer's published values shall be determined from empirical data or by rational engineering analysis and demonstrated by comprehensive testing performed by a qualified independent testing agency.

2.2 WOOD-PRESERVATIVE-TREATED LUMBER

- A. Preservative Treatment by Pressure Process: AWPA U1; Use Category UC2[**for interior construction not in contact with the ground, Use Category UC3b for exterior construction not in contact with the ground, and Use Category UC4a for items in contact with the ground**].
1. Preservative Chemicals: Acceptable to authorities having jurisdiction and containing no arsenic or chromium.
 2. For exposed items indicated to receive a stained or natural finish, use chemical formulations that do not require incising, contain colorants, bleed through, or otherwise adversely affect finishes.
- B. Kiln-dry lumber after treatment to a maximum moisture content of 19 percent. Do not use material that is warped or that does not comply with requirements for untreated material.
- C. Mark lumber with treatment quality mark of an inspection agency approved by the ALSC Board of Review.
1. For exposed lumber indicated to receive a stained or natural finish, [**mark end or back of each piece**] [**or**] [**omit marking and provide certificates of treatment compliance issued by inspection agency**].
- D. Application: Treat [**items indicated on Drawings, and the following**]:
1. Wood cants, nailers, curbs, equipment support bases, blocking, stripping, and similar members in connection with roofing, flashing, vapor barriers, and waterproofing.
 2. Wood sills, sleepers, blocking, [**furring,**] [**stripping,**] and similar concealed members in contact with masonry or concrete.
 3. Wood framing and furring attached directly to the interior of below-grade exterior masonry or concrete walls.
 4. Wood framing members that are less than **18 inches** (460 mm) above the ground in crawlspaces or unexcavated areas.
 5. Wood floor plates that are installed over concrete slabs-on-grade.

2.3 FIRE-RETARDANT-TREATED MATERIALS

- A. General: Where fire-retardant-treated materials are indicated, use materials complying with requirements in this article, that are acceptable to authorities having jurisdiction, and with fire-test-response characteristics specified as determined by testing identical products per test method indicated by a qualified testing agency.
- B. Fire-Retardant-Treated Lumber and Plywood by Pressure Process: Products with a flame spread index of 25 or less when tested according to ASTM E 84, and with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than **10.5 feet (3.2 m)** beyond the centerline of the burners at any time during the test.
1. Use treatment that does not promote corrosion of metal fasteners.
 2. Exterior Type: Treated materials shall comply with requirements specified above for fire-retardant-treated lumber and plywood by pressure process after being subjected to accelerated weathering according to ASTM D 2898. Use for exterior locations and where indicated.
 3. Interior Type A: Treated materials shall have a moisture content of 28 percent or less when tested according to ASTM D 3201 at 92 percent relative humidity. Use where exterior type is not indicated.
 4. Design Value Adjustment Factors: Treated lumber shall be tested according ASTM D 5664 and design value adjustment factors shall be calculated according to ASTM D 6841. **[For enclosed roof framing, framing in attic spaces, and where high temperature fire-retardant treatment is indicated, provide material with adjustment factors of not less than 0.85 modulus of elasticity and 0.75 for extreme fiber in bending for Project's climatological zone.]**
- C. Kiln-dry lumber after treatment to a maximum moisture content of 19 percent. **[Kiln-dry plywood after treatment to a maximum moisture content of 15 percent.]**
- D. Identify fire-retardant-treated wood with appropriate classification marking of qualified testing agency.
1. For exposed lumber indicated to receive a stained or natural finish, **[mark end or back of each piece] [or] [omit marking and provide certificates of treatment compliance issued by testing agency].**
- E. For exposed items indicated to receive a stained or natural finish, use chemical formulations that do not bleed through, contain colorants, or otherwise adversely affect finishes.
- F. Application: Treat all lumber used on the interior of the building.
1. Untreated wood: Not allowed except for temporary construction, as approved by DEN Project Manager.

2.4 DIMENSION LUMBER FRAMING

A. Non-Load-Bearing Interior Partitions: **[Standard, Stud, or No. 3]** grade.

1. Application: **[All interior partitions]**.
2. Species:
 - a. Hem-fir (north); NLGA.
 - b. Mixed southern pine; SPIB.
 - c. Spruce-pine-fir; NLGA.
 - d. Hem-fir; WCLIB, or WWPA.
 - e. Spruce-pine-fir (south); NeLMA, WCLIB, or WWPA.
 - f. Northern species; NLGA.
 - g. Eastern softwoods; NeLMA.
 - h. Western woods; WCLIB or WWPA.

B. Load-Bearing Partitions: **[Construction, Stud, or No. 3]** grade.

1. Application: **[Exterior walls] [and] [interior load-bearing partitions]**.
2. Species:
 - a. Hem-fir (north); NLGA.
 - b. Southern pine; SPIB.
 - c. Douglas fir-larch; WCLIB or WWPA.
 - d. Mixed southern pine; SPIB.
 - e. Spruce-pine-fir; NLGA.
 - f. Douglas fir-south; WWPA.
 - g. Hem-fir; WCLIB or WWPA.
 - h. Douglas fir-larch (north); NLGA.
 - i. Spruce-pine-fir (south); NeLMA, WCLIB, or WWPA.

C. Load-Bearing Partitions: Any species of machine stress-rated dimension lumber with a grade of not less than **[2400f-2.0E] [2100f-1.8E] [1650f-1.5E] <Insert grade>**.

1. Application: **[Exterior walls] [and] [interior load-bearing partitions]**.

D. Load-Bearing Partitions: Any species and grade with a modulus of elasticity of at least **[1,500,000 psi (10 350 MPa)] [1,300,000 psi (8970 MPa)] [1,100,000 psi (7590 MPa)] [1,000,000 psi (6900 MPa)] [900,000 psi (6210 MPa)]** and an extreme fiber stress in bending of at least **[1000 psi (6.9 MPa)] [850 psi (5.86 MPa)] [700 psi (4.83 MPa)] [600 psi (4.14 MPa)] [500 psi (3.45 MPa)]** for **2-inch nominal (38-mm actual)** thickness and **12-inch nominal (286-mm actual)** width for single-member use.

1. Application: **[Exterior walls] [and] [interior load-bearing partitions]**.

E. Ceiling Joists: **[Construction or No. 2] [Construction, Stud, or No. 3] [Standard, Stud, or No. 3]** grade.

1. Species:
 - a. Hem-fir (north); NLGA.

- b. Southern pine; SPIB.
 - c. Douglas fir-larch; WCLIB or WWPA.
 - d. Douglas fir-larch (north); NLGA.
 - e. Mixed southern pine; SPIB.
 - f. Spruce-pine-fir; NLGA.
 - g. Hem-fir; WCLIB or WWPA.
 - h. Douglas fir-south; WWPA.
 - i. Spruce-pine-fir (south); NeLMA, WCLIB, or WWPA.
 - j. Northern species; NLGA.
 - k. Eastern softwoods; NeLMA.
 - l. Western woods; WCLIB or WWPA.
- F. Joists, Rafters, and Other Framing Not Listed Above: **[Select Structural] [No. 1] [No. 2] [Construction or No. 2] [Construction, Stud, or No. 3]** grade.
1. Species:
 - a. Hem-fir (north); NLGA.
 - b. Southern pine; SPIB.
 - c. Douglas fir-larch; WCLIB or WWPA.
 - d. Mixed southern pine; SPIB.
 - e. Spruce-pine-fir; NLGA.
 - f. Douglas fir-south; WWPA.
 - g. Hem-fir; WCLIB or WWPA.
 - h. Douglas fir-larch (north); NLGA.
 - i. Spruce-pine-fir (south); NeLMA, WCLIB, or WWPA.
- G. Joists, Rafters, and Other Framing Not Listed Above: Any species of machine stress-rated dimension lumber with a grade of not less than **[2400f-2.0E] [2100f-1.8E] [1650f-1.5E]** <Insert grade>.
- H. Joists, Rafters, and Other Framing Not Listed Above: Any species and grade with a modulus of elasticity of at least **[1,500,000 psi (10 350 MPa)] [1,300,000 psi (8970 MPa)] [1,100,000 psi (7590 MPa)] [1,000,000 psi (6900 MPa)] [900,000 psi (6210 MPa)]** and an extreme fiber stress in bending of at least **[1000 psi (6.9 MPa)] [850 psi (5.86 MPa)] [700 psi (4.83 MPa)] [600 psi (4.14 MPa)] [500 psi (3.45 MPa)]** for **2-inch nominal** (38-mm actual) thickness and **12-inch nominal** (286-mm actual) width for single-member use.
- I. Exposed Framing: Provide material hand-selected for uniformity of appearance and freedom from characteristics, on exposed surfaces and edges, that would impair finish appearance, including decay, honeycomb, knot-holes, shake, splits, torn grain, and wane.
1. Application: Exposed **[exterior] [and] [interior]** framing **[indicated to receive a stained or natural finish]**.
 2. Species and Grade: As indicated above for load-bearing construction of same type.
 3. Species and Grade: Hem-fir (north); **[Select Structural] [No. 1]** grade; NLGA.
 4. Species and Grade: Southern pine; **[Select Structural] [No. 1] [No. 2]** grade; SPIB.

5. Species and Grade: Douglas fir-larch; [**Select Structural**] [**No. 1**] grade; WCLIB or WWPA.
6. Species and Grade: Mixed southern pine; [**Select Structural**] [**No. 1**] [**No. 2**] grade; SPIB.
7. Species and Grade: Spruce-pine-fir; [**Select Structural**] [**No. 1**] grade; NLGA.
8. Species and Grade: Douglas fir-south; [**Select Structural**] [**No. 1**] grade; WWPA.
9. Species and Grade: Hem-fir; [**Select Structural**] [**No. 1**] grade; WCLIB or WWPA.
10. Species and Grade: Douglas fir-larch (north); [**Select Structural**] [**No. 1**] grade; NLGA.
11. Species and Grade: Spruce-pine-fir (south); [**Select Structural**] [**No. 1**] grade; NeLMA, WCLIB, or WWPA.
12. Species and Grade: Eastern hemlock-balsam fir or eastern hemlock-tamarack; [**Select Structural**] [**No. 1**] grade; NeLMA.
13. Species and Grade: Beech-birch-hickory; [**Select Structural**] [**No. 1**] grade; NeLMA.
14. Species and Grade: Northern red oak; [**Select Structural**] [**No. 1**] grade; NeLMA.
15. Species and Grade: Redwood; [**Clear Heart Structural**] [**Clear Structural**] [**Select Structural**] [**No. 1**] grade; RIS.
16. Species and Grade: Mixed oak; [**Select Structural**] [**No. 1**] grade; NeLMA.
17. Species and Grade: Mixed maple; [**Select Structural**] [**No. 1**] grade; NeLMA.
18. Species and Grade: Western cedars; [**Select Structural**] [**No. 1**] grade; WCLIB or WWPA.

2.5 ENGINEERED WOOD PRODUCTS

- A. Engineered Wood Products, General: Products shall [**contain no urea formaldehyde.**] [**comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."**]
- B. Source Limitations: Obtain each type of engineered wood product from single source from a single manufacturer.
- C. Laminated-Veneer Lumber: Structural composite lumber made from wood veneers with grain primarily parallel to member lengths, evaluated and monitored according to ASTM D 5456 and manufactured with an exterior-type adhesive complying with ASTM D 2559.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Boise Cascade Corporation.
 - b. Finnforest USA.
 - c. Georgia-Pacific.
 - d. Jager Building Systems Inc.
 - e. Louisiana-Pacific Corporation.
 - f. Pacific Woodtech Corporation.

- g. Roseburg Forest Products Co.
 - h. Standard Structures Inc.
 - i. Stark Truss Company, Inc.
 - j. West Fraser Timber Co., Ltd.
 - k. Weyerhaeuser Company.
 - l. <Insert manufacturer>
 - m. or approved equal.
 2. Extreme Fiber Stress in Bending, Edgewise: **3100 psi (21.3 MPa)** [**2900 psi (20.0 MPa)**] [**2600 psi (17.9 MPa)**] [**2250 psi (15.5 MPa)**] <Insert value> for 12-inch nominal- (286-mm actual-) depth members.
 3. Modulus of Elasticity, Edgewise: **2,000,000 psi (13 700 MPa)** [**1,800,000 psi (12 400 MPa)**] [**1,500,000 psi (10 300 MPa)**] <Insert value>.
- D. Parallel-Strand Lumber: Structural composite lumber made from wood strand elements with grain primarily parallel to member lengths, evaluated and monitored according to ASTM D 5456 and manufactured with an exterior-type adhesive complying with ASTM D 2559.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Louisiana-Pacific Corporation.
 - b. Weyerhaeuser Company.
 - c. <Insert manufacturer>
 - d. or approved equal.
 2. Extreme Fiber Stress in Bending, Edgewise: **2900 psi (20 MPa)** for 12-inch nominal- (286-mm actual-) depth members.
 3. Modulus of Elasticity, Edgewise: **2,200,000 psi (15 100 MPa)**.
- E. Wood I-Joists: Prefabricated units, I-shaped in cross section, made with solid or structural composite lumber flanges and wood-based structural panel webs, let into and bonded to flanges. Provide units complying with material requirements of and with structural capacities established and monitored according to ASTM D 5055.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anthony-Domtar Inc.
 - b. Boise Cascade Corporation.
 - c. Georgia-Pacific.
 - d. J. M. Huber Corporation.
 - e. International Beams Inc.
 - f. International Paper Corporation.
 - g. Jager Building Systems Inc.
 - h. Louisiana-Pacific Corporation.
 - i. Nascor Incorporated.
 - j. Pacific Woodtech Corporation.
 - k. Roseburg Forest Products Co.

- I. Standard Structures Inc.
 - m. Stark Truss Company, Inc.
 - n. Superior Wood Systems.
 - o. Weyerhaeuser Company.
 - p. <Insert manufacturer's name>
 - q. or approved equal.
 2. Web Material: **[Either oriented strand board or plywood, complying with DOC PS 1 or DOC PS 2, Exposure 1] [Plywood, complying with DOC PS 1 or DOC PS 2, Exposure 1] [Plywood, complying with DOC PS 1, Exterior grade].**
 3. Structural Properties: Provide units with depths and design values not less than those indicated.
 4. Provide units complying with APA PRI-400, factory marked with APA trademark indicating nominal joist depth, joist class, span ratings, mill identification, and compliance with APA standard.
- F. Rim Boards: Product designed to be used as a load-bearing member and to brace wood I-joists at bearing ends, complying with research/evaluation report for I-joists.
1. Manufacturer: Provide products by same manufacturer as I-joists.
 2. Material: **[All-veneer product] [glued-laminated wood] [or] [product made from any combination solid lumber, wood strands, and veneers].**
 3. Thickness: **[1 inch (25 mm)] [1-1/8 inches (28 mm)] [1-1/4 inches (32 mm)].**
 4. Provide performance-rated product complying with APA PRR-401, **[rim board] [rim board plus]** grade, factory marked with APA trademark indicating thickness, grade, and compliance with APA standard.

2.6 SHEAR WALL PANELS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Shear Transfer Systems.
 2. Simpson Strong-Tie Co., Inc.
 3. Weyerhaeuser Company.
 4. <Insert manufacturer>
 5. or approved equal.
- B. Wood-Framed Shear Wall Panels: Prefabricated assembly consisting of wood perimeter framing, tie downs, and Exposure I, Structural I plywood or OSB sheathing.
1. Products shall **[contain no urea formaldehyde.] [comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."]**
- C. Steel-Framed Shear Wall Panels: Prefabricated assembly consisting of cold-formed galvanized steel panel, steel top and bottom plates, and wood studs.

- D. Allowable Design Loads: Provide products with allowable design loads, as published by manufacturer, which meet or exceed those **[indicated] [of products of manufacturers listed]**. Manufacturer's published values shall be determined from empirical data or by rational engineering analysis and demonstrated by comprehensive testing performed by a qualified independent testing agency.

2.7 MISCELLANEOUS LUMBER

- A. General: Provide miscellaneous lumber indicated and lumber for support or attachment of other construction, including the following:
1. Blocking.
 2. Nailers.
 3. Rooftop equipment bases and support curbs.
 4. Cants.
 5. Furring.
 6. Grounds.
 7. Utility shelving.
- B. For items of dimension lumber size, provide **[Standard, Stud, or No. 3]** grade lumber **[and any of the following species:]**
1. Hem-fir (north); NLGA.
 2. Mixed southern pine; SPIB.
 3. Spruce-pine-fir; NLGA.
 4. Hem-fir; WCLIB or WWPA.
 5. Spruce-pine-fir (south); NeLMA, WCLIB, or WWPA.
 6. Western woods; WCLIB or WWPA.
 7. Northern species; NLGA.
 8. Eastern softwoods; NeLMA.
- C. For utility shelving, provide lumber with **[19]** percent maximum moisture content and **[any of]** the following species and grades:
1. Eastern white pine, Idaho white, lodgepole, ponderosa, or sugar pine; **[Premium or No. 2 Common (Sterling)] [Standard or No. 3 Common]** grade; NeLMA, NLGA, WCLIB, or WWPA.
 2. Mixed southern pine; No. **[1] [2]** grade; SPIB.
 3. Hem-fir or hem-fir (north); **[Select Merchantable or No. 1 Common] [Construction or No. 2 Common]** grade; NLGA, WCLIB, or WWPA.
 4. Spruce-pine-fir (south) or spruce-pine-fir; **[Select Merchantable or No. 1 Common] [Construction or No. 2 Common]** grade; NeLMA, NLGA, WCLIB, or WWPA.
- D. For concealed boards, provide lumber with **[19]** percent maximum moisture content and **[any of]** the following species and grades:
1. Mixed southern pine; No. **[2] [3]** grade; SPIB.

2. Hem-fir or hem-fir (north); [**Construction or No. 2 Common**] [**Standard or No. 3 Common**] grade; NLGA, WCLIB, or WWPA.
 3. Spruce-pine-fir (south) or spruce-pine-fir; [**Construction or No. 2 Common**] [**Standard or No. 3 Common**] grade; NeLMA, NLGA, WCLIB, or WWPA.
 4. Eastern softwoods; No. [**2**] [**3**] Common grade; NeLMA.
 5. Northern species; No. [**2**] [**3**] Common grade; NLGA.
 6. Western woods; [**Construction or No. 2 Common**] [**Standard or No. 3 Common**] grade; WCLIB or WWPA.
- E. For blocking not used for attachment of other construction, Utility, Stud, or No. 3 grade lumber of any species may be used provided that it is cut and selected to eliminate defects that will interfere with its attachment and purpose.
- F. For blocking and nailers used for attachment of other construction, select and cut lumber to eliminate knots and other defects that will interfere with attachment of other work.
- G. For furring strips for installing plywood or hardboard paneling, select boards with no knots capable of producing bent-over nails and damage to paneling.

2.8 PLYWOOD BACKING PANELS

- A. Equipment Backing Panels: DOC PS 1, [**Exterior, AC**] [**Exterior, C-C Plugged**] [**Exposure 1, C-D Plugged**], [**fire-retardant treated**], in thickness indicated or, if not indicated, not less than [**1/2-inch (13-mm)**] [**3/4-inch (19-mm)**] nominal thickness.
1. Plywood shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.9 FASTENERS

- A. General: Provide fasteners of size and type indicated that comply with requirements specified in this article for material and manufacture.
1. Where rough carpentry is exposed to weather, in ground contact, pressure-preservative treated, or in area of high relative humidity, provide fasteners[**with hot-dip zinc coating complying with ASTM A 153/A 153M**].
- B. Nails, Brads, and Staples: ASTM F 1667.
- C. Power-Driven Fasteners: NES NER-272.
- D. Wood Screws: ASME B18.6.1.
- E. Lag Bolts: **ASME B18.2.1** (ASME B18.2.3.8M).

- F. Bolts: Steel bolts complying with [ASTM A 307, Grade A](#) (ASTM F 568M, Property Class 4.6); with [ASTM A 563](#) (ASTM A 563M) hex nuts and, where indicated, flat washers.
- G. Expansion Anchors: Anchor bolt and sleeve assembly of material indicated below with capability to sustain, without failure, a load equal to six times the load imposed when installed in unit masonry assemblies and equal to four times the load imposed when installed in concrete as determined by testing per ASTM E 488 conducted by a qualified independent testing and inspecting agency.
 - 1. Material: Carbon-steel components, zinc plated to comply with ASTM B 633, Class Fe/Zn 5.
 - 2. Material: Stainless steel with bolts and nuts complying with [ASTM F 593 and ASTM F 594, Alloy Group 1 or 2](#) (ASTM F 738M and ASTM F 836M, Grade A1 or A4).

2.10 METAL FRAMING ANCHORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Cleveland Steel Specialty Co.
 - 2. KC Metals Products, Inc.
 - 3. Phoenix Metal Products, Inc.
 - 4. Simpson Strong-Tie Co., Inc.
 - 5. USP Structural Connectors.
 - 6. **<Insert manufacturer's name>**
 - 7. or approved equal.
- B. Allowable Design Loads: Provide products with allowable design loads, as published by manufacturer, that meet or exceed those **[indicated] [of products of manufacturers listed]**. Manufacturer's published values shall be determined from empirical data or by rational engineering analysis and demonstrated by comprehensive testing performed by a qualified independent testing agency.
- C. Galvanized-Steel Sheet: Hot-dip, zinc-coated steel sheet complying with ASTM A 653/A 653M, [G60](#) (Z180) coating designation.
 - 1. Use for interior locations unless otherwise indicated.
- D. Hot-Dip, Heavy-Galvanized Steel Sheet: ASTM A 653/A 653M; structural steel (SS), high-strength low-alloy steel Type A (HSLAS Type A), or high-strength low-alloy steel Type B (HSLAS Type B); [G185](#) (Z550) coating designation; and not less than [0.036 inch](#) (0.9 mm) thick.
 - 1. Use for wood-preserved-treated lumber and where indicated.
- E. Stainless-Steel Sheet: ASTM A 666, **[Type 304] [Type 316]**.
 - 1. Use for exterior locations and where indicated.
- F. Joist Hangers: U-shaped joist hangers with [2-inch-](#) (50-mm-) long seat and [1-1/4-inch-](#)

(32-mm-) wide nailing flanges at least 85 percent of joist depth.

1. Thickness: [0.050 inch (1.3 mm)] [0.062 inch (1.6 mm)].
- G. I-Joist Hangers: U-shaped joist hangers with 2-inch- (50-mm-) long seat and 1-1/4-inch- (32-mm-) wide nailing flanges full depth of joist. Nailing flanges provide lateral support at joist top chord.
1. Thickness: [0.050 inch (1.3 mm)] [0.062 inch (1.6 mm)].
- H. Top Flange Hangers: U-shaped joist hangers, full depth of joist, formed from metal strap with tabs bent to extend over and be fastened to supporting member.
1. Strap Width: [1-1/2 inches (38 mm)] [2 inches (50 mm)].
 2. Thickness: [0.050 inch (1.3 mm)] [0.062 inch (1.6 mm)].
- I. Bridging: Rigid, V-section, nailless type, 0.050 inch (1.3 mm) thick, length to suit joist size and spacing.
- J. Post Bases: Adjustable-socket type for bolting in place with standoff plate to raise post 1 inch (25 mm) above base and with 2-inch- (50-mm-) minimum side cover, socket 0.062 inch (1.6 mm) thick, and standoff and adjustment plates 0.108 inch (2.8 mm) thick.
- K. Joist Ties: Flat straps, with holes for fasteners, for tying joists together over supports.
1. Width: [3/4 inch (19 mm)] [1-1/4 inches (32 mm)].
 2. Thickness: [0.050 inch (1.3 mm)] [0.062 inch (1.6 mm)].
 3. Length: [16 inches (400 mm)] [24 inches (600 mm)] [As indicated].
- L. Rafter Tie-Downs: Bent strap tie for fastening rafters or roof trusses to wall studs below, 1-1/2 inches (38 mm) wide by 0.050 inch (1.3 mm) thick. [**Tie fastens to side of rafter or truss, face of top plates, and side of stud below.**]
- M. Rafter Tie-Downs (Hurricane or Seismic Ties): Bent strap tie for fastening rafters or roof trusses to wall studs below, 2-1/4 inches (57 mm) wide by 0.062 inch (1.6 mm) thick. Tie fits over top of rafter or truss and fastens to both sides of rafter or truss, face of top plates, and side of stud below.
- N. Floor-to-Floor Ties: Flat straps, with holes for fasteners, for tying upper floor wall studs to band joists and lower floor studs, 1-1/4 inches (32 mm) wide by 0.050 inch (1.3 mm) thick by 36 inches (914 mm) long.
- O. Hold-Downs: Brackets for bolting to wall studs and securing to foundation walls with anchor bolts or to other hold-downs with threaded rods and designed with first of two bolts placed seven bolt diameters from reinforced base.
1. Bolt Diameter: [5/8 inch (15.8 mm)] [3/4 inch (19 mm)].
 2. Width: [2-1/2 inches (64 mm)] [3-3/16 inches (81 mm)].
 3. Body Thickness: [0.108 inch (2.8 mm)] [0.138 inch (3.5 mm)].
 4. Base Reinforcement Thickness: [0.108 inch (2.8 mm)] [0.239 inch (6.1 mm)].

- P. Wall Bracing: T-shaped bracing made for letting into studs in saw kerf, **1-1/8 inches** (29 mm) wide by **9/16 inch** (14 mm) deep by **0.034 inch** (0.85 mm) thick with hemmed edges.
- Q. Wall Bracing: Angle bracing made for letting into studs in saw kerf, **15/16 by 15/16 by 0.040 inch** (24 by 24 by 1 mm) thick with hemmed edges.

2.11 MISCELLANEOUS MATERIALS

- A. Sill-Sealer Gaskets: Closed-cell neoprene foam, **1/4 inch** (6.4 mm) thick, selected from manufacturer's standard widths to suit width of sill members indicated.
- B. Flexible Flashing: Composite, self-adhesive, flashing product consisting of a pliable, **[butyl rubber] [or] [rubberized-asphalt]** compound, bonded to a high-density polyethylene film, aluminum foil, or spunbonded polyolefin to produce an overall thickness of not less than **0.025 inch** (0.6 mm).
- C. Adhesives for Gluing **[Furring] [and] [Sleepers]** to Concrete or Masonry: Formulation complying with ASTM D 3498 that is approved for use indicated by adhesive manufacturer.
 - 1. Adhesives shall have a VOC content of **[70] <Insert value>** g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - 2. Adhesives shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- D. Water-Repellent Preservative: NWWDA-tested and -accepted formulation containing 3-iodo-2-propynyl butyl carbamate, combined with an insecticide containing chlorpyrifos as its active ingredient.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Set rough carpentry to required levels and lines, with members plumb, true to line, cut, and fitted. Fit rough carpentry to other construction; scribe and cope as needed for accurate fit. Locate **[furring,]nailers, blocking, [grounds,]**and similar supports to comply with requirements for attaching other construction.
- B. Framing Standard: Comply with AF&PA's WCD 1, "Details for Conventional Wood Frame Construction," unless otherwise indicated.
- C. Framing with Engineered Wood Products: Install engineered wood products to comply with manufacturer's written instructions.

- D. Install plywood backing panels by fastening to studs; coordinate locations with utilities requiring backing panels. [**Install fire-retardant treated plywood backing panels with classification marking of testing agency exposed to view.**]
- E. Shear Wall Panels: Install shear wall panels to comply with manufacturer's written instructions.
- F. Metal Framing Anchors: Install metal framing anchors to comply with manufacturer's written instructions. Install fasteners through each fastener hole.
- G. Install sill sealer gasket to form continuous seal between sill plates and foundation walls.
- H. Do not splice structural members between supports unless otherwise indicated.
- I. Provide blocking and framing as indicated and as required to support facing materials, fixtures, specialty items, and trim.
1. Provide metal clips for fastening gypsum board or lath at corners and intersections where framing or blocking does not provide a surface for fastening edges of panels. Space clips not more than **16 inches** (406 mm) o.c.
- J. Provide fire blocking in furred spaces, stud spaces, and other concealed cavities as indicated and as follows:
1. Fire block furred spaces of walls, at each floor level, at ceiling, and at not more than **96 inches** (2438 mm) o.c. with solid wood blocking or noncombustible materials accurately fitted to close furred spaces.
 2. Fire block concealed spaces of wood-framed walls and partitions at each floor level, at ceiling line of top story, and at not more than **96 inches** (2438 mm) o.c. Where fire blocking is not inherent in framing system used, provide closely fitted solid wood blocks of same width as framing members and **2-inch nominal-** (38-mm actual-) thickness.
 3. Fire block concealed spaces between floor sleepers with same material as sleepers to limit concealed spaces to not more than **100 sq. ft.** (9.3 sq. m) and to solidly fill space below partitions.
 4. Fire block concealed spaces behind combustible cornices and exterior trim at not more than **20 feet** (6 m) o.c.
- K. Sort and select lumber so that natural characteristics will not interfere with installation or with fastening other materials to lumber. Do not use materials with defects that interfere with function of member or pieces that are too small to use with minimum number of joints or optimum joint arrangement.
- L. Comply with AWWA M4 for applying field treatment to cut surfaces of preservative-treated lumber.
1. Use inorganic boron for items that are continuously protected from liquid water.
 2. Use copper naphthenate for items not continuously protected from liquid water.

- M. Securely attach rough carpentry work to substrate by anchoring and fastening as indicated, complying with the following:
1. NES NER-272 for power-driven fasteners.
 2. Table 2304.9.1, "Fastening Schedule," in ICC's International Building Code.
 3. Table R602.3(1), "Fastener Schedule for Structural Members," and Table R602.3(2), "Alternate Attachments," in ICC's International Residential Code for One- and Two-Family Dwellings.
- N. Power-Actuated Fasteners: Power-actuated fasteners are not permitted and shall not be used.
- O. Use steel common nails unless otherwise indicated. Select fasteners of size that will not fully penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections between members. Install fasteners without splitting wood. Drive nails snug but do not countersink nail heads unless otherwise indicated.
- P. For exposed work, arrange fasteners in straight rows parallel with edges of members, with fasteners evenly spaced, and with adjacent rows staggered.
1. Comply with **[approved] [indicated]** fastener patterns where applicable. **[Before fastening, mark fastener locations, using a template made of sheet metal, plastic, or cardboard.]**
 2. Use finishing nails unless otherwise indicated. Countersink nail heads and fill holes with wood filler.
 3. Use common nails unless otherwise indicated. Drive nails snug but do not countersink nail heads.

3.2 WOOD **[GROUND,] [SLEEPER,]** BLOCKING, AND NAILER INSTALLATION

- A. Install where indicated and where required for **[screeding or]** attaching other work. Form to shapes indicated and cut as required for true line and level of attached work. Coordinate locations with other work involved.
- B. Attach items to substrates to support applied loading. Recess bolts and nuts flush with surfaces unless otherwise indicated.
- C. Where wood-preservative-treated lumber is installed adjacent to metal decking, install continuous flexible flashing separator between wood and metal decking.
- D. Provide permanent grounds of dressed, pressure-preservative-treated, key-beveled lumber not less than **1-1/2 inches** (38 mm) wide and of thickness required to bring face of ground to exact thickness of finish material. Remove temporary grounds when no longer required.

3.3 WOOD FURRING INSTALLATION

- A. Install level and plumb with closure strips at edges and openings. Shim with wood as

required for tolerance of finish work.

- B. Furring to Receive Plywood or Hardboard Paneling: Install 1-by-3-inch nominal- (19-by-63-mm actual-) size furring [horizontally] [and] [vertically] at [24 inches (610 mm)] [600 mm] o.c.
- C. Furring to Receive [Gypsum Board] : Install 1-by-2-inch nominal- (19-by-38-mm actual-) size furring vertically at [16 inches (406 mm)] [400 mm] o.c.

3.4 WALL AND PARTITION FRAMING INSTALLATION

- A. General: Provide single bottom plate and double top plates using members of 2-inch nominal (38-mm actual) thickness whose widths equal that of studs, except single top plate may be used for non-load-bearing partitions[**and for load-bearing partitions where framing members bearing on partition are located directly over studs**]. Fasten plates to supporting construction unless otherwise indicated.
 - 1. For exterior walls, provide [2-by-6-inch nominal- (38-by-140-mm actual-)] [2-by-4-inch nominal- (38-by-89-mm actual-)] size wood studs spaced [24 inches (610 mm)] [16 inches (406 mm)] [600 mm] [400 mm] o.c. unless otherwise indicated.
 - 2. For interior partitions and walls, provide [2-by-6-inch nominal- (38-by-140-mm actual-)] [2-by-4-inch nominal- (38-by-89-mm actual-)] [2-by-3-inch nominal- (38-by-64-mm actual-)] size wood studs spaced [24 inches (610 mm)] [16 inches (406 mm)] [600 mm] [400 mm] o.c. unless otherwise indicated.
 - 3. Provide continuous horizontal blocking at midheight of partitions more than 96 inches (2438 mm) high, using members of 2-inch nominal (38-mm actual) thickness and of same width as wall or partitions.
- B. Construct corners and intersections with three or more studs[, **except that two studs may be used for interior non-load-bearing partitions**].
- C. Frame openings with multiple studs and headers. Provide nailed header members of thickness equal to width of studs. Support headers on jamb studs.
 - 1. For non-load-bearing partitions, provide double-jamb studs and headers not less than 4-inch nominal (89-mm actual) depth for openings 48 inches (1200 mm) and less in width, 6-inch nominal (140-mm actual) depth for openings 48 to 72 inches (1200 to 1800 mm) in width, 8-inch nominal (184-mm actual) depth for openings 72 to 120 inches (1800 to 3000 mm) in width, and not less than 10-inch nominal (235-mm actual) depth for openings 10 to 12 feet (3 to 3.6 m) in width.
 - 2. For load-bearing walls, provide double-jamb studs for openings 60 inches (1500 mm) and less in width, and triple-jamb studs for wider openings. Provide headers of depth indicated[**or, if not indicated, according to Table R502.5(1) or Table R502.5(2), as applicable, in ICC's International Residential Code for One- and Two-Family Dwellings**].
- D. Provide diagonal bracing in [exterior walls, at both walls of each external corner] [**walls, at locations indicated**], at 45-degree angle, full-story height unless otherwise

indicated. Use [**1-by-4-inch nominal- (19-by-89-mm actual-)** size boards, let-in flush with faces of studs] [metal wall bracing, let into studs in saw kerf].

3.5 FLOOR JOIST FRAMING INSTALLATION

- A. General: Install floor joists with crown edge up and support ends of each member with not less than **1-1/2 inches** (38 mm) of bearing on wood or metal, or **3 inches** (76 mm) on masonry. Attach floor joists as follows:
1. Where supported on wood members, by [**toe nailing or by**] using metal framing anchors.
 2. Where framed into wood supporting members, by using wood ledgers as indicated or, if not indicated, by using metal joist hangers.
- B. Fire Cuts: At joists built into masonry, bevel cut ends **3 inches** (76 mm) and do not embed more than **4 inches** (102 mm).
- C. Frame openings with headers and trimmers supported by metal joist hangers; double headers and trimmers where span of header exceeds **48 inches** (1200 mm).
- D. Do not notch in middle third of joists; limit notches to one-sixth depth of joist, one-third at ends. Do not bore holes larger than 1/3 depth of joist; do not locate closer than **2 inches** (50 mm) from top or bottom.
- E. Provide solid blocking of **2-inch nominal** (38-mm actual) thickness by depth of joist at ends of joists unless nailed to header or band.
- F. Lap members framing from opposite sides of beams, girders, or partitions not less than **4 inches** (102 mm) or securely tie opposing members together. Provide solid blocking of **2-inch nominal** (38-mm actual) thickness by depth of joist over supports.
- G. Anchor members paralleling masonry with **1/4-by-1-1/4-inch** (6.4-by-32-mm) metal strap anchors spaced not more than **96 inches** (2438 mm) o.c., extending over and fastening to three joists. Embed anchors at least **4 inches** (102 mm) into grouted masonry with ends bent at right angles and extending **4 inches** (102 mm) beyond bend.
- H. Provide solid blocking between joists under jamb studs for openings.
- I. Under non-load-bearing partitions, provide double joists separated by solid blocking equal to depth of studs above.
1. Provide triple joists separated as above, under partitions receiving ceramic tile and similar heavy finishes or fixtures.
- J. Provide bridging of type indicated below, at intervals of **96 inches** (2438 mm) o.c., between joists.
1. Diagonal wood bridging formed from bevel-cut, **1-by-3-inch nominal-** (19-by-64-mm actual-) size lumber, double-crossed and nailed at both ends to joists.

2. Steel bridging installed to comply with bridging manufacturer's written instructions.

3.6 CEILING JOIST AND RAFTER FRAMING INSTALLATION

- A. Ceiling Joists: Install ceiling joists with crown edge up and complying with requirements specified above for floor joists. Face nail to ends of parallel rafters.
 1. Where ceiling joists are at right angles to rafters, provide additional short joists parallel to rafters from wall plate to first joist; nail to ends of rafters and to top plate and nail to first joist or anchor with framing anchors or metal straps. Provide **1-by-8-inch nominal-** (19-by-184-mm actual-) size or **2-by-4-inch nominal-** (38-by-89-mm actual-) size stringers spaced **48 inches** (1200 mm) o.c. crosswise over main ceiling joists.
- B. Rafters: Notch to fit exterior wall plates and **[toe nail or]** use metal framing anchors. Double rafters to form headers and trimmers at openings in roof framing, if any, and support with metal hangers. Where rafters abut at ridge, place directly opposite each other and nail to ridge member or use metal ridge hangers.
 1. At valleys, provide double-valley rafters of size indicated or, if not indicated, of same thickness as regular rafters and **2 inches** (50 mm) deeper. Bevel ends of jack rafters for full bearing against valley rafters.
 2. At hips, provide hip rafter of size indicated or, if not indicated, of same thickness as regular rafters and **2 inches** (50 mm) deeper. Bevel ends of jack rafters for full bearing against hip rafter.
- C. Provide collar beams (ties) as indicated or, if not indicated, provide **1-by-6-inch nominal-** (19-by-140-mm actual-) size boards between every third pair of rafters, but not more than **48 inches** (1219 mm) o.c. Locate below ridge member, at third point of rafter span. Cut ends to fit roof slope and nail to rafters.
- D. Provide special framing as indicated for eaves, overhangs, dormers, and similar conditions if any.

3.7 STAIR FRAMING INSTALLATION

- A. Provide stair framing members of size, space, and configuration indicated or, if not indicated, to comply with the following requirements:
 1. Size: **2-by-12-inch nominal-** (38-by-286-mm actual-) size, minimum.
 2. Material: **[Laminated-veneer lumber] [parallel-strand lumber] [or] [solid lumber]**.
 3. Notching: Notch rough carriages to receive treads, risers, and supports; leave at least **3-1/2 inches** (89 mm) of effective depth.
 4. Spacing: At least three framing members for each **36-inch** (914-mm) clear width of stair.
- B. Provide stair framing with no more than **3/16-inch** (4.7-mm) variation between adjacent

treads and risers and no more than **3/8-inch** (9.5-mm) variation between largest and smallest treads and risers within each flight.

3.8 PROTECTION

- A. Protect wood that has been treated with inorganic boron (SBX) from weather. If, despite protection, inorganic boron-treated wood becomes wet, apply EPA-registered borate treatment. Apply borate solution by spraying to comply with EPA-registered label.
- B. Protect rough carpentry from weather. If, despite protection, rough carpentry becomes **[wet] [sufficiently wet that moisture content exceeds that specified]**, apply EPA-registered borate treatment. Apply borate solution by spraying to comply with EPA-registered label.MEASUREMENT

3.9 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 4 - PAYMENT

4.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 061000

SECTION 061600 - SHEATHING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Wall sheathing.
2. Roof sheathing.
3. Composite nail base insulated roof sheathing.
4. Subflooring.
5. Underlayment.
6. Sheathing joint and penetration treatment.

- B. Related Requirements:

1. **[Section 061000 "Rough Carpentry"] [Section 061053 "Miscellaneous Rough Carpentry"]** for plywood backing panels.
2. Section 072500 "Weather Barriers" for water-resistive barrier applied over wall sheathing.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of process and factory-fabricated product. Indicate component materials and dimensions and include construction and application details.
1. Include data for wood-preserved treatment from chemical treatment manufacturer and certification by treating plant that treated plywood complies with requirements. Indicate type of preservative used and net amount of preservative retained.
 2. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated plywood complies with requirements. Include physical properties of treated materials.
 3. For fire-retardant treatments, include physical properties of treated plywood both before and after exposure to elevated temperatures, based on testing by a qualified independent testing agency according to ASTM D 5516.

4. For products receiving a waterborne treatment, include statement that moisture content of treated materials was reduced to levels specified before shipment to Project site.
5. Include copies of warranties from chemical treatment manufacturers for each type of treatment.
6. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

1. Certificates for [**Credit MR 6**] [**Credit MR 7**]: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
2. Product Data for Credit IEQ 4.1: For adhesives, documentation including printed statement of VOC content.
3. Product Data for Credit IEQ 4.4: For composite wood products, documentation indicating that product contains no urea formaldehyde.
4. Laboratory Test Reports for Credit IEQ 4: For [**adhesives**] [**and**] [**composite wood products**], documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.4 INFORMATIONAL SUBMITTALS

A. Evaluation Reports: For following products, from ICC-ES:

1. Preservative-treated plywood.
2. Fire-retardant-treated plywood.
3. Foam-plastic sheathing.

1.5 QUALITY ASSURANCE

- A. Testing Agency Qualifications: For testing agency providing classification marking for fire-retardant-treated material, an inspection agency acceptable to authorities having jurisdiction that periodically performs inspections to verify that the material bearing the classification marking is representative of the material tested.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Stack panels flat with spacers beneath and between each bundle to provide air circulation. Protect sheathing from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings.

1.7 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Test-Response Characteristics: For assemblies with fire-resistance ratings, provide materials and construction identical to those of assemblies tested for fire resistance per ASTM E 119 by a testing and inspecting agency acceptable to authorities having jurisdiction.
1. Fire-Resistance Ratings: Indicated by design designations from **[UL's "Fire Resistance Directory."]** **[GA-600, "Fire Resistance Design Manual."]** <Insert listing organization and publication>.

2.2 WOOD PANEL PRODUCTS

- A. Emissions: Products shall meet the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- B. Certified Wood: For the following wood products, provide materials produced from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship":
1. Plywood.
 2. Oriented strand board.
 3. Fiberboard wall sheathing.
 4. Particleboard underlayment.
 5. Hardboard underlayment.
- C. Plywood: **[DOC PS 1] [Either DOC PS 1 or DOC PS 2 unless otherwise indicated].**
- D. Oriented Strand Board: DOC PS 2.
- E. Thickness: As needed to comply with requirements specified, but not less than thickness indicated.
- F. Factory mark panels to indicate compliance with applicable standard.

2.3 PRESERVATIVE-TREATED PLYWOOD

- A. Preservative Treatment by Pressure Process: AWWA U1; Use Category UC2[**for**

interior construction not in contact with the ground, Use Category UC3b for exterior construction not in contact with the ground, and Use Category UC4a for items in contact with the ground].

1. Preservative Chemicals: Acceptable to authorities having jurisdiction and containing no arsenic or chromium.
- B. Mark plywood with appropriate classification marking of an inspection agency acceptable to authorities having jurisdiction.
- C. Application: **[Treat all plywood unless otherwise indicated] [Treat items indicated on Drawings] [and plywood in contact with masonry or concrete or used with roofing, flashing, vapor barriers, and waterproofing].**

2.4 FIRE-RETARDANT-TREATED PLYWOOD

- A. General: Where fire-retardant-treated materials are indicated, use materials complying with requirements in this article that are acceptable to authorities having jurisdiction and with fire-test-response characteristics specified as determined by testing identical products per test method indicated by a qualified testing agency.
- B. Fire-Retardant-Treated Plywood by Pressure Process: Products with a flame-spread index of 25 or less when tested according to ASTM E 84, and with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than **10.5 feet (3.2 m)** beyond the centerline of the burners at any time during the test.
 1. Use treatment that does not promote corrosion of metal fasteners.
 2. Exterior Type: Treated materials shall comply with requirements specified above for fire-retardant-treated plywood by pressure process after being subjected to accelerated weathering according to ASTM D 2898. Use for exterior locations and where indicated.
 3. Interior Type A: Treated materials shall have a moisture content of 28 percent or less when tested according to ASTM D 3201 at 92 percent relative humidity. Use where exterior type is not indicated.
 4. Design Value Adjustment Factors: Treated lumber plywood shall be tested according ASTM D 5516 and design value adjustment factors shall be calculated according to ASTM D 6305. Span ratings after treatment shall be not less than span ratings specified.**[For roof sheathing and where high-temperature fire-retardant treatment is indicated, span ratings for temperatures up to 170 deg F (76 deg C) shall be not less than span ratings specified.]**
- C. Kiln-dry material after treatment to a maximum moisture content of 15 percent. Do not use material that is warped or does not comply with requirements for untreated material.
- D. Identify fire-retardant-treated plywood with appropriate classification marking of qualified testing agency.

- E. Application: **[Treat all plywood unless otherwise indicated.] [Treat plywood indicated on Drawings, and the following:]**
1. Roof **[and wall]** sheathing within **48 inches** (1220 mm) of **[fire] [party]** walls.
 2. Roof sheathing.
 3. Subflooring and underlayment for raised platforms.
 4. **<Insert category of plywood items required to be treated>**.

2.5 WALL SHEATHING

- A. Plywood Wall Sheathing: **[Exterior, Structural I] [Exterior] [Exposure 1, Structural I] [Exposure 1]** sheathing.
1. Span Rating: Not less than **[16/0] [20/0] [24/0] [32/16]**.
 2. Nominal Thickness: Not less than **[11/32 inch (8.7 mm)] [3/8 inch (9.5 mm)] [1/2 inch (13 mm)]**.
- B. Oriented-Strand-Board Wall Sheathing: **[Exposure 1, Structural I] [Exposure 1]** sheathing.
1. Span Rating: Not less than **[16/0] [20/0] [24/0] [24/16] [32/16]**.
 2. Nominal Thickness: Not less than **[5/16 inch (7.9 mm)] [3/8 inch (9.5 mm)] [1/2 inch (13 mm)]**.
- C. Paper-Surfaced Gypsum Wall Sheathing: ASTM C 1396/C 1396M, gypsum sheathing; with water-resistant-treated core and with water-repellent paper bonded to core's face, back, and long edges.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Gypsum.
 - b. G-P Gypsum Corporation.
 - c. LaFarge North America Inc.
 - d. National Gypsum Company.
 - e. Temple-Inland Inc.
 - f. United States Gypsum Co.
 - g. **<Insert manufacturer's name>**.
 - h. or approved equal.
 2. Type and Thickness: **[Regular, 1/2 inch (13 mm)] [Type X, 5/8 inch (15.9 mm)]** thick.
 3. Edge and End Configuration: **[V-shaped, tongue-and-groove long edges; square ends] [Square]**.
 4. Size: **[24 by 96 inches (610 by 2438 mm) for horizontal] [48 by 96 inches (1219 by 2438 mm) for vertical] [48 by 108 inches (1219 by 2743 mm) for vertical] [600 by 2400 mm for horizontal] [1200 by 2400 mm for vertical] [1200 by 2750 mm for vertical]** installation.

- D. Glass-Mat Gypsum Wall Sheathing: ASTM C 1177/1177M.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. CertainTeed Corporation; GlasRoc.
 - b. G-P Gypsum Corporation; Dens-Glass Gold.
 - c. National Gypsum Company; Gold Bond e(2)XP.
 - d. Temple-Inland Inc.; GreenGlass
 - e. United States Gypsum Co.; Securock.
 - f. **<Insert manufacturer's name; product name or designation>**.
 - g. or approved equal.
 2. Type and Thickness: [**Regular, 1/2 inch** (13 mm)] [**Type X, 5/8 inch** (15.9 mm)] thick.
 3. Size: [**48 by 96 inches** (1219 by 2438 mm)] [**48 by 108 inches** (1219 by 2743 mm)] [**48 by 120 inches** (1219 by 3048 mm)] [**1200 by 2400 mm**] [**1200 by 2750 mm**] [**1200 by 3050 mm**] for vertical installation.
- E. Cellulose Fiber-Reinforced Gypsum Sheathing: ASTM C 1278/C 1278M, gypsum sheathing.
1. Product: Subject to compliance with requirements, provide "Fiberock Sheathing with Aqua-Tough" by United States Gypsum Co.
 2. Type and Thickness: [**Regular, 1/2 inch** (13 mm)] [**Type X, 5/8 inch** (15.9 mm)] thick.
 3. Size: [**48 by 96 inches** (1219 by 2438 mm)] [**48 by 108 inches** (1219 by 2743 mm)] [**48 by 120 inches** (1219 by 3048 mm)] [**1200 by 2400 mm**] [**1200 by 2750 mm**] [**1200 by 3050 mm**].
- F. Cementitious Backer Units: ASTM C 1325, Type A.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. C-Cure; C-Cure Board 990.
 - b. Custom Building Products; Wonderboard.
 - c. FinPan, Inc.; Util-A-Crete Concrete Backer Board.
 - d. USG Corporation; DUROCK Cement Board.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.
 2. Thickness: [**1/2 inch** (12.7 mm)] [**5/8 inch** (15.9 mm)] [**As indicated**].
- G. Fiberboard Wall Sheathing: ASTM C 208, Type IV, [**Grade 1 (Regular)**] [**Grade 2 (Structural)**] cellulosic fiberboard sheathing with square edges, [**1/2 inch** (13 mm)] [**25/32 inch** (20 mm)] thick.
- H. Extruded-Polystyrene-Foam Wall Sheathing: ASTM C 578, Type IV, in manufacturer's standard lengths and widths with tongue-and-groove or shiplap long edges as standard with manufacturer.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. DiversiFoam Products.
 - b. Dow Chemical Company (The).
 - c. Owens Corning.
 - d. Pactiv, Inc.
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.
 2. Thickness: [**3/4 inch (19 mm)**] [**1 inch (25 mm)**] [**As indicated**].
- I. Foil-Faced, Polyisocyanurate-Foam Wall Sheathing: ASTM C 1289, Type I or Type II, Class 2, rigid, cellular, polyisocyanurate thermal insulation. Foam-plastic core and facings shall have a flame-spread index of 25 or less when tested individually.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Atlas Roofing Corporation.
 - b. Dow Chemical Company (The).
 - c. Rmax, Inc.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
 2. Thickness: [**7/16 inch (11.1 mm)**] [**1/2 inch (13 mm)**] [**5/8 inch (15.9 mm)**] [**3/4 inch (19 mm)**] [**1 inch (25 mm)**] [**As indicated**].

2.6 ROOF SHEATHING

- A. Plywood Roof Sheathing: [**Exterior, Structural I**] [**Exterior**] [**Exposure 1, Structural I**] [**Exposure 1**] sheathing.
1. Span Rating: Not less than [**16/0**] [**20/0**] [**24/0**] [**32/16**] [**40/20**] [**48/24**].
 2. Nominal Thickness: Not less than [**15/32 inch (11.9 mm)**] [**1/2 inch (13 mm)**].
- B. Oriented-Strand-Board Roof Sheathing: [**Exposure 1, Structural I**] [**Exposure 1**] sheathing.
1. Span Rating: Not less than [**16/0**] [**20/0**] [**24/0**] [**24/16**] [**32/16**] [**40/20**] [**48/24**].
 2. Nominal Thickness: Not less than [**7/16 inch (11.1 mm)**] [**15/32 inch (11.9 mm)**] [**1/2 inch (13 mm)**] [**5/8 inch (16 mm)**] [**3/4 inch (19 mm)**].

2.7 COMPOSITE NAIL BASE INSULATED ROOF SHEATHING

- A. Oriented-Strand-Board-Surfaced, Polyisocyanurate-Foam Sheathing: Rigid, cellular, polyisocyanurate thermal insulation with oriented strand board laminated to one face complying with ASTM C 1289, Type V.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Atlas Roofing Corporation.
 - b. Cornell Corporation.
 - c. Dow Chemical Company (The).
 - d. Johns Manville; Berkshire Hathaway Inc.
 - e. Rmax, Inc.
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
 2. Polyisocyanurate-Foam Thickness: [**1 inch (25 mm)**] [**1-1/2 inches (38 mm)**] [**2 inches (50 mm)**] [**2-1/2 inches (64 mm)**] [**3 inches (76 mm)**] [**3-1/2 inches (89 mm)**] [**4 inches (102 mm)**].
 3. Oriented-Strand-Board Nominal Thickness: [**7/16 inch (11.1 mm)**] [**5/8 inch (15.9 mm)**].
- B. Vented, Oriented-Strand-Board-Surfaced, Polyisocyanurate-Foam Sheathing: Rigid, cellular, polyisocyanurate thermal insulation complying with ASTM C 1289, Type II, Class 1, with oriented strand board adhered to spacers on one face.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Atlas Roofing Corporation.
 - b. Cornell Corporation.
 - c. Dow Chemical Company (The).
 - d. Johns Manville; Berkshire Hathaway Inc.
 - e. Rmax, Inc.
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
 2. Polyisocyanurate-Foam Thickness: [**1 inch (25 mm)**] [**1-1/2 inches (38 mm)**] [**2 inches (50 mm)**] [**2-1/2 inches (64 mm)**] [**3 inches (76 mm)**] [**3-1/2 inches (89 mm)**] [**4 inches (102 mm)**].
 3. Oriented-Strand-Board Nominal Thickness: [**7/16 inch (11.1 mm)**] [**5/8 inch (15.9 mm)**].
 4. Spacers: Wood furring strips or blocks not less than **3/4 inch (19 mm)** thick and spaced not more than [**12 inches (300 mm)**] [**16 inches (400 mm)**] [**24 inches (600 mm)**] o.c.

2.8 SUBFLOORING AND UNDERLAYMENT

- A. Plywood Combination Subfloor-Underlayment: DOC PS 1, [**Exterior, Structural I, C-C Plugged**] [**Exterior, C-C Plugged**] [**Exposure 1, Structural I, Underlayment**] [**Exposure 1, Underlayment**] single-floor panels.
 1. Span Rating: Not less than [**16**] [**20**] [**24**] [**32**] [**48**] o.c.

2. Nominal Thickness: Not less than [**23/32 inch (18.3 mm)**] [**7/8 inch (22.2 mm)**] [**1 inch (25 mm)**].
 3. Edge Detail: Square.
 4. Edge Detail: Tongue and groove.
 5. Surface Finish: Fully sanded face.
- B. Oriented-Strand-Board Combination Subfloor-Underlayment: Exposure 1 single-floor panels.
1. Span Rating: Not less than [**16**] [**20**] [**24**] [**32**] [**48**] o.c.
 2. Nominal Thickness: Not less than [**23/32 inch (18.3 mm)**] [**7/8 inch (22.2 mm)**] [**1 inch (25 mm)**].
 3. Edge Detail: Square.
 4. Edge Detail: Tongue and groove.
 5. Surface Finish: [**Fully sanded**] [**Resin-impregnated overlay**] face.
- C. Plywood Subflooring: [**Exterior, Structural I**] [**Exterior**] [**Exposure 1, Structural I**] [**Exposure 1**] single-floor panels or sheathing.
1. Span Rating: Not less than [**16**] [**20**] [**24**] [**32**] [**48**] o.c. [**or**] [**32/16**] [**40/20**] [**48/24**].
 2. Nominal Thickness: Not less than [**23/32 inch (18.3 mm)**] [**7/8 inch (22.2 mm)**] [**1 inch (25 mm)**].
- D. Oriented-Strand-Board Subflooring: Exposure 1[, **Structural I sheathing**] [**single-floor panels or sheathing**].
1. Span Rating: Not less than [**16**] [**20**] [**24**] [**32**] [**48**] o.c. [**or**] [**32/16**] [**40/20**] [**48/24**] [**60/32**].
 2. Nominal Thickness: Not less than [**23/32 inch (18.3 mm)**] [**7/8 inch (22.2 mm)**] [**1 inch (25 mm)**].
- E. Underlayment, General: Provide underlayment in nominal thicknesses indicated or, if not indicated, not less than **1/4 inch (6.4 mm)** over smooth subfloors and not less than **3/8 inch (9.5 mm)** over board or uneven subfloors.
- F. Plywood Underlayment for Resilient Flooring: DOC PS 1, [**Exterior A-C**] [**Exterior B-C**] [**Exterior, C-C Plugged**] [**Exposure 1 Underlayment**] with fully sanded face.
- G. Plywood Underlayment for Ceramic Tile: DOC PS 1, Exterior, C-C Plugged, not less than **5/8-inch (15.9-mm)** nominal thickness, for ceramic tile set in [**organic adhesive**] [**epoxy adhesive**] [**EGP (exterior glue plywood)**] [**latex-Portland cement mortar**].
- H. Plywood Underlayment for Carpet: DOC PS 1, [**Exterior, C-C Plugged**] [**Exposure 1, Underlayment**] [**Interior, Underlayment**].
- I. Particleboard Underlayment: ANSI A208.1, [**Grade PBU**] [**Grade M-2, made with binder containing no urea formaldehyde**].
- J. Hardboard Underlayment: ANSI A135.4, Class 4 (Service), Surface S1S; with back side sanded.

2.9 FASTENERS

- A. General: Provide fasteners of size and type indicated that comply with requirements specified in this article for material and manufacture.
1. For roof[**and wall**] sheathing, provide fasteners [**with hot-dip zinc coating complying with ASTM A 153/A 153M**] [**of Type 304 stainless steel**].
- B. Nails, Brads, and Staples: ASTM F 1667.
- C. Power-Driven Fasteners: NES NER-272.
- D. Wood Screws: ASME B18.6.1.
- E. Screws for Fastening Wood Structural Panels to Cold-Formed Metal Framing: ASTM C 954, except with wafer heads and reamer wings, length as recommended by screw manufacturer for material being fastened.
1. For wall and roof sheathing panels, provide screws with organic-polymer or other corrosion-protective coating having a salt-spray resistance of more than 800 hours according to ASTM B 117.
- F. Screws for Fastening Gypsum Sheathing to Cold-Formed Metal Framing: Steel drill screws, in length recommended by sheathing manufacturer for thickness of sheathing to be attached, with organic-polymer or other corrosion-protective coating having a salt-spray resistance of more than 800 hours according to ASTM B 117.
1. For steel framing less than **0.0329 inch** (0.835 mm) thick, use screws that comply with ASTM C 1002.
 2. For steel framing from **0.033 to 0.112 inch** (0.84 to 2.84 mm) thick, use screws that comply with ASTM C 954.
- G. Screws for Fastening Oriented-Strand-Board-Surfaced, Polyisocyanurate-Foam Sheathing to Metal Roof Deck: Steel drill screws, in type and length recommended by sheathing manufacturer for thickness of sheathing to be attached, with organic-polymer or other corrosion-protective coating having a salt-spray resistance of more than 800 hours according to ASTM B 117. Provide washers or plates if recommended by sheathing manufacturer.

2.10 SHEATHING JOINT-AND-PENETRATION TREATMENT MATERIALS

- A. Sealant for [**Paper-Surfaced**] [**Glass-Mat**] Gypsum Sheathing: Elastomeric, medium-modulus, neutral-curing silicone joint sealant compatible with joint substrates formed by gypsum sheathing and other materials, recommended by sheathing manufacturer for application indicated and complying with requirements for elastomeric sealants specified in Section 079200 "Joint Sealants."
- B. Sealant for Glass-Mat Gypsum Sheathing: Silicone emulsion sealant complying with ASTM C 834, compatible with sheathing tape and sheathing and recommended by

tape and sheathing manufacturers for use with glass-fiber sheathing tape and for covering exposed fasteners.

1. Sheathing Tape: Self-adhering glass-fiber tape, minimum **2 inches** (50 mm) wide, **10 by 10 or 10 by 20 threads/inch** (390 by 390 or 390 by 780 threads/m), of type recommended by sheathing and tape manufacturers for use with silicone emulsion sealant in sealing joints in glass-mat gypsum sheathing and with a history of successful in-service use.

- C. Sheathing Tape for Foam-Plastic Sheathing: Pressure-sensitive plastic tape recommended by sheathing manufacturer for sealing joints and penetrations in sheathing.

2.11 MISCELLANEOUS MATERIALS

- A. Adhesives for Field Gluing Panels to Framing: Formulation complying with **[APA AFG-01] [ASTM D 3498]** that is approved for use with type of construction panel indicated by manufacturers of both adhesives and panels.

1. Adhesives shall have a VOC content of **[50] [70] <Insert value>** g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
2. Adhesives shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Do not use materials with defects that impair quality of sheathing or pieces that are too small to use with minimum number of joints or optimum joint arrangement. Arrange joints so that pieces do not span between fewer than three support members.
- B. Cut panels at penetrations, edges, and other obstructions of work; fit tightly against abutting construction unless otherwise indicated.
- C. Securely attach to substrate by fastening as indicated, complying with the following:
1. NES NER-272 for power-driven fasteners.
 2. Table 2304.9.1, "Fastening Schedule," in ICC's "International Building Code."
 3. Table R602.3(1), "Fastener Schedule for Structural Members," and Table R602.3(2), "Alternate Attachments," in ICC's "International Residential Code for One- and Two-Family Dwellings."
- D. Use common wire nails unless otherwise indicated. Select fasteners of size that will not fully penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections. Install fasteners without splitting wood.

- E. Coordinate **[wall] [and] [roof]** sheathing installation with flashing and joint-sealant installation so these materials are installed in sequence and manner that prevent exterior moisture from passing through completed assembly.
- F. Do not bridge building expansion joints; cut and space edges of panels to match spacing of structural support elements.
- G. Coordinate sheathing installation with installation of materials installed over sheathing so sheathing is not exposed to precipitation or left exposed at end of the workday when rain is forecast.

3.2 WOOD STRUCTURAL PANEL INSTALLATION

- A. General: Comply with applicable recommendations in APA Form No. E30, "Engineered Wood Construction Guide," for types of structural-use panels and applications indicated.
- B. Fastening Methods: Fasten panels as indicated below:
 - 1. Combination Subfloor-Underlayment:
 - a. **[Glue and nail] [Nail]** to wood framing.
 - b. Screw to cold-formed metal framing.
 - c. Space panels **1/8 inch** (3 mm) apart at edges and ends.
 - 2. Subflooring:
 - a. **[Glue and nail] [Nail] [Nail or staple]** to wood framing.
 - b. Screw to cold-formed metal framing.
 - c. Space panels **1/8 inch** (3 mm) apart at edges and ends.
 - 3. Wall and Roof Sheathing:
 - a. **[Nail] [Nail or staple]** to wood framing. **[Apply a continuous bead of glue to framing members at edges of wall sheathing panels.]**
 - b. Screw to cold-formed metal framing.
 - c. Space panels **1/8 inch** (3 mm) apart at edges and ends.
 - 4. Underlayment:
 - a. **[Nail] [Nail or staple]** to subflooring.
 - b. Space panels **1/32 inch** (0.8 mm) apart at edges and ends.
 - c. Fill and sand edge joints of underlayment receiving resilient flooring immediately before installing flooring.

3.3 GYPSUM SHEATHING INSTALLATION

- A. Comply with GA-253 and with manufacturer's written instructions.

1. Fasten gypsum sheathing to wood framing with **[nails] [or] [screws]**.
 2. Fasten gypsum sheathing to cold-formed metal framing with screws.
 3. Install boards with a **3/8-inch** (9.5-mm) gap where non-load-bearing construction abuts structural elements.
 4. Install boards with a **1/4-inch** (6.4-mm) gap where they abut masonry or similar materials that might retain moisture, to prevent wicking.
- B. Apply fasteners so heads bear tightly against face of sheathing, but do not cut into facing.
- C. Horizontal Installation: Install sheathing with V-grooved edge down and tongue edge up. Interlock tongue with groove to bring long edges in contact with edges of adjacent boards without forcing. Abut ends of boards over centers of studs, and stagger end joints of adjacent boards not less than one stud spacing. Attach boards at perimeter and within field of board to each steel stud.
1. Space fasteners approximately **8 inches** (200 mm) o.c. and set back a minimum of **3/8 inch** (9.5 mm) from edges and ends of boards.
 2. For sheathing under stucco cladding, boards may be initially tacked in place with screws if overlying self-furring metal lath is screw-attached through sheathing to studs immediately after sheathing is installed.
- D. Vertical Installation: Install board vertical edges centered over studs. Abut ends and edges of each board with those of adjacent boards. Attach boards at perimeter and within field of board to each stud.
1. Space fasteners approximately **8 inches** (200 mm) o.c. and set back a minimum of **3/8 inch** (9.5 mm) from edges and ends of boards.
 2. For sheathing under stucco cladding, boards may be initially tacked in place with screws if overlying self-furring metal lath is screw-attached through sheathing to studs immediately after sheathing is installed.
- E. Seal sheathing joints according to sheathing manufacturer's written instructions.
1. Apply elastomeric sealant to joints and fasteners and trowel flat. Apply sufficient amount of sealant to completely cover joints and fasteners after troweling. Seal other penetrations and openings.
 2. Apply glass-fiber sheathing tape to glass-mat gypsum sheathing joints and apply and trowel silicone emulsion sealant to embed entire face of tape in sealant. Apply sealant to exposed fasteners with a trowel so fasteners are completely covered. Seal other penetrations and openings.
- ### 3.4 CEMENTITIOUS BACKER UNIT INSTALLATION
- A. Install panels and treat joints according to ANSI A108.11 and manufacturer's written instructions for type of application indicated.

3.5 FIBERBOARD SHEATHING INSTALLATION

- A. Comply with ASTM C 846 and with manufacturer's written instructions.
- B. Fasten fiberboard sheathing panels to intermediate supports and then at edges and ends. Use galvanized roofing nails[**or galvanized staples**]; comply with manufacturer's recommended spacing and referenced fastening schedule. Drive fasteners flush with surface of sheathing and locate perimeter fasteners at least **3/8 inch** (9.5 mm) from edges and ends.
- C. Install sheathing vertically with long edges parallel to, and centered over, studs. Install solid wood blocking where end joints do not occur over framing. Allow **1/8-inch** (3-mm) open space between edges and ends of adjacent units. Stagger horizontal joints if any.
- D. Cover sheathing as soon as practical after installation to prevent deterioration from wetting.

3.6 FOAM-PLASTIC SHEATHING INSTALLATION

- A. Comply with manufacturer's written instructions.
- B. Foam-Plastic Wall Sheathing: Install vapor-relief strips or equivalent for permitting escape of moisture vapor that otherwise would be trapped in stud cavity behind sheathing.
- C. Apply sheathing tape to joints between foam-plastic sheathing panels and at items penetrating sheathing. Apply at upstanding flashing to overlap both flashing and sheathing.

3.7 PARTICLEBOARD UNDERLAYMENT INSTALLATION

- A. Comply with CPA's recommendations for type of subfloor indicated. Fill and sand gouges, gaps, and chipped edges. Sand uneven joints flush.

- 1. Fastening Method: [**Glue and nail**] [**Nail**] [**Nail or staple**] underlayment to subflooring.

3.8 HARDBOARD UNDERLAYMENT INSTALLATION

- A. Comply with CPA's recommendations and hardboard manufacturer's written instructions for preparing and applying hardboard underlayment.

- 1. Fastening Method: [**Nail**] [**Nail or staple**] underlayment to subflooring.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 061600

SECTION 062023 - INTERIOR FINISH CARPENTRY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Interior trim, including non-fire-rated interior door[**and sidelight**] frames.
2. Fire-rated interior door[**and sidelight**] frames.
3. Interior [plywood] [hardboard] [board] paneling.
4. Shelving[**and clothes rods**].
5. Interior [stairs] [and] [railings].
6. Interior ornamental wood columns.

B. Related Requirements:

1. Section 061000 "Rough Carpentry" for furring, blocking, and other carpentry work not exposed to view[**and for framing exposed to view**].
2. Section 064113 "Wood-Veneered-Faced Architectural Cabinets" for custom wood-veneer cabinets.
3. Section 064116 "Plastic-Laminate-Faced Architectural Cabinets" for custom plastic-laminate cabinets.
4. Section 064213 "Stile and Rail Wood Paneling" for solid-wood and veneered stile and rail paneling.
5. Section 064216 "Flush Wood Paneling" for veneer-faced flush wood panels.
6. Section 064219 "Plastic-Laminate-Faced Wood Paneling" for plastic-laminate-faced flush wood panels.
7. Section 064400 "Ornamental Woodwork" for misc. shop-assembled woodwork items.
8. Section 064600 "Wood Trim" for standing and running wood trim.
9. Section 066400 "Plastic Paneling" for glass-fiber reinforced plastic paneling.
10. Section 099123 "Interior Painting" for priming and backpriming of interior finish carpentry.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

- A. MDF: Medium-density fiberboard.
- B. MDO: Plywood with a medium-density overlay on the face.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of process and factory-fabricated product. Indicate component materials, dimensions, profiles, textures, and colors and include construction and application details.
 - 1. Include data for wood-preservative treatment from chemical-treatment manufacturer and certification by treating plant that treated materials comply with requirements. Indicate type of preservative used and net amount of preservative retained. Include chemical-treatment manufacturer's written instructions for finishing treated material.
 - 2. Include data for fire-retardant treatment from chemical-treatment manufacturer and certification by treating plant that treated materials comply with requirements.
 - 3. Wall panel certificate: Submit certificate that wall panel backing adhesive and laminate comply with reference fire-resistance requirements.
 - 4. For products receiving a waterborne treatment, include statement that moisture content of treated materials was reduced before shipment to Project site to levels specified.
 - 5. Include copies of warranties from chemical-treatment manufacturers for each type of treatment.
 - 6. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: Submit shop drawings showing location of each item, dimensioned plans and elevations, large scale details, attachment devices and other components.
- C. Quality Certification: Submit woodwork Manufacturer's (Fabricator's) certification, stating that fabricated woodwork complies with quality grades and other requirements indicated.
- D. Certificate from the fabricator providing proof of not less than five (5) years experience in the fabrication of the types of products specified.
- E. Certificate from the installer providing proof of not less than five (5) years of successful experience in the installation of similar types of products and shall have completed at least three (3) jobs of similar size and scope.
- F. LEED Submittals:
 - 1. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating distance to Project, cost for each regional material, and fraction by weight that is considered regional.

2. Certificates for [**Credit MR 6**] [**Credit MR 7**]: Chain-of-custody certificates indicating that composite wood products comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
 3. Product Data for Credit IEQ 4.1: For adhesives and glues used at Project site, documentation including printed statement of VOC content.
 4. Product Data for Credit IEQ 4.4: For composite wood products, documentation indicating that product contains no urea formaldehyde.
 5. Laboratory Test Reports for Credit IEQ 4: For [**adhesives**] [**and**] [**composite wood products**], documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- G. Samples for Initial Selection: For each type of product involving selection of colors, profiles, or textures.
- H. Samples for Verification:
1. For each species and cut of lumber and panel products with non-factory-applied finish, with 1/2 of exposed surface finished, **50 sq. in.** (300 sq. cm) for lumber and **8 by 10 inches** (200 by 250 mm) for panels.
 2. For foam plastic moldings, with 1/2 of exposed surface finished; **50 sq. in.** (300 sq. cm).
 3. For each finish system and color of lumber and panel products with factory-applied finish, **50 sq. in.** (300 sq. cm) for lumber and **8 by 10 inches** (200 by 250 mm) for panels.
 4. For interior wood columns, include[**quarter-section**] Samples of cap, base, plinth, and **6-inch-** (150-mm-) long[**quarter-section**] Sample of shaft.[**Samples need not be same diameter as required columns.**]
- 1.5 INFORMATIONAL SUBMITTALS
- A. Evaluation Reports: For fire-retardant-treated wood, from ICC-ES.
 - B. Sample Warranty: For manufacturer's warranty.
- 1.6 CLOSEOUT SUBMITTALS
- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
- 1.7 DELIVERY, STORAGE, AND HANDLING
- A. Stack lumber, plywood, and other panels flat with spacers between each bundle to provide air circulation. Protect materials from weather by covering with waterproof

sheeting, securely anchored. Provide for air circulation around stacks and under coverings.

- B. Deliver interior finish carpentry materials only when environmental conditions meet requirements specified for installation areas. If interior finish carpentry materials must be stored in other than installation areas, store only where environmental conditions meet requirements specified for installation areas.

1.8 FIELD CONDITIONS

- A. Environmental Limitations: Do not deliver or install interior finish carpentry materials until building is enclosed and weatherproof, wet work in space is completed and nominally dry, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.
- B. Do not install finish carpentry materials that are wet, moisture damaged, or mold damaged.
 - 1. Indications that materials are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
 - 2. Indications that materials are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.
- C. If, due to unforeseen circumstances, woodwork must be stored in other than installation areas, store only in areas meeting requirements specified for installation areas.
- D. WARRANTY
- E. Warranty: Fabricator/installer to warrant all work from date of final acceptance of materials, fabrication, and installation of all items.
- F. Manufacturer's Warranty for Columns: Manufacturer agrees to repair or replace columns that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: Minimum **[two (2)]** <Insert number> years from date of Substantial Completion.
- G. CONSTRUCTION WASTE MANAGEMENT
 - 1. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

- A. Regional Materials: The following wood products shall be manufactured within **500 miles** (800 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles** (800 km) of Project site.
1. Interior trim.
 2. Fire-rated interior door[**and sidelight**] frames.
 3. Interior [**plywood**] [**hardboard**] [**board**] paneling.
 4. Shelving[**and clothes rods**].
 5. Interior [**stairs**] [**and**] [**railings**].
 6. Interior ornamental wood columns.
- B. Certified Wood: The following wood products shall be produced from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship":
1. Interior trim.
 2. Fire-rated interior door[**and sidelight**] frames.
 3. Interior [**plywood**] [**hardboard**] [**board**] paneling.
 4. Shelving[**and clothes rods**].
 5. Interior [**stairs**] [**and**] [**railings**].
 6. Interior ornamental wood columns.
- C. Low-Emitting Materials: Composite wood products shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- D. Lumber: DOC PS 20 and the following grading rules:
1. NeLMA: Northeastern Lumber Manufacturers' Association, "Standard Grading Rules for Northeastern Lumber."
 2. NHLA: National Hardwood Lumber Association, "Rules for the Measurement and Inspection of Hardwood & Cypress."
 3. NLGA: National Lumber Grades Authority, "Standard Grading Rules for Canadian Lumber."
 4. SPIB: The Southern Pine Inspection Bureau, "Standard Grading Rules for Southern Pine Lumber."
 5. WCLIB: West Coast Lumber Inspection Bureau, Standard No. 17, "Grading Rules for West Coast Lumber."
 6. WWPA: Western Wood Products Association, "Western Lumber Grading Rules."
- E. Factory mark each piece of lumber with grade stamp of inspection agency indicating grade, species, moisture content at time of surfacing, and mill.
1. For exposed lumber, mark grade stamp on end or back of each piece[, **or omit**

grade stamp and provide certificates of grade compliance issued by inspection agency].

- F. Softwood Plywood: DOC PS 1.
- G. Hardboard: AHA A135.4.
- H. MDF: ANSI A208.2, **[Grade 130] <Insert grade>**, **made with binder containing no urea-formaldehyde resin**].
- I. Particleboard: ANSI A208.1, **[Grade M-2] [Grade M-2-Exterior Glue] [Grade M-2, made with binder containing no urea-formaldehyde resin]**.
- J. Melamine-Faced Particleboard: Particleboard complying with ANSI A208.1, Grade M-2, finished on both faces with thermally fused, melamine-impregnated decorative paper and complying with requirements of NEMA LD3, Grade VGL, for test methods 3.3, 3.4, 3.6, 3.8, and 3.10.
 - 1. Color: **[White] [As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.

2.2 WOOD-PRESERVATIVE-TREATED MATERIALS

- A. Preservative Treatment by Pressure Process: AWWA U1; Use Category UC2.
 - 1. Kiln dry lumber and plywood after treatment to a maximum moisture content of 19 and 18 percent respectively.
 - 2. Preservative Chemicals: Acceptable to authorities having jurisdiction[**and containing no arsenic or chromium**].
 - 3. For exposed items indicated to receive transparent finish, do not use chemical formulations that contain colorants or that bleed through or otherwise adversely affect finishes.
 - 4. Do not use material that is warped or does not comply with requirements for untreated material.
 - 5. Mark lumber with treatment-quality mark of an inspection agency approved by the American Lumber Standard Committee's Board of Review.
 - a. For exposed lumber indicated to receive a stained or natural finish, **[mark end or back of each piece] [or] [omit marking and provide certificates of treatment compliance issued by inspection agency]**.
 - 6. Mark plywood with appropriate classification marking of an inspection agency acceptable to authorities having jurisdiction.
 - a. For exposed plywood indicated to receive a stained or natural finish, mark back of each piece.
 - 7. Application: **[Where indicated] [All interior lumber and plywood] <Insert application>**.

2.3 FIRE-RETARDANT-TREATED MATERIALS

- A. General: For applications indicated, use materials complying with requirements in this article that are acceptable to authorities having jurisdiction, and comply with testing requirements; testing by a qualified testing agency.
- B. Fire-Retardant-Treated Lumber and Plywood by Pressure Process: Products with a flame-spread index of 25 or less when tested according to ASTM E 84, with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than **10.5 feet (3.2 m)** beyond the centerline of the burners at any time during the test.
1. Kiln dry lumber and plywood after treatment to a maximum moisture content of 19 and 15 percent respectively.
- C. For exposed items indicated to receive a stained or natural finish, use[**organic resin**] chemical formulations that do not contain colorants, and provide materials that do not have marks from spacer sticks on exposed face.
- D. Do not use material that does not comply with requirements for untreated material or is warped or discolored.
- E. Identify fire-retardant-treated wood with appropriate classification marking of testing and inspecting agency acceptable to authorities having jurisdiction.
1. For exposed lumber indicated to receive a stained or natural finish, [**mark end or back of each piece**] [**or**] [**omit marking and provide certificates of treatment compliance issued by inspection agency**].
 2. For exposed plywood indicated to receive a stained or natural finish, mark back of each piece.
- F. Fire Performance Characteristics: Provide materials which are identical to those tested per ASTM methods and time periods indicated, are marked and listed for fire performance characteristics by Underwriters Laboratories, Inc., or other testing and inspecting agency acceptable to authorities having jurisdiction, and comply with the following requirements:
1. Mill lumber after treatment, within limits set for wood removal that does not affect listed fire performance characteristics, using a woodworking plant certified by testing and inspecting agency.
 2. Mill lumber before treatment and institute special procedures during treatment and drying processes to prevent warping, discoloration from drying sticks or other causes, marring or other defects in appearance of treated woodwork.
 3. At Contractor's option, mill treated lumber in either sequence indicated above.
 4. Marking: Identify treated lumber with separable paper classification marking of inspecting and testing agency, unless otherwise indicated.
 5. Kiln dry woodwork after treatment to levels required for non fire retardant treated woodwork materials. Maintain moisture content required by kiln drying, before and after treatment.
 6. Discard treated lumber that does not comply with requirements of referenced

woodworking standard. Do not use twisted, warped, bowed, discolored, or otherwise damaged or defective lumber.

- G. Fire-retardant particleboard: Provide panels with fire-retardant chemicals incorporated at time of manufacture to achieve surface-burning characteristics of 20 for flame spread and 25 for smoke developed when tested in accordance with ASTM E 84. Comply with ANSI A108.1 for Grade 1-M-1 panels with density of 45 lbs./cu. ft. for thicknesses of 3/4" and less and 44 lbs./cu. ft. for thicknesses of 13/16" to 1 1/4"; except as follows:
1. Modulus of rupture and modulus of elasticity: 1600 psi and 350,000 psi, respectively, for 48 lb. density, 1300 psi, respectively, and 275,000 psi for 44 lb. density.
 2. Linear expansion: 0.35% for 45 lb. density and 0.50% for 44 lb. density.
 3. Screw-holding capacity, face and edge: 300 lbs. and 250 lbs., respectively, for 45 lb. density, and of 250 and 175 lbs., respectively, for 44 lb. density.
- H. Application: **[Where indicated] [All interior lumber and plywood] <Insert application>**.

2.4 INTERIOR TRIM

- A. Softwood Lumber Trim for Transparent Finish (Stain or Clear Finish):
1. Species and Grade: Eastern white pine, **[C Select] [D Select] [Finish or 1 Common] [Premium or 2 Common]**; NeLMA or NLGA.
 2. Species and Grade: Idaho white, lodgepole, ponderosa, radiata, or sugar pine; **[C Select (Choice)] [D Select (Quality)] [1 Common (Colonial)] [2 Common (Sterling)]**; NLGA or WWPA.
 3. Species and Grade: Eastern white, Idaho white, lodgepole, ponderosa, radiata, or sugar pine; **[C Select (Choice)] [D Select (Quality)] [Finish or 1 Common (Colonial)] [Premium or 2 Common (Sterling)]**; NeLMA, NLGA, or WWPA.
 4. Species and Grade: White woods, **[C Select] [D Select] [1 Common] [2 Common]**; WWPA.
 5. Species and Grade: Douglas fir-larch or Douglas fir south, **[Superior or C & Btr] [Prime or D]** finish; NLGA, WCLIB, or WWPA.
 6. Species and Grade: Southern pine, **[B & B] [C & Btr]** finish; SPIB.
 7. Species and Grade: Western red cedar, **[Clear Heart] [Grade A] [Grade B]**; NLGA, WCLIB, or WWPA.
 8. Maximum Moisture Content: **[19] [15] percent [with at least 85 percent of shipment at 12 percent or less]**.
 9. Finger Jointing: **[Allowed] [Not allowed]**.
 10. Face Surface: **[Surfaced (smooth)] [Saw textured]**.
- B. Hardwood Lumber Trim for Transparent Finish (Stain or Clear Finish):
1. Species and Grade: **[Red oak] [White maple] [Alder] [Aspen, basswood, cottonwood, sap gum, sycamore, white maple, or yellow poplar] <Insert species>**; **[Clear] [A Finish] [B Finish]**; NHLA.

2. Maximum Moisture Content: [13] [10] [9] <Insert value> percent.
3. Finger Jointing: Not allowed.
4. Gluing for Width: [Allowed] [Not allowed] [Use for lumber trim wider than 6 inches (150 mm)].
5. Veneered Material: [Allowed] [Not allowed] [Use for lumber trim wider than 6 inches (150 mm)].
6. Face Surface: [Surfaced (smooth)] [Saw textured].
7. Matching: Selected for compatible grain and color.

C. Lumber Trim for Opaque Finish (Painted Finish):

1. Species and Grade: Eastern white pine, [D Select] [Finish or 1 Common] [Premium or 2 Common]; NeLMA or NLGA.
2. Species and Grade: Idaho white, lodgepole, ponderosa, radiata, or sugar pine; [D Select (Quality)] [1 Common (Colonial)] [2 Common (Sterling)]; NLGA or WWPA.
3. Species and Grade: Eastern white, Idaho white, lodgepole, ponderosa, radiata, or sugar pine; [D Select (Quality)] [Finish or 1 Common (Colonial)] [Premium or 2 Common (Sterling)]; NeLMA, NLGA, or WWPA.
4. Species and Grade: White woods, [D Select] [1 Common] [2 Common]; WWPA.
5. Species and Grade: Douglas fir-larch or Douglas fir south, [Superior or C & Btr] [Prime or D] finish; NLGA, WCLIB, or WWPA.
6. Species and Grade: Spruce-pine-fir, [1 Common] [2 Common]; NeLMA, NLGA, WCLIB, or WWPA.
7. Species and Grade: Alder, aspen, basswood, cottonwood, gum, magnolia, soft maple, sycamore, tupelo, or yellow poplar; [A Finish] [B Finish]; NHLA.
8. Maximum Moisture Content: [19] [15] percent [with at least 85 percent of shipment at 12 percent or less].
9. Maximum Moisture Content: [13] [10] [9] <Insert value> percent.
10. Finger Jointing: [Allowed] [Not allowed].
11. Face Surface: [Surfaced (smooth)] [Saw textured].
12. Optional Material: Primed MDF of same actual dimensions as lumber indicated may be used in lieu of lumber.

D. Softwood Moldings for Transparent Finish (Stain or Clear Finish): WMMPA WM 4, N-grade wood moldings. Made to patterns included in WMMPA WM 12.

1. Species: [Eastern white, Idaho white, lodgepole, ponderosa, radiata, or sugar pine] [Southern pine] [Western red cedar] [Douglas fir] <Insert species>.
2. Maximum Moisture Content: 15 percent with at least 85 percent of shipment at 12 percent or less.
3. Finger Jointing: Not allowed.
4. Matching: Selected for compatible grain and color.
5. Base Pattern: [WM 623, 9/16-by-3-1/4-inch (14-by-83-mm) ogee] [WM 713, 9/16-by-3-1/4-inch (14-by-83-mm) ranch] [WM 753, 9/16-by-3-1/4-inch (14-by-83-mm) beaded-edge] [WM 620, 9/16-by-4-1/4-inch (14-by-108-mm) ogee] [WM 750, 9/16-by-4-1/4-inch (14-by-108-mm) beaded-edge] base.

6. Shoe-Mold Pattern: [WM 129, 7/16-by-11/16-inch (11-by-17-mm) quarter-round] [WM 126, 1/2-by-3/4-inch (13-by-19-mm) quarter-round] [WM 131, 1/2-by-3/4-inch (13-by-19-mm) ogee] shoe mold.
 7. Casing Pattern: [WM 327, 11/16-by-2-1/4-inch (17-by-57-mm) clamshell] [WM 366, 11/16-by-2-1/4-inch (17-by-57-mm) featheredge] [WM 376, 11/16-by-2-1/4-inch (17-by-57-mm) beaded-edge] casing.
 8. Mull-Casing Pattern: [WM 957, 3/8-by-1-3/4-inch (9.5-by-44-mm) beaded-edge] [WM 973, 3/8-by-1-3/4-inch (9.5-by-44-mm) bullnose] [WM 983, 3/8-by-1-3/4-inch (9.5-by-44-mm) featheredge] casing.
 9. Stop Pattern: [WM 856, 3/8-by-1-3/8-inch (9.5-by-35-mm) ranch] [WM 946, 3/8-by-1-3/8-inch (9.5-by-35-mm) ogee] [WM 886, 3/8-by-1-3/8-inch (9.5-by-35-mm) bullnose] stop.
 10. Chair-Rail Pattern: WM 297, 11/16-by-3-inch (17-by-76-mm) chair rail.
- E. Hardwood Moldings for Transparent Finish (Stain or Clear Finish): WMMPA HWM 2, N-grade wood moldings made to patterns included in WMMPA HWM 1.
1. Species: [Red oak] [White maple] [Aspen, basswood, cottonwood, sap gum, sycamore, white maple, or yellow poplar] <Insert species>.
 2. Kiln-dried softwood or MDF, with exposed surfaces veneered with species indicated, may be used in lieu of solid wood.
 3. Maximum Moisture Content: 9 percent.
 4. Finger Jointing: Not allowed.
 5. Matching: Selected for compatible grain and color.
 6. Base Pattern: [HWM 633, 7/16-by-3-1/4-inch (11-by-83-mm) ogee] [HWM 713, 7/16-by-3-1/4-inch (11-by-83-mm) ranch] [HWM 753, 7/16-by-3-1/4-inch (11-by-83-mm) beaded-edge] [WM 620, 7/16-by-4-1/4-inch (11-by-108-mm) ogee] base.
 7. Shoe-Mold Pattern: [HWM 129, 7/16-by-11/16-inch (11-by-17-mm) quarter-round] [HWM 126, 1/2-by-3/4-inch (13-by-19-mm) quarter-round] [HWM 131, 1/2-by-3/4-inch (13-by-19-mm) ogee] shoe mold.
 8. Casing Pattern: [HWM 328, 1/2-by-2-1/4-inch (13-by-57-mm) clamshell] [HWM 366, 1/2-by-2-1/4-inch (13-by-57-mm) featheredge] [HWM 376, 1/2-by-2-1/4-inch (13-by-57-mm) beaded-edge] casing.
 9. Mull-Casing Pattern: [HWM 989, 3/16-by-2-inch (5-by-51-mm) square-edge] [HWM 988, 3/8-by-1-1/2-inch (9.5-by-38-mm) featheredge] [HWM 987, 3/8-by-2-inch (9.5-by-51-mm) featheredge] casing.
 10. Stop Pattern: [HWM 856, 3/8-by-1-3/8-inch (9.5-by-35-mm) ranch] [HWM 946, 3/8-by-1-3/8-inch (9.5-by-35-mm) ogee] [HWM 886, 3/8-by-1-3/8-inch (9.5-by-35-mm) bullnose] stop.
 11. Chair-Rail Pattern: HWM 297, 11/16-by-3-inch (17-by-76-mm) chair rail.
- F. Moldings for Opaque Finish (Painted Finish): Made to patterns included in WMMPA WM 12.
1. Softwood Moldings: WMMPA WM 4, P grade.
 - a. Species: [Eastern white, Idaho white, lodgepole, ponderosa, radiata, or sugar pine] <Insert species>.

- b. Maximum Moisture Content: 15 percent with at least 85 percent of shipment at 12 percent or less.
 2. Hardwood Moldings: WMMPA HWM 2, P-grade.
 - a. Species: **[Aspen, basswood, cottonwood, gum, magnolia, soft maple, tupelo, or yellow poplar] <Insert species>**.
 - b. Maximum Moisture Content: 9 percent.
 3. Optional Material: Primed MDF.
 4. Finger Jointing: **[Allowed] [Not allowed]**.
 5. Base Pattern: **[WM 623, 9/16-by-3-1/4-inch (14-by-83-mm) ogee] [WM 713, 9/16-by-3-1/4-inch (14-by-83-mm) ranch] [WM 753, 9/16-by-3-1/4-inch (14-by-83-mm) beaded-edge] [WM 620, 9/16-by-4-1/4-inch (14-by-108-mm) ogee] [WM 750, 9/16-by-4-1/4-inch (14-by-108-mm) beaded-edge]** base.
 6. Shoe-Mold Pattern: **[WM 129, 7/16-by-11/16-inch (11-by-17-mm) quarter-round] [WM 126, 1/2-by-3/4-inch (13-by-19-mm) quarter-round] [WM 131, 1/2-by-3/4-inch (13-by-19-mm) ogee]** shoe mold.
 7. Casing Pattern: **[WM 327, 11/16-by-2-1/4-inch (17-by-57-mm) clamshell] [WM 366, 11/16-by-2-1/4-inch (17-by-57-mm) featheredge] [WM 376, 11/16-by-2-1/4-inch (17-by-57-mm) beaded-edge]** casing.
 8. Mull-Casing Pattern: **[WM 957, 3/8-by-1-3/4-inch (9.5-by-44-mm) beaded-edge] [WM 973, 3/8-by-1-3/4-inch (9.5-by-44-mm) bullnose] [WM 983, 3/8-by-1-3/4-inch (9.5-by-44-mm) featheredge]** casing.
 9. Stop Pattern: **[WM 856, 3/8-by-1-3/8-inch (9.5-by-35-mm) ranch] [WM 946, 3/8-by-1-3/8-inch (9.5-by-35-mm) ogee] [WM 886, 3/8-by-1-3/8-inch (9.5-by-35-mm) bullnose]** stop.
 10. Chair-Rail Pattern: WM 297, **11/16-by-3-inch (17-by-76-mm)** chair rail.
- G. PVC-Wrapped Moldings: WMMPA WM 2 and made to patterns included in WMMPA WM 12.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Louisiana-Pacific Corporation.
 - b. Nickell Moulding Company, Inc.
 - c. Spectrim Building Products.
 - d. Zamma Corporation.
 - e. **<Insert manufacturer>**
 - f. or approved equal.
 2. Base Pattern: **[WM 623, 9/16-by-3-1/4-inch (14-by-83-mm) ogee] [WM 713, 9/16-by-3-1/4-inch (14-by-83-mm) ranch]** base.
 3. Shoe-Mold Pattern: **[WM 129, 7/16-by-11/16-inch (11-by-17-mm) quarter-round] [WM 126, 1/2-by-3/4-inch (13-by-19-mm) quarter-round]** shoe mold.
 4. Casing Pattern: **[WM 327, 11/16-by-2-1/4-inch (17-by-57-mm) clamshell] [WM 366, 11/16-by-2-1/4-inch (17-by-57-mm) featheredge]** casing.
 5. Mull-Casing Pattern: **[WM 973, 3/8-by-1-3/4-inch (9.5-by-44-mm) bullnose] [WM 983, 3/8-by-1-3/4-inch (9.5-by-44-mm) featheredge]** casing.

6. Stop Pattern: [WM 856, 3/8-by-1-3/8-inch (9.5-by-35-mm) ranch] [WM 886, 3/8-by-1-3/8-inch (9.5-by-35-mm) bullnose] stop.
 7. Chair-Rail Pattern: WM 297, 11/16-by-3-inch (17-by-76-mm) chair rail.
 8. Colors, Textures, and Grain Patterns: [As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range].
- H. Foam Plastic Moldings: Molded product of shapes indicated, with a tough outer skin on exposed surfaces; factory primed. Exposed surfaces shall not be shaped after molding.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Apex Urethane Millwork.
 - b. Architectural Moldings Ltd.; Balmer Architectural Mouldings Division.
 - c. Architectural Ornament, Inc.
 - d. Artistic Architectural Ornaments, Inc.
 - e. Carter Millwork, Inc.
 - f. Century Architectural Specialties LLC.
 - g. Chemcrest Architectural Products.
 - h. Diamond Mfg., Inc.
 - i. Focal Point Architectural Products.
 - j. Fypon Ltd.
 - k. Melton Classics Incorporated.
 - l. Railing & Building Products, Inc.
 - m. Vintage Mouldings Manufacturing Ltd.
 - n. <Insert manufacturer>
 - o. or approved equal.
 2. Density: Not less than 20 lb/cu. ft. (320 kg/cu. m).
 3. Flame-Spread Index: Not more than [75] <Insert number> when tested according to ASTM E 84.
 4. Thickness: Not more than 1/2 inch (12.7 mm).
 5. Width: Not more than 8 inches (204 mm).
 6. Patterns: [As indicated by manufacturer's designations] [Match DEN Project Manager's samples].

2.5 FIRE-RATED INTERIOR DOOR[AND SIDELIGHT] FRAMES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. <Insert, in separate subparagraphs, manufacturer's name>.
 2. or approved equal.
- B. Frames, complete with casings, fabricated from fire-retardant particleboard or fire-retardant MDF with veneered exposed surfaces, or from solid fire-retardant-treated wood. Frames shall comply with NFPA 80 and be listed and labeled by a testing and

inspecting agency acceptable to authorities having jurisdiction, based on testing according to NFPA 252.

1. Species: **[Red oak] [White oak] [White maple] [Cherry] <Insert species>**.
2. Fire Rating: **[20 minutes] [30 minutes] [45 minutes] [60 minutes] [90 minutes] [As indicated]**.

2.6 PANELING

A. Hardwood Veneer Plywood Paneling: Manufacturer's stock hardwood plywood panels complying with HPVA HP-1[, **made without urea-formaldehyde adhesive**].

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Chesapeake Hardwood Products, Inc.
 - b. Georgia-Pacific Corp.
 - c. Holland Southwest International.
 - d. **<Insert manufacturer>**
 - e. or approved equal.
2. Face Veneer Species and Cut: **[Rotary-cut white birch] [Plain-sliced red oak] [Plain-sliced hickory] <Insert species and cut>**.
3. Veneer Matching: **[Random match] [Selected for similar color and grain]**.
4. Backing Veneer Species: **[Same species as face veneer] [Any hardwood compatible with face species]**.
5. Construction: Veneer core.
6. Thickness: **[1/8 inch (3.2 mm)] [5/32 inch (4 mm)] [5 mm] [1/4 inch (6.4 mm)] [5/16 inch (7.9 mm)] [7/16 inch (11 mm)]**.
7. Panel Size: **[48 by 96 inches (1219 by 2438 mm)] [48 by 120 inches (1219 by 3048 mm)]**.
8. Panel Size: **[1200 by 2400 mm] [1200 by 3000 mm]**.
9. Glue Bond: Type II (interior).
10. Face Pattern: Manufacturer's standard **[V] [channel]**-grooved pattern, with grooves at edges, center, and third points of panels, and at other locations to provide pattern resembling random-width boards.
11. Finish: **[Manufacturer's standard, transparent, UV-resistant, protective finish] [As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range]**.

B. Hardboard Paneling: Interior factory-finished hardboard paneling complying with AHA 135.5.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Chesapeake Hardwood Products, Inc.
 - b. Georgia-Pacific Corp.

- c. Marlite.
 - d. <Insert manufacturer>
 - e. or approved equal.
 2. Thickness: [**1/8 inch (3.2 mm)**] [**5/32 inch (4 mm)**] [**1/4 inch (6.4 mm)**].
 3. Finish: [**Class I**] [**Class II**].
 4. Surface-Burning Characteristics: As follows, tested according to ASTM E 84:
 - a. Flame-Spread Index: 25 or less.
 - b. Smoke-Developed Index: 450 or less.
 5. Colors, Textures, and Patterns: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**].
- C. Board Paneling: Interior wood-board paneling complying with WMMPA WM 9.
1. Species: [**Eastern white, Idaho white, lodgepole, ponderosa, radiata, or sugar pine**] [**Southern pine**] [**Western red cedar**] [**Figured red gum**] <Insert species>.
 2. Grade: [**Clear No. 1**] [**Clear No. 2**] [**Knotty No. 1**] [**Knotty No. 2**] [**Finger jointed**].
 3. Maximum Moisture Content: [**15 percent with at least 85 percent of shipment at 12 percent or less**] [**9 percent**].
 4. Pattern: [**V-joint, tongue and groove, PT 82**] [**Beaded ceiling, PT 85**] [**Beveled-edge channel, shiplapped, PT 82**] [**As indicated**].
 5. Net Coverage Width: Not less than [**5-1/16 inches (128 mm)**] [**6-3/4 inches (171 mm)**] [**8-3/4 inches (222 mm)**].
- D. Board Paneling:
1. Species and Grade: Eastern white pine, [**C Select**] [**D Select**] [**Finish or 1 Common**] [**Premium or 2 Common**]; NeLMA or NLGA.
 2. Species and Grade: Idaho white, lodgepole, ponderosa, radiata, or sugar pine; [**C Select (Choice)**] [**D Select (Quality)**] [**1 Common (Colonial)**] [**2 Common (Sterling)**]; NLGA or WWPA.
 3. Species and Grade: Eastern white, Idaho white, lodgepole, ponderosa, radiata, or sugar pine; [**C Select (Choice)**] [**D Select (Quality)**] [**Finish or 1 Common (Colonial)**] [**Premium or 2 Common (Sterling)**]; NeLMA, NLGA, or WWPA.
 4. Species and Grade: Southern pine, [**B & B**] [**C & Btr**] [**No. 2**] Paneling; SPIB.
 5. Species and Grade: Western red cedar, [**Clear Heart**] [**Grade A**] [**Grade B**]; NLGA, WCLIB, or WWPA.
 6. Maximum Moisture Content: [**19**] [**15**] percent[**with at least 85 percent of shipment at 12 percent or less**].
 7. Pattern: V-joint, tongue and groove, [**NeLMA EWP 4**] [**SPIB SPP 54**] [or] [**WWPA WP 4**].
 8. Pattern: Pickwick, tongue and groove, [**NeLMA EWP 2**] [**SPIB SPP 52**] [or] [**WWPA WP 2**].
 9. Pattern: Rounded-edge channel groove, tongue and groove, [**SPIB SPP 60**] [or] [**WWPA WP 6**].

10. Pattern: Edge and center bead, tongue and groove, **[NeLMA E & CB]** **[or]** **[WWPA E & CB Ceiling]**.
11. Net Coverage Width: Not less than **[5-1/16 inches (128 mm)]** **[6-3/4 inches (171 mm)]** **[8-3/4 inches (222 mm)]**.

2.7 SHELVING AND CLOTHES RODS

- A. **[Exposed]** **[Closet]** **[Utility]** Shelving: Made from **[the following material]** **[one of the following materials]**, **3/4 inch (19 mm)** thick.
1. Particleboard with **[radiused and filled]** **[or]** **[solid-wood]** front edge.
 2. MDF with **[radiused]** **[or]** **[solid-wood]** front edge.
 3. MDO softwood plywood with solid-wood edge.
 4. Melamine-faced particleboard with **[radiused and filled]** **[applied-PVC]** front edge.
 5. Wood boards as specified above for **[lumber trim for opaque]** **[softwood lumber trim for transparent]** **[hardwood lumber trim for transparent]** finish.
 6. Softwood Boards: Eastern white, Idaho white, lodgepole, ponderosa, radiata, or sugar pine; **[C Select (Choice)]** **[D Select (Quality)]** **[Finish or 1 Common (Colonial)]** **[Premium or 2 Common (Sterling)]**; NeLMA, NLGA, or WWPA; kiln dried.
 7. Softwood Boards: Douglas fir-larch, Douglas fir south, or hem-fir; **[Superior or C & Btr]** **[Prime or D]** finish; NLGA, WCLIB, or WWPA; or southern pine, **[B & B]** **[C]** finish; SPIB; kiln dried.
- B. Shelf Cleats: **[3/4-by-3-1/2-inch (19-by-89-mm) boards]** **[3/4-by-5-1/2-inch (19-by-140-mm) boards]** **[3/4-by-5-1/2-inch (19-by-140-mm) boards with hole and notch to receive clothes rods]**, as specified above for **[shelving]** **[lumber trim for opaque finish]** **[softwood lumber trim for transparent finish]** **[hardwood lumber trim for transparent finish]**.
- C. Shelf Brackets with Rod Support: BHMA A156.16, B04051; prime-painted formed steel.
- D. Shelf Brackets without Rod Support: BHMA A156.16, B04041; prime-painted formed steel.
- E. Standards for Adjustable Shelf Brackets: BHMA A156.9, B04102; **[powder-coat-finished]** **[brass-finished]** **[zinc-plated]** steel.
- F. Adjustable Shelf Brackets: BHMA A156.9, B04112; **[powder-coat-finished steel]** **[brass-finished steel]** **[zinc-plated steel]** **[bronze-anodized aluminum]** **[black-anodized aluminum]** **[natural aluminum]**.
- G. Standards for Adjustable Shelf Supports: BHMA A156.9, B04071; **[powder-coat-finished]** **[brass-finished]** **[zinc-plated]** steel.
- H. Adjustable Shelf Supports: BHMA A156.9, B04081 or B04091; **[powder-coat-finished]** **[brass-finished]** **[zinc-plated]** steel.

- I. Clothes Rods: **1-1/2-inch-** (38-mm-) diameter, [clear, kiln-dried hardwood] [clear, kiln-dried Douglas fir or southern pine].
- J. Clothes Rods: **1-5/16-inch-** (33-mm-) diameter, [aluminum tubes] [chrome-plated-steel tubes] [color-coated steel tubes] [stainless-steel tubes] [chrome-plated-steel telescoping tubes with end brackets for mounting on shelf cleats].
- K. Rod Flanges: Clear, kiln-dried, [Douglas fir or southern pine] [eastern white, Idaho white, lodgepole, ponderosa, radiata, or sugar pine] [red oak] [white maple] [aspen, basswood, cottonwood, sap gum, white maple, or yellow poplar] <Insert species> turnings [with clear finish].
- L. Rod Flanges: [Aluminum] [Chrome-plated steel] [Stainless steel].

2.8 STAIRS AND RAILINGS

- A. Treads: **1-1/16-inch** (27-mm), clear, kiln-dried, edge-glued, [rift-sawn red oak] [red oak] [hard maple] [poplar] <Insert species> stepping with half-round nosing.
- B. Risers: **13/16-inch** (21-mm), clear, kiln-dried, edge-glued [red oak] [hard maple] [poplar] <Insert species> stock.
- C. Risers: **3/4-inch** (19-mm) finish boards as specified above for interior lumber trim for opaque finish.
- D. Treads: [**3/4-inch** (19-mm)] [**1-inch** (25-mm)] kiln-dried [Douglas fir, C & Btr VG (Vertical Grain) stepping; NLGA, WCLIB, or WWPA] [Hem-fir, C & Btr VG (Vertical Grain) stepping; NLGA, WCLIB, or WWPA] [Southern pine, B & B stepping; SPIB] with half-round or rounded edge nosing.
- E. Treads: [**3/4-inch** (19-mm)] [**1-inch** (25-mm)] particleboard with half-round nosing.
- F. Risers: **3/4-inch** (19-mm) kiln-dried [Douglas fir, C & Btr; NLGA, WCLIB, or WWPA] [Douglas fir, D; NLGA, WCLIB, or WWPA] [Hem-fir, C & Btr; NLGA, WCLIB, or WWPA] [Hem-fir, D; NLGA, WCLIB, or WWPA] [Southern pine, B & B; SPIB] [Southern pine, D; SPIB].
- G. Finished Stringers: **3/4-inch** (19-mm) finish boards as specified above for interior lumber trim for opaque finish.
- H. Interior Railings: Clear, kiln-dried [red oak] [hard maple] [yellow poplar] <Insert species>, of pattern indicated, either solid or laminated.
- I. Balusters: Clear, kiln-dried, [red oak] [hard maple] [yellow poplar] <Insert species>, turned balusters of pattern and size indicated.
- J. Balusters: **1-1/16-inch-** (27-mm-) square, clear, kiln-dried [red oak] [hard maple] [yellow poplar] <Insert species>.

- K. Newel Posts: Clear, kiln-dried, [**red oak**] [**hard maple**] [**yellow poplar**] <Insert species>, turned newel posts of pattern and size indicated.
- L. Newel Posts: **2-3/4-inch-** (70-mm-) square, clear, kiln-dried [**red oak**] [**hard maple**] [**yellow poplar**] <Insert species>, either solid or laminated.

2.9 ORNAMENTAL WOOD COLUMNS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Chadsworth's Incorporated.
 - 2. Colonial Columns, Inc.
 - 3. Hartmann-Sanders.
 - 4. Melton Classics Incorporated.
 - 5. Somerset Door & Column Company.
 - 6. Turncraft Div.; Cascade Wood Products, Inc.
 - 7. Worthington Millwork.
 - 8. <Insert manufacturer>
 - 9. or approved equal.
- B. Factory fabricate columns for transparent finish from clear, kiln-dried [**eastern white, Idaho white, lodgepole, ponderosa, radiata, or sugar pine**] [**aspen, basswood, cottonwood, sap gum, white maple, or yellow poplar**] [**red oak**] [**white maple**] [**mahogany**] <Insert species>.
- C. Factory fabricate columns for opaque finish from clear, kiln-dried [**eastern white, Idaho white, lodgepole, ponderosa, radiata, or sugar pine**] [**aspen, basswood, cottonwood, sap gum, white maple, or yellow poplar**] <Insert species>. Column staves may be finger jointed.
- D. Shafts: Built up from tongue-and-groove staves joined with waterproof glue. Lathe turn shafts to provide base diameter indicated and true architectural entasis taper.[**Precisely mill flutes as indicated.**]
- E. Capital and Base: [**Molded glass-fiber-reinforced plastic**] [**Built up from wood components with waterproof glue. Turn circular elements on lathes.**]
- F. Prime columns for opaque finish with one coat of interior wood primer compatible with specified topcoats.

2.10 MISCELLANEOUS MATERIALS

- A. Fasteners for Interior Finish Carpentry: Nails, screws, and other anchoring devices of type, size, material, and finish required for application indicated to provide secure attachment, concealed where possible.
- B. Low-Emitting Materials: Adhesives shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for

the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- C. Glue: Aliphatic-resin, polyurethane, or resorcinol wood glue recommended by manufacturer for general carpentry use.
 - 1. Wood glue shall have a VOC content of 30 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- D. Installation Adhesive for Foam Plastic Moldings: Product recommended for indicated use by foam plastic molding manufacturer.
 - 1. Adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- E. Paneling Adhesive: Comply with paneling manufacturer's written recommendations for adhesives.
 - 1. Adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- F. Multipurpose Construction Adhesive: Formulation complying with ASTM D 3498 that is recommended for indicated use by adhesive manufacturer.
 - 1. Adhesive shall have a VOC content of 70 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.11 FABRICATION

- A. Back out or kerf backs of the following members except those with ends exposed in finished work:
 - 1. Interior standing and running trim except shoe and crown molds.
 - 2. Wood-board paneling.
- B. Ease edges of lumber less than 1 inch (25 mm) in nominal thickness to 1/16-inch (1.5-mm) radius and edges of lumber 1 inch (25 mm) or more in nominal thickness to 1/8-inch (3-mm) radius.
- C. Wood Moisture Content: Comply with requirements of referenced quality standard for moisture content of lumber at time of fabrication and for relative humidity conditions in the installation areas.
- D. Fabricate woodwork to dimensions, profiles, and details indicated with openings and mortises precut, where possible, to receive hardware and other items and work.
- E. Complete fabrication, assembly, finishing, hardware application, and other work before shipment to project site to maximum extent possible. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.

- F. Pre-Cut Openings: Fabricate architectural woodwork with pre-cut openings, where possible, to receive hardware, appliances, plumbing fixtures, electrical work and similar items. Locate openings accurately and use templates or roughing in diagrams for proper size and shape. Smooth edges of cutoffs and, where located in countertops and similar exposures seal edges of cutouts with a water resistant coating.
- G. Measurements: Before proceeding with fabrication of woodwork required to be fitted to other construction, obtain field measurements and verify dimensions and shop drawing details as required for accurate fit.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Examine finish carpentry materials before installation. Reject materials that are wet, moisture damaged, and mold damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean substrates of projections and substances detrimental to application.
- B. Before installing interior finish carpentry, condition materials to average prevailing humidity in installation areas for a minimum of 48 hours[**unless longer conditioning is recommended by manufacturer**].

3.3 INSTALLATION, GENERAL

- A. Do not use materials that are unsound, warped, improperly treated or finished, inadequately seasoned, too small to fabricate with proper jointing arrangements, or with defective surfaces, sizes, or patterns.
- B. Install interior finish carpentry level, plumb, true, and aligned with adjacent materials. Use concealed shims where necessary for alignment.
 - 1. Scribe and cut interior finish carpentry to fit adjoining work. Refinish and seal cuts as recommended by manufacturer.
 - 2. Anchor woodwork to anchors or blocking built in or directly attached to substrates. Secure to grounds, stripping and blocking with countersunk, concealed fasteners and blind nailing as required for a complete installation.
 - 3. Except where prefinished matching fasteners heads are required, use fine finishing nails for exposed nailing, countersunk, filled flush, and sand with woodwork.

4. Install to tolerance of **1/8 inch in 96 inches** (3 mm in 2438 mm) for level and plumb. Install adjoining interior finish carpentry with **1/32-inch** (0.8-mm) maximum offset for flush installation and **1/16-inch** (1.5-mm) maximum offset for reveal installation.
5. Install stairs with no more than **3/16-inch** (4.7-mm) variation between adjacent treads and risers and with no more than **3/8-inch** (9.5-mm) variation between largest and smallest treads and risers within each flight.
6. Coordinate interior finish carpentry with materials and systems in or adjacent to it. Provide cutouts for mechanical and electrical items that penetrate interior finish carpentry.

3.4 STANDING AND RUNNING TRIM INSTALLATION

- A. Install with minimum number of joints practical, using full-length pieces from maximum lengths of lumber available. Do not use pieces less than **24 inches** (610 mm) long, except where necessary. Stagger joints in adjacent and related standing and running trim. [**Cope**] [**Miter**] at returns, miter at outside corners, and cope at inside corners to produce tight-fitting joints with full-surface contact throughout length of joint. Use scarf joints for end-to-end joints. Plane backs of casings to provide uniform thickness across joints where necessary for alignment.
 1. Match color and grain pattern of trim for transparent finish (stain or clear finish) across joints.
 2. Install trim after gypsum-board joint finishing operations are completed.
 3. Install without splitting; drill pilot holes before fastening where necessary to prevent splitting. Fasten to prevent movement or warping. Countersink fastener heads on exposed carpentry work and fill holes.

3.5 PANELING INSTALLATION

- A. Plywood Paneling: Select and arrange panels on each wall to minimize noticeable variations in grain character and color between adjacent panels. Leave **1/4-inch** (6-mm) gap to be covered with trim at top, bottom, and openings. Install with uniform tight joints between panels.
 1. Attach panels to supports with manufacturer's recommended panel adhesive and fasteners. Space fasteners and adhesive as recommended by panel manufacturer.
 2. Conceal fasteners to greatest practical extent.
 3. Arrange panels with grooves and joints over supports. Fasten to supports with nails of type and at spacing recommended by panel manufacturer. Use fasteners with prefinished heads matching groove color.
- B. Hardboard Paneling: Install according to manufacturer's written recommendations. Leave **1/4-inch** (6-mm) gap to be covered with trim at top, bottom, and openings. Butt adjacent panels with moderate contact. Use fasteners with prefinished heads matching paneling color.
 1. Wood Stud or Furring Substrate: Install with **1-inch** (25-mm) annular-ring shank

- hardboard nails.
 - 2. Plaster or Gypsum-Board Substrate: Install with **1-5/8-inch** (41-mm) annular-ring shank hardboard nails.
 - 3. Nailing: Space nails **4 inches** (100 mm) o.c. at panel perimeter and **8 inches** (200 mm) o.c. at intermediate supports unless otherwise required by manufacturer.
- C. Board Paneling: Install according to manufacturer's written instructions. Arrange in random-width pattern suggested by manufacturer unless boards or planks are of uniform width.
- 1. Install in full lengths without end joints.
 - 2. Stagger end joints in random pattern to uniformly distribute joints on each wall.
 - 3. Install with uniform end joints with only end-matched (tongue-and-groove) joints within each field of paneling.
 - 4. Install with uniform end joints. Locate end joints only over furring or blocking.
 - 5. Select and arrange boards on each wall to minimize noticeable variations in grain character and color between adjacent boards. Install with uniform tight joints between boards.
 - 6. Fasten paneling by face nailing, setting nails, and filling over nail heads.
 - 7. Fasten paneling with trim screws, set below face and filled.
 - 8. Fasten paneling by blind nailing through tongues.
 - 9. Fasten paneling with paneling system manufacturer's concealed clips.
 - 10. Fasten paneling to gypsum wallboard with panel adhesive.

3.6 SHELVING AND CLOTHES ROD INSTALLATION

- A. Cut shelf cleats at ends of shelves about **1/2 inch** (13 mm) less than width of shelves and sand exposed ends smooth.
- B. Install shelf cleats by fastening to framing or backing with finish nails or trim screws, set below face and filled. Space fasteners not more than **16 inches** (400 mm) o.c. [**Use 2 fasteners at each framing member or fastener location for cleats 4 inches nominal** (89 mm actual) **in width and wider.**]
 - 1. Apply a bead of multipurpose construction adhesive to back of shelf cleats before installing. Remove adhesive that is squeezed out after fastening shelf cleats in place.
- C. Install shelf brackets according to manufacturer's written instructions, spaced not more than [**32 inches** (800 mm)] [**36 inches** (900 mm)] o.c. Fasten to framing members, blocking, or metal backing, or use toggle bolts or hollow wall anchors.
- D. Install standards for adjustable shelf supports according to manufacturer's written instructions. Fasten to framing members, blocking, or metal backing, or use toggle bolts or hollow wall anchors. Space fasteners not more than **12 inches** (300 mm) o.c.
- E. Install standards for adjustable shelf brackets according to manufacturer's written instructions, spaced not more than **36 inches** (900 mm) o.c. and within **6 inches** (150

mm) of end of shelves. Fasten to framing members, blocking, or metal backing, or use toggle bolts or hollow wall anchors.

- F. Cut shelves to neatly fit openings with only enough gap to allow shelves to be removed and reinstalled. Install shelves, fully seated on cleats, brackets, and supports.
 - 1. Fasten shelves to cleats with finish nails or trim screws, set flush.
 - 2. Fasten shelves to brackets to comply with bracket manufacturer's written instructions.
- G. Install rod flanges for rods as indicated. Fasten to shelf cleats, framing members, blocking, or metal backing, or use toggle bolts or hollow wall anchors. Install rods in rod flanges.

3.7 STAIR AND RAILING INSTALLATION

- A. Treads and Risers at Interior Stairs: Secure treads and risers by gluing and nailing to rough carriages.
 - 1. Closed Stringers: [**House treads and risers into wall stringers, glue, and wedge into place**] [**Cope wall stringers to fit tightly over treads and risers**].
- B. Balusters: Dovetail or mortise balusters into treads, glue, and nail in place. Let into railings and glue in place.
- C. Newel Posts: Secure newel posts to stringers, rough carriages, and risers with countersunk-head wood screws and glue.
- D. Railings: Secure wall rails with metal brackets. Fasten freestanding railings to newel posts and to trim at walls with countersunk-head wood screws or rail bolts, and glue. Assemble railings at goosenecks, easements, and splices with rail bolts and glue.

3.8 ORNAMENTAL COLUMN INSTALLATION

- A. Install columns to comply with manufacturer's written instructions. Comply with requirements below unless manufacturer's written instructions state otherwise.
- B. Lay out column locations on ceiling and plumb down to locate column locations at floor.
- C. Set plinths in location, shim as required to temporarily level, and scribe and trim as required so that tops of plinths will sit level without use of shims. Seal cut surfaces with wood sealer or primer and fasten plinths to floor using pins or fasteners as recommended by manufacturer.
- D. Set columns in location, shim as required to temporarily plumb, and scribe and trim as required so that columns will sit plumb without shims.
- E. Scribe and trim tops of columns to fit to ceiling.

- F. Seal ends of columns with wood sealer or primer.
- G. Install column caps on columns and fasten to columns.
- H. Secure columns in place at top and bottom with fasteners recommended by manufacturer.

3.9 ADJUSTING

- A. Replace interior finish carpentry that is damaged or does not comply with requirements. Interior finish carpentry may be repaired or refinished if work complies with requirements and shows no evidence of repair or refinishing. Adjust joinery for uniform appearance.

3.10 CLEANING

- A. Clean interior finish carpentry on exposed and semiexposed surfaces. Restore damaged or soiled areas and touch up factory-applied finishes, if any.

3.11 PROTECTION

- A. Protect installed products from damage from weather and other causes during construction.
- B. Remove and replace finish carpentry materials that are wet, moisture damaged, and mold damaged.
 - 1. Indications that materials are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
 - 2. Indications that materials are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 062023

SECTION 064113 - WOOD-VENEER-FACED ARCHITECTURAL CABINETS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Architectural wood cabinets.
 - 2. Wood furring, blocking, shims, and hanging strips for installing architectural wood cabinets unless concealed within other construction before cabinet installation.
 - 3. Shop finishing of architectural wood cabinets.
- B. Related Requirements:
 - 1. Section 061000 "Rough Carpentry" for wood furring, blocking, shims, and hanging strips required for installing cabinets and concealed within other construction before cabinet installation.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 ALLOWANCES

- A. Veneer for wood-veneer-faced architectural cabinets is part of veneer allowance. Allowance includes the cost of veneer that is wasted due to selection, cutting, and trimming.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]<Insert location>**.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product[, **including**] **[panel products] [fire-retardant-treated materials] [cabinet hardware and accessories] [and] [finishing materials and processes]**.

1. Include data for fire-retardant treatment from chemical-treatment manufacturer and certification by treating plant that treated materials comply with requirements.
2. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating distance to Project, cost for each regional material, and fraction by weight that is considered regional.
3. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regionally manufactured[**and regionally extracted and manufactured**] materials. Include statement indicating cost for each regionally manufactured material.
 - a. Include statement indicating location of manufacturer and distance to Project for each regionally manufactured material.
 - b. Include statement indicating location of manufacturer and point of extraction, harvest, or recovery for each raw material used in regionally extracted and manufactured materials. Indicate distance to Project and fraction by weight of each regionally manufactured material that is regionally extracted.
4. Certificates for [**Credit MR 6**] [**Credit MR 7**]: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification and chain-of-custody requirements. Include statement indicating cost for each certified wood product.
5. Laboratory Test Reports for Credit IEQ 4.1: For adhesives, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
6. Product Data for Credit IEQ 4.4: For adhesives and composite wood products, documentation indicating that products contain no urea formaldehyde.
7. Laboratory Test Reports for Credit IEQ 4.4: For composite wood products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

C. Shop Drawings: Show location of each item, dimensioned plans and elevations, large-scale details, attachment devices, and other components.

1. Show details full size.

2. Show locations and sizes of furring, blocking, and hanging strips, including concealed blocking and reinforcement specified in other Sections.
 3. Show locations and sizes of cutouts and holes for **[electrical switches and outlets] [and other items]** installed in architectural wood cabinets.
 4. Show veneer leaves with dimensions, grain direction, exposed face, and identification numbers indicating the flitch and sequence within the flitch for each leaf.
 5. Apply AWI Quality Certification Program label to Shop Drawings.
- D. Samples for Initial Selection: Provide minimum 8" x 10" for each type, color, pattern and surface finish.
1. Shop-applied transparent finishes.
 2. Shop-applied opaque finishes.
 3. PVC edge material.
 4. Thermoset decorative panels.
 5. Exposed cabinet hardware, one unit of each type and finish.
- E. Samples for Verification:
1. Lumber for transparent finish, not less than **[5 inches (125 mm) wide by 12 inches (300 mm) long] [5 inches (125 mm) wide by 24 inches (600 mm) long]**, for each species and cut, finished on one side and one edge.
 2. Veneer leaves representative of and selected from flitches to be used for transparent-finished cabinets.
 3. Lumber and panel products with shop-applied opaque finish, **5 inches (125 mm) wide by 12 inches (300 mm) long** for lumber and **[8 by 10 inches (200 by 250 mm)] [12 by 12 inches (300 by 300 mm)]** for panels, for each finish system and color, with **[one-half of]** exposed surface finished.
 4. Thermoset decorative panels, **[8 by 10 inches (200 by 250 mm)] [12 by 12 inches (300 by 300 mm)]**, for each color, pattern, and surface finish, **[with edge banding on one edge]**.
 5. Corner pieces as follows:
 - a. Cabinet-front frame joints between stiles and rails, as well as exposed end pieces, **18 inches (450 mm) high by 18 inches (450 mm) wide by 6 inches (150 mm) deep**.
 - b. Miter joints for standing trim.
 6. Exposed cabinet hardware and accessories, one unit for each type **[and finish]**.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For **[Installer] [fabricator]**.
- B. Quality Certification: Submit woodwork Manufacturer's (Fabricator's) certification, stating that fabricated woodwork complies with quality grades and other requirements indicated.

- C. Certificate from the fabricator providing proof of not less than five (5) years experience in the fabrication of the types of products specified.
 - D. Certificate from the installer providing proof of not less than five (5) years of successful experience in the installation of similar types of products and shall have completed at least 3 jobs of similar size and scope.
 - E. Product Certificates: For **[each type of product.] [the following:]**
 - 1. Composite wood and agrifiber products.
 - 2. Thermoset decorative panels.
 - 3. Glass.
 - 4. Adhesives.
 - F. Woodwork Quality Standard Compliance Certificates: AWI Quality Certification Program certificates .
 - G. Evaluation Reports: For fire-retardant-treated materials, from ICC-ES.
 - H. Maintenance Data: Submit manufacturers care and maintenance data, including care and cleaning instructions.
- 1.7 CLOSEOUT SUBMITTALS
- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
- 1.8 QUALITY ASSURANCE
- A. Fabricator Qualifications: Shop that employs skilled workers who custom fabricate products similar to those required for this Project and whose products have a record of successful in-service performance. Shop is a certified participant in AWI's Quality Certification Program.
 - B. Installer Qualifications: **[Fabricator of products]** Certified participant in AWI's Quality Certification Program.
 - C. Testing Agency Qualifications: For testing agency providing classification marking for fire-retardant-treated material, an inspection agency acceptable to authorities having jurisdiction that periodically performs inspections to verify that the material bearing the classification marking is representative of the material tested.
 - D. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Build mockups of **[typical architectural wood cabinets as shown on Drawings]** <Insert description>.

2. Fabricate one carcass for each type of cabinet required. DEN Project Manager is to review and approve carcass before remaining cabinet work can be proceeded with. Contractor to pay for the expense of transporting the DEN Project Manager to carcass site and back.
 3. Complete fabrication of each carcass approved and deliver to job site for DEN Project Manager review. Once the mock-up for a type of cabinet is approved, all remaining cabinets of that type may be fabricated.
 4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- E. Coordination: Distribute copies of approved schedule for cabinet hardware specified in Section 087100, "Door Hardware" to manufacturer of architectural woodwork; coordinate cabinet shop drawings and fabrication with hardware requirements, including a cut sheet for all hardware items and typical fasteners.
- F. Distribute copies of casework shop drawings to stainless steel supplier and coordinate fabrication and installation.
- G. Warranty: Fabricator/installer to warrant for minimum two (2) years from date of final acceptance materials, fabrication and installation of all items.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Protect woodwork during transit, delivery, storage, and handling to prevent damage, soiling, and deterioration.
- B. Do not deliver cabinets until painting and similar operations that could damage woodwork have been completed in installation areas. If cabinets must be stored in other than installation areas, store only in areas where environmental conditions comply with requirements specified in "Field Conditions" Article.

1.10 FIELD CONDITIONS

- A. Conditioning: Woodwork Manufacturer and Installer shall advise Contractor of temperature and humidity requirements for woodwork installation and storage areas. Do not install woodwork until required temperature and relative humidity have been stabilized and will be maintained in installation areas.
- B. Maintain temperature and humidity in installation area as required to maintain moisture content of installed woodwork within a 1.0 percent tolerance of optimum moisture content, from date of installation through remainder of construction period. Require Woodwork Manufacturer to establish optimum moisture content and required temperature and humidity conditions.
- C. Environmental Limitations: Do not deliver or install cabinets until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.

- D. Environmental Limitations: Do not deliver or install cabinets until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature between 60 and 90 deg F (16 and 32 deg C) and relative humidity between [25 and 55] [17 and 50] <Insert humidity range> percent during the remainder of the construction period.
- E. Field Measurements: Where cabinets are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
 - 1. Locate concealed framing, blocking, and reinforcements that support cabinets by field measurements before being enclosed, and indicate measurements on Shop Drawings.
- F. Established Dimensions: Where cabinets are indicated to fit to other construction, establish dimensions for areas where cabinets are to fit. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

1.11 COORDINATION

- A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to ensure that wood-veneer-faced architectural cabinets can be supported and installed as indicated.
- B. Hardware Coordination: Distribute copies of approved hardware schedule specified in Section 087111 "Door Hardware (Descriptive Specification)" to fabricator of architectural woodwork; coordinate Shop Drawings and fabrication with hardware requirements.

1.12 WARRANTY

- A. Warranty: Fabricator/installer to warrant for minimum two (2) years from date of final acceptance materials, fabrication, and installation of all items.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 FABRICATION, GENERAL

- A. Wood Moisture Content: Comply with requirements of referenced quality standard for moisture content of lumber at time of fabrication and for relative humidity conditions in the installation areas.
- B. Fabricate woodwork to dimensions, profiles, and details indicated with openings and mortises precut, where possible, to receive hardware and other items and work.
- C. Complete fabrication, assembly, finishing, hardware application, and other work before shipment to project site to maximum extent possible. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
- D. Pre Cut Openings: Fabricate architectural woodwork with precut openings, where possible, to receive hardware, appliances, plumbing fixtures, electrical work and similar items. Locate openings accurately and use templates or roughing in diagrams for proper size and shape. Smooth edges of cutoffs and, where located in countertops and similar exposures seal edges of cutouts with a water resistant coating.
- E. Measurements: Before proceeding with fabrication of woodwork required to be fitted to other construction, obtain field measurements and verify dimensions and shop drawing details as required for accurate fit.

2.2 ARCHITECTURAL CABINET FABRICATORS

- A. Source Limitations: Engage a qualified woodworking firm to assume undivided responsibility for production of architectural wood cabinets with sequence-matched wood veneers **[wood paneling] [wood doors with face veneers that are sequence matched with woodwork] [and] [transparent-finished wood doors that are required to be of same species as woodwork]**.
- B. Fabricators: Subject to compliance with requirements, provide products by one of the following:
 - 1. **<Insert, in separate subparagraphs, names and possibly contact information for preapproved woodworking firms>**.
 - 2. or approved equal.

2.3 ARCHITECTURAL WOOD CABINETS, GENERAL

- A. Quality Standard: Unless otherwise indicated, comply with the "Architectural Woodwork Standards" for grades of architectural wood cabinets indicated for construction, finishes, installation, and other requirements.
 - 1. Provide **[labels] [and] [certificates]** from AWI certification program indicating

- that woodwork[, **including installation,**] complies with requirements of grades specified.
2. The Contract Documents contain selections chosen from options in the quality standard and additional requirements beyond those of the quality standard. Comply with those selections and requirements in addition to the quality standard.

2.4 WOOD CABINETS FOR TRANSPARENT FINISH

- A. Grade: [**Premium**] [**Custom**] [**Economy**].
- B. Regional Materials: Wood cabinets for transparent finish shall be manufactured within **500 miles** (800 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles** (800 km) of Project site.
- C. Regional Materials: Wood cabinets for transparent finish shall be manufactured within **500 miles** (800 km) of Project site.
- D. Certified Wood: Wood cabinets for transparent finish shall be produced from wood certified as "FSC Pure"[or "**FSC Mixed Credit**"] according to FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship," and FSC STD-40-004, "FSC Standard for Chain of Custody Certification."
- E. Type of Construction: [**Frameless**] [**Face frame**].
- F. Cabinet and Door and Drawer Front Interface Style: [**Flush overlay**] [**Reveal overlay**] [**Lipped**] [**Flush inset**].
- G. Reveal Dimension: [**1/2 inch (13 mm)**] [**As indicated**] <Insert dimension>.
- H. Wood for Exposed Surfaces:[**As indicated.**]
 1. Species: [**Red oak**] [**White oak**] [**White ash**] [**White birch**] <Insert species>.
 2. Cut: [**Plain sliced/plain sawn**] [**Rift cut/rift sawn**] [**Quarter cut/quarter sawn**].
 3. Grain Direction: [**Vertically for drawer fronts, doors, and fixed panels**] [**Horizontally for drawer fronts, doors, and fixed panels**] [**Vertically for doors and fixed panels, horizontally for drawer fronts**] [**As indicated**].
 4. Matching of Veneer Leaves: [**Book**] [**Slip**] [**Random**] match.
 5. Veneer Matching within Panel Face: [**Running**] [**Balance**] [**Center-balance**] match.
 6. Veneer Matching within Room: Provide cabinet veneers in each room or other space from a single flitch with doors, drawer fronts, and other surfaces matched in a sequenced set with continuous match where veneers are interrupted perpendicular to the grain.
 7. Comply with veneer and other matching requirements indicated for blueprint-matched paneling.
- I. Semi-exposed Surfaces: Provide surface materials indicated below:

1. Surfaces Other Than Drawer Bodies: [**Same species and cut indicated for exposed surfaces**] [**Thermoset decorative panels**] [**Compatible species to that indicated for exposed surfaces, stained to match**].
 - a. Edges of Thermoset Decorative Panel Shelves: PVC or polyester edge banding.
 2. Drawer Subfronts, Backs, and Sides: [**Solid-hardwood lumber, same species indicated for exposed surfaces**] [**Solid-hardwood lumber, stained to match species indicated for exposed surfaces**] [**Solid-hardwood lumber**] [**Thermoset decorative panels with PVC or polyester edge banding**].
 3. Drawer Bottoms: [**Hardwood plywood**] [**Thermoset decorative panels**].
- J. Dust Panels: **1/4-inch** (6.4-mm) plywood or tempered hardboard above compartments and drawers unless located directly under tops.
- K. Drawer Construction: Fabricate with exposed fronts fastened to subfront with mounting screws from interior of body.
1. Join subfronts, backs, and sides with [**glued rabbeted joints supplemented by mechanical fasteners**] [**or**] [**glued dovetail joints**].

2.5 WOOD CABINETS FOR OPAQUE FINISH

- A. Grade: [**Premium**] [**Custom**] [**Economy**].
- B. Regional Materials: Wood cabinets for opaque finish shall be manufactured within **500 miles** (800 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles** (800 km) of Project site.
- C. Regional Materials: Wood cabinets for opaque finish shall be manufactured within **500 miles** (800 km) of Project site.
- D. Certified Wood: Wood cabinets for opaque finish shall be produced from wood certified as "FSC Pure"[**or "FSC Mixed Credit"**] according to FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship," and FSC STD-40-004, "FSC Standard for Chain of Custody Certification."
- E. Type of Construction: [**Frameless**] [**Face frame**].
- F. Cabinet and Door and Drawer Front Interface Style: [**Flush overlay**] [**Reveal overlay**] [**Lipped**] [**Flush inset**].
- G. Reveal Dimension: [**1/2 inch (13 mm)**] [**As indicated**] <Insert dimension>.
- H. Species for Exposed Lumber Surfaces: Any closed-grain hardwood.
- I. Panel Product for Exposed Surfaces: Medium-density [**fiberboard**] [**overlay**].
- J. Semiexposed Surfaces: Provide surface materials indicated below:

1. Surfaces Other Than Drawer Bodies: **[Match materials indicated for exposed surfaces] [Thermoset decorative panels]**.
 - a. Edges of Thermoset Decorative Panel Shelves: PVC or polyester edge banding.
 2. Drawer Sides and Backs: **[Solid-hardwood lumber] [Thermoset decorative panels with PVC or polyester edge banding]**.
 3. Drawer Bottoms: **[Hardwood plywood] [Thermoset decorative panels]**.
- K. Dust Panels: **1/4-inch** (6.4-mm) plywood or tempered hardboard above compartments and drawers unless located directly under tops.
- L. Drawer Construction: Fabricate with exposed fronts fastened to subfront with mounting screws from interior of body.
1. Join subfronts, backs, and sides with **[glued rabbeted joints supplemented by mechanical fasteners] [or] [glued dovetail joints]**.

2.6 WOOD MATERIALS

- A. Wood Products: Provide materials that comply with requirements of referenced quality standard for each type of woodwork and quality grade specified unless otherwise indicated.
1. Do not use plain-sawn softwood lumber with exposed, flat surfaces more than **3 inches** (75 mm) wide.
 2. Wood Moisture Content: **[5 to 10] [4 to 9]** percent.
- B. Composite Wood and Agrifiber Products: Provide materials that comply with requirements of referenced quality standard for each type of woodwork and quality grade specified unless otherwise indicated.
1. Recycled Content of Medium-Density Fiberboard and Particleboard: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert number>** percent.
 2. Composite Wood and Agrifiber Products: Products shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
 3. Medium-Density Fiberboard: ANSI A208.2, **[Grade 130] <Insert grade>**, **made with binder containing no urea formaldehyde**.
 4. Particleboard: ANSI A208.1, **[Grade M-2] [Grade M-2, made with binder containing no urea formaldehyde] [Grade M-2-Exterior Glue]**.
 5. Particleboard: Straw-based particleboard complying with requirements in ANSI A208.1, Grade M-2, except for density.
 - a. Products: Subject to compliance with requirements, provide one of the following:

- 1) Environ Biocomposites Manufacturing LLC; Biofiber Wheat.
 - 2) Sorm Incorporated; Primeboard Premium Wheat.
 - 3) **<Insert manufacturer's name; product name or designation>**.
 - 4) or approved equal.
6. Softwood Plywood: DOC PS 1[, **medium-density overlay**].
 7. Veneer-Faced Panel Products (Hardwood Plywood): HPVA HP-1[, **made with adhesive containing no urea formaldehyde**].
 8. Thermoset Decorative Panels: Particleboard or medium-density fiberboard finished with thermally fused, melamine-impregnated decorative paper and complying with requirements of NEMA LD 3, Grade VGL, for test methods 3.3, 3.4, 3.6, 3.8, and 3.10.

2.7 FIRE-RETARDANT-TREATED MATERIALS

- A. Fire-Retardant-Treated Materials, General: Where fire-retardant-treated materials are indicated, use materials complying with requirements in this article that are acceptable to authorities having jurisdiction and with fire-test-response characteristics specified as determined by testing identical products per test method indicated by a qualified testing agency.
1. Use treated materials that comply with requirements of referenced woodworking standard. Do not use materials that are warped, discolored, or otherwise defective.
 2. Use fire-retardant-treatment formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.
 3. Identify fire-retardant-treated materials with appropriate classification marking of qualified testing agency in the form of removable paper label or imprint on surfaces that will be concealed from view after installation.
- B. Fire-Retardant-Treated Lumber and Plywood: Products with a flame-spread index of 25 or less when tested according to ASTM E 84, with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than **10.5 feet (3.2 m)** beyond the centerline of the burners at any time during the test.
1. Kiln dry lumber and plywood after treatment to a maximum moisture content of 19 and 15 percent, respectively.
 2. For items indicated to receive a stained or natural finish, use organic resin chemical formulation.
 3. Mill lumber after treatment within limits set for wood removal that do not affect listed fire-test-response characteristics, using a woodworking shop certified by testing and inspecting agency.
 4. Mill lumber before treatment and implement special procedures during treatment and drying processes that prevent lumber from warping and developing discolorations from drying sticks or other causes, marring, and other defects affecting appearance of treated woodwork.

- C. Fire-Retardant Particleboard: Panels complying with the following requirements, made from softwood particles and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 25 or less per ASTM E 84.
1. For panels **3/4 inch** (19 mm) thick and less, comply with ANSI A208.1 for Grade M-2 except for the following minimum properties: modulus of rupture, **1600 psi** (11 MPa); modulus of elasticity, **300,000 psi** (2070 MPa); internal bond, **80 psi** (550 kPa); and screw-holding capacity on face and edge, **250 and 225 lbf** (1100 and 1000 N), respectively.
 2. For panels **13/16 to 1-1/4 inches** (20 to 32 mm) thick, comply with ANSI A208.1 for Grade M-1 except for the following minimum properties: modulus of rupture, **1300 psi** (9 MPa); modulus of elasticity, **250,000 psi** (1720 MPa); linear expansion, 0.50 percent; and screw-holding capacity on face and edge, **250 and 175 lbf** (1100 and 780 N), respectively.
 3. Products: Subject to compliance with requirements, provide one of the following:
 - a. Flakeboard Company Limited; Duraflake FR.
 - b. SierraPine; Encore FR.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.
- D. Fire-Retardant Fiberboard: Medium-density fiberboard panels complying with ANSI A208.2, made from softwood fibers, synthetic resins, and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 200 or less per ASTM E 84.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Panel Source International, Inc.; Pyroblock Platinum.
 - b. SierraPine; Medite FR.
 - c. **<Insert manufacturer>**
 - d. or approved equal.

2.8 CABINET HARDWARE AND ACCESSORIES

- A. General: Provide cabinet hardware and accessory materials associated with architectural cabinets except for items specified in Section 087111 "Door Hardware (Descriptive Specification)."
- B. Butt Hinges: **2-3/4-inch** (70-mm), five-knuckle steel hinges made from **0.095-inch-** (2.4-mm-) thick metal, and as follows:
1. Semiconcealed Hinges for Flush Doors: BHMA A156.9, B01361.
 2. Semiconcealed Hinges for Overlay Doors: BHMA A156.9, B01521.
- C. Frameless Concealed Hinges (European Type): BHMA A156.9, B01602, **[100] [135] [170]** degrees of opening[, **self-closing**].

- D. Back-Mounted Pulls: BHMA A156.9, B02011.
- E. Wire Pulls: Back mounted, solid [metal] [plastic], [4 inches (100 mm) long, 5/16 inch (8 mm) in diameter] [5 inches (127 mm) long, 2-1/2 inches (63.5 mm) deep, and 5/16 inch (8 mm) in diameter].
- F. Catches: [Magnetic catches, BHMA A156.9, B03141] [Push-in magnetic catches, BHMA A156.9, B03131] [Roller catches, BHMA A156.9, B03071] [Ball friction catches, BHMA A156.9, B03013].
- G. Adjustable Shelf Standards and Supports: [BHMA A156.9, B04071; with shelf rests, B04081] [BHMA A156.9, B04102; with shelf brackets, B04112].
- H. Shelf Rests: BHMA A156.9, B04013; [metal] [plastic] [metal, two-pin type with shelf hold-down clip].
- I. Drawer Slides: BHMA A156.9.
- Grade 1 and Grade 2: Side mounted[and extending under bottom edge of drawer]; [full-extension] [partial-extension] type; [zinc-plated steel] [epoxy-coated steel] with polymer rollers.
 - Grade 1HD-100 and Grade 1HD-200: Side mounted; [full-extension] [full-overtravel-extension] type; zinc-plated-steel ball-bearing slides.
 - For drawers not more than 3 inches (75 mm) high and not more than 24 inches (600 mm) wide, provide [Grade 2] [Grade 1].
 - For drawers more than 3 inches (75 mm) high but not more than 6 inches (150 mm) high and not more than 24 inches (600 mm) wide, provide [Grade 1] [Grade 1HD-100].
 - For drawers more than 6 inches (150 mm) high or more than 24 inches (600 mm) wide, provide [Grade 1HD-100] [Grade 1HD-200].
 - For computer keyboard shelves, provide [Grade 1] [Grade 1HD-100].
 - For trash bins not more than 20 inches (500 mm) high and 16 inches (400 mm) wide, provide [Grade 1HD-100] [Grade 1HD-200].
- J. [Plastic] [Aluminum] Slides for Sliding Glass Doors: BHMA A156.9, B07063.
- K. Door Locks: BHMA A156.11, E07121.
- L. Drawer Locks: BHMA A156.11, E07041.
- M. Door and Drawer Silencers: BHMA A156.16, L03011.
- N. Float Glass for Cabinet Doors: ASTM C 1036, Type I, [Class 1 (clear)] [Class 2 or 3 (tinted)], Quality-Q3, [3.0 mm] [4.0 mm] [5.0 mm] [6.0 mm] thick.
- Tint Color: [Blue-green] [Bronze] [Green] [Gray] <Insert color>.
- O. Tempered Float Glass for Cabinet Doors: ASTM C 1048, Kind FT, Condition A, Type I, [Class 1 (clear)] [Class 2 or 3 (tinted)], Quality-Q3[, with exposed edges seamed before tempering], 6 mm thick unless otherwise indicated.

1. Tint Color: **[Blue-green] [Bronze] [Green] [Gray] <Insert color>**.
- P. Mirror Glass for Cabinet Doors: ASTM C 1503, Mirror **[Select] [Glazing]**, Quality-Q3, **[3.0 mm] [4.0 mm] [5.0 mm] [6.0 mm]** thick.
- Q. Decorative Glass for Cabinet Doors: Provide decorative glass complying with Section 088113 "Decorative Glass Glazing."
- R. Tempered Float Glass for Cabinet Shelves: ASTM C 1048, Kind FT, Condition A, Type I, **[Class 1 (clear)] [Class 2 or 3 (tinted)]**, Quality-Q3; with exposed edges seamed before tempering, 6 mm thick.
 1. Tint Color: **[Blue-green] [Bronze] [Green] [Gray] <Insert color>**.
- S. Exposed Hardware Finishes: For exposed hardware, provide finish that complies with BHMA A156.18 for BHMA finish number indicated.
 1. Dark, Oxidized, Satin Bronze, Oil Rubbed: BHMA 613 for bronze base; BHMA 640 for steel base; match DEN Project Manager's sample.
 2. Bright Brass, Clear Coated: BHMA 605 for brass base; BHMA 632 for steel base.
 3. Bright Brass, Vacuum Coated: BHMA 723 for brass base; BHMA 729 for zinc-coated-steel base.
 4. Satin Brass, Blackened, Bright Relieved, Clear Coated: BHMA 610 for brass base; BHMA 636 for steel base.
 5. Satin Chromium Plated: BHMA 626 for brass or bronze base; BHMA 652 for steel base.
 6. Bright Chromium Plated: BHMA 625 for brass or bronze base; BHMA 651 for steel base.
 7. Satin Stainless Steel: BHMA 630.
- T. For concealed hardware, provide manufacturer's standard finish that complies with product class requirements in BHMA A156.9.

2.9 MISCELLANEOUS MATERIALS

- A. Furring, Blocking, Shims, and Hanging Strips: **[Softwood or hardwood lumber] [Fire-retardant-treated softwood lumber]**, kiln dried to less than 15 percent moisture content.
- B. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide metal expansion sleeves or expansion bolts for post-installed anchors. Use nonferrous-metal or hot-dip galvanized anchors and inserts at inside face of exterior walls and at floors.
- C. Adhesives: Do not use adhesives that contain urea formaldehyde.
- D. Adhesives: Use adhesives that meet the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.10 FABRICATION

- A. Sand fire-retardant-treated wood lightly to remove raised grain on exposed surfaces before fabrication.
- B. Fabricate woodwork to dimensions, profiles, and details indicated. Ease edges to radius indicated for the following:
 - 1. Corners of Cabinets: **1/16 inch** (1.5 mm) unless otherwise indicated.
- C. Complete fabrication, including assembly[, **finishing,**] and hardware application, to maximum extent possible before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
 - 1. Notify DEN Project Manager seven (7) days in advance of the dates and times woodwork fabrication will be complete.
 - 2. Trial fit assemblies at fabrication shop that cannot be shipped completely assembled. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting. Verify that various parts fit as intended and check measurements of assemblies against field measurements before disassembling for shipment.
- D. Shop-cut openings to maximum extent possible to receive hardware, appliances, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.
- E. Install glass to comply with applicable requirements in Section 088000 "Glazing" and in GANA's "Glazing Manual." For glass in wood frames, secure glass with removable stops.

2.11 SHOP FINISHING

- A. General: Finish architectural wood cabinets at fabrication shop as specified in this Section. Defer only final touchup, cleaning, and polishing until after installation.
- B. General: Shop finish transparent-finished architectural wood cabinets at fabrication shop as specified in this Section. Refer to Section 099123 "Interior Painting" for field finishing opaque-finished architectural woodwork.
- C. General: Drawings indicate items that are required to be shop finished. Finish such items at fabrication shop as specified in this Section. Refer to [**Section 099123 "Interior Painting"**] [**and**] [**Section 099300 "Staining and Transparent Finishing"**] for field finishing architectural woodwork not indicated to be shop finished.
- D. Finish Materials: Use finish materials that meet the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- E. Shop Priming: Shop apply the prime coat including backpriming, if any, for[**transparent-finished**] items specified to be field finished. Refer to [**Section 099123 "Interior Painting"**] [**and**] [**Section 099300 "Staining and Transparent Finishing"**] for material and application requirements.
- F. Preparation for Finishing: Comply with referenced quality standard for sanding, filling countersunk fasteners, sealing concealed surfaces, and similar preparations for finishing architectural wood cabinets, as applicable to each unit of work.
1. Backpriming: Apply one coat of sealer or primer, compatible with finish coats, to concealed surfaces of cabinets.
- G. Transparent Finish:
1. Grade: [**Premium**] [**Same as item to be finished**].
 2. Finish: System - 1, nitrocellulose lacquer.
 3. Finish: System - 2, precatalyzed lacquer.
 4. Finish: System - 3, postcatalyzed lacquer.
 5. Finish: System - 4, water-based latex acrylic.
 6. Finish: System - 5, conversion varnish.
 7. Finish: System - 6, synthetic penetrating oil.
 8. Finish: System - 7, catalyzed vinyl.
 9. Finish: System - 8, water-based cross-linking acrylic.
 10. Finish: System - 9, UV curable acrylated epoxy, polyester, or urethane.
 11. Finish: System - 10, water-based UV curable.
 12. Finish: System - 11, catalyzed polyurethane.
 13. Finish: System - 12, water-based polyurethane.
 14. Finish: System - 13, catalyzed polyester.
 15. Wash Coat for Closed-Grain Woods: Apply wash-coat sealer to cabinets made from closed-grain wood before staining and finishing.
 16. Staining: [**None required**] [**Match approved sample for color**] [**Match DEN Project Manager's sample**].
 17. Open Finish for Open-Grain Woods: Do not apply filler to open-grain woods.
 18. Filled Finish for Open-Grain Woods:[**After staining, apply wash-coat sealer and allow to dry.**] Apply paste wood filler and wipe off excess. Tint filler to match stained wood.
 19. Sheen: [**Flat, 15-30**] [**Satin, 31-45**] [**Semigloss, 46-60**] [**Gloss, 61-100**] gloss units measured on 60-degree gloss meter per ASTM D 523.
- H. Opaque Finish:
1. Grade: [**Premium**] [**Same as item to be finished**].
 2. Finish: System - 1, nitrocellulose lacquer.
 3. Finish: System - 2, precatalyzed lacquer.
 4. Finish: System - 3, postcatalyzed lacquer.
 5. Finish: System - 4, water-based latex acrylic.
 6. Finish: System - 5, conversion varnish.
 7. Finish: System - 7, catalyzed vinyl.
 8. Finish: System - 8, water-based cross-linking acrylic.
 9. Finish: System - 9, UV curable acrylated epoxy, polyester, or urethane.

10. Finish: System - 10, water-based UV curable.
11. Finish: System - 11, catalyzed polyurethane.
12. Finish: System - 12, water-based polyurethane.
13. Finish: System - 13, catalyzed polyester.
14. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range].**
15. Sheen: **[Flat, 15-30] [Satin, 31-45] [Semigloss, 46-60] [Gloss, 61-100]** gloss units measured on 60-degree gloss meter per ASTM D 523.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Before installation, condition cabinets to average prevailing humidity conditions in installation areas.
- B. Before installing cabinets, examine shop-fabricated work for completion and complete work as required, including removal of packing and backpriming.

3.2 INSTALLATION

- A. Grade: Install cabinets to comply with same grade as item to be installed.
- B. Assemble cabinets and complete fabrication at Project site to the extent that it was not completed in the shop.
- C. Treated Wood: Handle, store, and install pressure treated wood in compliance with recommendations of chemical treatment manufacturer including those for adhesives, where required for installation.
- D. Install cabinets level, plumb, true, and straight. Shim as required with concealed shims. Install level and plumb to a tolerance of **1/8 inch in 96 inches** (3 mm in 2400 mm).
- E. Scribe and cut cabinets to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.
- F. Anchor cabinets to anchors or blocking built in or directly attached to substrates. Secure with countersunk, concealed fasteners and blind nailing. Except where prefinished matching fasteners heads are required, use fine finishing nails[**or finishing screws**] for exposed fastening, countersunk and filled flush with woodwork.
 1. For shop finished items, use filler matching finish of items being installed.
- G. Cabinets: Install without distortion so doors and drawers fit openings properly and are accurately aligned. Adjust hardware to center doors and drawers in openings and to provide unencumbered operation. Complete installation of hardware and accessory items as indicated.

1. Install cabinets with no more than **1/8 inch in 96-inch** (3 mm in 2400-mm) sag, bow, or other variation from a straight line.
 2. Maintain veneer sequence matching of cabinets with transparent finish.
 3. Fasten wall cabinets through back, near top and bottom, and at ends not more than **16 inches** (400 mm) o.c. with [**No. 10 wafer-head screws sized for not less than 1-1/2-inch** (38-mm) penetration into wood framing, blocking, or hanging strips] [**No. 10 wafer-head sheet metal screws through metal backing or metal framing behind wall finish**] [**toggle bolts through metal backing or metal framing behind wall finish**].
- H. Touch up finishing work specified in this Section after installation of woodwork. Fill nail holes with matching filler where exposed.
1. Apply specified finish coats, including stains and paste fillers if any, to exposed surfaces where only sealer/prime coats are applied in shop.
- I. Refer to [**Section 099123 "Interior Painting"**] [**and**] [**Section 099300 "Staining and Transparent Finishing"**] for final finishing of installed architectural woodwork[**not indicated to be shop finished**].

3.3 ADJUSTING AND CLEANING

- A. Repair damaged and defective cabinets, where possible, to eliminate functional and visual defects; where not possible to repair, replace woodwork. Adjust joinery for uniform appearance.
- B. Clean, lubricate, and adjust hardware.
- C. Clean cabinets on exposed and semiexposed surfaces. Touch up shop-applied finishes to restore damaged or soiled areas.

3.4 HARDWARE SCHEDULE

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 064113

SECTION 064116 - PLASTIC-LAMINATE-FACED ARCHITECTURAL CABINETS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Plastic-laminate-faced architectural cabinets.
2. Stainless steel items incorporated into woodwork.
3. All thermoset polymer alloy surfaces.
4. Wood furring, blocking, shims, and hanging strips for installing plastic-laminate-faced architectural cabinets unless concealed within other construction before cabinet installation.

B. Related Requirements:

1. Section 061000 "Rough Carpentry" for wood furring, blocking, shims, and hanging strips required for installing cabinets and concealed within other construction before cabinet installation.
2. Section 064219 "Plastic-Laminate-Faced Wood Paneling" for plastic laminated wood paneling.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager] <Insert location>**

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product[, **including**] [**panel products**] [**high-pressure decorative laminate**] [**stainless steel items incorporated into woodwork**] [**all thermoset polymer alloy surfaces**] [**adhesive for bonding plastic laminate**] [**fire-retardant-treated materials**] [**and**] [**cabinet hardware and accessories**].

1. Include data for fire-retardant treatment from chemical-treatment manufacturer

- and certification by treating plant that treated materials comply with requirements.
2. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
 2. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regionally manufactured materials. Include statement indicating cost for each regionally manufactured material.
 - a. Include statement indicating location of manufacturer and distance to Project for each regionally manufactured material.
 3. Certificates for **[Credit MR 6] [Credit MR 7]**: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification and chain-of-custody requirements. Include statement indicating cost for each certified wood product.
 4. Laboratory Test Reports for Credit IEQ 4.1: For adhesives, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
 5. Product Data for Credit IEQ 4.4: For adhesives and composite wood products, documentation indicating that products contain no urea formaldehyde.
 6. Laboratory Test Reports for Credit IEQ 4.4: For composite wood products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: Show location of each item, dimensioned plans and elevations, large-scale details, attachment devices, and other components.
1. Show details full size.
 2. Show locations and sizes of furring, blocking, and hanging strips, including concealed blocking and reinforcement specified in other Sections.
 3. Show locations and sizes of cutouts and holes for **[electrical switches and outlets] [and other items]** installed in architectural plastic-laminate cabinets.
 - 4.
 5. Apply AWI Quality Certification Program label to Shop Drawings.
- D. Samples for Initial Selection: Provide minimum 8" x 10" for each type, color, pattern, and surface finish. One sample for each cabinet liner type, 8" x 10".
1. Plastic laminates.
 2. PVC edge material.
 3. Thermoset decorative panels.

4. Exposed cabinet hardware, one unit of each type and finish.
5. Polymer alloy: For each type, color, pattern, and surface finish. One typical color matched seam.

E. Samples for Verification:

1. Plastic laminates, [**8 by 10 inches** (200 by 250 mm)] [**12 by 12 inches** (300 by 300 mm)], for each[**type,**] color, pattern, and surface finish[, **with one sample applied to core material**] [**and specified edge material applied to one edge**].
2. Wood-grain plastic laminates, [**12 by 24 inches** (300 by 600 mm)] [**24 by 24 inches** (600 by 600 mm)], for each[**type,**] pattern and surface finish[, **with one sample applied to core material**] [**and specified edge material applied to one edge**].
3. Thermoset decorative panels, [**8 by 10 inches** (200 by 250 mm)] [**12 by 12 inches** (300 by 300 mm)], for each color, pattern, and surface finish[, **with edge banding on one edge**].
4. Corner pieces as follows:
 - a. Cabinet-front frame joints between stiles and rails, as well as exposed end pieces, **18 inches** (450 mm) high by **18 inches** (450 mm) wide by **6 inches** (150 mm) deep.
 - b. Miter joints for standing trim.
5. Exposed cabinet hardware and accessories, one unit for each type[**and finish**].

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For [**Installer**] [**fabricator**].
- B. Quality Certification: Submit woodwork Manufacturer's (Fabricator's) certification, stating that fabricated woodwork complies with quality grades and other requirements indicated.
- C. Product Certificates: For [**each type of product.**] [**the following:**]
 1. Composite wood and agrifiber products.
 2. Thermoset decorative panels.
 3. High-pressure decorative laminate.
 4. Thermoset polymer alloy.
 5. Glass.
 6. Adhesives.
- D. Woodwork Quality Standard Compliance Certificates: AWI Quality Certification Program certificates .
- E. Certificate from the fabricator providing proof of not less than five (5) years experience in the fabrication of the types of products specified.

- F. Certificate from the installer providing proof of not less than five (5) years of successful experience in the installation of similar types of products and shall have completed at least 3 jobs of similar size and scope.
- G. Certificate from the manufacturer certifying that the polymer alloy cladding complies with the Denver Building Code for its intended use.
- H. Wall panel certificate: Submit certificate that wall panel backing adhesive and laminate comply with reference fire-resistance requirements.
- I. Evaluation Reports: For fire-retardant-treated materials, from ICC-ES.
- J. Maintenance Data: Submit manufacturer's care and maintenance data, including care and cleaning instructions.

1.6 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Fabricator Qualifications: Shop that employs skilled workers who custom fabricate products similar to those required for this Project and whose products have a record of successful in-service performance. Shop is a certified participant in AWI's Quality Certification Program.
- B. Installer Qualifications: [**Fabricator of products**] [**Certified participant in AWI's Quality Certification Program**].
- C. Testing Agency Qualifications: For testing agency providing classification marking for fire-retardant-treated material, an inspection agency acceptable to authorities having jurisdiction that periodically performs inspections to verify that the material bearing the classification marking is representative of the material tested.
- D. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Build mockups of [**typical plastic-laminate cabinets as shown on Drawings**] **<Insert description>**.
 - 2. Fabricate one carcass for each type of cabinet required. DEN Project Manager is to review and approve carcass before remaining cabinetwork can be proceeded with. Contractor to pay for the expense of transporting the DEN Project Manager to carcass site and back.

3. Complete fabrication of each carcass approved and deliver to job site for DEN Project Manager review. Once the mock-up for a type of cabinet is approved, all remaining cabinets of that type may be fabricated.
 4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- E. Coordination: Distribute copies of approved schedule for cabinet hardware specified in **[Section 087100, "Door Hardware"] [this Section]** to manufacturer of architectural woodwork; coordinate cabinet shop drawings and fabrication with hardware requirements, including a cut sheet for all hardware items and typical fasteners.
- F. Distribute copies of casework shop drawings to stainless steel supplier and coordinate fabrication and installation.
- 1.8 DELIVERY, STORAGE, AND HANDLING
- A. Protect woodwork during transit, delivery, storage, and handling to prevent damage, soiling, and deterioration.
 - B. Do not deliver cabinets until painting and similar operations that could damage woodwork have been completed in installation areas. If cabinets must be stored in other than installation areas, store only in areas where environmental conditions comply with requirements specified in "Field Conditions" Article.
- 1.9 FIELD CONDITIONS
- A. Conditioning: Woodwork Manufacturer and Installer shall advise Contractor of temperature and humidity requirements for woodwork installation and storage areas. Do not install woodwork until required temperature and relative humidity have been stabilized and will be maintained in installation areas.
 - B. Maintain temperature and humidity in installation area as required to maintain moisture content of installed woodwork within a 1.0 percent tolerance of optimum moisture content, from date of installation through remainder of construction period. Require Woodwork Manufacturer to establish optimum moisture content and required temperature and humidity conditions.
 - C. Environmental Limitations: Do not deliver or install cabinets until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.
 - D. Environmental Limitations: Do not deliver or install cabinets until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature between **60 and 90 deg F** (16 and 32 deg C) and relative humidity between **[25 and 55] [17 and 50] <Insert humidity range>** percent during the remainder of the construction period.
 - E. Field Measurements: Where cabinets are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and

indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1. Locate concealed framing, blocking, and reinforcements that support cabinets by field measurements before being enclosed, and indicate measurements on Shop Drawings.

- F. Established Dimensions: Where cabinets are indicated to fit to other construction, establish dimensions for areas where cabinets are to fit. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

1.10 COORDINATION

- A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to ensure that cabinets can be supported and installed as indicated.
- B. Hardware Coordination: Distribute copies of approved hardware schedule specified in Section 087111 "Door Hardware (Descriptive Specification)" to fabricator of architectural woodwork; coordinate Shop Drawings and fabrication with hardware requirements.

1.11 WARRANTY

- A. Warranty: Provide warranty for two (2) <Insert number> years from date of final acceptance materials, fabrication, and installation of all items.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 FABRICATION, GENERAL

- A. Wood Moisture Content: Comply with requirements of referenced quality standard for moisture content of lumber at time of fabrication and for relative humidity conditions in the installation areas.
- B. Fabricate woodwork to dimensions, profiles, and details indicated with openings and mortises precut, where possible, to receive hardware and other items and work.
- C. Complete fabrication, assembly, finishing, hardware application, and other work before

shipment to project site to maximum extent possible. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.

- D. Pre Cut Openings: Fabricate architectural woodwork with precut openings, where possible, to receive hardware, appliances, plumbing fixtures, electrical work and similar items. Locate openings accurately and use templates or roughing in diagrams for proper size and shape. Smooth edges of cutoffs and, where located in countertops and similar exposures seal edges of cutouts with a water resistant coating.
- E. Measurements: Before proceeding with fabrication of woodwork required to be fitted to other construction, obtain field measurements and verify dimensions and shop drawing details as required for accurate fit.

2.2 ARCHITECTURAL CABINET FABRICATORS

- A. Fabricators: Subject to compliance with requirements, provide products by one of the following:
 - 1. **<Insert, in separate subparagraphs, names and possibly contact information for preapproved woodworking firms>.**
 - 2. or approved equal.

2.3 PLASTIC-LAMINATE-FACED ARCHITECTURAL CABINETS

- A. Quality Standard: Unless otherwise indicated, comply with the "Architectural Woodwork Standards" for grades of architectural plastic-laminate cabinets indicated for construction, finishes, installation, and other requirements.
 - 1. Provide **[labels] [and] [certificates]** from AWI certification program indicating that woodwork[, **including installation,**] complies with requirements of grades specified.
 - 2. The Contract Documents contain selections chosen from options in the quality standard and additional requirements beyond those of the quality standard. Comply with those selections and requirements in addition to the quality standard.
- B. Grade: **[Premium] [Custom] [Economy]**.
- C. Regional Materials: Plastic-laminate cabinets shall be manufactured within **500 miles** (800 km) of Project site.
- D. Certified Wood: Plastic-laminate cabinets shall be made from wood products certified as "FSC Pure"[**or "FSC Mixed Credit"**] according to FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship," and FSC STD-40-004, "FSC Standard for Chain of Custody Certification."
- E. Type of Construction: **[Frameless] [Face frame] [As indicated]**.

- F. Cabinet, Door, and Drawer Front Interface Style: [**Flush overlay**] [**Reveal overlay**] [**Lipped**] [**Flush inset**].
- G. Reveal Dimension: [**1/2 inch (13 mm)**] [**As indicated**] <Insert dimension>.
- H. High-Pressure Decorative Laminate: NEMA LD 3, grades as indicated or if not indicated, as required by woodwork quality standard.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Abet Laminati, Inc.
 - b. Formica Corporation.
 - c. Lamin-Art, Inc.
 - d. Panolam Industries International, Inc.
 - e. Wilsonart International; Div. of Premark International, Inc.
 - f. <Insert manufacturer's name>.
 - g. or approved equal.
- I. Laminate Cladding for Exposed Surfaces:
1. Horizontal Surfaces: [**Grade HGS**] .
 2. Postformed Surfaces: Grade HGP.
 3. Vertical Surfaces: [**Grade HGS**] .
 4. Edges: [**Grade HGS**] Pattern Direction: [**Vertically for drawer fronts, doors, and fixed panels**] [**Horizontally for drawer fronts, doors, and fixed panels**] [**Vertically for doors and fixed panels, horizontally for drawer fronts**] [**As indicated**].
- J. Materials for Semiexposed Surfaces:
1. Surfaces Other Than Drawer Bodies: [**High-pressure decorative laminate, NEMA LD 3, Grade VGS**] .
 - a. Edges of Plastic-Laminate Shelves: [**PVC tape, 0.018-inch (0.460-mm) minimum thickness, matching laminate in color, pattern, and finish**] [**PVC T-mold matching laminate in color, pattern, and finish**] [**PVC edge banding, 0.12 inch (3 mm) thick, matching laminate in color, pattern, and finish**].
 - b. Edges of Thermoset Decorative Panel Shelves: PVC or polyester edge banding.
 - c. For semiexposed backs of panels with exposed plastic-laminate surfaces, provide surface of high-pressure decorative laminate, NEMA LD 3, [**Grade VGS**] .
 2. Drawer Sides and Backs: [**Solid-hardwood lumber**] [**Thermoset decorative panels with PVC or polyester edge banding**].
 3. Drawer Bottoms: [**Hardwood plywood**] [**Thermoset decorative panels**].
- K. Dust Panels: **1/4-inch (6.4-mm)** plywood or tempered hardboard above compartments

and drawers unless located directly under tops.

- L. Concealed Backs of Panels with Exposed Plastic-Laminate Surfaces: High-pressure decorative laminate, NEMA LD 3, Grade BKL.
- M. Drawer Construction: Fabricate with exposed fronts fastened to subfront with mounting screws from interior of body.
 - 1. Join subfronts, backs, and sides with **[glued rabbeted joints supplemented by mechanical fasteners] [or] [glued dovetail joints]**.
- N. Colors, Patterns, and Finishes: Provide materials and products that result in colors and textures of exposed laminate surfaces complying with the following requirements:
 - 1. As indicated by laminate manufacturer's designations.
 - 2. Match DEN Project Manager's sample.
 - 3. As selected by DEN Project Manager from laminate manufacturer's full range in the following categories:
 - a. Solid colors, **[gloss] [matte]** finish.
 - b. Solid colors with core same color as surface, **[gloss] [matte]** finish.
 - c. Wood grains, **[gloss] [matte]** finish.
 - d. Patterns, **[gloss] [matte]** finish.

2.4 WOOD MATERIALS

- A. Wood Products: Provide materials that comply with requirements of referenced quality standard for each type of woodwork and quality grade specified unless otherwise indicated.
 - 1. Wood Moisture Content: **[5 to 10] [4 to 9]** percent.
- B. Composite Wood and Agrifiber Products: Provide materials that comply with requirements of referenced quality standard for each type of woodwork and quality grade specified unless otherwise indicated.
 - 1. Recycled Content of Medium-Density Fiberboard and Particleboard: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert number>** percent.
 - 2. Composite Wood and Agrifiber Products: Products shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
 - 3. Medium-Density Fiberboard: ANSI A208.2, **[Grade 130] <Insert grade>**, **made with binder containing no urea formaldehyde**.
 - 4. Particleboard: ANSI A208.1, **[Grade M-2] [Grade M-2, made with binder containing no urea formaldehyde] [Grade M-2-Exterior Glue]**.
 - 5. Particleboard: Straw-based particleboard complying with requirements in ANSI A208.1, Grade M-2, except for density.

- a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) Environ Biocomposites Manufacturing LLC; Biofiber Wheat.
 - 2) Sorm Incorporated; Primeboard Premium Wheat.
 - 3) **<Insert manufacturer's name; product name or designation>**.
 - 4) or approved equal.
6. Softwood Plywood: DOC PS 1[, **medium-density overlay**].
7. Veneer-Faced Panel Products (Hardwood Plywood): HPVA HP-1[, **made with adhesive containing no urea formaldehyde**].
8. Thermoset Decorative Panels: Particleboard or medium-density fiberboard finished with thermally fused, melamine-impregnated decorative paper and complying with requirements of NEMA LD 3, Grade VGL, for test methods 3.3, 3.4, 3.6, 3.8, and 3.10.

2.5 ARCHITECTURAL POLYMER ALLOY CLADDING

- A. Provide architectural polymer alloy cladding that complies with the following:
 1. Thickness: As indicated on drawings.
 2. Impact Resistance: No fracture per NEMA LD3-3.03, 1/2 lb. ball.
 3. Hardness: 52-56, Barcol Impressor.
 4. Tensile Strength: 3900 psi, per ASTM D-638.
 5. Tensile Modulus: 1.0 x 10(6) psi per ASTM D-638.
 6. High temperature, boiling water and conductive heat resistance: No change per NEMA LD3-3.06, LD3-3.05 and LD3-3.08 respectively.
 7. Abrasion resistance: .08g/100 cycles per CS 221-66.
 8. Cigarette resistance: No lasting effect, NEMA LD3-3.07.
 9. Color stability: No change per NEMA LD3-3.10.
 10. Weight: 4.4 lbs./SF for a 1/2" thickness.
 11. Stain and chemical resistance: No lasting effect when exposed to acetone, Ethanol, gasoline, Methanol, 99.5% Acetic acid, 37% hydrochloric acid, 85% Phosphoric acid, 77% sulphuric acid, 1% ammonia, 1% lye, nail polish remover, coffee and ammonium Hydroxide.
 12. Surface burning characteristics: Flame spread: 10, smoke developed: 95-175.
 13. Finish: Matte, as obtained by light sanding with 320-350 grid sandpaper, glass level 5-18.
 14. Sealants and adhesives: Color-matched seam adhesive for joint seams. Match bowl color for seaming to sink bowls. Sealants to match polymer alloy in color, to be silicone and to comply with requirements of Section 07900, "Joint Sealers".

2.6 STAINLESS STEEL

- A. Provide stainless steel that complies with the following:
 1. Bar Stock: ASTM A 276, Type 302 or 304.
 2. Plate: ASTM A 167, Type 302 or 304.

3. Stainless steel finish: AISI number 4, brushed, directional with grain oriented along the length of the material or vertical on planar surfaces or as denoted by the DEN Project Manager.
4. Gauge: As noted on drawings.
5. Fasteners: Stainless steel, conceal to greatest extent possible.
6. Hinges: Stainless steel, concealed from view.

2.7 FIRE-RETARDANT-TREATED MATERIALS

- A. Fire-Retardant-Treated Materials, General: Where fire-retardant-treated materials are indicated, use materials complying with requirements in this article that are acceptable to authorities having jurisdiction and with fire-test-response characteristics specified as determined by testing identical products per test method indicated by a qualified testing agency.
1. Use treated materials that comply with requirements of referenced woodworking standard. Do not use materials that are warped, discolored, or otherwise defective.
 2. Use fire-retardant-treatment formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.
 3. Identify fire-retardant-treated materials with appropriate classification marking of qualified testing agency in the form of removable paper label or imprint on surfaces that will be concealed from view after installation.
- B. Fire-Retardant-Treated Lumber and Plywood: Products with a flame-spread index of 25 or less when tested according to ASTM E 84, with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than **10.5 feet** (3.2 m) beyond the centerline of the burners at any time during the test.
1. Kiln dry lumber and plywood after treatment to a maximum moisture content of 19 and 15 percent, respectively.
 2. For items indicated to receive a stained or natural finish, use organic resin chemical formulation.
 3. Mill lumber after treatment within limits set for wood removal that do not affect listed fire-test-response characteristics, using a woodworking shop certified by testing and inspecting agency.
 4. Mill lumber before treatment and implement special procedures during treatment and drying processes that prevent lumber from warping and developing discolorations from drying sticks or other causes, marring, and other defects affecting appearance of treated woodwork.
- C. Fire-Retardant Particleboard: Panels complying with the following requirements, made from softwood particles and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 25 or less per ASTM E 84.
1. For panels **3/4 inch** (19 mm) thick and less, comply with ANSI A208.1 for Grade

- M-2 except for the following minimum properties: modulus of rupture, **1600 psi** (11 MPa); modulus of elasticity, **300,000 psi** (2070 MPa); internal bond, **80 psi** (550 kPa); and screw-holding capacity on face and edge, **250 and 225 lbf** (1100 and 1000 N), respectively.
2. For panels **13/16 to 1-1/4 inches** (20 to 32 mm) thick, comply with ANSI A208.1 for Grade M-1 except for the following minimum properties: modulus of rupture, **1300 psi** (9 MPa); modulus of elasticity, **250,000 psi** (1720 MPa); linear expansion, 0.50 percent; and screw-holding capacity on face and edge, **250 and 175 lbf** (1100 and 780 N), respectively.
 3. Products: Subject to compliance with requirements, provide one of the following:
 - a. Flakeboard Company Limited; Duraflake FR.
 - b. SierraPine; Encore FR.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.
- D. Fire-Retardant Fiberboard: Medium-density fiberboard panels complying with ANSI A208.2, made from softwood fibers, synthetic resins, and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 200 or less per ASTM E 84.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Panel Source International, Inc.; Pyroblock Platinum.
 - b. SierraPine; Medite FR.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.

2.8 CABINET HARDWARE AND ACCESSORIES

- A. General: Provide cabinet hardware and accessory materials associated with architectural cabinets except for items specified in Section 087111 "Door Hardware (Descriptive Specification)."
- B. Butt Hinges: **2-3/4-inch** (70-mm), five-knuckle steel hinges made from **0.095-inch-** (2.4-mm-) thick metal, and as follows:
 1. Semiconcealed Hinges for Flush Doors: BHMA A156.9, B01361.
 2. Semiconcealed Hinges for Overlay Doors: BHMA A156.9, B01521.
- C. Frameless Concealed Hinges (European Type): BHMA A156.9, B01602, **[100] [135] [170]** degrees of opening[, **self-closing**].
- D. Back-Mounted Pulls: BHMA A156.9, B02011.
- E. Wire Pulls: Back mounted, solid **[metal] [plastic]**, **[4 inches** (100 mm) **long, 5/16 inch** (8 mm) **in diameter]** **[5 inches** (127 mm) **long, 2-1/2 inches** (63.5 mm) **deep, and 5/16 inch** (8 mm) **in diameter]**.

- F. Catches: [**Magnetic catches, BHMA A156.9, B03141**] [**Push-in magnetic catches, BHMA A156.9, B03131**] [**Roller catches, BHMA A156.9, B03071**] [**Ball friction catches, BHMA A156.9, B03013**].
- G. Adjustable Shelf Standards and Supports: [**BHMA A156.9, B04071; with shelf rests, B04081**] [**BHMA A156.9, B04102; with shelf brackets, B04112**].
- H. Shelf Rests: BHMA A156.9, B04013; [**metal**] [**plastic**] [**metal, two-pin type with shelf hold-down clip**].
- I. Drawer Slides: BHMA A156.9.
- Grade 1 and Grade 2: Side mounted[**and extending under bottom edge of drawer**]; [**full-extension**] [**partial-extension**] type; [**zinc-plated steel**] [**epoxy-coated steel**] with polymer rollers.
 - Grade 1HD-100 and Grade 1HD-200: Side mounted; [**full-extension**] [**full-overtravel-extension**] type; zinc-plated-steel ball-bearing slides.
 - For drawers not more than **3 inches** (75 mm) high and not more than **24 inches** (600 mm) wide, provide [**Grade 2**] [**Grade 1**].
 - For drawers more than **3 inches** (75 mm) high but not more than **6 inches** (150 mm) high and not more than **24 inches** (600 mm) wide, provide [**Grade 1**] [**Grade 1HD-100**].
 - For drawers more than **6 inches** (150 mm) high or more than **24 inches** (600 mm) wide, provide [**Grade 1HD-100**] [**Grade 1HD-200**].
 - For computer keyboard shelves, provide [**Grade 1**] [**Grade 1HD-100**].
 - For trash bins not more than **20 inches** (500 mm) high and **16 inches** (400 mm) wide, provide [**Grade 1HD-100**] [**Grade 1HD-200**].
- J. [**Plastic**] [**Aluminum**] Slides for Sliding Glass Doors: BHMA A156.9, B07063.
- K. Door Locks: BHMA A156.11, E07121.
- L. Drawer Locks: BHMA A156.11, E07041.
- M. Door and Drawer Silencers: BHMA A156.16, L03011.
- N. Float Glass for Cabinet Doors: ASTM C 1036, Type I, [**Class 1 (clear)**] [**Class 2 or 3 (tinted)**], Quality-Q3, [**3.0 mm**] [**4.0 mm**] [**5.0 mm**] [**6.0 mm**] thick.
- Tint Color: [**Blue-green**] [**Bronze**] [**Green**] [**Gray**] <Insert color>.
- O. Tempered Float Glass for Cabinet Doors: ASTM C 1048, Kind FT, Condition A, Type I, [**Class 1 (clear)**] [**Class 2 or 3 (tinted)**], Quality-Q3[, **with exposed edges seamed before tempering**], 6 mm thick unless otherwise indicated.
- Tint Color: [**Blue-green**] [**Bronze**] [**Green**] [**Gray**] <Insert color>.
- P. Mirror Glass for Cabinet Doors: ASTM C 1503, Mirror [**Select**] [**Glazing**], Quality-Q3, [**3.0 mm**] [**4.0 mm**] [**5.0 mm**] [**6.0 mm**] thick.

- Q. Decorative Glass for Cabinet Doors: Provide decorative glass complying with Section 088113 "Decorative Glass Glazing."
- R. Tempered Float Glass for Cabinet Shelves: ASTM C 1048, Kind FT, Condition A, Type I, **[Class 1 (clear)] [Class 2 or 3 (tinted)]**, Quality-Q3; with exposed edges seamed before tempering, 6 mm thick.
1. Tint Color: **[Blue-green] [Bronze] [Green] [Gray] <Insert color>**.
- S. Exposed Hardware Finishes: For exposed hardware, provide finish that complies with BHMA A156.18 for BHMA finish number indicated.
1. Dark, Oxidized, Satin Bronze, Oil Rubbed: BHMA 613 for bronze base; BHMA 640 for steel base; match DEN Project Manager's sample.
 2. Bright Brass, Clear Coated: BHMA 605 for brass base; BHMA 632 for steel base.
 3. Bright Brass, Vacuum Coated: BHMA 723 for brass base; BHMA 729 for zinc-coated-steel base.
 4. Satin Brass, Blackened, Bright Relieved, Clear Coated: BHMA 610 for brass base; BHMA 636 for steel base.
 5. Satin Chromium Plated: BHMA 626 for brass or bronze base; BHMA 652 for steel base.
 6. Bright Chromium Plated: BHMA 625 for brass or bronze base; BHMA 651 for steel base.
 7. Satin Stainless Steel: BHMA 630.
- T. For concealed hardware, provide manufacturer's standard finish that complies with product class requirements in BHMA A156.9.

2.9 MISCELLANEOUS MATERIALS

- A. Furring, Blocking, Shims, and Hanging Strips: **[Softwood or hardwood lumber] [Fire-retardant-treated softwood lumber]**, kiln dried to less than 15 percent moisture content.
- B. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide metal expansion sleeves or expansion bolts for post-installed anchors. Use nonferrous-metal or hot-dip galvanized anchors and inserts at inside face of exterior walls and at floors.
- C. Adhesives: Do not use adhesives that contain urea formaldehyde.
- D. Adhesives: Use adhesives that meet the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- E. Adhesive for Bonding Plastic Laminate: **[Unpigmented contact cement] [Contact cement] [PVA] [Urea formaldehyde] [Resorcinol]**.
1. Adhesive for Bonding Edges: Hot-melt adhesive[**or adhesive specified above**

for faces].

2.10 FABRICATION

- A. Sand fire-retardant-treated wood lightly to remove raised grain on exposed surfaces before fabrication.
- B. Fabricate cabinets to dimensions, profiles, and details indicated.
- C. Complete fabrication, including assembly and hardware application, to maximum extent possible before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
 - 1. Notify DEN Project Manager seven (7) days in advance of the dates and times woodwork fabrication will be complete.
 - 2. Trial fit assemblies at fabrication shop that cannot be shipped completely assembled. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting. Verify that various parts fit as intended and check measurements of assemblies against field measurements before disassembling for shipment.
- D. Shop-cut openings to maximum extent possible to receive hardware, appliances, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.
- E. Install glass to comply with applicable requirements in Section 088000 "Glazing" and in GANA's "Glazing Manual." For glass in wood frames, secure glass with removable stops.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Before installation, condition cabinets to average prevailing humidity conditions in installation areas.
- B. Before installing cabinets, examine shop-fabricated work for completion and complete work as required.

3.2 INSTALLATION

- A. Grade: Install cabinets to comply with same grade as item to be installed.
- B. Assemble cabinets and complete fabrication at Project site to the extent that it was not completed in the shop.

- C. Treated Wood: Handle, store, and install pressure treated wood in compliance with recommendations of chemical treatment manufacturer including those for adhesives, where required for installation.
- D. Install cabinets level, plumb, true, and straight. Shim as required with concealed shims. Install level and plumb to a tolerance of **1/8 inch in 96 inches** (3 mm in 2400 mm).
- E. Scribe and cut cabinets to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.
- F. Anchor cabinets to anchors or blocking built in or directly attached to substrates. Secure with countersunk, concealed fasteners and blind nailing. Except where prefinished matching fasteners heads are required, use fine finishing nails[**or finishing screws**] for exposed fastening, countersunk and filled flush with woodwork.
1. Use filler matching finish of items being installed.
- G. Cabinets: Install without distortion so doors and drawers fit openings properly and are accurately aligned. Adjust hardware to center doors and drawers in openings and to provide unencumbered operation. Complete installation of hardware and accessory items as indicated.
1. Install cabinets with no more than **1/8 inch in 96-inch** (3 mm in 2400-mm) sag, bow, or other variation from a straight line.
 2. Fasten wall cabinets through back, near top and bottom, and at ends not more than **16 inches** (400 mm) o.c. with [**No. 10 wafer-head screws sized for not less than 1-1/2-inch** (38-mm) **penetration into wood framing, blocking, or hanging strips**] [**No. 10 wafer-head sheet metal screws through metal backing or metal framing behind wall finish**] [**toggle bolts through metal backing or metal framing behind wall finish**].
- H. Tops: Anchor securely to base units and other support systems as indicated.
- I. Paneling: Anchor paneling to supporting substrate with concealed panel hanger clips.
- J. Polymer alloy cladding: Comply with all manufacturer's recommendations for installation. All edges to be eased unless otherwise noted on drawings. Provide materials of thickness and profile shown. Provide blocking and bracing and ancillary support. Fabricate baby changing counter with an integral coved backsplash at factory. Tightly seam any joints. Factory fabricate to greatest extent possible. Joints shall be inconspicuous and flush. Provide factory cutouts for in-alloy devices. Reject defective work. Cut and finish edges with clean sharp returns.
- K. Installing Stainless Steel Items:
1. Coordinate work with work by other trades.
 2. Comply with the intent of details.
 3. External corners: Ease 1/32" unless otherwise noted.
 4. Anchor all items securely. Adhere stainless steel to plywood where indicated per Manufacturer's recommendations.

3.3 ADJUSTING AND CLEANING

- A. Repair damaged and defective cabinets, where possible, to eliminate functional and visual defects; where not possible to repair, replace woodwork. Adjust joinery for uniform appearance.
- B. Clean, lubricate, and adjust hardware.
- C. Clean cabinets on exposed and semiexposed surfaces.

3.4 [HARDWARE SCHEDULE]

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 064116

SECTION 064213 - STILE AND RAIL WOOD PANELING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Stile and rail wood paneling (stile and rail wall surfacing).
2. Wood furring, blocking, shims, and hanging strips for installing stile and rail wood paneling unless concealed within other construction before paneling installation.
3. Shop finishing of stile and rail wood paneling.

- B. Related Requirements:

1. Section 061000 "Rough Carpentry" for wood furring, blocking, shims, and hanging strips required for installing paneling and that are concealed within other construction before paneling installation.
2. Section 064600 "Wood Trim" for wood trim installed on or next to stile and rail wood paneling.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 ALLOWANCES

- A. Veneer for paneling is part of veneer allowance. Allowance includes the cost of veneer that is wasted due to selection, cutting, and trimming.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]<Insert location>**.

1.5 ACTION SUBMITTALS

- A. Product Data: Product Data: For each type of product[, **including] [panel products] [adhesives] [fire-retardant-treated materials] [and] [finishing materials and**

processes].

1. Include data for fire-retardant treatment from chemical-treatment manufacturer and certification by treating plant that treated materials comply with requirements.
2. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating distance to Project, cost for each regional material, and fraction by weight that is considered regional.
3. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regionally manufactured[**and regionally extracted and manufactured**] materials. Include statement indicating cost for each regionally manufactured material.
 - a. Include statement indicating location of manufacturer and distance to Project for each regionally manufactured material.
 - b. Include statement indicating location of manufacturer and point of extraction, harvest, or recovery for each raw material used in regionally extracted and manufactured materials. Indicate distance to Project and fraction by weight of each regionally manufactured material that is regionally extracted.
4. Certificates for [**Credit MR 6**] [**Credit MR 7**]: Chain-of-custody certificates indicating that paneling complies with forest certification and chain-of-custody requirements. Include statement indicating cost for each certified wood product.
5. Product Data for Credit IEQ 4.1: For installation adhesives, documentation including printed statement of VOC content.
6. Laboratory Test Reports for Credit IEQ 4.1: For adhesives, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
7. Product Data for Credit IEQ 4.4: For composite wood products and fabrication adhesives, documentation indicating that products contain no urea formaldehyde.
8. Laboratory Test Reports for Credit IEQ 4.4: For composite wood products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

C. Shop Drawings: Show location of paneling, large-scale details, attachment devices, and other components. Include dimensioned plans and elevations.

1. Show details full size.
2. Show locations and sizes of furring and blocking, including concealed blocking specified in other Sections.
3. For paneling produced from premanufactured sets, show finished panel sizes, set numbers, sequence numbers within sets, and method of cutting panels to produce indicated sizes.
4. For paneling veneered in fabrication shop, show veneer leaves with dimensions, grain direction, exposed face, and identification numbers indicating the flitch and sequence within the flitch for each leaf.
- 5.

D. Samples for Initial Selection:

1. Shop-applied transparent finishes.
2. Shop-applied opaque finishes.

E. Samples for Verification:

1. Lumber for transparent finish, not less than [5 inches (125 mm) wide by 12 inches (300 mm) long] [5 inches (125 mm) wide by 24 inches (600 mm) long], for each species and cut, finished on one side and one edge.
2. Veneer leaves representative of and selected from flitches to be used for transparent-finished paneling.
3. Veneer-faced panel products for transparent finish, [8 by 10 inches (200 by 250 mm)] [12 by 12 inches (300 by 300 mm)] [12 by 24 inches (300 by 600 mm)], for each species and cut. Include at least one face-veneer seam and finish as specified.
4. Lumber and panel products with shop-applied opaque finish, 5 inches (125 mm) wide by 12 inches (300 mm) long for lumber and [8 by 10 inches (200 by 250 mm)] [12 by 12 inches (300 by 300 mm)] for panels, for each finish system and color, with [one-half of] exposed surface finished.
5. Corner pieces for stile and rail paneling, 18 inches (450 mm) high by 18 inches (450 mm) wide by 6 inches (150 mm) deep.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For [Installer] [Fabricator].
- B. Quality Certification: Submit woodwork Manufacturer's (Fabricator's) certification, stating that fabricated woodwork complies with quality grades and other requirements indicated.
- C. Product Certificates: For each type of product.
- D. Wall panel certificate: Submit certificate that wall panel backing adhesive and laminate comply with reference fire-resistance requirements.
- E. Woodwork Quality Standard Compliance Certificates: AWI Quality Certification Program certificates. .

- F. Certificate from the fabricator providing proof of not less than five (5) years experience in the fabrication of the types of products specified.
- G. Certificate from the installer providing proof of not less than five (5) years of successful experience in the installation of similar types of products and shall have completed at least 3 jobs of similar size and scope.
- H. Maintenance Data: Submit manufacturer's care and maintenance data, including care and cleaning instructions.
- I. Evaluation Reports: For **[fire-retardant-treated materials]** **[and]** **[fire-retardant-treated paneling]**, from ICC-ES.
- J. Provide warranty for two (2) years from date of final acceptance materials, fabrication, and installation of all items.

1.7 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 QUALITY ASSURANCE

- A. Fabricator Qualifications: Shop that employs skilled workers who custom-fabricate products similar to those required for this Project and whose products have a record of successful in-service performance. Shop is a certified participant in AWI's Quality Certification Program.
- B. Installer Qualifications: **[Fabricator of products]** **[Certified participant in AWI's Quality Certification Program]** .
- C. Testing Agency Qualifications: For testing agency providing classification marking for fire-retardant-treated material, an inspection agency acceptable to authorities having jurisdiction that periodically performs inspections to verify that the material bearing the classification marking is representative of the material tested.
- D. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Build mockups of **[typical paneling as shown on Drawings]** **<Insert description>**.
 - 2. Mock-up a minimum 200 sq. ft. of stile and rail wood panel. Demonstrate panel removal to the DEN Project Manager.
 - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Protect woodwork during transit, delivery, storage, and handling to prevent damage, soiling, and deterioration.
- B. Do not deliver paneling until painting and similar operations that could damage paneling have been completed in installation areas. If paneling must be stored in other than installation areas, store only in areas where environmental conditions comply with requirements specified in "Field Conditions" Article.

1.10 FIELD CONDITIONS

- A. Conditioning: Woodwork Manufacturer and Installer shall advise Contractor of temperature and humidity requirements for woodwork installation and storage areas. Do not install woodwork until required temperature and relative humidity have been stabilized and will be maintained in installation areas.
- B. Maintain temperature and humidity in installation area as required to maintain moisture content of installed woodwork within a 1.0 percent tolerance of optimum moisture content, from date of installation through remainder of construction period. Require Woodwork Manufacturer to establish optimum moisture content and required temperature and humidity conditions.
- C. Environmental Limitations: Do not deliver or install paneling until building is enclosed, wet work is complete, and HVAC system is operating and will maintain temperature and relative humidity at occupancy levels during the remainder of the construction period.
- D. Environmental Limitations: Do not deliver or install paneling until building is enclosed, wet work is complete, and HVAC system is operating and will maintain temperature between **60 and 90 deg F** (16 and 32 deg C) and relative humidity between **[25 and 55] [17 and 50] <Insert humidity range>** percent during the remainder of the construction period.
- E. Field Measurements: Where paneling is indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
 - 1. Locate concealed framing, blocking, and reinforcements that support paneling by field measurements before being enclosed and indicate measurements on Shop Drawings.
- F. Established Dimensions: Where paneling is indicated to fit to other construction, establish dimensions for areas where woodwork is to fit. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

1.11 COORDINATION

- A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to ensure that paneling can be installed as indicated.

1.12 WARRANTY

- A. Warranty: Fabricator/installer to warrant for minimum two (2) **<Insert number>** years from date of final acceptance materials, fabrication, and installation of all items.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 FABRICATION, GENERAL

- A. Wood Moisture Content: Comply with requirements of referenced quality standard for moisture content of lumber at time of fabrication and for relative humidity conditions in the installation areas.
- B. Fabricate woodwork to dimensions, profiles, and details indicated with openings and mortises precut, where possible, to receive hardware and other items and work.
- C. Complete fabrication, assembly, finishing, hardware application, and other work before shipment to project site to maximum extent possible. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
- D. Pre Cut Openings: Fabricate architectural woodwork with precut openings, where possible, to receive hardware, appliances, plumbing fixtures, electrical work and similar items. Locate openings accurately and use templates or roughing in diagrams for proper size and shape. Smooth edges of cutoffs and, where located in countertops and similar exposures seal edges of cutouts with a water resistant coating.
- E. Measurements: Before proceeding with fabrication of woodwork required to be fitted to other construction, obtain field measurements and verify dimensions and shop drawing details as required for accurate fit.

2.2 PANELING FABRICATORS

- A. Source Limitations: Engage a qualified woodworking firm to assume undivided

responsibility for production of paneling **[and] [wood-veneer-faced architectural cabinets] [ornamental woodwork] [wood trim] [wood frames] [and] [wood doors faced with veneers from same flitches as paneling]**.

- B. Fabricators: Subject to compliance with requirements, provide products by one of the following:
1. **<Insert, in separate subparagraphs, names and possibly contact information for preapproved woodworking firms>**.
 2. or approved equal.

2.3 PANELING, GENERAL

- A. Quality Standard: Unless otherwise indicated, comply with the "Architectural Woodwork Standards" for grades of stile and rail wood paneling (stile and rail wall surfacing) indicated for construction, finishes, installation, and other requirements.
1. Provide **[labels] [and] [certificates]** from AWI certification program indicating that paneling[, **including installation,**] complies with requirements of grades specified.
 2. The Contract Documents contain selections chosen from options in the quality standard and additional requirements beyond those of the quality standard. Comply with those selections and requirements in addition to the quality standard.
- B. Regional Materials: Paneling shall be manufactured within **500 miles** (800 km) of Project site.
1. Composite wood materials used for paneling shall be manufactured within **500 miles** (800 km) of Project site from materials that have been extracted, harvested, or recovered within **500 miles** (800 km) of Project site.
 2. Veneers used for paneling shall be manufactured within **500 miles** (800 km) of Project site from materials that have been extracted, harvested, or recovered within **500 miles** (800 km) of Project site.
 3. Lumber used for paneling shall be manufactured within **500 miles** (800 km) of Project site from materials that have been extracted, harvested, or recovered within **500 miles** (800 km) of Project site.

2.4 STILE AND RAIL WOOD PANELING FOR TRANSPARENT FINISH

- A. Grade: Premium.
- B. Certified Wood: Wood and composite wood components of stile and rail paneling for transparent finish shall be certified as "FSC Pure"[**or "FSC Mixed Credit"**] according to FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship," and FSC STD-40-004, "FSC Standard for Chain of Custody Certification."

- C. Wood Species: [**White oak, rift sawn/sliced**] [**Figured English ash, quarter sawn/sliced**] [**Butternut, plain sawn/sliced**] [**Figured red gum, plain-sawn/sliced panels, quarter-sawn/sliced stiles and rails**] <Insert species and cut>.
- D. Stiles and Rails: At fabricator's option, stiles and rails may be either lumber or veneered construction with edges banded or with lumber moldings, as indicated, to conceal core and veneer joints.
- E. Panels: [**Flat panels**] [**Raised panels with veneered faces and solid-lumber rims**] [**Raised panels with veneered faces extending across rims**] [**Raised panels made from edge-glued solid lumber**].
- F. Insert Panels: Blueprint matched in a horizontal sequence for adjacent panels and doors, with continuous vertical matching between adjacent panels. [**Book and balance**] [**Book, balance, and center**] match face-veneer leaves within each panel.
1. Refer to Section 012100 "Allowances" for allowances covering purchase of wood face veneers for stile and rail paneling.
 2. Refer to Section 011000 "Summary" for requirements concerning fitches reserved by DEN Project Manager.
- G. Insert Panels: Cut panels from premanufactured, sequence-matched sets of book-matched veneered panels. Cut panels with an [**even**] [**even or odd**] number of veneer leaves centered in each panel[**and with each of the remainders at least half as wide as the full veneer leaves**]. Cut panels with continuous matching between vertically adjacent panels; veneer leaves of upper panels are continuations of veneer leaves of panels below them.
- H. Insert Panels: Book and balance match face veneers within panels. No matching is required between adjacent panels; select and arrange panels for similarity of grain pattern and color between adjacent panels.
- I. Shop assemble stile and rail paneling into largest units practical for delivery and installation. Provide shop-prepared detachable joints for necessary field connections. Sand and pull joints tight in shop so field joints will comply with joint tolerances for specified grade. Unless otherwise indicated, provide continuous mortise-and-tenon joints between panel units and provide removable temporary protection for joints during handling and delivery.
1. Outside Corner of Stile and Rail Paneling: Shop prepare using lock-mitered[**or mitered-and-splined**] construction. Assemble, sand, and glue in shop if site conditions permit.
- 2.5 STILE AND RAIL WOOD PANELING FOR OPAQUE FINISH
- A. Grade: Premium.
- B. Certified Wood: Wood and composite wood components of stile and rail paneling for opaque finish shall be certified as "FSC Pure"[**or "FSC Mixed Credit"**] according to

FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship," and FSC STD-40-004, "FSC Standard for Chain of Custody Certification."

- C. Wood Species: **[Any closed-grain hardwood] [Eastern white pine, ponderosa pine, sugar pine, or western white pine] <Insert species>**.
- D. Stiles and Rails: Either solid lumber or particleboard, shop filled on face, with veneered or lumber-banded edges, at paneling fabricator's option.
- E. Flat Insert Panels: Medium-density fiberboard or particleboard with shop-filled face.
- F. Raised Insert Panels: **[Medium-density overlaid softwood plywood (exterior), machined to profile indicated and shop filled on exposed machined surfaces] [Medium-density fiberboard, machined to profile indicated]**.
- G. Provide fire-retardant treatment of stile and rail paneling as indicated below. For components of paneling fabricated from solid lumber, mill pieces before treatment.
 - 1. Stiles and Rails: **[Fire-retardant-treated lumber] [fire-retardant medium-density fiberboard] [or] [fire-retardant particleboard with fire-retardant lumber edge bands]**.
 - 2. Insert Panels: **[Fire-retardant medium-density fiberboard] [or] [fire-retardant particleboard with closed-grain hardwood veneer on face and back]**.
- H. Shop assemble stile and rail paneling into largest units practical for delivery and installation. Provide shop-prepared detachable joints for necessary field connections. Sand and pull joints tight in shop so field joints will comply with joint tolerances for specified grade. Unless otherwise indicated, provide continuous mortise-and-tenon joints between panel units and provide removable temporary protection for joints during handling and delivery.
 - 1. Outside Corner of Stile and Rail Paneling: Shop prepare using lock-mitered[**or mitered-and-splined**] construction. Assemble, sand, and glue in shop if site conditions permit.

2.6 MATERIALS

- A. Materials, General: Provide materials that comply with requirements of referenced quality standard for each quality grade specified unless otherwise indicated.
- B. Wood Moisture Content: **[5 to 10] [4 to 9]** percent.
- C. Composite Wood and Agrifiber Products: Provide materials that comply with requirements of referenced quality standard for each quality grade specified unless otherwise indicated.
 - 1. Recycled Content of Medium-Density Fiberboard and Particleboard: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert number>** percent.

2. Composite Wood and Agrifiber Products: Products shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
3. Medium-Density Fiberboard: ANSI A208.2, [**Grade 130**] <Insert grade>[, **made with binder containing no urea formaldehyde**].
4. Particleboard: ANSI A208.1, [**Grade M-2**] [**Grade M-2, made with binder containing no urea formaldehyde**] [**Grade M-2-Exterior Glue**].
5. Particleboard: Straw-based particleboard complying with requirements in ANSI A208.1, Grade M-2, except for density.
 - a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) Environ Biocomposites Manufacturing LLC; Biofiber Wheat.
 - 2) Sorm Incorporated; Primeboard Premium Wheat.
 - 3) <Insert manufacturer's name; product name or designation>.
 - 4) or approved equal.
6. Veneer-Faced Panel Products (Hardwood Plywood): HPVA HP-1[, **made with adhesive containing no urea formaldehyde**].

D. Adhesives: Do not use adhesives that contain urea formaldehyde.

E. Adhesives: Use adhesives that comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.7 FIRE-RETARDANT-TREATED MATERIALS

A. Fire-Retardant-Treated Materials, General: Where fire-retardant-treated materials are indicated, use materials complying with requirements in this article, that are acceptable to authorities having jurisdiction, and with fire-test-response characteristics specified as determined by testing identical products per test method indicated by a qualified testing agency.

1. Use treated materials that comply with requirements of referenced woodworking standard. Do not use materials that are warped, discolored, or otherwise defective.
2. Use fire-retardant-treatment formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.
3. Identify fire-retardant-treated materials with appropriate classification marking of qualified testing agency in the form of removable paper label or imprint on surfaces that will be concealed from view after installation.

B. Fire-Retardant-Treated Lumber and Plywood: Products with a flame-spread index of 25 or less when tested according to ASTM E 84, with no evidence of significant

progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than **10.5 feet** (3.2 m) beyond the centerline of the burners at any time during the test.

1. Kiln dry lumber and plywood after treatment to a maximum moisture content of 19 and 15 percent, respectively.
2. For items indicated to receive a stained or natural finish, use organic resin chemical formulation.
3. Mill lumber after treatment within limits set for wood removal that do not affect listed fire-test-response characteristics, using a woodworking shop certified by testing and inspecting agency.
4. Mill lumber before treatment and implement special procedures during treatment and drying processes that prevent lumber from warping and developing discolorations from drying sticks or other causes, marring, and other defects affecting appearance of treated woodwork.

C. Fire-Retardant Particleboard: Panels complying with the following requirements, made from softwood particles and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 25 or less per ASTM E 84.

1. For panels **3/4 inch** (19 mm) thick and less, comply with ANSI A208.1 for Grade M-2 except for the following minimum properties: modulus of rupture, **1600 psi** (11 MPa); modulus of elasticity, **300,000 psi** (2070 MPa); internal bond, **80 psi** (550 kPa); and screw-holding capacity on face and edge, **250 and 225 lbf** (1100 and 1000 N), respectively.
2. For panels **13/16 to 1-1/4 inches** (20 to 32 mm) thick, comply with ANSI A208.1 for Grade M-1 except for the following minimum properties: modulus of rupture, **1300 psi** (9 MPa); modulus of elasticity, **250,000 psi** (1720 MPa); linear expansion, 0.50 percent; and screw-holding capacity on face and edge, **250 and 175 lbf** (1100 and 780 N), respectively.
3. Products: Subject to compliance with requirements, provide one of the following:
 - a. Flakeboard Company Limited; Duraf Flake FR.
 - b. SierraPine; Encore FR.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.

D. Fire-Retardant Fiberboard: Medium-density fiberboard panels complying with ANSI A208.2, made from softwood fibers, synthetic resins, and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 200 or less per ASTM E 84.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Panel Source International, Inc., McKillican America, Inc.; Pyroblock Platinum.
 - b. SierraPine; Medite FR.
 - c. or approved equal.

2.8 INSTALLATION MATERIALS

- A. Furring, Blocking, Shims, and Hanging Strips: [**Softwood or hardwood lumber**] [**Fire-retardant-treated softwood lumber**], kiln dried to less than 15 percent moisture content.
- B. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide metal expansion sleeves or expansion bolts for post-installed anchors. Use nonferrous-metal or hot-dip galvanized anchors and inserts at inside face of exterior walls.
- C. VOC Limits for Installation Adhesives: Use products that comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
 - 1. Wood Glues: 30 g/L.
 - 2. Multipurpose Construction Adhesives: 70 g/L.
 - 3. Contact Adhesive: 80 g/L.
 - 4. Special-Purpose Contact Adhesive (contact adhesive that is used to bond melamine-covered board, metal, unsupported vinyl, rubber, or wood veneer **1/16 inch** (1.6 mm) or less in thickness to any surface): 250 g/L.

2.9 FABRICATION

- A. Sand fire-retardant-treated wood lightly to remove raised grain on exposed surfaces before fabrication.
- B. Arrange paneling in shop or other suitable space in proposed sequence for examination by DEN Project Manager. Mark units with temporary sequence numbers to indicate position in proposed layout.
 - 1. Lay out one elevation at a time if approved by DEN Project Manager..
 - 2. Notify DEN Project Manager seven days in advance of the date and time when layout will be available for viewing.
 - 3. Provide lighting of similar type and level as that of final installation for viewing layout unless otherwise approved by DEN Project Manager.
 - 4. Rearrange paneling as directed by DEN Project Manager until layout is approved.
 - 5. Do not trim end units and other nonmodular-size units to less than modular size until after DEN Project Manager's approval of layout.[**Indicate trimming by masking edges of units with nonmarking material.**]
 - 6. Obtain DEN Project Manager's approval of layout before start of assembly. Mark units and Shop Drawings with assembly sequence numbers based on approved layout.
- C. Complete fabrication, including assembly[**and finishing**], to maximum extent possible, before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.

1. Notify DEN Project Manager seven (7) days in advance of the dates and times paneling fabrication will be complete.
 2. Trial fit assemblies at fabrication shop that cannot be shipped completely assembled. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting. Verify that various parts fit as intended and check measurements of assemblies against field measurements indicated on approved Shop Drawings before disassembling for shipment.
- D. Shop cut openings, to maximum extent possible, to receive hardware, appliances, plumbing fixtures, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.

2.10 SHOP FINISHING

- A. General: Finish paneling at fabrication shop as specified in this Section. Defer only final touchup, cleaning, and polishing until after installation.
- B. General: Shop finish transparent-finished paneling at fabrication shop as specified in this Section. Refer to Section 099123 "Interior Painting" for field finishing of opaque-finished paneling.
- C. General: Drawings indicate paneling that is required to be shop finished. Finish such paneling at fabrication shop as specified in this Section. Refer to **[Section 099123 "Interior Painting"] [and] [Section 099300 "Staining and Transparent Finishing"]** for field finishing paneling not indicated to be shop finished.
- D. Shop Priming: Shop apply the prime coat including backpriming, if any, for **transparent-finished** paneling specified to be field finished. Refer to **[Section 099123 "Interior Painting"] [and] [Section 099300 "Staining and Transparent Finishing"]** for material and application requirements.
- E. Preparation for Finishing: Comply with referenced quality standard for sanding, filling countersunk fasteners, sealing concealed surfaces, and similar preparations for finishing paneling, as applicable to each unit of work.
1. Backpriming: Apply two coats of sealer or primer, compatible with finish coats, to concealed surfaces of paneling.
- F. Transparent Finish:
1. Grade: **[Premium] [Custom] [Same as item to be finished]**.
 2. Finish: System - 1, nitrocellulose lacquer.
 3. Finish: System - 2, precatalyzed lacquer.
 4. Finish: System - 3, postcatalyzed lacquer.
 5. Finish: System - 4, water-based latex acrylic.
 6. Finish: System - 5, conversion varnish.
 7. Finish: System - 6, synthetic penetrating oil.
 8. Finish: System - 7, catalyzed vinyl.

9. Finish: System - 8, water-based cross-linking acrylic.
10. Finish: System - 9, UV-curable acrylated epoxy, polyester, or urethane.
11. Finish: System - 10, water-based UV curable.
12. Finish: System - 11, catalyzed polyurethane.
13. Finish: System - 12, water-based polyurethane.
14. Wash Coat for Closed-Grain Woods: Apply wash-coat sealer to woodwork made from closed-grain wood before staining and finishing.
15. Staining: [**None required**] [**Match approved sample for color**] [**Match DEN Project Manager's sample**].
16. Open Finish for Open-Grain Woods: Do not apply filler to open-grain woods.
17. Filled Finish for Open-Grain Woods:[**After staining, apply wash-coat sealer and allow to dry.**] Apply paste wood filler and wipe off excess. Tint filler to match stained wood.
18. Sheen: [**Flat, 15-30**] [**Satin, 31-45**] [**Semigloss, 46-60**] [**Gloss, 61-100**] gloss units measured on 60-degree gloss meter per ASTM D 523.

G. Opaque Finish:

1. Grade: [**Premium**] [**Custom**] [**Same as item to be finished**].
2. Finish: System - 1, nitrocellulose lacquer.
3. Finish: System - 2, precatalyzed lacquer.
4. Finish: System - 3, postcatalyzed lacquer.
5. Finish: System - 4, water-based latex acrylic.
6. Finish: System - 5, conversion varnish.
7. Finish: System - 7, catalyzed vinyl.
8. Finish: System - 8, water-based cross-linking acrylic.
9. Finish: System - 9, UV-curable acrylated epoxy, polyester, or urethane.
10. Finish: System - 10, water-based UV curable.
11. Finish: System - 11, catalyzed polyurethane.
12. Finish: System - 12, water-based polyurethane.
13. Finish: System - 13, catalyzed polyester.
14. Colors: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**].
15. Sheen: [**Flat, 15-30**] [**Satin, 31-45**] [**Semigloss, 46-60**] [**Gloss, 61-100**] gloss units measured on 60-degree gloss meter per ASTM D 523.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Before installation, condition paneling to average prevailing humidity conditions in installation areas.
- B. Before installing paneling, examine shop-fabricated work for completion and complete work as required, including removal of packing and backpriming.

3.2 INSTALLATION

- A. Grade: Install paneling to comply with same grade as paneling to be installed.
- B. Treated Wood: Handle, store, and install pressure treated wood in compliance with recommendations of chemical treatment manufacturer including those for adhesives, where required for installation.
- C. Install paneling level, plumb, true, and straight with no distortions. Shim as required with concealed shims. Install level and plumb to a tolerance of **1/8 inch in 96 inches** (3 mm in 2400 mm). Install with no more than **1/16 inch in 96-inch** (1.6 mm in 2400-mm) vertical cup or bow and **1/8 inch in 96-inch** (3 mm in 2400-mm) horizontal variation from a true plane.
- D. Scribe and cut paneling to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.
- E. Anchor paneling to supporting substrate with concealed panel-hanger clips. Do not use face fastening unless [**covered by trim**] [**otherwise indicated**].
- F. Complete finishing work specified in this Section to extent not completed at shop or before installation of paneling. Fill nail holes with matching filler where exposed.
 - 1. Apply specified finish coats, including stains and paste fillers if any, to exposed surfaces where only sealer/prime coats are applied in shop.
- G. Refer to [**Section 099123 "Interior Painting"**] [**and**] [**Section 099300 "Staining and Transparent Finishing"**] for final finishing of installed paneling.

3.3 ADJUSTING AND CLEANING

- A. Repair damaged and defective paneling, where possible, to eliminate defects; where not possible to repair, replace paneling. Adjust for uniform appearance.
- B. Clean paneling on exposed surfaces. Touch up shop-applied finishes to restore damaged or soiled areas.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 064213

SECTION 064216 - FLUSH WOOD PANELING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Flush wood paneling (wood-veneer wall surfacing).
2. Wood furring, blocking, shims, and hanging strips for installing flush wood paneling unless concealed within other construction before paneling installation.
3. Shop finishing of flush wood paneling.

- B. Related Requirements:

1. Section 057000 "Decorative Metal" for metal reveals at wood paneling.
2. Section 061000 "Rough Carpentry" for wood furring, blocking, shims, and hanging strips required for installing paneling and that are concealed within other construction before paneling installation.
3. Section 064213 "Stile and Rail Wood Paneling" for raised wood paneling.
4. Section 099300 "Staining and Transparent Finishing" for final finishing of installed paneling.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 ALLOWANCES

- A. Veneer for paneling is part of veneer allowance. Allowance includes the cost of veneer that is wasted due to selection, cutting, and trimming.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]**
- B. **<Insert location>**.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product[, **including**] **[panel products]** **[adhesives]** **[fire-retardant-treated materials]** **[and]** **[finishing materials and processes]**.

1. Include data for fire-retardant treatment from chemical-treatment manufacturer and certification by treating plant that treated materials comply with requirements.
2. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating distance to Project, cost for each regional material, and fraction by weight that is considered regional.
3. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regionally manufactured[**and regionally extracted and manufactured**] materials. Include statement indicating cost for each regionally manufactured material.
 - a. Include statement indicating location of manufacturer and distance to Project for each regionally manufactured material.
 - b. Include statement indicating location of manufacturer and point of extraction, harvest, or recovery for each raw material used in regionally extracted and manufactured materials. Indicate distance to Project and fraction by weight of each regionally manufactured material that is regionally extracted.
4. Certificates for **[Credit MR 6]** **[Credit MR 7]**: Chain-of-custody certificates indicating that paneling complies with forest certification and chain-of-custody requirements. Include statement indicating cost for each certified wood product.
5. Product Data for Credit IEQ 4.1: For installation adhesives, documentation including printed statement of VOC content.
6. Laboratory Test Reports for Credit IEQ 4.1: For adhesives, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
7. Product Data for Credit IEQ 4.4: For composite wood products and fabrication adhesives, documentation indicating that products contain no urea formaldehyde.
8. Laboratory Test Reports for Credit IEQ 4.4: For composite wood products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- C. Shop Drawings: Show location of paneling, large-scale details, attachment devices, and other components. Include dimensioned plans and elevations.
1. Show details full size.
 2. Show locations and sizes of furring and blocking, including concealed blocking specified in other Sections.
 3. For paneling produced from premanufactured sets, show finished panel sizes, set numbers, sequence numbers within sets, and method of cutting panels to produce indicated sizes.
 4. For paneling veneered in fabrication shop, show veneer leaves with dimensions, grain direction, exposed face, and identification numbers indicating the flitch and sequence within the flitch for each leaf.
- D. Samples for Initial Selection:
1. Shop-applied transparent finishes.
 2. Shop-applied opaque finishes.
- E. Samples for Verification:
1. Lumber for transparent finish, not less than **[5 inches (125 mm) wide by 12 inches (300 mm) long] [5 inches (125 mm) wide by 24 inches (600 mm) long]**, for each species and cut, finished on one side and one edge.
 2. Veneer leaves representative of and selected from flitches to be used for transparent-finished paneling.
 3. Veneer-faced panel products for transparent finish, **[8 by 10 inches (200 by 250 mm)] [12 by 12 inches (300 by 300 mm)] [12 by 24 inches (300 by 600 mm)]**, for each species and cut. Include at least one face-veneer seam and finish as specified.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For **[Installer] [Fabricator]**.
- B. Product Certificates: For each type of product.
- C. Woodwork Quality Standard Compliance Certificates: AWI Quality Certification Program certificates.
- D. Wall panel certificate: Submit certificate that wall panel backing adhesive and laminate comply with reference fire-resistance requirements.
- E. Certificate from the fabricator providing proof of not less than five (5) years experience in the fabrication of the types of products specified.
- F. Certificate from the installer providing proof of not less than five (5) years of successful experience in the installation of similar types of products and shall have completed at least 3 jobs of similar size and scope.
- ? Evaluation Reports: For **[fire-retardant-treated materials] [and]**

[fire-retardant-treated paneling], from ICC-ES.

- G. Maintenance Data: Submit manufacturer's care and maintenance data, including care and cleaning instructions.
- H. Provide warranty for two (2) years from date of final acceptance materials.

1.7 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 QUALITY ASSURANCE

- A. Fabricator Qualifications: Shop that employs skilled workers who custom-fabricate products similar to those required for this Project and whose products have a record of successful in-service performance. Shop is a certified participant in AWI's Quality Certification Program.
- B. Installer Qualifications: **[Fabricator of products] [Certified participant in AWI's Quality Certification Program]** .
- C. Testing Agency Qualifications: For testing agency providing classification marking for fire-retardant-treated material, an inspection agency acceptable to authorities having jurisdiction that periodically performs inspections to verify that the material bearing the classification marking is representative of the material tested.
- D. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Build mockups of **[typical paneling as shown on Drawings]** <Insert **description**>.
 - 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- E. Distribute copies of casework shop drawings to stainless steel supplier and coordinate fabrication and installation.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Protect woodwork during transit, delivery, storage, and handling to prevent damage, soiling, and deterioration.
- B. Do not deliver paneling until painting and similar operations that could damage paneling have been completed in installation areas. If paneling must be stored in other than installation areas, store only in areas where environmental conditions comply with requirements specified in "Field Conditions" Article.

1.10 FIELD CONDITIONS

- A. Conditioning: Woodwork Manufacturer and Installer shall advise Contractor of temperature and humidity requirements for woodwork installation and storage areas. Do not install woodwork until required temperature and relative humidity have been stabilized and will be maintained in installation areas.
- B. Maintain temperature and humidity in installation area as required to maintain moisture content of installed woodwork within a 1.0 percent tolerance of optimum moisture content, from date of installation through remainder of construction period. Require Woodwork Manufacturer to establish optimum moisture content and required temperature and humidity conditions.
- C. Environmental Limitations: Do not deliver or install paneling until building is enclosed, wet work is complete, and HVAC system is operating and will maintain temperature and relative humidity at occupancy levels during the remainder of the construction period.
- D. Environmental Limitations: Do not deliver or install paneling until building is enclosed, wet work is complete, and HVAC system is operating and will maintain temperature between **60 and 90 deg F** (16 and 32 deg C) and relative humidity between **[25 and 55] [17 and 50] <Insert humidity range>** percent during the remainder of the construction period.
- E. Field Measurements: Where paneling is indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
 - 1. Locate concealed framing, blocking, and reinforcements that support paneling by field measurements before being enclosed and indicate measurements on Shop Drawings.
- F. Established Dimensions: Where paneling is indicated to fit to other construction, establish dimensions for areas where woodwork is to fit. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

1.11 COORDINATION

- A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to ensure that paneling can be installed as indicated.

1.12 WARRANTY

- A. Warranty: Fabricator/installer to warrant for minimum two (2) **<Insert number>** years from date of final acceptance materials, fabrication, and installation of all items.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 FABRICATION, GENERAL

- A. Wood Moisture Content: Comply with requirements of referenced quality standard for moisture content of lumber at time of fabrication and for relative humidity conditions in the installation areas.
- B. Fabricate woodwork to dimensions, profiles, and details indicated with openings and mortises precut, where possible, to receive hardware and other items and work.
- C. Complete fabrication, assembly, finishing, hardware application, and other work before shipment to project site to maximum extent possible. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
- D. Pre Cut Openings: Fabricate architectural woodwork with precut openings, where possible, to receive hardware, appliances, plumbing fixtures, electrical work and similar items. Locate openings accurately and use templates or roughing in diagrams for proper size and shape. Smooth edges of cutoffs and, where located in countertops and similar exposures seal edges of cutouts with a water resistant coating.
- E. Measurements: Before proceeding with fabrication of woodwork required to be fitted to other construction, obtain field measurements and verify dimensions and shop drawing details as required for accurate fit.

2.2 PANELING FABRICATORS

- A. Source Limitations: Engage a qualified woodworking firm to assume undivided responsibility for production of paneling **[and] [wood-veneer-faced architectural cabinets] [ornamental woodwork] [wood trim] [wood frames] [and] [wood doors faced with veneers from same flitches as paneling]**.
- B. Fabricators: Subject to compliance with requirements, provide products by one of the following:
 - 1. **<Insert, in separate subparagraphs, names and possibly contact information for preapproved woodworking firms>**.
 - 2. or approved equal.

2.3 PANELING, GENERAL

- A. Quality Standard: Unless otherwise indicated, comply with the "Architectural Woodwork Standards" for grades of flush wood paneling (wood-veneer wall surfacing) indicated for construction, finishes, installation, and other requirements.
1. Provide **[labels] [and] [certificates]** from **AWI** certification program indicating that paneling[, **including installation,**] complies with requirements of grades specified.
 2. The Contract Documents contain selections chosen from options in the quality standard and additional requirements beyond those of the quality standard. Comply with those selections and requirements in addition to the quality standard.
- B. Regional Materials: Paneling shall be manufactured within **500 miles** (800 km) of Project site.
1. Composite wood materials used for paneling shall be manufactured within **500 miles** (800 km) of Project site from materials that have been extracted, harvested, or recovered within **500 miles** (800 km) of Project site.
 2. Veneers used for paneling shall be manufactured within **500 miles** (800 km) of Project site from materials that have been extracted, harvested, or recovered within **500 miles** (800 km) of Project site.
 3. Lumber used for paneling shall be manufactured within **500 miles** (800 km) of Project site from materials that have been extracted, harvested, or recovered within **500 miles** (800 km) of Project site.

2.4 FLUSH WOOD PANELING (WOOD-VENEER WALL SURFACING)

- A. Grade: **[Premium] [Custom]**.
- B. Certified Wood: Wood and composite wood components of flush wood paneling shall be certified as "FSC Pure"[**or "FSC Mixed Credit"**] according to FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship," and FSC STD-40-004, "FSC Standard for Chain of Custody Certification."
- C. Wood Species and Cut: **[White oak, rift sliced] [Select white ash, plain sliced] [Sycamore, plain sliced] [Cherry, plain sliced] [Butternut, plain sliced] [Avodire, quarter sliced] <Insert species and cut>**.
- D. Matching of Adjacent Veneer Leaves: **[Book] [Slip]** match.
- E. Matching within Panel Face: **[Running] [Balance] [Center-balance]** match.
- F. Matching of Adjacent Veneer Leaves and within Panel Face: Slip, center, book match.
- G. Panel-Matching Method: No matching is required between panels. Select and arrange panels for similarity of grain pattern and color between adjacent panels.

- H. Panel-Matching Method: **[Premanufactured panel sets used full width]** **[Premanufactured panel sets selectively reduced in width]** **[Made-to-order, sequence-matched panels]** **[Made-to-order, blueprint-matched panels and components]** within each separate area.
1. Refer to Section 011000 "Summary" for requirements concerning flitches reserved by DEN Project Manager.
- I. Vertical Panel-Matching Method: **[Continuous end match; veneer leaves of upper panels are continuations of veneer leaves of lower panels]** **[Architectural end book match; veneer leaves are individually book matched from lower panels to upper panels]** **[Architectural end slip match; veneer leaves are individually slip matched from lower panels to upper panels]** **[Panel end book match; panels are book matched from lower panels to upper panels]** **[Panel end slip match; panels are slip matched from lower panels to upper panels]**.
- J. Panel Core Construction: **[Hardwood veneer-core plywood]** **[Particleboard or medium-density fiberboard]** **[Fire-retardant particleboard or fire-retardant, medium-density fiberboard]**.
1. Thickness: **[3/4 inch (19 mm)]** **[As indicated]**.
- K. Exposed Panel Edges: **[Inset solid-wood or wood-veneer matching faces]** **[Legs of metal channels forming reveals]** **[Applied solid-wood banding 11/16 inch (18 mm) thick by depth of panels]** **[Applied bronze flat bars 1/16 inch (1.6 mm) thick by depth of panels]** <Insert description>.
- L. Panel Reveals: **[Matte black plastic laminate]** **[Bronze sheet]** **[Stainless-steel sheet]** **[Bronze channels, 1 by 1 by 1/8 inch (25.4 by 25.4 by 3.2 mm) thick]** **[Stainless-steel channels, 1 by 1 by 1/16 inch (25.4 by 25.4 by 1.6 mm) thick]** <Insert description>.
- M. Fire-Retardant-Treated Paneling: Panels shall consist of wood-veneer and fire-retardant particleboard or fire-retardant, medium-density fiberboard. Panels shall have a flame-spread index of **25** or less and a smoke-developed index of 450 or less per ASTM E 84 and be listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction.
- N. Assemble panels by gluing and concealed fastening.

2.5 MATERIALS

- A. Materials, General: Provide materials that comply with requirements of referenced quality standard for each quality grade specified unless otherwise indicated.
- B. Wood Moisture Content: **[5 to 10]** **[4 to 9]** percent.
- C. Composite Wood and Agrifiber Products: Provide materials that comply with requirements of referenced quality standard for each quality grade specified unless otherwise indicated.

1. Recycled Content of Medium-Density Fiberboard and Particleboard: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert number>** percent.
2. Composite Wood and Agrifiber Products: Products shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
3. Medium-Density Fiberboard: ANSI A208.2, [**Grade 130**] **<Insert grade>**[, **made with binder containing no urea formaldehyde**].
4. Particleboard: ANSI A208.1, [**Grade M-2**] [**Grade M-2, made with binder containing no urea formaldehyde**] [**Grade M-2-Exterior Glue**].
5. Particleboard: Straw-based particleboard complying with requirements in ANSI A208.1, Grade M-2, except for density.
 - a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) Environ Biocomposites Manufacturing LLC; Biofiber Wheat.
 - 2) Sorm Incorporated; Primeboard Premium Wheat.
 - 3) **<Insert manufacturer's name; product name or designation>**.
 - 4) or approved equal.
6. Veneer-Faced Panel Products (Hardwood Plywood): HPVA HP-1[, **made with adhesive containing no urea formaldehyde**].

D. STAINLESS STEEL

1. Bar Stock: ASTM A 276, Type 302 or 304.
2. Plate: ASTM A 167, Type 302 or 304.
3. Stainless steel finish: AISI number 4, brushed, directional with grain oriented along the length of the material or vertical on planar surfaces or as denoted by the DEN Project Manager.
4. Gauge: As noted on drawings.
5. Fasteners: Stainless steel, conceal to greatest extent possible.
6. Hinges: Stainless steel, concealed from view.
7. Comply with Section 057000 "Decorative Metal" for metal reveals at wood paneling.

E. Adhesives: Do not use adhesives that contain urea formaldehyde.

F. Adhesives: Use adhesives that comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.6 FIRE-RETARDANT-TREATED MATERIALS

A. Fire-Retardant-Treated Materials, General: Where fire-retardant-treated materials are indicated, use materials complying with requirements in this article, that are acceptable

to authorities having jurisdiction, and with fire-test-response characteristics specified as determined by testing identical products per test method indicated by a qualified testing agency.

1. Use treated materials that comply with requirements of referenced woodworking standard. Do not use materials that are warped, discolored, or otherwise defective.
 2. Use fire-retardant-treatment formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.
 3. Identify fire-retardant-treated materials with appropriate classification marking of qualified testing agency in the form of removable paper label or imprint on surfaces that will be concealed from view after installation.
- B. Fire-Retardant-Treated Lumber and Plywood: Products with a flame-spread index of 25 or less when tested according to ASTM E 84, with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than **10.5 feet** (3.2 m) beyond the centerline of the burners at any time during the test.
1. Kiln dry lumber and plywood after treatment to a maximum moisture content of 19 and 15 percent, respectively.
 2. For items indicated to receive a stained or natural finish, use organic resin chemical formulation.
 3. Mill lumber after treatment within limits set for wood removal that do not affect listed fire-test-response characteristics, using a woodworking shop certified by testing and inspecting agency.
 4. Mill lumber before treatment and implement special procedures during treatment and drying processes that prevent lumber from warping and developing discolorations from drying sticks or other causes, marring, and other defects affecting appearance of treated woodwork.
- C. Fire-Retardant Particleboard: Panels complying with the following requirements, made from softwood particles and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 25 or less per ASTM E 84.
1. For panels **3/4 inch** (19 mm) thick and less, comply with ANSI A208.1 for Grade M-2 except for the following minimum properties: modulus of rupture, **1600 psi** (11 MPa); modulus of elasticity, **300,000 psi** (2070 MPa); internal bond, **80 psi** (550 kPa); and screw-holding capacity on face and edge, **250 and 225 lbf** (1100 and 1000 N), respectively.
 2. For panels **13/16 to 1-1/4 inches** (20 to 32 mm) thick, comply with ANSI A208.1 for Grade M-1 except for the following minimum properties: modulus of rupture, **1300 psi** (9 MPa); modulus of elasticity, **250,000 psi** (1720 MPa); linear expansion, 0.50 percent; and screw-holding capacity on face and edge, **250 and 175 lbf** (1100 and 780 N), respectively.
 3. Products: Subject to compliance with requirements, provide one of the following:
 - a. Flakeboard Company Limited; Duraf Flake FR.

- b. SierraPine; Encore FR.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.
- D. Fire-Retardant Fiberboard: Medium-density fiberboard panels complying with ANSI A208.2, made from softwood fibers, synthetic resins, and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 200 or less per ASTM E 84.
- 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Panel Source International, Inc., McKillican America, Inc.; Pyroblock Platinum.
 - b. SierraPine; Medite FR.
 - c. **<Insert manufacturer's name>**
 - d. or approved equal.

2.7 INSTALLATION MATERIALS

- A. Furring, Blocking, Shims, and Hanging Strips: [**Softwood or hardwood lumber**] [**Fire-retardant-treated softwood lumber**], kiln dried to less than 15 percent moisture content.
- B. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide metal expansion sleeves or expansion bolts for post-installed anchors. Use nonferrous-metal or hot-dip galvanized anchors and inserts at inside face of exterior walls.
- C. VOC Limits for Installation Adhesives: Use products that comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
 - 1. Wood Glues: 30 g/L.
 - 2. Multipurpose Construction Adhesives: 70 g/L.
 - 3. Contact Adhesive: 80 g/L.
 - 4. Special-Purpose Contact Adhesive (contact adhesive that is used to bond melamine covered board, metal, unsupported vinyl, rubber, or wood veneer **1/16 inch** (1.6 mm) or less in thickness to any surface): 250 g/L.

2.8 FABRICATION

- A. Sand fire-retardant-treated wood lightly to remove raised grain on exposed surfaces before fabrication.
- B. Arrange paneling in shop or other suitable space in proposed sequence for examination by DEN Project Manager. Mark units with temporary sequence numbers to indicate position in proposed layout.
 - 1. Lay out one elevation at a time if approved by DEN Project Manager.

2. Notify DEN Project Manager seven (7) days in advance of the date and time when layout will be available for viewing.
 3. Provide lighting of similar type and level as that of final installation for viewing layout unless otherwise approved by DEN Project Manager.
 4. Rearrange paneling as directed by DEN Project Manager until layout is approved.
 5. Do not trim end units and other nonmodular-size units to less than modular size until after DEN Project Manager's approval of layout. [**Indicate trimming by masking edges of units with nonmarking material.**]
 6. Obtain DEN Project Manager approval of layout before start of assembly. Mark units and Shop Drawings with assembly sequence numbers based on approved layout.
- C. Complete fabrication, including assembly [**and finishing**], to maximum extent possible, before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
1. Notify DEN Project Manager seven (7) days in advance of the dates and times paneling fabrication will be complete.
- D. Shop cut openings, to maximum extent possible, to receive hardware, appliances, plumbing fixtures, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.

2.9 SHOP FINISHING

- A. General: Finish paneling at fabrication shop as specified in this Section. Defer only final touchup, cleaning, and polishing until after installation.
- B. Shop Priming: Shop apply the prime coat including backpriming for [**transparent-finished**] paneling specified to be field finished. Refer to Section 099300 "Staining and Transparent Finishing" for material and application requirements.
- C. Preparation for Finishing: Comply with referenced quality standard for sanding, filling countersunk fasteners, sealing concealed surfaces, and similar preparations for finishing paneling, as applicable to each unit of work.
1. Backpriming: Apply two coats of sealer or primer, compatible with finish coats, to concealed surfaces of paneling.
- D. Transparent Finish:
1. Grade: [**Premium**] [**Custom**] [**Same as item to be finished**].
 2. Finish: System - 1, nitrocellulose lacquer.
 3. Finish: System - 2, precatalyzed lacquer.
 4. Finish: System - 3, postcatalyzed lacquer.
 5. Finish: System - 4, water-based latex acrylic.

6. Finish: System - 5, conversion varnish.
7. Finish: System - 6, synthetic penetrating oil.
8. Finish: System - 7, catalyzed vinyl.
9. Finish: System - 8, water-based cross-linking acrylic.
10. Finish: System - 9, UV-curable acrylated epoxy, polyester, or urethane.
11. Finish: System - 11, catalyzed polyurethane.
12. Finish: System - 10, water-based UV curable.
13. Finish: System - 12, water-based polyurethane.
14. Wash Coat for Closed-Grain Woods: Apply wash-coat sealer to woodwork made from closed-grain wood before staining and finishing.
15. Staining: **[None required] [Match approved sample for color] [Match DEN Project Manager's sample]**.
16. Open Finish for Open-Grain Woods: Do not apply filler to open-grain woods.
17. Filled Finish for Open-Grain Woods: **[After staining, apply wash-coat sealer and allow to dry.]** Apply paste wood filler and wipe off excess. Tint filler to match stained wood.
18. Sheen: **[Flat, 15-30] [Satin, 31-45] [Semigloss, 46-60] [Gloss, 61-100]** gloss units measured on 60-degree gloss meter per ASTM D 523.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Before installation, condition paneling to average prevailing humidity conditions in installation areas.
- B. Before installing paneling, examine shop-fabricated work for completion and complete work as required, including removal of packing and backpriming.

3.2 INSTALLATION

- A. Grade: Install paneling to comply with same grade as paneling to be installed.
- B. Treated Wood: Handle, store, and install pressure treated wood in compliance with recommendations of chemical treatment manufacturer including those for adhesives, where required for installation.
- C. Install paneling level, plumb, true, and straight with no distortions. Shim as required with concealed shims. Install level and plumb to a tolerance of **1/8 inch in 96 inches** (3 mm in 2400 mm). Install with no more than **1/16 inch in 96-inch** (1.6 mm in 2400-mm) vertical cup or bow and **1/8 inch in 96-inch** (3 mm in 2400-mm) horizontal variation from a true plane.
 1. For flush paneling with revealed joints, install with variations in reveal width, alignment of top and bottom edges, and flushness between adjacent panels not exceeding **[1/32 inch (0.8 mm)] [1/16 inch (1.5 mm)]**.

- D. Anchor paneling to supporting substrate with concealed panel-hanger clips. Do not use face fastening unless [**covered by trim**] [**otherwise indicated**].
- E. Complete finishing work specified in this Section to extent not completed at shop or before installation of paneling. Fill nail holes with matching filler where exposed.
 - 1. Apply specified finish coats, including stains and paste fillers if any, to exposed surfaces where only sealer/prime coats are applied in shop.
- F. Refer to Section 099300 "Staining and Transparent Finishing" for final finishing of installed paneling.

3.3 ADJUSTING AND CLEANING

- A. Repair damaged and defective paneling, where possible, to eliminate defects; where not possible to repair, replace paneling. Adjust for uniform appearance.
- B. Clean paneling on exposed surfaces. Touch up shop-applied finishes to restore damaged or soiled areas.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 064216

SECTION 064219 - PLASTIC-LAMINATE-FACED WOOD PANELING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Plastic-laminate-faced wood paneling (decorative laminate surfacing).
2. Wood furring, blocking, shims, and hanging strips for installing plastic-laminate-faced wood paneling unless concealed within other construction before paneling installation.

- B. Related Requirements:

1. Section 057000 "Decorative Metal" for metal reveals at plastic-laminate-faced wood paneling.
2. Section 061000 "Rough Carpentry" for wood furring, blocking, shims, and hanging strips required for installing paneling and that are concealed within other construction before paneling installation.
3. Section 064213 "Stile and Rail Wood Paneling" for raised wood paneling.
4. Section 064216 "Flush Wood Paneling" for flush wood paneling.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DIA Project Manager] <Insert location>**.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product[, **including**] **[panel products] [high-pressure decorative laminate] [adhesives] [and] [fire-retardant-treated materials]**.
 1. Include data for fire-retardant treatment from chemical-treatment manufacturer and certification by treating plant that treated materials comply with requirements.
 2. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating distance to Project, cost for each regional material, and fraction by weight that is considered regional.
3. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regionally manufactured[**and regionally extracted and manufactured**] materials. Include statement indicating cost for each regionally manufactured material.
 - a. Include statement indicating location of manufacturer and distance to Project for each regionally manufactured material.
 - b. Include statement indicating location of manufacturer and point of extraction, harvest, or recovery for each raw material used in regionally extracted and manufactured materials. Indicate distance to Project and fraction by weight of each regionally manufactured material that is regionally extracted.
4. Certificates for [**Credit MR 6**] [**Credit MR 7**]: Chain-of-custody certificates indicating that paneling complies with forest certification and chain-of-custody requirements. Include statement indicating cost for each certified wood product.
5. Product Data for Credit IEQ 4.1: For installation adhesives, documentation including printed statement of VOC content.
6. Laboratory Test Reports for Credit IEQ 4.1: For adhesives, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
7. Laboratory Test Reports for Credit IEQ 4.4: For composite wood products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

C. Shop Drawings: Show location of paneling, large-scale details, attachment devices, and other components. Include dimensioned plans and elevations.

1. Show details full size.
2. Show locations and sizes of furring and blocking, including concealed blocking specified in other Sections.

D. Samples for initial selection for high-pressure decorative laminates.

- E. Samples for verification for plastic laminates, **[8 by 10 inches (200 by 250 mm)] [12 by 12 inches (300 by 300 mm)]**, for each type, color, pattern, and surface finish[, **with one sample applied to core material] [and specified edge material applied to one edge]**.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For **[Installer] [Fabricator]**.
- B. Product Certificates: For each type of product.
- C. Quality Certification: Submit woodwork Manufacturer's (Fabricator's) certification, stating that fabricated woodwork complies with quality grades and other requirements indicated.
- D. Wall panel certificate: Submit certificate that wall panel backing adhesive and laminate comply with reference fire-resistance requirements.
- E. Woodwork Quality Standard Compliance Certificates: AWI Quality Certification Program certificates.
- F. Certificate from the fabricator providing proof of not less than 5 years experience in the fabrication of the types of products specified.
- G. Certificate from the installer providing proof of not less than 5 years of successful experience in the installation of similar types of products and shall have completed at least 3 jobs of similar size and scope.
- H. Evaluation Reports: For **[fire-retardant-treated materials] [and] [fire-retardant-treated paneling]**, from ICC-ES.
- I. Maintenance Data: Submit manufacturer's care and maintenance data, including care and cleaning instructions.
- J. Provide warranty for two (2) years from date of final acceptance materials, fabrication, and installation of all items.

1.6 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Fabricator Qualifications: Shop that employs skilled workers who custom-fabricate products similar to those required for this Project and whose products have a record of successful in-service performance. Shop is a certified participant in AWI's Quality

Certification Program.

- B. Installer Qualifications: [**Fabricator of products**] [**Certified participant in AWI's Quality Certification Program**] .
- C. Testing Agency Qualifications: For testing agency providing classification marking for fire-retardant-treated material, an inspection agency acceptable to authorities having jurisdiction that periodically performs inspections to verify that the material bearing the classification marking is representative of the material tested.
- D. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Build mockups of [**typical paneling as shown on Drawings**] <Insert **description**>.
 - 2. Mock-up a minimum 200 sq. ft. of plastic laminate faced wall panel. Demonstrate panel removal to the DIA Project Manager.
 - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- E. Distribute copies of shop drawings to stainless steel supplier and coordinate fabrication and installation.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Protect woodwork during transit, delivery, storage, and handling to prevent damage, soiling, and deterioration.
- B. Do not deliver paneling until painting and similar operations that could damage paneling have been completed in installation areas. If paneling must be stored in other than installation areas, store only in areas where environmental conditions comply with requirements specified in "Field Conditions" Article.

1.9 FIELD CONDITIONS

- A. Conditioning: Woodwork Manufacturer and Installer shall advise Contractor of temperature and humidity requirements for woodwork installation and storage areas. Do not install woodwork until required temperature and relative humidity have been stabilized and will be maintained in installation areas.
- B. Maintain temperature and humidity in installation area as required to maintain moisture content of installed woodwork within a 1.0 percent tolerance of optimum moisture content, from date of installation through remainder of construction period. Require Woodwork Manufacturer to establish optimum moisture content and required temperature and humidity conditions.
- C. Environmental Limitations: Do not deliver or install paneling until building is enclosed, wet work is complete, and HVAC system is operating and will maintain temperature

and relative humidity at occupancy levels during the remainder of the construction period.

- D. Environmental Limitations: Do not deliver or install paneling until building is enclosed, wet work is complete, and HVAC system is operating and will maintain temperature between **60 and 90 deg F** (16 and 32 deg C) and relative humidity between **[25 and 55] [17 and 50]** <Insert humidity range> percent during the remainder of the construction period.
- E. Field Measurements: Where paneling is indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
 - 1. Locate concealed framing, blocking, and reinforcements that support paneling by field measurements before being enclosed and indicate measurements on Shop Drawings.
- F. Established Dimensions: Where paneling is indicated to fit to other construction, establish dimensions for areas where woodwork is to fit. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

1.10 COORDINATION

- A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to ensure that paneling can be installed as indicated.

1.11 WARRANTY

- A. Warranty: Fabricator/installer to warrant for minimum two (2) <Insert number> years from date of final acceptance materials, fabrication, and installation of all items.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 FABRICATION, GENERAL

- A. Wood Moisture Content: Comply with requirements of referenced quality standard for moisture content of lumber at time of fabrication and for relative humidity conditions in

the installation areas.

- B. Fabricate woodwork to dimensions, profiles, and details indicated with openings and mortises precut, where possible, to receive hardware and other items and work.
- C. Complete fabrication, assembly, finishing, hardware application, and other work before shipment to project site to maximum extent possible. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
- D. Pre Cut Openings: Fabricate architectural woodwork with precut openings, where possible, to receive hardware, appliances, plumbing fixtures, electrical work and similar items. Locate openings accurately and use templates or roughing in diagrams for proper size and shape. Smooth edges of cutoffs and, where located in countertops and similar exposures seal edges of cutouts with a water resistant coating.
- E. Measurements: Before proceeding with fabrication of woodwork required to be fitted to other construction, obtain field measurements and verify dimensions and shop drawing details as required for accurate fit.

2.2 PANELING FABRICATORS

- A. Fabricators: Subject to compliance with requirements, provide products by one of the following:
 - 1. **<Insert, in separate subparagraphs, names and possibly contact information for preapproved woodworking firms>.**
 - 2. or approved equal.

2.3 PANELING, GENERAL

- A. Quality Standard: Unless otherwise indicated, comply with the "Architectural Woodwork Standards" for grades of plastic-laminate-faced wood paneling (decorative laminate surfacing) indicated for construction, finishes, installation, and other requirements.
 - 1. Provide **[labels] [and] [certificates]** from AWI certification program indicating that paneling[, **including installation,**] complies with requirements of grades specified.
 - 2. The Contract Documents contain selections chosen from options in the quality standard and additional requirements beyond those of the quality standard. Comply with those selections and requirements in addition to the quality standard.
- B. Regional Materials: Paneling shall be manufactured within **500 miles** (800 km) of Project site.
 - 1. Composite wood materials used for paneling shall be manufactured within **500 miles** (800 km) of Project site from materials that have been extracted, harvested,

- or recovered within **500 miles** (800 km) of Project site.
2. Lumber used for paneling shall be manufactured within **500 miles** (800 km) of Project site from materials that have been extracted, harvested, or recovered within **500 miles** (800 km) of Project site.

2.4 PLASTIC-LAMINATE-FACED WOOD PANELING

- A. Grade: [**Premium**] [**Custom**] [**Economy**].
- B. Certified Wood: Wood and composite wood components of plastic-laminate-clad flush paneling shall be certified as "FSC Pure"[or "**FSC Mixed Credit**"] according to FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship," and FSC STD-40-004, "FSC Standard for Chain of Custody Certification."
- C. Plastic Laminate: High-pressure decorative laminate complying with NEMA LD 3 and the following requirements:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Abet Laminati, Inc.
 - b. Arborite; Division of ITW Canada, Inc.
 - c. Formica Corporation.
 - d. Lamin-Art, Inc.
 - e. Panolam Industries International Incorporated.
 - f. Wilsonart International.
 - g. <**Insert manufacturer's name**>.
 - h. or approved equal.
 2. Faces: [**Grade SGF**] [**Grade HGS**] [**Grade HGF**] .
 3. Backs: [**Grade BKH**] [**Grade BKV**] [**Grade VGF**] .
 4. Exposed Edges: Same as faces.
- D. Colors, Patterns, and Finishes: Provide materials and products that result in colors and textures of exposed surfaces complying with the following requirements:
 1. As indicated by manufacturer's designations.
 2. Match DIA Project Manager's samples.
 3. As selected by DIA Project Manager from laminate manufacturer's full range in the following categories:
 - a. Solid colors, [**gloss**] [**matte**] finish.
 - b. Solid colors with core same color as surface, [**gloss**] [**matte**] finish.
 - c. Wood grains, [**gloss**] [**matte**] finish.
 - d. Patterns, [**gloss**] [**matte**] finish.
 4. Grain Direction: [**Vertical**] [**Horizontal**].
- E. Panel Core: [**Particleboard or medium-density fiberboard**] [**Fire-retardant particleboard or fire-retardant, medium-density fiberboard**].

1. Thickness: [**3/4 inch (19 mm)**] [**As indicated**].
- F. Exposed Panel Edges: [**Plastic-laminate matching faces**] [**Legs of metal channels forming reveals**] [**Applied solid-wood banding 11/16 inch (18 mm) thick by depth of panels**] [**Applied bronze flat bars 1/16 inch (1.6 mm) thick by depth of panels**] <Insert description>.
- G. Panel Reveals: [**Matte black plastic laminate**] [**Bronze sheet**] [**Stainless-steel sheet**] [**Bronze channels, 1 by 1 by 1/8 inch (25.4 by 25.4 by 3.2 mm) thick**] [**Stainless-steel channels, 1 by 1 by 1/16 inch (25.4 by 25.4 by 1.6 mm) thick**] <Insert description>.
- H. Adhesives for Bonding Plastic Laminate: [**Unpigmented contact cement**] [**Contact cement**] [**PVA**] [**Urea formaldehyde**] [**Resorcinol**].
 1. Adhesive for Bonding Edges: Hot-melt adhesive[**or adhesive specified above for faces**].
- I. Fire-Retardant-Treated Paneling: Panels shall consist of fire-retardant plastic laminate and fire-retardant particleboard or fire-retardant, medium-density fiberboard. Panels shall have a flame-spread index of [**25**] or less and a smoke-developed index of 450 or less per ASTM E 84 and be listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction.
- J. Assemble panels by gluing and concealed fastening.

2.5 MATERIALS

- A. Materials, General: Provide materials that comply with requirements of referenced quality standard for each quality grade specified unless otherwise indicated.
- B. Wood Moisture Content: [**5 to 10**] [**4 to 9**] percent.
- C. Composite Wood and Agrifiber Products: Provide materials that comply with requirements of referenced quality standard for each quality grade specified unless otherwise indicated.
 1. Recycled Content of Medium-Density Fiberboard and Particleboard: Postconsumer recycled content plus one-half of preconsumer recycled content not less than <Insert number> percent.
 2. Composite Wood and Agrifiber Products: Products shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
 3. Medium-Density Fiberboard: ANSI A208.2, [**Grade 130**] <Insert grade>[, **made with binder containing no urea formaldehyde**].
 4. Particleboard: ANSI A208.1, [**Grade M-2**] [**Grade M-2, made with binder containing no urea formaldehyde**] [**Grade M-2-Exterior Glue**].

5. Particleboard: Straw-based particleboard complying with requirements in ANSI A208.1, Grade M-2, except for density.
 - a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) Environ Biocomposites Manufacturing LLC; Biofiber Wheat.
 - 2) Sorm Incorporated; Primeboard Premium Wheat.
 - 3) **<Insert manufacturer's name; product name or designation>**.
 - 4) or approved equal.

D. STAINLESS STEEL

1. Bar Stock: ASTM A 276, Type 302 or 304.
2. Plate: ASTM A 167, Type 302 or 304.
3. Stainless steel finish: AISI number 4, brushed, directional with grain oriented along the length of the material or vertical on planar surfaces or as denoted by the DIA Project Manager.
4. Gauge: As noted on drawings.
5. Fasteners: Stainless steel, conceal to greatest extent possible.
6. Hinges: Stainless steel, concealed from view.
7. Reference Section 057000 "Decorative Metal" for metal reveals at wood paneling.

E. Adhesives: Do not use adhesives that contain urea formaldehyde.

F. Adhesives: Use adhesives that comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.6 FIRE-RETARDANT-TREATED MATERIALS

A. Fire-Retardant-Treated Materials, General: Where fire-retardant-treated materials are indicated, use materials complying with requirements in this article, that are acceptable to authorities having jurisdiction, and with fire-test-response characteristics specified as determined by testing identical products per test method indicated by a qualified testing agency.

1. Use treated materials that comply with requirements of referenced woodworking standard. Do not use materials that are warped, discolored, or otherwise defective.
2. Use fire-retardant-treatment formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.
3. Identify fire-retardant-treated materials with appropriate classification marking of qualified testing agency in the form of removable paper label or imprint on surfaces that will be concealed from view after installation.

- B. Fire-Retardant-Treated Lumber and Plywood: Products with a flame-spread index of 25 or less when tested according to ASTM E 84, with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than **10.5 feet** (3.2 m) beyond the centerline of the burners at any time during the test.
1. Kiln dry lumber and plywood after treatment to a maximum moisture content of 19 and 15 percent, respectively.
 2. For items indicated to receive a stained or natural finish, use organic resin chemical formulation.
 3. Mill lumber after treatment within limits set for wood removal that do not affect listed fire-test-response characteristics, using a woodworking shop certified by testing and inspecting agency.
 4. Mill lumber before treatment and implement special procedures during treatment and drying processes that prevent lumber from warping and developing discolorations from drying sticks or other causes, marring, and other defects affecting appearance of treated woodwork.
- C. Fire-Retardant Particleboard: Panels complying with the following requirements, made from softwood particles and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 25 or less per ASTM E 84.
1. For panels **3/4 inch** (19 mm) thick and less, comply with ANSI A208.1 for Grade M-2 except for the following minimum properties: modulus of rupture, **1600 psi** (11 MPa); modulus of elasticity, **300,000 psi** (2070 MPa); internal bond, **80 psi** (550 kPa); and screw-holding capacity on face and edge, **250 and 225 lbf** (1100 and 1000 N), respectively.
 2. For panels **13/16 to 1-1/4 inches** (20 to 32 mm) thick, comply with ANSI A208.1 for Grade M-1 except for the following minimum properties: modulus of rupture, **1300 psi** (9 MPa); modulus of elasticity, **250,000 psi** (1720 MPa); linear expansion, 0.50 percent; and screw-holding capacity on face and edge, **250 and 175 lbf** (1100 and 780 N), respectively.
 3. Products: Subject to compliance with requirements, provide one of the following:
 - a. Flakeboard Company Limited; Duraf Flake FR.
 - b. SierraPine; Encore FR.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.
- D. Fire-Retardant Fiberboard: Medium-density fiberboard panels complying with ANSI A208.2, made from softwood fibers, synthetic resins, and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 200 or less per ASTM E 84.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Panel Source International, Inc., McKillican America, Inc.; Pyroblock Platinum.
 - b. SierraPine; Medite FR.

- c. <Insert manufacturer>
- d. or approved equal.

2.7 INSTALLATION MATERIALS

- A. Furring, Blocking, Shims, and Hanging Strips: [**Softwood or hardwood lumber**] [**Fire-retardant-treated softwood lumber**], kiln dried to less than 15 percent moisture content.
- B. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide metal expansion sleeves or expansion bolts for post-installed anchors. Use nonferrous-metal or hot-dip galvanized anchors and inserts at inside face of exterior walls.
- C. VOC Limits for Installation Adhesives: Use products that comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
 - 1. Wood Glues: 30 g/L.
 - 2. Multipurpose Construction Adhesives: 70 g/L.
 - 3. Contact Adhesive: 80 g/L.
 - 4. Special-Purpose Contact Adhesive (contact adhesive that is used to bond melamine-covered board, metal, unsupported vinyl, rubber, or wood veneer **1/16 inch** (1.6 mm) or less in thickness to any surface): 250 g/L.

2.8 FABRICATION

- A. Sand fire-retardant-treated wood lightly to remove raised grain on exposed surfaces before fabrication.
- B. Complete fabrication, including assembly, to maximum extent possible, before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
 - 1. Notify DIA Project Manager seven (7) days in advance of the dates and times paneling fabrication will be complete.
- C. Shop cut openings, to maximum extent possible, to receive hardware, appliances, plumbing fixtures, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Before installation, condition paneling to average prevailing humidity conditions in installation areas.
- B. Before installing paneling, examine shop-fabricated work for completion and complete work as required, including removal of packing and backpriming.

3.2 INSTALLATION

- A. Grade: Install paneling to comply with same grade as paneling to be installed.
- B. Treated Wood: Handle, store, and install pressure treated wood in compliance with recommendations of chemical treatment manufacturer including those for adhesives, where required for installation.
- C. Install paneling level, plumb, true, and straight with no distortions. Shim as required with concealed shims. Install level and plumb to a tolerance of **1/8 inch in 96 inches** (3 mm in 2400 mm). Install with no more than **1/16 inch in 96-inch** (1.6 mm in 2400-mm) vertical cup or bow and **1/8 inch in 96-inch** (3 mm in 2400-mm) horizontal variation from a true plane.
 - 1. For flush paneling with revealed joints, install with variations in reveal width, alignment of top and bottom edges, and flushness between adjacent panels not exceeding **1/32 inch (0.8 mm)** [**1/16 inch (1.5 mm)**].
- D. Anchor paneling to supporting substrate with concealed panel-hanger clips. Do not use face fastening unless **[covered by trim]** **[otherwise indicated]**.
- E. Installing Stainless Steel Items:
 - 1. Coordinate work with work by other trades.
 - 2. Comply with the intent of details.
 - 3. External corners: Ease 1/32" unless otherwise noted.
 - 4. Anchor all items securely. Adhere stainless steel to plywood where indicated per Manufacturer's recommendations.

3.3 ADJUSTING AND CLEANING

- A. Repair damaged and defective paneling, where possible, to eliminate defects; where not possible to repair, replace paneling. Adjust for uniform appearance.
- B. Clean paneling on exposed surfaces. Touch up shop-applied finishes to restore damaged or soiled areas.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 064219

SECTION 064400 - ORNAMENTAL WOODWORK

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Exterior ornamental woodwork.
2. Interior ornamental woodwork.
3. Wood furring, blocking, shims, and hanging strips for installing ornamental work items unless concealed within other construction before woodwork installation.
4. Shop priming of exterior ornamental woodwork.
5. Shop priming of interior ornamental woodwork.
6. Shop finishing of exterior ornamental woodwork.
7. Shop finishing of interior ornamental woodwork.

- B. Related Requirements:

1. Section 061000 "Rough Carpentry" for wood furring, blocking, shims, and hanging strips required for installing ornamental woodwork and concealed within other construction before ornamental woodwork installation.
2. Section 062023 "Interior Finish Carpentry" for interior carpentry exposed to view that is not specified in this Section.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] <[location and time as determined by DEN Project Manager] Insert location>**.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product[, **including**] **[panel products]** **[fire-retardant-treated materials]** **[and]** **[finishing materials and processes]**.

1. Include data for wood-preservative treatment from chemical-treatment

- manufacturer and certification by treating plant that treated materials comply with requirements. Indicate type of preservative used and net amount of preservative retained. Include chemical-treatment manufacturer's written instructions for finishing treated material.
2. Include data for fire-retardant treatment from chemical-treatment manufacturer and certification by treating plant that treated materials comply with requirements.
 3. For products receiving a waterborne treatment, include statement that moisture content of treated materials was reduced to levels specified before shipment to Project site.
 4. Include copies of warranties from chemical-treatment manufacturers for each type of treatment.
 5. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating distance to Project, cost for each regional material, and fraction by weight that is considered regional.
3. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regionally manufactured[**and regionally extracted and manufactured**] materials. Include statement indicating cost for each regionally manufactured material.
 - a. Include statement indicating location of manufacturer and distance to Project for each regionally manufactured material.
 - b. Include statement indicating location of manufacturer and point of extraction, harvest, or recovery for each raw material used in regionally extracted and manufactured materials. Indicate distance to Project and fraction by weight of each regionally manufactured material that is regionally extracted.
4. Certificates for [**Credit MR 6**] [**Credit MR 7**]: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification and chain-of-custody requirements. Include statement indicating cost for each certified wood product.
5. Laboratory Test Reports for Credit IEQ 4.1: For adhesives, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
6. Product Data for Credit IEQ 4.4: For adhesives and composite wood products, documentation indicating that products contain no urea formaldehyde.
7. Laboratory Test Reports for Credit IEQ 4.4: For composite wood products, documentation indicating that products comply with the testing and product

requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- C. Shop Drawings: Show location of each item, dimensioned plans and elevations, large-scale details, attachment devices, and other components.
1. Show details full size.
 2. Show locations and sizes of furring, blocking, and hanging strips, including concealed blocking and reinforcement specified in other Sections.
 3. Show veneer leaves with dimensions, grain direction, exposed face, and identification numbers indicating the flitch and sequence within the flitch for each leaf.
 4. Apply AWI Quality Certification Program label to Shop Drawings.
- D. Samples for Initial Selection:
1. Shop-applied transparent finishes.
 2. Shop-applied opaque finishes.
- E. Samples for Verification:
1. Lumber for exterior wood-stain finish, not less than **5 inches** (125 mm) wide by **12 inches** (300 mm) long, for each species, with one-half of exposed surface finished.
 2. Lumber for transparent finish, not less than [**5 inches** (125 mm) wide by **12 inches** (300 mm) long] [**5 inches** (125 mm) wide by **24 inches** (600 mm) long], for each species and cut, finished on one side and one edge.
 3. Veneer leaves representative of and selected from flitches to be used for transparent-finished ornamental woodwork.
 4. Lumber and panel products with shop-applied opaque finish, **5 inches** (125 mm) wide by **12 inches** (300 mm) long for lumber and [**8 by 10 inches** (200 by 250 mm)] [**12 by 12 inches** (300 by 300 mm)] for panels, for each finish system and color, with [**one-half of**] exposed surface finished.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For [**Installer**] [**fabricator**].
- B. Quality Certification: Submit woodwork Manufacturer's (Fabricator's) certification, stating that fabricated woodwork complies with quality grades and other requirements indicated.
- C. Product Certificates: For [**each type of product.**] [**the following:**]
1. Composite wood and agrifiber products.
 2. Adhesives.
- D. Woodwork Quality Standard Compliance Certificates: AWI Quality Certification Program certificates.

- E. Certificate from the fabricator providing proof of not less than five (5) years experience in the fabrication of the types of products specified.
- F. Certificate from the installer providing proof of not less than five (5) years of successful experience in the installation of similar types of products and shall have completed at least 3 jobs of similar size and scope.
- G. Evaluation Reports: For [**wood-preserved-treated wood**] [**and**] [**fire-retardant-treated materials**], from ICC-ES.

1.6 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Fabricator Qualifications: Shop that employs skilled workers who custom fabricate products similar to those required for this Project and whose products have a record of successful in-service performance. Shop is a certified participant in AWI's Quality Certification Program.
- B. Installer Qualifications: [**Fabricator of products**] [**Certified participant in AWI's Quality Certification Program**].
- C. Testing Agency Qualifications: For testing agency providing classification marking for fire-retardant-treated material, an inspection agency acceptable to authorities having jurisdiction that periodically performs inspections to verify that the material bearing the classification marking is representative of the material tested.
- D. Warranty: Fabricator/installer to warrant for two (2) years from date of final acceptance materials, fabrication, and installation of all items.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Protect woodwork during transit, delivery, storage, and handling to prevent damage, soiling and deterioration.
- B. Do not deliver interior ornamental woodwork until painting and similar operations that could damage woodwork have been completed in installation areas. If ornamental woodwork must be stored in other than installation areas, store only in areas where environmental conditions comply with requirements specified in "Field Conditions" Article.

1.9 FIELD CONDITIONS

- A. Conditioning: Woodwork Manufacturer and Installer shall advise Contractor of temperature and humidity requirements for woodwork installation and storage areas. Do not install woodwork until required temperature and relative humidity have been stabilized and will be maintained in installation areas.
- B. Maintain temperature and humidity in installation area as required to maintain moisture content of installed woodwork within a 1.0 percent tolerance of optimum moisture content, from date of installation through remainder of construction period. Require Woodwork Manufacturer to establish optimum moisture content and required temperature and humidity conditions.
- C. Weather Limitations for Exterior Work: Proceed with installation of exterior ornamental woodwork only when existing and forecasted weather conditions permit work to be performed and at least one coat of specified finish to be applied without exposure to rain, snow, or dampness.
- D. Environmental Limitations for Interior Work: Do not deliver or install interior ornamental woodwork until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.
- E. Environmental Limitations for Interior Work: Do not deliver or install interior ornamental woodwork until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature between **60 and 90 deg F** (16 and 32 deg C) and relative humidity between **[25 and 55] [17 and 50] <Insert humidity range>** percent during the remainder of the construction period.
- F. Field Measurements: Where ornamental woodwork is indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
 - 1. Locate concealed framing, blocking, and reinforcements that support woodwork by field measurements before being enclosed, and indicate measurements on Shop Drawings.
- G. Established Dimensions: Where ornamental woodwork is indicated to fit to other construction, establish field dimensions for areas where woodwork is to fit. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

1.10 COORDINATION

- A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to ensure that ornamental woodwork can be supported and installed as indicated.

1.11 WARRANTY

- A. Provide warranty for minimum two (2) **<Insert number>** years from date of final acceptance of materials, fabrication, and installation of all items.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 FABRICATION, GENERAL

- A. Wood Moisture Content: Comply with requirements of referenced quality standard for moisture content of lumber at time of fabrication and for relative humidity conditions in the installation areas.
- B. Fabricate woodwork to dimensions, profiles, and details indicated with openings and mortises precut, where possible, to receive hardware and other items and work.
- C. Complete fabrication, assembly, finishing, hardware application, and other work before shipment to project site to maximum extent possible. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
- D. Pre Cut Openings: Fabricate architectural woodwork with precut openings, where possible, to receive hardware, appliances, plumbing fixtures, electrical work and similar items. Locate openings accurately and use templates or roughing in diagrams for proper size and shape. Smooth edges of cutoffs and, where located in countertops and similar exposures seal edges of cutouts with a water resistant coating.
- E. Measurements: Before proceeding with fabrication of woodwork required to be fitted to other construction, obtain field measurements and verify dimensions and shop drawing details as required for accurate fit.

2.2 ORNAMENTAL WOODWORK FABRICATORS

- A. Fabricators: Subject to compliance with requirements, provide products by one of the following:
 - 1. **<Insert, in separate subparagraphs, names and possibly contact information for preapproved woodworking firms>**.
 - 2. or approved equal.

2.3 ORNAMENTAL WOODWORK, GENERAL

- A. Quality Standard: Unless otherwise indicated, comply with the "Architectural Woodwork Standards" for grades of ornamental woodwork indicated for construction, finishes, installation, and other requirements.
1. Provide **[labels] [and] [certificates]** from AWI certification program indicating that woodwork[, **including installation,**] complies with requirements of grades specified.
 2. The Contract Documents contain selections chosen from options in the quality standard and additional requirements beyond those of the quality standard. Comply with those selections and requirements in addition to the quality standard.

2.4 EXTERIOR ORNAMENTAL WORK FOR TRANSPARENT FINISH

- A. Exterior ornamental work for transparent finish includes the following:
1. Balustrades.
 2. Columns.
 3. Cupolas.
 4. Pediment heads.
 5. Pilasters.
 6. **<Insert description>**.
- B. Grade: **[Premium] [Custom]** .
- C. Regional Materials: Exterior ornamental work for transparent finish shall be manufactured within **500 miles** (800 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles** (800 km) of Project site.
- D. Certified Wood: Wood and composite wood components of exterior ornamental work for transparent finish shall be certified as "FSC Pure"[**or "FSC Mixed Credit"**] according to FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship," and FSC STD-40-004, "FSC Standard for Chain of Custody Certification."
- E. Wood Species: **[Teak] [African mahogany] [All-heart redwood] [Western red cedar] [Ponderosa pine or sugar pine] <Insert species>**.

2.5 EXTERIOR ORNAMENTAL WORK FOR OPAQUE FINISH

- A. Exterior ornamental work for opaque finish includes the following:
1. Balustrades.
 2. Columns.
 3. Cupolas.
 4. Pediment heads.
 5. Pilasters.

6. <Insert description>.

B. Grade: [**Premium**] [**Custom**].

C. Regional Materials: Exterior ornamental work for opaque finish shall be manufactured within **500 miles** (800 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles** (800 km) of Project site.

D. Certified Wood: Wood and composite wood components of exterior ornamental work for opaque finish shall be certified as "FSC Pure"[or "**FSC Mixed Credit**"] according to FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship," and FSC STD-40-004, "FSC Standard for Chain of Custody Certification."

E. Wood Species: [**All-heart redwood**] [**Western red cedar**] [**Ponderosa pine**] [**Ponderosa pine or sugar pine**] [**Eastern white pine, sugar pine, or western white pine**] [**Any closed-grain hardwood**] [**Softwood plywood**] <Insert species>.

2.6 INTERIOR ORNAMENTAL WORK FOR TRANSPARENT FINISH

A. Interior ornamental work for transparent finish includes the following:

1. Balustrades.
2. Columns.
3. Grilles.
4. Lectern.
5. Mantels.
6. Pediment heads.
7. Pilasters.
8. <Insert description>.

B. Grade: [**Premium**] [**Custom**].

C. Regional Materials: Interior ornamental work for transparent finish shall be manufactured within **500 miles** (800 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles** (800 km) of Project site.

D. Regional Materials: Interior ornamental work for transparent finish shall be manufactured within **500 miles** (800 km) of Project site.

E. Certified Wood: Interior ornamental work for transparent finish shall be produced from wood certified as "FSC Pure"[or "**FSC Mixed Credit**"] according to FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship," and FSC STD-40-004, "FSC Standard for Chain of Custody Certification."

F. Wood Species and Cut:[**Match species and cut indicated for other types of transparent-finished architectural woodwork located in same area of building unless otherwise indicated.**]

1. Species: [**Red oak**] <Insert species>.
2. Cut: [**Plain sliced/plain sawn**] [**Rift cut/rift sawn**] [**Quarter cut/quarter sawn**] [**Any cut**].

2.7 INTERIOR ORNAMENTAL WORK FOR OPAQUE FINISH

- A. Interior ornamental work for opaque finish includes the following:
1. Balustrades.
 2. Columns.
 3. Grilles.
 4. Lectern.
 5. Mantels.
 6. Pediment heads.
 7. Pilasters.
 8. <Insert description>.
- B. Grade: [**Premium**] [**Custom**] .
- C. Regional Materials: Interior ornamental work for opaque finish shall be manufactured within **500 miles** (800 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles** (800 km) of Project site.
- D. Regional Materials: Interior ornamental work for opaque finish shall be manufactured within **500 miles** (800 km) of Project site.
- E. Certified Wood: Interior ornamental work for opaque finish shall be produced from wood certified as "FSC Pure"[or "**FSC Mixed Credit**"] according to FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship," and FSC STD-40-004, "FSC Standard for Chain of Custody Certification."
- F. Wood Species: [**Any closed-grain hardwood**] [**Eastern white pine, sugar pine, or western white pine**] <Insert species>.

2.8 WOOD MATERIALS

- A. Wood Products: Provide materials that comply with requirements of referenced quality standard for each type of ornamental woodwork and quality grade specified unless otherwise indicated.
1. Do not use plain-sawn softwood lumber with exposed, flat surfaces more than **3 inches** (75 mm) wide.
 2. Wood Moisture Content for Exterior Materials: [**9 to 15**] [**7 to 12**] percent.
 3. Wood Moisture Content for Interior Materials: [**5 to 10**] [**4 to 9**] percent.
- B. Composite Wood and Agrifiber Products: Provide materials that comply with requirements of referenced quality standard for each type of ornamental woodwork and quality grade specified unless otherwise indicated.

1. Recycled Content of Medium-Density Fiberboard and Particleboard: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert number>** percent.
 2. Composite Wood and Agrifiber Products: Products shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
 3. Medium-Density Fiberboard: ANSI A208.2, [**Grade 130**] **<Insert grade>**[, **made with binder containing no urea formaldehyde**].
 4. Particleboard: ANSI A208.1, [**Grade M-2**] [**Grade M-2, made with binder containing no urea formaldehyde**] [**Grade M-2-Exterior Glue**].
 5. Particleboard: Straw-based particleboard complying with requirements in ANSI A208.1, Grade M-2, except for density.
 - 1) Products: Subject to compliance with requirements, provide one of the following:
 - 2) Environ Biocomposites Manufacturing LLC; Biofiber Wheat.
 - 3) Sorm Incorporated; Primeboard Premium Wheat.
 - 4) **<Insert manufacturer's name; product name or designation>**.
 - 5) or approved equal.
 6. Softwood Plywood: DOC PS 1[, **exterior**] [, **medium-density overlay**].
 7. Veneer-Faced Panel Products (Hardwood Plywood): HPVA HP-1[, **made with adhesive containing no urea formaldehyde**].
- C. Water-Repellent Preservative Treated Materials: Comply with AWWA N1 (dip, spray, flood, or vacuum-pressure treatment) for exterior ornamental woodwork items indicated to receive water-repellent preservative treatment.
1. Preservative Chemicals: 3-iodo-2-propynyl butyl carbamate (IPBC)[, **combined with an insecticide containing chlorpyrifos (CPF)**].
 2. Use chemical formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants in solution to distinguish treated material from untreated material.
 3. Extent of Water-Repellent Preservative Treatment: Treat [**exterior ornamental woodwork indicated**] [**all exterior ornamental woodwork unless otherwise indicated**].
 4. Items fabricated from the following wood species need not be treated:
 - a. [**Redwood**] [**All-heart redwood**].
 - b. [**Western red cedar**] [**All-heart western red cedar**].
 - c. White oak.
 - d. African mahogany.
 - e. Honduras mahogany.
 - f. Ipe.
 - g. Dark red meranti.
 - h. Teak.

2.9 FIRE-RETARDANT-TREATED MATERIALS

- A. Fire-Retardant-Treated Materials, General: Where fire-retardant-treated materials are indicated, use materials complying with requirements in this article that are acceptable to authorities having jurisdiction and with fire-test-response characteristics specified as determined by testing identical products per test method indicated by a qualified testing agency.
1. Use treated materials that comply with requirements of referenced woodworking standard. Do not use materials that are warped, discolored, or otherwise defective.
 2. Use fire-retardant-treatment formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.
 3. Identify fire-retardant-treated materials with appropriate classification marking of qualified testing agency in the form of removable paper label or imprint on surfaces that will be concealed from view after installation.
- B. Fire-Retardant-Treated Lumber and Plywood: Products with a flame-spread index of 25 or less when tested according to ASTM E 84, with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than **10.5 feet (3.2 m)** beyond the centerline of the burners at any time during the test.
1. For exterior applications, use materials that comply with testing requirements after being subjected to accelerated weathering according to ASTM D 2898.
 2. Kiln dry lumber and plywood after treatment to a maximum moisture content of 19 and 15 percent, respectively.
 3. For items indicated to receive a stained or natural finish, use organic resin chemical formulation.
 4. Mill lumber after treatment within limits set for wood removal that do not affect listed fire-test-response characteristics, using a woodworking shop certified by testing and inspecting agency.
 5. Mill lumber before treatment and implement special procedures during treatment and drying processes that prevent lumber from warping and developing discolorations from drying sticks or other causes, marring, and other defects affecting appearance of treated woodwork.
- C. Fire-Retardant Particleboard: Panels complying with the following requirements, made from softwood particles and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 25 or less per ASTM E 84.
1. For panels **3/4 inch (19 mm)** thick and less, comply with ANSI A208.1 for Grade M-2 except for the following minimum properties: modulus of rupture, **1600 psi (11 MPa)**; modulus of elasticity, **300,000 psi (2070 MPa)**; internal bond, **80 psi (550 kPa)**; and screw-holding capacity on face and edge, **250 and 225 lbf (1100 and 1000 N)**, respectively.
 2. For panels **13/16 to 1-1/4 inches (20 to 32 mm)** thick, comply with ANSI A208.1 for Grade M-1 except for the following minimum properties: modulus of rupture,

1300 psi (9 MPa); modulus of elasticity, 250,000 psi (1720 MPa); linear expansion, 0.50 percent; and screw-holding capacity on face and edge, 250 and 175 lbf (1100 and 780 N), respectively.

3. Products: Subject to compliance with requirements, provide one of the following:
 - a. Flakeboard Company Limited; Duraflake FR.
 - b. SierraPine; Encore FR.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.

D. Fire-Retardant Fiberboard: Medium-density fiberboard panels complying with ANSI A208.2, made from softwood fibers, synthetic resins, and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 200 or less per ASTM E 84.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Panel Source International, Inc.; Pyroblock Platinum.
 - b. SierraPine; Medite FR.
 - c. **<Insert manufacturer>**
 - d. or approved equal.

2.10 MISCELLANEOUS MATERIALS

A. Exterior Blocking, Shims, and Nailers: Softwood or hardwood lumber[, **pressure-preservative treated**] [, **fire-retardant treated**], kiln dried to less than 15 percent moisture content.

1. Preservative Treatment by Pressure Process: AWPA U1; Use Category UC3b.
 - a. Kiln dry lumber after treatment to a maximum moisture content of 19 percent.
 - b. Preservative Chemicals: Acceptable to authorities having jurisdiction[**and containing no arsenic or chromium**].
 - c. Mark lumber with treatment quality mark of an inspection agency approved by the American Lumber Standards Committee's (ALSC) Board of Review.

B. Interior Furring, Blocking, Shims, and Hanging Strips: [**Softwood or hardwood lumber**] [**Fire-retardant-treated softwood lumber**], kiln dried to less than 15 percent moisture content.

C. Nails for Exterior Use: [**hot-dip galvanized**] [**or**] [**stainless steel**].

D. Screws for Exterior Use: [**bronze**] [**hot-dip galvanized**] [**or**] [**stainless steel**].

E. Provide self-drilling screws for metal-framing supports, as recommended by metal-framing manufacturer.

F. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide metal expansion sleeves or expansion bolts for post-installed

anchors. Use nonferrous-metal or hot-dip galvanized anchors and inserts at inside face of exterior walls and at floors.

- G. Adhesives: Do not use adhesives that contain urea formaldehyde.
- H. Adhesives: Use adhesives that meet the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- I. VOC Limits for Installation Adhesives and Sealants: Use products that comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
 - 1. Wood Glues: 30 g/L.
 - 2. Multipurpose Construction Adhesives: 70 g/L.
 - 3. Structural Wood Member Adhesive: 140 g/L.
 - 4. Architectural Sealants: 250 g/L.

2.11 FABRICATION

- A. Sand fire-retardant-treated wood lightly to remove raised grain on exposed surfaces before fabrication.
- B. Fabricate ornamental woodwork to dimensions, profiles, and details indicated. Ease edges to radius indicated for the following:
 - 1. Edges of Solid-Wood (Lumber) Members: **1/16 inch** (1.5 mm) unless otherwise indicated.
 - 2. Edges of Rails and Similar Members More Than **3/4 Inch** (19 mm) Thick: **1/8 inch** (3 mm).
- C. Complete fabrication, including assembly[**and finishing**], to maximum extent possible before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
 - 1. Notify DEN Project Manager seven (7) days in advance of the dates and times ornamental woodwork fabrication will be complete.
 - 2. Trial fit assemblies at fabrication shop that cannot be shipped completely assembled. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting. Verify that various parts fit as intended and check measurements of assemblies against field measurements before disassembling for shipment.

2.12 SHOP PRIMING

- A. Exterior Ornamental Woodwork for Opaque Finish: Shop prime with one coat of wood primer specified in Section 099113 "Exterior Painting."

- B. Exterior Ornamental Woodwork for Transparent Finish: Shop seal with stain (if required), other required pretreatments, and first coat of finish as specified in Section 099300 "Staining and Transparent Finishing."
- C. Interior Ornamental Woodwork for Opaque Finish: Shop prime with one coat of wood primer specified in Section 099123 "Interior Painting."
- D. Interior Ornamental Woodwork for Transparent Finish: Shop seal with stain (if required), other required pretreatments, and first coat of finish as specified in Section 099300 "Staining and Transparent Finishing."
- E. Preparations for Finishing: Comply with referenced quality standard for sanding, filling countersunk fasteners, sealing concealed surfaces, and similar preparations for finishing ornamental woodwork, as applicable to each unit of work.
 - 1. Backpriming: Apply minimum one coat of sealer or primer, compatible with finish coats, to all concealed surfaces of woodwork. Apply two coats to surfaces installed in contact with concrete or masonry and to end-grain surfaces.

2.13 SHOP FINISHING

- A. General: Finish ornamental woodwork at fabrication shop as specified in this Section. Defer only final touchup, cleaning, and polishing until after installation.
- B. General: Shop finish transparent-finished ornamental woodwork at fabrication shop as specified in this Section. Refer to [**Section 099113 "Exterior Painting"**] [**and**] [**Section 099123 "Interior Painting"**] for field finishing opaque-finished architectural woodwork.
- C. General: Drawings indicate items that are required to be shop finished. Finish such items at fabrication shop as specified in this Section. Refer to [**Section 099113 "Exterior Painting"**] [**Section 099123 "Interior Painting"**] [**and**] [**Section 099300 "Staining and Transparent Finishing"**] for field finishing ornamental woodwork not indicated to be shop finished.
- D. Finish Materials: Use finish materials that meet the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- E. Preparation for Finishing: Comply with referenced quality standard for sanding, filling countersunk fasteners, sealing concealed surfaces, and similar preparations for finishing ornamental woodwork, as applicable to each unit of work.
 - 1. Backpriming: Apply minimum one coat of sealer or primer, compatible with finish coats, to concealed surfaces of ornamental woodwork. Apply two coats to end-grain surfaces.
- F. Transparent Finish for Exterior Items: Comply with Section 099300 "Staining and Transparent Finishing."

- G. Opaque Finish for Exterior Items: Comply with Section 099113 "Exterior Painting."
- H. Transparent Finish for Interior Items:
1. Grade: **[Premium]** **[Custom]** **[Same as item to be finished]**.
 2. Finish: System - 1, nitrocellulose lacquer.
 3. Finish: System - 2, precatalyzed lacquer.
 4. Finish: System - 3, postcatalyzed lacquer.
 5. Finish: System - 4, water-based latex acrylic.
 6. Finish: System - 5, conversion varnish.
 7. Finish: System - 6, synthetic penetrating oil.
 8. Finish: System - 7, catalyzed vinyl.
 9. Finish: System - 8, water-based cross-linking acrylic.
 10. Finish: System - 9, UV curable acrylated epoxy, polyester, or urethane.
 11. Finish: System - 10, water-based UV curable.
 12. Finish: System - 11, catalyzed polyurethane.
 13. Finish: System - 12, water-based polyurethane.
 14. Finish: System - 13, catalyzed polyester.
 15. Wash Coat for Closed-Grain Woods: Apply wash-coat sealer to woodwork made from closed-grain wood before staining and finishing.
 16. Staining: **[None required]** **[Match approved sample for color]** **[Match DEN Project Manager's sample]**.
 17. Open Finish for Open-Grain Woods: Do not apply filler to open-grain woods.
 18. Filled Finish for Open-Grain Woods:**[After staining, apply wash-coat sealer and allow to dry.]** Apply paste wood filler and wipe off excess. Tint filler to match stained wood.
 19. Sheen: **[Flat, 15-30]** **[Satin, 31-45]** **[Semigloss, 46-60]** **[Gloss, 61-100]** gloss units measured on 60-degree gloss meter per ASTM D 523.
- I. Opaque Finish for Interior Items:
1. Grade: **[Premium]** **[Custom]** **[Same as item to be finished]**.
 2. Finish: System - 1, nitrocellulose lacquer.
 3. Finish: System - 2, precatalyzed lacquer.
 4. Finish: System - 3, postcatalyzed lacquer.
 5. Finish: System - 4, water-based latex acrylic.
 6. Finish: System - 5, conversion varnish.
 7. Finish: System - 7, catalyzed vinyl.
 8. Finish: System - 8, water-based cross-linking acrylic.
 9. Finish: System - 9, UV curable acrylated epoxy, polyester, or urethane.
 10. Finish: System - 10, water-based UV curable.
 11. Finish: System - 11, catalyzed polyurethane.
 12. Finish: System - 12, water-based polyurethane.
 13. Finish: System - 13, catalyzed polyester.
 14. Color: **[As indicated by manufacturer's designations]** **[Match DEN Project Manager's sample]** **[As selected by DEN Project Manager from manufacturer's full range]**.
 15. Sheen: **[Flat, 15-30]** **[Satin, 31-45]** **[Semigloss, 46-60]** **[Gloss, 61-100]** gloss units measured on 60-degree gloss meter per ASTM D 523.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Before installation, condition ornamental woodwork to average prevailing humidity conditions in installation areas.
- B. Before installing ornamental woodwork, examine shop-fabricated work for completion and complete work as required, including removal of packing and backpriming of all concealed wood surfaces.

3.2 INSTALLATION

- A. Grade: Install ornamental woodwork to comply with same grade as item to be installed.
- B. Assemble ornamental woodwork and complete fabrication at Project site to the extent that it was not completed in the shop.
- C. Install ornamental woodwork level, plumb, true, and straight. Shim as required with concealed shims. Install level and plumb to a tolerance of **1/8 inch in 96 inches** (3 mm in 2400 mm).
- D. Scribe and cut ornamental woodwork to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.
- E. Backprime and seal all concealed wood surfaces that are exposed due to cutting and other installation activities.
- F. Fire-Retardant-Treated Wood: Handle, store, and install fire-retardant-treated wood to comply with chemical treatment manufacturer's written instructions, including those for adhesives used to install woodwork.
- G. Preservative-Treated Wood: Where cut or drilled in field, treat cut ends and drilled holes according to AWPA M4.
- H. Anchor ornamental woodwork to anchors or blocking built in or directly attached to substrates. Secure with countersunk, concealed fasteners and blind nailing. Use fine finishing nails[**or finishing screws**] for exposed fastening, countersunk and filled flush with ornamental woodwork.
 - 1. For shop-finished items, use filler matching finish of items being installed.
- I. Touch up finishing work specified in this Section after installation of ornamental woodwork. Fill nail holes with matching filler where exposed.
 - 1. Apply specified finish coats, including stains and paste fillers if any, to exposed surfaces where only sealer/prime coats are applied in shop.
- J. Refer to [**Section 099113 "Exterior Painting"**] [**Section 099123 "Interior Painting"**]

[and] [Section 099300 "Staining and Transparent Finishing"] for final finishing of installed ornamental woodwork[**not indicated to be shop finished**].

3.3 ADJUSTING AND CLEANING

- A. Repair damaged and defective ornamental woodwork, where possible, to eliminate functional and visual defects; where not possible to repair, replace ornamental woodwork. Adjust joinery for uniform appearance.
- B. Clean ornamental woodwork on exposed and semiexposed surfaces. Touch up shop-applied finishes to restore damaged or soiled areas.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 064400

SECTION 064600 - WOOD TRIM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Exterior standing and running trim.
2. Interior standing and running trim.
3. Closet and utility shelving.
4. Wood furring, blocking, shims, and hanging strips for installing woodwork items unless concealed within other construction before woodwork installation.
5. Shop priming of wood trim.
6. Shop finishing of wood trim.

- B. Related Requirements:

1. Section 061000 "Rough Carpentry" for wood furring, blocking, and shims required for installing wood trim and concealed within other construction before wood trim installation.
2. Section 064400 "Ornamental Woodwork" for miscellaneous shop-assembled woodwork items.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product[, **including**] [**panel products**] [**fire-retardant-treated materials**] [**and**] [**finishing materials and processes**].

1. Include data for fire-retardant treatment from chemical-treatment manufacturer and certification by treating plant that treated materials comply with requirements.

- B. LEED Submittals:

1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product

- having recycled content.
2. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating distance to Project, cost for each regional material, and fraction by weight that is considered regional.
 3. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regionally manufactured[**and regionally extracted and manufactured**] materials. Include statement indicating cost for each regionally manufactured material.
 - a. Include statement indicating location of manufacturer and distance to Project for each regionally manufactured material.
 - b. Include statement indicating location of manufacturer and point of extraction, harvest, or recovery for each raw material used in regionally extracted and manufactured materials. Indicate distance to Project and fraction by weight of each regionally manufactured material that is regionally extracted.
 4. Certificates for [**Credit MR 6**] [**Credit MR 7**]: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification and chain-of-custody requirements. Include statement indicating cost for each certified wood product.
 5. Product Data for Credit IEQ 4.1: For installation adhesives, including printed statement of VOC content.
 6. Laboratory Test Reports for Credit IEQ 4.1: For adhesives, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
 7. Product Data for Credit IEQ 4.4: For adhesives and composite wood products, documentation indicating that products contain no urea formaldehyde.
 8. Laboratory Test Reports for Credit IEQ 4.4: For composite wood products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: Show location of each item, dimensioned plans and elevations, large-scale details, attachment devices, and other components.
1. Show details full size.
 2. Show locations and sizes of furring, blocking, and hanging strips, including concealed blocking and reinforcement specified in other Sections.
 3. Apply AWI Quality Certification Program label to Shop Drawings.
- D. Samples for Initial Selection:
1. Shop-applied transparent finishes.
 2. Shop-applied opaque finishes.

3. PVC edge material.
4. Thermoset decorative panels.

E. Samples for Verification:

1. Lumber for transparent finish, not less than [5 inches (125 mm) wide by 12 inches (300 mm) long] [5 inches (125 mm) wide by 24 inches (600 mm) long], for each species and cut, finished on one side and one edge.
2. Lumber and panel products with shop-applied opaque finish, 5 inches (125 mm) wide by 12 inches (300 mm) long for lumber and [8 by 10 inches (200 by 250 mm)] [12 by 12 inches (300 by 300 mm)] for panels, for each finish system and color, with [one-half of] exposed surface finished.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For [Installer] [fabricator].
- B. Quality Certification: Submit woodwork Manufacturer's (Fabricator's) certification, stating that fabricated woodwork complies with quality grades and other requirements indicated.
- C. Product Certificates: For [each type of product.] [the following:]
 1. Composite wood and agrifiber products.
 2. Thermoset decorative panels.
 3. Adhesives.
- D. Woodwork Quality Standard Compliance Certificates: AWI Quality Certification Program certificates.
- E. Certificate from the fabricator providing proof of not less than five (5) years experience in the fabrication of the types of products specified.
- F. Certificate from the installer providing proof of not less than five (5) years of successful experience in the installation of similar types of products and shall have completed at least 3 jobs of similar size and scope.
- G. Evaluation Reports: For fire-retardant-treated materials, from ICC-ES.
- H. Provide warranty for two (2) years from date of final acceptance materials, fabrication and installation of all items.

1.5 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Fabricator Qualifications: Shop that employs skilled workers who custom fabricate products similar to those required for this Project and whose products have a record of successful in-service performance. Shop is a certified participant in AWI's Quality Certification Program.
- B. Installer Qualifications: **[Fabricator of products] [Certified participant in AWI's Quality Certification Program]**.
- C. Testing Agency Qualifications: For testing agency providing classification marking for fire-retardant-treated material, an inspection agency acceptable to authorities having jurisdiction that periodically performs inspections to verify that the material bearing the classification marking is representative of the material tested.
- D. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Build mockups of **[typical wood trim as shown on Drawings] <Insert description>**.
 - 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- E. Warranty: Fabricator/installer to warrant for two (2) years from date of final acceptance of materials, fabrication, and installation of all items.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Protect woodwork during transit, delivery, storage, and handling to prevent damage, soiling, and deterioration.
- B. Do not deliver wood trim until operations that could damage wood trim have been completed in installation areas. If wood trim must be stored in other than installation areas, store only in areas where environmental conditions comply with requirements specified in "Field Conditions" Article.

1.8 FIELD CONDITIONS

- A. Conditioning: Woodwork Manufacturer and Installer shall advise Contractor of temperature and humidity requirements for woodwork installation and storage areas. Do not install woodwork until required temperature and relative humidity have been stabilized and will be maintained in installation areas.
- B. Maintain temperature and humidity in installation area as required to maintain moisture content of installed woodwork within a 1.0 percent tolerance of optimum moisture content, from date of installation through remainder of construction period. Require Woodwork Manufacturer to establish optimum moisture content and required temperature and humidity conditions.

- C. Weather Limitations for Exterior Work: Proceed with installation of exterior wood trim only when existing and forecasted weather conditions permit work to be performed and at least one coat of specified finish to be applied without exposure to rain, snow, or dampness.
- D. Environmental Limitations for Interior Work: Do not deliver or install interior wood trim until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.
- E. Environmental Limitations for Interior Work: Do not deliver or install interior wood trim until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature between **60 and 90 deg F** (16 and 32 deg C) and relative humidity between **[25 and 55] [17 and 50] <Insert humidity range>** percent during the remainder of the construction period.

1.9 COORDINATION

- A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to ensure that wood trim can be supported and installed as indicated.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 FABRICATION, GENERAL

- A. Wood Moisture Content: Comply with requirements of referenced quality standard for moisture content of lumber at time of fabrication and for relative humidity conditions in the installation areas.
- B. Fabricate woodwork to dimensions, profiles, and details indicated with openings and mortises precut, where possible, to receive hardware and other items and work.
- C. Complete fabrication, assembly, finishing, hardware application, and other work before shipment to project site to maximum extent possible. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
- D. Pre Cut Openings: Fabricate architectural woodwork with precut openings, where possible, to receive hardware, appliances, plumbing fixtures, electrical work and similar items. Locate openings accurately and use templates or roughing in diagrams

for proper size and shape. Smooth edges of cutoffs and, where located in countertops and similar exposures seal edges of cutouts with a water resistant coating.

- E. Measurements: Before proceeding with fabrication of woodwork required to be fitted to other construction, obtain field measurements and verify dimensions and shop drawing details as required for accurate fit.

2.2 WOOD TRIM FABRICATORS

- A. Fabricators: Subject to compliance with requirements, provide products by one of the following:
 1. **<Insert, in separate subparagraphs, names and possibly contact information for preapproved woodworking firms>.**
 2. or approved equal.

2.3 WOOD TRIM, GENERAL

- A. Quality Standard: Unless otherwise indicated, comply with the "Architectural Woodwork Standards" for grades of wood trim indicated for construction, finishes, installation, and other requirements.
 1. Provide **[labels] [and] [certificates]** from **[AWI]** certification program indicating that woodwork[, **including installation,**] complies with requirements of grades specified.
 2. The Contract Documents contain selections chosen from options in the quality standard and additional requirements beyond those of the quality standard. Comply with those selections and requirements in addition to the quality standard.

2.4 EXTERIOR STANDING AND RUNNING TRIM FOR TRANSPARENT FINISH

- A. Grade: **[Premium] [Custom]**.
- B. Regional Materials: Exterior trim for transparent finish shall be manufactured within **500 miles** (800 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles** (800 km) of Project site.
- C. Certified Wood: Exterior trim for transparent finish shall be certified as "FSC Pure"[**or "FSC Mixed Credit"**] according to FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship," and FSC STD-40-004, "FSC Standard for Chain of Custody Certification."
- D. Wood Species: **[All-heart redwood] [Western red cedar] [Ponderosa pine or sugar pine] [Eastern white pine] <Insert species>.**

2.5 EXTERIOR STANDING AND RUNNING TRIM FOR OPAQUE FINISH

- A. Grade: [**Premium**] [**Custom**].
- B. Regional Materials: Exterior trim for opaque finish shall be manufactured within **500 miles** (800 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles** (800 km) of Project site.
- C. Certified Wood: Exterior trim for opaque finish shall be certified as "FSC Pure"[or "**FSC Mixed Credit**"] according to FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship," and FSC STD-40-004, "FSC Standard for Chain of Custody Certification."
- D. Wood Species: [**All-heart redwood**] [**Western red cedar**] [**Ponderosa pine or sugar pine**] [**Eastern white pine, sugar pine, or western white pine**] [**Any closed-grain hardwood**] <Insert species>.

2.6 INTERIOR STANDING AND RUNNING TRIM FOR TRANSPARENT FINISH

- A. Grade: [**Premium**] [**Custom**] .
- B. Regional Materials: Interior trim for transparent finish shall be manufactured within **500 miles** (800 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles** (800 km) of Project site.
- C. Regional Materials: Interior trim for transparent finish shall be manufactured within **500 miles** (800 km) of Project site.
- D. Certified Wood: Interior trim for transparent finish shall be certified as "FSC Pure"[or "**FSC Mixed Credit**"] according to FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship," and FSC STD-40-004, "FSC Standard for Chain of Custody Certification."
- E. Wood Species and Cut:[**Match species and cut indicated for other types of transparent-finished architectural woodwork located in same area of building unless otherwise indicated.**]
 - 1. Species: [**Red oak**] [**White oak**] [**White ash**] [**Hickory**] <Insert species>.
 - 2. Cut: [**Plain sliced/plain sawn**] [**Rift cut/rift sawn**] [**Quarter cut/quarter sawn**].
 - 3. Provide split species on trim that faces areas with different wood species, matching each face of woodwork to species and cut of finish wood surfaces in areas finished.
- F. For trim items[**other than base**] wider than available lumber, use veneered construction. Do not glue for width.
 - 1. For veneered base, use hardwood lumber core, glued for width.
- G. For base wider than available lumber, glue for width. Do not use veneered construction.

- H. For rails thicker than available lumber, use veneered construction. Do not glue for thickness.

2.7 INTERIOR STANDING AND RUNNING TRIM FOR OPAQUE FINISH

- A. Grade: [**Premium**] [**Custom**] .
- B. Regional Materials: Interior trim for opaque finish shall be manufactured within **500 miles** (800 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles** (800 km) of Project site.
- C. Regional Materials: Interior trim for opaque finish shall be manufactured within **500 miles** (800 km) of Project site.
- D. Certified Wood: Interior trim for opaque finish shall be certified as "FSC Pure"[**or "FSC Mixed Credit"**] according to FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship," and FSC STD-40-004, "FSC Standard for Chain of Custody Certification."
- E. Wood Species: [**Any closed-grain hardwood**] [**Eastern white pine, sugar pine, or western white pine**] <Insert species>.

2.8 CLOSET AND UTILITY SHELVING

- A. Grade: [**Premium**] [**Custom**].
- B. Shelf Material: **3/4-inch** (19-mm) [**solid lumber**] [**veneer-faced panel product with solid-lumber edge**] [**veneer-faced panel product with veneer edge banding**] [**thermoset decorative panel with solid-lumber edge**] [**thermoset decorative panel with PVC T-mold edge**] [**medium-density fiberboard with solid-lumber edge**] [**particleboard with solid-lumber edge**] [**medium-density fiberboard with radiused edge**] [**particleboard with radiused and filled edge**].
- C. Cleats: **3/4-inch** (19-mm) [**solid lumber**] [**thermoset decorative panel**] [**panel product**].
- D. Wood Species: [**Red oak**] [**Match species indicated for other types of transparent-finished architectural woodwork located in same area of building unless otherwise indicated**] [**Match species indicated for door to closet where shelving is located**] [**Any closed-grain hardwood**] [**Eastern white pine, sugar pine, or western white pine**] <Insert species>.
- E. Closet Rods: **1-5/16-inch-** (33-mm-) diameter, [**aluminum**] [**chrome-plated-steel**] [**color-coated-steel**] [**stainless-steel**] tubes complying with BHMA A156.16, L03131.
- F. Rod Flanges: [**Aluminum**] [**Chrome-plated steel**] [**Stainless steel**].

2.9 WOOD MATERIALS

- A. Wood Products: Provide materials that comply with requirements of referenced quality standard for each type of wood trim and quality grade specified unless otherwise indicated.
1. Do not use plain-sawn softwood lumber with exposed, flat surfaces more than **3 inches** (75 mm) wide.
 2. Wood Moisture Content for Exterior Materials: **[9 to 15] [7 to 12]** percent.
 3. Wood Moisture Content for Interior Materials: **[5 to 10] [4 to 9]** percent.
- B. Composite Wood and Agrifiber Products: Provide materials that comply with requirements of referenced quality standard for each type of wood trim and quality grade specified unless otherwise indicated.
1. Recycled Content of Medium-Density Fiberboard and Particleboard: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert number>** percent.
 2. Composite Wood and Agrifiber Products: Products shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
 3. Medium-Density Fiberboard: ANSI A208.2, **[Grade 130] <Insert grade>**[, **made with binder containing no urea formaldehyde**].
 4. Particleboard: ANSI A208.1, **[Grade M-2] [Grade M-2, made with binder containing no urea formaldehyde] [Grade M-2-Exterior Glue]**.
 5. Particleboard: Straw-based particleboard complying with requirements in ANSI A208.1, Grade M-2, except for density.
 - a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) Environ Biocomposites Manufacturing LLC; Biofiber Wheat.
 - 2) Sorm Incorporated; Primeboard Premium Wheat.
 - 3) **<Insert manufacturer's name; product name or designation>**.
 - 4) or approved equal.
 6. Veneer-Faced Panel Products (Hardwood Plywood): HPVA HP-1[, **made with adhesive containing no urea formaldehyde**].
 7. Thermoset Decorative Panels: Particleboard or medium-density fiberboard finished with thermally fused, melamine-impregnated decorative paper and complying with requirements of NEMA LD 3, Grade VGL, for test methods 3.3, 3.4, 3.6, 3.8, and 3.10.
- C. Water-Repellent Preservative Treated Materials: Comply with AWPA N1 (dip, spray, flood, or vacuum-pressure treatment) for exterior wood trim indicated to receive water-repellent preservative treatment.
1. Preservative Chemicals: 3-iodo-2-propynyl butyl carbamate (IPBC)[, **combined with an insecticide containing chlorpyrifos (CPF)**].

2. Use chemical formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants in solution to distinguish treated material from untreated material.
3. Extent of Water-Repellent Preservative Treatment: Treat **[exterior wood trim indicated]** **[all exterior wood trim unless otherwise indicated]**.
4. Items fabricated from the following wood species need not be treated:
 - a. **[Redwood]** **[All-heart redwood]**.
 - b. **[Western red cedar]** **[All-heart western red cedar]**.
 - c. White oak.
 - d. African mahogany.
 - e. Honduras mahogany.
 - f. Ipe.
 - g. Dark red meranti.
 - h. Teak.

2.10 FIRE-RETARDANT-TREATED MATERIALS

- A. Fire-Retardant-Treated Materials, General: Where fire-retardant-treated materials are indicated, use materials complying with requirements in this article that are acceptable to authorities having jurisdiction and with fire-test-response characteristics specified as determined by testing identical products per test method indicated by a qualified testing agency.
 1. Use treated materials that comply with requirements of referenced woodworking standard. Do not use materials that are warped, discolored, or otherwise defective.
 2. Use fire-retardant-treatment formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.
 3. Identify fire-retardant-treated materials with appropriate classification marking of qualified testing agency in the form of removable paper label or imprint on surfaces that will be concealed from view after installation.
- B. Fire-Retardant-Treated Lumber: Products with a flame-spread index of 25 or less when tested according to ASTM E 84, with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than **10.5 feet** (3.2 m) beyond the centerline of the burners at any time during the test.
 1. For exterior applications, use materials that comply with testing requirements after being subjected to accelerated weathering according to ASTM D 2898.
 2. Kiln dry lumber after treatment to a maximum moisture content of 19 percent.
 3. For items indicated to receive a stained or natural finish, use organic resin chemical formulation.
 4. Mill lumber after treatment within limits set for wood removal that do not affect listed fire-test-response characteristics, using a woodworking shop certified by testing and inspecting agency.

5. Mill lumber before treatment and implement special procedures during treatment and drying processes that prevent lumber from warping and developing discolorations from drying sticks or other causes, marring, and other defects affecting appearance of treated woodwork.

2.11 HARDWARE AND ACCESSORIES

- A. Adjustable Shelf Standards and Supports: **[BHMA A156.9, B04071; with shelf rests, B04081] [BHMA A156.9, B04102; with shelf brackets, B04112]**.
- B. Shelf Rests: BHMA A156.9, B04013; **[metal] [metal, two-pin type with shelf hold-down clip]**.

2.12 MISCELLANEOUS MATERIALS

- A. Exterior Blocking, Shims, and Nailers: Softwood or hardwood lumber[, **pressure-preservative treated**] [, **fire-retardant treated**], kiln dried to less than 15 percent moisture content.
 1. Preservative Treatment by Pressure Process: AWWA U1; Use Category UC3b.
 - a. Kiln dry lumber after treatment to a maximum moisture content of 19 percent.
 - b. Preservative Chemicals: Acceptable to authorities having jurisdiction[**and containing no arsenic or chromium**].
 - c. Mark lumber with treatment quality mark of an inspection agency approved by the American Lumber Standards Committee's (ALSC) Board of Review.
- B. Interior Furring, Blocking, Shims, and Hanging Strips: **[Softwood or hardwood lumber] [Fire-retardant-treated softwood lumber]**, kiln dried to less than 15 percent moisture content.
- C. Nails for Exterior Use: **[hot-dip galvanized] [or] [stainless steel]**.
- D. Screws for Exterior Use: **[bronze] [hot-dip galvanized] [or] [stainless steel]**.
- E. Provide self-drilling screws for metal-framing supports, as recommended by metal-framing manufacturer.
- F. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide metal expansion sleeves or expansion bolts for post-installed anchors. Use nonferrous-metal or hot-dip galvanized anchors and inserts at inside face of exterior walls and at floors.
- G. Handrail Brackets: **[Cast] [Extruded] [Stamped]** from **[malleable iron] [aluminum] [bronze] [stainless steel]** with wall flange drilled **[for exposed anchor] [and tapped for concealed hanger bolt]** and with support arm for screwing to underside of rail. Sized to provide **1-1/2-inch** (38-mm) clearance between handrail and wall.

- H. Handrail/Bumper Rail Brackets: Pairs of extruded-aluminum channels; one for fastening to back of rail and one for fastening to face of wall. They are then assembled in overlapping fashion and fastened together top and bottom with self-tapping screws. Sized to provide 1-1/2-inch (38-mm) clearance between handrail and wall.
- I. Adhesives: Do not use adhesives that contain urea formaldehyde.
- J. Adhesives: Use adhesives that meet the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- K. VOC Limits for Installation Adhesives and Sealants: Use products that comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
 - 1. Wood Glues: 30 g/L.
 - 2. Multipurpose Construction Adhesives: 70 g/L.
 - 3. Structural Wood Member Adhesive: 140 g/L.
 - 4. Architectural Sealants: 250 g/L.

2.13 FABRICATION

- A. Sand fire-retardant-treated wood lightly to remove raised grain on exposed surfaces before fabrication.
- B. Fabricate wood trim to dimensions, profiles, and details indicated. Ease edges to radius indicated for the following:
 - 1. Edges of Solid-Wood (Lumber) Members: 1/16 inch (1.5 mm) unless otherwise indicated.
 - 2. Edges of Rails and Similar Members More Than 3/4 Inch (19 mm) Thick: 1/8 inch (3 mm).
- C. Backout or groove backs of flat trim members and kerf backs of other wide, flat members except for members with ends exposed in finished work.
- D. Assemble casings in shop except where shipping limitations require field assembly.
- E. Assemble moldings in shop to maximum extent possible. Miter corners in shop and prepare for field assembly with bolted fittings designed to pull connections together.

2.14 SHOP PRIMING

- A. Exterior Wood Trim for Opaque Finish: Shop prime with one coat of wood primer specified in Section 099113 "Exterior Painting."

- B. Exterior Wood Trim for Transparent Finish: Shop seal with stain (if required), other required pretreatments, and first coat of finish as specified in Section 099300 "Staining and Transparent Finishing."
- C. Interior Wood Trim for Opaque Finish: Shop prime with one coat of wood primer specified in Section 099123 "Interior Painting."
- D. Interior Wood Trim for Transparent Finish: Shop seal with stain (if required), other required pretreatments, and first coat of finish as specified in Section 099300 "Staining and Transparent Finishing."
- E. Preparations for Finishing: Comply with referenced quality standard for sanding, filling countersunk fasteners, sealing concealed surfaces, and similar preparations for finishing wood trim, as applicable to each unit of work.
 - 1. Backpriming: Apply one coat of sealer or primer, compatible with finish coats, to concealed surfaces of wood trim. Apply two coats to surfaces installed in contact with concrete or masonry and to end-grain surfaces.

2.15 SHOP FINISHING

- A. General: Finish wood trim at fabrication shop as specified in this Section. Defer only final touchup, cleaning, and polishing until after installation.
- B. General: Shop finish transparent-finished wood trim at fabrication shop as specified in this Section. Refer to [**Section 099113 "Exterior Painting"**] [**and**] [**Section 099123 "Interior Painting"**] for field finishing opaque-finished wood trim.
- C. General: Drawings indicate items that are required to be shop finished. Finish such items at fabrication shop as specified in this Section. Refer to [**Section 099113 "Exterior Painting"**] [**Section 099123 "Interior Painting"**] [**and**] [**Section 099300 "Staining and Transparent Finishing"**] for field finishing wood trim not indicated to be shop finished.
- D. Finish Materials: Use finish materials that meet the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- E. Preparation for Finishing: Comply with referenced quality standard for sanding, filling countersunk fasteners, sealing concealed surfaces, and similar preparations for finishing wood trim, as applicable to each unit of work.
 - 1. Backpriming: Apply one coat of sealer or primer, compatible with finish coats, to concealed surfaces of wood trim. Apply two coats to end-grain surfaces.
- F. Transparent Finish for Exterior Trim: Comply with Section 099300 "Staining and Transparent Finishing."
- G. Opaque Finish for Exterior Trim: Comply with Section 099113 "Exterior Painting."

H. Transparent Finish for Interior Trim:

1. Grade: **[Premium] [Custom] [Same as item to be finished]**.
2. Finish: System - 1, nitrocellulose lacquer.
3. Finish: System - 2, precatalyzed lacquer.
4. Finish: System - 3, postcatalyzed lacquer.
5. Finish: System - 4, water-based latex acrylic.
6. Finish: System - 5, conversion varnish.
7. Finish: System - 6, synthetic penetrating oil.
8. Finish: System - 7, catalyzed vinyl.
9. Finish: System - 8, water-based cross linking acrylic.
10. Finish: System - 9, UV curable acrylated epoxy, polyester, or urethane.
11. Finish: System - 10, water-based UV curable.
12. Finish: System - 11, catalyzed polyurethane.
13. Finish: System - 12, water-based polyurethane.
14. Finish: System - 13, catalyzed polyester.
15. Wash Coat for Closed-Grain Woods: Apply wash-coat sealer to woodwork made from closed-grain wood before staining and finishing.
16. Staining: **[None required] [Match approved sample for color] [Match DEN Project Manager's sample]**.
17. Open Finish for Open-Grain Woods: Do not apply filler to open-grain woods.
18. Filled Finish for Open-Grain Woods: **[After staining, apply wash-coat sealer and allow to dry.]** Apply paste wood filler and wipe off excess. Tint filler to match stained wood.
19. Sheen: **[Flat, 15-30] [Satin, 31-45] [Semigloss, 46-60] [Gloss, 61-100]** gloss units measured on 60-degree gloss meter per ASTM D 523.

I. Opaque Finish for Interior Trim:

1. Grade: **[Premium] [Custom] [Same as item to be finished]**.
2. Finish: System - 1, nitrocellulose lacquer.
3. Finish: System - 2, precatalyzed lacquer.
4. Finish: System - 3, postcatalyzed lacquer.
5. Finish: System - 4, water-based latex acrylic.
6. Finish: System - 5, conversion varnish.
7. Finish: System - 7, catalyzed vinyl.
8. Finish: System - 8, water-based cross linking acrylic.
9. Finish: System - 9, UV curable acrylated epoxy, polyester, or urethane.
10. Finish: System - 10, water-based UV curable.
11. Finish: System - 11, catalyzed polyurethane.
12. Finish: System - 12, water-based polyurethane.
13. Finish: System - 13, catalyzed polyester.
14. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range]**.
15. Sheen: **[Flat, 15-30] [Satin, 31-45] [Semigloss, 46-60] [Gloss, 61-100]** gloss units measured on 60-degree gloss meter per ASTM D 523.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Before installation, condition wood trim to average prevailing humidity conditions in installation areas.
- B. Before installing architectural wood trim, examine shop-fabricated work for completion and complete work as required, including removal of packing and backpriming.

3.2 INSTALLATION

- A. Grade: Install wood trim to comply with same grade as item to be installed.
- B. Assemble wood trim and complete fabrication at Project site to the extent that it was not completed in the shop.
- C. Install wood trim level, plumb, true, and straight. Shim as required with concealed shims. Install level and plumb to a tolerance of **1/8 inch in 96 inches** (3 mm in 2400 mm).
- D. Scribe and cut wood trim to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.
- E. Fire-Retardant-Treated Wood: Handle, store, and install fire-retardant-treated wood to comply with chemical treatment manufacturer's written instructions, including those for adhesives used to install woodwork.
- F. Preservative-Treated Wood: Where cut or drilled in field, treat cut ends and drilled holes according to AWPA M4.
- G. Backprime and seal all concealed wood surfaces that are exposed due to cutting and other installation activities.
- H. Anchor wood trim to anchors or blocking built in or directly attached to substrates. Secure with countersunk, concealed fasteners and blind nailing. Use fine finishing nails [**or finishing screws**] for exposed fastening, countersunk and filled flush with woodwork.
 - 1. For shop-finished items, use filler matching finish of items being installed.
- I. Standing and Running Trim: Install with minimum number of joints possible, using full-length pieces (from maximum length of lumber available) to greatest extent possible. Do not use pieces less than [**36 inches** (900 mm)] [**60 inches** (1500 mm)] [**96 inches** (2400 mm)] long except where shorter single-length pieces are necessary. [**Scarf running joints and stagger in adjacent and related members.**]
 - 1. Fill gaps, if any, between top of base and wall with [**plastic wood filler; sand smooth; and finish same as wood base if finished**] [**latex sealant, painted to match wall**].

2. Install standing and running trim with no more variation from a straight line than **1/8 inch in 96 inches** (3 mm in 2400 mm).
3. Install wall railings on indicated metal brackets securely fastened to wall framing.
 - a. Space rail brackets not more than **<Insert dimension>** o.c.
- J. Touch up finishing work specified in this Section after installation of wood trim. Fill nail holes with matching filler where exposed.
 1. Apply specified finish coats, including stains and paste fillers if any, to exposed surfaces where only sealer/prime coats are applied in shop.
- K. Refer to [**Section 099113 "Exterior Painting"**] [**Section 099123 "Interior Painting"**] [**and**] [**Section 099300 "Staining and Transparent Finishing"**] for final finishing of installed wood trim[**not indicated to be shop finished**].

3.3 ADJUSTING AND CLEANING

- A. Repair damaged and defective wood trim, where possible, to eliminate functional and visual defects; where not possible to repair, replace wood trim. Adjust joinery for uniform appearance.
- B. Clean wood trim on exposed and semiexposed surfaces. Touch up shop-applied finishes to restore damaged or soiled areas.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 064600

SECTION 066400 - PLASTIC PANELING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes glass-fiber reinforced plastic (FRP) wall paneling[**and trim accessories**].
- B. Related Sections:
 - 1. Section 061000 "Rough Carpentry" for wood furring for installing plastic paneling.
 - 2. Section 102600 "Wall and Door Protection" for corner guards installed over plastic paneling.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Credit IEQ 4.1: For [**adhesives**] [**and**] [**sealants**], documentation including printed statement of VOC content.
 - 2. Product Data for Credit IEQ 4.4: For laminating adhesive[**and composite wood products**] used in factory-laminated plastic panels, documentation indicating that product contains no urea formaldehyde.
 - 3. Laboratory Test Reports for Credit IEQ 4: For [**adhesives**] [**sealants**] [**and**] [**wall panels**], documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Samples for Initial Selection: For plastic paneling[**and trim accessories**].

- D. Samples for Verification: For plastic paneling[**and trim accessories**], in manufacturer's standard sizes.

1.4 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.5 QUALITY ASSURANCE

- A. Source Limitations: Obtain plastic paneling[**and trim accessories**] from single manufacturer.
- B. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
1. Flame-Spread Index: **[25]** <Insert value> or less.
 2. Smoke-Developed Index: **[450]** <Insert value> or less.
 3. Testing Agency: **[Acceptable to authorities having jurisdiction] [FM Approvals] [UL]**.

1.6 PROJECT CONDITIONS

- A. Environmental Limitations: Do not deliver or install plastic paneling until spaces are enclosed and weathertight and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

1.7 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PLASTIC SHEET PANELING

- A. General: Gelcoat-finished, glass-fiber reinforced plastic panels complying with ASTM D 5319.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Kemlite Company Inc.
 - b. Marlite.
 - c. Nudo Products, Inc.
 - d. <Insert manufacturer's name>.
 - e. or approved equal.
2. Low-Emitting Materials: Paneling shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
 3. Nominal Thickness: Not less than [**0.075 inch (1.9 mm)**] [**0.09 inch (2.3 mm)**] [**0.12 inch (3.0 mm)**].
 4. Surface Finish: [**Smooth**] [**Molded pebble texture**] [**Smooth surface with filled grooves at 4 inches (102 mm) o.c. to resemble tile**] [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**].
 5. Color: [**White**] [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**].

2.2 FACTORY-LAMINATED PLASTIC PANELS

- A. General: Gelcoat-finished, glass-fiber reinforced plastic panels complying with ASTM D 5319, laminated to [**plywood**] [**oriented strand board**] [**fire-retardant particleboard**] [**gypsum board**] [**high-impact gypsum board**] [**moisture- and mold-resistant gypsum board**].
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Kemlite Company Inc.
 - b. Nudo Products, Inc.
 - c. <Insert manufacturer's name>.
 - d. or approved equal.
 2. Low-Emitting Materials: Paneling shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
 3. Glass-Fiber Reinforced Plastic Panel Nominal Thickness: Not less than [**0.03 inch (0.76 mm)**] [**0.05 inch (1.3 mm)**] [**0.075 inch (1.9 mm)**] [**0.09 inch (2.3 mm)**].
 4. Surface Finish: [**Smooth**] [**Molded pebble texture**] [**Smooth surface with filled grooves at 4 inches (102 mm) o.c. to resemble tile**] [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**].
 5. Color: [**White**] [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**].

6. Plywood: DOC PS 1, Exterior B-C, [**1/4 inch (6.4 mm)**] [**3/8 inch (9.5 mm)**] [**1/2 inch (12.7 mm)**] [**5/8 inch (15.9 mm)**] [**3/4 inch (19.1 mm)**] thick.
7. Oriented Strand Board: DOC PS 2, [**1/4 inch (6.4 mm)**] [**3/8 inch (9.5 mm)**] [**1/2 inch (12.7 mm)**] [**3/4 inch (19.1 mm)**] thick.
8. Fire-Retardant Particleboard: Product complying with ANSI A208.1, Grade M-S, except for modulus of rupture; with flame-spread index of 25 or less per ASTM E 84; and [**3/8 inch (9.5 mm)**] [**1/2 inch (12.7 mm)**] thick.
9. Gypsum Board: ASTM C 1396/C 1396M, [**Regular, 1/2 inch (12.7 mm)**] [**Type X, 5/8 inch (15.9 mm)**].
10. High-Impact Gypsum Board: ASTM C 1396/C 1396M, **5/8 inch (15.9 mm)**, with Type X core, and [**0.010-inch (0.254-mm)**] [**0.020-inch (0.508-mm)**] [**0.030-inch (0.762-mm)**] [**0.081-inch (2.057-mm)**] plastic film laminated to back side for greater resistance to through penetration (impact resistance).
11. Moisture- and Mold-Resistant Gypsum Board: ASTM C 1396/C 1396M or ASTM C 1178/C 1178M, **5/8 inch (15.9 mm)**, Type X, with moisture- and mold-resistant core and surfaces.
12. Laminating Adhesive: Manufacturer's standard adhesive that [**does not contain urea formaldehyde.**][**complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."**]

2.3 ACCESSORIES

- A. Trim Accessories: Manufacturer's standard one-piece vinyl extrusions designed to retain and cover edges of panels. Provide division bars, inside corners, [**outside corners,**] and caps as needed to conceal edges.
 1. Color: [**White**] [**Match panels**] [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**].
- B. Trim Accessories: Manufacturer's standard two-piece, snap-on vinyl extrusions designed to cover edges of panels. Provide division bars, inside corners, [**outside corners,**] and caps as needed to conceal edges.
 1. Color: [**White**] [**Match panels**] [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**].
- C. Exposed Fasteners: Nylon drive rivets recommended by panel manufacturer.
- D. Concealed Mounting Splines: Continuous, H-shaped aluminum extrusions designed to fit into grooves routed in edges of factory-laminated panels and to be fastened to substrate.
- E. Adhesive: As recommended by plastic paneling manufacturer.
 1. Adhesive shall have a VOC content of [**50**] **<Insert value>** g/L or less when

- calculated according to 40 CFR 59, Subpart D (EPA Method 24).
2. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- F. Sealant: [**Single-component, mildew-resistant, neutral-curing silicone**] [**Single-component, mildew-resistant, acid-curing silicone**] [**Latex**] sealant recommended by plastic paneling manufacturer and complying with requirements in Section 079200 "Joint Sealants."
- G. Retain first subparagraph below if required for LEED-NC, LEED-CI or LEED-CS Credit IEQ 4.1.
1. Sealant shall have a VOC content of [**250**] <Insert value> g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 2. Sealant shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Remove wallpaper, vinyl wall covering, loose or soluble paint, and other materials that might interfere with adhesive bond.
- B. Prepare substrate by sanding high spots and filling low spots as needed to provide flat, even surface for panel installation.
- C. Clean substrates of substances that could impair bond of adhesive, including oil, grease, dirt, and dust.
- D. Condition panels by unpacking and placing in installation space before installation according to manufacturer's written recommendations.
- E. Lay out paneling before installing. Locate panel joints [**where indicated**] [**to provide equal panels at ends of walls not less than half the width of full panels**] [**so that trimmed panels at corners are not less than 12 inches** (300 mm) **wide**].

1. Mark plumb lines on substrate at **[trim accessory]** **[panel joint]** locations for accurate installation.
2. Locate **[trim accessories]** **[panel joints]** to allow clearance at panel edges according to manufacturer's written instructions.

3.3 INSTALLATION

- A. Install plastic paneling according to manufacturer's written instructions.
- B. Install panels in a full spread of adhesive.
- C. Install panels with fasteners. Layout fastener locations and mark on face of panels so that fasteners are accurately aligned.
 1. Drill oversized fastener holes in panels and center fasteners in holes.
 2. Apply sealant to fastener holes before installing fasteners.
- D. Install factory-laminated panels using concealed mounting splines in panel joints.
- E. Install trim accessories with **[adhesive]** **[and]** **[nails]** **[or]** **[staples]**.**[Do not fasten through panels.]**
- F. Fill grooves in trim accessories with sealant before installing panels and bed inside corner trim in a bead of sealant.
- G. Maintain uniform space between panels and wall fixtures. Fill space with sealant.
- H. Maintain uniform space between adjacent panels and between panels and floors, ceilings, and fixtures. Fill space with sealant.
- I. Remove excess sealant and smears as paneling is installed. Clean with solvent recommended by sealant manufacturer and then wipe with clean dry cloths until no residue remains.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 066400

SECTION 070150.19 - PREPARATION FOR RE-ROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Roof tear-off.
 - 2. Partial roof tear-off.
 - 3. Temporary roofing membrane.
 - 4. Roof re-cover preparation.
 - 5. Removal of base flashings.
- B. Related Sections:
 - 1. Section 011000 "Summary" for use of the premises and phasing requirements.
 - 2. Section 015000 "Temporary Facilities and Controls" for temporary construction and environmental-protection measures for reroofing preparation.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 MATERIALS OWNERSHIP

- A. Except for items or materials indicated to be reused, reinstalled, or otherwise indicated to remain Owner's property, demolished materials shall become Contractor's property and shall be removed from Project site and brought to DEN approved landfill as designated by Owner.

1.4 DEFINITIONS

- A. Roofing Terminology: Refer to ASTM D 1079 and glossary in NRCA's "The NRCA Roofing and Waterproofing Manual" for definition of terms related to roofing work in this Section.
- B. Existing Membrane Roofing System: **[Built-up asphalt] [Built-up coal-tar] [EPDM] [CSPE] [PVC] [TPO] [APP-modified bituminous] [SBS-modified bituminous]**

<Insert roof type> roofing membrane, roof insulation, surfacing, and components and accessories between deck and roofing membrane.

- C. Roof Re-Cover Preparation: Existing roofing membrane that is to remain and be prepared for reuse.
- D. Roof Tear-Off: Removal of existing membrane roofing system from deck.
- E. Partial Roof Tear-Off: Removal of a portion of existing membrane roofing system from deck or removal of selected components and accessories from existing membrane roofing system.
- F. Remove: Detach items from existing construction and legally dispose of them off-site unless indicated to be removed and reinstalled.
- G. Existing to Remain: Existing items of construction that are not indicated to be removed.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Include data substantiating that materials comply with requirements.
- B. Temporary Roofing: Include Product Data and description of temporary roofing system, including specifications, installation instructions, and general recommendations from manufacturers of roofing system materials, for types of temporary roofing materials required. Include data substantiating that materials comply with requirements.
 - 1. If temporary roof will remain in place, submit surface preparation requirements needed to receive permanent roof, and submit a letter from roofing membrane manufacturer stating acceptance of the temporary membrane and that its inclusion will not adversely affect the roofing system's resistance to fire and wind[**or its FM Global rating**].

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer[**including certificate that Installer is licensed to perform asbestos abatement**] [and] [**is approved by warrantor of existing roofing system**].
- B. Fastener pull-out test report.
- C. Photographs or Videotape: Show existing conditions of adjoining construction and site improvements, including exterior and interior finish surfaces that might be misconstrued as having been damaged by reroofing operations. Submit before Work begins.

- D. Landfill Records: Indicate receipt and acceptance of hazardous wastes, such as asbestos-containing material, by a DEN approved landfill facility licensed to accept hazardous wastes.

1.7 QUALITY ASSURANCE

A. Installer Qualifications:

1. A firm with not less than five (5) years of successful experience in re-roofing work similar to those required for this project and which is acceptable to or licensed by manufacturer of temporary roofing materials.
2. Installer of new membrane roofing system[, **licensed to perform asbestos abatement in the State of Colorado**] **[and] [approved by warrantor of existing roofing system to work on existing roofing].**

- B. Regulatory Requirements: Comply with governing EPA notification regulations before beginning membrane roofing removal. Comply with hauling and disposal regulations of authorities having jurisdiction.

C. Reroofing Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager] <Insert location>**.

1. Meet with Owner; DEN Project Manager, Owner's insurer if applicable, testing and inspecting agency representative; roofing system manufacturer's representative; deck Installer; roofing Installer including project manager, superintendent, and foreman; and installers whose work interfaces with or affects reroofing including installers of roof accessories and roof-mounted equipment.
2. Review methods and procedures related to roofing system tear-off and replacement including, but not limited to, the following:
 - a. Reroofing preparation, including membrane roofing system manufacturer's written instructions.
 - b. Temporary protection requirements for existing roofing system that is to remain during and after installation.
 - c. Existing roof drains and roof drainage during each stage of reroofing, and roof drain plugging and plug removal requirements.
 - d. Construction schedule and availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - e. Existing deck removal procedures and Owner notifications.
 - f. Condition and acceptance of existing roof deck and base flashing substrate for reuse.
 - g. Structural loading limitations of deck during reroofing.
 - h. Base flashings, special roofing details, drainage, penetrations, equipment curbs, and condition of other construction that will affect reroofing.
 - i. HVAC shutdown and sealing of air intakes.
 - j. Shutdown of fire-suppression, -protection, and -alarm and -detection systems.
 - k. Asbestos removal and discovery of asbestos-containing materials.

- I. Governing regulations and requirements for insurance and certificates if applicable.
- m. Existing conditions that may require notification of DEN Project Manager before proceeding.
- n. Record discussions and agreements and furnish copy to each participant.
- o. Provide at least 72 hours advance notice to participants prior to convening pre roofing conference.

1.8 PROJECT CONDITIONS

- A. Owner will occupy portions of building immediately below reroofing area. Conduct reroofing so Owner's operations will not be disrupted. Provide DEN Project Manager with not less than [72] <Insert number> hours' notice of activities that may affect Owner's operations.
 1. Coordinate work activities daily with DEN Project Manager so Owner can place protective dust or water leakage covers over sensitive equipment or furnishings, shut down HVAC and fire-alarm or -detection equipment if needed, and evacuate occupants from below the work area.
 2. Before working over structurally impaired areas of deck, notify DEN Project Manager to evacuate occupants from below the affected area. Verify that occupants below the work area have been evacuated before proceeding with work over the impaired deck area.
- B. Protect building to be reroofed, adjacent buildings, walkways, site improvements, exterior plantings, and landscaping from damage or soiling from reroofing operations.
- C. Maintain access to existing walkways, corridors, and other adjacent occupied or used facilities.
- D. Conditions existing at time of inspection for bidding will be maintained by Owner as far as practical.
 1. A roof moisture survey of existing membrane roofing system is available for Contractor's reference.
 2. The results of an analysis of test cores from existing membrane roofing system are available for Contractor's reference.
 3. Construction Drawings[and Project Manual] for existing roofing system are provided for Contractor's reference. Contractor is responsible for conclusions derived from existing documents.
- E. Limit construction loads on roof to <Insert load> rooftop equipment wheel loads and <Insert load> for uniformly distributed loads.
- F. Weather Limitations: Proceed with reroofing preparation only when existing and forecasted weather conditions permit Work to proceed without water entering existing roofing system or building.

- G. Hazardous Materials: It is not expected that hazardous materials such as asbestos-containing materials will be encountered in the Work.
1. Hazardous materials will be removed by Owner before start of the Work. Existing roof will be left no less watertight than before removal.
 2. If materials suspected of containing hazardous materials are encountered, do not disturb; immediately notify DEN Project Manager. Hazardous materials will be removed by Owner under a separate contract.
- H. Hazardous Materials: Present in building to be reroofed. A report on the presence of hazardous materials is on file for review and use. Examine report to become aware of locations where hazardous materials are present.
1. Hazardous material remediation is specified elsewhere in the Contract Documents.
 2. Do not disturb hazardous materials or items suspected of containing hazardous materials except according to procedures specified elsewhere in the Contract Documents.
 3. Coordinate with hazardous material remediation subcontractor to prevent water from entering existing roofing system or building.

1.9 WARRANTY

- A. Existing Warranties: Remove, replace, patch, and repair materials and surfaces cut or damaged during reroofing, by methods and with materials so as not to void existing roofing system warranty. Notify warrantor before proceeding.
1. Notify warrantor of existing roofing system on completion of reroofing, and obtain documentation verifying that existing roofing system has been inspected and warranty remains in effect. Submit documentation at Project closeout.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Performance: Provide roofing materials recognized to be of generic type indicated and tested to show compliance with indicated performances, or provide other similar materials certified in writing by manufacturer to be equal or better than specified in every significant respect and acceptable to DEN Project Manager.
- B. Compatibility: Provide products which are recommended by manufacturers to be fully

compatible with indicated substrates, or provide separation materials as required to eliminate contact between incompatible materials.

2.2 INFILL MATERIALS

A. Use infill materials matching existing membrane roofing system materials unless otherwise indicated.

1. Infill materials are specified in Section <Insert Section number> "<Insert title of applicable roofing membrane Section>."

2.3 TEMPORARY ROOFING MATERIALS

- A. Sheathing Paper: Red-rosin type, minimum 3 lb/100 sq. ft. (0.16 kg/sq. m).
- B. Base Sheet: ASTM D 4601, Type II, nonperforated, asphalt-impregnated and -coated, glass-fiber sheet.
- C. Glass-Fiber Felts: ASTM D 2178, Type IV, asphalt-impregnated, glass-fiber felt.
- D. Asphalt Primer: ASTM D 41.
- E. Roofing Asphalt: ASTM D 312, Type III or IV.

2.4 RECOVER BOARDS

- A. Recover Board: ASTM C 208, Type II, Grade [1] [2], cellulosic-fiber insulation board; 1/2 inch (13 mm) thick.
- B. Recover Board: Fan-folded, unfaced, extruded-polystyrene board insulation; [3/16-inch (5-mm)] [1/4-inch (6-mm)] [3/8-inch (10-mm)] nominal thickness.
- C. Recover Board: ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum substrate; [1/4 inch (6 mm)] [1/2 inch (13 mm)] [Type X, 5/8 inch (16 mm)] thick.
- D. Recover Board: ASTM C 1278/C 1278M, cellulosic-fiber-reinforced, water-resistant gypsum substrate; [1/4 inch (6 mm)] [3/8 inch (10 mm)] [1/2 inch (13 mm)] [5/8 inch (16 mm)] thick.
- E. Recover Board: ASTM C 728, perlite board; [1/2 inch (13 mm)] [3/4 inch (19 mm)] [1 inch (25 mm)] thick.
- F. Fasteners: Factory-coated steel fasteners, No. [12] [or] [14], and metal or plastic plates listed in FM Approval's "Approval Guide," designed for fastening recover boards to deck.

2.5 AUXILIARY REROOFING MATERIALS

- A. General: Auxiliary reroofing preparation materials recommended by roofing system manufacturer for intended use and compatible with components of **[existing and]**new membrane roofing system.
- B. Base Sheet Fasteners: Capped head, factory-coated steel fasteners, listed in FM Approval's "Approval Guide."
- C. Metal Flashing Sheet: Metal flashing sheet is specified in Section 076200 "Sheet Metal Flashing and Trim."

PART 3 - EXECUTION

3.1 PREPARATION

- A. Protect existing membrane roofing system that is indicated not to be reroofed.
 - 1. Loosely lay **1-inch-** (25-mm-) minimum thick, molded expanded polystyrene (MEPS) insulation over the roofing membrane in areas indicated. Loosely lay **15/32-inch** (12-mm) plywood or OSB panels over MEPS. Extend MEPS past edges of plywood or OSB panels a minimum of **1 inch** (25 mm).
 - 2. Limit traffic and material storage to areas of existing roofing membrane that have been protected.
 - 3. Maintain temporary protection and leave in place until replacement roofing has been completed. Remove temporary protection on completion of reroofing.
- B. Coordinate with DEN Project Manager to shut down air-intake equipment in the vicinity of the Work. Cover air-intake louvers before proceeding with reroofing work that could affect indoor air quality or activate smoke detectors in the ductwork.
- C. During removal operations, have sufficient and suitable materials on-site to facilitate rapid installation of temporary protection in the event of unexpected rain.
- D. Maintain roof drains in functioning condition to ensure roof drainage at end of each workday. Prevent debris from entering or blocking roof drains and conductors. Use roof-drain plugs specifically designed for this purpose. Remove roof-drain plugs at end of each workday, when no work is taking place, or when rain is forecast.
 - 1. If roof drains are temporarily blocked or unserviceable due to roofing system removal or partial installation of new membrane roofing system, provide alternative drainage method to remove water and eliminate ponding. Do not permit water to enter into or under existing membrane roofing system components that are to remain.
- E. Verify that rooftop utilities and service piping have been shut off before beginning the Work.

3.2 ROOF TEAR-OFF

- A. General: Notify DEN Project Manager each day of extent of roof tear-off proposed for the following day and obtain prior authorization from DEN Project Manager to proceed.
- B. Remove aggregate ballast from roofing membrane.[**Store aggregate ballast for reuse.**]
- C. Remove loose aggregate from aggregate-surfaced built-up bituminous roofing using a power broom.
- D. Remove pavers and accessories from roofing membrane.[**Store and protect pavers and accessories for reuse. Discard cracked pavers.**]
- E. Remove protection mat and extruded-polystyrene insulation from protected roofing membrane.
 - 1. Discard extruded-polystyrene insulation that is wet and exceeds [8 lb/cu. ft. (128 kg/cu. m)] **<Insert maximum wet weight>**.
 - 2. Store extruded-polystyrene insulation for reuse and protect from physical damage.
- F. Roof Tear-Off: Remove existing roofing membrane and other membrane roofing system components down to the deck.
 - 1. Remove [**cover boards**] [**roof insulation**] [**and**] [**substrate boards**].
 - 2. Bitumen and felts that are firmly bonded to concrete decks are permitted to remain if felts are dry. Remove unadhered bitumen and felts and wet felts.
 - 3. Remove excess asphalt from steel deck. A maximum of 15 lb/100 sq. ft. (0.72 kg/sq. m) of asphalt is permitted to remain on steel decks.
 - 4. Remove fasteners from deck[**or cut fasteners off slightly above deck surface**].
- G. Partial Roof Tear-Off: Where indicated, remove existing roofing membrane and other membrane roofing system components down to the deck.
 - 1. Remove [**cover boards**] [**roof insulation**] [**and**] [**substrate boards**].
 - 2. Bitumen and felts that are firmly bonded to concrete decks are permitted to remain if felts are dry. Remove unadhered bitumen and felts and wet felts.
 - 3. Remove excess asphalt from steel deck. A maximum of 15 lb/100 sq. ft. (0.72 kg/sq. m) of asphalt is permitted to remain on steel decks.
 - 4. Remove fasteners from deck[**or cut fasteners off slightly above deck surface**].
- H. Partial Roof Tear-Off: Remove existing roofing membrane and immediately check for presence of moisture by visually observing [**cover boards**] [**roof insulation**] [**substrate boards**] that will remain.
 - 1. Coordinate with DEN Project Manager and Owner's inspector to schedule times for tests and inspections immediately after membrane removal.

2. With an electrical capacitance moisture-detection meter, spot check [**cover boards**] [**roof insulation**] [**substrate boards**] that will remain.
3. Remove wet or damp boards and roof insulation. [**Removal will be paid for by adjusting the Contract Sum according to unit prices included in the Contract Documents.**]
4. Bitumen and felts that are firmly bonded to concrete decks are permitted to remain if felts are dry. Remove unadhered bitumen and felts and wet felts.
5. Remove excess asphalt from steel deck. A maximum of **15 lb/100 sq. ft.** (0.72 kg/sq. m) of asphalt is permitted to remain on steel decks.
6. Remove fasteners from deck [**or cut fasteners off slightly above deck surface**].

3.3 DECK PREPARATION

- A. Inspect deck after [**partial**] tear-off of membrane roofing system.
- B. Verify that concrete substrate is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D 4263 or by pouring **1 pint** (0.5 L) of hot roofing asphalt on deck at start of each day's work and at start of each roof area or plane. Do not proceed with roofing work if moisture condenses under the plastic sheet or if asphalt test sample foams or can be easily and cleanly stripped after cooling.
- C. If broken or loose fasteners that secure deck panels to one another or to structure are observed or if deck appears or feels inadequately attached, immediately notify DEN Project Manager. Do not proceed with installation until directed by DEN Project Manager.
- D. If deck surface is not suitable for receiving new roofing or if structural integrity of deck is suspect, immediately notify DEN Project Manager. Do not proceed with installation until directed by DEN Project Manager.
- E. Provide additional deck securement as indicated on Drawings.
- F. Replace deck as indicated on Drawings. Replacement deck is specified in Section **<Insert Section number> "<Insert Section title>."**

3.4 INFILL MATERIALS INSTALLATION

- A. Immediately after removal of selected portions of existing membrane roofing system, and inspection and repair, if needed, of deck, fill in the tear-off areas to match existing membrane roofing system construction.
 1. Installation of infill materials is specified in Section **<Insert Section number> "<Insert Section title>."**
 2. Install new roofing membrane patch over roof infill area. If new roofing membrane is installed the same day tear-off is made, roofing membrane patch is not required.

3.5 TEMPORARY ROOFING MEMBRANE

- A. Install approved temporary roofing membrane over area to be reroofed.
- B. Install temporary roofing membrane over area to be reroofed. [**Install two glass-fiber felts**] [**Mechanically fasten base sheet and install a glass-fiber felt**], lapping each sheet **19 inches** (483 mm) over preceding sheet. Embed glass-fiber felt in a solid mopping of hot roofing asphalt applied within equiviscous temperature range. Glaze-coat completed surface with hot roofing asphalt.
- C. Remove temporary roofing membrane before installing new roofing membrane.
- D. Prepare the temporary roof to receive new roofing membrane [**according to approved temporary roofing membrane proposal**] [**by patching and repairing temporary roofing membrane**] <Insert preparation method>. Restore temporary roofing membrane to watertight condition. Obtain approval for temporary roof substrate from roofing membrane manufacturer and DEN Project Manager before installing new roof.

3.6 ROOF RE-COVER PREPARATION

- A. Remove blisters, ridges, buckles, [**mechanically attached roofing membrane fastener buttons projecting above the membrane,**] and other substrate irregularities from existing roofing membrane that inhibit new recover boards from conforming to substrate.
 - 1. Remove loose aggregate from aggregate-surfaced built-up bituminous roofing with a power broom.
 - 2. Scarify the surface of sprayed polyurethane foam as necessary to achieve a sufficiently uniform plane to receive new recover boards.
 - 3. Broom clean existing substrate.
 - 4. Coordinate with Owner's inspector to schedule times for tests and inspections before proceeding with installation of recover boards.
 - 5. Verify that existing substrate is dry before proceeding with installation of recover boards. Spot check substrates with an electrical capacitance moisture-detection meter.
 - 6. Remove materials that are wet or damp. Removal will be paid for by adjusting the Contract Sum according to unit prices included in the Contract Documents.
- B. Remove blisters, ridges, buckles, [**mechanically attached roofing membrane fastener buttons projecting above the membrane,**] and other substrate irregularities from existing roofing membrane that inhibit new [**recover boards**] [**roofing membrane**] from conforming to substrate.
 - 1. Remove loose aggregate from aggregate-surfaced built-up bituminous roofing with a power broom.
 - 2. Scarify the surface of sprayed polyurethane foam as necessary to achieve a sufficiently uniform plane to receive new [**recover boards**] [**roofing membrane**].
 - 3. Broom clean existing substrate.

4. Coordinate with DEN Project Manager and Owner's inspector to schedule times for tests and inspections.
 5. Verify that existing substrate is dry before proceeding with installation. Spot check substrates with an electrical capacitance moisture-detection meter.
 6. Remove materials that are wet and damp. Removal will be paid for by adjusting the Contract Sum according to unit prices included in the Contract Documents.
- C. Remove blisters and areas of membrane not fully adhered.
- D. Remove[**mechanically attached roofing membrane fastener buttons projecting above the membrane and other**] substrate irregularities that inhibit new recover boards from conforming to substrate.
1. Remove loose aggregate from aggregate-surfaced built-up bituminous roofing with a power broom.
 2. Clean substrate of contaminants such as dirt, debris, oil, and grease that can affect adhesion of coated foamed roofing.
 3. Power vacuum the existing roof surface. If recommended by foam manufacturer, prime dried surface at recommended rate with recommended primer.
 4. Scarify the surface of coated polyurethane roofing as necessary to achieve a suitable substrate for new roofing.
 5. Provide additional uplift securement for existing roofing system with new screws and plates applied to each roof zone at the following densities:
 - a. Field of roof, one fastener for each **<Insert area>**.
 - b. Corners of roof, one fastener for each **<Insert area>**.
 - c. Perimeters of roof, one fastener for each **<Insert area>**. Width of perimeter zone of roof is **<Insert dimension>**.
 6. Verify that surface is dry by pressing litmus paper to surface areas most likely to retain moisture, such as shaded areas and low spots. If paper changes color, surface is too wet to apply foam.
 7. Build up isolated low spots on existing roofing membrane with sprayed foam specified in Section 075700 "Coated Foamed Roofing" to prevent ponding.
- 3.7 EXISTING BASE FLASHINGS
- A. Remove existing base flashings around parapets, curbs, walls, and penetrations.
1. Clean substrates of contaminants such as asphalt, sheet materials, dirt, and debris.
- B. Do not damage metal counterflashings that are to remain. Replace metal counterflashings damaged during removal with counterflashings [**of same metal, weight or thickness, and finish.**] [**specified in Section 076200 "Sheet Metal Flashing and Trim."**] [**specified in Section 077100 "Roof Specialties."**]
- C. Inspect parapet sheathing for deterioration and damage. If parapet sheathing has deteriorated, immediately notify DEN Project Manager.

- D. Remove existing parapet sheathing and replace with new [**pressure-preservative**] [**exterior fire-retardant**]-treated plywood sheathing, [**19/32 inch (15 mm)**] <Insert **thickness**> thick. If parapet framing has deteriorated, immediately notify DEN Project Manager.
- E. Plywood parapet sheathing is specified in [**Section 061000 "Rough Carpentry."**] [**Section 061053 Miscellaneous Rough Carpentry."**]

3.8 FASTENER PULL-OUT TESTING

- A. [**Perform**] [**Retain independent testing and inspecting agency to conduct**] fastener pull-out tests according to SPRI FX-1, and submit test report to DEN Project Manager and roofing membrane manufacturer before installing new membrane roofing system.
 - 1. Obtain DEN Project Manager's and roofing membrane manufacturer's approval to proceed with specified fastening pattern. DEN Project Manager and roofing membrane manufacturer may furnish revised fastening pattern commensurate with pullout test results.

3.9 RECOVER BOARD INSTALLATION

- A. Install recover boards over [**roof insulation**] [**roofing membrane**] with long joints in continuous straight lines and end joints staggered between rows. Loosely butt recover boards together[**and fasten to deck**].
 - 1. Tape joints of recover boards if required by roofing membrane manufacturer.
- B. Fasten recover boards to resist wind-uplift pressure at corners, perimeter, and field of roof specified in [**Section 075113 "Built-up Asphalt Roofing."**] [**Section <Insert Section number> "<Insert Section title>."**]
 - 1. Install additional fasteners near board corners and edges as necessary to conform boards to substrate and to adjacent boards.

3.10 DISPOSAL

- A. Collect demolished materials and place in containers. Promptly dispose of demolished materials. Do not allow demolished materials to accumulate on-site.
 - 1. Storage or sale of demolished items or materials on-site is not permitted.
- B. Transport and legally dispose of demolished materials off Owner's property in landfill approved by DEN.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

1. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 070150.19

SECTION 071113 - BITUMINOUS DAMPPROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Hot-applied asphalt dampproofing.
 - 2. Cold-applied, cut-back-asphalt dampproofing.
 - 3. Cold-applied, emulsified-asphalt dampproofing.
- B. Related Requirements:
 - 1. Section 033000 "Cast-in-Place Concrete" for bituminous vapor retarders.
 - 2. **[Section 042000 "Unit Masonry"] [Section 042200 "Concrete Unit Masonry"]** for mortar parge coat on masonry surfaces.
 - 3. **[Section 071326 "Self-Adhering Sheet Waterproofing"] [Section 071353 "Elastomeric Sheet Waterproofing"] [Section 071354 "Thermoplastic Sheet Waterproofing"] [Section 071413 "Hot Fluid-Applied Rubberized Asphalt Waterproofing"] [Section 071416 "Cold Fluid-Applied Waterproofing"]** for waterproofing.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product. Submit manufacturer's technical product data, installation instructions, and recommendations for each dampproofing material required.
 - 1. Include data substantiating that materials comply with specified requirements.
- B. LEED Submittals:
 - 1. Product Data for Credit IEQ 4.2: For dampproofing, documentation including printed statement of VOC content.
 - 2. Laboratory Test Reports for Credit IEQ 4: For dampproofing, documentation indicating that products comply with the testing and product requirements of the

California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

1.4 INFORMATIONAL SUBMITTALS

A. Certificates:

1. Installer shall provide a certificate that he is approved by the manufacturer for this installation.
2. Installer to provide a certificate indicating that dampproofing has been installed per requirements of this Section.
3. Manufacturer shall submit a certificate indicating that he has not less than five (5) years experience in the manufacturing of the types of products specified.

1.5 FIELD CONDITIONS

- A. Substrate: Proceed with dampproofing work only after substrate construction and penetrating work have been completed.
- B. Weather Limitations: Proceed with application only when existing and forecasted weather conditions permit dampproofing to be performed according to manufacturers' written instructions.
- C. Ventilation: Provide adequate ventilation during application of dampproofing in enclosed spaces. Maintain ventilation until dampproofing has cured.

1.6 QUALITY ASSURANCE

- A. General: For each type of work, obtain primary materials from single manufacturer, to greatest extent possible. Provide secondary materials only as recommended by manufacturer of primary materials.
- B. Installer Qualifications: A firm which has specialized for not less than three (3) years in installation of types of dampproofing required for project and which is acceptable to manufacturer of primary materials.

1.7 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

- A. Provide bituminous dampproofing materials that comply with the following requirements, or provide other similar products that are certified in writing by manufacturer of primary dampproofing materials to be superior in performance for application indicated.
- B. Source Limitations: Obtain primary dampproofing materials and primers from single source from single manufacturer. Provide[**protection course**] [**molded-sheet drainage panels**] [and]auxiliary materials recommended in writing by manufacturer of primary materials.
- C. VOC Content: Products shall comply with VOC content limits of authorities having jurisdiction unless otherwise required.

2.2 HOT-APPLIED ASPHALT DAMPPROOFING

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Owens Corning Roofing and Asphalt, LLC; Trumbull Division.
 - 2. **<Insert manufacturer's name>**.
 - 3. or approved equal.
- B. Hot-Applied Asphalt: ASTM D 449, [**Type II**] [**Type III**].
- C. VOC Content: [**250**] **<Insert value>** g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- D. Low-Emitting Materials: Dampproofing shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.3 COLD-APPLIED, CUT-BACK-ASPHALT DAMPPROOFING

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. APOC, Inc.; a division of Gardner-Gibson.
 - 2. BASF Construction Chemicals - Building Systems; Sonneborn Brand Products.
 - 3. Brewer Company (The).
 - 4. ChemMasters, Inc.
 - 5. Euclid Chemical Company (The); an RPM company.
 - 6. Henry Company.
 - 7. Karnak Corporation.

8. Koppers Inc.
 9. Malarkey Roofing Products.
 10. Meadows, W. R., Inc.
 11. **<Insert manufacturer's name>**.
 12. or approved equal.
- B. Trowel Coats: ASTM D 4586, Type I, Class 1, fibered.
- C. Brush and Spray Coats: ASTM D 4479, Type I, fibered[**or nonfibered**].
- D. VOC Content: [**250**] [**300**] **<Insert value>** g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- E. Low-Emitting Materials: Dampproofing shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.4 COLD-APPLIED, EMULSIFIED-ASPHALT DAMPPROOFING

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. APOC, Inc.; a division of Gardner-Gibson.
 2. BASF Construction Chemicals - Building Systems; Sonneborn Brand Products.
 3. Brewer Company (The).
 4. ChemMasters, Inc.
 5. Euclid Chemical Company (The); an RPM company.
 6. Gardner-Gibson, Inc.
 7. Henry Company.
 8. Karnak Corporation.
 9. Koppers Inc.
 10. Malarkey Roofing Products.
 11. Meadows, W. R., Inc.
 12. **<Insert manufacturer's name>**.
 13. or approved equal.
- B. Trowel Coats: ASTM D 1227, Type II, Class 1.
- C. Fibered Brush and Spray Coats: ASTM D 1227, Type II, Class 1.
- D. Brush and Spray Coats: ASTM D 1227, Type III, Class 1.
- E. VOC Content: [**Zero**] [**30 g/L or less**] **<Insert value>**.
- F. Low-Emitting Materials: Dampproofing shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.5 AUXILIARY MATERIALS

- A. General: Furnish auxiliary materials recommended in writing by dampproofing manufacturer for intended use and compatible with bituminous dampproofing.
- B. Cut-Back-Asphalt Primer: ASTM D 41.
- C. Emulsified-Asphalt Primer: ASTM D 1227, Type III, Class 1, except diluted with water as recommended in writing by manufacturer.
 - 1. Primer shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- D. Asphalt-Coated Glass Fabric: ASTM D 1668, Type I.
- E. Patching Compound: [**Epoxy or latex-modified repair mortar**] [**Asbestos-free fibered mastic**] of type recommended in writing by dampproofing manufacturer.
- F. Protection Course: ASTM D 6506, **1/8-inch**- (3-mm-) thick, semirigid sheets of fiberglass or mineral-reinforced-asphaltic core, pressure laminated between two asphalt-saturated fibrous liners.
- G. Protection Course: Fan folded, with a core of extruded-polystyrene board insulation faced on [**one side**] [**or**] [**both sides**] with plastic film, nominal thickness **1/4 inch** (6 mm), with a compressive strength of not less than **8 psi** (55 kPa) per ASTM D 1621, and maximum water absorption by volume of 0.6 percent per ASTM C 272.
- H. Protection Course: Extruded-polystyrene board insulation, unfaced, ASTM C 578, Type X, **1/2 inch** (13 mm) thick.
- I. Protection Course: Smooth-surfaced roll roofing complying with ASTM D 6380, Class S, Type III.

2.6 MOLDED-SHEET DRAINAGE PANELS

- A. Molded-Sheet Drainage Panel: Comply with Section 334600 "Subdrainage."
- B. Nonwoven-Geotextile-Faced, Molded-Sheet Drainage Panel: Composite subsurface drainage panel consisting of a studded, nonbiodegradable, molded-plastic-sheet drainage core; with a nonwoven, needle-punched geotextile facing with an apparent opening size not exceeding **No. 70** (0.21-mm) sieve laminated to one side of the core; and with a vertical flow rate of **9 to 15 gpm per ft.** (112 to 188 L/min. per m).
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Hydrotech, Inc.
 - b. Carlisle Coatings & Waterproofing Inc.

- c. Grace, W. R., & Co. - Conn.
- d. Protecto Wrap Company.
- e. **<Insert manufacturer's name>**.
- f. or approved equal.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions with Applicator present, for compliance with requirements for surface smoothness, surface moisture, and other conditions affecting performance of bituminous dampproofing work.
 - 1. Test for surface moisture according to ASTM D 4263.
- B. Proceed with application only after substrate construction and penetrating work have been completed and unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Mask or otherwise protect adjoining exposed surfaces from being stained, spotted, or coated with dampproofing. Prevent dampproofing materials from entering and clogging weep holes and drains.
- B. Clean substrates of projections and substances detrimental to the dampproofing work; fill voids, seal joints, and remove bond breakers if any, as recommended in writing by prime material manufacturer.
- C. Install accessories recommended by prime materials manufacturer.
- D. Apply patching compound to patch and fill tie holes, honeycombs, reveals, and other imperfections[; **cover with asphalt-coated glass fabric**].

3.3 APPLICATION, GENERAL

- A. Comply with manufacturer's written instructions for dampproofing application, cure time between coats, and drying time before backfilling unless more stringent requirements are indicated.
 - 1. Apply dampproofing to provide continuous plane of protection.
 - 2. Apply additional coats if recommended in writing by manufacturer or to achieve a smooth surface and uninterrupted coverage.
- B. Where dampproofing footings and foundation walls, apply from finished-grade line to top of footing; extend over top of footing and down a minimum of **6 inches (150 mm)** over outside face of footing.

1. Extend dampproofing **12 inches** (300 mm) onto intersecting walls and footings, but do not extend onto surfaces exposed to view when Project is completed.
 2. Install flashings and corner protection stripping at internal and external corners, changes in plane, construction joints, cracks, and where shown as "reinforced," by embedding an **8-inch-** (200-mm-) wide strip of asphalt-coated glass fabric in a heavy coat of dampproofing. Dampproofing coat for embedding fabric is in addition to other coats required.
- C. Where dampproofing exterior face of inner wythe of exterior masonry cavity walls, lap dampproofing at least **1/4 inch** (6 mm) onto flashing, masonry reinforcement, veneer ties, and other items that penetrate inner wythe.
1. Extend dampproofing over outer face of structural members and concrete slabs that interrupt inner wythe.
 2. Lap dampproofing at least **1/4 inch** (6 mm) onto shelf angles supporting veneer.
- D. Where dampproofing interior face of above-grade, exterior [**concrete**] [**and**] [**masonry**] [**single-wythe masonry**] walls, continue dampproofing through intersecting walls by keeping vertical mortar joints at intersection temporarily open or by dampproofing wall before constructing intersecting walls.

3.4 HOT-APPLIED ASPHALT DAMPPROOFING

- A. Do not apply hot asphalt when substrate condition causes foaming.
- B. Kettle Temperature: Comply with dampproofing-material manufacturer's written instructions, and keep at least **25 deg F** (14 deg C) below the flash point.
- C. Prime masonry and other porous substrates.
- D. Apply a uniform coat of hot asphalt by mopping or spraying at not less than **20 lb or 2.5 gal./100 sq. ft.** (1 kg or 1 L/sq. m).
 1. Apply a second coat [**to below-grade foundation walls**] [**and**] [**where first application has failed to produce a smooth surface and uninterrupted coverage**]. Apply second coat at the rate specified for first coat.

3.5 COLD-APPLIED, CUT-BACK-ASPHALT DAMPPROOFING

- A. Concrete Foundations[**and Parged Masonry Foundation Walls**]: Apply [**two brush or spray coats at not less than 1.25 gal./100 sq. ft.** (0.5 L/sq. m) **for first coat and 1 gal./100 sq. ft.** (0.4 L/sq. m) **for second coat**] [**or**] [**one trowel coat at not less than 4 gal./100 sq. ft.** (1.6 L/sq. m)].
- B. Unparged Masonry Foundation Walls: Apply [**primer and two brush or spray coats at not less than 1.25 gal./100 sq. ft.** (0.5 L/sq. m) **for first coat and 1 gal./100 sq. ft.** (0.4 L/sq. m) **for second coat**] [**or**] [**primer and one trowel coat at not less than 4 gal./100 sq. ft.** (1.6 L/sq. m)].

- C. Unexposed Face of Concrete Retaining Walls: Apply one brush or spray coat at not less than **1.25 gal./100 sq. ft.** (0.5 L/sq. m).
- D. Unexposed Face of Masonry Retaining Walls: Apply primer and one brush or spray coat at not less than **1.25 gal./100 sq. ft.** (0.5 L/sq. m).
- E. Concrete Backup for **[Brick Veneer Assemblies] [Stone Veneer Assemblies] [and] [Dimension Stone Cladding]**: Apply one brush or spray coat at not less than **1 gal./100 sq. ft.** (0.4 L/sq. m).
- F. Masonry Backup for **[Brick Veneer Assemblies] [Stone Veneer Assemblies] [and] [Dimension Stone Cladding]**: Apply primer and one brush or spray coat at not less than **1 gal./100 sq. ft.** (0.4 L/sq. m).
- G. Exterior Face of Inner Wythe of Cavity Walls: Apply primer and one brush or spray coat at not less than **1 gal./100 sq. ft.** (0.4 L/sq. m).

3.6 COLD-APPLIED, EMULSIFIED-ASPHALT DAMPPROOFING

- A. Concrete Foundations[**and Parged Masonry Foundation Walls**]: Apply **[two brush or spray coats at not less than 1.5 gal./100 sq. ft.** (0.6 L/sq. m) **for first coat and 1 gal./100 sq. ft.** (0.4 L/sq. m) **for second coat]** **[one fibered brush or spray coat at not less than 3 gal./100 sq. ft.** (1.2 L/sq. m)] **[or] [one trowel coat at not less than 4 gal./100 sq. ft.** (1.6 L/sq. m)].
- B. Unparged Masonry Foundation Walls: Apply **[primer and two brush or spray coats at not less than 1.5 gal./100 sq. ft.** (0.6 L/sq. m) **for first coat and 1 gal./100 sq. ft.** (0.4 L/sq. m) **for second coat]** **[primer and one fibered brush or spray coat at not less than 3 gal./100 sq. ft.** (1.2 L/sq. m)] **[or] [primer and one trowel coat at not less than 5 gal./100 sq. ft.** (2 L/sq. m)].
- C. Unexposed Face of Concrete Retaining Walls: Apply one brush or spray coat at not less than **1.25 gal./100 sq. ft.** (0.5 L/sq. m).
- D. Unexposed Face of Masonry Retaining Walls: Apply primer and one brush or spray coat at not less than **1.25 gal./100 sq. ft.** (0.5 L/sq. m).
- E. Concrete Backup for **[Brick Veneer Assemblies] [Stone Veneer Assemblies] [and] [Dimension Stone Cladding]**: Apply one brush or spray coat at not less than **1 gal./100 sq. ft.** (0.4 L/sq. m).
- F. Masonry Backup for **[Brick Veneer Assemblies] [Stone Veneer Assemblies] [and] [Dimension Stone Cladding]**: Apply primer and one brush or spray coat at not less than **1 gal./100 sq. ft.** (0.4 L/sq. m).
- G. Exterior Face of Inner Wythe of Cavity Walls: Apply primer and one brush or spray coat at not less than **1 gal./100 sq. ft.** (0.4 L/sq. m).

- H. Interior Face of Exterior Concrete Walls: Where above grade and indicated to be furred and finished, apply one brush or spray coat at not less than 1 gal./100 sq. ft. (0.4 L/sq. m).
- I. Interior Face of [**Single-Wythe**] Exterior Masonry Walls: Where above grade and indicated to be furred and finished, apply primer and one brush or spray coat at not less than 1 gal./100 sq. ft. (0.4 L/sq. m).

3.7 INSTALLATION OF PROTECTION COURSE

- A. Where indicated, install protection course over completed-and-cured dampproofing. Comply with dampproofing-material and protection-course manufacturers' written instructions for attaching protection course.
 - 1. Support protection course over cured coating with spot application of adhesive type recommended in writing by protection-board manufacturer.
 - 2. Install protection course [**on same day**] [**within 24 hours**] of installation of dampproofing (while coating is tacky) to ensure adhesion.

3.8 INSTALLATION OF MOLDED-SHEET DRAINAGE PANELS

- A. Place and secure molded-sheet drainage panels, with geotextile facing away from wall substrate, according to manufacturer's written instructions. Use adhesives or other methods that do not penetrate dampproofing. Lap edges and ends of geotextile to maintain continuity. Protect installed molded-sheet drainage panels during subsequent construction.
 - 1. Install protection course before installing drainage panels.

3.9 CLEANING

- A. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended in writing by manufacturer of affected construction.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 071113

SECTION 071326 - SELF-ADHERING SHEET WATERPROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Modified bituminous sheet waterproofing.
2. Modified bituminous sheet waterproofing, fabric reinforced.
3. Modified bituminous deck-paving sheet waterproofing.
4. Bonded HDPE or polyethylene sheet waterproofing.

- B. Related Requirements:

1. Section 079500 "Expansion Control" for plaza- or foundation-wall expansion-joint assemblies that interface with waterproofing.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]<Insert location>**.

1. Pre Application Conference: Approximately two (2) weeks prior to actual commencement of waterproofing installation, meet at project site with Installer, installers of deck or substrate construction to receive work, installers of other work in and around waterproofing work which must precede, follow or penetrate waterproofing work (including mechanical work if any), DEN Project Manager, the Contractor's Quality Control Manager and waterproofing material manufacturer's representative. Record (Contractor) discussions of conference, together with decisions and agreements (or disagreements) reached. Furnish copy of record to each party attending. Review methods and procedures related to work, including but not necessarily limited to the following:
 - a. Tour jobsite areas to be waterproofed. Inspect and discuss condition of substrate, drains, curbs, penetrations, and other preparatory work performed by other trades.

- b. Review waterproofing requirements (drawings, specifications and other contract documents), including surface preparation, substrate condition and pretreatment, minimum curing period, forecasted weather conditions, special details and sheet flashings, installation procedures, testing and inspection procedures, and protection and repairs.
- c. Review required submittals. Work cannot begin until all submittals are approved by Owner.
- d. Review and finalize construction schedule related to waterproofing work and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
- e. Review required inspection, testing, and certifying procedures, safety, and hazardous control programs.
- f. Review protection and repair procedures.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, and tested physical and performance properties of waterproofing.
2. Include manufacturer's written instructions for evaluating, preparing, and treating substrate.
3. Include data substantiating that materials comply with specified requirements.

B. LEED Submittals:

1. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating distance to Project, cost for each regional material, and fraction by weight that is considered regional.

C. Shop Drawings: Show locations and extent of waterproofing and details of substrate joints and cracks, sheet flashings, penetrations, inside and outside corners, tie-ins with adjoining waterproofing, and other termination conditions.

1. Include setting drawings showing layout, sizes, sections, profiles, and joint details of pedestal-supported concrete pavers.

D. Samples: For each exposed product and for each color and texture specified, including the following products, in minimum 1' x 1' sizes unless otherwise indicated:

1. Waterproofing and flashing sheet.
2. Insulation.
3. Drainage panel.
4. Plaza-deck paver, [4-by-4-inch (100-by-100-mm) square] [full sized], in each color and texture required.
5. Paver pedestal assembly.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Installer shall provide a certificate that he is approved by the manufacturer for this installation.
- C. Installer to submit a certificate evidencing not less than five (5) years of successful experience installing similar types to products specified.
- D. Installer to provide a certificate indicating that waterproofing has been installed per requirements of this section.
- E. Manufacturer shall submit a certificate indicating that he has not less than five (5) years experience in the manufacturing of the types of products specified.
- F. Manufacturer to submit a report that all work is being done per contract requirements.
- G. Field quality-control reports.
- H. Provide a certificate that bellows are jet fuel resistant.
- I. Provide a certificate stating that waterproofing and protection board to be used at the horizontal and vertical surfaces of the basement extension has been tested for jet fuel resistance and that the required warranty applies to this work. Provide the actual test report.
 - 1. Minimum Requirements: For waterproofing, expansion joint covers and any associated joints, no loss in waterproofing ability within 48 hours after ponding jet fuel for 72 hours. For protection board, no loss in protection within 48 hours after being immersed in jet fuel for 72 hours.
- J. Sample Warranties: For special warranties.

1.6 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. General: For each type of work, obtain primary materials from single manufacturer, with not less than three (5) years of successful experience in supplying principal materials for waterproofing work. Provide secondary materials only as recommended by manufacturer of primary materials.
- B. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by waterproofing manufacturer.

1. A firm that has specialized for not less than five (5) years in installation of types of dampproofing required for project and which is acceptable to manufacturer of primary materials.
 2. Assign work closely associated with waterproofing, including (but not limited to) waterproofing accessories, and flashings used in conjunction with waterproofing, expansion joints in membrane, insulation and protection course on membrane, to installer of waterproofing, for single, undivided responsibility.
- C. Mockups: Build mockups to verify selections made under Sample submittals and to set quality standards for installation.
1. Build for each typical waterproofing installation including[**pavers and**] accessories to demonstrate surface preparation, crack and joint treatment, corner treatment, and protection.
 - a. Size: [**100 sq. ft. (9.3 sq. m) in area**] [**As shown on Drawings**].
 - b. Description: Each type of [**wall**] [**deck**] [**and**] [**plaza**] <Insert description> installation.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 FIELD CONDITIONS

- A. Substrate: Proceed with dampproofing work only after substrate construction and penetrating work have been completed.
- B. Environmental Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended by waterproofing manufacturer. Do not apply waterproofing to a damp or wet substrate.
1. Do not apply waterproofing in snow, rain, fog, or mist.
- C. Maintain adequate ventilation during preparation and application of waterproofing materials.

1.9 WARRANTY

- A. Manufacturer's Warranty: Manufacturer's standard materials-only warranty in which manufacturer agrees to furnish replacement waterproofing material for waterproofing that does not comply with requirements or that fails to remain watertight within specified warranty period.
1. Warranty Period: Minimum [**Five**] <Insert number> years from date of Substantial Completion.

- B. Installer's Special Warranty: Specified form, [**on warranty form at end of this Section**,]signed by Installer, covering Work of this Section, for warranty period of minimum [**five**] <Insert number> years.
1. Warranty includes excavation, removing, and reinstalling protection board, drainage panels, insulation, pedestals, and pavers on plaza decks.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

- A. General Compatibility: Provide products that are recommended by manufacturer to be fully compatible with indicated substrates.
- B. Source Limitations for Waterproofing System: Obtain waterproofing materials[, **protection course,**] [**and**] [**molded-sheet drainage panels**] from single source from single manufacturer.
- C. Source Limitations for Plaza-Deck Paving: Obtain plaza-deck pavers[**and paver pedestals**] from single source from single manufacturer.

2.2 MODIFIED BITUMINOUS SHEET WATERPROOFING

- A. Modified Bituminous Sheet: Minimum **60-mil** (1.5-mm) nominal thickness, self-adhering sheet consisting of **56 mils** (1.4 mm) of rubberized asphalt laminated on one side to a **4-mil-** (0.10-mm-) thick, polyethylene-film reinforcement, and with release liner on adhesive side[; **formulated for application with primer or surface conditioner that complies with VOC limits of authorities having jurisdiction**].
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. American Hydrotech, Inc.; VM75.
 - b. Carlisle Coatings & Waterproofing Inc.; CCW MiraDRI 860/861.
 - c. CETCO Building Materials Group, a subsidiary of AMCOL International Corp.; Envirosheet.
 - d. Grace, W. R., & Co. - Conn.; [**Bituthene 3000/Low Temperature**] [**or**] [**Bituthene 4000**].
 - e. Henry Company; Blueskin WP 100/200.
 - f. Meadows, W. R., Inc.; SealTight Mel-Rol.
 - g. Nervastral, Inc.; BITU-MEM.
 - h. Polyguard Products, Inc.; Polyguard 650.

- i. Protecto Wrap Company; PW 100/60.
 - j. Tamko Building Products, Inc.; TW-60.
 - k. York Manufacturing, Inc.; HydroGard.
 - l. **<Insert manufacturer's name; product name or designation>**.
 - m. or approved equal.
2. Physical Properties:
- a. Tensile Strength, Membrane: **250 psi** (1.7 MPa) minimum; ASTM D 412, Die C, modified.
 - b. Ultimate Elongation: 300 percent minimum; ASTM D 412, Die C, modified.
 - c. Low-Temperature Flexibility: Pass at **minus 20 deg F** (minus 29 deg C); ASTM D 1970.
 - d. Crack Cycling: Unaffected after 100 cycles of **1/8-inch** (3-mm) movement; ASTM C 836.
 - e. Puncture Resistance: **40 lbf** (180 N) minimum; ASTM E 154.
 - f. Water Absorption: 0.2 percent weight-gain maximum after 48-hour immersion at **70 deg F** (21 deg C); ASTM D 570.
 - g. Water Vapor Permeance: **0.05 perms** (2.9 ng/Pa x s x sq. m) maximum; ASTM E 96/E 96M, Water Method.
 - h. Hydrostatic-Head Resistance: [**200 feet (60 m)**] **<Insert value>** minimum; ASTM D 5385.
3. Sheet Strips: Self-adhering, rubberized-asphalt strips of same material and thickness as sheet waterproofing.
- B. Modified Bituminous Sheet, Fabric Reinforced: Minimum **60-mil** (1.5-mm) nominal thickness, self-adhering sheet consisting of rubberized-asphalt membrane with embedded fabric reinforcement, and with release liner on adhesive side.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Protecto Wrap Company; Jiffy Seal 140/60.
 - b. Royston, Div. of Chase Specialty Coatings; [**104AHT Membrane**] [**Royal-Gard Plus Membrane 104ARHT**].
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.
 2. Physical Properties:
 - a. Pliability: No cracks when bent 180 degrees over a **1-inch** (25-mm) mandrel at **minus 25 deg F** (minus 32 deg C); ASTM D 146.
 - b. Puncture Resistance: [**40 lbf (180 N)**] [**100 lbf (445 N)**] minimum; ASTM E 154.
 - c. Water Vapor Permeance: **0.05 perms** (2.9 ng/Pa x s x sq. m) maximum; ASTM E 96/E 96M, Water Method.
 3. Sheet Strips: Self-adhering, reinforced, rubberized-asphalt strips of same material and thickness as sheet waterproofing.

2.3 MODIFIED BITUMINOUS DECK-PAVING SHEET WATERPROOFING

- A. Modified Bituminous Deck-Paving Sheet: Minimum **65-mil** (1.6-mm) nominal thickness, self-adhering sheets designed to be overlaid with asphalt paving; consisting of rubberized-asphalt membrane with woven or nonwoven fabric reinforcement laminated to one surface or embedded within the membrane, and with release liner on adhesive side.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Carlisle Coatings & Waterproofing Inc.; [**Pre-Pave CCW 711W**] [or] [**Pre-Pave CCW 711NW**].
 - b. Meadows, W. R., Inc.; SealTight Mel-Dek.
 - c. Polyguard Products, Inc.; [**Polyguard 665**] [or] [**Polyguard NW-75**].
 - d. Protecto Wrap Company; Jiffy Seal 400.
 - e. Royston, Div. of Chase Specialty Coatings; [**Bridge Waterproofing Membrane 10A**] [**Bridge Waterproofing Membrane 10A Easy Pave**] [**Bridge Waterproofing Membrane 10A-65**] [**Bridge and Railroad Bridge Membrane 10A 90 MIL**].
 - f. <Insert manufacturer's name; product name or designation>.
 - g. or approved equal.
 2. Physical Properties:
 - a. Tensile Strength, Membrane: [**50 lbf/in. (8.75 kN/m)**] <Insert value> minimum; ASTM D 882.
 - b. Pliability: Unaffected when bent 180 degrees over a **1/4-inch** (6.4-mm) mandrel at **minus 15 deg F** (minus 26 deg C); ASTM D 146.
 - c. Puncture Resistance, Mesh: [**40 lbf (180 N)**] [**100 lbf (445 N)**] [**200 lbf (890 N)**] minimum; ASTM E 154.
 3. Sheet Strips: Self-adhering, reinforced, rubberized-asphalt strips of same material and thickness as sheet waterproofing.

2.4 BONDED HDPE OR POLYETHYLENE SHEET WATERPROOFING

- A. Products: Subject to compliance with requirements, provide one of the following:
1. Vertical Applications:
 - a. Grace, W. R., & Co. - Conn.; Preprufe 160R[**with Preprufe Tie-Back Covers**].
 - b. Polyguard Products, Inc.; Underseal Blindside Membrane.
 - c. <Insert manufacturer's name; product name or designation>.
 - d. or approved equal.
 2. Horizontal Applications:
 - a. Grace, W. R., & Co. - Conn.; Preprufe 300R.
 - b. Polyguard Products, Inc.; Underseal Underslab Membrane.

- c. **<Insert manufacturer's name; product name or designation>**.
- d. or approved equal.

B. Bonded HDPE Sheet for Vertical Applications: Uniform, flexible, multilayered-composite sheet membrane consisting of either a HDPE film coated with a pressure-sensitive adhesive and protective release liner, total **32-mil** (0.8-mm) thickness, or an HDPE film coated with a modified asphalt layer and a nonwoven geotextile-fabric final layer, total **73-mil** (1.9-mm) thickness; with the following physical properties:

1. Tensile Strength, Film: **4000 psi** (27.6 MPa) minimum; ASTM D 412.
2. Low-Temperature Flexibility: Pass at **minus 10 deg F** (minus 23 deg C); ASTM D 1970.
3. Peel Adhesion to Concrete: **5 lbf/in.** (875 N/m) minimum; ASTM D 903, modified.
4. Lap Adhesion: **2.5 lbf/in.** (440 N/m) minimum; ASTM D 1876, modified.
5. Hydrostatic-Head Resistance: **231 feet** (70 m); ASTM D 5385, modified.
6. Puncture Resistance: **100 lbf** (445 N) minimum; ASTM E 154.
7. Water Vapor Permeance: **0.01 perms** (0.6 ng/Pa x s x sq. m) maximum; ASTM E 96/E 96M, Water Method.
8. Water Absorption: 0.5 percent maximum; ASTM D 570.

C. Bonded HDPE or Polyethylene Sheet for Horizontal Applications: Uniform, flexible, multilayered-composite sheet membrane consisting of either an HDPE film coated with pressure-sensitive adhesive and protective release liner, total **46-mil** (1.2-mm) thickness, or a cross-laminated film of low- and medium-density polyethylene, coated with a modified asphalt layer and a nonwoven geotextile-fabric final layer, total **95-mil** (2.4-mm) thickness; with the following physical properties:

1. Tensile Strength, Film: **2000 psi** (13.8 MPa) minimum; ASTM D 412.
2. Low-Temperature Flexibility: Pass at **minus 10 deg F** (minus 23 deg C); ASTM D 1970.
3. Peel Adhesion to Concrete: **5 lbf/in.** (875 N/m) minimum; ASTM D 903, modified.
4. Lap Adhesion: **2.5 lbf/in.** (440 N/m) minimum; ASTM D 1876, modified.
5. Hydrostatic-Head Resistance: **231 feet** (70 m); ASTM D 5385, modified.
6. Puncture Resistance: **200 lbf** (890 N) minimum; ASTM E 154.
7. Water Vapor Permeance: **0.01 perms** (0.6 ng/Pa x s x sq. m) maximum; ASTM E 96/E 96M, Water Method.
8. Water Absorption: 0.5 percent maximum; ASTM D 570.

D. Mastic, Adhesives, and Detail Tape: Liquid mastic and adhesives, and adhesive tapes recommended by waterproofing manufacturer.

2.5 AUXILIARY MATERIALS

A. General: Furnish auxiliary materials recommended by waterproofing manufacturer for intended use and compatible with sheet waterproofing.

1. Furnish liquid-type auxiliary materials that comply with VOC limits of authorities having jurisdiction.

- B. Primer: Liquid [**waterborne**] [**solvent-borne**] primer recommended for substrate by sheet-waterproofing material manufacturer.
- C. Surface Conditioner: Liquid, waterborne surface conditioner recommended for substrate by sheet-waterproofing material manufacturer.
- D. Liquid Membrane: Elastomeric, two-component liquid, cold fluid applied, of trowel grade or low viscosity.
- E. Substrate Patching Membrane: Low-viscosity, two-component, modified asphalt coating.
- F. Metal Termination Bars: Aluminum bars, approximately **1 by 1/8 inch** (25 by 3 mm) thick, predrilled at **9-inch** (229-mm) centers.
- G. Protection Course: ASTM D 6506, semirigid sheets of fiberglass or mineral-reinforced-asphaltic core, pressure laminated between two asphalt-saturated fibrous liners and as follows:
1. Thickness: [**1/8 inch (3 mm)**] [**1/4 inch (6 mm)**], nominal.
 2. Thickness: **1/8 inch** (3 mm), nominal, for vertical applications; **1/4 inch** (6 mm), nominal, elsewhere.
 3. Adhesive: Rubber-based solvent type recommended by waterproofing manufacturer for protection course type.
- H. Protection Course: Fan folded, with a core of extruded-polystyrene board insulation faced on [**one side**] [**or**] [**both sides**] with plastic film, nominal thickness **1/4 inch** (6 mm), with compressive strength of not less than **8 psi** (55 kPa) per ASTM D 1621, and maximum water absorption by volume of 0.6 percent per ASTM C 272.
- I. Protection Course: Extruded-polystyrene board insulation, unfaced, ASTM C 578, Type X, **1/2 inch** (13 mm) thick.
- J. Protection Course: Molded-polystyrene board insulation, ASTM C 578, Type I, **0.90-lb/cu. ft.** (15-kg/cu. m) minimum density, **1-inch** (25-mm) minimum thickness.
- K. Bellows: Where bellows are indicated on the drawings as in contact with the waterproof membrane, provide either 24-gauge soft copper or 60 mil flexible sheet membrane that is jet fuel resistant and compatible with waterproof membrane. Bellows shall be as indicated and shall lap waterproof membrane a minimum 6" per side.
- 2.6 MOLDED-SHEET DRAINAGE PANELS
- A. Molded-Sheet Drainage Panel: Comply with Section 334600 "Subdrainage."
- B. Nonwoven-Geotextile-Faced, Molded-Sheet Drainage Panel: Composite subsurface drainage panel consisting of a studded, nonbiodegradable, molded-plastic-sheet drainage core; with a nonwoven, needle-punched geotextile facing with an apparent opening size not exceeding **No. 70** (0.21-mm) sieve laminated to one side of the core[

and a polymeric film bonded to the other side]; and with a vertical flow rate of **9 to 15 gpm per ft.** (112 to 188 L/min. per m).

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. American Hydrotech, Inc.; [**Hydrodrain 400**] [or] [**Hydrodrain 420**].
 - b. Carlisle Coatings & Waterproofing Inc.; [**CCW MiraDRAIN 6000**] [**CCW MiraDRAIN 6000XL**] [**CCW MiraDRAIN 6200**] [or] [**CCW MiraDRAIN 6200XL**].
 - c. Grace, W. R., & Co. - Conn.; [**Hydroduct 220**] [or] [**Hydroduct 660**].
 - d. Protecto Wrap Company; Protecto Drain 2000-V.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.

- C. Woven-Geotextile-Faced, Molded-Sheet Drainage Panel: Composite subsurface drainage panels consisting of a studded, nonbiodegradable, molded-plastic-sheet drainage core; with a woven-geotextile facing with an apparent opening size not exceeding **No. 40** (0.425-mm) sieve laminated to one side of the core[**and a polymeric film bonded to the other side**]; and with a horizontal flow rate not less than **2.8 gpm per ft.** (35 L/min. per m).
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. American Hydrotech, Inc.; Hydrodrain 700.
 - b. Carlisle Coatings & Waterproofing Inc.; [**CCW MiraDRAIN 9000**] [or] [**CCW MiraDRAIN 9900**].
 - c. Grace, W. R., & Co. - Conn.; Hydroduct 225.
 - d. Protecto Wrap Company; Protecto Drain 2000-H.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.

- D. High-Capacity, Molded-Sheet Collector-Panel System: Composite subsurface collector-panel system by same manufacturer as primary molded-sheet drainage panels; consisting of a high-profile, studded, nonbiodegradable, molded-plastic-sheet drainage core; with a woven-geotextile facing with an apparent opening size not exceeding **No. 40** (0.425-mm) sieve laminated to one side of the core[**and a polymeric film bonded to the other side**]; and with a vertical flow rate of **9 to 15 gpm per ft.** (112 to 188 L/min. per m) and a horizontal flow rate [**as indicated on Drawings**] **<Insert requirement>**. Provide system with manufacturer's outlets, connectors, tapes, and other accessories to connect primary molded-sheet drainage panels with piped subdrainage system specified in Section 334600 "Subdrainage."
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Carlisle Coatings & Waterproofing Inc.; CCW QuickDRAIN.
 - b. Grace, W. R., & Co. - Conn.; Hydroduct Coil 600.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.

2.7 INSULATION

- A. Insulation, General: Comply with Section 072100 "Thermal Insulation."
- B. Board Insulation: Extruded-polystyrene board insulation complying with ASTM C 578, shiplap edged.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. DiversiFoam Products.
 - b. Dow Chemical Company (The).
 - c. Owens Corning Insulating Systems LLC.
 - d. Pactiv Building Products.
 - e. T. Clear Corporation, a subsidiary of Fin Pan Inc.
 - f. <Insert manufacturer's name>.
 - g. or approved equal.
 - 2. Type IV, **25-psi** (173-kPa) minimum compressive strength.
 - 3. Type VI, **40-psi** (276-kPa) minimum compressive strength.
 - 4. Type VII, **60-psi** (414-kPa) minimum compressive strength.
 - 5. Type V, **100-psi** (690-kPa) minimum compressive strength.

2.8 INSULATION DRAINAGE PANELS

- A. Unfaced Wall-Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, [**Type IV, 25-psi** (173-kPa)] [**or**] [**Type VI, 40-psi** (276-kPa)] minimum compressive strength; unfaced; fabricated with shiplap or channel edges and with one side having grooved drainage channels.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. DiversiFoam Products; [**CertiFoam 25 SL**] [**or**] [**CertiFoam 40 (with channel edges)**] Drainage Board.
 - b. Dow Chemical Company (The); Styrofoam Perimate.
 - c. <Insert manufacturer's name; product name or designation>.
 - d. or approved equal.
- B. Geotextile-Faced, Wall-Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, [**Type IV, 25-psi** (173-kPa)] [**or**] [**Type VI, 40-psi** (276-kPa)] minimum compressive strength; fabricated with tongue-and-groove edges and with one side having grooved drainage channels faced with nonwoven geotextile filter fabric.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Owens Corning Insulating Systems LLC; Insul-Drain.
 - b. T. Clear Corporation, a subsidiary of Fin Pan Inc.; [**Thermadry 750**] [**or**] [**Thermadry 1250**].
 - c. <Insert manufacturer's name; product name or designation>.

- d. or approved equal.
- C. Unfaced Plaza-Deck Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, [**Type VI, 40-psi (276-kPa)**] [**or**] [**Type VII, 60-psi (414-kPa)**] minimum compressive strength; unfaced; fabricated with shiplapped, channel, or tongue-and-groove edges and with one side having ribbed drainage channels.
1. Products: Subject to compliance with requirements, provide one of the following:
- a. American Hydrotech, Inc.; Hydroguard.
 - b. DiversiFoam Products; CertiFoam Plaza Deck.
 - c. Dow Chemical Company (The); Styrofoam Ribbed Roofmate.
 - d. Owens Corning Insulating Systems LLC; [**Foamular 404 RB**] [**Foamular 604 RB**].
 - e. <Insert manufacturer's name; product name or designation>.
 - f. or approved equal.
- D. Geotextile-Faced, Plaza-Deck Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, [**Type VI, 40-psi (276-kPa)**] [**or**] [**Type VII, 60-psi (414-kPa)**] minimum compressive strength; fabricated with tongue-and-groove edges and with one side having grooved drainage channels faced with manufacturer's standard, nonwoven geotextile filter fabric.
1. Products: Subject to compliance with requirements, provide one of the following:
- a. T. Clear Corporation, a subsidiary of Fin Pan Inc.; [**Thermadry 1250**] [**or**] [**Thermadry 1750**].
 - b. <Insert manufacturer's name; product name or designation>.
 - c. or approved equal.

2.9 PLAZA-DECK PAVERS

- A. Plaza-Deck Pavers: [**Brick**] [**Concrete**] [**Asphalt-block**] pavers specified in Section 321400 "Unit Paving."
- B. Stone Plaza-Deck Pavers: [**Granite**] [**Limestone**] [**Marble**] [**Quartz-based stone**] [**Slate**] [**Travertine**] [**Rough-stone**] pavers specified in [**Section 096340 "Stone Flooring."**] [**Section 321400 "Unit Paving"**]
1. Concrete Plaza-Deck Pavers: Solid, hydraulically pressed, standard-weight concrete units, [**square edged**] [**with top edges beveled 3/16 inch (5 mm)**], manufactured for use as plaza-deck pavers; [**7500-psi (52-MPa)**] [**6500-psi (45-MPa)**] <Insert value> minimum compressive strength, ASTM C 140; absorption not greater than 5 percent, ASTM C 140; no breakage and maximum 1 percent mass loss when tested for freeze-thaw resistance according to ASTM C 67.

2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Hanover Architectural Products.
 - b. Roofblok Limited.
 - c. Sunny Brook Pressed Concrete Co.
 - d. Wausau Tile, Inc.
 - e. Westile Roofing Products.
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
 3. Regional Materials: Concrete plaza-deck pavers shall be manufactured within **500 miles** (800 km) of Project site from aggregates[**and cement**] that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles** (800 km) of Project site.
 4. Thickness: [**1-5/8 inches** (41 mm)] [**1-3/4 inches** (45 mm)] [**2 inches** (51 mm)] [**2-3/8 inches** (60 mm)] **<Insert dimension>**.
 5. Face Size: [**8-7/8 inches** (225 mm) **square**] [**9 inches** (229 mm) **square**] [**9 by 18 inches** (229 by 457 mm)] [**12 inches** (305 mm) **square**] [**12 by 24 inches** (305 by 610 mm)] [**18 inches** (457 mm) **square**] [**24 inches** (610 mm) **square**] [**As indicated**] **<Insert dimension(s) and shape>**.
 6. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] **<Insert color>**.
- C. Setting Bed: Provide [**aggregate**] [**mortar**] [**bituminous**] setting-bed materials specified in Section 321400 "Unit Paving."
- D. Paver Pedestals: Paver manufacturer's standard paver support assembly, including [**fixed-height**] [**adjustable or stackable**] pedestals, shims, and spacer tabs for joint spacing of [**1/8 inch** (3 mm)] [**3/16 inch** (5 mm)] [**1/8 to 3/16 inch** (3 to 5 mm)].
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.
 - b. or approved equal.
 2. Concrete Fill: ACI 301, compressive strength of **5000 psi** (34 MPa) at 28 days, and air content of 6 percent.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the waterproofing.
 1. Verify that concrete has cured and aged for minimum time period recommended

- in writing by waterproofing manufacturer.
2. Verify that substrate is visibly dry and within the moisture limits recommended in writing by manufacturer. Test for capillary moisture by plastic sheet method according to ASTM D 4263.
 3. Verify that compacted subgrade is dry, smooth, sound, and ready to receive waterproofing sheet.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SURFACE PREPARATION

- A. Clean, prepare, and treat substrates according to manufacturer's written instructions. Provide clean, dust-free, and dry substrates for waterproofing application.
- B. Mask off adjoining surfaces not receiving waterproofing to prevent spillage and overspray affecting other construction.
- C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.
- D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids.
- E. Prepare, fill, prime, and treat joints and cracks in substrates. Remove dust and dirt from joints and cracks according to ASTM D 4258.
1. Install sheet strips of width according to manufacturer's written instructions and center over treated construction and contraction joints and cracks exceeding a width of **[1/16 inch (1.6 mm)] [or] [1/8 inch (3 mm) for modified bituminous deck-paving waterproofing]**.
- F. Bridge and cover **[isolation joints] [expansion joints] [and]** discontinuous deck-to-wall and deck-to-deck joints with overlapping sheet strips of widths according to manufacturer's written instructions.
1. Invert and loosely lay first sheet strip over center of joint. Firmly adhere second sheet strip to first and overlap to substrate.
- G. Corners: Prepare, prime, and treat inside and outside corners according to ASTM D 6135.
1. Install membrane strips centered over vertical inside corners. Install **3/4-inch (19-mm)** fillets of liquid membrane on horizontal inside corners and as follows:
 - a. At footing-to-wall intersections, extend liquid membrane in each direction from corner or install membrane strip centered over corner.
 - b. At plaza-deck-to-wall intersections, extend liquid membrane or sheet strips onto deck waterproofing and to finished height of sheet flashing.
- H. Prepare, treat, and seal vertical and horizontal surfaces at terminations and

penetrations through waterproofing and at drains and protrusions according to ASTM D 6135.

3.3 MODIFIED BITUMINOUS SHEET-WATERPROOFING APPLICATION

- A. General: Comply with manufacturer's instructions, except where more stringent requirements are shown or specified, and except where project conditions require extra precautions or provisions to ensure satisfactory performance of work.
- B. Start installation of waterproofing membrane only in presence and with advice of manufacturer's technical representative.
- C. Install modified bituminous sheets according to waterproofing manufacturer's written instructions and recommendations in ASTM D 6135.
- D. Apply primer to substrates at required rate and allow it to dry. Limit priming to areas that will be covered by sheet waterproofing in same day. Reprime areas exposed for more than 24 hours.
- E. Apply and firmly adhere sheets over area to receive waterproofing. Accurately align sheets and maintain uniform **2-1/2-inch-** (64-mm-) minimum lap widths and end laps. Overlap and seal seams, and stagger end laps to ensure watertight installation.
 - 1. When ambient and substrate temperatures range between **25 and 40 deg F** (minus 4 and plus 5 deg C), install self-adhering, modified bituminous sheets produced for low-temperature application. Do not use low-temperature sheets if ambient or substrate temperature is higher than **60 deg F** (16 deg C).
- F. Two-Ply Application: Install sheets to form a membrane with lap widths not less than 50 percent of sheet widths, to provide a minimum of two thicknesses of sheet membrane over areas to receive waterproofing.
- G. Horizontal Application: Apply sheets from low to high points of decks to ensure that laps shed water.
- H. Apply continuous sheets over already-installed sheet strips, bridging substrate cracks, construction, and contraction joints.
- I. Seal edges of sheet-waterproofing terminations with mastic.
- J. Install sheet-waterproofing and auxiliary materials to tie into adjacent waterproofing.
- K. Repair tears, voids, and lapped seams in waterproofing not complying with requirements. Slit and flatten fishmouths and blisters. Patch with sheet waterproofing extending **6 inches** (150 mm) beyond repaired areas in all directions.
- L. Immediately install protection course with butted joints over waterproofing membrane.
 - 1. **[Molded-sheet drainage panels] [Insulation drainage panels] [Board insulation]** may be used in place of a separate protection course to vertical

applications when approved by waterproofing manufacturer and installed immediately.

- M. Bellows: Lap waterproof membrane above and below bellows.

3.4 MODIFIED BITUMINOUS DECK-PAVING SHEET-WATERPROOFING APPLICATION

- A. Install modified bituminous deck-paving sheets according to waterproofing manufacturer's written instructions.
- B. Apply primer to substrates at required rate and allow it to dry. Limit priming to areas that will be covered by sheet waterproofing in same day. Reprime areas exposed for more than 24 hours.
- C. Apply and firmly adhere sheets over areas to receive waterproofing. Accurately align sheets and maintain uniform **2-1/2-inch-** (64-mm-) minimum side-lap widths and **6-inch** (150-mm) end laps. Overlap and seal seams and stagger end laps to ensure watertight installation.
- D. Apply sheet waterproofing from low to high points of decks to ensure that laps shed water.
- E. Apply continuous sheets over already-installed sheet strips, bridging substrate cracks, construction, and contraction joints.
- F. Seal edges of sheet-waterproofing terminations with mastic.
- G. Install sheet-waterproofing and auxiliary materials to tie into adjacent waterproofing.
- H. Repair tears, voids, and lapped seams in waterproofing that do not comply with requirements. Slit and flatten fishmouths and blisters. Patch with sheet waterproofing extending **6 inches** (150 mm) beyond repaired areas in all directions.

3.5 BONDED HDPE OR POLYETHYLENE SHEET-WATERPROOFING APPLICATION

- A. Install bonded HDPE or polyethylene sheets according to manufacturer's written instructions.
- B. Place and secure molded-sheet drainage panels over substrate. Lap edges and ends of geotextile to maintain continuity.
- C. Vertical Applications: Install sheet with HDPE face against substrate. Accurately align sheets and maintain uniform side and end laps of minimum dimensions required by membrane manufacturer. Overlap and seal seams, and stagger and tape end laps to ensure watertight installation. Mechanically fasten to substrate.
 - 1. Securely fasten top termination of membrane with continuous metal termination bar anchored into substrate and cover with detailing tape.

- D. Horizontal Applications: Install sheet with HDPE or polyethylene face against substrate. Accurately align sheets and maintain uniform side and end laps of minimum dimensions required by membrane manufacturer. Overlap and seal seams, and stagger and tape end laps to ensure watertight installation.
- E. Corners: Seal lapped terminations and cut edges of sheet waterproofing at inside and outside corners with detail tape.
- F. Seal penetrations through sheet waterproofing to provide watertight seal with detail tape patches or wraps and a liquid-membrane troweling.
- G. Install sheet-waterproofing and auxiliary materials to produce a continuous watertight tie into adjacent waterproofing.
- H. Repair tears, voids, and lapped seams in waterproofing not complying with requirements. Tape perimeter of damaged or nonconforming area extending **6 inches (150 mm)** beyond repaired areas in all directions. Apply a patch of sheet waterproofing and firmly secure with detail tape.
- I. Bellows: Lap waterproof membrane above and below bellows.

3.6 MOLDED-SHEET DRAINAGE-PANEL INSTALLATION

- A. Place and secure molded-sheet drainage panels, with geotextile facing away from wall or deck substrate, according to manufacturer's written instructions. Use adhesives or other methods that do not penetrate waterproofing. Lap edges and ends of geotextile to maintain continuity. Protect installed molded-sheet drainage panels during subsequent construction.
 - 1. For vertical applications, install [**board insulation**] [**protection course**] before installing drainage panels.

3.7 INSULATION INSTALLATION

- A. Install one or more layers of board insulation to achieve required thickness over waterproofed surfaces. Cut and fit to within **3/4 inch (19 mm)** of projections and penetrations.
- B. On vertical surfaces, set insulation units in adhesive or tape applied according to manufacturer's written instructions.
- C. On horizontal surfaces, loosely lay insulation units according to manufacturer's written instructions. Stagger end joints and tightly abut insulation units.

3.8 INSULATION DRAINAGE-PANEL INSTALLATION

- A. Install insulation drainage panels over waterproofed surfaces; cut and fit to within **3/4 inch (19 mm)** of projections and penetrations.

- B. Ensure that drainage channels are aligned and free of obstructions.
- C. On vertical surfaces, set insulation drainage panels in adhesive or tape applied according to manufacturer's written instructions.
- D. On horizontal surfaces, loosely lay insulation drainage panels according to manufacturer's written instructions. Stagger end joints and tightly abut insulation units.

3.9 PLAZA-DECK PAVER INSTALLATION

- A. Install concrete pavers in locations indicated according to manufacturer's written instructions.
- B. Setting Bed: Install setting bed in locations and of thickness indicated. Comply with requirements in [**Section 096340 "Stone Flooring."**] [**Section 321400 "Unit Paving."**]
- C. Accurately install paver pedestals and accessories in locations and to elevations required. Adjust for final level and slope.
 - 1. Fill paver pedestal with concrete mix, strike smooth with top of pedestal, and cure according to ACI 301.
- D. Loosely lay pavers on pedestals, maintaining a uniform open joint width. Tightly seat pavers against spacers to eliminate lateral movement or drift of paving assembly. Align joint patterns parallel in each direction.
 - 1. Lay out pavers to avoid less-than-half-width pavers at perimeter or other terminations.
- E. Install pavers to not vary more than **1/16 inch (1.6 mm)** in elevation between adjacent pavers or more than **1/16 inch (1.6 mm)** from surface plane elevation of individual paver.
- F. Maintain tolerances of paving installation within [**1/4 inch in 10 feet (1:48)**] <Insert **value**> of surface plane in any direction.

3.10 FIELD QUALITY CONTROL

- A. [**Owner will engage**] [**Engage**] a site representative qualified by waterproofing membrane manufacturer to inspect substrate conditions, surface preparation, membrane application, flashings, protection, and drainage components, and to furnish daily reports to DEN Project Manager.
- B. Flood Testing: Flood test each deck area for leaks, according to recommendations in ASTM D 5957, after completing waterproofing but before overlying construction is placed. Install temporary containment assemblies, plug or dam drains, and flood with potable water.

1. Flood to an average depth of **2-1/2 inches** (64 mm) with a minimum depth of **1 inch** (25 mm) and not exceeding a depth of **4 inches** (100 mm). Maintain **2 inches** (51 mm) of clearance from top of sheet flashings.
 2. Flood each area for **[24] [48] [72]** hours.
 3. After flood testing, repair leaks, repeat flood tests, and make further repairs until waterproofing installation is watertight.
- C. **[Owner will engage] [Engage]** an independent testing agency to observe flood testing and examine underside of decks and terminations for evidence of leaks during flood testing.
- D. Prepare test and inspection reports.
- 3.11 PROTECTION, REPAIR, AND CLEANING
- A. Do not permit foot or vehicular traffic on unprotected membrane.
 - B. Protect waterproofing from damage and wear during remainder of construction period.
 - C. Protect installed **[board insulation] [and] [insulation drainage panels]** from damage due to UV light, harmful weather exposures, physical abuse, and other causes. Provide temporary coverings where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.
 - D. Correct deficiencies in or remove waterproofing that does not comply with requirements; repair substrates, reapply waterproofing, and repair sheet flashings.
 - E. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 071326

SECTION 071353 - ELASTOMERIC SHEET WATERPROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. EPDM rubber sheet waterproofing.
 - 2. Butyl rubber sheet waterproofing.
- B. Related Requirements:
 - 1. Section 071354 "Thermoplastic Sheet Waterproofing" for PVC sheet waterproofing.
 - 2. Section 079500 "Expansion Control" for plaza- or foundation-wall expansion-joint assemblies that interface with waterproofing.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]<Insert location>**.
 - 1. Pre Application Conference: Approximately two (2) weeks prior to actual commencement of fluid applied waterproofing installation, meet at project site with Installer, installers of deck or substrate construction to receive work, installers of other work in and around waterproofing work which must precede, follow or penetrate waterproofing work (including mechanical work if any), DEN Project Manager the Contractor's Quality Control Manager and waterproofing material manufacturer's representative. Record (Contractor) discussions of conference, together with decisions and agreements (or disagreements) reached. Furnish copy of record to each party attending. Review methods and procedures related to work, including but not necessarily limited to the following:
 - a. Tour jobsite areas to be waterproofed. Inspect and discuss condition of substrate, drains, curbs, penetrations, and other preparatory work performed by other trades.

- b. Review waterproofing requirements (drawings, specifications and other contract documents) including surface preparation, substrate condition and pretreatment, minimum curing period, forecasted weather conditions, special details and sheet flashings, installation procedures, testing and inspection procedures, and protection and repairs. .
- c. Review required submittals. Work cannot begin until all submittals are approved by Owner.
- d. Review and finalize construction schedule related to waterproofing work and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
- e. Review required inspection, testing, and certifying procedures, safety, and hazardous control programs.
- f. Review protection and repair procedures.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, and tested physical and performance properties of waterproofing.
2. Include manufacturer's written instructions for evaluating, preparing, and treating substrate.
3. Include data substantiating that materials comply with specified requirements.

B. LEED Submittals:

1. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating distance to Project, cost for each regional material, and fraction by weight that is considered regional.

C. Shop Drawings: Show locations and extent of waterproofing and details of substrate joints and cracks, sheet flashings, penetrations, inside and outside corners, tie-ins with adjoining waterproofing, and other termination conditions.

1. Include setting drawings showing layout, sizes, sections, profiles, and joint details of pedestal-supported concrete pavers.

D. Samples: For each exposed product and for each color and texture specified, including the following products in minimum 1' x 1' sizes unless otherwise indicated:

1. Waterproofing and flashing sheet.
2. Insulation.
3. Drainage panel.
4. Plaza-deck paver, [4-by-4-inch (100-by-100-mm) square] [full sized], in each color and texture required.
5. Paver pedestal assembly.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Installer shall provide a certificate that he is approved by the manufacturer for this installation.
- C. Installer to submit a certificate evidencing not less than five (5) years of successful experience installing similar types to products specified.
- D. Installer to provide a certificate indicating that waterproofing has been installed per requirements of this section.
- E. Manufacturer shall submit a certificate indicating that he has not less than five (5) years experience in the manufacturing of the types of products specified.
- F. Manufacturer to submit a report that all work is being done per contract requirements.
- G. Field quality-control reports.
- H. Provide a certificate stating that waterproofing and protection board to be used at the horizontal and vertical surfaces of the basement extension has been tested for jet fuel resistance and that the required warranty applies to this work. Provide the actual test report.
- I. Minimum Requirements: For waterproofing, expansion joint covers and any associated joints, no loss in waterproofing ability within 48 hours after ponding jet fuel for 72 hours. For protection board, no loss in protection within 48 hours after being immersed in jet fuel for 72 hours.
- J. Provide a certificate that bellows are jet fuel resistant.
- K. Provide a certificate stating that waterproofing and protection board to be used at the horizontal and vertical surfaces of the basement extension has been tested for jet fuel resistance and that the required warranty applies to this work. Provide the actual test report.
 - 1. Minimum Requirements: For waterproofing, expansion joint covers and any associated joints, no loss in waterproofing ability within 48 hours after ponding jet fuel for 72 hours. For protection board, no loss in protection within 48 hours after being immersed in jet fuel for 72 hours.
- L. Sample Warranties: For special warranties.

1.6 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. General: For each type of work, obtain primary materials from single manufacturer, with not less than three (5) years of successful experience in supplying principal materials for waterproofing work. Provide secondary materials only as recommended by manufacturer of primary materials.
- B. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by waterproofing manufacturer.
1. A firm that has specialized for not less than five (5) years in installation of types of dampproofing required for project and which is acceptable to manufacturer of primary materials.
 2. Assign work closely associated with waterproofing, including (but not limited to) waterproofing accessories, and flashings used in conjunction with waterproofing, expansion joints in membrane, insulation and protection course on membrane, to installer of waterproofing, for single, undivided responsibility.
- C. Mockups: Build mockups to verify selections made under Sample submittals and to set quality standards for installation.
1. Build for each typical waterproofing installation including[**pavers and**] accessories to demonstrate surface preparation, crack and joint treatment, corner treatment, and protection.
 - a. Size: [**100 sq. ft. (9.3 sq. m) in area**] [**As shown on Drawings**].
 - b. Description: Each type of [**wall**] [**deck**] [**and**] [**plaza**] <Insert description> installation.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 FIELD CONDITIONS

- A. Substrate: Proceed with dampproofing work only after substrate construction and penetrating work have been completed.
- B. Environmental Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended in writing by waterproofing manufacturer. Do not apply waterproofing to a damp or wet substrate.
1. Do not apply waterproofing in snow, rain, fog, or mist.
- C. Maintain adequate ventilation during preparation and application of waterproofing materials.

1.9 WARRANTY

- A. Manufacturer's Warranty: Manufacturer's standard materials-only warranty in which manufacturer agrees to furnish replacement waterproofing material for waterproofing that does not comply with requirements or that fails to remain watertight within specified warranty period.
1. Warranty Period: Minimum **[10] [20] <Insert number>** years from date of Substantial Completion.
- B. Installer's Special Warranty: Specified form, **[on warranty form at end of this Section]**, signed by Installer, covering Work of this Section, for warranty period of **[five] <Insert number>** years.
1. Warranty includes excavation, removing, and reinstalling protection board, drainage panels, insulation, pedestals, and pavers on plaza decks.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

- A. General Compatibility: Provide products that are recommended by manufacturer to be fully compatible with indicated substrates.
- B. Source Limitations for Waterproofing System: Obtain waterproofing materials[, **protection course,**] **[and] [molded-sheet drainage panels]** from single source from single manufacturer.
- C. Source Limitations for Plaza-Deck Paving: Obtain plaza-deck pavers[**and paver pedestals**] from single source from single manufacturer.
- D. Provide dampproofing materials that comply with the following requirements, or provide other similar products that are certified in writing by manufacturer of primary dampproofing materials to be superior in performance for application indicated.

2.2 SHEET WATERPROOFING

- A. EPDM Rubber Sheet: ASTM D 6134, Type I, **60-mil-** (1.5-mm-) thick flexible sheet, unreinforced, formed from EPDM.
1. Products: Subject to compliance with requirements, provide one of the following:

- a. Carlisle Coatings & Waterproofing Inc.; Sure-Seal EPDM.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
- B. Butyl Rubber Sheet: ASTM D 6134, Type II, [**60-mil-** (1.5-mm-)] [**90-mil-** (2.3-mm-)] [**120-mil-** (3.0-mm-)] thick flexible sheet, unreinforced, formed from isobutylene-isoprene rubber.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Carlisle Coatings & Waterproofing Inc.; Sure-Seal Butyl.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.

2.3 AUXILIARY MATERIALS

- A. General: Furnish auxiliary materials recommended by waterproofing manufacturer for intended use and compatible with sheet waterproofing.
1. Furnish liquid-type auxiliary materials that comply with VOC limits of authorities having jurisdiction.
- B. Concealed Sheet Flashing: Same material, construction, and thickness as sheet waterproofing or **60-mil-** (1.5-mm-) thick, uncured EPDM, as required by manufacturer.
- C. Exposed Sheet Flashing: **60-mil-** (1.5-mm-) thick EPDM, cured or uncured, as required by manufacturer.
- D. Bonding Adhesives: For bonding waterproofing sheets and sheet flashings to substrates and projections.
- E. Splicing Cement and Cleaner: Single-component butyl splicing cement and solvent-based splice cleaner.
1. Butyl Gum Tape: **30-mil-** (0.76-mm-) thick-by-**6-1/4-inch-** (160-mm-) wide, uncured butyl with polyethylene release film.
- F. Lap Sealant: Single-component sealant.
- G. In-Seam Sealant: Single-component sealant.
- H. Water-Cutoff Mastic: Butyl mastic sealant.
- I. Waterproofing and Sheet-Flashing Accessories: Provide sealants, pourable sealers, cone, and vent flashings, inside and outside corner flashings, termination reglets, and other accessories recommended by waterproofing manufacturer for intended use.
- J. Metal Termination Bars: Manufacturer's standard aluminum bars, approximately **1 inch** (25 mm) wide, prepunched, with fasteners.

- K. Protection Course: Semirigid sheets of asphalt-impregnated organic mat, mineral surface, with a nominal thickness of **1/8 inch** (3 mm).
- L. Protection Course: Fan folded, with a core of extruded-polystyrene board insulation, a nominal thickness of **1/4 inch** (6 mm), and a compressive strength of not less than **8 psi** (55 kPa).
- M. Bellows: Where bellows are indicated on the drawings as in contact with the waterproof membrane, provide either 24 gauge soft copper or 60 mil flexible sheet membrane that is jet fuel resistant and compatible with waterproof membrane. Bellows shall be as indicated and shall lap waterproof membrane a minimum 6" per side.

2.4 MOLDED-SHEET DRAINAGE PANELS

- A. Molded-Sheet Drainage Panel: Comply with Section 334600 "Subdrainage."
- B. Nonwoven-Geotextile-Faced, Molded-Sheet Drainage Panel: Composite subsurface drainage panel consisting of a studded, nonbiodegradable, molded-plastic-sheet drainage core; with a nonwoven, needle-punched geotextile facing with an apparent opening size not exceeding **No. 70** (0.21-mm) sieve laminated to one side of the core[**and a polymeric film bonded to the other side**]; and with a vertical flow rate of **9 to 15 gpm per ft.** (112 to 188 L/min. per m).
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Carlisle Coatings & Waterproofing Inc.; [**CCW MiraDRAIN 6000**] [**CCW MiraDRAIN 6000XL**] [**CCW MiraDRAIN 6200**] [or] [**CCW MiraDRAIN 6200XL**].
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
- C. Woven-Geotextile-Faced, Molded-Sheet Drainage Panel: Composite subsurface drainage panels consisting of a studded, nonbiodegradable, molded-plastic-sheet drainage core; with a woven-geotextile facing with an apparent opening size not exceeding **No. 40** (0.425-mm) sieve laminated to one side of the core; and with a horizontal flow rate not less than **2.8 gpm per ft.** (35 L/min. per m).
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Carlisle Coatings & Waterproofing Inc.; [**CCW MiraDRAIN 9000**] [or] [**CCW MiraDRAIN 9900**].
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
- D. High-Capacity, Molded-Sheet Collector-Panel System: Composite subsurface collector-panel system by same manufacturer as primary molded-sheet drainage panels; consisting of a high-profile, studded, nonbiodegradable, molded-plastic-sheet drainage core; with a woven-geotextile facing with an apparent opening size not exceeding **No. 40** (0.425-mm) sieve laminated to one side of the core; and with a

vertical flow rate of **9 to 15 gpm per ft.** (112 to 188 L/min. per m) and a horizontal flow rate **[as indicated on Drawings] <Insert requirement>**. Provide system with manufacturer's outlets, connectors, tapes, and other accessories to connect primary molded-sheet drainage panels with piped subdrainage system specified in Section 334600 "Subdrainage."

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Carlisle Coatings & Waterproofing Inc.; CCW QuickDRAIN.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.

2.5 INSULATION

- A. Insulation, General: Comply with Section 072100 "Thermal Insulation."
- B. Board Insulation: Extruded-polystyrene board insulation complying with ASTM C 578, shiplap edged.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. DiversiFoam Products.
 - b. Dow Chemical Company (The).
 - c. Owens Corning Insulating Systems LLC.
 - d. Pactiv Building Products.
 - e. T. Clear Corporation; a subsidiary of Fin Pan Inc.
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
2. Type IV, **25-psi** (173-kPa) minimum compressive strength.
3. Type VI, **40-psi** (276-kPa) minimum compressive strength.
4. Type VII, **60-psi** (414-kPa) minimum compressive strength.
5. Type V, **100-psi** (690-kPa) minimum compressive strength.

2.6 INSULATION DRAINAGE PANELS

- A. Unfaced Wall-Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, **[Type IV, 25-psi (173-kPa)] [or] [Type VI, 40-psi (276-kPa)]** minimum compressive strength; unfaced; fabricated with shiplap or channel edges and with one side having grooved drainage channels.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. DiversiFoam Products; **[CertiFoam 25 SL] [or] [CertiFoam 40 (with channel edges)]** Drainage Board.
 - b. Dow Chemical Company (The); Styrofoam Perimate.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.

- B. Geotextile-Faced, Wall-Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, **[Type IV, 25-psi (173-kPa)]** **[or]** **[Type VI, 40-psi (276-kPa)]** minimum compressive strength; fabricated with tongue-and-groove edges and with one side having grooved drainage channels faced with nonwoven geotextile filter fabric.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Owens Corning Insulating Systems LLC; Insul-Drain.
 - b. T. Clear Corporation, a subsidiary of Fin Pan Inc.; **[Thermadry 750]** **[or]** **[Thermadry 1250]**.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.
- C. Unfaced Plaza-Deck Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, **[Type VI, 40-psi (276-kPa)]** **[or]** **[Type VII, 60-psi (414-kPa)]** minimum compressive strength; unfaced; fabricated with shiplapped, channel, or tongue-and-groove edges and with one side having ribbed drainage channels.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. American Hydrotech, Inc.; Hydroguard.
 - b. DiversiFoam Products; CertiFoam Plaza Deck.
 - c. Dow Chemical Company (The); Styrofoam Ribbed Roofmate.
 - d. Owens Corning Insulating Systems LLC; **[Foamular 404 RB]** **[Foamular 604 RB]**.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.
- D. Geotextile-Faced, Plaza-Deck Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, **[Type VI, 40-psi (276-kPa)]** **[or]** **[Type VII, 60-psi (414-kPa)]** minimum compressive strength; fabricated with tongue-and-groove edges and with one side having grooved drainage channels faced with manufacturer's standard, nonwoven geotextile filter fabric.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. T. Clear Corporation, a subsidiary of Fin Pan Inc.; **[Thermadry 1250]** **[or]** **[Thermadry 1750]**.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.

2.7 PLAZA-DECK PAVERS

- A. Plaza-Deck Pavers: **[Brick]** **[Concrete]** **[Asphalt-block]** pavers specified in Section 321400 "Unit Paving."

- B. Stone Plaza-Deck Pavers: [**Granite**] [**Limestone**] [**Marble**] [**Quartz-based stone**] [**Slate**] [**Travertine**] [**Rough-stone**] pavers specified in [**Section 096340 "Stone Flooring."**] [**Section 321400 "Unit Paving."**]
- C. Concrete Plaza-Deck Pavers: Solid, hydraulically pressed, standard weight concrete units, [**square edged**] [**with top edges beveled 3/16 inch (5 mm)**], manufactured for use as plaza-deck pavers; [**7500-psi (52-MPa)**] [**6500-psi (45-MPa)**] <Insert value> minimum compressive strength, ASTM C 140; absorption not greater than 5 percent, ASTM C 140; no breakage and maximum 1 percent mass loss when tested for freeze-thaw resistance according to ASTM C 67.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Hanover Architectural Products.
 - b. Roofblok Limited.
 - c. Sunny Brook Pressed Concrete Co.
 - d. Wausau Tile, Inc.
 - e. Westile Roofing Products.
 - f. <Insert manufacturer's name>.
 - g. or approved equal.
 2. Regional Materials: Concrete plaza-deck pavers shall be manufactured within **500 miles (800 km)** of Project site from aggregates[**and cement**] that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site.
 3. Thickness: [**1-5/8 inches (41 mm)**] [**1-3/4 inches (45 mm)**] [**2 inches (51 mm)**] [**2-3/8 inches (60 mm)**] <Insert dimension>.
 4. Face Size: [**8-7/8 inches (225 mm) square**] [**9 inches (229 mm) square**] [**9 by 18 inches (229 by 457 mm)**] [**12 inches (305 mm) square**] [**12 by 24 inches (305 by 610 mm)**] [**18 inches (457 mm) square**] [**24 inches (610 mm) square**] [**As indicated**] <Insert dimension(s) and shape>.
 5. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
- D. Setting Bed: Provide [**aggregate**] [**mortar**] [**bituminous**] setting-bed materials specified in Section 321400 "Unit Paving."
- E. Paver Pedestals: Paver manufacturer's standard paver support assembly, including [**fixed-height**] [**adjustable or stackable**] pedestals, shims, and spacer tabs for joint spacing of [**1/8 inch (3 mm)**] [**3/16 inch (5 mm)**] [**1/8 to 3/16 inch (3 to 5 mm)**].
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. <Insert, in separate subparagraphs, manufacturer's name; product name or designation>.
 - b. or approved equal.
 2. Concrete Fill: ACI 301, compressive strength of **5000 psi (34 MPa)** at 28 days and

air content of 6 percent.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the waterproofing.
 - 1. Verify that concrete has cured and aged for minimum time period recommended in writing by waterproofing manufacturer.
 - 2. Verify that substrate is visibly dry and within the moisture limits recommended in writing by manufacturer. Test for capillary moisture by plastic sheet method according to ASTM D 4263.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SURFACE PREPARATION

- A. Clean, prepare, and treat substrates according to manufacturer's written instructions. Provide clean, dust-free, and dry substrates for waterproofing application.
- B. Mask off adjoining surfaces not receiving waterproofing to prevent spillage and overspray affecting other construction.
- C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.
- D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids.
- E. Prepare, fill, prime, and treat joints and cracks in substrates. Remove dust and dirt from joints and cracks according to ASTM D 4258.
- F. Prepare, treat, and seal vertical and horizontal surfaces at terminations and penetrations through waterproofing and at drains and protrusions.

3.3 INSTALLATION, GENERAL:

- A. General: Comply with manufacturer's instructions, except where more stringent requirements are shown or specified, and except where project conditions require extra precautions or provisions to ensure satisfactory performance of work.
- B. Start installation of waterproofing membrane only in presence and with advice of manufacturer's technical representative.

3.4 FULLY ADHERED SHEET INSTALLATION

- A. Install fully adhered sheets over entire area to receive waterproofing according to manufacturer's written instructions and recommendations in ASTM D 5843.
- B. Accurately align sheets and maintain uniform side and end laps of minimum dimensions required. Stagger end laps.
- C. Apply bonding adhesive to substrates at required rate and allow it to partially dry.
- D. Apply bonding adhesive to sheets and firmly adhere sheets to substrates. Do not apply bonding adhesive to splice area of sheet.
- E. Install fully adhered sheets and auxiliary materials to tie into existing waterproofing.
- F. Repair tears, voids, and lapped seams in waterproofing that do not comply with requirements. Slit and flatten fishmouths and blisters. Patch with sheet waterproofing extending beyond repaired areas in all directions.
- G. Horizontal Application: Apply sheets with side laps shingled with slope of deck where possible.
 - 1. Spread sealant bed over deck drain flange at deck drains and securely seal sheet waterproofing in place with clamping ring.
- H. Bellows: Lap waterproof membrane above and below bellows.

3.5 PARTIALLY ADHERED SHEET INSTALLATION

- A. Install partially adhered sheets over entire area to receive waterproofing according to manufacturer's written instructions.
- B. Accurately align sheets and maintain uniform side and end laps of minimum dimensions required. Stagger end laps.
- C. Apply bonding adhesive to the following areas of substrates and to each sheet at required rate and allow to partially dry:
 - 1. Upper 25 percent of length of each sheet and 18 inches (457 mm) around perimeter of each sheet.
- D. Firmly adhere sheets to substrate. Do not apply bonding adhesive to splice area of sheet.
- E. Install partially adhered sheets and auxiliary materials to tie into existing waterproofing.
- F. Repair tears, voids, and lapped seams in waterproofing that do not comply with requirements. Slit and flatten fishmouths and blisters. Patch with sheet waterproofing extending beyond repaired areas in all directions.

- G. Bellows: Lap waterproof membrane above and below bellows.

3.6 COMPARTMENTED, LOOSELY LAID SHEET INSTALLATION

- A. Install compartmented, loosely laid sheets over entire area to receive waterproofing according to manufacturer's written instructions.
- B. Accurately align sheets and maintain uniform side and end laps of minimum dimensions required. Stagger end laps.
- C. Apply continuous beads of water-cutoff mastic, of size recommended in writing by waterproofing manufacturer, to substrates in a **60-by-60-inch** (1500-by-1500-mm) grid pattern before installing sheet.
- D. Apply sheets with side laps shingled with slope of deck where possible.
- E. Spread sealant bed over deck drain flange at deck drains and securely seal sheet waterproofing in place with clamping ring.
- F. Install compartmented, loosely laid sheets and auxiliary materials to tie into existing waterproofing.
- G. Repair tears, voids, and lapped seams in waterproofing that do not comply with requirements. Slit and flatten fishmouths and blisters. Patch with sheet waterproofing extending beyond repaired areas in all directions.

3.7 SEAM INSTALLATION

- A. Cement Splice: Clean splice areas, apply splicing cement and in-seam sealant, and firmly roll side and end laps of overlapping sheets according to manufacturer's written instructions to produce a splice not less than **6 inches** (150 mm) wide and to ensure a watertight seam installation. Apply lap sealant and seal edges of sheet terminations.
- B. Cement and Tape Splice: Clean splice areas, apply splicing cement and butyl gum tape, and firmly roll side and end laps of overlapping sheets according to manufacturer's written instructions to ensure a watertight seam installation. Apply lap sealant and seal edges of sheet terminations.

3.8 SHEET-FLASHING INSTALLATION

- A. Install sheet flashings and preformed flashing accessories and adhere to substrates according to waterproofing manufacturer's written instructions.
- B. Form wall flashings using exposed sheet flashing.
- C. Extend deck sheet waterproofing to form wall flashings.
 - 1. Flash penetrations and field-formed inside and outside corners with uncured

sheet flashing.

2. Clean splice areas, apply splicing cement, and firmly roll side and end laps of overlapping sheets to ensure a watertight installation. Apply lap sealant and seal edges of sheet-flashing terminations.
- D. Cover expansion joints and discontinuous deck-to-wall or deck-to-deck joints by extending deck sheet waterproofing over joints.
- E. Terminate and seal top of sheet flashings[**with mechanically anchored termination bars**].

3.9 PROTECTION COURSE INSTALLATION

- A. Install protection course over waterproofing membrane according to manufacturer's written instructions and before beginning subsequent construction operations. Minimize exposure of membrane.
1. **[Molded-sheet drainage panels] [Insulation drainage panels] [Board insulation]** may be used in place of a separate protection course for vertical applications when approved by waterproofing manufacturer.

3.10 MOLDED-SHEET DRAINAGE-PANEL INSTALLATION

- A. Place and secure molded-sheet drainage panels, with geotextile facing away from wall or deck substrate, according to manufacturer's written instructions. Use adhesives or other methods that do not penetrate waterproofing. Lap edges and ends of geotextile to maintain continuity. Protect installed molded-sheet drainage panels during subsequent construction.
1. For vertical applications, install protection course before installing drainage panels.

3.11 INSULATION INSTALLATION

- A. Install one or more layers of board insulation to achieve required thickness over waterproofed surfaces. Cut and fit to within **3/4 inch** (19 mm) of projections and penetrations.
- B. On vertical surfaces, set insulation units in adhesive or tape applied according to manufacturer's written instructions.
- C. On horizontal surfaces, loosely lay insulation units according to manufacturer's written instructions. Stagger end joints and tightly abut insulation units.

3.12 INSULATION DRAINAGE-PANEL INSTALLATION

- A. Install insulation drainage panels over waterproofed surfaces. Cut and fit to within **3/4**

inch (19 mm) of projections and penetrations.

- B. Ensure that drainage channels are aligned and free of obstructions.
- C. On vertical surfaces, set insulation drainage panels in adhesive or tape applied according to manufacturer's written instructions.
- D. On horizontal surfaces, loosely lay insulation drainage panels according to manufacturer's written instructions. Stagger end joints and tightly abut insulation units.

3.13 PLAZA-DECK PAVER INSTALLATION

- A. Install concrete pavers in locations indicated according to manufacturer's written instructions.
- B. Setting Bed: Install setting bed in locations and of thickness indicated. Comply with requirements in [**Section 096340 "Stone Flooring."**] [**Section 321400 "Unit Paving."**]
- C. Accurately install paver pedestals and accessories in locations and to elevations required. Adjust for final level and slope.
 - 1. Fill paver pedestal with concrete mix, strike smooth with top of pedestal, and cure according to ACI 301.
- D. Loosely lay pavers on pedestals, maintaining a uniform open joint width. Tightly seat pavers against spacers to eliminate lateral movement or drift of paving assembly. Align joint patterns parallel in each direction.
 - 1. Lay out pavers to avoid less-than-half-width pavers at perimeter or other terminations.
- E. Install pavers to vary not more than **1/16 inch** (1.6 mm) in elevation between adjacent pavers or more than **1/16 inch** (1.6 mm) from surface plane elevation of individual paver.
- F. Maintain tolerances of paving installation within [**1/4 inch in 10 feet (1:48)**] <Insert **value**> of surface plane in any direction.

3.14 FIELD QUALITY CONTROL

- A. Engage a site representative qualified by waterproofing membrane manufacturer to inspect substrate conditions, surface preparation; membrane application, flashings, protection, and drainage components, and to furnish daily reports to DEN Project Manager.
- B. Flood Testing: Flood test each deck area for leaks, according to recommendations in ASTM D 5957, after completing waterproofing but before overlying construction is

placed. Install temporary containment assemblies, plug or dam drains, and flood with potable water.

1. Flood to an average depth of **2-1/2 inches** (64 mm) with a minimum depth of **1 inch** (25 mm) and not exceeding a depth of **4 inches** (100 mm). Maintain **2 inches** (51 mm) of clearance from top of sheet flashings.
2. Flood each area for **[24] [48] [72]** hours.
3. After flood testing, repair leaks, repeat flood tests, and make further repairs until waterproofing installation is watertight.

- C. **[Owner will engage] [Engage]** an independent testing agency to observe flood testing and examine underside of decks and terminations for evidence of leaks during flood testing.
- D. Prepare test and inspection reports.

3.15 PROTECTION, REPAIR, AND CLEANING

- A. Do not permit foot or vehicular traffic on unprotected membrane.
- B. Protect waterproofing from damage and wear during remainder of construction period.
- C. Protect installed **[board insulation] [and] [insulation drainage panels]** from damage due to UV light, harmful weather exposures, physical abuse, and other causes. Provide temporary coverings where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.
- D. Correct deficiencies in or remove waterproofing that does not comply with requirements; repair substrates, reapply waterproofing, and repair sheet flashings.
- E. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 071353

SECTION 071354 - THERMOPLASTIC SHEET WATERPROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes PVC sheet waterproofing for horizontal installations.
- B. Related Requirements:
 - 1. Section 071353 "Elastomeric Sheet Waterproofing" for **[EPDM] [and] [butyl]** sheet waterproofing.
 - 2. Section 075400 "Thermoplastic Membrane Roofing" for thermoplastic membranes used **[for roofing] [and] [beneath vegetated roof assemblies]**.
 - 3. Section 079500 "Expansion Control" for expansion-joint assemblies that interface with waterproofing.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site][location and time as determined by DEN Project Manager] <Insert location>**
 - 1. Pre Application Conference: Approximately two (2) weeks prior to actual commencement of waterproofing installation, meet at project site with Installer, installers of deck or substrate construction to receive work, installers of other work in and around waterproofing work which must precede, follow or penetrate waterproofing work (including mechanical work if any), DEN Project Manager, the Contractor's Quality Control Manager and waterproofing material manufacturer's representative. Record (Contractor) discussions of conference, together with decisions and agreements (or disagreements) reached. Furnish copy of record to each party attending. Review methods and procedures related to work, including but not necessarily limited to the following:
 - a. Tour jobsite areas to be waterproofed. Inspect and discuss condition of substrate, drains, curbs, penetrations, and other preparatory work performed by other trades.
 - b. Review waterproofing requirements (drawings, specifications and other

contract documents), including surface preparation, substrate condition and pretreatment, minimum curing period, forecasted weather conditions, special details and sheet flashings, installation procedures, testing and inspection procedures, and protection and repairs.

- c. Review required submittals. Work cannot begin until all submittals are approved by Owner.
- d. Review and finalize construction schedule related to waterproofing work and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
- e. Review required inspection, testing, and certifying procedures, safety, and hazardous control programs.
- f. Review protection and repair procedures.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, and tested physical and performance properties of waterproofing.
2. Include manufacturer's written instructions for evaluating, preparing, and treating substrate.
3. Include data substantiating that materials comply with specified requirements.

B. LEED Submittals:

1. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating distance to Project, cost for each regional material, and fraction by weight that is considered regional.

C. Shop Drawings: Show locations and extent of waterproofing and details of substrate joints and cracks, sheet flashings, penetrations, inside and outside corners, tie-ins with adjoining waterproofing, and other termination conditions.

1. Include layout drawings showing locations of submembrane containment strips[**and control test drains**].
2. Include setting drawings showing layout, sizes, sections, profiles, and joint details of pedestal-supported concrete pavers.

D. Samples: For each exposed product and for each color and texture specified, including the following products, in minimum 1' x 1' sizes unless otherwise indicated:

1. Waterproofing and flashing sheet.
2. Insulation.
3. Drainage panel.
4. Plaza-deck paver, [**4-by-4-inch (100-by-100-mm) square**] [**full sized**], in each color and texture required.
5. Paver pedestal assembly.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Installer shall provide a certificate that he is approved by the manufacturer for this installation.
- C. Installer to submit a certificate evidencing not less than five (5) years of successful experience installing similar types to products specified.
- D. Installer to provide a certificate indicating that waterproofing has been installed per requirements of this section.
- E. Manufacturer shall submit a certificate indicating that he has not less than five (5) years experience in the manufacturing of the types of products specified.
- F. Manufacturer to submit a report that all work is being done per contract requirements.
- G. Field quality-control reports.
- H. Provide a certificate that bellows are jet fuel resistant.
- I. Provide a certificate stating that waterproofing and protection board to be used at the horizontal and vertical surfaces of the basement extension has been tested for jet fuel resistance and that the required warranty applies to this work. Provide the actual test report.
 - 1. Minimum Requirements: For waterproofing, expansion joint covers and any associated joints, no loss in waterproofing ability within 48 hours after ponding jet fuel for 72 hours. For protection board, no loss in protection within 48 hours after being immersed in jet fuel for 72 hours.
- J. Sample Warranties: For special warranties.

1.6 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. General: For each type of work, obtain primary materials from single manufacturer, with not less than three (5) years of successful experience in supplying principal materials for waterproofing work. Provide secondary materials only as approved in writing by manufacturer of primary materials.
- B. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by waterproofing manufacturer.

1. A firm that has specialized for not less than three (3) years in installation of types of dampproofing required for project and which is acceptable to manufacturer of primary materials.
 2. Assign work closely associated with waterproofing, including (but not limited to) waterproofing accessories, and flashings used in conjunction with waterproofing, expansion joints in membrane, insulation and protection course on membrane, to installer of waterproofing, for single, undivided responsibility.
- C. Mockups: Build mockups to verify selections made under Sample submittals and to set quality standards for installation.
1. Build for each typical waterproofing installation including[**pavers and**] accessories to demonstrate surface preparation, crack and joint treatment, corner treatment, and protection.
 - a. Size: [**100 sq. ft. (9.3 sq. m) in area**] [**As shown on Drawings**].
 - b. Description: Each type of [**deck**] [**and**] [**plaza**] <Insert description> installation.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 WARRANTY

- A. Manufacturer's Warranty: Manufacturer's standard warranty in which [**manufacturer agrees to furnish replacement waterproofing material for**] [**manufacturer and Installer agree to repair or replace**] waterproofing that does not comply with requirements or that fails to remain watertight within specified warranty period.
1. Warranty Period: Minimum [**10**] <Insert number> years from date of Substantial Completion.
- B. Installer's Special Warranty: Specified form, [**on warranty form at end of this Section**,]signed by Installer, covering Work of this Section, for warranty period of minimum [**five**] <Insert number> years.
1. Warranty includes excavation, removing, and reinstalling protection board, drainage panels, insulation, pedestals, and pavers on plaza decks.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

- A. General Compatibility: Provide products that are recommended by manufacturer to be fully compatible with indicated substrates.
- B. Source Limitations for Waterproofing System: Obtain waterproofing materials[, **protection course,**] [**and**] [**molded-sheet drainage panels**] from single source from single manufacturer.
- C. Source Limitations for Plaza-Deck Paving: Obtain plaza-deck pavers[**and paver pedestals**] from single source from single manufacturer.

2.2 PVC SHEET WATERPROOFING

- A. Products: Subject to compliance with requirements, provide one of the following:
 - 1. Sika Sarnafil Inc.; Sarnafil G476 Membrane.
 - 2. **<Insert manufacturer's name; product name or designation>**.
 - 3. or approved equal.
- B. PVC Sheet: **60-mil-** (1.5-mm-) [**80-mil-** (2.0-mm-)] [**96-mil-** (2.4-mm-)] thick, PVC membrane with integral pigments, stabilizers, UV absorbers, biocide, and nonwoven fiberglass reinforcement; with the following properties measured according to standard test methods referenced:
 - 1. Tensile Strength: **1500 psi** (10.3 MPa) minimum; ASTM D 638.
 - 2. Elongation at Break: 240 percent minimum, machine direction; ASTM D 638.
 - 3. Seam Strength: 90 percent minimum of tensile strength; ASTM D 638.
 - 4. Retention of Properties after Heat Aging: 95 percent minimum retention of tensile strength and elongation; ASTM D 638 after 168 hours at **194 deg F** (90 deg C); ASTM D 3045.
 - 5. Tear Resistance: **21 lbf** (95 N) minimum; ASTM D 1004.
 - 6. Low-Temperature Bend: Pass at **minus 40 deg F** (minus 40 deg C); ASTM D 2136.
 - 7. Linear Dimension Change: 0.002 percent maximum after 6 hours at **176 deg F** (80 deg C); ASTM D 1204.
 - 8. Water Absorption: 2.5 percent maximum weight gain after 168 hours' immersion at **158 deg F** (70 deg C); ASTM D 570.
 - 9. Dynamic Puncture Resistance: **117.7 ft-pdl** (5 J) minimum; ASTM D 5635.
- C. Self-Adhered PVC Sheet: **120-mil-** (3.0-mm-) thick, composite sheet composed of **60-mil-** (1.5-mm-) thick, PVC membrane with integral pigments, stabilizers, biocide, and nonwoven fiberglass reinforcement; a **60-mil-** (1.5-mm-) thick, nonpermeable, closed-cell-foam backing layer; and a pressure-sensitive adhesive coating; with the following properties measured according to standard test methods referenced:
 - 1. Tensile Strength: **1500 psi** (10.3 MPa) minimum; ASTM D 638.
 - 2. Elongation at Break: 240 percent minimum, machine direction; ASTM D 638.

3. Seam Strength: 90 percent minimum of tensile strength; ASTM D 638.
4. Retention of Properties after Heat Aging: 95 percent minimum retention of tensile strength and elongation; ASTM D 638 after 168 hours at **194 deg F** (90 deg C); ASTM D 3045.
5. Tear Resistance: **21 lbf** (95 N) minimum; ASTM D 1004.
6. Linear Dimension Change: 0.002 percent maximum after 6 hours at **176 deg F** (80 deg C); ASTM D 1204.
7. Dynamic Puncture Resistance: **949.2 ft-pdl** (40 J) minimum; ASTM D 5635.

2.3 AUXILIARY MATERIALS

- A. General: Furnish auxiliary materials recommended by waterproofing manufacturer for intended use and compatible with sheet waterproofing.
 1. Furnish liquid-type auxiliary materials that comply with VOC limits of authorities having jurisdiction.
- B. Concealed Sheet Flashing: Same material, construction, and thickness as sheet waterproofing.
- C. Exposed Sheet Flashing: PVC-sheet flashing [**60 mils** (1.5 mm)] [**80 mils** (2.0 mm)] [**96 mils** (2.4 mm)] thick; PVC with integral pigments, stabilizers, UV absorbers, and biocide; reinforced with nonwoven fiberglass.
- D. Surface Conditioner: Manufacturer's standard waterborne surface treatment to bind residual surface dust and efflorescence to substrate.
- E. Bonding Adhesives: For bonding waterproofing sheets[, **containment strips**,] and PVC-sheet flashings to substrates.
- F. Containment Strip: Manufacturer's standard asphalt-resistant, **60-mil-** (1.5-mm-) thick, PVC strip; reinforced with nonwoven fiberglass; **12 inches** (300 mm) wide.
- G. Geotextile Leveling Layer: Manufacturer's standard **0.22-inch-** (5.59-mm-) thick, nonwoven polypropylene fabric.
- H. Separation Layer: Manufacturer's standard **0.16-inch-** (4.06-mm-) thick, nonwoven polypropylene fabric.
- I. Protection Course: [**39-mil-** (1.0-mm-) **thick, HDPE sheet**] [or] [**51-mil-** (1.3-mm-) **thick, hot-air-weldable, PVC sheet**] protection layer.
- J. Waterproofing and Sheet-Flashing Accessories: Provide sealants, pourable sealers, termination reglets, clamps, compression bars, tapes, preformed cone and stack flashings, and other accessories recommended by waterproofing manufacturer for intended use.
- K. Control Test Drain: Manufacturer's standard assembly to verify the absence or presence of leaks from underside of waterproofed slab.

- L. Metal Termination Bars: Manufacturer's standard stainless steel or aluminum bars, prepunched, with noncorrosive fasteners.
- M. Bellows: Where bellows are indicated on the drawings as in contact with the waterproof membrane, provide either 24 gauge soft copper or 60 mil flexible sheet membrane that is jet fuel resistant and compatible with waterproof membrane. Bellows shall be as indicated and shall lap waterproof membrane a minimum 6" per side.

2.4 MOLDED-SHEET DRAINAGE PANELS

- A. Woven-Geotextile-Faced, Molded-Sheet Drainage Panel: Composite subsurface drainage panels consisting of a studded, nonbiodegradable, molded-plastic-sheet drainage core; with a woven-geotextile facing with an apparent opening size not exceeding **No. 40** (0.425-mm) sieve laminated to one side of the core; and with a horizontal flow rate not less than **2.8 gpm per ft.** (35 L/min. per m).
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Sika Sarnafil Inc.; [**Drainage Panel 900**] [**Drainage Panel 980**] [or] [**Drainage Panel 990**].
 - b. <Insert manufacturer's name; product name or designation>.
 - c. or approved equal

2.5 INSULATION

- A. Insulation, General: Comply with Section 072100 "Thermal Insulation."
- B. Board Insulation: Extruded-polystyrene board insulation complying with ASTM C 578.
 - 1. Type IV, **25-psi** (173-kPa) minimum compressive strength.
 - 2. Type VI, **40-psi** (276-kPa) minimum compressive strength.
 - 3. Type VII, **60-psi** (414-kPa) minimum compressive strength.
 - 4. Type V, **100-psi** (690-kPa) minimum compressive strength.

2.6 PLAZA-DECK PAVERS

- A. Plaza-Deck Pavers: [**Brick**] [**Concrete**] [**Asphalt-block**] pavers specified in Section 321400 "Unit Paving."
- B. Stone Plaza-Deck Pavers: [**Granite**] [**Limestone**] [**Marble**] [**Quartz-based stone**] [**Slate**] pavers specified in [**Section 096340 "Stone Flooring."**] [**Section 321400 "Unit Paving."**]
- C. Concrete Plaza-Deck Pavers: Solid, hydraulically pressed, standard-weight concrete units, [**square edged**] [**with top edges beveled 3/16 inch** (5 mm)], manufactured for use as plaza-deck pavers; [**7500-psi** (52-MPa)] [**6500-psi** (45-MPa)] <Insert value> minimum compressive strength, ASTM C 140; absorption not greater than 5 percent,

ASTM C 140; no breakage and maximum 1 percent mass loss when tested for freeze-thaw resistance according to ASTM C 67.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Hanover Architectural Products.
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.
 2. Regional Materials: Concrete plaza-deck pavers shall be manufactured within **500 miles** (800 km) of Project site from aggregates[**and cement**] that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles** (800 km) of Project site.
 3. Thickness: [**2 inches (51 mm)**] [**2-1/2 inches (64 mm)**] **<Insert dimension>**.
 4. Face Size: [**12 inches (305 mm) square**] [**12 by 24 inches (305 by 610 mm)**] [**18 inches (457 mm) square**] [**24 inches (610 mm) square**] [**As indicated**] **<Insert dimension(s) and shape>**.
 5. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] **<Insert color>**.
- D. Paver Pedestals: Paver manufacturer's standard paver support assembly, including [**fixed-height**] [**adjustable or stackable**] pedestals, shims, and spacer tabs for joint spacing of [**1/8 inch (3 mm)**] [**3/16 inch (5 mm)**] [**1/8 to 3/16 inch (3 to 5 mm)**].
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.
 - b. or approved equal.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the waterproofing.
 1. Verify that concrete has cured and aged for minimum time period recommended in writing by waterproofing manufacturer.
 2. Verify that substrate is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D 4263.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SURFACE PREPARATION

- A. Clean, prepare, and treat substrates according to manufacturer's written instructions. Provide clean, dust-free, and dry substrates for waterproofing application.
- B. Mask off adjoining surfaces not receiving waterproofing to prevent spillage and overspray affecting other construction.
- C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.
- D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids.
- E. Prepare, fill, prime, and treat joints and cracks in substrates. Remove dust and dirt from joints and cracks according to ASTM D 4258.
- F. Prepare, treat, and seal surfaces at terminations and penetrations through waterproofing and at drains and protrusions.

3.3 INSTALLATION, GENERAL:

- A. General: Comply with manufacturer's instructions, except where more stringent requirements are shown or specified, and except where project conditions require extra precautions or provisions to ensure satisfactory performance of work.
- B. Start installation of waterproofing membrane only in presence and with advice of manufacturer's technical representative.

3.4 FULLY ADHERED SHEET INSTALLATION

- A. General: Install self-adhered sheets over entire area to receive waterproofing according to manufacturer's written instructions.
 - 1. Accurately align sheets and maintain uniform side and end laps of minimum dimensions required. Stagger end laps.
 - 2. Install laps shingled with slope of deck where possible.
 - 3. Install flashings concurrently with deck sheet.
 - 4. Perform hot-air welding to ensure a watertight seam installation. Inspect outside edge of seams with pointed metal probe and ensure completed laps lay flat and are free of voids, fishmouths, or wrinkles.
 - 5. Install temporary cut-offs if work is interrupted. Remove the cut-offs completely before proceeding with the installation.
 - 6. Install sheets and auxiliary materials to tie into adjoining waterproofing.
- B. Apply surface conditioner, at required rate, to substrates to receive waterproofing. Apply only at temperatures greater than 25 deg F (minus 4 deg C) and rising.

- C. Apply and firmly adhere sheets to substrate; butt adjoining sheets tightly. Apply only when the membrane, air, and substrate temperatures are greater than 40 deg F (5 deg C) and rising. Apply a minimum 8-inch- (203-mm-) wide cover strip centered over joints and lap edges; hot-air weld cover strip to deck sheet.
- D. Hot-air weld three-way overlaps or T-joints with a 4-inch- (102-mm-) round or -square patch.
- E. Unless terminations and deck-sheet waterproofing perimeter are sealed with flashings, secure them with mechanically anchored metal termination bar. Seal edge of termination with sealant.
- F. Install flashing at deck drains. Spread sealant bed over deck drain flange, lap flashing membrane into drain flange and over deck sheet according to membrane manufacturer's written instructions, and hot-air-weld flashing to deck sheet; securely seal flashing sheet in place with clamping ring.
- G. Perform field quality-control flood testing before subsequent work.
- H. Repair tears, voids, and lapped seams in waterproofing that do not comply with requirements. Slit and flatten fishmouths and blisters. Patch with sheet waterproofing extending beyond repaired areas in all directions.
- I. Bellows: Lap waterproof membrane above and below bellows.

3.5 LOOSELY LAID SHEET INSTALLATION

- A. General: Install loosely laid sheets over entire area to receive waterproofing according to manufacturer's written instructions.
 - 1. Accurately align sheets and maintain uniform side and end laps of minimum dimensions required. Stagger end laps.
 - 2. Install laps shingled with slope of deck where possible.
 - 3. Install flashings concurrently with deck sheet.
 - 4. Perform hot-air welding to ensure a watertight seam installation. Inspect outside edge of seams with pointed metal probe and ensure completed laps lay flat and are free of voids, fishmouths, or wrinkles.
 - 5. Install temporary cut-offs if work is interrupted. Remove the cut-offs completely before proceeding with the installation.
 - 6. Install sheets and auxiliary materials to tie into adjoining waterproofing.
- B. Install geotextile leveling layer over entire area to receive deck sheet. Lap edges at least 4 inches (102 mm) and spot adhere fabric to deck as required to keep in position as waterproofing sheet is placed in position. Trim fabric using scissors or utility blades; do not use welding equipment to cut fabric.
- C. Apply deck sheet over area, lapping edges at least 3 inches (76 mm) for machine welding or at least 4 inches (102 mm) for hand welding. Hot-air weld sheets.

- D. Hot-air weld three-way overlaps or T-joints with a 4-inch- (102-mm-) round or -square patch.
- E. Secure perimeter of deck sheet with manufacturer's standard metal termination bars and accessories as recommended by manufacturer for each condition.
- F. At deck drains, spread sealant bed over drain flange and lap membrane into drain flange according to membrane manufacturer's written instructions; securely seal sheets in place with clamping ring.
- G. Perform field quality-control flood testing before subsequent work.
- H. Repair tears, voids, and lapped seams in waterproofing that do not comply with requirements. Slit and flatten fishmouths and blisters. Patch with sheet waterproofing extending beyond repaired areas in all directions.

3.6 COMPARTMENTED, LOOSELY LAID SHEET INSTALLATION

- A. General: Install compartmented, loosely laid sheets over entire area to receive waterproofing according to manufacturer's written instructions.
 - 1. Accurately align sheets and maintain uniform side and end laps of minimum dimensions required. Stagger end laps.
 - 2. Install laps shingled with slope of deck where possible.
 - 3. Install flashings concurrently with deck sheet.
 - 4. Perform hot-air welding to ensure a watertight seam installation. Inspect outside edge of seams with pointed metal probe and ensure completed laps lay flat and are free of voids, fishmouths, or wrinkles.
 - 5. Install temporary cut-offs if work is interrupted. Remove the cut-offs completely before proceeding with the installation.
 - 6. Install sheets and auxiliary materials to tie into adjoining waterproofing.
- B. Construct a test containment grid before beginning installation. Perform manufacturer's recommended peel test on the test containment grid and on each day's completed waterproofing work before resuming the following day's installation.
- C. Install submembrane containment grid to form compartments secured by containment strips. Also, install containment strips at the base of walls, curbs, penetrations, terminations, and transitions and at the perimeter of the installation. Secure containment grid to substrate with bonding adhesive.
- D. Install geotextile leveling layer over entire area between containment strips. Lap edges at least 4 inches (102 mm) and spot adhere fabric to deck as required to keep in position as waterproofing sheet is placed in position. Trim fabric even with edges of containment strips using scissors or utility blades; do not use welding equipment to cut fabric.
- E. Control-Test-Drain Installation: Drill 1-inch- (25-mm-) diameter hole through the substrate at or near the low point of each compartment and install control test drain,

according to manufacturer's written instructions, so as to enable verification of the absence or presence of leaks from underside of waterproofed slab.

- F. Apply deck sheet over area, lapping edges at least **3 inches** (76 mm) for machine welding or at least **4 inches** (102 mm) for hand welding. Hot-air weld the sheet to containment strips.
- G. Hot-air weld three-way overlaps or T-joints with a **4-inch-** (102-mm-) round or -square patch.
- H. Install flashing at deck drains. Spread sealant bed over deck drain flange, lap flashing membrane into drain flange and over containment strips according to membrane manufacturer's written instructions, and hot-air weld flashing to containment strips; securely seal flashing sheet in place with clamping ring.
- I. Perform field quality-control flood testing before subsequent work.
- J. Repair tears, voids, and lapped seams in waterproofing that do not comply with requirements. Slit and flatten fishmouths and blisters. Patch with sheet waterproofing extending beyond repaired areas in all directions.

3.7 SHEET-FLASHING INSTALLATION

- A. Form wall flashings exposed in final construction using exposed sheet flashing; otherwise, use concealed sheet flashing.
- B. Lap sheet flashings over deck sheet or containment strips. Flash penetrations and field-formed inside and outside corners with sheet flashing.
- C. Extend flashings a minimum of **8 inches** (203 mm) above the overburden unless otherwise indicated on Drawings and acceptable to waterproofing manufacturer.
- D. Hot-air weld joints with deck sheet or containment strips and end laps of overlapping sheet flashings and accessories to ensure a watertight seam installation.
- E. Hot-air weld three-way overlaps or T-joints with a **4-inch-** (102-mm-) round or -square patch.
- F. Secure flashings along top edge with mechanically anchored metal termination bar or with mechanically anchored metal reglet for subsequent metal counterflashing. Seal top of termination with sealant.
- G. Terminate deck sheet at expansion joints and discontinuous deck-to-wall or deck-to-deck joints. Bridge and cover joints with sheet flashing and joint accessories according to manufacturer's written instructions for each type of joint.

3.8 PROTECTION COURSE INSTALLATION

- A. Install separation layer over sheet waterproofing before placing protection course.

- B. Install protection course over [**sheet waterproofing**] [**separation layer**] according to manufacturer's written instructions and before beginning subsequent construction operations. Minimize exposure of membrane.

3.9 MOLDED-SHEET DRAINAGE-PANEL INSTALLATION

- A. Place and secure molded-sheet drainage panels, with geotextile facing away from wall or deck substrate, according to manufacturer's written instructions. Use adhesives or other methods that do not penetrate waterproofing. Lap edges and ends of geotextile to maintain continuity. Protect installed panels during subsequent construction.

3.10 INSULATION INSTALLATION

- A. Install one or more layers of board insulation to achieve required thickness over waterproofed surfaces. Cut and fit to within **3/4 inch** (19 mm) of projections and penetrations.
- B. Lay insulation units according to manufacturer's written instructions. Stagger end joints and tightly abut insulation units.

3.11 PLAZA-DECK PAVER INSTALLATION

- A. Install concrete pavers in locations indicated according to manufacturer's written instructions.
- B. Accurately install paver pedestals and accessories in locations and to elevations required. Adjust for final level and slope.
- C. Loosely lay pavers on pedestals, maintaining a uniform open joint width. Tightly seat pavers against spacers to eliminate lateral movement or drift of paving assembly. Align joint patterns parallel in each direction.
 - 1. Lay out pavers to avoid less-than-half-width pavers at perimeter or other terminations.
- D. Install pavers to vary not more than **1/16 inch** (1.6 mm) in elevation between adjacent pavers or more than **1/16 inch** (1.6 mm) from surface plane elevation of individual paver.
- E. Maintain tolerances of paving installation within [**1/4 inch in 10 feet (1:48)**] <Insert **value**> of surface plane in any direction.

3.12 FIELD QUALITY CONTROL

- A. Engage a site representative qualified by waterproofing membrane manufacturer to inspect substrate conditions; surface preparation; membrane application, flashings, protection, and drainage components; and to furnish daily reports to DEN Project

Manager.

- B. Flood Testing: Flood test each deck area for leaks, according to recommendations in ASTM D 5957, after completing waterproofing but before overlying construction is placed. Install temporary containment assemblies, plug or dam drains, and flood with potable water.
 - 1. Flood to an average depth of **2-1/2 inches** (64 mm) with a minimum depth of **1 inch** (25 mm) and not exceeding a depth of **4 inches** (100 mm). Maintain **2 inches** (51 mm) of clearance from top of sheet flashings.
 - 2. Flood each area for **[24] [48] [72]** hours.
 - 3. After flood testing, repair leaks, repeat flood tests, and make further repairs until waterproofing installation is watertight.
- C. **[Owner will engage] [Engage]** an independent testing agency to observe flood testing and examine underside of decks and terminations for evidence of leaks during flood testing.
- D. Prepare test and inspection report.

3.13 PROTECTION, REPAIR, AND CLEANING

- A. Do not permit foot or vehicular traffic on unprotected membrane.
- B. Protect waterproofing from damage and wear during remainder of construction period.
- C. Protect installed board insulation from damage due to UV light, harmful weather exposures, physical abuse, and other causes. Provide temporary coverings where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.
- D. Correct deficiencies in or remove waterproofing that does not comply with requirements; repair substrates, reapply waterproofing, and repair sheet flashings.
- E. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 071354

SECTION 071413 - HOT FLUID-APPLIED RUBBERIZED ASPHALT WATERPROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Rubberized-asphalt waterproofing membrane[, **unreinforced**] [, **reinforced**].
 - 2. Molded-sheet drainage panels.
 - 3. Insulation.
 - 4. Plaza deck pavers.
- B. Related Sections:
 - 1. Section 075556 "Fluid-Applied Protected Membrane Roofing" for hot fluid-applied, rubberized-asphalt roofing.
 - 2. Section 079200 "Joint Sealants" for joint-sealant materials and installation.
 - 3. Section 079500 "Expansion Control" for expansion-joint systems.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include manufacturer's written instructions for evaluating, preparing, and treating substrate, technical data, and tested physical and performance properties of waterproofing.
 - 1. Include data substantiating that all materials comply with requirements.
- B. Shop Drawings: Show locations and extent of waterproofing. Include details for substrate joints and cracks, sheet flashings, penetrations, inside and outside corners, tie-ins to adjoining waterproofing, and other termination conditions.
 - 1. Include setting drawings showing layout, sizes, sections, profiles, and joint details of pedestal-supported concrete pavers.
- C. Samples: For the following products in minimum 1' x 1' sizes unless otherwise

indicated:

1. Flashing sheet.
2. Membrane-reinforcing fabric.
3. Insulation.
4. Drainage panel.
5. Plaza deck paver[, **full sized**] in each color and texture required.
6. Paver pedestal assembly.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified [**Installer**] [**testing agency**].
- B. Installer to submit a certificate evidencing not less than three (3) years of successful experienced installing similar types to products specified.
- C. Manufacturer to submit a certificate evidencing not less than five (5) years experienced manufacturing types of products specified.
- D. Manufacturer to submit a field report that all installation work is being done per contract requirements.
- E. Product Test Reports: For waterproofing, based on evaluation of comprehensive tests performed by a qualified testing agency.
- F. Field quality-control reports.
- G. Provide a certificate that bellows are jet fuel resistant.
- H. Provide a certificate stating that waterproofing and protection board to be used at the horizontal and vertical surfaces of basement extensions have been tested for jet fuel resistance and that the required warranty applies to this work. Provide the actual test report.
 1. Minimum Requirements: For waterproofing, expansion joint covers and any associated joints, no loss in waterproofing ability within 48 hours after ponding jet fuel for 72 hours. For protection board, no loss in protection within 48 hours after being immersed in jet fuel for 72 hours.
- I. Warranties: Sample of special warranties.

1.5 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: A firm that is **[approved or licensed by]** **[acceptable to]** manufacturer for installation of waterproofing required for this Project and is eligible to receive special warranties specified.
1. Installer will have specialized in installation of types of waterproofing required for project for not less than three (3) years and which is acceptable to manufacturer(s) of primary materials.
 2. Assign work closely associated with waterproofing, including but not limited to waterproofing accessories, and flashings used in conjunction with waterproofing, expansion joints in membrane, insulation and protection course on membrane, to installer of waterproofing, for single, undivided responsibility.
- B. Source Limitations: Obtain primary waterproofing materials of each type required from single manufacturer with not less than three (3) years of successful experience in supplying principal materials for fluid applied waterproofing work. Provide secondary materials only as recommended by manufacturer of primary materials.
- C. Mockups: Install waterproofing to **[100 sq. ft. (9.3 sq. m)]** **<Insert area>** of **[deck]** **[wall]** to demonstrate surface preparation, crack and joint treatment, corner treatment, thickness, texture, and execution quality. **[Install pavers and paver supports to demonstrate aesthetic affects and set quality standards for materials and execution.]**
1. If DEN Project Manager determines mockups do not comply with requirements, reapply waterproofing **[and reinstall overlaying construction]** until mockups are approved.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
 3. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- D. Preinstallation Conference: Approximately two (2) weeks prior to actual commencement of fluid-applied waterproofing installation, meet at project site with Installer, installers of deck or substrate construction to receive work, installers of other work in and around waterproofing work which must precede, follow or penetrate waterproofing work, including mechanical work if any, DEN Project Manager, the Contractor's Quality Control Manager and waterproofing material manufacturer's representative. Record (Contractor) discussions of conference, together with decisions and agreements (or disagreements) reached. Furnish copy of record to each party attending.
1. Review methods and procedures related to work, including but not necessarily limited to the following:
 - a. Tour jobsite areas to be waterproofed. Inspect and discuss condition of substrate, drains, curbs, penetrations, and other preparatory work performed by other trades.

- b. Review waterproofing requirements (drawings, specifications and other contract documents), including surface preparation, substrate condition and pretreatment, minimum curing period, forecasted weather conditions, special details and sheet flashings, installation procedures,.
 - c. Review required submittals. Work cannot begin until all submittals are approved by Owner.
 - d. Review and finalize construction schedule related to waterproofing work and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - e. Review required inspection, testing, and certifying procedures, safety, and hazardous control programs.
 - f. Review protection and repair procedures.
- E. Warranty: Installer to warrant installation for five (5) years including responsibility for removing and replacing work concealing waterproof membrane. Warrant installation to be watertight for application required.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by waterproofing manufacturer.
- B. Remove and replace liquid materials that cannot be applied within their stated shelf life.
- C. Protect stored materials from direct sunlight.

1.8 PROJECT CONDITIONS

- A. Environmental Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended by waterproofing manufacturer. Do not apply waterproofing to a damp or wet substrate, or when temperature is below 0 deg F (minus 18 deg C).
 - 1. Do not apply waterproofing in snow, rain, fog, or mist.
- B. Maintain adequate ventilation during application and curing of waterproofing materials.

1.9 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace waterproofing and sheet flashings that do not comply with requirements or that fail to remain watertight within specified warranty period.
 - 1. Warranty insulation will retain 80 percent of original published thermal value.
 - 2. Warranty pavers will not dish or warp and will not crack, split, or disintegrate in freeze-thaw conditions.

3. Warranty includes removing and reinstalling protection board, drainage panels, insulation, pedestals, and pedestal-mounted pavers on plaza decks.
4. Warranty Period: **[Five]** **[10]** **<Insert number>** years from date of Substantial Completion.

B. Special Installer's Warranty: Specified form[, **on warranty form at end of this Section,**] signed by Installer, covering Work of this Section, for warranty period of **[two]** **<Insert number>** years.

1. Warranty includes removing and reinstalling protection board, drainage panels, insulation, pedestals, and pedestal-mounted pavers on plaza decks.

1.10 CONSTRUCTION WASTE MANAGEMENT

A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL

A. General Compatibility: Provide products that are recommended by manufacturer to be fully compatible with indicated substrates, including modification by bituminous additives (asphalt or coal tar as needed) and similar proven compounding provisions.

2.2 WATERPROOFING MEMBRANE

A. Hot Fluid-Applied, Rubberized-Asphalt Waterproofing Membrane: Single component; 100 percent solids; hot fluid-applied, rubberized asphalt.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. American Hydrotech, Inc.; Monolithic Membrane 6125.
 - b. American Permaquik Inc.; Permaquik 6100.
 - c. Barrett Company; Ram-Tough 250.
 - d. Carlisle Coatings & Waterproofing Inc.; CCW-500R.
 - e. Henry Company; 790-11.
 - f. Tamko Waterproofing; TW-Hot Melt.
 - g. Tremco Incorporated; Tremproof 150.
 - h. **<Insert manufacturer's name; product name or designation>**.
 - i. or approved equal.

2.3 FLASHING SHEET MATERIALS

- A. Elastomeric Flashing Sheet: **50-mil-** (1.3-mm-) minimum, uncured sheet neoprene as follows:
1. Tensile Strength: **1400 psi** (9.6 MPa) minimum; ASTM D 412, Die C.
 2. Elongation: 300 percent minimum; ASTM D 412.
 3. Tear Resistance: **125 psi** (860 kPa) minimum; ASTM D 624, Die C.
 4. Brittleness: Does not break at minus **30 deg F** (34 deg C); ASTM D 2137.

2.4 AUXILIARY MATERIALS

- A. Primer: ASTM D 41, asphaltic primer.
- B. Elastomeric Sheet: **50-mil-** (1.3-mm-) minimum, uncured sheet neoprene as follows:
1. Tensile Strength: **1400 psi** (9.6 MPa) minimum; ASTM D 412, Die C.
 2. Elongation: 300 percent minimum; ASTM D 412.
 3. Tear Resistance: **125 psi** (860 kPa) minimum; ASTM D 624, Die C.
 4. Brittleness: Does not break at minus **30 deg F** (34 deg C); ASTM D 2137.
- C. Metal Termination Bars: Manufacturer's standard, predrilled stainless-steel or aluminum termination bars; approximately **1 by 1/8 inch** (25 by 3 mm) thick; with anchors.
- D. Sealants and Accessories: Manufacturer's recommended sealants and accessories.
- E. Reinforcing Fabric: Manufacturer's recommended, spun-bonded polyester fabric.
- F. Protection Course: ASTM D 6506, semirigid sheets of fiberglass or mineral-reinforced-asphaltic core, pressure laminated between two asphalt-saturated fibrous liners and as follows:
1. Thickness: [**1/8 inch (3 mm)**] [**1/4 inch (6 mm)**], nominal.
 2. Thickness: **1/8 inch** (3 mm), nominal, for vertical applications; **1/4 inch** (6 mm), nominal, elsewhere.
- G. Protection Course: Manufacturer's standard, **80- to 90-mil-** (2.0- to 2.3-mm-) thick, fiberglass-reinforced rubberized asphalt or modified bituminous sheet.]
- H. Bellows: Where bellows are indicated on the drawings as in contact with the waterproof membrane, provide either 24 gauge soft copper or 60 mil flexible sheet membrane that is jet fuel resistant and compatible with waterproof membrane. Bellows shall be as indicated and shall lap waterproof membrane a minimum 6" per side.

2.5 MOLDED-SHEET DRAINAGE PANELS

- A. Nonwoven-Geotextile-Faced, Molded-Sheet Drainage Panel: Manufactured composite

subsurface drainage panels consisting of a nonwoven, needle-punched geotextile facing with an apparent opening size not exceeding **No. 70** (0.21-mm) sieve, laminated to one side **[with] [or] [without]** a polymeric film bonded to the other side of a studded, nonbiodegradable, molded-plastic-sheet drainage core, with a vertical flow rate of **9 to 15 gpm/ft.** (112 to 188 L/min. per m).

- B. Woven-Geotextile-Faced, Molded-Sheet Drainage Panel: Manufactured composite subsurface drainage panels consisting of a woven-geotextile facing with an apparent opening size not exceeding **No. 40** (0.43-mm) sieve, laminated to one side **[with] [or] [without]** a polymeric film bonded to the other side of a studded, nonbiodegradable, molded-plastic-sheet drainage core, with a horizontal flow rate not less than **2.8 gpm/ft.** (35 L/min. per m).

2.6 INSULATION

- A. Board Insulation: Extruded-polystyrene board insulation complying with ASTM C 578, shiplap edged.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. DiversiFoam Products.
- b. Dow Chemical Company (The).
- c. Owens Corning.
- d. Pactiv Corporation.
- e. T. Clear Corporation.
- f. **<Insert manufacturer's name>**.
- g. or approved equal.

2. Type VI, **40-psi** (276-kPa) minimum compressive strength.
3. Type VII, **60-psi** (414-kPa) minimum compressive strength.
4. Type V, **100-psi** (690-kPa) minimum compressive strength.

- B. Unfaced Wall Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, **[Type IV, 25-psi (173-kPa)] [or] [Type VI, 40-psi (276-kPa)]** minimum compressive strength; unfaced; fabricated with shiplap or channel edges and with one side having grooved drainage channels.

1. Products: Subject to compliance with requirements, provide one of the following:

- a. DiversiFoam Products; **[CertiFoam 25] [CertiFoam 40]** Drainage Board.
- b. Dow Chemical Company (The); Perimate.
- c. **<Insert manufacturer's name; product name or designation>**.
- d. or approved equal.

- C. Geotextile-Faced Wall Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, **[Type IV, 25-psi (173-kPa)] [or] [Type VI, 40-psi (276-kPa)]** minimum compressive strength; fabricated with tongue-and-groove edges and with one side having grooved drainage channels faced with a nonwoven,

geotextile filter fabric.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Owens Corning; Insul-Drain.
 - b. T. Clear Corporation; [Thermadry 750] [Thermadry 1250].
 - c. <Insert manufacturer's name; product name or designation>.
 - d. or approved equal.

- D. Unfaced Plaza Deck Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, [Type VI, 40-psi (276-kPa)] [Type VII, 60-psi (414-kPa)] minimum compressive strength; unfaced; fabricated with shiplapped or channel edges and with one side having ribbed drainage channels.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. DiversiFoam Products; CertiFoam Plaza Deck.
 - b. Dow Chemical Company (The); Styrofoam Ribbed Roofmate.
 - c. Owens Corning; [Foamular 404 RB] [Foamular 604 RB].
 - d. <Insert manufacturer's name; product name or designation>.
 - e. or approved equal.

- E. Geotextile-Faced Plaza Deck Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, Type VII, 60-psi (414-kPa) minimum compressive strength; fabricated with tongue-and-groove edges and with one side having grooved drainage channels faced with a nonwoven, geotextile filter fabric.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. T. Clear Corporation; Thermadry 1750.
 - b. <Insert manufacturer's name; product name or designation>.
 - c. or approved equal.

2.7 PLAZA DECK PAVERS

- A. Plaza Deck Pavers: [Brick] [Concrete] [Asphalt-block] pavers specified in Section 321400 "Unit Paving."
- B. Plaza Deck Pavers: [Granite] [Limestone] [Marble] [Quartz-based stone] [Slate] pavers specified in Section 096340 "Stone Flooring."
- C. Plaza Deck Pavers: Heavyweight, hydraulically pressed, concrete units, [square edged] [with top edges beveled 3/16 inch (5 mm)], manufactured for use as plaza deck pavers; minimum compressive strength [7500 psi (52 MPa)] [6500 psi (45 MPa)] <Insert value>, ASTM C 140; absorption not greater than 5 percent, ASTM C 140; no breakage and maximum 1 percent mass loss when tested for freeze-thaw resistance according to ASTM C 67.

1. Manufacturers: Subject to compliance with requirements, provide products by

one of the following:

- a. Hanover Architectural Products.
 - b. Hastings Pavement Company, LLC.
 - c. Roofblok Limited.
 - d. Sunny Brook Pressed Concrete.
 - e. Wausau Tile, Inc.; Terra-Paving Division.
 - f. Westile Roofing Products.
 - g. <Insert manufacturer's name>.
 - h. or approved equal.
2. Thickness: [**1-5/8 inches** (41 mm)] [**1-3/4 inches** (45 mm)] [**2 inches** (51 mm)] [**2-3/8 inches** (60 mm)] <Insert dimension>.
 3. Face Size: [**8-7/8 inches** (225 mm) square] [**9 inches** (229 mm) square] [**9 by 18 inches** (229 by 457 mm)] [**12 inches** (305 mm) square] [**12 by 24 inches** (305 by 610 mm)] [**18 inches** (457 mm) square] [**24 inches** (610 mm) square] [**As indicated**] <Insert dimensions and shape>.
 4. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
- D. Setting Bed: Provide [**aggregate**] [**mortar**] [**bituminous**] setting-bed materials specified in Section 321400 "Unit Paving."
- E. Paver Supports: Paver manufacturer's standard SBR rubber, high-density polyethylene, or polyurethane paver support assembly, including [**fixed-height**] [**adjustable or stackable**] pedestals, shims, and spacer tabs for joint spacing of [**1/8 inch** (3 mm)] [**3/16 inch** (5 mm)] [**1/8 to 3/16 inch** (3 to 5 mm)].
1. Concrete Fill: ACI 301, compressive strength of **5000 psi** (34 MPa) at 28 days, and air content of 6 percent.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
1. Verify that concrete has cured and aged for minimum time period recommended by waterproofing manufacturer.
 2. Verify that substrate is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D 4263.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean and prepare substrates according to manufacturer's written instructions. Provide clean, dust-free, and dry substrate for waterproofing application.
- B. Mask off adjoining surfaces not receiving waterproofing to prevent spillage and overspray affecting other construction.
- C. Close off deck drains and other deck penetrations to prevent spillage and migration of waterproofing fluids.
- D. Remove grease, oil, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.
 - 1. Abrasive blast clean concrete surfaces uniformly to expose top surface of fine aggregate according to ASTM D 4259 with a self-contained, recirculating, blast-cleaning apparatus. Remove material to provide a sound surface free of laitance, glaze, efflorescence, curing compounds, concrete hardeners, or form-release agents. Remove remaining loose material and clean surfaces according to ASTM D 4258.
- E. Remove fins, ridges, and other projections and fill honeycomb, aggregate pockets, and other voids.
- F. Seal joints, and apply bond breakers as recommended by prime materials manufacturer, with particular attention at construction joints.
- G. Install accessories as recommended by prime materials manufacturer.
- H. Prime substrate as recommended (and only if recommended) by prime materials manufacturer.

3.3 JOINTS, CRACKS, AND TERMINATIONS

- A. Prepare and treat substrates to receive waterproofing membrane, including joints and cracks, deck drains, corners, and penetrations according to manufacturer's written instructions.
 - 1. Rout and fill joints and cracks in substrate. Before filling, remove dust and dirt according to ASTM D 4258.
 - 2. Adhere strip of elastomeric sheet to substrate in a layer of hot rubberized asphalt. Extend elastomeric sheet a minimum of **6 inches** (150 mm) on each side of moving joints and cracks or joints and cracks exceeding **1/8 inch** (3 mm) thick, and beyond deck drains and penetrations. Apply second layer of hot fluid-applied, rubberized asphalt over elastomeric sheet.
 - 3. Embed strip of reinforcing fabric into a layer of hot rubberized asphalt. Extend reinforcing fabric a minimum of **6 inches** (150 mm) on each side of nonmoving joints and cracks not exceeding **1/8 inch** (3 mm) thick, and beyond roof drains and penetrations.

- a. Apply second layer of hot fluid-applied, rubberized asphalt over reinforcing fabric.

- B. At expansion joints and discontinuous deck-to-wall or deck-to-deck joints, bridge joints with elastomeric sheet extended a minimum of **6 inches** (150 mm) on each side of joints and adhere to substrates in a layer of hot rubberized asphalt. Apply second layer of hot fluid-applied, rubberized asphalt over elastomeric sheet.

3.4 FLASHING INSTALLATION

- A. Install elastomeric flashing sheets at terminations of waterproofing membrane according to manufacturer's written instructions.
- B. Prime substrate with asphalt primer per manufacturer's instructions.
- C. Install elastomeric flashing sheet and adhere to deck and wall substrates in a layer of hot rubberized asphalt.
- D. Extend elastomeric flashing sheet up walls or parapets a minimum of **8 inches** (200 mm) above plaza deck pavers and **6 inches** (150 mm) onto deck to be waterproofed.
- E. Install termination bars and mechanically fasten to top of elastomeric flashing sheet at terminations and perimeter of roofing.

3.5 MEMBRANE APPLICATION

- A. Apply primer, at manufacturer's recommended rate, over prepared substrate and allow to dry.
- B. Heat and apply rubberized asphalt according to manufacturer's written instructions.
 1. Heat rubberized asphalt in an oil- or air-jacketed melter with mechanical agitator specifically designed for heating rubberized asphalt.
- C. Start application with manufacturer's authorized representative present.
- D. Except as otherwise indicated, extend flashings onto perpendicular surfaces and other work penetrating substrate to not less than 6" beyond finished surface to be applied over waterproofing.
- E. Unreinforced Membrane: Apply hot rubberized asphalt to substrates and adjoining surfaces indicated. Spread to form a uniform, unreinforced, seamless membrane, [**180-mil** (4.5-mm) **minimum thickness**] [**180-mil** (4.5-mm) **average thickness, but not less than 125 mil** (3.2 mm)**thick**].
- F. Reinforced Membrane: Apply hot rubberized asphalt to substrates and adjoining surfaces indicated. Spread to a thickness of **90 mils** (2.3 mm); embed reinforcing fabric,

overlapping sheets **2 inches** (50 mm); spread another **125-mil-** (3.2-mm-) thick layer to provide a uniform, reinforced, seamless membrane **215 mils** (5.5 mm) thick.

- G. Apply waterproofing over prepared joints and up wall terminations and vertical surfaces to heights indicated or required by manufacturer.
- H. Cover waterproofing with protection course with overlapped joints before membrane is subject to **[backfilling] [construction or vehicular traffic]**.
- I. Bellows: Lap waterproof membrane above and below bellows.

3.6 PROTECTION COURSE:

- A. Install protection course on cured membrane (after testing, if required) without delay, so that period of membrane exposure will be minimized.
- B. On all vertical surfaces to be waterproofed install protection course. Comply with waterproofing manufacturer's recommendations for adhesion of protection course to membrane.
- C. On all horizontal surfaces to receive waterproofing including between slabs and at basement extension install protection course. Comply with waterproofing manufacturer's recommendations for adhesion of protection course to membranes.

3.7 MOLDED-SHEET DRAINAGE PANEL INSTALLATION

- A. Place and secure molded-sheet drainage panels, with geotextile facing away from wall or deck substrate according to manufacturer's written instructions. Use methods that do not penetrate waterproofing. Lap edges and ends of geotextile to maintain continuity. Protect installed molded-sheet drainage panels during subsequent construction.
 - 1. For vertical applications, install **[board insulation] [protection course]** before installing drainage panels.

3.8 INSULATION INSTALLATION

- A. Install **[one or more layers of board insulation to achieve required thickness] [and] [insulation drainage panels]** over waterproofed surfaces. Cut and fit to within **3/4 inch** (19 mm) of projections and penetrations.
- B. On vertical surfaces, set insulation units into rubberized asphalt according to manufacturer's written instructions.
- C. On horizontal surfaces, loosely lay insulation units according to manufacturer's written instructions. Stagger end joints and tightly abut insulation units.

3.9 PLAZA DECK PAVER INSTALLATION

- A. Setting Bed: Install setting bed in locations and of thickness indicated to comply with requirements in [**Section 321400 "Unit Paving."**] [**Section 096340 "Stone Flooring."**]
- B. Install concrete pavers in locations indicated according to manufacturer's written instructions.
- C. Accurately install [**fixed**] [**adjustable**]-height paver pedestals and accessories in locations and to elevations required. Adjust for final level and slope with shims.
 - 1. Fill paver pedestal with concrete mix, strike smooth with top of pedestal, and cure according to ACI 301.
- D. Loosely lay pavers on pedestals, maintaining a uniform open joint width. Tightly seat pavers against spacers to eliminate lateral movement or drift of paving assembly. Align joint patterns parallel in each direction.
 - 1. Lay out pavers to avoid less-than-half-width pavers at perimeter or other terminations.
- E. Install pavers to not vary more than **1/16 inch** (1.6 mm) in elevation between adjacent pavers or more than **1/16 inch** (1.6 mm) from surface plane elevation of individual paver.
- F. Maintain tolerances of paving installation within [**1/4 inch in 10 feet (1:48)**] **<Insert surface tolerance>** of surface plane in any direction.

3.10 FIELD QUALITY CONTROL

- A. Engage a full-time site representative qualified by waterproofing membrane manufacturer to inspect substrate conditions; surface preparation; and application of the membrane, flashings, protection, and drainage components; furnish daily reports to DEN Project Manager.
- B. Flood Testing: Flood test each deck area for leaks, according to recommendations in ASTM D 5957, after completing and protecting waterproofing but before overlaying construction is placed. Install temporary containment assemblies, plug or dam drains, and flood with potable water.
 - 1. Flood to an average depth of **2-1/2 inches** (65 mm) with a minimum depth of **1 inch** (25 mm) and not exceeding a depth of **4 inches** (100 mm). Maintain **2 inches** (50 mm) of clearance from top of sheet flashings.
 - 2. Flood each area for [**24**] [**48**] [**72**] hours.
 - 3. After flood testing, repair leaks, repeat flood tests, and make further repairs until waterproofing installation is watertight.
- C. [**Owner will engage**] [**Engage**] an independent testing agency to observe flood testing

and examine underside of decks and terminations for evidence of leaks during flood testing.

1. Independent testing laboratory to certify that waterproofing was installed per contract requirements and to thicknesses required. Submit certificate to DEN Project Manager.

3.11 CLEANING AND PROTECTION

- A. Protect waterproofing from damage and wear during remainder of construction period.
- B. Protect installed [**board insulation**] [**insulation drainage panels**] from damage due to UV light, harmful weather exposures, physical abuse, and other causes. Provide temporary coverings where insulation will be subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.
- C. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 071413

SECTION 071416 - COLD FLUID-APPLIED WATERPROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Single-component polyurethane waterproofing.
 - 2. Two-component polyurethane waterproofing.
 - 3. Polyester waterproofing.
 - 4. Latex-rubber waterproofing.
 - 5. Molded-sheet drainage panels.
 - 6. Insulation.
 - 7. Plaza deck pavers.
- B. Related Section:
 - 1. Section 079200 "Joint Sealants" for joint-sealant materials and installation.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include manufacturer's written instructions for evaluating, preparing, and treating substrate, technical data, and tested physical and performance properties of waterproofing.
 - 1. Include data substantiating that all materials comply with requirements.
- B. Shop Drawings: Show locations and extent of waterproofing. Include details for substrate joints and cracks, sheet flashings, penetrations, inside and outside corners, tie-ins with adjoining waterproofing, and other termination conditions.
 - 1. Include setting drawings showing layout, sizes, sections, profiles, and joint details of pedestal-supported concrete pavers.
- C. Samples: For the following products in minimum 1' x 1' sizes unless otherwise indicated:

1. Flashing sheet.
2. Membrane-reinforcing fabric.
3. Insulation.
4. Drainage panel.
5. Plaza deck paver **[full sized]** in each color and texture required.
6. Paver pedestal assembly.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer**[and testing agency]**.
- B. Installer to submit a certificate evidencing not less than five (5) years of successful experienced installing similar types to products specified.
- C. Manufacturer to submit a certificate evidencing not less than five (5) years experienced manufacturing types of products specified.
- D. Manufacturer to submit a field report that all installation work is being done per contract requirements.
- E. Product Test Reports: For waterproofing, based on evaluation of comprehensive tests performed by a qualified testing agency.
- F. Field quality-control reports.
- G. Provide a certificate that bellows are jet fuel resistant.
- H. Provide a certificate stating that waterproofing and protection board to be used at the horizontal and vertical surfaces of the basement extension has been tested for jet fuel resistance and that the required warranty applies to this work. Provide the actual test report.
 1. Minimum Requirements: For waterproofing, expansion joint covers and any associated joints, no loss in waterproofing ability within 48 hours after ponding jet fuel for 72 hours. For protection board, no loss in protection within 48 hours after being immersed in jet fuel for 72 hours.
- I. Warranty: Sample of special warranty.

1.5 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: A firm that is **[approved or licensed by]** **[acceptable to]**

waterproofing manufacturer for installation of waterproofing required for this Project and is eligible to receive special warranties specified.

1. Installer will have specialized in installation of types of waterproofing required for project for not less than five (5) years and which is acceptable to manufacturer(s) of primary materials.
 2. Assign work closely associated with waterproofing, including (but not limited to) waterproofing accessories, and flashings used in conjunction with waterproofing, expansion joints in membrane, insulation and protection course on membrane, to installer of waterproofing, for single, undivided responsibility.
- B. Source Limitations: Obtain primary waterproofing materials of each type required from single manufacturer with not less than three (3) years of successful experience in supplying principal materials for fluid applied waterproofing work. Provide secondary materials only as recommended by manufacturer of primary materials.
- C. Mockups: Before beginning installation, install waterproofing to **100 sq. ft. (9.3 sq. m)** <Insert area>of **[deck] [wall]** to demonstrate surface preparation, crack and joint treatment, corner treatment, thickness, texture, and execution quality. **[Install pavers and paver supports to demonstrate aesthetic effects and set quality standards for materials and execution.]**
1. If DEN Project Manager determines mockups do not comply with requirements, reapply waterproofing **[and reinstall overlaying construction]** until mockups are approved.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
 3. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- D. Preinstallation Conference: Approximately two (2) weeks prior to actual commencement of fluid-applied waterproofing installation, meet at project site with Installer, installers of deck or substrate construction to receive work, installers of other work in and around waterproofing work which must precede, follow or penetrate waterproofing work (including mechanical work if any), DEN Project Manager, the Contractor's Quality Control Manager and waterproofing material manufacturer's representative. Record (Contractor) discussions of conference, together with decisions and agreements (or disagreements) reached. Furnish copy of record to each party attending.
1. Review methods and procedures related to work, including but not necessarily limited to the following:
 - a. Tour jobsite areas to be waterproofed. Inspect and discuss condition of substrate, drains, curbs, penetrations, and other preparatory work performed by other trades.
 - b. Review waterproofing requirements (drawings, specifications and other contract documents), including surface preparation, substrate condition and pretreatment, minimum curing period, forecasted weather conditions,

- special details and flashings, and installation procedures.
 - c. Review required submittals. Work cannot begin until all submittals are accepted.
 - d. Review and finalize construction schedule related to waterproofing work and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - e. Review required inspection, testing, and certifying procedures, safety, and hazardous control programs.
 - f. Review protection and repair procedures.
 - E. Contractor to employ an independent testing laboratory to certify that waterproofing was installed per contract requirements and to thicknesses required. Submit certificate to DEN Project Manager.
 - F. Warranty: Installer to warrant installation for five (5) years including responsibility for removing and replacing work concealing waterproof membrane. Warrant installation to be watertight for application required.
- 1.7 DELIVERY, STORAGE, AND HANDLING
- A. Deliver liquid materials to Project site in original containers with seals unbroken, labeled with manufacturer's name, product brand name and type, date of manufacture, shelf life, and directions for storing and mixing with other components.
 - B. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by waterproofing manufacturer.
 - C. Remove and replace liquid materials that cannot be applied within their stated shelf life.
 - D. Protect stored materials from direct sunlight.
- 1.8 PROJECT CONDITIONS
- A. Environmental Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended by waterproofing manufacturer. Do not apply waterproofing to a damp or wet substrate, when relative humidity exceeds 85 percent, or when temperatures are less than 5 deg F (3 deg C) above dew point.
 - 1. Do not apply waterproofing in snow, rain, fog or mist, or when such weather conditions are imminent during application and curing period.
 - B. Maintain adequate ventilation during application and curing of waterproofing materials.
- 1.9 WARRANTY
- A. Special Manufacturer's Warranty: Manufacturer's standard form in which waterproofing manufacturer[**and Installer**] agree to repair or replace waterproofing that does not

comply with requirements or that fails to remain watertight within specified warranty period.

1. Warranty does not include failure of waterproofing due to failure of substrate prepared and treated according to requirements or formation of new joints and cracks in substrate that exceed **1/16 inch** (1.6 mm) in width.
2. Warranty Period: **[Five]** <Insert number> years from date of Substantial Completion.

B. Special Installer's Warranty: Specified form, **[on warranty form at end of this Section]**, signed by Installer, covering Work of this Section, for warranty period of **[two]** <Insert number> years.

1. Warranty includes removing and reinstalling protection board, drainage panels, insulation, pedestals, and pavers on plaza decks.

1.10 CONSTRUCTION WASTE MANAGEMENT

A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL

A. General Compatibility: Provide products that are recommended by manufacturer to be fully compatible with indicated substrates, including modification by bituminous additives (asphalt or coal tar as needed) and similar proven compounding provisions.

2.2 SINGLE-COMPONENT POLYURETHANE WATERPROOFING

A. Single-Component, Modified Polyurethane Waterproofing: Comply **[with ASTM C 836 and]**with manufacturer's written physical requirements.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. American Permaquik Inc.; PQ 6800.
 - b. Anti-Hydro International, Inc.; A-H Seamless Membrane.
 - c. Carlisle Coatings & Waterproofing Inc.; CCW-525.
 - d. CETCO; LDC 60.
 - e. Degussa Building Systems; HLM 5000.
 - f. Karnak Corporation; One-Kote System.
 - g. Meadows, W.R., Inc.; Sealtight Meadow-Pruf Seamless
 - h. Mer-Kote Products, Inc.; Mer-Thane 320.
 - i. Neogard, Div. of Jones-Blair; Neogard 7401.

- j. Pacific Polymers International, Inc.; [**Elasto-Deck B.T.**] [**Elasto-Deck B.T. 100% Solids**] [**Elasto-Deck B.T. H20**].
 - k. Tremco Incorporated; [**Tremproof 60**] [**Vulkem 250 GC**] [**Vulkem 201**].
 - l. United Coatings; Elastall 1000.
 - m. <**Insert manufacturer's name; product name or designation**>.
 - n. or approved equal.
- B. Single-Component, Reinforced, Modified Polyurethane Waterproofing: Comply [**with ASTM C 836 and**]with manufacturer's written physical requirements.
- 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Carlisle Coatings & Waterproofing Inc.; CCW-525-H.
 - b. <**Insert manufacturer's name; product name or designation**>.
 - c. or approved equal.
- C. Single-Component, Unmodified Polyurethane Waterproofing: Comply with ASTM C 836 and with manufacturer's written physical requirements.
- 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. 3M; Scotch Clad 5893/5864.
 - b. Tremco Incorporated; Vulkem 101.
 - c. <**Insert manufacturer's name; product name or designation**>.
 - d. or approved equal.

2.3 TWO-COMPONENT POLYURETHANE WATERPROOFING

- A. Two-Component, Modified Polyurethane Waterproofing: Comply with ASTM C 836 and with manufacturer's written physical requirements.
- 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Gaco Western Inc.; LM-60.
 - b. Tremco Incorporated; Vulkem 222.
 - c. <**Insert manufacturer's name; product name or designation**>.
 - d. or approved equal.
- B. Two-Component, Unmodified Polyurethane Waterproofing: Comply with ASTM C 836 and with manufacturer's written physical requirements.
- 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Carlisle Coatings & Waterproofing Inc.; CCW 703 Liqueiseal.
 - b. Pacific Polymers International, Inc.; [**Elasto-Deck B.T. 1000**] [**Elasto-Deck B.T. Two-Component**].
 - c. 3M; FC 100.
 - d. Tremco Incorporated; Vulkem 102.
 - e. <**Insert manufacturer's name; product name or designation**>.
 - f. or approved equal.

- C. Two-Component, Reinforced, Unmodified Polyurethane Waterproofing: Comply [**with ASTM C 836 and**]with manufacturer's written physical requirements.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Kemper System, Inc.; Kemperol 2K-PUR.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.

2.4 POLYESTER WATERPROOFING

- A. Two-Component, Reinforced, Unsaturated Polyester Waterproofing: Comply [**with ASTM C 836 and**]with manufacturer's written physical requirements.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Kemper System, Inc.; Kemperol BR.
 - b. Landmark Products, Inc.; Triflex D.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.

2.5 LATEX-RUBBER WATERPROOFING

- A. Two-Component, Unreinforced, Latex-Rubber Waterproofing: Comply [**with ASTM C 836 and**]with manufacturer's written physical requirements.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Grace, W. R. & Co.; Procor.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.

- B. Two-Component, Reinforced, Latex-Rubber Waterproofing: Comply [**with ASTM C 836 and**]with manufacturer's written physical requirements.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Grace, W. R. & Co.; Procor Deck System 3R.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.

2.6 AUXILIARY MATERIALS

- A. General: Provide auxiliary materials recommended by manufacturer to be compatible with one another and with waterproofing, as demonstrated by waterproofing manufacturer, based on testing and field experience.

- B. Primer: Manufacturer's standard, factory-formulated polyurethane or epoxy primer.

- C. Sheet Flashing: **50-mil-** (1.3-mm-) minimum, nonstaining, uncured sheet neoprene.
 - 1. Adhesive: Manufacturer's recommended contact adhesive.
- D. Membrane-Reinforcing Fabric: Nonwoven, needle-punched white polyester fabric, **[6-oz./sq. yd. (200-g/sq. m)] [5-oz./sq. yd. (169-g/sq. m)] [3.2-oz./sq. yd. (109-g/sq. m)] [manufacturer's standard]** weight.
- E. Joint Reinforcing Strip: Manufacturer's recommended fiberglass mesh or polyester fabric.
- F. Joint Sealant: Multicomponent polyurethane sealant, compatible with waterproofing, complying with ASTM C 920 Type M, Class 25; Grade NS for sloping and vertical applications or Grade P for deck applications; Use NT exposure; and as recommended by manufacturer for substrate and joint conditions.
 - 1. Backer Rod: Closed-cell polyethylene foam.
- G. Bellows: Where bellows are indicated on the drawings as in contact with the waterproof membrane, provide either 24 gauge soft copper or 60 mil flexible sheet membrane that is jet fuel resistant and compatible with waterproof membrane. Bellows shall be as indicated and shall lap waterproof membrane a minimum 6" per side.

2.7 PROTECTION COURSE

- A. Protection Course: ASTM D 6506, semirigid sheets of fiberglass or mineral-reinforced-asphaltic core, pressure laminated between two asphalt-saturated fibrous liners and as follows:
 - 1. Thickness: **[1/8 inch (3 mm)] [1/4 inch (6 mm)]**, nominal.
 - 2. Thickness: **1/8 inch (3 mm)**, nominal, for vertical applications; **1/4 inch (6 mm)**, nominal, elsewhere.
 - 3. Adhesive: Rubber-based solvent type recommended by waterproofing manufacturer for type of protection course.
- B. Protection Course: Fan folded, with a core of extruded-polystyrene board insulation faced **[one] [or] [both]** side(s) with plastic film, nominal thickness of **1/4 inch (6 mm)**, with compressive strength not less than **8 psi (55 kPa)** per ASTM D 1621 and maximum water absorption by volume of 0.6 percent per ASTM C 272.
- C. Protection Course: Unfaced, fan-folded, rigid, extruded-polystyrene board insulation; nominal thickness of **1/4 inch (6 mm)** with compressive strength of not less than **8 psi (55 kPa)** per ASTM D 1621.
- D. Protection Course: Fan folded, with a core of molded-polystyrene board insulation faced both sides with plastic film, nominal thickness of **[1/4 inch (6 mm)] [3/8 inch (9.5 mm)] [1/2 inch (13 mm)]**, with compressive strength not less than **12 psi (83 kPa)** per ASTM D 1621 and water absorption by volume of less than 1 percent per ASTM C 272.

- E. Protection Course: Unfaced, extruded-polystyrene board insulation; ASTM C 578, Type X, **1/2 inch** (13 mm) thick.
- F. Protection Course: Molded-polystyrene board insulation, ASTM C 578, Type I, **0.90-lb/cu. ft.** (15-kg/cu. m) minimum density, **1-inch** (25-mm) minimum thickness.

2.8 MOLDED-SHEET DRAINAGE PANELS

- A. Molded-Sheet Drainage Panel: Comply with Section 334600 "Subdrainage."
- B. Nonwoven-Geotextile-Faced, Molded-Sheet Drainage Panel: Manufactured composite subsurface drainage panels consisting of a nonwoven, needle-punched geotextile facing with an apparent opening size not exceeding **No. 70** (0.21-mm) sieve laminated to one side[**with**] [**or**] [**without**] a polymeric film bonded to the other side of a studded, nonbiodegradable, molded-plastic-sheet drainage core, with a vertical flow rate of **9 to 15 gpm per ft.** (112 to 188 L/min. per m).
- C. Woven-Geotextile-Faced, Molded-Sheet Drainage Panel: Manufactured composite subsurface drainage panels consisting of a woven-geotextile facing with an apparent opening size not exceeding **No. 40** (0.43-mm) sieve, laminated to one side[**with**] [**or**] [**without**] a polymeric film bonded to the other side of a studded, nonbiodegradable, molded-plastic-sheet drainage core, with a horizontal flow rate not less than **2.8 gpm per ft.** (35 L/min. per m).

2.9 INSULATION

- A. Board Insulation: Extruded-polystyrene board insulation complying with ASTM C 578, [**square**] [**or**] [**shiplap**] edged.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. DiversiFoam Products.
 - b. Dow Chemical Company (The).
 - c. Owens Corning.
 - d. Pactiv Corporation.
 - e. T. Clear Corporation.
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
 - 2. Type VI, **40-psi** (276-kPa) minimum compressive strength.
 - 3. Type VII, **60-psi** (414-kPa) minimum compressive strength.
 - 4. Type V, **100-psi** (690-kPa) minimum compressive strength.
- B. Unfaced, Wall Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, [**Type IV, 25-psi** (173-kPa)] [**Type VI, 40-psi** (276-kPa)] minimum compressive strength; unfaced; fabricated with shiplap or channel edges and with one side having grooved drainage channels.
 - 1. Products: Subject to compliance with requirements, provide one of the following:

- a. DiversiFoam Products; CertiFoam **[25] [40]** Drainage Board.
 - b. Dow Chemical Company (The); Perimate.
 - c. Pactiv Corporation; Green-Guard-DC.
 - d. **<Insert manufacturer's name; product name or designation>**.
 - e. or approved equal.
- C. Geotextile-Faced, Wall Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, **[Type IV, 25-psi (173-kPa)] [Type VI, 40-psi (276-kPa)]** minimum compressive strength; fabricated with tongue-and-groove edges and with one side having grooved drainage channels faced with a nonwoven-geotextile filter fabric.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Owens Corning; Insul-Drain.
 - b. T. Clear Corporation; Thermadry **[750] [1250]**.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.
- D. Unfaced, Plaza Deck, Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, **[Type VI, 40-psi (276-kPa)] [Type VII, 60-psi (414-kPa)]** minimum compressive strength; unfaced; fabricated with shiplapped or channel edges and with one side having ribbed drainage channels.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. DiversiFoam Products; CertiFoam Plaza Deck.
 - b. Dow Chemical Company (The); Styrofoam Ribbed Roofmate.
 - c. Owens Corning; **[Foamular 404 RB] [Foamular 604 RB]**.
 - d. **<Insert manufacturer's name; product name or designation>**.
 - e. or approved equal.
- E. Geotextile-Faced, Plaza Deck, Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, Type VII, **60-psi (414-kPa)** minimum compressive strength; fabricated with tongue-and-groove edges and with one side having grooved drainage channels faced with manufacturer's standard, nonwoven-geotextile filter fabric.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. T. Clear Corporation; Thermadry 1750.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
- 2.10 PLAZA DECK PAVERS
- A. Plaza Deck Pavers: **[Brick] [Concrete] [Asphalt-block]** pavers specified in Section 321400 "Unit Paving."

- B. Plaza Deck Pavers: **[Granite] [Limestone] [Marble] [Quartz-based stone] [Slate]** pavers specified in Section 096340 "Stone Flooring."
- C. Plaza Deck Pavers: Heavyweight, hydraulically pressed, concrete units, **[square edged] [with top edges beveled 3/16 inch (5 mm)]**, manufactured for use as plaza deck pavers; minimum compressive strength of **[7500 psi (52 MPa)] [6500 psi (45 MPa)]** <Insert value>, ASTM C 140; absorption not greater than 5 percent, ASTM C 140; no breakage and maximum 1 percent mass loss when tested for freeze-thaw resistance according to ASTM C 67.
- Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - Hanover Architectural Products.
 - Hastings Pavement Company, LLC.
 - Roofblok Ltd.
 - Sunny Brook Pressed Concrete Co.
 - Wausau Tile, Inc.; Terra-Paving Div.
 - Westile Roofing Products.
 - <Insert manufacturer's name>.
 - or approved equal.
 - Thickness: **[1-5/8 inches (41 mm)] [1-3/4 inches (45 mm)] [2 inches (51 mm)] [2-3/8 inches (60 mm)]** <Insert dimension>.
 - Face Size: **[8-7/8 inches (225 mm) square] [9 inches (229 mm) square] [9-by-18 inches (229-by-457 mm)] [12 inches (305 mm) square] [12-by-24 inches (305-by-610 mm)] [18 inches (457 mm) square] [24 inches (610 mm) square] [As indicated]** <Insert dimensions and shape>.
 - Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range]** <Insert color>.
- D. Setting Bed: Provide **[aggregate] [mortar] [bituminous]** setting-bed materials specified in Section 321400 "Unit Paving."
- E. Paver Pedestals: Paver manufacturer's standard SBR rubber, high-density polyethylene, or polyurethane paver support assembly, including **[fixed-height] [adjustable or stackable]** pedestals, shims, and spacer tabs for joint spacing of **[1/8 inch (3 mm)] [3/16 inch (5 mm)] [1/8 to 3/16 inch (3 to 5 mm)]**.
- Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - <Insert manufacturer's name>.
 - or approved equal.
 - Concrete Fill: ACI 301, compressive strength of **5000 psi (34 MPa)** at 28 days and air content of 6 percent.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance.
 - 1. Verify that concrete has cured and aged for minimum time period recommended by waterproofing manufacturer.
 - 2. Verify that substrate is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D 4263.
 - 3. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SURFACE PREPARATION

- A. Clean and prepare substrate according to manufacturer's written recommendations. Provide clean, dust-free, and dry substrate for waterproofing application.
- B. Mask off adjoining surfaces not receiving waterproofing to prevent spillage or overspray affecting other construction.
- C. Close off deck drains and other deck penetrations to prevent spillage and migration of waterproofing fluids.
- D. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, acid residues, and other penetrating contaminants or film-forming coatings from concrete.
 - 1. Abrasive blast clean concrete surfaces uniformly to expose top surface of fine aggregate according to ASTM D 4259 with a self-contained, recirculating, blast-cleaning apparatus. Remove material to provide a sound surface free of laitance, glaze, efflorescence, curing compounds, concrete hardeners, or form-release agents. Remove remaining loose material and clean surfaces according to ASTM D 4258.
- E. Remove fins, ridges, and other projections and fill honeycomb, aggregate pockets, and other voids.
- F. Seal joints, and apply bond breakers as recommended by prime materials manufacturer, with particular attention at construction joints.
- G. Install accessories as recommended by prime materials manufacturer.
- H. Prime substrate as recommended (and only if recommended) by prime materials manufacturer.

3.3 PREPARATION AT TERMINATIONS AND PENETRATIONS

- A. Prepare vertical and horizontal surfaces at terminations and penetrations through waterproofing and at expansion joints, drains, and sleeves according to **[ASTM C 898]** **[ASTM C 1471]** and manufacturer's written instructions.
- B. Prime substrate unless otherwise instructed by waterproofing manufacturer.
- C. Apply waterproofing in two separate applications, and embed a joint reinforcing strip in the first preparation coat when recommended by waterproofing manufacturer.
 - 1. Provide sealant cants around penetrations and at inside corners of deck-to-wall butt joints when recommended by waterproofing manufacturer.

3.4 JOINT AND CRACK TREATMENT

- A. Prepare, treat, rout, and fill joints and cracks in substrate according to **[ASTM C 898]** **[ASTM C 1471]** and waterproofing manufacturer's written instructions. Remove dust and dirt from joints and cracks, complying with ASTM D 4258, before coating surfaces.
 - 1. Comply with ASTM C 1193 for joint-sealant installation.
 - 2. Apply bond breaker between sealant and preparation strip.
 - 3. Prime substrate and apply a single thickness of preparation strip extending a minimum of **3 inches** (75 mm) along each side of joint. Apply waterproofing in two separate applications and embed a joint reinforcing strip in the first preparation coat.
- B. Install sheet flashing and bond to deck and wall substrates where indicated or required according to waterproofing manufacturer's written instructions.
 - 1. Extend sheet flashings onto perpendicular surfaces and other work penetrating substrate according to ASTM C 898.

3.5 WATERPROOFING APPLICATION

- A. Apply waterproofing according to **[ASTM C 898]** **[ASTM C 1471]** and manufacturer's written instructions.
- B. Start installing waterproofing in presence of manufacturer's technical representative.
- C. Apply primer over prepared substrate.
- D. Except as otherwise indicated, extend flashings onto perpendicular surfaces and other work penetrating substrate to not less than 6" beyond finished surface to be applied over waterproofing.
- E. Unreinforced Waterproofing Applications: Mix materials and apply waterproofing by spray, roller, notched squeegee, trowel, or other application method suitable to slope of substrate.

1. Apply one or more coats of waterproofing to obtain a seamless membrane free of entrapped gases, with an average dry film thickness of **[60 mils (1.5 mm) and a minimum dry film thickness of 50 mils (1.3 mm) at any point] [120 mils (3 mm)] <Insert thickness>**.
 2. Apply waterproofing to prepared wall terminations and vertical surfaces.
 3. Verify wet film thickness of waterproofing every **100 sq. ft. (9.3 sq. m)**.
- F. Reinforced Waterproofing Applications: Mix materials and apply waterproofing by roller, notched squeegee, trowel, or other suitable application method.
1. Apply first coat of waterproofing, embed membrane-reinforcing fabric, and apply second coat of waterproofing to completely saturate reinforcing fabric and to obtain a seamless reinforced membrane free of entrapped gases, with an average dry film total thickness of **[70 mils (1.8 mm)] [80 mils (2 mm)] [120 mils (3 mm)] <Insert thickness>**.
 2. Apply reinforced waterproofing to prepared wall terminations and vertical surfaces.
 3. Verify wet film thickness of waterproofing every **100 sq. ft. (9.3 sq. m)**.
- G. Install protection course with butted joints over nominally cured membrane before starting subsequent construction operations.
1. **[Molded-sheet drainage panels] [Insulation drainage panels] [Board insulation]** may be used in place of a separate protection course to vertical applications when approved by waterproofing manufacturer.
- H. Bellows: Lap waterproof membrane above and below bellows.
- 3.6 PROTECTION COURSE:
- A. Install protection course on cured membrane (after testing, if required) without delay, so that period of membrane exposure will be minimized.
 - B. On all vertical surfaces to be waterproofed install protection course. Comply with waterproofing manufacturer's recommendations for adhesion of protection course to membrane.
 - C. On all horizontal surfaces to receive waterproofing including between slabs and at basement extension install protection course. Comply with waterproofing manufacturer's recommendations for adhesion of protection course to membranes.
 - D. MOLDED-SHEET DRAINAGE PANEL INSTALLATION
 - E. Place and secure molded-sheet drainage panels, with geotextile facing away from wall or deck substrate, according to manufacturer's written instructions. Use adhesives **[or mechanical fasteners]** that do not penetrate waterproofing. Lap edges and ends of geotextile fabric to maintain continuity. Protect installed molded-sheet drainage panels during subsequent construction.

1. For vertical applications, install [**board insulation**] [**protection course**] before installing drainage panels.

3.7 INSULATION INSTALLATION

- A. Install [**one or more layers of board insulation to achieve required thickness**] [**insulation drainage panels**] over waterproofed surfaces. Cut and fit to within **3/4 inch** (19 mm) of projections and penetrations.
- B. On vertical surfaces, set insulation units in adhesive applied according to manufacturer's written instructions. Use type of adhesive recommended in writing by insulation manufacturer.
- C. On horizontal surfaces, place insulation units unadhered according to manufacturer's written instructions. Stagger end joints and tightly abut insulation units.

3.8 PLAZA DECK PAVER INSTALLATION

- A. Setting Bed: Install setting bed in locations and of thickness indicated to comply with requirements in [**Section 321400 "Unit Paving."**] [**Section 096340 "Stone Flooring."**]
- B. Install concrete pavers, in locations indicated, according to manufacturer's written instructions.
- C. Accurately install [**fixed**] [**adjustable**]-height paver pedestals in locations and to elevations required. Adjust for final level and slope with shims.
 1. Fill paver pedestal with concrete mix, strike smooth with top of pedestal, and cure according to ACI 301.
- D. Loosely lay pavers on pedestals, maintaining a uniform open joint width. Tightly seat pavers against spacers to eliminate lateral movement or drift of paving assembly. Align joint patterns parallel in each direction.
 1. Lay out pavers to avoid less-than-half-width pavers at perimeter or other terminations.
- E. Install pavers to not vary more than **1/16 inch** (1.6 mm) in elevation between adjacent pavers or more than **1/16 inch** (1.6 mm) from surface plane elevation of individual paver.
- F. Maintain tolerances of paving installation within [**1/4 inch in 10 feet (1:48)**] <Insert **surface tolerance**> of surface plane in any direction.

3.9 FIELD QUALITY CONTROL

- A. Engage a full time site representative qualified by the waterproofing membrane

manufacturer to inspect substrate conditions, surface preparation, and application of the membrane, flashings, protection, and drainage components; and to furnish daily reports to DEN Project Manager.

- B. Flood Testing: Flood test each deck area for leaks, according to recommendations in ASTM D 5957, after completing waterproofing but before overlaying construction is placed. Install temporary containment assemblies, plug or dam drains, and flood with potable water.
1. Flood to an average depth of **2-1/2 inches** (64 mm) with a minimum depth of **1 inch** (25 mm) and not exceeding a depth of **4 inches** (100 mm). Maintain **2 inches** (50 mm) of clearance from top of sheet flashings.
 2. Flood each area for **[24] [48] [72]** hours.
 3. After flood testing, repair leaks, repeat flood tests, and make further repairs until waterproofing installation is watertight.
- C. **[Owner will engage] [Engage]** an independent testing agency to observe flood testing and examine underside of decks and terminations for evidence of leaks during flood testing.
1. Independent testing laboratory to certify that waterproofing was installed per contract requirements and to thicknesses required. Submit certificate to DEN Project Manager.

3.10 CURING, PROTECTION, AND CLEANING

- A. Cure waterproofing according to manufacturer's written recommendations, taking care to prevent contamination and damage during application stages and curing.
1. Do not permit foot or vehicular traffic on unprotected membrane.
- B. Protect waterproofing from damage and wear during remainder of construction period.
- C. Protect installed **[board insulation] [insulation drainage panels]** from damage due to ultraviolet light, harmful weather exposures, physical abuse, and other causes. Immediately after installation, provide temporary coverings where insulation will be subject to abuse and cannot be concealed and protected by permanent construction.
- D. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 071416

SECTION 071613 - POLYMER MODIFIED CEMENT WATERPROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes polymer-modified cement waterproofing for **[positive] [negative]-side** application to **[concrete] [concrete unit masonry] [and] [clay masonry]**.
- B. Related Sections:
 - 1. Section 033000 "Cast-in-Place Concrete" for **[waterstops] [, concrete slabs serving as floor toppings to protect waterproofing,]** and finishing concrete walls and slabs to receive waterproofing.
 - 2. Section 042000 "Unit Masonry" for construction cleaning of unit masonry walls to receive waterproofing.
 - 3. Section 079200 "Joint Sealants" for elastomeric and preformed sealants in concrete and masonry walls and floors.
 - 4. Section 092400 "Portland Cement Plastering" for plaster finishes to be applied over waterproofing.
 - 5. Section 099726 "Cementitious Coatings" for polymer-modified cementitious coatings used primarily for decorative purposes.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include **[construction details,]** material descriptions and installation instructions for polymer-modified cement waterproofing.
 - 1. Include data substantiating that all materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Credit IEQ 4.2: For waterproofing for negative-side application, documentation including printed statement of VOC content.
 - 2. Laboratory Test Reports for Credit IEQ 4: For waterproofing for negative-side application, documentation indicating that products comply with the testing and

product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- C. Samples for Initial Selection: For each type of polymer-modified cement waterproofing indicated.
 - 1. Include Samples of available color selection.
- D. Samples for Verification: For each type of polymer-modified cement waterproofing indicated.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Applicator.
- B. Installer to submit a certificate evidencing not less than five (5) years of successful experienced installing similar types to products specified.
- C. Manufacturer to submit a certificate evidencing not less than five (5) years experienced manufacturing types of products specified.
- D. Manufacturer to submit a field report that all installation work is being done per contract requirements.
- E. Product Certificates: For waterproofing, patching, and plugging materials, from manufacturer.
- F. Product Test Reports: Based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency, for each type of polymer-modified cement waterproofing.
- G. Field quality-control reports.
- H. Copy of project warranty for waterproofing installation.

1.5 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Applicator Qualifications: A firm experienced in applying polymer-modified cement waterproofing similar in material, design, and extent to that indicated for this Project, whose work has resulted in applications with a record of successful in-service performance[, **and that employs workers trained and approved by manufacturer**].

1. Installer will have specialized in installation of types of waterproofing required for project for not less than five (5) years and which is acceptable to manufacturer(s) of primary materials.
 2. Assign work closely associated with waterproofing, including but not limited to waterproofing accessories, and materials used in conjunction with waterproofing, to installer of waterproofing, for single, undivided responsibility.
- B. Source Limitations: Obtain primary waterproofing materials of each type required from single manufacturer with not less than three (3) years of successful experience in supplying principal materials for fluid applied waterproofing work. Provide secondary materials only as recommended by manufacturer of primary materials.
- C. Mockups: Provide mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
1. Build mockup of typical [**vertical**] [**horizontal**] surfaces [**shown on Drawings**] [**10 sq. ft. (0.9 sq. m) in size**] <Insert description>.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
 3. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- D. Preinstallation Conference: Approximately two (2) weeks prior to actual commencement of waterproofing installation, meet at project site with Installer, installers of deck or substrate construction to receive work, installers of other work in and around waterproofing work which must precede, follow or penetrate waterproofing work, including mechanical work if any, DEN Project Manager, the Contractor's Quality Control Manager and waterproofing material manufacturer's representative. Record (Contractor) discussions of conference, together with decisions and agreements (or disagreements) reached. Furnish copy of record to each party attending.
1. Review methods and procedures related to work, including but not necessarily limited to the following:
 - a. Tour jobsite areas to be waterproofed. Inspect and discuss condition of substrate, drains, curbs, penetrations, and other preparatory work performed by other trades.
 - b. Review waterproofing requirements (drawings, specifications and other contract documents), including surface preparation, substrate condition and pretreatment, minimum curing period, forecasted weather conditions, special details and sheet flashings, installation procedures,.
 - c. Review required submittals. Work cannot begin until all submittals are approved by Owner.
 - d. Review and finalize construction schedule related to waterproofing work and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - e. Review required inspection, testing, and certifying procedures, safety, and hazardous control programs.
 - f. Review protection and repair procedures.

- E. Warranty: Installer to warrant installation for five (5) years including responsibility for removing and replacing work concealing waterproof membrane. Warrant installation to be watertight for application required.

1.7 PROJECT CONDITIONS

- A. Weather Limitations: Proceed with application only when existing and forecasted weather conditions permit polymer-modified cement waterproofing to be performed according to manufacturer's written instructions.
- B. Proceed with waterproofing work only after pipe sleeves, vents, curbs, inserts, drains, and other projections through the substrate to be waterproofed have been completed. Proceed only after substrate defects, including honeycombs, voids, and cracks, have been repaired to provide a sound substrate free of forming materials, including reveal inserts.
- C. Ambient Conditions: Proceed with waterproofing work only if temperature is maintained at **40 deg F** (4.4 deg C) or above during work and cure period, and space is well ventilated and kept free of water.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL

- A. General Compatibility: Provide products that are recommended by manufacturer to be fully compatible with indicated substrates.

2.2 FIELD-MIXED, POLYMER-MODIFIED CEMENT WATERPROOFING

- 1. Admixture for Field Mixing: Manufacturer's standard polymer admixture for mixing with Portland cement and sand to produce a waterproof coating that is suitable for vertical and horizontal applications below or above grade, is breathable, resists **[positive]** **[negative]**-side hydrostatic pressure, has VOC content complying with limits of authorities having jurisdiction, and has properties meeting or exceeding the criteria specified below.
- B. Products: Subject to compliance with requirements, provide one of the following:
 - 1. Anti-Hydro International, Inc.; Anti-Hydro.
 - 2. **<Insert manufacturer's name; product name or designation>**.

3. or approved equal.
4. Water Permeability: Maximum [**zero for water at 30 feet** (9 m)] **<Insert requirement>** when tested according to CE CRD-C 48.
5. Compressive Strength: Minimum [**4000 psi (27.6 MPa)**] **<Insert value>** at 28 days when tested according to ASTM C 109/C 109M.
6. Flexural Strength: Minimum [**710 psi (4.8 MPa)**] **<Insert value>** at 28 days when tested according to ASTM C 348.
7. Bond Strength: Minimum [**220 psi (1.5 MPa)**] **<Insert value>** at 14 days when tested according to ASTM C 321.
8. VOC Content of Negative-Side Waterproofing: Products shall comply with VOC limits of authorities having jurisdiction, but not exceed 400 g/L when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
9. Emissions from Negative-Side Waterproofing: Products shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.3 PREPACKAGED, POLYMER-MODIFIED CEMENT WATERPROOFING

- A. Negative-Side, Polymer-Modified Cement Waterproofing: Manufacturer's proprietary blend of dry cementitious and other ingredients for mixing with [**potable water**] [**or**] [**polymer admixture**] to produce a waterproof coating that is suitable for vertical and horizontal applications below or above grade, is breathable, resists negative-side hydrostatic pressure, has VOC content complying with limits of authorities having jurisdiction, and has properties meeting or exceeding the criteria specified below.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. American PERMAQUIK Inc.; [**ECTOFLEX 646**] [**ECTOFLEX 4020**].
 - b. Anti-Hydro International, Inc.; A-H Hydroseal.
 - c. AQUAFIN, Inc.; [**AQUAFIN-1K**] [**MORTAR-LN**].
 - d. BASF Building Systems; [**Brushbond**] [**Masterseal 550i**] [**Sonnoblock**] [**Thoroseal Foundation Coating**] [**Thoroseal**].
 - e. Conproco Corporation; Conpro Seal[**with Color K-88 Admix**].
 - f. Euclid Tamms; [**TAMOSEAL**] [**TAMOSEAL FOUNDATION COATING**].
 - g. Five Star Products, Inc.; [**Five Star Cement Coat**] [**Five Star Waterproofing**].
 - h. Gemite Products Inc.; [**Cem-Kote Plus**] [**Cem-Kote ST**] [**Cem-Kote Flex ST**].
 - i. International Chem-Crete, Inc.; CCC 150.
 - j. Metalcrete Industries; [**Blokcoat**] [**Blokcoat FR**].
 - k. Sika Corporation, Inc.; Sika Top Seal 107.
 - l. Specco Industries, Inc.; Speccrete P-10.
 - m. Vandex USA LLC; [**VANDEX BB 75**] [**VANDEX BB 75 E**].
 - n. **<Insert manufacturer's name; product name or designation>**.
 - o. or approved equal.
 2. Water Permeability: Maximum [**zero for water at 30 feet** (9 m)] **<Insert requirement>** when tested according to CE CRD-C 48.

3. Compressive Strength: Minimum [**4000 psi (27.6 MPa)**] <Insert value> at 28 days when tested according to ASTM C 109/C 109M.
 4. Flexural Strength: Minimum [**710 psi (4.8 MPa)**] <Insert value> at 28 days when tested according to ASTM C 348.
 5. Bond Strength: Minimum [**220 psi (1.5 MPa)**] <Insert value> at 14 days when tested according to ASTM C 321.
 6. Color: [**White**] [**Gray**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from full range**] [**As indicated in a color schedule**] <Insert color>.
 7. VOC Content: Products shall comply with VOC limits of authorities having jurisdiction, but not exceed 400 g/L when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 8. Low-Emitting Materials: Products shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- B. Positive-Side, Polymer-Modified Cement Waterproofing: Manufacturer's proprietary blend of dry cementitious and other ingredients for mixing with [**potable water**] [**or**] [**polymer admixture**] to produce a waterproof coating that is suitable for vertical and horizontal applications below or above grade, is breathable, resists positive-side hydrostatic pressure, has VOC content complying with limits of authorities having jurisdiction, and has properties meeting or exceeding the criteria specified below.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. American PERMAQUIK Inc.; [**ECTOFLEX 646**] [**ECTOFLEX 4020**].
 - b. Anti-Hydro International, Inc.; A-H Hydroseal.
 - c. AQUAFIN, Inc.; [**AQUAFIN-1K**] [**MORTAR-LN**] [**AQUAFIN-2K/M**].
 - d. BASF Building Systems; [**Brushbond**] [**Flextight**] [**Masterseal 550i**] [**Sonnoblock**] [**Thoroseal Foundation Coating**] [**Thoroseal**].
 - e. Conproco Corporation; [**Foundation Coat**] [**F/C Membrane**] [**Foundation Coat with K-88 Admix**] [**F/C Membrane with K-88 Admix**].
 - f. Damtite Waterproofing, Inc.; Powder Foundation Waterproofer[**with Acrylic Bonding Liquid**].
 - g. Euclid Tamms; [**TAMOSEAL**] [**TAMOSEAL FOUNDATION COATING**].
 - h. Five Star Products, Inc.; [**Five Star Cement Coat**] [**Five Star Waterproofing**].
 - i. Gemite Products Inc.; [**Cem-Kote ST**] [**Cem-Kote Flex ST**].
 - j. International Chem-Crete, Inc.; CCC 150.
 - k. Metalcrete Industries; [**Blokcoat**] [**Blokcoat FR**].
 - l. Sika Corporation, Inc.; Sika Top Seal 107.
 - m. Specco Industries, Inc.; Speccrete P-10.
 - n. Vandex USA LLC; [**VANDEX BB 75**] [**VANDEX BB 75 E**].
 - o. Wall Firma, Inc.; Wall Dri Foundation Coating.
 - p. <Insert manufacturer's name; product name or designation>.
 - q. or approved equal.
 2. Water Permeability: Maximum [**zero for water at 30 feet (9 m)**] <Insert requirement> when tested according to CE CRD-C 48.

3. Compressive Strength: Minimum [**4000 psi (27.6 MPa)**] <Insert value> at 28 days when tested according to ASTM C 109/C 109M.
4. Flexural Strength: Minimum [**710 psi (4.8 MPa)**] <Insert value> at 28 days when tested according to ASTM C 348.
5. Bond Strength: Minimum [**220 psi (1.5 MPa)**] <Insert value> at 14 days when tested according to ASTM C 321.
6. Color: [**White**] [**Gray**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from full range**] [**As indicated in a color schedule**] <Insert color>.

2.4 ACCESSORY MATERIALS

- A. Patching Compound: Factory-premixed cementitious repair mortar, crack filler, or sealant recommended by waterproofing manufacturer for filling and patching tie holes, honeycombs, reveals, and other imperfections; compatible with substrate and other materials indicated; and VOC content complying with limits of authorities having jurisdiction.
- B. Plugging Compound: Factory-premixed cementitious compound with hydrophobic properties and recommended by waterproofing manufacturer; resistant to water and moisture but vapor permeable for all standard applications (vertical, overhead, and horizontal surfaces not exposed to vehicular traffic); compatible with substrate and other materials indicated; and VOC content complying with limits of authorities having jurisdiction.
- C. Portland Cement: ASTM C 150, Type I.
- D. Slurry-Coat[**and Protective-Topping**] Sand: ASTM C 144.
- E. Trowel-Coat Sand: ASTM C 33, fine aggregate.
- F. Polymer Admixture for Protective Topping: Polymer bonding agent and admixture designed to improve adhesion to prepared substrates and to not create a vapor barrier.
- G. Water: Potable.

2.5 MIXES

- A. Field-Mixed, Polymer-Modified Cement Waterproofing: Add polymer admixture to Portland cement and sand according to manufacturer's written instructions. Blend together with mechanical mixer or by hand to required consistency.
- B. Prepackaged, Polymer-Modified Cement Waterproofing: Add prepackaged dry ingredients to mixing liquid according to manufacturer's written instructions. Mix together with mechanical mixer or by hand to required consistency.

- C. Protective Topping: Measure, batch, and mix Portland cement and sand in the proportion of [1:3] <Insert proportion> and water[**gaged with a polymer admixture**]. Blend together with mechanical mixer to required consistency.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Applicator present, for suitable conditions where waterproofing is to be applied.
- B. Proceed with application only after unsatisfactory conditions have been corrected.
- C. Notify DEN Project Manager in writing of active leaks or defects that would affect system performance.

3.2 PREPARATION

- A. Protect other work from damage caused by cleaning, preparation, and application of waterproofing. Provide temporary enclosure[**to confine spraying operation and**] to ensure adequate ambient temperatures and ventilation conditions for application.
- B. Do not allow waterproofing, patching, and plugging materials to enter reveals or annular spaces intended for resilient sealants or gaskets, such as joint spaces between pipes and pipe sleeves.
- C. Stop active water leaks with plugging compound according to waterproofing manufacturer's written instructions.
- D. Repair damaged or unsatisfactory substrate with patching compound according to manufacturer's written instructions.
1. At holes and cracks in substrate, remove loosened chips and cut reveal with sides perpendicular to surface, not tapered, and approximately **1 inch** (25.4 mm) deep. Fill reveal with patching compound flush with surface.
- E. Surface Preparation: Comply with waterproofing manufacturer's written instructions to remove efflorescence, chalk, dust, dirt, mortar spatter, grease, oils, paint, curing compounds, and form-release agents to ensure that waterproofing bonds to surfaces.
1. Clean concrete surfaces according to ASTM D 4258.
- a. Scratch- and Float-Finished Concrete: Etch with 10 percent muriatic (hydrochloric) acid solution according to ASTM D 4260.
- b. Prepare smooth-formed and trowel-finished concrete by mechanical abrading or abrasive-blast cleaning according to ASTM D 4259.
2. Clean concrete unit masonry surfaces according to ASTM D 4261.

- a. Lightweight Concrete Unit Masonry: Etch with 10 percent muriatic (hydrochloric) acid solution or abrade surface by wire brushing. Remove acid residue until pH readings of water after rinse are not more than 1.0 pH lower or 2.0 pH higher than pH of water before rinse.
 - b. Medium- and Normal-Weight Concrete Unit Masonry: Sandblast or bushhammer to a depth of **1/16 inch** (1.6 mm).
3. Clean clay masonry surfaces according to ASTM D 5703.
 4. Concrete Joints: Clean reveals according to waterproofing manufacturer's written instructions.
- F. Seal joints, and apply bond breakers as recommended by prime materials manufacturer, with particular attention at construction joints.
- G. Install accessories as recommended by prime materials manufacturer.
- H. Prime substrate as recommended (and only if recommended) by prime materials manufacturer.
- ### 3.3 APPLICATION
- A. General: Comply with waterproofing manufacturer's written instructions for application and curing.
1. Saturate surface with water[**for several hours prior to application**] with water and maintain damp condition until applying waterproofing. Remove standing water.
 2. Apply waterproofing to surfaces indicated on Drawings.
 3. Number of Coats: **[Number required for specified water permeability]** **[Two]** **[Three]** <Insert number>.
 - a. Coating Thickness: Maximum application thickness of **[47 mils (1.2 mm)]** <Insert value> per coat for total thickness **[as required for specified water permeability]** **[of 100 mils (2.5 mm)]** <Insert requirement>.
 - b. Apply first coat as a slurry with brush or roller, and apply subsequent coats with brush, roller, spray, or trowel.
 - c. Vigorously work first coat onto the substrate, forcing the material into surface voids. Apply each subsequent coat into full contact with previous coat.
 - d. Allow manufacturer's recommended time between coats. Dampen surface between coats.
- B. Final Coat Finish: **[Smooth troweled]** **[Brushed]** **[Textured]** <Insert requirement>.
- C. Curing: Air-cure waterproofing for not less than **[five]** <Insert number> days immediately after application and prior to being placed in service.

- D. Curing: Moist-cure waterproofing for not less than **[three]** <Insert number> days immediately after application has set, followed by air drying prior to being placed in service unless otherwise recommended in writing by manufacturer.
- E. Waterproofing Treatment Extensions: Extend waterproofing treatment as follows:
1. Onto columns integral with treated walls.
 2. Onto interior nontreated walls intersecting exterior treated walls, for a distance of **[24 inches (600 mm) for cast-in-place concrete]** [and] **[48 inches (1200 mm) for masonry]**.
 3. Onto exterior walls and onto both exterior and interior columns, for a height of **12 inches (300 mm)**, where floors, but not walls, are treated.
 4. Onto every substrate in areas indicated for treatment, including **[pipe trenches]** **[pipe chases]** **[pits]** **[sumps]** <Insert area> [and] **[similar offsets and features]**.
- F. Protective Floor Topping: Apply **[1-inch- (25.4-mm-)]** <Insert dimension> thick, protective topping over floor surfaces.

3.4 FIELD QUALITY CONTROL

- A. Inspection: Engage manufacturer's representative to inspect completed application and provide a written report that application complies with manufacturer's written instructions.
- B. **[Owner will engage]** **[Engage]** an Independent testing laboratory to certify that waterproofing was installed per contract requirements and to thicknesses required. Submit certificate to DEN Project Manager.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 071613

SECTION 071616 - CRYSTALLINE WATERPROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes crystalline waterproofing for [**positive**] [**negative**]-side application to [**concrete**] [**and**] [**concrete unit masonry**].
- B. Related Sections:
 - 1. Section 033000 "Cast-in-Place Concrete" for [**waterstops,**] [**concrete slabs serving as floor toppings to protect waterproofing,**] and finishing concrete walls and slabs to receive waterproofing.
 - 2. Section 042000 "Unit Masonry" for construction cleaning of concrete unit masonry walls to receive waterproofing.
 - 3. Section 079200 "Joint Sealants" for elastomeric and preformed sealants in concrete and concrete unit masonry walls and floors.
 - 4. Section 092400 "Portland Cement Plastering" for plaster finishes to be applied over waterproofing.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include[**construction details,**] material descriptions and installation instructions for crystalline waterproofing.
 - 1. Include data substantiating that all materials comply with requirements.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Applicator.
- B. Installer to submit a certificate evidencing not less than five (5) years of successful experienced installing similar types to products specified.

- C. Manufacturer to submit a certificate evidencing not less than five (5) years experienced manufacturing types of products specified.
- D. Manufacturer to submit a field report that all installation work is being done per contract requirements.
- E. Product Certificates: For waterproofing, patching, and plugging materials, from manufacturer.
- F. Product Test Reports: Based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency, for crystalline waterproofing.
- G. Field quality-control reports.
- H. Copy of project warranty for waterproofing installation.

1.5 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Applicator Qualifications: A firm experienced in applying crystalline waterproofing similar in material, design, and extent to that indicated for this Project, whose work has resulted in applications with a record of successful in-service performance[, **and that employs workers trained and approved by manufacturer**].
 - 1. Installer will have specialized in installation of types of waterproofing required for project for not less than five (5) years and which is acceptable to manufacturer(s) of primary materials.
 - 2. Assign work closely associated with waterproofing, including but not limited to waterproofing accessories, and materials used in conjunction with waterproofing, to installer of waterproofing, for single, undivided responsibility.
- B. Source Limitations: Obtain primary waterproofing materials of each type required from single manufacturer with not less than three (3) years of successful experience in supplying principal materials for fluid applied waterproofing work. Provide secondary materials only as recommended by manufacturer of primary materials.
- C. Mockups: Provide mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Build mockup of typical [**vertical**] [**horizontal**] surfaces [**shown on Drawings**] [**10 sq. ft. (0.9 sq. m) in size**] <Insert description>.

2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
 3. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- D. Preinstallation Conference: Approximately two (2) weeks prior to actual commencement of waterproofing installation, meet at project site with Installer, installers of deck or substrate construction to receive work, installers of other work in and around waterproofing work which must precede, follow or penetrate waterproofing work, including mechanical work if any, DEN Project Manager, DEN Resident Engineer, Owner, the Contractor's Quality Control Manager and waterproofing material manufacturer's representative. Record (Contractor) discussions of conference, together with decisions and agreements (or disagreements) reached. Furnish copy of record to each party attending.
1. Review methods and procedures related to work, including but not necessarily limited to the following:
 - a. Tour jobsite areas to be waterproofed. Inspect and discuss condition of substrate, drains, curbs, penetrations, and other preparatory work performed by other trades.
 - b. Review waterproofing requirements (drawings, specifications and other contract documents), including surface preparation, substrate condition and pretreatment, minimum curing period, forecasted weather conditions, special details and sheet flashings, installation procedures,.
 - c. Review required submittals. Work cannot begin until all submittals are approved by Owner.
 - d. Review and finalize construction schedule related to waterproofing work and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - e. Review required inspection, testing, and certifying procedures, safety, and hazardous control programs.
 - f. Review protection and repair procedures.
- E. Warranty: Installer to warrant installation for five (5) years including responsibility for removing and replacing work concealing waterproof membrane. Warrant installation to be watertight for application required.

1.7 PROJECT CONDITIONS

- A. Weather Limitations: Proceed with application only when existing and forecasted weather conditions permit crystalline waterproofing to be performed according to manufacturer's written instructions.
- B. Proceed with waterproofing work only after pipe sleeves, vents, curbs, inserts, drains, and other projections through the substrate to be waterproofed have been completed. Proceed only after substrate defects, including honeycombs, voids, and cracks, have

been repaired to provide a sound substrate free of forming materials, including reveal inserts.

- C. Ambient Conditions: Proceed with waterproofing work only if temperature is maintained at **40 deg F** (4.4 deg C) or above during work and cure period, and space is well ventilated and kept free of water.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL

- A. General Compatibility: Provide products that are recommended by manufacturer to be fully compatible with indicated substrates.

2.2 WATERPROOFING MATERIALS

- A. Crystalline Waterproofing: Prepackaged, **[gray]** **[white]**-colored proprietary blend of Portland cement, specially treated sand, and active chemicals that, when mixed with water and applied, penetrates into concrete and concrete unit masonry and reacts chemically with the byproducts of cement hydration in the presence of water to develop crystalline growth within substrate capillaries to produce an impervious, dense, waterproof substrate; that has VOC content complying with limits of authorities having jurisdiction; with properties meeting or exceeding the criteria specified below.

1. Products: Subject to compliance with requirements. Provide one of the following:

- a. American PERMAQUIK Inc.; Super 200.
- b. Anti-Hydro International, Inc.; A-H Hydrocap.
- c. AQUAFIN, Inc.; AQUAFIN-1C.
- d. BASF Building Systems; Tegraproof.
- e. Conproco Corporation; Conpro Super Seal.
- f. Euclid Tamms; **[HEY'DI K-11]** **[HEY'DI POWER X SYSTEM]**.
- g. Gemite Products Inc.; Cem-Kote CW Plus.
- h. ICS Penetron International Ltd.; Penetron.
- i. International Chem-Crete, Inc.; Chem-Cretex Cem 600.
- j. IPA Systems, Inc.; Drycon.
- k. Kryton Group of Companies (The); Krystol T1 & T2 Waterproofing System.
- l. Vandex USA LLC; Vandex Super/Super White.
- m. Xypex Chemical Corporation; Xypex.
- n. **<Insert manufacturer's name; product name or designation>**.
- o. or approved equal.

2. Water Permeability: Maximum [**zero for water at 30 feet** (9 m)] **<Insert requirement>** when tested according to CE CRD-C 48.
3. Compressive Strength: Minimum [**4000 psi (27.6 MPa)**] **<Insert value>** at 28 days when tested according to ASTM C 109/C 109M.

2.3 ACCESSORY MATERIALS

- A. Patching Compound: Factory-premixed cementitious repair mortar, crack filler, or sealant recommended by waterproofing manufacturer for filling and patching tie holes, honeycombs, reveals, and other imperfections; compatible with substrate and other materials indicated; and VOC content complying with limits of authorities having jurisdiction.
- B. Plugging Compound: Factory-premixed cementitious compound with hydrophobic properties and recommended by waterproofing manufacturer; resistant to water and moisture but vapor permeable for all standard applications (vertical, overhead, and horizontal surfaces not exposed to vehicular traffic); compatible with substrate and other materials indicated; and VOC content complying with limits of authorities having jurisdiction.
- C. Portland Cement: ASTM C 150, Type I.
- D. Sand: ASTM C 144.
- E. Polymer Admixture for Protective Topping: Polymer bonding agent and admixture designed to improve adhesion to prepared substrates and not to create a vapor barrier.
- F. Water: Potable.

2.4 MIXES

- A. Crystalline Waterproofing: Add prepackaged dry ingredients to water according to manufacturer's written instructions. Mix together with mechanical mixer or by hand to required consistency.
- B. Protective Topping: Measure, batch, and mix Portland cement and sand in the proportion of [**1:3**] **<Insert proportion>** and water[**gaged with a polymer admixture**]. Blend together with mechanical mixer to required consistency.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Applicator present, for suitable conditions where waterproofing is to be applied.

- B. Proceed with application only after unsatisfactory conditions have been corrected.
- C. Notify DEN Project Manager in writing of active leaks or defects that would affect system performance.

3.2 PREPARATION

- A. Protect other work from damage caused by cleaning, preparation, and application of waterproofing. Provide temporary enclosure[**to confine spraying operation and**] to ensure adequate ambient temperatures and ventilation conditions for application.
- B. Do not allow waterproofing, patching, and plugging materials to enter reveals or annular spaces intended for resilient sealants or gaskets, such as joint spaces between pipes and pipe sleeves.
- C. Stop active water leaks with plugging compound according to waterproofing manufacturer's written instructions.
- D. Repair damaged or unsatisfactory substrate with patching compound according to manufacturer's written instructions.
 - 1. At holes and cracks in substrate, remove loosened chips and cut reveal with sides perpendicular to surface, not tapered, and approximately **1 inch** (25.4 mm) deep. Fill reveal with patching compound flush with surface.
- E. Surface Preparation: Comply with waterproofing manufacturer's written instructions to remove efflorescence, chalk, dust, dirt, mortar spatter, grease, oils, paint, curing compounds, and form-release agents to ensure that waterproofing bonds to surfaces.
 - 1. Clean concrete surfaces according to ASTM D 4258.
 - a. Scratch- and Float-Finished Concrete: Etch with 10 percent muriatic (hydrochloric) acid solution according to ASTM D 4260.
 - b. Prepare smooth-formed and trowel-finished concrete by mechanical abrading or abrasive-blast cleaning according to ASTM D 4259.
 - 2. Clean concrete unit masonry surfaces according to ASTM D 4261.
 - a. Lightweight Concrete Unit Masonry: Etch with 10 percent muriatic (hydrochloric) acid solution or abrade surface by wire brushing. Remove acid residue until pH readings of water after rinse are not more than 1.0 pH lower or 2.0 pH higher than pH of water before rinse.
 - b. Medium- and Normal-Weight Concrete Unit Masonry: Sandblast or bushhammer to a depth of **1/16 inch** (1.6 mm).
 - 3. Concrete Joints: Clean reveals according to waterproofing manufacturer's written instructions.
- F. Seal joints, and apply bond breakers as recommended by prime materials manufacturer, with particular attention at construction joints.

- G. Install accessories as recommended by prime materials manufacturer.
- H. Prime substrate as recommended (and only if recommended) by prime materials manufacturer.

3.3 APPLICATION

- A. General: Comply with waterproofing manufacturer's written instructions for application and curing.
 - 1. Saturate surface with water for several hours prior to application and maintain damp condition until applying waterproofing. Remove standing water.
 - 2. Apply waterproofing to surfaces indicated on Drawings.
 - 3. Number of Coats: **[Number required for specified water permeability] [Two] [Three] <Insert number>**.
 - 4. Application Method: **[Brush] [Spray]**. Apply to ensure that each coat fills voids and is in full contact with substrate or previous coat.
 - 5. Dampen surface between coats.
- B. Final Coat Finish: **[Smooth] [Brushed] [Spray Textured]**.
- C. Curing: Moist-cure waterproofing for **[three] <Insert number>** days immediately after final coat has set, followed by air drying, unless otherwise recommended in writing by manufacturer.
- D. Waterproofing Treatment Extensions: Extend waterproofing treatment as follows:
 - 1. Onto columns integral with treated walls.
 - 2. Onto interior nontreated walls intersecting exterior treated walls, for a distance of **[24 inches (600 mm) for cast-in-place concrete] [and] [48 inches (1200 mm) for masonry]**.
 - 3. Onto exterior walls and onto both exterior and interior columns, for a height of **12 inches (300 mm)**, where floors, but not walls, are treated.
 - 4. Onto every substrate in areas indicated for treatment, including **[pipe trenches] [pipe chases] [pits] [sumps] <Insert area> [and] [similar offsets and features]**.
- E. Protective Topping: Apply **[1-inch- (25.4-mm-)] <Insert dimension>** thick, protective topping over floor surfaces.

3.4 FIELD QUALITY CONTROL

- A. Inspection: Engage manufacturer's representative to inspect completed application and provide a written report that application complies with manufacturer's written instructions.
- B. **[Owner will engage] [Engage]** an Independent testing laboratory to certify that waterproofing was installed per contract requirements and to thicknesses required. Submit certificate to DEN Project Manager.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 071616

SECTION 071619 - METAL OXIDE WATERPROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes metal-oxide waterproofing for [**positive**] [**negative**]-side application to [**concrete**] [**concrete unit masonry**] [**and**] [**clay masonry**].
- B. Related Sections:
 - 1. Section 033000 "Cast-in-Place Concrete" for [**waterstops,**] [**concrete slabs serving as floor toppings to protect waterproofing,**] and finishing concrete walls and slabs to receive waterproofing.
 - 2. Section 042000 "Unit Masonry" for construction cleaning of unit masonry walls to receive waterproofing.
 - 3. Section 079200 "Joint Sealants" for elastomeric and preformed sealants in concrete and masonry walls and floors.
 - 4. Section 092400 "Portland Cement Plastering" for plaster finishes to be applied over waterproofing.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include[**construction details,**] material descriptions and installation instructions for metal-oxide waterproofing.
 - 1. Include data substantiating that materials comply with requirements.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Applicator [**and testing agency**].
- B. Installer to submit a certificate evidencing not less than five (5) years of successful experienced installing similar types to products specified.
- C. Manufacturer to submit a certificate evidencing not less than ten (10) years

experienced manufacturing types of products specified.

- D. Manufacturer to submit a field report that all installation work is being done per contract requirements.
- E. Product Certificates: For waterproofing, patching, and plugging materials, from manufacturer.
- F. Product Test Reports: Based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency, for metal-oxide waterproofing.
- G. Field quality-control reports.
- H. Copy of project warranty for waterproofing installation.

1.5 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Applicator Qualifications: A firm experienced in applying metal-oxide waterproofing similar in material, design, and extent to that indicated for this Project, whose work has resulted in applications with a record of successful in-service performance[, **and that employs workers trained and approved by manufacturer**].
 - 1. Installer will have specialized in installation of types of waterproofing required for project for not less than five (5) years and which is acceptable to manufacturer(s) of primary materials.
 - 2. Assign work closely associated with waterproofing, including but not limited to waterproofing accessories, and materials used in conjunction with waterproofing, to installer of waterproofing, for single, undivided responsibility.
- B. Source Limitations: Obtain primary waterproofing materials of each type required from single manufacturer with not less than three (3) years of successful experience in supplying principal materials for fluid applied waterproofing work. Provide secondary materials only as recommended by manufacturer of primary materials.
- C. Mockups: Provide mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Build mockup of typical [vertical] [horizontal] surfaces [shown on Drawings] **[10 sq. ft. (0.9 sq. m) in size] <Insert description>**.

2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
 3. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- D. Preinstallation Conference: Approximately two (2) weeks prior to actual commencement of fluid applied waterproofing installation, meet at project site with Installer, installers of deck or substrate construction to receive work, installers of other work in and around waterproofing work which must precede, follow or penetrate waterproofing work, including mechanical work if any, DEN Project Manager, DEN Resident Engineer, Owner, the Contractor's Quality Control Manager and waterproofing material manufacturer's representative. Record (Contractor) discussions of conference, together with decisions and agreements (or disagreements) reached. Furnish copy of record to each party attending.
1. Review methods and procedures related to work, including but not necessarily limited to the following:
 - a. Tour jobsite areas to be waterproofed. Inspect and discuss condition of substrate, drains, curbs, penetrations, and other preparatory work performed by other trades.
 - b. Review waterproofing requirements (drawings, specifications and other contract documents), including surface preparation, substrate condition and pretreatment, minimum curing period, forecasted weather conditions, special details and sheet flashings, installation procedures,.
 - c. Review required submittals. Work cannot begin until all submittals are approved by Owner.
 - d. Review and finalize construction schedule related to waterproofing work and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - e. Review required inspection, testing, and certifying procedures, safety, and hazardous control programs.
 - f. Review protection and repair procedures.
- E. Warranty: Installer to warrant installation for five (5) years including responsibility for removing and replacing work concealing waterproof membrane. Warrant installation to be watertight for application required.
- 1.7 PROJECT CONDITIONS
- A. Weather Limitations: Proceed with application only when existing and forecasted weather conditions permit metal-oxide waterproofing to be performed according to manufacturer's written instructions.
 - B. Proceed with waterproofing work only after pipe sleeves, vents, curbs, inserts, drains, and other projections through the substrate to be waterproofed have been completed. Proceed only after substrate defects, including honeycombs, voids, and cracks, have been repaired to provide a sound substrate free of forming materials, including reveal inserts.

- C. Ambient Conditions: Proceed with waterproofing work only if temperature is maintained at **40 deg F** (4.4 deg C) or above during work and cure period, and space is well ventilated and kept free of water.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL

- A. General Compatibility: Provide products that are recommended by manufacturer to be fully compatible with indicated substrates.

2.2 WATERPROOFING MATERIALS

- A. Metal-Oxide Waterproofing Compound: A product specifically formulated for waterproofing concrete and masonry substrates; containing pulverized iron and a chemical oxidizing agent to cause the iron particles to rust and grow in size in the presence of water; with VOC content complying with limits of authorities having jurisdiction.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Anti-Hydro International, Inc.; A-H Metallic Waterproofing.
 - b. Euclid Chemical Company (The); Iron Waterpeller.
 - c. Metalcrete Industries; Metalcrete Waterproofing.
 - d. Specco Industries, Inc.; Speccrete Metallic Waterproofer.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.

2.3 ACCESSORY MATERIALS

- A. Patching Compound: Factory-premixed cementitious repair mortar, crack filler, or sealant recommended by waterproofing manufacturer for filling and patching tie holes, honeycombs, reveals, and other imperfections; compatible with substrate and other materials indicated; and VOC content complying with limits of authorities having jurisdiction.
- B. Plugging Compound: Factory-premixed cementitious compound with hydrophobic properties and recommended by waterproofing manufacturer; resistant to water and moisture but vapor permeable for all standard applications (vertical, overhead, and horizontal surfaces not exposed to vehicular traffic); compatible with substrate and

other materials indicated; and VOC content complying with limits of authorities having jurisdiction.

- C. Portland Cement: ASTM C 150, Type I.
- D. Sand: ASTM C 144.
- E. Water: Potable.

2.4 MIXES

- A. Metal-Oxide Coats: Add metal-oxide waterproofing compound to[**Portland cement, sand, and**] water according to manufacturer's written instructions. Blend together with mechanical mixer or by hand to required consistency for each coat.
- B. Protection Coat: Field mix protection coat consisting of Portland cement and sand as recommended by same manufacturer as metal-oxide waterproofing according to manufacturer's written instructions for application over waterproofing. Measure, batch, and mix materials with potable water. Blend together with mechanical mixer to required consistency.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Applicator present, for suitable conditions where waterproofing is to be applied.
- B. Proceed with application only after unsatisfactory conditions have been corrected.
- C. Notify DEN Project Manager in writing of active leaks or defects that would affect system performance.

3.2 PREPARATION

- A. Protect other work from damage caused by cleaning, preparation, and application of waterproofing. Provide temporary enclosure[**to confine spraying operation and**] to ensure adequate ambient temperatures and ventilation conditions for application.
- B. Do not allow waterproofing, patching, and plugging materials to enter reveals or annular spaces intended for resilient sealants or gaskets, such as joint spaces between pipes and pipe sleeves.
- C. Stop active water leaks with plugging compound according to waterproofing manufacturer's written instructions.

- D. Repair damaged or unsatisfactory substrate with patching compound according to manufacturer's written instructions.
1. At holes and cracks in substrate, remove loosened chips and cut reveal with sides perpendicular to surface, not tapered, and approximately **1 inch** (25.4 mm) deep. Fill reveal with patching compound flush with surface.
- E. Surface Preparation: Comply with waterproofing manufacturer's written instructions to remove efflorescence, chalk, dust, dirt, mortar spatter, grease, oils, paint, curing compounds, and form-release agents to ensure that waterproofing bonds to surfaces.
1. Clean concrete surfaces according to ASTM D 4258.
 - a. Scratch- and Float-Finished Concrete: Etch with 10 percent muriatic (hydrochloric) acid solution according to ASTM D 4260.
 - b. Prepare smooth-formed and trowel-finished concrete by mechanical abrading or abrasive-blast cleaning according to ASTM D 4259.
 2. Clean concrete unit masonry surfaces according to ASTM D 4261.
 - a. Lightweight Concrete Unit Masonry: Etch with 10 percent muriatic (hydrochloric) acid solution or abrade surface by wire brushing. Remove acid residue until pH readings of water after rinse are not more than 1.0 pH lower or 2.0 pH higher than pH of water before rinse.
 - b. Medium- and Normal-Weight Concrete Unit Masonry: Sandblast or bushhammer to a depth of **1/16 inch** (1.6 mm).
 3. Clean clay masonry surfaces according to ASTM D 5703.
 4. Concrete Joints: Clean reveals according to waterproofing manufacturer's written instructions.
- F. Seal joints, and apply bond breakers as recommended by prime materials manufacturer, with particular attention at construction joints.
- G. Install accessories as recommended by prime materials manufacturer.
- H. Prime substrate as recommended (and only if recommended) by prime materials manufacturer.

3.3 APPLICATION

- A. General: Comply with waterproofing manufacturer's written instructions for application and curing.
1. Saturate surface[**for several hours prior to application**] with water and maintain damp condition until applying waterproofing. Remove standing water.
 2. Apply waterproofing to surfaces indicated on Drawings.
 3. Number of Metal-Oxide Coats: [**Number required for specified water permeability**] [**Two**] [**Three**] **<Insert number>**.

4. Application Method: Brush apply the waterproofing, vigorously working first coat onto the substrate and forcing the material into surface voids. Brush each subsequent coat into full contact with previous coat.
 5. Dampen surface between coats.
 6. Allow each coat to set for [24] <Insert number> hours between coats.
 7. Protection Coat: Apply to a thickness of [1/8 inch (3 mm)] [1/4 inch (6 mm)] <Insert dimension> for walls and [1 inch (25 mm)] <Insert dimension> for floors.
- B. Final Coat Finish: [Smooth] [Brushed] [Textured] <Insert requirement>.
- C. Curing: Moist-cure waterproofing for [three] <Insert number> days immediately after final coat has set, followed by air drying prior to being placed in service, unless otherwise recommended in writing by manufacturer.
- D. Waterproofing Treatment Extensions: Extend waterproofing treatment as follows:
1. Onto columns integral with treated walls.
 2. Onto interior nontreated walls intersecting exterior treated walls, for a distance of [24 inches (600 mm) for cast-in-place concrete] [and] [48 inches (1200 mm) for masonry].
 3. Onto exterior walls and onto both exterior and interior columns, for a height of 12 inches (300 mm), where floors, but not walls, are treated.
 4. Onto every substrate in areas indicated for treatment, including [pipe trenches] [pipe chases] [pits] [sumps] <Insert area> [and] [similar offsets and features].

3.4 FIELD QUALITY CONTROL

- A. Inspection: Engage manufacturer's representative to inspect completed application and provide a written report that application complies with manufacturer's written instructions.
- B. [Owner will engage] [Engage] an Independent testing laboratory to certify that waterproofing was installed per contract requirements and to thicknesses required. Submit certificate to DEN Project Manager.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 071619

SECTION 071700 - BENTONITE WATERPROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

- 1. Bentonite waterproofing.
- 2. Molded-sheet drainage panels.
- 3. Insulation.

- B. Related Sections:

- 1. Section 033000 "Cast-in-Place Concrete" for forms, waterstops, and concrete placement.
- 2. Section 312000 "Earth Moving" for excavating and backfilling.
- 3. Section 315000 "Excavation Support and Protection" for permanent below-grade support systems that require blind-side waterproofing.
- 4. Section 334713 "Pond and Reservoir Liners" for flexible, impervious membrane pond and reservoir liners.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include product specifications and manufacturer's written installation instructions.

- 1. Include data substantiating that all materials comply with requirements.

- B. Shop Drawings: Show installation details for interface with other work.

- C. Samples: For each of the following products, in minimum 1' x 1' sizes unless otherwise indicated:

- 1. Waterproofing.
- 2. Drainage Panels.
- 3. Insulation.

1.4 INFORMATIONAL SUBMITTALS

- A. Material Certificates: For each type of bentonite waterproofing, from manufacturer.
- B. Product Test Reports: Based on evaluation of comprehensive tests performed by **[manufacturer and witnessed by a qualified testing agency] [a qualified testing agency]**, for bentonite waterproofing.
- C. Installer to submit a certificate evidencing not less than five (5) years of successful experienced installing similar types to products specified.
- D. Manufacturer to submit a certificate evidencing not less than five (5) years experienced manufacturing types of products specified.
- E. Manufacturer to submit a field report that all installation work is being done per contract requirements.
- F. Field quality-control reports.
- G. Warranty: Sample of special warranty.

1.5 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Applicator Qualifications: A firm experienced in applying polymer-modified cement waterproofing similar in material, design, and extent to that indicated for this Project, whose work has resulted in applications with a record of successful in-service performance[, **and that employs workers trained and approved by manufacturer**].
 - 1. Installer will have specialized in installation of types of waterproofing required for project for not less than five (5) years and which is acceptable to manufacturer(s) of primary materials.
 - 2. Assign work closely associated with waterproofing, including but not limited to waterproofing accessories, and materials used in conjunction with waterproofing, to installer of waterproofing, for single, undivided responsibility.
- B. Source Limitations: Obtain bentonite waterproofing system from single source from single manufacturer with not less than three (3) years of successful experience in supplying principal materials for fluid applied waterproofing work. Obtain accessory products used with bentonite waterproofing from sources acceptable to bentonite waterproofing manufacturer.
- C. Mockups: Build mockups to verify selections made under sample submittals and to set quality standards for fabrication and installation.

1. Approval of mockups is also for other material and construction qualities specifically approved by DEN Project Manager in writing.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
- D. Preinstallation Conference: Preinstallation Conference: Approximately two (2) weeks prior to actual commencement of waterproofing installation, meet at project site with Installer, installers of deck or substrate construction to receive work, installers of other work in and around waterproofing work which must precede, follow or penetrate waterproofing work, including mechanical work if any, DEN Project Manager, DEN Resident Engineer, Owner, the Contractor's Quality Control Manager and waterproofing material manufacturer's representative. Record (Contractor) discussions of conference, together with decisions and agreements (or disagreements) reached. Furnish copy of record to each party attending.
1. Review methods and procedures related to work, including but not necessarily limited to the following:
 - a. Tour jobsite areas to be waterproofed. Inspect and discuss condition of substrate, drains, curbs, penetrations, and other preparatory work performed by other trades.
 - b. Review waterproofing requirements (drawings, specifications and other contract documents), including surface preparation, substrate condition and pretreatment, minimum curing period, forecasted weather conditions, special details and sheet flashings, installation procedures,.
 - c. Review required submittals. Work cannot begin until all submittals are approved by Owner.
 - d. Review and finalize construction schedule related to waterproofing work and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - e. Review required inspection, testing, and certifying procedures, safety, and hazardous control programs.
 - f. Review protection and repair procedures.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials to Project site in manufacturer's original unopened and undamaged containers.
- B. Store materials in a dry, well-ventilated space.
- C. Remove and replace bentonite materials that have been prematurely exposed to moisture.

1.8 PROJECT CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted

weather conditions permit bentonite waterproofing to be installed according to manufacturers' written instructions and warranty requirements.

1. Do not apply waterproofing materials to surfaces where ice or frost is visible. Do not apply bentonite waterproofing materials in areas with standing water.
2. Placing bentonite clay products in panel or composite form on damp surfaces is allowed if approved in writing by manufacturer.

1.9 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer and Installer agree(s) to repair or replace components of bentonite waterproofing system that fail in materials or workmanship within specified warranty period, including responsibility for removing and replacing work concealing waterproof membrane.

1. Warranty Period: **[Five]** <Insert number> years from date of Substantial Completion.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL

- A. General Compatibility: Provide products that are recommended by manufacturer to be fully compatible with indicated substrates and site conditions.

2.2 GEOTEXTILE/BENTONITE SHEETS

- A. Geotextile/Bentonite Waterproofing: Minimum of **1.0 lb/sq. ft.** (5 kg/sq. m) of bentonite clay granules between two layers of geotextile polypropylene fabric, one woven and one nonwoven, needle punched and heat fused together.

1. Products: Subject to compliance with requirements, provide one of the following]:
 - a. Carlisle Coatings & Waterproofing; CCW MiraCLAY.
 - b. CETCO; Voltex.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.
2. Grab Tensile Strength: **[95 lbf (422 N)]** <Insert value> according to ASTM D 4632.

- B. Contaminant-Resistant Geotextile/Bentonite Waterproofing: Minimum of **1.0 lb/sq. ft.** (5 kg/sq. m) of bentonite clay granules specially formulated for use in saltwater or contaminated ground water, between two layers of geotextile polypropylene fabric, one woven and one nonwoven, needle punched and heat fused together.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Carlisle Coatings & Waterproofing; CCW MiraCLAY EF.
 - b. CETCO; Voltex CR.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.
 2. Grab Tensile Strength: **[95 lbf (422 N)]** **<Insert value>** according to ASTM D 4632.
- C. Geotextile-Geomembrane/Bentonite Waterproofing: Minimum of **1.0 lb/sq. ft.** (5 kg/sq. m) of bentonite clay granules between two layers of geotextile polypropylene fabric, one woven and one nonwoven, needle punched and heat fused together; and the woven fabric coated with a low-permeable polypropylene geomembrane.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Carlisle Coatings & Waterproofing; CCW MiraCLAY GM.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
 2. Grab Tensile Strength: **95 lbf** (422 N) according to ASTM D 4632.
- D. Composite Geotextile-HDPE/Bentonite Membrane: Minimum of **1.1 lb/sq. ft.** (5.4 kg/sq. m) of bentonite clay granules bonded to nonwoven geotextile polypropylene fabric, with HDPE bonded to surface of nonwoven fabric.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. CETCO; Voltex DS.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
 2. Grab Tensile Strength: **120 lbf** (534 N) according to ASTM D 4632.
 3. Puncture Resistance: **140 lbf** (620 N) according to ASTM D 4833.
 4. Vapor Permeance: 0.03 perms according to ASTM E 96.
- E. Contaminant-Resistant Composite Geotextile-HDPE/Bentonite Membrane: Minimum of **1.1 lb/sq. ft.** (5.4 kg/sq. m) of bentonite clay granules specially formulated for use in saltwater or contaminated ground water, bonded to nonwoven geotextile polypropylene fabric, with HDPE bonded to surface of nonwoven fabric.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. CETCO; Voltex DSCR.
 - b. **<Insert manufacturer's name; product name or designation>**.

- c. or approved equal.
2. Grab Tensile Strength: **120 lbf** (534 N) according to ASTM D 4632.
3. Puncture Resistance: **140 lbf** (620 N) according to ASTM D 4833.
4. Vapor Permeance: 0.03 perms according to ASTM E 96.

2.3 COMPOSITE HDPE/BENTONITE MEMBRANE

- A. Composite HDPE/Bentonite Membrane: Minimum **90-mil-** (2.3-mm-) thick membrane consisting of a **12-mil-** (0.5-mm-) thick, HDPE geomembrane liner bonded to a layer of bentonite clay granules **78 mils** (1.9 mm) thick.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. CETCO; Swelltite.
 - b. Tremco Commercial Sealants & Waterproofing, an RPM company; Paraseal.
 - c. Tremco Commercial Sealants & Waterproofing, an RPM company; Deckseal.
 - d. **<Insert manufacturer's name; product name or designation>**.
 - e. or approved equal.
 2. Puncture Resistance: **169 lbf** (752 N) according to ASTM E 154.
 3. Vapor Permeance: 0.03 perms according to ASTM E 96.
- B. Composite HDPE/Bentonite Membrane with Protective Facing: Minimum **170-mil-** (4.3-mm-) thick membrane consisting of HDPE geomembrane liner bonded to a layer of bentonite clay granules and with a spun polypropylene facing.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Tremco Commercial Sealants & Waterproofing, an RPM company; Paraseal LG.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
 2. Puncture Resistance: **169 lbf** (752 N) according to ASTM E 154.
 3. Vapor Permeance: 0.03 perms according to ASTM E 96.
- C. Composite HDPE/Bentonite-Polymer Membrane: Minimum **200-mil-** (5-mm-) thick membrane consisting of HDPE geomembrane liner bonded to a layer of bentonite-polymer clay granules.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. CETCO; Volclay Ultraseal SP.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
 2. Puncture Resistance: **75 lbf** (334 N) according to ASTM D 4833.

3. Vapor Permeance: 0.005 perms according to ASTM E 96.
- D. Composite Gastight HDPE/Bentonite Membrane: Minimum **150-mil-** (3.8-mm-) thick membrane consisting of a **60-mil-** (1.5-mm-) thick, HDPE geomembrane liner bonded to a layer of bentonite clay.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Tremco Commercial Sealants & Waterproofing, an RPM company; Paraseal GM.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
 2. Puncture Resistance: **169 lbf** (752 N) according to ASTM E 154.
 3. Vapor Permeance: 0.03 perms according to ASTM E 96.
- E. Composite Saline/Alkaline HDPE/Bentonite Membrane: Minimum **150-mil-** (3.8-mm-) thick membrane consisting of a **60-mil-** (1.5-mm-) thick, HDPE geomembrane liner bonded to a layer of bentonite clay granules.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Tremco Commercial Sealants & Waterproofing, an RPM company; Saltwater Paraseal.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
 2. Puncture Resistance: **169 lbf** (752 N) according to ASTM E 154.
 3. Vapor Permeance: 0.03 perms according to ASTM E 96.

2.4 COMPOSITE GEOTEXTILE-HDPE/BENTONITE MEMBRANE

- A. Geotextile/Bentonite-Polymer Waterproofing: Minimum **250-mil-** (6.4-mm-) thick membrane of bentonite-polymer clay granules between two layers of geotextile polypropylene fabric, one woven and one nonwoven, needle punched and heat fused together.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. CETCO; Volclay Ultraseal BT.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
 2. Puncture Resistance: **75 lbf** (334 N) according to ASTM D 4833.
 3. Vapor Permeance: 0.005 perms according to ASTM E 96.

2.5 BENTONITE PANELS

- A. Standard Panels: **3/16-inch-** (5-mm-) thick, corrugated kraft-paper panels with a

minimum of **1.0 lb/sq. ft.** (5 kg/sq. m) of bentonite confined in corrugations of boards.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. CETCO; Volclay Type 1.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.

B. Coated Panels: **3/16-inch-** (5-mm-) thick, corrugated kraft-paper panels specially coated to resist premature hydration due to incidental moisture; filled with a minimum of **1.0 lb/sq. ft.** (5 kg/sq. m) of bentonite.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. CETCO; Volclay Type 1-C.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.

C. Contaminant-Resistant Panels: **3/16-inch-** (5-mm-) thick, corrugated kraft-paper panels with a minimum of **1.0 lb/sq. ft.** (5 kg/sq. m) of contaminant-resistant granular bentonite specially formulated for use in contaminated ground-water conditions; confined in corrugations of boards.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. CETCO; Volclay Type 1 CR.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.

2.6 INSTALLATION ACCESSORIES

- A. Granular Bentonite: Sodium bentonite clay containing a minimum of 90 percent montmorillonite (hydrated aluminum silicate), with a minimum of 90 percent passing a **No. 20** (0.85-mm) sieve.
- B. Bentonite Mastic: Trowelable consistency, bentonite compound, specifically formulated for application at joints and penetrations.
- C. Granular Bentonite Tubes: Manufacturer's standard **2-inch-** (50-mm-) diameter, water-soluble tube containing approximately **1.5 lb/ft.** (2.2 kg/m) of bentonite; hermetically sealed; designed specifically for placing on wall footings at line of joint with exterior base of wall.
- D. Termination Bar: Extruded-aluminum or formed-stainless-steel bars with upper flange to receive sealant.
- E. Plastic Protection Sheet: Polyethylene sheeting complying with ASTM D 4397; thickness recommended by waterproofing manufacturer to suit application but at least **6 mils** (0.15 mm) thick.

- F. Cement Grout Patching Material: Manufacturer's recommended grout mix compatible with substrate being patched.
- G. Masonry Fasteners: Casehardened nails or hardened-steel, powder-actuated fasteners. Depending on manufacturer's written requirements, provide 1/2- or 1-inch- (13- or 25-mm-) diameter washers under fastener heads.
- H. Sealants: As recommended in writing by waterproofing manufacturer. Comply with requirements specified in Section 079200 "Joint Sealants."
- I. Tapes: Waterproofing manufacturer's recommended tape for joints between sheets, membranes, or panels.
- J. Adhesive: Water-based adhesive used to secure waterproofing to both vertical and horizontal surfaces.
- K. Protection Course: ASTM D 6506, semirigid sheets of fiberglass or mineral-reinforced-asphaltic core, pressure laminated between two asphalt-saturated fibrous liners, and as follows:
1. Thickness: [1/8 inch (3 mm)] [1/4 inch (6 mm)], nominal.
 2. Thickness: 1/8 inch (3 mm), nominal, for vertical applications; 1/4 inch (6 mm), nominal, elsewhere.
- L. Geotextile Protection Course: As recommended by waterproofing manufacturer.
- M. Molded-Sheet Drainage Panel: Comply with Section 334600 "Subdrainage."
- N. Nonwoven-Geotextile-Faced, Molded-Sheet Drainage Panel: Manufactured composite subsurface drainage panels consisting of a nonwoven, needle-punched geotextile facing with an apparent opening size not exceeding No. 70 (0.21-mm) sieve laminated to one side [with] [or] [without] a polymeric film bonded to the other side of a studded, nonbiodegradable, molded-plastic-sheet drainage core, with a vertical flow rate of 9 to 15 gpm per foot (112 to 188 L/min. per m).
- O. Woven-Geotextile-Faced, Molded-Sheet Drainage Panel: Manufactured composite subsurface drainage panels consisting of a woven-geotextile facing with an apparent opening size not exceeding No. 40 (0.425-mm) sieve laminated to one side [with] [or] [without] a polymeric film bonded to the other side of a studded, nonbiodegradable, molded-plastic-sheet drainage core, with a horizontal flow rate not less than 2.8 gpm per foot (35 L/min. per m).
- P. Board Insulation: Extruded-polystyrene board insulation complying with ASTM C 578, [square] [or] [shiplap] edged.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. DiversiFoam Products.
 - b. Dow Chemical Company (The).
 - c. Owens Corning.

- d. Pactiv Corporation.
 - e. T. Clear Corporation.
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
2. Type VI, **40-psi** (276-kPa) minimum compressive strength.
 3. Type VII, **60-psi** (414-kPa) minimum compressive strength.
 4. Type V, **100-psi** (690-kPa) minimum compressive strength.
- Q. Unfaced Wall Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, Type VI, **40-psi** (276-kPa) minimum compressive strength; unfaced; fabricated with shiplap or channel edges and with one side having grooved drainage channels.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. DiversiFoam Products; CertiFoam 40 Drainage Board.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
- R. Geotextile-Faced Wall Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, Type VI, **40-psi** (276-kPa) minimum compressive strength; fabricated with tongue-and-groove edges and with one side having grooved drainage channels faced with nonwoven geotextile filter fabric.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. T. Clear Corporation; Thermadry 1250.
 2. **<Insert manufacturer's name; product name or designation>**.
 - a. or approved equal.
- S. Unfaced Plaza Deck Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, [**Type VI, 40-psi** (276-kPa)] [**Type VII, 60-psi** (414-kPa)] minimum compressive strength; unfaced; fabricated with shiplapped or channel edges and with one side having ribbed drainage channels.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. DiversiFoam Products; CertiFoam Plaza Deck.
 - b. Dow Chemical Company (The); Styrofoam Ribbed Roofmate.
 - c. Owens Corning; [**Foamular 404 RB**] [**Foamular 604 RB**].
 - d. **<Insert manufacturer's name; product name or designation>**.
 - e. or approved equal.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with

requirements for substrate preparations affecting performance of bentonite waterproofing.

- B. Verify that substrate is complete and that work that will penetrate waterproofing is complete and rigidly installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Coordinate work in the vicinity of waterproofing to ensure proper conditions for installing the waterproofing system and to prevent damage to waterproofing after installation.
- B. Formed Concrete Surfaces: Remove fins and projections. Fill voids, rock pockets, form-tie holes, and other defects with bentonite mastic or cement grout patching material according to manufacturer's written instructions.
- C. Horizontal Concrete Surfaces: Remove debris, standing water, oily substances, mud, and similar substances that could impair the bonding ability of concrete or the effectiveness of waterproofing. Fill voids, cracks greater than **1/8 inch (3 mm)**, honeycomb areas, and other defects with bentonite mastic or cement grout patching material according to manufacturer's written instructions.
- D. Excavation Support and Protection System: If water is seeping, use plastic protection sheets or other suitable means to prevent wetting the bentonite waterproofing. Fill minor gaps and spaces **1/8 inch (3 mm)** wide or wider with wood, metal, concrete, or other appropriate filling material. Cover or fill large voids and crevices with cement mortar according to manufacturer's written instructions.

3.3 INSTALLATION, GENERAL

- A. Install waterproofing and accessories according to manufacturer's written instructions.
 - 1. Apply granular bentonite around penetrations in horizontal surfaces and changes in plane according to manufacturer's details in preparation for granular bentonite tubes and mastic.
 - 2. Apply granular bentonite tubes, bentonite mastic, or both at changes of plane, construction joints in substrate, projections, and penetrations.
- B. Apply granular bentonite tubes continuously on footing against base of wall to be waterproofed according to manufacturer's written instructions.
- C. Protect waterproofing from damage and wetting before and during subsequent construction operations. Repair punctures, tears, and cuts according to manufacturer's written instructions.
- D. Install protection course before backfilling or placing overburden when recommended by waterproofing manufacturer.

3.4 GEOTEXTILE/BENTONITE SHEET INSTALLATION

- A. General: Install a continuous layer of waterproofing sheets directly against concrete to be waterproofed. Lap ends and edges a minimum of **4 inches** (100 mm) on horizontal and vertical substrates. Stagger end joints between sheets a minimum of **24 inches** (600 mm). Fasten seams by stapling to adjacent sheet or nailing to substrate.
- B. Below Structural Slabs-on-Grade: Place waterproofing sheets on compacted substrate with ends and edges lapped and stapled.
1. Install a layer of waterproofing sheets under footings, grade beams, and pile caps; or continue waterproofing through key joints between footings and foundation walls, and extend a minimum of **8 inches** (200 mm) up or beyond perimeter slab forms.
- C. Concrete Walls: Starting at bottom of wall, apply waterproofing sheets horizontally with primary backing side against wall. Secure with masonry fasteners spaced according to manufacturer's written instructions. Extend to bottom of footing, grade beam, or wall, and secure.
1. Termination at Grade: Extend waterproofing sheets to within **2 inches** (50 mm) of finish grade unless otherwise indicated. Secure top edge with termination bar. Apply sealant to top edge of termination bar.
 2. Termination at Grade: Fasten top edge of waterproofing sheets to wall and protect top edge with sheet metal counterflashing. Cover waterproofing with a lapped course of plastic protection sheets if backfilling does not proceed immediately.
- D. Excavation Support and Protection (Permanent Shoring): Encase tieback rods, nuts, and plates, using bentonite mastic and waterproofing sheets, according to waterproofing manufacturer's written instructions for each configuration.
1. Install a layer of waterproofing sheets, with ends and edges lapped and nailed to shoring. Cover waterproofing with plastic protection sheets if needed for protection from precipitation; remove plastic sheets before placing concrete.
 2. Inspect and repair waterproofing after reinforcing steel has been placed. Coordinate and control concrete placement to avoid damage to waterproofing.

3.5 COMPOSITE HDPE/BENTONITE MEMBRANE INSTALLATION

- A. General: Install a continuous layer of waterproofing membrane with ends and edges lapped a minimum of **3 inches** (75 mm). Stagger end joints between membranes. Seal joints with permanent seam tape.
- B. Below Structural Slabs-on-Grade: Apply waterproofing membrane with HDPE side down and staple ends and edges.
1. Install under footings, grade beams, and pile caps; or continue waterproofing through key joints between footings and foundation walls, and extend a minimum

- of **8 inches** (200 mm) up or beyond perimeter slab forms.
2. Protect waterproofing from damage caused by reinforcing bar supports with sharp edges.
- C. Slabs: Starting at lowest point, install a continuous layer of waterproofing membrane, with ends and edges lapped a minimum of **2 inches** (50 mm).
- D. Vertical Concrete[**or Masonry**] Walls: Apply mastic around penetrations and form continuous **2-inch** (50-mm) cant at intersection of footings and walls with mastic.
1. Starting at lowest point, install a layer of waterproofing membrane horizontally, extending a minimum of **6 inches** (150 mm) onto the footing. Lap membrane ends and edges a minimum of **2 inches** (50 mm).
 2. Secure membrane to wall with adhesive or washer-headed fasteners, and tape terminations of membrane at grade.
- E. Excavation Support and Protection: Cut, clean, and treat tiebacks and similar projections. Encase tieback rods, nuts, and plates. If water is present, cover shoring and lagging with plastic protection sheets.
1. Starting at lowest point, install a layer of waterproofing membrane, with ends and edges lapped and nailed to shoring.
- F. Horizontal Roofs, Plazas, and between Slabs: Starting at lowest point, install a layer of waterproofing membrane, with ends and edges lapped and taped a minimum of **3 inches** (75 mm).
1. Prime concrete substrates. Primer may be omitted on concrete surfaces that comply with requirements for dryness, surface texture, and freedom from imperfections.
 2. Install bentonite side of membrane against the material to be waterproofed.
 3. Terminations at Vertical Surfaces: Provide a fillet or cant at intersection of horizontal and vertical substrates. Extend waterproofing membrane to top of curb or to a minimum of **6 inches** (150 mm) above plane of waterproofing; secure with manufacturer's recommended tape.
 4. Cover waterproofing with a plastic slip-sheet.
- 3.6 COMPOSITE GEOTEXTILE-HDPE/BENTONITE MEMBRANE INSTALLATION
- A. General: Install a continuous layer of waterproofing membrane with ends and edges lapped a minimum of **3 inches** (75 mm). Stagger end joints between membranes. Seal joints with permanent seam tape.
- B. Below Structural Slabs-on-Grade: Apply waterproofing membrane with HDPE side down and staple ends and edges.
1. Install under footings, grade beams, and pile caps; or continue waterproofing through key joints between footings and foundation walls, and extend a minimum of **8 inches** (200 mm) up or beyond perimeter slab forms.

2. Protect waterproofing from damage caused by reinforcing bar supports with sharp edges.
- C. Concrete Walls: Starting at bottom of wall, apply waterproofing membrane with HDPE side facing Installer; overlap sheets **3 inches** (75 mm). Secure with powder-actuated fasteners or casehardened nails. Extend to bottom of footing, grade beam, or wall, and secure.
1. Termination at Grade: Extend waterproofing membrane to within **2 inches** (50 mm) of finish grade unless otherwise indicated. Secure top edge with termination bar. Apply sealant to top edge of termination bar.
- D. Excavation Support and Protection (Permanent Shoring): Cut, clean, and treat tiebacks and similar projections. Encase tieback rods, nuts, and plates. If water is present, cover shoring and lagging with plastic protection sheets; remove plastic sheets before placing concrete.
1. Starting at lowest point, install a layer of waterproofing membrane, with ends and edges lapped and mechanically secured to shoring.
 2. Inspect and repair waterproofing membrane after reinforcing steel has been placed. Coordinate and control concrete placement to avoid damage to waterproofing.
- E. Horizontal Slabs, Roofs, and Plazas: Starting at lowest point, install a layer of waterproofing membrane, with ends and edges lapped and taped a minimum of **3 inches** (75 mm).
1. Clean overlap area and apply waterproof tape, rolling the exposed edge to seal to sheet below.
 2. Turn edges up and seal to vertical surfaces.
 3. Cover waterproofing with a plastic slip-sheet.

3.7 BENTONITE PANEL INSTALLATION

- A. General: Install a continuous layer of bentonite waterproofing panels with ends and edges lapped a minimum of **1-1/2 inches** (38 mm) unless otherwise indicated. Stagger joints in adjoining panel rows.
1. Install a double layer of waterproofing panels, with ends and edges butted instead of lapped and with second layer of joints staggered over first. Staple panels together to hold them in place.
- B. Concrete Walls: Starting at bottom of wall, apply waterproofing panels with ends and edges lapped and with vertical joints staggered. Secure with fasteners or adhesive recommended in writing by manufacturer. Extend to bottom of footing, grade beam, or wall.
1. Horizontal-to-Vertical Transitions: Install granular bentonite tubes immediately before backfilling and compact backfill over the joint.

2. Termination at Grade: Extend waterproofing panels to within **2 inches** (50 mm) of finish grade unless otherwise indicated. Secure top edge with termination bar. Apply sealant to top edge of termination bar.
3. Termination at Grade: Fasten top edge of waterproofing panels to wall and protect top edge with sheet metal counterflashing.
4. Cover waterproofing panels with a lapped course of plastic protection sheets; remove plastic sheets before backfilling.

3.8 MOLDED-SHEET DRAINAGE PANEL INSTALLATION

- A. Place and secure molded-sheet drainage panels, with geotextile facing away from wall or deck substrate. Use adhesives[**or mechanical fasteners**] that do not penetrate waterproofing. Lap edges and ends of geotextile to maintain continuity. Protect installed molded-sheet drainage panels during subsequent construction.
 1. For vertical applications, install [**board insulation**] [**protection course**] before installing drainage panels.

3.9 INSULATION INSTALLATION

- A. Install [**one or more layers of board insulation to achieve required thickness**] [**and**] [**insulation drainage panels**] over waterproofed surfaces. Cut and fit to within **3/4 inch** (19 mm) of projections and penetrations.
- B. On vertical surfaces, set insulation units in adhesive or tape applied according to manufacturer's written instructions.
- C. On horizontal surfaces, loosely lay insulation units. Stagger end joints and tightly abut insulation units.

3.10 FIELD QUALITY CONTROL

- A. Inspection: Arrange for manufacturer's representative to inspect completed waterproofing installation before covering with other construction and provide written report that installation complies with manufacturer's written instructions.
 1. Remove and replace applications of bentonite waterproofing where inspection indicates that it does not comply with specified requirements.
- B. Flood Testing: Flood test each deck area for leaks, according to recommendations in ASTM D 5957, after completing waterproofing but before overlaying construction is placed. Install temporary containment assemblies, plug or dam drains, and flood with potable water.
 1. Flood to an average depth of **2-1/2 inches** (64 mm) with a minimum depth of **1 inch** (25 mm) but not exceeding a depth of **4 inches** (100 mm). Maintain **2 inches** (50 mm) of clearance from top of membrane flashings.
 2. Flood each area for [**24**] [**48**] **<Insert number>** hours.

3. After flood testing, repair leaks, repeat flood test, and make further repairs until waterproofing installation is watertight.
- C. Perform additional testing and inspecting, at Contractor's expense, to determine compliance of replaced or additional work with specified requirements.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 071700

SECTION 071800 - TRAFFIC COATINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes traffic coatings[**and pavement markings**] for the following applications:
 - 1. Pedestrian traffic.
 - 2. Vehicular traffic.
 - 3. Equipment-room floor.
- B. Related Requirements:
 - 1. Section 071900 "Water Repellents" for penetrating and film-forming water repellents applied on traffic-bearing surfaces.
 - 2. Section 096723 "Resinous Flooring" for fluid-applied, [**decorative**] [**general-use commercial**] [**general-use industrial**] [**high-performance**] resinous flooring that does not serve as a waterproofing membrane with integral wearing surface.
 - 3. Section 096766 "Fluid-Applied Athletic Flooring" for fluid-applied, resinous flooring for athletic activity areas.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at [**Project site**] [**location and time as determined by DEN Project Manager**]
- B. <Insert location>.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product, including installation instructions, maintenance instructions, and general recommendations by manufacturer covering each material required for work.

1. Include data substantiating that materials comply with requirements..
- B. LEED Submittals:
1. Product Test Reports for Credit SS 7.2: For traffic coatings that are roof coverings, documentation indicating compliance with Solar Reflectance Index requirement.
 2. Product Data for Credit IEQ 4.2: For interior field-applied traffic coatings[**and pavement-marking paints**], documentation including printed statement of VOC content.
 3. Laboratory Test Reports for Credit IEQ 4: For interior traffic coatings[**and pavement-marking paints**], documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: For traffic coatings.
1. Include details for treating substrate joints and cracks, flashings, deck penetrations, and other termination conditions.
 2. Include plans showing layout of pavement markings, lane separations, and defined parking spaces. Indicate, with international symbol of accessibility, spaces allocated for people with disabilities.
- D. Samples for Initial Selection: For each type of exposed finish.
- E. Samples for Verification: For each type of exposed finish, prepared on rigid backing.
1. Provide stepped Samples on backing to illustrate buildup of traffic coatings, minimum 12 inch square, of fully cured, exposed finish materials, in colors required for the Project.
- 1.5 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For Installer.
 - B. Product Certificates: For each type of traffic coating.
 - C. Field quality-control reports.
 - D. Sample Warranty: For special warranty.
- 1.6 CLOSEOUT SUBMITTALS
- A. Maintenance Data: For traffic coatings to include in maintenance manuals.

1.7 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 MAINTENANCE MATERIALS

- A. Extra stock: Provide minimum four (4) gallons extra traffic topping. Store as directed by DEN Project Manager.

1.9 QUALITY ASSURANCE

- A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.
 - 1. Firm certified in writing by manufacturer as licensed or approved applicator and with a minimum three (3) years experience installing materials of this type.
- B. Manufacturer Qualifications: A firm with not less than five (5) years successful experience in producing traffic topping materials of types equivalent to those required for this project.
- C. UL Listed Products: Provide materials that have been tested and listed by UL for applications indicated, with following rating for deck and ramp slopes shown:
 - 1. "Class A" rated materials/system.
- D. Mockups: Build mockups to set quality standards for materials and execution.
 - 1. Build mockup for each traffic coating and substrate to receive traffic coatings.
 - 2. Size: [200 sq. ft. (18.5 sq. m)] <Insert dimension> of each substrate to demonstrate surface preparation, joint and crack treatment, thickness, texture, color, and standard of workmanship.
 - 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
 - 4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.10 FIELD CONDITIONS

- A. Environmental Limitations: Apply traffic coatings within the range of ambient and substrate temperatures recommended in writing by manufacturer. Do not apply traffic coatings to damp or wet substrates, when temperatures are below 40 deg F (5 deg C), when relative humidity exceeds 85 percent, or when temperatures are less than 5 deg F (3 deg C) above dew point.

1. Do not apply traffic coatings in snow, rain, fog, or mist, or when such weather conditions are imminent during the application and curing period. Apply only when frost-free conditions occur throughout the depth of substrate.
- B. Do not install traffic coating until substrate construction and items that penetrate membrane have been installed.
- C. Provide ventilation and heat in compliance with manufacturers recommended limitations during installation.
- D. Pavement-Marking Paint: Proceed with pavement marking only on clean, dry surfaces and at a minimum ambient or surface temperature of **[40 deg F (4.4 deg C) for oil-based materials]** **[50 deg F (10 deg C) for water-based materials]**, and not exceeding **95 deg F (35 deg C)**.

1.11 WARRANTY

- A. Special Project Warranty: Manufacturer and installer agree to repair or replace traffic coating that fails in materials or workmanship within specified warranty period.
 1. Submit manufacturer's standard warranty with available options and flashing endorsement, signed by Applicator and authorized representative of manufacturer, warranting traffic topping materials against failures resulting from normal exposure, but excluding failures due to unusual weather phenomena, failure of substrate, fire, abuse by unusual traffic, or other abnormal activities. This warranty shall be in addition to, and not a limitation of, other rights the Owner may have against the Contractor under the Contract Documents.
 2. Failures include, but are not limited to, the following:
 - a. Adhesive or cohesive failures.
 - b. Abrasion or tearing failures.
 - c. Surface crazing or spalling.
 - d. Intrusion of water, oils, gasoline, grease, salt, deicer chemicals, or acids into deck substrate.
 3. Warranty Period: Minimum **[five]** **<Insert number>** years from date of Substantial Completion.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

- A. Material Compatibility: Provide primers; base-, intermediate-, and topcoat; and accessory materials that are compatible with one another and with substrate under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.
- B. Source Limitations:
1. Obtain traffic coatings from single source from single manufacturer.
 2. Obtain primary traffic-coating materials, including primers, from traffic-coating manufacturer. Obtain accessory materials including aggregates, sheet flashings, joint sealants, and substrate repair materials of types and from sources recommended in writing by primary material manufacturer.
 3. Obtain pavement-marking paint from single source from single manufacturer.

2.2 TRAFFIC COATING <Insert drawing designation>

- A. Traffic Coating: Manufacturer's standard, traffic-bearing, seamless, high-solids-content, cold liquid-applied, elastomeric, waterproofing membrane system with integral wearing surface for [**pedestrian traffic**] [**vehicular traffic**] [**and**] [**equipment-room floor**] <Insert requirement>; according to ASTM C 957.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Advanced Polymer Technology Corporation.
 - b. AVM Industries, Inc.
 - c. BASF Construction Chemicals, LLC - Building Systems.
 - d. Carlisle Coatings & Waterproofing Inc.
 - e. Crossfield Products Corp.
 - f. Euclid Chemical Company (The); an RPM company.
 - g. Gaco Western LLC.
 - h. Key Resin Company.
 - i. LymTal International Inc.
 - j. Neogard; Division of Jones-Blair.
 - k. Pacific Polymers International, Inc.
 - l. ParexLahabra, Inc.
 - m. Pecora Corporation.
 - n. POLY-CARB, Inc.
 - o. Sherwin-Williams Company (The).
 - p. Tremco Incorporated; an RPM company.
 - q. Urethane Polymers International, Inc.
 - r. <Insert manufacturer's name>.
 - s. or approved equal.

- B. Primer: Liquid [**waterborne**] [**solvent-borne**] primer recommended for substrate and conditions by traffic-coating manufacturer.
1. Material: [**Epoxy**] [**Urethane**].
- C. Preparatory and Base Coats: [**Polyurethane**] [**Aromatic urethane**] [**Aliphatic urethane**] [**or**] [**epoxy**].
1. Thicknesses: Minimum [**dry**] [**or**] [**wet**] film thickness [**as recommended in writing by manufacturer for substrate and service conditions indicated**] <Insert thickness>.
- D. Intermediate Coat: [**Polyurethane**] [**Aromatic urethane**] [**Aliphatic urethane**] [**or**] [**epoxy**].
1. Thicknesses: Minimum [**dry**] [**or**] [**wet**] film thickness [**as recommended in writing by manufacturer for substrate and service conditions indicated**] <Insert thickness>, measured excluding aggregate.
 2. Aggregate Content: [**As recommended in writing by traffic-coating manufacturer for substrate and service conditions indicated**] [**Not less than 8 to 10 lb/100 sq. ft. (3.6 to 4.5 kg/10 sq. m)**] [**To refusal**] <Insert requirement>.
- E. Topcoat: [**Polyurethane**] [**Aromatic urethane**] [**Aliphatic urethane**] [**Aromatic urethane with UV inhibitors**] [**or**] [**epoxy**].
1. Thicknesses: Minimum [**dry**] [**or**] [**wet**] film thickness [**as recommended in writing by manufacturer for substrate and service conditions indicated**] <Insert thickness>, measured excluding aggregate.
 2. Aggregate Content: [**As recommended in writing by traffic-coating manufacturer for substrate and service conditions indicated**] [**As required to achieve slip-resistant finish**] [**8 to 10 lb/100 sq. ft. (3.6 to 4.5 kg/10 sq. m)**] [**To refusal**] <Insert requirement>.
 3. Color: [**As selected by DEN Project Manager from manufacturer's full range**] [**Match DEN Project Manager's sample**] <Insert color>.
- F. Aggregate: [**Manufacturer's standard aggregate for each use indicated**] [**Uniformly graded, washed silicon carbide sand**] [**Uniformly graded, washed silica sand**] [**Uniformly graded, washed flint shot silica**] [**Walnut shell granules**] [**Aluminum-oxide grit**] <Insert aggregate> of particle sizes, shape, and minimum hardness recommended in writing by traffic-coating manufacturer.
- G. Fire-Test-Response Characteristics: Provide traffic-coating materials with the fire-test-response characteristics as determined by testing identical products per test method below for deck type and slopes indicated by an independent testing and inspecting agency that is acceptable to authorities having jurisdiction.
1. [**Class A**] roof covering per ASTM E 108[**or UL 790**].
 2. <Insert test requirement>.
- H. Energy Performance: Provide traffic coating with an initial Solar Reflectance Index of

not less than 78 when calculated according to ASTM E 1980 based on the testing of identical products by a qualified testing agency.

- I. Energy Performance: Provide traffic coating that is listed on the DOE's ENERGY STAR "Roof Products Qualified Product List" for low-slope roof products.
- J. Energy Performance: Provide traffic coating with an initial Solar Reflectance Index of **[not less than 0.70] <Insert value>** and emissivity of **[not less than 0.75] <Insert value>** when tested according to CRRC-1.
- K. VOC Content: Traffic coating shall have a VOC content of 150 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- L. Low-Emitting Materials: Traffic coating shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.3 ACCESSORY MATERIALS

- A. Joint Sealants: **[As specified in Section 079200 "Joint Sealants."]** **[ASTM C 920.] <Insert requirement.>**
- B. Sheet Flashing: Nonstaining **[sheet material recommended in writing by traffic-coating manufacturer]** **[, uncured neoprene sheet]** **[, cured neoprene sheet]** **<Insert material>**.
 - 1. Thickness: Minimum **[60 mils (1.5 mm)]** **[50 mils (1.3 mm)]** **<Insert value>**.
- C. Adhesive: Contact adhesive recommended in writing by traffic-coating manufacturer.
- D. Reinforcing Strip: Fiberglass mesh recommended in writing by traffic-coating manufacturer.

2.4 PAVEMENT MARKINGS

- A. Pavement-Marking Paint: Comply with **[Section 321216 "Asphalt Paving."]** **[Section 321313 "Concrete Paving."]**
- B. Pavement-Marking Paint: Alkyd-resin type, lead and chromate free, ready mixed, complying with AASHTO M 248, **[Type N]** ; colors complying with FS TT-P-1952.
 - 1. Color: **[White]** **[Yellow]** **[Blue]** **[As indicated]** **<Insert color>**.
- C. Pavement-Marking Paint: MPI #32 Alkyd Traffic Marking Paint.
 - 1. Color: **[White]** **[Yellow]** **[Blue]** **[As indicated]** **<Insert color>**.
- D. Pavement-Marking Paint: Latex, waterborne emulsion, lead and chromate free, ready

mixed, complying with FS TT-P-1952, Type II, with drying time of less than **[three] [45]** minutes.

1. Color: **[White] [Yellow] [Blue] [As indicated] <Insert color>**.

E. Pavement-Marking Paint: MPI #97 Latex Traffic Marking Paint.

1. Color: **[White] [Yellow] [Blue] [As indicated] <Insert color>**.

F. Glass Beads: **[AASHTO M 247, Type 1] [FS TT-B-1325, Type 1A]**.

G. VOC Content: Pavement-marking paints shall have a VOC content of 150 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

H. Low-Emitting Materials: Pavement-marking paints shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

PART 3 - EXECUTION

3.1 GENERAL

- A. Do not apply pavement-marking paint until layout, colors, and placement have been verified with DEN Project Manager.
- B. Allow concrete pavement to cure for 28 days and be thoroughly dry before starting pavement marking.

3.2 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for surface smoothness, surface moisture, and other conditions affecting performance of traffic-coating work.
- B. Verify that substrates are visibly dry and free of moisture.
 - 1. Test for moisture according to ASTM D 4263.
 - 2. Test for moisture content by **[measuring with an electronic moisture meter] [method recommended in writing by traffic-coating manufacturer] <Insert test method>**.
- C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of traffic-coating work.
- D. Proceed with installation only after substrate construction and penetrating work have been completed and unsatisfactory conditions have been corrected.

1. Begin coating application only after minimum concrete-curing and -drying period recommended in writing by traffic-coating manufacturer has passed and after substrates are dry.
2. Application of coating indicates acceptance of surfaces and conditions.

3.3 PREPARATION

- A. General: Before applying traffic coatings, clean and prepare substrates according to ASTM C 1127 and manufacturer's written instructions to produce clean, dust-free, dry substrate for traffic-coating application. Remove projections, fill voids, and seal joints if any, as recommended in writing by traffic-coating manufacturer. Form coves at corners and penetrations of substrate.
- B. Test substrate for excessive moisture content, in manner recommended by manufacturer.
- C. Prime and seal substrate as recommended by traffic topping manufacturer, applying thinned coating of membrane liquid or other primer material at recommended spreading rate.
- D. Schedule preparation work so dust and other contaminants from process do not fall on wet, newly coated surfaces.
- E. Mask adjoining surfaces not receiving traffic coatings to prevent overspray, spillage, leaking, and migration of coatings. Prevent traffic-coating materials from entering deck substrate penetrations and clogging weep holes and drains.
- F. Concrete Substrates: [**Mechanically abrade surface to a uniform profile acceptable to manufacturer, according to ASTM D 4259.**] Do not acid etch.
 1. Remove grease, oil, paints, and other penetrating contaminants from concrete.
 2. Remove concrete fins, ridges, and other projections.
 3. Remove laitance, glaze, efflorescence, curing compounds, concrete hardeners, form-release agents, and other incompatible materials that might affect coating adhesion.
 4. Remove remaining loose material to provide a sound surface, and clean surfaces according to ASTM D 4258.

3.4 TERMINATIONS AND PENETRATIONS

- A. Prepare vertical and horizontal surfaces at terminations and penetrations through traffic coatings and at expansion joints, drains, and sleeves according to ASTM C 1127 and manufacturer's written instructions.
- B. Provide sealant cants at penetrations and at reinforced and nonreinforced, deck-to-wall butt joints.
- C. Terminate edges of deck-to-deck expansion joints with preparatory base-coat strip.

- D. Install sheet flashings at deck-to-wall expansion and dynamic joints, and bond to deck and wall substrates according to manufacturer's written recommendations.

3.5 JOINT AND CRACK TREATMENT

- A. Prepare, treat, rout, and fill joints and cracks in substrates according to ASTM C 1127 and manufacturer's written recommendations. Before coating surfaces, remove dust and dirt from joints and cracks according to ASTM D 4258.

- 1. Comply with recommendations in ASTM C 1193 for joint-sealant installation.

- B. Apply reinforcing strip in traffic-coating system where recommended in writing by traffic-coating manufacturer.

3.6 TRAFFIC-COATING APPLICATION

- A. Apply traffic coating according to ASTM C 1127 and manufacturer's written instructions.
- B. Apply number of coats of specified compositions for each type of traffic coating at locations as indicated on Drawings.
- C. Start traffic-coating application in presence of manufacturer's technical representative.
- D. Verify that wet film thickness of each coat complies with requirements every [100 sq. ft. (9 sq. m)] <Insert dimension>.
- E. Uniformly broadcast aggregate on coats specified to receive aggregate. Embed aggregate according to manufacturer's written instructions. After coat dries, sweep away excess aggregate.
- F. Apply traffic coatings to prepared wall terminations and vertical surfaces to height indicated; omit aggregate on vertical surfaces.
- G. Cure traffic coatings. Prevent contamination and damage during application and curing stages.

3.7 PAVEMENT MARKINGS

- A. Do not apply pavement-marking paint for striping and other markings until layout, colors, and placement have been verified with DEN Project Manager and traffic coating has cured.
- B. Sweep and clean surface to eliminate loose material and dust.
- C. Apply pavement-marking paint with mechanical equipment to produce markings of dimensions indicated with uniform straight edges. Apply at manufacturer's recommended rates for a 15-mil- (0.4-mm-) minimum, wet film thickness.

1. Apply graphic symbols and lettering with paint-resistant, die-cut stencils, firmly secured to surface. Mask an extended area beyond edges of each stencil to prevent paint application beyond stencil. Apply paint so that it cannot run beneath stencil.
2. Broadcast glass beads uniformly into wet pavement-marking paint at a rate of **6 lb/gal.** (0.72 kg/L).

3.8 FIELD QUALITY CONTROL

- A. Testing Agency: [**Owner will engage**] [**Engage**] a qualified testing agency to perform the following field tests and inspections:
1. Materials Testing:
 - a. Samples of material delivered to Project site shall be taken, identified, sealed, and certified in presence of [**Owner and**] Contractor.
 - b. Testing agency shall perform tests for characteristics specified, using applicable referenced testing procedures.
 - c. Testing agency shall verify thickness of coatings during traffic-coating application for each [**600 sq. ft. (56 sq. m)**] <Insert dimension> of installed traffic coating or part thereof.
 2. Electronic Leak-Detection Testing:
 - a. Testing agency shall test [**each deck area**] [**each deck area indicated for testing on Drawings**] <Insert area to be tested> for leaks using an electronic leak-detection method that locates discontinuities in the traffic-coating membrane.
 - b. Testing agency shall perform tests on abutting or overlapping smaller areas as necessary to cover entire test area.
 - c. Testing agency shall create a conductive electronic field over the area of traffic coating to be tested and electronically determine locations of discontinuities or leaks, if any, in the traffic coating.
 - d. Testing agency shall provide survey report indicating locations of discontinuities, if any.
 3. If test results show traffic coating does not comply with requirements, remove and replace or repair the membrane as recommended in writing by traffic-coating manufacturer and make further repairs after retesting until traffic-coating installation passes.
- B. Final Traffic-Coating Inspection: Arrange for traffic-coating manufacturer's technical personnel to inspect membrane installation on completion.
1. Notify DEN Project Manager 48 hours in advance of date and time of inspection.
- C. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

- D. Prepare test and inspection reports.

3.9 PROTECTING AND CLEANING

- A. Protect traffic coatings from damage and wear during remainder of construction period.
- B. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section.

END OF SECTION 071800

SECTION 071900 - WATER REPELLENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes **[penetrating] [film-forming] [MPI-approved]** water-repellent treatments for the following vertical and horizontal surfaces:
 - 1. Cast-in-place concrete.
 - 2. Precast concrete.
 - 3. Cast stone.
 - 4. Concrete unit masonry.
 - 5. Clay brick masonry.
 - 6. Natural stone.
 - 7. Portland cement plaster (stucco).
- B. Related Sections:
 - 1. Section 030130 "Maintenance of Cast-in-Place Concrete" for penetrating polymer sealers for exterior traffic surfaces.
 - 2. Section 040140 "Maintenance of Stone Assemblies" for combined stone consolidation and water-repellent treatment.
 - 3. Section 042000 "Unit Masonry" for integral water-repellent admixture for unit masonry assemblies.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 PERFORMANCE REQUIREMENTS

- A. General Performance: Water repellents shall meet performance requirements indicated without failure due to defective manufacture, fabrication, or installation.
 - 1. Water Repellents: Comply with performance requirements specified, as determined by **[preconstruction]testing[on manufacturer's standard]** substrate assemblies representing those indicated for this Project.
- B. Water Absorption: Minimum **[80] [90] <Insert number>** percent reduction of water absorption after 24 hours in comparison of treated and untreated specimens.

1. Cast-in Place Concrete: ASTM C 642.
2. Precast Concrete: ASTM C 642.
3. Cast Stone: ASTM C 1195.
4. Concrete Masonry Units: ASTM C 140.
5. Clay Brick: ASTM C 67.
6. Natural Stone: ASTM C 97.
7. Portland Cement Plaster (Stucco): ASTM D 6532.

C. Water-Vapor Transmission: Comply with one or both of the following:

1. Maximum [10] <Insert number> percent reduction in rate of vapor transmission in comparison of treated and untreated specimens, according to ASTM E 96/E 96M.
2. Minimum [80] <Insert number> percent water-vapor transmission in comparison of treated and untreated specimens, according to ASTM D 1653.

D. Water Penetration and Leakage through Masonry: Minimum [90] <Insert number> percent reduction in leakage rate in comparison of treated and untreated specimens, according to ASTM E 514.

E. Durability: Maximum [5] <Insert number> percent loss of water-repellent properties after 2500 hours of weathering according to ASTM G 154 in comparison to water-repellent-treated specimens before weathering.

F. Chloride-Ion Intrusion in Concrete: NCHRP Report 244, Series II tests.

1. Reduction of Water Absorption: [80] <Insert number> percent.
2. Reduction in Chloride Content: [80] <Insert number> percent.

1.4 PRECONSTRUCTION TESTING

A. Preconstruction Testing: Installed water repellents shall comply with performance requirements indicated, as evidenced by reports **[of tests performed on manufacturer's standard substrate assemblies] [based on Project-specific preconstruction testing of existing substrate assemblies]** by a qualified testing agency.

1. Select sizes and configurations of assemblies to adequately demonstrate capability of water repellents to comply with performance requirements.
2. In addition to verifying performance requirements, use test applications to verify manufacturer's written instructions for application procedure and optimum rates of product application to substrate assemblies.
3. Notify DEN Project Manager [seven] <Insert number> days in advance of the dates and times when assemblies will be tested.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

1. Include manufacturer's printed statement of VOC content.
2. Include manufacturer's standard colors.
3. Include manufacturer's recommended number of coats for each type of substrate and spreading rate for each separate coat.
4. Printout of current "MPI Approved Products List" for each product category specified in Part 2 that specifies water repellents approved by MPI, with the proposed product highlighted.

- B. Samples: For each type[**and color**] of water repellent and substrate indicated, **12 by 12 inches** (300 by 300 mm) in size, with specified water-repellent treatment applied to half of each Sample.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified [**Applicator**] [**testing agency**].
- B. Product Certificates: For each type of water repellent, from manufacturer.
 1. Include data substantiating that materials comply with requirements.
- C. Preconstruction Testing Reports: For water-repellent-treated substrates.
- D. Field quality-control reports.
- E. Warranty: Special warranty specified in this Section.

1.7 QUALITY ASSURANCE

- A. Applicator Qualifications: An employer of workers trained and approved by manufacturer.
- B. MPI Standards: Comply with MPI standards indicated and provide water repellents listed in its "MPI Approved Products List."
- C. Mockups: Apply water repellent to each type of substrate required.
 1. Locate each test application as [**shown on Drawings**] [**directed by DEN Project Manager**].
 2. Size: [**10 sq. ft. (9.3 sq. m)**] [**25 sq. ft. (2.3 sq. m)**] <Insert size>.
 3. Final approval by DEN Project Manager of[**color and**] water-repellent application will be from test applications.
- D. Preinstallation Conference: Conduct conference at [**Project site**] [**location and time as determined by DEN Project Manager**].
- E. <Insert location>.

1.8 PROJECT CONDITIONS

- A. Limitations: Proceed with application only when the following existing and forecasted weather and substrate conditions permit water repellents to be applied according to manufacturers' written instructions and warranty requirements:
1. Concrete surfaces and mortar have cured for not less than 28 days.
 2. Building has been closed in for not less than 30 days before treating wall assemblies.
 3. Ambient temperature is above **40 deg F** (4.4 deg C) and below **100 deg F** (37.8 deg C) and will remain so for 24 hours.
 4. Substrate is not frozen and substrate-surface temperature is above **40 deg F** (4.4 deg C) and below **100 deg F** (37.8 deg C).
 5. Rain or snow is not predicted within 24 hours.
 6. Not less than **[24 hours]** **[seven days]** have passed since surfaces were last wet.
 7. Windy conditions do not exist that might cause water repellent to be blown onto vegetation or surfaces not intended to be treated.
 8. **<Insert restriction>**.

1.9 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which **[manufacturer]** **[and]** **[Applicator]** agree(s) to repair or replace materials that fail to maintain water repellency specified in "Performance Requirements" Article within specified warranty period.
1. Warranty Period: Minimum **[five]** **<Insert number>** years from date of Substantial Completion.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PENETRATING WATER REPELLENTS

- A. Silane, Penetrating Water Repellent: Clear, containing **[20]** **<Insert number>** percent or more solids of alkyltrialkoxysilanes; with alcohol, mineral spirits, water, or other proprietary solvent carrier; and with 400 g/L or less of VOCs.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Advanced Chemical Technologies, Inc.; **[Sil-Act ATS-100]** **[Sil-Act**

- Multiguard].**
- b. BASF Construction Chemicals, LLC; [**Enviroseal 20**] [**Enviroseal 40**] [**Hydrozo 100**] [**Hydrozo 100 Plus**].
 - c. Chemical Products Industries, Inc.; SW-244-100 VOC.
 - d. Dayton Superior Corporation; Weather Worker J-29-WB.
 - e. Degussa Corp; [**Protectosil Aqua-Trete 20**] [**Protectosil Aqua-Trete 40**] [**Protectosil Aqua-Trete Concentrate**] [**Protectosil Aqua-Trete BH-N**] [**Protectosil BH-O**] [**Protectosil Chem-Trete BSM 400**] [**Protectosil Chem-Trete PB 100**].
 - f. Fox Industries, Inc.; [**FX-424**] [**FX-425**].
 - g. Kelly-Moore Paint Company Inc.; Kel-Seal 77.
 - h. LymTal International, Inc.; [**Iso-Flex 618-50 VOC**] [**Iso-Flex 618-100 CRS**].
 - i. Nox-Crete Products Group; [**Stifel GC**] [**Stifel HC**] [**Stifel SC**] [**Stifel VC**].
 - j. Pecora Corporation; [**KlereSeal 940-S VOC**] [**KlereSeal 9100-S**].
 - k. Price Research, Ltd.; [**Price Aqua Seal-40**] [**Price Aqua Silane-20**] [**Price Aqua Silane-40**].
 - l. PROSOCO, Inc.; [**SL100**] [**SLX100**].
 - m. Specco Industries, Inc.; Waterstopper S-40 Silane.
 - n. Tamms Industries, Inc., Euclid Chemical Company (The); Baracade Silane 100.
 - o. Textured Coatings of America, Inc.; [**Rainstopper 110**] [**Rainstopper 120**] [**Rainstopper 140**] [**Rainstopper 1750 Clear**].
 - p. Tnemec Inc.; [**Dur A Pell 40**] [**Dur A Pell 100**].
 - q. Vexcon Chemicals Inc.; [**Certi-Vex Envio Water Proof 100**] [**Certi-Vex Envio Water Proof 500**] [**Certi-Vex Penseal 244 VOC AIM**] [**Certi-Vex Stain Repellent AIM**] [**Certi-Vex Stain Repellent WB**] [**Powerseal 20**] [**Powerseal 40**].
 - r. Wacker Chemical Corporation; [**Silres BS 1316**] [**Silres BS Creme C**].
 - s. <Insert manufacturer's name; product name or designation>.
 - t. or approved equal.
- B. Silane, Penetrating Water Repellent: Clear, containing [20] <Insert number> percent or more solids of alkyltrialkoxysilanes; with alcohol, mineral spirits, water, or other proprietary solvent carrier; and with 600 g/L or less of VOCs.
- 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Advanced Chemical Technologies, Inc.; [**Sil-Act ATS-22 VOC**] [**Sil-Act ATS-42**] [**Sil-Act ATS-42L**] [**Sil-Act ATS-55**] [**Sil-Act ATS-100**] [**Sil-Act Multiguard**].
 - b. BASF Construction Chemicals, LLC; [**Enviroseal 20**] [**Enviroseal 40**] [**Hydrozo 100**] [**Hydrozo 100 Plus**] [**Hydrozo Clear 40 VOC**] [**Hydrozo Silane 40 VOC**] [**Masterseal SL 40 VOC**] [**Penetrating Sealer 40 VOC**].
 - c. Chemical Products Industries, Inc.; [**SW-244-100 VOC**] [**SW-244-40 VOC**].
 - d. ChemMasters; Aquanil Plus 40.
 - e. Conspec by Dayton Superior; [**Conspec Silane 20 WB**] [**Conspec Silane 40**] [**Conspec Silane 40 WB**].
 - f. Dayton Superior Corporation; Weather Worker J-29-WB.
 - g. Degussa Corporation; [**Protectosil Aqua-Trete 20**] [**Protectosil Aqua-Trete 40**] [**Protectosil Aqua-Trete Concentrate**] [**Protectosil**

- Aqua-Trete BH-N** [**Protectosil BH-O**] [**Protectosil Chem-Trete 40 VOC**] [**Protectosil Chem-Trete BSM 400**] [**Protectosil Chem-Trete PB 100**] [**Protectosil Chem-Trete 4PB VOC**].
- h. Fox Industries, Inc.; [**FX-424**] [**FX-425**].
 - i. H&C Concrete Care Products, Sherwin-Williams Company (The); H&C SL-40.

 - u. Tnemec Inc.; [**Dur A Pell 10**] [**Dur A Pell 20**] [**Prime-A-Pell H2O**] [**Prime-A-Pell Plus, Series 662**] [**Prime-A-Pell Plus, Series V662**].
 - v. Wacker Chemical Corporation; [**Silres BS 1001A**] [**Silres BS 2001**] [**Silres BS SMK 1311**].
 - w. <Insert manufacturer's name; product name or designation>.
 - x. or approved equal.
- G. Siliconate, Penetrating Water Repellent: Clear, methyl siliconate water repellent with 400 g/L or less of VOCs.
- 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. BASF Construction Chemicals, LLC; Thoroclear Special.
 - b. PROSOCO, Inc.; Natural Stone Treatment WB.
 - c. <Insert manufacturer's name; product name or designation>.
 - d. or approved equal.
- H. Proprietary-Blend, Penetrating Water Repellent: Clear, consisting of one or several different resins (silanes or siloxanes), polymers, stearates, or oils plus other compounds or products of components; and with 400 g/L or less of VOCs.
- 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. BASF Construction Chemicals, LLC; Enviroseal Surface Guard.
 - b. PROSOCO, Inc.; [**Stain Barrier**] [**STMP**].
 - c. <Insert manufacturer's name; product name or designation>.
 - d. or approved equal.
- I. Proprietary-Blend, Penetrating Water Repellent: Clear, consisting of one or several different resins (silanes or siloxanes), polymers, stearates, or oils plus other compounds or products of components; and with 600 g/L or less of VOCs.
- 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. BASF Construction Chemicals, LLC; [**Enviroseal Surface Guard**] [**Hydrozo Clear Double 7 VOC**] [**White Roc 10 VOC**].
 - b. PROSOCO, Inc.; [**Impregnator**] [**Stain Barrier**] [**STMP**].
 - c. <Insert manufacturer's name; product name or designation>.
 - d. or approved equal.

2.2 FILM-FORMING WATER REPELLENTS

- A. Silicone-Resin Sealer, Film-Forming Water Repellent: Clear, polymerized, silicone-resin water repellent for dense substrates; with a solvent- or waterborne solution containing not less than 3 and up to 5 percent solids by weight; and with 400 g/L or less of VOCs.
- Products: Subject to compliance with requirements, provide one of the following:
 - H&C Concrete Care Products, Sherwin-Williams Company (The); H&C WB-50.
 - Professional Products of Kansas, Inc.; Professional Water Sealant (Regular).
 - <Insert manufacturer's name; product name or designation>.**
 - or approved equal.
- B. Silicone-Resin Sealer, Film-Forming Water Repellent: Clear, polymerized, silicone-resin water repellent for dense substrates; with a solvent- or waterborne solution containing not less than 3 and up to 5 percent solids by weight; and with 600 g/L or less of VOCs.
- Products: Subject to compliance with requirements, provide one of the following:
 - ChemMasters; Aquanil.
 - H&C Concrete Care Products, Sherwin-Williams Company (The); H&C WB-50.
 - Professional Products of Kansas, Inc.; Professional Water Sealant (Regular).
 - <Insert manufacturer's name; product name or designation>.**
 - or approved equal.
- C. Proprietary-Blend, Film-Forming Water Repellent: **[Clear] [Pigmented]**, consisting of one or several different resins, acrylics, polymers, stearates, or oils plus other compounds or products of components; and with 400 g/L or less of VOCs.
- Products: Subject to compliance with requirements, provide one of the following:
 - OKON Co., Inc., Division of ZINSSER Co., Inc., an RPM company; **[Multi-Surface] [Okon W-1] [Okon W-2]**.
 - SaverSystems; DEFY Water Repellent for Split-Face Block.
 - Wacker Chemical Corporation; Silres BS 29 A.
 - ChemMasters; Colorsil.
 - Nox-Crete Products Group; Nox Carb X.
 - Textured Coatings of America, Inc.; **[Rainstopper 400 (Semi-Transparent)] [Rainstopper 500 (Opaque)]**.
 - <Insert manufacturer's name; product name or designation>.**
 - or approved equal.
 - Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from**

manufacturer's full range] <Insert color>.

- D. Proprietary-Blend, Film-Forming Water Repellent: **[Clear] [Pigmented]**, consisting of one or several different resins, acrylics, polymers, stearates, or oils plus other compounds or products of components; and with 600 g/L or less of VOCs.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. OKON Co., Inc., Division of ZINSSER Co., Inc., an RPM company; **[Multi-Surface] [Okon W-1] [Okon W-2]**.
 - b. SaverSystems; DEFY Water Repellent for Split-Face Block.
 - c. Wacker Chemical Corporation; Silres BS 29 A.
 - d. ChemMasters; Colorsil.
 - e. Nox-Crete Products Group; Nox Carb.
 - f. PROSOCO, Inc.; Breathable Masonry Coating II.
 - g. Textured Coatings of America, Inc.; **[Rainstopper 400 (Semi-Transparent)] [Rainstopper 500 (Opaque)]**.
 - h. **<Insert manufacturer's name; product name or designation>**.
 - i. or approved equal.
 2. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
- E. Acrylic, Film-Forming Water Repellent: **[Clear] [Pigmented]**, breathing coating of acrylic resins; with a waterborne, solvent-borne, or acrylic emulsion solution containing less than 15 percent solids by volume; and with 400 g/L or less of VOCs.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. BASF Construction Chemicals, LLC; White Roc W.
 - b. Convenience Products, Division of Clayton Corporation; **[Seal-Krete Multi-Surface] [Seal-Krete Original]**.
 - c. Nox-Crete Products Group; Sparkl-Seal E.
 - d. OKON Co., Inc., Division of ZINSSER Co., Inc., an RPM company; Plugger.
 - e. Nox-Crete Products Group; Acryl Pen X.
 - f. **<Insert manufacturer's name; product name or designation>**.
 - g. or approved equal.
 2. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
- F. Acrylic, Film-Forming Water Repellent: **[Clear] [Pigmented]**, breathing coating of acrylic resins; with a waterborne, solvent-borne, or acrylic emulsion solution containing less than 15 percent solids by volume; with 600 g/L or less of VOCs.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Convenience Products, Division of Clayton Corporation; **[Seal-Krete**

Multi-Surface] [Seal-Krete Original].

- b. OKON Co., Inc., Division of ZINSSER Co., Inc., an RPM company; Plugger.
- c. BASF Construction Chemicals, LLC; White Roc Toner VOC.
- d. Nox-Crete Products Group; Acryl Pen.
- e. **<Insert manufacturer's name; product name or designation>.**
- f. or approved equal.

2. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.**

2.3 MPI-APPROVED WATER REPELLENTS

- A. Water Repellent, Clear (Paintable); MPI #34: Penetrating, solvent-borne, clear water-repellent coating, for use on interior or exterior masonry, brick, and concrete surfaces, and that can be recoated with conventional paints; often applied by flooding the surface under low-pressure spray.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert manufacturer's name; product name or designation>.**
 - b. or approved equal.
2. VOC Content: **[600 g/L or less] [Less than 151 g/L] <Insert limit>.**
3. MPI Green Performance Standard: **[GPS-1] [GPS-2].**

- B. Water Repellent, Clear (Not Paintable); MPI #117: Penetrating, solvent-borne, silicone-oil type, clear water-repellent for interior or exterior masonry block or brick that will not be recoated with a coating other than the repellent; applied by brush, flooding, spray, or roller.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert manufacturer's name; product name or designation>.**
 - b. or approved equal.
2. VOC Content: **[600 g/L or less] [400 g/L or less] [Less than 201 g/L] <Insert limit>.**
3. MPI Green Performance Standard: **[GPS-1] [GPS-2].**

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Applicator present, for compliance with requirements and conditions affecting performance of the Work.

1. Verify that surfaces are clean and dry according to water-repellent

- manufacturer's requirements. Check moisture content in **[three]** **<Insert number>** representative locations by method recommended by manufacturer.
2. Inspect for previously applied treatments that may inhibit penetration or performance of water repellents.
 3. Verify that there is no efflorescence or other removable residues that would be trapped beneath the application of water repellent.
 4. Verify that required repairs are complete, cured, and dry before applying water repellent.
- B. Test pH level according to water-repellent manufacturer's written instructions to ensure chemical bond to silica-containing or siliceous minerals.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Cleaning: Before application of water repellent, clean substrate of substances that could impair penetration or performance of product according to water-repellent manufacturer's written instructions[**and as follows:**][.]
1. **[Cast-in-Place Concrete] [Precast Concrete] [Cast Stone] [and] [Concrete Unit Masonry]**: Remove oil, curing compounds, laitance, and other substances that inhibit penetration or performance of water repellents **[according to ASTM E 1857] <Insert requirement>**.
 2. Clay Brick Masonry: **[ASTM D 5703.] [Section 040120 "Maintenance of Unit Masonry."]**
 3. Natural Stone: **[ASTM C 1515.] [ASTM D 5107.] [Section 040140 "Maintenance of Stone Assemblies."]**
 4. Portland Cement Plaster (Stucco): **[ASTM E 1857] <Insert requirement>**.
- B. Protect adjoining work, including mortar and sealant bond surfaces, from spillage or blow-over of water repellent. Cover adjoining and nearby surfaces of aluminum and glass if there is the possibility of water repellent being deposited on surfaces. Cover live vegetation.
- C. Coordination with Mortar Joints: Do not apply water repellent until pointing mortar for joints adjacent to surfaces receiving water-repellent treatment has been installed and cured.
- D. Coordination with Sealant Joints: Do not apply water repellent until sealants for joints adjacent to surfaces receiving water-repellent treatment have been installed and cured.
1. Water-repellent work may precede sealant application only if sealant adhesion and compatibility have been tested and verified using substrate, water repellent, and sealant materials identical to those required.

3.3 APPLICATION

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect the substrate before application of water repellent and to instruct Applicator on the product and application method to be used.
- B. Apply a heavy-saturation coating of water repellent, on surfaces indicated for treatment, using [**15 psi- (103 kPa)- pressure spray with a fan-type spray nozzle**] [**roller**] [**or**] [**brush**] <Insert requirement> to the point of saturation. Apply coating in dual passes of uniform, overlapping strokes. Remove excess material; do not allow material to puddle beyond saturation. Comply with manufacturer's written instructions for application procedure unless otherwise indicated.
1. [**Precast Concrete**] [**and**] [**Cast Stone**]: At Contractor's option, first application of water repellent on units may be completed before installing them. Mask mortar and sealant bond surfaces to prevent water repellent from migrating onto joint surfaces.
- C. Apply a second saturation coating, repeating first application. Comply with manufacturer's written instructions for limitations on drying time between coats and after rainstorm wetting of surfaces between coats. Consult manufacturer's technical representative if written instructions are not applicable to Project conditions.

3.4 FIELD QUALITY CONTROL

- A. Testing of Water-Repellent Material: Owner reserves the right to invoke the following procedure at any time and as often as Owner deems necessary during the period when water repellent is being applied:
1. Owner will engage the services of a qualified testing agency to sample water-repellent material being used. Samples of material delivered to Project site will be taken, identified, sealed, and certified in presence of Contractor.
 2. Testing agency will perform tests for compliance of water-repellent material with product requirements.
 3. Owner may direct Contractor to stop applying water repellents if test results show material being used does not comply with product requirements. Contractor shall remove noncomplying material from Project site, pay for testing, and correct deficiency of surfaces treated with rejected materials, as approved by DEN Project Manager. <Insert additional requirements to suit Project>.
- B. Coverage Test: In the presence of DEN Project Manager, hose down a dry, repellent-treated surface to verify complete and uniform product application. A change in surface color will indicate incomplete application.
1. Notify DEN Project Manager [**seven**] <Insert number> days in advance of the dates and times when surfaces will be tested.
 2. Reapply water repellent until coverage test indicates complete coverage.

3.5 CLEANING

- A. Immediately clean water repellent from adjoining surfaces and surfaces soiled or damaged by water-repellent application as work progresses. Correct damage to work of other trades caused by water-repellent application, as approved by DEN Project Manager.
- B. Comply with manufacturer's written cleaning instructions.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 071900

SECTION 072100 - THERMAL INSULATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Foam-plastic board insulation.
2. Cellular-glass insulation.
3. Glass-fiber board insulation.
4. Mineral-wool board insulation.
5. Glass-fiber blanket insulation.
6. Mineral-wool blanket insulation.
7. Loose-fill insulation.
8. Spray-applied cellulosic insulation.
9. Spray polyurethane foam insulation.
10. Radiant barriers.
11. Vapor retarders.

B. Related Sections:

1. Section 042000 "Unit Masonry" for insulation installed in[**cavity walls and**] masonry cells.
2. Section 061600 "Sheathing" for foam-plastic board sheathing over wood or steel framing.
3. [Section 071326 "Self-Adhering Sheet Waterproofing"] [Section 071353 "Elastomeric Sheet Waterproofing"] [Section 071354 "Thermoplastic Sheet Waterproofing"] [Section 071413 "Hot Fluid-Applied Rubberized Asphalt Waterproofing"] [Section 071416 "Cold Fluid-Applied Waterproofing"] for insulated drainage panels installed with waterproofing.
4. [Section 072413 "Polymer-Based Exterior Insulation and Finish System (EIFS)"] [Section 072419 "Water-Drainage Exterior Insulation and Finish System (EIFS)"] for insulation specified as part of these systems.
5. [Section 075113 "Built-up Asphalt Roofing"] [Section 075116 "Built-up Coal Tar Roofing"] [Section 075216 "Atactic-Polypropylene (APP) Modified Bituminous Membrane Roofing"] [Section 075216 "Styrene-Butadiene-Styrene (SBS) Modified Bituminous Membrane Roofing"] [Section 075316 "Chlorosulfonate-Polyethylene (CSPE) Roofing"] [Section 075323 "Ethylene-Propylene-Diene-Monomer (EPDM) Roofing"]

- [Section 075416 "Ethylene Interpolymer (KEE) Roofing"] [Section 075419 Polyvinyl-Chloride (PVC) Roofing] [Section 075423 "Thermoplastic Polyolefin (TPO) Roofing"] [Section 075552 "Modified Bituminous Protected Membrane Roofing"] [Section 075556 "Fluid-Applied Protected Membrane Roofing"] [and] "[Section 075700 "Coated Foamed Roofing"]" for insulation specified as part of roofing construction.
6. Section 078446 "Fire-Resistive Joint Systems" for insulation installed as part of a perimeter fire-resistive joint system.
 7. [Section 092116.23 "Gypsum Board Shaft Wall Assemblies"] [Section 092300 "Gypsum Plastering"] [Section 092400 "Portland Cement Plastering"] [Section 092613 "Gypsum Veneer Plastering"] for installation in wood- and metal-framed assemblies of insulation specified by referencing this Section.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.

1.4 INFORMATIONAL SUBMITTALS

- A. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for each product.
- B. Research/Evaluation Reports: For foam-plastic insulation, from **[ICC-ES] <Insert applicable model code organization>**.

1.5 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Surface-Burning Characteristics: As determined by testing identical products according

to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Protect insulation materials from physical damage and from deterioration due to moisture, soiling, and other sources. Store inside and in a dry location. Comply with manufacturer's written instructions for handling, storing, and protecting during installation.
- B. Protect foam-plastic board insulation as follows:
 - 1. Do not expose to sunlight except to necessary extent for period of installation and concealment.
 - 2. Protect against ignition at all times. Do not deliver foam-plastic board materials to Project site before installation time.
 - 3. Quickly complete installation and concealment of foam-plastic board insulation in each area of construction.
- C. CONSTRUCTION WASTE MANAGEMENT
 - 1. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 FOAM-PLASTIC BOARD INSULATION

- A. Extruded-Polystyrene Board Insulation: ASTM C 578, of type and minimum compressive strength indicated below, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, per ASTM E 84.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. DiversiFoam Products.
 - b. Dow Chemical Company (The).
 - c. Owens Corning.
 - d. Pactiv Building Products.
 - e. **<Insert manufacturer>**
 - f. or approved equal.
 - 2. Type X, **15 psi** (104 kPa).
 - 3. Type IV, **25 psi** (173 kPa).
 - 4. Type VI, **40 psi** (276 kPa).
 - 5. Type VII, **60 psi** (414 kPa).
 - 6. Type V, **100 psi** (690 kPa).

- B. Unfaced Wall Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, [Type IV, 25-psi (173-kPa)] [or] [Type VI, 40-psi (276-kPa)] minimum compressive strength; unfaced; fabricated with shiplap or channel edges and with one side having grooved drainage channels.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. DiversiFoam Products.
 - b. Dow Chemical Company (The).
 - c. Pactiv Building Products.
 - d. <Insert manufacturer>
 - e. or approved equal.
- C. Geotextile-Faced Wall Insulation Drainage Panels: Extruded-polystyrene board insulation complying with ASTM C 578, [Type IV, 25-psi (173-kPa)] [or] [Type VI, 40-psi (276-kPa)] minimum compressive strength; fabricated with tongue-and-groove edges and with one side having grooved drainage channels faced with nonwoven geotextile filter fabric.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Owens Corning.
 - b. <Insert manufacturer>
 - c. or approved equal.
- D. Molded-Polystyrene Board Insulation: ASTM C 578, of type and minimum compressive strength indicated below, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, per ASTM E 84.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. DiversiFoam Products.
 - b. Plymouth Foam, Inc.
 - c. <Insert manufacturer>
 - d. or approved equal.
 2. Type I, 10 psi (69 kPa).
 3. Type II, 15 psi (104 kPa).
 4. Type VIII, 20 psi (138 kPa).
- E. Foil-Faced, Polyisocyanurate Board Insulation: ASTM C 1289, Type I, [Class 1] [or] [Class 2], with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, per ASTM E 84.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Atlas Roofing Corporation.
 - b. Dow Chemical Company (The).
 - c. Rmax, Inc.
 - d. **<Insert manufacturer>**
 - e. or approved equal.
- F. Adhesive for Bonding Insulation: Product with demonstrated capability to bond insulation securely to substrates without damaging insulation and substrates.

2.2 CELLULAR-GLASS INSULATION

- A. Cellular-Glass Insulation: ASTM C 552, **[Type I (flat block)] [Type IV (board) faced on both sides with manufacturer's special kraft-paper sheets laminated to glass block with asphalt]**.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Pittsburgh Corning Corporation.
 - b. **<Insert manufacturer>**
 - c. or approved equal.
- B. Asphalt Coating for Cellular-Glass Block Insulation: Cutback asphalt or asphalt emulsion of type recommended by manufacturer of cellular-glass block insulation.

2.3 GLASS-FIBER BOARD INSULATION

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. CertainTeed Corporation.
 2. Johns Manville.
 3. Knauf Insulation.
 4. Owens Corning.
 5. **<Insert manufacturer>**
 6. or approved equal.
- B. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert number>** percent.
- C. Unfaced, Flexible Glass-Fiber Board Insulation: ASTM C 612, Type IA; ASTM C 553, Types I, II, and III; or ASTM C 665, Type I; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per ASTM E 84, passing ASTM E 136 for combustion characteristics.
1. Nominal density of **1.0 lb/cu. ft.** (16 kg/cu. m), thermal resistivity of **3.7 deg F x h x sq. ft./Btu x in. at 75 deg F** (25.7 K x m/W at 24 deg C).

2. Nominal density of not less than 1.5 lb/cu. ft. (24 kg/cu. m) or more than 1.7 lb/cu. ft. (27 kg/cu. m), thermal resistivity of 4 deg F x h x sq. ft./Btu x in. at 75 deg F (27.7 K x m/W at 24 deg C).
- D. Foil-Faced, Flexible Glass-Fiber Board Insulation: ASTM C 612, Type IA or ASTM C 553, Types I, II, and III; faced on one side with foil-scrim-kraft vapor retarder; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per ASTM E 84.
1. Nominal density of 1.0 lb/cu. ft. (16 kg/cu. m), thermal resistivity of 3.7 deg F x h x sq. ft./Btu x in. at 75 deg F (25.7 K x m/W at 24 deg C).
 2. Nominal density of not less than 1.5 lb/cu. ft. (24 kg/cu. m) or more than 1.7 lb/cu. ft. (27 kg/cu. m), thermal resistivity of 4 deg F x h x sq. ft./Btu x in. at 75 deg F (27.7 K x m/W at 24 deg C).
- E. Unfaced, Glass-Fiber Board Insulation: ASTM C 612, Type IA; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per ASTM E 84[, **passing ASTM E 136 for combustion characteristics**].
1. Nominal density of 2.25 lb/cu. ft. (36 kg/cu. m), thermal resistivity of 4.3 deg F x h x sq. ft./Btu x in. at 75 deg F (29.8 K x m/W at 24 deg C).
 2. Nominal density of 3 lb/cu. ft. (48 kg/cu. m), thermal resistivity of 4.3 deg F x h x sq. ft./Btu x in. at 75 deg F (29.8 K x m/W at 24 deg C).
 3. Nominal density of 4.25 lb/cu. ft. (68 kg/cu. m), thermal resistivity of 4.3 deg F x h x sq. ft./Btu x in. at 75 deg F (29.8 K x m/W at 24 deg C).
 4. Nominal density of 6 lb/cu. ft. (96 kg/cu. m), thermal resistivity of 4.4 deg F x h x sq. ft./Btu x in. at 75 deg F (30.5 K x m/W at 24 deg C).
- F. Foil-Faced, Glass-Fiber Board Insulation: ASTM C 612, Type IA; faced on one side with foil-scrim-kraft or foil-scrim-polyethylene vapor retarder, with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per ASTM E 84.
1. Nominal density of 2.25 lb/cu. ft. (36 kg/cu. m), thermal resistivity of 4.3 deg F x h x sq. ft./Btu x in. at 75 deg F (29.8 K x m/W at 24 deg C).
 2. Nominal density of 3 lb/cu. ft. (48 kg/cu. m), thermal resistivity of 4.3 deg F x h x sq. ft./Btu x in. at 75 deg F (29.8 K x m/W at 24 deg C).
 3. Nominal density of 4.25 lb/cu. ft. (68 kg/cu. m), thermal resistivity of 4.3 deg F x h x sq. ft./Btu x in. at 75 deg F (29.8 K x m/W at 24 deg C).
 4. Nominal density of 6 lb/cu. ft. (96 kg/cu. m), thermal resistivity of not less than 4.34 deg F x h x sq. ft./Btu x in. at 75 deg F (30.1 K x m/W at 24 deg C).
- G. Dark-Surfaced, Glass-Fiber Board Insulation: ASTM C 612, Type IA; faced on one side with black glass-fiber mat or black polymer finish; maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per ASTM E 84.
1. Nominal density of 1.5 lb/cu. ft. (24 kg/cu. m), thermal resistivity of 4.2 deg F x h x sq. ft./Btu x in. at 75 deg F (29.1 K x m/W at 24 deg C).
 2. Nominal density of 2.25 lb/cu. ft. (36 kg/cu. m), thermal resistivity of 4.3 deg F x h x sq. ft./Btu x in. at 75 deg F (29.8 K x m/W at 24 deg C).

3. Nominal density of 3 lb/cu. ft. (48 kg/cu. m), thermal resistivity of 4.3 deg F x h x sq. ft./Btu x in. at 75 deg F (29.8 K x m/W at 24 deg C).
4. Nominal density of 6 lb/cu. ft. (96 kg/cu. m), thermal resistivity of 4.5 deg F x h x sq. ft./Btu x in. at 75 deg F (31.2 K x m/W at 24 deg C).

H. Sustainability Requirements: Provide glass-fiber board insulation as follows:

1. Free of Formaldehyde: Insulation manufactured with 100 percent acrylic binders and no formaldehyde.
2. Low Emitting: Insulation tested according to ASTM D 5116 and shown to emit less than 0.05-ppm formaldehyde.

2.4 MINERAL-WOOL BOARD INSULATION

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Fibrex Insulations Inc.
2. Isolatek International.
3. Owens Corning.
4. Roxul Inc.
5. Thermafiber.
6. <Insert manufacturer>
7. or approved equal.

B. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than <Insert number> percent.

C. Unfaced, Mineral-Wool Board Insulation: ASTM C 612; with maximum flame-spread and smoke-developed indexes of 15 and 0, respectively, per ASTM E 84; passing ASTM E 136 for combustion characteristics.

1. Nominal density of 4 lb/cu. ft. (64 kg/cu. m), Types IA and IB, thermal resistivity of 4 deg F x h x sq. ft./Btu x in. at 75 deg F (27.7 K x m/W at 24 deg C).
2. Nominal density of 6 lb/cu. ft. (96 kg/cu. m), Type II, thermal resistivity of 4.16 deg F x h x sq. ft./Btu x in. at 75 deg F (28.8 K x m/W at 24 deg C).
3. Nominal density of 8 lb/cu. ft. (128 kg/cu. m), Type III, thermal resistivity of 4.35 deg F x h x sq. ft./Btu x in. at 75 deg F (30.2 K x m/W at 24 deg C).
4. Fiber Color: Darkened, where indicated.

D. Foil-Faced, Mineral-Wool Board Insulation: ASTM C 612; faced on one side with foil-scrim or foil-scrim-polyethylene vapor retarder; with maximum flame-spread and smoke-developed indexes of 25 and 5, respectively, per ASTM E 84.

1. Nominal density of 4 lb/cu. ft. (64 kg/cu. m), Types IA and IB, thermal resistivity of 4 deg F x h x sq. ft./Btu x in. at 75 deg F (27.7 K x m/W at 24 deg C).
2. Nominal density of 6 lb/cu. ft. (96 kg/cu. m), Type II, thermal resistivity of 4.16 deg F x h x sq. ft./Btu x in. at 75 deg F (28.8 K x m/W at 24 deg C).

3. Nominal density of **8 lb/cu. ft.** (128 kg/cu. m), Type III, thermal resistivity of **4.35 deg F x h x sq. ft./Btu x in. at 75 deg F** (30.2 K x m/W at 24 deg C).

2.5 GLASS-FIBER BLANKET INSULATION

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. CertainTeed Corporation.
 2. Guardian Building Products, Inc.
 3. Johns Manville.
 4. Knauf Insulation.
 5. Owens Corning.
 6. **<Insert manufacturer>**
 7. or approved equal.
- B. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert number>** percent.
- C. Unfaced, Glass-Fiber Blanket Insulation: ASTM C 665, Type I; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per ASTM E 84; passing ASTM E 136 for combustion characteristics.
- D. Polypropylene-Scrim-Kraft-Faced, Glass-Fiber Blanket Insulation: ASTM C 665, Type II (non-reflective faced), Class A (faced surface with a flame-spread index of 25 or less); Category 1 (membrane is a vapor barrier).
- E. Kraft-Faced, Glass-Fiber Blanket Insulation: ASTM C 665, Type II (non-reflective faced), Class C (faced surface not rated for flame propagation); Category 1 (membrane is a vapor barrier).
- F. Reinforced-Foil-Faced, Glass-Fiber Blanket Insulation: ASTM C 665, Type III (reflective faced), Class A (faced surface with a flame-spread index of 25 or less); Category 1 (membrane is a vapor barrier), faced with foil scrim, foil-scrim kraft, or foil-scrim polyethylene.
- G. Foil-Faced, Glass-Fiber Blanket Insulation: ASTM C 665, Type III (reflective faced), Class B (faced surface with a flame-propagation resistance of 0.12 W/sq. cm); Category 1 (membrane is a vapor barrier), faced with foil scrim, foil-scrim kraft, or foil-scrim polyethylene.
- H. Eave Ventilation Troughs: Preformed, rigid fiberboard or plastic sheets designed and sized to fit between roof framing members and to provide cross ventilation between insulated attic spaces and vented eaves.
- I. Sustainability Requirements: Provide glass-fiber blanket insulation as follows:
 1. Free of Formaldehyde: Insulation manufactured with 100 percent acrylic binders and no formaldehyde.

2. Low Emitting: Insulation tested according to ASTM D 5116 and shown to emit less than 0.05-ppm formaldehyde.

2.6 MINERAL-WOOL BLANKET INSULATION

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Fibrex Insulations Inc.
 2. Owens Corning.
 3. Roxul Inc.
 4. Thermafiber.
 5. **<Insert manufacturer>**
 6. or approved equal.
- B. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert number>** percent.
- C. Unfaced, Mineral-Wool Blanket Insulation: ASTM C 665, Type I (blankets without membrane facing); consisting of fibers; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per ASTM E 84; passing ASTM E 136 for combustion characteristics.
- D. Reinforced-Foil-Faced, Mineral-Wool Blanket Insulation: ASTM C 665, Type III (reflective faced), Class A (faced surface with a flame-spread index of 25 or less per ASTM E 84); Category 1 (membrane is a vapor barrier), faced with foil scrim, foil-scrim kraft, or foil-scrim polyethylene.

2.7 LOOSE-FILL INSULATION

- A. Cellulosic-Fiber Loose-Fill Insulation: ASTM C 739, chemically treated for flame-resistance, processing, and handling characteristics.
 1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert number>** percent.
- B. Glass-Fiber Loose-Fill Insulation: ASTM C 764, [**Type I for pneumatic application**] [**or**] [**Type II for poured application**]; with maximum flame-spread and smoke-developed indexes of 5, per ASTM E 84.
 1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert number>** percent.

2.8 SPRAY-APPLIED CELLULOSIC INSULATION

- A. Self-Supported, Spray-Applied Cellulosic Insulation: ASTM C 1149, [**Type I (materials applied with liquid adhesive; suitable for either exposed or enclosed applications),**] [**Type II (materials containing a dry adhesive activated by water**

during installation; intended only for enclosed or covered applications),] [Type III (materials containing an adhesive mixed with water during application; intended for application on attic floors),] chemically treated for flame-resistance, processing, and handling characteristics.

1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert number>** percent.

2.9 SPRAY POLYURETHANE FOAM INSULATION

A. Closed-Cell Polyurethane Foam Insulation: ASTM C 1029, Type II, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, per ASTM E 84.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. BASF Corporation.
 - b. BaySystems NorthAmerica, LLC.
 - c. Dow Chemical Company (The).
 - d. ERSystems, Inc.
 - e. Gaco Western Inc.
 - f. Henry Company.
 - g. NCFI; Division of Barnhardt Mfg. Co.
 - h. SWD Urethane Company.
 - i. Volatile Free, Inc.
 - j. **<Insert manufacturer>**
 - k. or approved equal.
2. Minimum density of **1.5 lb/cu. ft.** (24 kg/cu. m), thermal resistivity of **6.2 deg F x h x sq. ft./Btu x in. at 75 deg F** (43 K x m/W at 24 deg C).

B. Open-Cell Polyurethane Foam Insulation: Spray-applied polyurethane foam using water as a blowing agent, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, per ASTM E 84.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. BaySystems NorthAmerica, LLC.
 - b. Demilec (USA) LLC.
 - c. Gaco Western Inc.
 - d. Icynene Inc.
 - e. SWD Urethane Company.
 - f. **<Insert manufacturer>**
 - g. or approved equal.
2. Minimum density of **0.4 lb/cu. ft.** (6.4 kg/cu. m), thermal resistivity of **3.4 deg F x h x sq. ft./Btu x in. at 75 deg F** (24 K x m/W at 24 deg C).

2.10 RADIANT BARRIERS

A. Sheet Radiant Barriers: ASTM C 1313 and as follows:

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Fi-Foil Company; Radiant Shield.
 - b. Innovative Energy, Inc.; R+Heatshield [**Commercial Solid**] [**Perforated**].
 - c. Innovative Insulation, Inc.; Super R [**Premium**] [**Plus**].
 - d. TVM Building Products; Reflective [**House Wrap**] [**Vapor Barrier**].
 - e. **<Insert manufacturer>**
 - f. or approved equal.
2. Sheet Construction: [**Foil on one side of substrate**] [**Foil on both sides of substrate**] [**Vacuum metallizing on substrate**].
3. Surface-Burning Characteristics: Maximum flame-spread and smoke-developed indexes of [**5 and 10**] **<Insert numbers>**, respectively.
4. Tear Resistance: **<Insert value>**.
5. Water-Vapor Transmission: [**1 perm, maximum**] [**5 perms or greater**].
6. Sheet Width: **<Insert width>**.

B. Interior Radiation Control Coating System: Silver-colored, not thickness-dependent, low-emissivity, [**solvent**] [**water**]-based coating; formulated for adherence to substrates indicated and with a surface emittance value of 0.25 or less as measured per ASTM C 1371.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. SOLEC Corporation; LO/MIT-I.
 - b. SOLEC Corporation; LO/MIT-II.
 - c. **<Insert manufacturer>**
 - d. or approved equal.

2.11 VAPOR RETARDERS

A. Polyethylene Vapor Retarders: ASTM D 4397, [**6 mils (0.15 mm)**] [**10 mils (0.25 mm)**] thick, with maximum permeance rating of **0.13 perm** (7.5 ng/Pa x s x sq. m).

B. Reinforced-Polyethylene Vapor Retarders: Two outer layers of polyethylene film laminated to an inner reinforcing layer consisting of either nylon cord or polyester scrim and weighing not less than **25 lb/1000 sq. ft.** (12 kg/100 sq. m), with maximum permeance rating of **0.0507 perm** (2.9 ng/Pa x s x sq. m).

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Raven Industries Inc.; DURA-SKRIM 6WW.
 - b. Reef Industries, Inc.; Griffolyn T-65.
 - c. **<Insert manufacturer>**
 - d. or approved equal.

C. Fire-Retardant, Reinforced-Polyethylene Vapor Retarders: Two outer layers of polyethylene film laminated to an inner reinforcing layer consisting of either nonwoven grid of nylon cord or polyester scrim and weighing not less than **22 lb/1000 sq. ft.** (10 kg/100 sq. m), with maximum permeance rating of **0.1317 perm** (7.56 ng/Pa x s x sq. m) and with flame-spread and smoke-developed indexes of not more than 5 and 60, respectively, per ASTM E 84.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Raven Industries Inc.; DURA-SKRIM 2FR.
 - b. Reef Industries, Inc.; Griffolyn T-55 FR.
 - c. **<Insert manufacturer>**
 - d. or approved equal.

D. Foil-Polyester-Film Vapor Retarders: Two layers of **0.5-mil-** (0.013-mm-) thick polyester film laminated to an inner layer of **1-mil-** (0.025-mm-) thick aluminum foil, with maximum water-vapor transmission rate in flat condition of 0.0 g/h x sq. m and with maximum flame-spread and smoke-developed indexes of 5, per ASTM E 84.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Alumiseal Corporation; Zero Perm Vapor Barrier.
 - b. **<Insert manufacturer>**
 - c. or approved equal.

E. Vapor-Retarder Tape: Pressure-sensitive tape of type recommended by vapor-retarder manufacturer for sealing joints and penetrations in vapor retarder.

F. Vapor-Retarder Fasteners: Pancake-head, self-tapping steel drill screws; with fender washers.

G. Single-Component Nonsag Urethane Sealant: ASTM C 920, Type I, Grade NS, Class 25, Use NT related to exposure, and Use O related to vapor-barrier-related substrates.

H. Adhesive for Vapor Retarders: Product recommended by vapor-retarder manufacturer and has demonstrated capability to bond vapor retarders securely to substrates indicated.

2.12 INSULATION FASTENERS

A. Adhesively Attached, Spindle-Type Anchors: Plate welded to projecting spindle; capable of holding insulation of specified thickness securely in position indicated with self-locking washer in place.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. AGM Industries, Inc.; Series T TACTOO Insul-Hangers.
 - b. Gemco; Spindle Type.
 - c. **<Insert manufacturer>**
 - d. or approved equal.

2. Plate: Perforated, galvanized carbon-steel sheet, **0.030 inch** (0.762 mm) thick by **2 inches** (50 mm) square.
 3. Spindle: Copper-coated, low-carbon steel; fully annealed; **0.105 inch** (2.67 mm) in diameter; length to suit depth of insulation indicated.
- B. Adhesively Attached, Angle-Shaped, Spindle-Type Anchors: Angle welded to projecting spindle; capable of holding insulation of specified thickness securely in position indicated with self-locking washer in place.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Gemco; 90-Degree Insulation Hangers.
 - b. **<Insert manufacturer>**
 - c. or approved equal.
 2. Angle: Formed from **0.030-inch-** (0.762-mm-) thick, perforated, galvanized carbon-steel sheet with each leg **2 inches** (50 mm) square.
 3. Spindle: Copper-coated, low-carbon steel; fully annealed; **0.105 inch** (2.67 mm) in diameter; length to suit depth of insulation indicated.
- C. Insulation-Retaining Washers: Self-locking washers formed from **0.016-inch-** (0.41-mm-) thick galvanized-steel sheet, with beveled edge for increased stiffness, sized as required to hold insulation securely in place, but not less than **1-1/2 inches** (38 mm) square or in diameter.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. AGM Industries, Inc.; **[RC150] [SC150]**.
 - b. Gemco; **[Dome-Cap] [R-150] [S-150]**.
 - c. **<Insert manufacturer's name>**
 - d. or approved equal.
 2. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in the following locations:
 - a. Crawl spaces.
 - b. Ceiling plenums.
 - c. Attic spaces.
 - d. Where indicated.
 - e. **<Insert location>**.
- D. Insulation Standoff: Spacer fabricated from galvanized mild-steel sheet for fitting over spindle of insulation anchor to maintain air space of **[1 inch (25 mm)] [2 inches (50 mm)] [3 inches (76 mm)]** between face of insulation and substrate to which anchor is attached.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Gemco; Clutch Clip.
 - b. **<Insert manufacturer>**

- c. or approved equal.
- E. Anchor Adhesive: Product with demonstrated capability to bond insulation anchors securely to substrates indicated without damaging insulation, fasteners, and substrates.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. AGM Industries, Inc.; TACTOO Adhesive.
 - b. Gemco; Tuff Bond Hanger Adhesive.
 - c. **<Insert manufacturer>**
 - d. or approved equal.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Clean substrates of substances that are harmful to insulation[**or vapor retarders, including removing projections capable of puncturing vapor retarders,**] or that interfere with insulation attachment.

3.2 INSTALLATION, GENERAL

- A. Comply with insulation manufacturer's written instructions applicable to products and applications indicated.
- B. Install insulation that is undamaged, dry, and unsoiled and that has not been left exposed to ice, rain, or snow at any time.
- C. Extend insulation to envelop entire area to be insulated. Cut and fit tightly around obstructions and fill voids with insulation. Remove projections that interfere with placement.
- D. Provide sizes to fit applications indicated and selected from manufacturer's standard thicknesses, widths, and lengths. Apply single layer of insulation units to produce thickness indicated unless multiple layers are otherwise shown or required to make up total thickness.

3.3 INSTALLATION OF BELOW-GRADE INSULATION

- A. On vertical surfaces, set insulation units [**using manufacturer's recommended adhesive**] [**loosely laid**] according to manufacturer's written instructions.
 - 1. If not otherwise indicated, extend insulation a minimum of [**24 inches (610 mm)**] [**36 inches (915 mm)**] **<Insert dimension>** below exterior grade line.
- B. On horizontal surfaces, loosely lay insulation units according to manufacturer's written

instructions. Stagger end joints and tightly abut insulation units.

1. If not otherwise indicated, extend insulation a minimum of **[24 inches (610 mm)] [36 inches (915 mm)]** <Insert dimension> in from exterior walls.

3.4 INSTALLATION OF CAVITY-WALL INSULATION

- A. Foam-Plastic Board Insulation: Install pads of adhesive spaced approximately **24 inches (610 mm)** o.c. both ways on inside face, and as recommended by manufacturer. Fit courses of insulation between wall ties and other obstructions, with edges butted tightly in both directions. Press units firmly against inside substrates.
 1. Supplement adhesive attachment of insulation by securing boards with two-piece wall ties designed for this purpose and specified in Section 042000 "Unit Masonry."
- B. Cellular-Glass Board Insulation: Install with closely fitting joints using **[adhesive pad] [serrated trowel]** attachment method according to manufacturer's written instructions.

3.5 INSTALLATION OF INSULATION FOR FRAMED CONSTRUCTION

- A. Apply insulation units to substrates by method indicated, complying with manufacturer's written instructions. If no specific method is indicated, bond units to substrate with adhesive or use mechanical anchorage to provide permanent placement and support of units.
- B. Foam-Plastic Board Insulation: Seal joints between units by applying adhesive, mastic, or sealant to edges of each unit to form a tight seal as units are shoved into place. Fill voids in completed installation with adhesive, mastic, or sealant as recommended by insulation manufacturer.
- C. Glass-Fiber or Mineral-Wool Blanket Insulation: Install in cavities formed by framing members according to the following requirements:
 1. Use insulation widths and lengths that fill the cavities formed by framing members. If more than one length is required to fill the cavities, provide lengths that will produce a snug fit between ends.
 2. Place insulation in cavities formed by framing members to produce a friction fit between edges of insulation and adjoining framing members.
 3. Maintain **3-inch (76-mm)** clearance of insulation around recessed lighting fixtures not rated for or protected from contact with insulation.
 4. Install eave ventilation troughs between roof framing members in insulated attic spaces at vented eaves.
 5. For metal-framed wall cavities where cavity heights exceed **96 inches (2438 mm)**, support unfaced blankets mechanically and support faced blankets by taping flanges of insulation to flanges of metal studs.
 6. For wood-framed construction, install blankets according to ASTM C 1320 and as follows:

- a. With faced blankets having stapling flanges, secure insulation by inset, stapling flanges to sides of framing members.
 - b. With faced blankets having stapling flanges, lap blanket flange over flange of adjacent blanket to maintain continuity of vapor retarder once finish material is installed over it.
7. Vapor-Retarder-Faced Blankets: Tape joints and ruptures in vapor-retarder facings, and seal each continuous area of insulation to ensure airtight installation.
- a. Exterior Walls: Set units with facing placed toward **[interior of construction] [as indicated on Drawings]**.
 - b. Interior Walls: Set units with facing placed **[toward areas of high humidity] [as indicated on Drawings] <Insert location>**.
- D. Loose-Fill Insulation: Apply according to ASTM C 1015 and manufacturer's written instructions. Level horizontal applications to uniform thickness as indicated, lightly settle to uniform density, but do not compact excessively.
1. For cellulosic-fiber loose-fill insulation, comply with CIMA's Bulletin #2, "Standard Practice for Installing Cellulose Insulation."
- E. Spray-Applied Insulation: Apply spray-applied insulation according to manufacturer's written instructions. Do not apply insulation until installation of pipes, ducts, conduits, wiring, and electrical outlets in walls is completed and windows, electrical boxes, and other items not indicated to receive insulation are masked. After insulation is applied, make flush with face of studs by using method recommended by insulation manufacturer.
- F. Miscellaneous Voids: Install insulation in miscellaneous voids and cavity spaces where required to prevent gaps in insulation using the following materials:
1. Loose-Fill Insulation: Compact to approximately 40 percent of normal maximum volume equaling a density of approximately **2.5 lb/cu. ft.** (40 kg/cu. m).
 2. Spray Polyurethane Insulation: Apply according to manufacturer's written instructions.
- 3.6 INSTALLATION OF INSULATION IN CEILINGS FOR SOUND ATTENUATION
- A. Where glass-fiber blankets are indicated for sound attenuation above ceilings, install blanket insulation over entire ceiling area in thicknesses indicated. Extend insulation **48 inches** (1219 mm) up either side of partitions.
- 3.7 INSTALLATION OF RADIANT BARRIERS
- A. Install interior radiation control coating system according to ASTM C 1321.
 - B. Install sheet radiant barriers according to ASTM C 1158.

3.8 INSTALLATION OF INSULATION FOR CONCRETE SUBSTRATES

- A. Install board insulation on concrete substrates by adhesively attached, spindle-type insulation anchors as follows:
1. Fasten insulation anchors to concrete substrates with insulation anchor adhesive according to anchor manufacturer's written instructions. Space anchors according to insulation manufacturer's written instructions for insulation type, thickness, and application indicated.
 2. Apply insulation standoffs to each spindle to create cavity width indicated between concrete substrate and insulation.
 3. After adhesive has dried, install board insulation by pressing insulation into position over spindles and securing it tightly in place with insulation-retaining washers, taking care not to compress insulation below indicated thickness.
 4. Where insulation will not be covered by other building materials, apply capped washers to tips of spindles.

3.9 INSTALLATION OF CURTAIN-WALL INSULATION

- A. Install board insulation in curtain-wall construction where indicated on Drawings according to curtain-wall manufacturer's written instructions.
1. Hold insulation in place by securing metal clips and straps or integral pockets within window frames, spaced at intervals recommended in writing by insulation manufacturer to hold insulation securely in place without touching spandrel glass. Maintain cavity width of dimension indicated between insulation and glass.
 2. Install insulation where it contacts perimeter fire-containment system to prevent insulation from bowing under pressure from perimeter fire-containment system.

3.10 INSTALLATION OF VAPOR RETARDERS

- A. Place vapor retarders on side of construction indicated on Drawings. Extend vapor retarders to extremities of areas to protect from vapor transmission. Secure vapor retarders in place with adhesives or other anchorage system as indicated. Extend vapor retarders to cover miscellaneous voids in insulated substrates, including those filled with loose-fiber insulation.
- B. Seal vertical joints in vapor retarders over framing by lapping no fewer than two studs.
1. Fasten vapor retarders to wood framing at top, end, and bottom edges; at perimeter of wall openings; and at lap joints. Space fasteners **16 inches** (406 mm) o.c.
 2. Before installing vapor retarders, apply urethane sealant to flanges of metal framing including runner tracks, metal studs, and framing around door and window openings. Seal overlapping joints in vapor retarders with vapor-retarder tape according to vapor-retarder manufacturer's written instructions. Seal butt joints with vapor-retarder tape. Locate all joints over framing members or other solid substrates.

3. Firmly attach vapor retarders to metal framing and solid substrates with vapor-retarder fasteners as recommended by vapor-retarder manufacturer.

- C. Seal joints caused by pipes, conduits, electrical boxes, and similar items penetrating vapor retarders with vapor-retarder tape to create an airtight seal between penetrating objects and vapor retarders.
- D. Repair tears or punctures in vapor retarders immediately before concealment by other work. Cover with vapor-retarder tape or another layer of vapor retarders.

3.11 PROTECTION

- A. Protect installed insulation[**and vapor retarders**] from damage due to harmful weather exposures, physical abuse, and other causes. Provide temporary coverings or enclosures where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

3.12 INSULATION SCHEDULE

- A. Insulation Type <Insert number>: [**Type IV**] <Insert Type> extruded-polystyrene board insulation.
- B. Insulation Type <Insert number>: [**Type VI**] <Insert Type> extruded-polystyrene drainage panels.
- C. Insulation Type <Insert number>: Fabric-faced, extruded-polystyrene drainage panels.
- D. Insulation Type <Insert number>: [**Type I**] <Insert Type> molded-polystyrene board insulation.
- E. Insulation Type <Insert number>: Foil-faced, polyisocyanurate board insulation.
- F. Insulation Type <Insert number>: Cellular-glass insulation.
- G. Insulation Type <Insert number>: Unfaced, flexible glass-fiber board insulation.
- H. Insulation Type <Insert number>: Foil-faced, flexible glass-fiber board insulation.
- I. Insulation Type <Insert number>: Unfaced, glass-fiber board insulation.
- J. Insulation Type <Insert number>: Foil-faced, glass-fiber board insulation.
- K. Insulation Type <Insert number>: Glass-mat-faced, glass-fiber board insulation.
- L. Insulation Type <Insert number>: Unfaced, mineral-wool board insulation.
- M. Insulation Type <Insert number>: Foil-faced, mineral-wool board insulation.

- N. Insulation Type <Insert number>: Unfaced, glass-fiber blanket insulation.
- O. Insulation Type <Insert number>: Faced, glass-fiber blanket insulation.
- P. Insulation Type <Insert number>: Unfaced, mineral-wool blanket insulation.
- Q. Insulation Type <Insert number>: Faced, mineral-wool blanket insulation.
- R. Insulation Type <Insert number>: Cellulosic-fiber loose-fill insulation.
- S. Insulation Type <Insert number>: Glass-fiber loose-fill insulation.
- T. Insulation Type <Insert number>: Spray-applied cellulosic insulation.
- U. Insulation Type <Insert number>: Polyurethane spray foam insulation.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 072100

SECTION 072413 - POLYMER-BASED EXTERIOR INSULATION AND FINISH SYSTEM (EIFS)

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Exterior insulation and finish system (EIFS) applied over **[concrete] [masonry] [exterior cement board] [gypsum sheathing] [plywood sheathing] <Insert substrate>**.
 - 2. Prefabricated panels consisting of EIFS applied over **[exterior cement board] [gypsum sheathing]** on metal framing.
- B. Related Sections:
 - 1. Section 061600 "Sheathing" for sheathing[**and weather-resistant sheathing paper**].
 - 2. Section 079200 "Joint Sealants" for sealing joints in EIFS with elastomeric joint sealants.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 SYSTEM DESCRIPTION

- A. Class PB EIFS: A non-load-bearing, exterior wall cladding system that consists of an insulation board attached adhesively, mechanically, or both to the substrate; an integrally reinforced base coat; and a textured protective finish coat.

1.4 PERFORMANCE REQUIREMENTS

- A. EIFS Performance: Comply with the following:
 - 1. Bond Integrity: Free from bond failure within EIFS components or between system and supporting wall construction, resulting from exposure to fire, wind loads, weather, or other in-service conditions.

2. Weathertightness: Resistant to water penetration from exterior into EIFS and assemblies behind it or through them into interior of building that results in deterioration of thermal-insulating effectiveness or other degradation of EIFS and assemblies behind it, including substrates, supporting wall construction, and interior finish.
- B. Class PB EIFS: Provide EIFS having physical properties and structural performance that comply with the following:
1. Abrasion Resistance: Sample consisting of **1-inch-** (25.4-mm-) thick EIFS mounted on **1/2-inch-** (12.7-mm-) thick gypsum board; cured for a minimum of 28 days; and showing no cracking, checking, or loss of film integrity after exposure to **528 quarts** (500 L) of sand when tested per ASTM D 968, Method A.
 2. Absorption-Freeze Resistance: No visible deleterious effects and negligible weight loss after 60 cycles per EIMA 101.01.
 3. Accelerated Weathering: Five samples per ICC-ES AC219 showing no cracking, checking, crazing, erosion, rusting, blistering, peeling, delamination, or other characteristics that might affect performance as a wall cladding after testing for 2000 hours when viewed under 5 times magnification per **[ASTM G 153 or ASTM G 154] [ASTM G 153 or ASTM G 155] <Insert test method>**.
 4. Freeze-Thaw: No surface changes, cracking, checking, crazing, erosion, rusting, blistering, peeling, or delamination, or indications of delamination between components when viewed under 5 times magnification after **[60 cycles per EIMA 101.01] [10 cycles per ICC-ES AC219]**.
 5. Mildew Resistance of Finish Coat: Sample applied to **2-by-2-inch** (50.8-by-50.8-mm) clean glass substrate, cured for 28 days, and showing no growth when tested per ASTM D 3273 and evaluated according to ASTM D 3274.
 6. Salt-Spray Resistance: No deleterious effects when tested according to ICC-ES AC219.
 7. Tensile Adhesion: No failure in the EIFS, adhesive, base coat, or finish coat when tested per **[EIMA 101.03] [ICC-ES AC219]**.
 8. Water Penetration: Sample consisting of **1-inch-** (25.4-mm-) thick EIFS mounted on **1/2-inch-** (12.7-mm-) thick gypsum board, cured for 28 days, and showing no water penetration into the plane of the base coat to expanded-polystyrene board interface of the test specimen after 15 minutes at **6.24 lbf/sq. ft.** (299 Pa) of air pressure difference or 20 percent of positive design wind pressure, whichever is greater, across the specimen during a test period when tested per EIMA 101.02.
 9. Water Resistance: Three samples, each consisting of **1-inch-** (25.4-mm-) thick EIFS mounted on **1/2-inch-** (12.7-mm-) thick gypsum board; cured for 28 days; and showing no cracking, checking, crazing, erosion, rusting, blistering, peeling, or delamination after testing for 14 days per ASTM D 2247.
 10. Wind-Driven-Rain Resistance: Resist wind-driven rain according to ICC-ES AC219.
 11. Impact Resistance: Sample consisting of **1-inch-** (25.4-mm-) thick EIFS when constructed, conditioned, and tested per EIMA 101.86; and meeting or exceeding the following:
 - a. Standard Impact Resistance: **25 to 49 inch-lb** (2.8 to 5.6 J).

- b. Medium Impact Resistance: **50 to 89 inch-lb** (5.7 to 10.1 J).
 - c. High Impact Resistance: **90 to 150 inch-lb** (10.2 to 17 J).
 - d. Ultra-High Impact Resistance: More than **150 inch-lb** (17 J).
 12. Structural Performance Testing: EIFS assembly and components shall comply with ICC-ES AC219 when tested per ASTM E 330.
 13. **<Insert additional testing to suit products>**.
- C. Performance of Prefabricated Panels: Prefabricated panels shall be designed as follows and withstand the structural performance indicated for Class PB EIFS and thermal movement limits indicated below without failure due to defective manufacture, fabrication, installation, or other defects in construction.
1. Delegated Design: Design prefabricated panels, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
 2. Structural Performance: EIFS shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated according to [**SEI/ASCE 7**] **<Insert requirement>**.
 - a. Wind Loads: Uniform pressure of **<Insert number> lbf/sq. ft.** (**<Insert number> Pa**), acting inward or outward.
 - b. Wind Loads: Uniform pressure as indicated on Drawings.
 3. Deflection Limits: Design prefabricated panels to withstand design loads without deflections greater than [**1/240**] **<Insert deflection limits>**.
 4. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 - a. Temperature Change (Range): [**100 deg F (55 deg C)**] **<Insert temperature range>**.
- 1.5 ACTION SUBMITTALS
- A. Product Data: For each type and component of EIFS indicated.
 1. Include data substantiating that materials comply with requirements.
 - B. LEED Submittals:
 1. Product Data for Credit IEQ 4.1: For adhesives and sealants used inside the weatherproofing system, documentation including printed statement of VOC content.
 2. Laboratory Test Reports for Credit IEQ 4: For adhesives and sealants used inside the weatherproofing system, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- C. Shop Drawings: For EIFS. Include plans, elevations, sections, details of components, details of penetration and termination, flashing details, joint locations and configurations, [**lifting points for prefabricated panels,**] fastening and anchorage details including mechanical fasteners, and connections and attachments to other work.
 - D. Panel Schedule: For prefabricated panel fabrication.
 - E. Samples for Initial Selection: For each type of finish-coat color and texture indicated.
 - 1. Include similar Samples of joint sealants [**and exposed accessories**] involving color selection.
 - F. Samples for Verification: **24-inch-** (600-mm-) square panels for each type of finish-coat color and texture indicated, prepared using same tools and techniques intended for actual work including [**custom trim, each profile,**] [**an aesthetic reveal,**] a typical control joint filled with sealant of color selected.
 - 1. Include sealants [**and exposed accessory**] Samples to verify color selected.
 - G. Delegated-Design Submittal: For prefabricated panels indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- 1.6 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For Installer [, **fabricator/erector,**] [, **professional engineer,**] and testing agency.
 - B. Manufacturer Certificates: Signed by manufacturers certifying that EIFS [**and joint sealants**] comply with requirements.
 - C. Material or Product Certificates: For [**cementitious materials and aggregates and for**] each insulation and joint sealant, from manufacturer.
 - D. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for each [**water-/weather-resistive barrier,**] insulation, reinforcing mesh, [**joint sealant,**] and coating.
 - E. Compatibility and Adhesion Test Reports: For joint sealants from sealant manufacturer indicating the following:
 - 1. Materials forming joint substrates and joint-sealant backings have been tested for compatibility and adhesion with joint sealants.
 - 2. Interpretation of test results and written recommendations for primers and substrate preparation needed for adhesion.
 - F. Field quality-control reports [**and special inspection reports**].

- G. Evaluation Reports: For **[exterior cement-board sheathing] [fasteners] [adhesive membrane flashing]** and EIFS (including insulation), from **<Insert applicable model code organization>**.

1.7 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For EIFS to include in maintenance manuals.

1.8 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.9 QUALITY ASSURANCE

- A. Installer Qualifications: **[An installer who is certified in writing by EIFS manufacturer as qualified to install manufacturer's system using trained workers] <Insert requirements>**.

1. A firm that has specialized in installation of types of EIFS required for Project for not less than five (5) years.
2. Fabricator/Erector Qualifications: Certified in writing by EIFS manufacturer as qualified to fabricate and erect manufacturer's prefabricated panel system using skilled and trained workers.

- B. Source Limitations: Obtain EIFS from single source from single EIFS manufacturer and from sources approved by EIFS manufacturer as compatible with system components.

- C. Fire-Test-Response Characteristics: Provide EIFS and system components with the following fire-test-response characteristics as determined by testing identical EIFS and system components per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify products with appropriate markings of applicable testing agency.

1. Fire-Resistance Characteristics: Provide materials and construction tested for fire resistance per ASTM E 119.
2. Full-Scale Multistory Fire Test: Tested mockup, representative of completed multistory wall assembly of which EIFS is a part, complies with UBC Standard 26-4 for test method and required fire-test-response characteristics of exterior non-load-bearing wall panel assemblies containing foam-plastic insulation.
3. Full-Scale Diversified Fire Test: Tested mockup, representative of completed multistory wall assembly of which EIFS is a part, showing no significant contribution to vertical or horizontal flame spread per ASTM E 108 modified for testing vertical walls.

4. Intermediate-Scale Multistory Fire Test: Tested mockup, representative of completed multistory wall assembly of which EIFS is a part, complies with **[NFPA 285] [UBC Standard 26-9]** for test method and required fire-test-response characteristics of exterior non-load-bearing wall panel assemblies containing foam-plastic insulation.
 5. Radiant Heat Exposure: No ignition of EIFS when tested according to NFPA 268.
 6. Potential Heat: Acceptable level when tested according to NFPA 259.
 7. Surface-Burning Characteristics: Provide insulation board, adhesives, base coats, and finish coats with flame-spread index of 25 or less and smoke-developed index of 450 or less, per **[ASTM E 84] [UBC Standard 8-1] <Insert test method>**.
- D. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution and set quality standards for fabrication and installation.
1. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- E. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]**
- F. **<Insert location>**.
- 1.10 DELIVERY, STORAGE, AND HANDLING
- A. Deliver materials in original, unopened packages with manufacturers' labels intact and clearly identifying products.
 - B. Store materials inside and under cover; keep them dry and protected from weather, direct sunlight, surface contamination, aging, corrosion, damaging temperatures, construction traffic, and other causes.
 1. Stack insulation board flat and off the ground.
 2. Protect plastic insulation against ignition at all times. Do not deliver plastic insulating materials to Project site before installation time.
 3. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.
- 1.11 PROJECT CONDITIONS
- A. Weather Limitations: Maintain ambient temperatures above **40 deg F (4.4 deg C)** for a minimum of 24 hours before, during, and after adhesives or coatings are applied. Do not apply EIFS adhesives or coatings during rainfall. Proceed with installation only when existing and forecasted weather conditions and ambient outdoor air, humidity, and substrate temperatures permit EIFS to be applied, dried, and cured according to manufacturers' written instructions and warranty requirements.

- B. Field Measurements: Verify actual dimensions required for prefabricated panels by field measurements before fabrication.

1.12 COORDINATION

- A. Coordinate installation of EIFS with related Work specified in other Sections to ensure that wall assemblies, including sheathing, [**weather-resistant sheathing paper,**] flashing, trim, joint sealants, windows, and doors, are protected against damage from the effects of weather, age, corrosion, moisture, and other causes. Do not allow water to penetrate behind flashing and barrier coating of EIFS.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Acrocrete, Inc.
 2. Corev America, Inc.
 3. Dryvit Systems, Inc.
 4. El Rey Stucco Company, Inc.; a brand of ParexLahabra, Inc.
 5. Finestone; Degussa Wall Systems, Inc.
 6. Master Wall, Inc.
 7. Omega Products International, Inc.
 8. Parex, Inc.; a brand of ParexLahabra, Inc.
 9. Pleko LLC.
 10. Senergy; Degussa Wall Systems, Inc.
 11. SonoWall; Degussa Wall Systems, Inc.
 12. Sto Corp.
 13. Stuc-O-Flex International, Inc.
 14. TEC; an H. B. Fuller company.
 15. Total Wall Inc.
 16. **<Insert manufacturer's name>**.
 17. or approved equal.

2.2 MATERIALS

- A. Compatibility: Provide adhesive, fasteners, board insulation, reinforcing meshes, base-and finish-coat systems, sealants, and accessories that are compatible with one another and with substrates and approved for use by EIFS manufacturer for Project.
- B. Prefabricated Panels: Comply with requirements in Section 054000 "Cold-Formed Metal Framing" for metal framing and with requirements in Section 061600 "Sheathing" for **[gypsum sheathing] [and] [weather-resistant sheathing paper]**.
- C. Exterior Cement Board: Not less than **[5/16-inch- (8-mm-)] [7/16-inch- (11-mm-)]** **<Insert dimension>** thick, fiber cement board complying with ASTM C 1186, Type A, for exterior applications.
1. Fasteners: Wafer-head or flat-head steel drill screws complying with ASTM C 954, with an organic-polymer coating or other corrosion-protective coating having a salt-spray resistance of more than 500 hours per ASTM B 117.
 - a. Size and Length: **[As recommended by sheathing manufacturer for type and thickness of sheathing board to be attached] <Insert size and length>**.
- D. Primer/Sealer: EIFS manufacturer's standard substrate conditioner **[with VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24),] [that complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers,"]** designed to seal substrates from moisture penetration and to improve the bond between substrate of type indicated and adhesive used for application of insulation.
- E. Flexible-Membrane Flashing: Cold-applied, fully self-adhering, self-healing, rubberized-asphalt and polyethylene-film composite sheet or tape and primer; EIFS manufacturer's standard or product recommended in writing by EIFS manufacturer.
- F. Insulation Adhesive: EIFS manufacturer's standard formulation designed for indicated use; compatible with substrate; **[with VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24);] [that complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers";]** and complying with **[one of]** the following:
1. Job-mixed formulation of Portland cement complying with ASTM C 150, Type I, and polymer-based adhesive specified for base coat.
 2. Factory-blended dry formulation of Portland cement, dry polymer admixture, and fillers specified for base coat.
 3. Factory-mixed noncementitious formulation designed for adhesive attachment of insulation to substrates of type indicated, as recommended by EIFS manufacturer.

- G. Molded, Rigid Cellular Polystyrene Board Insulation: Comply with ASTM C 578, Type I; EIFS manufacturer's requirements; and EIMA's "EIMA Guideline Specification for Expanded Polystyrene (EPS) Insulation Board" for most stringent requirements for material performance and qualities of insulation, including dimensions and permissible variations, and the following:
1. Aging: Before cutting and shipping, age insulation in block form by air drying for not less than six weeks or by another method approved by EIMA that produces equivalent results.
 2. Flame-Spread and Smoke-Developed Indexes: 25 and 450 or less, respectively, per ASTM E 84.
 3. Dimensions: Provide insulation boards not more than **24 by 48 inches** (610 by 1219 mm) and in thickness indicated, but not more than **4 inches** (102 mm) thick or less than thickness allowed by ASTM C 1397.
 4. Foam Shapes: Provide with profiles and dimensions indicated on Drawings.
- H. Reinforcing Mesh: Balanced, alkali-resistant, open-weave, glass-fiber mesh treated for compatibility with other EIFS materials, made from continuous multiend strands with retained mesh tensile strength of not less than **120 lbf/in.** (21 dN/cm) per **[ASTM E 2098] [EIMA 105.01]**; complying with ASTM D 578 and the following:
1. Standard-Impact Reinforcing Mesh: Not less than **[4.0 oz./sq. yd. (136 g/sq. m)] <Insert weight>**.
 2. Intermediate-Impact Reinforcing Mesh: Not less than **[10 oz./sq. yd. (339 g/sq. m)] [12.0 oz./sq. yd. (407 g/sq. m)] <Insert weight>**.
 3. High-Impact Reinforcing Mesh: Not less than **[15 oz./sq. yd. (509 g/sq. m)] <Insert weight>**.
 4. Heavy-Duty Reinforcing Mesh: Not less than **[20 oz./sq. yd. (678 g/sq. m)] <Insert weight>**.
 5. Strip Reinforcing Mesh: Not less than **[3.75 oz./sq. yd. (127 g/sq. m)] <Insert weight>**.
 6. Detail Reinforcing Mesh: Not less than **[4.0 oz./sq. yd. (136 g/sq. m)] <Insert weight>**.
 7. Corner Reinforcing Mesh: Not less than **[7.2 oz./sq. yd. (244 g/sq. m)] <Insert weight>**.
- I. Base-Coat Materials: EIFS manufacturer's standard mixture complying with **[one of]** the following:
1. Job-mixed formulation of Portland cement complying with ASTM C 150, Type I, white or natural color; and manufacturer's standard polymer-emulsion adhesive designed for use with Portland cement.
 2. Job-combined formulation of manufacturer's standard polymer-emulsion adhesive and manufacturer's standard dry mix containing Portland cement.
 3. Factory-blended dry formulation of Portland cement, dry polymer admixture, and inert fillers to which only water is added at Project site.
 4. Factory-mixed noncementitious formulation of polymer-emulsion adhesive and inert fillers that is ready to use without adding other materials.

- J. Waterproof Adhesive/Base-Coat Materials: EIFS manufacturer's standard waterproof formulation[**with VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24);**] [**that complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers";**] and complying with[**one of**] the following:
1. Job-mixed formulation of Portland cement complying with ASTM C 150, Type I, white or natural color; and manufacturer's standard polymer-emulsion adhesive designed for use with Portland cement.
 2. Job-combined formulation of manufacturer's standard polymer-emulsion adhesive and manufacturer's standard dry mix containing Portland cement.
- K. Primer: EIFS manufacturer's standard factory-mixed, elastomeric-polymer primer for preparing base-coat surface for application of finish coat.
- L. Finish-Coat Materials: EIFS manufacturer's [**standard acrylic-based coating**] [**standard acrylic-based coating with enhanced mildew resistance**] [**siliconized acrylic-based coating**] <Insert coating> complying with the following:
1. Factory-mixed formulation of polymer-emulsion binder, colorfast mineral pigments, sound stone particles, and fillers.
 2. Factory-mixed formulation of polymer-emulsion binder, colorfast mineral pigments, and fillers used with stone particles for embedding in finish coat to produce an applied-aggregate finish.
 - a. Aggregate: Marble chips of size and color [**as indicated by manufacturer's designations**] [**to match DEN Project Manager's samples**] [**as selected by DEN Project Manager from manufacturer's full range**].
 3. Sealer: Manufacturer's waterproof, clear acrylic-based sealer for protecting finish coat.
 4. Colors: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**].
- M. Water: Potable.
- N. Mechanical Fasteners: EIFS manufacturer's standard corrosion-resistant fasteners consisting of thermal cap, standard washer and shaft attachments, and fastener indicated below; selected for properties of pullout, tensile, and shear strength required to resist design loads of application indicated; capable of pulling fastener head below surface of insulation board; and of the following description:
1. For attachment to steel studs from **0.033 to 0.112 inch** (0.84 to 2.84 mm) in thickness, provide steel drill screws complying with ASTM C 954.
 2. For attachment to light-gage steel framing members not less than **0.0179 inch** (0.45 mm) in thickness, provide steel drill screws complying with ASTM C 1002.

3. For attachment to wood framing members and plywood sheathing, provide steel drill screws complying with ASTM C 1002, Type W.
 4. For attachment to masonry and concrete substrates, provide sheathing dowel in form of a plastic wing-tipped fastener with thermal cap, sized to fit insulation thickness indicated and to penetrate substrate to depth required to secure anchorage.
 5. For attachment, provide manufacturer's standard fasteners suitable for substrate.
 6. **<Insert fastener requirements>**.
- O. Trim Accessories: Type as designated or required to suit conditions indicated and to comply with EIFS manufacturer's written instructions; manufactured from UV-stabilized PVC; and complying with ASTM D 1784, manufacturer's standard Cell Class for use intended, and ASTM C 1063.
1. Casing Bead: Prefabricated, one-piece type for attachment behind insulation, of depth required to suit thickness of coating and insulation, with face leg perforated for bonding to coating and back leg.
 2. Drip Screed/Track: Prefabricated, one-piece type for attachment behind insulation with face leg extended to form a drip, of depth required to suit thickness of coating and insulation, with face leg perforated for bonding to coating and back leg.
 3. Expansion Joint: Prefabricated, one-piece V profile; designed to relieve stress of movement.
 4. Window Sill Flashing: Prefabricated type for both flashing and sloping sill over framing beneath windows; with end and back dams; designed to direct water to exterior.
 5. Parapet Cap Flashing: Type for both flashing and covering parapet top[**with design complying with ASTM C 1397**].
 6. **<Insert trim and requirements>**.

2.3 ELASTOMERIC SEALANTS

- A. Elastomeric Sealant Products: Provide EIFS manufacturer's listed and recommended chemically curing, elastomeric sealant that is compatible with joint fillers, joint substrates, and other related materials, and complies with requirements for products and testing indicated in ASTM C 1481 and with requirements in Section 079200 "Joint Sealants" for products corresponding to description indicated below:
1. Multicomponent, nonsag urethane sealant.
 2. Single-component, nonsag, neutral-curing silicone sealant.
 3. **<Insert sealant>**.
 4. Sealants used inside the weatherproofing system shall have a VOC content of **[250] <Insert value>** g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 5. Sealants used inside the weatherproofing system shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- B. Preformed Foam Sealant Products: Provide sealant compatible with adjacent materials and complying with requirements in Section 079200 "Joint Sealants."
- C. Sealant Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range].**

2.4 MIXING

- A. General: Comply with EIFS manufacturer's requirements for combining and mixing materials. Do not introduce admixtures, water, or other materials except as recommended by EIFS manufacturer. Mix materials in clean containers. Use materials within time period specified by EIFS manufacturer or discard.

2.5 PANEL FABRICATION

- A. Panel Framing: Fabricate panel framing to comply with requirements in Section 054000 "Cold-Formed Metal Framing."
 - 1. Connect panel framing by welding unless otherwise indicated.
 - 2. Connections: Provide connections capable of adjustment, complying with erection tolerance requirements, to anchor panels to structure.
- B. Exterior Cement Board: Install on metal framing to comply with requirements in "Exterior Cement-Board Installation" Article.
- C. EIFS Application: Apply EIFS to sheathed metal-framed panels to comply with requirements in "Trim Installation," "Insulation Installation," "Base-Coat Installation," and "Finish-Coat Installation" articles and as follows:
 - 1. Wrap base coat and reinforcing mesh at edges of panels and extend coverage not less than **4 inches** (100 mm) over backs of panels unless otherwise indicated.
 - 2. Wrap base coat and reinforcing mesh at edges of panels and extend coverage not less than full thickness to cover edges of metal framing unless otherwise indicated.
 - 3. Continue finish coat around corners at edges of panels, unless otherwise indicated, and extend to location indicated for sealant application. Do not extend finish coat over surfaces where sealant will be applied.
 - 4. Continue finish coat around corners at edges of panels and extend over edges to cover base coat unless otherwise indicated.
- D. Panel Fabrication Tolerances: Comply with the following:
 - 1. Overall Height and Width: Plus or minus **[1/8 inch (3.2 mm)] <Insert dimension>**.
 - 2. Cumulative Height and Width over Length of Building: Not more than **[3/8 inch (9.6 mm)] <Insert value>**.

3. Openings within One Unit: Plus or minus [**1/8 inch (3.2 mm)**] <Insert dimension> for window and doorframes.
 4. Out of Square: Plus or minus [**1/8 inch (3.2 mm)**] <Insert dimension>.
 5. Locations of Reveals and Architectural Features: Plus or minus [**1/8 inch (3.2 mm)**] <Insert dimension>.
 6. Thickness: Plus or minus [**1/16 inch (1.6 mm)**] <Insert dimension>.
 7. Flatness: Not more than [**1/8 inch in 8 feet (3.2 mm in 2.4 m)**] <Insert dimension> across face of panel.
- E. Source Quality Control: [**Owner will engage**] [**Engage**] a qualified testing agency to perform shop tests and inspections indicated below and prepare test reports.
1. Shop welds will be subject to testing and inspection.
 2. <Insert requirements>.
 3. Testing and inspecting agency shall interpret tests and report whether tested Work complies with or deviates from requirements.
 4. Correct deficiencies in or replace EIFS prefabricated panels that test reports and inspections indicated do not comply with requirements.
 5. Additional testing and inspection, at Contractor's expense, shall be performed to determine compliance of corrected Work with requirements.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of EIFS.
- B. Examine roof edges, wall framing, flashings, openings, substrates, and junctures at other construction for suitable conditions where EIFS will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.
 1. Begin coating application only after surfaces are dry.
 2. Application of coating indicates acceptance of surfaces and conditions.

3.2 PREPARATION

- A. Protect contiguous work from moisture deterioration and soiling caused by application of EIFS. Provide temporary covering and other protection needed to prevent spattering of exterior finish coats on other work.
- B. Protect EIFS, substrates, and wall construction behind them from inclement weather during installation. Prevent penetration of moisture behind EIFS and deterioration of substrates.

- C. Prepare and clean substrates to comply with EIFS manufacturer's written instructions to obtain optimum bond between substrate and adhesive for insulation.
 - 1. Concrete Substrates: Provide clean, dry, neutral-pH substrate for insulation installation. Verify suitability of substrate by performing bond and moisture tests recommended by EIFS manufacturer.

3.3 EXTERIOR CEMENT-BOARD INSTALLATION

- A. Exterior Cement Board: Install on metal framing to comply with cement-board manufacturer's written instructions and evaluation report acceptable to authorities having jurisdiction. Install board with steel drill screws spaced no more than **[8 inches (203 mm)] <Insert spacing>** o.c. along framing with perimeter fasteners at least **3/8 inch (9.6 mm)** but less than **5/8 inch (15.9 mm)** from edges of boards.

3.4 EIFS INSTALLATION, GENERAL

- A. Comply with ASTM C 1397 and EIFS manufacturer's written instructions for installation of EIFS as applicable to each type of substrate indicated.
- B. Install EIFS system as per approved shop drawings and in strict compliance with manufacturer's details approved for type of system, including type of products, and sequence and methods of installation.
