 - e. Vaporproof Lighting Fixtures: [**Incandescent fixture with 100-W lamp**] **<Insert requirements>**.
 - 1) Control: Neon pilot light and toggle switch located on exterior of door panel.
 - 2) Quantity: [**One per compartment, located on door panel**] **<Insert quantity>**.
 - f. Refrigeration System: [**Self-contained, mounted on unit**] [**Remote system with preassembled condensing unit and evaporator assemblies**] **<Insert requirements or manufacturer's refrigeration assembly designation>**.
 - 1) Exterior Condensing Units: Include winter control, crankcase heater, and enclosed weatherproof housing.
 - 2) Operating Temperature: **<Insert value(s)>**.
 - g. Temperature Monitoring System: [**Electronic monitoring and remote audible alarm system that warns when temperatures register 10 deg F (6 deg C) above or below set temperature**] **<Insert requirements>**.
 - h. Closure Panels and Trim: [**Include closure panels and trim**] **<Insert requirements>**.
 - i. Electrical Service: Equip unit for connection to [**service indicated on Drawings**] **<Insert requirements>**.
3. Finishes:
- a. Exposed Exterior Finish: [**Stucco-patterned aluminum**] [**Smooth, mill-finished aluminum**] [**White-painted aluminum**] **<Insert requirements>**.
 - b. Unexposed Exterior Finish: [**Stucco-patterned, metallic-coated steel**] **<Insert requirements>**.
 - c. Interior Finish: [**Stucco-patterned aluminum**] [**Smooth, mill-finished aluminum**] [**White-painted aluminum**] **<Insert requirements>**.
 - d. Closure Panels and Trim: [**Matched to exposed exterior finish of panels**] **<Insert requirements>**.

2.11 POWERED FOOD-PREPARATION EQUIPMENT

A. **[Mixers] [Slicers] [Meat Saws] [Peelers] <Insert description>: <Insert drawing designation>.**

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert manufacturer's name; product name or designation>.**
 - b. or approved equal.
2. Description: **<Insert requirements>.**
3. Accessories: **<Insert accessories>.**
4. Electrical Service: Equip unit with plug and cord for **[service indicated on Drawings] <Insert requirements>.**

2.12 WAREWASHING EQUIPMENT

A. Warewashing Machines: **<Insert drawing designation>.**

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert manufacturer's name; product name or designation>.**
 - b. or approved equal.
2. Description: **[Dishwashing, single tank] [Dishwashing, double tank] [Dishwashing, rackless conveyor] [Dishwashing, with circular conveyor table] [Pot and pan washing, two racks] [Pot and pan washing, one rack] <Insert description>.**
 - a. Capacity: **<Insert requirements>.**
 - b. Accessories: **<Insert accessories>.**
 - c. Electrical Service: Equip unit for connection to **[service indicated on Drawings] <Insert requirements>.**

2.13 SERVING EQUIPMENT

A. Modular Counters: **<Insert drawing designation>.**

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert manufacturer's name; product name or designation>.**
 - b. or approved equal.
2. Description: **[Hot food] [Refrigerated salad] [Ice-cooled salad] [Sliding-glass door refrigerated] [Frost-top] [Sandwich] [Pizza] [Refrigerated-chest] [Dual-temperature] [Tray-starter] [Storage] [Cashier] <Insert description> module.**
 - a. Cabinet Face Panels: **[Manufacturer's standard] <Insert requirements>.**

- b. Accessories:
 - 1) Tray slide.
 - 2) Work shelf.
 - 3) Casters.
 - 4) Electrical receptacle.
 - 5) Cam-action latch locks with trigger release to mate with adjoining modular counters.
 - 6) Tempered-glass, food-protector shield.
 - 7) **<Insert requirements>**.
- c. Electrical Service: Equip unit for connection to **[service indicated on Drawings] <Insert requirements>**.
- d. Color: **[As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.

2.14 UTILITY DISTRIBUTION SYSTEMS

A. Utility Distribution Systems: **<Insert drawing designation>**.

- 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert manufacturer's name; product name or designation>**.
 - b. or approved equal.
- 2. Description: **[Overhead] [Counter] [Island] [Tray-slide] [Steam] [Wall-mounted]** system.
- 3. Accessories: **<Insert accessories>**.

2.15 MISCELLANEOUS MATERIALS

A. Installation Accessories, General: NSF certified for end-use application indicated.

B. Elastomeric Joint Sealant: ASTM C 920; **[silicone] [urethane]**. Type S (single component), Grade NS (nonsag), Class 25, Use NT (nontraffic) related to exposure, and Use M, G, A, or O as applicable to joint substrates indicated.

- 1. Public Health and Safety Requirements:
 - a. Sealant is certified for compliance with NSF standards for end-use application indicated.
 - b. Washed and cured sealant complies with the FDA's regulations for use in areas that come in contact with food.
- 2. Cylindrical Sealant Backing: ASTM C 1330, Type C, closed-cell polyethylene, in diameter greater than joint width.

C. Cabinet Hardware: Provide NSF-certified, stainless-steel hardware for equipment items as indicated.

- D. Casters: NSF-certified, standard-duty, stainless-steel, swivel stem casters with 5-inch-diameter wheels, polyurethane tires with 1-inch tread width, and 200-lb load capacity per caster. Provide brakes on 2 casters per unit.

2.16 FINISHES

A. Stainless-Steel Finishes:

1. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
2. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - a. Run grain of directional finishes with long dimension of each piece.
 - b. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

- ### B. Powder-Coat Finishes: Immediately after cleaning and pretreating, electrostatically apply manufacturer's standard, baked-polymer, thermosetting powder finish. Comply with resin manufacturer's written instructions for application, baking, and minimum dry film thickness.

PART 3 - EXECUTION

3.1 DELIVERY, STORAGE, AND HANDLING

- A. Deliver food service equipment as factory-assembled units with protective crating and covering.
- B. Store food service equipment in original protective crating and covering and in a dry location.

3.2 PROJECT CONDITIONS

- A. Field Measurements: Verify dimensions of food service equipment installation areas by field measurements before equipment fabrication and indicate measurements on Shop Drawings and Coordination Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
- B. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish required dimensions and proceed with fabricating equipment without field measurements. Coordinate construction to ensure actual dimensions correspond to established dimensions.
 1. Contractor shall be responsible for equipment fitting properly into designated spaces, and shall be responsible for all corrections to ensure correct fit of equipment.

3.3 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances, service-utility connections, and other conditions affecting installation and performance of food service equipment. Do not proceed with installation until unsatisfactory conditions have been corrected.
- B. Examine roughing-in for piping, mechanical, and electrical systems to verify actual locations of connections before installation.

3.4 INSTALLATION

- A. Install foodservice equipment level and plumb, according to manufacturer's written instructions.
 - 1. Connect equipment to utilities.
 - 2. Provide cutouts in equipment, neatly formed, where required to run service lines through equipment to make final connections.
- B. Complete equipment assembly where field assembly is required.
 - 1. Provide closed butt and contact joints that do not require a filler.
 - 2. Grind field welds on stainless-steel equipment until smooth and polish to match adjacent finish.
- C. Install equipment with access and maintenance clearances that comply with manufacturer's written installation instructions and with requirements of authorities having jurisdiction.
- D. Install cabinets and similar equipment on bases in a bed of sealant.
- E. Install closure-trim strips and similar items requiring fasteners in a bed of sealant.
- F. Install joint sealant in joints between equipment and abutting surfaces with continuous joint backing unless otherwise indicated. Produce airtight, watertight, vermin-proof, sanitary joints.
- G. Install hoods to comply with NFPA 96 requirements and to remain free from vibration when operating.
- H. Install seismic restraints according to referenced SMACNA standard.
- I. Install trim strips and similar items requiring fasteners in a bed of sealant. Fasten with stainless-steel fasteners at 48 inches o.c. maximum.
- J. Except for mobile and adjustable-leg equipment, securely anchor and attach items and accessories to walls, floors, or bases with stainless-steel fasteners, unless otherwise indicated.

3.5 CLEANING AND PROTECTING

- A. After completing installation of equipment, repair damaged finishes.
- B. Clean and adjust equipment as required to produce ready-for-use condition.
- C. Protect equipment from damage during remainder of the construction period.
 - 1. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer that ensure food service equipment is without damage or deterioration at the time of Substantial Completion.

3.6 COMMISSIONING

- A. Startup Services: Engage factory-authorized service representatives to perform startup services and to demonstrate and train Owner's maintenance personnel as specified below.
 - 1. Schedule commissioning and training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.
 - 2. Coordinate food service equipment startup with service-utility testing, balancing, and adjustments. Do not operate steam lines before they have been cleaned and sanitized.
 - 3. Remove protective coverings and clean and sanitize equipment, both inside and out, and relamp equipment with integral lighting. Where applicable, comply with manufacturer's written cleaning instructions.
 - 4. Test each equipment item for proper operation. Repair or replace equipment that is defective in operation, including units that operate below required capacity or that operate with excessive noise or vibration.
 - 5. Test refrigeration equipment's ability to maintain specified operating temperature under heavy-use conditions. Repair or replace equipment that does not maintain specified operating temperature.
 - 6. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - 7. Test motors and rotating equipment for proper rotation and lubricate moving parts according to manufacturer's written instructions.
 - 8. Test water, drain, gas, steam, oil, refrigerant, and liquid-carrying components for leaks. Repair or replace leaking components.
 - 9. Train Owner's maintenance personnel on procedures and schedules related to startup and shutdown, troubleshooting, servicing, and preventive maintenance for each food service equipment item.
 - 10. Review data in the operation and maintenance manuals. Refer to Section 017720 "Contract Closeout."
 - 11. Review data in the operation and maintenance manuals. Refer to Division 01 Section "Operation and Maintenance Data."

3.7 FOOD SERVICE EQUIPMENT SCHEDULE

- A. Item [#] - Compartment Sink: Where items of this designation are indicated, provide products complying with the following:
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Product name and model; MFR'S name.>**
 - b. or approved equal.
 2. Accessories: **<Insert accessories required. Compartment sinks are not supplied with faucets unless specified. Wastes may also need to be specified. These components may also be specified as separate items.>**
 3. Preparation Requirements: **<Insert preparation requirements for equipment installed on decks or backsplashes, such as disposal units or faucets>**
- B. Item [#] - Portable Hot-Food Counter: Where items of this designation are indicated, provide products complying with the following:
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Product name and model; MFR'S name.>**
 - b. or approved equal.
 2. Cabinet Face Panels: **[Manufacturer's standard, in color selected by DEN Project Manager from manufacturer's full range of colors.] <Revise description or delete and insert other requirements to suit Project>**
 3. Accessories: **[Tray slide.] [Work shelf.] [Casters.] [Electrical receptacle.] [Cam-action latch locks with trigger release to mate with adjoining portable counters.] [Tempered-glass sneeze shield.] <Retain applicable accessories for products listed and insert others to suit Project>**
- C. Item [#] - Walk-in Cooler: Where items of this designation are indicated, provide products complying with the following:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. **<MFR'S name.>**
 - b. or approved equal.
 2. Wall and Ceiling Panels: **[Manufacturer's standard 4-inch- thick insulated panels for configuration indicated.] <Revise description or delete and insert other requirements to suit Project>**
 3. Floor Panels: **[Manufacturer's standard 4-inch- thick insulated panels for configuration indicated.] <Revise description to suit Project or delete if no floor panels>**
 4. Floor Screed: **[Manufacturer's standard insulated floor screed.] <Revise description to suit Project or delete if floor panels are required>**
 5. Door Panel: **[Manufacturer's standard 4-inch- thick, insulated door panel]**

- assembly with door in width and hand indicated.] <Revise description or delete and insert other requirements to suit Project. Indicate door size on drawings or by insert. Insert requirements for options such as vision ports.>**
- a. Hinges: **[Manufacturer's standard; 2 per door.] [Self-closing, spring-loaded hinges; 3 per door.] <Retain applicable requirement and delete other or revise to suit Project>**
 - b. Door Latch: **[Manufacturer's standard edge-mounted, positive-type latch with cylinder lock. Include safety-release handle to permit opening from inside when locked.] <Revise description or delete and insert other requirements to suit Project. Handles with cylinder locks but without positive latching are available.>**
6. Exposed Exterior Finish: **[Stucco-patterned aluminum.] [Smooth, mill-finished aluminum.] [White-painted aluminum.] <Retain applicable requirement or revise to suit Project>**
7. Unexposed Exterior Finish: **[Stucco-patterned galvanized steel.] <Revise description or delete and insert other requirements to suit Project>**
8. Interior Finish: **[Stucco-patterned aluminum.] [Smooth, mill-finished aluminum.] [White-painted aluminum.] <Retain applicable requirement or revise to suit Project>**
9. Vaporproof Lighting Fixtures: **[Manufacturer's standard fixture with lamp.]**
- a. **<Revise description to suit Project>**
 - b. Quantity: **[One, located on door panel.] [2; 1 located on door panel and 1 located as indicated.] [3; 1 located on door panel and 2 located as indicated.]**
 - c. **<Retain applicable requirement and delete others or revise to suit Project. MFRS generally provide one fixture on door panel as standard. Additional fixtures must be specified and are field installed.>**
10. Refrigeration System: **[Manufacturer's standard self-contained unit mounted on cooler and sized to maintain operating temperature indicated in cooler under heavy-use conditions.] [Manufacturer's standard remote system sized to maintain operating temperature indicated in cooler under heavy-use conditions and consisting of preassembled condensing unit and evaporator assemblies.] [For condensing unit located on exterior, provide winter control, crankcase heater, and enclosed weatherproof housing.]**
- a. **<Retain applicable requirements and delete others or revise to suit Project. Insert MFR'S assembly designation if applicable. If remote system is required, refrigeration piping between assemblies, and other accessories or components are field installed and must be specified separately. Verify requirements with MFRS.>**
 - b. Operating Temperature: **[35 deg F.] <Revise operating temperature indicated to suit Project.>**
11. Temperature Monitoring System: **[Electronic monitoring and remote audible**

alarm system that warns of temperatures that exceed 10 deg F above or below set temperature.] <Revise description or delete and insert other requirements to suit Project.>

12. Closure Panels and Trim: **[Match exposed exterior finish of panels.] <Revise description to suit Project>**
13. Accessories: **<Insert accessories required.>**

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 114000

SECTION 118226 - FACILITY WASTE COMPACTORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes waste compactors[**and diverters**], component fittings, and accessories.
- B. Related Sections:
 - 1. Section 114000 "Foodservice Equipment" for food-waste shredding, pulping, grinding, and compacting machines in foodservice facilities.
 - 2. Section 149100 "Facility Chutes" for trash chutes servicing waste compactors.
 - 3. Section 211100 "Facility Fire-Suppression Water-Service Piping" for fire-suppression water-service connections to automatic sprinkler in hopper of each chute-fed compactor.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. General: See the "WASTEC 2007 Listing of Rated Stationary Compactors" for detailed definitions of waste-compactor terminology.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, furnished specialties and accessories, and finishes.
 - 1. Unit dimensions.
 - 2. Installed and operating weights.
 - 3. Furnished specialties and accessories.
 - 4. WASTEC rating and normal and maximum system pressures.
 - 5. Packing force and force ratings.
 - 6. Wiring Diagrams: Detail wiring for power and control systems. Differentiate between manufacturer-installed and field-installed wiring.
 - 7. Certified test reports on operation.

8. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For each installation and for special components not dimensioned or detailed in manufacturer's product data. Include plans, elevations, sections, details, and attachments to other work.
1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 2. Dimensions locating chutes that interface with waste compactors.
 3. Location and installation details of automatic sprinkler in hopper of each chute-fed compactor.
 4. Equipment access points and required space for equipment service and operation.
 5. Setting drawings, templates, and instructions for installing anchor bolts and other anchorages.
 6. Wiring Diagrams: For power, signal, and control wiring.
- C. Coordination Drawings: Drawn to scale and coordinating compactor installation. Show the following:
1. Roughing-in dimensions, service connection details, and locations of field connections.
 2. Required clearances for equipment service and operation.
 3. Setting drawings, templates, and directions for installing anchor bolts and other anchorages.
- 1.5 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For qualified Installer.
 - B. Product Certificates: For each type of waste compactor, from manufacturer.
 - C. Field quality-control reports.
- 1.6 CLOSEOUT SUBMITTALS
- A. Operation and Maintenance Data: For waste compactors to include in operation and maintenance manuals specified in Division 01. Include the following:
 1. Operating and maintenance instructions.
 2. Parts inventory list.
 3. Purchase source for operating and maintenance materials.
 4. Emergency information.
 5. Name, address, and telephone number of manufacturer's service representative whose location is nearest to Project site.
 - B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300

"Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation and maintenance of units required for this Project.
 - 1. Maintenance Proximity: Not more than **[one] [two] <Insert number>** hour(s') normal travel time from Installer's place of business to Project site.
- B. Manufacturer Qualifications: A firm experienced in manufacturing waste compactors similar to those indicated for this Project and with a record of successful in-service performance.
- C. Product Options: Drawings indicate performance, service-connection, and dimensional requirements of waste compactors and are based on the specific equipment indicated **[in Part 2] [on Drawings]**.
- D. Equipment of other manufacturers **[listed in Part 2]** that meets performance requirements might be considered if the equipment is compatible with service-connection locations, dimensions, and clearance requirements indicated.
- E. **[Refer to Division 01 Section "Substitutions."]**
- F. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- G. Waste Compactor Standards: Comply with ANSI Z245.2, "Equipment Technology and Operations for Wastes and Recyclable Materials--Stationary Compactors--Safety Requirements," and NFPA 82, "Incinerators and Waste and Linen Handling Systems and Equipment."
- H. Waste Bin and Hopper Standard: Comply with ANSI Z245.30, "Refuse Collection, Processing, and Disposal Equipment--Waste Containers--Safety Requirements."
- I. Waste-Compactor Standards: ANSI Z245.21 **[including annexes]** and NFPA 82.
- J. Waste-Container Standards: ANSI Z245.30 and ANSI Z245.60.

1.8 MAINTENANCE SERVICE

- A. Initial Maintenance Service: Beginning at Substantial Completion, provide **[12] <Insert number>** months' full maintenance by skilled employees of waste-compactor Installer.
 - 1. Schedule regular surveillance and preventive maintenance visits at seven-day intervals for three (3) months and then at one-month intervals for nine (9) months.

2. Repair or replace worn or defective components; and lubricate, clean, and adjust equipment as required for proper equipment operation. Use replacement parts and maintenance supplies that were used in the manufacture and installation of the original equipment.

B. Continuing Maintenance Proposal: From Installer to Owner, in the form of a standard yearly (or other period) maintenance agreement, starting on date initial maintenance service is concluded. State services, obligations, conditions, and terms for agreement period and for future renewal options.

1.9 CONSTRUCTION WASTE MANAGEMENT

A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 WASTE COMPACTORS

A. Waste Compactor <Insert drawing designation>: Manufacturer's standard [stationary-horizontal] [self-contained horizontal] [combination-container] [vertical] [pivoting-ram] <Insert type>-type stationary compactor, complying with requirements[, liquidtight], and with components, options, and accessories needed to provide a complete, functional system.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Accurate Industries.
- b. Bes-Pac, Inc.
- c. Chicago Trashpacker Company, LLC.
- d. Galbreath, Inc.; a Wastequip company.
- e. GPI/Harmony Enterprises, Inc.
- f. Harmony Enterprises, Inc.
- g. Holt Specialty Equipment, Inc.; a Wastequip company.
- h. J. V. Manufacturing, Inc.
- i. Kohlman Engineering Corp.
- j. K-PAC Equipment; Division of Krause Corporation.
- k. Marathon Equipment Company; a Dover company.
- l. McClain group/E-Z Pack.
- m. Precision Machinery Systems, Inc.
- n. PTR Baler & Compactor Company.
- o. Rudco Products, Inc.
- p. Sebright Products Inc.
- q. SP Industries, Inc.
- r. Wastequip, Inc.

- s. Western Chutes; Division of Buchanan Company, Inc.
 - t. Wilkinson Hi-Rise.
 - u. **<Insert manufacturer's name>**.
 - v. or approved equal.
2. WASTEC-Rated Size (Volume): Minimum [0.14 cu. yd. (0.11 cu. m)] [1.00 cu. yd. (0.77 cu. m)] [1.50 cu. yd. (1.15 cu. m)] [2.00 cu. yd. (1.53 cu. m)] [3.50 cu. yd. (2.68 cu. m)] [5.00 cu. yd. (3.82 cu. m)] [7.50 cu. yd. (5.73 cu. m)] [10.00 cu. yd. (7.65 cu. m)] **<Insert volume>**.
3. Minimum Infeed Opening (Length by Width): Minimum [20 by 28 inches (508 by 711 mm)] [24 by 36 inches (610 by 914 mm)] [30 by 48 inches (762 by 1219 mm)] [60 by 48 inches (1524 by 1219 mm)] [108 by 72 inches (2743 by 1829 mm)] **<Insert dimensions>**.
4. Cycle Time: Maximum [30] [40] [50] [60] [70] **<Insert number>** seconds.
5. Discharge Opening (Width by Height): Maximum **<Insert dimensions>**.
6. Ground Height: Minimum **<Insert dimension>**.
7. Ram Face: Minimum **<Insert dimensions>**.
8. Ram Penetration: Minimum **<Insert dimension>**.
9. Normal/Maximum Resultant Ram Forces: [20,000/22,000 lbf (89/98 kN)] [36,000/40,000 lbf (160/178 kN)] [70,000/80,000 lbf (311/356 kN)] [125,000/150,000 lbf (556/667 kN)] **<Insert values>**.
10. Normal/Maximum System Pressures: [1600/1800 psi (11.0/12.4 MPa)] [2000/2400 psi (13.8/16.5 MPa)] [2500/2800 psi (17.2/19.3 MPa)] **<Insert values>**.
11. Scale Weight: Maximum [2500 lb (1134 kg)] [6000 lb (2722 kg)] [12,000 lb (5443 kg)] [20,000 lb (9072 kg)] **<Insert value>**.
12. Motor Size: [3] [10] [15] [20] [30] [50] **<Insert number>** hp.
13. Electrical Power Supply: [120] [208] [240] [480] **<Insert value>** V, [1] [3] phase, 60 Hz.
14. Controls: **<Insert control features>**.
15. Finish: [Manufacturer's standard] [Manufacturer's standard primer for field painting] **<Insert requirement>**.
- a. Color: [White] [Black] [Gray] [Dark green] [Yellow] [As selected by DEN Project Manager from manufacturer's full range] **<Insert color>**.
16. Deodorizing Device: [Manufacturer's standard] **<Insert requirement>**.
17. **<Insert requirement>**.
- B. Diverter: [Compactor manufacturer's standard] **<Insert requirement>** coordinated with chute dimensions and designed to divert waste from one chute into [two (2)] **<Insert number>** compactors, with chute-relay controls located [where shown on Drawings] **<Insert requirement>**, and finished [to match compactor] **<Insert requirement>**.
- C. Number of Extra Storage Containers: [One (1)] [Two (2)] **<Insert number>**.

2.2 FABRICATION

- A. Fabricate waste compactors with smooth, eased, exposed edges to prevent injury to persons in vicinity of the equipment.
- B. Fabricate containers, hoppers, compaction chambers, unit bodies, and similar components of steel with welded joints. Reinforce with steel members sized and spaced to withstand impacts and pressures of normal operations and to prevent deformation.
- C. Fabricate equipment with replaceable parts at points of normal wear.
- D. Fabricate liquidtight compactor baffles to stop liquid from leaking out.
- E. Fabricate diverter to fit chute and properly align with compactor hoppers.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances, clearances, service rough-ins, and other conditions affecting performance of waste-compactor work.
- B. Examine walls, floors, and chutes for suitable conditions where each waste compactor will be installed.
- C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install each waste compactor according to manufacturer's written instructions, ANSI Z245.2, and ANSI Z245.21[**including annexes**].
- B. Install automatic sprinkler in hopper of each chute-fed compactor according to NFPA 82.
- C. Set waste compactors level, plumb, properly aligned, and securely in place. Anchor as required for secure operation.
- D. Complete field assembly with joining methods recommended in writing by manufacturer. Grind welds smooth and restore finishes.
- E. Install diverter to chute and properly align with compactor hoppers.

3.3 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- B. Tests and Inspections:
 - 1. Perform installation and startup checks according to[**ANSI Z245.21, Annex D, "Tests for Evaluation of Equipment and Performance," and**] manufacturer's written instructions.
 - 2. Test and adjust controls, alarms, and safeties. Replace damaged and malfunctioning controls and equipment.
 - 3. Verify unrestricted access to each firefighting access door or fire port required by ANSI Z245.21 and NFPA 82 for compactor container(s).
 - 4. Verify correct locations, color-coding, and legibility of caution, warning, and danger markings.
 - 5. Certify compliance with test parameters.
- C. A waste compactor will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.

3.4 DEMONSTRATION

- A. Startup Services: Provide startup service, equipment demonstration, and training of Owner's maintenance personnel.
- B. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain waste compactors according to manufacturer's requirements and ANSI Z245.2.
 - 1. Demonstrate capacities, safety features, cleaning procedures, and proper methods for storing and handling raw and processed waste materials.
 - 2. Review data in maintenance manuals specified in Division 01.
 - 3. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 118226

SECTION 122113 - HORIZONTAL LOUVER BLINDS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

- 1. Horizontal louver blinds with [**aluminum**] [**wood**] [**polymer**] slats.
- 2. Motorized operators.

- B. Related Requirements:

- 1. Section 061053 "Miscellaneous Rough Carpentry" for wood blocking and grounds for mounting horizontal louver blinds and accessories.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ALLOWANCES

- A. Horizontal louver blinds are part of [**Window Covering Allowance**] <Insert name of allowance>.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.

- 1. Include data substantiating that materials comply with requirements.

- B. Shop Drawings: Show fabrication and installation details for horizontal louver blinds.

- 1. Motorized Operators: Include details of installation in headrails and diagrams for power, signal, and control wiring.

- C. Samples: For each exposed product and for each color and texture specified, **12 inches** (300 mm) long.

- D. Samples for Initial Selection: For each type and color of horizontal louver blind.

1. Include similar Samples of accessories involving color selection.
- E. Samples for Verification: For each type and color of horizontal louver blind indicated.
1. Slat: Not less than **12 inches** (300 mm) long.
 2. Tapes: Full width, not less than **6 inches** (150 mm) long.
 3. Horizontal Louver Blind: Full-size unit, not less than **16 inches** (400 mm) wide by **24 inches** (600 mm) long.
 4. Valance: Full-size unit, not less than **12 inches** (300 mm) wide.
- F. Window-Treatment Schedule: For horizontal louver blinds. Use same designations indicated on Drawings.
- 1.5 INFORMATIONAL SUBMITTALS
- A. Product Certificates: For each type of horizontal louver blind.
- B. Product Test Reports: For each type of horizontal louver blind, for tests performed by **[manufacturer and witnessed by a qualified testing agency] [a qualified testing agency]**.
- 1.6 CLOSEOUT SUBMITTALS
- A. Maintenance Data: For horizontal louver blinds to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
- 1.7 MAINTENANCE MATERIAL SUBMITTALS
- A. Furnish extra materials[, **from the same product run,**] that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Horizontal Louver Blinds: Full-size units equal to 5 percent of quantity installed for each size, color, texture, pattern, and gloss indicated, but no fewer than **[two]** **<Insert number>** units.
- 1.8 QUALITY ASSURANCE
- A. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
1. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.

2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver horizontal louver blinds in factory packages, marked with manufacturer, product name, and location of installation using same designations indicated on Drawings.

1.10 FIELD CONDITIONS

- A. Environmental Limitations: Do not install horizontal louver blinds until construction and wet and finish work in spaces, including painting, is complete and dry and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.
- B. Field Measurements: Where horizontal louver blinds are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings. Allow clearances for operating hardware of operable glazed units through entire operating range. Notify DEN Project Manager of installation conditions that vary from Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations: Obtain horizontal louver blinds from single source from single manufacturer.

2.2 HORIZONTAL LOUVER BLINDS, ALUMINUM SLATS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Hunter Douglas Contract.
 2. Levolor Contract; a Newell Rubbermaid company.
 3. Springs Window Fashions.
 4. **<Insert manufacturer's name>**.

5. or approved equal.
- B. Slats: Aluminum; alloy and temper recommended by producer for type of use and finish indicated; with crowned profile and radius corners.
1. Width: [1/2 to 5/8 inch (13 to 16 mm)] [1 inch (25 mm)] [2 inches (51 mm)] <Insert width>.
 2. Thickness: [Manufacturer's standard] [Not less than 0.006 inch (0.15 mm)] [Not less than 0.008 inch (0.20 mm)] <Insert thickness>.
 3. Spacing: [Manufacturer's standard] <Insert dimension>.
 4. Finish: [Ionized antistatic, dust-repellent, baked polyester finish] [Reflective finish on outside-facing surface of slat to enhance reflection of solar energy] <Insert finish>.
 5. Features:
 - a. Lift-Cord Rout Holes: Minimum size required for lift cord and located near back (outside) edge of slat to maximize slat overlap and minimize light gaps between slats.
 - b. Perforated Slats: Openness factor of [6 to 7] <Insert number> percent.
 - c. <Insert feature>.
- C. Headrail: Formed steel or extruded aluminum; long edges returned or rolled. Headrails fully enclose operating mechanisms on three sides.
1. Capacity: [One blind] [Two blinds] per headrail unless otherwise indicated.
 2. Ends: [Manufacturer's standard] [Capped or plugged] <Insert description>.
 3. Motorized Operating Mechanisms: Coordinate headrail with motorized operator requirements. Provide headrail acceptable to blind and motorized operator manufacturers and suitable for applications indicated.
 4. Manual Lift Mechanism:
 - a. Lift-Cord Lock: [Variable; stops lift cord at user-selected position within blind full operating range] [Top locking; stops lift cord when blind is in fully opened or fully closed positions only; equipped with ring pull not more than 4 inches (100 mm) long].
 - b. Operator: Extension of lift cord(s) through lift-cord lock mechanism to form cord pull.
 5. Manual Tilt Mechanism: Enclosed worm-gear mechanism and linkage rod that adjusts ladders.
 - a. Tilt: Full.
 - b. Tilt: [One] [Two]-direction, positive stop or lockout limited at an angle of [20] [60] [80] <Insert number> degrees from horizontal[, both directions].
 - c. Operator: [Clear-plastic wand] [Corrosion-resistant steel rod] [Dual cord] <Insert description>.
 - d. Over-Rotation Protection: Manufacturer's detachable operator or slip clutch to prevent over rotation of gear.

6. Manual Lift-Operator and Tilt-Operator Lengths: **[Manufacturer's standard] [Full length of blind when blind is fully closed] [Length required to extend to 48 inches (1219 mm) above floor level when blind is fully closed] [As indicated on Drawings] <Insert length>**.
 7. Manual Lift-Operator and Tilt-Operator Locations: **[Manufacturer's standard] [Right side and left side of headrail, respectively] [Left side and right side of headrail, respectively] [Right side of headrail] [Left side of headrail] [Left side of headrail and center blind, respectively] [Right side of headrail and center blind, respectively]** unless otherwise indicated.
 8. Integrated Headrail/Valance: **[Curved face] <Insert description>**.
- D. Bottom Rail: Formed-steel or extruded-aluminum tube that secures and protects ends of ladders and lift cords and has plastic- or metal-capped ends.
1. Type: **[Manufacturer's standard] [Top contoured to match crowned shape of slat] [Bottom contoured to minimize light gaps] <Insert description>**.
- E. Lift Cords: Manufacturer's standard braided cord.
- F. Ladders: Evenly spaced across headrail at spacing that prevents long-term slat sag.
1. Type: **[Braided cord] [Reinforced vinyl tape, manufacturer's standard width] [Cloth tape, manufacturer's standard width] <Insert description>**.
- G. Valance: **[Two slats] [PVC strip] [Manufacturer's standard] <Insert description>**.
- H. Mounting Brackets: With spacers and shims required for blind placement and alignment indicated.
1. Type: **[Wall] [Overhead] [End] [Wall extension] [Two piece for pocket installation] [As indicated] <Insert description>**.
 2. Intermediate Support: Provide intermediate support brackets to produce support spacing recommended by blind manufacturer for weight and size of blind.
- I. Hold-Down Brackets and Hooks or Pins: Manufacturer's standard.
- J. Side Channels and Perimeter Light Gap Seals: Manufacturer's standard.
- K. Colors, Textures, Patterns, and Gloss:
1. Slats: **[Match DEN Project Manager's samples] [Match DEN Project Manager's samples for custom color and other characteristics] [As selected by DEN Project Manager from manufacturer's full range] [As indicated on Drawings] <Insert description>**.
 2. Components: **[Provide rails, cords, ladders, and materials exposed to view matching or coordinating with slat color unless otherwise indicated] <Insert description>**.

2.3 HORIZONTAL LOUVER BLINDS, WOOD SLATS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Comfortex Window Fashions.
 2. Hunter Douglas Contract.
 3. Levolor Contract; a Newell Rubbermaid company.
 4. Springs Window Fashions.
 5. **<Insert manufacturer's name>**.
 6. or approved equal.
- B. Flame-Resistance Rating: Comply with NFPA 701; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
- C. Slats: Hardwood, **[Manufacturer's standard species] [North American] [basswood] [poplar] [ramin] <Insert species>**.
1. Width: **[1 inch (25 mm)] [1-3/8 inches (35 mm)] [2 inches (51 mm)] [2-3/8 inches (60 mm)] <Insert width>**.
 2. Thickness: **[Manufacturer's standard] [0.115 inch (2.9 mm)] [0.125 inch (3.2 mm)] <Insert thickness>**.
 3. Spacing: **[Manufacturer's standard] <Insert dimension>**.
 4. Profile: **[Flat] [Flat with beaded edges] [Flat with double beaded edges] <Insert profile>**.
 5. Corners: **[Square] [Radius]**.
 6. Features:
 - a. Lift-Cord Rout Holes: **[Minimum size required for lift cord and located near back (outside) edge of slat to maximize slat overlap and minimize light gaps between slats] [None]**.
 - b. **<Insert feature>**.
- D. Headrail: Formed steel or extruded aluminum; long edges returned or rolled. Headrails fully enclose operating mechanisms on three sides and ends.
1. Capacity: **[One blind] [Two blinds]** per headrail unless otherwise indicated.
 2. Motorized Operating Mechanisms: Coordinate headrail with motorized operator requirements. Provide headrail acceptable to blind and motorized operator manufacturers and suitable for applications indicated.
 3. Manual Lift Mechanism:
 - a. Lift-Cord Lock: **[Variable; stops lift cord at user-selected position within full operating range] [Top locking; stops lift cord when blind is in fully opened or fully closed positions only; equipped with ring pull not more than 4 inches (100 mm) long]**.
 - b. Operator: Extension of lift cord(s) through lift-cord lock mechanism to form cord pull.

4. Manual Tilt Mechanism: Enclosed worm-gear mechanism and linkage rod that adjusts ladders.
 - a. Tilt: Full.
 - b. Tilt: **[One]** **[Two]**-direction, positive stop or lockout limited at an angle of **[20]** **[60]** **[80]** **<Insert number>** degrees from horizontal[, **both directions**].
 - c. Operator: **[Clear-plastic wand]** **[Wood wand matching slats]** **[Corrosion-resistant steel rod]** **[Dual cord]** **<Insert description>**.
 - d. Over-Rotation Protection: Manufacturer's detachable operator or slip clutch to prevent over rotation of gear.

5. Manual Lift-Operator and Tilt-Operator Lengths: **[Manufacturer's standard]** **[Full length of blind when blind is fully closed]** **[Length required to extend to 48 inches (1219 mm) above floor level when blind is fully closed]** **[As indicated on Drawings]** **<Insert length>**.
6. Manual Lift-Operator and Tilt-Operator Locations: **[Manufacturer's standard]** **[Right side and left side of headrail, respectively]** **[Left side and right side of headrail, respectively]** **[Right side of headrail]** **[Left side of headrail]** **[Left side of headrail and center blind, respectively]** **[Right side of headrail and center blind, respectively]** unless otherwise indicated.

- E. Bottom Rail: Hardwood matching slats that secures and protects ends of ladders and lift cords.
 1. Type: **[Manufacturer's standard]** **[With trapezoid-shaped bottom angled to minimize light gaps]** **<Insert description>**.

- F. Lift Cords: Manufacturer's standard braided cord.

- G. Ladders: Evenly spaced across headrail at spacing that prevents long-term slat sag.
 1. Type: **[Braided cord]** **[Cloth tape, manufacturer's standard width]** **<Insert description>**.

- H. Valance: **[Manufacturer's standard]** **<Insert description>**.

- I. Tassels: Hardwood finished to match slats, **[manufacturer's standard]** **<Insert description>**.

- J. Mounting Brackets: With spacers and shims required for blind placement and alignment indicated.
 1. Type: **[Wall]** **[Overhead]** **[End]** **[Wall extension]** **[Two piece for pocket installation]** **[As indicated]** **<Insert description>**.
 2. Intermediate Support: Provide intermediate support brackets to produce support spacing recommended by blind manufacturer for weight and size of blind.

- K. Hold-Down Brackets and Hooks or Pins: Manufacturer's standard.

- L. Colors, Finishes, and Gloss:

1. Slats: **[Match DEN Project Manager's samples] [Match DEN Project Manager's samples for custom color and other characteristics] [As selected by DEN Project Manager from manufacturer's full range] [As indicated on Drawings] <Insert description>**.
2. Components: **[Provide rails, cords, ladders, and materials exposed to view matching or coordinating with slat color unless otherwise indicated] <Insert description>**.

2.4 HORIZONTAL LOUVER BLINDS, POLYMER SLATS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Comfortex Window Fashions.
 2. Hunter Douglas Contract.
 3. Levolor Contract; a Newell Rubbermaid company.
 4. Springs Window Fashions.
 5. **<Insert manufacturer's name>**.
 6. or approved equal.
- B. Flame-Resistance Rating: Comply with NFPA 701; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
- C. Slats: Polymers that are lead free, UV stabilized, integrally colored, opaque, and will not crack or yellow; antistatic, dust-repellent treated.
1. Formulation: **[Permanently flexible, extruded PVC] [Foam PVC] [Polymer/wood composite] [Manufacturer's standard] <Insert formulation>**.
 2. Width: **[2 inches (51 mm)] [2-1/2 inches (64 mm)] <Insert width>**.
 3. Thickness: **[0.125 inch (3.2 mm)] [0.150 inch (3.8 mm)] <Insert thickness>**.
 4. Spacing: **[Manufacturer's standard] <Insert dimension>**.
 5. Profile: **[Crowned] [Manufacturer's standard] <Insert profile>**.
 6. Features:
 - a. Lift-Cord Rout Holes: **[Minimum size required for lift cord and located near back (outside) edge of slat to maximize slat overlap and minimize light gaps between slats] [None]**.
 - b. Perforated Slats: Openness factor of **[6 to 7] <Insert number>** percent.
 - c. **<Insert feature>**.
- D. Headrail: Formed steel or extruded aluminum; long edges returned or rolled. Headrail fully encloses operating mechanisms on three sides and ends.
1. Capacity: **[One blind] [Two blinds]** per headrail unless otherwise indicated.
 2. Motorized Operating Mechanisms: Coordinate headrail with motorized operator requirements. Provide headrail acceptable to blind and motorized operator manufacturers and suitable for applications indicated.
 3. Manual Lift Mechanism:

- a. Lift-Cord Lock: **[Variable; stops lift cord at user-selected position within full operating range] [Top locking; stops lift cord when blind is in fully opened or fully closed positions only; equipped with ring pull not more than 4 inches (100 mm) long]**.
 - b. Operator: Extension of lift cord(s) through lift-cord lock mechanism to form cord pull.
4. Manual Tilt Mechanism: Enclosed worm-gear mechanism and linkage rod that adjusts ladders.
- a. Tilt: Full.
 - b. Tilt: **[One] [Two]-direction, positive stop or lockout limited at an angle of [20] [60] [80] <Insert number> degrees from horizontal[, both directions]**.
 - c. Operator: **[Clear-plastic wand] [Corrosion-resistant steel rod] [Dual cord] <Insert description>**.
 - d. Over-Rotation Protection: Manufacturer's detachable operator or slip clutch to prevent over rotation of gear.
5. Manual Lift-Operator and Tilt-Operator Lengths: **[Manufacturer's standard] [Full length of blind when blind is fully closed] [Length required to extend to 48 inches (1219 mm) above floor level when blind is fully closed] [As indicated on Drawings] <Insert length>**.
6. Manual Lift-Operator and Tilt-Operator Locations: **[Manufacturer's standard] [Right side and left side of headrail, respectively] [Left side and right side of headrail, respectively] [Right side of headrail] [Left side of headrail] [Left side of headrail and center blind, respectively] [Right side of headrail and center blind, respectively]** unless otherwise indicated.
- E. Bottom Rail: Secures and protects ends of ladders and lift cords.
1. Type: **[Manufacturers standard] [Formed-steel or extruded-aluminum tube, with plastic or metal capped ends] [Hardwood matching slats and trapezoid-shaped bottom angled for minimizing light gaps] <Insert type>**.
- F. Lift Cord: Manufacturer's standard braided cord.
- G. Ladders: Evenly spaced across headrail at spacing that prevents long-term slat sag.
1. Type: **[Braided cord] [Cloth tape, manufacturer's standard width] <Insert description>**.
- H. Valance: **[Manufacturer's standard] <Insert description>**.
- I. Mounting Brackets: With spacers and shims required for blind placement and alignment indicated.
1. Type: **[Wall] [Overhead] [End] [Wall extension] [Two piece for pocket installation] [As indicated] <Insert description>**.
 2. Intermediate Support: Provide intermediate support brackets to produce support spacing recommended by blind manufacturer for weight and size of blind.

- J. Hold-Down Brackets and Hooks or Pins: Manufacturer's standard.
- K. Colors, Textures, Patterns, and Gloss:
 - 1. Slats: **[Match DEN Project Manager's samples] [Match DEN Project Manager's samples for custom color and other characteristics] [As selected by DEN Project Manager from manufacturer's full range] [As indicated on Drawings] <Insert description>.**
 - 2. Components: **[Provide rails, cords, ladders, and materials exposed to view matching or coordinating with slat color unless otherwise indicated] <Insert description>.**

2.5 HORIZONTAL LOUVER BLIND FABRICATION

- A. Product Safety Standard: Fabricate horizontal louver blinds to comply with WCMA A 100.1 including requirements for corded, flexible, looped devices; lead content of components; and warning labels.
- B. Unit Sizes: Fabricate units in sizes to fill window and other openings as follows, measured at **74 deg F** (23 deg C):
 - 1. Between (Inside) Jamb Installation: Width equal to jamb-to-jamb dimension of opening in which blind is installed less **1/4 inch** (6 mm) per side or **1/2 inch** (13 mm) total, plus or minus **1/8 inch** (3.1 mm). Length equal to head-to-sill dimension of opening in which blind is installed less **1/4 inch** (6 mm), plus or minus **1/8 inch** (3.1 mm).
 - 2. Outside of Jamb Installation: Width and length as indicated, with terminations between blinds of end-to-end installations at centerlines of mullion or other defined vertical separations between openings.
- C. Concealed Components: Noncorrodible or corrosion-resistant-coated materials.
 - 1. Lift-and-Tilt Mechanisms: With permanently lubricated moving parts.
- D. Mounting and Intermediate Brackets: Designed for removal and reinstallation of blind without damaging blind and adjacent surfaces, for supporting blind components, and for bracket positions and blind placement indicated.
- E. Installation Fasteners: No fewer than two fasteners per bracket, fabricated from metal noncorrosive to brackets and adjoining construction; type designed for securing to supporting substrate; and supporting blinds and accessories under conditions of normal use.
- F. Color-Coated Finish:
 - 1. Metal: For components exposed to view, apply manufacturer's standard baked finish complying with manufacturer's written instructions for surface preparation including pretreatment, application, baking, and minimum dry film thickness.

2. Wood: Apply **[manufacturer's standard]** <Insert description> factory-applied finish complying with manufacturer's written instructions for surface preparation, application, and minimum dry film thickness.

2.6 MOTORIZED OPERATORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Am-Source International.
 2. BTX Window Automation Inc.
 3. SM Automatic, Inc.
 4. **<Insert manufacturer's name>**.
 5. or approved equal.
- B. General: Provide factory-assembled blind-operator systems of size and capacity and with features, characteristics, and accessories suitable for conditions indicated and recommended by motorized operator and blind manufacturers for use with blinds indicated, complete with electric motors and factory-prewired motor controls, power disconnect switches, enclosures protecting controls and operating parts, and accessories required for reliable operation without malfunction. Include wiring from motor controls to motors. Coordinate operator wiring requirements and electrical characteristics with building electrical system.
 1. Headrail: As specified for blind(s) operated by motorized operator.
 2. Function: **[Lift]** **[and]** **[tilt]**.
 3. Electrical Components: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Control Equipment: Comply with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6[**with NFPA 70, Class 2 control circuit, maximum 24-V ac or dc**].
- D. Electric Motors: Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 110513 "Common Motor Requirements for Equipment."
 1. Electrical Characteristics: Single phase, **[24]** **[110]** **[220]** **<Insert voltage rating>** V, 60 Hz.
- E. Remote Controls: Electric controls with NEMA ICS 6, Type 1 enclosure for **[surface]** **[recessed or flush]** **[within headrail]** **<Insert type>** mounting. Provide the following for remote-control activation of blinds:
 1. Keyed Control Stations: Keyed, **[maintained]** **[momentary]**-contact, three-position, switch-operated control station with open, close, and off functions. Provide two keys per station.
 2. Individual Switch Control Stations: **[Maintained]** **[Momentary]**-contact, **[three]** **[five]**-position, **[toggle]** **[rocker]**-style, wall-switch-operated control station with open, close, and center off functions.

3. Group Control Stations: **[Maintained] [Momentary]**-contact, three-position, rocker-style, wall-switch-operated control station with open, close, and center off functions for single-switch group control.
 4. Individual/Group Control Stations: **[Maintained] [Momentary]**-contact, three-position, rocker-style, wall-switch-operated control station with open, close, and center off functions for individual and group control.
 5. Sun Sensor Controls: Adjustable system consisting of LEDs detecting sun intensity and responding by automatically adjusting blinds.
 6. Infrared Controls: System consisting of concealed receiver complete with external eye and connecting modular cable and **[two] <Insert number>** portable, multiple-channel transmitters with separate buttons to open and close up to **[12] <Insert number>** individual blinds or groups of blinds, to open and close blinds simultaneously, **[to tilt forward,] [to tilt backward,]** and to stop.
 7. Timer Controls: Clock timer, **[24-hour] [seven-day] <Insert period>** programmable for regular events.
 8. Microprocessor Controls: Electronic programmable means for setting, changing, and adjusting control features; isolated from voltage spikes and surges.
 9. Color: **[Ivory] [White] [As indicated] <Insert color>**.
- F. Limit Switches: Adjustable switches, interlocked with motor controls and set to stop blind automatically at fully raised and fully lowered positions.
- G. Operating Features:
1. Group switching with integrated switch control; single faceplate for multiple switch cutouts.
 2. Capable of interface with **[audiovisual] [multiroom] <Insert description>** control system.
 3. Capable of accepting input from building automation control system.
 4. Override switch.
- H. Accessories:
1. Solar power unit.
 2. **<Insert accessory>**.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, operational clearances, **[locations of connections to building electrical system,]** and other conditions affecting performance.
1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install horizontal louver blinds level and plumb, aligned and centered on openings, and aligned with adjacent units according to manufacturer's written instructions.
 - 1. Locate so exterior slat edges are not closer than [1 inch (25 mm)] [2 inches (51 mm)] <Insert dimension> from interior faces of glass and not closer than [1/2 inch (13 mm)] [1-1/2 inches (38 mm)] <Insert dimension> from interior faces of glazing frames through full operating ranges of blinds.
 - 2. Install mounting and intermediate brackets to prevent deflection of headrails.
 - 3. Install with clearances that prevent interference with adjacent blinds, adjacent construction, and operating hardware of glazed openings, other window treatments, and similar building components and furnishings.
- B. Electrical Connections: Connect motorized operators to building electrical system.

3.3 ADJUSTING

- A. Adjust horizontal louver blinds to operate free of binding or malfunction through full operating ranges.

3.4 CLEANING AND PROTECTION

- A. Clean horizontal louver blind surfaces after installation according to manufacturer's written instructions.
- B. Provide final protection and maintain conditions in a manner acceptable to manufacturer and Installer and that ensures that horizontal louver blinds are without damage or deterioration at time of Substantial Completion.
- C. Replace damaged horizontal louver blinds that cannot be repaired in a manner approved by DEN Project Manager before time of Substantial Completion.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain systems.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 122113

SECTION 122116 - VERTICAL LOUVER BLINDS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Vertical louver blinds with [**aluminum**] [**PVC**] [**PVC and fabric insert**] [**fabric**] vanes.
 - 2. Motorized operators.
- B. Related Requirements:
 - 1. Section 061053 "Miscellaneous Rough Carpentry" for wood blocking and grounds for mounting vertical louver blinds and accessories.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 ALLOWANCES

- A. Vertical louver blinds are part of [**Window Covering Allowance**] <Insert name of allowance>.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: Show fabrication and installation details for vertical louver blinds[**and motorized operators**].
 - 1. Motorized Operators: Include details of installation and diagrams for power, signal, and control wiring.
- C. Samples: For each exposed product and for each color and texture specified, **12 inches** (300 mm) long.

- D. Samples for Initial Selection: For each type of vertical louver blind.
 - 1. Include similar Samples of accessories involving color selection.
- E. Samples for Verification: For each type of vertical louver blind.
 - 1. Vane: Not less than **12 inches** (300 mm) long.
 - a. Fabric: **3-1/2 inches** (90 mm) wide from dye lot used for the Work. Mark top and face of material.
 - 2. Vertical Louver Blind: Full-size unit, not less than **36 inches** (900 mm) wide by **36 inches** (900 mm) long.
 - 3. Valance: Full-size unit, not less than **12 inches** (300 mm) wide.
- F. Window-Treatment Schedule: For vertical louver blinds. Use same designations indicated on Drawings.

1.5 INFORMATIONAL SUBMITTALS

- A. Product Certificates: For each type of vertical louver blind.
- B. Product Test Reports: For each type of vertical louver blind, for tests performed by **[manufacturer and witnessed by a qualified testing agency] [a qualified testing agency]**.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For vertical louver blinds to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials[, **from the same product run,**] that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Vertical Louver Blinds: Full-size units equal to 5 percent of quantity installed for each size, color, texture, pattern, and finish indicated, but no fewer than **[two]** **<Insert number>** units.
 - 2. Vanes: Furnish quantity of full-size units equal to 5 percent of quantity installed for each type, size, texture, pattern, and finish indicated, but no fewer than **[two]** **<Insert number>** units.

1.8 QUALITY ASSURANCE

- A. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
 - 1. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
 - 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver vertical louver blinds in factory packages, marked with manufacturer and product name, and location of installation using same designations indicated on Drawings.

1.10 FIELD CONDITIONS

- A. Environmental Limitations: Do not install vertical louver blinds until construction and wet and finish work in spaces, including painting, is complete and dry and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.
- B. Field Measurements: Where vertical louver blinds are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings. Allow clearances for operating hardware of operable glazed units through entire operating range. Notify DEN Project Manager of installation conditions that vary from Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations: Obtain vertical louver blinds from single source from single manufacturer.

2.2 VERTICAL LOUVER BLINDS, ALUMINUM VANES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Hunter Douglas Contract.
 2. **<Insert manufacturer's name>**
 3. or approved equal.
- B. Vanes: Aluminum, alloy, and temper recommended by producer for type of use and finish indicated; with crowned profile and not less than **3/8-inch** (9.5-mm) overlap when rotated fully closed.
1. Width: **3-1/2 inches** (89 mm).
- C. Headrail: Channel, extruded aluminum with long edges returned or rolled and ends capped. Headrail encloses operating mechanisms including carrier-spacing mechanism that provides uniform vane spacing when blinds are traversed fully across headrail (closed).
1. Motorized Operator Control: Coordinate headrail with motorized operator requirements. Provide headrail acceptable to blind and motorized operator manufacturers and suitable for applications indicated.
 2. Manual Traverse Control: [**Nickel-plated metal bead chain**] [**Cord**] [**Wand**].
 3. Manual Rotation Control: [**Nickel-plated metal bead chain**] [**Plastic bead chain**] [**Wand**] [**Automatic rotation mechanically activated by traverse control**].
 4. Manual Control Locations: [**Right**] [**Left**] [**As indicated on Drawings**].
 5. Draw and Stack: [**One way, stack left**] [**One way, stack right**] [**Two way, center split**] [**Two way, center stack**] [**As indicated on Drawings**].
 6. Cord-Tensioner Mounting: [**Wall**] [**Floor**] [**Sill**] [**Baseboard**] [**As indicated on Drawings**] **<Insert description>**.
- D. Carriers: Engineered plastic with gears to align and synchronize vane rotation and stems that allow vane removal and replacement. Lead carriers have self-lubricating wheels or elongated bearing surfaces; following carriers have self-lubricating wheels.
- E. Valance: [**Manufacturer's standard with vane insert**] **<Insert description>**.
- F. Mounting Brackets: With spacers and shims required for blind placement and alignment indicated.
1. Type: [**Wall**] [**Overhead**] [**For headrail recessed in pocket**] [**As indicated**] **<Insert description>**.
 2. Intermediate Support: Provide intermediate support brackets to produce support spacing recommended by blind manufacturer for weight and size of blind.
- G. Colors, Textures, and Patterns:
1. Vanes: [**Match DEN Project Manager's samples**] [**As selected by DEN Project**]

Manager from manufacturer's full range] [As indicated on Drawings] <Insert description>.

2. Components: **[Provide materials exposed to view matching or coordinating with vanes unless otherwise indicated] <Insert description>.**

2.3 VERTICAL LOUVER BLINDS, PVC VANES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Hunter Douglas Contract.
 2. Levolor Contract; a Newell Rubbermaid company.
 3. Springs Window Fashions.
 4. **<Insert manufacturer's name>.**
 5. or approved equal.
- B. Vanes: Lead-free, UV-stabilized, integrally colored, opaque, permanently flexible, extruded PVC that will not crack or yellow; with not less than **3/8-inch** (9.5-mm) overlap when vanes are rotated fully closed.
 1. Width: **[2 inches** (51 mm) **]** **[3-1/2 inches** (89 mm) **]**.
 2. Profile: **[Flat] [Crowned] [Narrow-ridged flat] [Narrow-ridged crowned] [Wide-ridged crowned] [Embossed] <Insert description>.**
 3. Perforated Vanes: Openness factor of **[3] [6] [8] [10] [12] <Insert number>** percent.
 4. Flame-Resistance Rating: Comply with NFPA 701; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 5. Features:
 - a. Bottom chain.
 - b. **<Insert feature>.**
- C. Headrail: Channel, formed steel or extruded aluminum with long edges returned or rolled and ends capped. Headrail encloses operating mechanisms including carrier-spacing mechanism that provides uniform vane spacing when blinds are traversed fully across headrail (closed).
 1. Motorized Operator Control: Coordinate headrail with motorized operator requirements. Provide headrail acceptable to blind and motorized operator manufacturers and suitable for applications indicated.
 2. Manual Traverse Control: **[Nickel-plated metal bead chain] [Cord] [Wand].**
 3. Manual Rotation Control: **[Nickel-plated metal bead chain] [Plastic bead chain] [Wand] [Automatic rotation mechanically activated by traverse control].**
 4. Manual Control Locations: **[Right] [Left] [As indicated on Drawings].**
 5. Draw and Stack: **[One way, stack left] [One way, stack right] [Two way, center split] [Two way, center stack] [As indicated on Drawings].**
 6. Stack Release: Permitting stacked vanes to be moved away from stacking position for access to glazed opening.

7. Cord-Tensioner Mounting: **[Wall] [Floor] [Sill] [Baseboard] [As indicated on Drawings] <Insert description>**.
- D. Carriers: Engineered plastic with gears to align and synchronize vane rotation and stems that allow vane removal and replacement. Lead carriers have self-lubricating wheels or elongated bearing surfaces; following carriers have self-lubricating wheels.
- E. Valance: **[Manufacturer's standard with vane insert] <Insert description>**.
- F. Mounting Brackets: With spacers and shims required for blind placement and alignment indicated.
1. Type: **[Wall] [Overhead] [For headrail recessed in pocket] [As indicated] <Insert description>**.
 2. Intermediate Support: Provide intermediate support brackets to produce support spacing recommended by blind manufacturer for weight and size of blind.
- G. Colors, Textures, and Patterns:
1. Vanes: **[Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] [As indicated on Drawings] <Insert description>**.
 2. Components: **[Provide materials exposed to view matching or coordinating with vanes unless otherwise indicated] <Insert description>**.
- 2.4 VERTICAL LOUVER BLINDS, PVC VANES WITH FABRIC VANE INSERTS
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Hunter Douglas Contract.
 2. Levolor Contract; a Newell Rubbermaid company.
 3. Springs Window Fashions.
 4. **<Insert manufacturer's name>**.
 5. or approved equal.
- B. Vanes: Lead-free, UV-stabilized, permanently flexible, extruded PVC that will not crack or yellow; with not less than **3/8-inch** (9.5-mm) overlap when vanes are rotated fully closed. Provide integrally colored, opaque vane with clear grooves for holding fabric insert.
1. Width: **3-1/2 inches** (89 mm).
 2. Fabric Insert: **[Manufacturer's standard] <Insert fabric description>**; stain and fade resistant.
- C. Headrail: Channel, formed steel or extruded aluminum with long edges returned or rolled and ends capped. Headrail encloses operating mechanisms including carrier-spacing mechanism that provides uniform vane spacing when blinds are traversed fully across headrail (closed).

1. Motorized Operator Control: Coordinate headrail with motorized operator requirements. Provide headrail acceptable to blind and motorized operator manufacturers and suitable for applications indicated.
 2. Manual Traverse Control: **[Nickel-plated metal bead chain] [Cord] [Wand]**.
 3. Manual Rotation Control: **[Nickel-plated metal bead chain] [Plastic bead chain] [Wand] [Automatic rotation mechanically activated by traverse control]**.
 4. Manual Control Locations: **[Right] [Left] [As indicated on Drawings]**.
 5. Draw and Stack: **[One way, stack left] [One way, stack right] [Two way, center split] [Two way, center stack] [As indicated on Drawings]**.
 6. Stack Release: Permitting stacked vanes to be moved away from stacking position for access to glazed opening.
 7. Cord-Tensioner Mounting: **[Wall] [Floor] [Sill] [Baseboard] [As indicated on Drawings] <Insert description>**.
- D. Carriers: Engineered plastic with gears to align and synchronize vane rotation and stems that allow vane removal and replacement. Lead carriers have self-lubricating wheels or elongated bearing surfaces; following carriers have self-lubricating wheels.
- E. Valance: **[Manufacturer's standard with vane insert] <Insert description>**.
- F. Mounting Brackets: With spacers and shims required for blind placement and alignment indicated.
1. Type: **[Wall] [Overhead] [For headrail recessed in pocket] [As indicated] <Insert description>**.
 2. Intermediate Support: Provide intermediate support brackets to produce support spacing recommended by blind manufacturer for weight and size of blind.
- G. Colors, Textures, and Patterns:
1. Vanes:
 - a. PVC: **[Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] [As indicated on Drawings] <Insert description>**.
 - b. Fabric Inserts: **[Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] [As indicated on Drawings] <Insert description>**.
 2. Components: **[Provide materials exposed to view matching or coordinating with PVC vanes unless otherwise indicated] <Insert description>**.
- 2.5 VERTICAL LOUVER BLINDS, FABRIC VANES
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Hunter Douglas Contract.

2. Levolor Contract; a Newell Rubbermaid company.
 3. Silent Gliss USA, Inc.
 4. Solar Shading Systems.
 5. Springs Window Fashions.
 6. **<Insert manufacturer's name>**.
 7. or approved equal.
- B. Vanes: **[Manufacturer's standard] [PVC-coated fiberglass mesh] [PVC-coated polyester mesh] <Insert fabric description>** free-hanging fabric with hemmed, nonraveling edges; stain and fade resistant; with not less than **3/8-inch** (9.5-mm) overlap when vanes are rotated fully closed.
1. Width: **[2 inches** (51 mm)] **[3-1/2 inches** (89 mm)] **[5 inches** (125 mm)].
 2. Flame-Resistance Rating: Comply with NFPA 701; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 3. Features:
 - a. Weight, sewn in at bottom of vanes.
 - b. Bottom chain.
 - c. **<Insert feature>**.
- C. Headrail: Channel, formed steel or extruded aluminum with long edges returned or rolled and ends capped. Headrail encloses operating mechanisms including carrier-spacing mechanism that provides uniform vane spacing when blinds are traversed fully across headrail (closed).
1. Motorized Operator Control: Coordinate headrail with motorized operator requirements. Provide headrail acceptable to blind and motorized operator manufacturers and suitable for applications indicated.
 2. Manual Traverse Control: **[Nickel-plated metal bead chain] [Cord] [Wand]**.
 3. Manual Rotation Control: **[Nickel-plated metal bead chain] [Plastic bead chain] [Wand] [Automatic rotation mechanically activated by traverse control]**.
 4. Manual Control Locations: **[Right] [Left] [As indicated on Drawings]**.
 5. Draw and Stack: **[One way, stack left] [One way, stack right] [Two way, center split] [Two way, center stack] [As indicated on Drawings]**.
 6. Stack Release: Permitting stacked vanes to be moved away from stacking position for access to glazed opening.
 7. Cord-Tensioner Mounting: **[Wall] [Floor] [Sill] [Baseboard] [As indicated on Drawings] <Insert description>**.
- D. Carriers: Engineered plastic with gears to align and synchronize vane rotation and stems that allow vane removal and replacement. Lead carriers have self-lubricating wheels or elongated bearing surfaces; following carriers have self-lubricating wheels.
- E. Valance: **[Manufacturer's standard with vane insert] <Insert description>**.
- F. Mounting Brackets: With spacers and shims required for blind placement and alignment indicated.

1. Type: **[Wall] [Overhead] [For headrail recessed in pocket] [As indicated] <Insert description>**.
2. Intermediate Support: Provide intermediate support brackets to produce support spacing recommended by blind manufacturer for weight and size of blind.

G. Colors, Textures, and Patterns:

1. Vanes: **[Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] [As indicated on Drawings] <Insert description>**.
2. Components: **[Provide materials exposed to view matching or coordinating with vanes unless otherwise indicated] <Insert description>**.

2.6 VERTICAL LOUVER BLIND FABRICATION

- A. Product Safety Standard: Fabricate vertical louver blinds to comply with WCMA A 100.1 including requirements for corded, flexible, looped devices; lead content of components; and warning labels.
- B. Unit Sizes: Fabricate units in sizes to cover window and other openings as follows, measured at **74 deg F** (23 deg C):
1. Between (Inside) Jamb Installation: Width equal to jamb-to-jamb dimension of opening in which blind is installed less **1/4 inch** (6 mm) per side or **1/2 inch** (13 mm) total, plus or minus **1/8 inch** (3.1 mm). Length equal to head-to-sill or -floor dimension of opening in which blind is installed less **1/4 inch** (6 mm), plus or minus **1/8 inch** (3.1 mm).
 2. Outside of Jamb Installation: Width and length as indicated, with terminations between blinds of end-to-end installations at centerlines of mullion or other defined vertical separations between openings.
- C. Concealed Components: Noncorrodible or corrosion-resistant-coated materials.
1. Rotation-and-Traverse Mechanisms: With permanently lubricated moving parts.
- D. Installation Brackets: Designed for easy removal and reinstallation of blind, for supporting headrail[, **valance**,] and operating hardware and for bracket positions and blind mounting method indicated.
- E. Installation Fasteners: No fewer than two fasteners per bracket, fabricated from metal noncorrosive to brackets and adjoining construction; type designed for securing to supporting substrate; and supporting blinds and accessories under conditions of normal use.
- F. Color-Coated Finish: For metal components exposed to view unless, anodized or plated finish is indicated. Apply manufacturer's standard baked finish complying with manufacturer's written instructions for surface preparation including pretreatment, application, baking, and minimum dry film thickness.

2.7 MOTORIZED OPERATORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Am-Source International.
 2. BTX Window Automation Inc.
 3. Silent Gliss USA, Inc.
 4. SM Automatic, Inc.
 5. **<Insert manufacturer's name>**.
 6. or approved equal.
- B. General: Provide factory-assembled blind-operator systems of size and capacity and with features, characteristics, and accessories suitable for conditions indicated and recommended by motorized operator and blind manufacturers for use with blinds indicated, complete with electric motors and factory-prewired motor controls, power disconnect switches, enclosures protecting controls and operating parts, and accessories required for reliable operation without malfunction. Include wiring from motor controls to motors. Coordinate operator wiring requirements and electrical characteristics with building electrical system.
1. Headrail: As specified for blind(s) operated by motorized operator.
 2. Function: **[Rotation] [and] [traverse]**.
 3. Electrical Components: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Control Equipment: Comply with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6 [**with NFPA 70, Class 2 control circuit, maximum 24-V ac or dc**].
- D. Electric Motors: Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 110513 "Common Motor Requirements for Equipment."
1. Electrical Characteristics: Single phase, **[24] [110] [220] <Insert voltage rating>** V, 60 Hz.
 2. Mounting: **[Above headrail, left side] [Above headrail, right side] [Behind headrail, left side] [Behind headrail, right side] [In location indicated on Drawings] <Insert description>**.
- E. Remote Controls: Electric controls with NEMA ICS 6, Type 1 enclosure for **[surface] [recessed or flush] [headrail] <Insert type>** mounting. Provide the following devices for remote-control activation of blinds:
1. Keyed Control Stations: Keyed, **[maintained] [momentary]**-contact, three-position, switch-operated control station with open, close, and off functions. Provide two keys per station.
 2. Individual Switch Control Stations: **[Maintained] [Momentary]**-contact, **[three] [five]**-position, **[toggle] [rocker]**-style, wall-switch-operated control station with open, close, and center off functions.

3. Group Control Stations: **[Maintained] [Momentary]**-contact, three-position, rocker-style, wall-switch-operated control station with open, close, and center off functions for single-switch group control.
 4. Individual/Group Control Stations: **[Maintained] [Momentary]**-contact, three-position, rocker-style, wall-switch-operated control station with open, close, and center off functions for individual and group control.
 5. Sun Sensor Controls: Adjustable system consisting of LEDs detecting sun intensity and responding by automatically adjusting blinds.
 6. Infrared Controls: System consisting of concealed receiver complete with external eye and connecting modular cable and **[two] <Insert number>** portable, multiple-channel transmitters with separate buttons to open and close up to **[12] <Insert number>** individual blinds or groups of blinds, to open and close blinds simultaneously, to rotate blinds, and to stop.
 7. Timer Controls: Clock timer, **[24-hour] [seven-day] <Insert period>** programmable for regular events.
 8. Microprocessor Controls: Electronic programmable means for setting, changing, and adjusting control features; isolated from voltage spikes and surges.
 9. Color: **[Ivory] [White] [As indicated] <Insert color>**.
- F. Limit Switches: Adjustable switches interlocked with motor controls and set to stop blind automatically at vanes fully traversed across headrail and rotated closed and vanes stacked and rotated open.
- G. Operating Features:
1. Group switching with integrated switch control; single faceplate for multiple switch cutouts.
 2. Capable of interface with **[audiovisual] [multiroom] <Insert description>** control system.
 3. Capable of accepting input from building automation control system.
 4. Override switch.
- H. Accessories:
1. Solar power unit.
 2. **<Insert accessory>**.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, operational clearances, **[locations of connections to building electrical system,]** and other conditions affecting performance.
1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install vertical louver blinds level and plumb, aligned and centered on openings, and aligned with adjacent units according to manufacturer's written instructions.
 - 1. Locate so exterior vane edges are not closer than [2 inches (51 mm)] <Insert dimension> from interior faces of glass and not closer than [1-1/2 inches (38 mm)] <Insert dimension> from interior faces of glazing frames through full operating ranges of blinds.
 - 2. Install mounting and intermediate brackets to prevent deflection of headrails.
 - 3. Install with clearances that prevent interference with adjacent blinds, adjacent construction, and operating hardware of glazed openings, other window treatments, and similar building components and furnishings.
- B. Electrical Connections: Connect motorized operators to building electrical system.

3.3 ADJUSTING

- A. Adjust vertical louver blinds to operate free of binding or malfunction through full operating ranges.

3.4 CLEANING AND PROTECTION

- A. Clean vertical louver blind surfaces after installation according to manufacturer's written instructions.
- B. Provide final protection and maintain conditions in a manner acceptable to manufacturer and Installer and that ensures that vertical louver blinds are without damage or deterioration at time of Substantial Completion.
- C. Replace damaged vertical louver blinds that cannot be repaired in a manner approved by Architect before time of Substantial Completion.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain systems.
- B. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 122116

SECTION 123200 - MANUFACTURED WOOD CASEWORK

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Wood-faced cabinets of stock design.
2. Plastic-laminate-faced wood cabinets of stock design.
3. Plastic-laminate countertops.
4. Solid-surfacing-material countertops[, **including integral sinks**].
5. Stainless-steel countertops[, **including integral sinks**].
6. Wall shelving.
7. Polymer alloy cladding cabinets.
8. Stainless steel items incorporated into cabinets.

B. Related Sections:

1. Section 061000 "Rough Carpentry" for wood blocking for anchoring manufactured wood casework.
2. Section 064113 "Wood-Veneer-Faced Architectural Cabinets" for custom-fabricated wood cabinets.
3. Section 064116 "Plastic-Laminate-Faced Architectural Cabinets" for custom-fabricated plastic-laminate-faced cabinets.
4. Section 092216 "Non-Structural Metal Framing" for reinforcements in metal-framed partitions for anchoring manufactured wood casework.
5. Section 096513 "Resilient Base and Accessories" for resilient base applied to manufactured wood casework.
6. Section 123640 "Stone Countertops."

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. MDF: Medium-density fiberboard.

- B. Exposed Portions of Cabinets: Surfaces visible when doors and drawers are closed, including bottoms of cabinets more than **48 inches** (1220 mm) above floor, and surfaces visible in open cabinets.
- C. Semiexposed Portions of Cabinets: Surfaces behind opaque doors, such as interiors of cabinets, shelves, dividers, interiors and sides of drawers, and interior faces of doors. Tops of cases **78 inches** (1980 mm) or more above floor are defined as semiexposed.
- D. Concealed Portions of Cabinets: Surfaces not usually visible after installation, including sleepers, web frames, dust panels, and ends and backs that are placed directly against walls or other cabinets.
- E. Hardwood Plywood: A panel product composed of layers or plies of veneer, or of veneers in combination with lumber core, hardboard core, MDF core, or particleboard core, joined with adhesive, and faced both front and back with hardwood veneers.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Submit manufacturer's product data for each product and process specified as work of this section and incorporated into items of architectural woodwork during fabrication, finishing, and installation.
 - 1. Include data substantiating that materials comply with requirements.
- B. Wood Treatment Data: Submit chemical treatment manufacturer's instructions for handling, storing, installation, and finish of treated material.
- C. Fire Retardant Treatment: Include certification by treating plant that treated materials comply with requirements.
- D. Quality Certification: Submit woodwork Manufacturer's (Fabricator's) certification, stating that fabricated woodwork complies with quality grades and other requirements indicated.
- E. Wall panel certificate: Submit certificate that wall panel backing adhesive and laminate comply with reference fire-resistance requirements.
- F. LEED Submittals:
 - 1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
 - 2. Certificates for [**Credit MR 6**] [**Credit MR 7**]: Chain-of-custody certificates indicating that wood used to produce cabinets[**and countertops**] complies with forest certification requirements. Include evidence that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.

3. Product Data for Credit IEQ 4.4: For adhesives and composite wood products, documentation indicating that product contains no urea formaldehyde.
 4. Laboratory Test Reports for Credit IEQ 4: For **[adhesives] [and] [composite wood products]**, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- G. Shop Drawings: Include plans, elevations, sections, large-scale details, and attachments to other work. Show fabrication details, including types and locations of hardware. Show installation details, including field joints and filler panels. Indicate manufacturer's catalog numbers for casework.
1. Shop drawings shall be prepared as late as possible to meet the schedule. The drawings shall not be submitted for review until 242 days from the NTP.
- H. Samples for Initial Selection: For cabinet finishes and for each type of top material indicated.
- I. Samples for Verification: **8-by-10-inch** (200-by-250-mm) Samples for each type of finish, including top material and liner type[.] **[and the following:]**
1. Section of countertop showing top, front edge, and backsplash construction.
 2. One full-size finished base cabinet complete with hardware, doors, and drawers, but without countertop.
 3. One full-size finished wall cabinet complete with hardware, doors, and adjustable shelves.
 4. Maintain full-size Samples at Project site during construction in an undisturbed condition as a standard for judging the completed Work. Unless otherwise indicated, approved sample units may become part of the completed Work if in undisturbed condition at time of Substantial Completion. Notify DEN Project Manager of their exact locations.
- J. Exposed cabinet hardware, provide one (1) unit of each type and finish.
- 1.5 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For qualified Installer.
 - B. Certificate from the fabricator providing proof of not less than five (5) years experience in the fabrication of the types of products specified.
 - C. Certificate from the installer providing proof of not less than five (5) years of successful experience in the installation of similar types of products and shall have completed at least three (3) jobs of similar size and scope.
 - D. Certificate from the manufacturer certifying that the polymer alloy cladding complies with the Denver Building Code for its intended use.

- E. Maintenance Data: Submit manufacturers care and maintenance data, including care and cleaning instructions.
- F. Warranty: Sample of special warranty.

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish complete touchup kit for each type and finish of manufactured wood casework provided. Include scratch fillers, stains, finishes, and other materials necessary to perform permanent repairs to damaged casework finish.

1.7 MOCK-UP

- A. Fabricate one carcass for each type of cabinet required. DEN Project Manager is to review and approve carcass before remaining cabinet work can proceed. Contractor to pay for the expense of transporting the DEN Project Manager to carcass site and back.
- B. Complete fabrication of each carcass approved and deliver to job site for DEN Project Manager review. Once the mock-up for a type of cabinet is approved all remaining cabinets of that type may be fabricated. Approved cabinet mock-ups may be incorporated in the final work.
- C. Mock-up a minimum 200 sq. ft. of plastic-laminate-faced wall panel. Demonstrate panel removal to the DEN Project Manager.

1.8 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A qualified manufacturer that is certified for chain of custody by an FSC-accredited certification body.
- B. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.
- C. Source Limitations: Obtain manufactured wood casework from single source from single manufacturer.
- D. Quality Standard: Unless otherwise indicated, comply with requirements for modular cabinets in AWI's "Architectural Woodwork Quality Standards."
 - 1. Provide AWI Quality Certification Program [**labels**] [**certificate**] indicating that manufactured wood casework complies with requirements.
- E. Product Designations: Drawings indicate sizes, configurations, and finish material of manufactured wood casework by referencing designated manufacturer's catalog numbers. Other manufacturers' casework of similar sizes and door and drawer configurations, of same finish material, and complying with the Specifications may be considered. Refer to Section 016000 "Product Requirements."

- F. Coordination: Distribute copies of approved schedule for cabinet hardware specified in Section 087100, "Door Hardware" to manufacturer of architectural woodwork; coordinate cabinet shop drawings and fabrication with hardware requirements, including a cut sheet for all hardware items and typical fasteners.
- G. Distribute copies of casework shop drawings to stainless steel supplier and coordinate fabrication and installation.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Protect woodwork during transit, delivery, storage, and handling to prevent damage, soiling, and deterioration.
- B. Deliver manufactured wood casework only after painting, utility roughing-in, and similar operations that could damage, soil, or deteriorate casework have been completed in installation areas. If casework must be stored in other than installation areas, store only in areas where environmental conditions meet requirements specified for installation areas and in "Project Conditions" Article.
- C. Keep finished surfaces covered with polyethylene film or other protective covering during handling and installation.

1.10 PROJECT CONDITIONS

- A. Conditioning: Woodwork Manufacturer and Installer shall advise Contractor of temperature and humidity requirements for woodwork installation and storage areas. Do not install woodwork until required temperature and relative humidity have been stabilized and will be maintained in installation areas.
- B. Maintain temperature and humidity in installation area as required to maintain moisture content of installed woodwork within a 1.0 percent tolerance of optimum moisture content, from date of installation through remainder of construction period. Require Woodwork Manufacturer to establish optimum moisture content and required temperature and humidity conditions.
- C. Environmental Limitations: Do not deliver or install manufactured wood casework until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above ceilings is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
- D. Environmental Limitations: Do not deliver or install manufactured wood casework until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature between **60 and 90 deg F** (16 and 32 deg C) and relative humidity between **[25 and 55] [43 and 70] [17 and 50] <Insert humidity range>** percent during the remainder of the construction period.
- E. Field Measurements: Verify actual dimensions of construction contiguous with manufactured wood casework by field measurements before fabrication.

1.11 COORDINATION

- A. Coordinate layout and installation of framing and reinforcements in walls and partitions for support of manufactured wood casework.

1.12 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of manufactured wood casework that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
 - a. Delamination of components or other failures of glue bond.
 - b. Warping of components.
 - c. Failure of operating hardware.
 - d. Deterioration of finishes.
2. Warranty Period: Minimum **[five (5)]** <Insert number> years from date of Substantial Completion.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Wood-Faced Manufactured Casework:
 - a. Architectural Cabinet Systems; a division of Windham Millwork, Inc.
 - b. CampbellRhea; a Sagas International company.
 - c. CIF Furniture Ltd.
 - d. Fisher Hamilton L.L.C.
 - e. Kewaunee Scientific Corporation.
 - f. Mid Canada Millwork Ltd.
 - g. R. C. Smith Company.
 - h. Terrill Manufacturing Company.
 - i. TMI Systems Design Corporation.
 - j. <Insert manufacturer's name>.
 - k. or approved equal.

2. Plastic-Laminate-Faced Manufactured Casework:
- a. Architectural Cabinet Systems; a division of Windham Millwork, Inc.
 - b. Cal-Dak Cabinets.
 - c. CampbellRhea; a Sagas International company.
 - d. Case Systems Inc.
 - e. CIF Furniture Ltd.
 - f. Diversified Fixture.
 - g. Fisher Hamilton L.L.C.
 - h. Goelst USA, LLC.
 - i. Hausmann Industries, Inc.
 - j. International Office Products Cooperative.
 - k. LSI Corporation of America; a Sagas International company.
 - l. Mid Canada Millwork Ltd.
 - m. R. C. Smith Company.
 - n. Sidney Millwork Company.
 - o. Stevens Industries, Inc.
 - p. Techline USA, LLC.
 - q. Terrill Manufacturing Company.
 - r. TMI Systems Design Corporation.
 - s. UCMI.
 - t. **<Insert manufacturer's name>**.
 - u. or approved equal.

2.2 MATERIALS, GENERAL

- A. Certified Wood: Fabricate cabinets[**and countertops**] from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."
- B. Low-Emitting Materials: Fabricate manufactured wood casework, including countertops, with adhesives and composite wood products containing no urea formaldehyde.
- C. Low-Emitting Materials: [**Adhesives**] [**and**] [**composite wood products**] shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- D. Maximum Moisture Content for Lumber: 7 percent for hardwood and 12 percent for softwood.
- E. Hardwood Plywood: HPVA HP-1, either veneer core or particleboard core unless otherwise indicated.
- F. Softwood Plywood: DOC PS 1.
- G. Particleboard: ANSI A208.1, Grade M-2.

1. Recycled Content: Not less than **<Insert number>** percent preconsumer recycled content.
- H. Particleboard: Straw-based particleboard complying with ANSI A208.1, Grade M-2, except for density.
- I. MDF: ANSI A208.2, **[Grade 130] <Insert grade>**.
 1. Recycled Content: Not less than **<Insert number>** percent preconsumer recycled content.
- J. Hardboard: AHA A135.4, Class 1 Tempered.
 1. Recycled Content: Not less than **<Insert number>** percent preconsumer recycled content.
- K. Plastic Laminate: High-pressure decorative laminate complying with NEMA LD 3.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Abet Inc.
 - b. Arborite; a division of ITW Canada.
 - c. Formica Corporation.
 - d. Lamin-Art, Inc.
 - e. Nevamar Company, LLC; Decorative Products Div.
 - f. Panolam Industries International Incorporated.
 - g. Wilsonart International; Div. of Premark International, Inc.
 - h. **<Insert manufacturer's name>**.
 - i. or approved equal.
- L. Thermoset Decorative Panels: Particleboard or MDF finished with thermally fused, melamine-impregnated decorative paper complying with LMA SAT-1.
- M. Edgebanding for Plastic Laminate: **[Plastic laminate matching adjacent surfaces] [Rigid PVC extrusions, through color with satin finish, 3 mm thick at doors and drawer fronts, 1 mm thick elsewhere]**.
- N. Edgebanding for Wood-Veneered Construction: **[Minimum 1/8-inch- (3-mm-) thick, solid wood of same species as face veneer] [Wood veneer of same species as face veneer] [Rigid PVC extrusions, through color with satin finish, 3 mm thick at doors and drawer fronts, 1 mm thick elsewhere]**.
 1. Select wood edgebanding for grain and color compatible with face veneers.
- O. Edgebanding for Thermoset Decorative Panels: PVC or polyester edge banding complying with LMA EDG-1 and matching thermoset decorative panels.
- P. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, suitable for exposed applications.
- Q. Stainless-Steel Sheet: ASTM A 240 or ASTM A 666, Type 304, with No. 4 satin finish.

- R. Solid-Surfacing Material: Homogeneous solid sheets of filled plastic resin complying with ISSFA-2.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ABA Industries.
 - b. Avonite Surfaces; Aristech Acrylics LLC.
 - c. E. I. du Pont de Nemours and Company.
 - d. Formica Corporation.
 - e. LG Solid Source, L.L.C.
 - f. Meganite Inc.; a division of The Pyrochem Group.
 - g. Nevamar Company, LLC; Decorative Products Div.
 - h. Samsung; Cheil Industries Inc.
 - i. Swan Corporation (The).
 - j. Transolid, Inc.
 - k. Wilsonart International; Div. of Premark International, Inc.
 - l. <Insert manufacturer's name>.
 - m. or approved equal.
 2. Type: Provide Standard type[**or Veneer type made from material complying with requirements for Standard type, as indicated**] unless Special Purpose type is indicated.
 3. Integral Sink Bowls: Comply with ISSFA-2 and ANSI Z124.3, Type 5 or Type 6, without a precoated finish.

2.3 CABINET MATERIALS

- A. Exposed Cabinet Materials:
1. Wood Species: [Red oak] [White birch] [Alder] [White maple] [Hickory] [Cherry] <Insert species>.
 2. Plywood: Hardwood plywood with face veneer of species indicated, selected for compatible color and grain. Grade A exposed faces at least **1/50 inch** (0.5 mm) thick, and Grade J crossbands. Provide backs of same species as faces.
 - a. Face Veneer Cut: [Plain sliced] [Quarter sliced] [Rift cut] [Rotary cut].
 3. Solid Wood: Clear hardwood lumber of species indicated[**and selected for grain and color compatible with exposed plywood**] [, **selected for compatible grain and color**].
 4. Plastic Laminate: [Grade HGS] [Grade HGL] [Grade VGS].
 5. Unless otherwise indicated, provide specified edgebanding on all exposed edges.
- B. Semiexposed Cabinet Materials:

1. Solid Wood: Sound hardwood lumber, selected to eliminate appearance defects, of **[any species similar in color and grain to] [same species as]** exposed wood.
2. Plywood: Hardwood plywood of **[any species similar in color and grain to] [same species as]** exposed wood. **[Grade B] [Grade C]** faces and Grade J crossbands. Provide backs of same species as faces.
3. Plastic Laminate: **[Grade VGS] [Grade CLS]**.
 - a. Provide plastic laminate for semiexposed surfaces unless otherwise indicated.
 - b. Provide plastic laminate for interior faces of doors and drawer fronts and where indicated.
4. Thermoset Decorative Panels: Provide thermoset decorative panels for semiexposed surfaces unless otherwise indicated.
5. Metal for Steel Drawer Pans: Cold-rolled, steel sheet.
6. Unless otherwise indicated, provide specified edgebanding on all semiexposed edges.

C. Concealed Cabinet Materials:

1. Solid Wood: Any hardwood or softwood species, with no defects affecting strength or utility.
2. Plywood: Hardwood plywood. Provide backs of same species as faces.
3. Plastic Laminate: Grade BKL.

2.4 DESIGN, COLOR, AND FINISH

A. Design: Provide manufactured wood casework of the following design:

1. Lipped overlay with radiused edges and **[wire] [semirecessed plastic]** pulls.
2. Reveal overlay with **[wire] [semirecessed plastic]** pulls.
3. Flush overlay with **[wire] [semirecessed plastic]** pulls.
4. Lipped overlay with radiused wood edges and full-width, recessed finger pulls machined into faces of doors and drawers.
5. Reveal overlay with recessed finger pulls machined into faces of doors and drawers.

B. Wood Colors and Finishes: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from casework manufacturer's full range]**.

C. Thermoset Decorative Panel Colors, Patterns, and Finishes: **[As indicated by manufacturer's designations] [As selected by DEN Project Manager from casework manufacturer's full range] [As selected by DEN Project Manager from thermoset decorative panel manufacturer's full range] [As selected by DEN Project Manager from thermoset decorative panel manufacturer's full range of solid colors] [As selected by DEN Project Manager from thermoset decorative panel manufacturer's full range of wood-grain patterns]**.

- D. Plastic-Laminate Colors, Patterns, and Finishes: **[As indicated by manufacturer's designations] [As selected by DEN Project Manager from casework manufacturer's full range] [As selected by DEN Project Manager from plastic-laminate manufacturer's full range] [As selected by DEN Project Manager from plastic-laminate manufacturer's full range of solid colors] [As selected by DEN Project Manager from plastic-laminate manufacturer's full range of wood-grain patterns].**
- E. Architectural Polymer Alloy Cladding: **[As indicated by manufacturer's designations] [As selected by DEN Project Manager from casework manufacturer's full range] [As selected by DEN Project Manager from plastic-laminate manufacturer's full range] [As selected by DEN Project Manager from plastic-laminate manufacturer's full range of solid colors] [As selected by DEN Project Manager from plastic-laminate manufacturer's full range of wood-grain patterns].**
- F. PVC Edgebanding Color: **[Casework manufacturer's standard] [As selected from casework manufacturer's full range] <Insert requirement>.**
- G. Solid-Surfacing Material Colors and Patterns: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range].**

2.5 FIRE RETARDANT MATERIALS

- A. Fire retardant treated lumber: All wall panels to be pressure impregnated with fire retardant chemicals, particle board with hardwood trim, unless otherwise noted, and comply with the following requirements:
 - 1. Fire Retardant Chemicals: Use chemicals of type and for applications indicated which do not bleed through or otherwise adversely affect finishes. Do not use colorants in solution to distinguish treated lumber.
 - a. Organic Resin Type: Organic resin solution, relatively insoluble in water, thermally set in wood by kiln drying.
 - 1) Available Products: Subject to compliance with requirements, provide one of the following:
 - a) "NCX"; Koppers Co., Inc.
 - b) or approved equal.
 - 2. Fire Performance Characteristics: Provide materials which are identical to those tested per ASTM methods and time periods indicated, are marked and listed for fire performance characteristics by Underwriters Laboratories, Inc. or other testing and inspecting agency acceptable to authorities having jurisdiction, and comply with the following requirements:
 - a. Mill lumber after treatment, within limits set for wood removal, which does

- not affect listed fire performance characteristics, using a woodworking plant certified by testing and inspecting agency.
- b. Mill lumber before treatment and institute special procedures during treatment and drying processes to prevent warping, discoloration from drying sticks or other causes, marring or other defects in appearance of treated woodwork.
 - c. At Contractor's option, mill treated lumber in either sequence indicated above.
 - d. Marking: Identify treated lumber with separable paper classification marking of inspecting and testing agency, unless otherwise indicated.
 - e. Kiln dry woodwork after treatment to levels required for non fire retardant treated woodwork materials. Maintain moisture content required by kiln drying, before, and after treatment.
 - f. Discard treated lumber that does not comply with requirements of referenced woodworking standard. Do not use twisted, warped, bowed, discolored, or otherwise damaged or defective lumber.
3. Fire-retardant particleboard: Provide panels with fire-retardant chemicals incorporated at time of manufacture to achieve surface-burning characteristics of 20 for flame spread and 25 for smoke developed when tested in accordance with ASTM E 84. Comply with ANSI A108.1 for Grade 1-M-1 panels with density of 45 lbs./cu. ft. for thicknesses of 3/4" and less and 44 lbs./cu. ft. for thicknesses of 13/16" to 1 1/4"; except as follows:
- a. Modulus of rupture and modulus of elasticity: 1600 psi and 350,000 psi, respectively, for 48 lb. density, 1300 psi, respectively, and 275,000 psi for 44 lb. density.
 - b. Linear expansion: 0.35% for 45 lb. density and 0.50% for 44 lb. density.
 - c. Screw-holding capacity, face and edge: 300 lbs. and 250 lbs., respectively, for 45 lb. density, and of 250 and 175 lbs., respectively, for 44 lb. density.

2.6 FABRICATION, GENERAL

- A. Wood Moisture Content: Comply with requirements of referenced quality standard for moisture content of lumber at time of fabrication and for relative humidity conditions in the installation areas.
- B. Fabricate woodwork to dimensions, profiles, and details indicated with openings and mortises precut, where possible, to receive hardware and other items and work.
- C. Complete fabrication, assembly, finishing, hardware application, and other work before shipment to project site to maximum extent possible. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
- D. Pre Cut Openings: Fabricate architectural woodwork with precut openings, where possible, to receive hardware, appliances, plumbing fixtures, electrical work and similar items. Locate openings accurately and use templates or roughing in diagrams

for proper size and shape. Smooth edges of cutoffs and, where located in countertops and similar exposures seal edges of cutouts with a water resistant coating.

- E. Measurements: Before proceeding with fabrication of woodwork required to be fitted to other construction, obtain field measurements and verify dimensions and shop drawing details as required for accurate fit.

2.7 CABINET FABRICATION

- A. Wood-Faced Cabinet Construction:[**As required by referenced quality standard, but not less than the following:**]

1. Grade: Premium.
2. Bottoms of Cabinets and Tops of Wall Cabinets: **3/4-inch** (19-mm) [**veneer-core**] hardwood plywood.
3. Ends of Cabinets: **3/4-inch** (19-mm) hardwood plywood.
4. Shelves: **3/4-inch** (19-mm) veneer-core hardwood plywood.
5. Base Cabinet Top Frames: **3/4-by-2-inch** (19-by-51-mm) solid wood with mortise and tenon or doweled connections, glued and pinned or screwed.
6. Base Cabinet Stretchers: **3/4-by-4-1/2-inch** (19-by-114-mm) plywood, particleboard, or MDF strips or solid-wood boards at front and back of cabinet, glued and pinned or screwed.[**May be provided as an option to base cabinet top frames.**]
7. Base Cabinet Subtops: **3/4-inch** (19-mm) panel product glued and pinned or screwed.[**May be provided as an option to base cabinet top frames.**]
8. Backs of Cabinets: **3/4-inch** (19-mm) particleboard-core hardwood plywood where exposed, [**1/4-inch** (6.4-mm) **hardboard**] [**1/4-inch** (6.4-mm) **veneer-core hardwood plywood**] [**1/2-inch** (12.7-mm) **hardwood plywood**] dadoed into sides, bottoms, and tops where not exposed.
9. Drawer Fronts: **3/4-inch** (19-mm) particleboard-core hardwood plywood or solid hardwood.
10. Drawer Sides and Backs: **1/2-inch** (12.7-mm) solid-wood or [**veneer-core**] hardwood plywood, with glued dovetail or multiple-dowel joints.
11. Drawer Bottoms: **1/4-inch** (6.4-mm) veneer-core hardwood plywood glued and dadoed into front, back, and sides of drawers.[**Use 1/2-inch** (12.7-mm) **material for drawers more than 24 inches** (600 mm) **wide.**]
12. Drawer Bodies: Steel drawer pans formed from **0.0359-inch-** (0.9-mm-) thick metal, metallic phosphate treated, and finished with manufacturer's standard 2-coat, baked-enamel finish consisting of prime coat and thermosetting topcoat with a minimum dry film thickness of **1 mil** (0.025 mm) for topcoat and **2 mils** (0.05 mm) for system.
13. Doors **48 Inches** (1220 mm) or Less in Height: **3/4 inch** (19 mm) thick, with[**solid hardwood stiles and rails,**] particleboard or MDF cores, and hardwood face veneers and crossbands.
14. Doors More Than **48 Inches** (1220 mm) in Height: **1-1/16 inches** (27 mm) thick, with solid hardwood stiles and rails, honeycomb cores, and hardwood face veneers and crossbands.
15. Doors More Than **48 Inches** (1220 mm) in Height: **1-1/8 inches** (29 mm) thick, with particleboard cores and hardwood face veneers and crossbands.

- B. Plastic-Laminate-Faced Cabinet Construction:[**As required by referenced quality standard, but not less than the following:**]
1. Grade: Premium.
 2. Laminate Grade for Exposed Surfaces:
 - a. HGS (.050" nominal thickness).
 3. Laminate Grade For Semi-Exposed Surfaces:
 - a. HGL (.039" nominal thickness).
 4. Bottoms and Ends of Cabinets, and Tops of Wall Cabinets and Tall Cabinets: **3/4-inch** (19-mm) plywood not fire-retardant treated, complying with referenced standards, plastic-laminate faced[**on exposed surfaces, thermoset decorative panels on semiexposed surfaces**].
 5. Shelves: **3/4-inch** (19-mm) plywood, plastic-laminate faced.
 6. Backs of Cabinets: **1/2-inch** (12.7-mm) plywood not fire-retardant treated, complying with referenced standards, plastic-laminate faced[**on exposed surfaces, thermoset decorative panels on semiexposed surfaces**].
 7. Drawer Fronts: **3/4-inch** (19-mm) plywood not fire-retardant treated, complying with referenced standards, plastic-laminate faced.
 8. Drawer Sides and Backs: **1/2-inch** (12.7-mm) [**solid-wood or veneer-core hardwood plywood**] [**thermoset decorative panels**], with glued dovetail or multiple-dowel joints.
 9. Drawer Bottoms: **1/4-inch** (6.4-mm) [**hardwood plywood**] [**thermoset decorative panels**] glued and dadoed into front, back, and sides of drawers.[**Use 1/2-inch** (12.7-mm) **material for drawers more than 24 inches** (600 mm) **wide.**]
 10. Doors: **3/4-inch** (19-mm) particleboard or MDF[**with wood stiles and rails**], plastic-laminate faced.
 11. Provide dust panels of 1/4" plywood or tempered hardboard above compartments and drawers except where located directly under tops.
- C. Leg Shoes: Vinyl or rubber, black, open-bottom type.
- D. Filler Strips: Provide as needed to close spaces between cabinets and walls, ceilings, and indicated equipment. Fabricate from same material and with same finish as cabinets.

2.8 FINISH FOR WOOD-FACED MANUFACTURED CASEWORK

- A. Preparation: Sand lumber and plywood for manufactured wood casework construction before assembling. Sand edges of doors and drawer fronts and molded shapes with profile-edge sander. Sand casework after assembling for uniform smoothness at least equivalent to that produced by 220-grit sanding and without machine marks, cross sanding, or other surface blemishes.

- B. Staining: Remove fibers and dust and apply wash-coat sealer and stain to exposed and semiexposed surfaces as required to provide uniform color and to match approved samples.
- C. Finishing Closed-Grain Woods: Apply manufacturer's standard two-coat, baked, clear finish consisting of a thermosetting catalyzed sealer and a thermosetting catalyzed conversion varnish. Sand and wipe clean between applications of sealer and topcoat. Topcoat may be omitted on concealed surfaces.
- D. Finishing Open-Grain Woods: Apply manufacturer's standard three-coat, baked, clear finish consisting of a thermosetting catalyzed sealer and two coats of a thermosetting catalyzed conversion varnish. Sand and wipe clean between applications of sealer and topcoat and between topcoats. Topcoats may be omitted on concealed surfaces.

2.9 CASEWORK HARDWARE AND ACCESSORIES

- A. General: Provide cabinet hardware and accessory materials associated with architectural cabinets, except for items that are specified in Section 087100, "Door Hardware".
- B. Cabinet Hardware Schedule: Refer to schedule at end of this Section for cabinet hardware required for architectural cabinets.
- C. Hardware Standard: Comply with ANSI/BHMA A156.9 "American National Standard for Cabinet Hardware" for items indicated by reference to BHMA numbers or referenced to this standard.
- D. Hardware Finishes: Comply with BHMA 1301 for finishes indicated by BHMA Code Numbers or if not otherwise indicated, provide finishes complying with requirements indicated below:
 - 1. For exposed hardware comply with requirements indicated for finish and base indicated by BHMA Code Number below:
 - a. 630 (Satin stainless steel).
 - 2. For concealed hardware provide manufacturer's standard finish which complies with product class requirements of ANSI/BHMA A156.9.
- E. Clear Tempered Float Glass for Doors: FS DD G 1403, grade B, style I, type I, quality q3, class 1; manufactured by horizontal (roller hearth) process; 1/4" thick, unless otherwise indicated.
- F. Hardware, General: Unless otherwise indicated, provide manufacturer's standard [**satin-finish**], commercial-quality, heavy-duty hardware.
 - 1. Use threaded metal or plastic inserts with machine screws for fastening to particleboard except where hardware is through-bolted from back side.

- G. Butt Hinges: **[Stainless-steel]** , semiconcealed, 5-knuckle hinges complying with BHMA A156.9, Grade 1, with antifriction bearings and rounded tips. Provide 2 hinges for doors less than **48 inches** (1220 mm) high and 3 hinges for doors more than **48 inches** (1220 mm) high.
- H. Frameless Concealed Hinges (European Type): BHMA A156.9, Type B01602, **[100]** **[135]** **[170]** degrees of opening[, **self-closing**].
- I. Pulls: Solid **[stainless-steel]** wire pulls, fastened from back with two screws. For sliding doors, provide recessed **[stainless-steel]** flush pulls. Provide 2 pulls for drawers more than **24 inches** (600 mm) wide.
- J. Drawer Slides: BHMA A156.9, Type B05091.
1. Heavy Duty (Grade 1HD-100 and Grade 1HD-200): Side mounted; **[full]** **[full-overtravel]**-extension type; zinc-plated, steel ball-bearing slides.
 2. Box Drawer Slides: **[Grade 1HD-100]**, for drawers not more than **6 inches** (150 mm) high and **24 inches** (600 mm) wide.
 3. File Drawer Slides: **[Grade 1HD-100]** **[Grade 1HD-200]**, for drawers more than **6 inches** (150 mm) high or **24 inches** (600 mm) wide.
 4. Pencil Drawer Slides: **[Grade 2]** **[Grade 1]**, for drawers not more than **3 inches** (75 mm) high and **24 inches** (600 mm) wide.
 5. Keyboard Slides: **[Grade 1HD-100]**, for computer keyboard shelves.
 6. Trash Bin Slides: **[Grade 1HD-100]** **[Grade 1HD-200]**, for trash bins not more than **20 inches** (500 mm) high and **16 inches** (400 mm) wide.
- K. Label Holders: **[Stainless steel]** , sized to receive standard label cards approximately **1 by 2 inches** (25 by 51 mm), attached with screws or brads.
1. Provide label holders **[where indicated]** **[on all drawers]**.
- L. Drawer and Hinged Door Locks: **[Cylindrical (cam)]** **[Mortise]** type, 5-pin tumbler, brass with chrome-plated finish, and complying with BHMA A156.11, Grade 1.
1. Provide a minimum of two keys per lock and six master keys.
 2. Provide locks **[where indicated]** **[on all doors and drawers]**.
- M. Sliding-Door Hardware Sets: Manufacturer's standard, to suit type and size of sliding-door units.
- N. Adjustable Shelf Supports: **[2-pin locking plastic shelf rests complying with BHMA A156.9, Type B04013]** **[Single-pin metal shelf rests complying with BHMA A156.9, Type B04013]**.
- O. Adjustable Shelf Supports: Mortise-type, **[zinc-plated]** **[powder-coated]** steel standards and shelf rests complying with BHMA A156.9, Types B04071 and B04091.
- P. Grommets for Cable Passage through Countertops: **[1-1/4-inch (32-mm)]** **[2-inch (51-mm)]** **<Insert size>** OD, **[brown]** **[black]** **<Insert color>**, molded-plastic grommets and matching plastic caps with slot for wire passage.

- Q. Paper Slots: [12 inches (305 mm)] [17 inches (432 mm)] long by 1-3/4 inches (45 mm) wide by 1 inch (25 mm) deep; [brown] [black] <Insert color>, molded-plastic, paper-slot liner with 1/4-inch (6.4-mm) lip.

2.10 COUNTERTOPS

- A. Countertops, General: Provide smooth, clean exposed tops and edges in uniform plane free of defects. Provide front and end overhang of 1 inch (25 mm) over base cabinets.
- B. Grade: Premium.
- C. Plastic-Laminate Tops: Plastic-laminate sheet, shop bonded to both sides of [3/4-inch (19-mm)] [1-1/8-inch (29-mm)] plywood . Sand surfaces to which plastic laminate is to be bonded.
1. Plastic Laminate for Flat Tops: [Grade HGS] .
 2. Plastic Laminate for Formed Tops: Grade HGP.
 3. Plastic Laminate for Backing: Grade BKL.
 4. Provide [plastic-laminate edgings of the same material as top] [2-mm PVC edging] [3-mm PVC edging] on front edge of top, on top edges of backsplashes and end splashes, and on ends of tops and splashes.
 5. Construct top and backsplash from one piece of plastic laminate with rolled edges and coved intersection. Where indicated, provide separate end splashes fitted to top.
 6. Use exterior plywood for countertops containing sinks.
- D. Solid-Surfacing-Material Tops: [1/2-inch- (12.7-mm-)] [3/4-inch- (19-mm-)] thick, solid-surfacing material[with front edge built up with same material].
1. Front: [Straight, slightly eased at top] [Bevel] [3/4-inch (19-mm) bullnose] [Radius edge with apron, 2 inches (51 mm) high with 3/8-inch (9.5-mm) radius] [1-1/2-inch (38-mm) laminated bullnose] [1-inch (25-mm) laminated bullnose].
 2. Backsplashes: [1/2-inch- (12.7-mm-)] [3/4-inch- (19-mm-)] thick, solid-surfacing material; [slightly eased at edge] [beveled edge] [radiused edge with 3/8-inch (9.5-mm) radius].
- E. Solid-Surfacing-Material Tops: 1/4-inch- (6.4-mm-) thick, solid-surfacing material laminated to 3/4-inch- (19-mm-) thick particleboard with front edge built up with 3/4-inch- (19-mm-) thick, solid-surfacing material.
1. Front: [Radius edge with apron, 2 inches (51 mm) high with 3/8-inch (9.5-mm) radius] [1-inch (25-mm) laminated bullnose].
 2. Backsplashes: [1/2-inch- (12.7-mm-)] [3/4-inch- (19-mm-)] thick, solid-surfacing material; [slightly eased at edge] [beveled edge] [radiused edge with 3/8-inch (9.5-mm) radius].
- F. Stainless-Steel Tops: Made from 0.0625-inch- (1.6-mm-) thick, stainless-steel sheet.

1. Weld shop-made joints, and grind and polish surfaces to produce uniform, directional, textured, polished finish indicated, free of cross scratches. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
2. Sound deaden undersurface with heavy-build mastic coating.
3. Extend top down to provide a **1-inch-** (25-mm-) thick edge with a **1/2-inch** (12.7-mm) return flange.
4. Form backsplash coved to and integral with top surface, with a **1/2-inch-** (12.7-mm) thick edge and **1/2-inch** (12.7-mm) return flange.
5. Provide raised marine edge around perimeter of tops containing sinks; pitch two ways to sink to provide drainage without channeling or grooving.
6. Where stainless-steel sinks occur in stainless-steel tops, factory weld into one integral unit, grind welds smooth, and polish, passivate, and rinse.
7. Fabricate stainless-steel sinks with corners rounded and coved to at least a **5/8-inch** (16-mm) radius. Slope sink bottoms to outlet. Provide double-wall construction for sink partitions with top edge rounded to at least a **1/2-inch** (12.7-mm) diameter.

2.11 WALL SHELVING

- A. Plastic-Laminate Shelving: Plastic-laminate sheet, Grade HGL or HGP, shop bonded to both sides of plywood. Sand surfaces to which plastic laminate is to be bonded.
1. Shelf Thickness: [**5/8 inch** (16 mm)] [**3/4 inch** (19 mm)] [**1 inch** (25 mm)] [**As indicated**].
 2. Edge Treatment: Finish both edges with [**plastic laminate that matches faces**] [**rigid PVC T-molding, through color with satin finish**] [**rigid PVC extrusion, through color with satin finish, 3 mm thick**] [**minimum 1/8-inch-** (3-mm-) **thick, solid-wood edging applied before plastic laminate**].
- B. Adjustable Shelf Supports: [**Zinc-plated**] [**Powder-coated**] steel standards and shelf brackets, complying with BHMA A156.9, Types B04102 and B04112, surface mounted.

2.12 ARCHITECTURAL POLYMER ALLOY CLADDING

- A. Thickness: As indicated on drawings.
- B. Impact Resistance: No fracture per NEMA LD3-3.03, 1/2 lb. ball.
- C. Hardness: 52-56, Barcol Impressor.
- D. Tensile Strength: 3900 psi, per ASTM D-638.
- E. Tensile Modulus: 1.0 x 10(6) psi per ASTM D-638.
- F. High temperature, boiling water and conductive heat resistance: No change per NEMA LD3-3.06, LD3-3.05 and LD3-3.08 respectively.

- G. Abrasion resistance: .08g/100 cycles per CS 221-66.
- H. Cigarette resistance: No lasting effect, NEMA LD3-3.07.
- I. Color stability: No change per NEMA LD3-3.10.
- J. Weight: 4.4 lbs./SF for a 1/2" thickness.
- K. Stain and chemical resistance: No lasting effect when exposed to acetone, Ethanol, gasoline, Methanol, 99.5% Acetic acid, 37% hydrochloric acid, 85% Phosphoric acid, 77% sulphuric acid, 1% ammonia, 1% lye, nail polish remover, coffee and ammonium Hydroxide.
- L. Surface burning characteristics:
 - 1. Flame spread: 10.
 - 2. Smoke developed: 95-175.
- M. Finish: Matte, as obtained by light sanding with 320-350 grid sandpaper, glass level 5-18.
- N. Sealants and adhesives:
 - 1. Color-matched seam adhesive for joint seams. Match bowl color for seaming to sink bowls.
 - 2. Sealants to match polymer alloy in color, to be silicone and to comply with requirements of Section 079200, "Joint Sealants".

2.13 STAINLESS STEEL

- A. Bar Stock: ASTM A 276, Type 302 or 304.
- B. Plate: ASTM A 167, Type 302 or 304.
- C. Stainless steel finish: AISI number 4, brushed, directional with grain oriented along the length of the material or vertical on planar surfaces or as denoted by the DEN Project Manager.
- D. Gauge: As noted on drawings.
- E. Fasteners: Stainless steel, conceal to greatest extent possible.
- F. Hinges: Stainless steel, concealed from view.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas, with Installer present, for compliance with requirements for installation tolerances, location of framing and reinforcements, and other conditions affecting performance of manufactured wood casework.
- B. Condition woodwork to average prevailing humidity conditions in installation areas prior to installing.
- C. Prior to installation of architectural woodwork, examine shop fabricated work for completion, and complete work as required, including back priming and removal of packing
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 CASEWORK INSTALLATION

- A. Install level, plumb, and true; shim as required, using concealed shims. Where manufactured wood casework abuts other finished work, apply filler strips and scribe for accurate fit, with fasteners concealed where practical.
- B. Scribe and cut woodwork to fit adjoining work, and refinish cut surfaces or repair damaged finish at cuts.
- C. Pressure Treated Wood: Handle, store, and install pressure treated wood in compliance with recommendations of chemical treatment manufacturer including those for adhesives, where required for installation.
- D. Anchor woodwork to anchors or blocking built in or directly attached to substrates. Secure to grounds, stripping and blocking with countersunk, concealed fasteners and blind nailing as required for a complete installation. Except where prefinished matching fasteners heads are required, use fine finishing nails for exposed nailing, countersunk and filled flush with woodwork.
- E. Cabinets, General: Install without distortion so that doors and drawers fit openings properly and are accurately aligned. Adjust hardware to center doors and drawers in openings and to provide unencumbered operation. Complete the installation of hardware and accessory items as indicated. Maintain veneer sequence matching (if any) of cabinets with transparent finish.
- F. Base Cabinets: Set cabinets straight, level, and plumb. Adjust subtops within **1/16 inch** (1.5 mm) of a single plane. Fasten cabinets to masonry or framing, wood blocking, or reinforcements in walls and partitions with fasteners spaced **24 inches** (600 mm) o.c. Bolt adjacent cabinets together with joints flush, tight, and uniform. Align similar adjoining doors and drawers to a tolerance of **1/16 inch** (1.5 mm).

1. Where base cabinets are not installed adjacent to walls, fasten to floor at toe space with fasteners spaced [16 inches (400 mm)] [24 inches (600 mm)] o.c. Secure sides of cabinets to floor, where they do not adjoin other cabinets, with not less than two fasteners.
- G. Wall Cabinets: Hang cabinets straight, level, and plumb. Adjust fronts and bottoms within 1/16 inch (1.5 mm) of a single plane. Fasten to hanging strips, masonry, or framing, blocking, or reinforcements in walls or partitions. Align similar adjoining doors to a tolerance of 1/16 inch (1.5 mm).
1. Fasten through back, near top and bottom, at ends, and not more than [16 inches (400 mm)] <Insert spacing> o.c.
 2. Use toggle bolts at hollow masonry.
 3. Use expansion anchors at solid masonry.
 4. Use No. 10 wafer-head screws sized for 1-inch (25-mm) penetration at wood hanging strips.
 5. Use No. 10 wafer-head screws sized for 1-inch (25-mm) penetration into wood framing or blocking at wood-framed partitions.
 6. Use [No. 10 wafer-head sheet metal screws through metal backing or metal framing behind wall finish] [toggle bolts through metal backing or metal framing behind wall finish] at metal-framed partitions.
 7. Use toggle bolts at plaster on metal lath.
- H. Paneling: Anchor paneling to supporting substrate with concealed panel hanger clips.
- I. Polymer alloy cladding: Comply with all manufacturer's recommendations for installation. All edges to be eased unless otherwise noted on drawings. Provide materials of thickness and profile shown. Provide blocking and bracing and ancillary support. Fabricate baby changing counter with an integral covered backsplash at factory. Tightly seam any joints. Factory fabricate to greatest extent possible. Joints shall be inconspicuous and flush. Provide factory cutouts for in-alloy devices. Reject defective work. Cut and finish edges with clean sharp returns.
- J. Installing Stainless Steel Items:
1. Coordinate work with work by other trades.
 2. Comply with the intent of details.
 3. External corners: Ease 1/32" unless otherwise noted.
- K. Anchor all items securely. Adhere stainless steel to plywood where indicated per Manufacturer's recommendations.
- L. Install hardware uniformly and precisely. Set hinges snug and flat in mortises unless otherwise indicated. Adjust and align hardware so moving parts operate freely and contact points meet accurately. Allow for final adjustment after installation.
- M. Adjust casework and hardware so doors and drawers operate smoothly without warp or bind. Lubricate operating hardware as recommended by manufacturer.

3.3 INSTALLATION OF TOPS

- A. Field Jointing: Where possible make in the same manner as shop jointing, using dowels, splines, adhesives, and fasteners recommended by manufacturer. Prepare edges to be joined in shop so Project-site processing of top and edge surfaces is not required. Locate field joints where shown on Shop Drawings.
1. Secure field joints in plastic-laminate countertops with concealed clamping devices located within **6 inches** (150 mm) of front and back edges and at intervals not exceeding **24 inches** (600 mm). Tighten according to manufacturer's written instructions to exert a constant, heavy-clamping pressure at joints.
- B. Secure tops to cabinets with Z- or L-type fasteners or equivalent, using two or more fasteners at each front, end, and back.
- C. Abut top and edge surfaces in one true plane, with internal supports placed to prevent deflection.
- D. Secure **[backsplashes] [and] [end splashes]** to **[tops with concealed metal brackets at 16 inches** (400 mm) **o.c.] [and] [walls with adhesive]**.
- E. Seal junctures of tops, splashes, and walls with mildew-resistant silicone sealant or another permanently elastic sealing compound recommended by countertop material manufacturer.

3.4 INSTALLATION OF SHELVING

- A. Securely fasten shelf standards to masonry, partition framing, wood blocking, or reinforcements in partitions.
1. Fasten shelf standards at ends and not more than **[12 inches** (300 mm)] **<Insert spacing>** o.c.
 2. Use toggle bolts at hollow masonry.
 3. Use expansion anchors at solid masonry.
 4. Use **[self-tapping sheet metal screws] [toggle bolts]** in metal framing or metal backing at metal-framed partitions. Do not use wall anchors in gypsum board.
 5. Use wood screws sized for **1-inch** (25-mm) penetration into wood framing or blocking at wood-framed partitions.
 6. Use toggle bolts at plaster on metal lath.
- B. Install shelf standards plumb and at heights to align shelf brackets for level shelves. Space standards not more than **[30 inches** (750 mm)] **[36 inches** (900 mm)] **[42 inches** (1050 mm)] **[48 inches** (1200 mm)] **<Insert spacing>** o.c.
- C. Install shelving level and straight, closely fitted to other work where indicated.

3.5 CLEANING AND PROTECTING

- A. Repair damaged and defective woodwork where possible to eliminate defects

functionally and visually; where not possible to repair replace woodwork. Adjust joinery for uniform appearance.

- B. Complete the finishing work specified as work of this section, to whatever extent not completed at shop or prior to installation of woodwork.
 - 1. Provide final protection and maintain conditions, in a manner acceptable to Fabricator and Installer, which ensures architectural woodwork being without damage or deterioration at time of substantial completion.
- C. Clean, lubricate and adjust hardware.
- D. Clean finished surfaces, touch up as required, and remove or refinish damaged or soiled areas to match original factory finish, as approved by DEN Project Manager.
- E. Protection: Provide 6-mil (0.15-mm) plastic or other suitable water-resistant covering over countertop surfaces. Tape to underside of countertop at a minimum of 48 inches (1220 mm) o.c. Remove protection at Substantial Completion.

3.6 HARDWARE SCHEDULE

- A. CH-1 Standard Box Drainer Slides: 100 pound/pair load rating with steel ball bearings, self-closing.
 - 1. Complying Example: Accuride Model No. 3005.
- B. Door Pivot/Slide : Vertical: Pivot/Slide device suitable for vertical installation, for door thickness shown and for weights of doors as required. Provide manufacturer's standard or recommended "European" concealed hinges for a complete installation.
 - 1. Complying Example: Accuride Model No. 1332.
- C. Door Pivot/Slide : Horizontal: Pivot/Slide device suitable for horizontal installation, for door thickness shown and for weights of doors as required. For doors wider than 42" and/or weighing more than 20 lbs. provide a centered third slide. Provide manufacturer's standard or recommended "European" concealed hinges for a complete installation.
 - 1. Complying Example: Accuride Model No. 115.
- D. CH-4 Standard Cabinet Hinges for Plastic-Laminate Clad Cabinets: Self closing concealed casework hinges, minimum 110 degree opening, built-in 3 dimensional adjustment. Provide complete "European" style nickel-plated steel half-overlay hinges at intermediate supports, and full-overlay hinges at ends of casework, sized to result in a 1/4" reveal or gap, unless otherwise shown. Provide 2 hinges for doors up to 30" in height or 20 pounds in weight; 3 hinges for doors 30" to 60" in height or 20-40 pounds in weight; and 4 hinges for doors 60" to 84" in height or 40-60 pounds in weight, whichever is greater.
 - 1. Complying Example: Blum Model 90

- a. Full Overlay = #91M350
 - b. Half Overlay = #91M360
- E. CH-5 Cabinet Locks: Refer to Section 08710, for lock to be supplied, this Contractor to coordinate and install lock.
- 1. Complying Example: Best 5E7-Series
- F. CH-6 Flush Mount Interlocking Cleats: .062 cold rolled steel, 1-1/2" x 1-3/4" 2 piece interlocking hanger. System consisting of 2 identical pieces with a slightly raise tongue.
- 1. Complying Example: #418 Flush Mount
- G. CH-7 Standard Magnetic Catches: Heavy duty catch, pull strength of 7 pounds (+1/2 pound) base size 1-15/16 x 27/31 with a brushed aluminum finish. Provide manufacturers standard matching strike plate with each catch.
- 1. Complying Example: Stanley Model No. SP46.
- H. CH-8 Bumper/Stop: Black rubber bumper and metal fastener.
- 1. Complying Example: Stanley Hardware No. 2891.
- I. CH-9 Adjustable Shelving Support for Cabinets: 5/8" x 3/16" slotted steel standard with mounting brackets gained in flush.
- 1. Complying Example: Knape and Vogt. 255 standards with No. 256 brackets.
- J. C-10 Closet Rods: 1-1/2" diameter stainless steel, #4 finish, unless otherwise indicated.
- K. C-11 Ventilation Screen: 18 x 16 or 18 x 14 mesh of plastic-coated glass fiber threads, woven and fused to form fabric mesh resistant to corrosion, shrinkage, stretch, impact damage and weather deterioration, in black color.
- L. C-12 Undercarriage Mount Shelf Slide: Full travel shelf slide. Use 3 slides per shelf, minimum 130# capacity @ 25" extension. Maximum slide height = 1-3/4".
- 1. Complying Example: Accuride Model #C301-1590-24.
- M. C-13 Recessed Cabinet Pulls: Recessed drawer and door pulls, flush mortise mounted. Normal dimensions exposed to view - 4" long x 1" high. Black anodized finish.
- 1. Complying Example: EPCO Co. Model #DP-414.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 123200

SECTION 123619 - WOOD COUNTERTOPS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Wood countertops.
 - 2. Shop finishing of wood countertops.
- B. Related Requirements:
 - 1. Section 123200 "Manufactured Wood Casework".
 - 2. Section 123623.13 "Plastic-Laminate-Clad Countertops."
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product[, **including**] [**panel products**] [**fire-retardant-treated materials**] [**and**] [**finishing materials and processes**].
 - 1. Include data for fire-retardant treatment from chemical-treatment manufacturer and certification by treating plant that treated materials comply with requirements.
 - 2. Include data substantiating that materials comply with requirements.
- B. Wood Treatment Data: Submit chemical treatment manufacturer's instructions for handling, storing, installation, and finish of treated material.
- C. Quality Certification: Submit woodwork Manufacturer's (Fabricator's) certification, stating that fabricated woodwork complies with quality grades and other requirements indicated.
- D. LEED Submittals:
 - 1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and

- preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating distance to Project, cost for each regional material, and fraction by weight that is considered regional.
 3. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regionally manufactured[**and regionally extracted and manufactured**] materials. Include statement indicating cost for each regionally manufactured material.
 - a. Include statement indicating location of manufacturer and distance to Project for each regionally manufactured material.
 - b. Include statement indicating location of manufacturer and point of extraction, harvest, or recovery for each raw material used in regionally extracted and manufactured materials. Indicate distance to Project and fraction by weight of each regionally manufactured material that is regionally extracted.
 4. Certificates for [**Credit MR 6**] [**Credit MR 7**]: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification and chain-of-custody requirements. Include statement indicating cost for each certified wood product.
 5. Product Data for Credit IEQ 4.1: For installation adhesives, including printed statement of VOC content.
 6. Laboratory Test Reports for Credit IEQ 4.1: For adhesives, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
 7. Product Data for Credit IEQ 4.4: For adhesives and composite wood products, documentation indicating that products contain no urea formaldehyde.
 8. Laboratory Test Reports for Credit IEQ 4.4: For composite wood products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- E. Shop Drawings: Show location of each item, dimensioned plans and elevations, large-scale details, attachment devices, and other components.
1. Show locations and sizes of cutouts and holes for [**plumbing fixtures**] [**faucets**] [**soap dispensers**] [**electrical switches and outlets**] [**and other items**] installed in wood countertops.
 2. Show veneer leaves with dimensions, grain direction, exposed face, and identification numbers indicating the flitch and sequence within the flitch for each leaf.
 3. Apply AWI Quality Certification Program label to Shop Drawings.

- F. Samples for Initial Selection: For shop-applied transparent finishes.
- G. Samples for Verification:
 - 1. Lumber for transparent finish, not less than **[5 inches (125 mm) wide by 12 inches (300 mm) long] [5 inches (125 mm) wide by 24 inches (600 mm) long]**, for each species and cut, finished on one side and one edge.
 - 2. Veneer leaves representative of and selected from flitches to be used for transparent-finished woodwork.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For **[Installer] [fabricator]**.
- B. Certificate from the fabricator providing proof of not less than five (5) years experience in the fabrication of the types of products specified.
- C. Certificate from the installer providing proof of not less than five (5) years of successful experience in the installation of similar types of products and shall have completed at least three (3) jobs of similar size and scope.
- D. Product Certificates: For **[each type of product.] [the following:]**
 - 1. Composite wood and agrifiber products.
 - 2. Adhesives.
- E. Woodwork Quality Standard Compliance Certificates: **[AWI Quality Certification Program certificates] [WI Certified Compliance Program certificates]**.
- F. Evaluation Reports: For fire-retardant-treated materials, from ICC-ES.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Data: Submit manufacturers' care and maintenance data, including care and cleaning instructions.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Fabricator Qualifications: Shop that employs skilled workers who custom fabricate products similar to those required for this Project and whose products have a record of successful in-service performance. **[Shop is a certified participant in AWI's Quality Certification Program.][Shop is a licensee of WI's Certified Compliance Program.]**

- B. Installer Qualifications: [**Fabricator of products**] [**Certified participant in AWI's Quality Certification Program**] [**Licensee of WI's Certified Compliance Program**].
- C. Testing Agency Qualifications: For testing agency providing classification marking for fire-retardant-treated material, an inspection agency acceptable to authorities having jurisdiction that periodically performs inspections to verify that the material bearing the classification marking is representative of the material tested.
- D. Mockup: Build mockup to demonstrate aesthetic effects and to set quality standards for fabrication and execution.
 - 1. Build mockup of typical countertop as shown on Drawings. Fabricate one carcass for each type of wood countertop required. DEN Project Manager is to review and approve mockup before remaining cabinet work can proceed. Contractor to pay for the expense of transporting the DEN Project Manager to site and back.
 - 2. Complete fabrication of each countertop approved and deliver to job site for DEN Project Manager review. Once the mockup for a type of countertop is approved all remaining countertops of that type may be fabricated.
 - 3. Subject to compliance with requirements, approved mockup may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Protect woodwork during transit, delivery, storage, and handling to prevent damage, soiling and deterioration.
- B. Do not deliver wood countertops until painting and similar operations that could damage wood countertops have been completed in installation areas. If wood countertops must be stored in other than installation areas, store only in areas where environmental conditions comply with requirements specified in "Field Conditions" Article.

1.8 FIELD CONDITIONS

- A. Conditioning: Woodwork Manufacturer and Installer shall advise Contractor of temperature and humidity requirements for woodwork installation and storage areas. Do not install woodwork until required temperature and relative humidity have been stabilized and will be maintained in installation areas.
- B. Maintain temperature and humidity in installation area as required to maintain moisture content of installed woodwork within a 1.0 percent tolerance of optimum moisture content, from date of installation through remainder of construction period. Require Woodwork Manufacturer to establish optimum moisture content and required temperature and humidity conditions.
- C. Environmental Limitations: Do not deliver or install wood countertops until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.

- D. Environmental Limitations: Do not deliver or install wood countertops until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature between **60 and 90 deg F** (16 and 32 deg C) and relative humidity between **[25 and 55] [43 and 70] [17 and 50] <Insert humidity range>** percent during the remainder of the construction period.
- E. Field Measurements: Where wood countertops are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
- F. Established Dimensions: Where wood countertops are indicated to fit to other construction, establish dimensions for areas where wood countertops are to fit. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

1.9 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of wood countertops that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Delamination of components or other failures of glue bond.
 - b. Warping of components.
 - c. Deterioration of finishes.
 - 2. Warranty Period: Minimum **[five (5)] <Insert number>** years from date of Substantial Completion.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 WOODWORK FABRICATORS

- A. Fabricators: Subject to compliance with requirements, provide products by one of the following:
 - 1. **<Insert, in separate subparagraphs, names and possibly contact information for preapproved woodworking firms>**.
 - 2. or approved equal.

2.2 WOOD COUNTERTOPS

- A. Quality Standard: Unless otherwise indicated, comply with the "Architectural Woodwork Standards" for grades indicated for construction, finishes, installation, and other requirements.
1. Provide **[labels] [and] [certificates]** from **[AWI]** certification program indicating that woodwork[, **including installation,**] complies with requirements of grades specified.
 2. The Contract Documents contain selections chosen from options in the quality standard and additional requirements beyond those of the quality standard. Comply with those selections and requirements in addition to the quality standard.
- B. Grade: **[Premium] [Custom]**.
- C. Regional Materials: Wood countertops shall be manufactured within **500 miles** (800 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles** (800 km) of Project site.
- D. Regional Materials: Wood countertops shall be manufactured within **500 miles** (800 km) of Project site.
- E. Certified Wood: Wood countertops shall be produced from wood certified as "FSC Pure"[**or "FSC Mixed Credit"**] according to FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship," and FSC STD-40-004, "FSC Standard for Chain of Custody Certification."
- F. Type of Top: Solid wide width for transparent finish. Solid wood, edge glued, with crown direction reversed in adjacent boards, to produce widths indicated. Select boards for similarity of color and grain and arrange boards for optimum match between adjacent boards.
1. Wood Species and Cut:**[As indicated.]**
 - a. Species: **[Red oak] [White oak] [White ash] [White birch] <Insert species>**.
 - b. Cut: **[Plain sawn] [Rift sawn] [Quarter sawn]**.
- G. Type of Top: Solid butcher block for transparent finish. Narrow strips of lumber glued together. Arrange strips for random mix of color and grain.
1. Wood Species: **[Red oak] [Hard maple] [Teak] [As indicated] <Insert species>**.
 2. Strip Thickness: **[3/4 inch (19 mm)] [1-1/2 inches (38 mm)] [As indicated]**.
- H. Type of Top: Panel product for transparent finish (wood veneer laminated over core) as follows:
1. Wood Species and Cut:**[As indicated.]**

- a. Species: **[Red oak] [White oak] [White ash] [White birch] <Insert species>**.
 - b. Cut: **[Plain sliced] [Rift cut] [Quarter cut]**.
2. Matching of Adjacent Veneer Leaves: **[Book] [slip] [random] [and] [end] match**.
 3. Veneer Matching within Panel Face: **[Running] [Balance] [Center-balance] match**.
 4. Edge Treatment: **[Solid wood matching face for species and cut] [Wood veneer matching face for species and cut] [As indicated]**.
 5. Core Material: **[Exterior-grade plywood]**.

2.3 WOOD MATERIALS

- A. Wood Products: Provide materials that comply with requirements of referenced quality standard for each type of woodwork and quality grade specified unless otherwise indicated.
1. Do not use plain-sawn softwood lumber with exposed, flat surfaces more than **3 inches** (75 mm) wide.
 2. Wood Moisture Content: **[5 to 10] [8 to 13] [4 to 9]** percent.
 3. Softwood Plywood: DOC PS 1.

2.4 FIRE-RETARDANT-TREATED MATERIALS

- A. Fire-Retardant-Treated Materials, General: Where fire-retardant-treated materials are indicated, use materials complying with requirements in this article that are acceptable to authorities having jurisdiction and with fire-test-response characteristics specified as determined by testing identical products per test method indicated by a qualified testing agency.
1. Use treated materials that comply with requirements of referenced woodworking standard. Do not use materials that are warped, discolored, or otherwise defective.
 2. Use fire-retardant-treatment formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.
 3. Identify fire-retardant-treated materials with appropriate classification marking of qualified testing agency in the form of removable paper label or imprint on surfaces that will be concealed from view after installation.
- B. Fire-Retardant-Treated Lumber and Plywood: Products with a flame-spread index of 25 or less when tested according to ASTM E 84, with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than **10.5 feet** (3.2 m) beyond the centerline of the burners at any time during the test.
1. Kiln dry lumber and plywood after treatment to a maximum moisture content of

- 19 and 15 percent, respectively.
 2. For items indicated to receive a stained or natural finish, use organic resin chemical formulation.
 3. Mill lumber after treatment within limits set for wood removal that do not affect listed fire-test-response characteristics, using a woodworking shop certified by testing and inspecting agency.
 4. Mill lumber before treatment and implement special procedures during treatment and drying processes that prevent lumber from warping and developing discolorations from drying sticks or other causes, marring, and other defects affecting appearance of treated woodwork.
- C. Fire-Retardant Particleboard: Panels complying with the following requirements, made from softwood particles and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 25 or less per ASTM E 84.
1. For panels **3/4 inch** (19 mm) thick and less, comply with ANSI A208.1 for Grade M-2 except for the following minimum properties: modulus of rupture, **1600 psi** (11 MPa); modulus of elasticity, **300,000 psi** (2070 MPa); internal bond, **80 psi** (550 kPa); and screw-holding capacity on face and edge, **250 and 225 lbf** (1100 and 1000 N), respectively.
 2. For panels **13/16 to 1-1/4 inches** (20 to 32 mm) thick, comply with ANSI A208.1 for Grade M-1 except for the following minimum properties: modulus of rupture, **1300 psi** (9 MPa); modulus of elasticity, **250,000 psi** (1720 MPa); linear expansion, 0.50 percent; and screw-holding capacity on face and edge, **250 and 175 lbf** (1100 and 780 N), respectively.
 3. Products: Subject to compliance with requirements, provide one of the followin:
 - a. Flakeboard Company Limited; Duraflake FR.
 - b. SierraPine; Encore FR.
 - c. **<Insert manufacturer's name; product name or designation>**.

2.5 ACCESSORIES

- A. Grommets for Cable Passage through Countertops: [**1-1/4-inch** (32-mm)] [**2-inch** (51-mm)] **<Insert dimension>** OD, [**brown**] [**black**] **<Insert color>**, molded-plastic grommets and matching plastic caps with slot for wire passage.
1. Product: Subject to compliance with requirements, provide "[**OG**] [**SG**] series" by Doug Mockett & Company, Inc.
- B. Paper Slots: [**12 inches** (305 mm)] [**17 inches** (432 mm)] long by **1-3/4 inches** (45 mm) wide by **1 inch** (25 mm) deep; [**brown**] [**black**] **<Insert color>**, molded-plastic, paper-slot liner with **1/4-inch** (6.4-mm) lip.

2.6 MISCELLANEOUS MATERIALS

- A. Adhesives: Do not use adhesives that contain urea formaldehyde.

- B. Adhesives: Use adhesives that meet the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. VOC Limits for Installation Adhesives and Sealants: Use products that comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
 - 1. Wood Glues: 30 g/L.
 - 2. Multipurpose Construction Adhesives: 70 g/L.
 - 3. Structural Wood Member Adhesive: 140 g/L.
 - 4. Architectural Sealants: 250 g/L.

2.7 FABRICATION

- A. Wood Moisture Content: Comply with requirements of referenced quality standard for moisture content of lumber at time of fabrication and for relative humidity conditions in the installation areas.
- B. Sand fire-retardant-treated wood lightly to remove raised grain on exposed surfaces before fabrication.
- C. Measurements: Before proceeding with fabrication of woodwork required to be fitted to other construction, obtain field measurements and verify dimensions and shop drawing details as required for accurate fit.
- D. Fabricate wood countertops to dimensions, profiles, and details indicated. Ease edges to radius indicated for the following:
 - 1. Solid-Wood (Lumber) Members: **1/16 inch** (1.5 mm) unless otherwise indicated.
 - 2. Edges of Members More Than **3/4 Inch** (19 mm) Thick: **1/8 inch** (3 mm).
- E. Complete fabrication, including assembly[, **finishing,**] and hardware application, to maximum extent possible before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
 - 1. Notify DEN Project Manager seven days in advance of the dates and times woodwork fabrication will be complete.
 - 2. Trial fit assemblies at fabrication shop that cannot be shipped completely assembled. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting. Verify that various parts fit as intended and check measurements of assemblies against field measurements before disassembling for shipment.
- F. Shop-cut openings to maximum extent possible to receive hardware, appliances, plumbing fixtures, electrical work, and similar items. Locate openings accurately and

use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.

1. Seal edges of openings in countertops with a coat of varnish.

G. SHOP FINISHING

H. General: Finish architectural wood countertops at fabrication shop as specified in this Section. Defer only final touchup, cleaning, and polishing until after installation.

I. Finish Materials: Use finish materials that meet the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

J. Shop Priming: Shop apply the prime coat including backpriming, if any, for items specified to be field finished. Refer to Section 099300 "Staining and Transparent Finishing" for material and application requirements.

K. Preparation for Finishing: Comply with referenced quality standard for sanding, filling countersunk fasteners, sealing concealed surfaces, and similar preparations for finishing architectural woodwork, as applicable to each unit of work.

1. Backpriming: Apply one coat of sealer or primer, compatible with finish coats, to concealed surfaces of wood countertops. Apply two coats to end-grain surfaces.

L. Transparent Finish:

1. Grade: **[Premium]**.
2. Finish: System - 1, nitrocellulose lacquer.
3. Finish: System - 2, precatalyzed lacquer.
4. Finish: System - 3, postcatalyzed lacquer.
5. Finish: System - 4, water-based latex acrylic.
6. Finish: System - 5, conversion varnish.
7. Finish: System - 6, synthetic penetrating oil.
8. Finish: System - 7, catalyzed vinyl.
9. Finish: System - 8, water-based cross linking acrylic.
10. Finish: System - 9, UV curable acrylated epoxy, polyester, or urethane.
11. Finish: System - 10, water-based UV curable.
12. Finish: System - 11, catalyzed polyurethane.
13. Finish: System - 12, water-based polyurethane.
14. Finish: System - 13, catalyzed polyester.
15. Wash Coat for Closed-Grain Woods: Apply wash-coat sealer to woodwork made from closed-grain wood before staining and finishing.
16. Staining: **[None required] [Match approved sample for color] [Match DEN Project Manager's sample]**.
17. Open Finish for Open-Grain Woods: Do not apply filler to open-grain woods.
18. Filled Finish for Open-Grain Woods: **[After staining, apply wash-coat sealer and allow to dry.]** Apply paste wood filler and wipe off excess. Tint filler to match stained wood.

19. Sheen: **[Flat, 15-30] [Satin, 31-45] [Semigloss, 46-60] [Gloss, 61-100]** gloss units measured on 60-degree gloss meter per ASTM D 523.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Before installation, condition wood countertops to average prevailing humidity conditions in installation areas.
- B. Before installing wood countertops, examine shop-fabricated work for completion and complete work as required, including removal of packing and backpriming.

3.2 INSTALLATION

- A. Grade: Install wood countertops to comply with same grade as item to be installed.
- B. Assemble wood countertops and complete fabrication at Project site to the extent that it was not completed in the shop.
- C. Install wood countertops level, plumb, true, and straight. Shim as required with concealed shims. Install level and plumb to a tolerance of **1/8 inch in 96 inches** (3 mm in 2400 mm).
- D. Scribe and cut wood countertops to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.
- E. Fire-Retardant-Treated Wood: Handle, store, and install fire-retardant-treated wood to comply with chemical treatment manufacturer's written instructions, including those for adhesives used to install woodwork.
- F. Countertops: Anchor securely by screwing through corner blocks of base cabinets or other supports into underside of countertop.
 - 1. Install countertops with no more than **1/8 inch in 96-inch** (3 mm in 2400-mm) sag, bow, or other variation from a straight line.
 - 2. Secure backsplashes **[to tops with concealed metal brackets at 16 inches** (400 mm) **o.c.] [and] [to walls with adhesive]**.
 - 3. Calk space between backsplash and wall with sealant specified in Section 079200 "Joint Sealants."
- G. Touch up finishing work specified in this Section after installation of wood countertops. Fill nail holes with matching filler where exposed.
 - 1. Apply specified finish coats, including stains and paste fillers if any, to exposed surfaces where only sealer/prime coats are applied in shop.

- H. Refer to [**Section 099123 "Interior Painting"**] [**and**] [**Section 099300 "Staining and Transparent Finishing"**] for final finishing of installed wood countertops[**not indicated to be shop finished**].

3.3 ADJUSTING AND CLEANING

- A. Repair damaged and defective wood countertops, where possible, to eliminate functional and visual defects; where not possible to repair, replace woodwork. Adjust joinery for uniform appearance.
- B. Complete the finishing work specified as work of this section, to whatever extent not completed at shop or prior to installation of woodwork.
1. Provide final protection and maintain conditions, in a manner acceptable to Fabricator and Installer, which ensures wood countertops being without damage or deterioration at time of substantial completion.
- C. Clean wood countertops on exposed and semiexposed surfaces. Touch up shop-applied finishes to restore damaged or soiled areas.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 123619

SECTION 123623.13 - PLASTIC-LAMINATE-CLAD COUNTERTOPS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes plastic-laminate countertops.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product[, **including**] [**panel products**] [**high-pressure decorative laminate**] [**adhesive for bonding plastic laminate**] [**and**] [**fire-retardant-treated materials**].
 - 1. Include data for fire-retardant treatment from chemical-treatment manufacturer and certification by treating plant that treated materials comply with requirements.
 - 2. Include data substantiating that materials comply with requirements.
- B. Wood Treatment Data: Submit chemical treatment manufacturer's instructions for handling, storing, installation, and finish of treated material.
- C. Quality Certification: Submit woodwork Manufacturer's (Fabricator's) certification, stating that fabricated woodwork complies with quality grades and other requirements indicated.
- D. LEED Submittals:
 - 1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
 - 2. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating distance to Project, cost for each regional material, and fraction by weight that is considered regional.

3. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regionally manufactured[**and regionally extracted and manufactured**] materials. Include statement indicating cost for each regionally manufactured material.
 - a. Include statement indicating location of manufacturer and distance to Project for each regionally manufactured material.
 - b. Include statement indicating location of manufacturer and point of extraction, harvest, or recovery for each raw material used in regionally extracted and manufactured materials. Indicate distance to Project and fraction by weight of each regionally manufactured material that is regionally extracted.
 4. Certificates for [**Credit MR 6**] [**Credit MR 7**]: Chain-of-custody certificates indicating that products specified to be made from certified wood comply with forest certification and chain-of-custody requirements. Include statement indicating cost for each certified wood product.
 5. Product Data for Credit IEQ 4.1: For installation adhesives, including printed statement of VOC content.
 6. Laboratory Test Reports for Credit IEQ 4.1: For adhesives, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
 7. Product Data for Credit IEQ 4.4: For adhesives and composite wood products, documentation indicating that products contain no urea formaldehyde.
 8. Laboratory Test Reports for Credit IEQ 4.4: For composite wood products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- E. Shop Drawings: Show location of each item, dimensioned plans and elevations, large-scale details, attachment devices, and other components.
1. Show locations and sizes of cutouts and holes for [**plumbing fixtures**] [**faucets**] [**soap dispensers**] [**electrical switches and outlets**] [**and other items**] installed in plastic-laminate countertops.
 2. Apply AWI Quality Certification Program label to Shop Drawings.
- F. Samples for Initial Selection:
1. Plastic laminates.
- G. Samples for Verification:
1. Plastic laminates, [**8 by 10 inches** (200 by 250 mm)] [**12 by 12 inches** (300 by 300 mm)], for each[**type,**] color, pattern, and surface finish[, **with one sample applied to core material**] [**and specified edge material applied to one edge**].

2. Wood-grain plastic laminates, [12 by 24 inches (300 by 600 mm)] [24 by 24 inches (600 by 600 mm)], for each[**type,**] pattern and surface finish[, **with one sample applied to core material**] [**and specified edge material applied to one edge**].

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For [**Installer**] [**fabricator**].
- B. Certificate from the fabricator providing proof of not less than five (5) years experience in the fabrication of the types of products specified.
- C. Certificate from the installer providing proof of not less than five (5) years of successful experience in the installation of similar types of products and shall have completed at least three (3) jobs of similar size and scope.
- D. Product Certificates: For [**each type of product.**] [**the following:**]
 1. Composite wood and agrifiber products.
 2. High-pressure decorative laminate.
 3. Chemical-resistant, high-pressure decorative laminate.
 4. Adhesives.
- E. Woodwork Quality Standard Compliance Certificates: [**AWI Quality Certification Program certificates**] [**WI Certified Compliance Program certificates**].
- F. Evaluation Reports: For fire-retardant-treated materials, from ICC-ES.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Data: Submit manufacturers care and maintenance data, including care and cleaning instructions.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Fabricator Qualifications: Shop that employs skilled workers who custom fabricate products similar to those required for this Project and whose products have a record of successful in-service performance. [**Shop is a certified participant in AWI's Quality Certification Program.**][**Shop is a licensee of WI's Certified Compliance Program.**]
- B. Installer Qualifications: [**Fabricator of products**] [**Certified participant in AWI's Quality Certification Program**] [**Licensee of WI's Certified Compliance Program**].

- C. Testing Agency Qualifications: For testing agency providing classification marking for fire-retardant-treated material, an inspection agency acceptable to authorities having jurisdiction that periodically performs inspections to verify that the material bearing the classification marking is representative of the material tested.
- D. Mockup: Build mockup to demonstrate aesthetic effects and to set quality standards for fabrication and execution.
 - 1. Build mockup of typical countertop as shown on Drawings. Fabricate one carcass for each type of plastic-laminate-clad countertop required. DEN Project Manager is to review and approve mockup before remaining cabinet work can proceed. Contractor to pay for the expense of transporting the DEN Project Manager to site and back.
 - 2. Complete fabrication of each countertop approved and deliver to job site for DEN Project Manager review. Once the mockup for a type of countertop is approved all remaining countertops of that type may be fabricated.
 - 3. Subject to compliance with requirements, approved mockup may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Protect woodwork during transit, delivery, storage and handling to prevent damage, soiling and deterioration.
- B. Do not deliver countertops until painting and similar operations that could damage countertops have been completed in installation areas. If countertops must be stored in other than installation areas, store only in areas where environmental conditions comply with requirements specified in "Field Conditions" Article.

1.8 FIELD CONDITIONS

- A. Conditioning: Woodwork Manufacturer and Installer shall advise Contractor of temperature and humidity requirements for woodwork installation and storage areas. Do not install woodwork until required temperature and relative humidity have been stabilized and will be maintained in installation areas.
- B. Maintain temperature and humidity in installation area as required to maintain moisture content of installed woodwork within a 1.0 percent tolerance of optimum moisture content, from date of installation through remainder of construction period. Require Woodwork Manufacturer to establish optimum moisture content and required temperature and humidity conditions.
- C. Environmental Limitations: Do not deliver or install countertops until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.

- D. Environmental Limitations: Do not deliver or install countertops until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature between **60 and 90 deg F** (16 and 32 deg C) and relative humidity between **[25 and 55] [43 and 70] [17 and 50] <Insert humidity range>** percent during the remainder of the construction period.
- E. Field Measurements: Where countertops are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
- F. Established Dimensions: Where countertops are indicated to fit to other construction, establish dimensions for areas where countertops are to fit. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

1.9 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of plastic-laminate-clad countertops that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Delamination of components or other failures of glue bond.
 - b. Warping of components.
 - c. Deterioration of finishes.
 - 2. Warranty Period: Minimum **[five (5)] <Insert number>** years from date of Substantial Completion.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PLASTIC-LAMINATE COUNTERTOPS

- A. Quality Standard: Unless otherwise indicated, comply with the "Architectural Woodwork Standards" for grades indicated for construction, installation, and other requirements.

1. Provide **[labels] [and] [certificates]** from AWI certification program indicating that countertops[, **including installation,**] comply with requirements of grades specified.
 2. The Contract Documents contain selections chosen from options in the quality standard and additional requirements beyond those of the quality standard. Comply with those selections and requirements in addition to the quality standard.
- B. Grade: **[Premium] [Custom]** .
- C. Regional Materials: Plastic-laminate countertops shall be manufactured within **500 miles** (800 km) of Project site.
- D. Certified Wood: Plastic-laminate countertops shall be made from wood products certified as "FSC Pure"[**or "FSC Mixed Credit"**] according to FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship," and FSC STD-40-004, "FSC Standard for Chain of Custody Certification."
- E. High-Pressure Decorative Laminate: NEMA LD 3, **[Grade HGS]** .
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Abet Laminati, Inc.
 - b. Formica Corporation.
 - c. Lamin-Art, Inc.
 - d. Panolam Industries International, Inc.
 - e. Wilsonart International; Div. of Premark International, Inc.
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
- F. Chemical-Resistant, High-Pressure Decorative Laminate: NEMA LD 3, Grade HGP, and as follows:
1. Laminate has the following ratings when tested with indicated reagents according to NEMA LD 3, Test Procedure 3.9.5:
 - a. Nitric Acid (30 Percent): Moderate effect.
 - b. Sulfuric Acid (77 Percent): Moderate effect.
 - c. Hydrochloric Acid (37 Percent): Moderate effect.
 - d. Phosphoric Acid (75 Percent): No effect.
 - e. Acetic Acid (98 Percent): No effect.
 - f. Formaldehyde: No effect.
 - g. Ethyl Acetate: No effect.
 - h. Ethyl Ether: No effect.
 - i. Phenol (85 Percent): Moderate effect.
 - j. Benzene: No effect.
 - k. Xylene: No effect.
 - l. Butyl Alcohol: No effect.
 - m. Furfural: No effect.

- n. Methyl Ethyl Ketone: No effect.
 - o. Sodium Hydroxide (25 Percent): No effect.
 - p. Sodium Sulfide (15 Percent): No effect.
 - q. Ammonium Hydroxide (28 Percent): No effect.
 - r. Zinc Chloride: No effect.
 - s. Gentian Violet: No effect.
 - t. Methyl Red: No effect.
2. Products: Subject to compliance with requirements, provide one of the following:
- a. Formica Corporation; Lab Grade 840 Black.
 - b. Panolam Industries International, Inc.; Pionite Chemguard.
 - c. Wilsonart International, Div. of Premark International, Inc.; Chemsurf.
 - d. **<Insert manufacturer's name; product name or designation>**.
 - e. or approved equal.
- G. Colors, Patterns, and Finishes: Provide materials and products that result in colors and textures of exposed laminate surfaces complying with the following requirements:
1. As indicated by manufacturer's designations.
 2. Match DEN Project Manager's sample.
 3. As selected by DEN Project Manager from manufacturer's full range in the following categories:
 - a. Solid colors, **[gloss]** **[matte]** finish.
 - b. Solid colors with core same color as surface, **[gloss]** **[matte]** finish.
 - c. Wood grains, **[gloss]** **[matte]** finish.
 - d. Patterns, **[gloss]** **[matte]** finish.
 4. Grain Direction: Parallel to cabinet fronts.
- H. Edge Treatment: **[Same as laminate cladding on horizontal surfaces]** **[2-mm PVC edging]** **[3-mm PVC edging]** **[Lumber edge for transparent finish matching wood species and cut on cabinet surfaces]** **[As indicated]**.
- I. Core Material: **[Exterior-grade plywood]** .
- J. Core Material at Sinks: **[exterior-grade plywood]**.
- K. Core Thickness: **[3/4 inch (19 mm)]** **[1-1/8 inch (29 mm)]**.
1. Build up countertop thickness to **1-1/2 inches (38 mm)** at front, back, and ends with additional layers of core material laminated to top.
- L. Backer Sheet: Provide plastic-laminate backer sheet, NEMA LD 3, Grade BKL, on underside of countertop substrate.
- M. Paper Backing: Provide paper backing on underside of countertop substrate.

2.2 WOOD MATERIALS

- A. Wood Products: Provide materials that comply with requirements of referenced quality standard unless otherwise indicated.
1. Wood Moisture Content: **[5 to 10] [8 to 13] [4 to 9]** percent.
 2. Softwood Plywood: DOC PS 1.

2.3 FIRE-RETARDANT-TREATED MATERIALS

- A. Fire-Retardant-Treated Materials, General: Where fire-retardant-treated materials are indicated, use materials complying with requirements in this article that are acceptable to authorities having jurisdiction and with fire-test-response characteristics specified as determined by testing identical products per test method indicated by a qualified testing agency.
1. Use treated materials that comply with requirements of referenced woodworking standard. Do not use materials that are warped, discolored, or otherwise defective.
 2. Use fire-retardant-treatment formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.
 3. Identify fire-retardant-treated materials with appropriate classification marking of qualified testing agency in the form of removable paper label or imprint on surfaces that will be concealed from view after installation.
- B. Fire-Retardant-Treated Lumber and Plywood: Products with a flame-spread index of 25 or less when tested according to ASTM E 84, with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than **10.5 feet (3.2 m)** beyond the centerline of the burners at any time during the test.
1. Kiln dry lumber and plywood after treatment to a maximum moisture content of 19 and 15 percent, respectively.
 2. For items indicated to receive a stained or natural finish, use organic resin chemical formulation.
 3. Mill lumber after treatment within limits set for wood removal that do not affect listed fire-test-response characteristics, using a woodworking shop certified by testing and inspecting agency.
 4. Mill lumber before treatment and implement special procedures during treatment and drying processes that prevent lumber from warping and developing discolorations from drying sticks or other causes, marring, and other defects affecting appearance of treated woodwork.
- C. Fire-Retardant Particleboard: Panels complying with the following requirements, made from softwood particles and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 25 or less per ASTM E 84.

1. For panels **3/4 inch** (19 mm) thick and less, comply with ANSI A208.1 for Grade M-2 except for the following minimum properties: modulus of rupture, **1600 psi** (11 MPa); modulus of elasticity, **300,000 psi** (2070 MPa); internal bond, **80 psi** (550 kPa); and screw-holding capacity on face and edge, **250 and 225 lbf** (1100 and 1000 N), respectively.
2. For panels **13/16 to 1-1/4 inches** (20 to 32 mm) thick, comply with ANSI A208.1 for Grade M-1 except for the following minimum properties: modulus of rupture, **1300 psi** (9 MPa); modulus of elasticity, **250,000 psi** (1720 MPa); linear expansion, 0.50 percent; and screw-holding capacity on face and edge, **250 and 175 lbf** (1100 and 780 N), respectively.
3. Products: Subject to compliance with requirements, provide one of the following:
 - a. Flakeboard Company Limited; Duraflake FR.
 - b. SierraPine; Encore FR.
 - c. **<Insert manufacturer's name; product name or designation>**.

2.4 ACCESSORIES

- A. Grommets for Cable Passage through Countertops: [**1-1/4-inch** (32-mm)] [**2-inch** (51-mm)] **<Insert dimension>** OD, [**brown**] [**black**] **<Insert color>**, molded-plastic grommets and matching plastic caps with slot for wire passage.
 1. Product: Subject to compliance with requirements, provide "[**OG**] [**SG**] series" by Doug Mockett & Company, Inc.
- B. Paper Slots: [**12 inches** (305 mm)] [**17 inches** (432 mm)] long by **1-3/4 inches** (45 mm) wide by **1 inch** (25 mm) deep; [**brown**] [**black**] **<Insert color>**, molded-plastic, paper-slot liner with **1/4-inch** (6.4-mm) lip.

2.5 MISCELLANEOUS MATERIALS

- A. Adhesives: Do not use adhesives that contain urea formaldehyde.
- B. Adhesives: Use adhesives that meet the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Adhesive for Bonding Plastic Laminate: [**Unpigmented contact cement**] [**Contact cement**] [**PVA**] [**Urea formaldehyde**] [**Resorcinol**].
 1. Adhesive for Bonding Edges: Hot-melt adhesive[**or adhesive specified above for faces**].
- D. VOC Limits for Installation Adhesives and Sealants: Use products that comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
 1. Wood Glues: 30 g/L.

2. Multipurpose Construction Adhesives: 70 g/L.
3. Structural Wood Member Adhesive: 140 g/L.
4. Architectural Sealants: 250 g/L.

2.6 FABRICATION

- A. Wood Moisture Content: Comply with requirements of referenced quality standard for moisture content of lumber at time of fabrication and for relative humidity conditions in the installation areas.
- B. Sand fire-retardant-treated wood lightly to remove raised grain on exposed surfaces before fabrication.
- C. Measurements: Before proceeding with fabrication of woodwork required to be fitted to other construction, obtain field measurements and verify dimensions and shop drawing details as required for accurate fit.
- D. Fabricate countertops to dimensions, profiles, and details indicated. Provide front and end overhang of **1 inch** (25 mm) over base cabinets. Ease edges to radius indicated for the following:
 1. Solid-Wood (Lumber) Members: **1/16 inch** (1.5 mm) unless otherwise indicated.
- E. Complete fabrication, including assembly, to maximum extent possible before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
 1. Notify DEN Project Manager seven (7) days in advance of the dates and times woodwork fabrication will be complete.
 2. Trial fit assemblies at fabrication shop that cannot be shipped completely assembled. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting. Verify that various parts fit as intended and check measurements of assemblies against field measurements before disassembling for shipment.
- F. Shop cut openings to maximum extent possible to receive appliances, plumbing fixtures, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.
 1. Seal edges of openings in countertops with a coat of varnish.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Before installation, condition countertops to average prevailing humidity conditions in installation areas.
- B. Before installing countertops, examine shop-fabricated work for completion and complete work as required, including removal of packing and backpriming.

3.2 INSTALLATION

- A. Grade: Install countertops to comply with same grade as item to be installed.
- B. Assemble countertops and complete fabrication at Project site to the extent that it was not completed in the shop.
 - 1. Provide cutouts for appliances, plumbing fixtures, electrical work, and similar items.
 - 2. Seal edges of cutouts by saturating with varnish.
- C. Field Jointing: Where possible, make in the same manner as shop jointing, using dowels, splines, adhesives, and fasteners recommended by manufacturer. Prepare edges to be joined in shop so Project-site processing of top and edge surfaces is not required. Locate field joints where shown on Shop Drawings.
 - 1. Secure field joints in plastic-laminate countertops with concealed clamping devices located within **6 inches** (150 mm) of front and back edges and at intervals not exceeding **24 inches** (600 mm). Tighten according to manufacturer's written instructions to exert a constant, heavy-clamping pressure at joints.
- D. Install countertops level, plumb, true, and straight. Shim as required with concealed shims. Install level and plumb to a tolerance of **1/8 inch in 96 inches** (3 mm in 2400 mm).
- E. Scribe and cut countertops to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.
- F. Fire-Retardant-Treated Wood: Handle, store, and install fire-retardant-treated wood to comply with chemical treatment manufacturer's written instructions, including those for adhesives used to install woodwork.
- G. Countertops: Anchor securely by screwing through corner blocks of base cabinets or other supports into underside of countertop.
 - 1. Install countertops with no more than **1/8 inch in 96-inch** (3 mm in 2400-mm) sag, bow, or other variation from a straight line.
 - 2. Secure backsplashes [**to tops with concealed metal brackets at 16 inches** (400 mm) **o.c.**] [**and**] [**to walls with adhesive**].

3. Seal junctures of tops, splashes, and walls with mildew-resistant silicone sealant or another permanently elastic sealing compound recommended by countertop material manufacturer.

3.3 ADJUSTING AND CLEANING

- A. Repair damaged and defective countertops, where possible, to eliminate functional and visual defects; where not possible to repair, replace woodwork. Adjust joinery for uniform appearance.
- B. Provide final protection and maintain conditions, in a manner acceptable to Fabricator and Installer, which ensures architectural woodwork being without damage or deterioration at time of substantial completion.
- C. Clean countertops on exposed and semiexposed surfaces. Touch up shop-applied finishes to restore damaged or soiled areas.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 123623.13

SECTION 123640 - STONE COUNTERTOPS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes stone countertops.
- B. Related Requirements:
 - 1. Section 044200 "Exterior Stone Cladding" for descriptions of stone types required by this Section.
 - 2. Section 123200 "Architectural Woodwork" for cabinets.
 - 3. Section 123661 "Simulated Stone Countertops" for [**cultured-marble**] [**solid-surface**] [**and**] [**quartz-agglomerate**] countertops.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each[**variety of stone,**] stone accessory, and manufactured product.
 - 1. Include data substantiating that materials comply with requirements.
- B. Quality Certification: Submit stone countertop Manufacturer's (Fabricator's) certification, stating that fabricated stonework complies with quality grades and other requirements indicated.
- C. LEED Submittals:
 - 1. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating distance to Project, cost for each regional material, and fraction by weight that is considered regional.
 - 2. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regionally manufactured[**and regionally extracted**

and manufactured] materials. Include statement indicating cost for each regionally manufactured material.

- a. Include statement indicating location of manufacturer and distance to Project for each regionally manufactured material.
 - b. Include statement indicating location of manufacturer and point of extraction, harvest, or recovery for each raw material used in regionally extracted and manufactured materials. Indicate distance to Project and fraction by weight of each regionally manufactured material that is regionally extracted.
3. Product Data for Credit IEQ 4.1: For **[adhesives] [and] [sealants]**, documentation including printed statement of VOC content.
4. Laboratory Test Reports for Credit IEQ 4.1: For **[adhesives] [and] [sealants]**, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- D. Shop Drawings: Include plans, sections, large-scale details, and attachments to other work.
1. Show locations and details of joints.
 2. Show direction of veining, grain, or other directional pattern.
- E. Samples for Verification:
1. For each stone type indicated, in sets of Samples not less than **12 inches** (300 mm) square. Include **[two] [three]** or more Samples in each set and show the full range of variations in appearance characteristics expected in completed Work.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For fabricator.
- B. Certificate from the fabricator providing proof of not less than five (5) years experience in the fabrication of the types of products specified.
- C. Certificate from the installer providing proof of not less than five (5) years of successful experience in the installation of similar types of products and shall have completed at least three (3) jobs of similar size and scope.
- D. Material Test Reports:
1. Stone Test Reports: For **[each]** stone variety proposed for use on Project, by a qualified testing agency, indicating compliance with required physical properties, according to referenced ASTM standards. Base reports on testing done within previous **[three] [five] <Insert number>** years.
 2. Sealant Compatibility and Adhesion Test Report: From sealant manufacturer indicating that sealants will not stain or damage stone.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For stone countertops to include in maintenance manuals. Include product data for stone-care products used or recommended by Installer, and names, addresses, and telephone numbers of local sources for products.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Fabricator Qualifications: Shop that employs skilled workers who custom-fabricate stone countertops similar to that required for this Project, and whose products have a record of successful in-service performance.
- B. Installer Qualifications: Fabricator of stone countertops.
- C. Mockup: Build mockup to demonstrate aesthetic effects and to set quality standards for fabrication and execution.
 - 1. Build mockup of typical countertop as shown on Drawings. Fabricate one carcass for each type of stone countertop required. DEN Project Manager is to review and approve mockup before remaining cabinetwork can proceed. Contractor to pay for the expense of transporting the DEN Project Manager to site and back.
 - 2. Complete fabrication of each countertop approved and deliver to job site for DEN Project Manager review. Once the mockup for a type of countertop is approved all remaining countertops of that type may be fabricated.
 - 3. Subject to compliance with requirements, approved mockup may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 PRECONSTRUCTION TESTING

- A. Preconstruction Sealant Adhesion and Compatibility Testing: Submit to joint-sealant manufacturers, for compatibility and adhesion testing according to sealant manufacturer's standard testing methods and Section 079200 "Joint Sealants," Samples of materials that will contact or affect joint sealants.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Store and handle stone and related materials to prevent deterioration or damage due to moisture, temperature changes, contaminants, corrosion, breaking, chipping, and other causes.
 - 1. Lift stone with wide-belt slings; do not use wire rope or ropes that might cause staining. Move stone, if required, using dollies with cushioned wood supports.

2. Store stone on wood A-frames or pallets with nonstaining, waterproof covers. Arrange to distribute weight evenly and to prevent damage to stone. Ventilate under covers to prevent condensation.

1.9 FIELD CONDITIONS

- A. Field Measurements: Verify dimensions of construction to receive stone countertops by field measurements before fabrication[**and indicate measurements on Shop Drawings**].

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations for Stone: Obtain[**each variety of**] stone, [**regardless of finish,**] from a single quarry[, **whether specified in this Section or in another Section of the Specifications,**] with resources to provide materials of consistent quality in appearance and physical properties.

1. For stone types that include same list of varieties and sources, provide same variety from same source for each.

2. Make stone slabs available for examination by DEN Project Manager.

- a. DEN Project Manager will select aesthetically acceptable slabs[**and will indicate aesthetically unacceptable portions of slabs**].
- b. Segregate slabs selected for use on Project and mark backs indicating approval.
- c. Mark and photograph aesthetically unacceptable portions of slabs as directed by DEN Project Manager.

- B. Varieties and Sources: Subject to compliance with requirements, provide stone of varieties and from sources complying with Section 044200 "Exterior Stone Cladding."

2.2 GRANITE <Insert drawing designation>

- A. Material Standard: Comply with ASTM C 615.

- B. Regional Materials: Granite shall be fabricated within **500 miles (800 km)** of Project site from stone that has been extracted within **500 miles (800 km)** of Project site.

- C. Regional Materials: Granite shall be fabricated within 500 miles (800 km) of Project site.
- D. Description: Uniform, [fine] [medium]-grained, [white] [pink] [gray] [black] <Insert color> stone[without veining].
- E. Varieties and Sources: Subject to compliance with requirements, provide one of the following:
 - 1. <Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>.
 - 2. or approved equal.
- F. Cut: [Vein] [Fleuri].
- G. Cut stone from contiguous, matched slabs in which natural markings occur.
- H. Finish: [Polished] [Honed] [Thermal] [As indicated] [Match DEN Project Manager's sample] <Insert finish>.
- I. Match DEN Project Manager's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.3 MARBLE <Insert drawing designation>

- A. Material Standard: Comply with ASTM C 503[, Classification I Calcite] [, Classification II Dolomite] [, Group A] [, Group B] [, Group C] [, Group D].
 - 1. Stone Abrasion Resistance: Minimum value of [10] <Insert value>, based on testing according to ASTM C 241/C 241M or ASTM C 1353.
- B. Regional Materials: Marble shall be fabricated within 500 miles (800 km) of Project site from stone that has been extracted within 500 miles (800 km) of Project site.
- C. Regional Materials: Marble shall be fabricated within 500 miles (800 km) of Project site.
- D. Description: Uniform, fine- to medium-grained, [white] <Insert color> stone with only slight veining.
- E. Varieties and Sources: Subject to compliance with requirements, provide one of the following:
 - 1. <Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>.
 - 2. or approved equal.
- F. Cut: [Vein] [Fleuri].
- G. Cut stone from contiguous, matched slabs in which natural markings occur.

- H. Finish: [**Polished**] [**Honed**] [**As indicated**] [**Match DEN Project Manager's sample**] <Insert finish>.
- I. Match DEN Project Manager's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.4 SERPENTINE <Insert drawing designation>

- A. Material Standard: Comply with ASTM C 1526[, **Classification I Exterior**] [, **Classification II Interior**].
 - 1. Stone Abrasion Resistance: Minimum value of [**10**] <Insert value>, based on testing according to ASTM C 241/C 241M or ASTM C 1353.
- B. Regional Materials: Serpentine shall be fabricated within 500 miles (800 km) of Project site from stone that has been extracted within 500 miles (800 km) of Project site.
- C. Regional Materials: Serpentine shall be fabricated within 500 miles (800 km) of Project site.
- D. Varieties and Sources: Subject to compliance with requirements, provide one of the following:
 - 1. <Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>.
 - 2. or approved equal.
- E. Cut stone from contiguous, matched slabs in which natural markings occur.
- F. Finish: [**Polished**] [**Honed**] [**As indicated**] [**Match DEN Project Manager's sample**] <Insert finish>.
- G. Match DEN Project Manager's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.5 SLATE <Insert drawing designation>

- A. Material Standard: Comply with ASTM C 629[, **Classification I Exterior**] [, **Classification II Interior**].
 - 1. Stone Abrasion Resistance: Minimum value of [**8**] <Insert value>, based on testing according to ASTM C 241/C 241M or ASTM C 1353.
- B. Regional Materials: Slate shall be fabricated within 500 miles (800 km) of Project site from stone that has been extracted within 500 miles (800 km) of Project site.
- C. Regional Materials: Slate shall be fabricated within 500 miles (800 km) of Project site.

- D. Description: [**Black**] [**Blue-black**] [**Gray**] [**Blue-gray**] [**Green**] [**Purple**] [**Mottled purple and green**] [**Red**] slate with a fine, even grain[**and unfading color,**] from clear, sound stock.
- E. Varieties and Sources: Subject to compliance with requirements, provide one of the following:
1. **<Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>.**
 2. or approved equal.
- F. Finish: [**Honed**] [**Sand rubbed**] [**Natural cleft**] [**As indicated**] [**Match DEN Project Manager's sample**] **<Insert finish>.**
- G. Match DEN Project Manager's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.6 OTHER STONE **<Insert drawing designation>**

- A. Material Standards:
1. Maximum Absorption per ASTM C 97/C 97: **<Insert value>.**
 2. Minimum Compressive Strength per ASTM C 170/C 170M: **<Insert value>.**
 3. Minimum Flexural Strength per ASTM C 880/C 880: **<Insert value>.**
 4. Minimum Stone Abrasion Resistance per ASTM C 241/C 241M or ASTM C 1353: **[10] <Insert value>.**
- B. Regional Materials: Stone shall be fabricated within **500 miles (800 km)** of Project site from stone that has been extracted within **500 miles (800 km)** of Project site.
- C. Regional Materials: Stone shall be fabricated within **500 miles (800 km)** of Project site.
- D. Varieties and Sources: Subject to compliance with requirements, provide one of the following:
1. **<Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>.**
 2. or approved equal.
- E. Finish: [**Polished**] [**Honed**] [**Sand rubbed**] [**Natural cleft**] [**As indicated**] [**Match DEN Project Manager's sample**] **<Insert finish>.**
- F. Match DEN Project Manager's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.7 ADHESIVES, GROUT, SEALANTS, AND STONE ACCESSORIES

- A. General: Use only adhesives formulated for stone and ceramic tile and that are recommended by their manufacturer for the application indicated.

- B. Water-Cleanable Epoxy Adhesive: ANSI A118.3[.][, with a VOC content of 65 g/L or less.][, that complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."]
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. Boiardi Products; a QEP company.
 - b. Bonstone Materials Corporation.
 - c. Bostik, Inc.
 - d. C-Cure.
 - e. Custom Building Products.
 - f. Jamo Inc.
 - g. Laticrete International, Inc.
 - h. MAPEI Corporation.
 - i. Mer-Krete Systems; ParexLahabra, Inc.
 - j. Prospec; Bonsal American; a division of Oldcastle Architectural Products Group.
 - k. Summitville Tiles, Inc.
 - l. TEC, Specialty Construction Brands, Inc.; an H. B. Fuller company.
 - m. **<Insert manufacturer's name>.**
 - n. or approved equal.
- C. Water-Cleanable Epoxy Grout: ANSI A118.3, chemical-resistant, water-cleanable, tile-setting and -grouting epoxy.
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. Boiardi Products; a QEP company.
 - b. Bostik, Inc.
 - c. C-Cure.
 - d. Custom Building Products.
 - e. Jamo Inc.
 - f. Laticrete International, Inc.
 - g. MAPEI Corporation.
 - h. Mer-Krete Systems; ParexLahabra, Inc.
 - i. Prospec; Bonsal American; a division of Oldcastle Architectural Products Group.
 - j. Summitville Tiles, Inc.
 - k. TEC, Specialty Construction Brands, Inc.; an H. B. Fuller company.
 - l. **<Insert manufacturer's name>.**
 - m. or approved equal.
- D. Stone Adhesive: Two-part [epoxy] [or] [polyester] adhesive, formulated specifically for bonding stone to stone, with an initial set time of not more than two hours at 70 deg F (21 deg C)[.][, and with a VOC content of 65 g/L or less.][, that complies with the testing and product requirements of the California Department of Health

Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."]

1. Color: **[Clear] [Match stone]**.
 2. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. Epoxy Adhesive: **Akemi**; Akepox.
 - b. Epoxy Adhesive: **Axson North America, Inc., Wood & Stone Company**; Akabond Epoxy.
 - c. Epoxy Adhesive: **Bonstone Materials Corporation**; Touchstone Last Patch.
 - d. Epoxy Adhesive: **Bonstone Materials Corporation**; Touchstone Ratio Pac Clear Gel Epoxy.
 - e. Epoxy Adhesive: **<Insert manufacturer's name; product name or designation>**.
 - f. Polyester Adhesive: **Akemi**; Platinum Clear Polyester Adhesive.
 - g. Polyester Adhesive: **Axson North America, Inc., Wood & Stone Company**; Wood & Stone Polyester.
 - h. Polyester Adhesive: **Bonstone Materials Corporation**; Gripstone L-200KG.
 - i. Polyester Adhesive: **<Insert manufacturer's name; product name or designation>**.
 - j. or approved equal.
- E. Sealant for Countertops: Manufacturer's standard sealant of characteristics indicated below that complies with applicable requirements in Section 079200 "Joint Sealants" and will not stain the stone it is applied to.
1. Mildew-Resistant Joint Sealant: **[Mildew resistant, single component, nonsag, neutral curing, silicone] [Single component, nonsag, mildew resistant, acid curing, silicone] <Insert joint sealant>**.
 2. Joint Sealant: **[Latex] [Single component, nonsag, neutral curing, silicone; Class 25] <Insert joint sealant>**.
 3. Color: **[Clear] [As selected by DEN Project Manager from manufacturer's full range]**.
 4. Sealants shall have a VOC content of **[250] <Insert value>** g/L or less.
 5. Sealants shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- F. Stone Joint Splines: Stainless-steel or brass washers approximately **1 inch (25 mm)** in diameter and of thickness to fit snugly in saw-cut kerf in edge of stone units.
- G. Stone Cleaner: Specifically formulated for stone types, finishes, and applications indicated, as recommended by stone producer **[and, if a sealer is specified, by sealer manufacturer]**. Do not use cleaning compounds containing acids, caustics, harsh fillers, or abrasives.
- H. Stone Sealer: Colorless, stain-resistant sealer that does not affect color or physical properties of stone surfaces, as recommended by stone producer for application indicated.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Bostik, Inc.](#)
 - b. [Custom Building Products.](#)
 - c. [Hillyard, Inc.](#)
 - d. [HMK Stone Care System.](#)
 - e. [Miracle Sealants Company.](#)
 - f. [Stone Care International Inc.](#)
 - g. [Summitville Tiles, Inc.](#)
 - h. **<Insert manufacturer's name>**.
 - i. or approved equal.

2.8 STONE FABRICATION, GENERAL

- A. Select stone for intended use to prevent fabricated units from containing cracks, seams, and starts that could impair structural integrity or function.
 1. Repairs that are characteristic of the varieties specified are acceptable provided they do not impair structural integrity or function and are not aesthetically displeasing, as judged by DEN Project Manager.
- B. Grade and mark stone for final locations to produce assembled countertop units with an overall uniform appearance.
- C. Measurements: Before proceeding with fabrication of woodwork required to be fitted to other construction, obtain field measurements and verify dimensions and shop drawing details as required for accurate fit.
- D. Fabricate stone countertops in sizes and shapes required to comply with requirements indicated.
 1. For granite, comply with recommendations in NBGQA's "Specifications for Architectural Granite."
 2. For [**marble**] [**and**] [**serpentine**], comply with recommendations in MIA's "Dimension Stone - Design Manual VI."
 3. Clean sawed backs of stones to remove rust stains and iron particles.
 4. Dress joints straight and at right angle to face unless otherwise indicated.
 5. Cut and drill sinkages and holes in stone for anchors, supports, and attachments.
 6. Provide openings, reveals, and similar features as needed to accommodate adjacent work.
 7. Fabricate molded edges with machines having abrasive shaping wheels made to reverse contour of edge profile to produce uniform shape throughout entire length of edge and with precisely formed arris slightly eased to prevent snipping, and matched at joints between units. Form corners of molded edges as indicated with outside corners slightly eased unless otherwise indicated.
 8. Finish exposed faces of stone to comply with requirements indicated for finish of each stone type required and to match approved Samples and mockups. Provide matching finish on exposed edges of countertops, splashes, and cutouts.

- E. Carefully inspect finished stone units at fabrication plant for compliance with requirements for appearance, material, and fabrication. Replace defective units.

2.9 STONE COUNTERTOPS

- A. General: Comply with recommendations in MIA's "Dimension Stone - Design Manual VI."
- B. Nominal Thickness: Provide thickness indicated, but not less than [3/4 inch (20 mm)] [7/8 inch (22 mm)] [1-1/4 inches (32 mm)]. Gage backs to provide units of identical thickness.
- C. Edge Detail: [**Straight, slightly eased at top**] [3/8-inch (10-mm) bevel] [3/4-inch (20-mm) full bullnose] [1-1/4-inch (20-mm) full bullnose] [3/8-inch (10-mm) radius with 2-inch (50-mm) apron] [1-1/2-inch (40-mm) laminated bullnose] [**As indicated**].
- D. Splashes: Provide 3/4-inch- (20-mm-) thick [**backsplashes**] [**and**] [**end splashes**] unless otherwise indicated.
1. Height: [4 inches (100 mm)] [**As indicated**] <Insert dimension>.
 2. Top-Edge Detail: [**Straight, slightly eased at corner**] [3/8-inch (10-mm) bevel] [3/4-inch (20-mm) radius] [3/8-inch (10-mm) radius] [**As indicated**].
- E. Joints: Fabricate countertops without joints.
- F. Joints: Fabricate countertops in sections for joining in field, with joints at locations indicated and as follows:
1. Bonded Joints: 1/32 inch (0.8 mm) or less in width.
 2. Grouted Joints: 1/16 inch (1.5 mm) in width.
 3. Sealant-Filled Joints: 1/16 inch (1.5 mm) in width.
 4. Splined Joints: Accurately cut kerfs in edges at joints for insertion of metal splines to maintain alignment of surfaces at joints[**where indicated**]. Make width of cuts slightly more than thickness of splines to provide snug fit.[**Provide at least three splines in each joint.**]
- G. Cutouts and Holes:
1. Undercounter Fixtures: Make cutouts for undercounter fixtures in shop using template or pattern furnished by fixture manufacturer. Form cutouts to smooth, even curves.
 - a. Provide vertical edges, slightly eased at juncture of cutout edges with top and bottom surfaces of countertop and projecting 3/16 inch (5 mm) into fixture opening.
 - b. Provide vertical edges, rounded to 3/8-inch (10-mm) radius at juncture of cutout edges with top surface of countertop, slightly eased at bottom, and projecting 3/16 inch (5 mm) into fixture opening.

- c. Provide **3/4-inch (20-mm)** full bullnose edges projecting **3/8 inch (10 mm)** into fixture opening.
2. Counter-Mounted Fixtures: Prepare countertops in shop for field cutting openings for counter-mounted fixtures. Mark tops for cutouts and drill holes at corners of cutout locations. Make corner holes of largest radius practical.
3. Fittings: Drill countertops in shop for plumbing fittings, undercounter soap dispensers, and similar items.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates to receive stone countertops and conditions under which stone countertops will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of stone countertops.
- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of stone countertops.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Advise installers of other work about specific requirements for placement of inserts and similar items to be used by stone countertop Installer for anchoring stone countertops. Furnish installers of other work with Drawings or templates showing locations of these items.
- B. Before installing stone countertops, clean dirty or stained stone surfaces by removing soil, stains, and foreign materials. Clean stone by thoroughly scrubbing with fiber brushes and then drenching with clear water. Use only mild cleaning compounds that contain no caustic or harsh materials or abrasives. Allow stone to dry before installing.

3.3 CONSTRUCTION TOLERANCES

- A. Variation from Level: Do not exceed **1/8 inch in 96 inches (3 mm in 2400 mm)**, **1/4 inch (6 mm)** maximum.
- B. Variation in Joint Width: Do not vary joint thickness more than one-fourth of nominal joint width.
- C. Variation in Plane at Joints (Lipping): Do not exceed **1/64-inch (0.4-mm)** difference between planes of adjacent units.

- D. Variation in Line of Edge at Joints (Lipping): Do not exceed **1/64-inch (0.4-mm)** difference between edges of adjacent units, where edge line continues across joint.

3.4 INSTALLATION OF COUNTERTOPS

- A. General: Install countertops over plywood subtops with full spread of water-cleanable epoxy adhesive.
- B. General: Install countertops by adhering to supports with water-cleanable epoxy adhesive.
- C. Do not cut stone in field unless otherwise indicated. If stone countertops or splashes require additional fabrication not specified to be performed at Project site, return to fabrication shop for adjustment.
- D. Do necessary field cutting as stone is set. Use power saws with diamond blades to cut stone. Cut lines straight, true, and at right angles to finished surfaces unless beveling is required for clearance. Ease edges slightly to prevent snipping.
- E. Set stone to comply with requirements indicated. Shim and adjust stone to locations indicated, with uniform joints of widths indicated and with edges and faces aligned according to established relationships and indicated tolerances. **[Install anchors and other attachments indicated or necessary to secure stone countertops in place.]**
- F. Bond joints with stone adhesive and draw tight as countertops are set. Mask areas of countertops adjacent to joints to prevent adhesive smears.
1. Install metal splines in kerfs in stone edges at joints **[where indicated]**. Fill kerfs with stone adhesive before inserting splines and remove excess immediately after adjoining units are drawn into position.
 2. Clamp units to temporary bracing, supports, or each other to ensure that countertops are properly aligned and joints are of specified width.
- G. Space joints with **1/16-inch (1.5-mm)** gap for filling with **[grout] [sealant]**. Use temporary shims to ensure uniform spacing.
1. Install metal splines in kerfs in stone edges at joints **[where indicated]**. Fill kerfs with **[setting adhesive] [sealant]** before inserting splines and remove excess immediately after adjoining units are drawn into position.
 2. Clamp units to temporary bracing, supports, or each other to ensure that countertops are properly aligned and joints are of specified width.
- H. Complete cutouts not finished in shop. Mask areas of countertops adjacent to cutouts to prevent damage while cutting. Use power saws with diamond blades to cut stone. Make cutouts to accurately fit items to be installed, and at right angles to finished surfaces unless beveling is required for clearance. Ease edges slightly to prevent snipping.

- I. Install backsplashes and end splashes by adhering to wall with water-cleanable epoxy adhesive and to countertops with stone adhesive. Mask areas of countertops and splashes adjacent to joints to prevent adhesive smears.
- J. Install backsplashes and end splashes by adhering to countertops with stone adhesive. Mask areas of countertops and splashes adjacent to joints to prevent adhesive smears. Leave **1/16-inch (1.5-mm)** gap between splashes and wall for filling with sealant. Use temporary shims to ensure uniform spacing.
- K. Install backsplashes and end splashes by adhering to wall with water-cleanable epoxy adhesive. Leave **1/16-inch (1.5-mm)** gap between countertop and splashes for filling with sealant. Use temporary shims to ensure uniform spacing.
- L. Grout joints to comply with ANSI A108.10. Remove temporary shims before grouting. Tool grout uniformly and smoothly with plastic tool.
- M. Apply sealant to **[joints] [and] [gaps specified for filling with sealant]**; comply with Section 079200 "Joint Sealants." Remove temporary shims before applying sealant.

3.5 ADJUSTING AND CLEANING

- A. In-Progress Cleaning: Clean countertops as work progresses. Remove adhesive, grout, mortar, and sealant smears immediately.
- B. Remove and replace stone countertops of the following description:
 - 1. Broken, chipped, stained, or otherwise damaged stone. Stone may be repaired if methods and results are approved by DEN Project Manager.
 - 2. Defective countertops.
 - 3. Defective joints, including misaligned joints.
 - 4. Interior stone countertops and joints not matching approved Samples and mockups.
 - 5. Interior stone countertops not complying with other requirements indicated.
- C. Replace in a manner that results in stone countertops matching approved Samples and mockups, complying with other requirements, and showing no evidence of replacement.
- D. Provide final protection and maintain conditions, in a manner acceptable to Fabricator and Installer, which ensures stone countertops being without damage or deterioration at time of substantial completion.
- E. Clean stone countertops no fewer than six days after completion of **[sealant installation] [installation]**, using clean water and soft rags. Do not use wire brushes, acid-type cleaning agents, cleaning compounds with caustic or harsh fillers, or other materials or methods that could damage stone.
- F. Sealer Application: Apply stone sealer to comply with stone producer's and sealer manufacturer's written instructions.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 123640

SECTION 123661 - SIMULATED STONE COUNTERTOPS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Cultured marble countertops [**and backsplashes**].
 - 2. Solid-surface-material countertops [**and backsplashes**].
 - 3. Quartz agglomerate countertops [**and backsplashes**].
- B. Related Sections:
 - 1. Section 123640 "Stone Countertops."
 - 2. Section 224100 "Residential Plumbing Fixtures" for [**nonintegral sinks**] [**sinks**] [**and**] [**plumbing fittings**].
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For countertop materials[**and sinks**].
 - 1. Include data substantiating that materials comply with requirements.
- B. Quality Certification: Submit simulated stone countertop Manufacturer's (Fabricator's) certification, stating that fabricated stonework complies with quality grades and other requirements indicated.
- C. LEED Submittals:
 - 1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
 - 2. Certificates for [**Credit MR 6**] [**Credit MR 7**]: Chain-of-custody certificates indicating that wood products comply with forest certification requirements. Include documentation that manufacturer is certified for chain of custody by an

- FSC-accredited certification body. Include statement indicating cost for each certified wood product.
3. Product Data for Credit IEQ 4.4: For adhesives and composite wood products, documentation indicating that product contains no urea formaldehyde.
 4. Laboratory Test Reports for Credit IEQ 4: For **[adhesives] [sealants] [and] [composite wood and agrifiber products]**, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- D. Shop Drawings: For countertops. Show materials, finishes, edge and backsplash profiles, methods of joining, and cutouts for plumbing fixtures.
- E. Samples for Initial Selection: For each type of material exposed to view.
- F. Samples for Verification: For the following products:
1. Countertop material, **6 inches** (150 mm) square.
 2. Wood trim, **8 inches** (200 mm) long.
 3. One full-size cultured marble countertop, with front edge[**and backsplash**], **8 by 10 inches** (200 by 250 mm), of construction and in configuration specified.
 4. One full-size solid-surface-material countertop, with front edge[**and backsplash**], **8 by 10 inches** (200 by 250 mm), of construction and in configuration specified.
 5. One full-size quartz agglomerate countertop, with front edge[**and backsplash**], **8 by 10 inches** (200 by 250 mm), of construction and in configuration specified.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For fabricator.
- B. Certificate from the fabricator providing proof of not less than five (5) years experience in the fabrication of the types of products specified.
- C. Certificate from the installer providing proof of not less than five (5) years of successful experience in the installation of similar types of products and shall have completed at least 3 jobs of similar size and scope.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For stone countertops to include in maintenance manuals. Include product data for stone-care products used or recommended by Installer, and names, addresses, and telephone numbers of local sources for products.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Fabricator Qualifications: Shop that employs skilled workers who custom-fabricate simulated stone countertops similar to that required for this Project, and whose products have a record of successful in-service performance.
- B. Installer Qualifications: Fabricator of simulated stone countertops.
- C. Mockup: Build mockup to demonstrate aesthetic effects and to set quality standards for fabrication and execution.
 - 1. Build mockup of typical countertop as shown on Drawings. Fabricate one carcass for each type of simulated stone countertop required. DEN Project Manager is to review and approve mockup before remaining cabinetwork can proceed. Contractor to pay for the expense of transporting the DEN Project Manager to site and back.
 - 2. Complete fabrication of each countertop approved and deliver to job site for DEN Project Manager review. Once the mockup for a type of countertop is approved all remaining countertops of that type may be fabricated.
 - 3. Subject to compliance with requirements, approved mockup may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 PROJECT CONDITIONS

- A. Field Measurements: Verify dimensions of countertops by field measurements[**after base cabinets are installed but**] before countertop fabrication is complete.

1.8 COORDINATION

- A. Coordinate locations of utilities that will penetrate countertops or backsplashes.
- B. DELIVERY, STORAGE, AND HANDLING
- C. Store and handle stone and related materials to prevent deterioration or damage due to moisture, temperature changes, contaminants, corrosion, breaking, chipping, and other causes.
 - 1. Lift stone with wide-belt slings; do not use wire rope or ropes that might cause staining. Move stone, if required, using dollies with cushioned wood supports.
 - 2. Store stone on wood A-frames or pallets with nonstaining, waterproof covers. Arrange to distribute weight evenly and to prevent damage to stone. Ventilate under covers to prevent condensation.

1.9 FIELD CONDITIONS

- A. Field Measurements: Verify dimensions of construction to receive simulated stone countertops by field measurements before fabrication[**and indicate measurements on Shop Drawings**].

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 CULTURED MARBLE COUNTERTOPS

- A. Configuration: Provide countertops with the following front and backsplash style:
1. Front: **[No drip (raised marine edge with rolled front)] [Straight, slightly eased at top] [1/2-inch (12.7-mm) bullnose] [Radius edge with apron, 2 inches (50 mm) high with 3/8-inch (9.5-mm) radius].**
 2. Backsplash: **[Coved, with 3/8-inch (9.5-mm) radius cove and top] [Straight, with 3/8-inch (9.5-mm) radius cove and slightly eased at top] [Straight, slightly eased at cove and top].**
 3. Endsplash: **[Matching backsplash] [None].**
- B. Countertops: **1/2-inch-** (12.7-mm-) thick, cultured marble.
- C. Backsplashes: **1/2-inch-** (12.7-mm-) thick, cultured marble.
- D. Fabrication: Fabricate tops in one piece with integral sink bowls and backsplashes unless otherwise indicated.

2.2 SOLID-SURFACE-MATERIAL COUNTERTOPS

- A. Configuration: Provide countertops with the following front and backsplash style:
1. Front: **[Straight, slightly eased at top] [Beveled] [3/4-inch (19-mm) bullnose] [Radius edge with apron, 2 inches (50 mm) high with 3/8-inch (9.5-mm) radius] [1-1/2-inch (38-mm) laminated bullnose] [1-inch (25-mm) laminated bullnose] [Wood-trimmed edge as indicated].**
 2. Backsplash: **[Straight, slightly eased at corner] [Beveled] [Radius edge with 3/8-inch (9.5-mm) radius].**
 3. Endsplash: **[Matching backsplash] [None].**
- B. Countertops: **[1/2-inch-** (12.7-mm-)] **[3/4-inch-** (19-mm-)] thick, solid surface material **[with wood-trimmed edges] [with front edge built up with same material].**
- C. Countertops: **1/4-inch-** (6.4-mm-) thick, solid surface material laminated to **3/4-inch-** (19-mm-) thick particleboard with **[wood-trimmed exposed edges] [exposed edges built up with 3/4-inch-** (19-mm-) **thick, solid surface material] [exposed edges faced with 1/4-inch-** (6.4-mm-) **thick, solid surface material].**

- D. Backsplashes: [1/2-inch- (12.7-mm-)] [3/4-inch- (19-mm-)] thick, solid surface material[**with wood-trimmed edges**].
- E. Fabrication: Fabricate tops in one piece with shop-applied edges[**and backsplashes**] unless otherwise indicated. Comply with solid-surface-material manufacturer's written instructions for adhesives, sealers, fabrication, and finishing.
 - 1. Fabricate with loose backsplashes for field assembly.
 - 2. Install integral sink bowls in countertops in the shop.

2.3 QUARTZ AGGLOMERATE COUNTERTOPS

- A. Configuration: Provide countertops with the following front and backsplash style:
 - 1. Front: [**Straight, slightly eased at top**] [**Beveled**] [3/4-inch (19-mm) **bullnose**] [**Radius edge with apron, 2 inches (50 mm) high with 3/8-inch (9.5-mm) radius**] [1-1/2-inch (38-mm) **laminated bullnose**] [1-inch (25-mm) **laminated bullnose**] [**Wood-trimmed edge as indicated**].
 - 2. Backsplash: [**Straight, slightly eased at corner**] [**Beveled**] [**Radius edge with 3/8-inch (9.5-mm) radius**].
 - 3. Endsplash: [**Matching backsplash**] [**None**].
- B. Countertops: [1/2-inch- (12.7-mm-)] [3/4-inch- (19-mm-)] thick, quartz agglomerate[**with wood-trimmed edges**] [**with front edge built up with same material**].
- C. Backsplashes: [1/2-inch- (12.7-mm-)] [3/4-inch- (19-mm-)] thick, quartz agglomerate[**with wood-trimmed edges**].
- D. Fabrication: Fabricate tops in one piece with shop-applied edges[**and backsplashes**] unless otherwise indicated. Comply with quartz agglomerate manufacturer's written instructions for adhesives, sealers, fabrication, and finishing.
 - 1. Fabricate with loose backsplashes for field assembly.

2.4 COUNTERTOP MATERIALS

- A. Certified Wood Materials: Fabricate countertops with wood and wood-based products produced from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."
- B. Plywood: Exterior softwood plywood complying with DOC PS 1, Grade C-C Plugged, touch sanded.
- C. Adhesives: Adhesives shall not contain urea formaldehyde.
- D. Adhesives: Adhesives shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile

Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- E. Cultured Marble: Gel-coated solid fabrication of filled plastic resin complying with ANSI Z124.3, Type 4, with precoated finish, and not less than 1/2 inch (12.7 mm) thick.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Bathroom World Manufacturing Company.
 - b. Cameo Marble.
 - c. Cherry Marble Group.
 - d. Comar Products, Inc.
 - e. Craig Baker Marble Co., Inc.
 - f. Cultured Marble Products.
 - g. Custom Marble Products.
 - h. Custom Marble Products, Inc.
 - i. Imperial Marble Corp.
 - j. Marbleon, Inc.
 - k. MarCraft, Inc.
 - l. Princess Marble.
 - m. Roma Marble, Inc.
 - n. Rynone Manufacturing Corp.
 - o. Tiffany Marble.
 - p. <Insert manufacturer>.
 - q. or approved equal.
 2. Colors and Patterns: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range].**
- F. Solid Surface Material: Homogeneous solid sheets of filled plastic resin complying with ANSI SS1.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Avonite Surfaces.
 - b. E. I. du Pont de Nemours and Company.
 - c. Formica Corporation.
 - d. LG Chemical, Ltd.
 - e. Meganite Inc.
 - f. Samsung Chemical USA, Inc.
 - g. Swan Corporation (The).
 - h. Transolid, Inc.
 - i. Wilsonart International.
 - j. <Insert manufacturer>.
 - k. or approved equal.

2. Type: Provide Standard Type[**or Veneer Type made from material complying with requirements for Standard Type, as indicated**] unless Special Purpose Type is indicated.
 3. Integral Sink Bowls: Comply with ISSFA-2 and ANSI Z124.3, Type 5 or Type 6, without a precoated finish.
 4. Colors and Patterns: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**].
- G. Quartz Agglomerate: Solid sheets consisting of quartz aggregates bound together with a matrix of filled plastic resin and complying with the "Physical Characteristics of Materials" Article of ANSI SS1.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Cambria.
 - b. Cosentino USA.
 - c. E. I. du Pont de Nemours and Company.
 - d. LG Chemical, Ltd.
 - e. Meganite Inc.
 - f. Samsung Chemical USA, Inc.
 - g. Technistone USA, Inc.
 - h. Transolid, Inc.
 - i. **<Insert manufacturer>**.
 - j. or approved equal.
 2. Colors and Patterns: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**].
- H. Solid Wood Edges and Trim: Clear [**red oak**] [**white oak**] [**hard maple**] [**cherry**] **<Insert species>** lumber, free of defects, selected for compatible grain and color, and kiln dried to 7 percent moisture content.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install countertops level to a tolerance of **1/8 inch in 8 feet** (3 mm in 2.4 m).
- B. Fasten countertops by screwing through corner blocks of base units into underside of countertop. Pre-drill holes for screws as recommended by manufacturer. Align adjacent surfaces and, using adhesive in color to match countertop, form seams to comply with manufacturer's written instructions. Carefully dress joints smooth, remove surface scratches, and clean entire surface.

1. Install [**backsplashes**] [**and**] [**endsplashes**] to comply with manufacturer's written instructions for adhesives, sealers, fabrication, and finishing.
 2. Seal edges of cutouts in particleboard subtops by saturating with varnish.
- C. ADJUSTING AND CLEANING
- D. In-Progress Cleaning: Clean countertops as work progresses. Remove adhesive, grout, mortar, and sealant smears immediately.
- E. Remove and replace simulated stone countertops of the following description:
1. Broken, chipped, stained, or otherwise damaged stone. Simulated stone may be repaired if methods and results are approved by DEN Project Manager.
 2. Defective countertops.
 3. Defective joints, including misaligned joints.
 4. Interior stone countertops and joints not matching approved Samples and mockups.
 5. Interior stone countertops not complying with other requirements indicated.
- F. Replace in a manner that results in simulated stone countertops matching approved Samples and mockups, complying with other requirements, and showing no evidence of replacement.
- G. Provide final protection and maintain conditions, in a manner acceptable to Fabricator and Installer, which ensures simulated stone countertops being without damage or deterioration at time of substantial completion.
- H. Clean stone countertops no fewer than six (6) days after completion of [**sealant installation**] [**installation**], using clean water and soft rags. Do not use wire brushes, acid-type cleaning agents, cleaning compounds with caustic or harsh fillers, or other materials or methods that could damage stone.
- I. Sealer Application: Apply stone sealer to comply with stone producer's and sealer manufacturer's written instructions.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 123661

SECTION 124813 - ENTRANCE FLOOR MATS AND FRAMES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Roll-up rail mats.
 - 2. Resilient entrance mats.
 - 3. Resilient-tile entrance mats.
 - 4. **[Recessed] [Surface-mounted]** frames.
- B. Related Requirements:
 - 1. Section 124816 "Entrance Floor Grilles" for rigid floor grilles and frames.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 COORDINATION

- A. Coordinate size and location of recesses in concrete to receive floor mats and frames.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for floor mats and frames.
 - a. Include data substantiating that materials comply with requirements.
- B. Shop Drawings:
 - 1. Items penetrating floor mats and frames, including door control devices.
 - 2. Divisions between mat sections.
 - 3. Perimeter floor moldings.
 - 4. Custom Graphics: Scale drawing indicating colors.

C. Samples: For the following products, in manufacturer's standard sizes:

1. Floor Mat: Assembled sections of floor mat.
2. Tread Rail: Sample of each type and color.
3. Frame Members: Sample of each type and color.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For floor mats and frames to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Resilient-Tile Entrance Mats: Full-size tile units equal to [2] <Insert number> percent of amount installed, but no fewer than [10] <Insert number> units.

1.7 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 ENTRANCE FLOOR MATS AND FRAMES, GENERAL

- A. Structural Performance: Provide roll-up rail mats and frames capable of withstanding the following loads and stresses within limits and under conditions indicated:
 1. Uniform floor load of [300 lbf/sq. ft. (14.36 kN/sq. m)] <Insert value>.
 2. Wheel load of [350 lb (159 kg)] <Insert value> per wheel.
- B. Regulatory Requirements: Comply with applicable provisions in [the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for Buildings and Facilities] [and] [ICC A117.1] <Insert regulation>.

2.2 ROLL-UP RAIL MATS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [American Floor Products Company, Inc.](#)
 2. [American Mat & Rubber Company.](#)
 3. [Arden Architectural Specialties, Inc.](#)
 4. [Balco, Inc.](#)
 5. [Cactus Mat Mfg. Co.](#)
 6. [Crowder, K. N. Manufacturing, Inc.](#)
 7. [C/S Group.](#)
 8. [Durable Corporation.](#)
 9. [J. L. Industries, Inc.](#)
 10. [Kadee Industries, Inc.](#)
 11. [Mats Inc.](#)
 12. [Musson Rubber Company.](#)
 13. [Pawling Corporation; Architectural Products Division.](#)
 14. [Reese Enterprises, Inc.](#)
 15. <Insert manufacturer's name>.
 16. or approved equal.
- B. Roll-up, Aluminum-Rail Hinged Mats: Extruded-aluminum tread rails [1-1/2 inches (38 mm)] [2 inches (50 mm)] <Insert dimension> wide by 3/8 inch (9.5 mm) thick, sitting on continuous vinyl cushions.
1. Tread Inserts: [Plain serrated aluminum treads] [Textured-surface, resilient vinyl] [Ribbed-design-surface, resilient vinyl] [Mineral abrasive particles bonded to or embedded in vinyl] [Aluminum-oxide or silicon-carbide grit in epoxy matrix] [1/4-inch- (6.4-mm-) high, 28-oz./sq. yd. (950-g/sq. m) weight, level-cut, nylon-pile, fusion-bonded carpet] <Insert tread inserts>.
 2. Colors, Textures, and Patterns of Inserts: [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors].
 3. Rail Color: [Mill finish] [Clear] [Light bronze] [Medium bronze] [Dark bronze] [Black] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors and color densities].
 4. Hinges: [Plastic] [Aluminum].
 5. Mat Size: [As indicated] <Insert size>.
- C. Roll-up, Vinyl-Rail Hinged Mats: Vinyl-acrylic tread rails [1-1/2 inches (38 mm)] [2 inches (50 mm)] <Insert dimension> wide by 3/8 inch (9.5 mm) thick, with slotted or perforated hinges.
1. Tread Inserts: [Textured-surface, resilient vinyl] [Ribbed-design-surface, resilient vinyl] [Mineral abrasive particles bonded to or embedded in vinyl] [Aluminum-oxide or silicon-carbide grit in epoxy matrix] [1/4-inch- (6.4-mm-) high, 28-oz./sq. yd. (950-g/sq. m) weight, level-cut, nylon-pile, fusion-bonded carpet] <Insert tread inserts>.

2. Colors, Textures, and Patterns of Inserts: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors].**
3. Rail Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors].**
4. Hinges: **[Vinyl] [Aluminum].**
5. Mat Size: **[As indicated] <Insert size>.**

2.3 RESILIENT ENTRANCE MATS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. [American Floor Products Company, Inc.](#)
2. [American Mat & Rubber Company.](#)
3. [Arden Architectural Specialties, Inc.](#)
4. [Balco, Inc.](#)
5. [Cactus Mat Mfg. Co.](#)
6. [Consolidated Plastics Company, Inc.](#)
7. [C/S Group.](#)
8. [Durable Corporation.](#)
9. [Flexco.](#)
10. [Mats Inc.](#)
11. [Musson Rubber Company.](#)
12. [Pawling Corporation; Architectural Products Division.](#)
13. [Sbemco International Inc.; Matting by Design.](#)
14. [Tennessee Mat Company, Inc.](#)
15. [Tepromark International, Inc.](#)
16. [U.S. Mat & Rubber Corporation.](#)
17. **<Insert manufacturer's name>.**
18. or approved equal.

- B. Resilient Link Mats: Reversible **[vinyl] [rubber] [rubber-tire]** link mats, **[3/8 inch (9.5 mm)] [or] [7/16 inch (11 mm)]** thick, with **[galvanized-spring] [stainless]-steel** wire link rods, vulcanized edge-nosing trim, steel-reinforced end trim, and links consisting of rectangular units or continuous strips in a **[heel-proof, solid-weave pattern with no openings between links] [heel-proof, close-weave pattern with openings between links not exceeding 1/8 inch (3.2 mm) wide by 1 inch (25.4 mm) long] [open-weave pattern].**

1. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors].**
2. Mat Size: **[As indicated] <Insert size>.**

- C. **[Rubber] [or] [Vinyl]** Mats: **[1/4-inch- (6.4-mm-)] [3/8-inch- (9.5-mm-)] [7/16-inch- (11-mm-)] [1/2-inch- (13-mm-)] <Insert dimension>** thick mats; with **[square edges for recessed installations] [beveled edges for surface applications]** and with

[**solid-sheet (no perforations) style**] [**perforated style, 1/4-inch (6.4-mm) diameter on standard spacing**] [**perforated style, 3/16 by 3/4 inch (5 by 19 mm) on standard spacing**], [**standard pyramid design**] [**standard wide-wale corrugated**] [**hi-rib, narrow-wale corrugated**] top profile, and [**low-rib, narrow-wale corrugated**] [**standard knob-base**] [**flat-base**] bottom surface.

1. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry colors**].
 2. Mat Size: [**As indicated**] <Insert size>.
- D. Cocoa Mats: Constructed from cocoa fiber yarn permanently bonded to PVC backing for dimensional stability and resistance to shedding; [**5/8- to 3/4-inch (16- to 19-mm) overall thickness; 1.5-lb/sq. ft. (7.3-kg/sq. m)**] [**1-inch (25.4-mm) overall thickness; 2.0-lb/sq. ft. (10-kg/sq. m)**] [**1-1/4-inch (32-mm) overall thickness; 2.5-lb/sq. ft. (12-kg/sq. m)**] weight.
1. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry colors**].
 2. Mat Size: [**As indicated**] <Insert size>.
- E. Rubber-Tire Mats: Units of edge-grain-laminated and chenille-buffed, rubber-tire wall cuts; bonded to sheet rubber or other durable flexible backing sheet to form **3/8- to 7/16-inch- (9.5- to 11-mm-)** thick, **12-inch- (300-mm-)** wide, continuous linear strip up to **25 feet (7.6 m)** long.
1. Mat Size: [**As indicated**] <Insert size>.
- F. Carpet-Type Mats: [**Nylon**] [**Polypropylene**] [**Olefin**] [**Polyester**] carpet bonded to **1/8- to 1/4-inch- (3.2- to 6.4-mm-)** thick, flexible vinyl backing to form mats **3/8 or 7/16 inch (9.5 or 11 mm)** thick with nonraveling edges.
1. Colors, Textures, and Patterns: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry colors**].
 2. Mat Size: [**As indicated**] <Insert size>.
- G. Loop Filament Mats: Loop filament vinyl material [**3/8 inch (9.5 mm)**] [**1/2 inch (13 mm)**] thick, with [**solid vinyl**] [**foam**] sheet backing and with built-in chemical agents to reduce fungus and mildew.
1. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry colors**].
 2. Mat Size: [**As indicated**] <Insert size>.
- H. Graphics: Custom inlaid or woven-in graphic [**design,**] [**logo,**] [**emblem,**] [**characters,**] as indicated.

2.4 RESILIENT-TILE ENTRANCE MATS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [American Floor Products Company, Inc.](#)
 2. [American Mat & Rubber Company.](#)
 3. [Cactus Mat Mfg. Co.](#)
 4. [Consolidated Plastics Company, Inc.](#)
 5. [Durable Corporation.](#)
 6. [Flexco.](#)
 7. [Mats Inc.](#)
 8. [Musson Rubber Company.](#)
 9. [Pawling Corporation; Architectural Products Division.](#)
 10. [Tennessee Mat Company, Inc.](#)
 11. [Turtle Plastics.](#)
 12. <Insert manufacturer's name>.
 13. or approved equal.
- B. Rubber-Tire Tiles: Units of edge-grain-laminated and chenille-buffed, rubber-tire wall cuts; bonded to sheet rubber or other durable flexible backing sheet to form **3/8- to 7/16-inch-** (9.5- to 11-mm-) thick, square tile.
1. Colors, Textures, and Patterns: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors].**
 2. Tile Size: **[12 inches (300 mm)] [As indicated] <Insert size>.**
- C. **[Rubber] [or] [Vinyl] Tiles: [5/8-inch- (16-mm-)] [7/16-inch- (11-mm-)] thick, [solid] [open-grid] [rubber] [or] [vinyl] compound molded tiles with [concealed interlocking joint tabs] [1/4-inch- (6.4-mm-)] deep, serpentine-grooved top face and knob-base back face on solid tile].**
1. Colors, Textures, and Patterns: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors].**
 2. Tile Size: **[As indicated] <Insert size>.**
- D. Carpet-Type Tiles: **[Nylon] [Polypropylene] [Olefin] [Polyester] carpet bonded to 1/8- to 1/4-inch- (3.2- to 6.4-mm-) thick, flexible vinyl backing to form mats 3/8 or 7/16 inch (9.5 or 11 mm) thick with nonraveling edges.**
1. Colors, Textures, and Patterns: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors].**
 2. Tile Size: **[As indicated] <Insert size>.**

2.5 FRAMES

A. Surface-Mounted Frames:

1. Tapered Frames: Tapered [**flexible vinyl edge-**][**aluminum**] frame members, not less than [2 inches (50 mm)] [1-1/2 inches (38 mm)] wide[, **attached to mat at all four edges,**] with welded mitered corners.
 - a. Vinyl Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry colors**].
 - b. Aluminum Color: [**Mill finish**] [**Clear**] [**Light bronze**] [**Medium bronze**] [**Dark bronze**] [**Black**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry colors and color densities**].

B. Recessed Frames: Manufacturer's standard extrusion.

1. Extruded Aluminum: **ASTM B 221** (ASTM B 221M), Alloy 6061-T6 or Alloy 6063-T5, T6, or T52.
 - a. Color: [**Mill finish**] [**Clear**] [**Light bronze**] [**Medium bronze**] [**Dark bronze**] [**Black**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry colors and color densities**].
2. Architectural Bronze: ASTM B 455, Alloy UNS No. C38500.

2.6 CONCRETE FILL AND GROUT MATERIALS

- A. Provide concrete fill and grout equivalent in strength to cast-in-place concrete slabs for recessed mats and frames. Use aggregate no larger than one-third fill thickness.

2.7 FABRICATION

- A. Floor Mats: Shop fabricate units to greatest extent possible in sizes indicated. Unless otherwise indicated, provide single unit for each mat installation; do not exceed manufacturer's recommended maximum sizes for units that are removed for maintenance and cleaning. Where joints in mats are necessary, space symmetrically and away from normal traffic lanes. Miter corner joints in framing elements with hairline joints or provide prefabricated corner units without joints.
- B. Surface-Mounted Frames: As indicated for permanent surface-mounted installation, complete with corner connectors, splice plates or connecting pins, and postinstalled expansion anchors.
- C. Recessed Frames: As indicated, for permanent recessed installation, complete with corner pins or reinforcement and anchorage devices.

1. Fabricate edge-frame members in single lengths or, where frame dimensions exceed maximum available lengths, provide minimum number of pieces possible, with hairline joints equally spaced and pieces spliced together by straight connecting pins.
- D. Coat concealed surfaces of aluminum frames that contact cementitious material with manufacturer's standard protective coating.

2.8 ALUMINUM FINISHES

- A. Mill finish.
- B. Clear Anodic Finish: AAMA 611, [**AA-M12C22A41, Class I, 0.018 mm**] [**AA-M12C22A31, Class II, 0.010 mm**] or thicker.
- C. Color Anodic Finish: AAMA 611, [**AA-M12C22A42/A44, Class I, 0.018 mm**] [**AA-M12C22A32/A34, Class II, 0.010 mm**] or thicker.

2.9 COPPER-ALLOY (BRONZE) FINISHES

- A. Finish designations prefixed by CDA comply with the system established by the Copper Development Association for designating copper-alloy finishes, as defined in NAAMM's "Metal Finishes Manual for Architectural and Metal Products."
 1. Remove tool and die marks and stretch lines, or blend into finish.
 2. Grind and polish surfaces to produce uniform, directionally textured, polished finish, free of cross scratches. Run grain of directional finishes with long dimension of each piece.
- B. CDA Mechanical Finish Designation: [**M11, specular, as fabricated**] [**M32, directionally textured, medium satin**].

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and floor conditions for compliance with requirements for location, sizes, [**minimum recess depth**,]and other conditions affecting installation of floor mats and frames.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install recessed mat frames to comply with manufacturer's written instructions. Set mat tops at height recommended by manufacturer for most effective cleaning action;

coordinate tops of mat surfaces with bottoms of doors that swing across mats to provide clearance between door and mat.

1. For installation in terrazzo flooring areas, provide allowance for grinding and polishing of terrazzo without grinding surface of recessed frames. Coordinate with other trades as required.
2. Install necessary shims, spacers, and anchorages for proper location, and secure attachment of frames.
3. Install grout and fill around frames and, if required to set mat tops at proper elevations, in recesses under mats. Finish grout and fill smooth and level.

B. Install surface-type units to comply with manufacturer's written instructions at locations indicated; coordinate with entrance locations and traffic patterns.

1. Anchor fixed surface-type frame members to floor with devices spaced as recommended by manufacturer.

3.3 PROTECTION

A. After completing frame installation and concrete work, provide temporary filler of plywood or fiberboard in recesses and cover frames with plywood protective flooring. Maintain protection until construction traffic has ended and Project is near Substantial Completion.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 124813

SECTION 124816 - ENTRANCE FLOOR GRILLES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes recessed floor grilles and frames.
- B. Related Requirements:
 - 1. Section 124813 "Entrance Floor Mats and Frames" for flexible floor mats and frames.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 COORDINATION

- A. Coordinate size and location of recesses in concrete to receive floor grilles and frames.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for entrance floor grilles and foot grilles.
 - 2. Include data substantiating that materials comply with requirements.
- B. Shop Drawings:
 - 1. Items penetrating floor grilles and frames, including door control devices.
 - 2. Divisions between grille sections.
 - 3. Perimeter floor moldings.
- C. Samples: For the following products, in manufacturer's standard sizes:
 - 1. Floor Grille: Assembled section of floor grille.
 - 2. Frame Members: Sample of each type and color.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For floor grilles and frames to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 FIELD CONDITIONS

- A. Field Measurements: Indicate measurements on Shop Drawings.

1.7 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. [Arden Architectural Specialties, Inc.](#)
 - 2. [Balco, Inc.](#)
 - 3. [Cactus Mat Mfg. Co.](#)
 - 4. [Crowder, K. N. Manufacturing, Inc.](#)
 - 5. [C/S Group.](#)
 - 6. [J. L. Industries, Inc.](#)
 - 7. [Kadee Industries, Inc.](#)
 - 8. [Mats Inc.](#)
 - 9. [Pawling Corporation; Architectural Products Division.](#)
 - 10. [Reese Enterprises, Inc.](#)
 - 11. **<Insert manufacturer's name>**.
 - 12. or approved equal.

2.2 ENTRANCE FLOOR GRILLES, GENERAL

- A. Structural Performance: Provide floor grilles and frames capable of withstanding the following loads and stresses:
 - 1. Uniform floor load of [300 lbf/sq. ft. (14.36 kN/sq. m)] **<Insert value>**.
 - 2. Wheel load of [350 lb (159 kg)] **<Insert value>** per wheel.

- B. Regulatory Requirements: Comply with applicable provisions in **[the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for Buildings and Facilities]** **[and] [ICC A117.1] <Insert regulation>**.

2.3 FLOOR GRILLES

- A. General: Provide manufacturer's standard floor-grille assemblies consisting of treads of type and profile indicated, interlocked or joined together by cross members, and with support legs (if any) and other components needed to produce a complete installation.
- B. **[Aluminum] [Bronze]** Floor Grilles: Provide manufacturer's standard floor grilles with extruded members, top-surfaced tread rails, and as follows:
1. Tread Rails: Extruded-**[aluminum] [bronze]** tread rails.
 - a. Aluminum Color: **[Mill finish] [Clear] [Light bronze] [Medium bronze] [Dark bronze] [Black] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors and color densities]**.
 2. Tread Rail Spacing: **[1-1/2 inches (38 mm) o.c. with 1/8- to 3/16-inch- (3.2- to 4.8-mm-)] [2 inches (50 mm) o.c. with 1/4-inch- (6.4-mm-)] <Insert dimensions>** wide openings between treads.
 3. Top Surface: **[Serrated aluminum] [Serrated bronze] [Serrated vinyl cap with UV stabilizer and antifungal additive] [Textured-surface, resilient vinyl insert] [Aluminum-oxide or silicon-carbide grit in epoxy matrix] [Abrasive particles bonded to or imbedded in vinyl insert] [Fusion-bonded, level-cut-pile nylon carpet insert; 1/4 inch (6.4 mm) high, 28 oz./sq. yd. (950 g/sq. m)]**.
 - a. Top Surface Color: **[Match tread rail] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range of industry colors]**.
 4. Grille Size: **[As indicated] <Insert size>**.
- C. Stainless-Steel Floor Grille: Type 304.
1. Surface Treads: **[0.071-by-0.177-inch (1.8-by-4.49-mm) wire with 0.125-inch- (3.17-mm-)] [0.090-by-0.172-inch (2.2-by-4.37-mm) wire with 0.145-inch- (3.68-mm-)] [0.093-by-0.156-inch (2.36-by-3.96-mm) wire with 0.125-inch- (3.17-mm-)]** wide openings between wires.
 2. Support Rods: Spaced **1 inch (25.4 mm)** o.c., welded to each wire.
 3. Mat Grating: **5/8 inch (15.8 mm)** deep.
 4. Pit Grating: **1-1/8 inches (28.5 mm)** deep.
 5. Stainless-Steel Finish: **[Mill] [No. 4]**.
 6. Grille Size: **[As indicated] <Insert size>**.

- D. PVC Floor Grille: **1/8-by-1-1/2-by-1-inch** (3.2-by-38.1-by-25.4-mm) ribbed top, PVC tread bars joined with **3/8-inch** (9.5-mm) stainless-steel rods with **1-1/16-inch-** (27-mm-) long nylon spacers at **12 inches** (304 mm) o.c. Provide PVC frame with nylon anchors.
1. Colors: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors]**.
 2. Grille Size: **[As indicated] <Insert size>**.
- E. Lockdown: **[Manufacturer's standard] [Hidden] [In view]**.

2.4 FRAMES

- A. Provide manufacturer's standard frames of size and style for grille type, for permanent recessed installation in subfloor, complete with installation anchorages and accessories. Unless otherwise indicated, fabricate frame of same material and finish as grilles.

2.5 SUPPORT SYSTEM

- A. Level Bed Applications: Provide manufacturer's standard, vinyl cushion support system.
- B. Drainage Pit Applications: Provide manufacturer's special deep-pit frame and support extrusion system with intermediate support beams, sized and spaced as recommended by manufacturer for indicated spans and equipped with vinyl support cushions.

2.6 DRAIN PANS

- A. Provide manufacturer's standard[, **0.060-inch-** (1.52-mm-) **thick**], **[metallic-coated steel] [aluminum] [or] [stainless-steel]** sheet drain pan with **NPS 2** (DN 50) drain outlet for each floor-grille unit. Coat bottom of pan with protective coating recommended by manufacturer.

2.7 MATERIALS

- A. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B, with **A60** (ZF180) zinc-iron-alloy (galvannealed) coating or with **G60** (Z180) mill-phosphatized zinc coating; stretcher-leveled standard of flatness; with minimum thickness indicated representing specified thickness according to ASTM A 924/A 924M.
- B. Stainless-Steel Sheet, Strip, Plate, and Flat Bars: ASTM A 666, Type 304.

- C. Aluminum Sheet: **ASTM B 209** (ASTM B 209M), alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with not less than strength and durability properties of Alloy 5005-H15.
- D. Extruded Aluminum: **ASTM B 221** (ASTM B 221M), Alloy 6061-T6 or Alloy 6063-T5, T6, or T52 as standard with manufacturer. Coat surface of frame in contact with cementitious materials with manufacturer's standard protective coating.
- E. Extruded Architectural Bronze: ASTM B 455, Alloy No. C38500.
- F. Stainless-Steel Angles: ASTM A 276 or ASTM A 479/A 479M, corrosion resistant, Type 304.

2.8 FABRICATION

- A. Shop fabricate floor grilles to greatest extent possible in sizes as indicated. Unless otherwise indicated, provide each grille as a single unit; do not exceed manufacturer's recommended maximum sizes for units that are removed for maintenance and cleaning. Where joints in grilles are necessary, space symmetrically and away from normal traffic lanes.
- B. Fabricate frame members in single lengths or, where frame dimensions exceed maximum available lengths, provide minimum number of pieces possible, with hairline joints equally spaced and pieces spliced together by straight connecting pins.

2.9 ALUMINUM FINISHES

- A. Mill finish.
- B. Clear Anodic Finish: AAMA 611, [**AA-M12C22A41, Class I, 0.018 mm**] [**AA-M12C22A31, Class II, 0.010 mm**] or thicker.
- C. Color Anodic Finish: AAMA 611, [**AA-M12C22A42/A44, Class I, 0.018 mm**] [**AA-M12C22A32/A34, Class II, 0.010 mm**] or thicker.

2.10 STAINLESS-STEEL FINISHES

- A. Mill finish.
- B. Directional Satin Finish: No. 4.
 - 1. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

2.11 COPPER-ALLOY (BRONZE) FINISHES

- A. Finish designations for copper alloys comply with the system established for designating copper-alloy finish systems defined in NAAMM's "Metal Finishes Manual for Architectural and Metal Products."
 - 1. Remove tool and die marks and stretch lines, or blend into finish.
 - 2. Grind and polish surfaces to produce uniform, directionally textured, polished finish, free of cross scratches. Run grain of directional finishes with long dimension of each piece.
- B. Mechanical Finish Designation: [**M11, specular, as fabricated**] [**M32, directionally textured, medium satin**].

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and floor conditions for compliance with requirements for location, size, minimum recess depth, and other conditions affecting installation of floor grilles and frames.
- B. Examine roughing-in for drainage piping systems to verify actual locations of piping connections before floor grille and frame and drain pan installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install recessed floor grilles and frames[**and drain pans**] to comply with manufacturer's written instructions at locations indicated and with top of floor grilles and frames in relationship to one another and to adjoining finished flooring as recommended by manufacturer. Set floor-grille tops at height for most effective cleaning action.[**Coordinate top of floor-grille surfaces with doors that swing across grilles to provide clearance under door.**]

3.3 PROTECTION

- A. After completing frame installations, provide temporary filler of plywood or fiberboard in floor-grille recesses and cover frames with plywood protective flooring. Maintain protection until construction traffic has ended and Project is near Substantial Completion.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 124816

SECTION 126100 - FIXED AUDIENCE SEATING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes fixed audience seating with the following:
 - 1. **[Standard] [Beam] [Pedestal]** mounting.
 - 2. **[Upholstered chairs] [Molded-plastic chairs] [Molded-plastic chairs with upholstered inserts] [Formed hardwood-veneer chairs]**.
 - 3. Lecture-hall tables.
 - 4. **[Power] [and] [data]** service to individual seat locations.
- B. Owner-Furnished Material: Upholstery fabric.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Pan: An exposed, supporting seat bottom made of steel.
- B. Shell: An exposed, supporting seat bottom or back made of materials other than steel.
- C. Tablet Arm: A flat surface attached to a chair that has the primary function to support tasks such as writing and short-term reference-material handling.

1.4 ALLOWANCES

- A. Fixed audience seating is part of fixed audience seating allowance.
- B. Fabric for fixed audience seating is part of **<Insert allowance designation>** allowance.
- C. Installation of Owner-furnished upholstery fabric is part of fixed audience seating allowance.

1.5 COORDINATION

- A. Coordinate layout and installation of electrical wiring and devices with seating layout to ensure that floor junction boxes for electrical devices are accurately located to allow connection without exposed conduit.
- B. Coordinate layout and installation of diffuser pedestals with HVAC work and with properties of diffuser pedestals to ensure alignment, proper air diffusion, and correct seat locations.

1.6 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager] <Insert location>**.

1.7 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of components, and finishes for fixed audience seating.
 - 2. Include electrical characteristics of electrical components, devices, and accessories.
 - 3. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Credit IEQ 4.4: For composite wood products, documentation indicating that product contains no urea formaldehyde.
 - 2. Laboratory Test Reports for Credit IEQ 4.4: For composite wood products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
 - 1. Seating Layout: Show seating layout, aisle widths, aisle-end alignment or stepping, row-lettering and chair-numbering scheme, chair widths, and chair spacing in each row.
 - 2. Accessories: Show locations and features of accessories, including **[left- and right-hand tablet arms] [electrical devices] [bookracks] <Insert item>**, and accessibility provisions.
 - 3. Wiring Diagrams: For power, signal, and control wiring.
- D. Samples for Initial Selection: For each type of exposed color, finish, texture, and pattern indicated.

1. Include Samples of accessories involving color and finish selection.
- E. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below:
1. Chair Unit: Full-size unit of each type[**and combination of finishes**].
 2. Molded Plastic: Manufacturer's standard-size unit, not less than **3 inches** (75 mm) square.
 3. Plastic Laminate: Manufacturer's standard-size unit, not less than **3 inches** (75 mm) square.
 4. Baked-on Coating Finishes: Manufacturer's standard-size unit, not less than **3 inches** (75 mm) square.
 5. Aluminum Finishes: Manufacturer's standard-size unit, not less than **3 inches** (75 mm) square.
 6. Wood and Plywood Materials and Finishes: Manufacturer's standard-size unit, not less than **3 inches** (75 mm) square.
 7. Upholstery Fabric: Full width by [**36-inch-** (914-mm-)] **<Insert dimension>** long section of fabric from dye lot to be used for the Work, with specified treatments applied. Show complete pattern repeat. Mark top and face of fabric.
 8. Row-Letter and Chair-Number Plates: Full-size units with letters and numbers marked.
 9. Aisle Lighting: Full-size unit.
 10. Power[**and Data**] Service Devices: Full-size units.
 11. Bookracks: Full-size unit.
 12. Exposed Fasteners: Full-size units of each type.

1.8 INFORMATIONAL SUBMITTALS

- A. Product Certificates: For each type of fixed audience seating.
- B. Material Certificates: For each type of flame-retardant treatment of fabric.
- C. Field quality-control reports.
- D. Sample Warranty: For special warranty.

1.9 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For fixed audience seating to include in operation and maintenance manuals.
 1. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
 - a. Maintenance of self-rising seat mechanisms, folding armrests, and other operating components.
 - b. Adjustment of self-rising seat mechanisms to align seats.
 - c. Maintenance of electrical components, devices, and accessories.
 - d. Methods for maintaining upholstery fabric.

- e. Precautions for cleaning materials and methods that could be detrimental to seating finishes and performance.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.10 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials from the same production run that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Chair Seats and Backs: [5] <Insert number> percent of quantity installed for each type and size of chair seat and back.
 2. Upholstered, Slip-on Cushions: [5] <Insert number> percent of quantity installed for each type and size of cushion.
 3. Tablet Arms: [5] <Insert number> percent of quantity installed for each type and size of tablet arm; left- and right-hand mounted.
 4. Armrests: [5] <Insert number> percent of quantity installed for each type of armrest.
 5. Power Receptacles: [5] <Insert number> percent of quantity installed.
 6. Data Ports: [5] <Insert number> percent of quantity installed.
 7. Chair Seat Hinges: [5] <Insert number> percent of quantity installed.
 8. Aisle-Lighting Fixture Bulbs: [5] <Insert number> percent of quantity installed.
 9. Donor Plates: [100] <Insert number>.
 10. Bookracks: [5] <Insert number> percent of quantity installed

1.11 QUALITY ASSURANCE

- A. Mockups: Build mockups to verify selections made under Sample submittals, demonstrate aesthetic effects, and set quality standards for fabrication and installation.
 1. Build mockups of [area of fixed audience seating indicated on Drawings] [two typical seats or a typical two-seat unit] [two typical seats in width and two typical rows deep with lecture-hall table between the rows] <Insert requirement>, including finishes and accessories:
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.12 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of fixed audience seating that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
 - a. Structural failures including standards, beams, and pedestals.
 - b. Faulty operation of self-rising seat mechanism.
 - c. Faulty operation of electrical components.
 - d. Wear and deterioration of fabric and stitching beyond normal use.
 - e. Deterioration of metals, metal finishes, and other materials beyond normal weathering and use.
 - f. **<Insert failure modes>**.
2. Warranty Periods: As follows, from date of Substantial Completion.
 - a. Structural: Minimum **[five (5) years] [ten (10 years)] [Lifetime]**.
 - b. Operating Mechanisms: Minimum **[three (3) years] [five (5) years] [Lifetime]**.
 - c. Electrical Components: Minimum **[three (3)] [five (5)]** years.
 - d. Plastic, Wood, and Paint Components: Minimum **[two (2)] [three (3)] [five (5)]** years.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

- A. Source Limitations: Obtain each type of seating required, including accessories and mounting components, from single source from single manufacturer.
 1. Upholstery Fabric: Obtain fabric of a single dye lot for each color and pattern of fabric required.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 PERFORMANCE REQUIREMENTS

- A. Fire-Test-Response Characteristics of Upholstered Chairs:
 1. Fabric: Class 1 according to DOC CS 191-1953 or 16 CFR 1610, tested according to California Technical Bulletin 117.
 2. Padding: Comply with California Technical Bulletin 117.
 3. Full-Scale Fire Test: Comply with California Technical Bulletin 133.

- B. Strength and Durability Performance: Chairs and components shall pass testing according to BIFMA X5.4.

2.3 FIXED AUDIENCE SEATING <Insert drawing designation>

- A. Fixed Audience Seating: Assembly-space seating in permanent arrangement <Insert description> as shown on Drawings.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. American Seating Company.
- b. Clarin Seating.
- c. Ducharme Seating International Inc.
- d. GreyStone International, Inc.
- e. Hussey Seating Company.
- f. Interkal LLC.
- g. Irwin Seating Company.
- h. KI, Inc.
- i. Preferred Seating Co. Inc.
- j. Seating Concepts LLC.
- k. SERIES LLC.
- l. Sitmatic.
- m. Theatre Solutions, Inc.
- n. Track Seating; a division of Track Corporation.
- o. <Insert manufacturer's name>.
- p. or approved equal.

- B. Chair Mounting Standards: [Floor] [Riser] attached of the following material:

1. Steel: One-piece, heavy-tube or reinforced sheet with welded mounting plate and welded connections for seat pivots, backs, armrests, and end panels.
2. Cast [Iron] [Aluminum]: One-piece castings with integral mounting points and attachment anchoring points for seat pivots, backs, and armrests.
3. Molded Plastic: One-piece, solid injection-molded plastic with integral reinforcing ribs and attachment anchoring points for seat pivots, backs, and armrests.

- C. Chair Mounting Beam: Steel horizontal beam mounted on [floor] [riser]-attached steel support pedestals spaced at intervals of 2 to 2-1/2 chair widths. [Chair attachments equipped with 180-degree swivel capability, returning to forward position when unoccupied.]

- D. Chair Mounting Pedestal: Floor-attached pedestal, manufacturer's standard [base with 90-degree left and right rotation capability] [base with 360-degree swivel capability] [diffuser pedestal at location(s) indicated] <Insert description>.

- E. End Panels:

1. Material: **[Steel] [Cast iron with design] [Cast aluminum with design] [Plastic laminate] [Hardwood-veneer plywood] [Solid hardwood] [Fabric upholstered] [Molded plastic]**.
 - a. Cast-Metal Design: **[As indicated by manufacturer's designations] [As selected by DEN Project Manager from manufacturer's full range] <Insert design>**.
 2. Decorative Insert: **[Plastic laminate] [Hardwood-veneer plywood] [Solid hardwood] [Fabric upholstered] [Molded plastic] [Customized medallion]**.
 3. Style: **[Rectangular] [Oval] [Teardrop] [Tapered] [Panel to floor (pew)] <Insert requirement>** with **[square] [rounded]** corners.
- F. Fabric Upholstered Chairs:
1. Back:
 - a. Padding Thickness: **[1-1/4 inches (32 mm)] [2 inches (51 mm)] [3 inches (76 mm)] <Insert dimension>**.
 - b. Outer Back Surface: **[Steel] [Molded plastic] [Fabric upholstered with 1/4-inch (6-mm) padding] [Plastic laminate] [Hardwood-veneer plywood] <Insert requirement>**, with **[concealed] [exposed]** fasteners.
 - c. Top Corners: **[Square] [Rounded]**.
 - d. Upholstery Options: **[Tufting] [decorative stitching] [and] [welt cord trim] <Insert option>**.
 2. Seat: **[Two part, top and bottom construction] [One part, fully upholstered construction] [One part, fully upholstered construction with removable upholstery cover]** and as follows:
 - a. Top Padding Thickness: Minimum **[1-1/2 inches (38 mm)] [3 inches (76 mm)] [4 inches (102 mm)] <Insert dimension>** at front and rear edges.
 - b. Seat Bottom: **[Steel sheet seat pan] [Perforated steel sheet seat pan with acoustical insulation] [Hardwood-veneer-faced, formed plywood shell] [Molded-plastic shell] [Fabric upholstered] <Insert requirements>**.
- G. Plastic Chairs: **[Single] [Double]**-wall molded plastic and as follows:
1. Back: **[Smooth surface] [Textured surface] [Formed slats] [Smooth surface with upholstered inserts] [Textured surface with upholstered inserts]** with **[square] [rounded]** top corners **<Insert description>**.
 2. Seat: **[Smooth surface] [Textured surface] [With simulated slats] [Smooth surface with upholstered inserts] [Textured surface with upholstered inserts] <Insert description>**.
 3. Upholstered Inserts: Padding and fabric covering over **1/8-inch (3-mm)** plywood or medium-density fiberboard backing board, recessed **[3/16 inch (5 mm)] <Insert dimension>** into plastic surface, centered, and attached with hidden, vandal-resistant fasteners.

- H. Formed Hardwood-Veneer Chairs: Hardwood-veneer-faced, formed plywood backs and seats, with **[concealed] [exposed]** fasteners.
1. Back Top Corners: **[Square] [Rounded] <Insert requirement>**.
- I. Chair Width: **[Vary chair widths to optimize sightlines and row lengths] [Single-width chair in each row]**, with **[minimum]** chair width of **[18 inches (457 mm)] [19 inches (483 mm)] [20 inches (508 mm)] [21 inches (533 mm)] [22 inches (559 mm)] [23 inches (584 mm)] [24 inches (610 mm)] <Insert dimension>** from center to center of armrests.
- J. Back Height: **[Standard] [High] [Planetarium]-style backs**, **[31 inches (787 mm)] [32-1/2 inches (826 mm)] [35 inches (889 mm)] [38 inches (965 mm)] [40 inches (1016 mm)] [44 inches (1117 mm)] <Insert dimension>** high.
- K. Back Pitch: **[Fixed] [Variable at set angles (planetarium)] [Variable, hinged (rocker)]**.
1. Back Angle: **[Angle for optimum viewing comfort] [Different angles within manufacturer's available range, for optimum viewing comfort at each location] [16 degrees] [18 degrees] [20 degrees] [21 degrees] [24 degrees] <Insert requirement>**.
 2. Chair Back Hinges: Self-lubricating type with noiseless mechanism that raises back to vertical position when chair is unoccupied.
- L. Chair Seat Hinges: Self-lubricating, with noiseless **[self-rising seat mechanism passing ASTM F 851] [manual operation]**, positive internal stops cushioned with rubber or neoprene, and requiring no maintenance.
1. Self-Rising Seat Mechanism: **[Spring actuated, three-quarter fold] [Spring actuated, full fold] [Gravity actuated, full fold]**.
 2. Reclining Mechanism: Manufacturer's standard mechanism for reclining planetarium chairs.
- M. Armrests: **[Molded plastic] [Solid hardwood] [Upholstered] [Plastic laminate on medium-density fiberboard] [Integral scrolled cast iron]** with rounded edges[, **integral cup holder,**] and concealed mounting.
1. Folding Armrests: Equip seating with **[folding aisle armrests where indicated] [and] [folding center armrests]**.
- N. Aisle-Lighting Fixtures: Manufacturer's standard **[round] [rectangular-louvered] [concealed-in-armrest] <Insert description>** fixtures.
1. Bulb: **[LED] [or] [incandescent] <Insert bulb type>**.
 2. Power: **[12] [24] [or] [120] <Insert value> V**.
 3. For low-voltage lighting, provide manufacturer's voltage-reduction device housed in safety enclosure equipped with fuses, terminal blocks, and safety disconnect.

- O. Power and Data Service Package: **[Manufacturer's standard service]** **[Service]** to each seat position **[indicated]**, including terminal devices and wiring with **18 inches** (457 mm) of extra length and as follows:
1. Power Receptacles: 120 V with wiring and **[duplex]** receptacle.
 2. Data Ports: Data-port terminal with wiring and receptacle jack **[of type indicated]** **<Insert type>**.
 3. Location: **[Manufacturer's standard location]** **[On raceway beneath the seating]** **[In the armrest]** **[Beneath the armrest on front or side of the standard]** **[In back panel of seat in front]** **<Insert requirement>**.
- P. Tablet Arms: **[Manufacturer's standard-size]** **[Manufacturer's oversize]** **<Insert size in minimum sq. in. (sq. mm) of surface area>**, **[fixed]** **[foldaway]** tablet arm with plastic-laminate writing surface over medium-density fiberboard or plywood core and with rounded, matching PVC edges.
1. Mounting: **[Right-hand mounted unless otherwise indicated]** **<Insert mounting>**.
 2. Fold-Away Mechanism: Cast-iron or steel hinge and swivel mechanism that give positive support in open position and semiautomatic return to stored position below arm block and parallel to chair.
- Q. Accessible Seating:
1. Provide **[removable]** **[rollaway]** **[swing-away]** chair for each wheelchair space unless otherwise indicated.
 2. Provide chairs with folding armrest on aisle side in locations indicated, but not less than five percent of aisle seats, dispersed through the audience seating area. Identify these seats with a sign or marker.
- R. Row-Letter and Chair-Number Plates: **[Manufacturer's standard]** **<Insert description>**.
1. Material: **[Aluminum]** **[Bronze]** **[Stainless steel]** **<Insert material>** with black embossed characters.
 2. Location: **[As indicated on Drawings]** **[row letter on top of aisle armrest]** **[chair number on front edge of seat]** **[and]** **[chair number on top edge of back]** **<Insert requirement>**.
 3. Attachment: **[Manufacturer's standard method]** **[Adhesive]** **[Minimum of two mechanical fasteners]** **<Insert attachment>**.
- S. **[Accessibility-Logo]** **[and]** **[Donor]** Plates: **[Manufacturer's standard]** **<Insert description>**.
1. Material: **[Aluminum]** **[Bronze]** **[Stainless steel]** **<Insert material>** with black embossed characters.
 2. Location: **[As indicated on Drawings]** **[Top of armrest]** **[Front of chair back]** **<Insert requirement>**.
 3. Attachment: **[Manufacturer's standard method]** **[Adhesive]** **[Minimum of two mechanical fasteners]** **<Insert attachment>**.

- T. Bookracks: Manufacturer's standard [**under-chair**] [**or**] [**back-of-chair**] boxes, matching material and finish of mounting surface.

1. Size: Minimum **<Insert dimensions>**.

2.4 LECTURE-HALL TABLES **<Insert drawing designation>**

- A. Lecture-Hall Tables: Continuous tables in permanent arrangement **<Insert description>** as indicated on Drawings.

1. Manufacturer: Subject to compliance with requirements, provide products by the same manufacturer as for fixed audience seating.

- B. Supports: Attached to [**floor**] [**fixed audience seating**] and matching construction and finish structure for fixed audience seating.

- C. Table Top: Manufacturer's standard construction, [**plastic laminate on medium-density fiberboard**] [**hardwood-veneer plywood**] **<Insert requirement>** with rounded edges[, **integral pencil groove**,] and concealed mounting.

1. Depth: [**Manufacturer's standard**] **<Insert dimension>**.

- D. Modesty Panels: Manufacturer's standard construction, [**matching Tabletop**] [**plastic laminate on medium-density fiberboard**] [**hardwood-veneer plywood**] [**perforated steel**] [**fabric upholstered**] **<Insert requirement>**.

1. Height: [**Full height to 1 inch (25 mm) above floor**] [**24 inches (610 mm)**] [**14 inches (356 mm)**] **<Insert dimension>**.

- E. Power and Data Service Package: [**Manufacturer's standard service**] [**Service**] to each seat position[**indicated**], including terminal devices and wiring with **18 inches (457 mm)** of extra length and as follows:

1. Power Receptacles: 120 V with wiring and[**duplex**] receptacle.
2. Data Ports: Data-port terminal with wiring and receptacle jack [**of type indicated**] **<Insert type>**.
3. Location: [**Manufacturer's standard location**] [**On raceway beneath the tabletop**] **<Insert requirement>**.

2.5 MATERIALS AND FINISHES

- A. Composite Wood Products: [**Made with binder containing no urea formaldehyde.**] [**Products shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."**]

1. Medium-Density Fiberboard: ANSI A208.2, Grade MD.

2. Concealed Plywood: HPVA HP-1 hardwood plywood or DOC PS 1 softwood plywood as standard with manufacturer.
 3. Exposed Plywood: HPVA HP-1, Face Grade A, hardwood-veneer core with color-matched hardwood-veneer faces.
- B. Hardwood Lumber and Veneer Faces: **[American black walnut] [Red oak] [Teak] [Birch] [Cherry] [Maple] <Insert wood species>** selected to be free of visible defects.
1. Stain and Finish: **[Manufacturer's standard, transparent, ultraviolet (UV)-resistant, protective finish] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert stain and finish>**.
- C. Plastic Laminate: NEMA LD 3, Grade VGS for vertical surfaces and Grade HGS for horizontal surfaces.
1. Color and Pattern: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and pattern>**.
- D. Molded Plastic: High-density polyethylene or polypropylene, blow or injection molded, with surface that is mar and dent resistant.
1. Provide with UV inhibitors to retard fading.
 2. Color and Texture: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and texture>**.
- E. Fabric: Manufacturer's standard **[100 percent nylon] [100 percent polyolefin] <Insert fiber>** with flame-retardant treatment.
1. Weight: **[12 oz./linear yd. (0.37 kg/linear m)] [16 oz./linear yd. (0.50 kg/linear m)] [18 oz./linear yd. (0.56 kg/linear m)] [20 oz./linear yd. (0.62 kg/linear m)] <Insert weight>**.
 2. Color and Pattern: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and pattern>**.
- F. Upholstery Padding: Flexible, cellular, molded or slab polyurethane foam.
- G. Metal Finish: Finish exposed metal parts with manufacturer's standard **[polyurethane] [baked-on] [minimum 1.5-mil- (0.04-mm-) thick, polyester baked-on powder] [minimum 1.5-mil- (0.04-mm-) thick, epoxy baked-on powder] [minimum 70 percent by weight, PVDF fluoropolymer resin baked-on powder]** coating.
1. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.

2.6 FABRICATION

- A. Floor Attachments: Fabricate to conform to floor slope so that standards and pedestals are plumb and chairs are maintained at same angular relationship to vertical throughout Project.
- B. For beam-mounted chairs[**and tables**] in curved patterns, curve the beam uniformly to the various radii required for the rows.
- C. Upholstery: Fabricate fabric-covered cushions with molded padding beneath fabric and with fabric covering free of welts, creases, stretch lines, and wrinkles. For each upholstered component, install pile and pattern run in a consistent direction.
- D. Upholstered Chairs: Fabricate as follows:
 - 1. Two-Part Upholstered Back: Padded cushion glued to a curved steel, plywood, or molded-plastic inner panel and covered with easily replaceable fabric; with curved outer back shell that fully encloses upholstery edges.
 - 2. Two-Part, Steel-Pan Seats: Upper part, an upholstered cushion with molded padding over no fewer than **[five]** **<Insert number>** serpentine springs attached to reinforced steel frame, with weight-distributing and abrasion-resistant sheeting separating padding from springs, and removable for reupholstering without removing steel pan from chair. Lower part, a steel pan, reinforced at stress points and completely enclosing hinges and self-rising mechanism.
 - 3. Two-Part, Molded-Plastic Seats: Upper part, an upholstered cushion with formed padding over a five-ply plywood panel[**with fabric cover conforming to shape of cushion to conceal inner seat structure and hinge mechanism**]. Lower part, a molded-plastic shell.
 - 4. One-Part Seats: Double-wall plastic shells **[fitted with a padded upholstered cushion and covered with easily replaceable fabric]** **[padded and fully upholstered]**.
- E. Double-Wall, Molded-Plastic Chairs: Contoured seat and back fabricated of double-wall, blow-molded plastic; both sides of seat and back components are finished surfaces. Reinforce plastic with interior steel plates at attachment points.
- F. Single-Wall, Molded-Plastic Chairs: Contoured plastic shell with smoothly rolled edges and reinforcing ribs on underside of shell. Fabricate for attachment of chair to support with self-threading, corrosion-resistant screws.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine floors, risers, and other adjacent work and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.
- B. Verify that electrical connections are properly located.

- C. Verify that HVAC air-distribution locations are correct.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install seating[**and tables**] in locations indicated and fasten securely to substrates according to manufacturer's written installation instructions.
 - 1. Install fixed audience seating with each chair capable of complying with performance requirements without failure or other conditions that might impair the chair's usefulness.
 - 2. Install standards and pedestals plumb.
 - 3. Install seating so moving components operate smoothly and quietly.
- B. Install seating[**and tables**] with end standards aligned or stepped as indicated from first to last row and with backs and seats varied in [**width**] [**and**] [**spacing**] to optimize sightlines.
- C. Install riser-mounted standards and attachments to maintain uniform chair heights above floor.
- D. Install chairs[**and tables**] in curved rows at a constant radius.
- E. Install wiring conductors and cables concealed in components of seating[**and tables**] and accessible for servicing.
 - 1. Connect electrical service at junction-box locations according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
 - 2. Connect voice and data communication service at junction-box locations according to Section 271500 "Communications Horizontal Cabling."

3.3 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
 - 1. Inspect components, assemblies, and equipment, including connections, to verify proper, complete, and sturdy installation according to manufacturer's written instructions and product specifications.
 - 2. Verify that seats return to correct and uniform at-rest position.
 - 3. Test power receptacles as specified in Section 262726 "Wiring Devices" when power is activated.
 - 4. Test data ports when data connection is activated.
- B. Fixed audience seating will be considered defective if it does not pass tests and inspections.
- C. Prepare test and inspection reports.

3.4 ADJUSTING

- A. Adjust chair backs so that they are at proper angles and aligned with each other in uniform rows.
- B. Adjust hardware and moving parts to function smoothly so they operate easily. Lubricate bearings and sliding parts as recommended in writing by manufacturer.
- C. Adjust self-rising seat mechanisms so seats in each row are aligned when in upright position.
- D. Repair minor abrasions and imperfections in finishes with coating that matches factory-applied finish.
- E. Replace damaged and malfunctioning components that cannot be acceptably repaired.
- F. Replace upholstery fabric damaged during installation or work of other trades.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 126100

SECTION 129200 - INTERIOR PLANTERS AND ARTIFICIAL PLANTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Freestanding interior planters.
2. Freestanding planters with built-in subirrigation.
3. Site-installed, self-contained subirrigation units.
4. Planter liners.
5. Manufactured interior plants.

B. Owner-Furnished, Contractor-Installed Material: **<Insert product>**.

C. Related Requirements:

1. Section 033000 "Cast-in-Place Concrete" for site-built, cast-in-place concrete planters.
2. Section 033300 "Architectural Concrete" for site-built, cast-in-place architectural concrete planters.
3. Section 034500 "Precast Architectural Concrete" for plant-cast architectural planters.
4. Section 042000 "Unit Masonry" for site-built masonry planters.
5. Section 044313.13 "Anchored Stone Masonry Veneer" for site-built natural stone planters.
6. Section 044313.16 "Adhered Stone Masonry Veneer" for site-built natural stone planters.
7. Section 047200 "Cast Stone Masonry" for plant-manufactured cast stone planters.
8. Section 328400 "Planting Irrigation" for interior above-grade or suspended irrigation systems.
9. Section 329300 "Plants" for interior live plants, planting mediums, and planting accessories.
10. Section 334713 "Pond and Reservoir Liners" for interior ponds.

D. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ALLOWANCES

- A. Work of this Section is part of **[Interior Planter and Artificial Plant Allowance]** **<Insert allowance>**.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site]** **[location and time as determined by DEN Project Manager]** **<Insert location>**.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings:
1. Metal Plant Liners: Show layouts, profiles, shapes, seams, and dimensions.
 2. Self-Contained Subirrigation Units: Show fabrication and installation details of units and accessories.
- C. Samples: For each freestanding planter finish, color, and texture specified, not less than **3 by 3 inches** (76 by 76 mm) in size.
- D. Product Schedule:
1. For freestanding interior planters, include the following:
 - a. Finish, color, and texture.
 - b. Dimensions.
 - c. Manufacturer's name.
 - d. Manufacturer's product designation.
 2. For manufactured interior plants, include the following:
 - a. Plant height.
 - b. Plant width.
 - c. 35-mm color print or digital photographic record.
 - d. Manufacturer's name.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For interior **[planters]** **[and]** **[manufactured interior plants]** to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300

"Submittal Procedures".

1.7 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 FREESTANDING INTERIOR PLANTERS <Insert drawing designation>

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. <Insert manufacturer's name>.
 2. or approved equal.
- B. Type: [**Hanging**] [**Tabletop**] [**Panel/Wall mounted**] [**Floor mounted**].
- C. Material: [**Ceramic**] [**Fiberglass**] [**Metal**] [**Plastic**] [**Cast stone**] [**Terra cotta**] [**Wood**] <Insert material>.
- D. Inside Width: <Insert inches (mm)>.
- E. Outside Width: <Insert inches (mm)>.
- F. Inside Length: <Insert inches (mm)>.
- G. Outside Length: <Insert inches (mm)>.
- H. Inside Diameter: <Insert inches (mm)>.
- I. Outside Diameter: <Insert inches (mm)>.
- J. Height: <Insert inches (mm)>.
- K. Pattern: <Insert manufacturer's designation>.
- L. Color: <Insert manufacturer's designation>.
- M. Finish: <Insert manufacturer's designation>.
- N. Accessories: [**Planter pad**] [**Matching saucer**] [**Carpet protector disc**] [**Casters**] <Insert accessory>.

2.2 FREESTANDING PLANTERS WITH BUILT-IN SUBIRRIGATION <Insert drawing designation>

- A. General Planter Requirements: Freestanding, self-contained, seamless, one-piece units; low-density polyethylene with subirrigation unit, exterior drainage adapter, integral air and watertight reservoir, vacuum sensor system, and tamper-resistant stopper.
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Jardinier Planter Systems, Inc.](#)
 - b. [PLAYMOBIL USA, Inc., Lechuza Division.](#)
 - c. [TourneSol Siteworks, Inc.](#)
 - d. <Insert manufacturer's name>.
 - e. or approved equal.
 2. Color: <Insert color>.
 3. Accessories: [Tree tie downs, three per container] [Security tie downs] [Root-control fabric] <Insert accessory>.

2.3 SITE-INSTALLED, SELF-CONTAINED SUBIRRIGATION UNITS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Jardinier Planter Systems, Inc.](#)
 2. [TourneSol Siteworks, Inc.](#)
 3. <Insert manufacturer's name>.
 4. or approved equal.
- B. Provide fittings and accessories necessary for proper functioning of unit as recommended by manufacturer and as follows:
1. <Insert required fittings and accessories, in separate subparagraphs, to suit Project>.

2.4 PLASTIC PLANTER LINERS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [PLAYMOBIL USA, Inc., Lechuza Division.](#)
 2. [TourneSol Siteworks, Inc.](#)
 3. <Insert manufacturer's name>.
 4. or approved equal.

- B. Seamless Modular Planter Liners: Thermoplastic, **[high-impact polystyrene] [linear low-density polyethylene]** plastic unibody construction with no seams or welded joints.
1. Color: **[Black] <Insert color>**.
- C. Welded Modular Planter Liners: Stress-relieved polypropylene plastic with welded rigid wall sections.
1. Color: **[Black] <Insert color>**.

2.5 METAL PLANT LINERS

- A. Materials:
1. Zinc-Coated (Galvanized) Steel Sheet: ASTM A 653/A 653M, **G90 (Z275)** coating designation; structural quality, mill phosphatized for field painting, **[0.0276 inch (0.7 mm)] [0.0336 inch (0.85 mm)] <Insert thickness>** thick.
 2. Stainless-Steel Sheet: ASTM A 240/A 240M, Type 304, No. 2D finish, **[0.040 inch (1.0 mm)] [0.050 inch (1.2 mm)] <Insert thickness>** thick.
 3. Copper Sheet: ASTM B 370, Temper H00 or H01, cold-rolled copper sheet, **[16 oz./sq. ft. (0.55 mm thick)] [20 oz./sq. ft. (0.7 mm thick)] <Insert weight (thickness)>**.
 4. Elastomeric Sealant: ASTM C 920, elastomeric polymer sealant; of type, grade, class, and use classifications required to seal joints in sheet metal and remain watertight.
 5. Solder for Stainless Steel: ASTM B 32, Grade Sn60, with acid flux of type recommended by stainless-steel sheet manufacturer.
 6. Solder for Copper: ASTM B 32, Grade Sn50, 50 percent tin and 50 percent lead.
- B. Fabrication:
1. Comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of planter liner indicated.
 2. Shop fabricate where practical. Obtain field measurements for accurate fit before shop fabrication.
 3. Fabricate sheet metal without excessive oil canning, buckling, and tool marks and true to line and levels indicated, with exposed edges folded back to form hems.
 4. Fabricate sheet metal joints with soldered, flat-lock seams. Clean surfaces to be soldered, removing oils and foreign matter. Pretin edges of sheets to be soldered to a width of **1-1/2 inches (38 mm)**.
 - a. Stainless-Steel Soldering: Pretin edges of uncoated sheets to be soldered using phosphoric acid flux and solder for stainless steel. Promptly wash off acid flux residue from metal after soldering.
 - b. Copper Soldering: Tin uncoated copper surfaces at edges of sheets using solder for copper.

5. Fabricate joints in sheet metal to accommodate elastomeric sealant.
 - a. Seal joints with elastomeric sealant as required for watertight construction. Embed hooked flanges of joint members not less than **1 inch (25 mm)** into sealant. Form joints to completely conceal sealant. Prepare joints and apply sealants according to manufacturer's written instructions.

2.6 MANUFACTURED INTERIOR PLANTS <Insert drawing designation>

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. **<Insert manufacturer's name>**.
 2. or approved equal.
- B. Plant Type: **<Insert description>**.
- C. Treat trunk, branch, and foliage surfaces with flame retardant to comply with NFPA 701.

2.7 MINERAL MULCH

- A. Mineral Mulch: Hard, durable stone, washed free of loam, sand, clay, and other foreign substances, of the following type, size range, and color:
 1. Type: **[Rounded riverbed gravel or smooth-faced stone] [Crushed stone or gravel] [Marble chips] [Granite chips] <Insert material>**.
 2. Size Range: **[1-1/2 inches (38 mm) maximum, 3/4 inch (19 mm) minimum] [3/4 inch (19 mm) maximum, 1/4 inch (6 mm) minimum]**.
 3. Color: **[Uniform tan-beige color range acceptable to DEN Project Manager] [Readily available natural gravel color range] <Insert color>**.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine installation areas, with Installer present, for compliance with environmental requirements and other conditions affecting installation and performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Before installation, lay out interior planters in locations indicated. Adjust locations when requested by DEN Project Manager and obtain DEN Project Manager's acceptance of layout before installation.

3.3 FREESTANDING PLANTER PLACEMENT

- A. Install freestanding planters level and plumb. Use concealed shims where required for alignment.
- B. Remove stickers and other temporary labels from interior planters.

3.4 INSTALLATION OF SELF-CONTAINED SUBIRRIGATION UNITS

- A. Install self-contained subirrigation units into planters according to manufacturer's written instructions, level and plumb.
- B. Install drainage overflow adapters prior to installing self-contained subirrigation units.
- C. Trim fill tubes to no less than **1 inch (25 mm)** higher than level of planting medium.

3.5 INSTALLATION OF PLANTER LINERS

- A. Set liners in planters [**according to freestanding planter manufacturer's written instructions**] [**as indicated on Drawings**].
- B. Install liners to allow for liner removal.

3.6 MANUFACTURED PLANT PLACEMENT

- A. Set manufactured plants at locations indicated on Drawings according to manufacturer's written instructions.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 129200

SECTION 129300 - SITE FURNISHINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Seating.
2. Tables.
3. Bicycle racks.
4. Bicycle lockers.
5. Trash receptacles.
6. Ash receptacles.
7. Planters.
8. Bollards.

- B. Related Requirements:

1. Section 033000 "Cast-in-Place Concrete" for **[installing pipe sleeves cast]** **[installing anchor bolts cast]** **[formed voids]** in concrete footings.
2. Section 312000 "Earth Moving" for excavation for installing concrete footings.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1. Include data substantiating that materials comply with requirements.

- B. LEED Submittals:

1. Product Data for Credit MR 4.1[**and Credit MR 4.2**]: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Certificates for **[Credit MR 6]** **[Credit MR 7]**: Chain-of-custody certificates indicating that wood components of site furnishings comply with forest

certification requirements. Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.

- C. Samples: For each exposed product and for each color and texture specified.
- D. Samples for Initial Selection: For units with factory-applied finishes.
- E. Samples for Verification: For each type of exposed finish, not less than **6-inch-** (152-mm-) long linear components and **4-inch-** (102-mm-) square sheet components.
 - 1. Include full-size Samples of **[bench] [table] [bicycle rack] [trash receptacle] [ash receptacle] <Insert product>**.
- F. Product Schedule: For site furnishings. Use same designations indicated on Drawings.

1.4 INFORMATIONAL SUBMITTALS

- A. Material Certificates: For site furnishings.
 - 1. Wood Preservative Treatment: Include certification by treating plant stating type of preservative solution and pressure process used, net amount of preservative retained, and compliance with applicable standards.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For site furnishings to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Bench Replacement **[Slats] [Planks]**: No fewer than **[two] <Insert number>** full-size units for each size indicated.
 - 2. Trash Receptacle Inner Containers: **[Five] <Insert number>** full-size units for each size indicated, but no fewer than **[two] <Insert number>** units.
 - 3. Anchors: **<Insert type and number>**.

1.7 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to

satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 [SEATING] [AND] [TABLES] <Insert drawing designation>

A. Products: Subject to compliance with requirements, provide one of the following:

1. <Insert manufacturer's name; product name or designation>.
2. A & T Iron Works, Inc.
3. BCI Burke Company, LLC.
4. BRP Enterprises, Inc.
5. Canterbury International.
6. Columbia Cascade Company.
7. Country Casual.
8. Creative Pipe, Inc.
9. DuMor Inc.
10. FairWeather Site Furnishings; Division of Leader Manufacturing, Inc.

38. or approved equal.

B. Frame: **[Cast aluminum] [Cast iron] [Steel] [Stainless steel] [Wrought iron] [Cedar] [Teak] <Insert material>**.

C. Seat**[and Back]**:

1. Material:

- a. Aluminum Sheet: **[Perforated] [Expanded] metal**.
- b. **[Painted] Steel: [Perforated metal] [Expanded metal] [Evenly spaced, parallel flat straps or bars] [Evenly woven, flat straps or bars] [Edge framed, evenly spaced, parallel rods or rolled bars] <Insert description>**.
- c. Stainless Steel: **[Perforated metal] [Expanded metal] [Evenly spaced, parallel flat straps or bars] [Evenly woven, flat straps or bars] [Edge framed, evenly spaced, parallel rods or rolled bars] <Insert description>**.
- d. Wood: **[Douglas fir] [Pine] [Cedar] [Redwood] [Teak] <Insert species>; formed into [evenly spaced parallel slats] [planks] <Insert description>**.
- e. **[Recycled] [Plastic] [Fiberglass] Planks: [Evenly spaced, parallel] <Insert description>**.
- f. **[Recycled] [Plastic] [Fiberglass] Sheet: [Solid] [Perforated]**.

2. Seat Height: **[As indicated] <Insert dimension>**.

3. Seat Surface Shape: **[Flat] [Contoured or dished]**.

4. Overall Height: **[As indicated] <Insert dimension>**.

5. Overall Width: **[As indicated] <Insert dimension>**.

6. Overall Depth: **[As indicated] <Insert dimension>**.

7. Arms: **[None] [One, as indicated] [Two, one at each end] [Three, one at each end and in center] <Insert requirements>**.

a. Arm Material: Match **[frame] [seat] <Insert component>**.

8. Weight: **<Insert weight>**.

9. Seating Configuration: Multiple units**[as indicated]**.

a. **[Straight] [Angled] [Curved] shape**.

b. Closed **[hexagon] [circle] [shape indicated] around a [tree trunk] [planter] [light post] <Insert central element>**.

D. Table Top:

1. Material:

a. Aluminum Sheet: **[Perforated] [Expanded] metal**.

b. **[Painted] Steel: [Perforated metal] [Expanded metal] [Evenly spaced, parallel flat straps or bars] [Evenly woven, flat straps or bars] [Edge framed, evenly spaced, parallel rods or rolled bars] <Insert description>**.

c. Stainless Steel: **[Perforated metal] [Expanded metal] [Evenly spaced, parallel flat straps or bars] [Evenly woven, flat straps or bars] [Edge**

- framed, evenly spaced, parallel rods or rolled bars] <Insert description>.**
- d. Wood: **[Douglas fir] [Pine] [Cedar] [Redwood] [Teak] <Insert species>;** formed into **[evenly spaced parallel slats] [planks] <Insert description>.**
 - e. **[Recycled] [Plastic] [Fiberglass] Planks: [Evenly spaced, parallel] <Insert description>.**
 - f. **[Recycled] [Plastic] [Fiberglass] Sheet: [Solid] [Perforated].**
- 2. Surface Shape: **[Round] [Hexagon] [Shape indicated] <Insert shape>.**
 - 3. Feature: **[Center umbrella hole] <Insert feature>.**
- E. Aluminum Finish: **[Mill finish] [Color coated].**
- 1. Color: **[As indicated by manufacturer's designation] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] [As indicated in a site furnishing schedule] <Insert color>.**
- F. Steel Finish: **[Galvanized and] [color] [PVC-color] coated.**

33. or approved equal.

B. Bicycle Rack Construction:

1. Frame: [Aluminum] [Steel] [Galvanized steel] [Stainless steel] [Steel and redwood] [Steel and pine] <Insert description>.
 - a. [Pipe] [Tubing] OD: Not less than [1-5/8 inches (41 mm)] [2-3/8 inches (60 mm)] [2-7/8 inches (73 mm)] [4-1/2 inches (115 mm)] <Insert dimension>.
 - b. Locking Bars: Solid round bar, not less than [3/4 inch (19 mm)] [1 inch (25 mm)] in diameter.
2. Style: [Single-side parking] [Double-side parking] [Bollard] [As indicated] <Insert description>.
 - a. Overall Height: [As indicated] <Insert dimension>.
 - b. Overall Width: [As indicated] <Insert dimension>.
 - c. Overall Depth: [As indicated] <Insert dimension>.
 - d. Capacity: Designed to accommodate no fewer than [two] [three] [four] <Insert number> bicycles.
3. Security: Designed to lock [wheel] [and] [frame].

4. Accessories: **[Base covers for each pipe and tubing anchored end] [Wheel stops] <Insert accessory>**.
 5. Installation Method: **[Freestanding] [Surface flange anchored at finished grade to substrate indicated] [Surface flange anchored below finished grade to substrate indicated] [Cast in concrete] [Bolted to cast-in anchor bolts] [Wall mounted] [As indicated]**.
- C. Aluminum Finish: **[Mill finish] [Color coated]**.
1. Color: **[As indicated by manufacturer's designation] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] [As indicated in a site furnishing schedule] <Insert description>**.
- D. Steel Finish: **[Galvanized] [Color coated]**.
1. Color: **[As indicated by manufacturer's designation] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] [As indicated in a site furnishing schedule] <Insert color>**.
- E. Stainless-Steel Finish: **[No. 4] <Insert description>**.
- F. Wood Finish: **[Unfinished] [Manufacturer's standard finish]**.
- 2.3 BICYCLE LOCKERS **<Insert drawing designation>**
- A. Products: Subject to compliance with requirements, provide one of the following:
1. **<Insert manufacturer's name; product name or designation>**.
 2. American Bicycle Security Company.
 3. Columbia Cascade Company.
 4. Cora Bike Rack.
 5. Creative Pipe, Inc.
 6. CycleSafe.
 7. Dero Bike Rack Co.
 8. Huntco Supply, LLC.
 9. Madrax; Division of Trilary, Inc.
 10. **<Insert manufacturer's name>**.
 11. or approved equal.
- B. Bicycle Locker Construction:
1. Locker: **[Molded one-piece fiberglass] [Steel sheet, 0.053 inch (1.4 mm) thick] [Steel sheet, 0.053 inch (1.4 mm) thick, with perforated metal sides] [with welded tubular steel frame] <Insert material>**.
 2. Door: **[Molded one-piece fiberglass] [Steel sheet, 0.053 inch (1.4 mm) thick] [with tubular steel frame] [Match locker] <Insert material>**.
 3. View **[Window] [Grille]: [Lexan, 12 inches (305 mm) square] [Perforated metal]**.

4. Lock: **[Manufacturer's standard] [Key lock with internal locking bar] [Coin/token lock] <Insert description>**.
 - a. Provide **[four] <Insert number>** keys.
 5. Overall Height: **[As indicated] <Insert dimension>**.
 6. Overall Width: **[As indicated] <Insert dimension>**.
 7. Overall Depth: **[As indicated] <Insert dimension>**.
 8. Capacity: Designed to accommodate **[one] [two]** bicycle(s).
 9. Installation Method: **[Locker anchored at finished grade to substrate indicated] [Locker anchored below finished grade to substrate indicated] [As indicated]**.
 10. Locker Configuration: **[Multiple] [Four] <Insert number> units[as indicated], in [straight row] [curved shape] [shape indicated] <Insert description>**.
- C. Steel Finish: Color coated.
1. Color: **[As indicated by manufacturer's designation] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] [As indicated in a site furnishing schedule] <Insert description>**.
- D. Fiberglass Color: **[As indicated by manufacturer's designation] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] [As indicated in a site furnishing schedule] <Insert description>**.
- 2.4 **[TRASH] [AND] [ASH] RECEPTACLES <Insert drawing designation>**
- A. Products: Subject to compliance with requirements, provide one of the following:
1. **<Insert manufacturer's name; product name or designation>**.
 2. BCI Burke Company, LLC.
 3. BRP Enterprises, Inc.
 4. Canterbury International.
 5. Columbia Cascade Company.

 33. Weatherend Estate Furniture.
 34. **<Insert manufacturer's name>**.
 35. or approved equal.
- B. Aluminum Facing Surrounds: **[Aluminum sheet] [Perforated aluminum sheet] [Grid in tubular frame] [Evenly patterned, parallel flat aluminum straps, bars, or tubular shapes] [Match benches] <Insert material and description>**.
- C. Steel Facing Surrounds: **[Steel sheet] [Perforated-steel sheet] [Evenly patterned, parallel flat steel straps, bars, or tubular shapes] [Evenly patterned, parallel round steel rods, bars, or tubular shapes] [Grid in tubular frame] [Match benches] <Insert material and description>**.
- D. Stainless-Steel Facing Surrounds: **[Steel sheet] [Perforated-steel sheet] [Evenly patterned, parallel flat steel straps, bars, or tubular shapes] [Evenly patterned, parallel round steel rods, bars, or tubular shapes] [Grid in tubular frame] [Match benches] <Insert material and description>**.
- E. Wood Facing Surrounds: **[Evenly spaced, Douglas fir slats] [Evenly spaced pine slats] [Evenly spaced cedar slats] [Redwood panels] [Evenly spaced redwood slats] [Teak panels] [Evenly spaced teak slats] [Match benches] <Insert wood type and description>**.
- F. Fiberglass Facing Surrounds: Molded fiberglass shape.
- G. Plastic Facing Surrounds: **[Molded HDPE shape] [Evenly spaced HDPE slats] [Evenly spaced, recycled HDPE slats] [Match benches] <Insert plastic type and description>**.
- H. Support Frames: **[Steel] [Galvanized steel]**; welded.
- I. **[Trash] [and] [Ash] Receptacles:**
1. Receptacle Shape and Form: **[Round cylinder] [Round cylinder with tapered funnel top] [Round, tapered column] [Square column] [Rectangular column]**

- [As indicated] <Insert shape and form>; with opening for depositing trash in [lid or top] [side of lid or top] [receptacle side].
2. Ash Receptacle Function: [Uncovered receptacle with sand pan] [Uncovered receptacle with bowl and funnel] [Covered receptacle with sand pan] [Covered receptacle with bowl and screen] [Covered receptacle with slots] [Uncovered receptacle with sand pan attaching to side of trash receptacle] <Insert description and accessories> for depositing cigarette butts; fire-proof design; bowl and pan removable for cleaning.
 3. Lids and Tops: [Matching facing panels] [Aluminum] [Steel] [HDPE] [Recycled HDPE] <Insert material and description> secured by cable or chain, hinged, swiveled, or permanently secured.
 - a. Description: [Flat rim ring lid with center opening] [Dome top] [Arched top] [Elevated flat or shallow dome rain-cap lid] [Combination ash sand pan and rim lid] [Combination ash sand pan and dome top] [Combination ash sand pan and elevated flat or shallow dome rain-cap lid] <Insert description>.
 - b. Opening for depositing trash covered by [self-closing, spring-loaded-hinged, push-in] [rotating] weather flap.
 4. Receptacle Height: [As indicated] <Insert dimension>.
 5. Overall Width: [As indicated] <Insert dimension>.
 6. Weight: <Insert weight>.
 7. Inner Container: [Aluminum] [Galvanized-steel sheet] [Perforated-metal] [Fiberglass] [Rigid plastic] container with [drain holes] [lift-out handles]; designed to be removable and reusable.
 8. Disposable Liners: Provide receptacle designed to accommodate disposable liners.
 9. Capacity: Not less than [22 gal. (83 L)] [28 gal. (106 L)] [30 gal. (114 L)] [32 gal. (121 L)] [40 gal. (151 L)] [55 gal. (208 L)] <Insert value>.
 10. Service Access: [Removable lid or top] [Fixed lid or top, side access]; inner container and disposable liner lift or slide out for emptying[; lockable with padlock hasps] [; keyed lock with two keys per receptacle] [; self-latching hinge].
 11. Post Mount: [Color-coated steel pipe; color to match receptacle] [Galvanized-steel pipe] [Wood]; for mounting [one] [two] [three] receptacle(s).
 12. Ash Receptacle Accessories: [Sand sifter] [Butt stub-out] <Insert accessory>.
- J. Aluminum Finish: [Mill finish] [Color coated].
1. Color: [As indicated by manufacturer's designation] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] [As indicated in a site furnishing schedule] <Insert description>.
- K. Steel Finish: [Galvanized and] [color] [PVC-color] coated.
1. Color: [As indicated by manufacturer's designation] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from

**manufacturer's full range] [As indicated in a site furnishing schedule]
<Insert description>.**

- L. Stainless-Steel Finish: **[No. 6] <Insert description>.**
- M. Wood Finish: **[Unfinished] [Factory-applied transparent finish] [Factory-applied stain and transparent finish] [Factory-applied opaque finish] [Manufacturer's standard finish].**
 - 1. Stain: **[Manufacturer's standard] <Insert stain type and color>.**
- N. **[Fiberglass] [HDPE] Color: [As indicated by manufacturer's designation] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] [As indicated in a site furnishing schedule] <Insert description>.**
- O. Graphics: **[Surface-applied] [Engraved] [Attached brass plaque with engraved] copy, content, and style [per manufacturer's standard] [as indicated on Drawings].**
 - 1. Copy: **[Litter] [Trash] [Waste] [Recycle] <Insert term>.**

2.5 PLANTERS <Insert drawing designation>

- A. Products: Subject to compliance with requirements, provide one of the following:
 - 1. **<Insert manufacturer's name; product name or designation>.**
 - 2. Country Casual.
 - 3. DuMor Inc.
 - 4. FairWeather Site Furnishings; Division of Leader Manufacturing, Inc.
 - 5. Fiberglass Engineering Company.
 - 6. Fibrex Group Inc. (The).
 - 7. Gardenside, Ltd.
 - 8. Kay Park Recreation.

 - 15. Victor Stanley, Inc.
 - 16. Wausau Tile, Inc.
 - 17. Weatherend Estate Furniture.
 - 18. **<Insert manufacturer's name>.**
 - 19. or approved equal.
- B. Aluminum Facing Surrounds: **[Aluminum sheet] [Perforated aluminum sheet] [Grid in tubular frame] [Evenly patterned, parallel flat aluminum straps, bars, or tubular shapes] [Match benches] <Insert material and description>.**

- C. Steel Facing Surrounds: [**Steel sheet**] [**Perforated-steel sheet**] [**Evenly patterned, parallel flat steel straps, bars, or tubular shapes**] [**Evenly patterned, parallel round steel rods, bars, or tubular shapes**] [**Grid in tubular frame**] [**Match benches**] <Insert material and description>.
- D. Stainless-Steel Facing Surrounds: [**Steel sheet**] [**Perforated-steel sheet**] [**Evenly patterned, parallel flat steel straps, bars, or tubular shapes**] [**Evenly patterned, parallel round steel rods, bars, or tubular shapes**] [**Grid in tubular frame**] [**Match benches**] <Insert material and description>.
- E. Wood Facing Surrounds: [**Evenly spaced, Douglas fir slats**] [**Evenly spaced pine slats**] [**Evenly spaced cedar slats**] [**Redwood panels**] [**Evenly spaced redwood slats**] [**Teak panels**] [**Evenly spaced teak slats**] [**Match benches**] <Insert wood type and description>.
- F. Fiberglass Facing Surrounds: Molded fiberglass shape.
- G. Plastic Facing Surrounds: [**Molded HDPE shape**] [**Evenly spaced HDPE slats**] [**Evenly spaced, recycled HDPE slats**] [**Match benches**] <Insert plastic type and description>.
- H. Support Frames: [**Steel**] [**Galvanized steel**]; welded.
- I. Planter Shape and Form: [**Round cylinder**] [**Round cylinder with tapered funnel top**] [**Round, tapered column**] [**Square column**] [**Rectangular column**] [**As indicated**] <Insert shape and form>.
- J. Style: [**To match benches**] [**As indicated by manufacturer's designation**].
- K. Overall Height: [**As indicated**] <Insert dimension>.
- L. Overall [**Diameter**] [**Width**]: [**As indicated**] <Insert dimension>.
- M. Overall Depth: [**As indicated**] <Insert dimension>.
- N. Weight: <Insert weight>.
- O. Inner Container: [**Aluminum**] [**Galvanized-steel sheet**] [**Fiberglass**] [**Rigid plastic**] container[**with drain holes**].
- P. Capacity: Not less than [**22 gal. (83 L)**] [**28 gal. (106 L)**] [**30 gal. (114 L)**] [**32 gal. (121 L)**] [**40 gal. (151 L)**] [**55 gal. (208 L)**] <Insert value>.
- Q. Installation Method: [**Freestanding**] [**Freestanding with weighted base**] [**Anchored to substrate indicated on Drawings**] [**Wall mounted**] [**Post mounted**] [**Mounted on elevated leg angles anchored at finished grade to substrate indicated on Drawings**] [**Mounted on elevated leg angles anchored below finished grade to substrate indicated on Drawings**] [**As indicated on Drawings**].
1. Post Mount: [**Color-coated steel pipe; color to match receptacle**] [**Galvanized-steel pipe**] [**Wood**]; for mounting [**one**] [**two**] [**three**] planter(s).

- R. Aluminum Finish: Color coated.
1. Color: **[As indicated by manufacturer's designation] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] [As indicated in a site furnishing schedule] <Insert description>.**
- S. Steel Finish: **[Galvanized and] [color] [PVC-color]** coated.
1. Color: **[As indicated by manufacturer's designation] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] [As indicated in a site furnishing schedule] <Insert description>.**
- T. Stainless-Steel Finish: **[No. 6] <Insert description>.**
- U. Wood Finish: **[Unfinished] [Factory-applied transparent finish] [Factory-applied stained and transparent finish].**
1. Stain: **<Insert stain type and color>.**
- V. **[Fiberglass] [HDPE]** Color: **[As indicated by manufacturer's designation] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] [As indicated in a site furnishing schedule] <Insert description>.**
1. Finish: **[Smooth] [Textured].**

2.6 BOLLARDS **<Insert drawing designation>**

- A. Products: Subject to compliance with requirements, provide one of the following:
1. **<Insert manufacturer's name; product name or designation>.**
 2. BRP Enterprises, Inc.
 3. Canterbury International.
 4. Columbia Cascade Company.
 5. Creative Pipe, Inc.
 6. Dero Bike Rack Co.
 7. DuMor Inc.
 8. FairWeather Site Furnishings; Division of Leader Manufacturing, Inc.
 9. Huntco Supply, LLC.
 10. Keystone Ridge Designs, Inc.
 11. L. A. Steelcraft.
 12. Maglin Site Furniture Inc.
 13. Thomas Steele; Division of Trilary, Inc.
 14. Urban Accessories, Inc.
 15. Victor Stanley, Inc.
 16. **<Insert manufacturer's name>.**
 17. or approved equal.

B. Bollard Construction:

1. **[Pipe] [Tubing] [Cast Iron]** OD: Not less than **[4-1/2 inches (115 mm)] <Insert dimension>**, **[fluted]**.
 - a. Steel: **[Schedule 40] [Schedule 80]** pipe.
 - b. Aluminum: **[Extruded pipe and tubes] [Castings]**.
 - c. Stainless Steel: **[Tubes] [Pipe]**.
 - d. Cast Iron: **[Tapered] [As indicated]**.
2. **[Round] [Square]** Wood: **[Cedar] <Insert material>**, **[8 inches (203 mm) square] [10 inches (254 mm) in diameter]**.
3. Style: **[Manufacturer's standard] [Chamfered top] [Dome top] [Ornamental cap] [As indicated] <Insert description>**.
4. Overall Height: **[As indicated] <Insert dimension>**.
5. Overall Width: **[As indicated] <Insert dimension>**.
6. Overall Depth: **[As indicated] <Insert dimension>**.
7. Accessories: **[Eye bolts] <Insert accessory>**.
8. Installation Method: **[Surface flange anchored at finished grade to substrate indicated] [Surface flange anchored below finished grade to substrate indicated] [Cast in concrete] [Bolted to cast-in anchor bolts] [As indicated]**.

C. Aluminum Finish: **[Mill finish] [Color coated]**.

1. Color: **[As indicated by manufacturer's designation] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] [As indicated in a site furnishing schedule] <Insert description>**.

D. Steel Finish: **[Galvanized] [Color coated]**.

1. Color: **[As indicated by manufacturer's designation] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] [As indicated in a site furnishing schedule] <Insert description>**.

E. Cast-Iron Finish: **[Manufacturer's standard] [Galvanized] [Color coated]**.

1. Color: **[As indicated by manufacturer's designation] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] [As indicated in a site furnishing schedule] <Insert description>**.

F. Stainless-Steel Finish: **[No. 4] <Insert description>**.

G. Wood Finish: **[Unfinished] [Manufacturer's standard finish]**.

2.7 MATERIALS

- A. Aluminum: Alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated; free of surface blemishes and complying with the following:
1. Rolled or Cold-Finished Bars, Rods, and Wire: [ASTM B 211](#) (ASTM B 211M).
 2. Extruded Bars, Rods, Wire, Profiles, and Tubes: [ASTM B 221](#) (ASTM B 221M).
 3. Structural Pipe and Tube: ASTM B 429/B 429M.
 4. Sheet and Plate: [ASTM B 209](#) (ASTM B 209M).
 5. Castings: ASTM B 26/B 26M.
- B. Steel and Iron: Free of surface blemishes and complying with the following:
1. Plates, Shapes, and Bars: ASTM A 36/A 36M.
 2. Steel Pipe: Standard-weight steel pipe complying with ASTM A 53/A 53M, or electric-resistance-welded pipe complying with ASTM A 135/A 135M.
 3. Tubing: Cold-formed steel tubing complying with ASTM A 500/A 500M.
 4. Mechanical Tubing: Cold-rolled, electric-resistance-welded carbon or alloy steel tubing complying with ASTM A 513, or steel tubing fabricated from steel complying with ASTM A 1011/A 1011M and complying with dimensional tolerances in ASTM A 500/A 500M; zinc coated internally and externally.
 5. Sheet: Commercial steel sheet complying with ASTM A 1011/A 1011M.
 6. Perforated Metal: From steel sheet not less than [[0.075-inch](#) (1.9-mm)] [[0.090-inch](#) (2.3-mm)] [[0.120-inch](#) (3.0-mm)] **<Insert dimension>** nominal thickness; manufacturer's standard perforation pattern.
 7. Expanded Metal: Carbon-steel sheets, deburred after expansion, and complying with ASTM F 1267.
 8. Malleable-Iron Castings: ASTM A 47/A 47M, grade as recommended by fabricator for type of use intended.
 9. Gray-Iron Castings: ASTM A 48/A 48M, Class 200.
- C. Stainless Steel: Free of surface blemishes and complying with the following:
1. Sheet, Strip, Plate, and Flat Bars: ASTM A 666.
 2. Pipe: Schedule 40 steel pipe complying with ASTM A 312/A 312M.
 3. Tubing: ASTM A 554.
- D. Wood: Surfaced smooth on four sides with eased edges; kiln dried, free of knots, solid stock of species indicated.
1. Wood Species:[**Manufacturer's standard.**]
 - a. Douglas Fir: Clear Grade, vertical grain.
 - b. Pine: Southern pine; No. 2 or better[; **preservative treated, kiln dried after treatment**].
 - c. [**Eastern White**] [**Red**] [**Yellow**] Cedar: Select Grade or better.
 - d. Redwood: [**Clear all heart**] [**Construction heart or better**], free-of-heart center.
 - e. Teak (Tectona Grandis): Clear Grade.

- f. **<Insert wood species>: <Insert grade, if applicable, and other requirements>.**
2. Certified Wood: Fabricate site furnishings with components produced from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."
 3. Finish: Manufacturer's standard **[stain] [and] [transparent sealer] [transparent wood preservative treatment and sealer] <Insert treatment or finish>.**
- E. Fiberglass: Multiple laminations of glass-fiber-reinforced polyester resin with UV-light stable, colorfast, nonfading, weather- and stain-resistant, colored polyester gel coat, and with manufacturer's standard finish.
- F. Plastic: Color impregnated, color and UV-light stabilized, and mold resistant.
1. Polyethylene: Fabricated from virgin plastic HDPE resin.
 2. Recycled Content of Polyethylene: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert number>** percent.
- G. Anchors, Fasteners, Fittings, and Hardware: **[Stainless steel] [Brass] [Galvanized steel] [Zinc-plated steel] [Manufacturer's standard, corrosion-resistant-coated or noncorrodible materials]**; commercial quality[, **tamperproof, vandal and theft resistant**] [, **concealed, recessed, and capped or plugged**].
1. Angle Anchors: For inconspicuously bolting legs of site furnishings to **[on] [below]**-grade substrate; **[one per leg] [extent as indicated] <Insert extent>.**
 2. Antitheft Hold-Down Brackets: For securing site furnishings to substrate; **[two per unit] [extent as indicated on Drawings] <Insert extent>.**
- H. Nonshrink, Nonmetallic Grout: Premixed, factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107/C 1107M; recommended in writing by manufacturer, for exterior applications.
- I. Erosion-Resistant Anchoring Cement: Factory-packaged, nonshrink, nonstaining, hydraulic-controlled expansion cement formulation for mixing with potable water at Project site to create pourable anchoring, patching, and grouting compound; resistant to erosion from water exposure without needing protection by a sealer or waterproof coating; recommended in writing by manufacturer, for exterior applications.
- J. Galvanizing: Where indicated for steel and iron components, provide the following protective zinc coating applied to components after fabrication:
1. Hot-Dip Galvanizing: According to ASTM A 123/A 123M, ASTM A 153/A 153M, or ASTM A 924/A 924M.
- 2.8 WOOD-PRESERVATIVE-TREATED MATERIALS
- A. Preservative Treatment: Pressure-treat wood according to AWPA U1 and the following:

1. Use preservative chemicals acceptable to authorities having jurisdiction and containing no arsenic or chromium. Use chemical formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.
2. Kiln-dry lumber and plywood after treatment to a maximum moisture content, respectively, of 19 and 15 percent. Do not use materials that are warped or do not comply with requirements for untreated materials.

2.9 FABRICATION

- A. Metal Components: Form to required shapes and sizes with true, consistent curves, lines, and angles. Separate metals from dissimilar materials to prevent electrolytic action.
- B. Welded Connections: Weld connections continuously. Weld solid members with full-length, full-penetration welds and hollow members with full-circumference welds. At exposed connections, finish surfaces smooth and blended so no roughness or unevenness shows after finishing and welded surface matches contours of adjoining surfaces.
- C. Pipes and Tubes: Form simple and compound curves by bending members in jigs to produce uniform curvature for each repetitive configuration required; maintain cylindrical cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of handrail and railing components.
- D. Preservative-Treated Wood Components: Complete fabrication of treated items before treatment if possible. If cut after treatment, apply field treatment complying with AWPA M4 to cut surfaces.
- E. Exposed Surfaces: Polished, sanded, or otherwise finished; all surfaces smooth, free of burrs, barbs, splinters, and sharpness; all edges and ends rolled, rounded, or capped.
- F. Factory Assembly: Assemble components in the factory to greatest extent possible to minimize field assembly. Clearly mark units for assembly in the field.

2.10 GENERAL FINISH REQUIREMENTS

- A. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.11 ALUMINUM FINISHES

- A. Baked-Enamel, Powder-Coat Finish: Manufacturer's standard, baked, polyester, powder-coat finish complying with finish manufacturer's written instructions for surface preparation, including pretreatment, application, baking, and minimum dry film thickness.

2.12 STEEL AND GALVANIZED-STEEL FINISHES

- A. Baked-Enamel, Powder-Coat Finish: Manufacturer's standard, baked, polyester, powder-coat finish complying with finish manufacturer's written instructions for surface preparation, including pretreatment, application, baking, and minimum dry film thickness.
- B. PVC Finish: Manufacturer's standard, UV-light stabilized, mold-resistant, slip-resistant, matte-textured, dipped or sprayed-on, PVC-plastisol finish, with flame retardant added; complying with coating manufacturer's written instructions for pretreatment, application, and minimum dry film thickness.

2.13 IRON FINISHES

- A. Baked-Enamel, Powder-Coat Finish: Manufacturer's standard, baked, polyester, powder-coat finish complying with finish manufacturer's written instructions for surface preparation, including pretreatment, application, baking, and minimum dry film thickness.

2.14 STAINLESS-STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 1. Run directional finishes with long dimension of each piece.
 - 2. Directional Satin Finish: No 4.
 - 3. Dull Satin Finish: No. 6.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for correct and level finished grade, mounting surfaces, installation tolerances, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

- A. Comply with manufacturer's written installation instructions unless more stringent requirements are indicated. Complete field assembly of site furnishings where required.

- B. Unless otherwise indicated, install site furnishings after landscaping and paving have been completed.
- C. Install site furnishings level, plumb, true, and **[securely anchored] [positioned]** at locations indicated on Drawings.
- D. Post Setting: Set cast-in support posts in concrete footing with smooth top, shaped to shed water. Protect portion of posts above footing from concrete splatter. Verify that posts are set plumb or at correct angle and are aligned and at correct height and spacing. Hold posts in position during placement and finishing operations until concrete is sufficiently cured.
- E. Posts Set into Voids in Concrete: Form or core-drill holes for installing posts in concrete to depth recommended in writing by manufacturer of site furnishings and **3/4 inch (19 mm)** larger than OD of post. Clean holes of loose material, insert posts, and fill annular space between post and concrete with **[nonshrink, nonmetallic grout] [or] [anchoring cement]**, mixed and placed to comply with anchoring material manufacturer's written instructions, with top smoothed and shaped to shed water.
- F. Pipe Sleeves: Use steel pipe sleeves preset and anchored into concrete for installing posts. After posts have been inserted into sleeves, fill annular space between post and sleeve with **[nonshrink, nonmetallic grout] [or] [anchoring cement]**, mixed and placed to comply with anchoring material manufacturer's written instructions, with top smoothed and shaped to shed water.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 129300

SECTION 133419 - METAL BUILDING SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Structural-steel framing.
2. Metal roof panels.
3. Metal wall panels.
4. Foam-insulation-core metal wall panels.
5. Translucent panels.
6. Metal soffit panels.
7. Thermal insulation.
8. Doors and frames.
9. Windows.
10. Accessories.

- B. Related Sections:

1. Section 083323 "Overhead Coiling Doors."
2. Section 083613 "Sectional Doors."

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Terminology Standard: See MBMA's "Metal Building Systems Manual" for definitions of terms for metal building system construction not otherwise defined in this Section or in referenced standards.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of metal building system component. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for the following:

1. Structural-steel-framing system.
2. Metal roof panels.
3. Metal wall panels.
4. Metal liner panels.
5. Translucent panels.
6. Insulation and vapor retarder facings.
7. Flashing and trim.
8. Doors.
9. Windows.
10. Accessories.
11. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

1. Product Test Reports for Credit SS 7.2: For roof panels, documentation indicating that panels comply with Solar Reflectance Index requirement.
2. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.

C. Shop Drawings: For the following metal building system components. Include plans, elevations, sections, details, and attachments to other work.

1. Anchor-Bolt Plans: Submit anchor-bolt plans and templates before foundation work begins. Include location, diameter, and projection of anchor bolts required to attach metal building to foundation. Indicate column reactions at each location.
2. Structural-Framing Drawings: Show complete fabrication of primary and secondary framing; include provisions for openings. Indicate welds and bolted connections, distinguishing between shop and field applications. Include transverse cross-sections.
 - a. Show provisions for attaching **[roof curbs] [service walkways] [platforms] [and] [pipe racks]**.
3. Metal **[Roof] [and] [Wall]** Panel Layout Drawings: Show layouts of metal panels including methods of support. Include details of edge conditions, joints, panel profiles, corners, anchorages, trim, flashings, closures, and special details. Distinguish between factory- and field-assembled work; show locations of exposed fasteners.
 - a. Show roof-mounted items including roof hatches, equipment supports, pipe supports and penetrations, lighting fixtures, and items mounted on roof curbs.
 - b. Show wall-mounted items including doors, windows, louvers, and lighting fixtures.
 - c. Show translucent panels.
4. Accessory Drawings: Include details of the following items, at a scale of not less than **[1-1/2 inches per 12 inches (1:8)] <Insert scale>**:

- a. Flashing and trim.
 - b. Gutters.
 - c. Downspouts.
 - d. Roof ventilators.
 - e. Louvers.
 - f. Service walkways.
- D. Samples for Initial Selection: For units with factory-applied color finish.
- E. Samples for Verification: For each type of exposed finish required, prepared on Samples of sizes indicated below:
1. Metal Panels: Nominal **12 inches** (300 mm) long by actual panel width. Include fasteners, closures, and other exposed panel accessories.
 2. Translucent Panels: Nominal **12 inches** (300 mm) long by actual panel width.
 3. Flashing and Trim: Nominal **12 inches** (300 mm) long. Include fasteners and other exposed accessories.
 4. Vapor-Retarder Facings: Nominal **6-inch-** (150-mm-) square Samples.
 5. Windows: Full-size, nominal **12-inch-** (300-mm-) long frame Samples showing typical profile.
 6. Accessories: Nominal **12-inch-** (300-mm-) long Samples for each type of accessory.
- F. Door Schedule: For doors and frames. Use same designations indicated on Drawings. Include details of reinforcement.
1. Door Hardware Schedule: Include details of fabrication and assembly of door hardware. Organize schedule into door hardware sets indicating complete designations of every item required for each door or opening.
 2. Keying Schedule: Detail Owner's final keying instructions for locks. Include schematic keying diagram and index each key set to unique door designations.
- G. Delegated-Design Submittal: For metal building systems indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- 1.5 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For qualified **[erector] [manufacturer] [professional engineer] [land surveyor] [testing agency]**.
- B. Welding certificates.
- C. Metal Building System Certificates: For each type of metal building system, from manufacturer.
1. Letter of Design Certification: Signed and sealed by a qualified professional engineer. Include the following:
 - a. Name and location of Project.

- b. Order number.
 - c. Name of manufacturer.
 - d. Name of Contractor.
 - e. Building dimensions including width, length, height, and roof slope.
 - f. Indicate compliance with AISC standards for hot-rolled steel and AISI standards for cold-rolled steel, including edition dates of each standard.
 - g. Governing building code and year of edition.
 - h. Design Loads: Include dead load, roof live load, collateral loads, roof snow load, deflection, wind loads/speeds and exposure, seismic design category or effective peak velocity-related acceleration/peak acceleration, and auxiliary loads (cranes).
 - i. Load Combinations: Indicate that loads were applied acting simultaneously with concentrated loads, according to governing building code.
 - j. Building-Use Category: Indicate category of building use and its effect on load importance factors.
 - k. AISC Certification for Category MB: Include statement that metal building system and components were designed and produced in an AISC-Certified Facility by an AISC-Certified Manufacturer.
- D. Erector Certificates: For each product, from manufacturer.
- E. Manufacturer Certificates: For each product, from manufacturer.
- F. Material Test Reports: For each of the following products:
- 1. Structural steel including chemical and physical properties.
 - 2. Bolts, nuts, and washers including mechanical properties and chemical analysis.
 - 3. Tension-control, high-strength, bolt-nut-washer assemblies.
 - 4. Shop primers.
 - 5. Nonshrink grout.
- G. Product Test Reports: Based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency, for insulation and vapor-retarder facings. Include reports for thermal resistance, fire-test-response characteristics, water-vapor transmission, and water absorption.
- H. Source quality-control reports.
- I. Field quality-control reports.
- J. Surveys: Show final elevations and locations of major members. Indicate discrepancies between actual installation and the Contract Documents. Have surveyor who performed surveys certify their accuracy.
- K. Warranties: Sample of special warranties.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For metal panel finishes[**and door hardware**] to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A qualified manufacturer[**and member of MBMA**].
 - 1. AISC Certification for Category MB: An AISC-Certified Manufacturer that designs and produces metal building systems and components in an AISC-Certified Facility.
 - 2. Engineering Responsibility: Preparation of Shop Drawings and comprehensive engineering analysis by a qualified professional engineer.
- B. Land Surveyor Qualifications: A professional land surveyor who practices in jurisdiction where Project is located and who is experienced in providing surveying services of the kind indicated.
- C. Erector Qualifications: An experienced erector who specializes in erecting and installing work similar in material, design, and extent to that indicated for this Project and who is acceptable to manufacturer.
- D. Testing Agency Qualifications: Qualified according to ASTM E 329 for testing indicated.
- E. Source Limitations: Obtain metal building system components, including primary and secondary framing and metal panel assemblies, from single source from single manufacturer.
- F. Welding Qualifications: Qualify procedures and personnel according to the following:
 - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 - 2. AWS D1.3, "Structural Welding Code - Sheet Steel."
- G. Structural Steel: Comply with AISC 360, "Specification for Structural Steel Buildings," for design requirements and allowable stresses.
- H. Cold-Formed Steel: Comply with AISI's "North American Specification for the Design of Cold-Formed Steel Structural Members" for design requirements and allowable stresses.
- I. Fire-Resistance Ratings: Where indicated, provide metal panel assemblies identical to those of assemblies tested for fire resistance per ASTM E 119 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.
 2. Combustion Characteristics: ASTM E 136.
- J. Fire-Rated Door Assemblies: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure according to NFPA 252 or UL 10C.
1. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.
- K. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
1. Build mockup of typical wall area as shown on Drawings.
 2. Build mockups for typical wall metal panel including accessories.
 - a. Size: **[48 inches (1200 mm) long by 48 inches (1200 mm)] <Insert dimensions>**.
 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
- L. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]<Insert location>**.
1. Review methods and procedures related to metal building systems including, but not limited to, the following:
 - a. Condition of foundations and other preparatory work performed by other trades.
 - b. Structural load limitations.
 - c. Construction schedule. Verify availability of materials and erector's personnel, equipment, and facilities needed to make progress and avoid delays.
 - d. Required tests, inspections, and certifications.
 - e. Unfavorable weather and forecasted weather conditions.
 2. Review methods and procedures related to metal roof panel assemblies including, but not limited to, the following:
 - a. Compliance with requirements for purlin and rafter conditions, including flatness and attachment to structural members.
 - b. Structural limitations of purlins and rafters during and after roofing.
 - c. Flashings, special roof details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that will affect metal roof panels.

- d. Temporary protection requirements for metal roof panel assembly during and after installation.
 - e. Roof observation and repair after metal roof panel installation.
3. Review methods and procedures related to metal wall panel assemblies including, but not limited to, the following:
- a. Compliance with requirements for support conditions, including alignment between and attachment to structural members.
 - b. Structural limitations of girts and columns during and after wall panel installation.
 - c. Flashings, special siding details, wall penetrations, openings, and condition of other construction that will affect metal wall panels.
 - d. Temporary protection requirements for metal wall panel assembly during and after installation.
 - e. Wall observation and repair after metal wall panel installation.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver components, sheets, panels, and other manufactured items so as not to be damaged or deformed. Package metal panels for protection during transportation and handling.
- B. Unload, store, and erect metal panels in a manner to prevent bending, warping, twisting, and surface damage.
- C. Stack metal panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal panels to ensure dryness, with positive slope for drainage of water. Do not store metal panels in contact with other materials that might cause staining, denting, or other surface damage.
- D. Protect foam-plastic insulation as follows:
 1. Do not expose to sunlight, except to extent necessary for period of installation and concealment.
 2. Protect against ignition at all times. Do not deliver foam-plastic insulation materials to Project site before installation time.
 3. Complete installation and concealment of foam-plastic materials as rapidly as possible in each area of construction.

1.9 PROJECT CONDITIONS

- A. Weather Limitations: Proceed with installation only when weather conditions permit metal panels to be installed according to manufacturers' written instructions and warranty requirements.
- B. Field Measurements:

1. Established Dimensions for Foundations: Comply with established dimensions on approved anchor-bolt plans, establishing foundation dimensions, and proceeding with fabricating structural framing without field measurements. Coordinate anchor-bolt installation to ensure that actual anchorage dimensions correspond to established dimensions.
2. Established Dimensions for Metal Panels: Where field measurements cannot be made without delaying the Work, either establish framing and opening dimensions and proceed with fabricating metal panels without field measurements, or allow for field trimming metal panels. Coordinate construction to ensure that actual building dimensions, locations of structural members, and openings correspond to established dimensions.

1.10 COORDINATION

- A. Coordinate sizes and locations of concrete foundations and casting of anchor-bolt inserts into foundation walls and footings. Concrete, reinforcement, and formwork requirements are specified in Section 033000 "Cast-in-Place Concrete."
- B. Coordinate installation of **[roof curbs] [equipment supports] [and] [roof penetrations]**, which are specified in Section 077200 "Roof Accessories."
- C. Coordinate metal panel assemblies with rain drainage work, flashing, trim, and construction of supports and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.11 WARRANTY

- A. Special Warranty on Metal Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal panels that show evidence of deterioration of factory-applied finishes within specified warranty period.
 1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 2. Finish Warranty Period: Minimum **[20] [10] <Insert number>** years from date of Substantial Completion.
- B. Special Weathertightness Warranty for Standing-Seam Metal Roof Panels: Manufacturer's standard form in which manufacturer agrees to repair or replace standing-seam metal roof panel assemblies that leak or otherwise fail to remain weathertight within specified warranty period.
 1. Warranty Period: Minimum **[20] <Insert number>** years from date of Substantial Completion.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. [A&S Building Systems, Inc.](#); Division of NCI Building Systems, L.P.
2. [Alliance Steel, Inc.](#)
3. [American Buildings Company; Division of Magnatrax Corp.](#)
4. [American Steel Building Co., Inc.](#)
5. [BC Steel Buildings, Inc.](#)
6. [Behlen Mfg. Co.](#)
7. [Bigbee Steel Buildings, Inc.](#)
8. [Butler Manufacturing Company; a BlueScope Steel company.](#)
9. [CBC Steel Buildings; Division of Magnatrax Corp.](#)
10. [Ceco Building Systems; Division of NCI Building Systems, L.P.](#)
11. [Chief Buildings; Division of Chief Industries, Inc.](#)
12. [Elite Structures, Inc.](#)
13. [Garco Building Systems; Division of NCI Building Systems, L.P.](#)
14. [Gulf States Manufacturers, Inc.; Division of Magnatrax Corp.](#)
15. [Inland Buildings; Subsidiary of Behlen Mfg. Co.](#)
16. [Kirby Building Systems; Division of Magnatrax Corp.](#)
17. [Mesco Building Solutions; Division of NCI Building Systems, L.P.](#)
18. [Metallic Building Company; Division of NCI Building Systems, L.P.](#)
19. [Metco Metal Supply.](#)
20. [Mid-West Steel Building Company; Division of NCI Building Systems, L.P.](#)
21. [Nucor Building Systems.](#)
22. [Oakland Metal Buildings, Inc.](#)
23. [Olympia Steel Building Systems.](#)
24. [Package Industries, Inc.](#)
25. [Pinnacle Structures, Inc.](#)
26. [Robertson Building Systems; an NCI company.](#)
27. [Ruffin Building Systems, Inc.](#)
28. [Schulte Building Systems, LLP.](#)
29. [Spirco Manufacturing.](#)
30. [Star Building Systems; an NCI company.](#)
31. [Tyler Building Systems, L.P.](#)
32. [USA, Inc.](#)
33. [VP Buildings; a United Dominion company.](#)
34. [Vulcan Steel Structures, Inc.](#)
35. [Whirlwind Building Systems.](#)

36. <Insert manufacturer's name>.
37. or approved equal.

2.2 METAL BUILDING SYSTEMS

- A. Description: Provide a complete, integrated set of [**metal building system manufacturer's standard**] mutually dependent components and assemblies that form a metal building system capable of withstanding structural and other loads, thermally induced movement, and exposure to weather without failure or infiltration of water into building interior.
1. Provide metal building system of size and with bay spacings, roof slopes, and spans indicated.
- B. Primary-Frame Type:
1. Rigid Clear Span: Solid-member, structural-framing system without interior columns.
 2. Rigid Modular: Solid-member, structural-framing system with interior columns.
 3. Truss-Frame Clear Span: Truss-member, structural-framing system without interior columns.
 4. Truss-Frame Modular: Truss-member, structural-framing system with interior columns.
 5. Lean to: Solid- or truss-member, structural-framing system without interior columns, designed to be partially supported by another structure.
- C. End-Wall Framing: Manufacturer's standard, for buildings not required to be expandable, consisting of [**primary frame, capable of supporting one-half of a bay design load, and end-wall columns**] [**load-bearing end-wall and corner columns and rafters**].
- D. End-Wall Framing: Engineer end walls to be expandable. Provide primary frame, capable of supporting full-bay design loads, and end-wall columns.
- E. Secondary-Frame Type: Manufacturer's standard purlins and joists and [**flush-framed**] [**partially inset-framed**] [**exterior-framed (bypass)**] girts.
- F. Eave Height: [16 feet (4.9 m)] [20 feet (6.1 m)] [24 feet (7.3 m)] [28 feet (8.5 m)] [**Manufacturer's standard height, as indicated by nominal height on Drawings**] <Insert dimension>.
- G. Bay Spacing: [20 feet (6.1 m)] [25 feet (7.6 m)] [30 feet (9.1 m)] [**As determined by manufacturer**] <Insert dimension>.
- H. Roof Slope: [1/4 inch per 12 inches (1:48)] [1/2 inch per 12 inches (1:24)] [1 inch per 12 inches (1:12)] [4 inches per 12 inches (1:3)] [**Manufacturer's standard for frame type required**] <Insert slope>.
- I. Roof System: Manufacturer's standard [**vertical-rib, standing-seam**] [**trapezoidal-rib, standing-seam**] [**lap-seam**] metal roof panels [**with field-installed insulation**].

- J. Exterior Wall System: Manufacturer's standard [**tapered-rib, exposed-fastener**] [**reverse-rib, exposed-fastener**] [**concealed-fastener**] metal wall panels[**with field-installed insulation**].
- K. Exterior Wall System: Manufacturer's standard foam-insulation-core metal wall panels.

2.3 METAL BUILDING SYSTEM PERFORMANCE

- A. Delegated Design: Design metal building system, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. Structural Performance: Metal building systems shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated according to procedures in MBMA's "Metal Building Systems Manual."
 - 1. Design Loads: As indicated on Drawings.
 - 2. Design Loads: As required by [**MBMA's "Metal Building Systems Manual."**] [**ASCE/SEI 7.**] <Insert applicable code requirement.>
 - 3. Deflection Limits: Design metal building system assemblies to withstand design loads with deflections no greater than the following:
 - a. Purlins and Rafters: Vertical deflection of [**1/180**] [**1/240**] <Insert limit> of the span.
 - b. Girts: Horizontal deflection of [**1/180**] [**1/240**] <Insert limit> of the span.
 - c. Metal Roof Panels: Vertical deflection of [**1/180**] [**1/240**] <Insert limit> of the span.
 - d. Metal Wall Panels: Horizontal deflection of [**1/180**] [**1/240**] <Insert limit> of the span.
 - e. Design secondary-framing system to accommodate deflection of primary framing and construction tolerances, and to maintain clearances at openings.
 - 4. Drift Limits: Engineer building structure to withstand design loads with drift limits no greater than the following:
 - a. Lateral Drift: Maximum of [**1/200**] [**1/400**] <Insert limit> of the building height.
 - 5. Metal panel assemblies shall withstand the effects of gravity loads and loads and stresses within limits and under conditions indicated according to ASTM E 1592.
- C. Seismic Performance: Metal building systems shall withstand the effects of earthquake motions determined according to [**ASCE/SEI 7**] <Insert requirement>.
- D. Thermal Movements: Allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base engineering calculations on

surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change (Range): [120 deg F (67 deg C), **ambient**; 180 deg F (100 deg C)] **<Insert temperature range>**, material surfaces.
- E. Air Infiltration for Metal Roof Panels: Air leakage through assembly of not more than [0.06 cfm/sq. ft. (0.3 L/s per sq. m)] **<Insert value>** of roof area when tested according to ASTM E 1680 at negative test-pressure difference of [1.57 lbf/sq. ft. (75 Pa)] **<Insert value>**.
- F. Air Infiltration for Metal Wall Panels: Air leakage through assembly of not more than [0.06 cfm/sq. ft. (0.3 L/s per sq. m)] **<Insert value>** of wall area when tested according to ASTM E 283 at static-air-pressure difference of [1.57 lbf/sq. ft. (75 Pa)] **<Insert value>**.
- G. Water Penetration for Metal Roof Panels: No water penetration when tested according to ASTM E 1646 at test-pressure difference of [2.86 lbf/sq. ft. (137 Pa)] **<Insert value>**.
- H. Water Penetration for Metal Wall Panels: No water penetration when tested according to ASTM E 331 at a wind-load design pressure of not less than [2.86 lbf/sq. ft. (137 Pa)] **<Insert value>**.
- I. Wind-Uplift Resistance: Provide metal roof panel assemblies that comply with UL 580 for [Class 30] [Class 60] [Class 90].
- J. Thermal Performance: Provide insulated metal panel assemblies with the following maximum U-factors and minimum R-values for opaque elements when tested according to ASTM C 1363 or ASTM C 518:
1. Metal Roof Panel Assemblies:
 - a. U-Factor: **<Insert value>**.
 - b. R-Value: **<Insert value>**.
 2. Metal Wall Panel Assemblies:
 - a. U-Factor: **<Insert value>**.
 - b. R-Value: **<Insert value>**.
- K. Solar Reflectance Index: Not less than [78] [29] when calculated according to ASTM E 1980 based on testing identical products by a qualified testing agency.
- L. Energy Performance: Provide roof panels that are listed on the DOE's ENERGY STAR Roof Products Qualified Product List for [low] [steep]-slope roof products.
- M. Energy Performance: Provide roof panels with initial solar reflectance not less than [0.70] **<Insert value>** and emissivity not less than [0.75] **<Insert value>** when tested according to CRRC.

2.4 STRUCTURAL-STEEL FRAMING

- A. Primary Framing: Manufacturer's standard primary-framing system, designed to withstand required loads and specified requirements. Primary framing includes transverse and lean-to frames; rafter, rake, and canopy beams; sidewall, intermediate, end-wall, and corner columns; and wind bracing.
1. General: Provide frames with attachment plates, bearing plates, and splice members. Factory drill for field-bolted assembly. Provide frame span and spacing indicated.
 - a. Slight variations in span and spacing may be acceptable if necessary to comply with manufacturer's standard, as approved by DEN Project Manager.
 2. Rigid Clear-Span Frames: I-shaped frame sections fabricated from shop-welded, built-up steel plates or structural-steel shapes. Interior columns are not permitted.
 3. Rigid Modular Frames: I-shaped frame sections fabricated from shop-welded, built-up steel plates or structural-steel shapes. Provide interior columns fabricated from round steel pipes or tubes, or shop-welded, built-up steel plates.
 4. Truss-Frame, Clear-Span Frames: Rafter frames fabricated from joist girders, and I-shaped column sections fabricated from shop-welded, built-up steel plates or structural-steel shapes.
 5. Truss-Frame Modular Frames: Rafter frames fabricated from joist girders, and I-shaped column sections fabricated from shop-welded, built-up steel plates or structural-steel shapes. Provide interior columns fabricated from round steel pipes or tubes, or shop-welded, built-up steel plates.
 6. Long-Bay Frames: I-shaped frame sections fabricated from shop-welded, built-up steel plates or structural-steel shapes. Provide interior columns fabricated from round steel pipes or tubes, or shop-welded, built-up steel plates.
 7. Frame Configuration: [**Single gable**] [**One-directional sloped**] [**Lean to, with high side connected to and supported by another structure**] [**Multiple gable**] [**Load-bearing-wall type**] [**Multistory**].
 8. Exterior Column Type: [**Uniform depth**] [**Tapered**].
 9. Rafter Type: [**Uniform depth**] [**Tapered**].
- B. End-Wall Framing: Manufacturer's standard primary end-wall framing fabricated for field-bolted assembly to comply with the following:
1. End-Wall and Corner Columns: I-shaped sections fabricated from structural-steel shapes; shop-welded, built-up steel plates; or C-shaped, cold-formed, structural-steel sheet.
 2. End-Wall Rafters: C-shaped, cold-formed, structural-steel sheet; or I-shaped sections fabricated from shop-welded, built-up steel plates or structural-steel shapes.
- C. Secondary Framing: Manufacturer's standard secondary framing, including purlins, girts, eave struts, flange bracing, base members, gable angles, clips, headers, jambs, and other miscellaneous structural members. Unless otherwise indicated, fabricate

framing from either cold-formed, structural-steel sheet or roll-formed, metallic-coated steel sheet, prepainted with coil coating, to comply with the following:

1. Purlins: C- or Z-shaped sections; fabricated from built-up steel plates, steel sheet, or structural-steel shapes; minimum **2-1/2-inch- (64-mm-)** wide flanges.
 - a. Depth: **[As indicated] [As needed to comply with system performance requirements] <Insert dimension>**.
 2. Purlins: Steel joists of depths indicated.
 3. Girts: C- or Z-shaped sections; fabricated from built-up steel plates, steel sheet, or structural-steel shapes. Form ends of Z-sections with stiffening lips angled 40 to 50 degrees from flange, with minimum **2-1/2-inch- (64-mm-)** wide flanges.
 - a. Depth: **[As indicated] [As required to comply with system performance requirements] <Insert dimension>**.
 4. Eave Struts: Unequal-flange, C-shaped sections; fabricated from built-up steel plates, steel sheet, or structural-steel shapes; to provide adequate backup for metal panels.
 5. Flange Bracing: Minimum **2-by-2-by-1/8-inch (51-by-51-by-3-mm)** structural-steel angles or **1-inch (25-mm)** diameter, cold-formed structural tubing to stiffen primary-frame flanges.
 6. Sag Bracing: Minimum **1-by-1-by-1/8-inch (25-by-25-by-3-mm)** structural-steel angles.
 7. Base or Sill Angles: Minimum **3-by-2-inch (76-by-51-mm)** zinc-coated (galvanized) steel sheet.
 8. Purlin and Girt Clips: Manufacturer's standard clips fabricated from steel sheet. Provide galvanized clips where clips are connected to galvanized framing members.
 9. Secondary End-Wall Framing: Manufacturer's standard sections fabricated from **[zinc-coated (galvanized) steel sheet] [structural-steel sheet]**.
 10. Framing for Openings: Channel shapes; fabricated from cold-formed, structural-steel sheet or structural-steel shapes. Frame head and jamb of door openings and head, jamb, and sill of other openings.
 11. Miscellaneous Structural Members: Manufacturer's standard sections fabricated from cold-formed, structural-steel sheet; built-up steel plates; or zinc-coated (galvanized) steel sheet; designed to withstand required loads.
- D. Canopy Framing: Manufacturer's standard structural-framing system, designed to withstand required loads; fabricated from shop-welded, built-up steel plates or structural-steel shapes. Provide frames with attachment plates and splice members, factory drilled for field-bolted assembly.
1. Type: **[Straight-beam, eave type] [Purlin-extension type] [Tapered-beam, below-eave type] [As indicated]**.
- E. Bracing: Provide adjustable wind bracing as follows:

1. Rods: ASTM A 36/A 36M; ASTM A 572/A 572M, Grade 50 (345); or ASTM A 529/A 529M, Grade 50 (345); minimum 1/2-inch- (13-mm-) diameter steel; threaded full length or threaded a minimum of 6 inches (152 mm) at each end.
 2. Cable: ASTM A 475, 1/4-inch- (6-mm-) diameter, extra-high-strength grade, Class B, zinc-coated, seven-strand steel; with threaded end anchors.
 3. Angles: Fabricated from structural-steel shapes to match primary framing, of size required to withstand design loads.
 4. Rigid Portal Frames: Fabricated from shop-welded, built-up steel plates or structural-steel shapes to match primary framing; of size required to withstand design loads.
 5. Fixed-Base Columns: Fabricated from shop-welded, built-up steel plates or structural-steel shapes to match primary framing; of size required to withstand design loads.
 6. Diaphragm Action of Metal Panels: Design metal building to resist wind forces through diaphragm action of metal panels.
 7. Bracing: Provide wind bracing using any method specified above, at manufacturer's option.
- F. Bolts: Provide plain-finish bolts for structural-framing components that are primed or finish painted. Provide **[zinc-plated]** [or] **[hot-dip galvanized]** bolts for structural-framing components that are galvanized.
- G. Materials:
1. W-Shapes: ASTM A 992/A 992M; ASTM A 572/A 572M, Grade 50 or 55 (345 or 380); or ASTM A 529/A 529M, Grade 50 or 55 (345 or 380).
 2. Channels, Angles, M-Shapes, and S-Shapes: ASTM A 36/A 36M; ASTM A 572/A 572M, Grade 50 or 55 (345 or 380); or ASTM A 529/A 529M, Grade 50 or 55 (345 or 380).
 3. Plate and Bar: ASTM A 36/A 36M; ASTM A 572/A 572M, Grade 50 or 55 (345 or 380); or ASTM A 529/A 529M, Grade 50 or 55 (345 or 380).
 4. Steel Pipe: ASTM A 53/A 53M, Type E or S, Grade B.
 5. Cold-Formed Hollow Structural Sections: ASTM A 500, Grade B or C, structural tubing.
 6. Structural-Steel Sheet: Hot-rolled, ASTM A 1011/A 1011M, Structural Steel (SS), Grades 30 through 55 (205 through 380), or High-Strength Low-Alloy Steel (HSLAS), Grades 45 through 70 (310 through 480); or cold-rolled, ASTM A 1008/A 1008M, Structural Steel (SS), Grades 25 through 80 (170 through 550), or High-Strength Low-Alloy Steel (HSLAS), Grades 45 through 70 (310 through 480).
 7. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), Grades 33 through 80 (230 through 550,) or High-Strength Low-Alloy Steel (HSLAS), Grades 50 through 80 (340 through 550); with G60 (Z180) coating designation; mill phosphatized.
 8. Metallic-Coated Steel Sheet Prepainted with Coil Coating: Steel sheet, metallic coated by the hot-dip process and prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
 - a. Zinc-Coated (Galvanized) Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), Grades 33 through 80 (230 through 550,) or High-Strength

- Low-Alloy Steel (HSLAS), Grades 50 through 80 (340 through 550); with G90 (Z275) coating designation.
- b. Aluminum-Zinc Alloy-Coated Steel Sheet: ASTM A 792/A 792M, Structural Steel (SS), Grade 50 or 80 (340 or 550); with Class AZ50 (AZM150) coating.
9. Joist Girders: Manufactured according to "Standard Specifications for Joist Girders," in SJI's "Standard Specifications and Load Tables for Steel Joists and Joist Girders"; with steel-angle, top- and bottom-chord members, and end- and top-chord arrangements as indicated and required for primary framing.
10. Steel Joists: Manufactured according to "Standard Specifications for Open Web Steel Joists, K-Series," in SJI's "Standard Specifications and Load Tables for Steel Joists and Joist Girders"; with steel-angle, top- and bottom-chord members, and end- and top-chord arrangements as indicated and required for secondary framing.
11. Non-High-Strength Bolts, Nuts, and Washers: ASTM A 307, Grade A (ASTM F 568M, Property Class 4.6), carbon-steel, hex-head bolts; ASTM A 563 (ASTM A 563M) carbon-steel hex nuts; and ASTM F 844 plain (flat) steel washers.
- a. Finish: **[Plain] [Hot-dip zinc coating, ASTM A 153/A 153M, Class C] [Mechanically deposited zinc coating, ASTM B 695, Class 50].**
12. High-Strength Bolts, Nuts, and Washers: ASTM A 325 (ASTM A 325M), Type 1, heavy-hex steel structural bolts; ASTM A 563 (ASTM A 563M) heavy-hex carbon-steel nuts; and ASTM F 436 (ASTM F 436M) hardened carbon-steel washers.
- a. Finish: **[Plain] [Hot-dip zinc coating, ASTM A 153/A 153M, Class C] [Mechanically deposited zinc coating, ASTM B 695, Class 50].**
13. High-Strength Bolts, Nuts, and Washers: ASTM A 490 (ASTM A 490M), Type 1, heavy-hex steel structural bolts **[or tension-control, bolt-nut-washer assemblies with spline ends];** ASTM A 563 (ASTM A 563M) heavy-hex carbon-steel nuts; and ASTM F 436 (ASTM F 436M) hardened carbon-steel washers, plain.
14. Tension-Control, High-Strength Bolt-Nut-Washer Assemblies: ASTM F 1852, Type 1, heavy-hex-head steel structural bolts with spline ends.
- a. Finish: **[Plain] [Mechanically deposited zinc coating, ASTM B 695, Class 50] [Mechanically deposited zinc coating, ASTM B 695, Class 50, baked-epoxy coated].**
15. Unheaded Anchor Rods: **[ASTM F 1554, Grade 36] [ASTM A 572/A 572M, Grade 50 (345)] [ASTM A 36/A 36M] [ASTM A 307, Grade A (ASTM F 568M, Property Class 4.6)].**
- a. Configuration: Straight.
- b. Nuts: ASTM A 563 (ASTM A 563M) **[heavy-]**hex carbon steel.
- c. Plate Washers: ASTM A 36/A 36M carbon steel.
- d. Washers: ASTM F 436 (ASTM F 436M) hardened carbon steel.

- e. Finish: **[Plain] [Hot-dip zinc coating, ASTM A 153/A 153M, Class C]**
[Mechanically deposited zinc coating, ASTM B 695, Class 50].
16. Headed Anchor Rods: **[ASTM F 1554, Grade 36]** **[ASTM A 307, Grade A (ASTM F 568M, Property Class 4.6)].**
- a. Configuration: Straight.
 - b. Nuts: **ASTM A 563 (ASTM A 563M) [heavy-]**hex carbon steel.
 - c. Plate Washers: ASTM A 36/A 36M carbon steel.
 - d. Washers: **ASTM F 436 (ASTM F 436M)** hardened carbon steel.
 - e. Finish: **[Plain] [Hot-dip zinc coating, ASTM A 153/A 153M, Class C]**
[Mechanically deposited zinc coating, ASTM B 695, Class 50].
17. Threaded Rods: **[ASTM A 193/A 193M] [ASTM A 572/A 572M, Grade 50 (345)]**
[ASTM A 36/A 36M] [ASTM A 307, Grade A (ASTM F 568M, Property Class 4.6)].
- a. Nuts: **ASTM A 563 (ASTM A 563M) [heavy-]**hex carbon steel.
 - b. Washers: **[ASTM F 436 (ASTM F 436M) hardened] [ASTM A 36/A 36M]**
carbon steel.
 - c. Finish: **[Plain] [Hot-dip zinc coating, ASTM A 153/A 153M, Class C]**
[Mechanically deposited zinc coating, ASTM B 695, Class 50].
18. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25] <Insert number>** percent.
- H. Finish: Factory primed. Apply specified primer immediately after cleaning and pretreating.
- 1. Apply primer to primary and secondary framing to a minimum dry film thickness of **1 mil (0.025 mm)**.
 - a. Prime secondary framing formed from uncoated steel sheet to a minimum dry film thickness of **0.5 mil (0.013 mm)** on each side.
 - 2. Prime galvanized members with specified primer after phosphoric acid pretreatment.
 - 3. Primer: SSPC-Paint 15, Type I, red oxide.
- 2.5 METAL ROOF PANELS
- A. Vertical-Rib, Standing-Seam Metal Roof Panels **<Insert drawing designation>**: Formed with vertical ribs at panel edges and **[intermediate stiffening ribs symmetrically spaced] [flat pan]** between ribs; designed for sequential installation by mechanically attaching panels to supports using concealed clips located under one side of panels and engaging opposite edge of adjacent panels.

1. Material: [**Zinc-coated (galvanized)**] [**Aluminum-zinc alloy-coated**] steel sheet, [**0.022-inch** (0.56-mm)] [**0.028-inch** (0.71-mm)] [**0.034-inch** (0.86-mm)] nominal thickness.
 - a. Exterior Finish: [**Fluoropolymer**] [**Siliconized polyester**].
 - b. Color: [**As indicated by manufacturer's designations**] [**As selected by DEN Proejct Manager from manufacturer's full range**] <Insert color>.
 2. Clips: Manufacturer's standard, [**fixed type**] [**floating type to accommodate thermal movement**]; fabricated from [**zinc-coated (galvanized) steel**] [**aluminum-zinc alloy-coated steel**] [**stainless-steel**] [**zinc-coated (galvanized) steel, aluminum-zinc alloy-coated steel, or stainless-steel**] sheet.
 3. Joint Type: Panels snapped together.
 4. Joint Type: Mechanically seamed, [**single folded**] [**double folded**] [**folded according to manufacturer's standard**].
 5. Panel Coverage: [**16 inches** (406 mm)] <Insert dimension>.
 6. Panel Height: [**2 inches** (51 mm)] <Insert dimension>.
 7. Uplift Rating: [**UL 30**] [**UL 60**] [**UL 90**].
- B. Trapezoidal-Rib, Standing-Seam Metal Roof Panels <Insert drawing designation>:
Formed with raised trapezoidal ribs at panel edges and [**intermediate stiffening ribs symmetrically spaced**] [**flat pan**] between ribs; designed for sequential installation by mechanically attaching panels to supports using concealed clips located under one side of panels and engaging opposite edge of adjacent panels.
1. Material: [**Zinc-coated (galvanized)**] [**Aluminum-zinc alloy-coated**] steel sheet, [**0.022-inch** (0.56-mm)] [**0.028-inch** (0.71-mm)] [**0.034-inch** (0.86-mm)] nominal thickness.
 - a. Exterior Finish: [**Fluoropolymer**] [**Siliconized polyester**].
 - b. Color: [**As indicated by manufacturer's designations**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
 2. Clips: Manufacturer's standard, [**fixed type**] [**floating type to accommodate thermal movement**]; fabricated from [**zinc-coated (galvanized) steel**] [**aluminum-zinc alloy-coated steel**] [**stainless-steel**] [**zinc-coated (galvanized) steel, aluminum-zinc alloy-coated steel, or stainless-steel**] sheet.
 3. Joint Type: Panels snapped together.
 4. Joint Type: Mechanically seamed, [**single folded**] [**double folded**] [**folded according to manufacturer's standard**].
 5. Panel Coverage: [**24 inches** (610 mm)] <Insert dimension>.
 6. Panel Height: [**3 inches** (76 mm)] <Insert dimension>.
 7. Uplift Rating: [**UL 30**] [**UL 60**] [**UL 90**].
- C. Tapered-Rib-Profile, Lap-Seam Metal Roof Panels <Insert drawing designation>:
Formed with raised, trapezoidal major ribs and [**intermediate stiffening ribs symmetrically spaced**] [**flat pan**] between major ribs; designed to be installed by

lapping side edges of adjacent panels and mechanically attaching panels to supports using exposed fasteners in side laps.

1. Material: [**Zinc-coated (galvanized)**] [**Aluminum-zinc alloy-coated**] steel sheet, [0.022-inch (0.56-mm)] [0.028-inch (0.71-mm)] [0.034-inch (0.86-mm)] nominal thickness.
 - a. Exterior Finish: [**Fluoropolymer**] [**Siliconized polyester**].
 - b. Color: [**As indicated by manufacturer's designations**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
 2. Major-Rib Spacing: [6 inches (152 mm)] [12 inches (305 mm)] <Insert dimension> o.c.
 3. Panel Coverage: [36 inches (914 mm)] <Insert dimension>.
 4. Panel Height: [0.75 inch (19 mm)] [1.125 inches (29 mm)] [1.188 inches (30 mm)] [1.25 inches (32 mm)] [1.5 inches (38 mm)] <Insert dimension>.
- D. Tapered-Rib-Profile, Metal Liner Panels <Insert drawing designation>: Formed with raised, trapezoidal major ribs and [**intermediate stiffening ribs symmetrically spaced**] [**flat pan**] between major ribs; designed to be installed by lapping side edges of adjacent panels and mechanically attaching panels to supports using exposed fasteners in side laps.
1. Material: [**Zinc-coated (galvanized)**] [**Aluminum-zinc alloy-coated**] steel sheet, [0.022-inch (0.56-mm)] [0.028-inch (0.71-mm)] [0.034-inch (0.86-mm)] nominal thickness.
 - a. Exterior Finish: [**Fluoropolymer**] [**Siliconized polyester**].
 - b. Color: [**As indicated by manufacturer's designations**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
 2. Major-Rib Spacing: [6 inches (152 mm)] [12 inches (305 mm)] <Insert dimension> o.c.
 3. Panel Coverage: [36 inches (914 mm)] <Insert dimension>.
 4. Panel Height: [1.25 inches (32 mm)] [1.5 inches (38 mm)] <Insert dimension>.
- E. Materials:
1. Metallic-Coated Steel Sheet: Restricted-flatness steel sheet, metallic coated by the hot-dip process and prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
 - a. Zinc-Coated (Galvanized) Steel Sheet: ASTM A 653/A 653M, **G90** (Z275) coating designation; structural quality.
 - b. Aluminum-Zinc Alloy-Coated Steel Sheet: ASTM A 792/A 792M, **Class AZ50** coating designation, **Grade 40** (Class AZM150 coating designation, **Grade 275**); structural quality.
 - c. Surface: [**Smooth, flat**] [**Embossed**] finish.
- F. Finishes:

1. Exposed Coil-Coated Finish:
 - a. Two-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - b. Three-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - c. Siliconized Polyester: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than **0.2 mil** (0.005 mm) for primer and **0.8 mil** (0.02 mm) for topcoat.
2. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with a minimum total dry film thickness of **0.5 mil** (0.013 mm).

2.6 METAL WALL PANELS

- A. Tapered-Rib-Profile, Exposed-Fastener Metal Wall Panels <**Insert drawing designation**>: Formed with raised, trapezoidal major ribs and [**intermediate stiffening ribs symmetrically spaced**] [**flat pan**] between major ribs; designed to be installed by lapping side edges of adjacent panels and mechanically attaching panels to supports using exposed fasteners in side laps.
 1. Material: [**Zinc-coated (galvanized)**] [**Aluminum-zinc alloy-coated**] steel sheet, [**0.022-inch** (0.56-mm)] [**0.028-inch** (0.71-mm)] [**0.034-inch** (0.86-mm)] nominal thickness.
 - a. Exterior Finish: [**Fluoropolymer**] [**Siliconized polyester**].
 - b. Color: [**As indicated by manufacturer's designations**] [**As selected by DEN Project Manager from manufacturer's full range**] <**Insert color**>.
 2. Major-Rib Spacing: [**6 inches** (152 mm)] [**12 inches** (305 mm)] <**Insert dimension**> o.c.
 3. Panel Coverage: [**36 inches** (914 mm)] <**Insert dimension**>.
 4. Panel Height: [**0.75 inch** (19 mm)] [**1.125 inches** (29 mm)] [**1.188 inches** (30 mm)] [**1.25 inches** (32 mm)] [**1.5 inches** (38 mm)] <**Insert dimension**>.
- B. Reverse-Rib-Profile, Exposed-Fastener Metal Wall Panels <**Insert drawing designation**>: Formed with recessed, trapezoidal major valleys and [**intermediate stiffening valleys symmetrically spaced**] [**flat pan**] between major valleys; designed to be installed by lapping side edges of adjacent panels and mechanically attaching panels to supports using exposed fasteners in side laps.
 1. Material: [**Zinc-coated (galvanized)**] [**Aluminum-zinc alloy-coated**] steel sheet, [**0.022-inch** (0.56-mm)] [**0.028-inch** (0.71-mm)] [**0.034-inch** (0.86-mm)] nominal thickness.

- a. Exterior Finish: **[Fluoropolymer] [Siliconized polyester]**.
 - b. Color: **[As indicated by manufacturer's designations] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
2. Major-Rib Spacing: **[12 inches (305 mm)] <Insert dimension> o.c.**
 3. Panel Coverage: **[36 inches (914 mm)] <Insert dimension>**.
 4. Panel Height: **[1.125 inches (29 mm)] [1.188 inches (30 mm)] [1.25 inches (32 mm)] [1.5 inches (38 mm)] <Insert dimension>**.
- C. Concealed-Fastener Metal Wall Panels **<Insert drawing designation>**: Formed with vertical panel edges and **[a single wide recess, centered between panel edges] [flush surface]**; with flush joint between panels; with **1-inch- (25-mm-)** wide flange for attaching interior finish; designed to be installed by lapping and interconnecting side edges of adjacent panels and mechanically attaching through panel to supports using concealed fasteners **[and factory-applied sealant]** in side laps.
1. Material: **[Zinc-coated (galvanized)] [Aluminum-zinc alloy-coated]** steel sheet, **[0.028-inch (0.71-mm)] [0.034-inch (0.86-mm)]** nominal thickness.
 - a. Exterior Finish: **[Fluoropolymer] [Siliconized polyester]**.
 - b. Color: **[As indicated by manufacturer's designations] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
 2. Panel Coverage: **[16 inches (406 mm)] <Insert dimension>**.
 3. Panel Height: **[3 inches (76 mm)] <Insert dimension>**.
- D. Tapered-Rib-Profile, Metal Liner Panels **<Insert drawing designation>**: Formed with raised, trapezoidal major ribs and **[intermediate stiffening ribs symmetrically spaced] [flat pan]** between major ribs; designed to be installed by lapping side edges of adjacent panels and mechanically attaching panels to supports using exposed fasteners in side laps.
1. Material: **[Zinc-coated (galvanized)] [Aluminum-zinc alloy-coated]** steel sheet, **[0.022-inch (0.56-mm)] [0.028-inch (0.71-mm)] [0.034-inch (0.86-mm)]** nominal thickness.
 - a. Exterior Finish: **[Siliconized polyester] [Acrylic enamel]**.
 - b. Color: **[As indicated by manufacturer's designations] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
 2. Major-Rib Spacing: **[6 inches (152 mm)] [12 inches (305 mm)] <Insert dimension> o.c.**
 3. Panel Coverage: **[36 inches (914 mm)] <Insert dimension>**.
 4. Panel Height: **[1.25 inches (32 mm)] [1.5 inches (38 mm)] <Insert dimension>**.
- E. Flush-Profile, Metal Liner Panels **<Insert drawing designation>**: **[Solid] [Perforated]** panels formed with vertical panel edges and **[intermediate stiffening ribs symmetrically spaced] [flat pan]** between panel edges; with flush joint between panels; designed for interior side of metal wall panel assemblies and installed by lapping and interconnecting side edges of adjacent panels and mechanically attaching

through panel to supports using concealed fasteners[**and factory-applied sealant**] in side laps.

1. Material: [**Zinc-coated (galvanized)**] [**Aluminum-zinc alloy-coated**] steel sheet, [**0.028-inch** (0.71-mm)] [**0.034-inch** (0.86-mm)] nominal thickness.
 - a. Exterior Finish: [**Siliconized polyester**] [**Polyester**] [**Acrylic enamel**].
 - b. Color: [**As indicated by manufacturer's designations**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
2. Sound Absorption: NRC not less than [**0.65**] [**0.85**] [**1.00**] <Insert value> when tested according to ASTM C 423.
3. Panel Coverage: [**12 inches** (305 mm)] <Insert dimension>.
4. Panel Height: [**1.5 inches** (38 mm)] <Insert dimension>.

F. Materials:

1. Metallic-Coated Steel Sheet: Restricted-flatness steel sheet, metallic coated by the hot-dip process and prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
 - a. Zinc-Coated (Galvanized) Steel Sheet: ASTM A 653/A 653M, **G90** (Z275) coating designation; structural quality.
 - b. Aluminum-Zinc Alloy-Coated Steel Sheet: ASTM A 792/A 792M, **Class AZ50 coating designation, Grade 40** (Class AZM150 coating designation, **Grade 275**); structural quality.
 - c. Surface: [**Smooth, flat**] [**Embossed**] finish.

G. Finishes:

1. Exposed Coil-Coated Finish:
 - a. Two-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - b. Three-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - c. Siliconized Polyester: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than **0.2 mil** (0.005 mm) for primer and **0.8 mil** (0.02 mm) for topcoat.
2. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with a minimum total dry film thickness of **0.5 mil** (0.013 mm).

2.7 FOAM-INSULATION-CORE METAL WALL PANELS

- A. Description: Provide factory-formed and -assembled, metal wall panels fabricated from two metal facing sheets and an insulation core foamed in place during fabrication, with joints between panels designed to form weathertight seals. Include accessories required for weathertight installation.
1. Concealed-Fastener, Foam-Insulation-Core Metal Wall Panels <Insert drawing **designation**>: Formed with tongue-and-groove panel edges; designed for sequential installation by interlocking panel edges and mechanically attaching panels to supports using concealed clips or fasteners.
 - a. Facings: Fabricate panel with exterior and interior facings of same material and thickness.
 - b. Exterior Surface: [**Smooth, flat**] [**Striated**] [**Shallow ribs**] [**Shallow V grooves**].
 - c. Panel Coverage: [**36 inches (914 mm)**] [**42 inches (1067 mm)**] <Insert **dimension**> nominal.
 - d. Panel Thickness: [**2 inches (51 mm)**] [**2.5 inches (64 mm)**] [**3 inches (76 mm)**] [**4 inches (102 mm)**] [**5 inches (127 mm)**] [**6 inches (152 mm)**] <Insert **dimension**>.
 - e. Thermal-Resistance Value (R-Value): <Insert **R-value**>.
- B. Panel Performance:
1. Flatwise Tensile Strength: **30 psi (200 kPa)** when tested according to ASTM C 297/C 297M.
 2. Humid Aging: Volume increase not greater than 6.0 percent and no delamination or metal corrosion when tested for seven days at **140 deg F (60 deg C)** and 100 percent relative humidity according to ASTM D 2126.
 3. Heat Aging: Volume increase not greater than 2.0 percent and no delamination, surface blistering, or permanent bowing when tested for seven days at **200 deg F (93 deg C)** according to ASTM D 2126.
 4. Cold Aging: Volume decrease not more than 1.0 percent and no delamination, surface blistering, or permanent bowing when tested for seven days at minus **20 deg F (29 deg C)** according to ASTM D 2126.
 5. Fatigue: No evidence of delamination, core cracking, or permanent bowing when tested to a **20-lbf/sq. ft. (958-kPa)** positive and negative wind load and with deflection of L/180 for two million cycles.
 6. Autoclave: No delamination when exposed to **2-psi (13.8-kPa)** pressure at a temperature of **212 deg F (100 deg C)** for 2-1/2 hours.
 7. Fire-Test-Response Characteristics: Class A according to ASTM E 108.
- C. Polyisocyanurate Insulation-Core Performance:
1. Density: **2.0 to 2.6 lb/cu. ft. (32 to 42 kg/cu. m)** when tested according to ASTM D 1622.
 2. Compressive Strength: Minimum **20 psi (140 kPa)** when tested according to ASTM D 1621.
 3. Shear Strength: **26 psi (179 kPa)** when tested according to ASTM C 273/C 273M.

D. Materials:

1. Polyisocyanurate Insulation: Modified polyisocyanurate foam using a non-CFC blowing agent, foamed-in-place or board type as indicated, with maximum flame-spread and smoke-developed indexes of 25 and 450, respectively.
 - a. Closed-Cell Content: 90 percent when tested according to ASTM D 6226.
2. Metallic-Coated Steel Sheet: Restricted-flatness steel sheet, metallic coated by the hot-dip process and prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
 - a. Zinc-Coated (Galvanized) Steel Sheet: ASTM A 653/A 653M, **G90 (Z275)** coating designation; structural quality.
 - b. Aluminum-Zinc Alloy-Coated Steel Sheet: ASTM A 792/A 792M, **Class AZ50 coating designation, Grade 40** (Class AZM150 coating designation, Grade 275); structural quality.
 - c. Surface: **[Smooth, flat] [Embossed]** finish.

E. Finishes:

1. Exposed Coil-Coated Finish:
 - a. Two-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - b. Three-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - c. Siliconized Polyester: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than **0.2 mil (0.005 mm)** for primer and **0.8 mil (0.02 mm)** for topcoat.
2. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with a minimum total dry film thickness of **0.5 mil (0.013 mm)**.

2.8 TRANSLUCENT PANELS

- A. Uninsulated Translucent Panels: Glass-fiber-reinforced polyester, translucent plastic; complying with ASTM D 3841, **[Type CC2 (general purpose)] [Type CC1 (limited flammability)]**, Grade 1 (weather resistant); smooth finish on both sides. Match profile of adjacent metal panels.
1. Roof Panel Weight: Not less than **8 oz./sq. ft. (2441 g/sq. m)**.
 2. Wall Panel Weight: Not less than **6 oz./sq. ft. (1831 g/sq. m)**.

3. Light Transmittance: Not less than **[55]** <Insert number> percent according to ASTM D 1494.
 4. Metal Edge: Fabricate full length of each side of panel with metal edge for seaming into standing-seam roof panel joint.
 5. Color: **[White]** <Insert color>.
- B. Insulated Translucent Panels: Fabricate insulating units of two sheets of glass-fiber-reinforced polyester, translucent plastic separated by an air space; complying with ASTM D 3841, Type CC1 (limited flammability), Grade 1 (weather resistant); smooth finish on both sides. Match profile of adjacent metal panels.
1. Exterior Panel Weight: Not less than **[8 oz./sq. ft. (2441 g/sq. m)]** **[6 oz./sq. ft. (1831 g/sq. m)]**.
 2. Interior Panel Weight: Not less than **[8 oz./sq. ft. (2441 g/sq. m)]** **[6 oz./sq. ft. (1831 g/sq. m)]** **[4 oz./sq. ft. (1221 g/sq. m)]**.
 3. Light Transmittance: Not less than **[42]** <Insert number> percent according to ASTM D 1494.
 4. Metal Edge: Fabricate full length of each side of panel with metal edge for seaming into standing-seam roof panel joint.
 5. Color: **[White]** <Insert color>.
- C. Mastic for Translucent Panels: Nonstaining, saturated vinyl polymer as recommended by translucent panel manufacturer for sealing laps.
- D. Performance:
1. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - a. Flame-Spread Index: **[25]** <Insert value> or less.
 - b. Smoke-Developed Index: **[450]** <Insert value> or less.
- 2.9 METAL SOFFIT PANELS
- A. General: Provide factory-formed metal soffit panels designed to be installed by lapping and interconnecting side edges of adjacent panels and mechanically attaching through panel to supports using concealed fasteners[**and factory-applied sealant**] in side laps. Include accessories required for weathertight installation.
- B. Metal Soffit Panels: Match profile and material of metal **[roof]** **[wall]** panels.
1. Finish: **[Match finish and color of metal roof panels]** **[Match finish and color of metal wall panels]** **[As indicated on Drawings]**.
- C. Tapered-Rib-Profile, Exposed-Fastener Metal Soffit Panels <Insert drawing designation>: Formed with raised, trapezoidal major ribs and **[intermediate stiffening ribs symmetrically spaced]** **[flat pan]** between major ribs; designed to be

installed by lapping side edges of adjacent panels and mechanically attaching panels to supports using exposed fasteners in side laps.

1. Material: [**Zinc-coated (galvanized)**] [**Aluminum-zinc alloy-coated**] steel sheet, [0.022-inch (0.56-mm)] [0.028-inch (0.71-mm)] [0.034-inch (0.86-mm)] nominal thickness.
 - a. Exterior Finish: [**Fluoropolymer**] [**Siliconized polyester**].
 - b. Color: [**As indicated by manufacturer's designations**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
2. Major-Rib Spacing: [6 inches (152 mm)] [12 inches (305 mm)] <Insert dimension> o.c.
3. Panel Coverage: [36 inches (914 mm)] <Insert dimension>.
4. Panel Height: [0.75 inch (19 mm)] [1.125 inches (29 mm)] [1.188 inches (30 mm)] [1.25 inches (32 mm)] [1.5 inches (38 mm)] <Insert dimension>.

D. Concealed-Fastener Metal Soffit Panels <Insert drawing designation>: Formed with vertical panel edges and [**a single wide recess, centered between panel edges**] [**flush surface**]; with flush joint between panels; with 1-inch- (25-mm-) wide flange for attaching interior finish; designed to be installed by lapping and interconnecting side edges of adjacent panels and mechanically attaching through panel to supports using concealed fasteners[**and factory-applied sealant**] in side laps.

1. Material: [**Zinc-coated (galvanized)**] [**Aluminum-zinc alloy-coated**] steel sheet, [0.028-inch (0.71-mm)] [0.034-inch (0.86-mm)] nominal thickness.
 - a. Exterior Finish: [**Fluoropolymer**] [**Siliconized polyester**].
 - b. Color: [**As indicated by manufacturer's designations**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
2. Panel Coverage: [12 inches (305 mm)] [16 inches (406 mm)] <Insert dimension>.
3. Panel Height: [1 inch (25 mm)] [1.5 inches (38 mm)] <Insert dimension>.

2.10 THERMAL INSULATION

- A. Faced Metal Building Insulation: ASTM C 991, Type II, glass-fiber-blanket insulation; 0.5-lb/cu. ft. (8-kg/cu. m) density; 2-inch- (51-mm-) wide, continuous, vapor-tight edge tabs; with a flame-spread index of 25 or less.
- B. Unfaced Metal Building Insulation: ASTM C 991, Type I, or NAIMA 202, glass-fiber-blanket insulation; 0.5-lb/cu. ft. (8-kg/cu. m) density; 2-inch- (51-mm-) wide, continuous, vapor-tight edge tabs; with a flame-spread index of 25 or less.
 1. Vapor-Retarder Facing: ASTM C 1136, with permeance not greater than 0.02 perm (1.15 ng/Pa x s x sq. m) when tested according to ASTM E 96/E 96M, Desiccant Method.

- a. Composition: White metallized-polypropylene film facing, fiberglass scrim reinforcement, and kraft-paper backing.
 - b. Composition: Aluminum foil facing, elastomeric barrier coating, fiberglass scrim reinforcement, and kraft-paper backing.
 - c. Composition: White **[polypropylene] [vinyl]** film facing, fiberglass scrim reinforcement, and metallized-polyester film backing.
 - d. Composition: White polypropylene film facing and fiberglass-polyester-blend fabric backing.
- C. Mineral-Fiber-Blanket Insulation: ASTM C 665, type indicated below; consisting of fibers manufactured from glass, slag wool, or rock wool.
1. Nonreflective Faced: Type II (blankets with nonreflective membrane covering), Category 1 (membrane is a vapor retarder), Class A (membrane-faced surface with a flame-spread index of 25 or less).
 2. Reflective Faced: Type III (blankets with reflective membrane covering), Category 1 (membrane is a vapor retarder), Class A (membrane-faced surface with a flame-spread index of 25 or less).
 3. Unfaced: Type I (blankets without membrane covering), passing ASTM E 136 for combustion characteristics.
 - a. Vapor-Retarder Facing: ASTM C 1136, with permeance not greater than **0.02 perm** (1.15 ng/Pa x s x sq. m) when tested according to ASTM E 96/E 96M, Desiccant Method.
 - 1) Composition: White metallized-polypropylene film facing, fiberglass scrim reinforcement, and kraft-paper backing.
 - 2) Composition: Aluminum foil facing, elastomeric barrier coating, fiberglass scrim reinforcement, and kraft-paper backing.
 - 3) Composition: White **[polypropylene] [vinyl]** film facing, fiberglass scrim reinforcement, and metallized-polyester film backing.
 - 4) Composition: White polypropylene film facing and fiberglass-polyester blend fabric backing.
- D. Faced, Polyisocyanurate Board Insulation: ASTM C 1289, Type I (foil facing), Class 2, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, based on tests performed on unfaced core. Provide units tested for interior exposure without an approved thermal barrier.
- E. Retainer Strips: **0.025-inch** (0.64-mm) nominal-thickness, formed, metallic-coated steel or PVC retainer clips colored to match insulation facing.
- F. Vapor-Retarder Tape: Pressure-sensitive tape of type recommended by vapor-retarder manufacturer for sealing joints and penetrations in vapor retarder.
- 2.11 DOORS AND FRAMES
- A. Swinging Personnel Doors and Frames: As specified in Section 081113 "Hollow Metal Doors and Frames."

- B. Swinging Personnel Doors and Frames: Metal building system manufacturer's standard doors and frames; prepared and reinforced at strike and at hinges to receive factory- and field-applied hardware according to BHMA A156 Series.
1. Steel Doors: 1-3/4 inches (44 mm) thick; fabricated from 0.040-inch (1.02-mm) nominal-thickness, metallic-coated steel face sheets; of [**seamed**] [**seamless**], hollow-metal construction; with 0.064-inch (1.63-mm) nominal-thickness, inverted metallic-coated steel channels welded to face sheets at top and bottom of door.
 - a. Design: [**Flush panel**] [**As indicated**] <Insert design>.
 - b. Core: Kraft honeycomb with U-factor rating of at least 0.47 Btu/sq. ft. x h x deg F (2.67 W/sq. m x K).
 - c. Core: Polystyrene foam with U-factor rating of at least 0.16 Btu/sq. ft. x h x deg F (0.91 W/sq. m x K).
 - d. Core: Polyurethane foam with U-factor rating of at least 0.07 Btu/sq. ft. x h x deg F (0.40 W/sq. m x K).
 - e. Glazing Frames: Steel frames to receive field-installed glass.
 - f. Glazing: As specified in Section 088000 "Glazing."
 2. Steel Frames: Fabricate 2-inch- (51-mm-) wide face frames from 0.064-inch (1.63-mm) nominal-thickness, metallic-coated steel sheet.
 - a. Type: [**Knocked down for field assembly**] [**Factory welded**].
 3. Fabricate concealed stiffeners, reinforcement, edge channels, and moldings from either cold- or hot-rolled steel sheet.
 4. Hardware:
 - a. Provide hardware for each door leaf, as follows:
 - 1) Hinges: BHMA A156.1. Three [**plain**] [**antifriction**]-bearing, standard-weight, full-mortise, stainless-steel or bronze, template-type hinges; 4-1/2 by 4-1/2 inches (114 by 114 mm), with nonremovable pin.
 - 2) Lockset: BHMA A156.2. [**Key-in-lever cylindrical**] [**Mortise, with lever handle**] type.
 - 3) Exit Device: BHMA A156.3. Touch- or push-bar type.
 - 4) Threshold: BHMA A156.21. Extruded aluminum.
 - 5) Silencers: Pneumatic rubber; three silencers on strike jambs of single door frames and two silencers on heads of double door frames.
 - 6) Closer: BHMA A156.4. Surface-applied, standard-duty hydraulic type.
 - 7) Weather Stripping: Vinyl applied to head and jambs, with vinyl sweep at sill.
 - b. Provide each pair of double doors with the following hardware in addition to that specified for each leaf:
 - 1) Astragal: Removable type.
 - 2) Surface Bolts: Top and bottom of inactive door.

5. Anchors and Accessories: Manufacturer's standard units, galvanized according to ASTM A 123/A 123M.
 6. Fabrication: Fabricate doors and frames to be rigid; neat in appearance; and free from defects, warp, or buckle. Provide continuous welds on exposed joints; grind, dress, and make welds smooth, flush, and invisible.
- C. Horizontal-Sliding Doors: Manufacturer's standard horizontal-sliding door assembly including structural frame, door panels, brackets, guides, tracks, hardware, and installation accessories.
1. Door Frames: Channels and zees; fabricated from minimum 0.064-inch (1.63-mm) nominal-thickness, metallic-coated steel sheet or structural-steel shapes.
 2. Door Panels: Same material and finish as metal wall panels.
 3. Hardware: Manufacturer's standard metallic-coated steel track, bottom guides, lock angles for side closure, and brackets. Support each door leaf by two four-wheel trolleys. Provide metallic-coated steel handle for each leaf, and slide bolt or padlock hasp. Flash top of track with metallic-coated steel sheet hood.
- D. Materials:
1. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B, suitable for exposed applications.
 2. Hot-Rolled Steel Sheet: ASTM A 1011/A 1011M, Commercial Steel (CS), Type B; free of scale, pitting, or surface defects; pickled and oiled.
 3. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B; with G60 (Z180) zinc (galvanized) or A60 (ZF180) zinc-iron-alloy (galvannealed) coating designation.
- E. Finishes for Personnel Doors and Frames:
1. Prime Finish: Factory-apply manufacturer's standard primer immediately after cleaning and pretreating.
 - a. Shop Primer: Manufacturer's standard, fast-curing, lead- and chromate-free primer complying with SDI A250.10 acceptance criteria; recommended by primer manufacturer for substrate; compatible with substrate and field-applied coatings despite prolonged exposure.
 2. Factory-Applied Paint Finish: Manufacturer's standard, complying with SDI A250.3 for performance and acceptance criteria.
 - a. Color and Gloss: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and gloss>.**

2.12 WINDOWS

- A. Aluminum Windows: As specified in Section 085113 "Aluminum Windows."

- B. Aluminum Windows: Metal building system manufacturer's standard, with self-flashing mounting fins, and as follows:
1. Type, Performance Class, and Performance Grade: Comply with AAMA/WDMA/CSA 101/I.S.2/A440 and as follows:
 - a. Horizontal-Sliding Units: **[HS-LC25] [HS-C30] <Insert designation>**.
 - b. Single-Hung Units: **[H-LC25] [H-C30] <Insert designation>**.
 - c. Fixed Units: **[F-LC25] [F-C30] <Insert designation>**.
 2. Aluminum Extrusions: **ASTM B 221 (ASTM B 221M)**, alloy and temper recommended by manufacturer for strength, corrosion resistance, and application of required finish, but not less than **0.064-inch (1.63-mm)** thickness at any location for main frame and sash members.
 - a. Thermally Improved Construction: Fabricate window units with an integral, concealed, low-conductance thermal barrier; located between exterior materials and window members exposed on interior side; in a manner that eliminates direct metal-to-metal contact.
 3. Mullions: Between adjacent windows, fabricated of extruded aluminum matching finish of window units.
 4. Fasteners, Anchors, and Clips: Nonmagnetic stainless steel, aluminum, or other noncorrosive material, compatible with aluminum window members, trim, hardware, anchors, and other components of window units. Fasteners shall not be exposed, except for attaching hardware.
 - a. Reinforcement: Where fasteners screw-anchor into aluminum less than **0.128 inch (3.26 mm)** thick, reinforce interior with aluminum or nonmagnetic stainless steel to receive screw threads, or provide standard, noncorrosive, pressed-in, spline grommet nuts.
 5. Hardware: Manufacturer's standard; of aluminum, stainless steel, die-cast steel, malleable iron, or bronze; including the following:
 - a. Cam-action sweep sash lock and keeper at meeting rails.
 - b. Spring-loaded, snap-type lock at jambs.
 - c. Pole-operated, cam-action locking device on meeting rail where rail is more than **72 inches (1830 mm)** above floor.
 - d. Lift handles for single-hung units.
 - e. Nylon sash rollers for horizontal-sliding units.
 - f. Steel or bronze operating arms.
 6. Sliding-Type Weather Stripping: Woven-pile weather stripping of wool, polypropylene, or nylon pile and resin-impregnated backing fabric; complying with AAMA 701/702.
 7. Insect Screens: Provide removable insect screen on each operable exterior sash, with screen frame finished to match window unit, and as follows:

- a. Aluminum Wire Fabric: **18-by-18** (1.1-by-1.1-mm), **18-by-16** (1.1-by-1.3-mm), or **18-by-14** (1.1-by-1.5-mm) mesh of **0.013-inch-** (0.3-mm-) diameter, coated aluminum wire; complying with FS RR-W-365, Type VII.
 - b. Glass-Fiber Mesh Fabric: **18-by-16** (1.1-by-1.3-mm) or **18-by-14** (1.1-by-1.5-mm) mesh of PVC-coated, glass-fiber threads, woven and fused to form a fabric mesh; complying with ASTM D 3656.
 - c. Fabric: Manufacturer's standard aluminum wire fabric or glass-fiber mesh fabric.
- C. Glazing: Comply with requirements specified in Section 088000 "Glazing."
- D. Glazing:
1. Float Glass: ASTM C 1036, Type I, Quality-Q3, Class I (clear), 3 mm thick.
 2. Heat-Treated Float Glass: ASTM C 1048, Type I, Quality-Q3, Class I (clear), Condition A, 3 mm thick.
 3. Tinted Float Glass: ASTM C 1036, Type I, Quality-Q3, Class 2, 3 mm thick.
 - a. Tint Color: **[Blue] [Blue-green] [Bronze] [Green] [Gray] [Manufacturer's standard color] <Insert color>**.
 4. Patterned Glass: ASTM C 1036, Type II, Quality-Q6, Class 1 (clear), Form 3, Pattern P3 (random), 3 mm thick.
 5. Insulating-Glass Units: Factory-assembled units consisting of sealed lites of 2.5-mm-thick clear float glass separated by a dehydrated interspace, qualified according to ASTM E 2190.
 6. Safety Glass: Category II materials complying with testing requirements in 16 CFR 1201.
 - a. Provide safety glazing labeling.
 7. Glazing Stops: Screw-applied or snap-on glazing stops coordinated with Section 088000 "Glazing" and with glazing system indicated. Match material and finish of window frames.
 8. Factory-Glazed Fabrication: Glaze window units in the factory to greatest extent possible and practical for applications indicated. Comply with requirements in Section 088000 "Glazing."
- E. Finish:
1. Mill finish.
 2. Baked-Enamel Finish: Organic Coating: Thermosetting, modified-acrylic enamel primer/topcoat system complying with AAMA 2603 except with a minimum dry film thickness of **0.7 mil** (0.02 mm), medium gloss.
 - a. Color: **[As indicated by manufacturer's designations] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.

2.13 ACCESSORIES

- A. General: Provide accessories as standard with metal building system manufacturer and as specified. Fabricate and finish accessories at the factory to greatest extent possible, by manufacturer's standard procedures and processes. Comply with indicated profiles and with dimensional and structural requirements.
1. Form exposed sheet metal accessories that are without excessive oil-canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
- B. Roof Panel Accessories: Provide components required for a complete metal roof panel assembly including copings, fasciae, corner units, ridge closures, clips, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal roof panels unless otherwise indicated.
1. Closures: Provide closures at eaves and ridges, fabricated of same material as metal roof panels.
 2. Clips: Manufacturer's standard, formed from **[steel] [stainless-steel]** sheet, designed to withstand negative-load requirements.
 3. Cleats: Manufacturer's standard, mechanically seamed cleats formed from **[steel] [stainless-steel sheet or nylon-coated aluminum]** sheet.
 4. Backing Plates: Provide metal backing plates at panel end splices, fabricated from material recommended by manufacturer.
 5. Closure Strips: Closed-cell, expanded, cellular, rubber or crosslinked, polyolefin-foam or closed-cell laminated polyethylene; minimum **1-inch- (25-mm-)** thick, flexible closure strips; cut or premolded to match metal roof panel profile. Provide closure strips where indicated or necessary to ensure weathertight construction.
 6. Thermal Spacer Blocks: Where metal panels attach directly to purlins, provide thermal spacer blocks of thickness required to provide **1-inch (25-mm)** standoff; fabricated from extruded polystyrene.
- C. Wall Panel Accessories: Provide components required for a complete metal wall panel assembly including copings, fasciae, mullions, sills, corner units, clips, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal wall panels unless otherwise indicated.
1. Closures: Provide closures at eaves and rakes, fabricated of same material as metal wall panels.
 2. Backing Plates: Provide metal backing plates at panel end splices, fabricated from material recommended by manufacturer.
 3. Closure Strips: Closed-cell, expanded, cellular, rubber or crosslinked, polyolefin-foam or closed-cell laminated polyethylene; minimum **1-inch- (25-mm-)** thick, flexible closure strips; cut or premolded to match metal wall panel profile. Provide closure strips where indicated or necessary to ensure weathertight construction.

- D. Flashing and Trim: Formed from **0.022-inch (0.56-mm)** nominal-thickness, metallic-coated steel sheet or aluminum-zinc alloy-coated steel sheet prepainted with coil coating; finished to match adjacent metal panels.
1. Provide flashing and trim as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, eaves, rakes, corners, bases, framed openings, ridges, fasciae, and fillers.
 2. Opening Trim: Formed from [**0.022-inch (0.56-mm)**] [**0.034-inch (0.86-mm)**] nominal-thickness, metallic-coated steel sheet or aluminum-zinc alloy-coated steel sheet prepainted with coil coating. Trim head and jamb of door openings, and head, jamb, and sill of other openings.
- E. Gutters: Formed from **0.022-inch (0.56-mm)** nominal-thickness, metallic-coated steel sheet or aluminum-zinc alloy-coated steel sheet prepainted with coil coating; finished to match roof fascia and rake trim. Match profile of gable trim, complete with end pieces, outlet tubes, and other special pieces as required. Fabricate in minimum **96-inch- (2438-mm-)** long sections, sized according to SMACNA's "Architectural Sheet Metal Manual."
1. Gutter Supports: Fabricated from same material and finish as gutters.
 2. Strainers: Bronze, copper, or aluminum wire ball type at outlets.
- F. Downspouts: Formed from **0.022-inch (0.56-mm)** nominal-thickness, zinc-coated (galvanized) steel sheet or aluminum-zinc alloy-coated steel sheet prepainted with coil coating; finished to match metal wall panels. Fabricate in minimum **10-foot- (3-m-)** long sections, complete with formed elbows and offsets.
1. Mounting Straps: Fabricated from same material and finish as gutters.
- G. Roof Ventilators: Gravity type, complete with hardware, flashing, closures, and fittings.
1. Circular-Revolving Type: Minimum [**20-inch- (508-mm-)**] **<Insert dimension>** diameter throat opening; fabricated from **0.028-inch (0.71-mm)** nominal-thickness, metallic-coated steel sheet or aluminum-zinc alloy-coated steel sheet prepainted with coil coating; finished to match metal roof panels; with matching base and rain cap.
 - a. Type: [**Directional**] [**Stationary**] revolving.
 - b. Bird Screening: Galvanized steel, **1/2-inch- (13-mm-)** square mesh, **0.041-inch (1.04-mm)** wire; or aluminum, **1/2-inch- (13-mm-)** square mesh, **0.063-inch (1.6-mm)** wire.
 - c. Dampers: Spring-loaded, butterfly type; pull-chain operation; with pull chain of length required to reach within **36 inches (914 mm)** of floor.
 - d. Reinforce and brace units, with joints properly formed and edges beaded to be watertight under normal positive-pressure conditions.
 - e. Mount ventilators on square-to-round bases for ridge or on-slope mounting, designed to match roof pitch and roll formed to match metal roof panel profile.

2. Continuous or Sectional-Ridge Type: Factory-engineered and -fabricated, continuous unit; fabricated from **0.022-inch (0.56-mm)** nominal-thickness, metallic-coated steel sheet or aluminum-zinc alloy-coated steel sheet prepainted with coil coating; finished to match metal roof panels. Fabricated in minimum **10-foot- (3-m-)** long sections. Provide throat size and total length indicated, complete with side baffles, ventilator assembly, end caps, splice plates, and reinforcing diaphragms.
 - a. Bird Screening: Galvanized steel, **1/2-inch- (13-mm-)** square mesh, **0.041-inch (1.04-mm)** wire; or aluminum, **1/2-inch- (13-mm-)** square mesh, **0.063-inch (1.6-mm)** wire.
 - b. Dampers: Manually operated, spring-loaded, vertically rising type; chain and worm gear operator; with pull chain of length required to reach within **36 inches (914 mm)** of floor.
 - c. Throat Size: [**9 inches (229 mm)**] [**12 inches (305 mm)**] [**9 or 12 inches (229 or 305 mm)**], **as standard with manufacturer, and as required to comply with ventilation requirements**].

- H. Louvers: Size and design indicated; self-framing and self-flashing. Fabricate welded frames from minimum **0.052-inch (1.32-mm)** nominal-thickness, metallic-coated steel sheet; finished to match metal wall panels. Form blades from **0.040-inch (1.02-mm)** nominal-thickness, metallic-coated steel sheet; folded or beaded at edges, set at an angle that excludes driving rains, and secured to frames by riveting or welding. Fabricate louvers with equal blade spacing to produce uniform appearance.
 1. Blades: Fixed.
 2. Blades: Adjustable type, with weather-stripped edges, and manually operated by hand crank or pull chain.
 3. Free Area: Not less than [**7.0 sq. ft. (0.65 sq. m)**] **<Insert dimension>** for **48-inch- (1220-mm-)** wide by **48-inch- (1220-mm-)** high louver.
 4. Bird Screening: Galvanized steel, **1/2-inch- (13-mm-)** square mesh, **0.041-inch (1.04-mm)** wire; with rewirable frames, removable and secured with clips; fabricated of same kind and form of metal and with same finish as louvers.
 - a. Mounting: [**Interior**] [**Exterior**] face of louvers.
 5. Vertical Mullions: Provide mullions at spacings recommended by manufacturer, or **72 inches (1830 mm)** o.c., whichever is less.

- I. Roof Curbs: Fabricated from minimum **0.052-inch (1.32-mm)** nominal-thickness, metallic-coated steel sheet or aluminum-zinc alloy-coated steel sheet prepainted with coil coating; finished to match metal roof panels; with welded top box and bottom skirt, and integral full-length cricket; capable of withstanding loads of size and height indicated.
 1. Curb Subframing: Fabricated from **0.064-inch (1.63-mm)** nominal-thickness, angle-, C-, or Z-shaped metallic-coated steel sheet.
 2. Insulation: **1-inch- (25-mm-)** thick, rigid type.

- J. Service Walkways: Fabricated from 0.052-inch (1.32-mm) nominal-thickness, metallic-coated steel plank grating; with slip-resistant pattern; [18-inch (457-mm)] [24-inch (610-mm)] [36-inch (914-mm)] overall width. Support walkways on framing system anchored to metal roof panels without penetrating panels; with predrilled holes and clamps or hooks for anchoring.
- K. Pipe Flashing: Premolded, EPDM pipe collar with flexible aluminum ring bonded to base.
- L. Materials:
1. Fasteners: Self-tapping screws, bolts, nuts, self-locking rivets and bolts, end-welded studs, and other suitable fasteners designed to withstand design loads. Provide fasteners with heads matching color of materials being fastened by means of plastic caps or factory-applied coating.
 - a. Fasteners for Metal Roof Panels: Self-drilling or self-tapping, zinc-plated, hex-head carbon-steel screws, with a stainless-steel cap or zinc-aluminum-alloy head and EPDM sealing washer.
 - b. Fasteners for Metal Roof Panels: Self-drilling, Type 410 stainless-steel or self-tapping, Type 304 stainless-steel or zinc-alloy-steel hex washer head, with EPDM washer under heads of fasteners bearing on weather side of metal panels.
 - c. Fasteners for Metal Wall Panels: Self-drilling or self-tapping, zinc-plated, hex-head carbon-steel screws[, **with EPDM sealing washers bearing on weather side of metal panels**].
 - d. Fasteners for Metal Wall Panels: Self-drilling, Type 410 stainless-steel or self-tapping, Type 304 stainless-steel or zinc-alloy-steel hex washer head[, **with EPDM sealing washers bearing on weather side of metal panels**].
 - e. Fasteners for Flashing and Trim: Blind fasteners or self-drilling screws with hex washer head.
 - f. Blind Fasteners: High-strength aluminum or stainless-steel rivets.
 2. Corrosion-Resistant Coating: Cold-applied asphalt mastic, compounded for 15-mil (0.4-mm) dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.
 3. Nonmetallic, Shrinkage-Resistant Grout: ASTM C 1107, factory-packaged, nonmetallic aggregate grout, noncorrosive, nonstaining, mixed with water to consistency suitable for application and a 30-minute working time.
 4. Metal Panel Sealants:
 - a. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene-compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape of manufacturer's standard size.
 - b. Joint Sealant: ASTM C 920; one-part elastomeric polyurethane or polysulfide; of type, grade, class, and use classifications required to seal joints in metal panels and remain weathertight; and as recommended by metal building system manufacturer.

2.14 SOURCE QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to evaluate product.
- B. Special Inspector: Owner will engage a qualified special inspector to perform the following tests and inspections and to submit reports. Special inspector will verify that manufacturer maintains detailed fabrication and quality-control procedures and will review the completeness and adequacy of those procedures to perform the Work.
 - 1. Special inspections will not be required if fabrication is performed by manufacturer registered and approved by authorities having jurisdiction to perform such Work without special inspection.
 - a. After fabrication, submit copy of certificate of compliance to authorities having jurisdiction, certifying that Work was performed according to Contract requirements.
- C. Testing: Test and inspect shop connections for metal buildings according to the following:
 - 1. Bolted Connections: Shop-bolted connections shall be **[tested and]** inspected according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts."
 - 2. Welded Connections: In addition to visual inspection, shop-welded connections shall be tested and inspected according to AWS D1.1/D1.1M and the following inspection procedures, at inspector's option:
 - a. Liquid Penetrant Inspection: ASTM E 165.
 - b. Magnetic Particle Inspection: ASTM E 709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration will not be accepted.
 - c. Ultrasonic Inspection: ASTM E 164.
 - d. Radiographic Inspection: ASTM E 94.
- D. Product will be considered defective if it does not pass tests and inspections.
- E. Prepare test and inspection reports.

2.15 FABRICATION

- A. General: Design components and field connections required for erection to permit easy assembly.
 - 1. Mark each piece and part of the assembly to correspond with previously prepared erection drawings, diagrams, and instruction manuals.
 - 2. Fabricate structural framing to produce clean, smooth cuts and bends. Punch holes of proper size, shape, and location. Members shall be free of cracks, tears, and ruptures.

- B. Tolerances: Comply with MBMA's "Metal Building Systems Manual" for fabrication and erection tolerances.
- C. Primary Framing: Shop fabricate framing components to indicated size and section, with baseplates, bearing plates, stiffeners, and other items required for erection welded into place. Cut, form, punch, drill, and weld framing for bolted field assembly.
 - 1. Make shop connections by welding or by using high-strength bolts.
 - 2. Join flanges to webs of built-up members by a continuous, submerged arc-welding process.
 - 3. Brace compression flange of primary framing with steel angles or cold-formed structural tubing between frame web and purlin web or girt web, so flange compressive strength is within allowable limits for any combination of loadings.
 - 4. Weld clips to frames for attaching secondary framing.
 - 5. Shop Priming: Prepare surfaces for shop priming according to SSPC-SP 2. Shop prime primary framing with specified primer after fabrication.
- D. Secondary Framing: Shop fabricate framing components to indicated size and section by roll-forming or break-forming, with baseplates, bearing plates, stiffeners, and other plates required for erection welded into place. Cut, form, punch, drill, and weld secondary framing for bolted field connections to primary framing.
 - 1. Make shop connections by welding or by using non-high-strength bolts.
 - 2. Shop Priming: Prepare uncoated surfaces for shop priming according to SSPC-SP 2. Shop prime uncoated secondary framing with specified primer after fabrication.
- E. Metal Panels: Fabricate and finish metal panels at the factory to greatest extent possible, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements. Comply with indicated profiles and with dimensional and structural requirements.
 - 1. Provide panel profile, including major ribs and intermediate stiffening ribs, if any, for full length of metal panel.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with erector present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Before erection proceeds, survey elevations and locations of concrete- and masonry-bearing surfaces and locations of anchor rods, bearing plates, and other embedments to receive structural framing, with erector present, for compliance with requirements and metal building system manufacturer's tolerances.
 - 1. Engage land surveyor to perform surveying.

- C. Proceed with erection only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean and prepare surfaces to be painted according to manufacturer's written instructions for each particular substrate condition.
- B. Provide temporary shores, guys, braces, and other supports during erection to keep structural framing secure, plumb, and in alignment against temporary construction loads and loads equal in intensity to design loads. Remove temporary supports when permanent structural framing, connections, and bracing are in place unless otherwise indicated.

3.3 ERECTION OF STRUCTURAL FRAMING

- A. Erect metal building system according to manufacturer's written erection instructions and erection drawings.
- B. Do not field cut, drill, or alter structural members without written approval from metal building system manufacturer's professional engineer.
- C. Set structural framing accurately in locations and to elevations indicated, according to AISC specifications referenced in this Section. Maintain structural stability of frame during erection.
- D. Base[**and Bearing**] Plates: Clean concrete- and masonry-bearing surfaces of bond-reducing materials, and roughen surfaces prior to setting plates. Clean bottom surface of plates.
 - 1. Set plates for structural members on wedges, shims, or setting nuts as required.
 - 2. Tighten anchor rods after supported members have been positioned and plumbed. Do not remove wedges or shims but, if protruding, cut off flush with edge of plate before packing with grout.
 - 3. Promptly pack grout solidly between bearing surfaces and plates so no voids remain. Neatly finish exposed surfaces; protect grout and allow to cure. Comply with manufacturer's written installation instructions for shrinkage-resistant grouts.
- E. Align and adjust structural framing before permanently fastening. Before assembly, clean bearing surfaces and other surfaces that will be in permanent contact with framing. Perform necessary adjustments to compensate for discrepancies in elevations and alignment.
 - 1. Level and plumb individual members of structure.
 - 2. Make allowances for difference between temperature at time of erection and mean temperature when structure will be completed and in service.
- F. Primary Framing and End Walls: Erect framing level, plumb, rigid, secure, and true to line. Level baseplates to a true even plane with full bearing to supporting structures, set with double-nutted anchor bolts. Use grout to obtain uniform bearing and to

maintain a level base-line elevation. Moist-cure grout for not less than seven days after placement.

1. Make field connections using high-strength bolts installed according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts" for bolt type and joint type specified.
 - a. Joint Type: Snug tightened or pretensioned.
- G. Secondary Framing: Erect framing level, plumb, rigid, secure, and true to line. Field bolt secondary framing to clips attached to primary framing.
 1. Provide rake or gable purlins with tight-fitting closure channels and fasciae.
 2. Locate and space wall girts to suit openings such as doors and windows.
 3. Locate canopy framing as indicated.
 4. Provide supplemental framing at entire perimeter of openings, including doors, windows, louvers, ventilators, and other penetrations of roof and walls.
- H. Steel Joists[**and Joist Girders**]: Install joists[, **girders**,] and accessories plumb, square, and true to line; securely fasten to supporting construction according to SJI's "Standard Specifications and Load Tables for Steel Joists and Joist Girders," joist manufacturer's written instructions, and requirements in this Section.
 1. Before installation, splice joists delivered to Project site in more than one piece.
 2. Space, adjust, and align joists accurately in location before permanently fastening.
 3. Install temporary bracing and erection bridging, connections, and anchors to ensure that joists are stabilized during construction.
 4. Bolt joists to supporting steel framework using carbon-steel bolts unless otherwise indicated.
 5. Bolt joists to supporting steel framework using high-strength structural bolts unless otherwise indicated. Comply with RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts" for high-strength structural bolt installation and tightening requirements.
 6. Install and connect bridging concurrently with joist erection, before construction loads are applied. Anchor ends of bridging lines at top and bottom chords if terminating at walls or beams.
- I. Bracing: Install bracing in roof and sidewalls where indicated on erection drawings.
 1. Tighten rod and cable bracing to avoid sag.
 2. Locate interior end-bay bracing only where indicated.
- J. Framing for Openings: Provide shapes of proper design and size to reinforce openings and to carry loads and vibrations imposed, including equipment furnished under mechanical and electrical work. Securely attach to structural framing.
- K. Erection Tolerances: Maintain erection tolerances of structural framing within AISC 303.

3.4 METAL PANEL INSTALLATION, GENERAL

- A. Examination: Examine primary and secondary framing to verify that structural-panel support members and anchorages have been installed within alignment tolerances required by manufacturer.
1. Examine roughing-in for components and systems penetrating metal panels, to verify actual locations of penetrations relative to seams before metal panel installation.
- B. General: Anchor metal panels and other components of the Work securely in place, with provisions for thermal and structural movement.
1. Field cut metal panels as required for doors, windows, and other openings. Cut openings as small as possible, neatly to size required, and without damage to adjacent metal panel finishes.
 - a. Field cutting of metal panels by torch is not permitted unless approved in writing by manufacturer.
 2. Install metal panels perpendicular to structural supports unless otherwise indicated.
 3. Flash and seal metal panels with weather closures at perimeter of openings and similar elements. Fasten with self-tapping screws.
 4. Locate and space fastenings in uniform vertical and horizontal alignment.
 5. Locate metal panel splices over, but not attached to, structural supports with end laps in alignment.
 6. Lap metal flashing over metal panels to allow moisture to run over and off the material.
- C. Lap-Seam Metal Panels: Install screw fasteners using power tools with controlled torque adjusted to compress EPDM washers tightly without damage to washers, screw threads, or metal panels. Install screws in predrilled holes.
1. Arrange and nest side-lap joints so prevailing winds blow over, not into, lapped joints. Lap ribbed or fluted sheets one full rib corrugation. Apply metal panels and associated items for neat and weathertight enclosure. Avoid "panel creep" or application not true to line.
- D. Metal Protection: Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with corrosion-resistant coating, by applying rubberized-asphalt underlayment to each contact surface, or by other permanent separation as recommended by metal roof panel manufacturer.
- E. Joint Sealers: Install gaskets, joint fillers, and sealants where indicated and where required for weatherproof performance of metal panel assemblies. Provide types of gaskets, fillers, and sealants indicated; or, if not indicated, provide types recommended by metal panel manufacturer.

1. Seal metal panel end laps with double beads of tape or sealant the full width of panel. Seal side joints where recommended by metal panel manufacturer.
2. Prepare joints and apply sealants to comply with requirements in Section 079200 "Joint Sealants."

3.5 METAL ROOF PANEL INSTALLATION

- A. General: Provide metal roof panels of full length from eave to ridge unless otherwise indicated or restricted by shipping limitations.
1. Install ridge[**and hip**] caps as metal roof panel work proceeds.
 2. Flash and seal metal roof panels with weather closures at eaves and rakes. Fasten with self-tapping screws.
- B. Standing-Seam Metal Roof Panels: Fasten metal roof panels to supports with concealed clips at each standing-seam joint, at location and spacing and with fasteners recommended by manufacturer.
1. Install clips to supports with self-drilling or self-tapping fasteners.
 2. Install pressure plates at locations indicated in manufacturer's written installation instructions.
 3. Snap Joint: Nest standing seams and fasten together by interlocking and completely engaging factory-applied sealant.
 4. Seamed Joint: Crimp standing seams with manufacturer-approved motorized seamer tool so that clip, metal roof panel, and factory-applied sealant are completely engaged.
 5. Rigidly fasten eave end of metal roof panels and allow ridge end free movement due to thermal expansion and contraction. Predrill panels for fasteners.
 6. Provide metal closures at [**peaks**] [**rake edges**] [**rake walls**] [**and**] each side of ridge[**and hip**] caps.
- C. Lap-Seam Metal Roof Panels: Fasten metal roof panels to supports with exposed fasteners at each lapped joint, at location and spacing recommended by manufacturer.
1. Provide metal-backed sealing washers under heads of exposed fasteners bearing on weather side of metal roof panels.
 2. Provide sealant tape at lapped joints of metal roof panels and between panels and protruding equipment, vents, and accessories.
 3. Apply a continuous ribbon of sealant tape to weather-side surface of fastenings on end laps and on side laps of nesting-type metal panels, on side laps of ribbed or fluted metal panels, and elsewhere as needed to make metal panels weatherproof to driving rains.
 4. At metal panel splices, nest panels with minimum **6-inch** (152-mm) end lap, sealed with butyl-rubber sealant and fastened together by interlocking clamping plates.
- D. Metal Fascia Panels: Align bottom of metal panels and fasten with blind rivets, bolts, or self-drilling or self-tapping screws. Flash and seal metal panels with weather closures where fasciae meet soffits, along lower panel edges, and at perimeter of all openings.

- E. Metal Roof Panel Installation Tolerances: Shim and align metal roof panels within installed tolerance of **1/4 inch in 20 feet** (6 mm in 6 m) on slope and location lines as indicated and within **1/8-inch** (3-mm) offset of adjoining faces and of alignment of matching profiles.

3.6 METAL WALL PANEL INSTALLATION

- A. General: Install metal wall panels in orientation, sizes, and locations indicated on Drawings. Install panels perpendicular to girts, extending full height of building, unless otherwise indicated. Anchor metal wall panels and other components of the Work securely in place, with provisions for thermal and structural movement.
1. Unless otherwise indicated, begin metal panel installation at corners with center of rib lined up with line of framing.
 2. Shim or otherwise plumb substrates receiving metal wall panels.
 3. When two rows of metal panels are required, lap panels **4 inches** (102 mm) minimum.
 4. When building height requires two rows of metal panels at gable ends, align lap of gable panels over metal wall panels at eave height.
 5. Rigidly fasten base end of metal wall panels and allow eave end free movement due to thermal expansion and contraction. Pre-drill panels.
 6. Flash and seal metal wall panels with weather closures at eaves, rakes, and at perimeter of all openings. Fasten with self-tapping screws.
 7. Install screw fasteners in pre-drilled holes.
 8. Install flashing and trim as metal wall panel work proceeds.
 9. Apply elastomeric sealant continuously between metal base channel (sill angle) and concrete, and elsewhere as indicated; or, if not indicated, as necessary for waterproofing.
 10. Align bottom of metal wall panels and fasten with blind rivets, bolts, or self-drilling or self-tapping screws.
 11. Provide weatherproof escutcheons for pipe and conduit penetrating exterior walls.
- B. Metal Wall Panels: Install metal wall panels on exterior side of girts. Attach metal wall panels to supports with fasteners as recommended by manufacturer.
- C. Insulated Metal Wall Panels: Install insulated metal wall panels on exterior side of girts. Attach panels to supports at each panel joint using concealed clip and fasteners at maximum **42 inches** (1067 mm) o.c., spaced not more than manufacturer's recommendation. Fully engage tongue and groove of adjacent insulated metal wall panels.
1. Install clips to supports with self-tapping fasteners.
 2. Apply continuous ribbon of sealant to panel joint on concealed side of insulated metal wall panels as vapor seal; apply sealant to panel joint on exposed side of panels as weather seal.
- D. Installation Tolerances: Shim and align metal wall panels within installed tolerance of **1/4 inch in 20 feet** (6 mm in 6 m), nonaccumulative, on level, plumb, and on location

lines as indicated, and within 1/8-inch (3-mm) offset of adjoining faces and of alignment of matching profiles.

3.7 TRANSLUCENT PANEL INSTALLATION

- A. Translucent Panels: Attach translucent panels to structural framing with fasteners according to manufacturer's written instructions. Install panels perpendicular to supports unless otherwise indicated. Anchor translucent panels securely in place, with provisions for thermal and structural movement.
1. Provide end laps of not less than 6 inches (152 mm) and side laps of not less than 1-1/2-inch (38-mm) corrugations for metal roof panels.
 2. Provide end laps of not less than 4 inches (102 mm) and side laps of not less than 1-1/2-inch (38-mm) corrugations for metal wall panels.
 3. Align horizontal laps with adjacent metal panels.
 4. Seal intermediate end laps and side laps of translucent panels with translucent mastic.

3.8 METAL SOFFIT PANEL INSTALLATION

- A. Provide metal soffit panels the full width of soffits. Install panels perpendicular to support framing.
- B. Flash and seal metal soffit panels with weather closures where panels meet walls and at perimeter of all openings.

3.9 THERMAL INSULATION INSTALLATION

- A. General: Install insulation concurrently with metal panel installation, in thickness indicated to cover entire surface, according to manufacturer's written instructions.
1. Set vapor-retarder-faced units with vapor retarder toward warm side of construction unless otherwise indicated. Do not obstruct ventilation spaces except for firestopping.
 2. Tape joints and ruptures in vapor retarder, and seal each continuous area of insulation to the surrounding construction to ensure airtight installation.
 3. Install factory-laminated, vapor-retarder-faced blankets straight and true in one-piece lengths, with both sets of facing tabs sealed, to provide a complete vapor retarder.
 4. Install blankets straight and true in one-piece lengths. Install vapor retarder over insulation, with both sets of facing tabs sealed, to provide a complete vapor retarder.
- B. Blanket Roof Insulation: Comply with the following installation method:
1. Over-Framing Installation: Extend insulation and vapor retarder over and perpendicular to top flange of secondary framing. Hold in place by metal roof panels fastened to secondary framing.

2. **Between-Purlin Installation:** Extend insulation and vapor retarder between purlins. Carry vapor-retarder-facing tabs up and over purlin, overlapping adjoining facing of next insulation course and maintaining continuity of retarder. Hold in place with bands and crossbands below insulation.
 3. **Over-Purlin-with-Spacer-Block Installation:** Extend insulation and vapor retarder over and perpendicular to top flange of secondary framing. Install layer of filler insulation over first layer to fill space formed by metal roof panel standoffs. Hold in place by panels fastened to standoffs.
 - a. **Thermal Spacer Blocks:** Where metal roof panels attach directly to purlins, install thermal spacer blocks.
 4. **Two-Layers-between-Purlin-with-Spacer-Block Installation:** Extend insulation and vapor retarder between purlins. Carry vapor-retarder-facing tabs up and over purlin, overlapping adjoining facing of next insulation course and maintaining continuity of retarder. Install layer of filler insulation over first layer to fill space between purlins formed by thermal spacer blocks. Hold in place with bands and crossbands below insulation.
 - a. **Thermal Spacer Blocks:** Where metal roof panels attach directly to purlins, install thermal spacer blocks.
 5. **Retainer Strips:** Install retainer strips at each longitudinal insulation joint, straight and taut, nesting with secondary framing to hold insulation in place.
- C. **Blanket Wall Insulation:** Extend insulation and vapor retarder over and perpendicular to top flange of secondary framing. Hold in place by metal wall panels fastened to secondary framing.
1. **Retainer Strips:** Install retainer strips at each longitudinal insulation joint, straight and taut, nesting with secondary framing to hold insulation in place.
 2. **Sound-Absorption Insulation:** Where sound-absorption requirement is indicated for metal liner panels, cover insulation with polyethylene film and provide inserts of wire mesh to form acoustical spacer grid.
- D. **Board Wall Insulation:** Extend board insulation in thickness indicated to cover entire wall. Hold in place by metal wall panels fastened to secondary framing. Comply with manufacturers' written instructions.
1. **Retainer Strips:** Install retainer strips at each longitudinal insulation joint, straight and taut, nesting with secondary framing to hold insulation in place.
- 3.10 **DOOR AND FRAME INSTALLATION**
- A. **General:** Install doors and frames plumb, rigid, properly aligned, and securely fastened in place according to manufacturers' written instructions. Coordinate installation with wall flashings and other components. Seal perimeter of each doorframe with elastomeric sealant used for metal wall panels.

- B. Personnel Doors and Frames: Install doors and frames according to SDI A250.8. Fit non-fire-rated doors accurately in their respective frames, with the following clearances:
1. Between Doors and Frames at Jambs and Head: **1/8 inch (3 mm)**.
 2. Between Edges of Pairs of Doors: **1/8 inch (3 mm)**.
 3. At Door Sills with Threshold: **3/8 inch (9.5 mm)**.
 4. At Door Sills without Threshold: **3/4 inch (19.1 mm)**.
 5. At fire-rated openings, install frames according to, and doors with clearances specified in, NFPA 80.
- C. Sliding Service Doors: Bolt support angles to opening head members through factory-punched holes. Bolt door tracks to support angles at maximum **24 inches (610 mm)** o.c. Set doors and operating equipment with necessary hardware, jamb and head mold stops, continuous hood flashing, anchors, inserts, hangers, and equipment supports.
- D. Field Glazing: Comply with installation requirements in Section 088000 "Glazing."
- E. Retain paragraph below if hardware is not specified.
- F. Door Hardware: Mount units at heights indicated in DHI's "Recommended Locations for Architectural Hardware for Standard Steel Doors and Frames."
1. Install surface-mounted items after finishes have been completed on substrates involved.
 2. Set units level, plumb, and true to line and location. Adjust and reinforce attachment substrates as necessary for proper installation and operation.
 3. Drill and countersink units that are not factory prepared for anchorage fasteners. Space fasteners and anchors according to industry standards.
 4. Set thresholds for exterior doors in full bed of butyl-rubber sealant complying with requirements specified in Section 079200 "Joint Sealants."

3.11 WINDOW INSTALLATION

- A. General: Install windows plumb, rigid, properly aligned, without warp or rack of frames or sash, and securely fasten in place according to manufacturer's written instructions. Coordinate installation with wall flashings and other components. Seal perimeter of each window frame with elastomeric sealant used for metal wall panels.
1. Separate dissimilar materials from sources of corrosion or electrolytic action at points of contact with other materials by complying with requirements specified in AAMA/WDMA/CSA 101/I.S.2/A440.
- B. Set sill members in bed of sealant or with gaskets, as indicated, for weathertight construction.
- C. Install windows and components to drain condensation, water penetrating joints, and moisture migrating within windows to the exterior.

- D. Mount screens directly to frames with tapped screw clips.
- E. Field Glazing: Comply with installation requirements in Section 088000 "Glazing."

3.12 ACCESSORY INSTALLATION

- A. General: Install accessories with positive anchorage to building and weathertight mounting, and provide for thermal expansion. Coordinate installation with flashings and other components.
 - 1. Install components required for a complete metal roof panel assembly, including trim, copings, ridge closures, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items.
 - 2. Install components for a complete metal wall panel assembly, including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items.
 - 3. Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with corrosion-resistant coating, by applying rubberized-asphalt underlayment to each contact surface, or by other permanent separation as recommended by manufacturer.
- B. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.
 - 1. Install exposed flashing and trim that is without excessive oil-canning, buckling, and tool marks and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and to result in waterproof and weather-resistant performance.
 - 2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of **10 feet (3 m)** with no joints allowed within **24 inches (600 mm)** of corner or intersection. Where lapped or bayonet-type expansion provisions cannot be used or would not be sufficiently weather resistant and waterproof, form expansion joints of intermeshing hooked flanges, not less than **1 inch (25 mm)** deep, filled with mastic sealant (concealed within joints).
- C. Gutters: Join sections with riveted-and-soldered or lapped-and-sealed joints. Attach gutters to eave with gutter hangers spaced as required for gutter size, but not more than **36 inches (914 mm)** o.c. using manufacturer's standard fasteners. Provide end closures and seal watertight with sealant. Provide for thermal expansion.
- D. Downspouts: Join sections with **1-1/2-inch (38-mm)** telescoping joints. Provide fasteners designed to hold downspouts securely **1 inch (25 mm)** away from walls; locate fasteners at top and bottom and at approximately **60 inches (1524 mm)** o.c. in between.

1. Provide elbows at base of downspouts to direct water away from building.
 2. Tie downspouts to underground drainage system indicated.
- E. Circular Roof Ventilators: Set ventilators complete with necessary hardware, anchors, dampers, weather guards, rain caps, and equipment supports. Mount ventilators on flat level base. Install preformed filler strips at base to seal ventilator to metal roof panels.
- F. Continuous Roof Ventilators: Set ventilators complete with necessary hardware, anchors, dampers, weather guards, rain caps, and equipment supports. Join sections with splice plates and end-cap skirt assemblies where required to achieve indicated length. Install preformed filler strips at base to seal ventilator to metal roof panels.
- G. Louvers: Locate and place louver units level, plumb, and at indicated alignment with adjacent work.
1. Use concealed anchorages where possible. Provide brass or lead washers fitted to screws where required to protect metal surfaces and to make a weathertight connection.
 2. Provide perimeter reveals and openings of uniform width for sealants and joint fillers.
 3. Protect galvanized- and nonferrous-metal surfaces from corrosion or galvanic action by applying a heavy coating of corrosion-resistant paint on surfaces that will be in contact with concrete, masonry, or dissimilar metals.
 4. Install concealed gaskets, flashings, joint fillers, and insulation as louver installation progresses, where weathertight louver joints are required. Comply with Section 079200 "Joint Sealants" for sealants applied during louver installation.
- H. Roof Curbs: Install curbs at locations indicated on Drawings. Install flashing around bases where they meet metal roof panels.
- I. Pipe Flashing: Form flashing around pipe penetration and metal roof panels. Fasten and seal to panel as recommended by manufacturer.

3.13 FIELD QUALITY CONTROL

- A. Special Inspections: **[Owner will engage] [Engage]** a qualified special inspector to perform the following special inspections:
1. Inspection of fabricators.
 2. Steel construction.
 3. **<Insert special inspections>**.
- B. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections.
- C. Tests and Inspections:

1. High-Strength, Field-Bolted Connections: Connections shall be[**tested and**] inspected during installation according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts."
2. Welded Connections: In addition to visual inspection, field-welded connections shall be tested and inspected according to AWS D1.1/D1.1M and the following inspection procedures, at inspector's option:
 - a. Liquid Penetrant Inspection: ASTM E 165.
 - b. Magnetic Particle Inspection: ASTM E 709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration will not be accepted.
 - c. Ultrasonic Inspection: ASTM E 164.
 - d. Radiographic Inspection: ASTM E 94.

D. Product will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports.

3.14 ADJUSTING

- A. Doors: After completing installation, test and adjust doors to operate easily, free of warp, twist, or distortion.
- B. Door Hardware: Adjust and check each operating item of door hardware and each door to ensure proper operation and function of every unit. Replace units that cannot be adjusted to operate as intended.
- C. Windows: Adjust operating sashes and ventilators, screens, hardware, and accessories for a tight fit at contact points and at weather stripping to ensure smooth operation and weathertight closure. Lubricate hardware and moving parts.
- D. [**Roof Ventilators**] [**and**] [**Adjustable Louvers**]: After completing installation, including work by other trades, lubricate, test, and adjust units to operate easily and be free of warp, twist, or distortion as needed to provide fully functioning units.
 1. Adjust louver blades to be weathertight when in closed position.

3.15 CLEANING AND PROTECTION

- A. Repair damaged galvanized coatings on galvanized items with galvanized repair paint according to ASTM A 780 and manufacturer's written instructions.
- B. Remove and replace glass that has been broken, chipped, cracked, abraded, or damaged during construction period.
- C. Touchup Painting: After erection, promptly clean, prepare, and prime or reprime field connections, rust spots, and abraded surfaces of prime-painted structural framing[, **bearing plates,**] and accessories.

1. Clean and prepare surfaces by SSPC-SP 2, "Hand Tool Cleaning," or by SSPC-SP 3, "Power Tool Cleaning."
 2. Apply a compatible primer of same type as shop primer used on adjacent surfaces.
- D. Touchup Painting: Cleaning and touchup painting are specified in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."
- E. Metal Panels: Remove temporary protective coverings and strippable films, if any, as metal panels are installed. On completion of metal panel installation, clean finished surfaces as recommended by metal panel manufacturer. Maintain in a clean condition during construction.
1. Replace metal panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.
- F. Doors and Frames: Immediately after installation, sand rusted or damaged areas of prime coat until smooth and apply touchup of compatible air-drying primer.
1. Immediately before final inspection, remove protective wrappings from doors and frames.
- G. Windows: Clean metal surfaces immediately after installing windows. Avoid damaging protective coatings and finishes. Remove excess sealants, glazing materials, dirt, and other substances. Clean factory-glazed glass immediately after installing windows.
- H. Louvers: Clean exposed surfaces that are not protected by temporary covering, to remove fingerprints and soil during construction period. Do not let soil accumulate until final cleaning.
1. Restore louvers damaged during installation and construction period so no evidence remains of corrective work. If results of restoration are unsuccessful, as determined by DEN Project Manager, remove damaged units and replace with new units.
 - a. Touch up minor abrasions in finishes with air-dried coating that matches color and gloss of, and is compatible with, factory-applied finish coating.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 133419

SECTION 133423 - FABRICATED STRUCTURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes prefabricated **[steel]** **[aluminum]** control booths.
- B. Related Sections:
 - 1. Section 033000 "Cast-in-Place Concrete" for installing anchor bolts.
 - 2. Section 055000 "Metal Fabrications" for pipe bollards to protect control booths.
- C. ADA-ABA Accessibility Guidelines: U.S. Architectural & Transportation Barriers Compliance Board's "Americans with Disabilities Act (ADA) Accessibility Guidelines for Buildings and Facilities; Architectural Barriers Act (ABA) Accessibility Guidelines."
- D. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Control booths shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated according to **[ASCE/SEI 7]** **<Insert requirement>**:
 - 1. Dead Loads: **<Insert loads>**.
 - 2. Live Loads: **<Insert loads>**.
 - 3. Roof Loads: **<Insert loads>**.
 - 4. Snow Loads: **<Insert loads>**.
 - 5. Seismic Loads: **<Insert loads>**.
 - 6. Wind Loads: **<Insert loads>**.
 - 7. **<Insert loads or load combinations>**.
 - 8. Deflection Limits: Design framing system to withstand design loads without deflections greater than the following:
 - a. **<Insert deflection limits>**.

- B. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 - 1. Temperature Change (Range): [120 deg F (67 deg C), **ambient**; 180 deg F (100 deg C)] <Insert temperature range>, material surfaces.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for control booths.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For control booths. Include plans, elevations, sections, details, and attachments to other work.
- C. Samples for Initial Selection: For control booths with factory-applied color finishes.
- D. Samples for Verification: For exposed finishes, in manufacturer's standard sizes.
- E. Delegated-Design Submittal: For control booths indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.5 INFORMATIONAL SUBMITTALS

- A. Welding certificates.
- B. Warranty: Sample of special warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For control booths to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel according to the following:
 - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 - 2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
 - 3. AWS D1.3, "Structural Welding Code - Sheet Steel."

- B. Regulatory Requirements: Comply with applicable provisions in **[the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines]** **[and]** **[ICC/ANSI A117.1]**.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Safety Glazing Products: Category II materials complying with testing requirements in 16 CFR 1201.
 - 1. Subject to compliance with requirements, obtain safety glazing products permanently marked with certification label of **[SGCC or another certification agency]** **[or]** **[manufacturer]** acceptable to authorities having jurisdiction.
- E. Preinstallation Conference: Conduct conference at **[Project site]** **[location and time as determined by DEN Project Manager]**<Insert location>.

1.8 COORDINATION

- A. Coordinate installation of anchorages for control booths. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

1.9 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair finish or replace wall panels that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: Minimum **[five (5)]** <Insert number> years from date of Substantial Completion.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Aluminum: Alloy and temper recommended by aluminum producer and manufacturer for type of use and finish indicated, and as follows:

1. Sheet: **ASTM B 209** (ASTM B 209M).
 2. Extruded Shapes: **ASTM B 221** (ASTM B 221M).
 3. Rolled Tread Plate: ASTM B 632/B 632M, Alloy 6061-T4 or Alloy 6061-T6.
- B. Zinc-Coated (Galvanized) Steel Sheet: ASTM A 653/A 653M, commercial quality, **G90** (Z275) coating designation; mill phosphatized.
- C. Galvanized, Rolled Steel Tread Plate: ASTM A 786/A 786M, rolled from steel plate complying with ASTM A 572/A 572M, Grade **55** (380); hot-dip galvanized according to ASTM A 123/A 123M.
- D. Steel Structural Tubing: ASTM A 500, Grade B.
- E. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.
- F. Steel Mechanical Tubing: ASTM A 513, welded steel mechanical tubing.
- G. Zinc-Coated (Galvanized) Steel: Hot-dip galvanized according to ASTM A 123/A 123M.
- H. Stainless-Steel Sheet: ASTM A 666, Type 304.
- I. Plastic Laminate: NEMA LD 3, HGS or HGL grade.
- J. Plywood: DOC PS 1, Exterior grade.
- K. Particleboard: ANSI A208.1, Grade M-2.
- L. Clear Float Glass: ASTM C 1036, Type I, Class 1, Quality q3.
- M. Clear Tempered Float Glass: ASTM C 1048, Kind FT, Condition A, Type I, Class 1, and Quality q3.
- N. Insulating Glass: Units complying with ASTM E 774 for Class CBA and consisting of two lites of 2.5-mm-thick clear float glass and dehydrated air space, with a total overall unit thickness of **7/16 inch** (11 mm) and with manufacturer's standard dual seal.
- O. Ballistics-Resistant Glazing: Comply with requirements specified in Section 088000 "Glazing."
- P. Anchorages: Anchor bolts; [**hot-dip galvanized according to ASTM A 153/A 153M or ASTM F 2329**] [**stainless steel**].
- 2.2 PREFABRICATED CONTROL BOOTHS, GENERAL
- A. General: Provide a complete, integrated set of mutually dependent components that form a completely assembled, prefabricated control booth, ready for installation on Project site.

1. Building Style: **[Standard square corners]** **[Radius corners]** **[Round corners]** **[Butt-glazed corners]** **[Wraparound type, with single rounded building end]** **[Wraparound type, with both building ends rounded]** **[As indicated on Drawings]**.
 2. Doors: **[Sliding door on one side]** **[Sliding doors on both sides]** **[Swinging door on back]** **[As indicated on Drawings]**.
- B. Windows: Extruded-aluminum sash frames glazed with **[6-mm-thick, clear tempered glass]** **[clear insulating glass]** **[ballistics-resistant glazing, UL 752 Level <Insert number>]**.
1. Frame Finish: **[Mill]** **[Clear anodic]**.
 2. Provide insect screens for each operable window.
 3. Provide galvanized-steel security screens for each window.
 4. Corner Shape: **[Square]** **[Round]**.
- C. Horizontal Sliding Windows: Extruded-aluminum sash frames glazed with 3-mm-thick, clear tempered float glass. Equip windows with cam locks, weather stripping, and **[stainless-steel]** **[nylon]** ball-bearing rollers.
1. Frame Finish: **[Mill]** **[Clear anodic]**.
 2. Provide insect screens for each operable window.
 3. Corner Shape: **[Square]** **[Round]**.
- D. Work Counters: Full width of control booth, reinforced; with **16-inch-** (406-mm-) wide **[storage]** **[cash]** drawer below each counter, and an access opening for electrical cords at **[each]** rear corner of counter.
1. Material: **[0.078-inch-** (1.98-mm-) **thick, stainless-steel sheet]** **[0.079-inch** (2.01-mm) **nominal-thickness, galvanized-steel sheet]** **[1/2-inch-** (13-mm-) **thick particleboard with plastic-laminate finish]**.
 2. Depth: **[22 inches** (559 mm)] **[20 inches** (508 mm)] **[18 inches** (457 mm)].
- E. Electrical Power Service: 125-A, 120/240-V ac, single-phase, three-wire **[load center, with no fewer than four open circuits]** **[service with 8-16 circuit-breaker panel]**; located under one end of work counter. Run copper wiring in **1/2-inch** (13-mm) EMT conduit.
1. Provide **[one]** **<Insert number>** 120-V **[ground-fault circuit interrupter (GFCI)]** power receptacle(s).
- F. Lighting Fixtures: **[One]** **[Two]** ceiling-mounted fluorescent lighting fixture(s), **48 inches** (1219 mm) long, with acrylic lens and two 40-W lamps **[in each fixture]**. Provide single-pole switch mounted adjacent to door to control lighting fixture.
- G. Heating Unit: **[Wall]** **[Roof]**-mounted, thermostatically controlled, 110-V, 1500-W electric heater with fan-forced operation and with capacity of not less than **5000 Btu/h** (1465 W). Enclose in enameled-steel cabinet **[and mount under work counter]**.

- H. Cooling Unit: **[Wall] [Roof]**-mounted, thermostatically controlled air conditioner with cooling capacity of not less than **[13,500 Btu/h (3956 W)] <Insert value>**. Enclose in enameled-steel cabinet.
- I. Accessories: Provide the following for each control booth:
 - 1. Antifatigue mats.
 - 2. Exterior stainless-steel counter.
 - 3. **[Floor] [Wall-mounted]** safe.
 - 4. Signage: **<Insert requirements>**.
 - 5. Ventilation fan.
 - 6. Intercom.
 - 7. Traffic control lights.

2.3 PREFABRICATED STEEL CONTROL BOOTHS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. AustinMohawk and Company, Inc.
 - 2. B.I.G. Enterprises, Inc.
 - 3. Canada Kiosk; an NRB company.
 - 4. Delta Scientific Corporation.
 - 5. Keystone Structures, Inc.
 - 6. Little Buildings, Inc.
 - 7. Mardan Fabricators.
 - 8. Parking Booth Company, Inc.
 - 9. Par-Kut International, Inc.
 - 10. Porta-King Building Systems.
 - 11. **<Insert manufacturer's name>**.
 - 12. or approved equal.
- B. Structural Framework: Fabricated from **2-by-2-by-0.075-inch** (50-by-50-by-1.90-mm) steel structural or mechanical tubing. Connect framework by welding.
- C. Base/Floor Assembly: **[4-inch- (102-mm-)] [3-inch- (76-mm-)]** high assembly consisting of perimeter frame welded to structural framework of booth. Fabricate frame from **2-by-4-inch** (51-by-102-mm) galvanized-steel structural tubing; **0.108-inch** (2.74-mm) nominal-thickness, C-shaped, galvanized-steel sheet channels; or galvanized structural-steel angles. Include anchor clips fabricated from **1/4-inch-** (6-mm-) thick galvanized-steel plate, predrilled and welded to exterior of integral floor frame.
 - 1. Finished Floor: **0.108-inch** (2.74-mm) nominal-thickness, galvanized, rolled steel tread plate.
 - 2. Subfloor and Finished Floor: Assembly consisting of **0.079-inch** (2.01-mm) nominal-thickness, galvanized-steel sheet underside with rigid insulation core; covered by **0.125-inch-** (3.18-mm-) thick, aluminum rolled tread plate; with overall assembly thickness of **2 inches** (51 mm).

3. Subfloor and Finished Floor: Assembly consisting of **[one]** **[two]** layer(s) of **3/4-inch-** (19-mm-) thick plywood or oriented strand board with **[0.125-inch-** (3.18-mm-) **thick, aluminum rolled tread plate]** **[vinyl composition flooring]** **[carpeting]**.
- D. Base/Floor Assembly: No perimeter frame, with finished floor fabricated from **0.108-inch** (2.74-mm) nominal-thickness, galvanized, rolled steel tread plate.
- E. Base/Floor Assembly: No perimeter frame, with surface of supporting concrete base as finished floor.
- F. Wall Panel Assembly: Assembly consisting of exterior face panel fabricated from **0.079-inch** (2.01-mm) nominal-thickness, galvanized-steel sheet; and interior face panel fabricated from **[0.064-inch** (1.63-mm)] **[0.052-inch** (1.32-mm)] nominal-thickness, galvanized-steel sheet; with **[2-inch-** (51-mm-)] **[3-inch-** (76-mm-)] **<Insert dimension>** thick, rigid fiberglass or polystyrene board insulation in cavity between exterior and interior face panels.
 1. Thermal Resistance Value (R-Value): **[R-7]** **<Insert R-value>**.
- G. Flat Roof/Ceiling Assembly: Consisting of exterior roof panels, interior ceiling panels, and insulation between exterior and interior panels; sloped to drain at booth perimeter.
 1. Exterior Roof Panel: Fabricated from **[0.079-inch** (2.01-mm)] **[0.064-inch** (1.63-mm)] nominal-thickness, galvanized-steel sheet; with **[painted finish]** **[EPDM membrane]**, continuously welded seams, and full-perimeter gutter.
 2. Interior Ceiling Panel: Fabricated from **0.079-inch** (2.01-mm) nominal-thickness, galvanized-steel sheet; with fiberglass insulation in cavity between ceiling and roof.
 - a. Thermal Resistance Value (R-Value): **[R-17]** **<Insert R-value>**.
 3. Insulated Exterior/Interior Panel: Fabricated from **[0.028-inch** (0.71-mm) **nominal-thickness, galvanized-steel]** **[0.032-inch-** (0.81-mm-) **thick, aluminum]** sheet faces and expanded-foam insulation core.
 - a. Thermal Resistance Value (R-Value): **[R-17]** **<Insert R-value>**.
 4. Canopy Fascia: Fabricated from **0.079-inch** (2.01-mm) nominal-thickness, galvanized-steel sheet, of **[manufacturer's standard design]** **[custom design indicated on Drawings]**.
 - a. Height: **[6 inches** (152 mm)] **[8 inches** (203 mm)] **<Insert dimension>**.
 - b. Overhang: **[3 inches** (76 mm) **beyond]** **[<Insert dimension> beyond]** **[Flush with]** face of walls below.
 5. Downspouts: Integral, extending **3 inches** (76 mm) beyond booth walls.
 6. Roof scuppers.
 7. Rooftop finial.

- H. Sliding Door: Top suspended from aluminum track with ball-bearing rollers; **1-3/4 inches** (44 mm) thick; tubular-frame design fabricated from **[clear-anodized aluminum] [galvanized steel]**; with top half of door glazed. Equip door with deadlock, lock support, guide hardware, and full weather stripping.
1. Glazing: **[Fixed] [Horizontal sliding]** unit with 6-mm-thick, clear tempered float glass.
 2. Deadlock: Mortised, laminated-hook bolt type with removable cylinder capable of being master keyed.
- I. Swinging Door: **1-3/4 inches** (44 mm) thick; tubular-frame design fabricated from **[clear-anodized aluminum] [galvanized steel]**; with top half of door glazed. Equip door with deadlock, three butt hinges, closer, and full weather stripping.
1. Glazing: **[Fixed] [Horizontal sliding]** unit with 6-mm-thick, clear tempered float glass.
 2. Deadlock: Mortised, with lever handle and removable cylinder capable of being master keyed.
- J. Finish: Finish exposed metal surfaces, including structural framework, walls, canopy, and ceiling with rust-inhibitive primer and one finish coat of industrial air-dry **[acrylic] [polyurethane]** enamel.
1. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range]**.

2.4 PREFABRICATED ALUMINUM CONTROL BOOTHS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. AustinMohawk and Company, Inc.
 2. Keystone Structures, Inc.
 3. Mardan Fabricators.
 4. Portafab Corporation.
 5. Porta-King Building Systems.
 6. Starrco.
 7. **<Insert manufacturer's name>**.
 8. or approved equal.
- B. Structural Framework: Fabricated from **2-by-2-by-0.125-inch** (51-by-51-by-3.18-mm) aluminum tubing, channel, angle, or tee extrusions; with **[clear] [color]** anodic finish. Connect framework with **[exposed]** mechanical fasteners.
- C. Base/Floor Assembly: **4-inch-** (102-mm-) high assembly consisting of perimeter frame welded to structural framework of booth. Fabricate frame from **2-by-4-by-0.125-inch** (51-by-102-by-3.18-mm) aluminum tubing or aluminum angles. Include anchor clips

fabricated from **1/4-inch-** (6-mm-) thick aluminum, predrilled and welded to exterior of integral floor frame.

1. Subfloor and Finished Floor: Assembly consisting of **0.032-inch-** (0.81-mm-) thick, aluminum sheet underside, plywood and rigid insulation core; covered by **0.125-inch-** (3.18-mm-) thick, aluminum rolled tread plate; with overall assembly thickness of **2 inches** (51 mm).
 2. Subfloor and Finished Floor: Assembly consisting of **[one] [two]** layer(s) of **3/4-inch-** (19-mm-) thick plywood or oriented strand board with **[0.125-inch-** (3.18-mm-) **thick, aluminum rolled tread plate] [vinyl composition flooring] [carpeting]**.
- D. Base/Floor Assembly: No perimeter frame, with surface of supporting concrete base as finished floor.
- E. Wall Panel Assembly: Assembly consisting of exterior face panel fabricated from **[0.032-inch-** (0.81-mm-)] **[0.063-inch-** (1.60-mm-)] thick aluminum sheet, and interior face panel fabricated from **[0.032-inch-** (0.81-mm-)] **[0.050-inch-** (1.27-mm-)] thick aluminum sheet; with **2-inch-** (51-mm-) thick, polystyrene or polyisocyanurate board insulation in cavity between exterior and interior face panels.
1. Thermal Resistance Value (R-Value): **[R-7] <Insert R-value>**.
- F. Flat Roof/Ceiling Assembly: Consisting of exterior roof panels, interior ceiling panels, and insulation between exterior and interior panels; sloped to drain at booth perimeter.
1. Exterior Roof Panel: Fabricated from **0.032-inch-** (0.81-mm-) thick aluminum sheet with protective plastic sheet finish and full-perimeter gutter.
 2. Interior Ceiling Panel: Fabricated from **0.125-inch-** (3.18-mm-) thick hardboard; with polyisocyanurate board insulation in cavity between ceiling and roof.
 - a. Thermal Resistance Value (R-Value): **[R-19] <Insert R-value>**.
 3. Insulated Exterior/Interior Panel: Fabricated from **[0.032-inch-** (0.81-mm-) **thick, aluminum] [0.021-inch** (0.53-mm) **nominal-thickness, galvanized-steel]** sheet faces and expanded-foam insulation core.
 - a. Thermal Resistance Value (R-Value): **[R-19] <Insert R-value>**.
 4. Canopy Fascia: Fabricated from **0.063-inch-** (1.60-mm-) thick aluminum sheet, of **[manufacturer's standard design] [custom design indicated on Drawings]**.
 - a. Height: **[6 inches** (152 mm) **] [8 inches** (203 mm) **] <Insert dimension>**.
 - b. Overhang: **[3 inches** (76 mm) **beyond] [<Insert dimension> beyond] [Flush with]** face of walls below.
 5. Downspouts: Integral, extending **3 inches** (76 mm) beyond booth walls.
 6. Roof scuppers.
 7. Rooftop finial.

- G. Sliding Door: Top suspended from aluminum track with ball-bearing rollers; **1-3/4 inches** (44 mm) thick; tubular-frame design fabricated from aluminum matching exterior and interior wall panels; with top half of door glazed and with extruded-aluminum door frame. Equip door with deadlock, lock support, guide hardware, and full weather stripping.
1. Glazing: **[Fixed] [Horizontal sliding]** unit with 6-mm-thick, clear tempered float glass.
 2. Deadlock: Mortised, laminated-hook bolt type with removable cylinder capable of being master keyed.
- H. Swinging Door: **1-3/4 inches** (44 mm) thick; tubular-frame design fabricated from aluminum matching exterior and interior wall panels; with top half of door glazed and with extruded-aluminum doorframe. Equip door with deadlock, three butt hinges, closer, and full weather stripping.
1. Glazing: **[Fixed] [Horizontal sliding]** unit with 6-mm-thick, clear tempered float glass.
 2. Deadlock: Mortised, with lever handle and removable cylinder capable of being master keyed.
- I. Finish: Finish exposed metal surfaces, including structural framework, walls, canopy, and ceiling with **[clear anodizing] [color anodizing] [baked enamel or powder coat]**.
1. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range]**.

2.5 FABRICATION

- A. Fabricate control booths completely in factory.
- B. Preglaze windows and doors at factory.
- C. Prewire control booths at factory, ready for connection to service at Project site.
- D. Fabricate control booths with **[forklift pockets in base of booth] [removable lifting eye centered in roof]**.
- E. Accessible Control Booths: Where indicated to be accessible, fabricate control booths as follows:
1. Provide service windows located no higher than **34 inches** (865 mm) above exterior grade.
 2. Provide door opening with minimum **32-inch** (813-mm) clear width.
 3. Provide minimum **60-inch** (1525-mm) clear turning spacing within the booth.
 4. Provide minimum **27-inch** (685-mm) clearance beneath interior work surfaces. Locate work surfaces **28 inches** (710 mm) minimum and **34 inches** (865 mm) maximum above the floor.

5. Locate controls and operable parts no lower than **15 inches** (381 mm) and no higher than **48 inches** (1219 mm) above the floor where reach is unobstructed. Where side reach is obstructed, locate controls and operable parts no lower than **15 inches** (381 mm) and no higher than **46 inches** (1219 mm) above the floor.

2.6 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.7 FINISHES

- A. **[Steel] [and] [Galvanized-Steel]** Factory Finish: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat.
 1. Color and Gloss: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and gloss>**.

2.8 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, **[AA-M12C22A41, Class I, 0.018 mm] [AA-M12C22A31, Class II, 0.010 mm]** or thicker.
- B. Color Anodic Finish: AAMA 611, **[AA-M12C22A42/A44, Class I, 0.018 mm] [AA-M12C22A32/A34, Class II, 0.010 mm]** or thicker.
 1. Color: **[Light bronze] [Medium bronze] [Dark bronze] [Black] <Insert color>**.
 2. Color: **[Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors and color densities]**.
- C. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of **1.5 mils** (0.04 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
 1. Color and Gloss: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and gloss>**.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install control booths according to manufacturer's written instructions.
- B. Accessible Control Booths: Install with interior floor surface at same elevation as adjacent paved surfaces.
- C. Set control booths plumb and aligned. Level baseplates true to plane with full bearing on concrete bases.
- D. Fasten control booths securely to **[cast-in anchor bolts] [concrete bases with expansion anchors]**.
- E. Connect electrical power service to power distribution system.

3.3 ADJUSTING

- A. Adjust doors, operable windows, and hardware to operate smoothly, easily, properly, and without binding. Confirm that locks engage accurately and securely without forcing or binding.
- B. Lubricate hardware and other moving parts.
- C. After completing installation, inspect exposed finishes and repair damaged finishes.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 133423

SECTION 142100 - ELECTRIC TRACTION ELEVATORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes electric traction [**passenger**] [**and**] [**service**] elevators.
- B. Related Requirements:
 - 1. Section 015210 "Temporary Facilities" for temporary use of elevators for construction purposes.
 - 2. Section 033000 "Cast-in-Place Concrete" for setting sleeves, inserts, and anchoring devices in concrete.
 - 3. Section 042000 "Unit Masonry" for setting sleeves, inserts, and anchoring devices in masonry and for grouting elevator entrance frames installed in masonry walls.
 - 4. Section 051200 "Structural Steel Framing" for the following:
 - a. Attachment plates, angle brackets, and other preparation of structural steel for fastening guide-rail brackets.
 - b. Divider beams.
 - c. Hoist beams.
 - d. Structural-steel shapes for subsills.
 - 5. Section 055000 "Metal Fabrications" for the following:
 - a. Attachment plates and angle brackets for supporting guide-rail brackets.
 - b. Divider beams.
 - c. Hoist beams.
 - d. Structural-steel shapes for subsills.
 - e. Pit ladders.
 - f. Cants in hoistways made from steel sheet.
 - 6. Section 055213 "Pipe and Tube Railings" for railings between adjacent elevator pits.
 - 7. Section 057000 "Decorative Metal" for combination hall push-button stations.
 - 8. Section 099113 "Exterior Painting" for field painting of hoistway entrance doors and frames.
 - 9. Section 099123 "Interior Painting" for field painting of hoistway entrance doors and frames.

10. <Insert Section number>-<Insert Section title> for finish flooring in elevator cars.
11. Section 142113 "Electric Traction Freight Elevators" for electric traction elevators used primarily for carrying freight and inaccessible to the general public.
12. Section 221429 "Sump Pumps" for sump pumps, sumps, and sump covers in elevator pits.
13. Section 271500 "Communications Horizontal Cabling" for telephone service for elevators[**and for Internet connection to elevator controllers for remote monitoring of elevator performance**].
14. [Section 283111 "Digital, Addressable Fire-Alarm System"] [Section 283112 "Zoned (DC Loop)] Fire-Alarm System" for smoke detectors in elevator lobbies to initiate emergency recall operation[**and heat detectors in shafts and machine rooms to disconnect power from elevator equipment before sprinkler activation**] and for connection to elevator controllers.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

Accessibility Guidelines for Buildings and Facilities.

1.4 ALLOWANCES

- A. Elevator Car Allowances: Provide finished passenger[**and service**] elevator cars under the Elevator Car Allowance specified in Section 012100 "Allowances."
Allowance includes furnishing and installing the following:

1. Car wall finishes including trim.
2. Car floor finishes.
3. Car ceiling finishes.
4. Car[**and hoistway**] door finishes.
5. Car doorsills.
6. Car light fixtures.
7. Handrails.
8. Cutouts and other provisions for installing elevator signal equipment in cars.

1.5 DEFINITIONS

- A. Definitions in ASME A17.1/CSA B44 apply to work of this Section.
- B. Service Elevator: A passenger elevator that is also used to carry freight.
- C. Electric Traction Elevators: Elevators in which cars are hoisted by wire ropes using electrically driven traction sheaves and are defined to include driving machines; cars; hoistway doors; guide rails; guide-rail brackets; roping; buffers; counterweights; signals; control systems; electrical wiring within elevator system; and devices for operations, safety, security, required performance at rated speed and capacity, and for complete elevator installation.
1. Counterweight displacement switches, seismic switch, and other elevator safety equipment required by the "Code" for seismic risk zone 2 or greater are included.
- D. Defective Elevator Work: Operation or control system failures; performances below specified ratings; excessive wear; unusual deterioration or aging of materials or finishes; unsafe conditions; the need for excessive maintenance; abnormal noise or vibration; and similar unusual, unexpected, and unsatisfactory conditions.

1.6 ACTION SUBMITTALS

- A. Product Data: Include capacities, sizes, performances, operations, safety features, finishes, and similar information. Include product data for car enclosures, hoistway entrances, and operation, control, and signal systems.
1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings:

1. Include plans, elevations, sections, and large-scale details indicating service at each landing, machine room layout, coordination with building structure, relationships with other construction, and locations of equipment.
2. Indicate variations from specified requirements, maximum dynamic and static loads imposed on building structure at points of support, locations of equipment and signals, and maximum and average power demands.
3. Include large-scale layout of car-control station[**and standby power operation control panel**].

C. Samples for Initial Selection: For finishes involving color selection.

D. Samples for Verification: For exposed car, hoistway door and frame, and signal equipment finishes; **3-inch**- (75-mm-) square Samples of sheet materials; and **4-inch** (100-mm) lengths of running trim members.

1.7 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Seismic Qualification Certificates: For elevator equipment, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

C. Manufacturer Certificates: Signed by elevator manufacturer certifying that hoistway, pit, and **[machine room] [control closet]** layout and dimensions, as shown on Drawings, and electrical service[**including standby power generator**], as shown and specified, are adequate for elevator system being provided.

D. Sample Warranty: For special warranty.

1.8 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For elevators to include in emergency, operation, and maintenance manuals.

1. In addition to items specified in Section 017823 "Operation and Maintenance Data," include diagnostic and repair information available to manufacturer's and Installer's maintenance personnel.

B. Inspection and Acceptance Certificates and Operating Permits: As required by authorities having jurisdiction for normal, unrestricted elevator use.

- C. Manufacturer shall furnish a letter stating all components are designed by an Engineer and are suitable for the intended purpose.
- D. Signage
- E. Maintenance manuals for each different electric traction elevator, including operation and maintenance instructions, parts listing with sources indicated, recommended parts inventory listing, emergency instructions, and similar information. Include all diagnostic and repair information available to manufacturer's and Installer's maintenance personnel. Submit for Owner's information at project closeout as specified in Division 01.
- F. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.9 MAINTENANCE SERVICE

- A. Initial Maintenance Service: Beginning at Substantial Completion, provide 12 months' full maintenance service by skilled, competent employees of the elevator Installer. Include monthly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper elevator operation at rated speed and capacity. Use parts and supplies as used in the manufacture and installation of original equipment.
 - 1. Perform maintenance, including emergency callback service, during normal working hours.
 - 2. Include 24-hour-per-day, 7-day-per-week emergency callback service.
 - 3. Response Time: 1 hour or less.
- B. Continuing Maintenance Proposal: Submit a continuing maintenance proposal from Installer to DEN Project Manager, in the form of a standard [**one-year**] [**two-year**] [**five-year**] <Insert agreement period> maintenance agreement, starting on date initial maintenance service is concluded. State services, obligations, conditions, and terms for agreement period and for future renewal options.

1.10 QUALITY ASSURANCE

- A. Installer Qualifications: Engage the elevator manufacturer or an experienced Installer approved by the elevator manufacturer who has completed elevator installations similar in material, design, and extent to that indicated for this Project and with a record of successful in-service performance.
- B. Regulatory Requirements: In addition to local governing regulations, comply with the applicable provisions of the following:
 - 1. ASME A17.1, "Safety Code for Elevators and Escalators," referred to as the "Code."

1.11 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle materials, components, and equipment in manufacturer's protective packaging. Store materials, components, and equipment off ground, under cover, and in a dry location.

1.12 COORDINATION

- A. Coordinate installation of sleeves, block outs, elevator equipment with integral anchors, and other items that are embedded in concrete or masonry for elevator equipment. Furnish templates, sleeves, elevator equipment with integral anchors, and installation instructions and deliver to Project site in time for installation.
- B. Coordinate locations and dimensions of other work relating to electric traction elevators including pit ladders; sumps and floor drains in pits; entrance subsills; electrical service; and electrical outlets, lights, and switches in hoistways, pits, and machine rooms.

1.13 WARRANTY

- A. Manufacturer's Standard Warranty: Manufacturer agrees to repair, restore, or replace elevator work that fails in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, operation or control system failure, including excessive malfunctions; performances below specified ratings; excessive wear; unusual deterioration or aging of materials or finishes; unsafe conditions; need for excessive maintenance; abnormal noise or vibration; and similar unusual, unexpected, and unsatisfactory conditions.
 - 2. Warranty Period: Minimum 12 months <Insert number> year(s) from date of Substantial Completion.

1.14 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. ThyssenKrupp
 - 2. Dover Elevator Corp.

3. KONE Inc.
4. Otis Elevator Co.
5. Schindler Elevator Corp.
6. U.S. Elevator.
7. <Insert manufacturer's name>.
8. or approved equal.

B. Source Limitations: Obtain elevators from single manufacturer.

1. Major elevator components, including driving machines, controllers, signal fixtures, door operators, car frames, cars, and entrances, shall be manufactured by single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Comply with ASME A17.1/CSA B44.

B. Accessibility Requirements: Comply with Section 407 in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines and with ICC A117.1.

C. Seismic Performance: Elevator system shall withstand the effects of earthquake motions determined according to [ASCE/SEI 7] <Insert requirement> and shall comply with elevator safety requirements for seismic risk Zone 2 or greater in ASME A17.1/CSA B44.

1. The term "withstand" means "the system will remain in place without separation of any parts when subjected to the seismic forces specified[**and the system will be fully operational after the seismic event**]."
2. Affected peak velocity acceleration (Av) for Project's location is [**less than 0.10 (seismic risk Zones 0 and 1)**] [**greater than or equal to 0.10, but less than 0.20 (seismic risk Zone 2)**] [**greater than or equal to 0.20 (seismic risk Zones 3 and 4)**].
3. Provide earthquake equipment required by ASME A17.1/CSA B44.
4. Provide seismic switch required by ASCE/SEI 7.
5. Design earthquake spectral response acceleration short period (Sds) for Project is <Insert value>.
6. Project Seismic Design Category: [A] [B] [C] [D] [E] [F].
7. Elevator Component Importance Factor: [1.5] [1.0].

2.3 MATERIALS AND COMPONENTS, GENERAL

A. General: Provide manufacturer's standard elevator systems. Where components are not otherwise indicated, provide standard components, published by manufacturer as included in standard preengineered elevator systems and as required for a complete system.

B. Elevator Machines: (Geared) (Gearless) type.

1. At manufacturer's option, provide either variable-voltage, variable-frequency ac-type hoisting machine or variable-voltage dc type.
 2. Where elevator speed is 100 ft./min. (0.5 m/s) or less, provide variable-voltage geared machine.
 3. Where elevator speed is 100 ft./min. (0.5 m/s) or less, provide geared machine with ac-type single-speed or 2-speed motor as indicated.
- C. Power Control: Except as otherwise indicated, where variable voltage is required, provide solid-state power converters for use with motors on elevator machines (ac or dc).
1. Provide line filters or chokes to prevent electrical peaks or spikes from feeding back into building power system from solid-state converters.
- D. Power Supply: (480 V, 60 Hz, 3 phase.) (208 V, 60 Hz, 3 phase.) (240 V, 60 Hz, 2 phase).
- E. Inserts: Furnish required concrete and masonry inserts and similar anchorage devices for installing guide rails, machinery, and other components of elevator work where installation of devices is specified in another Specification Section.
- F. Machine Beams: Provide framing to support the elevator hoisting machine and deflector sheaves from the building structure. Comply with Division 05 for materials and fabrication.
- G. Guide Shoes/Rollers: Provide either sliding shoes or rollers for speeds of 200 ft./min. (1.02 m/s) and less, and rollers for speeds in excess of 200 ft./min. (1.02 m/s).
- H. Car Frame and Platform: Welded steel units.

2.4 ELEVATORS

- A. Elevator System, General: Manufacturer's standard elevator systems. Unless otherwise indicated, manufacturer's standard components shall be used, as included in standard elevator systems and as required for complete system.
- B. Elevator Description:
1. Group Number: **<Insert a different number for each group of elevators that share a group operation system>**.
 2. Elevator Number(s): **<Insert elevator number(s) as shown on Drawings>**.
 3. Emergency Elevator Number(s): **<Insert elevator number(s) as shown on Drawings>**.
 4. Service Elevator Number(s): **<Insert elevator number(s) as shown on Drawings>**.
 5. Machine Location: **[Machine room above hoistway] [Hoistway; no machine room is provided]**.
 6. Machine Type: **[Geared] [Gearless]** traction.

7. Rated Load: [2000 lb (908 kg)] [2100 lb (953 kg)] [2500 lb (1135 kg)] [3000 lb (1362 kg)] [3500 lb (1589 kg)] [4000 lb (1816 kg)] [4500 lb (2043 kg)] [5000 lb (2270 kg)] **<Insert value>**.
8. Freight Loading Class for Service Elevator(s): Class A.
9. Rated Speed: [200 fpm (1.0 m/s)] [350 fpm (1.8 m/s)] [400 fpm (2.0 m/s)] [450 fpm (2.3 m/s)] [500 fpm (2.5 m/s)] [700 fpm (3.6 m/s)] [800 fpm (4.1 m/s)] [1000 fpm (5.1 m/s)] [1200 fpm (6.1 m/s)] [1400 fpm (7.1 m/s)] **<Insert value>**.
10. Operation System: [**Selective-collective automatic operation**] [**Group automatic operation**] [**Group automatic operation with demand-based dispatching**] [**Destination-based group automatic operation**].
11. Auxiliary Operations:
 - a. Standby power operation.
 - b. Standby-powered lowering.
 - c. Battery-powered lowering.
 - d. Earthquake Emergency Operation: Comply with requirements in ASME A17.1/CSA B44.
 - e. Automatic dispatching of loaded car.
 - f. Nuisance call cancel.
 - g. [**Emergency hospital**] [**Priority**] service at [all] **<Insert floor designations>** floors.
 - h. Independent service for [**service elevator**] [**one car in group**] [**all cars in group**].
 - i. Loaded-car bypass.
 - j. Distributed parking.
12. Security Features: [**Card-reader operation**] [**Keyswitch operation**] [**Keypad operation**] [**Car-to-lobby feature**].
13. Dual Car-Control Stations: Provide two car-control stations[**in each elevator**]; equip only one with required keyswitches if any.
14. Car Enclosures:
 - a. Inside Width: [64 inches (1626 mm)] [68 inches (1727 mm)] [80 inches (2032 mm)] [92 inches (2337 mm)] **<Insert dimension>** from sidewall to sidewall.
 - b. Inside Depth: [51 inches (1295 mm)] [53 inches (1346 mm)] [57 inches (1448 mm)] [65 inches (1651 mm)] [87-1/2 inches (2222 mm)] [90 inches (2286 mm)] [93 inches (2362 mm)] [93-1/2 inches (2375 mm)] [96 inches (2438 mm)] [101 inches (2565 mm)] [102 inches (2591 mm)] **<Insert dimension>** from back wall to front wall (return panels).
 - c. Inside Height: [88 inches (2235 mm)] [92 inches (2337 mm)] [94 inches (2388 mm)] [100 inches (2540 mm)] [104 inches (2642 mm)] [108 inches (2743 mm)] [112 inches (2845 mm)] **<Insert dimension>** to underside of ceiling.
 - d. Front Walls (Return Panels): [**Polished stainless steel, No. 8 finish**] [**Satin stainless steel, No. 4 finish**] [**Polished bronze, lacquered**] [**Satin bronze, lacquered**].
 - e. Car Fixtures: [**Polished stainless steel, No. 8 finish**] [**Satin stainless steel, No. 4 finish**] [**Polished bronze, lacquered**] [**Satin bronze, lacquered**].

- f. Side and Rear Wall Panels: [Enameled steel] [Plastic laminate] [Satin stainless steel, No. 4 finish] [Textured stainless steel] [Satin bronze, lacquered].
 - g. Reveals: [Enameled steel] [Polished stainless steel, No. 8 finish] [Satin stainless steel, No. 4 finish] [Polished bronze, lacquered] [Satin bronze, lacquered].
 - h. Door Faces (Interior): [Enameled steel] [Primed steel] [Polished stainless steel, No. 8 finish] [Satin stainless steel, No. 4 finish] [Textured stainless steel] [Polished bronze, lacquered] [Satin bronze, lacquered] [Plastic laminate].
 - i. Doorsills: [Aluminum, mill finish] [Bronze, polished] [Nickel silver, polished].
 - j. Ceiling: [Luminous ceiling] [Polished stainless steel, No. 8 finish] [Satin stainless steel, No. 4 finish] [Polished bronze, lacquered] [Reflective metallic-finish, plastic-laminate, stainless steel] [Reflective metallic-finish, plastic-laminate, bronze].
 - k. Handrails: [1-1/2 inches (38 mm) round] [1/2 by 2 inches (13 by 50 mm) rectangular] <Insert dimension> [mirror-polished stainless steel, No. 8 finish] [satin stainless steel, No. 4 finish] [mirror-polished bronze, lacquered] [satin bronze, lacquered], at [sides] [and] [rear] of car.
 - l. Floor: Manufacturer's standard carpet.
 - m. Floor prepared to receive carpet (specified in Section 096816 "Sheet Carpeting").
 - n. Floor prepared to receive resilient flooring (specified in Section 096500 "Resilient Flooring").
 - o. Floor recessed and prepared to receive [dimension stone tile (specified in Section 093033 "Stone Tiling")] [ceramic tile (specified in Section 093000 "Tiling")].
 - p. Floor Thickness, Including Setting Materials: <Insert thickness> above plywood subfloor.
15. Hoistway Entrances:
- a. Width: [36 inches (914 mm)] [42 inches (1067 mm)] [48 inches (1219 mm)] [54 inches (1372 mm)] <Insert dimension>.
 - b. Height: [84 inches (2134 mm)] [96 inches (2438 mm)] <Insert dimension>.
 - c. Type: [Single-speed side sliding] [Two-speed side sliding] [Single-speed center opening] [Two-speed center opening].
 - d. Frames [at First Floor] [at Basement Floors]: [Enameled steel] [Primed steel] [Polished stainless steel, No. 8 finish] [Satin stainless steel, No. 4 finish] [Polished bronze, lacquered] [Satin bronze, lacquered].
 - e. Frames at Other Floors: [Enameled steel] [Primed steel] [Polished stainless steel, No. 8 finish] [Satin stainless steel, No. 4 finish] [Polished bronze, lacquered] [Satin bronze, lacquered].
 - f. Doors[and Transoms] [at First Floor] [at Basement Floors]: [Enameled steel] [Primed steel] [Polished stainless steel, No. 8 finish] [Satin stainless steel, No. 4 finish] [Textured stainless steel] [Polished bronze, lacquered] [Satin bronze, lacquered] [Plastic laminate].
 - g. Doors[and Transoms] at Other Floors: [Enameled steel] [Primed steel] [Polished stainless steel, No. 8 finish] [Satin stainless steel, No. 4

- finish] [Textured stainless steel] [Polished bronze, lacquered] [Satin bronze, lacquered] [Plastic laminate].
- h. Sills [at First Floor] [at Basement Floors]: [Aluminum, mill finish] [Bronze, polished] [Nickel silver, polished].
 - i. Sills at Other Floors: [Aluminum, mill finish] [Bronze, polished] [Nickel silver, polished].
16. Hall Fixtures [at First Floor] [at Basement Floors]: [Polished stainless steel, No. 8 finish] [Satin stainless steel, No. 4 finish] [Polished bronze, lacquered] [Satin bronze, lacquered] [Recessed type with no exposed-metal surfaces].
17. Hall Fixtures at Other Floors: [Polished stainless steel, No. 8 finish] [Satin stainless steel, No. 4 finish] [Polished bronze, lacquered] [Satin bronze, lacquered] [Recessed type with no exposed-metal surfaces].
18. Additional Requirements:
- a. Provide inspection certificate in each car, mounted under acrylic cover with frame made from [polished stainless steel, No. 8 finish] [satin stainless steel, No. 4 finish] [polished bronze, lacquered] [satin bronze, lacquered].
 - b. Provide hooks for protective pads[in all cars] and [one] [two] <Insert number> complete set(s) of full-height protective pads.

2.5 TRACTION SYSTEMS

- A. Elevator Machines: Variable-voltage, variable-frequency, ac-type hoisting machines[or variable-voltage dc-type hoisting machines] and solid-state power converters.
- 1. Provide [regenerative] [or] [nonregenerative] system.
 - 2. Limit total harmonic distortion of regenerated power to 5 percent per IEEE 519.
 - 3. Provide means for absorbing regenerated power when elevator system is operating on standby power.
 - 4. Provide line filters or chokes to prevent electrical peaks or spikes from feeding back into building power system.
- B. Fluid for Hydraulic Buffers: If using hydraulic buffers, use only fire-resistant fluid.
- C. Inserts: Furnish required concrete and masonry inserts and similar anchorage devices for installing guide rails, machinery, and other components of elevator work. Device installation is specified in another Section.
- D. Machine Beams: Provide framing to support elevator hoisting machine and deflector sheaves from the building structure. Comply with Section 055000 "Metal Fabrications" for materials and fabrication.
- E. Car Frame and Platform: Bolted- or welded-steel units.
- F. Guides: [Roller guides] [or] [polymer-coated, nonlubricated sliding guides]. Provide guides at top and bottom of car and counterweight frames.

2.6 OPERATION SYSTEMS

- A. General: Provide manufacturer's standard microprocessor operation systems as required to provide type of operation indicated.
- B. Group Automatic Operation with Demand-Based Dispatching: Provide[**reprogrammable**] group automatic system that assigns cars to hall calls based on a dispatching program designed to minimize passenger [**waiting time**] [**time to destination**]. System automatically adjusts to demand changes for different traffic conditions including heavy incoming, heavy two-way, heavy outgoing, and light off-hours as variations of normal two-way traffic.
- Products: Subject to compliance with requirements, provide one of the following:
 - ThyssenKrupp
 - Dover Elevator Corp.
 - KONE Inc.; KCM 831.
 - Otis Elevator Co.; Elevonic.
 - Schindler Elevator Corp.; Miconic TX.
 - U.S. Elevator.
 - <Insert manufacturer's name; product name or designation>**.
 - or approved equal.
- C. Destination-Based Group Automatic Operation: Provide reprogrammable group automatic system that assigns elevators leaving the main lobby in the up direction to a selected group of floors and directs passengers to an elevator serving their destination floor. System dispatches cars in a regulated sequence for optimum system efficiency; dispatch is based on origin and destination of calls. System automatically adjusts to changes in demand for different traffic conditions including heavy incoming, heavy two-way, heavy outgoing, and light off-hours as variations of normal two-way traffic.
- Products: Subject to compliance with requirements, provide one of the following:
 - KONE Inc.; Polaris Destination Control.
 - Otis Elevator Co.; Elevonic with Channeling Operation.
 - Schindler Elevator Corp.; Miconic 10.
 - <Insert manufacturer's name; product name or designation>**.
 - or approved equal.
- D. Auxiliary Operations: In addition to primary operation system features, provide the following operational features for elevators where indicated:
- Single-Car Standby Power Operation: On activation of standby power, car is returned to a designated floor and parked with doors open. Car can be manually put in service on standby power, either for return operation or for regular operation, by switches in control panel located at [**main lobby**] [**fire command station**] **<Insert location>**. Manual operation causes automatic operation to cease.
 - Single-Car Standby-Powered Lowering: On activation of standby power, if car is at a floor, it remains at that floor, opens its doors, and shuts down. If car is

- between floors, it is lowered to the next floor below, opens its doors, and shuts down.
3. Single-Car Battery-Powered Lowering: If power fails and car is at a floor, it remains at that floor, opens its doors, and shuts down. If car is between floors, it is lowered to the next floor below, opens its doors, and shuts down. System includes rechargeable battery and automatic recharging system.
 4. Group Standby Power Operation: On activation of standby power, cars are returned to a designated floor and parked with doors open. One car is returned at a time, with priority given to loaded cars. If a car cannot be returned after two attempts, it is removed from the system. When all cars have been returned or removed from the system, one car is automatically placed in service. If car selected for service cannot operate within 60 seconds, the system removes car from service and places another car in service. Cars can be manually put in service on standby power, either for return operation or for regular operation, by switches in control panel located at **[main lobby] [fire command station] <Insert location>**. Manual operation causes automatic operation to cease.
 5. Group Standby Power Operation: On activation of standby power, cars are returned, one at a time, to a designated floor and parked with doors open. If a car cannot be returned, it is removed from the system. When all cars have been returned or removed from the system, one car can be put in service on standby power by a selector switch in control panel located at **[main lobby] [fire command station] <Insert location>**.
 6. Group Battery-Powered Lowering: If power fails, cars that are at a floor remain at that floor, open their doors, and shut down. Cars that are between floors are lowered one at a time to the next floor below, open their doors, and shut down. System includes rechargeable battery and automatic recharging system.
 7. Automatic Dispatching of Loaded Car: When car load exceeds 80 percent of rated capacity, doors begin closing.
 8. Nuisance Call Cancel: When car calls exceed a preset number while car load is less than a predetermined weight, all car calls are canceled. Preset number of calls **[and predetermined weight]** can be adjusted.
 9. Loaded-Car Bypass: When car load exceeds 80 percent of rated capacity, car responds only to car calls, not to hall calls.
 10. Distributed Parking: When cars are not required for response to calls, they are parked with doors closed and distributed in predetermined zones throughout the building. One zone shall include the main floor and adjacent floors; remaining floors shall be divided into approximately equal zones.
 11. Independent Service: Keyswitch in car-control station removes car from group operation and allows it to respond only to car calls. Key cannot be removed from keyswitch when car is in independent service. When in independent service, doors close only in response to door close button.
 12. **[Emergency Hospital] [Priority] Service: Service is initiated by a [keyswitch] [card reader] [remote switch] at designated floors. One elevator is removed from group operation and directed to the floor where service was initiated. On arriving at the floor, elevator opens its doors and parks [and a lighted sign directs passengers to exit elevator]. Car is placed in operation by selecting a floor and pressing door close button or by operating keyswitch to put car in independent service. After responding to floor selected or being removed from independent service, car is returned to group operation. If car is not placed in operation within a preset time after being called, it is returned to group operation.**

13. Earthquake emergency operation.
 14. Fire recall position
- E. Security Features: Provide the following security features, where indicated. Security features shall not affect emergency firefighters' service.
1. Card-Reader Operation: System uses card readers at **[car-control stations]** **[and]** **[hall push-button stations]** to authorize calls. Security system determines which landings and at what times calls require authorization by card reader. Provide required conductors in traveling cable and panel in machine room for interconnecting card readers, other security access system equipment, and elevator controllers. Allow space as indicated for card reader in car.
 - a. When system is activated, car calls to restricted landings do not register unless card is first inserted into card reader. Security access system determines which landings are restricted and which of those are accessible to cardholder.
 - b. Security access system equipment is **[specified in Section 281300 "Access Control."]** **[not in the Contract.]**
 2. Card-reader operation for access to restricted landings based on security system provided by others. Provide required conductors in traveling cable and panel in machine room for interconnecting card readers, other security access system equipment, and elevator controllers. Allow space in car as indicated for card reader.
 - a. When system is activated, car calls to restricted landings do not register unless card is first inserted into card reader. Security access system determines which landings are restricted and which of those are accessible to cardholder.
 3. Keyswitch Operation: Push buttons are activated and deactivated by security keyswitches at car-control stations and hall push-button stations. Key is removable **[only in deactivated position]**.
 4. Secured landing feature that allows each landing to be secured or cleared. If a landing is secured, car buttons for that landing do not register a call unless a landing access code is entered within a predetermined time period after the landing button is pressed. When a secured landing button is pressed a "Restricted Floor" lamplights and remains lit until landing access code has been entered or predetermined time period has elapsed.
 5. Access codes are programmed at each car operating panel using a security keyswitch. Secured landing feature is activated and deactivated by a security keyswitch at the main landing.
 6. Anticrime feature activated by a keyswitch that causes all cars in a group to return immediately to a predetermined floor and open their doors for inspection. On deactivation by keyswitch, cars complete calls registered before keyswitch activation and resume normal operation.

7. Keypad Operation: Allows each landing to be restricted or unrestricted. When a restricted landing button is pressed, a "Restricted Floor" lamp lights and remains lit until landing access code has been entered into a keypad or predetermined time period has elapsed. Car calls for restricted landings do not register until landing access code is entered into keypad within predetermined time period after landing button is pressed.
 - a. Access codes are programmed at each car operating panel using a security keyswitch. Keypad operation can be activated and deactivated by security keyswitch at main landing.
8. Car-to-Lobby Feature: Feature, activated by keyswitch at main lobby that causes **[car] [all cars in a group]** to return immediately to lobby and open doors for inspection. On deactivation by keyswitch, calls registered before keyswitch activation are completed and normal operation is resumed.

2.7 DOOR REOPENING DEVICES

- A. Infrared Array: Provide door reopening device with uniform array of 36 or more microprocessor-controlled, infrared light beams projecting across car entrance. Interruption of one or more light beams shall cause doors to stop and reopen.
- B. Nudging Feature: After car doors are prevented from closing for predetermined adjustable time, through activating door reopening device, a loud buzzer shall sound and doors shall begin to close at reduced kinetic energy.

2.8 CAR ENCLOSURES

- A. General: Provide **[enameled-steel car enclosures to receive removable] [steel-framed car enclosures with nonremovable]** wall panels, with **[removable]** car roof, access doors, power door operators, and ventilation.
 1. Provide standard railings complying with ASME A17.1/CSA B44 on car tops where required by ASME A17.1/CSA B44.
 2. See "Allowances" Paragraph in "Summary" Article for items to be provided under the Elevator Car Allowance. Provide items not included in the Elevator Car Allowance as needed for finished car **[including materials and finishes specified below]**.
- B. Materials and Finishes: Manufacturer's standards, but not less than the following:
 1. Subfloor: Exterior, underlayment grade plywood, not less than **5/8-inch** (15.9-mm) nominal thickness.
 2. Subfloor: Exterior, C-C Plugged grade plywood, not less than **7/8-inch** (22.2-mm) nominal thickness.
 3. Floor Finish: **[Specified in <Insert Section number>-<Insert Section title>] [Elevator manufacturer's standard level-loop nylon carpet; color as selected by DEN Project Manager from full range of industry colors]**.

4. Enameled-Steel Wall Panels: Flush, hollow-metal construction; fabricated from cold-rolled steel sheet. Provide with factory-applied enamel finish; colors as selected by DEN Project Manager from manufacturer's full range.
5. Stainless-Steel Wall Panels: Flush, hollow-metal construction; fabricated from stainless-steel sheet.
6. Bronze Wall Panels: Flush, hollow-metal construction; fabricated from bronze sheet.
7. Plastic-Laminate Wall Panels: Plastic laminate adhesively applied to **[1/2-inch (13-mm) fire-retardant-treated particleboard]** **[manufacturer's standard honeycomb core]** with **[plastic-laminate panel backing and]** manufacturer's standard protective edge trim. Panels have a flame-spread index of **[25]** **[75]** or less, when tested according to ASTM E 84. Plastic-laminate color, texture, and pattern as selected by DEN Project Manager from **[plastic-laminate]** **[elevator]** manufacturer's full range.
8. Fabricate car with recesses and cutouts for signal equipment.
9. Fabricate car doorframe integrally with front wall of car.
10. Enameled-Steel Doors: Flush, hollow-metal construction; fabricated from cold-rolled steel sheet. Provide with factory-applied enamel finish; colors as selected by DEN Project Manager from manufacturer's full range.
11. Primed-Steel Doors: Flush, hollow-metal construction; fabricated from cold-rolled steel sheet, with factory-applied, rust-resistant primer for field painting.
12. Stainless-Steel Doors: Flush, hollow-metal construction; fabricated **[from stainless-steel sheet]** **[or]** **[by laminating stainless-steel sheet to exposed faces and edges of enameled cold-rolled steel doors using adhesive that fully bonds metal to metal without telegraphing or oil-canning].**
13. Bronze Doors: Flush, hollow-metal construction; fabricated by laminating bronze sheet to exposed faces and edges of enameled cold-rolled steel doors using adhesive that fully bonds metal to metal without telegraphing or oil-canning.
14. Plastic-Laminate Doors: Flush, hollow-metal construction; fabricated by laminating plastic laminate to exposed faces of enameled cold-rolled steel doors and covering edges with protective edge trim **[matching return panels]**. Plastic-laminate color, texture, and pattern as selected by DEN Project Manager from **[plastic-laminate]** **[elevator]** manufacturer's full range.
15. Unfinished-Steel Doors: Flush, hollow-metal construction; fabricated from cold-rolled steel sheet, with factory-applied enamel.
16. Sight Guards: Provide sight guards on car doors.
17. Sills: Extruded metal, with grooved surface, **1/4 inch** (6.4 mm) thick.
18. Luminous Ceiling: Fluorescent light fixtures and ceiling panels of translucent acrylic or other permanent rigid plastic.
19. **[Metal]** **[Metallic-Finish, Plastic-Laminate]** Ceiling: Flush panels, with **[incandescent downlights in the center of]** **[four low-voltage downlights in]** each panel. **[Align ceiling panel joints with joints between wall panels.]**
20. Handrails: Manufacturer's standard handrails, of shape, metal, and finish indicated.

2.9 HOISTWAY ENTRANCES

- A. Hoistway Entrance Assemblies: Manufacturer's standard horizontal-sliding, door-and-frame hoistway entrances complete with track systems, hardware, sills, and accessories. Frame size and profile shall accommodate hoistway wall construction.
- Where gypsum board wall construction is indicated, frames shall be self-supporting with reinforced head sections.
- B. Fire-Rated Hoistway Entrance Assemblies: Door and frame assemblies shall comply with NFPA 80 and be listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction based on testing at as close-to-neutral pressure as possible according to **[NFPA 252]** **[or]** **[UL 10B]**.
- Fire-Protection Rating: **[1 hour]** **[1-1/2 hours]** **<Insert rating>** **[with 30-minute temperature rise of 450 deg F (250 deg C)]**.
- C. Materials and Fabrication: Manufacturer's standards, but not less than the following:
- Enameled-Steel Frames: Formed from cold- or hot-rolled steel sheet. Provide with factory-applied enamel finish; colors as selected by DEN Project Manager from manufacturer's full range.
 - Primed-Steel Frames: Formed from cold- or hot-rolled steel sheet. Provide with factory-applied, rust-resistant primer for field painting.
 - Steel Subframes: Formed from cold- or hot-rolled steel sheet, with factory-applied enamel finish or rust-resistant primer. Fabricate to receive applied finish as indicated.
 - Stainless-Steel Frames: Formed from stainless-steel sheet.
 - Bronze Frames: Formed from cold- or hot-rolled steel sheet, with enamel finish, and with formed-bronze sheet laminated to steel frames using adhesive that fully bonds metal to metal without telegraphing or oil-canning.
 - Star of Life Symbol: Identify emergency elevators with star of life symbol, not less than **3 inches (76 mm)** high, on both inside surfaces of hoistway doorframes.
 - Enameled-Steel Doors **[and Transoms]**: Flush, hollow-metal construction; fabricated from cold-rolled steel sheet. Provide with factory-applied enamel finish; colors as selected by DEN Project Manager from manufacturer's full range.
 - Primed-Steel Doors **[and Transoms]**: Flush, hollow-metal construction; fabricated from cold-rolled steel sheet. Provide with factory-applied, rust-resistant primer for field painting.
 - Stainless-Steel Doors **[and Transoms]**: Flush, hollow-metal construction; fabricated **[from stainless-steel sheet] [or] [by laminating stainless-steel sheet to exposed faces and edges of enameled cold-rolled steel doors using adhesive that fully bonds metal to metal without telegraphing or oil-canning]**.
 - Bronze Doors **[and Transoms]**: Flush, hollow-metal construction; fabricated by laminating bronze sheet to exposed faces and edges of enameled cold-rolled steel doors using adhesive that fully bonds metal to metal without telegraphing or oil-canning.
 - Plastic-Laminate Doors **[and Transoms]**: Flush, hollow-metal construction; fabricated by laminating plastic laminate to exposed faces of enameled

- cold-rolled steel doors and covering edges with protective edge trim[**matching doorframes**]. Plastic-laminate color, texture, and pattern as selected by DEN Project Manager from [**plastic-laminate**] [**elevator**] manufacturer's full range.
12. Unfinished-Steel Doors[**and Transoms**]: Flush, hollow-metal construction; fabricated from cold-rolled steel sheet, with factory-applied enamel.
 13. Sight Guards: Provide sight guards on doors matching door edges.
 14. Sills: Extruded metal, with grooved surface, **1/4 inch** (6.4 mm) thick.
 15. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107/C 1107M.

2.10 SIGNAL EQUIPMENT

- A. General: Provide hall-call and car-call buttons that light when activated and remain lit until call has been fulfilled. Fabricate lighted elements with [**long-life lamps and acrylic or other permanent, non-yellowing translucent plastic diffusers**] [**or**] [**LEDs**].
- B. General: Provide signal equipment designed for destination-based system. Fabricate lighted elements with [**long-life lamps and acrylic or other permanent, nonyellowing translucent plastic diffusers**] [**or**] [**LEDs**].
- C. Car-Control Stations: Provide manufacturer's standard [**recessed**] [**or**] [**semirecessed**] car-control stations. Include call buttons for each landing served and other buttons, switches, and controls required for specified car operation. Provide operating device symbols as required by the applicable codes. Mount in return panel adjacent to car door unless otherwise indicated.
 1. Mark buttons and switches for required use or function. Use both tactile symbols and Braille.
 2. Provide "No Smoking" sign matching car-control station, either integral with car-control station or mounted adjacent to it, with text and graphics as required by authorities having jurisdiction.
- D. Swing-Return Car-Control Stations: Provide car control station fully recessed in hinged return panel adjacent to door of each car. Include call buttons for each landing served and other buttons, switches, and controls required for specified car operation. Provide operating device symbols as required by the applicable codes. Mark other buttons and switches with manufacturer's standard identification for required use or function.
 1. Mark buttons and switches for function. Use both tactile symbols and Braille.
 2. Provide "No Smoking" sign matching car-control station, either integral with car-control station or mounted adjacent to it, with text and graphics as required by authorities having jurisdiction.
 3. Mount controls as shown or scheduled and at heights complying with ANSI A117.1.
 4. Mount controls as shown or scheduled and at heights complying with ADA Accessibility Guidelines.
 5. Provide 2 car control stations in each passenger elevator; equip only 1 with required keyswitches, if any.

- E. Emergency Communication System: Elevators at DEN shall be equipped with a Talk-a-Phone model ETP103 OEM elevator telephone installed per manufacturer's instructions behind the control panel in each elevator car. DEN technologies will provide cabling and an analog telephone line from the DIA PABX system for each telephone. Telephones are powered from the PABX system, which in turn is backed up by battery. The PABX is programmed to rung down calls from the elevators to the 24/7 police positions at the airport communications centers. Elevator telephones are polled once per day using Talk-a-Phone Talk-a-Lert software to confirm health and status of the telephones. Technicians are dispatched to repair or replace any telephone that fails during a polling cycle. Telephone products from other vendors shall not be permitted, as they cannot be polled.
- F. Firefighters' Two-Way Telephone Communication Service: Provide [**flush-mounted cabinet**] [**telephone jack**] in each car and required conductors in traveling cable for firefighters' two-way telephone communication service specified in [**Section 283111 "Digital, Addressable Fire-Alarm System."**] [**Section 283112 "Zoned (DC Loop) Fire-Alarm System."**]
- G. Car-Top Alarm: Provide switches on top emergency exits that will cause alarm to sound when cover is opened.
- H. Car Position Indicator: Provide [**illuminated**,]digital-type car position indicator, located above car door or above car-control station. Also, provide audible signal to indicate to passengers that car is either stopping at or passing each of the floors served. Include travel direction arrows if not provided in car-control station.
- I. Hall Push-Button Stations: [[**Provide one hall push-button station at each landing for each single elevator or group of elevators, but not less than one station for each four elevators in a group**] [**Provide hall push-button stations at each landing as indicated**]. For each group of passenger elevators, locate between 2 elevators at center of group or at location most convenient for approaching passengers.
1. Provide [**units with flat faceplate for mounting with body of unit recessed in wall**].
 2. Equip units with buttons for calling elevator and for indicating desired direction of travel.
 3. Provide 2-button stations at intermediate landings. Provide 1-button stations with direction indication at terminal landings.
 4. Equip units with [**buttons**] [**or**] [**touch screen**] for calling elevator and for indicating direction of travel or destination as required by system. Provide a signaling system to verify floor selection, where destination registration is required, and to direct passengers to appropriate car.
 - a. Provide a means for passengers to indicate that they have disabilities so control system can allow extra room in assigned car.
 - b. Provide for connecting units that require destination registration to building security access system so a card reader can be used to register calls.

- J. Provide telephone jack in each unit for firefighters' two-way telephone communication service specified in [**Section 283111 "Digital, Addressable Fire-Alarm System."**] [**Section 283112 "Zoned (DC Loop) Fire-Alarm System."**]
1. Possibly insert a provision for either an "In Use" signal or a digital display of car position for single elevators.
- K. Hall Lanterns: Units with illuminated arrows; but provide single arrow at terminal landings. Match materials, finishes, and mounting method of hall push-button stations. Provide[**one of**] the following:
1. Place lanterns either above or beside each hoistway entrance, unless otherwise shown. Mount at minimum of 72 inches (1829 mm) above finished floor.
 2. Place lanterns in both jambs of entrance frame for each elevator. Mount at minimum of 72 inches (1829 mm) above finished floor.
 3. At manufacturer's option, for single elevators or for only 2 cars in a group, lanterns may be located in car door jambs instead of entrance jambs.
 4. With each lantern, provide audible signals indicating car arrival and direction of travel. Signals sound once for up and twice for down.
 5. At manufacturer's option, audible signals may be placed on each car.
- L. Hall Annunciator: With each hall lantern, provide audible signals indicating car arrival and direction of travel. Signals sound once for up and twice for down.
1. At manufacturer's option, audible signals may be placed on cars.
- M. Hall Position Indicators: Provide [**illuminated,**] digital-display-type position indicators, located above each hoistway entrance at ground floor. Match materials, finishes, and mounting method of hall push-button stations.
1. Integrate ground-floor hall lanterns with hall position indicators.
- N. Standby Power Elevator Selector Switches: Provide switches, as required by ASME A17.1/CSA B44, where indicated. Adjacent to switches, provide illuminated signal that indicates when normal power supply has failed.[**For each elevator, provide illuminated signals that indicate when they are operational and when they are at the designated emergency return level with doors open.**]
- O. Fire-Command-Center Annunciator Panel: Provide panel containing illuminated position indicators for each elevator, clearly labeled with elevator designation; include illuminated signal that indicates when elevator is operational and when it is at the designated emergency return level with doors open. Provide standby power elevator selector switch(es), as required by ASME A17.1/CSA B44, adjacent to position indicators. Provide illuminated signal that indicates when normal power supply has failed.

- P. Emergency Pictorial Signs: Fabricate from materials matching hall push-button stations, with text and graphics as required by authorities having jurisdiction, indicating that in case of fire, elevators are out of service and exits should be used instead. Provide one sign at each hall push-button station unless otherwise indicated.

2.11 FINISH MATERIALS

- A. General: Provide the following materials for exposed parts of elevator car enclosures, car doors, hoistway entrance doors and frames, and signal equipment as indicated.
- B. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, commercial steel, Type B, exposed, matte finish.
- C. Hot-Rolled Steel Sheet: ASTM A 1011/A 1011M, commercial steel, Type B, pickled.
- D. Stainless-Steel Sheet: ASTM A 240/A 240M, Type 304.
- E. Textured Stainless-Steel Sheet: ASTM A 240/A 240M, Type 304 with embossed texture rolled into exposed surface.
1. Product: Subject to compliance with requirements, provide "<Insert product name>" by <Insert manufacturer's name>.
 2. Metal surface is [satin polished] [satin relieved] [titanium nitride colored] [oxide colored] [satin polished and titanium nitride colored] [satin relieved and titanium nitride colored] [satin polished and oxide colored] [satin relieved and oxide colored] [color coated and satin relieved] [color coated and bright relieved] after texturing.
- F. Stainless-Steel Bars: ASTM A 276, Type 304.
- G. Stainless-Steel Tubing: ASTM A 554, Grade MT 304.
- H. Bronze Plate and Sheet: ASTM B 36/B 36M, Alloy UNS No. C28000 (muntz metal).
- I. Bronze Extrusions: ASTM B 455, Alloy UNS No. C38500 (architectural bronze).
- J. Bronze Tubing: [ASTM B 135](#) (ASTM B 135M), Alloy UNS No. C23000 (red brass, 85 percent copper).
- K. Aluminum Extrusions: [ASTM B 221](#) (ASTM B 221M), Alloy 6063.
- L. Nickel Silver Extrusions: ASTM B 151/B 151M, Alloy UNS No. C74500 or No. C77600.
- M. Plastic Laminate: High-pressure type complying with NEMA LD 3, [Type HGS for flat applications] [Type HGL for flat applications] [Type HGP for postformed applications] [and] [Type BKV for panel backing].

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine elevator areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work. Examine hoistways, hoistway openings, pits, and machine rooms as constructed; verify critical dimensions; and examine supporting structure and other conditions under which elevator work is to be installed.
- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Comply with manufacturer's written instructions and recommendations.
- B. Welded Construction: Provide welded connections for installing elevator work where bolted connections are not required for subsequent removal or for normal operation, adjustment, inspection, maintenance, and replacement of worn parts. Comply with AWS standards for workmanship and for qualifications of welding operators. Comply with Section 059990 "Welding".
- C. Coordination: Coordinate elevator work with work of other trades for proper time and sequence to avoid construction delays. Use established benchmarks, lines, and levels to ensure dimensional coordination of the Work.
- D. Sound Isolation: Mount rotating and vibrating equipment on vibration-isolating mounts to minimize vibration transmission to structure and structure-borne noise due to elevator system.
- E. Lubricate operating parts of systems, including ropes, as recommended by manufacturers.
- F. Alignment: Coordinate installation of hoistway entrances with installation of elevator guide rails for accurate alignment of entrances with car. Where possible, delay final adjustment of sills and doors until car is operable in shaft. Reduce clearances to minimum, safe, workable dimension at each landing.
- G. Leveling Tolerance: $1/8$ inch (3 mm), up or down, regardless of load and travel direction.
- H. Set sills flush with finished floor surface at landing. Fill space under sill solidly with nonshrink, nonmetallic grout.
- I. Locate hall signal equipment for elevators as follows unless otherwise indicated:

1. For groups of elevators, locate hall push-button stations between two elevators at center of group or at location most convenient for approaching passengers.
2. Place hall lanterns either above or beside each hoistway entrance.
3. Mount hall lanterns at a minimum of **72 inches** (1829 mm) above finished floor.

3.3 FIELD QUALITY CONTROL

- A. Acceptance Testing: On completion of elevator installation and before permitting elevator use (either temporary or permanent), perform acceptance tests as required and recommended by ASME A17.1/CSA B44 and by governing regulations and agencies.
- B. Operating Test: Load [**elevator**] [**each elevator**] [**one elevator of each type, capacity, speed, and travel distance**] to rated capacity and operate continuously for 30 minutes over full travel distance, stopping at each level and proceeding immediately to the next. Record temperature rise of elevator machine during 30-minute test period. Record failure to perform as required.
- C. Advise Owner, DEN Project Manager, and authorities having jurisdiction a minimum of 72 hours in advance of dates and times that tests are to be performed on elevators.

3.4 PROTECTION

- A. Temporary Use: [**Limit temporary use for construction purposes to one elevator.**] Do not use elevators for construction purposes unless approved by DEN Project Manager, and unless cars are provided with temporary enclosures, either within finished cars or in place of finished cars, to protect finishes from damage. Comply with the following requirements for [**each**] elevator used for construction purposes:
 1. Provide car with temporary enclosure, either within finished car or in place of finished car, to protect finishes from damage.
 2. Provide strippable protective film on entrance and car doors and frames.
 3. Provide padded wood bumpers on entrance doorframes covering jambs and frame faces.
 4. Provide other protective coverings, barriers, devices, signs, and procedures as needed to protect elevator and elevator equipment.
 - a. If, despite such protection, elevators become damaged, engage elevator Installer to restore damaged work so that no evidence remains of correction work. Return items that cannot be refinished in the field to the shop, make required repairs and refinish entire unit, or provide new units as required and approved by DEN Project Manager.
 5. Do not load elevators beyond their rated weight capacity.
 6. Engage elevator Installer to provide full maintenance service. Include preventive maintenance, repair, or replacement of worn or defective components, lubrication, cleanup, and adjustment as necessary for proper elevator operation

at rated speed and capacity. Provide parts and supplies same as those used in the manufacture and installation of original equipment.

7. Engage elevator Installer to restore damaged work, if any, so no evidence remains of correction. Return items that cannot be refinished in the field to the shop, make required repairs and refinish entire unit, or provide new units as required.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to operate[, **adjust, and maintain**] elevator(s).
 1. Review emergency provisions, including emergency access and procedures to be followed at time of failure in operation and other building emergencies. Train DEN personnel in procedures to follow in identifying sources of operational failures or malfunctions. Confer with DEN Project Manager on requirements for a complete elevator maintenance program.
 2. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.
- B. Check operation of[**each**] elevator with DEN Project Manager's personnel present before date of Substantial Completion[**and again not more than one month before end of warranty period**]. Determine that operation systems and devices are functioning properly.

3.6 MAINTENANCE

- A. Initial Maintenance Service: Beginning at Substantial Completion, maintenance service shall include 12 <**Insert number**> months' full maintenance by skilled employees of elevator Installer. Include monthly preventive maintenance, repair, or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper elevator operation at rated speed and capacity. Parts and supplies shall be manufacturer's authorized replacement parts and supplies as used in the manufacture and installation of original equipment.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 142100

SECTION 142113 - ELECTRIC TRACTION FREIGHT ELEVATORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes electric traction freight elevators.
- B. Related Requirements:
 - 1. Section 033000 "Cast-in-Place Concrete" for setting sleeves, inserts, and anchoring devices in concrete.
 - 2. Section 042000 "Unit Masonry" for setting sleeves, inserts, and anchoring devices in masonry and for grouting elevator entrance frames installed in masonry walls.
 - 3. Section 051200 "Structural Steel Framing" for the following:
 - a. Attachment plates, angle brackets, and other preparation of structural steel for fastening guide-rail brackets.
 - b. Divider beams.
 - c. Hoist beams.
 - d. Structural-steel shapes for subsills[**and hoistway doorframes**] that are part of steel frame.
 - 4. Section 055000 "Metal Fabrications" for the following:
 - a. Attachment plates and angle brackets for supporting guide-rail brackets.
 - b. Divider beams.
 - c. Hoist beams.
 - d. Structural-steel shapes for [**subsills**] [**and**] [**hoistway doorframes**].
 - e. Pit ladders.
 - f. Cants in hoistways made from steel sheet.
 - 5. Section 055213 "Pipe and Tube Railings" for railings between adjacent elevator pits.
 - 6. Section 099113 "Exterior Painting" for field painting of hoistway entrance doors and frames.
 - 7. Section 099123 "Interior Painting" for field painting of hoistway entrance doors and frames.

8. Section 271500 "Communications Horizontal Cabling" for telephone service for elevators[**and for Internet connection to elevator controllers for remote monitoring of elevator performance**].
9. **[Section 283111 "Digital, Addressable Fire-Alarm System"] [Section 283112 "Zoned (DC Loop) Fire-Alarm System"]** for smoke detectors in elevator lobbies to initiate emergency recall operation[**and heat detectors in shafts and machine rooms to disconnect power from elevator equipment before sprinkler activation**] and for connection to elevator controllers.

C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.4 DEFINITIONS

A. Definitions in ASME A17.1/CSA B44 apply to work of this Section.

- B. Electric Traction Elevators: Elevators in which cars are hoisted by wire ropes using electrically driven traction sheaves and are defined to include driving machines; cars; hoistway doors; guide rails; guide-rail brackets; roping; buffers; counterweights; signals; control systems; electrical wiring within elevator system; and devices for operations, safety, security, required performance at rated speed and capacity, and for complete elevator installation.
 - 1. Counterweight displacement switches, seismic switch, and other elevator safety equipment required by the "Code" for seismic risk zone 2 or greater are included.
- C. Defective Elevator Work: Operation or control system failures; performances below specified ratings; excessive wear; unusual deterioration or aging of materials or finishes; unsafe conditions; the need for excessive maintenance; abnormal noise or vibration; and similar unusual, unexpected, and unsatisfactory conditions.

1.5 ACTION SUBMITTALS

- A. Product Data: Include capacities, sizes, performances, operations, safety features, finishes, and similar information.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings:
 - 1. Include plans, elevations, sections, and large-scale details indicating service at each landing, machine room layout, coordination with building structure, relationships with other construction, and locations of equipment.
 - 2. Indicate variations from specified requirements, maximum dynamic and static loads imposed on building structure at points of support, locations of equipment and signals, and maximum and average power demands.
- C. Samples for Initial Selection: For finishes involving color selection.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Seismic Qualification Certificates: For elevator equipment, accessories, and components, from manufacturer.
 - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- C. Manufacturer Certificates: Signed by elevator manufacturer certifying that hoistway, pit, and **[machine room]** **[control closet]** layout and dimensions, as shown on

Drawings, and electrical service[**including standby power generator**], as shown and specified, are adequate for elevator system being provided.

- D. Sample Warranty: For special warranty.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For elevators to include in emergency, operation, and maintenance manuals.
 - 1. In addition to items specified in Section 017823 "Operation and Maintenance Data," include diagnostic and repair information available to manufacturer's and Installer's maintenance personnel.
- B. Inspection and Acceptance Certificates and Operating Permits: As required by authorities having jurisdiction for normal, unrestricted elevator use.
- C. Manufacturer shall furnish a letter stating all components are designed by an Engineer and are suitable for the intended purpose.
- D. Signage.
- E. Maintenance manuals for each different electric traction elevator, including operation and maintenance instructions, parts listing with sources indicated, recommended parts inventory listing, emergency instructions, and similar information. Include all diagnostic and repair information available to manufacturer's and Installer's maintenance personnel. Submit for Owner's information at project closeout as specified in Division 01.
- F. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 MAINTENANCE SERVICE

- A. Initial Maintenance Service: Beginning at Substantial Completion, provide 12 months' full maintenance service by skilled, competent employees of the elevator Installer. Include monthly preventive maintenance, repair, or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper elevator operation at rated speed and capacity. Use parts and supplies as used in the manufacture and installation of original equipment.
 - 1. Perform maintenance, including emergency callback service, during normal working hours.
 - 2. Include 24-hour-per-day, 7-day-per-week emergency callback service.
 - 3. Response Time: 1 hour or less.
- B. Continuing Maintenance Proposal: Submit a continuing maintenance proposal from Installer to DEN Project Manager, in the form of a standard [**one-year**] [**two-year**]

[five-year] <Insert agreement period> maintenance agreement, starting on date initial maintenance service is concluded. State services, obligations, conditions, and terms for agreement period and for future renewal options.

1.9 QUALITY ASSURANCE

- A. Installer Qualifications: Engage the elevator manufacturer or an experienced Installer approved by the elevator manufacturer who has completed elevator installations similar in material, design, and extent to that indicated for this Project and with a record of successful in-service performance.
- B. Regulatory Requirements: In addition to local governing regulations, comply with the applicable provisions of the following:
 - 1. ASME A17.1, "Safety Code for Elevators and Escalators," referred to as the "Code."

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle materials, components, and equipment in manufacturer's protective packaging. Store materials, components, and equipment off of ground, under cover, and in a dry location.

1.11 COORDINATION

- A. Coordinate installation of sleeves, block outs, elevator equipment with integral anchors, and other items that are embedded in concrete or masonry for elevator equipment. Furnish templates, sleeves, elevator equipment with integral anchors, and installation instructions and deliver to Project site in time for installation.
- B. Coordinate locations and dimensions of other work relating to electric traction freight elevators including pit ladders; sumps and floor drains in pits; entrance subsills; electrical service; and electrical outlets, lights, and switches in hoistways, pits, and machine rooms.

1.12 WARRANTY

- A. Manufacturer's Standard Warranty: Manufacturer agrees to repair, restore, or replace elevator work that fails in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, operation or control system failure, including excessive malfunctions; performances below specified ratings; excessive wear; unusual deterioration or aging of materials or finishes; unsafe conditions; need for excessive maintenance; abnormal noise or vibration; and similar unusual, unexpected, and unsatisfactory conditions.
 - 2. Warranty Period: Minimum 12 months <Insert number> year(s) from date of Substantial Completion.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Dover Elevator Corp.
 2. KONE Inc.
 3. Otis Elevator Co.
 4. U.S. Elevator
 5. **<Insert manufacturer's name>**.
 6. or approved equal.
- B. Source Limitations: Obtain freight elevators from single manufacturer.
1. Major elevator components, including driving machines, controllers, signal fixtures, door operators, car frames, cars, and entrances, shall be manufactured by single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. Regulatory Requirements: Comply with ASME A17.1/CSA B44.
- B. Accessibility Requirements: Comply with Section 407 in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines and with ICC A117.1.
- C. Seismic Performance: Elevator system shall withstand the effects of earthquake motions determined according to **[ASCE/SEI 7] <Insert requirement>** and shall comply with elevator safety requirements for seismic risk Zone 2 or greater in ASME A17.1/CSA B44.
1. The term "withstand" means "the system will remain in place without separation of any parts when subjected to the seismic forces specified **[and the system will be fully operational after the seismic event].**"
 2. Affected peak velocity acceleration (Av) for Project's location is **[less than 0.10 (seismic risk Zones 0 and 1)] [greater than or equal to 0.10, but less than 0.20 (seismic risk Zone 2)] [greater than or equal to 0.20 (seismic risk Zones 3 and 4)].**
 3. Provide earthquake equipment required by ASME A17.1/CSA B44.
 4. Provide seismic switch required by ASCE/SEI 7.

5. Design earthquake spectral response acceleration short period (Sds) for Project is **<Insert value>**.
6. Project's Seismic Design Category: **[A] [B] [C] [D] [E] [F]**.
7. Elevator Component Importance Factor: **[1.5] [1.0]**.

2.3 MATERIALS AND COMPONENTS, GENERAL

- A. General: Provide manufacturer's standard elevator systems. Where components are not otherwise indicated, provide standard components, published by manufacturer as included in standard preengineered elevator systems and as required for a complete system.
- B. Elevator Machines: (Geared) (Gearless) type.
 1. At manufacturer's option, provide either variable-voltage, variable-frequency ac-type hoisting machine or variable-voltage dc type.
 2. Where elevator speed is 100 ft./min. (0.5 m/s) or less, provide variable-voltage geared machine.
 3. Where elevator speed is 100 ft./min. (0.5 m/s) or less, provide geared machine with ac-type single-speed or 2-speed motor as indicated.
- C. Power Control: Except as otherwise indicated, where variable voltage is required, provide solid-state power converters for use with motors on elevator machines (ac or dc).
 1. Provide line filters or chokes to prevent electrical peaks or spikes from feeding back into building power system from solid-state converters.
- D. Power Supply: (480 V, 60 Hz, 3 phase.) (208 V, 60 Hz, 3 phase.) (240 V, 60 Hz, 2 phase).
- E. Inserts: Furnish required concrete and masonry inserts and similar anchorage devices for installing guide rails, machinery, and other components of elevator work where installation of devices is specified in another Specification Section.
- F. Machine Beams: Provide framing to support the elevator hoisting machine and deflector sheaves from the building structure. Comply with Division 05 for materials and fabrication.
- G. Guide Shoes/Rollers: Provide either sliding shoes or rollers for speeds of 200 ft./min. (1.02 m/s) and less, and rollers for speeds in excess of 200 ft./min. (1.02 m/s).
- H. Car Frame and Platform: Welded steel units.

2.4 FREIGHT ELEVATORS

- A. Elevator System, General: Manufacturer's standard electric traction freight elevator systems. Unless otherwise indicated, manufacturer's standard components shall be used, as included in standard elevator systems and as required for complete system.

B. Elevator Description:

1. Elevator Number(s): **<Insert elevator number(s) as shown on Drawings>**.
2. Elevator Type: **[Geared] [Gearless]** traction.
3. Machine Location: **[Machine room above hoistway] [Hoistway; no machine room is provided]**.
4. Rated Load: **[2000 lb (908 kg)] [2500 lb (1135 kg)] [3000 lb (1362 kg)] [4000 lb (1816 kg)] [5000 lb (2270 kg)] [6000 lb (2720 kg)] [8000 lb (3632 kg)] [10,000 lb (4540 kg)] <Insert value>**.
5. Freight Loading Class: **[Class A] [Class B] [Class C1] [Class C2] [Class C3]**.
6. Rated Speed: **[75 fpm (0.38 m/s)] [100 fpm (0.51 m/s)] [150 fpm (0.76 m/s)] [200 fpm (1.0 m/s)] [350 fpm (1.8 m/s)] <Insert value>**.
7. Operation System: **[Single automatic] [Car-switch automatic floor stop] [Selective-collective automatic]**.
8. Auxiliary Operations:
 - a. Standby power operation.
 - b. Earthquake emergency operation.
 - c. Load-weighing device.
9. Security Feature: **[Card-reader] [Keyswitch]** operation.
10. Auxiliary Car-Control Station: Provide additional car-control station mounted on side of car at height to facilitate operation by forklift-truck operator without leaving truck.
11. Car Enclosures:
 - a. Platform Width: **[64 inches (1626 mm)] [76 inches (1930 mm)] [88 inches (2235 mm)] [100 inches (2540 mm)] <Insert dimension>**.
 - b. Platform Depth: **[84 inches (2134 mm)] [96 inches (2438 mm)] [120 inches (3048 mm)] [144 inches (3658 mm)] [168 inches (4267 mm)] <Insert dimension>**.
 - c. Ceiling Height: **[84 inches (2134 mm)] [96 inches (2438 mm)] [108 inches (2743 mm)] <Insert dimension>**.
 - d. Walls and Ceiling: **[Prime-painted steel] [Prime-painted, metallic-coated steel] [Satin stainless steel, No. 4 finish] [Textured stainless steel]**.
 - e. Car Fixtures: Satin stainless steel, No. 4 finish.
 - f. Floor: **[Rolled steel floor plate] [Aluminum-alloy rolled tread plate] [Rolled stainless-steel floor plate] <Insert material>**.
 - g. Car Gate Type: **[Vertical biparting] [Single-speed vertical lift] [Two-speed vertical lift]**.
 - h. Car Gate Operation: **[Manual] [Power operated]**.
 - i. Car Gate Material: **[Prime-painted steel] [Satin stainless steel, No. 4 finish]**.
 - j. Car Sill: Steel angle.
 - k. Lighting: **[One] [Two] [Three] 48-inch (1219-mm), [suspended,] [surface-mounted,] two-tube fluorescent light fixture(s) with [white reflectors] [and] [wire lamp guards]**.
 - l. Lighting: **[One] [Two] 48-inch (1219-mm), recessed, [two] [three]-tube fluorescent light fixture(s) with UV-stabilized acrylic diffusers not less than 0.125 inch (3.2 mm) thick.**

12. Hoistway Entrances:
 - a. Width: [60 inches (1524 mm)] [72 inches (1829 mm)] [96 inches (2438 mm)] <Insert dimension>.
 - b. Height: [84 inches (2134 mm)] [96 inches (2438 mm)] <Insert dimension>.
 - c. Door Type: [Vertical biparting] [Single-speed vertical lift] [Two-speed vertical lift].
 - d. Fire-Protection Rating: [1 hour] [1-1/2 hours] <Insert rating>[with 30-minute temperature rise of 450 deg F (250 deg C)].
 - e. Door Operation: [Manual] [Power operated].
 - f. Door Material: [Prime-painted steel] [Satin stainless steel, No. 4 finish].
 - g. Doorframe Material: [Prime-painted steel] [Satin stainless steel, No. 4 finish].
 - h. Door[frames and] sills are specified in [Section 051200 "Structural Steel Framing"] [Section 055000 "Metal Fabrications."]
13. Hall Fixtures: Satin stainless steel, No. 4 finish.
14. Auxiliary Hall Stations: Provide additional pendant-mounted, hall push-button stations[**where indicated**], mounted at height to facilitate operation by forklift-truck operator without leaving truck.
15. Additional Requirements:
 - a. Door reopening device.

2.5 TRACTION SYSTEMS

- A. Elevator Machines: At manufacturer's option, provide variable-voltage, variable-frequency, ac-type or variable-voltage, dc-type hoisting machines. Provide solid-state power converters.
 1. Limit total harmonic distortion of regenerated power to 5 percent per IEEE 519.
 2. Provide means for absorbing regenerated power when elevator system is operating on standby power.
 3. Provide line filters or chokes to prevent electrical peaks or spikes from feeding back into building power system from solid-state converters.
- B. Fluid for Hydraulic Buffers: If using hydraulic buffers, use only fire-resistant fluid.
- C. Inserts: Furnish required concrete and masonry inserts and similar anchorage devices for installing guide rails, machinery, and other components of elevator work. Device installation is specified in another Section.
- D. Machine Beams: Provide framing to support elevator hoisting machine and deflector sheaves from the building structure. Comply with Section 055000 "Metal Fabrications" for materials and fabrication.
- E. Car Frame and Platform: Welded[**or bolted**]-steel units.

1. Provide special heavy-duty units where indicated for power truck loading, designed to withstand impacts and wheel loadings indicated.

F. Guides: **[Roller guides] [or] [polymer-coated, nonlubricated sliding guides]**. Provide guides at top and bottom of car and counterweight frames.

2.6 OPERATION SYSTEMS

A. General: Provide manufacturer's standard microprocessor operation systems as required to provide type of operation indicated.

B. Single-Car Standby Power Operation: On activation of standby power, car is returned to a designated floor and parked with doors open. Car can be manually put in service on standby power by a switch in control panel located at **[main lobby] [fire command station] <Insert location>**.

C. Group Standby Power Operation: On activation of standby power, cars are returned one car at a time to a designated floor and parked with doors open. If a car cannot be returned, it is removed from the system. One car is selected for service on standby power by a switch in the control panel located at **[main lobby] [fire command station] <Insert location>**.

D. Earthquake Emergency Operation: Comply with requirements in ASME A17.1/CSA B44.

E. Fire recall position.

F. Load-Weighing Device: When car load exceeds 80 percent of rated capacity, a signal lamp lights and remains lit in the car-control station; when car load exceeds rated capacity, car does not respond to car or hall calls.

G. Security Features: Provide the following security features, where indicated. Security features shall not affect emergency firefighters' service.

1. Card-Reader Operation: System uses card readers at **[car-control stations] [and] [hall push-button stations]** to authorize calls. Security system determines which landings and at what times calls require authorization by card reader. Provide required conductors in traveling cable and panel in machine room for interconnecting card readers, other security access system equipment, and elevator controllers. **[Allow space as indicated for card reader in car] [Provide stripe-swipe card reader integral with each car-control station]**.

a. When system is activated, car calls to restricted landings do not register unless card is first inserted into card reader. Security access system determines which landings are restricted and which of those are accessible to cardholder.

b. Security access system equipment is **[specified in Section 281300 "Access Control."]** **[not in the Contract.]**

2. Card-reader operation for access to restricted landings based on security system

provided by others. Provide required conductors in traveling cable and panel in machine room for interconnecting card readers, other security access system equipment, and elevator controllers. Allow space in car as indicated for card reader.

- a. When system is activated, car calls to restricted landings do not register unless card is first inserted into card reader. Security access system determines which landings are restricted and which of those are accessible to cardholder.
3. Keyswitch Operation: Push buttons are activated and deactivated by security keyswitches at [**car-control stations**] [**and**] [**hall push-button stations**]. Key is removable [**only in deactivated position**] [**in either position**].
4. Secured landing feature that allows each landing to be secured or cleared. If a landing is secured, car buttons for that landing do not register a call unless a landing access code is entered within a predetermined time period after the landing button is pressed. When a secured landing button is pressed a "Restricted Floor" lamp lights and remains lit until landing access code has been entered or predetermined time period has elapsed.
5. Access codes are programmed at each car operating panel using a security keyswitch. Secured landing feature is activated and deactivated by a security keyswitch at the main landing.
6. Anticrime feature activated by a keyswitch that causes all cars in a group to return immediately to a predetermined floor and open their doors for inspection. On deactivation by keyswitch, cars complete calls registered before keyswitch activation and resume normal operation.

2.7 DOOR REOPENING DEVICES

- A. Infrared Array: Provide door reopening device with a uniform array of 36 or more microprocessor-controlled, infrared light beams projecting across car entrance. Interruption of one or more light beams shall cause doors to stop and reopen.

2.8 CAR ENCLOSURES

- A. General: Provide car enclosures as indicated, including ventilation, lighting, finishes, access doors, thresholds, trim, and accessories. Fabricate with recesses and cutouts for signal equipment.
 1. Provide power door operators with linkages for hoistway door operation.
 2. Provide standard railings complying with ASME A17.1/CSA B44 on car tops where required by ASME A17.1/CSA B44.
- B. Materials and Fabrication: Provide manufacturer's standard, flush panel, welded construction made from metal sheet, of metal indicated, not less than **0.067 inch** (1.7 mm) and reinforced at **16-inch** (406-mm) maximum spacing.

1. Provide perforated panels for ceiling and for walls above **72 inches** (1829 mm) from car floor, unless required to be solid by ASME A17.1/CSA B44.

2.9 HOISTWAY ENTRANCES

- A. General: Structural-steel frames and sills for hoistway entrances are specified in **[Section 051200 "Structural Steel Framing"] [Section 055000 "Metal Fabrications."]**
- B. Unless otherwise indicated, provide hoistway entrance doors of type indicated below, with truckable sill bars and resilient safety meeting-rail gaskets.
 1. Equip for power operation by coordinated linkage with power-operated car door.
 2. Where gypsum board wall construction is indicated, provide fire-resistance-rated, hollow-metal, door-and-frame hoistway entrances. Provide self-supporting frames with reinforced head sections.
- C. Fire-Rated Hoistway Entrance Assemblies: Door and frame assemblies shall comply with NFPA 80 and be listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on testing at as close-to-neutral pressure as possible according to **[NFPA 252] [or] [UL 10B]**.
- D. Materials and Fabrication: Provide manufacturer's standards, but not less than the following:
 1. Metal Door Panels: Constructed of metal sheets, flush on room side, welded and reinforced in steel framing with vertical reinforcing spaced not more than **24 inches** (610 mm) o.c. Fabricate panel faces from metal sheet, of metal indicated, not less than **0.097 inch** (2.5 mm) thick.

2.10 SIGNAL EQUIPMENT

- A. General: Provide hall-call and car-call buttons that light when activated and remain lit until call has been fulfilled. Fabricate lighted elements of acrylic or other permanent, non-yellowing translucent plastic.
- B. Car-Control Stations: Provide manufacturer's standard car-control station. Include call buttons for each landing served and other buttons, switches, and controls required for specified car operation. Provide operating device symbols as required by the applicable codes. Mount adjacent to car door unless otherwise indicated.
 1. Mark buttons and switches for function. Use both tactile symbols and Braille.
 2. Mount controls at heights complying with the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines and with ICC A117.1.
- C. Emergency Communication System: Elevators at DEN shall be equipped with a Talk-a-Phone model ETP103 OEM elevator telephone installed per manufacturer's instructions behind the control panel in each elevator car. DEN technologies will

provide cabling and an analog telephone line from the DIA PABX system for each telephone. Telephones are powered from the PABX system, which in turn is backed up by battery. The PABX is programmed to rung down calls from the elevators to the 24/7 police positions at the airport communications centers. Elevator telephones are polled once per day using Talk-a-Phone Talk-a-Lert software to confirm health and status of the telephones. Technicians are dispatched to repair or replace any telephone that fails during a polling cycle. Telephone products from other vendors shall not be permitted, as they cannot be polled.

- D. Firefighters' Two-Way Telephone Communication Service: Provide [**flush-mounted cabinet**] [**telephone jack**] in each car and required conductors in traveling cable for firefighters' two-way telephone communication service specified in [**Section 283113 "Digital, Addressable Fire-Alarm System"**] [**Section 283112 "Zoned (DC Loop) Fire-Alarm System."**]
- E. Car-Top Alarm: Provide switches on top emergency exits that will cause alarm to sound when cover is opened
- F. Car Position Indicator: Provide illuminated, digital-type car position indicator, located above car door or above car-control station.
- G. Hall Push-Button Stations: Provide hall push-button station at each landing as indicated.
 - 1. Provide single-button stations with [**position**] [**"in-use"**] indicator.
- H. Provide telephone jack in each unit for firefighters' two-way telephone communication service specified in [**Section 283113 "Digital, Addressable Fire-Alarm System"**] [**Section 283112 "Zoned (DC Loop) Fire-Alarm System."**]

2.11 FINISH MATERIALS

- A. General: Provide the following materials for exposed parts of elevator car enclosures, car doors, hoistway entrance doors and frames, and signal equipment as indicated.
- B. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, commercial steel, Type B, exposed, matte finish.
- C. Hot-Rolled Steel Sheet: ASTM A 1011/A 1011M, commercial steel, Type B, pickled.
- D. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, commercial steel, with **G60** (Z180) zinc coating (galvanized) or **A60** (ZF180) zinc-iron-alloy coating (galvannealed).
- E. Stainless-Steel Sheet: ASTM A 240/A 240M, Type 304.
- F. Textured Stainless-Steel Sheet: ASTM A 240/A 240M, Type 304 with embossed texture rolled into exposed surface.
 - 1. Product: Subject to compliance with requirements, provide "<Insert product name>" by <Insert manufacturer's name>.

- G. Stainless-Steel Bars: ASTM A 276, Type 304.
- H. Stainless-Steel Tubing: ASTM A 554, Grade MT 304.
- I. Rolled Steel Floor Plate: ASTM A 786/A 786M.
- J. Rolled Stainless-Steel Floor Plate: ASTM A 793.
- K. Aluminum-Alloy Rolled Tread Plate: ASTM B 632/B 632M, Pattern 1, Alloy 6061-T6.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine elevator areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work. Examine hoistways, hoistway openings, pits, and machine rooms as constructed; verify critical dimensions; and examine supporting structure and other conditions under which elevator work is to be installed.
- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Comply with manufacturer's written instructions.
- B. Welded Construction: Provide welded connections for installing elevator work where bolted connections are not required for subsequent removal or for normal operation, adjustment, inspection, maintenance, and replacement of worn parts. Comply with AWS standards for workmanship and for qualifications of welding operators.
- C. Coordination: Coordinate elevator work with work of other trades for proper time and sequence to avoid construction delays. Use established benchmarks, lines, and levels to ensure dimensional coordination of the Work.
- D. Sound Isolation: Mount rotating and vibrating equipment on vibration-isolating mounts to minimize vibration transmission to structure and structure-borne noise due to elevator system.
- E. Lubricate operating parts of systems, including ropes, as recommended by manufacturers.
- F. Alignment: Coordinate installation of hoistway entrances with installation of elevator guide rails for accurate alignment of entrances with car. Where possible, delay final

adjustment of sills and doors until car is operable in shaft. Reduce clearances to minimum, safe, workable dimension at each landing.

3.3 FIELD QUALITY CONTROL

- A. Acceptance Testing: On completion of elevator installation and before permitting elevator use (either temporary or permanent), perform acceptance tests as required and recommended by ASME A17.1/CSA B44 and by governing regulations and agencies.
- B. Operating Test: Load [**elevator**] [**each elevator**] [**one elevator of each type, capacity, speed, and travel distance**] to rated capacity and operate continuously for 30 minutes over full travel distance, stopping at each level and proceeding immediately to the next. Record temperature rise of elevator machine during 30-minute test period. Record failure to perform as required.
- C. Advise Owner, DEN Project Manager, and authorities having jurisdiction in advance of dates and times that tests are to be performed on elevators.

3.4 PROTECTION

- A. Temporary Use: [**Limit temporary use for construction purposes to one elevator.**] Do not use elevators for construction purposes unless approved by DEN Project Manager, and unless cars are provided with temporary enclosures, either within finished cars or in place of finished cars, to protect finishes from damage. Comply with the following requirements for [**each**] elevator used for construction purposes:
 - 1. Provide protective coverings, barriers, devices, signs, and procedures as needed to protect elevator and elevator equipment.
 - 2. Do not load elevators beyond their rated weight capacity.
 - 3. Engage elevator Installer to provide full maintenance service. Include preventive maintenance, repair, or replacement of worn or defective components, lubrication, cleanup, and adjustment as necessary for proper elevator operation at rated speed and capacity. Provide parts and supplies same as those used in the manufacture and installation of original equipment.
 - 4. Engage elevator Installer to restore damaged work, if any, so no evidence remains of correction. Return items that cannot be refinished in the field to the shop, make required repairs and refinish entire unit, or provide new units as required and approved by DEN Project Manager.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to operate[, **adjust, and maintain**] elevator(s).
 - 1. Review emergency provisions, including emergency access and procedures to be followed at time of failure in operation and other building emergencies. Train DEN personnel in procedures to follow in identifying sources of operational

- failures or malfunctions. Confer with DEN Project Manager on requirements for a complete elevator maintenance program.
2. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

- B. Check operation of[**each**] elevator with DEN Project Manager's personnel present and before date of Substantial Completion[**and not more than one month before end of warranty period**]. Determine that operation systems and devices are functioning properly.

3.6 MAINTENANCE

- A. Initial Maintenance Service: Beginning at Substantial Completion, maintenance service shall include 12<**Insert number**> months' full maintenance by skilled employees of elevator Installer. Include monthly preventive maintenance, repair, or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper elevator operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies as used in the manufacture and installation of original equipment.
 1. Perform maintenance during normal working hours.
 2. Perform emergency callback service during normal working hours with response time of [**two**] <**Insert number**> hours or less.
 3. Include 24-hour-per-day, 7-day-per-week emergency callback service with response time of [**two**] <**Insert number**> hours or less.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 142113

SECTION 142400 - HYDRAULIC ELEVATORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes hydraulic [**passenger**] [**and**] [**service**] elevators.
- B. Related Requirements:
 - 1. Section 015000 "Temporary Facilities and Controls" for temporary use of elevators for construction purposes.
 - 2. Section 033000 "Cast-in-Place Concrete" for setting sleeves, inserts, and anchoring devices in concrete.
 - 3. Section 042000 "Unit Masonry" for setting sleeves, inserts, and anchoring devices in masonry and for grouting elevator entrance frames installed in masonry walls.
 - 4. Section 051200 "Structural Steel Framing" for the following:
 - a. Attachment plates, angle brackets, and other preparation of structural steel for fastening guide-rail brackets.
 - b. Divider beams.
 - c. Hoist beams.
 - d. Structural-steel shapes for subsills that are part of steel frame.
 - 5. Section 055000 "Metal Fabrications" for the following:
 - a. Attachment plates and angle brackets for supporting guide-rail brackets.
 - b. Divider beams.
 - c. Hoist beams.
 - d. Structural-steel shapes for subsills.
 - e. Pit ladders.
 - f. Cants in hoistways made from steel sheet.
 - 6. Section 055213 "Pipe and Tube Railings" for railings between adjacent elevator pits.
 - 7. Section 057000 "Decorative Metal" for combination hall push-button stations.
 - 8. **<Insert Section number>-<Insert Section title>** for finish flooring in elevator cars.
 - 9. Section 099113 "Exterior Painting" for field painting of hoistway entrance doors and frames.

10. Section 099123 "Interior Painting" for field painting of hoistway entrance doors and frames.
11. Section 142413 "Hydraulic Freight Elevators" for hydraulic elevators used primarily for carrying freight and inaccessible to the general public.
12. Section 221429 "Sump Pumps" for sump pumps, sumps, and sump covers in elevator pits.
13. Section 271500 "Communications Horizontal Cabling" for telephone service for elevators.
14. **[Section 283111 "Digital, Addressable Fire-Alarm System"] [Section 283112 "Zoned (DC Loop) Fire-Alarm System"]** for smoke detectors in elevator lobbies to initiate emergency recall operation **[and heat detectors in shafts and machine rooms to disconnect power from elevator equipment before sprinkler activation]** and for connection to elevator controllers.
15. Section 31200 "Earth Moving" for excavating well hole to accommodate cylinder assembly.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.4 ALLOWANCES

- A. Elevator Car Allowances: Provide finished passenger[**and service**] elevator cars under the Elevator Car Allowance specified in Section 012100 "Allowances."
Allowance includes furnishing and installing the following:

1. Car wall finishes including trim.
2. Car floor finishes.
3. Car ceiling finishes.
4. Car[**and hoistway**] door finishes.
5. Car doorsills.
6. Car light fixtures.
7. Handrails.
8. Cutouts and other provisions for installing elevator signal equipment in cars.

1.5 UNIT PRICES

- A. Unit Prices: Rock excavation for cylinder well holes is paid for under the unit price indicated in the Contract and as specified in Section 012200 "Unit Prices."

1.6 DEFINITIONS

- A. Definitions in ASME A17.1/CSA B44 apply to work of this Section.
- B. Service Elevator: A passenger elevator that is also used to carry freight.
- C. Defective Elevator Work: Operation or control system failures; performances below specified ratings; excessive wear; unusual deterioration or aging of materials or finishes; unsafe conditions; the need for excessive maintenance; abnormal noise or vibration; and similar unusual, unexpected, and unsatisfactory conditions.

1.7 ACTION SUBMITTALS

- A. Product Data: Include capacities, sizes, performances, operations, safety features, finishes, and similar information. Include product data for car enclosures, hoistway entrances, and operation, control, and signal systems.
 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings:
 1. Include plans, elevations, sections, and large-scale details indicating service at each landing, machine room layout, coordination with building structure, relationships with other construction, and locations of equipment.

2. Include large-scale layout of car-control station[**and standby power operation control panel**].
3. Indicate variations from specified requirements, maximum dynamic and static loads imposed on building structure at points of support, locations of equipment and signals, and maximum and average power demands.

C. Samples for Initial Selection: For finishes involving color selection.

D. Samples for Verification: For exposed car, hoistway door and frame, and signal equipment finishes; **3-inch-** (75-mm-) square Samples of sheet materials; and **4-inch** (100-mm) lengths of running trim members.

1.8 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Seismic Qualification Certificates: For elevator equipment, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

C. Manufacturer Certificates: Signed by elevator manufacturer certifying that hoistway, pit, and machine room layout and dimensions, as shown on Drawings, and electrical service[**including standby power generator**], as shown and specified, are adequate for elevator system being provided.

D. Sample Warranty: For special warranty.

1.9 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For elevators to include in emergency, operation, and maintenance manuals.

1. In addition to items specified in Section 017823 "Operation and Maintenance Data," include diagnostic and repair information available to manufacturer's and Installer's maintenance personnel.

B. Inspection and Acceptance Certificates and Operating Permits: As required by authorities having jurisdiction for normal, unrestricted elevator use.

C. Manufacturer shall furnish a letter stating all components are designed by an Engineer and are suitable for the intended purpose.

D. Signage

- E. Maintenance manuals for each different electric traction elevator, including operation and maintenance instructions, parts listing with sources indicated, recommended parts inventory listing, emergency instructions, and similar information. Include all diagnostic and repair information available to manufacturer's and Installer's maintenance personnel. Submit for Owner's information at project closeout as specified in Division 01.
- F. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.10 MAINTENANCE SERVICE

- A. Initial Maintenance Service: Beginning at Substantial Completion, provide 12 months' full maintenance service by skilled, competent employees of the elevator Installer. Include monthly preventive maintenance, repair, or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper elevator operation at rated speed and capacity. Use parts and supplies as used in the manufacture and installation of original equipment.
 - 1. Perform maintenance, including emergency callback service, during normal working hours.
 - 2. Include 24-hour-per-day, 7-day-per-week emergency callback service.
 - 3. Response Time: 1 hour or less.
- B. Continuing Maintenance Proposal: Submit a continuing maintenance proposal from Installer to Owner, in the form of a standard [**one-year**] [**two-year**] [**five-year**] <Insert **agreement period**> maintenance agreement, starting on date initial maintenance service is concluded. State services, obligations, conditions, and terms for agreement period and for future renewal options.

1.11 QUALITY ASSURANCE

- A. Installer Qualifications: Engage the elevator manufacturer or an experienced Installer approved by the elevator manufacturer who has completed elevator installations similar in material, design, and extent to that indicated for this Project and with a record of successful in-service performance.
- B. Regulatory Requirements: In addition to local governing regulations, comply with the applicable provisions of the following:
 - 1. ASME A17.1, "Safety Code for Elevators and Escalators," referred to as the "Code."

1.12 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle materials, components, and equipment in manufacturer's protective packaging. Store materials, components, and equipment off of ground, under cover, and in a dry location.

1.13 COORDINATION

- A. Coordinate installation of sleeves, block outs, elevator equipment with integral anchors, and other items that are embedded in concrete or masonry for elevator equipment. Furnish templates, sleeves, elevator equipment with integral anchors, and installation instructions and deliver to Project site in time for installation.
- B. Furnish well casing and coordinate delivery with related excavation work.
- C. Coordinate locations and dimensions of other work relating to hydraulic elevators including pit ladders; sumps and floor drains in pits; entrance subsills; electrical service; and electrical outlets, lights, and switches in hoistways, pits, and machine rooms.

1.14 WARRANTY

- A. Manufacturer's Standard Warranty: Manufacturer agrees to repair, restore, or replace elevator work that fails in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, operation or control system failure, including excessive malfunctions; performances below specified ratings; excessive wear; unusual deterioration or aging of materials or finishes; unsafe conditions; need for excessive maintenance; abnormal noise or vibration; and similar unusual, unexpected, and unsatisfactory conditions.
 - 2. Warranty Period: Minimum 12 months<Insert number> year(s) from date of Substantial Completion.

1.15 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. ThyssenKrupp
2. Dover Elevator Co.
3. KONE Inc.
4. Otis Elevator Co.
5. Schindler Elevator Corp.
6. U.S. Elevator
7. <Insert manufacturer's name>.
8. or approved equal.

B. Source Limitations: Obtain elevators[, **including electric traction passenger elevators specified in Section 142100 "Electric Traction Elevators,"**] from single manufacturer.

1. Major elevator components, including pump-and-tank units, plunger-cylinder assemblies, controllers, signal fixtures, door operators, car frames, cars, and entrances, shall be manufactured by single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Comply with ASME A17.1/CSA B44.

B. Accessibility Requirements: Comply with Section 407 in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines and with ICC A117.1.

C. Seismic Performance: Elevator system shall withstand the effects of earthquake motions determined according to **[ASCE/SEI 7]** <Insert requirement> and shall comply with elevator safety requirements for seismic risk Zone 2 or greater in ASME A17.1/CSA B44.

1. The term "withstand" means "the system will remain in place without separation of any parts when subjected to the seismic forces specified[**and the system will be fully operational after the seismic event**]."
2. Affected peak velocity acceleration (Av) for Project's location is [**less than 0.10 (seismic risk Zones 0 and 1)**] [**greater than or equal to 0.10, but less than 0.20 (seismic risk Zone 2)**] [**greater than or equal to 0.20 (seismic risk Zones 3 and 4)**].
3. Provide earthquake equipment required by ASME A17.1/CSA B44.
4. Provide seismic switch required by ASCE/SEI 7.
5. Design earthquake spectral response acceleration short period (Sds) for Project is <Insert value>.
6. Project's Seismic Design Category: **[A] [B] [C] [D] [E] [F]**.
7. Elevator Component Importance Factor: **[1.5] [1.0]**.

2.3 MATERIALS AND COMPONENTS, GENERAL

A. General: Provide manufacturer's standard elevator systems. Where components are not otherwise indicated, provide standard components, published by manufacturer as

included in standard preengineered elevator systems and as required for a complete system.

- B. Power Supply: (480 V, 60 Hz, 3 phase.) (208 V, 60 Hz, 3 phase.) (240 V, 60 Hz, 2 phase).
- C. Inserts: Furnish required concrete and masonry inserts and similar anchorage devices for installing guide rails, machinery, and other components of elevator work where installation of devices is specified in another Specification Section.
- D. Machine Beams: Provide framing to support the elevator hoisting machine and deflector sheaves from the building structure. Comply with DIVISION 5 for materials and fabrication.
- E. Guide Shoes/Rollers: Provide either sliding shoes or rollers for speeds of 200 ft./min. (1.02 m/s) and less, and rollers for speeds in excess of 200 ft./min. (1.02 m/s).
- F. Car Frame and Platform: Welded steel units.

2.4 ELEVATORS

- A. Elevator System, General: Manufacturer's standard elevator systems. Unless otherwise indicated, manufacturers' standard components shall be used, as included in standard elevator systems and as required for complete system.
- B. Elevator Description:
 - 1. Group Number: **<Insert a different number for each group of elevators that share a group operation system>**.
 - 2. Elevator Number(s): **<Insert elevator number(s) as shown on Drawings>**.
 - 3. Emergency Elevator Number(s): **<Insert elevator number(s) as shown on Drawings>**.
 - 4. Service Elevator Number(s): **<Insert elevator number(s) as shown on Drawings>**.
 - 5. Type: Under-the-car single cylinder.
 - 6. Type: Holeless, beside-the-car, single-acting, [**single**] [**dual**] cylinder.
 - 7. Type: Holeless, beside-the-car, telescoping, [**single**] [**dual**] cylinder.
 - 8. Type: Holeless, beside-the-car, roped hydraulic, [**single**] [**dual**] cylinder.
 - 9. Rated Load: [**2000 lb (908 kg)**] [**2100 lb (953 kg)**] [**2500 lb (1135 kg)**] [**3000 lb (1362 kg)**] [**3500 lb (1589 kg)**] [**4000 lb (1816 kg)**] [**4500 lb (2043 kg)**] [**5000 lb (2270 kg)**] **<Insert value>**.
 - 10. Freight Loading Class for Service Elevators: Class A.
 - 11. Rated Speed: [**75 or 80 fpm (0.38 or 0.41 m/s)**] [**100 fpm (0.51 m/s)**] [**125 fpm (0.64 m/s)**] [**150 fpm (0.76 m/s)**] [**175 fpm (0.89 m/s)**] [**200 fpm (1.0 m/s)**] **<Insert value>**.
 - 12. Operation System: [**Single automatic**] [**Selective-collective automatic**] [**Group automatic**].
 - 13. Auxiliary Operations:
 - a. Standby power operation.

- b. Standby-powered lowering.
 - c. Battery-powered lowering.
 - d. Automatic dispatching of loaded car.
 - e. Nuisance call cancel.
 - f. **[Emergency hospital] [Priority] service at [all] <Insert floor designations> floors.**
 - g. Independent service for **[service elevator] [one car in group] [all cars in group]**.
 - h. Loaded-car bypass.
14. Security Features: **[Card-reader operation] [Keyswitch operation] [Keypad operation] [Car-to-lobby feature]**.
15. Dual Car-Control Stations: Provide two car-control stations **[in each elevator]**; equip only one with required keyswitches, if any.
16. Car Enclosures:
- a. Inside Width: **[64 inches (1626 mm)] [68 inches (1727 mm)] [80 inches (2032 mm)] [92 inches (2337 mm)] <Insert dimension>** from side wall to side wall.
 - b. Inside Depth: **[51 inches (1295 mm)] [53 inches (1346 mm)] [57 inches (1448 mm)] [65 inches (1651 mm)] [87-1/2 inches (2222 mm)] [90 inches (2286 mm)] [93 inches (2362 mm)] [93-1/2 inches (2375 mm)] [96 inches (2438 mm)] [101 inches (2565 mm)] [102 inches (2591 mm)] <Insert dimension>** from back wall to front wall (return panels).
 - c. Inside Height: **[88 inches (2235 mm)] [92 inches (2337 mm)] [94 inches (2388 mm)] [100 inches (2540 mm)] [104 inches (2642 mm)] [108 inches (2743 mm)] [112 inches (2845 mm)] <Insert dimension>** to underside of ceiling.
 - d. Front Walls (Return Panels): **[Polished stainless steel, No. 8 finish] [Satin stainless steel, No. 4 finish] [Polished bronze, lacquered] [Satin bronze, lacquered]** with integral car doorframes.
 - e. Car Fixtures: **[Polished stainless steel, No. 8 finish] [Satin stainless steel, No. 4 finish] [Polished bronze, lacquered] [Satin bronze, lacquered]**.
 - f. Side and Rear Wall Panels: **[Enameled steel] [Plastic laminate] [Satin stainless steel, No. 4 finish] [Textured stainless steel] [Satin bronze, lacquered]**.
 - g. Reveals: **[Enameled steel] [Polished stainless steel, No. 8 finish] [Satin stainless steel, No. 4 finish] [Polished bronze, lacquered] [Satin bronze, lacquered]**.
 - h. Door Faces (Interior): **[Enameled steel] [Primed steel] [Polished stainless steel, No. 8 finish] [Satin stainless steel, No. 4 finish] [Textured stainless steel] [Polished bronze, lacquered] [Satin bronze, lacquered] [Plastic laminate]**.
 - i. Doorsills: **[Aluminum, mill finish] [Bronze, polished] [Nickel silver, polished]**.
 - j. Ceiling: **[Luminous ceiling] [Polished stainless steel, No. 8 finish] [Satin stainless steel, No. 4 finish] [Polished bronze, lacquered] [Reflective metallic-finish, plastic-laminate, stainless steel] [Reflective metallic-finish, plastic-laminate, bronze]**.
 - k. Handrails: **[1-1/2 inches (38 mm) round] [1/2 by 2 inches (13 by 50 mm) rectangular] <Insert dimension(s)> [mirror-polished stainless steel,**

- No. 8 finish] [satin stainless steel, No. 4 finish] [mirror-polished bronze, lacquered] [satin bronze, lacquered], at [sides] [and] [rear] of car.**
- l. Floor: Manufacturer's standard carpet.
 - m. Floor prepared to receive carpet (specified in Section 096816 "Sheet Carpeting").
 - n. Floor prepared to receive resilient flooring (specified in Section 096500 "Resilient Flooring").
 - o. Floor recessed and prepared to receive **[dimension stone tile (specified in Section 093033 "Stone Tiling")] [ceramic tile (specified in Section 093000 "Tiling")]**.
 - p. Floor Thickness, Including Setting Materials: **<Insert thickness>** above plywood subfloor.
17. Hoistway Entrances:
- a. Width: **[36 inches (914 mm)] [42 inches (1067 mm)] [48 inches (1219 mm)] [54 inches (1372 mm)] <Insert dimension>**.
 - b. Height: **[84 inches (2134 mm)] [96 inches (2438 mm)] <Insert dimension>**.
 - c. Type: **[Single-speed side sliding] [Two-speed side sliding] [Single-speed center opening] [Two-speed center opening]**.
 - d. Frames **[at First Floor] [at Basement Floors]: [Enameled steel] [Primed steel] [Polished stainless steel, No. 8 finish] [Satin stainless steel, No. 4 finish] [Polished bronze, lacquered] [Satin bronze, lacquered]**.
 - e. Frames at Other Floors: **[Enameled steel] [Primed steel] [Polished stainless steel, No. 8 finish] [Satin stainless steel, No. 4 finish] [Polished bronze, lacquered] [Satin bronze, lacquered]**.
 - f. Doors **[and Transoms] [at First Floor] [at Basement Floors]: [Enameled steel] [Primed steel] [Polished stainless steel, No. 8 finish] [Satin stainless steel, No. 4 finish] [Textured stainless steel] [Polished bronze, lacquered] [Satin bronze, lacquered] [Plastic laminate]**.
 - g. Doors **[and Transoms] at Other Floors: [Enameled steel] [Primed steel] [Polished stainless steel, No. 8 finish] [Satin stainless steel, No. 4 finish] [Textured stainless steel] [Polished bronze, lacquered] [Satin bronze, lacquered] [Plastic laminate]**.
 - h. Sills **[at First Floor] [at Basement Floors]: [Aluminum, mill finish] [Bronze, polished] [Nickel silver, polished]**.
 - i. Sills at Other Floors: **[Aluminum, mill finish] [Bronze, polished] [Nickel silver, polished]**.
18. Hall Fixtures **[at First Floor] [at Basement Floors]: [Polished stainless steel, No. 8 finish] [Satin stainless steel, No. 4 finish] [Polished bronze, lacquered] [Satin bronze, lacquered] [Recessed type with no exposed-metal surfaces]**.
19. Hall Fixtures at Other Floors: **[Polished stainless steel, No. 8 finish] [Satin stainless steel, No. 4 finish] [Polished bronze, lacquered] [Satin bronze, lacquered] [Recessed type with no exposed-metal surfaces]**.
20. Additional Requirements:
- a. Provide inspection certificate in each car, mounted under acrylic cover with frame made from **[polished stainless steel, No. 8 finish] [satin stainless**

steel, No. 4 finish] [polished bronze, lacquered] [satin bronze, lacquered].

- b. Provide hooks for protective pads[**in all cars**] and [**one**] [**two**] <Insert number> complete set(s) of full-height protective pads.

2.5 SYSTEMS AND COMPONENTS

- A. Pump Units: Positive-displacement type with a maximum of 10 percent variation between no load and full load and with minimum pulsations.
1. Pump shall be [**submersible type with submersible squirrel-cage induction motor, and shall be suspended inside oil tank from vibration isolation mounts**] [or] [**shall be tank-top-mounted type with fan-cooled, squirrel-cage induction motor, and shall be mounted on oil tank with vibration isolation mounts and enclosed in prime-painted steel enclosure lined with 1-inch-(25-mm-) thick, glass-fiber insulation board**].
 2. Motor shall have [**wye-delta**] [or] [**solid-state**] starting.
 3. Motor shall have variable-voltage, variable-frequency control.
- B. Hydraulic Silencers: System shall have hydraulic silencer containing pulsation-absorbing material in blowout-proof housing at pump unit.
- C. Piping: Size, type, and weight of piping as recommended by elevator manufacturer, with flexible connectors to minimize sound and vibration transmissions from power unit.
1. Cylinder units shall be connected with dielectric couplings.
 2. Casing for Underground Piping: Schedule 40 PVC pipe complying with ASTM D 1785, joined with PVC fittings complying with ASTM D 2466 and solvent cement complying with ASTM D 2564.
- D. Hydraulic Fluid: Elevator manufacturer's standard [**fire-resistant**] fluid with additives as needed to prevent oxidation of fluid, corrosion of cylinder and other components, and other adverse effects.
- E. Hydraulic Fluid: Nontoxic, biodegradable[, **fire-resistant**] fluid made from vegetable oil with antioxidant, anticorrosive, antifoaming, and metal-passivating additives and approved by elevator manufacturer for use with elevator equipment.
1. Product: Subject to compliance with requirements, provide "Hydro Safe" by Hydro Safe Oil Division, Inc.
- F. Inserts: Furnish required concrete and masonry inserts and similar anchorage devices for installing guide rails, machinery, and other components of elevator work. Device installation is specified in another Section.
- G. Protective Cylinder Casing: PVC or HDPE pipe casing complying with ASME A17.1/CSA B44, of sufficient size to provide not less than **1-inch** (25-mm) clearance

from cylinder and extending above pit floor. Casing shall have means of monitoring effectiveness to comply with ASME A17.1/CSA B44.

- H. Corrosion-Protective Filler: A nontoxic, petroleum-based gel formulated for filling the space between hydraulic cylinder and protective casing. Filler shall be electrically nonconductive, displace or absorb water, and gel or solidify at temperatures below **60 deg F** (16 deg C).
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Hydro Safe Oil Division, Inc.; No-Ox-Id Liquid Elevator Casing Filler E-800.
 - b. Union-Gard, a division of Dome Services L.L.C.; Union-Gard 160.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.
 - I. Car Frame and Platform: Welded[**or bolted**] steel units.
 - J. Guides: Roller guides; polymer-coated, nonlubricated sliding guides; or sliding guides with guide-rail lubricators. Provide guides at top and bottom of car and counterweight frames.

2.6 OPERATION SYSTEMS

- A. General: Provide manufacturer's standard microprocessor operation system as required to provide type of operation indicated.
- B. Auxiliary Operations: In addition to primary operation system features, provide the following operational features for elevators where indicated:
1. Single-Car Standby Power Operation: On activation of standby power, car is returned to a designated floor and parked with doors open. Car can be manually put in service on standby power, either for return operation or for regular operation, by switches in control panel located at **[main lobby] [fire command station] <Insert location>**. Manual operation causes automatic operation to cease.
 2. Single-Car Standby-Powered Lowering: On activation of standby power, if car is at a floor, it remains at that floor, opens its doors, and shuts down. If car is between floors, it is lowered to a preselected floor, opens its doors, and shuts down. If car is below the preselected floor, it is lowered to the next lower floor, opens its doors, and shuts down.
 3. Single-Car Standby-Powered Lowering: On activation of standby power, car is lowered to the lowest floor, opens its doors, and shuts down.
 4. Single-Car Battery-Powered Lowering: If power fails and car is at a floor, it remains at that floor, opens its doors, and shuts down. If car is between floors, it is lowered to a preselected floor, opens its doors, and shuts down. If car is below the preselected floor, it is lowered to the next lower floor, opens its doors, and shuts down. System includes rechargeable battery and automatic recharging system.

5. Single-Car Battery-Powered Lowering: When power fails, car is lowered to the lowest floor, opens its doors, and shuts down. System includes rechargeable battery and automatic recharging system.
6. Group Standby Power Operation: On activation of standby power, cars are returned to a designated floor and parked with doors open. Only one car is moved upward at a time, with priority given to loaded cars. If a car cannot be returned after two attempts, it is removed from the system. When all cars have been returned or removed from the system, one car is automatically placed in service. If car selected for service cannot operate within 60 seconds, the system removes car from service and places another car in service. Cars can be manually put in service on standby power, either for return operation or for regular operation, by switches in control panel located at **[main lobby] [fire command station] <Insert location>**. Manual operation causes automatic operation to cease.
7. Group Standby Power Operation: On activation of standby power, cars are returned to lowest floor and parked with doors open. If a car cannot be returned, it is removed from the system. One car is selected for service on standby power by a switch located at **[main lobby] [fire command station] <Insert location>**.
8. Group Standby-Powered Lowering: On activation of standby power, cars that are at a floor remain at that floor, open their doors, and shut down. Cars that are between floors are lowered to a preselected floor, open their doors, and shut down. Cars that are below the preselected floor are lowered to the next lower floor, open their doors, and shut down.
9. Group Standby-Powered Lowering: On activation of standby power, cars are lowered to the lowest floor, open their doors, and shut down.
10. Group Battery-Powered Lowering: If power fails, cars that are at a floor remain at that floor, open their doors, and shut down. Cars that are between floors are lowered to a preselected floor, open their doors, and shut down. Cars that are below the preselected floor are lowered to the next lower floor, open their doors, and shut down. System includes rechargeable battery and automatic recharging system.
11. Group Battery-Powered Lowering: When power fails, cars are lowered to the lowest floor, open their doors, and shut down. System includes rechargeable battery and automatic recharging system.
12. Automatic Dispatching of Loaded Car: When car load exceeds 80 percent of rated capacity, doors start closing.
13. Nuisance Call Cancel: When car calls exceed a preset number while car load is less than a predetermined weight, all car calls are canceled. Preset number of calls **[and predetermined weight]** can be adjusted.
14. Loaded-Car Bypass: When car load exceeds 80 percent of rated capacity, car responds only to car calls, not to hall calls.
15. Independent Service: Keyswitch in car-control station removes car from group operation and allows it to respond only to car calls. Key cannot be removed from keyswitch when car is in independent service. When in independent service, doors close only in response to door close button.
16. **[Emergency Hospital] [Priority] Service**: Service is initiated by a **[keyswitch] [card reader] [remote switch]** at designated floors. One elevator is removed from group operation and directed to the floor where service was initiated. On arriving at the floor, elevator opens its doors and parks **[and a lighted sign directs passengers to exit elevator]**. Car is placed in operation by selecting a

floor and pressing door close button or by operating keyswitch to put car in independent service. After responding to floor selected or being removed from independent service, car is returned to group operation. If car is not placed in operation within a preset time after being called, it is returned to group operation.

17. Earthquake emergency operation.
18. Fire recall position

C. Security Features: Provide the following security features, where indicated. Security features shall not affect emergency firefighters' service.

1. Card-Reader Operation: System uses card readers at [**car-control stations**] [**and**] [**hall push-button stations**] to authorize calls. Security system determines which landings and at what times calls require authorization by card reader. Provide required conductors in traveling cable and panel in machine room for interconnecting card readers, other security access system equipment, and elevator controllers. Allow space as indicated for card reader in car.
 - a. When system is activated, car calls to restricted landings do not register unless card is first inserted into card reader. Security access system determines which landings are restricted and which of those are accessible to cardholder.
2. Card-reader operation for access to restricted landings based on security system provided by others. Provide required conductors in traveling cable and panel in machine room for interconnecting card readers, other security access system equipment, and elevator controllers. Allow space in car as indicated for card reader.
 - a. When system is activated, car calls to restricted landings do not register unless card is first inserted into card reader. Security access system determines which landings are restricted and which of those are accessible to cardholder.
3. Keyswitch Operation: Push buttons are activated and deactivated by security keyswitches at car-control stations and hall push-button stations. Key is removable only in deactivated position.
4. Secured landing feature that allows each landing to be secured or cleared. If a landing is secured, car buttons for that landing do not register a call unless a landing access code is entered within a predetermined time period after the landing button is pressed. When a secured landing button is pressed a "Restricted Floor" lamplights and remains lit until landing access code has been entered or predetermined time period has elapsed.
5. Access codes are programmed at each car operating panel using a security keyswitch. Secured landing feature is activated and deactivated by a security keyswitch at the main landing.
6. Anticrime feature activated by a keyswitch that causes all cars in a group to return immediately to a predetermined floor and open their doors for inspection.

On deactivation by keyswitch, cars complete calls registered before keyswitch activation and resume normal operation.

7. Keypad Operation: Allows each landing to be restricted or unrestricted. When a restricted landing button is pressed, a "Restricted Floor" lamp lights and remains lit until landing access code has been entered into a keypad or predetermined time period has elapsed. Car calls for restricted landings do not register until landing access code is entered into keypad within predetermined time period after landing button is pressed.
 - a. Access codes are programmed at each car operating panel using a security keyswitch. Keypad operation can be activated and deactivated by security keyswitch at main landing.
8. Car-to-Lobby Feature: Feature, activated by keyswitch at main lobby, that causes **[car] [all cars in a group]** to return immediately to lobby and open doors for inspection. On deactivation by keyswitch, calls registered before keyswitch activation are completed and normal operation is resumed.

2.7 DOOR REOPENING DEVICES

- A. Infrared Array: Provide door reopening device with uniform array of 36 or more microprocessor-controlled, infrared light beams projecting across car entrance. Interruption of one or more light beams shall cause doors to stop and reopen.
- B. Nudging Feature: After car doors are prevented from closing for predetermined adjustable time, through activating door reopening device, a loud buzzer shall sound and doors shall begin to close at reduced kinetic energy.

2.8 CAR ENCLOSURES

- A. General: Provide **[enameled-steel car enclosures to receive removable] [steel-framed car enclosures with nonremovable]** wall panels, with **[removable]** car roof, access doors, power door operators, and ventilation.
 1. Provide standard railings complying with ASME A17.1/CSA B44 on car tops where required by ASME A17.1/CSA B44.
 2. See "Allowances" Paragraph in "Summary" Article for items to be provided under the Elevator Car Allowance. Provide items not included in the Elevator Car Allowance as needed for finished car **[including materials and finishes specified below]**.
- B. Materials and Finishes: Manufacturer's standards, but not less than the following:
 1. Subfloor: Exterior, underlayment grade plywood, not less than **5/8-inch** (15.9-mm) nominal thickness.
 2. Subfloor: Exterior, C-C Plugged grade plywood, not less than **7/8-inch** (22.2-mm) nominal thickness.

3. Floor Finish: [**Specified in <Insert Section number>-<Insert Section title>**] [**Elevator manufacturer's standard level-loop nylon carpet; color as selected by DEN Project Manager from manufacturer's full range**].
4. Enameled-Steel Wall Panels: Flush, hollow-metal construction; fabricated from cold-rolled steel sheet. Provide with factory-applied enamel finish; colors as selected by DEN Project Manager from manufacturer's full range.
5. Stainless-Steel Wall Panels: Flush, hollow-metal construction; fabricated from stainless-steel sheet.
6. Bronze Wall Panels: Flush, hollow-metal construction; fabricated from bronze sheet.
7. Plastic-Laminate Wall Panels: Plastic laminate adhesively applied to [**1/2-inch (13-mm) fire-retardant-treated particleboard**] [**manufacturer's standard honeycomb core**] with [**plastic-laminate panel backing and**] manufacturer's standard protective edge trim. Panels have a flame-spread index of [**25**] [**75**] or less, when tested according to ASTM E 84. Plastic-laminate color, texture, and pattern as selected by DEN Project Manager from [**plastic-laminate**] [**elevator**] manufacturer's full range.
8. Fabricate car with recesses and cutouts for signal equipment.
9. Fabricate car doorframe integrally with front wall of car.
10. Enameled-Steel Doors: Flush, hollow-metal construction; fabricated from cold-rolled steel sheet. Provide with factory-applied enamel finish; colors as selected by DEN Project Manager from manufacturer's full range.
11. Primed-Steel Doors: Flush, hollow-metal construction; fabricated from cold-rolled steel sheet. Provide with factory-applied, rust-resistant primer for field painting.
12. Stainless-Steel Doors: Flush, hollow-metal construction; fabricated [**from stainless-steel sheet**] [**or**] [**by laminating stainless-steel sheet to exposed faces and edges of enameled cold-rolled steel doors using adhesive that fully bonds metal to metal without telegraphing or oil-canning**].
13. Bronze Doors: Flush, hollow-metal construction; fabricated by laminating bronze sheet to exposed faces and edges of enameled cold-rolled steel doors using adhesive that fully bonds metal to metal without telegraphing or oil-canning.
14. Plastic-Laminate Doors: Flush, hollow-metal construction; fabricated by laminating plastic laminate to exposed faces of enameled cold-rolled steel doors and covering edges with protective edge trim [**matching return panels**]. Plastic-laminate color, texture, and pattern as selected by DEN Project Manager from [**plastic-laminate**] [**elevator**] manufacturer's full range.
15. Unfinished-Steel Doors: Flush, hollow-metal construction; fabricated from cold-rolled steel sheet, with factory-applied enamel.
16. Sight Guards: Provide sight guards on car doors.
17. Sills: Extruded metal, with grooved surface, **1/4 inch (6.4 mm)** thick.
18. Luminous Ceiling: Fluorescent light fixtures and ceiling panels of translucent acrylic or other permanent rigid plastic.
19. [**Metal**] [**Metallic-Finish, Plastic-Laminate**] Ceiling: Flush panels, with [**incandescent downlights in the center of**] [**four low-voltage downlights in**] each panel. [**Align ceiling panel joints with joints between wall panels.**]
20. Handrails: Manufacturer's standard handrails, of shape, metal, and finish indicated.

2.9 HOISTWAY ENTRANCES

- A. Hoistway Entrance Assemblies: Manufacturer's standard horizontal-sliding, door-and-frame hoistway entrances complete with track systems, hardware, sills, and accessories. Frame size and profile shall accommodate hoistway wall construction.
- Where gypsum board wall construction is indicated, frames shall be self-supporting with reinforced head sections.
- B. Fire-Rated Hoistway Entrance Assemblies: Door and frame assemblies shall comply with NFPA 80 and be listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction based on testing at as close-to-neutral pressure as possible according to **[NFPA 252]** **[or]** **[UL 10B]**.
- Fire-Protection Rating: **[1 hour]** **[1-1/2 hours]** **<Insert rating>** **[with 30-minute temperature rise of 450 deg F (250 deg C)]**.
- C. Materials and Fabrication: Manufacturer's standards, but not less than the following:
- Enameled-Steel Frames: Formed from cold- or hot-rolled steel sheet. Provide with factory-applied enamel finish; colors as selected by DEN Project Manager from manufacturer's full range.
 - Primed-Steel Frames: Formed from cold- or hot-rolled steel sheet. Provide with factory-applied, rust-resistant primer for field painting.
 - Steel Subframes: Formed from cold- or hot-rolled steel sheet, with factory-applied enamel finish or rust-resistant primer. Fabricate to receive applied finish as indicated.
 - Stainless-Steel Frames: Formed from stainless-steel sheet.
 - Bronze Frames: Formed from cold- or hot-rolled steel sheet, with enamel finish, and with formed-bronze sheet laminated to steel frames using adhesive that fully bonds metal to metal without telegraphing or oil-canning.
 - Star of Life Symbol: Identify emergency elevators with star of life symbol, not less than **3 inches** (76 mm) high, on both inside surfaces of hoistway doorframes.
 - Enameled-Steel Doors **[and Transoms]**: Flush, hollow-metal construction; fabricated from cold-rolled steel sheet. Provide with factory-applied enamel finish; colors as selected by DEN Project Manager from manufacturer's full range.
 - Primed-Steel Doors **[and Transoms]**: Flush, hollow-metal construction; fabricated from cold-rolled steel sheet. Provide with factory-applied, rust-resistant primer for field painting.
 - Stainless-Steel Doors **[and Transoms]**: Flush, hollow-metal construction; fabricated **[from stainless-steel sheet]** **[or]** **[by laminating stainless-steel sheet to exposed faces and edges of enameled cold-rolled steel doors using adhesive that fully bonds metal to metal without telegraphing or oil-canning]**.
 - Bronze Doors **[and Transoms]**: Flush, hollow-metal construction; fabricated by laminating bronze sheet to exposed faces and edges of enameled cold-rolled steel doors using adhesive that fully bonds metal to metal without telegraphing or oil-canning.
 - Plastic-Laminate Doors **[and Transoms]**: Flush, hollow-metal construction; fabricated by laminating plastic laminate to exposed faces of enameled

- cold-rolled steel doors and covering edges with protective edge trim[**matching doorframes**]. Plastic-laminate color, texture, and pattern as selected by DEN Project Manager from [**plastic-laminate**] [**elevator**] manufacturer's full range.
12. Unfinished-Steel Doors[**and Transoms**]: Flush, hollow-metal construction; fabricated from cold-rolled steel sheet, with factory-applied enamel.
 13. Sight Guards: Provide sight guards on doors matching door edges.
 14. Sills: Extruded metal, with grooved surface, **1/4 inch** (6.4 mm) thick.
 15. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107/C 1107M.

2.10 SIGNAL EQUIPMENT

- A. General: Provide hall-call and car-call buttons that light when activated and remain lit until call has been fulfilled. Fabricate lighted elements with [**long-life lamps and acrylic or other permanent, non-yellowing translucent plastic diffusers**] [**or**] [**LEDs**].
- B. Car-Control Stations: Provide manufacturer's standard [**recessed**] [**or**] [**semirecessed**] car-control stations. Include call buttons for each landing served and other buttons, switches, and controls required for specified car operation. Provide operating device symbols as required by the applicable codes. Mount in return panel adjacent to car door unless otherwise indicated.
 1. Mark buttons and switches for required use or function. Use both tactile symbols and Braille.
 2. Provide "No Smoking" sign matching car-control station, either integral with car-control station or mounted adjacent to it, with text and graphics as required by authorities having jurisdiction.
- C. Swing-Return Car-Control Stations: Provide car control station fully recessed in hinged return panel adjacent to door of each car. Include call buttons for each landing served and other buttons, switches, and controls required for specified car operation. Provide operating device symbols as required by the applicable codes. Mark other buttons and switches with manufacturer's standard identification for required use or function
 1. Mark buttons and switches for function. Use both tactile symbols and Braille.
 2. Provide "No Smoking" sign matching car-control station, either integral with car-control station or mounted adjacent to it, with text and graphics as required by authorities having jurisdiction.
 3. Mount controls as shown or scheduled and at heights complying with ANSI A117.1.
 4. Mount controls as shown or scheduled and at heights complying with ADA Accessibility Guidelines.
 5. Provide 2 car control stations in each passenger elevator; equip only 1 with required keyswitches, if any.
- D. Emergency Communication System: Elevators at DEN shall be equipped with a Talk-a-Phone model ETP103 OEM elevator telephone installed per manufacturer's instructions behind the control panel in each elevator car. DEN technologies will

provide cabling and an analog telephone line from the DIA PABX system for each telephone. Telephones are powered from the PABX system, which in turn is backed up by battery. The PABX is programmed to rung down calls from the elevators to the 24/7 police positions at the airport communications centers. Elevator telephones are polled once per day using Talk-a-Phone Talk-a-Lert software to confirm health and status of the telephones. Technicians are dispatched to repair or replace any telephone that fails during a polling cycle. Telephone products from other vendors shall not be permitted, as they cannot be polled.

- E. Firefighters' Two-Way Telephone Communication Service: Provide [**flush-mounted cabinet**] [**telephone jack**] in each car and required conductors in traveling cable for firefighters' two-way telephone communication service specified in [**Section 283111 "Digital, Addressable Fire-Alarm System"**] [**Section 283112 "Zoned (DC Loop) Fire-Alarm System."**]
- F. Car-Top Alarm: Provide switches on top emergency exits that will cause alarm to sound when cover is opened.
- G. Car Position Indicator: Provide [**illuminated,**] digital-type car position indicator, located above car door or above car-control station. Also, provide audible signal to indicate to passengers that car is either stopping at or passing each of the floors served. Include travel direction arrows if not provided in car-control station.
- H. Hall Push-Button Stations: [**Provide one hall push-button station at each landing for each single elevator or group of elevators, but not less than one station for each four elevators in a group**] [**Provide hall push-button station at each landing as indicated**]. For each group of passenger elevators, locate between 2 elevators at center of group or at location most convenient for approaching passengers.
 - 1. Provide [**units with flat faceplate for mounting with body of unit recessed in wall**].
 - 2. Equip units with buttons for calling elevator and for indicating applicable direction of travel.
 - 3. Provide 2-button stations at intermediate landings. Provide 1-button stations with direction indication at terminal landings.
 - 4. Provide telephone jack in each unit for firefighters' two-way telephone communication service specified in [**Section 283111 "Digital, Addressable Fire-Alarm System"**] [**Section 283112 "Zoned (DC Loop) Fire-Alarm System."**]Possibly insert a provision for either an "In Use" signal or a digital display of car position for single elevators.
- I. Hall Lanterns: Units with illuminated arrows; but provide single arrow at terminal landings. Match materials, finishes, and mounting method of hall push-button stations. Provide[**one of**] the following:
 - 1. Manufacturer's standard wall-mounted units, for mounting above entrance frames.
 - 2. Units with flat faceplate for mounting with body of unit recessed in wall and with illuminated elements projecting from faceplate for ease of angular viewing.
 - 3. Units mounted in both jambs of entrance frame[**for each elevator**].

4. Units mounted in both car door jambs[; **may be used only for single elevators or for two-car groups**].
 - J. Hall Annunciator: With each hall lantern, provide audible signals indicating car arrival and direction of travel. Signals sound once for up and twice for down.
 1. At manufacturer's option, audible signals may be placed on cars.
 - K. Hall Position Indicators: Provide [**illuminated**,]digital-display-type position indicators, located above each hoistway entrance at ground floor. Provide units with flat faceplate for mounting and with body of unit recessed in wall. Match materials, finishes, and mounting method of hall push-button stations.
 1. Integrate ground-floor hall lanterns with hall position indicators.
 - L. Standby Power Elevator Selector Switches: Provide switches, as required by ASME A17.1/CSA B44, where indicated. Adjacent to switches, provide illuminated signal that indicates when normal power supply has failed.[**For each elevator, provide illuminated signals that indicate when they are operational and when they are at the designated emergency return level with doors open.**]
 - M. Fire-Command-Center Annunciator Panel: Provide panel containing illuminated position indicators for each elevator, clearly labeled with elevator designation; include illuminated signal that indicates when elevator is operational and when it is at the designated emergency return level with doors open. Provide standby power elevator selector switch(es), as required by ASME A17.1/CSA B44, adjacent to position indicators. Provide illuminated signal that indicates when normal power supply has failed.
 - N. Emergency Pictorial Signs: Fabricate from materials matching hall push-button stations, with text and graphics as required by authorities having jurisdiction, indicating that in case of fire elevators are out of service and exits should be used instead. Provide one sign at each hall push-button station unless otherwise indicated.
- 2.11 FINISH MATERIALS
- A. General: Provide the following materials for exposed parts of elevator car enclosures, car doors, hoistway entrance doors and frames, and signal equipment as indicated.
 - B. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, commercial steel, Type B, exposed, matte finish.
 - C. Hot-Rolled Steel Sheet: ASTM A 1011/A 1011M, commercial steel, Type B, pickled.
 - D. Stainless-Steel Sheet: ASTM A 240/A 240M, Type 304.
 - E. Textured Stainless-Steel Sheet: ASTM A 240/A 240M, Type 304 with embossed texture rolled into exposed surface.

1. Product: Subject to compliance with requirements, provide "<Insert product name>" by <Insert manufacturer's name>.
 2. Metal surface is [satin polished] [satin relieved] [titanium nitride colored] [oxide colored] [satin polished and titanium nitride colored] [satin relieved and titanium nitride colored] [satin polished and oxide colored] [satin relieved and oxide colored] [color coated and satin relieved] [color coated and bright relieved] after texturing.
- F. Stainless-Steel Bars: ASTM A 276, Type 304.
- G. Stainless-Steel Tubing: ASTM A 554, Grade MT 304.
- H. Bronze Plate and Sheet: ASTM B 36/B 36M, Alloy UNS No. C28000 (muntz metal).
- I. Bronze Extrusions: ASTM B 455, Alloy UNS No. C38500 (architectural bronze).
- J. Bronze Tubing: [ASTM B 135](#) (ASTM B 135M), Alloy UNS No. C23000 (red brass, 85 percent copper).
- K. Aluminum Extrusions: [ASTM B 221](#) (ASTM B 221M), Alloy 6063.
- L. Nickel Silver Extrusions: ASTM B 151/B 151M, Alloy UNS No. C74500 or No. C77600.
- M. Plastic Laminate: High-pressure type complying with NEMA LD 3, [Type HGS for flat applications] [Type HGL for flat applications] [Type HGP for postformed applications] [and] [Type BKV for panel backing].

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine elevator areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work. Verify critical dimensions and examine supporting structure and other conditions under which elevator work is to be installed.
- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Excavation for Cylinder: Drill well hole in [each] elevator pit to accommodate installation of cylinder; comply with applicable requirements in Section 312000 "Earth Moving."
- B. Provide [waterproof] well casing [as necessary] to retain well-hole walls.

- C. Install cylinder in protective casing within well hole. Before installing protective casing, remove water and debris from well hole[**and provide permanent waterproof seal at bottom of well casing**].
1. Fill void space between protective casing and cylinder with corrosion-protective filler.
 2. Align cylinders and fill space around protective casing with fine sand.
- D. Install cylinder plumb and accurately centered for elevator car position and travel. Anchor securely in place, supported at pit floor. Seal between **[well] [protective]** casing and pit floor with **4 inches** (100 mm) of nonshrink, nonmetallic grout.
- E. Install cylinder plumb and accurately centered for elevator car position and travel. Anchor securely in place, supported at pit floor and braced at intervals as needed to maintain alignment. Anchor cylinder guides at spacing needed to maintain alignment and avoid overstressing guides.
- F. Welded Construction: Provide welded connections for installing elevator work where bolted connections are not required for subsequent removal or for normal operation, adjustment, inspection, maintenance, and replacement of worn parts. Comply with AWS workmanship and welding operator qualification standards.
- G. Coordination: Coordinate elevator work with work of other trades for proper time and sequence to avoid construction delays. Use established benchmarks, lines, and levels to ensure dimensional coordination of the Work.
- H. Sound Isolation: Mount rotating and vibrating equipment on vibration-isolating mounts to minimize vibration transmission to structure and structure-borne noise due to elevator system.
- I. Install piping above the floor, where possible. Install underground piping in casing.
- J. Lubricate operating parts of systems as recommended by manufacturers.
- K. Alignment: Coordinate installation of hoistway entrances with installation of elevator guide rails for accurate alignment of entrances with car. Where possible, delay installation of sills and frames until car is operable in shaft. Reduce clearances to minimum, safe, workable dimension at each landing.
- L. Leveling Tolerance: **1/4 inch** (6 mm), up or down, regardless of load and travel direction.
- M. Set sills flush with finished floor surface at landing. Fill space under sill solidly with nonshrink, nonmetallic grout.
- N. Locate hall signal equipment for elevators as follows, unless otherwise indicated:
1. For groups of elevators, locate hall push-button stations between two elevators at center of group or at location most convenient for approaching passengers.
 2. Place hall lanterns either above or beside each hoistway entrance.
 3. Mount hall lanterns at a minimum of **72 inches** (1829 mm) above finished floor.

3.3 FIELD QUALITY CONTROL

- A. Acceptance Testing: On completion of elevator installation and before permitting elevator use (either temporary or permanent), perform acceptance tests as required and recommended by ASME A17.1/CSA B44 and by governing regulations and agencies.
- B. Operating Test: Load [elevator] [each elevator] [one elevator of each type, **capacity, speed, and travel distance**] to rated capacity and operate continuously for 30 minutes over full travel distance, stopping at each level and proceeding immediately to the next. Record temperature rise of elevator machine during 30-minute test period. Record failure to perform as required.
- C. Advise Owner, DEN Project Manager, and authorities having jurisdiction a minimum of 72 hours in advance of dates and times that tests are to be performed on elevators.

3.4 PROTECTION

- A. Temporary Use: [**Limit temporary use for construction purposes to one elevator.**] Do not use elevators for construction purposes unless approved by DEN Project Manager, and unless cars are provided with temporary enclosures, either within finished cars or in place of finished cars, to protect finishes from damage. Comply with the following requirements for[**each**] elevator used for construction purposes:
 - 1. Provide car with temporary enclosure, either within finished car or in place of finished car, to protect finishes from damage.
 - 2. Provide strippable protective film on entrance and car doors and frames.
 - 3. Provide padded wood bumpers on entrance doorframes covering jambs and frame faces.
 - 4. Provide other protective coverings, barriers, devices, signs, and procedures as needed to protect elevator and elevator equipment.
 - a. If, despite such protection, elevators become damaged, engage elevator Installer to restore damaged work so that no evidence remains of correction work. Return items that cannot be refinished in the field to the shop, make required repairs and refinish entire unit, or provide new units as required and approved by DEN Project Manager.
 - 5. Do not load elevators beyond their rated weight capacity.
 - 6. Engage elevator Installer to provide full maintenance service. Include preventive maintenance, repair or replacement of worn or defective components, lubrication, cleanup, and adjustment as necessary for proper elevator operation at rated speed and capacity. Provide parts and supplies same as those used in the manufacture and installation of original equipment.
 - 7. Engage elevator Installer to restore damaged work, if any, so no evidence remains of correction. Return items that cannot be refinished in the field to the shop, make required repairs and refinish entire unit, or provide new units as required.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to operate[, **adjust, and maintain**] elevator(s).
1. Review emergency provisions, including emergency access and procedures to be followed at time of failure in operation and other building emergencies. Train DEN personnel in procedures to follow in identifying sources of operational failures or malfunctions. Confer with DEN Project Manager on requirements for a complete elevator maintenance program.
 2. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.
- B. Check operation of[**each**] elevator with Owner's personnel present before date of Substantial Completion[**and again not more than one month before end of warranty period**]. Determine that operation systems and devices are functioning properly.

3.6 MAINTENANCE

- A. Initial Maintenance Service: Beginning at Substantial Completion, maintenance service shall include 12<Insert number> months' full maintenance by skilled employees of elevator Installer. Include monthly preventive maintenance, repair, or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper elevator operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies as used in the manufacture and installation of original equipment.
1. Perform maintenance during normal working hours.
 2. Perform emergency callback service during normal working hours with response time of [**two**] <Insert number> hours or less.
 3. Include 24-hour-per-day, 7-day-per-week emergency callback service with response time of [**two**] <Insert number> hours or less.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

A. METHOD OF PAYMENT

- B. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 142400

SECTION 142413 - HYDRAULIC FREIGHT ELEVATORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes hydraulic freight elevators.
- B. Related Requirements:
 - 1. Section 033000 "Cast-in-Place Concrete" for setting sleeves, inserts, and anchoring devices in concrete.
 - 2. Section 042000 "Unit Masonry" for setting sleeves, inserts, and anchoring devices in masonry.
 - 3. Section 051200 "Structural Steel Framing" for the following:
 - a. Attachment plates, angle brackets, and other preparation of structural steel for fastening guide-rail brackets.
 - b. Divider beams.
 - c. Hoist beams.
 - d. Structural-steel shapes for subsills[**and entrance frames**] that are part of steel frame.
 - 4. Section 055000 "Metal Fabrications" for the following:
 - a. Attachment plates and angle brackets for supporting guide-rail brackets.
 - b. Divider beams.
 - c. Hoist beams.
 - d. Structural-steel shapes for [**subsills**] [**and**] [**entrance frames**].
 - e. Pit ladders.
 - f. Cants in hoistways made from steel sheet.
 - 5. Section 055213 "Pipe and Tube Railings" for railings between adjacent elevator pits.
 - 6. Section 099113 "Exterior Painting" for field painting of hoistway entrance doors and frames.
 - 7. Section 099123 "Interior Painting" for field painting of hoistway entrance doors and frames.
 - 8. Section 102213 "Wire Mesh Partitions" for guards between adjacent elevator pits.

9. Section 271500 "Communications Horizontal Cabling" for telephone service for elevators.
 10. **[Section 283111 "Digital, Addressable Fire-Alarm System"] [Section 283112 "Zoned (DC Loop) Fire-Alarm System"]** for smoke detectors in elevator lobbies to initiate emergency recall operation[**and heat detectors in shafts and machine rooms to disconnect power from elevator equipment before sprinkler activation**] and for connection to elevator controllers.
 11. Section 31200 "Earth Moving" for excavating well hole to accommodate cylinder assembly.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.
- D. Unit Prices: Rock excavation for cylinder well holes is paid for under the unit price indicated in the Contract and as specified in Section 012200 "Unit Prices."

1.4 DEFINITIONS

- A. Definitions in ASME A17.1/CSA B44 apply to work of this Section.
- B. Defective Elevator Work: Operation or control system failures; performances below specified ratings; excessive wear; unusual deterioration or aging of materials or finishes; unsafe conditions; the need for excessive maintenance; abnormal noise or vibration; and similar unusual, unexpected, and unsatisfactory conditions.

1.5 ACTION SUBMITTALS

- A. Product Data: Include capacities, sizes, performances, operations, safety features, finishes, and similar information.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings:
 - 1. Include plans, elevations, sections, and large-scale details indicating service at each landing, machine room layout, coordination with building structure, relationships with other construction, and locations of equipment.
 - 2. Indicate variations from specified requirements, maximum dynamic and static loads imposed on building structure at points of support, locations of equipment and signals, and maximum and average power demands.
- C. Samples for Initial Selection: For finishes involving color selection.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Seismic Qualification Certificates: For elevator equipment, accessories, and components, from manufacturer.
 - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- C. Manufacturer Certificates: Signed by elevator manufacturer certifying that hoistway, pit, and machine room layout and dimensions, as shown on Drawings, and electrical service[**including standby power generator**], as shown and specified, are adequate for elevator system being provided.
- D. Sample Warranty: For special warranty.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For elevators to include in emergency, operation, and maintenance manuals.
 - 1. In addition to items specified in Section 017823 "Operation and Maintenance Data," include diagnostic and repair information available to manufacturer's and Installer's maintenance personnel.
- B. Inspection and Acceptance Certificates and Operating Permits: As required by authorities having jurisdiction for normal, unrestricted elevator use.
- C. Manufacturer shall furnish a letter stating all components are designed by an Engineer and are suitable for the intended purpose.
- D. Signage
- E. Maintenance manuals for each different electric traction elevator, including operation and maintenance instructions, parts listing with sources indicated, recommended parts inventory listing, emergency instructions, and similar information. Include all diagnostic and repair information available to manufacturer's and Installer's maintenance personnel. Submit for Owner's information at project closeout as specified in Division 01.
- F. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 MAINTENANCE SERVICE

- A. Initial Maintenance Service: Beginning at Substantial Completion, provide 12 months' full maintenance service by skilled, competent employees of the elevator Installer. Include monthly preventive maintenance, repair, or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper elevator operation at rated speed and capacity. Use parts and supplies as used in the manufacture and installation of original equipment.
 - 1. Perform maintenance, including emergency callback service, during normal working hours.
 - 2. Include 24-hour-per-day, 7-day-per-week emergency callback service.
 - 3. Response Time: 1 hour or less.
- B. Continuing Maintenance Proposal: Submit a continuing maintenance proposal from Installer to Owner, in the form of a standard [**one-year**] [**two-year**] [**five-year**] <Insert **agreement period**> maintenance agreement, starting on date initial maintenance service is concluded. State services, obligations, conditions, and terms for agreement period and for future renewal options.

1.9 QUALITY ASSURANCE

- A. Installer Qualifications: Engage the elevator manufacturer or an experienced Installer approved by the elevator manufacturer who has completed elevator installations similar in material, design, and extent to that indicated for this Project and with a record of successful in-service performance.
- B. Regulatory Requirements: In addition to local governing regulations, comply with the applicable provisions of the following:
 - 1. ASME A17.1, "Safety Code for Elevators and Escalators," referred to as the "Code."

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle materials, components, and equipment in manufacturer's protective packaging. Store materials, components, and equipment off of ground, under cover, and in a dry location.

1.11 COORDINATION

- A. Coordinate installation of sleeves, block outs, and items that are embedded in concrete or masonry for elevator equipment. Furnish templates and installation instructions and deliver to Project site in time for installation.
- B. Furnish well casing and coordinate delivery with related excavation work.
- C. Coordinate locations and dimensions of other work relating to hydraulic freight elevators including pit ladders; sumps and floor drains in pits; entrance subsills; electrical service; and electrical outlets, lights, and switches in hoistways, pits, and machine rooms.

1.12 WARRANTY

- A. Manufacturer's Standard Warranty: Manufacturer agrees to repair, restore, or replace elevator work that fails in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, operation or control system failure, including excessive malfunctions; performances below specified ratings; excessive wear; unusual deterioration or aging of materials or finishes; unsafe conditions; need for excessive maintenance; abnormal noise or vibration; and similar unusual, unexpected, and unsatisfactory conditions.
 - 2. Warranty Period: Minimum 12<Insert number> year(s) from date of Substantial Completion.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. KONE Inc.
2. Otis Elevator Co.
3. Schindler Elevator Corp.
4. Schindler Elevator Corp.
5. U.S. Elevator.
6. **<Insert manufacturer's name>**.
7. or approved equal.

- B. Source Limitations: Obtain freight elevators[, **including electric traction freight elevators specified in Section 142100 "Electric Traction Elevators,"**] from single manufacturer.

1. Major elevator components, including pump-and-tank units, plunger-cylinder assemblies, controllers, signal fixtures, door operators, car frames, cars, and entrances, shall be manufactured by single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. Regulatory Requirements: Comply with ASME A17.1/CSA B44.
- B. Accessibility Requirements: Comply with Section 407 in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines and with ICC A117.1.
- C. Seismic Performance: Elevator system shall withstand the effects of earthquake motions determined according to **[ASCE/SEI 7] <Insert requirement>** and shall comply with elevator safety requirements for seismic risk Zone 2 or greater in ASME A17.1/CSA B44.
1. The term "withstand" means "the system will remain in place without separation of any parts when subjected to the seismic forces specified[**and the system will be fully operational after the seismic event.**]"
 2. Affected peak velocity acceleration (Av) for Project's location is [**less than 0.10 (seismic risk Zones 0 and 1)**] [**greater than or equal to 0.10, but less than**

0.20 (seismic risk Zone 2)] [greater than or equal to 0.20 (seismic risk Zones 3 and 4)].

3. Provide earthquake equipment required by ASME A17.1/CSA B44.
4. Provide seismic switch required by ASCE/SEI 7.
5. Design earthquake spectral response acceleration short period (Sds) for Project is **<Insert value>**.
6. Project's Seismic Design Category: **[A] [B] [C] [D] [E] [F]**.
7. Elevator Component Importance Factor: **[1.5] [1.0]**.

2.3 MATERIALS AND COMPONENTS, GENERAL

- A. General: Provide manufacturer's standard elevator systems. Where components are not otherwise indicated, provide standard components, published by manufacturer as included in standard preengineered elevator systems and as required for a complete system.
- B. Power Supply: (480 V, 60 Hz, 3 phase.) (208 V, 60 Hz, 3 phase.) (240 V, 60 Hz, 2 phase).
- C. Inserts: Furnish required concrete and masonry inserts and similar anchorage devices for installing guide rails, machinery, and other components of elevator work where installation of devices is specified in another Specification Section.
- D. Machine Beams: Provide framing to support the elevator hoisting machine and deflector sheaves from the building structure. Comply with DIVISION 05 for materials and fabrication.
- E. Guide Shoes/Rollers: Provide either sliding shoes or rollers for speeds of 200 ft./min. (1.02 m/s) and less, and rollers for speeds in excess of 200 ft./min. (1.02 m/s).
- F. Car Frame and Platform: Welded steel units.

2.4 FREIGHT ELEVATORS

- A. Elevator System, General: Manufacturer's standard hydraulic freight elevator systems. Unless otherwise indicated, manufacturer's standard components shall be used, as included in standard elevator systems and as required for complete system.
- B. Elevator Description:
 1. Elevator Number(s): **<Insert elevator number(s) as shown on Drawings>**.
 2. Type: Under-the-car **[single] [or] [dual]** cylinder.
 3. Type: Holeless, beside-the-car, single-acting, **[single] [dual]** cylinder.
 4. Type: Holeless, beside-the-car, telescoping, **[single] [dual]** cylinder.
 5. Type: Holeless, beside-the-car, roped hydraulic, **[single] [dual]** cylinder.
 6. Rated Load: **[2000 lb (908 kg)] [2500 lb (1135 kg)] [3000 lb (1362 kg)] [4000 lb (1816 kg)] [5000 lb (2270 kg)] [6000 lb (2720 kg)] [8000 lb (3632 kg)] [10,000 lb (4540 kg)]**
<Insert value>.
 7. Freight Loading Class: **[Class A] [Class B] [Class C1] [Class C2] [Class C3]**.

8. Rated Speed (Up): [50 fpm (0.25 m/s)] [75 or 80 fpm (0.38 or 0.41 m/s)] [100 fpm (0.51 m/s)] <Insert value>.
9. Operational Speed (Down): [Approximately 30 percent more than] [Same as] rated speed (up).
10. Operation System: [Single automatic] [Car-switch automatic floor stop] [Selective-collective automatic].
11. Auxiliary Operations:
 - a. Battery-powered lowering.
 - b. Standby power operation.
 - c. Load-weighing device.
12. Security Features: [Card-reader] [Keyswitch] operation.
13. Auxiliary Car-Control Station: Provide additional car-control station mounted on side of car at height to facilitate operation by forklift-truck operator without leaving truck.
14. Car Enclosures:
 - a. Platform Width: [60 inches (1524 mm)] [64 inches (1626 mm)] [66 inches (1676 mm)] [76 inches (1930 mm)] [78 inches (1981 mm)] [88 inches (2235 mm)] [100 inches (2540 mm)] [102 inches (2591 mm)] [124 inches (3150 mm)] [126 inches (3200 mm)] <Insert dimension>.
 - b. Platform Depth: [72 inches (1829 mm)] [84 inches (2134 mm)] [96 inches (2438 mm)] [120 inches (3048 mm)] [144 inches (3658 mm)] [168 inches (4267 mm)] <Insert dimension>.
 - c. Ceiling Height: [84 inches (2134 mm)] [96 inches (2438 mm)] [108 inches (2743 mm)] <Insert dimension>.
 - d. Walls and Ceiling: [Prime-painted steel] [Prime-painted, metallic-coated steel] [Satin stainless steel, No. 4 finish] [Textured stainless steel].
 - e. Car Fixtures: Satin stainless steel, No. 4 finish.
 - f. Floor: [Rolled steel floor plate] [Aluminum-alloy rolled tread plate] [Rolled stainless-steel floor plate] <Insert material>.
 - g. Car Gate Type: [Vertical biparting] [Single-speed vertical lift] [Two-speed vertical lift].
 - h. Car Gate Operation: [Manual] [Power operated].
 - i. Car Gate Material: [Prime-painted steel] [Satin stainless steel, No. 4 finish].
 - j. Car Sill: Steel angle.
 - k. Lighting: [One] [Two] [Three] 48-inch (1219-mm), [suspended,] [surface-mounted,] two-tube fluorescent light fixture(s) with [white reflectors] [and] [wire lamp guards].
 - l. Lighting: [One] [Two] 48-inch (1219-mm), recessed, [two] [three]-tube fluorescent light fixture(s) with UV-stabilized acrylic diffusers not less than 0.125 inch (3.2 mm) thick.
15. Hoistway Entrances:
 - a. Width: [56 inches (1422 mm)] [60 inches (1524 mm)] [62 inches (1575 mm)] [72 inches (1829 mm)] [96 inches (2438 mm)] [98 inches (2489 mm)] [120 inches (3048 mm)] [122 inches (3099 mm)] <Insert dimension>.

- b. Height: [84 inches (2134 mm)] [96 inches (2438 mm)] <Insert dimension>.
 - c. Door Type: [Vertical biparting] [Single-speed vertical lift] [Two-speed vertical lift].
 - d. Fire-Protection Rating: [1 hour] [1-1/2 hours] <Insert rating>[with 30-minute temperature rise of 450 deg F (250 deg C)].
 - e. Door Operation: [Manual] [Power operated].
 - f. Door Material: [Prime-painted steel] [Satin stainless steel, No. 4 finish].
 - g. Doorframe Material: [Prime-painted steel] [Satin stainless steel, No. 4 finish].
 - h. Door[frames and] sills are specified in [Section 051200 "Structural Steel Framing"] [Section 05500 "Metal Fabrications."]
16. Hall Fixtures: Satin stainless steel, No. 4 finish.
17. Auxiliary Hall Stations: Provide additional pendant-mounted, hall push-button stations[**where indicated**] mounted at height to facilitate operation by forklift-truck operator without leaving truck.
18. Additional Requirements:
- a. Door reopening device.

2.5 SYSTEMS AND COMPONENTS

- A. Pump Units: Positive-displacement type with a maximum of 10 percent variation between no load and full load and with minimum pulsations.
- 1. Pump shall be [submersible type with submersible squirrel-cage induction motor, and shall be suspended inside oil tank from vibration isolation mounts] [or] [tank-top-mounted type with fan-cooled, squirrel-cage induction motor and shall be mounted on oil tank with vibration isolation mounts and enclosed in prime-painted steel enclosure lined with 1-inch- (25-mm-) thick, glass-fiber insulation board].
 - 2. Motor shall have [wye-delta] [or] [solid-state] starting.
- B. Hydraulic Silencers: System shall have hydraulic silencer containing pulsation-absorbing material in blowout-proof housing at pump unit.
- C. Piping: Size, type, and weight of piping as recommended by elevator manufacturer, with flexible connectors to minimize sound and vibration transmissions from power unit.
- 1. Cylinder units shall be connected with dielectric couplings.
 - 2. Casing for Underground Piping: Schedule 40 PVC pipe complying with ASTM D 1785, joined with PVC fittings complying with ASTM D 2466 and solvent cement complying with ASTM D 2564.
- D. Hydraulic Fluid: Elevator manufacturer's standard [**fire-resistant**] fluid with additives as needed to prevent oxidation of fluid, corrosion of cylinder and other components, and other adverse effects.

- E. Hydraulic Fluid: Nontoxic, biodegradable[, **fire-resistant**] fluid made from vegetable oil with antioxidant, anticorrosive, antifoaming, and metal-passivating additives and approved by elevator manufacturer for use with elevator equipment.
1. Product: Subject to compliance with requirements, provide "Hydro Safe" by Hydro Safe Oil Division, Inc.
- F. Inserts: Furnish required concrete and masonry inserts and similar anchorage devices for installing guide rails, machinery, and other components of elevator work. Device installation is specified in another Section.
- G. Protective Cylinder Casing: PVC or HDPE pipe casing complying with ASME A17.1/CSA B44, of sufficient size to provide not less than **1-inch (25-mm)** clearance from cylinder and extending above pit floor. Casing shall have method of monitoring effectiveness of complying with ASME A17.1/CSA B44.
- H. Corrosion-Protective Filler: A nontoxic, petroleum-based gel formulated for filling the space between hydraulic cylinder and protective casing. Filler shall be electrically nonconductive, displace or absorb water, and gel or solidify at temperatures below **60 deg F (16 deg C)**.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Hydro Safe Oil Division, Inc.; No-Ox-Id Liquid Elevator Casing Filler E-800.
 - b. Union-Gard, a division of Dome Services L.L.C.; Union-Gard 160.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.
- I. Car Frame and Platform: Welded[**or bolted**] steel units.
1. Provide special heavy-duty units where indicated for power truck loading, designed to withstand impacts and wheel loadings indicated.
- J. Guides: Roller guides; polymer-coated, nonlubricated sliding guides; or sliding guides with guide-rail lubricators. Provide guides at top and bottom of car and counterweight frames.

2.6 OPERATION SYSTEMS

- A. General: Provide manufacturer's standard microprocessor operation system as required to provide type of operation indicated.
- B. Battery-Powered Lowering: When power fails, car is lowered to the lowest floor, opens its doors, and shuts down. System includes rechargeable battery and automatic recharging system.
- C. Single-Car Standby Power Operation: On activation of standby power, car is returned to a designated floor and parked with doors open. Car can be manually put in service on standby power by a switch in control panel located at [**main lobby**] [**fire command station**] **<Insert location>**.

- D. Group Standby Power Operation: On activation of standby power, cars are returned one car at a time to a designated floor and parked with doors open. If a car cannot be returned, it is removed from the system. One car is selected for service on standby power by a switch in control panel located at **[main lobby] [fire command station] <Insert location>**.
- E. Load-Weighing Device: When car load exceeds 80 percent of rated capacity, a signal light is lit in the car-control station; when car load exceeds rated capacity, car does not respond to car or hall calls.
- F. Earthquake emergency operation.
- G. Fire recall position.
- H. Security Features: Provide the following security features, where indicated. Security features shall not affect emergency firefighters' service.
1. Card-Reader Operation: System uses card readers at **[car-control stations] [and] [hall push-button stations]** to authorize calls. Security system determines which landings and at what times calls require authorization by card reader. Provide required conductors in traveling cable and panel in machine room for interconnecting card readers, other security access system equipment, and elevator controllers. **[Allow space as indicated for card reader in car] [Provide stripe-swipe card reader integral with each car-control station]**.
 - a. When system is activated, car calls to restricted landings do not register unless card is first inserted into card reader. Security access system determines which landings are restricted and which of those are accessible to cardholder.
 - b. Security access system equipment is **[specified in Section 281300 "Access Control."]** **[not in the Contract.]**
 2. Card-reader operation for access to restricted landings based on security system provided by others. Provide required conductors in traveling cable and panel in machine room for interconnecting card readers, other security access system equipment, and elevator controllers. Allow space in car as indicated for card reader.
 - a. When system is activated, car calls to restricted landings do not register unless card is first inserted into card reader. Security access system determines which landings are restricted and which of those are accessible to cardholder.
 3. Keyswitch Operation: Push buttons are activated and deactivated by security keyswitches at **[car-control stations] [and] [hall push-button stations]**. Key is removable **[only in deactivated position] [in either position]**.
 4. Secured landing feature that allows each landing to be secured or cleared. If a landing is secured, car buttons for that landing do not register a call unless a landing access code is entered within a predetermined time period after the landing button is pressed. When a secured landing button is pressed a

- "Restricted Floor" lamp lights and remains lit until landing access code has been entered or predetermined time period has elapsed.
5. Access codes are programmed at each car operating panel using a security keyswitch. Secured landing feature is activated and deactivated by a security keyswitch at the main landing.
 6. Anticrime feature activated by a keyswitch that causes all cars in a group to return immediately to a predetermined floor and open their doors for inspection. On deactivation by keyswitch, cars complete calls registered before keyswitch activation and resume normal operation.
 7. Keypad Operation: Allows each landing to be restricted or unrestricted. When a restricted landing button is pressed, a "Restricted Floor" lamp lights and remains lit until landing access code has been entered into a keypad or predetermined time period has elapsed. Car calls for restricted landings do not register until landing access code is entered into keypad within predetermined time period after landing button is pressed.
 - a. Access codes are programmed at each car operating panel using a security keyswitch. Keypad operation can be activated and deactivated by security keyswitch at main landing.
 8. Car-to-Lobby Feature: Feature, activated by keyswitch at main lobby, that causes **[car] [all cars in a group]** to return immediately to lobby and open doors for inspection. On deactivation by keyswitch, calls registered before keyswitch activation are completed and normal operation is resumed.

2.7 DOOR REOPENING DEVICES

- A. Infrared Array: Provide door reopening devices with uniform array of 36 or more microprocessor-controlled, infrared light beams projecting across car entrance. Interruption of one or more light beams shall cause doors to stop and reopen.

2.8 CAR ENCLOSURES

- A. General: Provide car enclosures as indicated, including ventilation, lighting, finishes, access doors, thresholds, trim, and accessories. Fabricate with recesses and cutouts for signal equipment.
 1. Provide power door operators with linkages for hoistway door operation.
 2. Provide standard railings complying with ASME A17.1/CSA B44 on car tops where required by ASME A17.1/CSA B44.
- B. Materials and Fabrication: Provide manufacturer's standard, flush panel, welded construction made from metal sheet, of metal indicated, not less than **0.067 inch** (1.7 mm) and reinforced at **16-inch** (406-mm) maximum spacing.
 1. Provide perforated panels for ceiling and for walls above **72 inches** (1829 mm) from car floor unless required to be solid by ASME A17.1/CSA B44.

2.9 HOISTWAY ENTRANCES

- A. General: Structural-steel frames and sills for hoistway entrances are specified in **[Section 051200 "Structural Steel Framing"] [Section 05500 "Metal Fabrications."]**
- B. Unless otherwise indicated, provide hoistway entrance doors of type indicated below, with truckable sill bars and resilient safety meeting-rail gaskets.
 - 1. Equip for power operation by coordinated linkage with power-operated car door.
 - 2. Where gypsum board wall construction is indicated, provide fire-resistance-rated, hollow-metal, door-and-frame hoistway entrances. Provide self-supporting frames with reinforced head sections.
- C. Fire-Rated Hoistway Entrance Assemblies: Door and frame assemblies shall comply with NFPA 80 and be listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on testing at as-close-to-neutral pressure as possible according to **[NFPA 252] [or] [UL 10B]**.
- D. Materials and Fabrication: Provide manufacturer's standards, but not less than the following:
 - 1. Metal Door Panels: Constructed of metal sheets, flush on room side, welded and reinforced in steel framing with vertical reinforcing spaced not more than **24 inches** (610 mm) o.c. Fabricate panel faces from metal sheet, of metal indicated, not less than **0.097 inch** (2.5 mm) thick.

2.10 SIGNAL EQUIPMENT

- A. General: Provide hall-call and car-call buttons that light when activated and remain lit until call has been fulfilled. Fabricate lighted elements of acrylic or other permanent, nonyellowing translucent plastic.
- B. Car-Control Stations: Provide manufacturer's standard car-control station. Mount adjacent to car door unless otherwise indicated. Include call buttons for each landing served and other buttons, switches, and controls required for specified car operation. Provide operating device symbols as required by the applicable codes.
 - 1. Mark buttons and switches for function. Use both tactile symbols and Braille.
 - 2. Provide "No Smoking" sign matching car-control station, either integral with car-control station or mounted adjacent to it, with text and graphics as required by authorities having jurisdiction.
 - 3. Mount controls at heights complying with the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines and with ICC A117.1.
- C. Emergency Communication System: Elevators at DEN shall be equipped with a Talk-a-Phone model ETP103 OEM elevator telephone installed per manufacturer's instructions behind the control panel in each elevator car. DEN technologies will

provide cabling and an analog telephone line from the DIA PABX system for each telephone. Telephones are powered from the PABX system, which in turn is backed up by battery. The PABX is programmed to rung down calls from the elevators to the 24/7 police positions at the airport communications centers. Elevator telephones are polled once per day using Talk-a-Phone Talk-a-Lert software to confirm health and status of the telephones. Technicians are dispatched to repair or replace any telephone that fails during a polling cycle. Telephone products from other vendors shall not be permitted, as they cannot be polled.

- D. Firefighters' Two-Way Telephone Communication Service: Provide [**flush-mounted cabinet**] [**telephone jack**] in each car and required conductors in traveling cable for firefighters' two-way telephone communication service specified in [**Section 283111 "Digital, Addressable Fire-Alarm System"**] [**Section 283112 "Zoned (DC Loop) Fire-Alarm System."**]
- E. Car-Top Alarm: Provide switches on top emergency exits that will cause alarm to sound when cover is opened.
- F. Car Position Indicator: Provide illuminated digital-type car position indicator, located above car door or above car-control station.
- G. Hall Push-Button Stations: Provide hall push-button stations at each landing as indicated.
 - 1. Provide single-button stations with [**position**] [**"in-use"**] indicator.
- H. Provide telephone jack in each unit for firefighters' two-way telephone communication service specified in [**Section 283111 "Digital, Addressable Fire-Alarm System"**] [**Section 283112 "Zoned (DC Loop) Fire-Alarm System."**]

2.11 FINISH MATERIALS

- A. General: Provide the following materials for exposed parts of elevator car enclosures, car doors, hoistway entrance doors and frames, and signal equipment as indicated.
- B. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, commercial steel, Type B, exposed, matte finish.
- C. Hot-Rolled Steel Sheet: ASTM A 1011/A 1011M, commercial steel, Type B, pickled.
- D. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, commercial steel, with **G60** (Z180) zinc coating (galvanized) or **A60** (ZF180) zinc-iron-alloy coating (galvannealed).
- E. Stainless-Steel Sheet: ASTM A 240/A 240M, Type 304.
- F. Textured Stainless-Steel Sheet: ASTM A 240/A 240M, Type 304 with embossed texture rolled into exposed surface.
 - 1. Product: Subject to compliance with requirements, provide "<**Insert product name**>" by <**Insert manufacturer's name**>.

- G. Stainless-Steel Bars: ASTM A 276, Type 304.
- H. Stainless-Steel Tubing: ASTM A 554, Grade MT 304.
- I. Rolled Steel Floor Plate: ASTM A 786/A 786M.
- J. Rolled Stainless-Steel Floor Plate: ASTM A 793.
- K. Aluminum-Alloy Rolled Tread Plate: ASTM B 632/B 632M, Pattern 1, Alloy 6061-T6.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine elevator areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work. Verify critical dimensions and examine supporting structure and other conditions under which elevator work is to be installed.
- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Excavation for Cylinder: Drill well hole in **[each]** elevator pit to accommodate installation of cylinder; comply with applicable requirements in Section 312000 "Earth Moving."
- B. If retaining first paragraph below, usually delete "waterproof" option and retain "as necessary" option. Well casing is essentially part of Contractor's means and methods unless required by authorities having jurisdiction; however, requiring a well casing helps prevent disputes if cylinder well-hole excavation is not being provided by elevator Installer.
- C. Provide **[waterproof]** well casing **[as necessary]** to retain well-hole walls.
- D. Install cylinder in protective casing within well hole. Before installing protective casing, remove water and debris from well hole **[and provide permanent waterproof seal at bottom of well casing]**.
 - 1. Fill void space between protective casing and cylinder with corrosion-protective filler.
 - 2. Align cylinders and fill space around protective casing with fine sand.

- E. Install cylinder plumb and accurately centered for elevator car position and travel. Anchor securely in place, supported at pit floor. Seal between **[well] [protective]** casing and pit floor with **4 inches** (100 mm) of nonshrink, nonmetallic grout.
- F. Install cylinder plumb and accurately centered for elevator car position and travel. Anchor securely in place, supported at pit floor and braced at intervals as needed to maintain alignment. Anchor cylinder guides at spacing needed to maintain alignment and avoid overstressing guides.
- G. Welded Construction: Provide welded connections for installing elevator work where bolted connections are not required for subsequent removal or for normal operation, adjustment, inspection, maintenance, and replacement of worn parts. Comply with AWS workmanship and welding operator qualifications standards.
- H. Coordination: Coordinate elevator work with work of other trades for proper time and sequence to avoid construction delays. Use established benchmarks, lines, and levels to ensure dimensional coordination of the Work.
- I. Sound Isolation: Mount rotating and vibrating equipment on vibration-isolating mounts to minimize vibration transmission to structure and structure-borne noise due to elevator system.
- J. Install piping above the floor, where possible. Install underground piping in casing.
- K. Lubricate operating parts of systems as recommended by manufacturers.
- L. Alignment: Coordinate installation of hoistway entrances with installation of elevator guide rails for accurate alignment of entrances with car. Where possible, delay installation of sills and frames until car is operable in shaft. Reduce clearances to minimum, safe, workable dimension at each landing.

3.3 FIELD QUALITY CONTROL

- A. Acceptance Testing: On completion of elevator installation and before permitting elevator use (either temporary or permanent), perform acceptance tests as required and recommended by ASME A17.1/CSA B44 and by governing regulations and agencies.
- B. Operating Test: Load **[elevator] [each elevator] [one elevator of each type, capacity, speed, and travel distance]** to rated capacity and operate continuously for 30 minutes over full travel distance, stopping at each level and proceeding immediately to the next. Record temperature rise of elevator machine during 30-minute test period. Record failure to perform as required.
- C. Advise Owner, DEN Project Manager, and authorities having jurisdiction a minimum of 72 hours in advance of dates and times that tests are to be performed on elevators.

3.4 PROTECTION

- A. Temporary Use: [**Limit temporary use for construction purposes to one elevator.**] Do not use elevators for construction purposes unless approved by DEN Project Manager, and unless cars are provided with temporary enclosures, either within finished cars or in place of finished cars, to protect finishes from damage. Comply with the following requirements for[**each**] elevator used for construction purposes:
1. Provide protective coverings, barriers, devices, signs, and procedures as needed to protect elevator and elevator equipment.
 - a. If, despite such protection, elevators become damaged, engage elevator Installer to restore damaged work so that no evidence remains of correction work. Return items that cannot be refinished in the field to the shop, make required repairs and refinish entire unit, or provide new units as required and approved by DEN Project Manager.
 2. Do not load elevators beyond their rated weight capacity.
 3. Engage elevator Installer to provide full maintenance service. Include preventive maintenance, repair, or replacement of worn or defective components, lubrication, cleanup, and adjustment as necessary for proper elevator operation. Provide parts and supplies same as those used in the manufacture and installation of original equipment.
 4. Engage elevator Installer to restore damaged work, if any, so no evidence remains of correction. Return items that cannot be refinished in the field to the shop, make required repairs and refinish entire unit, or provide new units as required.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to operate[, **adjust, and maintain**] elevator(s).
1. Review emergency provisions, including emergency access and procedures to be followed at time of failure in operation and other building emergencies. Train DEN personnel in procedures to follow in identifying sources of operational failures or malfunctions. Confer with DEN Project Manager on requirements for a complete elevator maintenance program.
 2. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.
- B. Check operation of[**each**] elevator with Owner's personnel present and before date of Substantial Completion[**and not more than one month before end of warranty period**]. Determine that operation systems and devices are functioning properly.

3.6 MAINTENANCE

- A. Initial Maintenance Service: Beginning at Substantial Completion, maintenance service shall include 12<Insert number> months' full maintenance by skilled employees of elevator Installer. Include monthly preventive maintenance, repair, or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper elevator operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies as used in the manufacture and installation of original equipment.
1. Perform maintenance during normal working hours.
 2. Perform emergency callback service during normal working hours with response time of [two] <Insert number> hours or less.
 3. Include 24-hour-per-day, 7-day-per-week emergency callback service with response time of [two] <Insert number> hours or less.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 142413

SECTION 143100 - ESCALATORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes [**standard**] [**and**] [**high-traffic,**] [**interior**] [**and**] [**exterior**] escalators.
- B. Related Requirements:
 - 1. Section 033000 "Cast-in-Place Concrete" for setting sleeves, inserts, and anchoring devices in concrete.
 - 2. Section 051200 "Structural Steel Framing" for attachment plates, angle brackets, and other preparation of structural steel to support escalator trusses.
 - 3. Section 083113 "Access Doors and Frames" for wall and ceiling access panels and access doors in escalator enclosures.
 - 4. Section 101400 "Signage" for "Caution" signs required by ASME A17.1/CSA B44.
 - 5. [**Section 283111 "Digital, Addressable Fire-Alarm System"**] [**Section 283112 "Zoned (DC Loop) Fire-Alarm System"**] for smoke detectors that activate escalator alarm and, after at least 15 seconds, cause the interruption of power to the escalator motor and brake and for connection to escalator controllers.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. High-Traffic Escalators: Designed specifically for high-traffic-volume use that produces dense occupancy resulting in structural, machinery, and brake loads much higher than normal.

1.4 ACTION SUBMITTALS

- A. Product Data: Include capacities, sizes, performances, safety features, finishes, and similar information.
 - 1. Include data substantiating that materials comply with requirements.

- B. Shop Drawings:
 - 1. Include plans, elevations, sections, and details indicating coordination with building structure and relationships with other construction.
 - 2. Indicate maximum loads imposed on building structure at points of support, and power requirements.
 - 3. Indicate access and ventilation for escalator machine space.
- C. Samples for Initial Selection: For exposed materials involving color selection.
- D. Samples for Verification: For exposed escalator finishes, **3-inch-** (75-mm-) square Samples of sheet materials, and **4-inch** (100-mm) lengths of running trim members.
- E. Delegated-Design Submittal: For escalators.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Seismic Qualification Certificates: For escalator equipment, accessories, and components, from manufacturer.
 - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- C. Manufacturer Certificates: Signed by manufacturer certifying that escalator layout and dimensions, as shown on Drawings, and electrical service, as shown and specified, are adequate for escalator system being provided.
- D. Sample Warranty: For special warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For escalators to include in emergency, operation, and maintenance manuals.
 - 1. In addition to items specified in Section 017823 "Operation and Maintenance Data," include diagnostic and repair information available to manufacturer's and Installer's maintenance personnel.
- B. Inspection and Acceptance Certificates and Operating Permits: As required by authorities having jurisdiction for normal, unrestricted escalator use.
- C. Continuing Maintenance Proposal: Submit a continuing maintenance proposal from Installer to Owner, in the form of a standard [**one-year**] [**two-year**] [**five-year**] <Insert

agreement period> maintenance agreement, starting on date initial maintenance service is concluded. State services, obligations, conditions, and terms for agreement period and for future renewal options.

- D. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: Escalator manufacturer[**or an authorized representative who is trained and approved by manufacturer**].

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle materials, components, and equipment in manufacturer's protective packaging. Store materials, components, and equipment off of ground, under cover, and in a dry location.

1.9 COORDINATION

- A. Coordinate installation of sleeves, block outs, escalator equipment with integral anchors, and other items that are embedded in concrete or masonry for escalator equipment. Furnish templates, sleeves, escalator equipment with integral anchors, and installation instructions and deliver to Project site in time for installation.
- B. Coordinate locations and dimensions of other work relating to escalators including sumps and floor drains in pits; electrical service; and electrical outlets, lights, and switches in pits.

1.10 WARRANTY

- A. Manufacturer's Special Warranty: Manufacturer agrees to repair, restore, or replace escalator work that fails in materials or workmanship within specified warranty period.
1. Failures include, but are not limited to, operation or control system failure, including excessive malfunctions; performances below specified ratings; excessive wear; unusual deterioration or aging of materials or finishes; unsafe conditions; the need for excessive maintenance; abnormal noise or vibration; and similar unusual, unexpected, and unsatisfactory conditions.
 2. Warranty Period: Minimum **<Insert number>** year(s) from date of Substantial Completion.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419

"Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Fujitec America, Inc.
 2. KONE Inc.
 3. Mitsubishi Electric Corporation.
 4. Otis Elevator Co.
 5. Schindler Elevator Corp.
 6. ThyssenKrupp Elevator.
 7. **<Insert manufacturer's name>**.
 8. or approved equal.
- B. Source Limitations: Obtain escalators[**and moving walks, specified in another Section,**] from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. Regulatory Requirements: Comply with ASME A17.1/CSA B44.
- B. Braking Performance: Provide brakes that stop escalator in up-running mode at a rate no greater than **3 ft./s²** (0.91 m/s²).
- C. Braking Performance: Provide brakes that produce a stopping force on escalator in up-running mode that is one-third that used in down-running mode.
- D. Step/Skirt Performance Index: Not more than 0.15.
- E. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design escalators.
- F. Seismic Performance: Escalators shall withstand the effects of earthquake motions determined according to [**ASCE/SEI 7**] **<Insert requirement>**.
1. Design earthquake spectral response acceleration short period (Sds) for Project is **<Insert value>**.
 2. Project's Seismic Design Category: [**A**] [**B**] [**C**] [**D**] [**E**] [**F**].
 3. Escalator Component Importance Factor: 1.0.
- G. Structural and Mechanical Performance for High-Traffic Escalators: For the purposes of structural design, driving machine and power transmission calculations, and brake

calculations, design high-traffic escalators for loads not less than **[two]** <Insert **number**> times the design loads required by ASME A17.1/CSA B44.

- H. Structural Performance of Balustrades, Deck Barricades, and Handrails: Provide components and assemblies capable of withstanding the effects of loads indicated in ASCE/SEI 7 for handrail assemblies and guardrail systems.

2.3 ESCALATORS

- A. Escalators, General: Manufacturer's standard escalators complying with requirements. Unless otherwise indicated, manufacturer's standard components shall be used, as included in standard escalator systems and as required for complete system.
- B. High-Traffic Escalators, General: Manufacturer's high-traffic escalators complying with requirements. Unless otherwise indicated, manufacturer's heavy-duty components shall be used, as included in standard high-traffic escalator systems and as required for complete system.
- C. Design and equip escalators to run in either direction.
- D. Provide escalators with **[two]** **[three]** **[four]** flat steps at top and bottom landings.
- E. Rated Speed: **[90 fpm (0.46 m/s)]** **[or]** **[100 fpm (0.5 m/s)]**.

2.4 COMPONENTS

- A. Fabricate exposed metalwork, including deck covers, balustrade panels, and trim to provide surface flatness equivalent to stretcher-leveled standard of flatness and sufficient strength for indicated use; increase metal thickness or reinforce with concealed stiffeners, backing materials, or both, as necessary. Support joints with concealed stiffeners as needed to hold exposed faces of adjoining sheets in flush alignment.
- B. Opaque Balustrades: Manufacturer's standard profile or arrangement of moving handrails on fully paneled guide rail with interior balustrade panels, deck covers, skirts, trim, and accessories. **[Prepared for exterior finish below the deck covers; exterior finish specified in another Section.]**
- C. Transparent Balustrades: Manufacturer's standard profile or arrangement of moving handrails on guide rail that is supported by tempered glass panels, with deck covers, skirts, trim, and accessories. **[Prepared for exterior finish below the deck covers; exterior finish specified in another Section.]**
- D. Direction Indicator Lights: Provide red and green indicator lights at least **2 inches** (50 mm) in diameter in **[right-hand]** **[both]** balustrade newels at both upper and lower landings. Green light indicates entrance end, and red light indicates exit end. When escalator is stopped, red lights are illuminated at both ends.
- E. Guards at Ceiling Intersection: Clear plastic.

- F. Handrails: Smooth, jointless, reinforced neoprene.
1. Color: **[Black]** **[Match DEN Project Manager's sample]** **[As selected by DEN Project Manager from manufacturer's full range]** <Insert color>.
- G. Deck Covers and Trim: **[Satin stainless steel]** **[Polished stainless steel]** **[Gold-colored, satin stainless steel]** **[Gold-colored, polished stainless steel]** **[Satin bronze]**.
- H. Antislid Devices: **[Satin stainless steel]** **[Polished stainless steel]** **[Gold-colored, satin stainless steel]** **[Gold-colored, polished stainless steel]** **[Satin bronze]**.
- I. Balustrade Interior Panels: **[Satin stainless steel]** **[Polished stainless steel]** **[Gold-colored, satin stainless steel]** **[Gold-colored, polished stainless steel]** **[Satin bronze]**.
- J. Balustrade Exterior Panels[and Escalator Soffits]: **[Satin stainless steel]** **[Polished stainless steel]** **[Gold-colored, satin stainless steel]** **[Gold-colored, polished stainless steel]** **[Satin bronze]**.
- K. Skirt Panels[, if Applicable]: **[Satin stainless steel]** **[Polished stainless steel]** **[Satin stainless steel with exposed surface coated with clear PTFE]** **[Steel panels with exposed surface coated with PTFE]** **[Manufacturer's standard low-friction material]**.
- L. Skirt Deflector Devices: Manufacturer's standard brush-type device.
- M. Steps: One-piece, die-cast aluminum with demarcation grooves at front and rear of tread surface.
1. Finish: Powder-coated, **[gray]** **[black]** <Insert color>.
2. Step Demarcation: **1-1/2- to 2-inch-** (38- to 50-mm-) wide yellow stripe at sides and backs of step treads.
3. Nosing Demarcation: **2-inch-** (50-mm-) wide yellow stripe at nosings of step treads.
- N. Combs: **[Integrally colored structural plastic]** **[Cast aluminum]** **[Cast aluminum with powder-coated finish]**.
1. Comb Color: **[Yellow]** **[Black]** **[Gray]** **[Red]** <Insert color>.
- O. Combplate Lights: Provide recessed light fixtures with flush lenses mounted in skirt panels at each side of combplates, designed to illuminate combplate steps.
- P. Floor Plates: **[Cast or extruded aluminum]** **[Stainless steel]** with grooved or patterned surface[and with abrasive material embedded in or metallically bonded to floor-plate surface].

2.5 FEATURES

- A. Operational Control: Provide key-operated starter switches[**and key-operated switches for directional control**] located on exterior deck above newel base at both upper and lower landings of escalators.
- B. Fault Indicator: Provide escalators with a microprocessor unit that monitors safety devices, motor temperature, and escalator speed and records in nonvolatile memory the date, time, and device identification if a safety device is activated or escalator malfunctions.
 - 1. Provide built-in[**or plug-in**] unit to display recorded information.
- C. Reduced-Current Starting: Provide escalator motors with wye-delta or solid-state starting.
- D. Energy-Saving Feature: Provide escalator motors and controls designed for motors running on partial windings (at reduced power) when not under full load.
- E. Provide motors complying with NEMA MG 1, Insulation Class B.
- F. Brake-Saving Feature: Provide stopping mechanism that allows escalator to coast to a stop before applying brakes, unless stopping is initiated by a safety device.
- G. Equip step drive mechanism with automatic step-chain lubricators.
- H. Oil Drip Pan: Provide metal pan under full width and length of escalator to collect and hold oil and grease drippings from lubricated components. Design and fabricate drip pan to sustain a load of **250 lbf** (1.1 kN) on a **1.0-sq. ft.** (0.9-sq. m) area at any location without permanent deflection.
- I. Overspeed Governor: Provide units with overspeed governor that is activated if speed of steps exceeds rated speed by more than 20 percent.
- J. Upper-Landing, Step Upthrust Device: Activated if a step is displaced against upthrust track at upper curve in passenger-carrying line of track system.
- K. Comb-Step Impact Device: Activated if a horizontal force in direction of travel is applied exceeding **400 lbf** (1780 N) at either side or exceeding **800 lbf** (3560 N) at center of front edge of combplate, or a resultant force in upward direction is applied exceeding **150 lbf** (688 N) at center of front edge of combplate.
- L. Comb-Step Impact Device: Activated if a horizontal force in direction of travel is applied exceeding **112 lbf** (500 N) at either side or exceeding **225 lbf** (1000 N) at center of front edge of combplate, or a resultant force in upward direction is applied exceeding **150 lbf** (688 N) at center of front edge of combplate.

2.6 EXTERIOR ESCALATORS

- A. Fabricate exposed components from [**stainless steel**] [**bronze**] unless otherwise indicated.
- B. Hot-dip galvanize escalator trusses and other structural components to comply with ASTM A 123/A 123M. Use only stainless-steel or zinc-plated fasteners.
- C. Fabricate oil drip pan from galvanized-steel sheet. Provide drain and oil/water separator in oil drip pan.
- D. Provide drains, weeps, and drips to prevent water accumulation on horizontal surfaces and to direct water away from electrical equipment and moving parts.
- E. Provide enclosures complying with NEMA 250, Type 4 for electrical connections, switches, and equipment.
- F. Provide totally enclosed motors complying with NEMA MG 1, Insulation Class B.
- G. Equip step drive mechanism with automatic step-chain lubricators.
- H. Provide electric heaters with integral thermostats in escalator truss space to maintain temperature above 40 deg F (4.4 deg C).
- I. Equip combplates with 400-W electric heaters to prevent ice and snow accumulation.

2.7 MATERIALS

- A. Stainless Steel: ASTM A 240/A 240M, [**Type 304**] [**Type 316**] [**Type 304, except use Type 316 for exterior escalators**].
 - 1. Satin Finish: No. 4 directional satin.
 - 2. Polished Finish: No. 8 mirror polish.
 - 3. Gold-Colored Satin Finish: No. 4 directional satin with gold-colored oxide or titanium nitride finish.
 - 4. Gold-Colored Mirror Finish: No. 8 mirror polish with gold-colored oxide or titanium nitride finish.
- B. Satin Bronze Sheet: ASTM B 36/B 36M, Alloy UNS No. C28000 (muntz metal), fine satin finish, lacquered.
- C. Satin Bronze Extrusions: ASTM B 455, Alloy UNS No. C38500 (architectural bronze), fine satin finish, lacquered.
- D. Steel Sheet: Cold-rolled steel sheet, ASTM A 1008/A 1008M, commercial steel, Type B, exposed, matte finish.
- E. Clear Tempered Glass: ASTM C 1048, Condition A (uncoated surfaces), Type 1 (transparent glass, flat), Class 1 (clear), Quality q3 (glazing, select), Kind FT (fully tempered), [**10.0**] [**12.0**] mm thick.

- F. Tinted Tempered Glass: ASTM C 1048, Condition A (uncoated surfaces), Type 1 (transparent glass, flat), Class 2 (tinted), Quality q3 (glazing, select), Kind FT (fully tempered), [10.0] [12.0] mm thick.
1. Color: [Bronze] [Gray] [Green] <Insert color>.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine escalator areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine supporting structure, machine spaces, and pits; verify critical dimensions; and examine conditions under which escalators are to be installed.
- C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Comply with manufacturer's written instructions.
- B. Set escalators true to line and level, properly supported, and anchored to building structure. Use established benchmarks, lines, and levels to ensure dimensional coordination of the Work.
- C. Adjust installed components for smooth, efficient operation, complying with required tolerances and free of hazardous conditions. Lubricate operating parts, including bearings, tracks, chains, guides, and hardware. Test operating devices, equipment, signals, controls, and safety devices. [**Install oil drip pans and verify that no oil drips outside of pans.**]
- D. Repair damaged finishes so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop, make required repairs and refinish entire unit, or provide new units as required.

3.3 FIELD QUALITY CONTROL

- A. Acceptance Testing: On completion of escalator installation and before permitting escalator use, perform acceptance tests as required and recommended by ASME A17.1/CSA B44 and by authorities having jurisdiction.
 1. For escalators specified to comply with requirements more stringent than those of ASME A17.1/CSA B44, perform tests for compliance with specified

requirements. Test safety devices that are not required by ASME A17.1/CSA B44 as well as those that are.

- B. Advise Owner, DEN Project Manager, and authorities having jurisdiction in advance of dates and times that tests are to be performed.

3.4 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to operate[, **adjust, and maintain**] escalators.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.
- B. Check operation of escalators with Owner's personnel present before date of Substantial Completion[**and again not more than one month before end of warranty period**]. Determine that operation systems and devices are functioning properly.

3.5 MAINTENANCE

- A. Initial Maintenance Service: Beginning at Substantial Completion, maintenance service shall include 12<Insert number> months' full maintenance by skilled employees of escalator Installer. Include monthly preventive maintenance, repair, or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper escalator operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.
 - 1. Perform maintenance during normal working hours.
 - 2. Perform emergency callback service during normal working hours with response time of **[two]** <Insert number> hours or less.
 - 3. Include 24-hour-per-day, 7-day-per-week emergency callback service with response time of **[two]** <Insert number> hours or less.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work

described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 143100

SECTION 143200 - MOVING WALKS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes [**interior**] [**and**] [**exterior**] moving walks.
- B. Related Requirements:
 - 1. Section 033000 "Cast-in-Place Concrete" for setting sleeves, inserts, and anchoring devices in concrete.
 - 2. Section 051200 "Structural Steel Framing" for attachment plates, angle brackets, and other preparation of structural steel to support moving walk trusses.
 - 3. Section 083113 "Access Doors and Frames" for wall and ceiling access panels and access doors in moving walk enclosures.
 - 4. Section 101400 "Signage" for "Caution" signs required by ASME A17.1/CSA B44.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: Include capacities, sizes, performances, safety features, finishes, and similar information.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings:
 - 1. Include plans, elevations, sections, and details indicating coordination with building structure and relationships with other construction.
 - 2. Indicate maximum loads imposed on building structure at points of support, and power requirements.
 - 3. Indicate access and ventilation for moving walk machine space.
- C. Samples for Verification: For exposed finishes, **3-inch-** (75-mm-) square Samples of sheet materials and **4-inch** (100-mm) lengths of running trim members.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Manufacturer Certificates: Signed by manufacturer certifying that moving walk layout and dimensions, as shown on Drawings, and electrical service, as shown and specified, are adequate for moving walks being provided.
- C. Sample Warranty: For special warranty.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For moving walks to include in emergency, operation, and maintenance manuals.
 - 1. In addition to items specified in Section 017823 "Operation and Maintenance Data," include diagnostic and repair information available to manufacturer's and Installer's maintenance personnel.
- B. Inspection and Acceptance Certificates and Operating Permits: As required by authorities having jurisdiction for normal, unrestricted use of moving walks.
- C. Continuing Maintenance Proposal: Provide a continuing maintenance proposal from Installer to Owner, in the form of a standard [**one-year**] [**two-year**] [**five-year**] <Insert **agreement period**> maintenance agreement, starting on date initial maintenance service is concluded. State services, obligations, conditions, and terms for agreement period and for future renewal options.
- D. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: Moving walk manufacturer[**or an authorized representative who is trained and approved by manufacturer**].

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle materials, components, and equipment in manufacturer's protective packaging. Store materials, components, and equipment off of ground, under cover, and in a dry location.

1.8 COORDINATION

- A. Coordinate installation of sleeves, block outs, moving walk equipment with integral anchors, and other items that are embedded in concrete or masonry for moving walk

equipment. Furnish templates, sleeves, moving walk equipment with integral anchors, and installation instructions and deliver to Project site in time for installation.

- B. Coordinate locations and dimensions of other work relating to moving walks including sumps and floor drains in pits; electrical service; and electrical outlets, lights, and switches in pits.

1.9 WARRANTY

- A. Manufacturer's Special Warranty: Manufacturer agrees to repair, restore, or replace moving walk work that fails in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, operation or control system failure, including excessive malfunctions; performances below specified ratings; excessive wear; unusual deterioration or aging of materials or finishes; unsafe conditions; the need for excessive maintenance; abnormal noise or vibration; and similar unusual, unexpected, and unsatisfactory conditions.
 - 2. Warranty Period: Minimum **<Insert number>** year(s) from date of Substantial Completion.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Fujitec America, Inc.
 - 2. KONE Inc.
 - 3. Mitsubishi Electric Corporation.
 - 4. Otis Elevator Co.
 - 5. Schindler Elevator Corp.
 - 6. ThyssenKrupp Elevator.
 - 7. Westmont Industries.
 - 8. **<Insert manufacturer's name>**.
 - 9. or approved equal.
- B. Source Limitations: Obtain moving walks[**and escalators, specified in another Section,**] from a single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. Regulatory Requirements: Comply with ASME A17.1/CSA B44.
- B. Structural Performance of Balustrades, Deck Barricades, and Handrails: Provide components and assemblies capable of withstanding the effects of loads indicated in ASCE/SEI 7 for handrail assemblies and guardrail systems.

2.3 MOVING WALKS

- A. Moving Walks, General: Manufacturer's standard [**pallet-**] [**or**] [**belt-**]type moving walks complying with requirements. Unless otherwise indicated, manufacturer's standard components shall be used as included in standard moving walk systems and as required for complete system.
- B. Design and equip moving walks to run in either direction.
- C. Rated Speed: [90 fpm (0.45 m/s)] [100 fpm (0.5 m/s)] [120 fpm (0.6 m/s)] [130 fpm (0.66 m/s)] [150 fpm (0.76 m/s)] <Insert value>.

2.4 COMPONENTS

- A. Fabricate exposed metalwork, including deck covers, balustrade panels, and trim to provide surface flatness equivalent to stretcher-leveled standard of flatness and sufficient strength for indicated use; increase metal thickness or reinforce with concealed stiffeners, backing materials, or both, as necessary. Support joints with concealed stiffeners as needed to hold exposed faces of adjoining sheets in flush alignment.
- B. Opaque Balustrades: Manufacturer's standard profile or arrangement of moving handrails on fully paneled guide rail with interior balustrade panels, deck covers, skirts, trim, and accessories. [**Prepared for exterior finish below the deck covers; exterior finish specified in another Section.**]
- C. Transparent Balustrades: Manufacturer's standard profile or arrangement of moving handrails on guide rail that is supported by [**clear**] [**tinted**] tempered glass panels, with deck covers, skirts, trim, and accessories. [**Prepared for exterior finish below the deck covers; exterior finish specified in another Section.**]
- D. Direction Indicator Lights: Provide red and green indicator lights at least **2 inches** (50 mm) in diameter in [**right-hand**] [**both**] balustrade newels at both landings. Green light indicates entrance end, and red light indicates exit end. When moving walk is stopped, red lights are illuminated at both ends.
- E. Handrails: Smooth, jointless, reinforced neoprene.
 - 1. Color: [**Black**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.

- F. Deck Covers and Trim: [**Satin stainless steel**] [**Polished stainless steel**] [**Gold-colored, satin stainless steel**] [**Gold-colored, polished stainless steel**] [**Satin bronze**].
- G. Balustrade Interior Panels: [**Satin stainless steel**] [**Polished stainless steel**] [**Gold-colored, satin stainless steel**] [**Gold-colored, polished stainless steel**] [**Satin bronze**].
- H. Balustrade Exterior Panels: [**Satin stainless steel**] [**Polished stainless steel**] [**Gold-colored, satin stainless steel**] [**Gold-colored, polished stainless steel**] [**Satin bronze**].
- I. Skirt Panels, if Applicable: [**Polished stainless steel**] [**Satin stainless steel with exposed surface coated with clear PTFE**] [**Steel panels with exposed surface coated with PTFE**].
1. Clearance between skirt panels or overhanging balustrade panels and treadway shall not exceed **1/16 inch** (1.6 mm).
- J. Combs: [**Integrally colored structural plastic**] [**Cast aluminum**] [**Cast aluminum with powder-coated finish**].
1. Comb Color: [**Yellow**] [**Black**] [**Gray**] [**Red**] <Insert color>.
- K. Combplate Lights: Provide recessed light fixtures with flush lenses mounted in interior balustrade panels at each side of combplates, designed to illuminate treadway at combplate.
- L. Floor Plates: [**Cast or extruded aluminum**] [**Stainless steel**] with grooved or patterned surface[**and with abrasive material embedded in or metallically bonded to floor-plate surface**].

2.5 FEATURES

- A. Operational Control: Provide key-operated starter switches[**and key-operated switches for directional control**] located on exterior deck above newel base at both ends of moving walks.
- B. Fault Indicator: Provide moving walks with a microprocessor unit that monitors safety devices, motor temperature, and moving walk speed and records in nonvolatile memory date, time, and device identification if a safety device is activated or moving walk malfunctions.
1. Provide built-in[**or plug-in**] unit to display recorded information.
- C. Reduced-Current Starting: Provide moving walk motors with wye-delta or solid-state starting.
- D. Energy-Saving Feature: Provide moving walk motors and controls designed for motors running on partial windings (at reduced power) when not under full load.

- E. Brake-Saving Feature: Provide stopping mechanism that allows moving walks to coast to a stop before applying brakes, unless stopping is initiated by a safety device.
- F. Equip pallet drive mechanism with automatic pallet drive-chain lubricators.
- G. Oil Drip Pan: Provide metal pan under full width and length of moving walks to collect and hold oil and grease drippings from lubricated components. Design and fabricate drip pan to sustain a load of **250 lbf** (1.1 kN) on a **1.0-sq. ft.** (0.09-sq. m) area at any location without permanent deflection.
- H. Comb-Step Impact Device: Activated if a horizontal force in direction of travel is applied exceeding **400 lbf** (1780 N) at either side or exceeding **800 lbf** (3560 N) at center of front edge of combplate, or a resultant force in upward direction is applied exceeding **150 lbf** (688 N) at center of front edge of combplate.
- I. Comb-Step Impact Device: Activated if a horizontal force in direction of travel is applied exceeding **112 lbf** (500 N) at either side or exceeding **225 lbf** (1000 N) at center of front edge of combplate, or a resultant force in upward direction is applied exceeding **150 lbf** (688 N) at center of front edge of combplate.

2.6 EXTERIOR MOVING WALKS

- A. Fabricate exposed components from [**stainless steel**] [**bronze**] unless otherwise indicated.
- B. Hot-dip galvanize moving walk trusses and other structural components to comply with ASTM A 123/A 123M. Use only stainless-steel or zinc-plated fasteners for moving walk component assembly.
- C. Fabricate oil drip pan from galvanized steel sheet. Provide drain and oil/water separator in oil drip pan.
- D. Provide drains, weeps, and drips to prevent water accumulation on horizontal surfaces and to direct water away from electrical equipment and moving parts.
- E. Provide enclosures complying with NEMA 250, Type 4 for electrical connections, switches, and equipment.
- F. Provide totally enclosed fan-cooled motors complying with NEMA MG 1, Insulation Class B.
- G. Equip pallet drive mechanism with automatic pallet drive-chain lubricators.
- H. Provide electric heaters with integral thermostats in moving walk truss space to maintain temperature above **40 deg F** (4.4 deg C).
- I. Equip combplates with 400-W electric heaters to prevent ice and snow accumulation.

2.7 MATERIALS

- A. Stainless Steel: ASTM A 240/A 240M, **[Type 304] [Type 316] [Type 304, except use Type 316 for exterior moving walks]**.
1. Satin Finish: No. 4 directional satin.
 2. Polished Finish: No. 8 mirror polish.
 3. Gold-Colored Satin Finish: No. 4 directional satin with gold-colored oxide or titanium nitride finish.
 4. Gold-Colored Mirror Finish: No. 8 mirror polish with gold-colored oxide or titanium nitride finish.
- B. Satin Bronze Sheet: ASTM B 36/B 36M, Alloy UNS No. C28000 (muntz metal), fine satin finish, lacquered.
- C. Satin Bronze Extrusions: ASTM B 455, Alloy UNS No. C38500 (architectural bronze), fine satin finish, lacquered.
- D. Steel Sheet: Cold-rolled steel sheet, ASTM A 1008/A 1008M, commercial steel, Type B, exposed, matte finish.
- E. Clear Tempered Glass: ASTM C 1048, Condition A (uncoated surfaces), Type 1 (transparent glass, flat), Class 1 (clear), Quality q3 (glazing, select), Kind FT (fully tempered), **[10.0] [12.0]** mm thick.
- F. Tinted Tempered Glass: ASTM C 1048, Condition A (uncoated surfaces), Type 1 (transparent glass, flat), Class 2 (tinted), Quality q3 (glazing, select), Kind FT (fully tempered), **[10.0] [12.0]** mm thick.
1. Color: **[Bronze] [Gray] [Green] <Insert color>**.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine moving walk areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work. Examine supporting structure, machine spaces, and pits; verify critical dimensions; and examine conditions under which moving walks are to be installed.
- B. Prepare a written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Comply with manufacturer's written instructions.

- B. Set moving walks true to line and level[, **or to indicated slope**], properly supported, and anchored to building structure. Use established benchmarks, lines, and levels to ensure dimensional coordination of the Work.
- C. Adjust installed components for smooth, efficient operation, complying with required tolerances and free of hazardous conditions. Lubricate operating parts, including bearings, tracks, chains, guides, and hardware. Test operating devices, equipment, signals, controls, and safety devices. Install oil drip pans and verify that no oil drips outside of pans.
- D. Repair damaged finishes so no evidence remains of correction work. Return items to the shop that cannot be refinished in the field, make required repairs and refinish entire unit, or provide new units as required.

3.3 FIELD QUALITY CONTROL

- A. Acceptance Testing: On completion of moving walk installation and before permitting moving walk use, perform acceptance tests as required and recommended by ASME A17.1/CSA B44 and by authorities having jurisdiction.
 - 1. For moving walks specified to comply with requirements more stringent than those of ASME A17.1/CSA B44, perform tests for compliance with specified requirements.
- B. Advise Owner, DEN Project Manager, and authorities having jurisdiction in advance of dates and times that tests are to be performed.

3.4 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to operate[, **adjust, and maintain**] moving walks.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.
- B. Check operation of moving walks with Owner's personnel present before date of Substantial Completion[**and again not more than one month before end of warranty period**]. Determine that operation systems and devices are functioning properly.

3.5 MAINTENANCE

- A. Initial Maintenance Service: Beginning at Substantial Completion, maintenance service shall include 12<**Insert number**> months' full maintenance by skilled employees of moving walk Installer. Include monthly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper moving walk operation at rated speed and capacity. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

1. Perform maintenance during normal working hours.
2. Perform emergency callback service during normal working hours with response time of **[two]** <Insert number> hours or less.
3. Include 24-hour-per-day, 7-day-per-week emergency callback service with response time of **[two]** <Insert number> hours or less.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 143200

SECTION 147300 - OVER THE WING PASSENGER BOARDING BRIDGES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section specifies the furnishing and installing of new Passenger Boarding Bridges, including new bridges, new walkways, new pedestals and rotundas and new foundations
- B. Related Requirements:
 - 1. Provisions of the Contract, General and Special Conditions, Technical Specifications Division 01, and all other Technical Specification Sections, apply to this Section.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. General: Submit required items in accordance with General Contract Conditions and Division 01 Specification Sections.
 - 1. All drawings, sketches details, and material shall be submitted in the English language, in United States units, including dimensions, volumes, weights, and forces. The use of metric or SI units is not acceptable.
 - 2. No installation of any of the passenger loading bridge components shall begin until the drawings for such components have been reviewed and approved in writing by DEN. Fabrication and / or assembly begun prior to approval by DEN is done so solely at the risk of the Contractor / Manufacturer. Additional drawings shall be submitted as necessary to fully describe the bridge to be delivered.
- B. Minimum Required Submittal for Layout Approval:
 - 1. Complete finalized layout, including fuel pits, and PC Air unit.
- C. Minimum Required Submittals for 75% Review:
 - 1. Complete Issue for Construction set of drawings and technical specifications

including:

- a. Cover sheet with sheet index.
 - b. Vicinity plan of Airport and surrounding area.
 - c. Concourse key plan.
 - d. Gate layout plan including centerlines of rotundas in DEN coordinate system and with dimensions.
 - e. Phasing / Safety plan including trenching required for fuel pit work.
 - f. Foundation drawings.
 - g. Electrical drawings.
 - h. All other letters and calculations required for Building Permit.
 - i. Graphics / signage details.
 - j. Paint finishes.
 - k. Preconditioned air and 400 Hz brackets and connection details for tie-in to existing monitoring system.
 - l. Technical Specifications.
- D. Minimum Required Submittals for Building Permit.
1. See Memorandum of Understanding, Article V attached as 147300 Appendix A at the end of this Section.
 2. Elevations:
 - a. Side elevation of new bridges including Holdroom section.
 - b. Front elevation of new bridges including Holdroom elevation beyond.
- E. Minimum Required Submittals for Materials:
1. Reference Technical Specification Section 013300 "Submittal Procedures".
- F. Minimum Required Submittals for End of Project Report.
1. See Memorandum of Understanding, Article VI attached as 147300 Appendix A at the end of this Section.
- G. Welding: Refer to Technical Specification Section 059990 "Welding" for required welding submittals for field welding only. All shop welding shall be of good commercial quality.
- H. Spare parts:
1. Recommended spare parts list with current prices shall be furnished not less than 45 days prior to arrival of a bridge.
- I. All items required by Airlines / Denver International Airport agreement.
- J. LEED Submittals: <Insert requirements>
- 1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Preinstallation Examination Report: Indicating dimensional discrepancies and conditions detrimental to performance or indicating that dimensions and conditions were found to be satisfactory.
- C. Product Certificates: For each type of boarding bridge. .
- D. Field quality-control reports.
- E. Sample Warranty: For manufacturer's special warranty.

1.5 CLOSEOUT SUBMITTALS

- A. As Built-Plans: Contractor shall submit As-Built Plans in AutoCAD (Release 2000 minimum) format, Adobe Acrobat 6.0 (bookmarked and free of security), in hard copy and on Compact Disk. Two (2) sets of full size drawings (34x44 or 24x36) and (1) Compact Disk containing all drawing files shall be submitted to the DEN Project Manager as part of each submittal. Other file formats will not be accepted.
- B. Operation and Maintenance Data: For boarding bridges to include in operation and maintenance manuals.
- C. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[location and time as determined by DEN Project Manager][Project site] <Insert location>**.
- B. If needed, insert list of conference participants not mentioned in Section 013100 "Project Management and Coordination."

1.7 STANDARDS

- A. The standards listed below represent the minimum required standards. All editions shall be the most current issue. Safety to passengers, other personnel, aircraft, and equipment is of prime importance. Nothing in these specifications shall relieve the Contractor of the responsibility for providing a safe product.
- B. Design:
 - 1. Codes, Regulations, and References: The bridge shall be designed to conform to the most current editions all applicable Federal, State of Colorado, and City and County of Denver codes and regulations, including applicable Memoranda of Understanding between the City and County of Denver Building Department and

DEN.

- American Welding Society (AWS) Standards (Technical Specification Section 059990 "Welding" applies to field welding should the need for any arise).

C. Safety:

- All equipment shall be designed to be fail-safe and all controls, which regulate bridge motions (i.e., horizontal travel, vertical travel, and cab rotation), shall be of the dead-man type. Dead-man type shall mean controls, which require the operator to apply constant pressure to be engaged. Once the pressure is released, the control is disengaged.
- All operating mechanisms, i.e. horizontal and vertical drive, cab rotation, etc., shall be designed so the drive mechanism is locked when power fails or is shut off.
- Positive stops shall be provided to prevent dangerous overtravel where any component might become disengaged from its guiding or restraining component. The positive stop shall be in addition to all limit switches provided to restrict overtravel under normal operating conditions, including bogie steering motions. Documents highlighting the actual stops are a shop drawing requirement.
- The operator's position in the control cab shall be designed to permit the operator to position the loading bridge with the cab weather door closed. Suitable enclosures, guard rails, etc. shall be provided to protect the operator from being pitched out the open end of the cab (when operated from an open door) in case of sudden stops or inadvertent movements of the bridge. A handhold shall be attached to the wall on both sides of the cab weather door.
- The passenger loading bridges shall comply with all applicable local building codes and regulations at point of installation, which are in effect at the time of manufacture.
- All sheared or sharp metal edges shall be deburred or broken. All exposed metal corners shall have radii.

D. Materials:

Component:	ASTM Grade or Equivalent (Min. Properties):
Structural Plate	ASTM-A35-70A
Structural Steel and Shapes	ASTM-A36-69
Steel Tube	ASTM-A36-69
Steel Pipe	ASTM-A53-B
Steel Sheet	ASTM-A570-72 F or ASTM-A569
T-1 Pins	ASTM-A5-4-64 F or ASTM-A517-64 F
Hinge Pins	AISC-C1018
Bolts – Standard	ASTM-A307
Bolts – High Strength	ASTM-A325 or SAE Grade 8

E. Maintenance:

- Components shall be installed with adequate access and type of fasteners to permit them to be changed by one man. Where the weight of a component requires mechanical assistance, the component or assembly shall be provided with lift eyes, forklift guides, etc. Particular attention shall be given to keeping components simple, rugged, and easily accessible for routine maintenance,

- lubrication, component exchange, and adjustment.
2. Access panels, where required to gain access to equipment or maintenance areas, shall be suitably sized to permit accomplishment of the tasks required including tools and equipment. The panel shall be permanently attached to the structure by hinges, etc., and any fasteners required shall be a permanent part of the panel, etc., to prevent loss.
 3. If special tools are required for routine maintenance, one (1) set shall be furnished by the Contractor for each year of the Project.
 4. Modular components: Provide for rapid corrective maintenance of malfunctioning elements through use of standardized modular components, which are readily available in the continental U.S. Allowance must be made for convenient access to components critical to the operation of the passenger loading bridge.

1.8 INSTALLATION REQUIREMENTS

- A. The Contractor shall provide qualified technical and service personnel during the installation of the loading bridges to assure a proper installation. These representatives shall also be available to DEN at no charge on delivery of the first bridge and shall be on call for a timely response within eight (8) hours for a period of sixty (60) days after each loading bridge is officially opened for airline operations. This is to ensure adequate and reliable field service support to correct any and all equipment failures that normally occur during the initial operating period.
- B. Reference Technical Specification Section 011400 "Work Sequence and Constraints" for other Installation Requirements.
- C. Communications:
 1. Verification of existing communications at each existing bridge. Contractor shall also coordinate re-connection of communications with current communications contractor, Qwest.
 2. Contractor shall also coordinate reconnection of existing Pre Conditioned Air monitoring system with DEN HVAC department. Removal and reinstallation of existing Pre Conditioned Air units shall be done in such a way so that only the unit being removed and reinstalled shall not be connected and recognized by the monitoring system. Prior to removal, DEN and Contractor shall inspect and document condition of existing equipment.

1.9 ACCEPTANCE PROCEDURES

- A. In addition to the requirements described in the General Conditions and elsewhere in the Technical Specifications, the following also applies:
 1. Final Acceptance Inspection:
 - a. Final acceptance shall be done on an individual gate basis.
 - b. After full compliance by the Contractor of all outstanding Punch List items as determined from the Conditional Acceptance Inspection, DEN shall

- perform the final inspection of the bridge.
- c. The Contractor shall make certain that each bridge is complete in all respects and operating properly, all deficiencies noted in the Conditional Acceptance Inspection are corrected, and all training accomplished prior to the requesting the DEN Project Manager to witness and make the Final Acceptance Inspection. Upon satisfactory completion of that inspection, a Certificate of Customer Acceptance will be issued. The warranty for each individual bridge shall begin upon its Final Acceptance.
 - d. DEN reserves the right to employ an independent testing laboratory to inspect the bridges to verify the Contractor's compliance with the specified structural, welding, mechanical, electrical, and fireproofing requirements. Deficiencies and / or violations reported by the DEN laboratory shall be immediately corrected by the Contractor at no cost to DEN. The cost of re-inspection by the DEN Laboratory shall be borne by the Contractor and DEN will deduct such reinspection costs from monies due to the Contractor.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 FINAL CONFIGURATION

- A. This specification describes an Over-the-Wing (OTW) Passenger Boarding Bridge (PBB). This OTW Bridge, in conjunction with a standard Radial or Apron Drive PBB, is designed to extend from the terminal hold room doorway to both front and rear aircraft boarding doors so that passengers can enplane and deplane via both aircraft doors completely protected from inclement weather, aircraft engine blast and blown dust. The provision of both bridges is known as a Dual OTW system. The provision of the Rear Bridge only to an existing Forward Bridge is known as an OTW Bridge.
- B. The OTW Dual Bridge shall include a standard Radial or Apron Drive PBB (hereafter known as the Forward Bridge) to service the front aircraft door (L1 door) and an Over-The-Wing (OTW) PBB (also known as the Rear Bridge) that extends over the wing of the aircraft to service the rear door (L2 door). The two bridges shall typically be connected to one terminal building door via a section of fixed walkway, the location of which is determined by aircraft to be serviced and airport site considerations. Alternatively, each bridge may connect directly to the terminal building, each having its own door.
- C. The OTW Bridge shall service aircraft ranging in size between the **[Edit for appropriate fleet mix]** and shall clear winglets on these aircraft when traveling over the wing from a parked position. The OTW Bridge shall incorporate a pivot point along the bridge tunnel to provide sufficient lift such that a Boeing 777 wing shall clear the

underside of the bridge. The Forward Bridge may be specified to accommodate a larger mix of aircraft as it can still be used without engaging the OTW Bridge.

- D. The OTW Bridge Systems (Dual and singular) shall provide a rapid, simple, convenient, safe, and controlled method for passenger boarding. All elements of the system shall provide barrier free access with tunnel slopes not exceeding 1:12 when in the operating position. The walkway and bridge slopes are dependent on several factors including terminal building elevation, rotunda base heights, the aircraft being serviced and the allowable distance to aircraft, all of which shall be identified during layout planning prior to construction.
- E. The OTW System shall consist of the following components:
1. Fixed Walkway (Note: 1 & 2 are the same thing).
 2. Forward Bridge (provided only with Dual OTW Bridge System).
 3. OTW Bridge rotunda.
 4. OTW Bridge pivoting tunnels.
 5. OTW Bridge cab and telescoping tunnel.
 6. OTW canopy closure system.
 7. OTW Bridge vertical drive system.
 8. OTW Bridge horizontal drive system.
 9. OTW Bridge suspension drive system.
 10. Bridge Control Consoles (In OTW cab and remote in Forward cab).
 11. Electrical distribution system.
- F. The OTW Bridge shall employ a separate microprocessor controller so that it can be operated independently from the Forward Bridge. A remote control panel shall be provided in the cab bubble of the Forward Bridge to operate the OTW Bridge.
- G. NOTE: All references to direction are with the observer positioned with his or her back to the Terminal end and facing the aircraft end of the PBB when referring to left or right. The forward or front bridge refers to the bridge servicing the aircraft L1 or front door. The rear or rearward bridge (OTW) refers to the bridge servicing the rearmost aircraft door.

2.2 DESIGN CRITERIA

- A. The OTW Bridge Systems shall be built in accordance with good engineering practice and in accordance with legislative and industry standards applicable to aircraft passenger boarding bridges. The OTW Bridge shall include redundant safety features and factors of safety normal in the industry. Particular attention shall be given to keeping components simple, rugged, and easily accessible for routine maintenance, including lubrication, component exchange, and ease of adjustment. All access panels and openings shall be sized to accommodate the component being changed or adjusted, as well as the equipment and personnel necessary to accomplish the work.

2.3 CODE COMPLIANCE

- A. The OTW Bridge shall conform to all applicable Federal, Provincial/State, ADA, and Municipal codes and regulations that apply to the installation site. The bridge design and construction shall comply with the latest edition of the following codes: See also Paragraph 1.7 of this Section.

1. NEC - National Electric Code.
2. AISC - American Institute of Steel Construction.
3. ASME - American Society of Mechanical Engineers.
4. NEMA - National Electrical Manufacturers Association.
5. OSHA - Occupational Safety and Health Administration.
6. SAE - Society of Automotive Engineers.
7. NFPA - National Fire Protection Association.
8. SSPC - Steel Structures Painting Council.

2.4 OPERATION AND MAINTENANCE MANUALS AND TRAINING

- A. Reference the DEN / Airlines Lease Agreement.

2.5 DELIVERY AND STORAGE

- A. The transportation and installation of the OTW Bridge shall be included as part of the contract with DEN. The Dewbridge is shipped as soon as it is fabricated and installation begins immediately upon arrival at the job site. If necessary, special arrangements can be made with DEN for storage at site or at Dewbridge's facilities prior to the installation.

2.6 ACCEPTANCE CONDITIONS AND RESPONSIBILITY

- A. The PBB Contractor shall assume maintenance and repair responsibility for the OTW Bridge until such time as the Certificate of Customer Acceptance has been signed, and all training has been accomplished.
- B. DEN shall not operate the OTW Bridge until DEN has conditionally accepted it. DEN's Project Manager shall conduct a Conditional Acceptance Inspection for the purpose of certifying the OTW Bridge to be safe for training purposes. As part of the inspection, the DEN Project Manager shall issue a punch list to record the status of items checked and to record any remaining items, if applicable, to be corrected by the PBB Contractor. Upon completion of the inspection, DEN shall be granted use of the OTW Bridge under the supervision of the PBB Contractor for training purposes.
- C. The PBB Contractor shall ensure that the OTW Bridge is complete in all respects and operating properly, that all deficiencies noted in the Conditional Acceptance Inspection are corrected, and that all training is accomplished prior to requesting DEN's Project Manager to witness and perform the Final Acceptance Inspection. Upon satisfactory completion of this inspection, a Certificate of Customer Final Acceptance will be issued.

2.7 WARRANTY

- A. The OTW Bridge shall be warranted against defects in material and workmanship for twenty-four (24) months from the date of Final Acceptance by DEN in accordance with the PBB Contractor's standard product warranty. Warranty work shall be provided at no cost to DEN and shall include all labor and materials necessary to replace/repair defective material and workmanship during the period of the warranty. See Technical Specifications Sections Section 017835 "Warranties and Bonds" for requirements.

2.8 STRUCTURAL DESIGN

A. General Design

1. Structural Loads: The OTW Bridge shall support the following loads. The bridge shall accommodate the combination that imposes the most adverse loading condition. In addition to the dead loads and strain caused by movement, the entire passenger boarding bridge shall support:
 - a. A live load of 40 pounds per square foot. (195 kg/m²).
 - b. An operational wind load of 12.5 pounds per square foot (61 kg/m²) or an approximate wind velocity of 60.0 mph (97 km/h).
 - c. A retracted and stowed wind load of 25 pounds per square foot (122 kg/m²) or an approximate wind velocity of 90.0 mph (145 km/h).
 - d. A roof load (snow load) of 25 pounds per square foot. (122 kg/ m²).
2. The structure shall be sufficiently rigid to avoid excessive sway when the OTW Bridge is brought to a gradual stop.
3. All mechanisms for actuating, guiding, and restraining the OTW Bridge and its components shall be designed so that no excessive noise, sway, or sense of insecurity is apparent to passengers. No operating vibrations or loads shall be transmitted to the terminal building.
4. The Forward Bridge (if provided) shall be capable of accommodating the added loads of 400 Hz point of use ground power equipment, 28 Volt DC equipment, Gate Signage, Pre-Conditioned Air (PCA) equipment and potable water system. The purchase contract shall specify the location of this equipment when ordered with the OTW Bridge.

B. Environmental Considerations

1. The OTW Bridge shall operate satisfactorily under ambient temperatures from -40 deg F (-40 deg C) to 125 deg F (52 deg C). All of the OTW Bridge components and materials shall either individually or collectively be designed or selected for long service life under such conditions.
2. The OTW Bridge assembly shall provide a clean, structurally sound, comfortable, and functional transition between the aircraft and the terminal building.
3. The entire OTW Bridge shall be weatherproof and any equipment or controls that are exposed to the weather shall be weatherproof type or housed in weatherproof boxes. The PBB Contractor shall follow standard industrial practice regarding NEMA Enclosures for electrical equipment.

C. Interior Dimensions:

1. The OTW Bridge shall have the following minimum interior clear dimensions:
 - a. Tunnel width – 77 inches (1956 mm).
 - b. Tunnel width with handrails – 70 inches (1778 mm).
 - c. Tunnel height – 92 inches (2337 mm) from finished floor level.
 - d. Telescopic tunnel width – 62 inches (1574 mm).
 - e. Telescopic tunnel width with handrails – 55 inches (1397 mm).
 - f. Telescopic tunnel height – 79.5 inches (2019 mm) from finished floor level.

- D. Support: The OTW Bridge fixed walkway shall be supported from beneath at the terminal building end by a column to support the inboard end and additional support columns located along the walkway to support the walkway. The Forward Bridge and OTW Rear Bridge shall each be supported at one end by dual structural columns affixed to each of the drive wheel gantry systems and at the rotunda end by a structural support column located underneath the rotunda assemblies. Each of the fixed walkway, Forward Bridge and OTW Bridge shall be supported independently from one another. All fixed structural support columns shall rest on foundations supplied by others.

E. Building Connection

1. The OTW Bridge System shall be designated as equipment and as such shall receive no structural support from the air terminal building to which it is attached.
2. An aluminum diamond checker plate threshold shall be installed over the gap between the terminal building and the adjacent bridge interface. Interior metal and exterior flexible flashings shall provide a waterproof connection between the bridge and the terminal building.
3. At the terminal building, the bridge interface shall fit a door up to 48 inches (1219 mm) wide by 84 inches (2134 mm) high.

2.9 FOUNDATION SYSTEM

- A. Foundation Design: DEN shall provide an excavated and concrete filled foundation. The PBB Contractor shall provide DEN with all pertinent loads and design information to allow the Airport's Structural Engineer to design the foundations and structural attachments. This shall include the locations and orientations of all pedestals and columns.
- B. Bridge Operating Surface: DEN shall provide a concrete apron surface capable of supporting wheel loads up to 27,200 Lbs, with a maximum contact pressure of 530 PSI.

2.10 OTW BRIDGE SYSTEM MAIN COMPONENTS

- A. Rotunda:

1. The rotunda assembly for the OTW Bridge shall comprise a rotunda and support pedestal. The rotunda assembly shall abut the end of the fixed walkway at one end and be pivotally connected to the rear over-the-wing bridge tunnel at the opposite end and shall not transmit any live or dead loads or vibration to the fixed walkway.
2. The rotunda assembly shall be fixed to the pedestal and shall include pivot points for vertical and horizontal motion of the bridge. The bridge shall rotate about the rotunda. Slat type curtains and flexible panels attached to the rotunda shall be provided in order to maintain the seal as the bridge is rotated, raised, or lowered.
3. Over-travel and operational swing limits shall be located in the rotunda assembly. The operational limits shall be adjustable to meet local operating conditions and requirements.
4. A rotational encoder shall be installed in the Rotunda, for measuring the horizontal axis of rotation. The rotational encoder shall provide position data to the bridge control system. The encoder shall be of the absolute encoder type.
5. The rotunda floor shall remain stationary and level at all times to provide a smooth transition between the horizontal surface at the fixed walkway connection and the bridge tunnel. Flap type seals shall provide weather protection between the rotunda and the hinged rotating tunnel section. These seals shall be sufficient to prevent the accumulation of wind blown snow or rain in the interior of the bridge.
6. A support pedestal shall provide structural support for the rotunda. The pedestal shall mount to the foundation (provided by others). The PBB Contractor shall determine the length of the pedestal based on site information provided by DEN.

2.11 TUNNELS

- A. The pivoting tunnels, A (closest to rotunda) and B (pivotally attached to A) shall be rectangular in cross section. The tunnels shall be provided between the rotunda assembly and the over-the-wing telescoping bridge cab assembly. The A tunnel shall pivot in the vertical direction at the connection to the rotunda. The B Tunnel shall pivot in the vertical direction at the connection to the A Tunnel. The pivot point between the A and B Tunnels shall be located approximately above the leading edge of the aircraft wing when the bridge is connected to the aircraft. The tunnels shall not exceed a slope of 1:12 (8.33%) when the bridge is servicing the specified aircraft.
- B. The exterior walls of the tunnels shall be corrugated 14 gauge steel sheet. The roof shall be continuously welded flat 14 gauge steel sheet.
- C. Stainless steel handrails shall be provided on both sides of the A- tunnel and extend as far into the B tunnel as is possible without interference with the telescopic C tunnel.
- D. Roof drainage and seals shall be provided between tunnels B and C. The roof drains and seals shall be designed and constructed to prevent leakage of water run off into the interior of the bridge.
- E. A weather protective accordion type bellows shall be installed around the ends of the A and B Tunnels at the pivoting connection point. The bellows shall employ an outer material that shall not absorb water, be highly tear resistant, weather resistant, and

remain elastic and flexible in extreme hot or cold temperatures. The material and any supporting framework shall be designed with adequate strength to accept the load of water, snow, or debris that may accumulate in the folds of the bellows when the bridge is not in use. A flame retardant material compliant with NFPA 415 shall be assembled on the inside of the bellows.

- F. The bellows shall be split at the bottom (underside of tunnel connection) to permit installation or removal of the bellows without separating the A and B tunnels at the pivot point.
- G. Minimum interior clear dimensions shall be as follows:
 - 1. Tunnel width: **77 inches** (1956 mm).
 - 2. Tunnel width with handrails: **70 inches** (1778 mm).
 - 3. Tunnel height: **92 inches** (2337 mm) from finished floor level.
 - 4. Minimum inter-tunnel ramp width: **55 inches** (1397 mm).
- H. The tunnel materials and construction method shall ensure compliance with NFPA-415 specifications pertaining to emergency egress of passengers.

2.12 CAB AND TELESCOPING TUNNEL ASSEMBLY

- A. The cab and telescoping tunnel assembly shall include a telescoping tunnel or C Tunnel and adjustable cab. The cab shall be attached to the telescoping tunnel. The telescoping tunnel shall be mounted inside the B Tunnel on a roller system to provide telescopic movement. The telescopic action shall be provided by an electromechanical system.
- B. The face of the cab that interfaces with an aircraft shall have a minimum inside width of **128 inches** (3251 mm) and a minimum inside height of **102 inches** (2591 mm).
- C. A transition ramp shall accommodate the difference in elevation between the telescoping section (C Tunnel) and the B Tunnel. The transition ramp shall slope with respect to the tunnel centerline. The transition ramp shall provide a shallow slope in the transition area. Handrails shall be provided on both sides of the tunnel in the ramp area. The transition ramp shall be carpeted with a smooth yellow plastic edging.
- D. The telescoping tunnel shall be equipped with a dogleg style exterior electrical cable conveyance system mounted at the left hand side. The system shall be accessible to maintenance personnel for inspection of the cable bundle or addition of cable.
- E. The exterior walls of the telescoping tunnel shall be corrugated 14 gauge steel sheet covered by 22 gauge interlocking steel panels to provide a smooth surface. The roof shall be continuously welded flat 14 gauge steel sheet.
- F. Stainless steel handrails shall be provided on both sides of the telescoping tunnel section.
- G. A rectangular view port shall be located at the rearmost end of the telescoping tunnel on the right hand side. The view port shall provide the bridge operator a view of the

aircraft wing when operating the bridge in manual mode. The viewing area shall comprise of a wired safety glass panel with minimum dimensions of **29.38 inches** (746 mm) wide by **33 inches** (838 mm) high.

- H. Three view ports shall be provided in the cab area. Two view ports, each **29.38 inches high** (746 mm) by **33 inches wide** (838 mm) shall be located in the cab exterior walls, one on the rear wall and one on the right-hand sidewall. One view port **29.38 inches wide** (746 mm) by **33 inches high** (838 mm) shall be located in the front wall next to the weather door. The location of these view ports shall permit the operator an unobstructed view of the rear aircraft door contact area and aircraft rear stabilizer during manual docking operation when the bridge is being operated using the secondary control console. The view ports shall provide an unobstructed view of the auto-leveler without opening the weather door.
- I. Corrugated, black, ribbed-rubber, **¼ inch** (6 mm) thick, shall be installed on the floor of the cab. Aluminum carpet trim shall be provided on all edges of the flooring.
- J. A full width spacer (bumper) shall be installed along the front edge of the cab floor where the cab mates to an aircraft. The spacer material shall comply with NFPA-415 requirements. The spacer shall be of a material that remains flexible regardless of temperature and non-abrasive to prevent scratching or other damage to an aircraft fuselage.
- K. The cab shall be mounted at an adjustable angle to the telescoping tunnel. The cab rotational action shall be controlled by an electromechanical system (actuator type) that shall permit 6 degrees left or 6 degrees right from the neutral position. The cab exterior color shall be the same as the bridge pivoting tunnels.
- L. A weather door on the front of the cab shall seal and secure the interior when the bridge is not in use. The weather door shall be on the right side and shall be motorized. The door shall be a roll-up type, constructed in aluminum and minimum **42 inch** (1067 mm) wide by **81.5 inch** (2070 mm) high. The roll-up door shall be self locking with a manual release on the interior to permit manual operation of the door.
- M. An automatic door opener/closer shall be installed to operate the cab weather door. The weather door shall open upon confirmation from the bridge control system that the bridge is docked to the aircraft. The roll-up door shall close automatically upon a signal to un-dock the bridge from the aircraft.
- N. At the outermost end of the bridge, the leading edge of the cab floor shall be fixed at a generally level angle when the bridge is connected to the aircraft such that the floor nearest the aircraft is generally parallel with the floor of the aircraft. The floor shall slope slightly upwards toward the aircraft fuselage in order to permit unobstructed opening of a vertically hinged aircraft door. The transition floor shall provide a smooth platform sloped approximately in the direction of passenger flow. There shall be no raised surfaces, which may introduce a tripping hazard to passengers.

2.13 CANOPY ASSEMBLY

- A. The outermost end of the cab shall be equipped with an accordion type bellows aircraft closure (canopy). The closure shall be designed to provide a weather-tight seal against the specified aircraft contours. When fitted against the aircraft fuselage, the canopy shall enclose both the open aircraft door and doorway. In automated docking mode, the canopy shall be automatically positioned when the bridge is docked to the aircraft.
- B. The aircraft contact point of closure shall be made of gray colored soft material to prevent scratching or damage to the aircraft skin. The closure material shall be non-abrasive, highly tear resistant, and weather resistant, remain elastic and flexible in extreme hot or cold temperatures and shall not absorb water. The closure shall include segmented components for ease of removal or replacement.
- C. A flame retardant material compliant with NFPA 415 shall be assembled between the two exterior surfaces of the canopy. The closure, when in its retracted position shall be protected by a hood to prevent water and debris from laying in the folds of the closure material when the bridge is not in use.
- D. The canopy system shall be operated by two winches, one at each side. The winches shall unwind the closure bellows such that the canopy will rest against the aircraft fuselage. The gas cylinder assist canopy shall result in the canopy applying minimal pressure onto the aircraft skin.
- E. Canopy limit switches shall control canopy extension and retraction.

2.14 VERTICAL DRIVE SYSTEM

- A. The vertical drive system shall be electro-mechanical. The lifting mechanism shall consist of two (2) recirculating ball bearing screw assemblies. Ball screws shall be sized for the applicable loads. Each assembly shall be independent of the other, with individual motors and brakes and the two lift columns shall be interconnected with a drive shaft to prevent differential motion. The vertical drive system motors shall be AC and powered through an inverter system.
- B. Each assembly shall be capable of supporting the bridge under full design load. The vertical drive motors shall be equipped with spring applied brakes which release only when power is applied and vertical motion, up or down, is signaled from the control system.
- C. The ball nut of this assembly shall be equipped with wiper brushes to remove grit and dirt from screw threads. The ball nut shall incorporate a redundant load path to prevent the bridge from collapsing in the event of a failure of the ball nut.
- D. Each vertical lift column shall be equipped with an oiling system to provide lubrication of the ball-screw assembly during regular schedule maintenance.
- E. Limit switches shall be installed to prevent over travel of the vertical lift columns in both directions.

2.15 SUSPENSION DRIVE SYSTEM

- A. The suspension drive system shall be electro-mechanical. The system shall incorporate two (2) recirculating ball bearing screw assemblies mounted horizontally and connected in a manner to lift tunnel B in relation to tunnel A. Ball screws shall be sized for the applicable loads. Each assembly shall be independent of the other, with individual motors and brakes and the two ball screw assemblies shall be interconnected with a drive shaft to prevent differential motion. The suspension drive system motors shall be AC and powered through an inverter system.
- B. Each assembly shall be capable of supporting the bridge under full design load. The suspension drive motors shall be equipped with spring applied brakes which release only when power is applied and horizontal motion is signaled from the control system or the auto-leveler/shoe sensor system.
- C. The ball nut of this assembly shall be equipped with wiper brushes to remove grit and dirt from screw threads. The ball nut shall incorporate a redundant load path to prevent the bridge from collapsing in the event of a failure of the ball nut.
- D. Each ball screw assembly shall be equipped with an oiling system to provide lubrication during regular schedule maintenance.
- E. An accordion type bellows shall be installed on each ball screw assembly and enclose the area of telescopic extension/ retraction to provide protection from weather. The closure material shall not absorb water, be highly tear resistant, weather resistant and remain elastic and flexible in extreme hot or cold temperatures.
- F. Limit switches shall be installed to prevent over travel of the suspension lift columns in both directions. Two (2) external steel cables designed to support the load of the Tunnel B & C assemblies are provided as a positive mechanical stop in the unlikely event of on over travel of the suspension system.

2.16 MECHANICAL HARD-STOP SYSTEM

- A. The mechanical hard stop system shall provide a positive mechanical stop to prevent the tunnels from contacting a wing in the event of a lift system failure. Upon initial bridge movement the mechanical hard stop shall automatically position itself to provide a vertical clearance between the underside of the bridge tunnel and the top surface of the aircraft wing. The actuation system shall be electro-mechanical. The system shall incorporate acme self-locking thread assemblies. Each assembly shall incorporate individual AC motors and shall be interconnected through a horizontal drive shaft to prevent differential motion.
- B. Limit switches shall be installed to prevent over travel of the hard-stop lift system.
- C. Each acme screw assembly shall be equipped with a grease system to provide lubrication during regular schedule maintenance.
- D. The mechanical hard stop shall act as a maintenance stand while servicing the vertical lift system.

2.17 HORIZONTAL DRIVE SYSTEM

- A. The horizontal drive system shall be variable speed electro-mechanical. A four-wheeled gantry system shall provide horizontal drive of the bridge between parked position and the aircraft. The bridge shall travel in a radial arc pivoted about the rotunda. A link arm shall extend from the rotunda pivot point to the gantry frame at the center of wheel track such that tire scrub shall be minimized.
- B. The horizontal drive shall be powered by AC electric gear motors with integral brakes. Solid-state variable frequency motor controllers (inverters) shall drive the AC motors allowing the bridge to operate at variable speeds with smooth, controlled starts and stops. Removable covers shall be installed over the gear motor assemblies to provide environmental protection for the mechanisms.
- C. A dynamic braking system shall allow the bridge to come to a smooth controlled stop. Integral spring actuated brakes shall be located on the drive wheel motors and lock the bridge in place when electrical power is cut off. The horizontal drive motors shall be equipped with manual brake releases. These mechanisms shall allow the bridge to be towed in the event of a power failure. Towing lugs designed for the appropriate loads encountered during towing shall be located on either end of the gantry frame.
- D. Drive wheels and tires shall be rated for design loads. Tires shall be high wearing solid industrial type with a winter type tread pattern. OTW's shall not use treadless tires.

2.18 BRIDGE EMERGENCY LIFT MECHANISM

- A. An emergency lift mechanism, located on the horizontal drive system, shall be provided to lift the Over-The-Wing Bridge in the event of a power failure or malfunction in the vertical or suspension drive system. The lift mechanism shall be designed for the load encountered when lifting the entire bridge and shall provide sufficient lift travel to raise the cab end of the bridge a sufficient height to clear the wing to allow push back of an aircraft. The lift mechanism shall be separate from the vertical drive system.
- B. The emergency lift system shall consist of two (2) electric motors operated on a 20 amp, 120 VAC circuit. In the event of an electrical power interruption, an owner-supplied generator shall provide power to operate the emergency lift system.

2.19 TELESCOPING TUNNEL DRIVE SYSTEM

- A. The telescoping tunnel shall be driven by an electromechanical system mounted on the B tunnel structure. The drive system shall provide telescoping movement of the telescopic C Tunnel.
- B. An AC electric gear motor, complete with integral brake, shall power the telescoping tunnel drive. A solid-state variable frequency motor controller (inverter) shall drive the AC motor and shall provide smooth, controlled starts and stops.
- C. Integral spring actuated brakes shall be located on the telescopic tunnel drive motor and lock the tunnel in place when electrical power is cut off..

- D. A mechanical hard-stop device shall be installed at each end of the C Tunnel and shall prevent the telescopic unit from becoming separated from the bridge tunnel in the event of a failure of the telescopic drive system.

2.20 CONTROL CONSOLE

- A. Two control consoles shall be supplied with the rear bridge, a primary and secondary control console. The primary control console shall comprise a self-contained operator's control panel and shall be installed in the vicinity of the forward bridge control console. The primary control console shall be separate from the forward bridge control console and shall be installed on a movable pendant such that the operator's view of an approaching aircraft is not reduced. The secondary control console shall be located in the Over-The-Wing Bridge cab and shall consist of a movable pendant station mounted on the rear wall of the cab. Both control consoles shall be protected from the outside environment and from passenger interference. The control consoles shall include all controls, service utilities, and control interlocks required to accomplish bridge operation.
- B. Both the primary and secondary control consoles shall include all controls necessary for the operation and control of the rear bridge. All controls shall be labeled as to their function in a unilingual written format or in universal symbol format to meet customer specifications. The control circuits shall be designed and programmed so that it is impossible to select opposite motions simultaneously, e.g. extend and retract or raise and lower.
- C. The primary control console shall contain a Human Machine Interface (HMI) consisting of a 12 inch (305 mm) measured diagonally) graphical display to provide the operator with control interfaces and messages. The HMI display shall be LCD TFT type and incorporate a touch screen surface. The primary control console shall contain a 13-inch (330 mm) (measured diagonally) LCD STN view screen to display images from the CCTV camera located in the rear bridge cab. The camera shall be equipped with an auto focus lens system. PBB operational functions are to be microprocessor controlled. The programming language shall be English and all documentation for programming and troubleshooting shall be in English.
- D. The primary control console shall be interconnected to the forward bridge control console to provide the following functionality:
 - 1. The emergency stop button in the forward bridge control console shall be interconnected with the controls of the rear bridge such that the operator can stop movement of both the forward and rear bridge by pressing a single E-Stop button.
 - 2. The audible bell(s) located in the forward bridge shall be interconnected with the auto level fault system such that an auto level fault in the rear bridge shall cause the bell(s) in the forward bridge to sound.
- E. The HMI in the primary control console shall include as a minimum the following operator functions:

1. User authentication (password) screen.
 2. Aircraft type and model selection.
 3. Aircraft type and model selection confirmation.
 4. Begin automated bridge docking.
 5. Automated docking progress.
 6. Bridge docked screen/ Initiate automated bridge disengagement.
 7. Automated un-docking progress.
- F. The secondary control console shall contain an emergency stop button and HMI screen. The HMI screen shall be the same type and size as the HMI screen in the primary control console. The HMI in the secondary control console shall be in communication with the HMI screen in the primary control console.
- G. The HMI in the secondary control console shall include as a minimum the following operator controls:
1. Password or authentication method to control access to bridge operation or maintenance by only authorized personnel.
 2. Button to select maintenance mode.
- H. Both the primary and secondary control console shall include an auxiliary controls screen located on the HMI with the following operator controls:
1. Button to operate the cab floodlights.
 2. Button to sound the travel bell.
 3. Button to operate the ventilation fan (when so equipped).
 4. Button to operate the cab floor deicer (when so equipped).
 5. Button to switch on the cab exterior fluorescent lamp.
- I. Both the primary and secondary control consoles shall include information, warning, and maintenance screens located on the HMI. Additional password authentication shall be required to access screens available to maintenance personnel only. The screens shall display as a minimum the following messages and warnings to the operator/maintenance personnel:
1. Bridge parked indicator.
 2. Bridge docked indicator.
 3. Bridge in misparked indicator
 4. Auto level malfunction indicator. The screen shall display red to indicate a malfunction and an audible bell shall sound.
 5. Bridge Swing Limit error message shall indicate that the bridge has been rotated in manual mode beyond its set points causing the limit switches in the rotunda to be tripped, shutting down all bridge functions. The bridge must be operated in the opposite direction to enable the Operator to reset the shutdown function and reverse the direction of bridge movement that caused the shutdown.
 6. Cab floor deicer on indicator.
 7. Error message notification.
 8. Diagnostics (accessible by maintenance personnel only).
 9. Sensor status (accessible by maintenance personnel only).
 10. Calibration screens (accessible by maintenance personnel only).

2.21 POWER AND WIRING REQUIREMENTS

- A. The main power circuit shall be 480 volt, 3 phase, 4 wire, 60 Hz. The standard bridge requires 200A at 480V.
- B. DEN shall provide a fused disconnect with the required power at the terminal gate exterior wall. This disconnect should be sized for the bridge with all additional options required. If ancillary equipment is provided, separate disconnects should be provided for each.
- C. The main electrical panel for each bridge shall be accessible from the interior of the bridge.
- D. All standard lighting and duplex receptacles shall operate on 120 volt, single phase, 60 Hz power. The transformer and separate circuit breaker for lighting and control power shall be mounted in the main electrical panel.
- E. All electrical components, which are exposed to the weather, shall be of a weatherproof type or housed in weather-tight NEMA rated enclosures. The bridge main electrical panels and control consoles shall be equipped with heaters to control condensation.
- F. All electrical components utilized shall be recognized by the Underwriter's Laboratories (UL) in all cases where UL maintains a listing category for the devices installed.
- G. Wiring and installation shall be in accordance with National Electric Code (NEC) and applicable local electric codes. All wiring conductors shall be color coded or identified. Circuits of different voltages, emergency power, and telephone lines shall be separated.

2.22 DUPLEX RECEPTACLES

- A. Interior: Three (3) unswitched 120 volt, 1 phase, 60 Hz, 20 amp, three-conductor duplex receptacles shall be provided in the over-the-wing bridge. One receptacle shall be located in the cab section, one near the pivot point of the A and B tunnels and the last shall be at rotunda end of the A tunnel. An additional receptacle can be provided as an option in the fixed walkway.
- B. Exterior: Two (2) weatherproof, GFI protected, 120 volt, U ground, 20 amp, three-conductor duplex receptacles shall be provided. One shall be located on the gantry system and the other receptacle shall be mounted in the maintenance platform area on the roof.

2.23 TELEPHONE CIRCUIT

- A. A flush mounted J-Box containing 2 Cat 5 Ethernet cables shall be installed in the bridge cab near the control console to provide communications between the bridges control systems and the terminal building.

2.24 INTERIOR AND EXTERIOR LIGHTING

- A. Commercial double tube, flush-recessed, T-8 fluorescent lighting fixtures with prismatic lenses mounted perpendicular to the long dimension shall be installed in the ceilings of the fixed walkway and forward and rear over-the-wing bridge tunnels, spaced at 8'-0 inch centers and in the ceilings above the cab areas inside the weather doors. The double tube fixtures shall provide a minimum light intensity of 30-foot candles at the finished floor level with the cab weather doors closed. The lights shall be controlled by two 3-way switches. One switch shall be located at the rotunda assembly and one switch shall be located in cab.
- B. Two pairs of adjustable flood lamps shall be mounted on the exterior of the bridge. One pair shall be mounted under the cab area and the other pair just rear of the pivot point on the A tunnel to illuminate the ramp near the gantry wheels.
- C. One sealed exterior type two-tube fluorescent lighting fixtures shall be installed in the cab areas forward of the cab weather doors. The light switch shall be located on the HMI touch screens.
- D. Emergency lighting shall be provided in the bridge and fixed walkway. These shall be battery pack type with two spotlights per unit.

2.25 VISUAL AND AUDIBLE INDICATORS

- A. Two (2) amber rotating beacon lights are provided one mounted underneath the cab and the second near the gantry system, both shall be in a visually prominent location. The beacon lights shall be illuminated whenever power to the bridge is on to warn ramp personnel that movement of the bridge may occur.
- B. Two (2) audible hazard bells are provided one mounted underneath the cab and the second near the gantry system each shall sound to provide a warning that the bridge is moving. Each bell shall provide a sound level of 98 db at 10 feet (3048 mm).
- C. A visual indicator shall be located in the cab, forward of the weather door to provide a visual indication to the flight attendant inside an aircraft that the over-the-wing bridge is safely docked to the aircraft. This shall notify the Flight Attendant that the aircraft door can be safely opened. The indicator shall employ a green light to indicate when the bridge is properly docked to the aircraft and a red light to indicate that the bridge is not docked.
- D. A remote audible alarm shall be provided at the end of the fixed walkway nearest the terminal building. In the event of a power failure, an alarm shall sound to indicate that all bridge operational functions have become inoperable including the auto-level function for both the forward and rear over-the-wing bridges. Power for the alarm bell shall be drawn from the battery pack also providing power to the emergency lights inside the bridges.
- E. Four (4) E-stop buttons are provided for safety. Two are located on the gantry system on either end, one is located in the forward control console and another is located in

the rear control console.

- F. Rotating beacons are provided to warn the ground crew if the OTW bridge is not in it's fully parked position.

2.26 LIMIT SWITCHES

- A. Three (3) swing limit switches shall be located in the rotunda, two for each operational rotational direction limit and the third as a critical to prevent over rotation of the OTW Bridge. When the operational limit switches as triggered the direction of rotation shall be stopped and the bridge shall only rotate in the opposite direction. If the critical limit switch is triggered, a critical failure shall occur and all bridge motions shall cease to be operative and an indicator light shall illuminate in the respective control console of the bridge exhibiting the malfunction.
- B. Limit switches shall be provided to prevent travel beyond the maximum and minimum set point of travel of the vertical, suspension, adjustable hard stop and telescoping drive system. The location of the limit switches shall be factory set to meet local site conditions.
- C. Two safety limit switches shall stop the bridge horizontal movement should an obstacle be detected in the path of travel. One switch shall be mounted on the forward bumper and one switch shall be mounted on the rear bumper when viewed in the direction of wheel travel. The bumpers shall be designed to permit 6 inches of travel before striking the structure of the wheel gantry. Drive power to the gantry shall be cut off and the brakes shall be applied in a similar fashion to an E-stop.
- D. A limit switch is provided under the A tunnel to prevent unnecessary contact of the Mechanical Hard Stop system. When triggered all bridge functions are stopped and a warning is displayed on both HMI screens.
- E. Two (2) whisker type limit switches are provided underneath the cab area to prevent contact with the horizontal rear stabilizer of the aircraft. When triggered all bridge functions are stopped and a warning is displayed on both HMI screens.
- F. Four (4) whisker type limit switches are provided on the leading edge of the cab bumper with two on each end. When triggered all bridge functions are stopped however they are used in the final check that the OTW bridge has safely docked to the aircraft and therefore do not display any warnings.

2.27 SENSORS

- A. The bridge is equipped with three (3) encoder type sensors that provide information to the control system regarding the position of the Rotunda angle, Vertical height and the Suspension angle.
- B. A sensor shall provide information to the control system regarding the position of the telescoping tunnel section.

- C. Sensor(s) located in the outermost cab area shall determine the horizontal distance between the bridge and the aircraft. The sensor(s) shall provide data to the bridge control system to ensure that a safe distance is maintained between the bridge and the aircraft fuselage.
- D. Sensor(s) shall be provided to detect the leading edge of the selected aircraft to determine if the aircraft is in the correct parking position. When the sensor(s) are triggered all bridge movement will be prevented and a visible warning will be displayed on the forward HMI screen.
- E. Sensor(s) shall be provided under the cab area to prevent contact with the horizontal rear stabilizer of the aircraft. When the sensor(s) are triggered all bridge movement will be prevented and a visible warning will be displayed on the forward HMI screen.
- F. A bumper type sensor shall be provided on the outermost edge of the exterior cab wall to prevent the bridge from contacting the leading edge of the aircrafts horizontal rear stabilizer.
- G. A sensor(s) shall be provided at the underside of the B Tunnel to detect the clearance of the underside of the B Tunnel and the top surface of the aircraft wing. The sensor(s) shall provide data to the bridge control system to ensure that a save clearance is maintained between the bridge and the aircraft wing.
- H. When aircraft employing winglets are specified in the Aircraft Mix, a sensor(s) shall be located at both the right and left sides of the B Tunnel to provide data to the bridge control system to ensure that the bridge will not strike the winglet during horizontal travel.
- I. The bridge is equipped with sensor(s) that provide information to the control system allowing for automatically determining the height of the aircraft door.
- J. A safety shoe sensor shall be installed to serve as a back-up system to the auto level system. The safety shoe shall detect interference between the lower edge of the aircraft door and the cab floor and automatically lower the bridge to prevent the aircraft door from touching the cab floor. In the event that the safety shoe sensor is activated, the travel bell shall sound during the time that the bridge is moving vertically downwards. An alarm shall also sound in the HMI Panel in the forward bridge. A timer shall control the maximum amount of time that the bridge shall descend when triggered by the safety shoe sensor. After two activations of the shoe sensor, the bridge shall be shut down and an alarm buzzer shall sound continuously until the safety shoe sensor is reset by the operator. The alarm shall provide the same warning as an auto-level malfunction and the HMI Panel in the forward bridge cab shall display visible warning.

2.28 AUTO LEVELING SYSTEM

- A. The OTW Bridge shall be equipped with a wheel-type-auto-leveling sensor located in the cab to allow the floor of the cab to automatically follow small changes in the aircraft floor sill elevation as the aircraft loading varies. The auto level system shall be

engaged when the automated docking cycle is completed. The auto-level systems shall function for all designated aircraft, regardless of door location and fuselage contour. In this mode, the automatic leveling system shall regulate vertical travel.

- B. The auto-level system shall incorporate independent systems to monitor vertical movement in relation to time. In the event that over a pre-set period of time, the auto-level system causes vertical movement of either bridge beyond a pre-set displacement, the auto-level system shall shut down and prevent further vertical travel of the bridge exhibiting this condition. An audible alarm shall sound from a six-inch bell mounted beneath the bridge cab. The auto-level systems shall be able to be reset.

2.29 INTERLOCKS

- A. An interlock shall be installed on the OTW Bridge cab weather door to prevent movement of the bridge in the event the door is not closed.
- B. An interlock shall be provided to prevent auto movement of the bridge in the event the bridge is not in its preset parked position.
- C. The canopy is interlocked to prevent movement of the bridge unless the canopy is in the full retracted position.

2.30 EXTERIOR FINISH

- A. The OTW Bridge telescopic tunnel shall provide a smooth, flat-sided appearance. The exterior sides of the walls and roof shall be covered with 22 gauge interlocking steel panels with a baked enamel finish. The color shall be specified by DEN based on standard colors offered by the PBB Contractor. Other colors can be specified as a priced option.
- B. All exposed metal surfaces are dry abrasive blast cleaned in accordance with SSPC-SP6 (Commercial Blast Cleaning) prior to painting to remove all mill scale, rust, and dirt. Acceptable product is Sherwin Williams Polane paint system (or approved equal) consisting of a prime coat of lead and chromium free epoxy primer followed by a two-component polyurethane topcoat. Total dry film thickness is a minimum of four (4) mils when dry. This paint system is for all exposed parts excluding the interlocking panels that are pre-painted. Parts that are not exposed to passengers only have the prime coat applied. Exterior paint color is matched to the pre-painted interlocking steel panels.
- C. Anodized aluminum, galvanized or stainless steel trim items and cab curtains shall be supplied in their original unpainted bright finish. Machined surfaces shall not be painted unless they are exposed after assembly. Parts that are not exposed shall be prime coated only.

2.31 INTERIOR FINISH

- A. The bridge sub-floor shall be $\frac{3}{4}$ inches (19 mm) thick plywood. Adjoining plywood

sheets shall be supported and suitably fastened to common structural members to provide smooth, even joints. A painted galvanized steel skin shall be installed beneath the plywood.

- B. Floor covering, such as carpeting or carpet tiles shall be installed when specified by DEN.
- C. The wall treatment shall consist of floor to ceiling 7/16 inch fire-rated laminated particleboard. The plastic laminate (NEMA LD-3, Grade FR32, comply with UL 723) shall be adhered to an NFPA 415 approved backing-board (complying with UL 723). Colors to be selected by DEN. Wall panels shall be approximately 4 feet (1219 mm) on center and attached by clear anodized aluminum trim. The wall system shall be designed such that each panel can be removed individually for maintenance or replacement.
- D. The ceiling shall consist of interconnecting plank type panels with no gaps between adjacent slats. Ceiling panels shall be individually removable. Ceiling material shall be .020-inch (.51 mm) thick aluminum 4 inch linear plank-type panels with a white baked-on enamel finish. Ceiling panels shall be continuous slats from wall to wall and installed perpendicular to the tunnel centerline. A molding shall be provided along both sides down the length of the ceiling at the junction between the ceiling and walls.

2.32 AVAILABLE OPTIONS

- A. Cab Floor Deicer/Heater: An under floor heating system (floor de-icer) can be installed outside and forward of the cab weather door to prevent the build-up of snow and ice on the cab floor. The floor heating system shall be controlled by an exterior mounted ambient temperature sensor (summer/ winter selector), a temperature controller to cycle the heating element on and off and a manual control switch located on the HMI touch screen. This system does not guard against large accumulations of snow or ice. These must be removed separately.
- B. Bridge Heating, Forced Air: Multiple 5 or 10 KW forced air heaters can be located in the cab and/or rotunda roof as required. These are controlled by a central thermostat.
- C. Bridge Heating, Baseboard: Up to 10-2KW baseboard heaters can be provided along the bridge walls. These can be controlled by a central thermostat at an additional cost.
- D. Bridge Insulation: The walls and ceiling of the bridge can be insulated with pink fiberglass, type R12. This option is highly recommended if the Bridge Heating option is selected.
- E. Main Voltage System: The standard voltage system is 480 Volt. For other voltages, such as 600 Volt, a transformer can be supplied.
- F. Interior Additional Duplex: Extra interior and exterior wall outlets can be provided as required. These duplexes are 20 Amp. The additional quantity and location can be specified by the customer.

- G. 1500CFM Ventilator Fan: A ventilator fan can be installed in the cab and/or Rotunda roofs of the PBB to increase air circulation within the bridge.
- H. 12 Pair Communication Cable: Cat5E communication cable.
- I. Ballast Emergency Light: Selected interior fluorescent tunnel lights, one tube per fixture, can be provided with emergency power for improved safety in the event of a power outage. These are ballast type battery packs that are charged via an automatic recharging device on the same circuit as the interior lighting fixtures. This system would replace the spotlight battery pack type provided as standard.
- J. Brushed Aluminum Ceiling: The standard interior ceiling panel is a 4" horizontal plank type system with baked on white enamel finish. A brushed aluminum finish is available as an option.
- K. Marine Grade Flooring: This option is usually chosen for humid climate regions or for clients who want to provide a more durable sub-floor. Marine grade plywood is a type of plywood that has been treated to increase its resistance to moisture.
- L. Carpeting: The base bridge price does not include carpeting. Many purchasers prefer to provide their standard carpeting. If the purchaser chooses to provide the carpet, we can provide an option price for factory or field installation. We can also provide an option price for carpeting plus installation. Our standard commercial grade carpeting has a pile weight of 28oz/sq.yard and is available in many colors.
- M. Exterior Siding: The tunnel C is sided with 22 gauge interlocking panels. The A and B tunnels are painted 14 gauge corrugated steel. As an option, A and B tunnels can also be sided over with the interlocking panels.
- N. Gate Sign: A Gate sign can be installed on the cab roof, including 3-sided illuminated gate signs.
- O. Interior and Exterior Signage: Signs can be installed on the walls of the bridge such as welcome notes on the interior or airport logos on the exterior.
- P. Exit Signs: Exit signs can be installed within the bridge. One will be installed at the intersection point of the OTW Bridge and the fixed walkway to indicate the terminal direction. This sign shall be back lit.

PART 3 - EXECUTION (NOT USED)

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

PART 6 - APPENDIX 14730 A

6.1 Copy of Memorandum of Understanding between the City and County of Denver Building Department and Denver International Airport

MEMORANDUM

DATE: 5 August 2004

TO: John Brann

Chief Construction Inspector

THROUGH: Hana Rocek, PE

Assistant Deputy Manager

THROUGH: Reginald Norman, RA

Design Manager

FROM: Mark Percy,

Project Manager

SUBJECT: Memorandum of Understanding / Administrative Modification

Fixed and Moveable Aircraft Loading Walkways at Denver International Airport

CODES: 2004 Denver Amendments to the 2003 International Building Code
NFPA 415

REQUEST: Denver International Airport desires to clarify and strengthen requirements that govern constructing moveable and fixed Aircraft Loading Walkways. Therefore, we request approval of the Provisions I through VI as detailed below.

REFERENCE: Memorandum of Interpretation and Administrative Understanding (MAU) dated 25 August 1992 (attached)

Administrative Modification (AM) 2003 AM 0496 dated 28 October 2003 (attached)

PROVISIONS:

- A. Memorandum of Interpretation and Administrative Understanding dated 25 August 1992

1. This Memorandum remains in full effect, with the following exception:

- a. All references to "NAPA 417" shall be changed to "NFPA 415".

- B. Administrative Modification 2003 AM 0496 dated 28 October 2003

1. This Administrative Modification shall remain in full effect, with the following exception:

2. Item 1 shall be revised to read "The fixed bridges to be used shall be similar to those originally installed on Concourse B, and shall be in compliance with the Denver Amendments to the 2003 International Building Code and NFPA 415".

- C. 2004 Denver Amendments to the 2003 International Building Code, Appendix N, Paragraph N103.3
 - 1. This Paragraph remains in full effect, with the following exception:
 - 2. All references to "NAPA 417" shall be changed to "NFPA 415".
- D. Maximum Allowable Distances for Aircraft Loading Aircraft Loading Walkways at Denver International Airport
- E. Fixed and Moveable Aircraft Loading Walkways of a total combined length not to exceed 242'-0 inch from Concourse face to Aircraft threshold shall be constructed per the Memorandum of Interpretation and Administrative Understanding dated 25 August 1992 as modified herein.
- F. Fixed and Moveable Aircraft Loading Walkways of a total combined length greater than 242'-0 inch but not to exceed 400'-0 inch from Concourse face to Aircraft threshold shall be constructed per the Administrative Modification 2003 AM 0496 dated 28 October 2003 as modified herein.
- G. Fixed and Moveable Aircraft Loading Walkways of a total combined length greater than 400'-0 inch from Concourse face to Aircraft threshold shall be one-hour noncombustible construction from Concourse face to such a length that the remaining portion is 242'-0 inch or less. The remaining portion shall be constructed per the Administrative Modification 2003 AM 0496 dated 28 October 2003 as modified herein.
- H. Building Permit Application Requirements for Aircraft Loading Aircraft Loading Walkways at Denver International Airport
- I. Drawings (2 Sets)
 - 1. Airport Site Plan
 - 2. Concourse Orientation Plan
 - 3. Gate Plan
 - 4. Cross Section through Aircraft Loading Walkway
- J. Complete set of Technical Specifications (1 Set)
- K. Calculations (1 Set)
 - 1. Wind Load shall be 30 miles per hour (mph)
 - 2. Jet Blast Load shall not be applicable
 - 3. Applicable Live Loads shall be stated
 - 4. Load at Concourse face (if applicable) shall be stated
 - 5. Worst Case Loads at both ends of Aircraft Loading Walkway (full extension) shall be stated
 - 6. Wheel Load at Apron
 - 7. Caisson Load at Rotunda
 - 8. Worst Case Overturning Moment
 - 9. Electrical Loads, accompanied by Panel Schedules and One Line Diagrams

- L. Certifications (1 Set)
1. Manufacturer shall certify Aircraft Loading Walkways meet all applicable provisions of NFPA 415
 2. Manufacturer shall certify all electrical materials, components, etc. used to construct the Aircraft Loading Walkways meet NEMA 3R
 3. Manufacturer shall demonstrate compliance with the above standards by submission of a letter from a Nationally Recognized Testing Laboratory (NRTL). Inspection and verification by the independent laboratory of the manufacturer's facilities shall have taken place within six (6) months of the letter's date.
 4. A structural consultant, currently registered as a Professional Engineer in the State of Colorado, shall review calculations furnished by the Manufacturer and author a report on those calculations and submit report to Denver International Airport for subsequent review by Denver Building Inspection Division.
- M. Nothing in these Provisions shall be interpreted as lessening the requirements for Professionals currently licensed in the State of Colorado to stamp and sign submitted documents.
- N. Structural Analysis
- O. Denver International Airport assumes all responsibilities for inspection Manufacturer's in-plant welding.
- P. A structural consultant, currently registered as a Professional Engineer in the State of Colorado shall inspect the Aircraft Loading Walkways once erection in complete. The Engineer shall then author a report to Denver International Airport on their findings. This report shall be forwarded to Denver Building Inspection Division by Denver International Airport. The Engineer shall inspect where applicable:
1. Foundation connections to Apron
 2. Foundation connections to support columns
 3. Column connections to Aircraft Loading Walkways.
 4. Any other connections completed in the field.

END OF SECTION 147300

SECTION 147310 - APRON DRIVE PASSENGER BOARDING BRIDGES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section specifies the furnishing and installing of new Passenger Boarding Bridges, including new bridges, new walkways, new pedestals and rotundas, new foundations, removal and re-installation of the existing Pre-conditioned Air Units, and removal and re-installation of the 400 Hz aircraft power units.
- B. Related Requirements:
 - 1. Provisions of the Contract, General and Special Conditions, Technical Specifications Division 01, and all other Technical Specification Sections, apply to this Section.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. General: Submit required items in accordance with General Contract Conditions and Division 01 Specification Sections.
 - 1. All drawings, sketches details, and material shall be submitted in the English language, in United States units, including dimensions, volumes, weights, and forces. The use of metric or SI units is not acceptable.
 - 2. No installation of any of the passenger loading bridge components shall begin until the drawings for such components have been reviewed and approved in writing by DEN. Fabrication and/or assembly begun prior to approval by DEN is done so solely at the risk of the Contractor / Manufacturer. Additional drawings shall be submitted as necessary to fully describe the bridge to be delivered.
- B. Minimum Required Submittal for Layout Approval:
 - 1. Complete finalized layout, including fuel pits, and PC Air units.
- C. Minimum Required Submittals for 75% Review:

1. Complete Issue for Construction set of drawings and technical specifications including:
 - a. Cover sheet with sheet index.
 - b. Vicinity plan of Airport and surrounding area.
 - c. Concourse key plan.
 - d. Gate layout plan including centerlines of rotundas in DEN coordinate system and with dimensions.
 - e. Phasing / Safety plan including trenching required for fuel pit work.
 - f. Foundation drawings.
 - g. Electrical drawings.
 - h. All other letters and calculations required for Building Permit.
 - i. Graphics / signage details.
 - j. Paint finishes.
 - k. Preconditioned air and 400 Hz brackets and connection details for tie-in to existing monitoring system.
 - l. Technical Specifications.
- D. Minimum Required Submittals for Building Permit.
 1. See Memorandum of Understanding, Article V attached as 147310 Appendix A at the end of this Section
 2. Elevations:
 - a. Side elevation of new bridges including Holdroom section.
 - b. Front elevation of new bridges including Holdroom elevation beyond.
- E. Minimum Required Submittals for Materials:
 1. Reference Technical Specification Section 013300 "Submittal Procedures" for the Master List of Submittals
- F. Minimum Required Submittals for End of Project Report:
 1. See Memorandum of Understanding, Article VI attached as 147310 Appendix A at the end of this Section
- G. Welding: Refer to Technical Specification Section 059990 "Welding" for required welding submittals for field welding only. All shop welding shall be of good commercial quality.
- H. Spare parts:
 1. Recommended spare parts list with current prices shall be furnished not less than 45 days prior to arrival of a bridge.
- I. All items required by Airlines / Denver International Airport agreement.
- J. LEED Submittals: **<Insert requirements>**

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Preinstallation Examination Report: Indicating dimensional discrepancies and conditions detrimental to performance or indicating that dimensions and conditions were found to be satisfactory.
- C. Product Certificates: For each type of boarding bridge.
- D. Field quality-control reports.
- E. Sample Warranty: For special warranty.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For boarding bridges to include in operation and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[location and time as determined by DEN Project Manager][Project site] <Insert location>**.

1.7 STANDARDS

- A. The standards listed below represent the minimum required standards. All editions shall be the most current issue. Safety to passengers, other personnel, aircraft, and equipment is of prime importance. Nothing in these specifications shall relieve the Contractor of the responsibility for providing a safe product.
- B. Design:
 - 1. Codes, Regulations, and References: The bridge shall be designed to conform to all applicable Federal, State of Colorado, and City and County of Denver codes and regulations, including applicable Memoranda of Understanding between the City and County of Denver Building Department and DEN.
 - 2. American Welding Society (AWS) Standards (Technical Specification Section 059990 "Welding" applies to field welding should the need for any arise).
- C. Safety:
 - 1. All equipment shall be designed to be fail-safe and all controls, which regulate bridge motions (i.e., horizontal travel, vertical travel, and cab rotation), shall be of

- the dead-man type. Dead-man type shall mean controls, which require the operator to apply constant pressure to be engaged. Once the pressure is released, the control is disengaged.
2. All operating mechanisms, i.e. horizontal and vertical drive, cab rotation, etc. shall be designed so the drive mechanism is locked when power fails or is shut off.
 3. Positive stops shall be provided to prevent dangerous overtravel where any component might become disengaged from its guiding or restraining component. The positive stop shall be in addition to all limit switches provided to restrict overtravel under normal operating conditions, including bogie steering motions. Documents highlighting the actual stops are a shop drawing requirement.
 4. The operator's position in the control cab shall be designed to permit the operator to position the loading bridge with the cab weather door closed. Suitable enclosures, guard rails, etc., shall be provided to protect the operator from being pitched out the open end of the cab (when operated from an open door) in case of sudden stops or inadvertent movements of the bridge. A handhold shall be attached to the wall on both sides of the cab weather door.
 5. The passenger loading bridges shall comply with all applicable local building codes and regulations at point of installation, which are in effect at the time of manufacture.
 6. All sheared or sharp metal edges shall be deburred or broken. All exposed metal corners shall have radii.

D. Materials:

Component:	ASTM Grade or Equivalent (Min. Properties):
Structural Plate	ASTM-A35-70A
Structural Steel and Shapes	ASTM-A36-69
Steel Tube	ASTM-A36-69
Steel Pipe	ASTM-A53-B
Steel Sheet	ASTM-A570-72 F or ASTM-A569
T-1 Pins	ASTM-A5-4-64 F or ASTM-A517-64 F
Hinge Pins	AISC-C1018
Bolts – Standard	ASTM-A307
Bolts – High Strength	ASTM-A325 or SAE Grade 8

E. Maintenance:

1. Components shall be installed with adequate access and type of fasteners to permit them to be changed by one man. Where the weight of a component requires mechanical assistance, the component or assembly shall be provided with lift eyes, forklift guides, etc. Particular attention shall be given to keeping components simple, rugged, and easily accessible for routine maintenance, lubrication, component exchange, and adjustment.
2. Access panels, where required to gain access to equipment or maintenance areas, shall be suitably sized to permit accomplishment of the tasks required including tools and equipment. The panel shall be permanently attached to the structure by hinges, etc., and any fasteners required shall be a permanent part of the panel, etc., to prevent loss.
3. If special tools are required for routine maintenance, one (1) set shall be furnished by the Contractor for each year of the Project.

4. Modular components: Provide for rapid corrective maintenance of malfunctioning elements through use of standardized modular components, which are readily available in the continental U.S. Allowance must be made for convenient access to components critical to the operation of the passenger loading bridge.

1.8 INSTALLATION REQUIREMENTS

- A. The Contractor shall provide qualified technical and service personnel during the installation of the loading bridges to assure a proper installation. These representatives shall also be available to DEN at no charge on delivery of the first bridge and shall be on call for a timely response within twenty-four (24) hours for a period of sixty (60) days after each loading bridge is officially opened for airline operations. This is to ensure adequate and reliable field service support to correct any and all equipment failures that normally occur during the initial operating period.
- B. Reference Technical Specification Section 011400 "Work Sequence and Constraints" for other Installation Requirements.
- C. Communications:
 1. Verification of existing communications at each existing bridge. Contractor shall also coordinate re-connection of communications with current communications contractor, Qwest.
 2. Contractor shall also coordinate reconnection of existing Pre Conditioned Air monitoring system with DEN HVAC department. Removal and reinstallation of existing Pre Conditioned Air units shall be done in such a way so that only the unit being removed and reinstalled shall not be connected and recognized by the monitoring system. Prior to removal, DEN and Contractor shall inspect and document condition of existing equipment.

1.9 ACCEPTANCE PROCEDURES

- A. In addition to the requirements described in the General Conditions and elsewhere in the Technical Specifications, the following also applies:
- B. Final Acceptance Inspection:
 1. Final acceptance shall be done on an individual gate basis.
 2. After full compliance by the Contractor of all outstanding Punch List items as determined from the Conditional Acceptance Inspection, DEN shall perform the final inspection of the bridge.
 3. The Contractor shall make certain that each bridge is complete in all respects and operating properly, all deficiencies noted in the Conditional Acceptance Inspection are corrected, and all training accomplished prior to the requesting the DEN Project Manager to witness and make the Final Acceptance Inspection. Upon satisfactory completion of that inspection, a Certificate of Customer Acceptance will be issued. The warranty for each individual bridge shall begin upon its Final Acceptance.

4. DEN reserves the right to employ an independent testing laboratory to inspect the bridges to verify the Contractor's compliance with the specified structural, welding, mechanical, electrical, and fireproofing requirements. Deficiencies and / or violations reported by DEN's laboratory shall be immediately corrected by the Contractor at no cost to DEN. The cost of re-inspection by DEN's Laboratory shall be borne by the Contractor and DEN will deduct such reinspection costs from monies due to the Contractor.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 APRON DRIVE PASSENGER LOADING BRIDGE TYPE

- A. Acceptable Manufacturers: Subject to compliance with requirements, provide one of the following:
 1. Dew Bridge Airport Systems.
 2. FMC Technologies.
 3. <Insert manufacturer's name>
 4. Or approved equal.
- B. Apron drive units are those that have "major" degrees of motion, lateral, horizontal, and vertical, of a portion of the loading bridge tunnel and the bridge head/cab about a fixed point.
- C. The apron drive units shall be capable of having simultaneous omnidirectional (extension, lateral and horizontal) movements in a fashion similar to a motor vehicle. These invariably include vertical elevation and significant rotation in a horizontal plane and include extension retraction capability.
- D. General In Service Requirements:
 1. The passenger loading bridge array indicated shall permit aircraft to be taxied in frontward, with all engines running, to final parking positions.
 2. The passenger loading bridges shall operate satisfactorily under ambient temperature conditions of **25 degrees to +125 degrees F** (-32 to +52 degrees C), with or without wind and windblown precipitation up to **60 miles per hour** (96.6 km/h). All components and materials must, individually and collectively, be designed and/or selected for long service life under such climatic conditions.
 3. All electrical systems shall be guarded and protected from damage that might be caused by falling objects or collision with aircraft service equipment and other moving ground vehicles.
 4. Electrical control panels, disconnect switches shall be so located that they are at

all times accessible to the maintenance personnel standing at ground level without the use of a ladder, regardless of the vertical position of the bridge.

E. In Service, Shutdown:

1. The Contractor shall provide a manual override to release wheel bogey brakes to permit towing the passenger loading bridge into or out of position on the apron in case of power failure.
2. The override system shall be mechanically interlocked to preclude normal operation with the brakes locked out.
3. The wheel bogey shall include tow lugs on the front and rear to permit attachment of a suitable tow bar.

F. In Service, Maneuvering:

1. The bridge head/cab shall be equipped with canopies, side curtains, and floor bumpers and shall be capable of docking with aircraft without scratching or damaging the aircraft fuselage when contact is made, with aircraft parked within plus or minus 1 foot (0.3 m) in any direction from the position marked on the apron.
2. The bridge shall have the capability of simultaneous vertical, horizontal, cab rotate and cab floor motion in order to minimize bridge pre positioning time.

G. In Service, Docked to Aircraft:

1. Contractor shall submit, with his Bid, certificate(s) of compliance with NFPA 415, latest edition, from a certified testing company located in the continental United States. The Contractor shall also provide affidavits attesting to the passenger loading bridge's compliance with NFPA 415 (in effect at the date of bid submittal).
 - a. Concourse floor height elevation: Contractor to verify the exact elevation at each gate.
 - b. Unless otherwise directed by DEN, the passenger loading bridges shall be capable of accommodating the first forward door of all aircraft.
 - c. The Contractor shall verify apron elevations at each bridge location and coordinate these elevations with the bridge operation, layout, and maximum slope.
 - d. The Contractor shall be responsible to check the above requirements to assure that the selected passenger loading bridges shall meet the requirements of the application within the Contractor's installation guidelines and constraints of the models selected. Permissible slope of telescoping tunnel: (8.33% or 1:12) maximum measured, for each aircraft type serviced, from the hinge point at the concourse rotunda to the hinge point in the adjustable cab floor.
 - e. The cab shall be designed to rotate a total of 125 degrees (90-95 degrees CCW and 30 35 degrees CW). The cab shall rotate at a maximum peripheral speed of 19.0 feet per minute (5.8 m/min.) in either direction.
 - f. The rotunda shall be such that it permits the entire unit to rotate 175 degrees.
 - g. The bogey wheels shall be capable of rotating a minimum of 90 degrees left

and 90 degrees right.

- 1) A warning light shall be installed on the control panel to indicate when the steer limit switch is activated.
 - 2) It shall not be possible for the wheel bogey to rotate beyond its positive stop.
 - 3) Provide positive identification for both the front and back sides of the bogey, such identification shall be clearly readable by the operator through the mirrors specified by this Section.
 - 4) The wheel's position shall also be identified by a wheel position indicator on the control panel. Install a protective cover or screen over the indicator.
- h. The vertical lift speed as measured at the cab bumper shall be **2.5 fpm to 3.5 fpm** (0.76 to 1.07 m/min).
- i. The drive system shall permit the unit to be extended/retracted and rotated to any point within its operating envelope and shall permit these movements at variable speed between **10 and 90 fpm** (3.0 to 27.4 m/min). The drive mechanism shall be such as to permit the extension/retraction movement be accomplished simultaneously with the rotation movement. Maximum speed shall be limited to **85 90 fpm** (25.9 to 27.4 m/min).
- j. The horizontal drive system shall include a decelerator device to reduce or eliminate shocks when approaching maximum extension, or when horizontal travel is stopped or reversed suddenly, for protection of the equipment and passenger loading bridge operator.

2.2 STRUCTURAL DESIGN AND SUPPORT ELEMENTS

A. General Design:

1. Structural Loads: The Bridge shall support the following loads. The bridge shall accommodate the combination that imposes the most adverse loading condition. In addition to the dead loads and strain caused by movement, the entire passenger boarding bridge shall support:
 - a. A live load of **40 pounds per square foot** (195 kg/m²).
 - b. An operational wind load of **12.5 pounds per square foot** (61 kg/m²) or an approximate wind velocity of **60.0 mph** (97 km/h).
 - c. A retracted and stowed wind load of **25 pounds per square foot** (122 kg/ m²) or an approximate wind velocity of **90.0 mph** (145 km/h).
 - d. A roof load (snow load) of **25 pounds per square foot** (122 kg/ m²).
2. The structure shall be sufficiently rigid to avoid excessive sway when the Bridge is brought to a gradual stop.
3. All mechanisms for actuating, guiding, and restraining the Bridge and its components shall be designed so that no excessive noise, sway or sense of insecurity is apparent to passengers. No operating vibrations or loads shall be transmitted to the concourse building.

B. Environmental Considerations:

1. The Bridge shall operate satisfactorily under ambient temperatures from **-40 degrees F (-40 degrees C)** to **125 degrees F (52 degrees C)**. All of the Bridge components and materials shall either individually or collectively be designed or selected for long service life under such conditions.
2. The Bridge assembly shall provide a clean, structurally sound, comfortable, and functional transition between the aircraft and the concourse building.
3. The entire Bridge shall be weatherproof and any equipment or controls that are exposed to the weather shall be weatherproof type or housed in weatherproof boxes. The PBB Contractor shall follow standard industrial practice regarding NEMA Enclosures for electrical equipment.

C. Interior Dimensions:

1. The Bridge shall have the following minimum interior clear dimensions:
 - a. Tunnel width: **77 inches (1956 mm)**.
 - b. Tunnel width with handrails: **70 inches (1778 mm)**.
 - c. Tunnel height: **92 inches (2337 mm)** from finished floor level.
 - d. Telescopic tunnel width: **62 inches (1574 mm)**.
 - e. Telescopic tunnel width with handrails: **55 inches (1397 mm)**.
 - f. Telescopic tunnel height: **79.5 inches (2019 mm)** from finished floor level.

- D. Support: The Bridge fixed walkway shall be supported from beneath at the concourse building end by a column to support the inboard end and additional support columns located along the walkway to support the walkway. All fixed structural support columns shall rest on foundations supplied by others.

E. Building Connection:

1. The Bridge System shall be designated as equipment and as such shall receive no structural support from the air concourse building to which it is attached.
2. An aluminum diamond checker plate threshold shall be installed over the gap between the concourse building and the adjacent bridge interface. Interior metal and exterior flexible flashings shall provide a waterproof connection between the bridge and the concourse building.
3. At the concourse building, the bridge interface shall fit a door up to **48 inches (1219 mm)** wide by **84 inches (2134 mm)** high.

F. In Service, Maneuvering:

1. Passenger loading bridge wheels shall be of sufficient width and surface quality to preclude damage to apron pavement. The Contractor shall ascertain the bearing strength and pavement hardness from the DEN for specific passenger loading bridge locations.
 - a. The wheels shall be designed to operate on Portland cement and asphaltic concrete pavement in Denver, Colorado climatic conditions.

2. The tires shall be new solid tires manufactured of a rubber compound that will not chip or fray at the edges and not be affected or damaged due to contact with oil, lubricating and hydraulic fluids, and/or fuels from aircraft and servicing equipment, including hydraulic fluid.
 - a. The tire treads shall be suitable for use by passenger loading bridges.
 - b. The tire rim, wheel and hub design shall be such that only the wheel to axle hub bolts/nuts are available for removal while the wheel is mounted on the bogey. This is to preclude accidentally loosening the tire from the rim while still mounted on the wheel bogey assembly.
 - c. The wheel and tire changing procedures shall be specified in the Maintenance Manual.

2.3 BRIDGE ASSEMBLY ELEMENTS

- A. The apron drive bridge is capable of moving to any point on the concourse apron within its design operation range to accommodate the required aircraft type. The proposed apron drive bridge requirements for the following components are as follows:
 1. Optional Fixed Walkways, Rotunda Entry Corridor and Rotunda:
 - a. Handrails with returned ends shall be installed the full length of the fixed walkway, both sides.
 - b. The fixed walkway shall be supported at the concourse building by a column or columns such that it is not anchored or secured to the concourse building in any way.
 - c. Minimum inside dimensions of the fixed walkway shall be:
 - 1) 7'-0" at Concourse B.
 - d. Depending upon length, structural loads, or other considerations, the fixed walkway may be supported by the rotunda column or by independent column supports at the end adjacent to rotunda entry corridor.
 - e. The rotunda entry corridor shall be a fixed rectangular tunnel at a constant height that connects the concourse building or fixed walkway with the rotunda.
 - f. The rotunda entry corridor shall be cantilevered from the rotunda column to the concourse building face or the mating frame of the fixed walkway.
 - g. The rotunda is a cylindrical structure supported on a tubular column. It shall permit the telescoping tunnels to swing through a minimum arc of **175 degrees** (87-1/2 degrees CW and 87-1/2 degrees CCW of centerline). The rotunda floor shall remain level at all positions.
 - h. The rotunda column shall not be anchored or secured to the concourse building, nor shall it transmit any live or dead loads or vibrations to the concourse building. An industry standard 8 bolt foundations pattern shall be used.
 - i. The flashing between the concourse building and the rotunda hall, corridor or fixed walkway shall be provided to effect a weathertight connection between the concourse building and the rotunda entry corridor or fixed

walkway. Similar seals shall be used between the rotunda entry corridor and the fixed walkway, if specified. Interior flashing shall be installed.

- j. The flashing shall be such that it does not damage the existing building or void the warranty. If the Contractor modifies the existing building the Contractor will be responsible for any weather damage to the building in the general area of the building modification regardless of source.
- k. Concourse Door Thresholds: The Contractor shall install a threshold at the concourse door loading bridge interface. The threshold shall have an anti-slip surface.
- l. The rotunda shall be equipped with adjustable limit switches to control the traversable area of the bridge. If the limit switch is activated by the bridge, all power shall be disconnected, stopping the bridge.
- m. Flap type seals (dual) shall be provided for complete weather tightness between the rotunda and the hinged telescoping tunnels.
- n. Rotunda side curtain shall be galvanized steel unless otherwise noted.

2. Telescoping Tunnels:

- a. The telescoping tunnel shall permit servicing of all commercial jet aircraft as specified by the tenant, **[United]** **[Frontier]** **[insert other]** Airlines
- b. Where telescoping sections overlap, low angle transition ramps shall be provided to accommodate the difference in elevation. The hinged inner tunnel transition ramps shall be designed to minimize the transition slope. The additional slope shall be less than 3 degrees in relation to the overall tunnel slope. Manufacturer shall submit actual data for transition slopes.
 - 1) Ramps shall have yellow chamfered edges 1/4" (6 mm) black ribbed rubber matting.
 - 2) The inner tunnel transition ramp shall be hinged and slope shall be less than (3) degrees relative to female tunnel section.
 - 3) Handrails shall be provided at all transition ramp areas (both sides of the tunnel).
 - a) Where folding handrails are utilized to accommodate telescoping sections, the design shall be such that the handrail is self erecting and automatically folded by tunnel action.
 - b) The handrail, when erected, shall be rigid and promote the confidence of the user and shall be turned at the ends in an approved manner to prevent injury and prevent grabbing coats and purse straps of passengers passing through the tunnel. Handrails in the A Tunnel with returned ends shall be provided on both sides and run the full length of the tunnel. The handrail shall extend over the transition ramps and shall be sloped at a uniform dimension above the ramp.
 - c) The telescoping tunnels and all other elements of the structure shall be so designed as to resist the accumulation of water at low points and pockets in the structure. Drain holes shall be provided where necessary so as to drain collection points in any operating attitude. Drains from internal gutters shall be carried clear of the structure and shall be sized to prevent

- blockage by accumulated debris.
- d) Flat roof shall be provided at all telescoping tunnels, fixed extensions, and fixed walkways typically.
 - e) The telescoping tunnels shall be equipped with two stage limit switches, slow and stop, to control extended and retracted lengths. Mechanical stops with elastomeric bumpers to prevent overtravel in the event of limit switch failure shall be provided.
 - f) Clearance between the telescoping tunnels shall be maintained such that no soiling or wear of the interior surfaces occurs as the result of movement.
 - g) Flap type seals (dual) shall be utilized between the individual tunnel assemblies to provide a weathertight seal and to prevent the entrance of fire and/or smoke in the event of an apron fire.
 - h) The extended length of the telescoping tunnels shall be determined such that the slope of telescoping tunnels does not exceed 8.33 percent (except at the tunnel transition ramps) unless otherwise specified by the user.

	2-Tunnel Bridge and Fixed Walkways:	3-Tunnel Bridge:
Min. Interior Width:	4'-10" (1473 mm)	4'-10" (1473 mm)
Min. Interior Height:	7'-0" (2134 mm)	7'-0" (2134 mm)
Min. Transition Ramp Width:	4'-8" (1422 mm)	4'-8" (1422 mm)

- i) The telescoping tunnels shall allow for mounting transport system to accommodate conductors for transmission of 400 Hz aircraft ground power to the gate box mounted adjacent to, or under, the aircraft cab, or 60 Hz power, or 400 Hz static converters, and/or Preconditioned Air handler units.
- j) Tunnel ice scrapers shall be provided.

3. Operator Cab:

- a. The cab shall be equipped with a forward facing operator control station located behind a wire glass window to permit the operator full view of the aircraft contact area. Additional visibility shall be provided through windows to the left side of the control station.
- b. The cab slat curtains shall have view panels installed so the operator will have maximum visibility of the aircraft and ramp when positioning bridge to and from an aircraft or stowed position.
- c. A manually operated, insulated, weather roll-up door with vision panels shall be provided at the cab front to seal the bridge when not in use. The weather door shall be capable of being locked to ensure securing. Minimum clear width of the weather door shall be **3 feet 8 inches** (1118 mm).
- d. A full width aircraft spacer shall be provided at the aircraft end of the cab floor. The bumper material shall meet the latest issue of the fire protection requirements of NFPA 415 and shall be sufficiently flexible and nonabrasive to prevent scratching of or other damage to the aircraft fuselage.
- e. The cab shall be rotated by a gear motor and chain drive operating on the

circumference of the fixed circular floor section of the aircraft cab.
Adjustable limit switches and fixed physical stops control the extreme of rotation.

- f. Aircraft bumper to be furnished with B737 left doorjamb reference strip. Stripe to be located approximately **71 inches (1800 mm)** from right end of bumper. Manufacturer to assure coordination with aircraft closure.
- g. A cab floor deicer, thermostatically controlled, and a manual control switch, with indicator light, located in control console, shall be provided.
- h. Cab side curtains shall be galvanized steel with wire glass windows on every other panel minimum.
- i. The operator's control console shall include, in addition to other specified requirements, the following components:
 - 1) Controls.
 - 2) Indicators.
 - 3) Control features.
 - 4) Interlocks.
 - 5) Warning devices.
 - 6) Aircraft Cab Interim Illumination
 - 7) Exterior Apron and Aircraft Interface Illumination.
 - 8) Interior Illumination Controls.
 - 9) Operator cab shall be equipped with infrared slow-down sensors that restrict the cab's forward and rotational movements when the cab is within two (2) feet of the aircraft.
 - 10) Console work light.
 - 11) Console heater.
 - 12) Video display of wheel bogie taken from Rotunda looking toward cab. Screen shall be within console and not within control screen. Provide screen sunshields.

4. Aircraft Closure (Canopy):

- a. The outermost end of the cab shall be equipped with an adjustable closure with folded accordion bellows to make a weather tight seal against the aircraft. The closure shall enclose both the open aircraft door and its doorway.
- b. Pressure sensitive limit switches or tension switches shall be incorporated into each side of the closure mechanism to prevent excessive pressure on the aircraft.
 - 1) The contacting edge or seal shall be a soft material to prevent scratching or damage to the aircraft skin.
 - 2) The entire closure shall be designed to withstand weathering, be non water absorbent, and remain elastic and flexible between **-31 degrees F (-35.0 degrees C)** and **127 degrees F (52.8 degrees C)** and be highly tear resistance and shall meet the fire resistance requirements of NFPA 415.
 - 3) Aircraft closures must be capable of accommodating the doors of the A320 and F100 aircraft, as applicable.
 - 4) Provide A300 closure modifications where applicable.

- c. The canopy shall be designed in such a manner that it will be possible to lower the canopy over the aircraft door and have sufficient clearance to open the door.
- 1) It shall be able to service both L1 and L2 doors on wide body aircraft as specified on the Plans and shall conform to the approximate top fuselage contour at the forward loading door.
 - 2) Cushion pad(s) shall be provided at the point of contact between the canopy and aircraft fuselage to prevent denting and or scratching of the aircraft skin or cabin and cockpit windows. This includes damage to rain diverters or troughs that may be located over the doors.
 - 3) Any canopy supports or stiffening rods of the canopy shall be thoroughly padded to prevent contact with the aircraft and protect canopy material when in its retracted position. This padding will be firmly attached in such a manner that it will not slip, turn, twist, or distort from repeated usage. It shall be possible to replace the padding sides and top, and any inserts in sections without replacing the entire canopy.
 - 4) The actuating mechanism shall be designed to preclude excessive pressure on the aircraft fuselage.
 - 5) Changes in the position of the aircraft and/or passenger loading bridge while the canopy is in contact with the fuselage shall not cause excessive loads to be exerted on the fuselage skin. Pressure exerted by the closure against the aircraft fuselage shall not exceed **2 psig (13.8 kPa)**.
 - 6) The mechanism shall be rugged and be able to withstand wind gusts and jetblasts.
 - 7) The entire Aircraft Closure shall be designed to withstand weathering, shall be non water absorbent, shall remain elastic and flexible between 32 degrees C and 52 degrees C, shall be tear resistant, and shall meet the fire resistance requirements of the current issue of NFPA 415.
 - 8) An electrical interlock shall be provided preventing forward motion and cab rotation with the Aircraft Closure extended. The interlock shall not prevent the bridge from being withdrawn from the aircraft with the canopy extended.
 - 9) Any chains, cables, or electrical wire that penetrate the floor or wall structure shall have adequate clearance, be protected, and securely fastened.
 - 10) Dependence upon the automatic leveling device to prevent such an occurrence as in 6 (first above) is unacceptable.
 - 11) Cab seal shall be resilient bellows type; tarpaulin types are not acceptable.
 - 12) The canopy, when in its retracted position, shall be protected by a hood or other device to prevent water from lying in the folds of the canopy material when the bridge is not in use.
5. Bumper: An aircraft bumper, the full outside width of the passenger loading bridge cab opening, shall be provided along the front edge of the floor at the point of contact with the aircraft.

- a. Bumper installation and material shall be such that it will not mark and will prevent any damage or abrasion of the aircraft skin when the bridge is in contact with the aircraft.
 - b. The bumper shall provide bodily support when stepped upon, and shall have a Shore A Durometer hardness of 50 - 70 when measured in accordance with ASTM D2240.
 - c. The bumper material shall be an E.P.D.M. or other suitable polymer compounded to meet the fireproofing requirements of NFPA 415, current edition.
 - d. Passenger loading bridge motion control or limit devices mounted on the bumper shall be located at the extreme outboard ends of the bumper and along its centerline or shall be mounted continuously along the face of the bumper.
 - e. There shall not be any metal trim or structural element capable of contacting the aircraft fuselage outside the canopy padding and/or bumper.
 - f. Provide for clearance for B737 pitot tubes on all bridges. The vertical front-edge of of the bracket shall be no closer to the front vertical edge than three (3) inches.
6. Lighting:
- a. Interior Lighting: Interior fluorescent lighting fixtures shall be divided among several different circuits, at least two, in such a way that failure of one circuit will not preclude the distribution of light sufficient for the safe use of the passenger loading bridge.
 - 1) Fluorescent fixtures shall be standard type suitable for use with 48 inch (1219 mm) long cool white 34 Watt fluorescent lamps.
 - 2) Ballast shall be provided for 20 degrees F (-28.9 degrees C) cold weather applications. Interior lighting shall be actuated by a manual switch located next to the concourse door. Lighting calculations shall be submitted under provisions of Article titled "Submittals".
 - 3) Fluorescent fixtures (interior) shall have painted steel housings and acrylic prismatic lens.
 - 4) Not less than one (1) fixture per tunnel/walkway segment shall remain illuminated at all times.
 - b. Exterior Lighting: Exterior lights shall have aluminum housing, weatherproof (gasketed) with high impact lens.
 - c. Tunnel Lighting: 20 to 25 average maintained footcandles (215 to 270 Lux).
 - d. Cab Lighting: 20 footcandles (215 Lux). Control panel area shall have 60 footcandles (645 Lux). It shall be possible for the operator to turn off cab lights at the control console to eliminate glare when positioning the bridge to the aircraft during hours of darkness.
 - e. Intensity of illumination will be measured at the floor.
 - f. Emergency Fluorescent Lamp Power Supply: Provide self-contained battery powered inverter unit for direct mounting in designated fluorescent fixtures. Provide unit with dual 120 or 277 VAC input, fully automatic two rate charger, nickel cadmium battery, automatic low voltage battery disconnect, AC "ON" pilot light, and test switch. Design unit to automatically

transfer to battery supply on loss of normal AC power and shall operate one F40 fluorescent lamp with a minimum output of 1100 lumens for 1 1/2 hours. Not less than one fixture per bridge section and two per fixed walkway over 30 feet (9.15 m) shall be provided.

- g. All lighting fixtures shall be designed for easy access for lamp replacement and for cleaning of fixtures.
- h. The service stairs and landing shall be illuminated by a 100-watt weatherproof incandescent lamp with a control switch inside and adjacent to the service door.
- i. For night operations, exterior sealed beam type floodlights shall be provided to illuminate the apron area ahead of the bridge. A sealed fluorescent fixture shall be provided just beyond the roll up weather door to illuminate the cab aircraft interface area.
- j. Existing Gate ID sign shall be carefully removed from existing bridge, temporarily stored and maintained in good condition and re-installed on the new bridge.

7. Electronically Operated 400 Hz Cable Hoist:

- a. The existing hoist system consisting of either one or two cable hoists (for dual output 400 Hz converters) shall be carefully removed from existing bridge, temporarily stored and maintained in good condition and re-installed on the new bridge.

8. Insulation:

- a. An R4.5 average value is required to be integrated into metal structures at ceilings and sidewalls at the time of manufacture.
- b. In no instance shall insulation materials be exposed to the weather or applied with glues or tape but shall be covered with appropriate weather resistant finish material.
- c. The ceilings shall incorporate acoustical insulation of an inert non combustible type (1 inch (25 mm) minimum).
- d. Particular attention shall be given in the design to eliminate the possibility of condensation in the insulation that might cause unsightly water stains appearing on the interior finished surfaces and rust at the interface of the insulation and outer shell.
- e. The use of asbestos or asbestos products as an insulation material or for any other use will not be permitted.

9. Service Assembly:

- a. A service door, served by a stair and landing, shall provide apron access to and from the bridge for authorized personnel. The service door shall be located on the right side of the cab.
- b. The service door shall be hollow core, steel door heavy 1/2 hour fire rating and an automatic door closure. It shall be of a standard size with nominal dimensions of 2 feet 6 inches by 6 feet 8 inches (762 mm x 2032 mm).
- c. The service door shall be provided with a double-sided keyless push button simplex combination lock as manufactured by Kaba Ilco or approved equal.

- d. It shall be equipped with a 1/2 inch (12 mm) wire mesh glass upper window a minimum size of 12 inches x 18 inches (305 x 457 mm).
- e. A 30 inch (762 mm) high stainless steel kickplate shall be provided for the full width of the inside of the door.
- f. The door shall open outward using heavy duty industrial type hardware (using standard U.S. hinges and finish hardware), and it shall be provided with an automatic heavy duty door closer installed on inside of the door.
- g. A doorstop and hook assembly shall be provided on the stair handrail or platform to prevent damage to the passage set and/or door.
- h. The door shall be so constructed that the door and all its components can be easily removed and reset or replaced for maintenance purposes.
- i. The service access landing shall be constructed of open mesh (grip strut) galvanized steel grating equipped on the outside perimeter with tubular steel handrails in accordance with applicable safety codes.
- j. The service stair shall be equipped with self adjusting risers with open mesh galvanized steel treads (grip strut) and is supported at the apron on castering rollers.
 - 1) The caster type rollers shall have solid rubber tires that are designed to operate on asphalt pavement in elevated temperature conditions.
 - 2) All steps shall have an equal rise with a tread width of 27 1/2 inches (700 mm) and a depth of 9 1/2 inches (240 mm).
 - 3) Both sides of the stair shall be equipped with tubular steel handrails of proper height to comply with applicable codes and regulations.
 - 4) Clear width between handrails shall be a minimum of 28 inches (813 mm).
 - 5) The service stair shall be fully usable at all heights and positions.
- k. A roof access ladder shall be provided on the service landing. The frame of the ladder shall be of galvanized steel channel and the rungs shall be galvanized steel bars with cast abrasive.
- l. A system to allow workers on the bridge roof to attach safety harnesses shall be provided.
- m. A handrail on the roof to protect workers maintaining the vertical life motors.
 - 1) Structural Performance of Handrails and Railing Systems: Design, engineer, fabricate, and install handrails and railing systems to comply with requirements of ASTM E 985 for structural performance based on testing performed in accordance with ASTM E 894 and E 985.
 - 2) Structural Performance: Design, engineer, fabricate and install the following metal fabrications to withstand the following structural loads without exceeding the allowable design working stress of the materials involved, including anchors and connections. Apply each load to produce the maximum stress in each respective component of each metal fabrication.
 - 3) Top Rail of Guardrail/Handrail Systems: Capable of withstanding the following loads applied as indicated: Concentrated load of 300 pounds applied at any point non-concurrently, vertically downward, or horizontally.

- 4) Handrails Not Serving as Top Rails: Capable of withstanding the following loads applied as indicated: Concentrated load of 200 pounds applied at any point non-concurrently, vertically downward or horizontally.
- 5) Infill Area of Guardrail Systems: Capable of withstanding a horizontal concentrated load of 200 pounds applied to one square foot at any point in the system, including panels, intermediate rails balusters or other elements composing the infill area.

10. Pre-Conditioned Air Unit (PC Air):

- a. Bridge mounted in accordance with Division 23 sections.
- b. Stand mounted in accordance with Division 23 sections.

2.4 CONTROL ELEMENTS

A. General In Service Requirements:

1. Controls shall be PC based.
2. Electrical Components:
 - a. General: Electrical equipment, components, and installation shall be manufactured in U.S. standard units and shall conform to the recommendations and requirements of the American Insurance Association (AIA), the National Electrical Manufacturers Association (NEMA), the National Electrical Code (NEC), and the Denver Building Code.
 - b. The means of accomplishing all motions shall be contained at the operator's control panel.
 - c. Electrical Junctions: All electrical junction points and connections within the loading bridge shall be made directly to concourse strips, or by means of plug type connections.
 - 1) Power lines shall likewise be hard wired from the passenger loading bridge directly to concourse building feeder panels.
 - 2) Unless otherwise shown on the plans, no standard electrical and/or communication service conduit will be permitted on the exterior sides of the passenger loading bridge.
 - 3) All cables and wiring shall be installed in cable carrying devices approved by the Construction Supervisor.
 - d. All operating electrical circuitry shall be checked before the unit leaves the manufacturer's plant.
 - e. Anti Chafing Devices: Whenever electrical cables are required to slide or move, anti chafing devices shall be provided. Acceptable anti chafing devices include grommets, flexible sleeves and jackets, and other approved similar protection.
 - f. Electrical panels mounted on the rotunda at apron-level shall be equipped with a locking mechanism containing a Best cylinder.
 - g. Not more than one (1) wire may be terminated under any terminal..

3. Mechanical Design and Components:
 - a. Only standard components of highest commercial or industrial quality, readily available in the continental United States, manufactured in U.S. standard units and conforming to recommendations and standards established by the Society of Automotive Engineers (SAE) and American Society of Mechanical engineers (ASME) shall be used.
 - b. All operating mechanical components must be assembled and checked out before the unit(s) leaves the manufacturer's plant.

4. Horizontal and Vertical Drive System: The drive systems shall be electrical mechanical.
 - a. Vertical Drive - Electro Mechanical:
 - 1) The bridge shall be moved vertically by means of two recirculating ball bearing screw assemblies. Each assembly shall be independent of the other, with individual motors. The ball nut of this assembly shall be equipped with wiper brushes to remove grit or dirt from screw threads and a self locking acme type thread which will prevent unit collapse in the vent of ball nut failure.
 - 2) The vertical drive motors shall be fitted with spring applied brakes which release only when electric power is applied and vertical motion, up or down, is signaled from the operator's console or the auto level system.
 - 3) The brakes shall hold securely at all elevations, without creeping whether the bridge is in operation or not.
 - 4) The fault detector circuit shall shut down the electrical power to the vertical drive motors and sets the brakes independently of the operator. This shall occur if the bridge is in the vertical operate mode and there is differential motion at the ball screws.
 - 5) Attached into the ball screw's lower end shall be a tapered collar that prevents the screw from disengaging the ball nut. Vertical rate of travel shall be a constant speed.
 - 6) Reference stripes shall be painted or mechanically fastened on the inner tube (s) to indicate maximum travel of column, both up and down.
 - 7) Back up emergency magnetic type limit switch(s) shall be provided in the vertical circuit, for both up and down limits.
 - 8) Each screw shall be capable of supporting a full loaded bridge.
 - 9) Inspection holes in each column tube shall be provided to allow baroscope inspection of the ball screw surface. All holes shall be aligned in inner and outer column tubes. Covered plates shall be provided in outer tube.

 - b. Horizontal Drive:
 - 1) An electro mechanical drive system shall provide extend, retract, swing and steer capabilities at variable speeds up to 90 ft. (27 m) per minute. This two wheeled system shall operate on solid tires. Both

- wheels shall be independently driven by DC gear motors with solid state SCR controls.
 - 2) The entire system shall be contained within the bridge and require only AC power.
 - 3) A dynamic braking system shall allow the bridge to come to smooth, controlled stops. Spring actuated brakes shall be located on each drive motor and lock the bridge in place whenever electrical power is cut off by moving the control lever to the neutral position or if power fails. The horizontal drive motors shall be equipped with brake releases.
 - 4) Connection lugs shall be provided to allow the bridges to be towed in the event of power failures.
- c. The control logic shall be such that if any one (1) horizontal or vertical drive motor is shut-down by current overload, all drive motors shall be shut down, necessitating a re-start from the operator's control panel.
5. Certifications: The Contractor shall furnish notarized certifications that all electrical, mechanical, and hydraulic designs, components, and installations meet the requirements specified in this Section.

B. In Service, Maneuvering:

1. Control Console and Station:

a. General:

- 1) All passenger loading bridge operator controls shall be located on the control console in the bridge cab section in such a position as to afford the operator maximum visibility as the bridge is positioned to the aircraft with the cab weather door closed.
- 2) The operator's control station shall be so located so as to provide adequate space for the operator and his required movements and sufficient space for maintenance of the electrical control components as required by voltage classification in the National Electrical Code (NEC).
- 3) In addition, each passenger loading bridge shall be provided with **18 inch (457 mm)** circular convex mirrors and 2 undercarriage floodlights to enable the operator to have full unobstructed view of the apron and bogey wheels at any time before setting the bridge into motion and when the bridge is in motion.
- 4) A wheel position indicator shall also be provided on the control panel to enable the operator to determine the bogey's position at any given time the bridge is idle or in motion.
- 5) The control console shall be of such design and installation to be tamper and theft proof.
- 6) Control console shall have painted steel enclosure, heavy duty oil tight push buttons, selection switches, and indicating lights. "Push to Test" push buttons shall be provided for indicating lamps. All legend plates shall colored graphic labels mounted on the surface.

b. Controls:

- 1) A key switch with positions marked "Auto", "Manual", and "Autolevel". The key can be removed only in the "Auto" and "Autolevel" positions.
- 2) A lever arm that controls all forward and reverse motions. The speed of travel (forward/reverse) shall be proportional to the movement of the lever arm. Push button controls shall provide for steering motion. Legend plates marked "Left", "Steer" and "Right".
- 3) Push button switches to extend or retract the Aircraft Canopy independently. Legend plates marked "Extend" and "Retract" and "Left" and "Right". .
- 4) A red, mushroom head, maintained contact emergency stop switch for turning power off to all controls, except lights.
- 5) A push button switch to bypass the Rotunda travel limit switches, located inside of the console and to bypass the wheel rotation travel limit.
- 6) A push button switch to operate the cab rotation, left and right. Legend plates marked "Left" and "Right".
- 7) A switch for floodlights that illuminate the apron area under the aircraft, drive column undercarriage. A switch for the overhead lights in the cab.
- 8) All switches and/or push buttons shall be labeled. Each function shall be spelled out, i.e. "Canopy" "Extend"-"Retract".
- 9) Primary Switch: A standard switch on the control panel shall be used to energize and de-energize the other panel controls.
- 10) A disconnect switch inside the bridge main control power cabinet shall be provided. When this disconnect switch is depressed, all power to the bridge shall be interrupted.

c. Labeling: The control panel shall include all passenger loading bridge motion controls, cab weather door controls, canopy controls, emergency stop control, cab and control panel lights, ramp floodlights, and associated indicator lights, meters and gages, if any. These shall be permanently labeled as to function.

- 1) Telephone Service: A 6 wire telephone outlet, complete with all conduit and fittings for installation of telephone or intercommunication system and a standard modular jack, shall be provided in the vicinity of the Control Station. The telephone set will be provided by DEN.
- 2) Convenience Outlets: 4 unswitched 120 volt, 1 phase, 60 Hz, 20 A, 3 conductor duplex receptacles shall be provided, one located near the operator's console, one in the rotunda, one weatherproof outlet at the wheel bogey, and one weatherproof outlet on roof near lifting column.
- 3) A minimum of 6 spare conductors shall be included in the bridge control circuitry for possible future additions or changes to the control system.
- 4) All electrical switch and receptacle device plate covers shall be stainless steel and shall match the device configurations, and on

- exposed wiring shall exactly fit the outlet box dimensions.
- 5) Indicators: The operator's control station shall include indicators for the following:
- d. An aircraft cab floor height indicator mounted in the Control Console.
 - e. A drive/steer position indicator mounted in the Control Console that shows wheel orientation, regardless of the cabs rotational position.
 - f. An amber light (console) that indicates the auto leveling function is energized and operating.
 - g. A red light (console) that indicates an auto level travel timer has tripped. This light shall be coupled with an audible alarm. In the event of the interruption of primary power at the main contractor, both visual and audible warnings shall be activated when in the auto level mode.
 - h. An amber light (console) that indicates when the bridge is approaching its maximum rotational points (Rotunda Limit). This light shall be coupled with an audible alarm.
 - i. A red light (console) that indicates when the bridge has reached its maximum rotational points (Rotunda Limit), both left and right. This light shall be coupled with an audible alarm.
 - j. Amber light associated with control switch mounted in the operator control console indicating cab floor deicing "on" status.
 - k. A red light that indicates when the aircraft closure curtain is not in the full stowed position.
 - l. Green status light for pre conditioned air, including light and terminal points within the console for field connection to the light.

C. Control System:

- 1. Motion Control System:
 - a. The motion control switches shall be of a "dead man" type which must be manually held "on" during entire period of operation and shall be fully protected at all times against the outside environment and passenger interference.
 - b. In most cases, visual observation of the ramp area through viewing windows shall be adequate for monitoring the passenger loading bridge position.
 - c. The Contractor shall also provide an amber rotating light and a bell warning system on the exterior base of the bridge head/cab.
 - d. These warning systems shall be automatically activated by any movement of the loading bridge, except when in the Autolevel mode.
- 2. Canopy Control: The canopy shall be operated by switch from the operator's control panel.
- 3. Emergency Stop Control: An emergency stop button shall be provided on the control panel to stop all motion of the passenger loading bridge.
- 4. Movement Prevention Interlocks:
 - a. General: The control system logic shall be such as to preclude damage to circuits or mechanical systems because of simultaneous contrary control

- signals or an otherwise unsafe combination of control signals.
- b. Deployed Canopy Interlock: All passenger loading bridge motion, except auto leveling, shall be possible only when the canopy is in a fully retracted position. Provide for a mechanical override (of the dead man type) to permit the retraction (only in case of mechanical emergency or mechanical failure) of the bridge with the canopy not in the fully retracted position.
 - c. Contrary Control Signal Interlock: All loading bridge motion shall be precluded whenever contrary control signals (e.g., extend and retract) are activated.
5. Actuator Systems:
- a. General: All actuator systems shall be protected from motion overrun near the design limits of motion. All equipment shall be designed to be fail safe both in terms of the components themselves and in terms of the passenger loading bridge as a whole.
 - b. Limit Switches for Electrical Mechanical Designs: Electrical limit switches shall be provided on all passenger loading bridge movement actuator systems, car bumper, canopy system, and include fail safe limit switches near the end of horizontal travel and vertical travel. These switches, when contacted, shall de-energize their respective actuator systems. The tunnel rotation limit switch shall be located per manufacturer's recommendations and reset locally.
 - c. Mechanical Stops: Mechanical stops shall be provided on all movement actual systems except for tunnel rotation, which shall have a dual limit switch. Mechanical stops shall be shown and detailed on shop drawings.
6. In Service, Docked to Aircraft:
- a. Auto leveling: All passenger loading bridges shall be equipped with an automatic leveling device which permits the bridge to automatically respond to small changes in aircraft door sill height thus maintaining a constant relationship between the floor of the aircraft and the floor of the loading bridge.
 - 1) It shall not exert any stresses on the loading bridge. The leveling device actuating mechanism or sensor which contacts the aircraft shall be located on the right side of the cab in full view of the operator at all times.
 - 2) If the actuating mechanism or sensor is located in the cab interior or other area normally exposed to passenger traffic, it shall be adequately protected or shrouded to preclude passenger interference.
 - 3) It shall function reliably on all specified aircraft regardless of door location, fuselage contour, and aircraft doorsill height.
 - 4) Since the aircraft and passenger loading bridge are exposed to various wind conditions and jet blast during the servicing period, the auto level actuating mechanism and sensor shall be capable of activating within the full range of its horizontal or lateral clearance.
 - 5) The control circuitry shall include an adjustable solid state timer

- which will limit the automatic leveler's continuous response in either direction.
- 6) The timer shall have a maximum rotation of one revolution and allow a range of adjustment of at least six inches (150 mm) up or down from a neutral position.
 - 7) The circuitry shall include an audible alarm and warning light at the control station, and a bell or horn in the general ramp area, which shall produce a distinctively different sound than any other on the unit, when the timer interrupts the response to the system.
 - 8) When the timer circuit is interrupted, the vertical lift system shall automatically be locked in position and de-energized, a vertical travel brake automatically engaged and a red warning light and audible alarm will be energized on the control panel, a red warning light and an audible warning horn will be activated in the ramp area, and an audible alarm sounded in the adjacent holdroom.
- b. Adjustable Cab Floor: The cab (aircraft vestibule) shall be provided with a synchronized up and down control to assure a level horizontal attitude at the various extension lengths, vertical heights, and tunnel and cab rotations of the passenger loading bridge. The Contractor shall submit details of his design for review by the Construction Supervisor.
- c. Aircraft Height Indicator: An aircraft height indicator to enable the operator to pre position the cab to the approximate aircraft sill height prior to the arrival shall be prominently displayed on the control console. This indicator can either be digital or have lights which shall indicate the sill height of each aircraft type.
- 1) The indicator shall be permanently calibrated for each aircraft prior to the initial inspection of the passenger loading bridges.
 - 2) All electrical connections to the height indicator stops shall be securely fastened and enclosed in a box for waterproofing and to prevent tampering.
- d. The lifting mechanism shall hold securely at any elevation within the travel range with or without power supplied and in the event of power failure.

2.5 POWER AND COMMUNICATION CHARACTERISTICS

- A. The boarding bridge shall operate on 480 volts, 3 phase, 60 Hz, and "Y" configuration with neutral and ground power for motion. The 480V AC shall be transformed to 120/240V AC for lighting and controls by an onboard transformer provided with the loading bridge. The transformer shall be mounted according to manufacturer standards.
- B. Power requirements for boarding bridges that are equipped with bridge mounted, 400 Hz solid state aircraft power units must have a dedicated input circuit of the 480V, 3 phase, 60 Hz "Y" configuration with neutral and ground power as follows:
1. 1.90 kVA 400 Hz unit = 150 amps.

2. 10120 kVA 400 Hz unit = 225 amps.
- C. All exterior electrical components shall be housed in weathertight and corrosion resistant enclosures; aluminum, stainless steel, etc.
- D. Provisions for a restricted telephone service next to the control panel. The Contractor shall furnish and install a $3/4$ inch (20 mm) (min.) diameter galvanized steel conduit, with 8 conductor communications cable from a junction box at the rotunda end to a junction box installed in the cab wall adjacent to the operator's console located approximately 54 inches (1372 mm) above the floor.

2.6 INTERIOR SURFACES

A. Walls:

1. Interior wall treatment shall consist (unless noted otherwise) laminated flame resistant phenolic plastic panels (Wilson Art or equivalent) four (4) feet wide with aluminum trim and recessed black accept strips. The decorative facing shall consist of a high-pressure laminate, of approximate thickness of 0.030". Subject to compliance with requirements, provide one of the following:
 - a. Wilson Art # 264.
 - b. **<Insert manufacturer's name>**
 - c. or approved equal.
2. The finished product shall carry a UL label and meet the flame spread test as listed in ASTM E-84.

B. Floors:

1. Passenger loading bridge, rotunda, tunnels, and cab floors shall be constructed of $3/4$ " high-density fire retardant plywood subfloor.
2. Loading bridge floor finish shall be factory-installed carpet.
3. Cab floor finish shall be black ribbed, non-skid, neoprene floor finish. Subject to compliance with requirements, provide one of the following:
 - a. Musson Rubber Company Epoxy Glue, #775.
 - b. **<Insert manufacturer's name>**
 - c. or approved equal.
4. Anodized aluminum and other galvanized, aluminum, or stainless steel shall have a satin finish.

PART 3 - EXECUTION (NOT USED)

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

PART 6 - APPENDIX 147310 A

6.1 Copy of Memorandum of Understanding between the City and County of Denver Building Department and Denver International Airport

MEMORANDUM

DATE: 5 August 2004
TO: John Brann
Chief Construction Inspector
THROUGH: Hana Rocek, PE
Assistant Deputy Manager
THROUGH: Reginald Norman, RA
Design Manager
FROM: Mark Percy,
Project Manager

- A. SUBJECT: Memorandum of Understanding / Administrative Modification
1. Fixed and Moveable Aircraft Loading Walkways at Denver International Airport
- B. CODES:
1. 2004 Denver Amendments to the 2003 International Building Code
 2. NFPA 415
- C. REQUEST:
1. Denver International Airport desires to clarify and strengthen requirements that govern constructing moveable and fixed Aircraft Loading Walkways. Therefore, we request approval of the Provisions I through VI as detailed below.
- D. REFERENCE:
1. Memorandum of Interpretation and Administrative Understanding (MAU) dated 25 August 1992 (attached)
 2. Administrative Modification (AM) 2003 AM 0496 dated 28 October 2003

(attached)

E. PROVISIONS:

1. Memorandum of Interpretation and Administrative Understanding dated 25 August 1992
 - a. This Memorandum remains in full effect, with the following exception:
 - 1) All references to "NAPA 417" shall be changed to "NFPA 415".
2. Administrative Modification 2003 AM 0496 dated 28 October 2003
 - a. This Administrative Modification shall remain in full effect, with the following exception:
 - 1) Item 1 shall be revised to read "The fixed bridges to be used shall be similar to those originally installed on Concourse B, and shall be in compliance with the Denver Amendments to the 2003 International Building Code and NFPA 415".
3. 2004 Denver Amendments to the 2003 International Building Code, Appendix N, Paragraph N103.3
 - a. This Paragraph remains in full effect, with the following exception:
 - 1) All references to "NAPA 417" shall be changed to "NFPA 415".
4. Maximum Allowable Distances for Aircraft Loading Aircraft Loading Walkways at Denver International Airport
 - a. Fixed and Moveable Aircraft Loading Walkways of a total combined length not to exceed 242'-0" from Concourse face to Aircraft threshold shall be constructed per the Memorandum of Interpretation and Administrative Understanding dated 25 August 1992 as modified herein.
 - b. Fixed and Moveable Aircraft Loading Walkways of a total combined length greater than 242'-0" but not to exceed 400'-0" from Concourse face to Aircraft threshold shall be constructed per the Administrative Modification 2003 AM 0496 dated 28 October 2003 as modified herein.
 - c. Fixed and Moveable Aircraft Loading Walkways of a total combined length greater than 400'-0" from Concourse face to Aircraft threshold shall be one-hour noncombustible construction from Concourse face to such a length that the remaining portion is 242'-0" or less. The remaining portion shall be constructed per the Administrative Modification 2003 AM 0496 dated 28 October 2003 as modified herein.
5. Building Permit Application Requirements for Aircraft Loading Aircraft Loading Walkways at Denver International Airport
 - a. Drawings (2 Sets)

- 1) Airport Site Plan
 - 2) Concourse Orientation Plan
 - 3) Gate Plan
 - 4) Cross Section through Aircraft Loading Walkway
- b. Complete set of Technical Specifications (1 Set)
- c. Calculations (1 Set)
- 1) Wind Load shall be 30 miles per hour (mph)
 - 2) Jet Blast Load shall not be applicable
 - 3) Applicable Live Loads shall be stated
 - 4) Load at Concourse face (if applicable) shall be stated
 - 5) Worst Case Loads at both ends of Aircraft Loading Walkway (full extension) shall be stated
 - 6) Wheel Load at Apron
 - 7) Caisson Load at Rotunda
 - 8) Worst Case Overturning Moment
 - 9) Electrical Loads, accompanied by Panel Schedules and One Line Diagrams
- d. Certifications (1 Set)
- 1) Manufacturer shall certify Aircraft Loading Walkways meet all applicable provisions of NFPA 415
 - 2) Manufacturer shall certify all electrical materials, components, etc. used to construct the Aircraft Loading Walkways meet NEMA 3R
 - 3) Manufacturer shall demonstrate compliance with the above standards by submission of a letter from a Nationally Recognized Testing Laboratory (NRTL). Inspection and verification by the independent laboratory of the manufacturer's facilities shall have taken place within six (6) months of the letter's date.
 - 4) A structural consultant, currently registered as a Professional Engineer in the State of Colorado, shall review calculations furnished by the Manufacturer and author a report on those calculations and submit report to Denver International Airport for subsequent review by Denver Building Inspection Division.
- e. Nothing in these Provisions shall be interpreted as lessening the requirements for Professionals currently licensed in the State of Colorado to stamp and sign submitted documents.
6. Structural Analysis
- a. Denver International Airport assumes all responsibilities for inspection Manufacturer's in-plant welding.
 - b. A structural consultant, currently registered as a Professional Engineer in the State of Colorado shall inspect the Aircraft Loading Walkways once erection in complete. The Engineer shall then author a report to Denver International Airport on their findings. This report shall be forwarded to Denver Building Inspection Division by Denver International Airport. The

Engineer shall inspect where applicable:

- 1) Foundation connections to Apron
- 2) Foundation connections to support columns
- 3) Column connections to Aircraft Loading Walkways.
- 4) Any other connections completed in the field.

END OF SECTION 147310

SECTION 147320 - RADIAL DRIVE PASSENGER BOARDING BRIDGES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- B. Refer to specification sections for furnishing and installing new foundations, Pre-conditioned Air Units, and Ground Power Units.

1.2 SUMMARY

- A. This Section specifies the design, fabrication, testing, transporting, installing, and commissioning of new Radial Drive Passenger Boarding Bridges ("PBB" or "bridge"), including new bridges, new walkways, new pedestals, and rotundas as shown on the Contract Documents.
 - 1. Related Requirements:
 - a. Provisions of the Contract, General and Special Conditions, Technical Specifications Division 01, and all other Technical Specification Sections, apply to this Section.
 - B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Definitions in ASME A18.1 apply to Work of this Section.

1.4 ACTION SUBMITTALS

- A. General: Submit required items in accordance with General Contract Conditions and Division 01 Specification Sections.
 - 1. All drawings, sketches details, and material shall be submitted in the English language, in United States units, including dimensions, volumes, weights, and forces. The use of metric or SI units is not acceptable.
 - 2. No installation of any of the passenger loading bridge components shall begin until the drawings for such components have been reviewed and approved in writing by DEN. Fabrication and / or assembly begun prior to approval by DEN is done so solely at the risk of the Contractor / Manufacturer. Additional drawings

shall be submitted as necessary to fully describe the bridge to be delivered.

B. Minimum Required Submittal for Layout Approval:

1. Complete finalized layout, including fuel pits and PC Air units.

C. Minimum Required Submittals for Shop Drawing:

1. Complete Issue for Construction set of drawings and technical specifications including:
 - a. Cover sheet with sheet index.
 - b. Vicinity plan of Airport and surrounding area.
 - c. Concourse key plan.
 - d. Gate layout plan including centerlines of rotundas in DEN coordinate system and with dimensions.
 - e. Phasing / Safety plan including trenching required for fuel pit work.
 - f. Foundation drawings.
 - g. Electrical drawings.
 - h. All other letters and calculations required for Building Permit.
 - i. Graphics / signage details.
 - j. Paint finishes.
 - k. Preconditioned air and 400 Hz brackets and connection details for tie-in to existing monitoring system.
 - l. Technical Specifications.

D. Minimum Required Submittals for Building Permit.

1. See Memorandum of Understanding, Article V attached as 147320 Appendix A at the end of this Section
2. Elevations:
 - a. Side elevation of new bridges including Holdroom section.
 - b. Front elevation of new bridges including Holdroom elevation beyond.

E. Minimum Required Submittals for Materials:

1. Reference Technical Specification Section 013300 "Submittal Procedures" for the Master List of Submittals

F. Minimum Required Submittals for End of Project Report.

1. See Memorandum of Understanding, Article VI attached as 147310 Appendix A at the end of this section

G. Welding: Refer to Technical Specification Section 059990 "Welding" for required welding submittals for field welding only. All shop welding shall be of good commercial quality.

H. Spare parts:

1. Recommended spare parts list with current prices shall be furnished not less than 45 days prior to arrival of a bridge.

I. All items required by Airlines / Denver International Airport agreement.

J. LEED Submittals:

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Preinstallation Examination Report: Indicating dimensional discrepancies and conditions detrimental to performance or indicating that dimensions and conditions were found to be satisfactory.

C. Product Certificates: For each type of lift.

D. Sample Warranty: For special warranty.

1.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For each type of lift to include in operation and maintenance manuals.

1. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:

- a. Parts list with sources indicated.
- b. Recommended parts inventory list.

B. Verify requirements for as-built plans with DEN Project Manager.

C. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at **[location and time as determined by DEN Project Manager][Project site] <Insert location>**.

1.8 STANDARDS

A. The standards listed below represent the minimum required standards. All editions shall be the most current issue. Safety to passengers, other personnel, aircraft, and equipment is of prime importance. Nothing in these specifications shall relieve the Contractor of the responsibility for providing a safe product.

B. Design:

1. Codes, Regulations, and References: The bridge shall be designed to conform to all applicable Federal, State of Colorado, and City and County of Denver codes and regulations, including applicable Memoranda of Understanding between the City and County of Denver Building Department and DEN.
2. American Welding Society (AWS) Standards (Technical Specification Section 059990 "Welding" applies to field welding should the need for any arise).
3. National Electrical Code (NEC) and National Electrical Manufacturers Association (NEMA).
4. National Fire Prevention Association (NFPA): New bridges shall meet all provisions of NFPA 415.
5. Mechanical Specifications and Standards.
 - a. All Mechanical components and designs shall conform to the recommendations and standards of the Society of Automotive Engineers (SAE), Joint Industrial Conference (JIC) and the American Society of Mechanical Engineers (ASME).
 - b. All threaded fasteners shall incorporate suitable locking devices.
 - c. All components shall be U.S. or Canadian manufactured or be directly interchangeable.
6. Occupational Safety and Health Administration (OSHA).
7. The Society for Protective Coatings (SSPC).

C. Safety:

1. All equipment shall be designed to be fail-safe and all controls, which regulate bridge motions (i.e., horizontal travel, vertical travel, and cab rotation), shall be of the dead-man type. Dead-man type shall mean controls, which require the operator to apply constant pressure to be engaged. Once the pressure is released, the control is disengaged.
2. All operating mechanisms, i.e. horizontal and vertical drive, cab rotation, etc., shall be designed so the drive mechanism is locked when power fails or is shut off.
3. Positive stops shall be provided to prevent dangerous overtravel where any component might become disengaged from its guiding or restraining component. The positive stop shall be in addition to all limit switches provided to restrict overtravel under normal operating conditions, including bogie steering motions. Documents highlighting the actual stops are a shop drawing requirement.
4. The operator's position in the control cab shall be designed to permit the operator to position the loading bridge with the cab weather door closed. Suitable enclosures, guard rails, etc., shall be provided to protect the operator from being pitched out the open end of the cab (when operated from an open door) in case of sudden stops or inadvertent movements of the bridge. A handhold shall be attached to the wall on both sides of the cab weather door.
5. The passenger loading bridges shall comply with all applicable local building codes and regulations at point of installation, which are in effect at the time of manufacture.
6. All sheared or sharp metal edges shall be deburred or broken. All exposed metal

corners shall have radii.

D. Materials:

Component:	ASTM Grade or Equivalent (Min. Properties)
Structural Plate	ASTM-A#%-70A
Structural Steel and Shapes	ASTM-A36-69
Steel Tube	ASTM-A36-69
Steel Pipe	ASTM-A53-B
Steel Sheet	ASTM-A570-72 F or ASTM-A569
T-1 Pins	ASTM-A5-4-64 F or ASTM-A517-64 F
Hinge Pins	AISC-C1018
Bolts - Standard	ASTM-A307
Bolts - High Strength	ASTM-A325 or SAE Grade 8
Welding: All shop welding shall be good commercial quality per all applicable provisions of American Welding Society or Canadian Welding Bureau. Field welding shall also be governed by Technical Specification Section 059990 "Welding"..	

E. Maintenance:

1. Components shall be installed with adequate access and type of fasteners to permit them to be changed by one man. Where the weight of a component requires mechanical assistance, the component or assembly shall be provided with lift eyes, forklift guides, etc. Particular attention shall be given to keeping components simple, rugged, and easily accessible for routine maintenance, lubrication, component exchange and adjustment.
2. Access panels, where required to gain access to equipment or maintenance areas, shall be suitably sized to permit accomplishment of the tasks required including tools and equipment. The panel shall be permanently attached to the structure by hinges, etc., and any fasteners required shall be a permanent part of the panel, etc., to prevent loss.
3. If special tools are required for routine maintenance, one (1) set shall be furnished by the Contractor for each year of the project.
4. Modular components: Provide for rapid corrective maintenance of malfunctioning elements through use of standardized modular components, which are readily available in the continental U.S. Allowance must be made for convenient access to components critical to the operation of the passenger loading bridge.
5. Manuals and Training: The Bridge Contractor shall furnish to DEN two (2) copies of its maintenance manual for Radial Drive Bridges and 1 copy of the manual in Microsoft Word format on disk. The manual shall clearly identify all required periodic maintenance. Two (2) eight hour sessions shall be provided to train DEN's Maintenance personnel. One session shall be late afternoon or evening.
6. If special tools are required the Contractor shall identify them and supply 2 sets to DEN.
7. A recommended spare parts list with current prices shall be submitted as an

attachment to Appendix 147320 A. A price for each individual part shall be given.

F. Structural Design:

1. Structural Loads: The bridge shall support the following loads. The bridge shall accommodate the combination that imposes the most adverse loading condition. In addition to the dead loads and strain caused by movement, the entire passenger boarding bridge shall support:
 - a. A live load of 40 pounds per square foot (195 kg/m²).
 - b. An operational wind load of 12.5 pounds per square foot (61 kg/m²) or an approximate wind velocity of 60.0 mph (97 km/h).
 - c. A retracted and stowed wind load of 25 pounds per square foot (122 kg/m²) or an approximate wind velocity of 90.0 mph (145 km/h).
 - d. A roof load (snow load) of 25 pounds per square foot. (122 kg/ m²).
 - e. 200 pound maintenance personnel on roof.
2. The bridge shall be sufficiently rigid to avoid excessive sway when the bridge is brought to a gradual stop.
3. All mechanisms for actuating, guiding, and restraining the bridge and its components shall be designed so that no excessive noise, sway, or sense of insecurity is apparent to passengers. No operating vibrations or loads shall be transmitted to the concourse building.
4. The bridge shall be capable of accommodating the added loads of 400 Hz point of use Ground Power Unit (GPU), 28 Volt DC equipment, Gate Signage, Pre-Conditioned Air (PCA) equipment and potable water system. Reference Contract Documents for equipment loads and locations.
5. The bridge shall receive no structural support from the building. Reference the Contract Documents for foundations.

G. Electrical Design:

1. Bridge power shall be 480 volt AC, 60 Hz, 3 phase, 4 wire. Power shall be transformed to 120 / 240 volt for lighting and as required for controls.
2. All unsupported power cabling shall have strain relief.
3. Power cabling shall be capable of accommodating full range of bridge motion.
4. 120 volt weatherproof GFI duplex outlet on separate circuits shall be provided at the drive column and near the rotunda
5. A minimum of two 120 volt, 15 amp duplex outlets shall be provided at the bridge interior. One shall be located in the cab, near the control console, and the other shall be located in or immediately adjacent to the rotunda.
6. Coordinate with Ground Power Unit (GPU) supplier and provide lifting cable and hoist adequate to allow the power cable to service every aircraft in the fleet mix.

H. Communication Design

1. A telephone outlet shall be provided on the wall adjacent to the control console supplied by a minimum of six pairs.

I. Pre Conditioned Air (PCA): Reference Contract Documents for PCAir requirements.

1. Coordinate with the PCA supplier to allow a hose basket for the PCA hose to be mounted at drive assembly.

J. Environmental Considerations:

1. The bridge shall operate satisfactorily, consistently, and reliably under ambient temperatures from **-40 deg F (-40 deg C)** to **125 deg F (52 deg C)**. All bridge components and materials shall be individually and collectively be designed and / or selected for reliable long service life under these conditions.
2. The entire bridge shall be weatherproof and any equipment or controls that are exposed to the weather shall be weatherproof type or housed in weatherproof boxes (NEMA 3R or 4 rating).

- K. Slope: The maximum slope of the bridge shall be 1:12 or 8.33% when reaching the threshold of any aircraft in the designated aircraft fleet mix.

1.9 INSTALLATION REQUIREMENTS

- A. The Contractor shall provide qualified technical and service personnel during the installation of the loading bridges to assure a proper installation. These representatives shall also be available to DEN at no charge on delivery of the first bridge and shall be on call for a timely response within eight (8) hours for a period of sixty (60) days after each loading bridge is officially opened for airline operations. This is to ensure adequate and reliable field service support to correct any and all equipment failures that normally occur during the initial operating period.
- B. Reference Technical Specification Section 011400 "Work Sequence and Constraints" for other Installation Requirements.
- C. Communications:
1. Verification of existing communications at each existing bridge. Contractor shall also coordinate re-connection of communications with current communications contractor, Qwest.
 2. Contractor shall also coordinate reconnection of existing Pre Conditioned Air monitoring system with DEN HVAC department.

1.10 ACCEPTANCE PROCEDURES

- A. In addition to the requirements described in the General Conditions and elsewhere in the Technical Specifications, the following also applies:
1. Final Acceptance Inspection:
 - a. Final acceptance shall be done on an individual gate basis.
 - b. After full compliance by the Contractor of all outstanding Punch List items as determined from the Conditional Acceptance Inspection, DEN shall perform the final inspection of the bridge.
 - c. The Contractor shall make certain that each bridge is complete in all

respects and operating properly, all deficiencies noted in the Conditional Acceptance Inspection are corrected, and all training accomplished prior to the requesting the Project Manager to witness and make the Final Acceptance Inspection. Upon satisfactory completion of that inspection, a Certificate of Customer Acceptance will be issued. The warranty for each individual bridge shall begin upon its Final Acceptance.

- d. DEN reserves the right to employ an independent testing laboratory to inspect the bridges to verify the Contractor's compliance with the specified structural, welding, mechanical, electrical, and fireproofing requirements. Deficiencies and / or violations reported by DEN's laboratory shall be immediately corrected by the Contractor at no cost to DEN. The cost of re-inspection by DEN's Laboratory shall be borne by the Contractor and DEN will deduct such reinspection costs from monies due to the Contractor.

1.11 WARRANTY

- A. The bridge shall be warranted against defects in material and workmanship for twenty-four (24) months from the date of Final Acceptance by DEN in accordance with the PBB Contractor's standard product warranty. Warranty work shall be provided at no cost to DEN and shall include all labor and materials necessary to replace/repair defective material and workmanship during the period of the warranty. See Technical Specifications Sections Section 017835 "Warranties and Bonds" for requirements.

1.12 AIRCRAFT FLEET MIX

- A. All CRJ types.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Acceptable Manufacturers:
 1. Dew Bridge Airport Systems.
 2. FMC Technologies.
 3. **<Insert manufacturer>**
 4. or approved equal per Division 01.
- B. Contractor shall furnish and install only radial drive bridges, in which the drive wheels travel in a fixed arc across the apron, and the tunnel section nearest the aircraft shall be capable of an extend / retract motion. The cab of the bridge shall be capable of rotating about a fixed point. The bridge shall be capable of a range of motion in its arc travel, extend / retract plane, and cab rotation that will allow it to safely dock to every aircraft specified in the Aircraft fleet mix.
- C. Contractor shall demonstrate that every aircraft contained in the aircraft fleet mix will be adequately serviced. Also, the slope for each bridge at each aircraft type shall be

given.

- D. All interior and exterior colors and finishes shall be selected by DEN.

2.2 WALKWAY

- A. The walkway is the connection between the Commuter Building and rotunda, and shall be constructed to match the Tunnels
- B. The Contractor shall furnish and install an aluminum diamond plate threshold at the floor gap between the Commuter Building and the walkway.
- C. The Contractor shall furnish and install weatherproof and watertight flashing at the wall and ceiling junctures between the Commuter Building and the walkway. The flashing shall be flexible enough to maintain its integrity independently of all bridge and / or rotunda motion or walkway motion due to ambient temperature changes.
- D. During installation of the bridges, walkways, and / or rotundas, the Contractor shall maintain temporary watertight and weatherproof seals as required to protect the Commuter Building interior.

2.3 ROTUNDA ASSEMBLY

- A. The rotunda shall be the stationary pivot point for the bridge to rotate about horizontally and vertically. It shall be self supporting; not imparting any loads to the Commuter Building (reference Contract Documents for foundations). The Contractor shall be responsible for coordinating with the bridge manufacturer as to the bolt pattern required to anchor the rotunda. The rotunda shall be capable of a total range of horizontal rotation of 175 degrees. This range shall be equally distributed in clockwise and counterclockwise directions.
- B. The walls of the rotunda shall be constructed of a slat type sheet metal curtain assembly. The rotunda shall also have flexible panels capable of maintaining a weather tight seal as the rotunda rotates. The rotunda shall also have dual rubber seals at its juncture with the tunnel to maintain weatherproof and watertight protection.
- C. The floor of the rotunda shall be flat and stationary, being level with the floor of the Commuter Building.
- D. Limit Switches: The rotunda shall have limit switches that protect it against damage by the bridge over-traveling its range of motion in any and all directions. These limit switches shall be adjustable and disable all motion except that opposite the direction of over-travel. The limit switch shall activate a warning buzzer and light on the operator's console when a limit is reached.

2.4 TUNNELS

- A. The tunnel spans between the rotunda assembly and the cab assembly. It may be

constructed of corrugated steel wall panels of 14 gauge minimum thickness, or alternatively as a steel tube truss with walls and roof constructed of 24 gauge minimum thickness. The tunnels shall be rectangular in its cross section. The exterior walls and roof shall be painted. Paint colors and interior wall finishes shall be selected by DEN. The interior wall finish shall be plastic laminate of a color selected by DEN. The interior wall panels shall be individually removable and trimmed by clear anodized aluminum strips. Exterior finishes shall be cleaned per SPPC SP-1, dry abrasive blast prepared per SPPC SP-6, primed to a minimum of 2-10 mils dry film thickness with Sherwin Williams Hi Build Epoxy or approved equal, and finish coated to a minimum of 2-3 mils dry film thickness with Sherwin Williams Polane H Polyurethane or approved equal.

- B. The floor shall be of steel construction and meet NFPA 415. Floor covering shall be carpet to match that in the Commuter Facility supplied by the General Contractor and installed by the bridge manufacturer after the bridge is in place.
- C. A transition ramp shall be provided over any changes in elevation between tunnel segments. Handrails shall run on both sides of the transition ramp and a one inch minimum OSHA compliant yellow alert strip shall be placed on the transition strip nosing. The transition ramps shall be covered in the same flooring material as the remainder of the bridge.
- D. The tunnel segments shall be provided with seals capable of maintaining weatherproof and waterproof integrity throughout the tunnel's extension / retraction range
- E. The tunnel ceiling shall be constructed of removable interlocking metal panels, painted a color selected by DEN. The panels shall span transversely across the tunnels. A continuous trim piece shall be provided at the juncture between the ceiling and each wall.
- F. The tunnels shall have mounted within the ceiling, fluorescent lighting providing a minimum of 18 footcandles at the floor. The lights shall be circuited such that one light remains on at all times, or the lights shall be provided with emergency ballasts. The lights shall be switched both from the cab and immediately adjacent to the Commuter Building.
- G. Limit Switches: The tunnels shall have limit switches that protect it against damage by the bridge over-traveling its extend / retract range of motion. These limit switches shall be adjustable and disable all motion except that opposite the direction of over-travel. The limit switch shall activate a warning buzzer and light on the operator's console when a limit is reached.
- H. Provide OSHA approved painted steel guardrails at the roof or provisions for attaching fall protection cable per OSHA requirements.

2.5 CAB ASSEMBLY

- A. The cab shall be located at the aircraft end of the tunnels. It shall be capable of a range of motion that renders it capable of safely docking to all aircraft in the fleet mix.

- B. The cab shall have an operator's control console located on its right side. The control console shall be afforded the largest view windows possible to its right side and front. Reference Article 2.6 for control console.
- C. The cab shall have a weather door with a minimum clear width of 30 inches at its front (immediately adjacent to the aircraft). This door shall afford weatherproof and waterproof protection when closed and have the largest possible view window. The door shall have a mechanism capable of holding it opened and closed.
- D. The cab shall have a bumper at its leading edge sufficiently flexible and non-abrasive enough that it will not damage or mar aircraft while the bridge is docked to it. The bumper shall also meet all NFPA 415 requirements. It shall accommodate all aspects of every aircraft in the fleet mix such as doors, steps, stairs, handrails, pitot tubes, etc.
- E. The walls of the cab shall be constructed of a slat type sheet metal curtain assembly that allows it to rotate a minimum of 90 degrees. The maximum cab rotation speed shall be 3.5 deg/sec. Limit switches shall be provided that prevent the over rotation of the cab. These limit switches shall be adjustable and disable all motion except that opposite the direction of over-rotation. The limit switch shall activate a warning buzzer and light on the operator's console when a limit is reached.
- F. The remaining walls and ceiling shall be constructed to match those of the tunnels. All interior and exterior finishes shall match those of the tunnels.
- G. The cab floor shall be self leveling regardless of bridge slope or orientation relative to the aircraft. The floor shall be heated and finished with 3/16 inch ribbed black rubber. The cab floor shall be extendable / retractable on its left side and provided with handrail slots to meet its designated aircraft fleet mix. Limit switches and pressure sensitive switches shall disable all bridge motion and trigger visible and audible warnings at the control console if contact is made with any part of the aircraft, including handrails.
- H. A moveable handrail system shall be provided at the left side of the cab to assist passengers as they exit the aircraft.
- I. The cab shall be equipped with fluorescent lights at its interior ceiling and weatherproof fluorescent lights at its exterior aircraft side entrance. Minimum lighting level shall be 18 footcandles measured at the floor.
- J. Exterior floodlights controlled from the control console shall be provided to illuminate the apron area.
- K. An amber flashing light shall be provided underneath the cab that activate when the bridge power is turned on. A 90 db minimum audible alarm shall also be located underneath the cab and sound whenever the bridge moves.
- L. Manufacturer's standard Baggage Lift to be added to the bridge.
- M. Manufacturer to include a Powered Bagslide System as manufactured by Advanced Bridge Systems to the bridge.

- N. Provide OSHA approved painted steel guardrails at the roof or provisions for attaching fall protection cable

2.6 CONTROL CONSOLE

- A. The control console shall be located per Part 2. If the console is configured with sides, they shall be constructed of steel panels painted to match the walls and its faceplate shall be of brushed stainless steel.

- B. Bridge Controls: All bridge controls shall be of the momentary contact (“deadman”) type and the following controls shall be provided at a minimum:

1. A 3 position master switch shall be used to select “OFF”, “ON”, or “AUTO” (auto level). The key shall only be removable when in the “OFF” or “AUTO” position. Two keys shall be provided for each bridge.
 - a. In the “OFF” position all controls and power to actuating motors shall be disabled.
 - b. In the “ON” position, all controls shall be active (except when overridden by limit switches or interlocks) and power shall be supplied to all actuating motors.
 - c. In the “AUTO” position all controls shall be disabled except for Auto Level and power supplied only to the vertical drive actuating motors.
2. Lever arms or push buttons shall control:
 - a. Bridge drive right / left.
 - b. Bridge raise / lower.
 - c. Tunnel extend / retract.
 - d. Cab rotate right / left.
3. An emergency stop switch that immediately disables all bridge motion.
4. Exterior floodlight control buttons.
5. Floor and platform control buttons.
6. Canopy control buttons.
7. Auto level control buttons.
8. Pre Conditioned Air and Ground Power Unit control buttons, including cable hoists.

- C. Bridge Status Indicators: All warnings shall be visible and audible. The following status indicators shall be provided at a minimum:

1. Diagnostic indicators.
2. Auto Level:
 - a. Activation indicator.
 - b. Fault warning.
3. Limit warning for all travel / rotation limits.
4. Proximity warning.

5. Cab height indicator.
6. Pre Conditioned Air and Ground Power Unit indicators, including cable hoists.
7. Cab floor heater indicator.

D. Optional Status Controls and Indicators: If the options are selected for inclusion by DEN, provide the following status indicators:

1. Baggage Valet in controls / indicators.
2. Powered Bagslide controls / indicators.

E. Maintenance Access: Maintenance access shall be provided by means of lockable access panels. All controls shall be de-energized and all bridge motion disabled when maintenance access panels are opened. Provide two (2) keys per panel per bridge.

F. Each control shall be clearly labeled in English.

2.7 SERVICE ACCESS

A. Service access shall be provided, allowing personnel access from the Apron to the bridge cab.

B. Service Stairs: Stairs shall lead from the Apron to the Service Landing.

1. The stairs shall be constructed of galvanized steel.
2. Stair treads shall be constructed of serrated expanded metal, Gripstrut or equal approved by DEN.
3. The stairs shall be capable of adjusting to the changing bridge height, throughout its entire range of vertical motion.
4. The stairs shall be equipped with rollers at its lowest tread such that it may smoothly travel across the apron with the bridge, throughout its entire range of motion.
5. The stairs shall have OSHA approved handrails on each side constructed of galvanized steel.
6. All treads shall be at an equal rise.

C. A Service Landing shall be furnished and installed on right side of the cab and shall be at the same level as the cab floor.

1. The landing shall be constructed of galvanized steel, with galvanized serrated expanded metal landing surface, Gripstrut or approved equal.
2. The landing shall be surrounded by an OSHA approved guardrail constructed of galvanized steel.

D. A Service Door shall lead from the service landing to the interior of the cab.

1. The door shall be hollow metal steel, painted to match the bridge exterior, and a minimum of 2 feet 6 inches wide and 6 feet 7 inches high.
2. The door shall have weather stripping and threshold to maintain weather proof and water proof integrity.
3. The door shall have heavy duty commercial hardware and closer. The door's

lockset shall be a double sided simplex cipher lock, Kaba Ilco 1000-1 or approved equal.

4. The door shall have a wire glass window.
5. Provide a gutter over the door.

E. A 100 watt minimum light shall be provided at the exterior of the cab, adjacent to the service door. The light shall be switched immediately adjacent to the service door at the cab interior.

F. A painted steel ladder with safety cage shall lead from the landing to the cab roof. The ladder and safety cage shall meet all applicable OSHA standards.

2.8 CANOPY

A. The aircraft end of the cab shall be equipped with a flexible canopy of an adjustable contour capable of sealing against the fuselage of every aircraft listed in the fleet mix. The canopy shall enclose both the aircraft exit door and the cab weather door, affording a weather / moisture screen for passengers.

B. The canopy shall be power actuated such that it deploys against a stationary aircraft and retracts to allow an aircraft to arrive / depart.

C. The canopy shall be constructed of a material that will not mar or scratch the surface of an aircraft. The material shall also meet the provisions of NFPA 415. The material shall also be durable, tear resistant, not absorb water and remain flexible from 40 deg F (-40 deg C) to 125 deg F (52 deg C).

D. The canopy shall have an interlock that prevents horizontal bridge movement while it is deployed.

2.9 DRIVE SYSTEMS

A. Vertical Drive:

1. The vertical drive system shall be a recirculating ball bearing screw assembly on each lift column, with an individual electric motor for each column. Each ball bearing assembly shall be self oiling and have a mechanism(s) to remove dirt from the screw threads. The ball bearing assembly shall be actuated by electrical motors.

2. The lift columns shall either be connected with a synchronized shaft, or have a detector to sense differential movement between the columns and disconnect power from the electrical drive motors in the event of a fault.

3. Each assembly shall be fully capable of independently supporting the full bridge weight at all times.

4. Each vertical lift assembly shall have a brake capable of holding the column securely in place in the absence of electrical power being applied or component failure.

5. The minimum vertical travel speed shall be 3.5 feet per minute.

B. Horizontal Drive

1. The horizontal drive shall be actuated by electrical motors, capable of variable speeds and smooth stop / starts.
2. The horizontal drive system shall be equipped with a manual brake release that will permit the bridge to be towed in the event of a power failure. Provide means to attach a tow bar to the wheel assembly.
3. The bridge shall have solid tires or foam filled tires capable of providing sufficient traction in all weather conditions inherent to Denver.

2.10 CONTROL FEATURES

A. Automatic Leveling Device ("Auto Level"): The bridge shall be equipped with a device, when deployed, capable of sensing elevational changes in a parked aircraft and automatically adjusting the height of the bridge to maintain its vertical relationship to the aircraft.

1. The Auto Level shall perform reliably in conjunction with each aircraft list in the fleet mix.
2. The Auto Level shall be a wheel type device, visible at all time from the control console. The wheel shall freely turn, and constructed of such materials and in such a manner as to not mar or damage the aircraft fuselage.
3. The Auto Level system shall include provisions to trigger a fault and thus stop vertical travel in the event:
 - a. Vertical travel does not cease in an adjustable dimension of 1 inch – 6 inches.
 - b. The Auto Level arm does not cease travel in the adjustable duration of 1 second – 6 seconds.

B. Interlocks: The bridge shall have the following interlocks:

1. Prevention of simultaneous opposite motion.
2. Prevention of motion while Pre Conditioned Air, Ground Power Unit, 28v system, Baggage Valet, and / or Powered Bagslide are operating.

C. Bridge controls shall be PLC based.

D. PRE-CONDITIONED AIR UNIT (PC AIR)

1. Bridge mounted in accordance with Division 23 sections.
2. Stand mounted in accordance with Division 23 sections.

PART 3 - EXECUTION (NOT USED)

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this section. The cost of the work described in this Section shall be included in the applicable unit price item, work order or lump sum bid item.

PART 6 - APPENDIX 14732 A

- 6.1 Copy of Memorandum of Understanding between the City and County of Denver Building Department and Denver International Airport

MEMORANDUM

DATE: 5 August 2004
TO: John Brann
Chief Construction Inspector
THROUGH: Hana Rocek, PE
Assistant Deputy Manager
THROUGH: Reginald Norman, RA
Design Manager
FROM: Mark Percy,
Project Manager

- A. SUBJECT:
1. Memorandum of Understanding / Administrative Modification
 2. Fixed and Moveable Aircraft Loading Walkways at Denver International Airport
- B. CODES:
1. 2004 Denver Amendments to the 2003 International Building Code
 2. NFPA 415
- C. REQUEST:
1. Denver International Airport desires to clarify and strengthen requirements that govern constructing moveable and fixed Aircraft Loading Walkways. Therefore,

we request approval of the Provisions I through VI as detailed below.

D. REFERENCE:

1. Memorandum of Interpretation and Administrative Understanding (MAU) dated 25 August 1992 (attached)
2. Administrative Modification (AM) 2003 AM 0496 dated 28 October 2003 (attached)

E. PROVISIONS:

1. Memorandum of Interpretation and Administrative Understanding dated 25 August 1992
 - a. This Memorandum remains in full effect, with the following exception:
 - 1) All references to "NAPA 417" shall be changed to "NFPA 415".
2. Administrative Modification 2003 AM 0496 dated 28 October 2003
 - a. This Administrative Modification shall remain in full effect, with the following exception:
 - 1) Item 1 shall be revised to read "The fixed bridges to be used shall be similar to those originally installed on Concourse B, and shall be in compliance with the Denver Amendments to the 2003 International Building Code and NFPA 415".
3. 2004 Denver Amendments to the 2003 International Building Code, Appendix N, Paragraph N103.3
 - a. This Paragraph remains in full effect, with the following exception:
 - 1) All references to "NAPA 417" shall be changed to "NFPA 415".
4. Maximum Allowable Distances for Aircraft Loading Aircraft Loading Walkways at Denver International Airport
 - a. Fixed and Moveable Aircraft Loading Walkways of a total combined length not to exceed 242'-0" from Concourse face to Aircraft threshold shall be constructed per the Memorandum of Interpretation and Administrative Understanding dated 25 August 1992 as modified herein.
 - b. Fixed and Moveable Aircraft Loading Walkways of a total combined length greater than 242'-0" but not to exceed 400'-0" from Concourse face to Aircraft threshold shall be constructed per the Administrative Modification 2003 AM 0496 dated 28 October 2003 as modified herein.
 - c. Fixed and Moveable Aircraft Loading Walkways of a total combined length greater than 400'-0" from Concourse face to Aircraft threshold shall be one-hour noncombustible construction from Concourse face to such a length that the remaining portion is 242'-0" or less. The remaining portion shall be constructed per the Administrative Modification 2003 AM 0496

dated 28 October 2003 as modified herein.

5. Building Permit Application Requirements for Aircraft Loading Aircraft Loading Walkways at Denver International Airport
 - a. Drawings (2 Sets)
 - 1) Airport Site Plan
 - 2) Concourse Orientation Plan
 - 3) Gate Plan
 - 4) Cross Section through Aircraft Loading Walkway
 - b. Complete set of Technical Specifications (1 Set)
 - c. Calculations (1 Set)
 - 1) Wind Load shall be 30 miles per hour (mph)
 - 2) Jet Blast Load shall not be applicable
 - 3) Applicable Live Loads shall be stated
 - 4) Load at Concourse face (if applicable) shall be stated
 - 5) Worst Case Loads at both ends of Aircraft Loading Walkway (full extension) shall be stated
 - 6) Wheel Load at Apron
 - 7) Caisson Load at Rotunda
 - 8) Worst Case Overturning Moment
 - 9) Electrical Loads, accompanied by Panel Schedules and One Line Diagrams
 - d. Certifications (1 Set)
 - 1) Manufacturer shall certify Aircraft Loading Walkways meet all applicable provisions of NFPA 415
 - 2) Manufacturer shall certify all electrical materials, components, etc. used to construct the Aircraft Loading Walkways meet NEMA 3R
 - 3) Manufacturer shall demonstrate compliance with the above standards by submission of a letter from a Nationally Recognized Testing Laboratory (NRTL). Inspection and verification by the independent laboratory of the manufacturer's facilities shall have taken place within six (6) months of the letter's date.
 - 4) A structural consultant, currently registered as a Professional Engineer in the State of Colorado, shall review calculations furnished by the Manufacturer and author a report on those calculations and submit report to Denver International Airport for subsequent review by Denver Building Inspection Division.
 - e. Nothing in these Provisions shall be interpreted as lessening the requirements for Professionals currently licensed in the State of Colorado to stamp and sign submitted documents.
6. Structural Analysis

- a. Denver International Airport assumes all responsibilities for inspection Manufacturer's in-plant welding.
- b. A structural consultant, currently registered as a Professional Engineer in the State of Colorado shall inspect the Aircraft Loading Walkways once erection is complete. The Engineer shall then author a report to Denver International Airport on their findings. This report shall be forwarded to Denver Building Inspection Division by Denver International Airport. The Engineer shall inspect where applicable:
 - 1) Foundation connections to Apron
 - 2) Foundation connections to support columns
 - 3) Column connections to Aircraft Loading Walkways.
 - 4) Any other connections completed in the field.

END OF SECTION 147320

SECTION 149100 - FACILITY CHUTES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes [**waste**] [**and**] [**laundry**] chutes.
- B. Related Sections:
 - 1. Section 055000 "Metal Fabrications" for metal supporting framework at floor penetrations.
 - 2. Section 076200 "Sheet Metal Flashing and Trim" for roof-vent flashing and counterflashing.
 - 3. Section 077200 "Roof Accessories" for roof curbs.
 - 4. Section 078413 "Penetration Firestopping" for annular spaces at doors, floors, or roofs.
 - 5. Section 211313 "Wet-Pipe Sprinkler Systems" for building fire sprinklers and piping.
 - 6. Section 221116 "Domestic Water Piping" for water-service connections.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for chutes.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For chutes. Include plans, elevations, sections, details, weights, operational clearances, and attachments to other work. Indicate method of field assembly.
 - 1. Wiring Diagrams: Power, signal and control wiring.

1.4 INFORMATIONAL SUBMITTALS

- A. Product Certificates: For each type of chute, from manufacturer.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For chutes to include in operation and maintenance manuals.

- 1. Include manufacturer's recycling plan guidelines.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Fire-Rated Door Assemblies: Assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated.

- 1. Test Pressure: Test at atmospheric (neutral) pressure according to NFPA 252 or UL 10B.
 - 2. Intake Door: Class B labeled; [1] [1-1/2]-hour fire rated[**with 30-minute temperature rise of 250 deg F** (140 deg C)].
 - 3. Discharge Door: Class B labeled; 1-hour fire rated[**with 30-minute temperature rise of 250 deg F** (140 deg C)].
 - 4. Access Door: Class B labeled; [1] [1-1/2]-hour fire rated[**with 30-minute temperature rise of 250 deg F** (140 deg C)].

- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

- C. Standard: Provide chutes complying with NFPA 82.

1.7 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. American Chute Systems, Inc.
 2. Chutes International.
 3. Midland Chutes.
 4. U.S. Chutes.
 5. Valiant Products, Inc.
 6. Western Chutes; Div. of Buchanan Company, Inc.
 7. Wilkinson Hi-Rise, LLC.
 8. **<Insert manufacturer's name>**.
 9. or approved equal.

2.2 CHUTES

- A. Chute Metal: **[Aluminum-coated, cold-rolled, commercial steel sheet; ASTM A 463/A 463M, Type 1 with not less than T1-40 (T1M-120) coating] [Type 430 stainless steel, ASTM A 240/A 240M] [Type 304 stainless steel, ASTM A 240/A 240M]**.
1. Thickness: **[0.060 inch (1.6 mm)] [0.075 inch (1.9 mm)]**.
- B. Size: **[24-inch (610-mm) diameter] [As indicated on Drawings] <Insert dimension>**.

2.3 DOORS

- A. Intake Door Assemblies: ASTM A 240/A 240M, Type 304 stainless-steel, self-closing units with positive latch and latch handle; as required to provide fire-protection[**and temperature-rise**] ratings indicated; and with frame suitable for enclosing chase construction.
1. Door Type: **[Hopper] [Hopper, limited access] [Side hinged, limited access, 180-degree swing, square] [Type as indicated on Drawings] <Insert description>**.
 2. Size: Manufacturer's standard size for door type, chute type, and diameter indicated.
 3. Finish: Manufacturer's standard satin or No. 3 directional polish.
 4. Locks: Cylinder locks with keys that are removable only when cylinder is locked. For each chute, key locks **[keyed alike] [to master key system]**. For each door, furnish **[four] <Insert number>** keys.
 5. Baffles: Rubber-back draft baffles at each intake.
 6. Foot Operators: Hopper-type door operators that unlatch and open door when foot pedal is depressed.

7. Accessible Automatic Door Operating System: Manufacturer's standard system complying with applicable provisions in **[the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines] [and] [ICC/ANSI A117.1]**.
 8. Mechanical Interlocks: Interlock system operated from discharge door to automatically lock intake doors.
 9. Electrical Interlocks: Interlock system that is energized by opening one intake door; remaining doors automatically lock when system is energized.
- B. Discharge-Door Assemblies: Aluminum-coated-steel doors as required to provide fire-protection[**and temperature-rise**] ratings indicated; equipped with fusible links that cause doors to close in the event of fire.
1. Direct Vertical Discharge: Provide inclined, horizontally rolling, shutter-type unit.
 2. Horizontal Discharge: Provide top-hinged, self-closing, hopper door with self-latching hardware; floor-mounted leg brace designed to absorb impact of material dropping against chute; and minimum **NPS 2 (DN 50)** drainpipe connection.
- C. Heat-[**and Smoke-**]Detector System: Interlock system with temperature-rise elements that locks chute doors when temperature in chute reaches a predetermined, adjustable temperature.
1. Locate smoke detector outside discharge door with solenoid to close discharge door.
- D. Access Door Assemblies: Manufacturer's standard ASTM A 240/A 240M, Type 302/304 stainless-steel doors; as required to provide fire-protection[**and temperature-rise**] ratings indicated; with frame suitable for enclosing chase construction; and in satin or No. 3 directional polish finish.
- E. Manual Control System: Control system with manual switches that lock doors of chute during shutdown hours and service operations.
- 2.4 ACCESSORIES
- A. Fire Sprinklers: Manufacturer's standard **NPS 1/2 (DN 13)** fire sprinklers ready for piping connections.
 - B. Flushing Spray Unit: **NPS 3/4 (DN 19)** spray head unit located in chute above highest intake door, ready for hot-water piping connection, and with access for head and piping maintenance.
 - C. Sanitizing Unit: **NPS 3/4 (DN 19)** disinfecting and sanitizing spray head unit located in chute above highest intake door, including **1-gal. (3.8-L)** tank and adjustable proportioning valve with bypass for manual control of sanitizing and flushing operation, ready for hot-water piping connection, and with access for head and piping maintenance.

- D. Intake Door Baffles: Rubber baffles, 1/8 inch (3 mm) thick.
- E. Sound Dampening: Manufacturer's standard **[sound deadening coating on exterior of chute] [and] [sound and vibration isolator pads at floor supporting frames]**.

2.5 FABRICATION

- A. General: Factory assemble chutes to greatest extent practical with continuously welded or lock-seamed joints without bolts, rivets, or clips projecting on chute interior. Include intake door assemblies and metal supporting framing at each floor, and chute expansion joints between each support point.
- B. Roof Vent: Fabricate vent unit to extend [36 inches (910 mm)] [48 inches (1200 mm)] **<Insert dimension>** above roof with full-diameter, screened vent and metal safety cap or glass explosion-release cap. Fabricate with roof-deck flange, counterflashing, and clamping ring of nonferrous metal compatible with chute metal.
- C. Fire Sprinklers: Comply with NFPA 13. Locate fire sprinklers at or above the top service opening of chutes, within the chute at alternate floor levels in buildings more than two stories tall, and at the lowest service level.
- D. Equipment Access: Fabricate chutes with access for maintaining equipment located within the chute, such as flushing and sanitizing units, fire sprinklers, and plumbing and electrical connections.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. General: Comply with NFPA 82 requirements and with chute manufacturer's written instructions. Assemble components with tight, nonleaking joints. Anchor securely to supporting structure to withstand impact and stresses on vent units. Install chute and components to maintain fire-resistive construction of chute and enclosing chase.
- B. Install chutes plumb, without offsets or obstructions that might prevent materials from free falling within chutes.
- C. Anchor roof flanges of chute vents before installing roofing and flashing. Install chute-vent counterflashing after roofing and roof-penetration flashing are installed.
- D. Intake and Discharge Doors: Interface door units with throat sections of chutes for safe, snag-resistant, sanitary depositing of materials in chutes by users.
 - 1. Coordinate installation of foot-pedal door operator with installation of door and enclosing chase.
 - 2. Interconnect sanitizer control with door interlock system.
- E. Electrical Interlock System: Comply with applicable NECA 1 recommendations.

- F. Test chute components after installation. Operate doors, locks, and interlock systems to demonstrate that hardware is adjusted and electrical wiring is connected correctly. Complete test operations before installing chase enclosures.
- G. Test heat- [**and smoke-**]sensing devices for proper operation.
- H. Operate sanitizing unit through one complete cycle of chute use and cleanup, and replenish chemicals or cleaning fluids in unit containers.

3.2 CLEANING

- A. After completing chase enclosure, clean exposed surfaces of chute system's components. Do not remove labels of independent testing and inspecting agencies.

3.3 DEMONSTRATION

- A. Demonstrate use of chute and equipment to Owner's personnel.
 - 1. Schedule demonstration with Owner, through DEN Project Manager, with at least seven (7) days advance notice.
- B. Demonstrate replenishment of sanitizing-unit chemicals or cleaning fluids.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

A. METHOD OF PAYMENT

- B. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 149100

SECTION 210400 - BASIC FIRE-SUPPRESSION REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and DEN BIM models and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
1. Basic requirements common to the Work in general of Division 21 and other Divisions and Sections of the Specification where referenced.
 2. Provide, unless specified otherwise, all labor, materials, and equipment necessary for completely finished and operational fire protection systems described and specified under other Sections of this Division 21.
 3. Provide all minor incidental items such as offsets, fittings, and accessories required as part of the Work even though not specified or indicated.
 4. Inspection: Inspect Work preceding or interfacing with work of Division 21 and report any known or observed defects that affect the Work to the General Contractor. Do not proceed with the Work until defects are corrected.

1.3 REFERENCES

- A. General:
1. For products or workmanship specified by association, trade, or Federal Standards, comply with requirements of the standard, except when more rigid requirements are specified or are required by applicable Codes.
 2. The date of the standard is that in effect as the date of the Contract Documents, except when a specific date is specified.
 3. When required by individual Specifications Section by means of reference for cleaning or installation requirements, etc., obtain a copy of the standard. Maintain the copy at job site during Work until substantial completion. Copy shall be in electronic format.
 4. Schedule of Referenced Organizations: The following is a list of the acronyms of organizations referenced in these Specifications:

- a. ABMA–American Bearing Manufacturers Association
- b. ACI–American Concrete Institute
- c. ASA–American National Standards on Acoustics and Vibrations
- d. ASME–American Society of Mechanical Engineers
- e. ASTM–American Society for Testing of Materials
- f. AGA–American Gas Association
- g. ANSI–American National Standards Institute
- h. API–American Petroleum Institute
- i. ASME–American Society of Mechanical Engineers
- j. ATA–Air Transport Association of America
- k. AWS–American Welding Society
- l. EPA–Environmental Protection Agency
- m. CISPI–Cast Iron Soil Pipe Institute
- n. FM–Factory Mutual Insurance Association
- o. HI–Hydronics Institute
- p. IFC–International Fire Code
- q. MSS–Manufacturers Standardization Society of the Valve and Fittings Industry
- r. NACE–National Association of Corrosion Engineers
- s. NAPCA–National Association of Pipe Coating Applicators
- t. NFPA–National Fire Protection Association
- u. NIST–National Institute of Science and Technology
- v. ABMA–American Bearing Manufacturers Association
- w. SSPC–The Society for Protective Coatings
- x. STI–Steel Tank Institute
- y. UL–Underwriters' Laboratories

1.4 DEFINITIONS

- A. Conform to Division 01: These Specifications are of abbreviated, simplified, or streamlined type and include incomplete sentences. Singular words will be interpreted as plural and plural words will be interpreted as singular where applicable and where full context of the Contract Documents so indicates.
- B. The following words are re-defined and/or elaborated on for the context of Division 21 work:
 - 1. Furnish: Except as otherwise defined in greater detail, term "furnish" is used to mean supply and deliver to Project site, ready for unloading, unpacking, assembly, installation, etc., as applicable in each instance.
 - 2. Install: Except as otherwise defined in greater detail, term "install" is used to describe operations at Project site including unloading, unpacking, assembly, erection, placing, anchoring, applying, working to dimension, finishing, curing, protecting, cleaning and similar operations, as applicable in each instance.
 - 3. Provide: Except as otherwise defined in greater detail, term "provide" means furnish and install, complete and ready for intended use, as applicable in each instance.
 - 4. General Contractor: The term "General Contractor" used in Division 21 and elsewhere in the Contract Documents means the party with whom the Owner has

executed the Owner-Contractor Agreement.

1.5 QUALITY CONTROL

- A. Conform to Division 01. Materials and apparatus required for the Work to be new and of first-class quality; to be furnished, delivered, erected, connected and finished in every detail; and to be so selected and arranged so as to fit properly into the building spaces. Where no specific kind or quality of material is given, a first-class standard article shall be furnished.
- B. Unless otherwise specifically indicated, equipment and materials to be installed in accordance with the recommendations of the Manufacturer. This includes the performance of tests as recommended by the Manufacturer.

1.6 REGULATORY REQUIREMENTS

- A. Comply with latest editions of all applicable Codes, Standards, Ordinances and Regulations in effect as of the date of the Contract Documents adopted by CCD, BD, and FD, including but not necessarily limited to the following:
 - 1. National Electrical Code NFPA-70.
 - 2. NFPA.
 - 3. Underwriters Laboratories.
- B. If discrepancies occur between the Contract Documents and any applicable Codes, Guidelines, Ordinances, Acts, or Standards, the most stringent requirements shall apply.
- C. Where hourly fire ratings are indicated or required, provide components and assemblies meeting requirements of the American Insurance Association, Factory Mutual Insurance Association and listed by Underwriters Laboratories, Inc.

1.7 PRODUCT OPTIONS AND SUBSTITUTIONS

- A. Substitutions: Refer to Division 01, General Requirements.
- B. Some materials and equipment are specified by Manufacturer and catalog numbers. The Manufacturer and catalog numbers are used to establish a degree of quality and style for such equipment and material.
- C. When alternate or substitute materials and equipment are used, Contractor shall be responsible for space requirements, configurations, performance, changes in bases, supports, structural members and openings in structure, electrical changes and other apparatus and trades that may be affected by their use.
- D. When providing a product and/or service under the qualification of "acceptable equal,"

Contractor shall be entirely responsible for additional costs incurred due to modifications to the civil, architectural, structural, mechanical, electrical, or any other system design that may be required to accommodate the "acceptable equal."

- E. Substitute materials and equipment are only allowed to be provided from the manufacturers listed as approved.

1.8 SHOP DRAWINGS AND PRODUCT DATA

- A. General: Comply with the General Conditions of the Contract and with Division 01 General Requirements.

- 1. All documents shall be submitted in electronic format. Each submittal shall be in a single security free PDF document. PDF documents shall be compatible with the latest version of Adobe Acrobat. All as-built documents shall be submitted in the latest version of Revit format.

1.9 CONTRACT RECORD DOCUMENTS

- A. General: Comply with the General Conditions of the Contract and with Division 01 General Requirements,

1.10 OPERATING AND MAINTENANCE DATA

- A. Division 21 Contractor shall submit electronic record, in accordance with Division 1 requirements, a single PDF file of the entire maintenance manual to the DEN Project Manager and General Contractor for their approval.

- B. The manual shall have as a minimum the following:

- 1. Alphabetical list of all system components including the name, address, and 24-hour phone number of the company responsible for servicing each item during the first year's operation.
- 2. Operating instructions for complete system, including emergency procedures for fire or failure of major equipment and procedures for normal starting/operating/shutdown and long-term shutdown.
- 3. Maintenance instructions, including valves, valve tag, and other identified equipment lists, proper lubricants and lubricating instructions for each piece of equipment and necessary cleaning/replacing/adjusting schedules.
 - a. Manufacturer's data on each piece of equipment, including:
 - 1) Installation instructions.
 - 2) Drawings, specifications, and approved shop drawings.
 - 3) Complete parts lists.

4. Complete wiring and temperature control diagrams (approved shop drawings).
 5. Each piece identified on any schedule shall be bookmarked in the electronic file by its scheduled tag ID.
- C. In addition to the maintenance manual, and keyed to it, the equipment shall be identified and tagged as specified elsewhere. Insert a copy.
1. Identify all starters, disconnect switches, and manually operated controls, except integral equipment switches with permanently applied, legible markers corresponding to operating instructions in the "Maintenance Manual".
 2. Tag all manual operating valves with 1-1/2" diameter brass tags attached with chains. Tags are to be sequence numbered with legible metal stamps. Obtain latest tag identification schedule from the DEN Project Manager.
 3. Provide a typed tag list or schedule mounted under glass in the room designated by DEN Project Manager stating number, location, and function of each tagged item. Insert a copy of tag list in each "Maintenance Manual".
- D. Division 21 Contractor shall be responsible for scheduling instructional meetings for maintenance personnel on the proper operation and maintenance of all fire suppression systems, using the maintenance manual as a guide. These meetings must be scheduled through the DEN Project Manager, and General Contractor far enough in advance so that all personnel can be notified.
- E. Division 21 Contractor shall provide proof of performance certification of all fire suppression systems to demonstrate that all fire suppression systems are operating to the intent of the design.

1.11 FINAL OBSERVATION

- A. Comply with the requirements of Division 01 and the following.
- B. Prior to the request for final observation, all Work under the contract shall be completed, all systems shall be in proper working order and placed in operation (System Startup of 48 hours).
- C. All equipment shall be cleaned, including but not limited to, plumbing fixtures. All debris and construction materials shall be removed from the DEN property to a suitable landfill off-airport.
- D. The temperature control system shall be complete and in proper working order. All instruments shall be properly and accurately field calibrated.
- E. At the request of the DEN Project Manager, a representative of the Contractor who is thoroughly familiar with the Project and operation of the various systems shall be present during the final observation to demonstrate proper operation of the equipment and controls. If requested by the DEN Project Manager, the Contractor shall have representatives from the Contractor's subcontractors present to assist during final observation.

1.12 PROJECT CONDITIONS

A. Accessibility:

1. Division 21 Contractor shall be responsible for the sufficiency of the size of shafts and chases and the adequate clearance in double partitions and hung ceilings for proper installation of the Contractor's Work. The Contractor shall cooperate with Contractors of other Divisions of the Work whose work is in the same space and shall advise the General Contractor of the Contractor's requirements. Such spaces and clearances shall, however, be kept to the minimum size required.
2. Division 21 Contractor shall locate all equipment, which must be serviced, operated, or maintained in fully accessible positions. Such equipment shall include (but not be limited to) valves, shock absorbers, traps, cleanouts, motors, controllers, switchgear, and drain points. If required for better accessibility, furnish access doors for this purpose, minor deviations from Drawings may be allowed to provide for better accessibility. Any changes shall be approved by the DEN Project Manager prior to making the change.
3. Division 21 Contractor shall provide the General Contractor with the exact locations of access doors for each concealed valve, shock absorber control, damper, or other device requiring service. Locations of these doors shall be submitted in sufficient time to be installed in the normal course of work.
4. Provide carpentry, masonry, concrete and metal work required for Work of this Division where not specifically called for under other Sections.

B. Fabrication:

1. Before any ductwork is fabricated and before running and/or fabricating any lines of piping or ductwork, the Contractor shall assure himself that they can be run as contemplated in cooperation with Contractors of other Divisions of the Work and the physical constraints of existing conditions and new structural and architectural Work.

C. Freeze Protection:

1. Do not run lines in outside walls, or locations where freezing may occur. Piping next to outside walls shall be in furred spaces with insulation between the piping and the outside wall. Insulation of piping shall not be considered freeze protection.

D. Scaffolding, Rigging and Hoisting:

1. Provide all scaffolding, rigging, hoisting and services necessary for erection and delivery into the premises of any equipment and apparatus furnished; remove same from premises when no longer required. Conform to OSHA requirements and standards.

1.13 COORDINATION

- A. General: Coordinate and order the progress of fire protection Work to conform to the progress of the Work of the other trades. Complete the entire installation as soon as the condition of the building will permit.
- B. Coordination with Electrical Work: Section 210500 "Common Work Results for Fire Suppression".
- C. Existing System Interruptions: Comply with Division 01.
- D. Cutting and Patching: Section 210500 "Common Work Results for Fire Suppression", Division 01 requirements, and Section 017330 "Cutting and Patching".
- E. Drawings and Specifications: The Fire Protection Drawings indicate the general design and arrangement of lines, equipment, systems, etc. Information shown may be diagrammatic in character and does not necessarily indicate every required offset, fitting, etc. Do not scale the Drawings for dimensions. Review dimensions, measurements, locations, levels, etc., on the architectural drawings and equipment to be furnished, and field verify all dimensions.
- F. Discrepancies: Examine Drawings and Specifications for other parts of the Work, and if any discrepancies occur between the plans for the Work of this Division and the plans for the work of others, report such discrepancies to the DEN Project Manager and obtain written instructions for any changes necessary.
- G. Order of Precedence: The precedence of construction documents are as Specified in the General Conditions.

1.14 START-UP PROCEDURES

- A. Before start-up, each piece of equipment comprising a part of the system shall be checked for proper lubrication, drive rotation, belt tension, proper control sequence, and any other condition, which may cause damage to equipment or endanger personnel.
- B. Ensure that all control systems are fully operational in automatic mode.
- C. If systems are not to continue in use following the start-up procedures, steps should be taken to ensure against accidental operation or operation by unauthorized personnel.
- D. Factory personnel shall be notified as appropriate to start systems requiring their services.
- E. Notify the DEN Project Manager in writing a minimum of 72 hours prior to start-up of all major fire protection equipment and systems.
- F. Should there be any equipment found which had not been properly started up, it will be the responsibility of this Contractor to arrange for the appropriate personnel to start up the equipment at the Contractor's expense and at a time as scheduled by the DEN

Project Manager.

1.15 SCHEDULE OF TESTING

- A. Provide testing in accordance with the General Conditions of the Contract.
- B. A schedule of testing shall be drawn up by the Division 21 Contractor in such a manner that it will show areas tested, test pressure, length of test, date, time and signature of testing personnel.
- C. Notify the DEN Project Manager, DEN Inspector, and DEN Mechanical Engineer in writing a minimum of 72 hours prior to testing of any fire protection equipment and systems.
- D. All testing must be performed in the presence of the DEN Project Manager and or the DEN Project Manager's designated representative; DEN Project Manager's signature for verification of the test must appear on the schedule.
- E. All testing must be performed in accord with the procedures set forth in Division 21 and other Sections of the Specifications where referenced. At completion of testing, the schedule shall then be submitted in triplicate to the DEN Project Manager.
- F. Make all specified tests on piping, ductwork, and related systems as necessary.
- G. Make sure operational and performance tests are made on seasonal equipment.
- H. Complete all tests required by Code Authorities, such as health codes, building codes, and safety codes.
- I. After test runs have been completed and systems have been demonstrated to be satisfactory and ready for permanent operation, all permanent pipeline strainers and filters shall be cleaned, air filters cleaned or replaced, valve and pump packing properly adjusted, belt tensions adjusted, drive guards secured in place, lubrication checked and replenished if required.

1.16 CLEANING AND FINISHING

- A. Provide cleaning in accordance with the General Requirements of the Contract.
- B. Cleaning shall include but not be limited to removing grease, dirt, dust, stains, labels, fingerprints, and other foreign materials from sight-exposed piping, ductwork, equipment, fixtures and other such items installed under Division 21 of the Work. If finishes have been damaged, refinish to original condition and leave everything in proper working order and of intended appearance.

1.17 WARRANTIES

- A. Conform to Division 01: Provide a written warranty covering the entire fire protection

Work to be free from defective materials, equipment, and workmanship for a minimum period of two (2) years after date of acceptance. During this period, provide labor and materials as required to repair or provide labor and materials required to repair or replace defects. Provide certificates for such items of equipment, which have or are specified to have warranties in excess of one (1) year.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION (NOT USED)

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the applicable unit price item, work order or lump sum bid item.

END OF SECTION 210400

SECTION 210500 - COMMON WORK RESULTS FOR FIRE SUPPRESSION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following basic fire protection materials and methods to complement other Division 21 Sections.
 - 1. Piping materials and installation instructions common to most piping systems.
 - 2. Dielectric fittings.
 - 3. Mechanical sleeve seals.
 - 4. Sleeves.
 - 5. Escutcheons.
 - 6. Nonshrink grout for equipment installations.
 - 7. Flowable backfill for underground piping.
 - 8. Field-fabricated metal equipment supports.
 - 9. Concrete bases
 - 10. Installation requirements common to equipment specification Sections.
 - 11. Fire protection demolition.
 - 12. Cutting and patching.
 - 13. Touch up painting and finishing.
 - 14. Pipe and pipe fitting materials are specified in piping system Sections.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 RELATED SECTIONS

- A. Drawings and general provisions of Contract, including General and the Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- B. Division 31 Earthwork Sections.
- C. Section 050510 "Welding"
- D. Section 210553 "Identification for Fire-Suppression Piping and Equipment" for labeling and identifying plumbing systems and equipment.

1.4 DEFINITIONS

- A. Pipe, pipe fittings, and piping include tube, tube fittings, and tubing.
- B. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct shafts, unheated spaces immediately below the roof, spaces above ceilings, unexcavated spaces, crawl spaces, and tunnels.
- C. Exposed Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- D. Exposed Exterior Installations: Exposed to view outdoors, or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
- E. Concealed Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and in duct shafts.
- F. Concealed Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants, but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.

1.5 SUBMITTALS

- A. General: Submit the following according to the Conditions of the Contract and Division 01 Specification Sections:
 - 1. Shop drawings detailing fabrication and installation for metal supports and anchorage for fire protection materials and equipment.
 - 2. Prepare coordination drawings according to Division 01 Section "Submittals" to a 1/4 inch equals 1 foot scale or larger. Detail major elements, components, and systems of fire protection equipment and materials in relationship with other systems, installations, and building components. Show space requirements for installation and access. Show where sequence and coordination of installations are important to the efficient flow of the Work. Include the following:
 - a. Clearances for servicing and maintaining equipment, including space for equipment disassembly required for periodic maintenance.
 - b. Pump metal support details.
 - 3. Welder certificates signed by Contractor certifying that welders comply with requirements specified under the Quality Assurance Article.
 - 4. Floor x-rays and/or ground penetrating radar reports.
 - 5. "As Built" Plans shall be provided in the same format and manner as described above.
 - 6. Contractor shall submit fully dimensioned spool drawings for all welded piping work. Drawings shall indicate all weld types, sizes, and materials to be used. The spool drawing size shall match the full size contract documents of either 24 x 36 or 34 x 44. Spool drawings shall be submitted in either the latest version of Revit or the latest version of Adobe Acrobat (pdf). Adobe Acrobat files shall not contain

- security. Other file formats will not be accepted.
7. Field Test Reports: Written reports of each pressure tests specified in Division 21 Sections. Include the following:
- a. Test procedures used.
 - b. Test results that comply with requirements.
 - c. Failed test results and corrective action taken to achieve requirements.

1.6 QUALITY CONTROL

- A. Equipment Selection: Equipment of greater or larger power, dimensions, capacities, and ratings may be furnished provided such proposed equipment is approved in writing by the DEN Project Manager and connecting mechanical and electrical services, circuit breakers, conduit, motors, bases, and equipment spaces are increased. No additional costs will be approved for these increases, if larger equipment is approved. If minimum energy ratings or efficiencies of the equipment are specified, the equipment must meet the design requirements and commissioning requirements.
- B. Unless specified otherwise, all materials and equipment shall be of domestic (USA) manufacture and shall be of the best quality used for the purpose in commercial practice.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver pipes and tubes with factory-applied end-caps. Maintain end-caps through shipping, storage, and handling to prevent pipe-end damage and prevent entrance of dirt, debris, and moisture.
- B. Protect stored pipes and tubes from moisture and dirt. Elevate above grade. When stored inside, do not exceed structural capacity of the floor.
- C. Store plastic pipes protected from direct sunlight. Support to prevent sagging and bending.
- D. Protect flanges, fittings, and piping specialties from moisture and dirt.
- E. Deliver ductwork and fittings with plastic sheeting to protect it from elements. Inspect duct liner for exposure to dirt and tears.

1.8 SEQUENCING AND SCHEDULING

- A. Coordinate fire protection equipment installation with other building components.
- B. Coordinate the installation of required supporting devices.
- C. Sequence, coordinate, and integrate installations of fire protection materials and equipment for efficient flow of the Work.

- D. Coordinate connection of electrical services.
- E. Coordinate installation of identifying devices after completing covering and painting where devices are applied to surfaces.

PART 2 - PRODUCTS

2.1 PIPE AND PIPE FITTINGS

- A. Refer to individual piping system specification Sections for pipe and fitting materials and joining methods.
- B. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.

2.2 JOINING MATERIALS

- A. Refer to individual piping system specification Sections in Division 21 for special joining materials not listed below.
- B. Grooved Mechanical Couplings: Acceptable only for fire protection piping; not acceptable for any other applications.
- C. Pipe Flange Gasket Materials: Suitable for the chemical and thermal conditions of the piping system contents.
 - 1. ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch maximum thickness, except where thickness or specific material is indicated.
 - a. Full-Face Type: For flat-face, Class 125 cast-iron and cast-bronze flanges.
 - b. Narrow-Face Type: For raised-face, Class 250 cast-iron and steel flanges.
- D. Solder Filler Metal: ASTM B 32.
 - 1. Alloy Sn95 or Alloy Sn94: Tin (approximately 95 percent) and silver (approximately 5 percent) – Not industry standard, usually 5% antimony.
- E. Brazing Filler Metals: AWS A5.8.
 - 1. BCuP Series: Copper-phosphorus alloys.
 - 2. BAg1: Silver alloy.
- F. Welding Filler Metals: Comply with AWS D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded. All welding rod is to be kept in an operable rod oven at all times.

2.3 PIPING SPECIALTIES

- A. Dielectric Fittings: Assembly or fitting having insulating material isolating joined dissimilar metals to prevent galvanic action and stop corrosion.
1. Description: Combination of copper alloy and ferrous; threaded, solder, plain, and weld neck end types and matching piping system materials.
 2. Insulating Material: Suitable for system fluid, pressure, and temperature.
 3. Dielectric Waterway Fittings: Dielectric fittings designed to effectively separate dissimilar metals exposed to water or other electrolytes, conforming to NSF and ASTM F492 standards for continuous use at temperatures up to 225 degrees F and pressures up to 300 psi. Fittings to have electro-zinc-plated steel casings providing for maintained exterior electrical continuity, threaded or flanged ends as applicable, and inert linings.
 4. Dielectric Flanges: Factory-fabricated, companion-flange assembly for 150- or 300-psig minimum pressure to suit system pressures.
 5. Dielectric-Flange Insulation Kits: Field-assembled, companion-flange assembly, full-face or ring type. Components include neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers.
 - a. Provide separate companion flanges and steel bolts and nuts for 150- or 300-psig minimum working pressure to suit system pressures.

2.4 MECHANICAL SLEEVE SEALS

- A. Reference Section 210517 "Sleeves and Sleeve Seals for Fire Suppression Piping" for sleeve seals.

2.5 SLEEVES

- A. Reference Section 210517 "Sleeves and Sleeve Seals for Fire-Suppression Piping" for sleeves.

2.6 ESCUTCHEONS

- A. Reference Section 210518 "Escutcheons for Fire-Suppression Piping" for escutcheons.

2.7 GROUT

- A. Nonshrink, Nonmetallic Grout: ASTM C 1107, Grade B.
1. Characteristics: Post-hardening, volume-adjusting, dry, hydraulic-cement grout, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
 2. Design Mix: 5000-psi, 28-day compressive strength.
 3. Packaging: Premixed and factory-packaged.

2.8 BACKFILL

- A. Flowable Backfill: Designed in accordance with ASTM C 94 and ASTM D 4832.
 - 1. Refer to Section 033350 "Flowable Backfill Low-Strength Concrete" for material and installation requirements.
 - 2. Minimum Requirements:
 - a. Compressive Strength: 50-100 psi
 - b. Slump: 6-8 inches.
 - 3. Required for all piping and ductwork installed below concrete slabs, apron paving and roadways.

PART 3 - EXECUTION

3.1 PIPING SYSTEMS - COMMON REQUIREMENTS

- A. General: Install piping as described below, except where system Sections specify otherwise. Individual piping system specification Sections in Division 21 specify piping installation requirements unique to the piping system.
- B. General Locations and Arrangements: Drawings indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated, except where deviations to layout are approved on coordination drawings.
- C. Install piping at indicated slope.
- D. Install piping free of sags and bends.
- E. Install piping plumb and at right angles and plumb or parallel to building walls. Diagonal runs are prohibited, except where indicated.
- F. Install piping tight to slabs, beams, joists, columns, walls, and other building elements.
- G. Install fittings for changes in direction and branch connections.
- H. Install couplings according to manufacturer's printed instructions.
- I. Piping Joint Construction: Join pipe and fittings as follows and as specifically required in individual piping system Sections.
 - 1. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
 - 2. Remove scale, slag, dirt, rust, and debris from inside and outside of pipe and fittings before assembly.
 - 3. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends

to remove burrs and restore full inside diameter. Join pipe fittings and valves as follows:

- a. Note the internal length of threads in fittings or valve ends, and proximity of internal seat or wall, to determine how far pipe should be threaded into joint.
 - b. Apply appropriate tape or thread compound to external pipe threads (except where dry seal threading is specified).
 - c. Align threads at point of assembly.
 - d. Tighten joint with wrench. Apply wrench to valve end into which pipe is being threaded.
 - e. Damaged Threads: Do not use pipe or pipe fittings having threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- J. Piping Connections: Except as otherwise indicated, make piping connections as specified below.
1. Install unions in piping 2 inches and smaller adjacent to each valve and at final connection to each piece of equipment having a 2-inch or smaller threaded pipe connection.
 2. Wet Piping Systems: Install dielectric coupling and nipple fittings to connect piping materials of dissimilar metals.
- K. Piping below apron, concrete slabs or paving shall be encased in flowable backfill. Refer to Section 033350 "Flowable Backfill Low-Strength Concrete" and Division 31 Sections for material and installation requirements.

3.2 EQUIPMENT INSTALLATION - COMMON REQUIREMENTS

- A. Install equipment to provide the maximum possible headroom where mounting heights are not indicated.
- B. Install equipment according to approved submittal data. Portions of the Work may be shown only in diagrammatic form. Refer conflicts to the DEN Project Manager for review.
- C. Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces, except where otherwise indicated.
- D. Install mechanical equipment to facilitate servicing, maintenance, and repair or replacement of equipment components. Connect equipment for ease of disconnecting, with minimum of interference with other installations. Extend grease fittings to an accessible location.
- E. Install fire protection equipment giving right-of-way to piping systems installed at a required slope.

3.3 PAINTING AND FINISHING

- A. Refer to Division 09 Sections for field painting requirements. Paint color schedule shall conform to ASME A13.1-1996, "Scheme for the Identification of Piping Systems."
- B. Damage and Touch Up: Repair marred and damaged factory-painted finishes with materials and procedures to match original factory finish.
- C. All rooftop equipment exposed to public or aircraft view shall be painted flat white or grey in accordance with Division 09.

3.4 CONCRETE PENETRATIONS

- A. Reference Section 017329 "Cutting and Patching" for core drilling and saw cutting requirements.
- B. Reference Section 017329 "Selective Demolition" for demolition and removal of selected portions of a building or structure, and repair procedures for selective demolition operations.
- C. All penetrations required through completed concrete construction shall be core drilled or saw cut at minimum size required. All penetrations in concrete require an x-ray or ground penetrating radar to determine if the location is clear of reinforcing steel and embedded systems. Precautions shall be taken when drilling to prevent damage to structural concrete.
 - 1. The Contractor shall provide an interpretation of the x-rays or radar shot and obtain written acceptance from the DEN Project Manager before proceeding with drilling.

3.5 CONCRETE BASES

- A. Concrete Bases: Anchor equipment to concrete base according to equipment manufacturer's written instructions and according to seismic codes at Project.
 - 1. Construct concrete bases of dimensions indicated, but not less than 4 inches larger in both directions than supported unit.
 - 2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of the base.
 - 3. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
 - 4. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - 5. Install anchor bolts to elevations required for proper attachment to supported equipment.
 - 6. Install anchor bolts according to anchor-bolt manufacturer's written instructions.
 - 7. Use [**3000-psi**] <Insert other>, 28-day compressive-strength concrete and

reinforcement as specified in Division 03.

3.6 WELDING

- A. Qualify welding processes and operators for structural steel according to AWS D1.1 Structural Welding Code - Steel. See Division 05 for additional requirements.
- B. All welding shall be inspected in process by a contractor provided, Certified, Independent Testing Agency by an AWS certified welding inspector.
- C. Qualify welding processes and operators for piping according to ASME Boiler and Pressure Vessel Code, Section IX, Welding and Brazing Qualifications.
 - 1. Comply with provisions of ASME B31 Series "Code for Pressure Piping."
 - 2. Certify that each welder has passed AWS qualification tests for the welding processes involved and that certification is current.

3.7 ERECTION OF METAL SUPPORTS AND ANCHORAGE

- A. Refer to Division 05 for structural steel.
- B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor fire protection materials and equipment.
- C. Field Welding: Comply with AWS D1.1 Structural Welding Code - Steel, as referenced in Part1.
- D. Double nut all suspended assemblies.

3.8 DEMOLITION

- A. Refer to Division 01 for general demolition requirements and procedures.
- B. Where pipe, ductwork, insulation, or equipment to remain is damaged or disturbed, remove damaged portions and install new products of equal capacity and quality.
- C. Temporary Disconnection: Remove, store, clean, reinstall, reconnect, and make operational equipment indicated for relocation.
- D. Disconnect, demolish, and remove fire protection systems, equipment, and components indicated to be removed.
 - 1. Piping to Be Removed: Remove portion of piping and associated supports indicated to be removed, provide a shutoff valve with plug or cap in pressurized systems and cap or plug remaining piping with same or compatible piping material. No piping shall be abandoned in place. Repair insulation.
 - 2. Piping to Be Abandoned in Place: Drain piping and cap or plug piping with same or compatible piping material.

3. Equipment to Be Removed: Disconnect and cap services and remove equipment.
4. Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make equipment operational.
5. Equipment to Be Removed and Salvaged: Disconnect and cap services and remove equipment and deliver to DEN Project Manager.
6. If pipe, insulation, or equipment to remain is damaged in appearance or is unserviceable, remove damaged or unserviceable portions and replace with new products of equal capacity and quality.
7. Repair structure [**floor, ceilings, roof, slabs**] from removed supports in accordance with [**Division 03**], [**Division 05**], [**and Division 09**]

3.9 GROUTING

- A. Mix and install grout for fire protection equipment base bearing surfaces, pump and other equipment base plates, and anchors.
- B. Clean surfaces that will come into contact with grout.
- C. Provide forms as required for placement of grout.
- D. Avoid air entrapment during placement of grout.
- E. Place grout, completely filling equipment bases.
- F. Place grout on concrete bases and provide smooth bearing surface for equipment.
- G. Place grout around anchors.
- H. Cure placed grout.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the applicable unit price item, work order or lump sum bid item.

END OF SECTION 210500

SECTION 210513 - COMMON MOTOR REQUIREMENTS FOR FIRE SUPPRESSION EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes general requirements for single-phase and polyphase, general-purpose, horizontal, small and medium, squirrel-cage induction motors for use on ac power systems up to 600 V and installed at equipment manufacturer's factory or shipped separately by equipment manufacturer for field installation.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 COORDINATION

- A. Coordinate features of motors, installed units, and accessory devices to be compatible with the following:
 - 1. Motor controllers.
 - 2. Torque, speed, and horsepower requirements of the load.
 - 3. Ratings and characteristics of supply circuit and required control sequence.
 - 4. Ambient and environmental conditions of installation location.

1.4 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL MOTOR REQUIREMENTS

- A. Comply with NEMA MG 1 unless otherwise indicated.

- B. Comply with IEEE 841 for severe-duty motors.

2.2 MOTOR CHARACTERISTICS

- A. Duty: Continuous duty at ambient temperature of 40 deg C and at altitude of 3300 feet (1000 m) above sea level.
- B. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.

2.3 POLYPHASE MOTORS

- A. Description: NEMA MG 1, Design B, medium induction motor.
- B. Efficiency: Energy efficient, as defined in NEMA MG 1.
- C. Service Factor: 1.15.
- D. Multispeed Motors: Variable torque.
 - 1. For motors with 2:1 speed ratio, consequent pole, single winding.
 - 2. For motors with other than 2:1 speed ratio, separate winding for each speed.
- E. Multispeed Motors: Separate winding for each speed.
- F. Rotor: Random-wound, squirrel cage.
- G. Bearings: Regreasable, shielded, antifriction ball bearings suitable for radial and thrust loading.
- H. Temperature Rise: Match insulation rating.
- I. Insulation: **[Class F] <Insert class>**.
- J. Code Letter Designation:
 - 1. Motors **[15] <Insert number>** HP and Larger: NEMA starting Code F or Code G.
 - 2. Motors Smaller than **[15] <Insert number>** HP: Manufacturer's standard starting characteristic.
- K. Enclosure Material: Cast iron for motor frame sizes **[324T] <Insert number>** and larger; rolled steel for motor frame sizes smaller than **[324T] <Insert number>**.

2.4 POLYPHASE MOTORS WITH ADDITIONAL REQUIREMENTS

- A. Motors Used with Reduced-Voltage and Multispeed Controllers: Match wiring connection requirements for controller with required motor leads. Provide terminals in motor terminal box, suited to control method.
- B. Motors Used with Variable Frequency Controllers: **[Ratings, characteristics, and features coordinated with and approved by controller manufacturer.]**
 - 1. Windings: Copper magnet wire with moisture-resistant insulation varnish, designed and tested to resist transient spikes, high frequencies, and short time rise pulses produced by pulse-width modulated inverters.
 - 2. Energy- and Premium-Efficient Motors: Class B temperature rise; Class F insulation.
 - 3. Inverter-Duty Motors: Class F temperature rise; Class H insulation.
 - 4. Thermal Protection: Comply with NEMA MG 1 requirements for thermally protected motors.
- C. Severe-Duty Motors: Comply with IEEE 841, with 1.15 minimum service factor.

2.5 SINGLE-PHASE MOTORS

- A. Motors larger than 1/20 hp shall be one of the following, to suit starting torque and requirements of specific motor application:
 - 1. Permanent-split capacitor.
 - 2. Split phase.
 - 3. Capacitor start, inductor run.
 - 4. Capacitor start, capacitor run.
- B. Multispeed Motors: Variable-torque, permanent-split-capacitor type.
- C. Bearings: Prelubricated, antifriction ball bearings or sleeve bearings suitable for radial and thrust loading.
- D. Motors 1/20 HP and Smaller: Shaded-pole type.
- E. Thermal Protection: Internal protection to automatically open power supply circuit to motor when winding temperature exceeds a safe value calibrated to temperature rating of motor insulation. Thermal-protection device shall automatically reset when motor temperature returns to normal range.

PART 3 - EXECUTION (Not Applicable)

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 210513

SECTION 210517 - SLEEVES AND SLEEVE SEALS FOR FIRE-SUPPRESSION PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Include all sleeves, sleeve seals, fittings, and accessories to provide a complete seal system. If conflicts occur in this specification or between this specification and other contract documents, the most stringent requirement shall apply.
- B. Section Includes:
 - 1. Sleeves.
 - 2. Stack-sleeve fittings.
 - 3. Sleeve-seal systems.
 - 4. Sleeve-seal fittings.
 - 5. Grout.
- C. Related Sections
 - 1. Section 210500 "Common Work Results for Fire Suppression" for work results.
 - 2. Section 211200 "Fire Suppression Standpipes" for standpipe work.
 - 3. Section 211313 "Wet Pipe Sprinkler Systems" for wet pipe sprinkler system work.
 - 4. Section 211316 "Dry Pipe Sprinkler Systems" for dry pipe sprinkler system work.
 - 5. Section 211319 "Preaction Sprinkler Systems" for preaction sprinkler system work.
 - 6. Section 211326 "Deluge Fire Suppression Sprinkler Systems" for deluge sprinkler system work.
 - 7. Section 211339 "Foam-Water Systems" for foam water systems work.
 - 8. Section 212200 "Clean Agent Fire Extinguishing Systems" for clean agent systems work.
 - 9. Division 7 Sections for fire stopping, fire sealants, fire proofing for materials and methods for sealing pipe penetrations through walls and fire/smoke barriers.
 - 10. Division 099123 "Interior Painting" for preparation and painting of fire protection piping systems.
- D. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 WORK FURNISHED BUT INSTALLED UNDER OTHER SECTIONS

- A. Furnish pipe sleeves, complete with drawing(s) locating all sleeves and indicating sleeve size to Division 3, 4 or 9, contractors, or other contractors as required, for placement.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop drawing(s) locating all sleeves and indicating sleeve size and type to Division 3, 4 or 9 contractors as required, or other contractors, for placement.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Protect sleeves and sleeve seals from moisture and dirt.

1.6 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 SLEEVES

- A. Cast Iron: Cast or fabricated "wall pipe" equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.
- B. Galvanized-Steel Wall Pipes: B. Steel Pipe: ASTM A53, Type E, Grade B, Schedule 40, galvanized, plain ends
- C. Galvanized-Steel-Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, , with plain ends.
- D. Galvanized-Steel Sheet: 0.0478-inch (18 gage) minimum thickness; round tube closed with welded longitudinal joint.
- E. Molded-PE or -PP Sleeves: Reusable, tapered-cup shaped, and smooth outer surface with nailing flange for attaching to wooden forms.
- F. PVC-Pipe Sleeves: ASTM D 1785, Schedule 40

- G. Molded-PVC Sleeves: With nailing flange for attaching to wooden forms.

2.2 STACK-SLEEVE FITTINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Smith, Jay R. Mfg. Co.
2. Zurn Specification Drainage Operation; Zurn Plumbing Products Group.
3. **<Insert manufacturer's name>**.
4. or approved equal.

- B. Description: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring, bolts, and nuts for membrane flashing.

1. Underdeck Clamp: Clamping ring with set screws.

2.3 SLEEVE-SEAL SYSTEMS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Metraflex Co.
2. Pipeline Seal and Insulator, Inc.
3. PSI-Thunderline/Link-Seal.
4. **<Insert manufacturer's name>**.
5. or approved equal.

- B. Description: Modular sealing-element unit, designed for field assembly, for filling annular space between piping and sleeve.

1. Sealing Elements: **[EPDM-rubber] [NBR]** interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
2. Pressure Plates: **[Carbon steel] [Plastic] [Stainless steel]**. Include two for each sealing element.
3. Connecting Bolts and Nuts: **[Carbon steel, with corrosion-resistant coating,] [Stainless steel]** of length required to secure pressure plates to sealing elements. Include once for each sealing element

2.4 SLEEVE-SEAL FITTINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Presealed Systems.
2. **<Insert manufacturer's name>**.
3. or approved equal.

- B. Description: Manufactured plastic, sleeve-type, waterstop assembly made for imbedding in concrete slab or wall. Unit has plastic or rubber waterstop collar with center opening to match piping OD.

2.5 GROUT

- A. Standard: ASTM C 1107/C 1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
- B. Characteristics: Nonshrink; recommended for interior and exterior applications.
- C. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.
- D. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1 SLEEVE INSTALLATION

- A. Install sleeves for piping passing through penetrations in floors, partitions, roofs, and walls.
- B. For sleeves that will have sleeve-seal system installed, select sleeves of size large enough to provide [1-inch (25-mm)] <Insert dimension> annular clear space between piping and concrete slabs and walls.
 - 1. Sleeves are not required for core-drilled holes.
- C. Install sleeves in concrete floors, concrete roof slabs, and concrete walls as new slabs and walls are constructed.
 - 1. Permanent sleeves are not required for holes in slabs formed by molded-PE or -PP sleeves.
 - 2. Cut sleeves to length for mounting flush with both surfaces.
 - a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas [2 inches (50 mm)] <Insert dimension> above finished floor level.
 - 3. Using grout, seal the space outside of sleeves in slabs and walls without sleeve-seal system.
- D. Install sleeves for pipes passing through interior partitions.
 - 1. Cut sleeves to length for mounting flush with both surfaces.
 - 2. Install sleeves that are large enough to provide 1/4-inch (6.4-mm) annular clear space between sleeve and pipe or pipe insulation.

3. Seal annular space between sleeve and piping or piping insulation; use joint sealants appropriate for size, depth, and location of joint. Comply with requirements for sealants specified in Division 07 Section "Joint Sealants."

E. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements for firestopping specified in Division 07 Section "Penetration Firestopping."

3.2 STACK-SLEEVE-FITTING INSTALLATION

A. Install stack-sleeve fittings in new slabs as slabs are constructed.

1. Install fittings that are large enough to provide 1/4-inch (6.4-mm) annular clear space between sleeve and pipe or pipe insulation.
2. Secure flashing between clamping flanges for pipes penetrating floors with membrane waterproofing. Comply with requirements for flashing specified in Division 07 Section "Sheet Metal Flashing and Trim."
3. Install section of cast-iron soil pipe to extend sleeve to 2 inches (50 mm) above finished floor level.
4. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.
5. Using grout, seal the space around outside of stack-sleeve fittings.

B. Fire-Barrier Penetrations: Maintain indicated fire rating of floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements for firestopping specified in Division 07 Section "Penetration Firestopping."

3.3 SLEEVE-SEAL-SYSTEM INSTALLATION

A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at service piping entries into building.

B. Select type, size, and number of sealing elements required for piping material and size and for sleeve ID or hole size. Position piping in center of sleeve. Center piping in penetration, assemble sleeve-seal system components, and install in annular space between piping and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make a watertight seal.

3.4 SLEEVE-SEAL-FITTING INSTALLATION

A. Install sleeve-seal fittings in new walls and slabs as they are constructed.

B. Assemble fitting components of length to be flush with both surfaces of concrete slabs and walls. Position waterstop flange to be centered in concrete slab or wall.

C. Secure nailing flanges to concrete forms.

- D. Using grout, seal the space around outside of sleeve-seal fittings.

3.5 GROUT INSTALLATION

- A. Install grout in strict compliance with manufacturer's instructions, industry standards, and all applicable codes and standards.
- B. Clean surfaces that will come into contact with grout.
- C. Provide forms as required for placement of grout.
- D. Avoid air entrapment during placement of grout.
- E. Cure placed grout.

3.6 SLEEVE AND SLEEVE-SEAL SCHEDULE

- A. Use sleeves and sleeve seals for the following piping-penetration applications:
1. Exterior Concrete Walls above Grade:
 - a. Piping Smaller Than [NPS 6 (DN 150)] <Insert pipe size>: [Cast-iron wall sleeves] [Galvanized-steel wall sleeves] [Galvanized-steel-pipe sleeves] [Sleeve-seal fittings] <Insert material>.
 - b. Piping [NPS 6 (DN 150)] <Insert pipe size> and Larger: [Cast-iron wall sleeves] [Galvanized-steel wall sleeves] [Galvanized-steel-pipe sleeves] <Insert material>.
 2. Exterior Concrete Walls below Grade:
 - a. Piping Smaller Than [NPS 6 (DN 150)] <Insert pipe size>: [Cast-iron wall sleeves with sleeve-seal system] [Galvanized-steel wall sleeves with sleeve-seal system] [Galvanized-steel-pipe sleeves with sleeve-seal system] [Sleeve-seal fittings] <Insert material>.
 - 1) Select sleeve size to allow for 1-inch (25-mm) annular clear space between piping and sleeve for installing sleeve-seal system.
 - b. Piping [NPS 6 (DN 150)] <Insert pipe size> and Larger: [Cast-iron wall sleeves with sleeve-seal system] [Galvanized-steel wall sleeves with sleeve-seal system] [Galvanized-steel-pipe sleeves with sleeve-seal system] <Insert material>.
 - 1) Select sleeve size to allow for 1-inch (25-mm) annular clear space between piping and sleeve for installing sleeve-seal system.
 3. Concrete Slabs-on-Grade:

- a. Piping Smaller Than [NPS 6 (DN 150)] <Insert pipe size>: [Cast-iron wall sleeves with sleeve-seal system] [Galvanized-steel wall sleeves with sleeve-seal system] [Galvanized-steel-pipe sleeves with sleeve-seal system] [Sleeve-seal fittings] <Insert material>.ol style="list-style-type: none;"> - 1) Select sleeve size to allow for 1-inch (25-mm) annular clear space between piping and sleeve for installing sleeve-seal system.
- b. Piping [NPS 6 (DN 150)] <Insert pipe size> and Larger: [Cast-iron wall sleeves with sleeve-seal system] [Galvanized-steel wall sleeves with sleeve-seal system] [Galvanized-steel-pipe sleeves with sleeve-seal system] [Galvanized-steel-pipe sleeves] <Insert material>.ol style="list-style-type: none;">- 1) Select sleeve size to allow for 1-inch (25-mm) annular clear space between piping and sleeve for installing sleeve-seal system.
4. Concrete Slabs above Grade:
- a. Piping Smaller Than [NPS 6 (DN 150)] <Insert pipe size>: [Galvanized-steel-pipe sleeves] [PVC-pipe sleeves] [Stack-sleeve fittings] [Sleeve-seal fittings] [Molded-PE or -PP sleeves] [Molded-PVC sleeves] <Insert material>.
 - b. Piping [NPS 6 (DN 150)] <Insert pipe size> and Larger: [Galvanized-steel-pipe sleeves] [PVC-pipe sleeves] [Stack-sleeve fittings] <Insert material>.
5. Interior Partitions:
- a. Piping Smaller Than [NPS 6 (DN 150)] <Insert pipe size>: [Galvanized-steel-pipe sleeves] [PVC-pipe sleeves] <Insert material>.
 - b. Piping [NPS 6 (DN 150)] <Insert pipe size> and Larger: [Galvanized-steel-sheet sleeves] <Insert material>.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 210517

SECTION 210518 - ESCUTCHEONS FOR FIRE-SUPPRESSION PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Escutcheons.
 - 2. Floor plates.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Include data substantiating that materials comply with requirements.
- B. Samples: For each type requested by DEN Project Manager.

1.4 DELIVERY, STORAGE AND HANDLING

- A. Protect escutcheons from moisture and dirt.

1.5 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 ESCUTCHEONS

- A. One-Piece, Cast-Brass Type: With **[polished, chrome-plated]** **[and]** **[rough-brass]** finish and setscrew fastener.
- B. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with chrome-plated finish and spring-clip fasteners.
- C. One-Piece, Stamped-Steel Type: With chrome-plated finish and spring-clip fasteners.
- D. Split-Casting Brass Type: With **[polished, chrome-plated]** **[and]** **[rough-brass]** finish and with concealed hinge and setscrew.
- E. Split-Plate, Stamped-Steel Type: With chrome-plated finish, **[concealed]** **[and]** **[exposed-riquet]** hinge, and spring-clip fasteners.

2.2 FLOOR PLATES

- A. One-Piece Floor Plates: Cast-iron flange **[with holes for fasteners]**.
- B. Split-Casting Floor Plates: Cast brass with concealed hinge.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install escutcheons for piping penetrations of walls, ceilings, and finished floors.
- B. Install escutcheons with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.
 - 1. Escutcheons for New Piping:
 - a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
 - b. Chrome-Plated Piping: One-piece, cast-brass **[or split-casting brass]** type with polished, chrome-plated finish.
 - c. Insulated Piping: One-piece, stamped-steel type **[or split-plate, stamped-steel type with concealed hinge]** **[or split-plate, stamped-steel type with exposed-riquet hinge]**.
 - d. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, cast-brass **[or split-casting brass]** type with polished, chrome-plated finish.

- e. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, stamped-steel type[**or split-plate, stamped-steel type with concealed hinge**] [**or split-plate, stamped-steel type with exposed-rivet hinge**].
 - f. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece, cast-brass[**or split-casting brass**] type with polished, chrome-plated finish.
 - g. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece, stamped-steel type[**or split-plate, stamped-steel type with concealed hinge**] [**or split-plate, stamped-steel type with exposed-rivet hinge**].
 - h. Bare Piping in Unfinished Service Spaces: One-piece, cast-brass[**or split-casting brass**] type with [**polished, chrome-plated**] [**rough-brass**] finish.
 - i. Bare Piping in Unfinished Service Spaces: One-piece, stamped-steel type[**or split-plate, stamped-steel type with concealed hinge**] [**or split-plate, stamped-steel type with exposed-rivet hinge**].
 - j. Bare Piping in Equipment Rooms: One-piece, cast-brass[**or split-casting brass**] type with [**polished, chrome-plated**] [**rough-brass**] finish.
 - k. Bare Piping in Equipment Rooms: One-piece, stamped-steel type[**or split-plate, stamped-steel type with concealed hinge**] [**or split-plate, stamped-steel type with exposed-rivet hinge**].
2. Escutcheons for Existing Piping:
- a. Chrome-Plated Piping: Split-casting brass type with polished, chrome-plated finish.
 - b. Insulated Piping: Split-plate, stamped-steel type with [**concealed**] [**or**] [**exposed-rivet**] hinge.
 - c. Bare Piping at Wall and Floor Penetrations in Finished Spaces: Split-casting brass type with polished, chrome-plated finish.
 - d. Bare Piping at Wall and Floor Penetrations in Finished Spaces: Split-plate, stamped-steel type with [**concealed**] [**or**] [**exposed-rivet**] hinge.
 - e. Bare Piping at Ceiling Penetrations in Finished Spaces: Split-casting brass type with polished, chrome-plated finish.
 - f. Bare Piping at Ceiling Penetrations in Finished Spaces: Split-plate, stamped-steel type with [**concealed**] [**or**] [**exposed-rivet**] hinge.
 - g. Bare Piping in Unfinished Service Spaces: Split-casting brass type with [**polished, chrome-plated**] [**rough-brass**] finish.
 - h. Bare Piping in Unfinished Service Spaces: Split-plate, stamped-steel type with [**concealed**] [**or**] [**exposed-rivet**] hinge.
 - i. Bare Piping in Equipment Rooms: Split-casting brass type with [**polished, chrome-plated**] [**rough-brass**] finish.
 - j. Bare Piping in Equipment Rooms: Split-plate, stamped-steel type with [**concealed**] [**or**] [**exposed-rivet**] hinge.
- C. Install floor plates for piping penetrations of equipment-room floors.
- D. Install floor plates with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.
1. New Piping: One-piece, floor-plate type.

2. Existing Piping: Split-casting, floor-plate type.

3.2 FIELD QUALITY CONTROL

A. Replace broken and damaged escutcheons and floor plates using new materials.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 210518

SECTION 210533 - HEAT TRACING FOR FIRE-SUPPRESSION PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes heat tracing for fire-suppression piping with the following electric heating cables:
 - 1. Plastic insulated, series resistance.
 - 2. Self-regulating, parallel resistance.
- B. Related Requirements:
 - 1. Section 220533 "Heat Tracing for Plumbing Piping."
 - 2. Section 230533 "Heat Tracing for HVAC Piping."
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include rated capacities, operating characteristics, and furnished specialties and accessories.
 - 2. Schedule heating capacity, length of cable, spacing, and electrical power requirement for each electric heating cable required.
 - 3. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For electric heating cable.
 - 1. Include plans, elevations, sections, and attachment details.
 - 2. Include diagrams for power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.

- B. Sample Warranty: For special warranty.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For electric heating cables to include in operation and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace electric heating cable that fails in materials or workmanship within specified warranty period.
 - 1. Warranty Period: Minimum **[three (3)] [five (5)] <Insert number>** years from date of Substantial Completion.

1.7 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PLASTIC-INSULATED, SERIES-RESISTANCE HEATING CABLES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Delta-Therm Corporation.
 - 2. Easy Heat; a division of EGS Electrical Group LLC.
 - 3. Pyrotenax; a brand of Tyco Thermal Controls LLC.
 - 4. Raychem; a brand of Tyco Thermal Controls LLC.
 - 5. Watts Radiant, Inc.; a subsidiary of Watts Water Technologies, Inc.
 - 6. **<Insert manufacturer's name>**.
 - 7. or approved equal.
- B. Comply with IEEE 515.1.
- C. Heating Element: Single- or dual-stranded resistor wire. Terminate with waterproof, factory-assembled nonheating leads with connectors at both ends.

- D. Electrical Insulating Jacket: Minimum **4.0-mil** (0.10-mm) Kapton with silicone, Tefzel, or polyolefin.
- E. Cable Cover: Aluminum braid[**and silicone or Hylar outer jacket or TPR overjacket**].
- F. Maximum Operating Temperature (Power On): [**150 deg F** (65 deg C)] **<Insert temperature>**.
- G. Maximum Exposure Temperature (Power Off): [**185 deg F** (85 deg C)] **<Insert temperature>**.
- H. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70 and NFPA 13, by a qualified testing agency, and marked for intended location and application.
- I. Capacities and Characteristics:
 - 1. Maximum Heat Output: [**6 W/ft.** (19.7 W/m)] [**7.5 W/ft.** (24.6 W/m)] **<Insert value>**.
 - 2. Piping Diameter: **<Insert NPS (DN)>**.
 - 3. Number of Parallel Cables: **<Insert number>**.
 - 4. Spiral Wrap Pitch: **<Insert inches (mm)>**.
 - 5. Electrical Characteristics for Single-Circuit Connection:
 - a. Volts: [**120**] [**208**] [**240**] [**277**] [**480**] **<Insert value>**.
 - b. Phase: **<Insert value>**.
 - c. Hertz: **<Insert value>**.
 - d. Full-Load Amperes: **<Insert value>**.
 - e. Minimum Circuit Ampacity: **<Insert value>**.
 - f. Maximum Overcurrent Protection: **<Insert amperage>**.

2.2 SELF-REGULATING, PARALLEL-RESISTANCE HEATING CABLES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. BriskHeat.
 - 2. Chromalox.
 - 3. Delta-Therm Corporation.
 - 4. Easy Heat; a division of EGS Electrical Group LLC.
 - 5. Nelson Heat Trace; a division of EGS Electrical Group LLC.
 - 6. Pyrotenax; a brand of Tyco Thermal Controls LLC.
 - 7. Raychem; a brand of Tyco Thermal Controls LLC.
 - 8. Thermon Americas Inc.
 - 9. Trasor Corp.
 - 10. **<Insert manufacturer's name>**.
 - 11. or approved equal.
- B. Comply with IEEE 515.1.

- C. Heating Element: Pair of parallel **[No. 16] [No. 18]** AWG, **[tinned] [nickel-coated]**, stranded copper bus wires embedded in crosslinked conductive polymer core, which varies heat output in response to temperature along its length. Terminate with waterproof, factory-assembled, nonheating leads with connectors at one end, and seal the opposite end watertight. Cable shall be capable of crossing over itself once without overheating.
- D. Electrical Insulating Jacket: Flame-retardant polyolefin.
- E. Cable Cover: **[Tinned-copper] [Stainless-steel]** braid **[and polyolefin outer jacket with ultraviolet inhibitor]**.
- F. Maximum Operating Temperature (Power On): **[150 deg F (65 deg C)] <Insert temperature>**.
- G. Maximum Exposure Temperature (Power Off): **[185 deg F (85 deg C)] <Insert temperature>**.
- H. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- I. Capacities and Characteristics:
 - 1. Maximum Heat Output: **[3 W/ft. (9.8 W/m)] [5 W/ft. (16.4 W/m)] [8 W/ft. (26 W/m)] [10 W/ft. (32.8 W/m)] [12 W/ft. (39.4 W/m)] <Insert value>**.
 - 2. Piping Diameter: **<Insert NPS (DN)>**.
 - 3. Number of Parallel Cables: **<Insert number>**.
 - 4. Spiral Wrap Pitch: **<Insert inches (mm)>**.
 - 5. Electrical Characteristics for Single-Circuit Connection:
 - a. Volts: **[120] [208] [240] [277] [480] <Insert value>**.
 - b. Phase: **<Insert value>**.
 - c. Hertz: **<Insert value>**.
 - d. Full-Load Amperes: **<Insert value>**.
 - e. Minimum Circuit Ampacity: **<Insert value>**.
 - f. Maximum Overcurrent Protection: **<Insert amperage>**.

2.3 CONTROLS

- A. Remote bulb unit with adjustable temperature range from **[30 to 50 deg F (minus 1 to plus 10 deg C)] <Insert temperature range>**.
- B. Snap action; open-on-rise, single-pole switch with minimum current rating adequate for connected cable.
- C. Remote bulb on capillary, resistance temperature device, or thermistor for directly sensing pipe-wall temperature.
- D. Corrosion-resistant, waterproof control enclosure.

2.4 ACCESSORIES

- A. Cable Installation Accessories: Fiberglass tape, heat-conductive putty, cable ties, silicone end seals and splice kits, and installation clips all furnished by manufacturer or as recommended in writing by manufacturer.
- B. Warning Tape: Continuously printed "Electrical Tracing"; vinyl, at least **3 mils** (0.08 mm) thick, and with pressure-sensitive, permanent, waterproof, self-adhesive back.
 - 1. Width for Markers on Pipes with OD, Including Insulation, Less Than **6 Inches** (150 mm): **3/4 inch** (19 mm) minimum.
 - 2. Width for Markers on Pipes with OD, Including Insulation, **6 Inches** (150 mm) or Larger: **1-1/2 inches** (38 mm) minimum.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine surfaces and substrates to receive electric heating cables for compliance with requirements for installation tolerances and other conditions affecting performance.
 - 1. Ensure surfaces and pipes in contact with electric heating cables are free of burrs and sharp protrusions.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install electric heating cable where indicated and according to NFPA 70 and NFPA 13.
- B. Install electric heating cable across expansion joints according to manufacturer's written instructions; use cable to allow movement without damage to cable.
- C. Install electric heating cables after piping has been tested and before insulation is installed.
- D. Install electric heating cables according to IEEE 515.1.
- E. Install insulation over piping with electric cables according to Section 210700 "Fire-Suppression Systems Insulation."
- F. Install warning tape on piping insulation where piping is equipped with electric heating cables.
- G. Set field-adjustable switches and circuit-breaker trip ranges.

3.3 CONNECTIONS

- A. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- C. Connect heat-tracing controls to fire-alarm system according to NFPA 13. Comply with requirements in [**Section 283111 "Digital, Addressable Fire-Alarm System."**] [**Section 283112 "Zoned (DC Loop) Fire-Alarm System."**]

3.4 FIELD QUALITY CONTROL

- A. Testing Agency: [**Owner will engage**] [**Engage**] a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- C. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
 - 1. Perform tests after cable installation but before application of coverings such as insulation, wall or ceiling construction, or concrete.
 - 2. Test cables for electrical continuity and insulation integrity before energizing.
 - 3. Test cables to verify rating and power input. Energize and measure voltage and current simultaneously.
- D. Repeat tests for continuity, insulation resistance, and input power after applying thermal insulation on pipe-mounted cables.
- E. Cables will be considered defective if they do not pass tests and inspections.
- F. Prepare test and inspection reports.

3.5 PROTECTION

- A. Protect installed heating cables, including nonheating leads, from damage during construction.
- B. Remove and replace damaged heat-tracing cables.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 210533

SECTION 210548 - VIBRATION AND SEISMIC CONTROLS FOR FIRE-SUPPRESSION PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Isolation pads.
 - 2. Isolation mounts.
 - 3. Restrained elastomeric isolation mounts.
 - 4. Restraining braces.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. IBC: International Building Code.
- B. ICC-ES: ICC-Evaluation Service.
- C. OSHPD: Office of Statewide Health Planning and Development for the State of California.

1.4 PERFORMANCE REQUIREMENTS

- A. Seismic-Restraint Loading:
 - 1. Site Class as Defined in the IBC: [A] [B] [C] [D] [E] [F].
 - 2. Assigned Seismic Use Group or Building Category as Defined in the IBC: [I] [II] [III].
 - a. Component Importance Factor: [1.0] [1.5] <Insert value>.
 - b. Component Response Modification Factor: [1.5] [2.5] [3.5] [5.0] <Insert value>.
 - c. Component Amplification Factor: [1.0] [2.5] <Insert value>.

3. Design Spectral Response Acceleration at Short Periods (0.2 Second): **<Insert percent>**.
4. Design Spectral Response Acceleration at 1-Second Period: **<Insert percent>**.

1.5 ACTION SUBMITTALS

A. Product Data: For the following:

1. Include rated load, rated deflection, and overload capacity for each vibration isolation device.
2. Illustrate and indicate style, material, strength, fastening provision, and finish for each type and size of seismic-restraint component used.
 - a. Tabulate types and sizes of seismic restraints, complete with report numbers and rated strength in tension and shear as evaluated by **[an evaluation service member of ICC-ES] [OSHPD] [an agency acceptable to authorities having jurisdiction]**.
 - b. Annotate to indicate application of each product submitted and compliance with requirements.
3. Include data substantiating that materials comply with requirements.

B. Delegated-Design Submittal: For vibration isolation and seismic-restraint details indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Design Calculations: Calculate static and dynamic loading due to equipment weight and operation, seismic forces required to select vibration isolators, seismic restraints, and for designing vibration isolation bases.
2. Seismic-Restraint Details:
 - a. Design Analysis: To support selection and arrangement of seismic restraints. Include calculations of combined tensile and shear loads.
 - b. Details: Indicate fabrication and arrangement. Detail attachments of restraints to the restrained items and to the structure. Show attachment locations, methods, and spacings. Identify components, list their strengths, and indicate directions and values of forces transmitted to the structure during seismic events. Indicate association with vibration isolation devices.
 - c. Preapproval and Evaluation Documentation: By **[an evaluation service member of ICC-ES] [OSHPD] [an agency acceptable to authorities having jurisdiction]**, showing maximum ratings of restraint items and the basis for approval (tests or calculations).

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For **[professional engineer] [and] [testing agency]**.

- B. Welding certificates.
- C. Manufacturer's Certificate: Certify that isolators are properly installed and adjusted to meet or exceed specified requirements.
- D. Project Record Documents:
 - 1. Record actual locations of hangers including attachment points.

1.7 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 QUALITY ASSURANCE

- A. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.
- B. Comply with seismic-restraint requirements in the IBC and NFPA 13 unless requirements in this Section are more stringent.
- C. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- D. Seismic-restraint devices shall have horizontal and vertical load testing and analysis and shall bear anchorage preapproval OPA number from OSHPD, preapproval by ICC-ES, or preapproval by another agency acceptable to authorities having jurisdiction, showing maximum seismic-restraint ratings. Ratings based on independent testing are preferred to ratings based on calculations. If preapproved ratings are not available, submittals based on independent testing are preferred. Calculations (including combining shear and tensile loads) to support seismic-restraint designs must be signed and sealed by a qualified professional engineer.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 VIBRATION ISOLATORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Ace Mountings Co., Inc.
 2. Amber/Booth Company, Inc.
 3. California Dynamics Corporation.
 4. Isolation Technology, Inc.
 5. Kinetics Noise Control.
 6. Mason Industries.
 7. Vibration Eliminator Co., Inc.
 8. Vibration Isolation.
 9. Vibration Mountings & Controls, Inc.
 10. **<Insert manufacturer's name>**.
 11. or approved equal.
- B. Pads **<Insert drawing designation>**: Arranged in single or multiple layers of sufficient stiffness for uniform loading over pad area, molded with a nonslip pattern and galvanized-steel baseplates, and factory cut to sizes that match requirements of supported equipment.
1. Resilient Material: Oil- and water-resistant [**neoprene**] [**rubber**] [**hermetically sealed compressed fiberglass**].
- C. Mounts **<Insert drawing designation>**: Double-deflection type, with molded, oil-resistant rubber, hermetically sealed compressed fiberglass, or neoprene isolator elements with factory-drilled, encapsulated top plate for bolting to equipment and with baseplate for bolting to structure. Color-code or otherwise identify to indicate capacity range.
1. Materials: Cast-ductile-iron or welded steel housing containing two separate and opposing, oil-resistant rubber or neoprene elements that prevent central threaded element and attachment hardware from contacting the housing during normal operation.
 2. Neoprene: Shock-absorbing materials compounded according to the standard for bridge-bearing neoprene as defined by AASHTO.
- D. Restrained Mounts **<Insert drawing designation>**: All-directional mountings with seismic restraint.
1. Materials: Cast-ductile-iron or welded steel housing containing two separate and opposing, oil-resistant rubber or neoprene elements that prevent central threaded element and attachment hardware from contacting the housing during normal operation.
 2. Neoprene: Shock-absorbing materials compounded according to the standard for bridge-bearing neoprene as defined by AASHTO.

2.2 SEISMIC-RESTRAINT DEVICES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Amber/Booth Company, Inc.
 2. California Dynamics Corporation.
 3. Cooper B-Line, Inc.; a division of Cooper Industries.
 4. Hilti, Inc.
 5. Kinetics Noise Control.
 6. Loos & Co.; Cableware Division.
 7. Mason Industries.
 8. TOLCO Incorporated; a brand of NIBCO INC.
 9. Unistrut; Tyco International, Ltd.
 10. **<Insert manufacturer's name>**.
 11. or approved equal.
- B. General Requirements for Restraint Components: Rated strengths, features, and applications shall be as defined in reports by **[an evaluation service member of ICC-ES] [OSHPD] [an agency acceptable to authorities having jurisdiction]**.
1. Structural Safety Factor: Allowable strength in tension, shear, and pullout force of components shall be at least **[four] <Insert number>** times the maximum seismic forces to which they will be subjected.
- C. Channel Support System: MFMA-3, shop- or field-fabricated support assembly made of slotted steel channels with accessories for attachment to braced component at one end and to building structure at the other end and other matching components and with corrosion-resistant coating; and rated in tension, compression, and torsion forces.
- D. Hanger Rod Stiffener: **[Steel tube or steel slotted-support-system sleeve with internally bolted connections] [Reinforcing steel angle clamped]** to hanger rod.
- E. Bushings for Floor-Mounted Equipment Anchor Bolts: Neoprene bushings designed for rigid equipment mountings, and matched to type and size of anchor bolts and studs.
- F. Bushing Assemblies for Wall-Mounted Equipment Anchorage: Assemblies of neoprene elements and steel sleeves designed for rigid equipment mountings and matched to type and size of attachment devices used.
- G. Resilient Isolation Washers and Bushings: One-piece, molded, oil- and water-resistant neoprene, with a flat washer face.
- H. Mechanical Anchor Bolts: Drilled-in and stud-wedge or female-wedge type in zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchor bolts with strength required for anchor and as tested according to ASTM E 488. Minimum length of eight times diameter.
- I. Adhesive Anchor Bolts: Drilled-in and capsule anchor system containing polyvinyl or urethane methacrylate-based resin and accelerator, or injected polymer or hybrid

mortar adhesive. Provide anchor bolts and hardware with zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchor bolts with strength required for anchor and as tested according to ASTM E 488.

2.3 FACTORY FINISHES

- A. Finish: Manufacturer's standard prime-coat finish ready for field painting.
- B. Finish: Manufacturer's standard paint applied to factory-assembled and -tested equipment before shipping.
 - 1. Powder coating on springs and housings.
 - 2. All hardware shall be galvanized. Hot-dip galvanize metal components for exterior use.
 - 3. Baked enamel or powder coat for metal components on isolators for interior use.
 - 4. Color-code or otherwise mark vibration isolation and seismic-control devices to indicate capacity range.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and equipment to receive vibration isolation and seismic-control devices for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Examine roughing-in of reinforcement and cast-in-place anchors to verify actual locations before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 APPLICATIONS

- A. Multiple Pipe Supports: Secure pipes to trapeze member with clamps approved for application by **[an evaluation service member of ICC-ES] [OSHPD] [an agency acceptable to authorities having jurisdiction]**.
- B. Hanger Rod Stiffeners: Install hanger rod stiffeners where indicated or scheduled on Drawings to receive them and where required to prevent buckling of hanger rods due to seismic forces.
- C. Strength of Support and Seismic-Restraint Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static and seismic loads within specified loading limits.

3.3 VIBRATION-CONTROL AND SEISMIC-RESTRAINT DEVICE INSTALLATION

A. Equipment Restraints:

1. Install resilient bolt isolation washers on equipment anchor bolts where clearance between anchor and adjacent surface exceeds **0.125 inch** (3.2 mm).
2. Install seismic-restraint devices using methods approved by **[an evaluation service member of ICC-ES] [OSHPD] [an agency acceptable to authorities having jurisdiction]** providing required submittals for component.

B. Piping Restraints:

1. Comply with requirements in MSS SP-127 and NFPA 13.
2. Space lateral supports a maximum of **[40 feet (12 m)] <Insert dimension>** o.c., and longitudinal supports a maximum of **[80 feet (24 m)] <Insert dimension>** o.c.
3. Brace a change of direction longer than **12 feet** (3.7 m).

C. Install cables so they do not bend across edges of adjacent equipment or building structure.

D. Install seismic-restraint devices using methods approved by **[an evaluation service member of ICC-ES] [OSHPD] [an agency acceptable to authorities having jurisdiction]** providing required submittals for component.

E. Install bushing assemblies for anchor bolts for floor-mounted equipment, arranged to provide resilient media between anchor bolt and mounting hole in concrete base.

F. Install bushing assemblies for mounting bolts for wall-mounted equipment, arranged to provide resilient media where equipment or equipment-mounting channels are attached to wall.

G. Attachment to Structure: If specific attachment is not indicated, anchor bracing to structure at flanges of beams, at upper truss chords of bar joists, or at concrete members.

H. Drilled-in Anchors:

1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Do not damage existing reinforcing or embedded items during coring or drilling. Notify the DEN Project Manager if reinforcing steel or other embedded items are encountered during drilling. Locate and avoid prestressed tendons, electrical and telecommunications conduit, and gas lines.
2. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
3. Wedge Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.
4. Adhesive Anchors: Clean holes to remove loose material and drilling dust prior to installation of adhesive. Place adhesive in holes proceeding from the bottom of

the hole and progressing toward the surface in such a manner as to avoid introduction of air pockets in the adhesive.

5. Set anchors to manufacturer's recommended torque, using a torque wrench.
6. Install zinc-coated steel anchors for interior and stainless-steel anchors for exterior applications.

3.4 ACCOMMODATION OF DIFFERENTIAL SEISMIC MOTION

- A. Install flexible connections in piping where they cross seismic joints, where adjacent sections or branches are supported by different structural elements, and where the connections terminate with connection to equipment that is anchored to a different structural element from the one supporting the connections as they approach equipment. Comply with requirements in Section 211200 "Fire-Suppression Standpipes," Section 211313 "Wet-Pipe Sprinkler Systems," and Section 211316 "Dry-Pipe Sprinkler Systems" for piping flexible connections.

3.5 FIRE-SUPPRESSION VIBRATION-CONTROL AND SEISMIC-RESTRAINT DEVICE SCHEDULE

- A. Supported or Suspended Equipment: **<Insert name and drawing designation>**.
 1. Equipment Location: **<Insert room number>**.
 2. Pads:
 - a. Material: **[Neoprene] [Rubber] [Hermetically sealed compressed fiberglass]**.
 - b. Thickness: **<Insert inches (mm)>**.
 - c. Number of Pads: **<Insert number>** thick.
 3. Isolator Type: **<Insert generic name or designation used in Part 2>**.
 4. Minimum Deflection: **<Insert inches (mm)>**.
 5. Component Importance Factor: **[1.0] [1.5]**.
 6. Component Response Modification Factor: **[1.5] [2.5] [3.5] [5.0]**.
 7. Component Amplification Factor: **[1.0] [2.5]**.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 210548

SECTION 210553 - IDENTIFICATION FOR FIRE-SUPPRESSION PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Equipment labels.
 - 2. Warning signs and labels.
 - 3. Pipe labels.
 - 4. Stencils.
 - 5. Valve tags.
 - 6. Warning tags.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 REFERENCES

- A. Materials and workmanship shall conform to the latest issue of all industry standards, publications, or regulations referenced in this section and with the following references as applicable. Refer to Section 014225 "Referenced Standards" for listing of issuing organizations or agencies.
- B. Applicable Standards:
 - 1. American Society of Mechanical Engineers (ASME).
 - 2. ASME A13.1 - Scheme for the Identification of Piping Systems.
 - 3. International Building Code (IBC) with the Denver Amendments.
 - 4. International Fire Code (IFC) with the Denver Amendments.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product. Provide manufacturers catalog literature for each product required.
 - 1. Include data substantiating that materials comply with requirements.

- B. Samples: For color, letter style, and graphic representation required for each identification material and device.
- C. Equipment-Label Schedule: Include a listing of all equipment to be labeled and the proposed content for each label.
 - 1. Submit list of wording, symbols, letter size, and color coding for mechanical identification.
- D. Valve Schedules: Valve numbering scheme.
 - 1. Include valve chart and schedule, including valve tag number, location, function, and valve manufacturer's name and model number.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For each piping system to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
 - 1. Record actual locations of all tagged valves.

1.6 COORDINATION

- A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.
- B. Coordinate installation of identifying devices with locations of access panels and doors.
- C. Install identifying devices before installing acoustical ceilings and similar concealment.

1.7 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 SIGNAGE AND LABELING - GENERAL

- A. Signage shall be per the requirements of NFPA - 13, FM Global, and any applicable

Insurance underwriter.

- B. Signs shall be pre-manufactured metal, approximately 2" x 6", located at all valves, main drains, auxiliary drains, air, alarm, and similar devices.

2.2 ACCEPTABLE MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. W.H. Brady Co.
 - 2. Panduit Corp.
 - 3. Seton Name Plate Corp.
 - 4. Marking Services, Inc.
 - 5. <Insert manufacturer>
 - 6. or approved equal.

2.3 MATERIALS

- A. Color: Unless specified otherwise, conform to ASME A13.1.
- B. Plastic Nameplates: Laminated three-layer plastic with engraved black letters on light contrasting background color.
- C. Metal Tags: Brass or aluminum, with stamped letters; tag size minimum 1-1/2 inch diameter with smooth edges.
- D. Chart: Typewritten letter size list in anodized aluminum frame.
- E. Stencils: With clean cut symbols and letters of 2-1/2 inch size.
- F. Stencil Paint: In accordance with Section 099123 "Interior Painting, semi-gloss enamel.
- G. Plastic Pipe Markers: Factory fabricated, flexible, semi-rigid plastic, preformed to fit around pipe or pipe covering; minimum information indicating flow direction arrow and fluid being conveyed.
- H. Underground Plastic Pipe Markers:
 - 1. Bright colored continuously printed plastic ribbon tape of not less than 6 inch wide by 4 mil thick, manufactured for direct burial service.
 - 2. For non-metallic buried piping provide printed foil type tape, enabling locating of runs by use of a metal detector.

2.4 EQUIPMENT LABELS

A. Metal Labels for Equipment:

1. Material and Thickness: **[Brass, 0.032 inch (0.8 mm)] [stainless steel, 0.025 inch (0.64 mm)] [aluminum, 0.032 inch (0.8 mm)] [or] [anodized aluminum, 0.032 inch (0.8 mm)]** thick, with predrilled holes for attachment hardware.
2. Letter Color: **[Black] [Blue] [Red] [White] [Yellow] <Insert color>**.
3. Background Color: **[Black] [Blue] [Red] [White] [Yellow] <Insert color>**.
4. Minimum Label Size: Length and width vary for required label content, but not less than **2-1/2 by 3/4 inch (64 by 19 mm)**.
5. Minimum Letter Size: **1/4 inch (6.4 mm)** for name of units if viewing distance is less than **24 inches (600 mm)**, **1/2 inch (13 mm)** for viewing distances up to **72 inches (1830 mm)**, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
6. Fasteners: Stainless-steel **[rivets] [or] [self-tapping screws]**.
7. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

B. Plastic Labels for Equipment:

1. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, **[1/16 inch (1.6 mm)] [1/8 inch (3.2 mm)] <Insert dimension>** thick, with predrilled holes for attachment hardware.
2. Letter Color: **[Black] [Blue] [Red] [White] [Yellow] <Insert color>**.
3. Background Color: **[Black] [Blue] [Red] [White] [Yellow] <Insert color>**.
4. Maximum Temperature: Able to withstand temperatures up to **160 deg F (71 deg C)**.
5. Minimum Label Size: Length and width vary for required label content, but not less than **2-1/2 by 3/4 inch (64 by 19 mm)**.
6. Minimum Letter Size: **1/4 inch (6.4 mm)** for name of units if viewing distance is less than **24 inches (600 mm)**, **1/2 inch (13 mm)** for viewing distances up to **72 inches (1830 mm)**, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
7. Fasteners: Stainless-steel **[rivets] [or] [self-tapping screws]**.
8. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

C. Label Content: Include equipment's Drawing designation or unique equipment number, Drawing numbers where equipment is indicated (plans, details, and schedules), and the Specification Section number and title where equipment is specified.

D. Equipment-Label Schedule: For each item of equipment to be labeled, on **8-1/2-by-11-inch (A4)** bond paper. Tabulate equipment identification number and identify Drawing numbers where equipment is indicated (plans, details, and schedules) and the Specification Section number and title where equipment is specified. Equipment schedule shall be included in operation and maintenance data.

1. Provide typewritten letter size equipment chart and schedule in anodized aluminum frame.

2.5 WARNING SIGNS AND LABELS

- A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, **[1/16 inch (1.6 mm)] [1/8 inch (3.2 mm)] <Insert dimension>** thick, with predrilled holes for attachment hardware.
- B. Letter Color: **[Black] [Blue] [Red] [White] [Yellow] <Insert color>**.
- C. Background Color: **[Black] [Blue] [Red] [White] [Yellow] <Insert color>**.
- D. Maximum Temperature: Able to withstand temperatures up to **160 deg F (71 deg C)**.
- E. Minimum Label Size: Length and width vary for required label content, but not less than **2-1/2 by 3/4 inch (64 by 19 mm)**.
- F. Minimum Letter Size: **1/4 inch (6.4 mm)** for name of units if viewing distance is less than **24 inches (600 mm)**, **1/2 inch (13 mm)** for viewing distances up to **72 inches (1830 mm)**, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
- G. Fasteners: Stainless-steel **[rivets] [or] [self-tapping screws]**.
- H. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- I. Label Content: Include caution and warning information, plus emergency notification instructions.

2.6 PIPE LABELS

- A. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service and showing flow direction.
- B. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to **[partially cover] [cover full]** circumference of pipe and to attach to pipe without fasteners or adhesive.
- C. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.
- D. Pipe-Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings; pipe size; and an arrow indicating flow direction.
 1. Flow-Direction Arrows: Integral with piping-system service lettering to accommodate both directions, or as separate unit on each pipe label to indicate flow direction.

2. Lettering Size: At least 1-1/2 inches (38 mm) high.

E. Pipe-Label Colors:

1. Background Color: Red.
2. Letter Color: White.

2.7 STENCILS

- A. Stencils: Prepared with letter sizes according to ASME A13.1 for piping; and minimum letter height of 3/4 inch (19 mm) for access panel and door labels, equipment labels, and similar operational instructions.

1. Stencil Material: **[Aluminum] [Brass] [Fiberboard] [Fiberboard or metal] <Insert material>**.
2. Stencil Paint: Exterior, gloss, **[alkyd enamel] [acrylic enamel] <Insert paint type>** black unless otherwise indicated. Paint may be in pressurized spray-can form.
3. Identification Paint: Exterior, **[alkyd enamel] [acrylic enamel] <Insert paint type>** in colors according to ASME A13.1 unless otherwise indicated.

2.8 VALVE TAGS

- A. Valve Tags: Stamped or engraved with 1/4-inch (6.4-mm) letters for piping-system abbreviation and 1/2-inch (13-mm) numbers.

1. Tag Material: **[Brass, 0.032 inch (0.8 mm)] [stainless steel, 0.025 inch (0.64 mm)] [aluminum, 0.032 inch (0.8 mm)] [or] [anodized aluminum, 0.032 inch (0.8 mm)]** thick, with predrilled holes for attachment hardware.
2. Fasteners: Brass **[wire-link chain] [beaded chain] [or] [S-hook]**.
3. Valve-Tag Color: Red.
4. Letter Color: White.

- B. Valve Schedules: For each piping system, on 8-1/2-by-11-inch (A4) bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag), location of valve (room or space), normal-operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.

1. Valve-tag schedule shall be included in operation and maintenance data.

2.9 WARNING TAGS

- A. Warning Tags: Preprinted or partially preprinted, accident-prevention tags, of plasticized card stock with matte finish suitable for writing.

1. Size: **[3 by 5-1/4 inches (75 by 133 mm) minimum] [Approximately 4 by 7**

- inches (100 by 178 mm)] <Insert size>.**
2. Fasteners: [**Brass grommet and wire**] [**Reinforced grommet and wire or string**].
 3. Nomenclature: Large-size primary caption such as "DANGER," "CAUTION," or "DO NOT OPERATE."
 4. Color: Yellow background with black lettering.

2.10 CEILING TACKS

- A. Description: Steel with 3/4 inch diameter color coded head.
- B. Color code as follows:
 1. Red: Fire dampers/smoke dampers.
 2. Green: Plumbing valves.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.
- B. Prepare surfaces in accordance with Division 09 sections for stencil painting.

3.2 LABEL INSTALLATION

- A. Every drain and control valve shall be permanently labeled with the DEN designated system I.D. number and a consecutive number indicating quantity of drains on the system, i.e. T-4-43 / 3 of 7 in the terminal or FZ – 03 / 2 of 2 .
- B. Hydraulic plaques shall be provided at all risers with the appropriate information.
- C. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.
- D. Coordinate installation of identifying devices with locations of access panels and doors.
- E. Install or permanently fasten labels on each major item of mechanical equipment.
- F. Locate equipment labels where accessible and visible.
- G. Piping Color-Coding: Painting of piping is specified in [**Section 099123 "Interior Painting."**] [**Section 099600 "High-Performance Coatings."**]

- H. Stenciled Pipe-Label Option: Stenciled labels may be provided instead of manufactured pipe labels, at Installer's option. Install stenciled pipe labels, complying with ASME A13.1, [**with painted, color-coded bands or rectangles**] on each piping system.
1. Identification Paint: Use for contrasting background.
 2. Stencil Paint: Use for pipe marking.
 3. Apply in accordance with Division 09 requirements.
- I. Pipe-Label Locations: Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
1. Install in accordance with manufacturer's instructions.
 2. Near each valve and control device.
 3. Near each branch connection excluding short takeoffs. Where flow pattern is not obvious, mark each pipe at branch.
 4. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.
 5. At access doors, manholes, and similar access points that permit view of concealed piping.
 6. Near major equipment items and other points of origination and termination.
 7. Spaced at maximum intervals of [**50 feet (15 m)**] <Insert dimension> along each run. Reduce intervals to [**25 feet (7.6 m)**] <Insert dimension> in areas of congested piping and equipment.
 8. On piping above removable acoustical ceilings. Omit intermediately spaced labels.
- J. Plastic Nameplates: Install with corrosive-resistant mechanical fasteners and adhesive.
- K. Metal Tags: Install with corrosive-resistant chain.
- L. Plastic Pipe Markers: Install in accordance with manufacturer's instructions.
- M. Underground Plastic Pipe Markers: Install 6 to 8 inches below finished grade or paving, directly above buried pipe.
- N. Controls: Identify control panels and major control components outside panels with plastic nameplates. Key to control schematics.

3.3 VALVE-TAG INSTALLATION

- A. Install tags on valves and control devices in piping systems. List tagged valves in a valve-tag schedule.
- B. Valves Identification:
1. Identify all valves, including fire protection valves, in main and branch piping located inside the building. Use tags secured with brass 'S' hooks or brass

- chains.
2. Stamp tags with a unique prefix to identify system to which applied, followed by a number (Example: CW-1, CW-2, etc.). In general, prefix shall match system abbreviations used on drawings where applicable.
 3. Provide a typewritten listing of valves including: valve identification number, location, function, normal position, service, and area served. Mount list as specified and directed. Include additional copy in operation and maintenance manuals.
 4. Show valve tag designations on the project record document drawings, including schematic flow diagrams where included with construction documents.
 5. Contractor shall prepare and install where directed, in aluminum frames with clear plastic protective cover, a valve location diagram in the form of a series of flow diagrams with each automatic or manually actuated control or shut-off valve clearly identified in sequence with its individual valve tag number. Automatic control valves shall be tagged to match designations shown on the temperature control drawings, and the specified valve charts shall be installed adjacent to valve location diagrams.
- C. Piping: Identify piping, concealed or exposed, with plastic pipe markers. Tags may be used on ½" or smaller diameter non-insulated piping. Identify service, flow direction, and pressure. Install in clear view and align with axis of piping. Locate identification not to exceed 20 feet on straight runs including risers and drops, adjacent to each valve and "T", at each side of penetration of structure or enclosure, and at each obstruction.
- D. Valve-Tag Application Schedule: Tag valves according to size, shape, and with captions similar to those indicated in "Valve-Tag Size and Shape" Subparagraph below:
1. Valve-Tag Size and Shape:
 - a. Fire-Suppression Standpipe: [1-1/2 inches (38 mm)] [2 inches (50 mm)], [round] [square] <Insert shape>.
 - b. Wet-Pipe Sprinkler System: [1-1/2 inches (38 mm)] [2 inches (50 mm)], [round] [square] <Insert shape>.
 - c. Dry-Pipe Sprinkler System: [1-1/2 inches (38 mm)] [2 inches (50 mm)], [round] [square] <Insert shape>.
 - d. Foam-Water System: [1-1/2 inches (38 mm)] [2 inches (50 mm)], [round] [square] <Insert shape>.
 - e. Clean-Agent Fire-Extinguishing System: [1-1/2 inches (38 mm)] [2 inches (50 mm)], [round] [square] <Insert shape>.
 2. Provide valve chart and schedule in aluminum frame with clear plastic shield. Install at location as directed by DEN Project Manager.

3.4 WARNING-TAG INSTALLATION

- A. Write required message on, and attach warning tags to, equipment and other items where required.

3.5 PIPING IDENTIFICATION SCHEDULE

- A. Pipe identification and color coding for fire-suppression piping systems shall be in accordance with the following schedule:

Classification:	Band Color:	Stenciled Legend:
Fire Protection Piping	Red	Fire Line
Fire Sprinkler Piping	Red	Fire Sprinkler. Line
Fire Hose Cabinets:		
Outside Trim/Hose Bracket	Red Enamel	
Interior	White Enamel	

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 210553

SECTION 210700 - FIRE-SUPPRESSION SYSTEMS INSULATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Insulating indoor engine coolant piping for remote radiator of engine-driven fire pump.
 - 2. Insulating indoor engine exhaust piping and silencer.
 - 3. Insulating indoor and outdoor equipment.
 - 4. Insulating outdoor piping.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include thermal conductivity, water-vapor permeance thickness, and jackets (both factory and field applied if any).
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Credit IEQ 4.1: For adhesives and sealants, documentation including printed statement of VOC content and chemical components.
 - 2. Laboratory Test Reports for Credit IEQ 4: For adhesives and sealants, documentation indicating that product complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
 - 1. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
 - 2. Detail attachment and covering of heat tracing inside insulation.

3. Detail insulation application at pipe expansion joints for each type of insulation.
4. Detail insulation application at elbows, fittings, flanges, valves, and specialties for each type of insulation.
5. Detail removable insulation at piping specialties and equipment connections.
6. Detail application of field-applied jackets.
7. Detail application at linkages of control devices.
8. Detail field application for fire-suppression water storage tanks.

D. Samples: For each type of insulation and jacket indicated. Identify each Sample, describing product and intended use. Sample sizes are as follows:

1. Preformed Pipe Insulation Materials: **12 inches** (300 mm) long by **NPS 2** (DN 50).
2. Sheet Form Insulation Materials: **12 inches** (300 mm) square.
3. Jacket Materials for Pipe: **12 inches** (300 mm) long by **NPS 2** (DN 50).
4. Sheet Jacket Materials: **12 inches** (300 mm) square.
5. Manufacturer's Color Charts: For products where color is specified, show the full range of colors available for each type of finish material.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer.
- B. Installer Certificates: Signed by the Contractor certifying that installers comply with requirements.
- C. Material Test Reports: From a qualified testing agency acceptable to authorities having jurisdiction indicating, interpreting, and certifying test results for compliance of insulation materials, sealers, attachments, cements, and jackets, with requirements indicated. Include dates of tests and test methods employed.
- D. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.
- B. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products according to ASTM E 84, by a testing and inspecting agency acceptable to authorities having jurisdiction. Factory label insulation and jacket

materials and adhesive, mastic, and cement material containers, with appropriate markings of applicable testing agency.

1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
 2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.
- C. Mockups: Before installing insulation, build mockups for each type of insulation and finish listed below to demonstrate quality of insulation application and finishes. Build mockups in the location indicated or, if not indicated, as directed by DEN Project Manager. Use materials indicated for the completed Work.
1. Piping Mockups:
 - a. One 10-foot (3-m) section of NPS 2 (DN 50) straight pipe.
 - b. One each of a 90-degree threaded, welded, and flanged elbow.
 - c. One each of a threaded, welded, and flanged tee fitting.
 - d. One NPS 2 (DN 50) or smaller valve, and one NPS 2-1/2 (DN 65) or larger valve.
 - e. Four support hangers including hanger shield and insert.
 - f. One threaded strainer and one flanged strainer with removable portion of insulation.
 - g. One threaded reducer and one welded reducer.
 - h. One pressure temperature tap.
 - i. One mechanical coupling.
 2. Equipment Mockups:
 - a. One tank or vessel.
 3. For each mockup, fabricate cutaway sections to allow observation of application details for insulation materials, adhesives, mastics, attachments, and jackets.
 4. Notify DEN Project Manager seven (7) days in advance of dates and times when mockups will be constructed.
 5. Obtain DEN Project Manager's approval of mockups before starting insulation application.
 6. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
 7. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
 8. Demolish and remove mockups when directed.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.

- B. Deliver materials to site in original factory packaging, labeled with manufacturer's identification, including product density and thickness.
- C. Store insulation in original wrapping and protect from weather and construction traffic.
- D. Protect insulation against dirt, water, chemical, and mechanical damage.

1.8 COORDINATION

- A. Coordinate sizes and locations of supports, hangers, and insulation shields.
- B. Coordinate clearance requirements with piping Installer for piping insulation application and equipment Installer for equipment insulation application. Before preparing piping Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.
- C. Coordinate installation and testing of heat tracing.

1.9 SCHEDULING

- A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.
- B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 INSULATION MATERIALS

- A. Comply with requirements in Part 3 schedule articles for where insulating materials shall be applied.
- B. Products shall not contain asbestos, lead, mercury, or mercury compounds.
- C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.

- D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.
- E. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.
- F. Calcium Silicate:
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Industrial Insulation Group (IIG); Thermo-12 Gold.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
 2. Preformed Pipe Sections: Flat-, curved-, and grooved-block sections of noncombustible, inorganic, hydrous calcium silicate with a non-asbestos fibrous reinforcement. Comply with ASTM C 533, Type I, asbestos free.
 3. Prefabricated Fitting Covers: Comply with ASTM C 450 and ASTM C 585 for dimensions used in preforming insulation to cover valves, elbows, tees, and flanges.
 4. Comply with the following:
 - a. 'K' value: ASTM C 177 and C 518; 0.44 at 300 degrees F.
 - b. Maximum Service Temperature: 1200 degrees F.
 - c. Density: 13 lb/cu ft; compressive strength (block) 200 PSI with 5% compression at 1-1/2" thickness.
 - d. Tie with 16 gage stainless steel wire loops with twisted ends, spaced 12 inches on center.
- G. Cellular Glass: Inorganic, incombustible, foamed or cellulated glass with annealed, rigid, hermetically sealed cells. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Pittsburgh Corning Corporation; Foamglas.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
 2. Block Insulation: ASTM C 552, Type I.
 3. Special-Shaped Insulation: ASTM C 552, Type III.
 4. Board Insulation: ASTM C 552, Type IV.
 5. Preformed Pipe Insulation without Jacket: Comply with ASTM C 552, Type II, Class 1.
 6. Preformed Pipe Insulation with Factory-Applied [ASJ] [ASJ-SSL]: Comply with ASTM C 552, Type II, Class 2.
 7. Factory fabricate shapes according to ASTM C 450 and ASTM C 585.
 8. Comply with the following:
 - a. 'K' value: 0.40 at 75 degrees F.

- b. Maximum Water Vapor Transmission: 0.1 perm.
- H. Flexible Elastomeric Insulation: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C 534, Type I for tubular materials and Type II for sheet materials.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Aeroflex USA, Inc.; Aerocel.
 - b. Armacell LLC; AP Armaflex.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.
 - I. Mineral-Fiber Blanket Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 553, Type II and ASTM C 1290, Type I. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. CertainTeed Corp.; SoftTouch Duct Wrap.
 - b. Johns Manville; Microlite.
 - c. Knauf Insulation; Friendly Feel Duct Wrap.
 - d. Manson Insulation Inc.; Alley Wrap.
 - e. Owens Corning; SOFTR All-Service Duct Wrap.
 - f. **<Insert manufacturer's name; product name or designation>**.
 - g. or approved equal.
 2. Comply with the following:
 - a. Minimum Service Temperature: 0 degrees F.
 - b. Maximum Service Temperature: 400 degrees F.
 - c. Maximum Moisture Absorption: 0.2 percent by volume.
 - J. Mineral-Fiber Board Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 612, Type IA or Type IB. For equipment applications, provide insulation [**without factory-applied jacket**] [**with factory-applied ASJ**] [**with factory-applied FSK jacket**]. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. CertainTeed Corp.; CertaPro Commercial Board.
 - b. Fibrex Insulations Inc.; FBX.
 - c. Johns Manville; 800 Series Spin-Glas.
 - d. Knauf Insulation; Insulation Board.
 - e. Manson Insulation Inc.; AK Board.
 - f. Owens Corning; Fiberglas 700 Series.
 - g. **<Insert manufacturer's name; product name or designation>**.
 - h. or approved equal.
 2. Comply with the following:

- a. Minimum Service Temperature: 0 degrees F.
- b. Maximum Service Temperature: 400 degrees F.
- c. Maximum Moisture Absorption: 0.2 percent by volume.

K. Mineral-Fiber, Preformed Pipe Insulation:

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Fibrex Insulations Inc.; Coreplus 1200.
 - b. Johns Manville; Micro-Lok.
 - c. Knauf Insulation; 1000-Degree Pipe Insulation.
 - d. Manson Insulation Inc.; Alley-K.
 - e. Owens Corning; Fiberglas Pipe Insulation.
 - f. **<Insert manufacturer's name; product name or designation>**.
 - g. or approved equal.
2. Type I, **850 Deg F** (454 Deg C) Materials: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 547, Type I, Grade A, **[without factory-applied jacket] [with factory-applied ASJ] [with factory-applied ASJ-SSL]**. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
3. Type II, **1200 Deg F** (649 Deg C) Materials: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 547, Type II, Grade A, **[without factory-applied jacket] [with factory-applied ASJ] [with factory-applied ASJ-SSL]**. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
4. Comply with the following:
 - a. Minimum Service Temperature: 0 degrees F.
 - b. Maximum Service Temperature: 400 degrees F.
 - c. Maximum Moisture Absorption: 0.2 percent by volume.

L. Mineral-Fiber, Pipe and Tank Insulation: Mineral or glass fibers bonded with a thermosetting resin. Semirigid board material with factory-applied **[ASJ] [FSK jacket]** complying with ASTM C 1393, Type II or Type IIIA Category 2, or with properties similar to ASTM C 612, Type IB. Nominal density is **2.5 lb/cu. ft.** (40 kg/cu. m) or more. Thermal conductivity (k-value) at **100 deg F** (55 deg C) is **0.29 Btu x in./h x sq. ft. x deg F** (0.042 W/m x K) or less. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. CertainTeed Corp.; CrimpWrap.
 - b. Johns Manville; MicroFlex.
 - c. Knauf Insulation; Pipe and Tank Insulation.
 - d. Manson Insulation Inc.; AK Flex.
 - e. Owens Corning; Fiberglas Pipe and Tank Insulation.
 - f. **<Insert manufacturer's name; product name or designation>**.
 - g. or approved equal.

2. Comply with the following:
 - a. Minimum Service Temperature: 0 degrees F.
 - b. Maximum Service Temperature: 400 degrees F.
 - c. Maximum Moisture Absorption: 0.2 percent by volume.

M. Phenolic:

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Kingspan Tarec Industrial Insulation NV; Koolphen K.
 - b. Resolco International BV; Insul-phen.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.
2. Preformed pipe insulation of rigid, expanded, closed-cell structure. Comply with ASTM C 1126, Type III, Grade 1.
3. Block insulation of rigid, expanded, closed-cell structure. Comply with ASTM C 1126, Type II, Grade 1.
4. Factory fabricate shapes according to ASTM C 450 and ASTM C 585.
5. Factory-Applied Jacket: Requirements are specified in "Factory-Applied Jackets" Article.
 - a. Preformed Pipe Insulation: **[None] [ASJ]**.
 - b. Board for Equipment Applications: **[None] [ASJ]**.

N. Polyisocyanurate: Unfaced, preformed, rigid cellular polyisocyanurate material intended for use as thermal insulation.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Dow Chemical Company (The); Trymer 2000 XP.
 - b. Duna USA Inc.; Corafoam.
 - c. Dyplast Products; ISO-25.
 - d. Elliott Company of Indianapolis; Elfoam.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.
2. Comply with ASTM C 591, Type I or Type IV, except thermal conductivity (k-value) shall not exceed **0.19 Btu x in./h x sq. ft. x deg F** (0.027 W/m x K) at **75 deg F** (24 deg C) after 180 days of aging.
3. Flame-spread index shall be 25 or less and smoke-developed index shall be 50 or less for thickness up to **1 inch** (25 mm) as tested by ASTM E 84.
4. Fabricate shapes according to ASTM C 450 and ASTM C 585.
5. Factory-Applied Jacket: Requirements are specified in "Factory-Applied Jackets" Article.
 - a. Pipe Applications: **[None] [ASJ] [ASJ-SSL] [PVDC] [PVDC-SSL]**.
 - b. Equipment Applications: **[None] [ASJ] [ASJ-SSL] [PVDC] [PVDC-SSL]**.

6. Comply with the following:

- a. Minimum Service Temperature: -250 degrees F.
- b. Maximum Service Temperature: 250 degrees F.
- c. Maximum Moisture Absorption: ASTM D 2842; 0.054 percent by volume.
- d. Moisture Vapor Transmission: 1.26 perm inches.
- e. Connection: Waterproof vapor barrier adhesive.

O. Polyolefin: Unicellular, polyethylene thermal plastic insulation. Comply with ASTM C 534 or ASTM C 1427, Type I, Grade 1 for tubular materials and Type II, Grade 1 for sheet materials.

1. Products: Subject to compliance with requirements, provide one of the following:

- a. Armacell LLC; Tubolit.
- b. Nomaco Insulation; IMCOLOCK, IMCOSHEET, NOMALOCK, and NOMAPLY.
- c. **<Insert manufacturer's name; product name or designation>**.
- d. or approved equal.

P. Polystyrene: Rigid, extruded cellular polystyrene intended for use as thermal insulation. Comply with ASTM C 578, Type IV or Type XIII, except thermal conductivity (k-value) shall not exceed **0.26 Btu x in./h x sq. ft. x deg F** (0.038 W/m x K) after 180 days of aging. Fabricate shapes according to ASTM C 450 and ASTM C 585.

1. Products: Subject to compliance with requirements, provide one of the following:

- a. Dow Chemical Company (The); Styrofoam.
- b. **<Insert manufacturer's name; product name or designation>**.
- c. or approved equal.

2. Comply with the following:

- a. Maximum service temperature: 180 degrees F.
- b. Maximum Water Vapor Transmission: 0.1 perm.

2.2 INSULATING CEMENTS

A. Mineral-Fiber Insulating Cement: Comply with ASTM C 195.

1. Products: Subject to compliance with requirements, provide one of the following:

- a. Ramco Insulation, Inc.; Super-Stik.
- b. **<Insert manufacturer's name; product name or designation>**.
- c. or approved equal.

B. Expanded or Exfoliated Vermiculite Insulating Cement: Comply with ASTM C 196.

1. Products: Subject to compliance with requirements, provide one of the following:

- a. Ramco Insulation, Inc.; Thermokote V.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
- C. Mineral-Fiber, Hydraulic-Setting Insulating, and Finishing Cement: Comply with ASTM C 449.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Ramco Insulation, Inc.; Ramcote 1200 and Quik-Cote.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.

2.3 ADHESIVES

- A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated unless otherwise indicated.
- B. Calcium Silicate Adhesive: Fibrous, sodium-silicate-based adhesive with a service temperature range of **50 to 800 deg F** (10 to 427 deg C).
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-97.
 - b. Eagle Bridges - Marathon Industries; 290.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 81-27.
 - d. Mon-Eco Industries, Inc.; 22-30.
 - e. Vimasco Corporation; 760.
 - f. **<Insert manufacturer's name; product name or designation>**.
 - g. or approved equal.
 2. For indoor applications, adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- C. Cellular-Glass Adhesive: Two-component, thermosetting urethane adhesive containing no flammable solvents, with a service temperature range of **minus 100 to plus 200 deg F** (minus 73 to plus 93 deg C).
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 81-84.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
 2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

- D. Flexible Elastomeric and Polyolefin Adhesive: Comply with MIL-A-24179A, Type II, Class I.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Aeroflex USA, Inc.; Aero seal.
 - b. Armacell LLC; Armaflex 520 Adhesive.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-75.
 - d. **<Insert manufacturer's name; product name or designation>**.
 - e. or approved equal.
 2. For indoor applications, adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- E. Mineral-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-127.
 - b. Eagle Bridges - Marathon Industries; 225.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-60/85-70.
 - d. Mon-Eco Industries, Inc.; 22-25.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.
 2. For indoor applications, adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- F. Phenolic and Polyisocyanurate Adhesive: Solvent-based resin adhesive, with a service temperature range of **minus 75 to plus 300 deg F** (minus 59 to plus 149 deg C).
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-96.
 - b. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 81-33.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.
 2. For indoor applications, adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- G. Polystyrene Adhesive: Solvent- or water-based, synthetic resin adhesive with a service temperature range of **minus 20 to plus 140 deg F** (29 to plus 60 deg C).
1. Products: Subject to compliance with requirements, provide one of the following:

- a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-96.
- b. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-60.
- c. **<Insert manufacturer's name; product name or designation>**.
- d. or approved equal.

2.4 MASTICS

- A. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-PRF-19565C, Type II.
- B. Vapor-Barrier Mastic: Water based; suitable for indoor use on below-ambient services.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-80/30-90.
 - b. Vimasco Corporation; 749.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.
 2. Water-Vapor Permeance: ASTM E 96/E 96M, Procedure B, **0.013 perm** (0.009 metric perm) at **43-mil** (1.09-mm) dry film thickness.
 3. Service Temperature Range: **Minus 20 to plus 180 deg F** (Minus 29 to plus 82 deg C).
 4. Solids Content: ASTM D 1644, 58 percent by volume and 70 percent by weight.
 5. Color: White.
- C. Vapor-Barrier Mastic: Solvent based; suitable for outdoor use on below-ambient services.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Encacel.
 - b. Eagle Bridges - Marathon Industries; 570.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 60-95/60-96.
 - d. **<Insert manufacturer's name; product name or designation>**.
 - e. or approved equal.
 2. Water-Vapor Permeance: ASTM F 1249, **0.05 perm** (0.033 metric perm) at **30-mil** (0.8-mm) dry film thickness.
 3. Service Temperature Range: **Minus 50 to plus 220 deg F** (Minus 46 to plus 104 deg C).
 4. Solids Content: ASTM D 1644, 33 percent by volume and 46 percent by weight.
 5. Color: White.

- D. Breather Mastic: Water based; suitable for indoor and outdoor use on above-ambient services.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-10.
 - b. Eagle Bridges - Marathon Industries; 550.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 46-50.
 - d. Mon-Eco Industries, Inc.; 55-50.
 - e. Vimasco Corporation; WC-1/WC-5.
 - f. **<Insert manufacturer's name; product name or designation>**.
 - g. or approved equal.
 2. Water-Vapor Permeance: ASTM F 1249, **1.8 perms** (1.2 metric perms) at **0.0625-inch** (1.6-mm) dry film thickness.
 3. Service Temperature Range: **Minus 20 to plus 180 deg F** (Minus 29 to plus 82 deg C).
 4. Solids Content: 60 percent by volume and 66 percent by weight.
 5. Color: White.

2.5 LAGGING ADHESIVES

- A. Description: Comply with MIL-A-3316C, Class I, Grade A and shall be compatible with insulation materials, jackets, and substrates.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-50 AHV2.
 - b. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-36.
 - c. Vimasco Corporation; 713 and 714.
 - d. **<Insert manufacturer's name; product name or designation>**.
 - e. or approved equal.
 2. Fire-resistant, water-based lagging adhesive and coating for use indoors to adhere fire-resistant lagging cloths over equipment and pipe insulation.
 3. Service Temperature Range: **0 to plus 180 deg F** (Minus 18 to plus 82 deg C).
 4. Color: White.

2.6 SEALANTS

- A. Joint Sealants:
1. Joint Sealants for Cellular-Glass, Phenolic, and Polyisocyanurate Products: Subject to compliance with requirements, provide one of the following:

- a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76.
 - b. Eagle Bridges - Marathon Industries; 405.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-45.
 - d. Mon-Eco Industries, Inc.; 44-05.
 - e. Pittsburgh Corning Corporation; Pittseal 444.
 - f. **<Insert manufacturer's name; product name or designation>**.
 - g. or approved equal.
2. Joint Sealants for Polystyrene Products: Subject to compliance with requirements, provide one of the following:
- a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-70.
 - b. Eagle Bridges - Marathon Industries; 405.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-45.
 - d. Mon-Eco Industries, Inc.; 44-05.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.
3. Materials shall be compatible with insulation materials, jackets, and substrates.
4. Permanently flexible, elastomeric sealant.
5. Service Temperature Range: **Minus 100 to plus 300 deg F** (Minus 73 to plus 149 deg C).
6. Color: White or gray.
7. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- B. FSK and Metal Jacket Flashing Sealants:
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76.
 - b. Eagle Bridges - Marathon Industries; 405.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 95-44.
 - d. Mon-Eco Industries, Inc.; 44-05.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.
 2. Materials shall be compatible with insulation materials, jackets, and substrates.
 3. Fire- and water-resistant, flexible, elastomeric sealant.
 4. Service Temperature Range: **Minus 40 to plus 250 deg F** (Minus 40 to plus 121 deg C).
 5. Color: Aluminum.
 6. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

- C. ASJ Flashing Sealants, and Vinyl, PVDC, and PVC Jacket Flashing Sealants:
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
 2. Materials shall be compatible with insulation materials, jackets, and substrates.
 3. Fire- and water-resistant, flexible, elastomeric sealant.
 4. Service Temperature Range: **Minus 40 to plus 250 deg F** (Minus 40 to plus 121 deg C).
 5. Color: White.
 6. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.7 FACTORY-APPLIED JACKETS

- A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.
 2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C 1136, Type I.
 3. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C 1136, Type II.
 4. PVDC Jacket for Indoor Applications: **4-mil-** (0.10-mm-) thick, white PVDC biaxially oriented barrier film with a permeance at **0.02 perm** (0.013 metric perm) when tested according to ASTM E 96/E 96M and with a flame-spread index of 5 and a smoke-developed index of 20 when tested according to ASTM E 84.
 - a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) Dow Chemical Company (The); Saran 540 Vapor Retarder Film and Saran 560 Vapor Retarder Film.
 - 2) **<Insert manufacturer's name; product name or designation>**.
 - 3) or approved equal.
 5. PVDC Jacket for Outdoor Applications: **6-mil-** (0.15-mm-) thick, white PVDC biaxially oriented barrier film with a permeance at **0.01 perm** (0.007 metric perm) when tested according to ASTM E 96/E 96M and with a flame-spread index of 5 and a smoke-developed index of 25 when tested according to ASTM E 84.
 - a. Products: Subject to compliance with requirements, provide one of the following:

- 1) Dow Chemical Company (The); Saran 540 Vapor Retarder Film and Saran 560 Vapor Retarder Film.
 - 2) **<Insert manufacturer's name; product name or designation>**.
 - 3) or approved equal.
6. PVDC-SSL Jacket: PVDC jacket with a self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip.
- a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) Dow Chemical Company (The); Saran 540 Vapor Retarder Film and Saran 560 Vapor Retarder Film.
 - 2) **<Insert manufacturer's name; product name or designation>**.
 - 3) or approved equal.

2.8 FIELD-APPLIED FABRIC-REINFORCING MESH

- A. Woven Glass-Fiber Fabric for Pipe Insulation: Approximately **2 oz./sq. yd.** (68 g/sq. m) with a thread count of **10 strands by 10 strands/sq. in.** (4 strands by 4 strands/sq. mm) for covering pipe and pipe fittings.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Chil-Glas No. 10.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
- B. Woven Glass-Fiber Fabric for Equipment Insulation: Approximately **6 oz./sq. yd.** (203 g/sq. m) with a thread count of **5 strands by 5 strands/sq. in.** (2 strands by 2 strands/sq. mm) for covering equipment.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Chil-Glas No. 5.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
- C. Woven Polyester Fabric: Approximately **1 oz./sq. yd.** (34 g/sq. m) with a thread count of **10 strands by 10 strands/sq. in.** (4 strands by 4 strands/sq. mm), in a Leno weave.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Mast-A-Fab.
 - b. Vimasco Corporation; Elastafab 894.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.

2.9 FIELD-APPLIED CLOTHS

- A. Woven Glass-Fiber Fabric: Comply with MIL-C-20079H, Type I, plain weave, and presized a minimum of **8 oz./sq. yd.** (271 g/sq. m).
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Alpha Associates, Inc.; Alpha-Maritex 84215 and 84217/9485RW, Luben 59.
 - b. **<Insert manufacturer's name; product name or designation>.**
 - c. or approved equal.

2.10 FIELD-APPLIED JACKETS

- A. Field-applied jackets shall comply with ASTM C 921, Type I unless otherwise indicated.
- B. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D 1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Johns Manville; Zeston.
 - b. P.I.C. Plastics, Inc.; FG Series.
 - c. Proto Corporation; LoSmoke.
 - d. Speedline Corporation; SmokeSafe.
 - e. **<Insert manufacturer's name; product name or designation>.**
 - f. or approved equal.
 2. Adhesive: As recommended by jacket material manufacturer.
 3. Color: **[White] [Color-code jackets based on system. Color as selected by DEN Project Manager]**.
 4. Factory-fabricated fitting covers to match jacket if available; otherwise, field fabricate.
 - a. Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, unions, reducers, end caps, soil-pipe hubs, traps, mechanical joints, and P-trap and supply covers for lavatories.
 5. Factory-fabricated tank heads and tank side panels.
 6. Comply with the following:
 - a. Factory-fabricated fitting covers manufactured from 20-mil- thick, high-impact, ultraviolet-resistant PVC.
 - b. Factory-fabricated fitting covers manufactured from 30-mil-thick, high-impact, ultraviolet-resistant PVC.
 - c. Minimum Service Temperature: -40 degrees F.
 - d. Maximum Service Temperature: 150 degrees F.

- e. Moisture Vapor Transmission: ASTM E 96; 0.002 perm inches.
- f. Maximum Flame Spread: ASTM E 84; 25.
- g. Maximum Smoke Developed: ASTM E 84; 50.
- h. Minimum Thickness: 20 mil.
- i. Connections: Brush on welding adhesive or pressure sensitive color matching vinyl tape.

C. Metal Jacket:

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Metal Jacketing Systems.
 - b. ITW Insulation Systems; Aluminum and Stainless Steel Jacketing.
 - c. RPR Products, Inc.; Insul-Mate.
 - d. **<Insert manufacturer's name; product name or designation>**.
 - e. or approved equal.
2. Aluminum Jacket: Comply with [ASTM B 209](#) (ASTM B 209M), Alloy 3003, 3005, 3105, or 5005, Temper H-14.
 - a. **[Sheet and roll stock ready for shop or field sizing] [Factory cut and rolled to size]**.
 - b. Finish and thickness are indicated in field-applied jacket schedules.
 - c. Moisture Barrier for Indoor Applications: **[1-mil- (0.025-mm-) thick, heat-bonded polyethylene and kraft paper] [3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper] [2.5-mil- (0.063-mm-) thick polysurlyn]**.
 - d. Moisture Barrier for Outdoor Applications: **[3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper] [2.5-mil- (0.063-mm-) thick polysurlyn]**.
 - e. Factory-Fabricated Fitting Covers:
 - 1) Same material, finish, and thickness as jacket.
 - 2) Preformed 2-piece or gore, 45- and 90-degree, short- and long-radius elbows.
 - 3) Tee covers.
 - 4) Flange and union covers.
 - 5) End caps.
 - 6) Beveled collars.
 - 7) Valve covers.
 - 8) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.
 - f. Comply with the following:
 - 1) Minimum Thickness: 0.024-inch sheet.
 - 2) Finish: Embossed.
 - 3) Joining: Longitudinal slip joints and 2-inch laps.
 - 4) Fittings: 0.016-inch thick die shaped fitting covers with factory

- attached protective liner.
- 5) Metal Jacket Bands: 3/8 inch wide: .015-inch thick aluminum.
 - 6) Painted finish, 0.016 inch thick.
3. Stainless-Steel Jacket: ASTM A 167 or ASTM A 240/A 240M.
- a. **[Sheet and roll stock ready for shop or field sizing] [Factory cut and rolled to size].**
 - b. Material, finish, and thickness are indicated in field-applied jacket schedules.
 - c. Moisture Barrier for Indoor Applications: **[1-mil- (0.025-mm-) thick, heat-bonded polyethylene and kraft paper] [3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper] [2.5-mil- (0.063-mm-) thick polysurlyn].**
 - d. Moisture Barrier for Outdoor Applications: **[3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper] [2.5-mil- (0.063-mm-) thick polysurlyn].**
 - e. Factory-Fabricated Fitting Covers:
 - 1) Same material, finish, and thickness as jacket.
 - 2) Preformed 2-piece or gore, 45- and 90-degree, short- and long-radius elbows.
 - 3) Tee covers.
 - 4) Flange and union covers.
 - 5) End caps.
 - 6) Beveled collars.
 - 7) Valve covers.
 - 8) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.
 - f. Comply with the following:
 - 1) Thickness: 0.016 inch.
 - 2) Finish: Corrugated.
 - 3) Elbows: Gore type, for 45- and 90-degree elbows in same material, finish, and thickness as jacket.
 - 4) Jacket Bands: Stain
 - 5) Metal Jacket Bands: 3/8 inch wide; 0.010-inch thick stainless steel.

2.11 TAPES

- A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. ABI, Ideal Tape Division; 428 AWF ASJ.
 - b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0836.
 - c. Compac Corporation; 104 and 105.

- d. Venture Tape; 1540 CW Plus, 1542 CW Plus, and 1542 CW Plus/SQ.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.
 2. Width: **3 inches** (75 mm).
 3. Thickness: **11.5 mils** (0.29 mm).
 4. Adhesion: **90 ounces force/inch** (1.0 N/mm) in width.
 5. Elongation: 2 percent.
 6. Tensile Strength: **40 lbf/inch** (7.2 N/mm) in width.
 7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.
- B. SK Tape: Ffoil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C 1136.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. ABI, Ideal Tape Division; 491 AWF FSK.
 - b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0827.
 - c. Compac Corporation; 110 and 111.
 - d. Venture Tape; 1525 CW NT, 1528 CW, and 1528 CW/SQ.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.
 2. Width: **3 inches** (75 mm).
 3. Thickness: **6.5 mils** (0.16 mm).
 4. Adhesion: **90 ounces force/inch** (1.0 N/mm) in width.
 5. Elongation: 2 percent.
 6. Tensile Strength: **40 lbf/inch** (7.2 N/mm) in width.
 7. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.
- C. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive; suitable for indoor and outdoor applications.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. ABI, Ideal Tape Division; 370 White PVC tape.
 - b. Compac Corporation; 130.
 - c. Venture Tape; 1506 CW NS.
 - d. **<Insert manufacturer's name; product name or designation>**.
 - e. or approved equal.
 2. Width: **2 inches** (50 mm).
 3. Thickness: **6 mils** (0.15 mm).
 4. Adhesion: **64 ounces force/inch** (0.7 N/mm) in width.
 5. Elongation: 500 percent.
 6. Tensile Strength: **18 lbf/inch** (3.3 N/mm) in width.
- D. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive.
1. Products: Subject to compliance with requirements, provide one of the following:

- a. ABI, Ideal Tape Division; 488 AWF.
 - b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0800.
 - c. Compac Corporation; 120.
 - d. Venture Tape; 3520 CW.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.
2. Width: **2 inches** (50 mm).
 3. Thickness: **3.7 mils** (0.093 mm).
 4. Adhesion: **100 ounces force/inch** (1.1 N/mm) in width.
 5. Elongation: 5 percent.
 6. Tensile Strength: **34 lbf/inch** (6.2 N/mm) in width.
- E. PVDC Tape for Indoor Applications: White vapor-retarder PVDC tape with acrylic adhesive.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Dow Chemical Company (The); Saran 540 Vapor Retarder Tape.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
 2. Width: **3 inches** (75 mm).
 3. Film Thickness: **4 mils** (0.10 mm).
 4. Adhesive Thickness: **1.5 mils** (0.04 mm).
 5. Elongation at Break: 145 percent.
 6. Tensile Strength: **55 lbf/inch** (10.1 N/mm) in width.
- F. PVDC Tape for Outdoor Applications: White vapor-retarder PVDC tape with acrylic adhesive.
1. Products: Subject to compliance with requirements, **provide one of the following**:
 - a. Dow Chemical Company (The); Saran 560 Vapor Retarder Tape.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
 2. Width: **3 inches** (75 mm).
 3. Film Thickness: **6 mils** (0.15 mm).
 4. Adhesive Thickness: **1.5 mils** (0.04 mm).
 5. Elongation at Break: 145 percent.
 6. Tensile Strength: **55 lbf/inch** (10.1 N/mm) in width.

2.12 SECUREMENTS

- A. Bands:
1. Products: Subject to compliance with requirements, provide one of the following:

- a. ITW Insulation Systems; Gerrard Strapping and Seals.
 - b. RPR Products, Inc.; Insul-Mate Strapping, Seals, and Springs.
 - c. <Insert manufacturer's name; product name or designation>.
 - d. or approved equal.
2. Stainless Steel: ASTM A 167 or ASTM A 240/A 240M, [Type 304] [or] [Type 316]; 0.015 inch (0.38 mm) thick, [1/2 inch (13 mm)] [3/4 inch (19 mm)] wide with [wing seal] [or] [closed seal].
 3. Aluminum: ASTM B 209 (ASTM B 209M), Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch (0.51 mm) thick, [1/2 inch (13 mm)] [3/4 inch (19 mm)] wide with [wing seal] [or] [closed seal].
 4. Springs: Twin spring set constructed of stainless steel with ends flat and slotted to accept metal bands. Spring size determined by manufacturer for application.
- B. Insulation Pins and Hangers:
1. Metal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place.
 - a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) AGM Industries, Inc.; Tactoo Insul-Hangers, Series T.
 - 2) GEMCO; Perforated Base.
 - 3) Midwest Fasteners, Inc.; Spindle.
 - 4) <Insert manufacturer's name; product name or designation>.
 - 5) or approved equal.
 - b. Baseplate: Perforated, galvanized carbon-steel sheet, 0.030 inch (0.76 mm) thick by 2 inches (50 mm) square.
 - c. Spindle: [Copper- or zinc-coated, low carbon steel] [Aluminum] [Stainless steel], fully annealed, 0.106-inch- (2.6-mm-) diameter shank, length to suit depth of insulation indicated.
 - d. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.
 2. Self-Sticking-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place.
 - a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) AGM Industries, Inc.; Tactoo Insul-Hangers, Series TSA.
 - 2) GEMCO; Press and Peel.
 - 3) Midwest Fasteners, Inc.; Self Stick.
 - 4) <Insert manufacturer's name; product name or designation>.
 - 5) or approved equal.

- b. Baseplate: Galvanized carbon-steel sheet, **0.030 inch** (0.76 mm) thick by **2 inches** (50 mm) square.
 - c. Spindle: [**Copper- or zinc-coated, low-carbon steel**] [**Aluminum**] [**Stainless steel**], fully annealed, **0.106-inch-** (2.6-mm-) diameter shank, length to suit depth of insulation indicated.
 - d. Adhesive-backed base with a peel-off protective cover.
 3. Insulation-Retaining Washers: Self-locking washers formed from **0.016-inch-** (0.41-mm-) thick, [**galvanized-steel**] [**aluminum**] [**stainless-steel**] sheet, with beveled edge sized as required to hold insulation securely in place but not less than **1-1/2 inches** (38 mm) in diameter.
 - a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) AGM Industries, Inc.; RC-150.
 - 2) GEMCO; R-150.
 - 3) Midwest Fasteners, Inc.; WA-150.
 - 4) Nelson Stud Welding; Speed Clips.
 - 5) **<Insert manufacturer's name; product name or designation>**.
 - 6) or approved equal.
 - b. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in exposed locations.
 - C. Staples: Outward-clinching insulation staples, nominal **3/4-inch-** (19-mm-) wide, stainless steel or Monel.
 - D. Wire: [**0.080-inch** (2.0-mm) **nickel-copper alloy**] [**0.062-inch** (1.6-mm) **soft-annealed, stainless steel**] [**0.062-inch** (1.6-mm) **soft-annealed, galvanized steel**].
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. C & F Wire.
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.
- 2.13 CORNER ANGLES
- A. PVC Corner Angles: **30 mils** (0.8 mm) thick, minimum **1 by 1 inch** (25 by 25 mm), PVC according to ASTM D 1784, Class 16354-C. White or color-coded to match adjacent surface.
 - B. Aluminum Corner Angles: **0.040 inch** (1.0 mm) thick, minimum **1 by 1 inch** (25 by 25 mm), aluminum according to **ASTM B 209** (ASTM B 209M), Alloy 3003, 3005, 3105, or 5005; Temper H-14.

- C. Stainless-Steel Corner Angles: **0.024 inch** (0.61 mm) thick, minimum **1 by 1 inch** (25 by 25 mm), stainless steel according to ASTM A 167 or ASTM A 240/A 240M, **[Type 304]** **[or]** **[Type 316]**.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.
1. Verify that systems and equipment to be insulated have been tested and are free of defects.
 2. Verify that surfaces to be insulated are clean and dry.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.
- B. Surface Preparation: Clean and prepare surfaces to be insulated. Before insulating, apply a corrosion coating to insulated surfaces as follows:
1. Stainless Steel: Coat 300 series stainless steel with an epoxy primer **5 mils** (0.127 mm) thick and an epoxy finish **5 mils** (0.127 mm) thick if operating in a temperature range between **140 and 300 deg F** (60 and 149 deg C). Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
 2. Carbon Steel: Coat carbon steel operating at a service temperature between **32 and 300 deg F** (0 and 149 deg C) with an epoxy coating. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
- C. Coordinate insulation installation with the trade installing heat tracing. Comply with requirements for heat tracing that apply to insulation.
- D. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless-steel surfaces, use demineralized water.

3.3 ENVIRONMENTAL REQUIREMENTS

- A. Maintain ambient temperatures and conditions required by manufacturers of adhesives, mastics, and insulation cements.
- B. Maintain temperature during and after installation for minimum period of 24 hours.

3.4 GENERAL INSTALLATION REQUIREMENTS

- A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of equipment and piping including fittings, valves, and specialties.
- B. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of equipment and pipe system as specified in insulation system schedules.
- C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.
- D. Install insulation with longitudinal seams at top and bottom of horizontal runs.
- E. Install multiple layers of insulation with longitudinal and end seams staggered.
- F. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.
- G. Keep insulation materials dry during application and finishing.
- H. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
- I. Install insulation with least number of joints practical.
- J. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
 - 1. Install insulation continuously through hangers and around anchor attachments.
 - 2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
 - 3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
 - 4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.
- K. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
- L. Install insulation with factory-applied jackets as follows:
 - 1. Draw jacket tight and smooth.

2. Cover circumferential joints with **3-inch-** (75-mm-) wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced **4 inches** (100 mm) o.c.
 3. Overlap jacket longitudinal seams at least **1-1/2 inches** (38 mm). Install insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at [**2 inches** (50 mm)] [**4 inches** (100 mm)] o.c.
 - a. For below-ambient services, apply vapor-barrier mastic over staples.
 4. Cover joints and seams with tape, according to insulation material manufacturer's written instructions, to maintain vapor seal.
 5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to pipe flanges and fittings.
- M. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.
- N. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.
- O. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least **4 inches** (100 mm) beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.
- P. For above-ambient services, do not install insulation to the following:
1. Vibration-control devices.
 2. Testing agency labels and stamps.
 3. Nameplates and data plates.
 4. Manholes.
 5. Handholes.
 6. Cleanouts.

3.5 PENETRATIONS

- A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.
1. Seal penetrations with flashing sealant.
 2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 3. Extend jacket of outdoor insulation outside roof flashing at least **2 inches** (50 mm) below top of roof flashing.
 4. Seal jacket to roof flashing with flashing sealant.
- B. Insulation Installation at Below-Grade Exterior Wall Penetrations: Terminate insulation

flush with sleeve seal. Seal terminations with flashing sealant.

- C. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.
1. Seal penetrations with flashing sealant.
 2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least **2 inches** (50 mm).
 4. Seal jacket to wall flashing with flashing sealant.
- D. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.
- E. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation continuously through penetrations of fire-rated walls and partitions.
1. Comply with requirements in Section 078413 "Penetration Firestopping" for firestopping and fire-resistive joint sealers.
- F. Insulation Installation at Floor Penetrations:
1. Pipe: Install insulation continuously through floor penetrations.
 2. Seal penetrations through fire-rated assemblies. Comply with requirements in Section 078413 "Penetration Firestopping."

3.6 EQUIPMENT, TANK, AND VESSEL INSULATION INSTALLATION

- A. Secure insulation with adhesive and anchor pins and speed washers.
1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for **[100] [50] <Insert percentage>** percent coverage of tank and vessel surfaces.
 2. Groove and score insulation materials to fit as closely as possible to equipment, including contours. Bevel insulation edges for cylindrical surfaces for tight joints. Stagger end joints.
 3. Protect exposed corners with secured corner angles.
 4. Install adhesively attached or self-sticking insulation hangers and speed washers on sides of tanks and vessels as follows:
 - a. Do not weld anchor pins to ASME-labeled pressure vessels.
 - b. Select insulation hangers and adhesive that are compatible with service temperature and with substrate.
 - c. On tanks and vessels, maximum anchor-pin spacing is **3 inches** (75 mm) from insulation end joints, and **16 inches** (400 mm) o.c. in both directions.
 - d. Do not overcompress insulation during installation.

- e. Cut and miter insulation segments to fit curved sides and domed heads of tanks and vessels.
 - f. Impale insulation over anchor pins and attach speed washers.
 - g. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
5. Secure each layer of insulation with stainless-steel or aluminum bands. Select band material compatible with insulation materials.
 6. Where insulation hangers on equipment and vessels are not permitted or practical and where insulation support rings are not provided, install a girdle network for securing insulation. Stretch prestressed aircraft cable around the diameter of vessel and make taut with clamps, turnbuckles, or breather springs. Place one circumferential girdle around equipment approximately **6 inches** (150 mm) from each end. Install wire or cable between two circumferential girdles **12 inches** (300 mm) o.c. Install a wire ring around each end and around outer periphery of center openings, and stretch prestressed aircraft cable radially from the wire ring to nearest circumferential girdle. Install additional circumferential girdles along the body of equipment or tank at a minimum spacing of **48 inches** (1200 mm) o.c. Use this network for securing insulation with tie wire or bands.
 7. Stagger joints between insulation layers at least **3 inches** (75 mm).
 8. Install insulation in removable segments on equipment access doors, manholes, handholes, and other elements that require frequent removal for service and inspection.
 9. Bevel and seal insulation ends around manholes, handholes, ASME stamps, and nameplates.
 10. For equipment with surface temperatures below ambient, apply mastic to open ends, joints, seams, breaks, and punctures in insulation.
- B. Flexible Elastomeric Thermal Insulation Installation for Tanks and Vessels: Install insulation over entire surface of tanks and vessels.
1. Apply 100 percent coverage of adhesive to surface with manufacturer's recommended adhesive.
 2. Seal longitudinal seams and end joints.
- ### 3.7 GENERAL PIPE INSULATION INSTALLATION
- A. Requirements in this article generally apply to all insulation materials except where more specific requirements are specified in various pipe insulation material installation articles.
- B. Insulation Installation on Fittings, Valves, Strainers, Flanges, and Unions:
1. Install insulation over fittings, valves, strainers, flanges, unions, and other specialties with continuous thermal and vapor-retarder integrity unless otherwise indicated.
 2. Insulate pipe elbows using preformed fitting insulation or mitered fittings made from same material and density as adjacent pipe insulation. Each piece shall be

- butted tightly against adjoining piece and bonded with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.
3. Insulate tee fittings with preformed fitting insulation or sectional pipe insulation of same material and thickness as used for adjacent pipe. Cut sectional pipe insulation to fit. Butt each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.
 4. Insulate valves using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.
 5. Insulate strainers using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below-ambient services, provide a design that maintains vapor barrier.
 6. Insulate flanges and unions using a section of oversized preformed pipe insulation. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker.
 7. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below-ambient services and a breather mastic for above-ambient services. Reinforce the mastic with fabric-reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.
 8. For services not specified to receive a field-applied jacket except for flexible elastomeric and polyolefin, install fitted PVC cover over elbows, tees, strainers, valves, flanges, and unions. Terminate ends with PVC end caps. Tape PVC covers to adjoining insulation facing using PVC tape.
 9. Stencil or label the outside insulation jacket of each union with the word "union." Match size and color of pipe labels.
- C. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes, vessels, and equipment. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.
- D. Install removable insulation covers at locations indicated. Installation shall conform to the following:
1. Make removable flange and union insulation from sectional pipe insulation of same thickness as that on adjoining pipe. Install same insulation jacket as adjoining pipe insulation.
 2. When flange and union covers are made from sectional pipe insulation, extend insulation from flanges or union long at least two times the insulation thickness over adjacent pipe insulation on each side of flange or union. Secure flange

- cover in place with stainless-steel or aluminum bands. Select band material compatible with insulation and jacket.
3. Construct removable valve insulation covers in same manner as for flanges, except divide the two-part section on the vertical centerline of valve body.
 4. When covers are made from block insulation, make two halves, each consisting of mitered blocks wired to stainless-steel fabric. Secure this wire frame, with its attached insulation, to flanges with tie wire. Extend insulation at least **2 inches** (50 mm) over adjacent pipe insulation on each side of valve. Fill space between flange or union cover and pipe insulation with insulating cement. Finish cover assembly with insulating cement applied in two coats. After first coat is dry, apply and trowel second coat to a smooth finish.
 5. Unless a PVC jacket is indicated in field-applied jacket schedules, finish exposed surfaces with a metal jacket.

3.8 CALCIUM SILICATE INSULATION INSTALLATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure single-layer insulation with stainless-steel bands at **12-inch** (300-mm) intervals and tighten bands without deforming insulation materials.
2. Install two-layer insulation with joints tightly butted and staggered at least **3 inches** (75 mm). Secure inner layer with wire spaced at **12-inch** (300-mm) intervals. Secure outer layer with stainless-steel bands at **12-inch** (300-mm) intervals.
3. Apply a skim coat of mineral-fiber, hydraulic-setting cement to insulation surface. When cement is dry, apply flood coat of lagging adhesive and press on one layer of glass cloth or tape. Overlap edges at least **1 inch** (25 mm). Apply finish coat of lagging adhesive over glass cloth or tape. Thin finish coat to achieve smooth, uniform finish.

B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of block insulation of same material and thickness as pipe insulation.
4. Finish flange insulation same as pipe insulation.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed sections of same material as straight segments of pipe insulation when available.
2. When preformed insulation sections of insulation are not available, install mitered sections of calcium silicate insulation. Secure insulation materials with wire or bands.
3. Finish fittings insulation same as pipe insulation.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install mitered segments of calcium silicate insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
2. Install insulation to flanges as specified for flange insulation application.
3. Finish valve and specialty insulation same as pipe insulation.

3.9 CELLULAR-GLASS INSULATION INSTALLATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of insulation to pipe with wire or bands and tighten bands without deforming insulation materials.
2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and applicable insulation joint sealant.
3. For insulation with factory-applied jackets on above-ambient services, secure laps with outward-clinched staples at **6 inches** (150 mm) o.c.
4. For insulation with factory-applied jackets on below-ambient services, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of cellular-glass block insulation of same thickness as pipe insulation.
4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least **1 inch** (25 mm), and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed sections of same material as straight segments of pipe insulation when available.
2. When preformed sections of insulation are not available, install mitered sections of cellular-glass insulation. Secure insulation materials with wire or bands.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed sections of cellular-glass insulation to valve body.
2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.

3.10 FLEXIBLE ELASTOMERIC INSULATION INSTALLATION

- A. Seal longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
- B. Insulation Installation on Pipe Flanges:
1. Install pipe insulation to outer diameter of pipe flange.
 2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
 3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of sheet insulation of same thickness as pipe insulation.
 4. Secure insulation to flanges and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
- C. Insulation Installation on Pipe Fittings and Elbows:
1. Install mitered sections of pipe insulation.
 2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
- D. Insulation Installation on Valves and Pipe Specialties:
1. Install preformed valve covers manufactured of same material as pipe insulation when available.
 2. When preformed valve covers are not available, install cut sections of pipe and sheet insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
 3. Install insulation to flanges as specified for flange insulation application.
 4. Secure insulation to valves and specialties and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

3.11 MINERAL-FIBER INSULATION INSTALLATION

- A. Insulation Installation on Straight Pipes and Tubes:
1. Secure each layer of preformed pipe insulation to pipe with wire or bands and tighten bands without deforming insulation materials.
 2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and applicable insulation joint sealant.
 3. For insulation with factory-applied jackets on above-ambient surfaces, secure laps with outward-clinched staples at **6 inches** (150 mm) o.c.
 4. For insulation with factory-applied jackets on below-ambient surfaces, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive as

recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with mineral-fiber blanket insulation.
4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least **1 inch (25 mm)**, and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed sections of same material as straight segments of pipe insulation when available.
2. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with wire or bands.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed sections of same material as straight segments of pipe insulation when available.
2. When preformed sections are not available, install mitered sections of pipe insulation to valve body.
3. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
4. Install insulation to flanges as specified for flange insulation application.

3.12 PHENOLIC INSULATION INSTALLATION

A. General Installation Requirements:

1. Secure single-layer insulation with stainless-steel bands at **12-inch (300-mm)** intervals and tighten bands without deforming insulation materials.
2. Install 2-layer insulation with joints tightly butted and staggered at least **3 inches (75 mm)**. Secure inner layer with **0.062-inch (1.6-mm)** wire spaced at **12-inch (300-mm)** intervals. Secure outer layer with stainless-steel bands at **12-inch (300-mm)** intervals.

B. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of insulation to pipe with wire or bands and tighten bands without deforming insulation materials.
2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and applicable insulation joint sealant.

3. For insulation with factory-applied jackets on above-ambient services, secure laps with outward-clinched staples at **6 inches (150 mm)** o.c.
4. For insulation with factory-applied jackets with vapor retarders on below-ambient services, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

C. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of block insulation of same material and thickness as pipe insulation.

D. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed insulation sections of same material as straight segments of pipe insulation.

E. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed insulation sections of same material as straight segments of pipe insulation.
2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.

3.13 POLYISOCYANURATE INSULATION INSTALLATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of insulation to pipe with tape or bands and tighten without deforming insulation materials. Orient longitudinal joints between half sections in 3- and 9-o'clock positions on the pipe.
2. For insulation with factory-applied jackets with vapor barriers, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive or tape as recommended by insulation material manufacturer and seal with vapor-barrier mastic.
3. All insulation shall be tightly butted and free of voids and gaps at all joints. Vapor barrier must be continuous. Before installing jacket material, install vapor-barrier system.

B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, same thickness of adjacent pipe insulation, not to exceed **1-1/2-inch (38-mm)** thickness.

3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of polyisocyanurate block insulation of same thickness as pipe insulation.

C. Insulation Installation on Fittings and Elbows:

1. Install preformed sections of same material as straight segments of pipe insulation.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed sections of polyisocyanurate insulation to valve body.
2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.

3.14 POLYOLEFIN INSULATION INSTALLATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Seal split-tube longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

B. Insulation Installation on Pipe Flanges:

1. Install pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of polyolefin sheet insulation of same thickness as pipe insulation.
4. Secure insulation to flanges and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install mitered sections of polyolefin pipe insulation.
2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install cut sections of polyolefin pipe and sheet insulation to valve body.
2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.

4. Secure insulation to valves and specialties, and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

3.15 POLYSTYRENE INSULATION INSTALLATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of insulation with tape or bands and tighten bands without deforming insulation materials. Orient longitudinal joints between half sections in 3- and 9-o'clock positions on the pipe.
2. For insulation with factory-applied jackets with vapor barriers, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive or tape as recommended by insulation material manufacturer and seal with vapor-barrier mastic.
3. All insulation shall be tightly butted and free of voids and gaps at all joints. Vapor barrier must be continuous. Before installing jacket material, install vapor-barrier system.

B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, and make thickness same as adjacent pipe insulation, not to exceed 1-1/2-inch (38-mm) thickness.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of polystyrene block insulation of same thickness as pipe insulation.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed insulation sections of same material as straight segments of pipe insulation.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed section of polystyrene insulation to valve body.
2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.

3.16 FIELD-APPLIED JACKET INSTALLATION

A. Where glass-cloth jackets are indicated, install directly over bare insulation or insulation with factory-applied jackets.

1. Draw jacket smooth and tight to surface with 2-inch (50-mm) overlap at seams and joints.

2. Embed glass cloth between two 0.062-inch- (1.6-mm-) thick coats of lagging adhesive.
 3. Completely encapsulate insulation with coating, leaving no exposed insulation.
- B. Where FSK jackets are indicated, install as follows:
1. Draw jacket material smooth and tight.
 2. Install lap or joint strips with same material as jacket.
 3. Secure jacket to insulation with manufacturer's recommended adhesive.
 4. Install jacket with 1-1/2-inch (38-mm) laps at longitudinal seams and 3-inch- (75-mm-) wide joint strips at end joints.
 5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.
- C. Where PVC jackets are indicated, install with 1-inch (25-mm) overlap at longitudinal seams and end joints. Seal with manufacturer's recommended adhesive.
1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.
- D. Where metal jackets are indicated, install with 2-inch (50-mm) overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12 inches (300 mm) o.c. and at end joints.
- E. Where PVDC jackets are indicated, install as follows:
1. Apply three separate wraps of filament tape per insulation section to secure pipe insulation to pipe prior to installation of PVDC jacket.
 2. Wrap factory-presizes jackets around individual pipe insulation sections with one end overlapping the previously installed sheet. Install presized jacket with an approximate overlap at butt joint of 2 inches (50 mm) over the previous section. Adhere lap seal using adhesive or SSL, and then apply 1-1/4 circumferences of appropriate PVDC tape around overlapped butt joint.
 3. Continuous jacket can be spiral wrapped around a length of pipe insulation. Apply adhesive or PVDC tape at overlapped spiral edge. When electing to use adhesives, refer to manufacturer's written instructions for application of adhesives along this spiral edge to maintain a permanent bond.
 4. Jacket can be wrapped in cigarette fashion along length of roll for insulation systems with an outer circumference of 33-1/2 inches (850 mm) or less. The 33-1/2-inch- (850-mm-) circumference limit allows for 2-inch- (50-mm-) overlap seal. Using the length of roll allows for longer sections of jacket to be installed at one time. Use adhesive on the lap seal. Visually inspect lap seal for "fishmouthing," and use PVDC tape along lap seal to secure joint.
 5. Repair holes or tears in PVDC jacket by placing PVDC tape over the hole or tear and wrapping a minimum of 1-1/4 circumferences to avoid damage to tape edges.

3.17 FINISHES

- A. Equipment and Pipe Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."
 - 1. Flat Acrylic Finish: **[Two]** <Insert number> finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.
 - a. Finish Coat Material: Interior, flat, latex-emulsion size.
- B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.
- C. Color: Final color as selected by DEN Project Manager. Vary first and second coats to allow visual inspection of the completed Work.
- D. Do not field paint aluminum or stainless-steel jackets.

3.18 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage]** **[Engage]** a qualified testing agency to perform tests and inspections.
- B. Perform tests and inspections.
- C. Tests and Inspections:
 - 1. Inspect field-insulated equipment, randomly selected by DEN Project Manager, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to **[one]** <Insert number> location(s) for each type of equipment defined in the "Equipment Insulation Schedule" Article. For large equipment, remove only a portion adequate to determine compliance.
 - 2. Inspect pipe, fittings, strainers, and valves, randomly selected by DEN Project Manager, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to **[three]** <Insert number> locations of straight pipe, **[three]** <Insert number> locations of threaded fittings, **[three]** <Insert number> locations of welded fittings, **[two]** <Insert number> locations of threaded strainers, **[two]** <Insert number> locations of welded strainers, **[three]** <Insert number> locations of threaded valves, and **[three]** <Insert number> locations of flanged valves for each pipe service defined in the "Piping Insulation Schedule, General" Article.
- D. All insulation applications will be considered defective Work if sample inspection reveals noncompliance with requirements.

3.19 EQUIPMENT INSULATION SCHEDULE

- A. Insulation materials and thicknesses are identified below. If more than one material is listed for a type of equipment, selection from materials listed is Contractor's option.
- B. Insulate indoor and outdoor equipment that is not factory insulated.
- C. Fire-suppression water storage tank insulation shall be [**one of**] the following:
 - 1. Cellular Glass: [2 inches (50 mm)] <Insert dimension> thick.
 - 2. Flexible Elastomeric: [1 inch (25 mm)] <Insert dimension> thick.
 - 3. Mineral-Fiber Board: [1 inch (25 mm)] <Insert dimension> thick and [2-lb/cu. ft. (32-kg/cu. m)] [3-lb/cu. ft. (48-kg/cu. m)] [6-lb/cu. ft. (96-kg/cu. m)] nominal density.
 - 4. Mineral-Fiber Pipe and Tank: [1 inch (25 mm)] <Insert dimension> thick.
 - 5. Phenolic: [1 inch (25 mm)] <Insert dimension> thick.
 - 6. Polyisocyanurate: [1 inch (25 mm)] <Insert dimension> thick.
 - 7. Polyolefin: [1 inch (25 mm)] <Insert dimension> thick.

3.20 PIPING INSULATION SCHEDULE, GENERAL

- A. Acceptable preformed pipe and tubular insulation materials and thicknesses are identified for each piping system and pipe size range. If more than one material is listed for a piping system, selection from materials listed is Contractor's option.
- B. Items Not Insulated: Unless otherwise indicated, do not install insulation on the following:
 - 1. Indoor fire-suppression piping.
 - 2. Underground piping.

3.21 INDOOR PIPING INSULATION SCHEDULE

- A. Indoor Engine Coolant Piping for Remote Radiator of Engine-Driven Fire Pump:
 - 1. All Pipe Sizes: Insulation shall be [**one of**] the following:
 - a. Calcium Silicate: [2 inches (50 mm)] <Insert dimension> thick.
 - b. Cellular Glass: [2 inches (50 mm)] <Insert dimension> thick.
 - c. Mineral-Fiber, Preformed Pipe, Type I or II: [2 inches (50 mm)] <Insert dimension> thick.
- B. Indoor Engine Exhaust Piping and Silencer, All Pipe Sizes: Calcium silicate, [4 inches (100 mm)] <Insert dimension> thick.

3.22 OUTDOOR, ABOVEGROUND PIPING INSULATION SCHEDULE

- A. Fire-Suppression Water Piping:

1. All Pipe Sizes: Insulation shall be[**one of**] the following:
 - a. Cellular Glass: [2 inches (50 mm)] <Insert dimension> thick.
 - b. Mineral-Fiber, Preformed Pipe Insulation, Type I: [2 inches (50 mm)] <Insert dimension> thick.
 - c. Phenolic: [2 inches (50 mm)] <Insert dimension> thick.

- B. Outdoor Engine Coolant Piping for Remote Radiator of Engine-Driven Fire Pump:
 1. All Pipe Sizes: Insulation shall be[**one of**] the following:
 - a. Calcium Silicate: [2 inches (50 mm)] <Insert dimension> thick.
 - b. Cellular Glass: [2 inches (50 mm)] <Insert dimension> thick.
 - c. Mineral-Fiber, Preformed Pipe, Type I or II: [2 inches (50 mm)] <Insert dimension> thick.

- C. Outdoor Engine Exhaust Piping and Silencer, All Pipe Sizes: Calcium silicate, [4 inches (100 mm)] <Insert dimension> thick.

- D. Outdoor Fire-Suppression Piping Filled with Water:
 1. All Pipe Sizes: Insulation shall be[**one of**] the following:
 - a. Cellular Glass: [2 inches (50 mm)] <Insert dimension> thick.
 - b. Flexible Elastomeric: [2 inches (50 mm)] <Insert dimension> thick.
 - c. Mineral-Fiber, Preformed Pipe Insulation, Type I: [2 inches (50 mm)] <Insert dimension> thick.
 - d. Phenolic: [2 inches (50 mm)] <Insert dimension> thick.
 - e. Polyisocyanurate: [2 inches (50 mm)] <Insert dimension> thick.
 - f. Polyolefin: [2 inches (50 mm)] <Insert dimension> thick.
 - g. Polystyrene: [2 inches (50 mm)] <Insert dimension> thick.

3.23 INDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.

- B. If more than one material is listed, selection from materials listed is Contractor's option.

- C. Piping, Concealed:
 1. None.
 2. Aluminum, [Smooth] [Corrugated] [Stucco Embossed]: [0.016 inch (0.41 mm)] [0.020 inch (0.51 mm)] [0.024 inch (0.61 mm)] [0.032 inch (0.81 mm)] [0.040 inch (1.0 mm)] thick.
 3. Painted Aluminum, [Smooth] [Corrugated] [Stucco Embossed]: [0.016 inch (0.41 mm)] [0.020 inch (0.51 mm)] [0.024 inch (0.61 mm)] [0.032 inch (0.81 mm)] thick.

4. Stainless Steel, [**Type 304**] [or] [**Type 316**], [**Smooth 2B Finish**] [**Corrugated**] [**Stucco Embossed**]: [0.010 inch (0.25 mm)] [0.016 inch (0.41 mm)] [0.020 inch (0.51 mm)] [0.024 inch (0.61 mm)] thick.
5. <Insert jacket type>.

D. Piping, Exposed:

1. None.
2. [**PVC**] [**PVC, Color-Coded by System**]: [20 mils (0.5 mm)] [30 mils (0.8 mm)] thick.
3. Aluminum, [**Smooth**] [**Corrugated**] [**Stucco Embossed**]: [0.016 inch (0.41 mm)] [0.020 inch (0.51 mm)] [0.024 inch (0.61 mm)] [0.032 inch (0.81 mm)] [0.040 inch (1.0 mm)] thick.
4. Painted Aluminum, [**Smooth**] [**Corrugated**] [**Stucco Embossed**]: [0.016 inch (0.41 mm)] [0.020 inch (0.51 mm)] [0.024 inch (0.61 mm)] [0.032 inch (0.81 mm)] thick.
5. Stainless Steel, [**Type 304**] [or] [**Type 316**], [**Smooth 2B Finish**] [**Corrugated**] [**Stucco Embossed**]: [0.010 inch (0.25 mm)] [0.016 inch (0.41 mm)] [0.020 inch (0.51 mm)] [0.024 inch (0.61 mm)] thick.
6. <Insert jacket type>.

3.24 OUTDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
- B. If more than one material is listed, selection from materials listed is Contractor's option.
- C. Equipment, Concealed:

1. None.
2. [**PVC**] [**PVC, Color-Coded by System**]: [20 mils (0.5 mm)] [30 mils (0.8 mm)] thick.
3. Aluminum, [**Smooth**] [**Corrugated**] [**Stucco Embossed**]: [0.016 inch (0.41 mm)] [0.020 inch (0.51 mm)] [0.024 inch (0.61 mm)] [0.032 inch (0.81 mm)] [0.040 inch (1.0 mm)] thick.
4. Painted Aluminum, [**Smooth**] [**Corrugated**] [**Stucco Embossed**]: [0.016 inch (0.41 mm)] [0.020 inch (0.51 mm)] [0.024 inch (0.61 mm)] [0.032 inch (0.81 mm)] thick.
5. Stainless Steel, [**Type 304**] [or] [**Type 316**], [**Smooth 2B Finish**] [**Corrugated**] [**Stucco Embossed**]: [0.010 inch (0.25 mm)] [0.016 inch (0.41 mm)] [0.020 inch (0.51 mm)] [0.024 inch (0.61 mm)] thick.
6. <Insert jacket type>.

- D. Equipment, Exposed, up to 48 Inches (1200 mm) in Diameter or with Flat Surfaces up to 72 Inches (1800 mm):

1. [**Painted**] Aluminum, [**Smooth**] [**Corrugated**] [**Stucco Embossed**] [**with Z-Shaped Locking Seam**]: [0.016 inch (0.41 mm)] [0.020 inch (0.51 mm)] [0.024

- inch (0.61 mm)] [0.032 inch (0.81 mm)] [0.040 inch (1.0 mm)] thick.
 2. Stainless Steel, [Type 304] [or] [Type 316], [Smooth 2B Finish] [Corrugated] [Stucco Embossed] [with Z-Shaped Locking Seam]: [0.010 inch (0.25 mm)] [0.016 inch (0.41 mm)] [0.020 inch (0.51 mm)] [0.024 inch (0.61 mm)] thick.
 3. <Insert jacket type>.
- E. Equipment, Exposed, Larger Than 48 Inches (1200 mm) in Diameter or with Flat Surfaces Larger Than 72 Inches (1800 mm):
1. [Painted] Aluminum, [Smooth] [Stucco Embossed] with [1-1/4-Inch- (32-mm-) Deep Corrugations] [2-1/2-Inch- (65-mm-) Deep Corrugations] [4-by-1-Inch (100-by-25-mm) Box Ribs]: [0.032 inch (0.81 mm)] [0.040 inch (1.0 mm)] thick.
 2. Stainless Steel, [Type 304] [or] [Type 316], [Smooth] [Stucco Embossed], with [1-1/4-Inch- (32-mm-) Deep Corrugations] [2-1/2-Inch- (65-mm-) Deep Corrugations] [4-by-1-Inch (100-by-25-mm) Box Ribs]: [0.020 inch (0.51 mm)] [0.024 inch (0.61 mm)] thick.
 3. <Insert jacket type>.
- F. Outdoor Exposed Piping:
1. PVC: [20 mils (0.5 mm)] [30 mils (0.8 mm)] [40 mils (1.0 mm)] thick.
 2. [Painted] Aluminum, [Smooth] [Corrugated] [Stucco Embossed] [with Z-Shaped Locking Seam]: [0.016 inch (0.41 mm)] [0.020 inch (0.51 mm)] [0.024 inch (0.61 mm)] [0.032 inch (0.81 mm)] [0.040 inch (1.0 mm)] thick.
 3. Stainless Steel, [Type 304] [or] [Type 316], [Smooth 2B Finish] [Corrugated] [Stucco Embossed] [with Z-Shaped Locking Seam]: [0.010 inch (0.25 mm)] [0.016 inch (0.41 mm)] [0.020 inch (0.51 mm)] [0.024 inch (0.61 mm)] thick.
 4. <Insert jacket type>.

PART 4 - PART 4- MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PART 5- PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 210700

SECTION 211100 - FACILITY FIRE-SUPPRESSION WATER-SERVICE PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes fire-suppression water-service piping and related components outside the building [**and service entrance piping through floor into the building**] [**and service entrance piping through wall into the building**].
- B. Include all pipe and fittings, valves and connections for fire-suppression water-service piping. All piping required to complete the fire protection systems shall be designed, fabricated, and installed based on approved hydraulic calculations and shop drawings prepared and submitted by the Fire Protection Work Contractor (FPWC).
- C. The FPWC shall provide all special tools required for installation or maintenance for the equipment provided. If conflicts occur in this specification or between this specification and the contract documents, the most stringent requirement shall apply.
- D. Work on all systems require DEN Shut Down Requests be completed and filed a minimum of five (5) days before work is to be done. Work on wet systems must be done during off hour periods, 10:00 p.m. to 6:00 a.m. Sunday night through Friday morning. No system may be shut down for periods longer than ten (10) hours. The Fire Sprinkler Contractor is responsible for the required fire watch and must remain ON SITE for the entire period of time that the system is not in service. Failure to comply may be reason for immediate suspension of work privileges
- E. Utility-furnished products include water meters that will be furnished to the site, ready for installation.
- F. Related Sections:
 - 1. Section 211200 "Fire-Suppression Standpipes" for fire-suppression standpipes inside the building.
 - 2. Section 211313 "Wet-Pipe Sprinkler Systems" for wet-pipe fire-suppression sprinkler systems inside the building.
 - 3. Section 211316 "Dry-Pipe Sprinkler Systems" for dry-pipe fire-suppression sprinkler systems inside the building.
 - 4. Section 211339 "Foam-Water Systems" for AFFF piping.
 - 5. [**Section 213113 "Electric-Drive, Centrifugal Fire Pumps"**] [**Section 213116 "Diesel-Drive, Centrifugal Fire Pumps"**] [**Section 213213 "Electric-Drive,**

Vertical-Turbine Fire Pumps"] [Section 213216 "Diesel-Drive, Vertical-Turbine Fire Pumps"] for fire pumps, pressure-maintenance pumps, and controllers.

- G. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Pipe sizes used in this specification are Nominal Pipe Size (NPS).
- B. Other definitions for fire protection systems are listed in NFPA 13 and 14.
- C. "Working Plans" as used in this section means those documents (including drawings and calculations) prepared pursuant to the requirements contained in NFPA 13 for obtaining approval of the authority having jurisdiction.
- D. High-Pressure Piping System: Fire-suppression piping system designed to operate at working pressure higher than standard 175 psig
- E. Underground Service-Entrance Piping: Underground service piping below the building.
- F. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated, including the following:
1. Piping materials and fittings.
 2. Valves and trim.
 3. Monitors.
 4. Fire hydrants.
 5. Fire department connections, including type; number, size, and arrangement of inlets; caps and chains; size and direction of outlet; escutcheon and marking; and finish.
 6. Include data substantiating that materials comply with requirements.
- B. Shop Drawings:
1. Submit working plans and product data under provisions of Division 01. Submittal shall include drawings, hydraulic calculations, hydraulic reference points, detailed pipe layout, components, accessories, and other items as defined by NFPA 13. Indicate pipe materials used, jointing methods, supports, and wall penetration seals. Indicate installation, layout, weights, mounting and support details, and piping connections.
 2. Working Plans drawings shall be submitted in latest version of Revit format or latest version of Adobe Acrobat (bookmarked and free of security) in hard copy and on Compact Disk. Two (2) sets of full size drawings (34 x 44) and (1)

- Compact Disk containing all drawing files shall be submitted to the DEN Life Safety Team as part of each submittal.
3. Working plans submitted for approval shall have the signed wet stamp of a registered Fire Protection Engineer licensed in the State of Colorado (or N.I.C.E.T. 4), certifying that the fire sprinkler system has been designed and hydraulically calculated in compliance with NFPA and governing authorities requirements.
 4. Copy of City and County of Denver Fire Protection Contractors License, and Fire protection Supervisor's certificate for class of equipment being installed.
 5. Obtain DEN Life Safety Team review and stamp prior to submittal for permit.
 6. Submit working plans and product data to Denver Fire Department for approval. Subject to approval, submit copy of approved submittal and permit to the DEN Project Manager.
 7. Detail precast concrete vault assemblies and indicate dimensions, method of field assembly, and components.
 8. Wiring Diagrams: For power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: For piping and specialties including relation to other services in same area, drawn to scale. Show piping and specialty sizes and valves, meter and specialty locations, and elevations.
- B. Submit additional non returnable copies of current permits and agency approved working plan drawings with System Interruption Request.
- C. Maintenance data for each type of valve, piping specialty, fire protection specialty, and fire department valve specified, for inclusion in operating and maintenance manual specified in Division 01.
- D. Welders Certificate: Include welders' certification of compliance with **[ASME SEC 9]** **[AWS D1.1.]** <Insert>.
- E. "As Built" Plans shall be provided in the same format and manner as described above. Each set shall be equipped with a plan holder equal to "Stacor Plan Clamps" for the appropriate size drawings.
- F. Contractor shall submit fully dimensioned spool drawings for all welded piping work. Drawings shall indicate all weld types, sizes, and materials to be used. The spool drawing size shall match the full size contract documents of either 24x36 or 34x44. Spool drawings shall be submitted in either the latest version of Revit or the latest version of Adobe Acrobat (pdf). Adobe Acrobat files shall not contain security. Other file formats will not be accepted.
- G. Field quality-control reports.

1.6 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 EXTRA STOCK

- A. The following must be delivered and accepted prior to any testing:
 - 1. Provide a spare parts list. The list is to be provided with material submittal cut sheets.
 - 2. Provide one set of renewable parts for each type of valve installed. Spare parts are not required for the following: OS&Y valves and Butterfly valves.
 - 3. Provide DEN Representatives all special tools required for installation and maintenance.

1.8 QUALITY ASSURANCE

- A. Regulatory Requirements:
 - 1. Comply with requirements of utility company supplying water. Include tapping of water mains and backflow prevention.
 - 2. Comply with standards of authorities having jurisdiction for fire-suppression water-service piping, including materials, hose threads, installation, and testing.
- B. Piping materials shall bear label, stamp, or other markings of specified testing agency.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Comply with the "Approval Guide," published by FM Global, or UL's "Fire Protection Equipment Directory" for fire-service-main products.
- E. NFPA Compliance: Comply with NFPA 24 for materials, installations, tests, flushing, and valve and hydrant supervision for fire-suppression water-service piping.
- F. Qualifications for Welding Processes and Operators: Comply with the requirements of AWS B2.1, Specifications for Procedure and Performance Qualifications.
- G. Manufacturer: Company specializing in manufacturing the products specified in this Section with minimum five (5) years' documented experience.
- H. Installer: Company specializing in performing the work of this section with minimum five (5) years documented experience.
- I. All field personnel must be a current holder of the City & County of Denver Fire Department Fire Protection Installers license.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Preparation for Transport: Prepare valves, including fire hydrants, according to the following:
 - 1. Ensure that valves are dry and internally protected against rust and corrosion.
 - 2. Protect valves against damage to threaded ends and flange faces.
 - 3. Set valves in best position for handling. Set valves closed to prevent rattling.
- B. During Storage: Use precautions for valves, including fire hydrants, according to the following:
 - 1. Do not remove end protectors unless necessary for inspection; then reinstall for storage.
 - 2. Protect from weather. Store indoors and maintain temperature higher than ambient dew point temperature. Support off the ground or pavement in watertight enclosures when outdoor storage is necessary.
- C. Handling: Use sling to handle valves and fire hydrants if size requires handling by crane or lift. Rig valves to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.
- D. Deliver piping with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe-end damage and to prevent entrance of dirt, debris, and moisture.
- E. Protect stored piping from moisture and dirt. Elevate above grade. Do not exceed structural capacity of floor when storing inside.
- F. Protect flanges, fittings, and specialties from moisture and dirt.
- G. Store plastic piping protected from direct sunlight. Support to prevent sagging and bending.

1.10 PROJECT CONDITIONS

- A. Interruption of Existing Fire-Suppression Water-Service Piping: Do not interrupt service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary water-distribution service according to requirements indicated:
 - 1. Notify DEN Project Manager no fewer than two (2) **<Insert number>** weeks in advance of proposed interruption of service.
 - 2. Do not proceed with interruption of service without DEN Project Manager's written permission.

1.11 COORDINATION

- A. Coordinate connection to water main with utility company.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 COPPER TUBE AND FITTINGS

- A. Soft Copper Tube: [ASTM B 88, Type K (ASTM B 88M, Type A)] [and] [ASTM B 88, Type L (ASTM B 88M, Type B)], water tube, annealed temper.
- B. Hard Copper Tube: [ASTM B 88, Type K (ASTM B 88M, Type A)] [and] [ASTM B 88, Type L (ASTM B 88M, Type B)], water tube, drawn temper.
- C. Copper, Solder-Joint Fittings: ASME B16.18, cast-copper-alloy or ASME B16.22, wrought-copper, solder-joint pressure type. Furnish only wrought-copper fittings if indicated.
- D. Copper, Pressure-Seal Fittings:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Viega; Plumbing & Heating Systems.
 - b. <Insert manufacturer's name>.
 - c. or approved equal.
 2. Standard: UL 213.
 3. NPS 2 (DN 50) and Smaller: Wrought-copper fitting with EPDM O-ring seal in each end.
 4. NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Bronze fitting with stainless-steel grip ring and EPDM O-ring seal in each end.
- E. Bronze Flanges: ASME B16.24, Class 150, with solder-joint end. Furnish Class 300 flanges if required to match piping.
- F. Copper Unions: MSS SP-123, cast-copper-alloy, hexagonal-stock body with ball-and-socket, metal-to-metal seating surfaces, and solder-joint or threaded ends.

2.2 DUCTILE-IRON PIPE AND FITTINGS

- A. Threadable lightwall, black and galvanized, for threaded joints is not allowed.
- B. Mechanical-Joint, Ductile-Iron Pipe: AWWA C151, with mechanical-joint bell and plain spigot end.

- C. Mechanical-Joint, Ductile-Iron Pipe: Sizes 3" and larger: Class 52 Tyton joint ductile iron, cement lined pipe in accordance with AWWA C110 and rubber gaskets per AWWA C111.
- D. Mechanical-Joint, Ductile-Iron Fittings: AWWA C110, ductile- or gray-iron standard pattern or AWWA C153, ductile-iron compact pattern.
 - 1. Glands, Gaskets, and Bolts: AWWA C111, ductile- or gray-iron glands, rubber gaskets, and Corten steel bolts.
- E. Flanges: ASME B16.1, Class 125, cast iron.

2.3 SPECIAL PIPE FITTINGS

- A. Ductile-Iron Flexible Expansion Joints:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. EBAA Iron, Inc.
 - b. ROMAC Industries Inc.
 - c. Star Pipe Products.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
 - 2. Description: Compound, ductile-iron fitting with combination of flanged and mechanical-joint ends complying with AWWA C110 or AWWA C153. Include two gasketed ball-joint sections and one or more gasketed sleeve sections. Assemble components for offset and expansion indicated. Include AWWA C111, ductile-iron glands, rubber gaskets, and steel bolts.
 - 3. Pressure Rating: **250 psig** (1725 kPa) minimum.
- B. Ductile-Iron Deflection Fittings:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. EBAA Iron, Inc.
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.
 - 2. Description: Compound, ductile-iron coupling fitting with sleeve and one or two flexing sections for up to 15-degree deflection, gaskets, and restrained-joint ends complying with AWWA C110 or AWWA C153. Include AWWA C111, ductile-iron glands, rubber gaskets, and steel bolts.
 - 3. Pressure Rating: **250 psig** (1725 kPa) minimum.

2.4 ENCASEMENT FOR PIPING

- A. Standard: ASTM A 674 or AWWA C105.
- B. Material: [**Linear low-density PE film of 0.008-inch (0.20-mm)**] [**or**] [**High-density, cross-laminated PE film of 0.004-inch (0.10-mm)**] minimum thickness.
- C. Form: [**Sheet**] [**or**] [**tube**].
- D. Color: [**Black**] [**or**] [**natural**] <Insert color>.

2.5 JOINING MATERIALS

- A. Welding Materials: Field welding shall not be permitted; perform only shop welding. Comply with Section II, Part C, ASME Boiler and Pressure Vessel Code for welding materials appropriate for the wall thickness and chemical analysis of the pipe being welded. Welded outlets are permitted as long as the welding is done in compliance with NFPA welding requirements.
- B. Ductile Iron Fire Protection Service Piping: Mechanical joint restraint shall be incorporated in the design of the follower gland and shall include a restraining mechanism which, when actuated, imparts multiple wedging action against the pipe, increasing its resistance as the pressure increases. Flexibility of the joint shall be maintained after burial. Glands shall be manufactured of ductile iron conforming to ASTM A 536 80. Restraining devices shall be of ductile iron heat treated to a minimum hardness of 370 BHN. Dimensions of the gland shall be such that it can be used with the standardized mechanical joint bell and tee head bolts conforming to ANSI/AWWA A21.11 and ANSI/AWWA C153/A21.53 of latest revision. Twist-off nuts, sized same as tee head bolts, shall be used to insure proper actuating of restraining devices. The mechanical joint restraint device shall have a working pressure of at least 250 psi with a minimum safety factor of 2:1 and shall be EBAA Iron, Inc., MEGALUG or equal.
- C. Gaskets for Ferrous Piping and Copper-Alloy Tubing: ASME B16.21, asbestos free.
- D. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series.
- E. Bonding Adhesive for Fiberglass Piping: As recommended by fiberglass piping manufacturer.

2.6 PIPING SPECIALTIES

- A. Transition Fittings: Manufactured fitting or coupling same size as, with pressure rating at least equal to and ends compatible with, piping to be joined.
- B. Tubular-Sleeve Pipe Couplings:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Cascade Waterworks Manufacturing.
 - b. Dresser, Inc.; Dresser Piping Specialties.
 - c. Ford Meter Box Company, Inc. (The); Pipe Products Division.
 - d. JCM Industries.
 - e. ROMAC Industries Inc.
 - f. Smith-Blair, Inc.; a Sensus company.
 - g. Viking Johnson.
 - h. **<Insert manufacturer's name>**.
 - i. or approved equal.
2. Description: Metal, bolted, sleeve-type, reducing or transition coupling, with center sleeve, gaskets, end rings, and bolt fasteners, and with ends of same sizes as piping to be joined.
 3. Standard: AWWA C219.
 4. Center-Sleeve Material: **[Manufacturer's standard] [Carbon steel] [Stainless steel] [Ductile iron] [Malleable iron]**.
 5. Gasket Material: Natural or synthetic rubber.
 6. Pressure Rating: **[150 psig (1035 kPa)] [200 psig (1380 kPa)] <Insert value>** minimum.
 7. Metal Component Finish: Corrosion-resistant coating or material.

2.7 **[CORPORATION VALVES] [AND] [CURB VALVES]**

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Amcast Industrial Corporation.
 2. Ford Meter Box Company, Inc. (The); Pipe Products Division.
 3. Jones, James Company.
 4. Master Meter, Inc.
 5. McDonald, A. Y. Mfg. Co.
 6. Mueller Co.; Water Products Division.
 7. Red Hed Manufacturing & Supply.
 8. **<Insert manufacturer's name>**.
 9. or approved equal.
- B. Corporation Valves: Comply with AWWA C800. Include saddle and valve compatible with tapping machine[**and manifold**].
 1. Service Saddle: Copper alloy with seal and AWWA C800, threaded outlet for corporation valve.
 2. Corporation Valve: Bronze body and ground-key plug, with AWWA C800, threaded inlet and outlet matching service piping material.
 3. Manifold: Copper fitting with two to four inlets as required, with ends matching corporation valves and outlet matching service piping material.
- C. Curb Valves: Comply with AWWA C800 for high-pressure service-line valves. Valve has bronze body, ground-key plug or ball, wide tee head, and inlet and outlet matching service piping material.

- D. Service Boxes for Curb Valves: Similar to AWWA M44 requirements for cast-iron valve boxes. Include cast-iron telescoping top section of length required for depth of burial of valve, plug with lettering "WATER," and bottom section with base that fits over curb valve and with a barrel approximately 3 inches (75 mm) in diameter.
1. Shutoff Rods: Steel; with tee-handle with one pointed end, stem of length to operate deepest buried valve, and slotted end matching curb valve.
- E. Meter Valves: Comply with AWWA C800 for high-pressure service-line valves. Include angle- or straight-through-pattern bronze body, ground-key plug or ball, and wide tee head, with inlet and outlet matching service piping material.

2.8 GATE VALVES

A. AWWA Gate Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American AVK Company; Valves & Fittings Division.
 - b. American Cast Iron Pipe Company; American Flow Control Division.
 - c. American Cast Iron Pipe Company; Waterous Company Subsidiary.
 - d. American R/D.
 - e. Clow Valve Company; a division of McWane, Inc.
 - f. Crane Co.; Crane Valve Group; Stockham Division.
 - g. East Jordan Iron Works, Inc.
 - h. Kennedy Valve; a division of McWane, Inc.
 - i. M&H Valve Company; a division of McWane, Inc.
 - j. Mueller Co.; Water Products Division.
 - k. NIBCO INC.
 - l. Tyler Pipe; a division of McWane, Inc.; Utilities Division.
 - m. U.S. Pipe.
 - n. **<Insert manufacturer's name>**.
 - o. or approved equal.
2. Gate Valves - 2 Inch and Smaller: Body and bonnet of cast bronze, 175 pound cold water working pressure, nonshock, threaded ends, solid wedge, outside screw and yoke, rising stem, screw-in bonnet, and malleable iron handwheel. Valves shall be capable of being repacked under pressure, with valve wide open. Provide Supervisory switches.
3. Gate Valves - 2-1/2 Inch and Larger: Iron body, bronze mounted, 175 pound cold water working pressure, nonshock. Valves shall have solid taper wedge, outside screw and yoke, rising stem, flanged bonnet, with body and bonnet conforming to ASTM A 126, Class B; replaceable bronze wedge facing rings, flanged ends, and a packing assembly consisting of a cast iron gland flange, brass gland, packing, bonnet, and bronze bonnet bushing. Valves shall be capable of being repacked under pressure, with valve wide open. Provide Supervisory switches.

4. Iron body, bronze trim, rising stem, OS&Y, solid wedge.
5. Supervisory switches are required.
6. **200-psig** (1380-kPa), AWWA, Iron, Nonrising-Stem, Metal-Seated Gate Valves:
 - a. Description: Gray- or ductile-iron body and bonnet; with cast-iron or bronze double-disc gate, bronze gate rings, bronze stem, and stem nut.
 - b. Standard: AWWA C500.
 - c. Pressure Rating: **200 psig** (1380 kPa).
 - d. End Connections: Mechanical joint.
 - e. Interior Coating: Complying with AWWA C550.
7. **200-psig** (1380-kPa), AWWA, Iron, Nonrising-Stem, Resilient-Seated Gate Valves:
 - a. Description: Gray- or ductile-iron body and bonnet; with bronze or gray- or ductile-iron gate, resilient seats, bronze stem, and stem nut.
 - b. Standard: AWWA C509.
 - c. Pressure Rating: **200 psig** (1380 kPa).
 - d. End Connections: Mechanical or push-on joint.
 - e. Interior Coating: Complying with AWWA C550.
8. **250-psig** (1725-kPa), AWWA, Iron, Nonrising-Stem, Resilient-Seated Gate Valves:
 - a. Description: Ductile-iron body and bonnet; with bronze or ductile-iron gate, resilient seats, bronze stem, and stem nut.
 - b. Standard: AWWA C509.
 - c. Pressure Rating: **250 psig** (1725 kPa).
 - d. End Connections: Mechanical or push-on joint.
 - e. Interior Coating: Complying with AWWA C550.
9. **200-psig** (1380-kPa), AWWA, Iron, OS&Y, Metal-Seated Gate Valves:
 - a. Description: Cast- or ductile-iron body and bonnet; with cast-iron double disc, bronze disc and seat rings, and bronze stem.
 - b. Standard: AWWA C500.
 - c. Pressure Rating: **200 psig** (1380 kPa).
 - d. End Connections: Flanged or grooved.
10. **200-psig** (1380-kPa), AWWA, Iron, OS&Y, Resilient-Seated Gate Valves:
 - a. Description: Cast- or ductile-iron body and bonnet; with bronze, gray-iron, or ductile-iron gate; resilient seats; and bronze stem.
 - b. Standard: AWWA C509.
 - c. Pressure Rating: **200 psig** (1380 kPa).
 - d. End Connections: Flanged or grooved.
11. **250-psig** (1725-kPa), AWWA, Iron, OS&Y, Resilient-Seated Gate Valves:
 - a. Description: Cast- or ductile-iron body and bonnet; with bronze, gray-iron, or ductile-iron gate; resilient seats; and bronze stem.

- b. Standard: AWWA C509.
 - c. Pressure Rating: 200 psig (1380 kPa).
 - d. End Connections: Flanged or grooved.
12. Class 125, Bronze, Nonrising-Stem Gate Valves:
- a. Description: Class 125, Type 1; bronze with solid wedge and malleable-iron handwheel.
 - b. Standard: MSS SP-80.
 - c. Pressure Rating: 200 psig (1380 kPa).
 - d. End Connections: Solder joint or threaded.
- B. UL-Listed or FM-Approved Gate Valves:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- a. American AVK Company; Valve & Fittings Division.
 - b. American Cast Iron Pipe Company; American Flow Control Division.
 - c. American Cast Iron Pipe Company; Waterous Company Subsidiary.
 - d. Clow Valve Company; a division of McWane, Inc.
 - e. Crane Co.; Crane Valve Group; Jenkins Valves.
 - f. Crane Co.; Crane Valve Group; Stockham Division.
 - g. East Jordan Iron Works, Inc.
 - h. Hammond Valve.
 - i. Kennedy Valve; a division of McWane, Inc.
 - j. M&H Valve Company; a division of McWane, Inc.
 - k. Milwaukee Valve Company.
 - l. Mueller Co.; Water Products Division.
 - m. NIBCO INC.
 - n. Shurjoint Piping Products.
 - o. Troy Valve; a division of Penn-Troy Manufacturing, Inc.
 - p. Tyco Fire & Building Products LP.
 - q. United Brass Works, Inc.
 - r. U.S. Pipe.
 - s. Watts Water Technologies, Inc.
 - t. <Insert manufacturer's name>.
 - u. or approved equal.
2. 175-psig (1200-kPa), UL-Listed or FM-Approved, Iron, Nonrising-Stem Gate Valves:
- a. Description: Iron body and bonnet, bronze seating material, and inside screw.
 - b. Standards: UL 262 and "Approval Guide," published by FM Global, listing.
 - c. Pressure Rating: 175 psig (1200) minimum.
 - d. End Connections: Mechanical or push-on joint.
 - e. Indicator-Post Flange: Include on valves used with indicator posts.

3. **250-psig** (1725-kPa), UL-Listed or FM-Approved, Iron, Nonrising-Stem Gate Valves:
 - a. Description: Iron body and bonnet, bronze seating material, and inside screw.
 - b. Standards: UL 262 and "Approval Guide," published by FM Global, listing.
 - c. Pressure Rating: **250 psig** (1725 kPa) minimum.
 - d. End Connections: Mechanical or push-on joint.
 - e. Indicator-Post Flange: Include on valves used with indicator posts.

4. **175-psig** (1200-kPa), UL-Listed or FM-Approved, Iron, OS&Y, Gate Valves:
 - a. Description: Iron body and bonnet and bronze seating material.
 - b. Standards: UL 262 and "Approval Guide," published by FM Global, listing.
 - c. Pressure Rating: **175 psig** (1200 kPa) minimum.
 - d. End Connections: Flanged or grooved.

5. **250-psig** (1725-kPa), UL-Listed or FM-Approved, Iron, OS&Y Gate Valves:
 - a. Description: Iron body and bonnet and bronze seating material.
 - b. Standards: UL 262 and "Approval Guide," published by FM Global, listing.
 - c. Pressure Rating: **250 psig** (1725 kPa) minimum.
 - d. End Connections: Flanged or grooved.

6. UL-Listed or FM-Approved, OS&Y Bronze, Gate Valves:
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Crane Co.; Crane Valve Group; Crane Valves.
 - 2) Crane Co.; Crane Valve Group; Stockham Division.
 - 3) Milwaukee Valve Company.
 - 4) NIBCO INC.
 - 5) United Brass Works, Inc.
 - 6) **<Insert manufacturer's name>**.
 - 7) or approved equal.

 - b. Description: Bronze body and bonnet and bronze stem.
 - c. Standards: UL 262 and "Approval Guide," published by FM Global, listing.
 - d. Pressure Rating: **175 psig** (1200 kPa) minimum.
 - e. End Connections: Threaded.

2.9 GATE VALVE ACCESSORIES AND SPECIALTIES

A. Tapping-Sleeve Assemblies:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Cast Iron Pipe Company; Waterous Company Subsidiary.

- b. Clow Valve Company; a division of McWane, Inc.
 - c. East Jordan Iron Works, Inc.
 - d. Flowserve.
 - e. Kennedy Valve; a division of McWane, Inc.
 - f. M&H Valve Company; a division of McWane, Inc.
 - g. Mueller Co.; Water Products Division.
 - h. U.S. Pipe.
 - i. **<Insert manufacturer's name>**.
 - j. or approved equal.
 2. Description: Sleeve and valve compatible with drilling machine.
 3. Standard: MSS SP-60.
 4. Tapping Sleeve: Cast-iron, ductile-iron, or stainless-steel, two-piece bolted sleeve with flanged outlet for new branch connection. Sleeve shall match size and type of pipe material being tapped and have recessed flange for branch valve.
 5. Valve: AWWA, cast-iron, nonrising-stem, **[metal] [resilient]**-seated gate valve with one raised-face flange mating tapping-sleeve flange.
- B. Valve Boxes: Comply with AWWA M44 for cast-iron valve boxes. Include top section, adjustable extension of length required for depth of burial of valve, plug with lettering "WATER," and bottom section with base that fits over valve and with a barrel approximately 5 inches (125 mm) in diameter.
 1. Operating Wrenches: Steel; with tee-handle with one pointed end, stem of length to operate deepest buried valve, and socket matching valve operating nut.
- C. Indicator Posts:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American AVK Company; Valves & Fittings Division.
 - b. American Cast Iron Pipe Company; American Flow Control Division.
 - c. American Cast Iron Pipe Company; Waterous Company Subsidiary.
 - d. Clow Valve Company; a division of McWane, Inc.
 - e. Crane Co.; Crane Valve Group; Stockham Division.
 - f. Kennedy Valve; a division of McWane, Inc.
 - g. Mueller Co.; Water Products Division.
 - h. NIBCO INC.
 - i. Tyco Fire & Building Products LP.
 - j. **<Insert manufacturer's name>**.
 - k. or approved equal.
 2. Description: Vertical-type, cast-iron body with operating wrench, extension rod, and adjustable cast-iron barrel of length required for depth of burial of valve.
 3. Standards: UL 789 and "Approval Guide," published by FM Global, listing.

2.10 GLOBE (OR ANGLE) VALVES

- A. Brass body with renewable composition disc.

2.11 BUTTERFLY VALVES

- A. AWWA Butterfly Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. DeZurik/Copes-Vulcan; a unit of SPX Corporation.
 - b. Milliken Valve Company.
 - c. Mosser Valve; a division of Olson Technologies, Inc.
 - d. Mueller Co.; Water Products Division.
 - e. Pratt, Henry Company.
 - f. Val-Matic Valve & Manufacturing Corp.
 - g. **<Insert manufacturer's name>**.
 - h. or approved equal.
2. Description: Rubber seated.
3. Standard: AWWA C504.
4. Body Material: Cast or ductile iron.
5. Body Type: **[Wafer] [or] [flanged]**.
6. Pressure Rating: **150 psig** (1035 kPa).

- B. UL Butterfly Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Kennedy Valve; a division of McWane, Inc.
 - b. Milwaukee Valve Company.
 - c. Mueller Co.; Water Products Division.
 - d. NIBCO INC.
 - e. Pratt, Henry Company.
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
2. Description: Metal on resilient material seating.
3. Standards: UL 1091 and "Approval Guide," published by FM Global, listing.
4. Body Material: Cast or ductile iron.
5. Body Type: **[Wafer] [or] [flanged]**.
6. Pressure Rating: **175 psig** (1200 kPa).

2.12 CHECK VALVES

- A. UL-Listed or FM-Approved Check Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Cast Iron Pipe Company; Waterous Company Subsidiary.
 - b. Clow Valve Company; a division of McWane, Inc.
 - c. Crane Co.; Crane Valve Group; Stockham Division.
 - d. Globe Fire Sprinkler Corporation.
 - e. Kennedy Valve; a division of McWane, Inc.
 - f. Kidde Fire Fighting.
 - g. Matco-Norca.
 - h. Mueller Co.; Water Products Division.
 - i. NIBCO INC.
 - j. Reliable Automatic Sprinkler Co., Inc.
 - k. Tyco Fire & Building Products LP.
 - l. United Brass Works, Inc.
 - m. Victaulic Company.
 - n. Viking Corporation.
 - o. Watts Water Technologies, Inc.
 - p. **<Insert manufacturer's name>**.
 - q. or approved equal.
2. Description: Swing-check type with pressure rating, rubber-face checks unless otherwise indicated, and ends matching piping.
3. Standards: UL 312 and "Approval Guide," published by FM Global, listing.
4. Pressure Rating: [175 psig (1200 kPa)] [250 psig (1725 kPa)].

2.13 DETECTOR CHECK VALVES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Ames Fire & Waterworks; a division of Watts Water Technologies, Inc.
 2. Badger Meter, Inc.
 3. FEBCO; SPX Valves & Controls.
 4. Globe Fire Sprinkler Corporation.
 5. Kennedy Valve; a division of McWane, Inc.
 6. Mueller Co.; Hersey Meters Division.
 7. Victaulic Company.
 8. Viking Corporation.
 9. Watts Water Technologies, Inc.
 10. **<Insert manufacturer's name>**.
 11. or approved equal.
- B. Description: Galvanized cast-iron body, bolted cover with air-bleed device for access to internal parts, and flanged ends. Include one-piece bronze disc with bronze bushings, pivot, and replaceable seat. Include threaded bypass taps in inlet and outlet for bypass meter connection. Set valve to allow minimal water flow through bypass meter when major water flow is required.

- C. Standards: UL 312 and "Approval Guide," published by FM Global, listing.
- D. Pressure Rating: 175 psig (1200 kPa).
- E. Water Meter: AWWA C700, disc type, at least one-fourth size of detector check valve. Include meter, bypass piping, gate valves, check valve, and connections to detector check valve.

2.14 WATER METERS

- A. Water meters will be furnished by utility company.
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. AMCO Water Metering Systems.
 - 2. Badger Meter, Inc.
 - 3. Carlon Meter.
 - 4. Hays Fluid Controls.
 - 5. McCrometer.
 - 6. Mueller Co.; Hersey Meters Division.
 - 7. Neptune Technology Group Inc.
 - 8. Sensus Metering Systems.
 - 9. <Insert manufacturer's name>.
 - 10. or approved equal.
- C. Displacement-Type Water Meters:
 - 1. Description: With bronze main case.
 - 2. Standard: AWWA C700.
 - 3. Registration: Flow in [gallons (liters)] [cubic feet (cubic meters)].
- D. Turbine-Type Water Meters:
 - 1. Standard: AWWA C701.
 - 2. Registration: Flow in [gallons (liters)] [cubic feet (cubic meters)].
- E. Compound-Type Water Meters:
 - 1. Standard: AWWA C702.
 - 2. Registration: Flow in [gallons (liters)] [cubic feet (cubic meters)].
- F. Remote Registration System:
 - 1. Description: Utility company's standard; direct-reading type. Include meter modified with signal-transmitting assembly, low-voltage connecting wiring, and remote register assembly.
 - 2. Standard: AWWA C706.
 - 3. Registration: Flow in [gallons (liters)] [cubic feet (cubic meters)].

G. Remote Registration System:

1. Description: Utility company's standard; encoder type. Include meter modified with signal-transmitting assembly, low-voltage connecting wiring, and remote register assembly.
2. Standard: AWWA C707.
3. Registration: Flow in [gallons (liters)] [cubic feet (cubic meters)].
4. Data-Acquisition Units: Comply with utility company's requirements for type and quantity.
5. Visible Display Units: Comply with utility company's requirements for type and quantity.

2.15 DETECTOR-TYPE WATER METERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Badger Meter, Inc.
2. Mueller Co.; Hersey Meters Division.
3. Neptune Technology Group Inc.
4. Sensus Metering Systems.
5. <Insert manufacturer's name>.
6. or approved equal.

B. AWWA, Detector Check Water Meters:

1. Description: Main line, turbine meter with second meter on bypass.
2. Standard: AWWA C703.
3. Registration: Flow in [gallons (liters)] [cubic feet (cubic meters)].
4. Pressure Rating: 150 psig (1035 kPa).
5. Bypass Meter: [AWWA C701, turbine] [AWWA C702, compound]-type, bronze case.
 - a. Size: At least one-half nominal size of main-line meter.

C. Fire-Protection, Detector Check Water Meters:

1. Description: Main-line turbine meter with strainer and second meter on bypass.
2. Standards: UL's "Fire Protection Equipment Directory" listing and "Approval Guide," published by FM Global, listing.
3. Registration: Flow in [gallons (liters)] [cubic feet (cubic meters)].
4. Pressure Rating: 175 psig (1200 kPa) minimum.
5. Bypass Meter: AWWA C701, turbine-type, bronze case.
 - a. Size: At least NPS 2 (DN 50).

D. Remote Registration System:

1. Description: Utility company's standard; direct-reading type. Include meter modified with signal-transmitting assembly, low-voltage connecting wiring, and remote register assembly.
2. Standard: AWWA C706.
3. Registration: Flow in [gallons (liters)] [cubic feet (cubic meters)].

E. Remote Registration System:

1. Description: Utility company's standard; encoder type. Include meter modified with signal-transmitting assembly, low-voltage connecting wiring, and remote register assembly.
2. Standard: AWWA C707.
3. Registration: Flow in [gallons (liters)] [cubic feet (cubic meters)].
4. Data-Acquisition Units: Comply with utility company's requirements for type and quantity.
5. Visible Display Units: Comply with utility company's requirements for type and quantity.

2.16 PRESSURE-REDUCING VALVES

A. Water Regulators:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Cash Acme; a division of The Reliance Worldwide Corporation.
 - b. Conbraco Industries, Inc.; Apollo Valves.
 - c. Honeywell Water Controls.
 - d. Watts Water Technologies, Inc.
 - e. Zurn Plumbing Products Group; Wilkins Water Control Products Division.
 - f. <Insert manufacturer's name>.
 - g. or approved equal.
2. Standard: ASSE 1003.
3. Pressure Rating: Initial pressure of 150 psig (1035 kPa).
4. Size: <Insert NPS (DN)>.
5. Design Flow Rate: <Insert gpm (L/s)>.
6. Design Inlet Pressure: <Insert psig (kPa)>.
7. Design Outlet Pressure Setting: <Insert psig (kPa)>.
8. Body Material: Bronze[**with chrome-plated finish**] for NPS 2 (DN 50) and smaller; cast iron[**with interior lining complying with AWWA C550 or that is FDA approved**] for NPS 2-1/2 and NPS 3 (DN 65 and DN 80).
9. End Connections: Threaded for NPS 2 (DN 50) and smaller; flanged for NPS 2-1/2 and NPS 3 (DN 65 and DN 80).

B. Water Control Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. CLA-VAL Automatic Control Valves.
 - b. Flomatic Corporation.
 - c. OCV Control Valves.
 - d. Watts Regulator Company; Ames Fluid Control Systems.
 - e. Watts Regulator Company; Watts ACV Division.
 - f. Zurn Plumbing Products Group; Wilkins Water Control Products Division.
 - g. **<Insert manufacturer's name>**.
 - h. or approved equal.
2. Description: Pilot-operation, diaphragm-type, single-seated main water control valve with AWWA C550 or FDA-approved, interior epoxy coating. Include small pilot control valve, restrictor device, specialty fittings, and sensor piping.
 3. Pressure Rating: Initial pressure of **150 psig** (1035 kPa) minimum.
 4. Main Valve Body: Cast or ductile iron with AWWA C550 or FDA-approved, interior epoxy coating; or stainless-steel body.
 - a. Size: **<Insert NPS (DN)>**.
 - b. Pattern: **[Angle] [Globe]**-valve design.
 - c. Trim: Stainless steel.
 5. Design Flow Rate: **<Insert gpm (L/s)>**.
 6. Design Inlet Pressure: **<Insert psig (kPa)>**.
 7. Design Outlet Pressure Setting: **<Insert psig (kPa)>**.
 8. End Connections: Threaded for **NPS 2** (DN 50) and smaller; **[flanged] <Insert type>** for **NPS 2-1/2** (DN 65) and larger.

2.17 BACKFLOW PREVENTERS

A. Reduced-Pressure-Principle Backflow Preventers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ames Fire & Waterworks; a division of Watts Water Technologies, Inc.
 - b. Conbraco Industries, Inc.; Apollo Valves.
 - c. FEBCO; SPX Valves & Controls.
 - d. Flomatic Corporation.
 - e. Watts Water Technologies, Inc.
 - f. Zurn Plumbing Products Group; Wilkins Water Control Products Division.
 - g. **<Insert manufacturer's name>**.
 - h. or approved equal.
2. Standard: **[ASSE 1013] [or] [AWWA C511]**.
3. Operation: Continuous-pressure applications.
4. Pressure Loss: **[12 psig (83 kPa)] <Insert value>** maximum, through middle one-third of flow range.
5. Size: **<Insert NPS (DN)>**.
6. Design Flow Rate: **<Insert gpm (L/s)>**.
7. Selected Unit Flow Range Limits: **<Insert gpm (L/s)>**.

8. Pressure Loss at Design Flow Rate: <Insert psig (kPa)> for NPS 2 (DN 50) and smaller; <Insert psig (kPa)> for NPS 2-1/2 (DN 65) and larger.
 9. Body Material: Bronze for NPS 2 (DN 50) and smaller; **[cast iron with interior lining complying with AWWA C550 or that is FDA approved]** **[steel with interior lining complying with AWWA C550 or that is FDA approved]** **[stainless steel]** for NPS 2-1/2 (DN 65) and larger.
 10. End Connections: Threaded for NPS 2 (DN 50) and smaller; **[flanged]** <Insert type> for NPS 2-1/2 (DN 65) and larger.
 11. Configuration: Designed for **[horizontal, straight through]** **[vertical inlet, horizontal center section, and vertical outlet]** **[vertical]** <Insert configuration> flow.
 12. Accessories:
 - a. Valves: Ball type with threaded ends on inlet and outlet of NPS 2 (DN 50) and smaller; OS&Y gate type with flanged ends on inlet and outlet of NPS 2-1/2 (DN 65) and larger.
 - b. Air-Gap Fitting: ASME A112.1.2, matching backflow preventer connection.
- B. Double-Check, Backflow-Prevention Assemblies:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ames Fire & Waterworks; a division of Watts Water Technologies, Inc.
 - b. Conbraco Industries, Inc.; Apollo Valves.
 - c. FEBCO; SPX Valves & Controls.
 - d. Flomatic Corporation.
 - e. Watts Water Technologies, Inc.
 - f. Zurn Plumbing Products Group; Wilkins Water Control Products Division.
 - g. <Insert manufacturer's name>.
 - h. or approved equal.
 2. Standard: **[ASSE 1015]** **[or]** **[AWWA C510]**.
 3. Operation: Continuous-pressure applications unless otherwise indicated.
 4. Pressure Loss: **[5 psig (35 kPa)]** <Insert value> maximum, through middle one-third of flow range.
 5. Size: <Insert NPS (DN)>.
 6. Design Flow Rate: <Insert gpm (L/s)>.
 7. Selected Unit Flow Range Limits: <Insert gpm (L/s)>.
 8. Pressure Loss at Design Flow Rate: <Insert psig (kPa)> for NPS 2 (DN 50) and smaller; <Insert psig (kPa)> for NPS 2-1/2 (DN 65) and larger.
 9. Body Material: Bronze for NPS 2 (DN 50) and smaller; **[cast iron with interior lining complying with AWWA C550 or that is FDA approved]** **[steel with interior lining complying with AWWA C550 or that is FDA approved]** **[stainless steel]** for NPS 2-1/2 (DN 65) and larger.
 10. End Connections: Threaded for NPS 2 (DN 50) and smaller; **[flanged]** <Insert type> for NPS 2-1/2 (DN 65) and larger.
 11. Configuration: Designed for **[horizontal, straight through]** <Insert configuration> flow.

12. Accessories: Ball valves with threaded ends on inlet and outlet of **NPS 2** (DN 50) and smaller; OS&Y gate valves with flanged ends on inlet and outlet of **NPS 2-1/2** (DN 65) and larger.

C. Reduced-Pressure-Detector, Fire-Protection Backflow Preventer Assemblies:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ames Fire & Waterworks; a division of Watts Water Technologies, Inc.
 - b. Conbraco Industries, Inc.; Apollo Valves.
 - c. FEBCO; SPX Valves & Controls.
 - d. Watts Water Technologies, Inc.
 - e. Zurn Plumbing Products Group; Wilkins Water Control Products Division.
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
2. Standards: ASSE 1047 and UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
3. Operation: Continuous-pressure applications.
4. Pressure Loss: [**12 psig** (83 kPa)] **<Insert value>** maximum, through middle one-third of flow range.
5. Size: **<Insert NPS (DN)>**.
6. Design Flow Rate: **<Insert gpm (L/s)>**.
7. Selected Unit Flow Range Limits: **<Insert gpm (L/s)>**.
8. Pressure Loss at Design Flow Rate: **<Insert psig (kPa)>**.
9. Body Material: [**Cast iron with interior lining complying with AWWA C550 or that is FDA approved**] [**Steel with interior lining complying with AWWA C550 or that is FDA approved**] [**Stainless steel**].
10. End Connections: Flanged.
11. Configuration: Designed for [**horizontal, straight through**] [**vertical inlet, horizontal center section, and vertical outlet**] [**vertical**] **<Insert configuration>** flow.
12. Accessories:
 - a. Valves: UL 262, "Approval Guide," published by FM Global, listing; OS&Y gate type with flanged ends on inlet and outlet.
 - b. Air-Gap Fitting: ASME A112.1.2, matching backflow preventer connection.
 - c. Bypass: With displacement-type water meter, shutoff valves, and reduced-pressure backflow preventer.

D. Double-Check, Detector-Assembly Backflow Preventers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ames Fire & Waterworks; a division of Watts Water Technologies, Inc.
 - b. Conbraco Industries, Inc.; Apollo Valves.
 - c. FEBCO; SPX Valves & Controls.
 - d. Watts Water Technologies, Inc.

- e. Zurn Plumbing Products Group; Wilkins Water Control Products Division.
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
2. Standards: ASSE 1048 and UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
 3. Operation: Continuous-pressure applications.
 4. Pressure Loss: [5 psig (35 kPa)] **<Insert value>** maximum, through middle one-third of flow range.
 5. Size: **<Insert NPS (DN)>**.
 6. Design Flow Rate: **<Insert gpm (L/s)>**.
 7. Selected Unit Flow Range Limits: **<Insert gpm (L/s)>**.
 8. Pressure Loss at Design Flow Rate: **<Insert psig (kPa)>**.
 9. Body Material: **[Cast iron with interior lining complying with AWWA C550 or that is FDA approved] [Steel with interior lining complying with AWWA C550 or that is FDA approved] [Stainless steel]**.
 10. End Connections: Flanged.
 11. Configuration: Designed for **[horizontal, straight through] [vertical inlet, horizontal center section, and vertical outlet] [vertical] <Insert configuration>** flow.
 12. Accessories:
 - a. Valves: UL 262, "Approval Guide," published by FM Global, listing, approved; OS&Y gate type with flanged ends on inlet and outlet.
 - b. Bypass: With displacement-type water meter, shutoff valves, and reduced-pressure backflow preventer.
- E. Backflow Preventer Test Kits:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Conbraco Industries, Inc.; Apollo Valves.
 - b. FEBCO; SPX Valves & Controls.
 - c. Flomatic Corporation.
 - d. Watts Water Technologies, Inc.
 - e. Zurn Plumbing Products Group; Wilkins Water Control Products Division.
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
 2. Description: Factory calibrated, with gages, fittings, hoses, and carrying case with test-procedure instructions.
- F. At every backflow preventer there shall be displayed, on the assembly a permanent placard with the greatest total flow anticipated by the hydraulic calculations and the corresponding net pressure lose utilized for the device in the hydraulic data. This information must be substantiated by means of a full flow discharge test during system acceptance to assure proper valve operation per NFPA. The placard shall be a standard red background, white letters, a minimum of ¾" tall. A ball valve shall be provided on each end of the device and a common liquid filled gauge cross connected

to achieve a net differential reading for comparison to the hydraulic calculations.

2.18 WATER METER BOXES

- A. Description: Cast-iron body and cover for disc-type water meter, with lettering "WATER METER" on cover; and with slotted, open-bottom base section of length to fit over service piping.
 - 1. Option: Base section may be cast-iron, PVC, clay, or other pipe.
- B. Description: Cast-iron body and double cover for disc-type water meter, with lettering "WATER METER" on top cover; and with separate inner cover; air space between covers; and slotted, open-bottom base section of length to fit over service piping.
- C. Description: Polymer-concrete body and cover for disc-type water meter, with lettering "WATER" on cover; and with slotted, open-bottom base section of length to fit over service piping. Include vertical and lateral design loadings of **15,000 lb minimum over 10 by 10 inches** (6 800 kg minimum over 254 by 254 mm) square.

2.19 CONCRETE VAULTS

- A. Description: Precast, reinforced-concrete vault, designed for A-16 load designation according to ASTM C 857, and made according to ASTM C 858.
- B. Ladder: ASTM A 36/A 36M, steel ladder; or PE-encased steel steps.
- C. Manhole: ASTM A 48/A 48M, Class No. 35A minimum tensile strength, gray-iron traffic frame and cover.
 - 1. Dimension: **24-inch** (610-mm) minimum diameter unless otherwise indicated.
- D. Manhole: ASTM A 536, Grade 60-40-18, ductile-iron traffic frame, and cover.
 - 1. Dimension: **24-inch** (610-mm) minimum diameter unless otherwise indicated.
- E. Drain: ASME A112.6.3, cast-iron floor drain with outlet of size indicated. Include body anchor flange, light-duty cast-iron grate, bottom outlet, and integral or field-installed bronze ball or clapper-type backwater valve.

2.20 PROTECTIVE ENCLOSURES

- A. Freeze-Protection Enclosures:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AquaShield.
 - b. BF Products.

- c. DekoRRa Products LLC.
 - d. Dunco Manufacturing, Inc.
 - e. G&C Enclosures.
 - f. Hot Box, Inc.
 - g. HydroCowl, Inc.
 - h. Piedmont Well Covers, Inc.
 - i. Watts Water Technologies, Inc.
 - j. **<Insert manufacturer's name>**.
 - k. or approved equal.
2. Description: Insulated enclosure designed to protect aboveground water piping, equipment, or specialties from freezing and damage, with heat source to maintain minimum internal temperature of **40 deg F (4 deg C)** when external temperatures reach as low as **minus 34 deg F (minus 36 deg C)**.
 3. Standard: ASSE 1060.
 4. Class I: For equipment or devices other than pressure or atmospheric vacuum breakers.
 5. Class I-V: For pressure or atmospheric vacuum breaker equipment or devices. Include drain opening in housing.
 - a. Housing: Reinforced~~[-aluminum]~~ **[or]** ~~[-fiberglass]~~ **<Insert housing>** construction.
 - 1) Size: Of dimensions indicated but not less than those required for access and service of protected unit.
 - 2) Drain opening for units with drain connection.
 - 3) Access doors with locking devices.
 - 4) Insulation inside housing.
 - 5) Anchoring devices for attaching housing to concrete base.
 - b. Electric heating cable or heater with self-limiting temperature control.

B. Weather-Resistant Enclosures:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AquaShield.
 - b. BF Products.
 - c. DekoRRa Products LLC.
 - d. Dunco Manufacturing, Inc.
 - e. G&C Enclosures.
 - f. Hot Box, Inc.
 - g. HydroCowl, Inc.
 - h. Piedmont Well Covers, Inc.
 - i. Watts Water Technologies, Inc.
 - j. **<Insert manufacturer's name>**.
 - k. or approved equal.

2. Description: Uninsulated enclosure designed to protect aboveground water piping, equipment, or specialties from weather and damage.
3. Standard: ASSE 1060.
4. Class III: For equipment or devices other than pressure or atmospheric vacuum breakers.
5. Class III-V: For pressure or atmospheric vacuum breaker equipment or devices. Include drain opening in housing.
 - a. Housing: Reinforced[-aluminum] [or] [-fiberglass] <Insert housing> construction.
 - 1) Size: Of dimensions indicated, but not less than those required for access and service of protected unit.
 - 2) Drain opening for units with drain connection.
 - 3) Access doors with locking devices.
 - 4) Anchoring devices for attaching housing to concrete base.

C. Expanded-Metal Enclosures:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Backflow Prevention Device InnClosures, Inc.
 - b. BF Products.
 - c. Cross Brothers Inc.
 - d. Le Meur Welding & Manufacturing Co.
 - e. V.I.T. Products, Inc.
 - f. <Insert manufacturer's name>.
 - g. or approved equal.
2. Description: Enclosure designed to protect aboveground water piping, equipment, or specialties from damage.
3. Material: ASTM F 1267, expanded metal side and top panels, of weight and with reinforcement of same metal at edges as required for rigidity.
4. Type: [I, expanded] [II, expanded and flattened].
5. Class: [Class 1, uncoated carbon steel] [Class 2, hot-dip, zinc-coated carbon steel] [Class 3, corrosion-resistant steel].
6. Finish: Manufacturer's enamel paint.
7. Size: Of dimensions indicated but not less than those required for access and service of protected unit.
8. Locking device.
9. Lugs or devices for securing enclosure to base.
10. Enclosure Bases: [4-inch- (100-mm-)] [6-inch- (150-mm-)] minimum thickness precast concrete, of dimensions required to extend at least 6 inches (150 mm) beyond edges of enclosure housings. Include openings for piping.

2.21 FIRE HYDRANTS

A. AWWA Dry-Barrel Fire Hydrants:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American AVK Company; Valves & Fittings Division.
 - b. American Cast Iron Pipe Company; American Flow Control Division.
 - c. American Cast Iron Pipe Company; Waterous Company Subsidiary.
 - d. American Foundry Group, Inc.
 - e. Clow Valve Company; a division of McWane, Inc.
 - f. East Jordan Iron Works, Inc.
 - g. Kennedy Valve; a division of McWane, Inc.
 - h. M&H Valve Company; a division of McWane, Inc.
 - i. Mueller Co.; Water Products Division.
 - j. Troy Valve; a division of Penn-Troy Manufacturing, Inc.
 - k. U.S. Pipe.
 - l. **<Insert manufacturer's name>**.
 - m. or approved equal.
 2. Description: Post type, with one **NPS 4-1/2** (DN 115) and two **NPS 2-1/2** (DN 65) outlets; and with **5-1/4-inch** (133-mm) main valve, drain valve, and **NPS 6** (DN 150) mechanical-joint inlet. Include interior coating according to AWWA C550. Hydrant shall have cast-iron body and compression-type valve opening against pressure and closing with pressure.
 3. Standard: AWWA C502.
 4. Pressure Rating: [**150 psig** (1035 kPa) **minimum**] [**200 psig** (1380 kPa) **minimum**] [**250 psig** (1725 kPa)].
- B. UL-Listed, Dry-Barrel Fire Hydrants:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Cast Iron Pipe Company; American Flow Control Division.
 - b. American Cast Iron Pipe Company; Waterous Company Subsidiary.
 - c. American Foundry Group, Inc.
 - d. Clow Valve Company; a division of McWane, Inc.
 - e. East Jordan Iron Works, Inc.
 - f. Kennedy Valve; a division of McWane, Inc.
 - g. M&H Valve Company; a division of McWane, Inc.
 - h. Mueller Co.; Water Products Division.
 - i. Troy Valve; a division of Penn-Troy Manufacturing, Inc.
 - j. U.S. Pipe.
 - k. **<Insert manufacturer's name>**.
 2. Description: Freestanding, with one **NPS 4-1/2** (DN 115) and two **NPS 2-1/2** (DN 65) outlets; and with **5-1/4-inch** (133-mm) main valve, drain valve, and **NPS 6** (DN 150) mechanical-joint inlet. Hydrant shall have cast-iron body and compression-type valve opening against pressure and closing with pressure.
 3. Standards: UL 246 and "Approval Guide," published by FM Global, listing.
 4. Design: Base valve.

5. Pressure Rating: [150 psig (1035 kPa) **minimum**] [175 psig (1200 kPa) **minimum**] [200 psig (1380 kPa) **minimum**] [250 psig (1725 kPa)].
6. Outlet Threads: NFPA 1963, with external hose thread used by local fire department. Include cast-iron caps with steel chains.
7. Operating and Cap Nuts: Pentagon, 1-1/2 inches (38 mm) point to flat.
8. Direction of Opening: Hydrant valve opens by turning operating nut to left or counterclockwise.
9. Exterior Finish: Red alkyd-gloss enamel paint unless otherwise indicated.

C. AWWA Wet-Barrel Fire Hydrants:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American AVK Company; Valves & Fittings Division.
 - b. Clow Valve Company; a division of McWane, Inc.
 - c. Jones, James Company.
 - d. Mueller Co.; Water Products Division.
 - e. <Insert manufacturer's name>.
 - f. or approved equal.
2. Description: Post type, with one NPS 4-1/2 (DN 115) and two NPS 2-1/2 (DN 65) outlets and with NPS 6 (DN 150) threaded or flanged inlet, and base section with NPS 6 (DN 150) mechanical-joint inlet. Include interior coating according to AWWA C550.
3. Standard: AWWA C503.
4. Pressure Rating: [150 psig (1035 kPa) **minimum**] [200 psig (1380 kPa) **minimum**] [250 psig (1725 kPa)].

D. UL-Listed, Wet-Barrel Fire Hydrants:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American AVK Company; Valves & Fittings Division.
 - b. Clow Valve Company; a division of McWane, Inc.
 - c. Jones, James Company.
 - d. Mueller Co.; Water Products Division.
 - e. <Insert manufacturer's name>.
 - f. or approved equal.
2. Description: Freestanding, with one NPS 4-1/2 (DN 115) and two NPS 2-1/2 (DN 65) outlets and with NPS 6 (DN 150) threaded or flanged inlet, and base section with NPS 6 (DN 150) mechanical-joint inlet.
3. Standards: UL 246 and "Approval Guide," published by FM Global, listing.
4. Design: Wet barrel.
5. Pressure Rating: [150 psig (1035 kPa) **minimum**] [175 psig (1200 kPa) **minimum**] [200 psig (1380 kPa)].
6. Outlet Threads: NFPA 1963, with external hose thread used by local fire department. Include cast-iron caps with steel chains.

7. Operating and Cap Nuts: Pentagon, 1-1/2 inches (38 mm) point to flat.
8. Direction of Opening: Hydrant valves open by turning operating nut to left or counterclockwise.
9. Exterior Finish: Red alkyd-gloss enamel paint unless otherwise indicated.

2.22 FIRE-DEPARTMENT CONNECTIONS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Potter Roemer: Two-Way [2], Potter Roemer 5020 series or equal, flush mounted wall type, Fire Department Connection, (threading as required by Denver Fire Department), complete with 3/4 inch automatic ball drip. Provide additional 2.5 inch outlet for each 250 GPM design discharge over 500 GPM per NFPA 13.
 2. **<Insert manufacturer's name>**.
 3. or approved equal.
- B. Description: Wall-mounted, with cast-bronze body, thread inlets according to NFPA 1963 and matching local fire department hose threads, and threaded bottom outlet. Include lugged caps, gaskets, and chains; lugged swivel connection and drop clapper for each hose-connection inlet; 18-inch- (460-mm-) high brass sleeve; and round escutcheon plate.
- C. Standard: UL 405.
- D. Finish Including Sleeve: [**Polished chrome plated**] [**Rough chrome plated**]**Polished bronze**].
- E. Escutcheon Plate Marking: "[**AUTO SPKR - STP**] ".

2.23 ALARM DEVICES

- A. General: UL 753 and "Approval Guide," published by FM Global, listing, of types and sizes to mate and match piping and equipment.
- B. Water-Flow Indicators: Vane-type water-flow detector, rated for 250-psig (1725-kPa) working pressure; designed for horizontal or vertical installation; with two single-pole, double-throw circuit switches to provide isolated alarm and auxiliary contacts, 7 A, 125-V ac and 0.25 A, 24-V dc; complete with factory-set, field-adjustable retard element to prevent false signals and tamperproof cover that sends signal when cover is removed.
 1. Retard feature must be of the instantly recycling type so that flows less than retard period will not produce a cumulative effect.
 2. Flow switch shall not be installed in a fitting or within 12 inches of any fitting that changes the direction of water flow.
 3. Design detector with a sensitivity setting to signal any flow of water that equals or exceeds the discharge from one sprinkler head.
 4. Provide weatherproof and dust tight flow detector.

5. Provide a 3/4 inch conduit entrance per detector.
 - C. Pressure Alarm Switches: Rated to 250 psig; designed for vertical installation; having two, spdt circuit switches to provide isolated alarm and auxiliary contacts, 7 ampere, 125 Vac and 0.25 ampere, 24 Vdc; complete with factory-set, field-adjustable tamperproof cover.
 - D. Design detector with a sensitivity setting to signal any flow of water that equals or exceeds the discharge from one sprinkler head.
 - E. Provide weatherproof and dust tight flow detector.
 - F. Provide a 3/4 inch conduit entrance per detector.
 - G. Supervisory Tamper Switches: SPDT, normally closed contacts, designed to signal valve in other than full open position.
 - H. Supervisory Tamper Switches: SPDT, normally closed contacts, single pole, double throw; designed to signal valve in other than fully open position.
 - I. Pressure Switches: Single pole, double throw; designed to signal increase in pressure.
- 2.24 SIGNAGE AND LABELING
- A. Signage shall be per the requirements of NFPA – 13, FM Global, and any applicable Insurance underwriter.
 1. Signs shall be pre-manufactured metal, approximately 2" x 6", located at all valves, main drains, auxiliary drains, air, alarm, and similar devices.
 2. Every drain and control valve shall be permanently labeled with the D.I.A. designated system I.D. number and a consecutive number indicating quantity of drains on the system, i.e. T-4-43 / 3 of 7 in the terminal or FZ – 03 / 2 of 2 .
 3. Hydraulic Plaques shall be provided at all risers with the appropriate information.

PART 3 - EXECUTION

3.1 SEQUENCING AND SCHEDULING

- A. Comply with DEN Maintenance and Engineering system interruption requirements and provide Denver Fire Department approved Fire Watch during entire time of system interruption.
- B. In no case shall the building structure remain without fire protection for more than ten (10) hours.
- C. Schedule rough-in installations with installations of other building components.

3.2 EARTHWORK

- A. Comply with excavating, trenching, and backfilling requirements in Section 312000 "Earth Moving."

3.3 PREPARATION

- A. Ream pipe and tube ends to full inside diameter.
- B. Remove burrs, and bevel plain end ferrous pipe.
- C. Remove scale and foreign material, inside and outside, before assembly.

3.4 PIPING INSTALLATION

- A. Water-Main Connection: Arrange with water utility company for tap of size and in location indicated in water main.
- B. Water-Main Connection: Tap water main according to requirements of water utility company and of size and in location indicated.
- C. Make connections larger than **NPS 2 (DN 50)** with tapping machine according to the following:
 - 1. Install tapping sleeve and tapping valve according to MSS SP-60.
 - 2. Install tapping sleeve on pipe to be tapped. Position flanged outlet for gate valve.
 - 3. Use tapping machine compatible with valve and tapping sleeve; cut hole in main. Remove tapping machine and connect water-service piping.
 - 4. Install gate valve onto tapping sleeve. Comply with MSS SP-60. Install valve with stem pointing up and with valve box.
- D. Make connections **NPS 2 (DN 50)** and smaller with drilling machine according to the following:
 - 1. Install service-saddle assemblies and corporation valves in size, quantity, and arrangement required by utility company's standards.
 - 2. Install service-saddle assemblies on water-service pipe to be tapped. Position outlets for corporation valves.
 - 3. Use drilling machine compatible with service-saddle assemblies and corporation valves. Drill hole in main. Remove drilling machine and connect water-service piping.
 - 4. Install corporation valves into service-saddle assemblies.
 - 5. Install manifold for multiple taps in water main.
 - 6. Install curb valve in water-service piping with head pointing up and with service box.
- E. Comply with NFPA 24 for fire-service-main piping materials and installation.
- F. Install copper tube and fittings according to CDA's "Copper Tube Handbook."

1. Install encasement for tubing according to ASTM A 674 or AWWA C105.
- G. Install ductile-iron, water-service piping according to AWWA C600 and AWWA M41.
 1. Install encasement for piping according to ASTM A 674 or AWWA C105.
- H. Bury piping with depth of cover over top at least [30 inches (750 mm)] <Insert dimension>, with top at least [12 inches (300 mm)] <Insert dimension> below level of maximum frost penetration, and according to the following:
 1. Under Driveways: With at least [36 inches (910 mm)] <Insert dimension> of cover over top.
 2. Under Railroad Tracks: With at least [48 inches (1220 mm)] <Insert dimension> of cover over top.
 3. In Loose Gravelly Soil and Rock: With at least [12 inches (300 mm)] <Insert dimension> of additional cover.
- I. Install piping by tunneling or jacking, or combination of both, under streets and other obstructions that cannot be disturbed.
- J. Extend fire-suppression water-service piping and connect to water-supply source and building fire-suppression water-service piping systems at locations and pipe sizes indicated.
 1. Terminate fire-suppression water-service piping at building [floor slab] [wall] until building-water-piping systems are installed. Terminate piping with caps, plugs, or flanges as required for piping material. Make connections to building's fire-suppression water-service piping systems when those systems are installed.
- K. Install underground piping with restrained joints at horizontal and vertical changes in direction. Use restrained-joint piping, thrust blocks, anchors, tie-rods and clamps, and other supports.
- L. Comply with requirements in Section 211200 "Fire-Suppression Standpipes," Section 211313 "Wet-Pipe Sprinkler Systems," and Section 211316 "Dry-Pipe Sprinkler Systems" for fire-suppression-water piping inside the building.
- M. Comply with requirements in Section 221116 "Domestic Water Piping" for potable-water piping inside the building.
- N. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 210517 "Sleeves and Sleeve Seals for Fire-Suppression Piping."
- O. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 210517 "Sleeves and Sleeve Seals for Fire-Suppression Piping."

3.5 JOINT CONSTRUCTION

- A. Install couplings, flanges, flanged fittings, unions, nipples, and transition and special fittings that have finish and pressure rating same as or higher than systems pressure rating for aboveground applications unless otherwise indicated.
- B. Install unions adjacent to each valve in tubing **NPS 2** (DN 50) and smaller.
- C. Install flanges, flange adaptors, or couplings for grooved-end piping on valves, apparatus, and equipment having **NPS 2-1/2** (DN 65) and larger end connections.
- D. Ream ends of tubes and remove burrs.
- E. Remove scale, slag, dirt, and debris from outside and inside of pipes, tubes, and fittings before assembly.
- F. Copper-Tubing, Brazed Joints: Join copper tube and fittings according to CDA's "Copper Tube Handbook," "Braze Joints" Chapter.
- G. Copper-Tubing, Pressure-Sealed Joints: Use proprietary crimping tool and procedure recommended by copper, pressure-seal-fitting manufacturer.
- H. Ductile-Iron Piping, Gasketed Joints for Fire-Service-Main Piping: UL 194.
- I. Ductile-Iron Piping, Grooved Joints: Cut-groove pipe. Assemble joints with grooved-end, ductile-iron-piping couplings, gaskets, lubricant, and bolts.
- J. Flanged Joints: Select appropriate gasket material in size, type, and thickness suitable for water service. Join flanges with bolts according to ASME B31.9.
- K. PE Piping Heat-Fusion Joints: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join according to ASTM D 2657.
- L. Dissimilar Materials Piping Joints: Use adapters compatible with both piping materials, with OD, and with system working pressure.
- M. Do not use flanges or unions for underground piping.

3.6 ANCHORAGE INSTALLATION

- A. Anchorage, General: Install water-distribution piping with restrained joints. Anchorages and restrained-joint types that may be used include the following:
 - 1. Concrete thrust blocks.
 - 2. Locking mechanical joints.
 - 3. Set-screw mechanical retainer glands.
 - 4. Bolted flanged joints.
 - 5. Heat-fused joints.
 - 6. Pipe clamps and tie rods.
 - 7. **<Insert devices>**.

- B. Install anchorages for tees, plugs and caps, bends, crosses, valves, and hydrant branches in fire-suppression water-service piping according to NFPA 24 and the following:
 - 1. Gasketed-Joint, Ductile-Iron, Water-Service Piping: According to AWWA C600.
 - 2. Gasketed-Joint, PVC Water-Service Piping: According to AWWA M23.
 - 3. Bonded-Joint Fiberglass, Water-Service Piping: According to AWWA M45.
- C. Apply full coat of asphalt or other acceptable corrosion-resistant material to surfaces of installed ferrous anchorage devices.

3.7 VALVE INSTALLATION

- A. AWWA Gate Valves: Comply with AWWA C600 and AWWA M44. Install each underground valve with stem pointing up and with valve box.
- B. AWWA Valves Other Than Gate Valves: Comply with AWWA C600 and AWWA M44.
- C. UL-Listed or FM-Approved Gate Valves: Comply with NFPA 24. Install each underground valve and valves in vaults with stem pointing up and with vertical cast-iron indicator post.
- D. UL-Listed or FM-Approved Valves Other Than Gate Valves: Comply with NFPA 24.
- E. MSS Valves: Install as component of connected piping system.
- F. Corporation Valves and Curb Valves: Install each underground curb valve with head pointed up and with service box.
- G. Pressure-Reducing Valves: Install in vault or aboveground between shutoff valves. [**Install full-size valved bypass.**]
- H. Support valves and piping, not direct buried, on concrete piers. Comply with requirements for concrete piers in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]

3.8 DETECTOR CHECK VALVE INSTALLATION

- A. Install in vault or aboveground.
- B. Install for proper direction of flow. Install bypass with water meter, gate valves on each side of meter, and check valve downstream from meter.
- C. Support detector check valves and piping on concrete piers. Comply with requirements for concrete piers in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]

3.9 WATER METER INSTALLATION

- A. Install water meters, piping, and specialties according to utility company's written instructions.
- B. Water Meters: Install **[displacement] [turbine]**-type water meters **NPS 2** (DN 50) and smaller in meter boxes with shutoff valves on water meter inlets. Include valves on water meter outlets, and include valved bypass around meters unless prohibited by authorities having jurisdiction.
- C. Water Meters: Install **[compound] [turbine]**-type water meters **NPS 3** (DN 80) and larger in meter vaults. Include shutoff valves on water meter inlets and outlets, and include valved bypass around meters. Support meters, valves, and piping on brick or concrete piers.
- D. Water Meters: Install detector-type water meters in meter vault according to AWWA M6. Include shutoff valves on water meter inlets and outlets, and include full-size valved bypass around meters. Support meters, valves, and piping on brick or concrete piers.
- E. Support water meters and piping **NPS 3** (DN 80) and larger on concrete piers. Comply with requirements for concrete piers in **[Section 033000 "Cast-in-Place Concrete. "] [Section 033053 "Miscellaneous Cast-in-Place Concrete. "]**

3.10 ROUGHING-IN FOR WATER METERS

- A. Rough-in piping and specialties for water meter installation according to utility company's written instructions.

3.11 BACKFLOW PREVENTER INSTALLATION

- A. Install backflow preventers of type, size, and capacity indicated. Include valves and test cocks. Install according to requirements of plumbing and health department and authorities having jurisdiction.
- B. Do not install backflow preventers that have relief drain in vault or in other spaces subject to flooding.
- C. Do not install bypass piping around backflow preventers.
- D. Support **NPS 2-1/2** (DN 65) and larger backflow preventers and piping on concrete piers. Comply with requirements for concrete piers in **[Section 033000 "Cast-in-Place Concrete. "] [Section 033053 "Miscellaneous Cast-in-Place Concrete. "]**

3.12 WATER METER BOX INSTALLATION

- A. Install water meter boxes in paved areas flush with surface.

- B. Install water meter boxes in grass or earth areas with top [2 inches (50 mm)] <Insert dimension> above surface.

3.13 CONCRETE VAULT INSTALLATION

- A. Install precast concrete vaults according to ASTM C 891.

3.14 PROTECTIVE ENCLOSURE INSTALLATION

- A. Install concrete base level and with top approximately [2 inches (50 mm)] <Insert dimension> above grade.
- B. Install protective enclosure over valves and equipment.
- C. Anchor protective enclosure to concrete base.

3.15 FIRE HYDRANT INSTALLATION

- A. General: Install each fire hydrant with separate gate valve in supply pipe, anchor with restrained joints or thrust blocks, and support in upright position.
- B. Wet-Barrel Fire Hydrants: Install with valve below frost line. Provide for drainage.
- C. AWWA Fire Hydrants: Comply with AWWA M17.
- D. UL-Listed or FM-Approved Fire Hydrants: Comply with NFPA 24.

3.16 FIRE-DEPARTMENT CONNECTION INSTALLATION

- A. Install ball drip valves at each check valve for fire-department connection to mains.
- B. Install protective pipe bollards [on two sides of] [on three sides of] <Insert arrangement> each fire-department connection. Pipe bollards are specified in Section 055000 "Metal Fabrications."

3.17 ALARM DEVICE INSTALLATION

- A. General: Comply with NFPA 24 for devices and methods of valve supervision. Underground valves with valve box do not require supervision.
- B. Supervisory Switches: Supervise valves in open position.
 1. Valves: Grind away portion of exposed valve stem. Bolt switch, with plunger in stem depression, to OS&Y gate-valve yoke.
 2. Indicator Posts: Drill and thread hole in upper-barrel section at target plate. Install switch, with toggle against target plate, on barrel of indicator post.

- C. Locking and Sealing: Secure unsupervised valves as follows:
 - 1. Valves: Install chain and padlock on open OS&Y gate valve.
 - 2. Post Indicators: Install padlock on wrench on indicator post.
- D. Pressure Switches: Drill and thread hole in exposed barrel of fire hydrant. Install switch.
- E. Water-Flow Indicators: Install in water-service piping in vault. Select indicator with saddle and vane matching pipe size. Drill hole in pipe, insert vane, and bolt saddle to pipe.
- F. Connect alarm devices to building's fire-alarm system. Wiring and fire-alarm devices are specified in [**Section 283111 "Digital, Addressable Fire-Alarm System."**] [**Section 283112 "Zoned (DC Loop) Fire-Alarm System."**]

3.18 CONNECTIONS

- A. Connect fire-suppression water-service piping to [**utility water main**] [**existing water main**] <Insert piping system>. Use [**tapping sleeve and tapping valve**] [**service clamp and corporation valve**] <Insert method>.
- B. Connect fire-suppression water-service piping to interior fire-suppression piping.
- C. Connect waste piping from concrete vault drains to [**sanitary sewerage system. Comply with requirements in Section 221313 "Facility Sanitary Sewers" for connection to sanitary sewer**] [**storm-drainage system. Comply with requirements in Section 334100 "Storm Utility Drainage Piping" for connection to storm sewer**].

3.19 FIELD QUALITY CONTROL

- A. Use test procedure prescribed by authorities having jurisdiction or, if method is not prescribed by authorities having jurisdiction, use procedure described below.
- B. Piping Tests: Conduct piping tests before joints are covered and after concrete thrust blocks have hardened sufficiently. Fill pipeline 24 hours before testing and apply test pressure to stabilize system. Use only potable water.
- C. Hydrostatic Tests: Test at not less than one-and-one-half times the working pressure for two hours.
 - 1. Increase pressure in **50-psig (350-kPa)** increments and inspect each joint between increments. Hold at test pressure for one hour; decrease to **0 psig (0 kPa)**. Slowly increase again to test pressure and hold for one more hour. Maximum allowable leakage is **2 quarts (1.89 L)** per hour per 100 joints. Remake leaking joints with new materials and repeat test until leakage is within allowed limits.

- D. Prepare test and inspection reports.

3.20 IDENTIFICATION

- A. Install continuous underground[**detectable**] warning tape during backfilling of trench for underground fire-suppression water-service piping. Locate below finished grade, directly over piping. Underground warning tapes are specified in Section 312000 "Earth Moving."
- B. Permanently attach equipment nameplate or marker indicating plastic fire-suppression water-service piping or fire-suppression water-service piping with electrically insulated fittings, on main electrical meter panel. Comply with requirements for identifying devices in Section 220553 "Identification for Plumbing Piping and Equipment."

3.21 CLEANING

- A. Clean[**and disinfect**] fire-suppression water-service piping as follows:
1. Purge new piping systems and parts of existing systems that have been altered, extended, or repaired before use.
 2. Use purging[**and disinfecting**] procedure prescribed by authorities having jurisdiction or, if method is not prescribed by authorities having jurisdiction, use procedure described in NFPA 24 for flushing of piping. Flush piping system with clean, potable water until dirty water does not appear at points of outlet.
 3. Use purging and disinfecting procedure prescribed by authorities having jurisdiction or, if method is not prescribed by authorities having jurisdiction, use procedure described in AWWA C651 or do as follows:
 - a. Fill system or part of system with water/chlorine solution containing at least 50 ppm of chlorine; isolate and allow to stand for 24 hours.
 - b. Drain system or part of system of previous solution and refill with water/chlorine solution containing at least 200 ppm of chlorine; isolate and allow to stand for three hours.
 - c. After standing time, flush system with clean, potable water until no chlorine remains in water coming from system.
 - d. Submit water samples in sterile bottles to authorities having jurisdiction. Repeat procedure if biological examination shows evidence of contamination.

- B. Prepare reports of purging[**and disinfecting**] activities.

3.22 PIPING SCHEDULE

- A. Underground fire-suppression water-service piping [NPS 2 (DN 50) **and smaller**] <Insert pipe size range> shall be[**one of**] the following:

1. **[Hard] [Soft]** copper tube, **[ASTM B 88, Type K (ASTM B 88M, Type A)] [ASTM B 88, Type L (ASTM B 88M, Type B)]**; **[wrought-copper, solder-joint fittings; and brazed] [copper, pressure-seal fittings; and pressure-sealed]** joints.
 2. **NPS 2 (DN 50) PE, [Class 150] [Class 200]**, fire-service pipe; molded PE fittings; and heat-fusion joints.
- B. Underground fire-suppression water-service piping **NPS 3 (DN 80)** shall be **[one of]** the following:
1. **[Hard] [Soft]** copper tube, **[ASTM B 88, Type K (ASTM B 88M, Type A)] [ASTM B 88, Type L (ASTM B 88M, Type B)]**; **[wrought-copper, solder-joint fittings; and brazed] [copper, pressure-seal fittings; and pressure-sealed]** joints.
 2. Mechanical-joint, ductile-iron pipe; mechanical-joint, **[ductile- or gray-iron, standard-pattern] [or] [ductile-iron, compact-pattern]** fittings; glands, gaskets, and bolts; and gasketed joints.
 3. Push-on-joint, ductile-iron pipe; push-on-joint, ductile-iron compact-pattern fittings; and gasketed joints.
- C. Underground fire-suppression water-service piping **NPS 4 (DN 100)** shall be **[one of]** the following:
1. **[Hard] [Soft]** copper tube, **[ASTM B 88, Type K (ASTM B 88M, Type A)] [ASTM B 88, Type L (ASTM B 88M, Type B)]**; **[wrought-copper, solder-joint fittings; and brazed] [copper, pressure-seal fittings; and pressure-sealed]** joints.
 2. Mechanical-joint, ductile-iron pipe; mechanical-joint, **[ductile- or gray-iron, standard-pattern] [or] [ductile-iron, compact-pattern]** fittings; glands, gaskets, and bolts; and gasketed joints.
 3. Push-on-joint, ductile-iron pipe; push-on-joint, ductile-iron compact-pattern fittings; and gasketed joints.
- D. Underground fire-suppression water-service piping **[NPS 6 to NPS 12 (DN 150 to DN 300)] <Insert pipe size range>** shall be **[one of]** the following:
1. Mechanical-joint, ductile-iron pipe; mechanical-joint, **[ductile- or gray-iron, standard-pattern] [or] [ductile-iron, compact-pattern]** fittings; glands, gaskets, and bolts; and gasketed joints.
 2. Push-on-joint, ductile-iron pipe; push-on-joint, ductile-iron compact-pattern fittings; and gasketed joints.
- E. **[Aboveground] [and] [vault]** fire-suppression water-service piping **[NPS 2 (DN 50) and smaller] <Insert pipe size range>** shall be hard copper tube, **[ASTM B 88, Type K (ASTM B 88M, Type A)] [ASTM B 88, Type L (ASTM B 88M, Type B)]**; **[wrought- or cast-copper-alloy, solder-joint fittings; and brazed] [copper, pressure-seal fittings; and pressure-sealed]** joints.
- F. **[Aboveground] [and] [vault]** fire-suppression water-service piping **[NPS 3 and NPS 4 (DN 80 and DN 100)] <Insert pipe size range>** shall be **[one of]** the following:
1. Hard copper tube, **[ASTM B 88, Type K (ASTM B 88M, Type A)] [ASTM B 88, Type L (ASTM B 88M, Type B)]**; **[wrought-copper, solder-joint fittings; and brazed] [copper, pressure-seal fittings; and pressure-sealed]** joints.

- G. **[Aboveground] [and] [vault]** fire-suppression water-service piping **[NPS 5 to NPS 12 (DN 125 to DN 300)]** **<Insert pipe size range>** shall be grooved-end, ductile-iron pipe; grooved-end, ductile-iron pipe appurtenances; and grooved joints.
- H. Underslab fire-suppression water-service piping **[NPS 2 (DN 50) and smaller]** **<Insert pipe size range>** shall be **[hard] [soft]** copper tube, **[ASTM B 88, Type K (ASTM B 88M, Type A)] [ASTM B 88, Type L (ASTM B 88M, Type B)]**; **[wrought-copper, solder-joint fittings; and brazed] [copper, pressure-seal fittings; and pressure-sealed]** joints.
- I. Underslab fire-suppression water-service piping **[NPS 3 and NPS 4 (DN 80 and DN 100)]** **<Insert pipe size range>** shall be **[one of]** the following:
1. **[Hard] [Soft]** copper tube, **[ASTM B 88, Type K (ASTM B 88M, Type A)] [ASTM B 88, Type L (ASTM B 88M, Type B)]**; **[wrought-copper, solder-joint fittings; and brazed] [copper, pressure-seal fittings; and pressure-sealed]** joints.
 2. Mechanical-joint, ductile-iron pipe; mechanical-joint, **[ductile- or gray-iron, standard-pattern] [or] [ductile-iron, compact-pattern]** fittings; glands, gaskets, and bolts; and restrained, gasketed joints.
 3. Push-on-joint, ductile-iron pipe; push-on-joint, ductile-iron compact-pattern fittings; and restrained, gasketed joints.
- J. Underslab fire-suppression water-service piping **[NPS 6 to NPS 12 (DN 150 to DN 300)]** **<Insert pipe size range>** shall be **[one of]** the following:
1. Mechanical-joint, ductile-iron pipe; mechanical-joint, **[ductile- or gray-iron, standard-pattern] [or] [ductile-iron, compact-pattern]** fittings; glands, gaskets, and bolts; and restrained, gasketed joints.
 2. Push-on-joint, ductile-iron pipe; push-on-joint, ductile-iron compact-pattern fittings; and restrained, gasketed joints.

3.23 VALVE SCHEDULE

- A. Drawings indicate valve types to be used. Where specific valve types are not indicated, the following requirements apply:
- B. Underground fire-suppression water-service shutoff valves **NPS 2 (DN 50)** and smaller shall be corporation valves or curb valves with ends compatible with piping.
- C. Meter box fire-suppression water-service shutoff valves **NPS 2 (DN 50)** and smaller shall be meter valves.
- D. Vault fire-suppression water-service shutoff valves **NPS 2 (DN 50)** and smaller shall be **[Class 125, MSS, bronze, nonrising stem] [or] [UL-listed or FM-approved, OS&Y, bronze,]** gate valves.
- E. Underground fire-suppression water-service shutoff valves **NPS 3 (DN 80)** and larger shall be **[one of]** the following:

1. 200-psig (1380-kPa), AWWA, iron, nonrising-stem, **[metal] [resilient]**-seated gate valves.
 2. 250-psig (1725-kPa), AWWA, iron, nonrising-stem, resilient-seated gate valves.
 3. **[175-psig (1200-kPa)] [250-psig (1725-kPa)]**, UL-listed or FM-approved, iron, nonrising-stem gate valves.
- F. Indicator-post underground fire-suppression water-service valves **NPS 3** (DN 80) and larger shall be **[175-psig (1200-kPa)] [250-psig (1725-kPa)]**, UL-listed or FM-approved, iron, nonrising-stem gate valves with indicator-post flange.
- G. Standard-pressure, **[aboveground] [and] [vault]** fire-suppression water-service shutoff valves **NPS 3** (DN 80) and larger shall be **[one of]** the following:
1. 200-psig (1380-kPa), AWWA, iron, OS&Y, **[metal] [resilient]**-seated gate valves.
 2. 250-psig (1725-kPa), AWWA, iron, OS&Y, resilient-seated gate valves.
 3. **[175-psig (1200-kPa)] [250-psig (1725-kPa)]**, UL-listed or FM-approved, iron, OS&Y gate valves.
 4. **[AWWA] [or] [UL-listed or FM-approved]** butterfly valves.
- H. Fire-suppression water-service check valves **NPS 3** (DN 80) and larger shall be **[one of]** the following:
1. **[AWWA] [or] [UL-listed or FM-approved]** check valves.
 2. UL-listed or FM-approved detector check valves.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 211100

SECTION 211200 - FIRE-SUPPRESSION STANDPIPES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Pipes, fittings, and specialties.
2. Fire-protection valves.
3. Hose connections.
4. Monitors.
5. Fire-department connections.
6. Alarm devices.
7. Manual control stations.
8. Control panels.
9. Pressure gages.

B. Related Sections:

1. Section 211313 "Wet-Pipe Sprinkler Systems" for wet-pipe sprinkler piping.
2. Section 211316 "Dry-Pipe Sprinkler Systems" for dry-pipe sprinkler piping.
3. Section 211339 "Foam-Water Systems" for AFFF piping.
4. **[Section 213113 "Electric-Drive, Centrifugal Fire Pumps"] [Section 213116 "Diesel-Drive, Centrifugal Fire Pumps"] [Section 213213 "Electric-Drive, Vertical-Turbine Fire Pumps"] [Section 213216 "Diesel-Drive, Vertical-Turbine Fire Pumps"]** for fire pumps, pressure-maintenance pumps, and fire-pump controllers.
5. **[Section 283111 "Digital, Addressable Fire-Alarm System"] [Section 283112 "Zoned (DC Loop) Fire-Alarm System"]** for alarm devices not specified in this Section.

- C. Include all design, pipe and fittings, valves, connections, fabrication, and installation of all standpipe and fire hose protection systems in association with the fire pump installation, wet-pipe and dry-pipe sprinkler installation, and all fire and smoke alarm interface in accordance with design criteria and fire/smoke zoning requirements indicated on drawings.

- D. Major bulk runs, standpipe mains and risers, and sprinkler crossmains are shown to assist the contractor where interference with other trades may occur. However, all piping required to complete the fire protection systems shall be designed, fabricated

and installed based on approved hydraulic calculations and shop drawings prepared and submitted by the Fire Protection Work Contractor (FPWC).

- E. The FPWC shall provide all special tools required for installation or maintenance for the equipment provided. If conflicts occur in this specification or between this specification and the contract documents, most stringent requirement shall apply.
- F. Work on all systems require DEN Shut Down Requests be completed and filed five (5) days before work is to be done. Work on wet systems must be done during off hour periods, 10:00 p.m. to 6:00 a.m. Sunday night through Friday morning. No system may be shut down for periods longer than ten (10) hours. The FPWC is responsible for the required Fire Watch and must remain ON SITE for the entire period of time that the system is not in service. Failure to comply may be reason for immediate suspension of work privileges.
- G. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. High-Pressure Standpipe Piping: Fire-suppression standpipe piping designed to operate at working pressure higher than standard 175 psig (1200 kPa), but not higher than [250 psig (1725 kPa)] [300 psig (2070 kPa)].
- B. Standard-Pressure Standpipe Piping: Fire-suppression standpipe piping designed to operate at working pressure 175 psig (1200 kPa) maximum.
- C. Pipe sizes used in this specification are Nominal Pipe Size (NPS).
- D. Other definitions for fire protection systems are listed in NFPA 10, 13 and 14.
- E. "Working Plans" as used in this section means those documents (including drawings and calculations) prepared pursuant to the requirements contained in NFPA 13 for obtaining approval of the authority having jurisdiction.
- F. High-Pressure Piping System: Fire-suppression piping system designed to operate at working pressure higher than standard 175 psig
- G. Underground Service-Entrance Piping: Underground service piping below the building.

1.4 REFERENCE STANDARDS

- A. Materials and workmanship shall conform to the latest issue of all industry standards, publications, or regulations referenced in this section and with the following references as applicable. Appendices and/or Annexes referenced by these standards shall apply.
- B. International Building Code (IBC) with the Denver Amendments.
- C. International Fire Code (IFC) with the Denver Amendments.

- D. National Fire Protection Association (NFPA).
- E. UL and FM Global Compliance: Fire protection system materials and components shall be UL listed and labeled, and FM Global approved.
- F. All applicable insurance authorities underwriting requirements.

1.5 SYSTEM DESCRIPTIONS

- A. Provide fire proofing repair damaged by this work.
- B. Provide all required fire sealants and smoke stopping required by this work.
- C. Current Denver Water Department test reports (less than 6 months old) for the underground supply shall be provided for all new calculations. Where accepted by all AHJ's the most current DEN Fire Pump Test may be used.
- D. Automatic Wet-Type, Class I Standpipe System: Includes **NPS 2-1/2** (DN 65) hose connections. Has open water-supply valve with pressure maintained and is capable of supplying water demand.
- E. Automatic Wet-Type, Class II Standpipe System: Includes **NPS 1-1/2** (DN 40) hose stations. Has open water-supply valve with pressure maintained and is capable of supplying water demand.
- F. Automatic Wet-Type, Class III Standpipe System: Includes **NPS 1-1/2** (DN 40) hose stations and **NPS 2-1/2** (DN 65) hose connections. Has open water-supply valve with pressure maintained and is capable of supplying water demand.
- G. Automatic Dry-Type, Class I Standpipe System: Includes **NPS 2-1/2** (DN 65) hose connections. Has open water-supply valve and dry-pipe valve with standpipes containing compressed air. Opening fire-hose valve releases compressed air and permits water pressure to open dry-pipe valve. Water then flows into standpipes.
- H. Automatic Dry-Type, Class II Standpipe System: Includes **NPS 1-1/2** (DN 40) hose stations. Has open water-supply valve and dry-pipe valve with standpipes containing compressed air. Opening fire-hose valve releases compressed air and permits water pressure to open dry-pipe valve. Water then flows into standpipes.
- I. Automatic Dry-Type, Class III Standpipe System: Includes **NPS 1-1/2** (DN 40) hose stations and **NPS 2-1/2** (DN 65) hose connections. Has open water-supply valve and dry-pipe valve with standpipes containing compressed air. Opening fire-hose valve releases compressed air and permits water pressure to open dry-pipe valve. Water then flows into standpipes.
- J. Semiautomatic Dry-Type, Class I Standpipe System: Includes **NPS 2-1/2** (DN 65) hose connections. Has open water-supply valve and deluge valve with standpipes containing air. Actuation of detection device permits water pressure to open deluge valve. Water then flows into standpipes.

- K. Semiautomatic Dry-Type, Class II Standpipe System: Includes **NPS 1-1/2 (DN 40)** hose stations. Has open water-supply valve and deluge valve with standpipes containing air. Actuation of detection device permits water pressure to open deluge valve. Water then flows into standpipes.
- L. Semiautomatic Dry-Type, Class III Standpipe System: Includes **NPS 1-1/2 (DN 40)** hose stations and **NPS 2-1/2 (DN 65)** hose connections. Has open water-supply valve and deluge valve with standpipes containing air. Actuation of detection device permits water pressure to open deluge valve. Water then flows into standpipes.
- M. Manual Wet-Type, Class I Standpipe System: Includes **NPS 2-1/2 (DN 65)** hose connections. Has small water supply to maintain water in standpipes. Piping is wet, but water must be pumped into standpipes to satisfy demand.
- N. Manual Dry-Type, Class I Standpipe System: Includes **NPS 2-1/2 (DN 65)** hose connections. Does not have permanent water supply. Piping is dry. Water must be pumped into standpipes to satisfy demand.

1.6 PERFORMANCE REQUIREMENTS

- A. Standard-Pressure, Fire-Suppression Standpipe System Component: Listed for **175-psig (1200-kPa)** minimum working pressure.
- B. High-Pressure, Fire-Suppression Standpipe System Component: Listed for **[250-psig (1725-kPa) minimum] [300-psig (2070-kPa)]** working pressure.
- C. Delegated Design: Design fire-suppression standpipes, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
 - 1. Available fire-hydrant flow test records indicate the following conditions:
 - a. Date: **<Insert test date>**.
 - b. Time: **<Insert time> [a.m.] [p.m.]**
 - c. Performed by: **<Insert operator's name> of <Insert firm>**.
 - d. Location of Residual Fire Hydrant R: **<Insert location>**.
 - e. Location of Flow Fire Hydrant F: **<Insert location>**.
 - f. Static Pressure at Residual Fire Hydrant R: **<Insert psig (kPa)>**.
 - g. Measured Flow at Flow Fire Hydrant F: **<Insert gpm (L/s)>**.
 - h. Residual Pressure at Residual Fire Hydrant R: **<Insert psig (kPa)>**.
- D. Fire-suppression standpipe design shall be approved by authorities having jurisdiction.
 - 1. Minimum residual pressure at each hose-connection outlet is as follows:
 - a. **NPS 1-1/2 (DN 40) Hose Connections: [65 psig (450 kPa)] <Insert value>**.
 - b. **NPS 2-1/2 (DN 65) Hose Connections: [100 psig (690 kPa)] <Insert value>**.
 - 2. Maximum residual pressure at required flow at each hose-connection outlet is as follows unless otherwise indicated:

- a. **NPS 1-1/2** (DN 40) Hose Connections: [**100 psig** (690 kPa)] **<Insert value>**.
 - b. **NPS 2-1/2** (DN 65) Hose Connections: [**175 psig** (1200 kPa)] **<Insert value>**.
- E. Seismic Performance: Fire-suppression standpipes shall withstand the effects of earthquake motions determined according to NFPA 13 and **[ASCE/SEI 7]** **<Insert requirement>**.

1.7 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.[**Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.**] Include the following:
1. Piping materials, including [**dielectric fittings and**] [**dielectric fittings, flexible connections, and**] [**flexible connections and**] specialty fittings.
 2. Pipe hangers and supports.
 3. Valves, including listed fire-protection valves, unlisted general-duty valves, and specialty valves and trim.
 4. Air compressors, including electrical data.
 5. Excess-pressure pumps, including electrical data.
 6. Hose connections, including size, type, and finish.
 7. Hose stations, including size, type, and finish of hose connections; type and length of fire hoses; finish of fire hose couplings; type, material, and finish of nozzles; and finish of rack.
 8. Roof hose cabinets.
 9. Monitors.
 10. Fire hydrants.
 11. Fire department connections, including type; number, size, and arrangement of inlets; caps and chains; size and direction of outlet; escutcheon and marking; and finish.
 12. Alarm devices, including electrical data.
- B. Shop Drawings: For fire-suppression standpipes. Include plans, elevations, sections, details, and attachments to other work.
1. Submittal shall include drawings, hydraulic calculations, hydraulic reference points, detailed pipe layout, hangers and supports, components and accessories and other items as defined by NFPA 13.
 2. Indicate pipe materials used, jointing methods, supports, floor, and wall penetration seals. Indicate installation, layout, weights, mounting and support details, and piping connections.
 3. Drawings shall be submitted in latest version of Revit format or latest version of Adobe Acrobat (bookmarked and free of security) in hard copy and on Compact Disk. Two (2) sets of full size drawings (34x44) and one (1) Compact Disk containing all drawing files shall be submitted to the DEN Life Safety Team as part of each submittal.
 4. Wiring Diagrams: For power, signal, and control wiring.

- C. Delegated-Design Submittal: For standpipe systems indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- D. Final Submittal: Working plans submitted for approval shall have the signed wet stamp of a registered Fire Protection Engineer licensed in the State of Colorado (or N.I.C.E.T. 4), certifying that the system has been designed and hydraulically calculated in compliance with NFPA and governing authorities requirements.
- E. Copy of City and County of Denver Fire Protection Contractors License, and Fire protection Supervisor's certificate for class of equipment being installed.
- F. Obtain DEN Life Safety Team review and stamp prior to submittal for permit.
- G. Submit working plans and product data to Denver Fire Department for approval. Subject to approval, submit copy of approved submittal and permit to the DEN Project Manager.
- H. Submit additional non returnable copies of current permits and agency approved working plan drawings with System Interruption Request.
- I. Contractor shall submit fully dimensioned spool drawings for all welded piping work. Drawings shall indicate all weld types, sizes, and materials to be used. The spool drawing size shall match the full size contract documents of either 24x36 or 34x44. Spool drawings shall be submitted in either the latest version of Revit or the latest version of Adobe Acrobat (pdf). Adobe Acrobat files shall not contain security. Other file formats will not be accepted.

1.8 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Fire-suppression standpipes, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 - 1. Domestic water piping.
 - 2. Compressed air piping.
 - 3. HVAC hydronic piping.
 - 4. **<Insert item>**.
- B. Qualification Data: For qualified Installer[**and professional engineer**].
- C. Approved Standpipe Drawings: Working plans, prepared according to NFPA 14, that have been approved by authorities having jurisdiction, including hydraulic calculations if applicable.
- D. Welding certificates.
- E. Fire-hydrant flow test report.

- F. Field Test Reports and Certificates: Indicate and interpret test results for compliance with performance requirements and as described in NFPA 14. Include "Contractor's Material and Test Certificate for Aboveground Piping" and "Contractor's Material and Test Certificate for Underground Piping."
- G. Field quality-control reports.

1.9 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For fire-suppression standpipes specialties to include in emergency, operation, and maintenance manuals. Include valve data, servicing requirements, and test schedule.
 - 1. Maintenance data for each type of valve, piping specialty, fire protection specialty, fire department valve, and hose cabinet specified, for inclusion in operating and maintenance manual specified in Division 01.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
- C. Extra Stock:
 - 1. Provide one set of renewable parts and seals for each valve installed.
 - 2. Provide to DEN Representatives all special tools required for installation and maintenance.
 - 3. Provide two (2) spanner wrenches for caps and adapters.
- D. Provide a spare parts list. The list is to be provided with material submittal cut sheets.

1.10 QUALITY ASSURANCE

- A. Installer Qualifications:
 - 1. Company specializing in performing the work of this section with minimum five (5) years documented experience.
 - 2. All field personnel must be a current holder of the City & County of Denver Fire Department Fire Protection Installers license.
 - 3. Installer's responsibilities include designing, fabricating, and installing fire-suppression standpipes and providing professional engineering services needed to assume engineering responsibility. Base calculations on results of fire-hydrant flow test.
 - a. Engineering Responsibility: Preparation of working plans, calculations, and field test reports by a qualified professional engineer.
- B. Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. NFPA Standards: Fire-suppression standpipe equipment, specialties, accessories, installation, and testing shall comply with NFPA 14, "Installation of Standpipe and Hose Systems."
- E. Manufacturer: Company specializing in manufacturing the products specified in this section with minimum five (5) years documented experience.
- F. Comply with all requirements of Owner's Insurance Underwriter.

1.11 PROJECT CONDITIONS

- A. Interruption of Existing Fire-Suppression Standpipe Service: Do not interrupt fire-suppression standpipe service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary fire-suppression standpipe service according to requirements indicated:
 - 1. Notify DEN Project Manager no fewer than five (5) days in advance of proposed interruption of fire-suppression standpipe service.
 - 2. Do not proceed with interruption of fire-suppression standpipe service without DEN Project Manager's written permission.
- B. Environmental Conditions:
 - 1. The equipment shall be designed and constructed to operate successfully at the rated values under the following environmental conditions:
 - a. Location: Indoors and Outdoors.
 - b. Altitude: 5,500 feet (1677 m) above sea level.
 - c. Ambient temperature range: Minus 30 deg F (minus 35 deg C) to 120 deg F (49 deg C).
 - d. Wind Load: 115 mph with gust factor of 1.3.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PIPING MATERIALS

- A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube,

and fitting materials, and for joining methods for specific services, service locations, and pipe sizes.

- B. Equipment and Components: Bear UL or FM Global label or marking.

2.2 STEEL PIPE AND FITTINGS

- A. Threadable lightwall, black and galvanized, for threaded joints is NOT ALLOWED.

- B. Buried Pipe Within Project Limits:

1. Sizes 3" and larger: Class 52 Tyton joint ductile iron, cement lined pipe in accordance with AWWA C110 and rubber gaskets per AWWA C111.
 - a. Rods shall be 3/4" diameter, number of rods required shall be in accordance with NFPA 24, Table 8-6.2.2(b) with the exception that a minimum of 2 rods shall be used on pipe sizes 6" and smaller. Bolts shall be Cortan steel packaged complete with gaskets, nuts, and follower glands.
 - b. After installation, rods, nuts, bolts, washers, clamps, and other restraining devices except thrust blocks shall be cleaned and thoroughly coated with a bituminous or other acceptable corrosion-retarding material.
 - c. Concrete thrust blocks or other suitable means of thrust restraint shall be provided at each change in direction of a pipeline and at all tees, plugs, caps, and bends. Concrete mix requirement and area of bearing face of concrete thrust blocks shall be in accordance with NFPA 24, chapter 8 recommendations.
 - d. Comply with Denver Water Board requirements.
2. Cathodic Protection: Provide joints and connections in compliance with cathodic protection requirements. Reference Section 264200 "Cathodic Protection".

- C. Interior Standpipe Piping: Steel Pipe: ASTM A 795, Schedule 40, seamless, black and galvanized, plain ends or ASTM A 53 continuous weld or ERW. Minimum Working pressure: 175 psig. Temperature: 110 degrees F or as conditions require. All black steel pipe shall have a protective coating. Reference Section 211316 "Dry-Pipe Sprinkler Systems" for additional instructions for dry pipe system piping.

1. Sizes 2" and smaller pipe: ASTM A53 Type "F" continuous welded black carbon steel, schedule 40, threaded and coupled ends. Only pipe identified and conforming to schedule 40 wall thickness shall be used. In example, "Dyna Flow", "Eddy Pipe", "Super Flow" and / or similar products which are not true Schedule 40 thickness will not be allowed. Do not weld pipe or attach welded flanges or fittings.
2. Sizes 2-1/2" and larger pipe: ASTM A53 Type "E" ERW black carbon steel, Schedule 40, butt weld ends.
3. Joints: Shall be cut grooved for ASTM A106, Gr. B couplings.

- D. Optional Standpipe Piping (if approved by DEN Project Manager): ASTM A135 Gr. B ERW thinwall pipe or acceptable alternates per NFPA 13. Maximum pressure shall be

300 psig conforming to NFPA 13, Chapter 3. Reference Section 211316 "Dry-Pipe Sprinkler Systems" for additional instructions for dry pipe system piping.

1. Sizes 2-1/2" through 5": Schedule 10 or an NFPA approved alternate.
 2. 6" size: 0.134" wall thickness or an NFPA approved alternate.
 3. 8" and 10" size: 0.188" wall thickness or an NFPA approved alternate.
 4. Joints: ASTM A536, dimensionally compatible with mechanical couplings.
- E. **[Galvanized] [and] [Uncoated]**, Steel Couplings: ASTM A 865, threaded.
- F. **[Galvanized] [and] [Uncoated]**, Gray-Iron Threaded Fittings: ASME B16.4, Class 125 or 250 as required, standard pattern, for threaded joints. Threads shall conform to ANSI B1.20.1., standard pattern.
- G. Malleable- or Ductile-Iron Unions: UL 860.
- H. Malleable Iron Threaded Fittings: ANSI B16.3, Class 150 or 300 as required, standard pattern, for threaded joints. Threads shall conform to ANSI B1.20.1.
1. Exterior dry systems connections must have galvanized fittings.
- I. Cast-Iron Flanges: ASME B16.1, Class 125 or 250 as required. Raised face flanges shall be mated with raised face, and flat face flanges shall be mated with flat face only..
- J. Steel Flanges and Flanged Fittings: ASME B16.5, Class 150.
- K. Steel Welding Fittings: ASTM A 234/A 234M and ASME B16.9.
- L. Grooved-Joint, Steel-Pipe Appurtenances:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil International, Inc.
 - b. Corcoran Piping System Co.
 - c. National Fittings, Inc.
 - d. Shurjoint Piping Products.
 - e. Tyco Fire & Building Products LP.
 - f. Victaulic Company.
 - g. **<Insert manufacturer's name>**
 - h. or approved equal.
 2. Pressure Rating: **[175 psig (1200 kPa)] [250 psig (1725 kPa)] [300 psig (2070 kPa)]** minimum.
 3. **[Galvanized] [and] [Uncoated]**, Grooved-End Fittings for Steel Piping: ASTM A 47/A 47M, malleable-iron casting or ASTM A 536, ductile-iron casting; with dimensions matching steel pipe.
 4. Grooved-End-Pipe Couplings for Steel Piping: AWWA C606 and UL 213, rigid pattern, unless otherwise indicated, for steel-pipe dimensions. Include ferrous housing sections, EPDM-rubber gasket, and bolts and nuts.

- M. Use of Hooker style fittings and/or any similar rubber gasketed, drill to mount, 2" and smaller clamp on tees will NOT be permitted.
- N. Use of threaded thin wall pipe. Pressfit fittings or similar non-threaded connections of any kind will NOT be permitted.
- O. "EZ-T's" are NOT permitted.
- P. Unions: 150 to 300psi as required malleable iron for threaded ferrous piping.

2.3 FLANGES, AND COUPLINGS

- A. Flanges: 150 psi forged steel slip on or weld-neck flanges for ferrous piping. Raised face flanges shall be mated with raised face, and flat face flanges shall be mated with flat face only.
- B. Mechanical Grooved Couplings: Malleable iron housing clamps to engage and lock, designed to permit some angular deflection, contraction, and expansion; "C" shaped composition sealing gasket, steel bolts, nuts, and washers.

2.4 PIPING JOINING MATERIALS

- A. Pipe-Flange Gasket Materials: [**AWWA C110, rubber, flat face, 1/8 inch (3.2 mm) thick**] [or] [**ASME B16.21, nonmetallic and asbestos free**].
 - 1. Class 125, Cast-Iron Flanges and Class 150, Bronze Flat-Face Flanges: Full-face gaskets.
 - 2. Class 250, Cast-Iron Flanges and Class 300, Steel Raised-Face Flanges: Ring-type gaskets.
- B. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.
- C. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for general-duty brazing unless otherwise indicated.
- D. Welding Filler Metals: Comply with AWS D10.12M/D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- E. Welding Materials: Field welding shall not be permitted; perform only shop welding. Comply with Section II, Part C, ASME Boiler and Pressure Vessel Code for welding materials appropriate for the wall thickness and chemical analysis of the pipe being welded. Welded outlets are permitted as long as the welding is done in compliance with NFPA welding requirements and Division 05 specifications.
- F. Gasket Materials: Thickness, material, and type suitable for fluid or gas to be handled, and design temperatures and pressures.
- G. Threaded Joint Compound or "Teflon" tape.

- H. Ductile Iron Fire Protection Service Piping: Mechanical joint restraint shall be incorporated in the design of the follower gland and shall include a restraining mechanism which, when actuated, imparts multiple wedging action against the pipe, increasing its resistance as the pressure increases. Flexibility of the joint shall be maintained after burial. Glands shall be manufactured of ductile iron conforming to ASTM A 536 80. Restraining devices shall be of ductile iron heat treated to a minimum hardness of 370 BHN. Dimensions of the gland shall be such that it can be used with the standardized mechanical joint bell and tee head bolts conforming to ANSI/AWWA A21.11 and ANSI/AWWA C153/A21.53 of latest revision. Twist-off nuts, sized same as tee head bolts, shall be used to insure proper actuating of restraining devices. The mechanical joint restraint device shall have a working pressure of at least 250 psi with a minimum safety factor of 2:1.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. EBAA Iron, Inc., MEGALUG.
 - b. <Insert manufacturer's name>
 - c. or approved equal.

2.5 PIPE HANGERS AND SUPPORTS

- A. All supports shall conform to the requirements of NFPA 13. Reference Section 220529 "Hangers and Supports for Plumbing Piping and Equipment".
- B. Hangers for Pipe Sizes 1/2 to 12 Inch: Adjustable band hanger or malleable iron split ring in accordance with NFPA 13.
- C. All beam clamp type hangers shall be provided with retaining straps and surge restrainers.
- D. All hangers attached to metal grated mezzanines or floors and conveyor systems shall be provided with vibration spring isolators.
- E. All hangers support under the AGTS Tunnel must be only clevis style with double nuts for locking purposes.
- F. All hangers supported by attachment to the concrete structure shall be provided with fender washers and double nuts against the washer to assure locking.

2.6 LISTED FIRE-PROTECTION VALVES

- A. General Requirements:
 1. Valves shall be UL listed or FM approved.
 2. Minimum Pressure Rating for Standard-Pressure Piping: 175 psig (1200 kPa).
 3. Minimum Pressure Rating for High-Pressure Piping: [250 psig (1725 kPa)] [300 psig (2070 kPa)].

B. VALVE OPERATORS

1. Provide hand wheels for gate, globe [**or angle,**] and drain valves.
2. Butterfly valves provide gear operators for all sizes.
3. For valves located with a centerline more than 7 feet above finish floor, provide endless chain operated sheaves. Extend chains to 5 feet above floor and secure clear of walkways, as applicable.

C. VALVE CONNECTIONS

1. Provide valve connections to match pipe joints. Use valves of pipe size.
2. Provide butterfly valve for isolating service.

D. Ball Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil International, Inc.
 - b. Victaulic Company.
 - c. **<Insert manufacturer's name>**
 - d. or approved equal.
2. Standard: UL 1091 except with ball instead of disc.
3. Valves **NPS 1-1/2 (DN 40)** and Smaller: Bronze body with threaded ends.
4. Valves **NPS 2 and NPS 2-1/2 (DN 50 and DN 65)**: Bronze body with threaded ends or ductile-iron body with grooved ends.
5. Valves **NPS 3 (DN 80)**: Ductile-iron body with grooved ends.

E. Bronze Butterfly Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Fivalco Inc.
 - b. Global Safety Products, Inc.
 - c. Milwaukee Valve Company.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
2. Standard: UL 1091.
3. Pressure Rating: **175 psig** (1200 kPa).
4. Body Material: Bronze.
5. End Connections: Threaded.

F. Iron Butterfly Valves:

1. Per NFPA 13: UL listed and FM Global approved butterfly control valves for use with tamper switches, flanged or grooved connections. Carbon steel body, 150 lb full ANSI rated bi directional, 316 SS electrodeposit nickel plated eccentric rotating disc, dynamic sealed, TFE seal ring, 17 4 PH stainless steel shaft, teflon

- chevron stem packing, 316 SS graphite impregnated bearings, and gear operator. Provide Supervisory switches.
2. Per NFPA-13 UL-Listed and FM Global approved grooved end control valves for use as zone control and/or sectional valves may be used with appropriate pressure ratings for intended service.
 3. Supervisory switches are required on all control valves.
 4. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil International, Inc.
 - b. Fivalco Inc.
 - c. Global Safety Products, Inc.
 - d. Kennedy Valve; a division of McWane, Inc.
 - e. Milwaukee Valve Company.
 - f. NIBCO INC.
 - g. Pratt, Henry Company.
 - h. Shurjoint Piping Products.
 - i. Tyco Fire & Building Products LP.
 - j. Victaulic Company.
 - k. **<Insert manufacturer's name>**.
 - l. or approved equal.
 5. Standard: UL 1091.
 6. Pressure Rating: 175 psig (1200 kPa).
 7. Body Material: Cast or ductile iron.
 8. Style: Lug or wafer.
 9. End Connections: Grooved.

G. Check Valves:

1. UL listed and FM Global approved wafer check valves, flanged or grooved connections.
 - a. Iron body, bronze trim, swing disc, renewable disc and seat.
 - b. Iron body, bronze trim spring loaded, renewable composition disc, where indicated on drawings.
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AFAC Inc.
 - b. American Cast Iron Pipe Company; Waterous Company Subsidiary.
 - c. Anvil International, Inc.
 - d. Clow Valve Company; a division of McWane, Inc.
 - e. Crane Co.; Crane Valve Group; Crane Valves.
 - f. Crane Co.; Crane Valve Group; Jenkins Valves.
 - g. Crane Co.; Crane Valve Group; Stockham Division.
 - h. Fire-End & Croker Corporation.
 - i. Fire Protection Products, Inc.
 - j. Fivalco Inc.

- k. Globe Fire Sprinkler Corporation.
 - l. Groeniger & Company.
 - m. Kennedy Valve; a division of McWane, Inc.
 - n. Matco-Norca.
 - o. Metraflex, Inc.
 - p. Milwaukee Valve Company.
 - q. Mueller Co.; Water Products Division.
 - r. NIBCO INC.
 - s. Potter Roemer.
 - t. Reliable Automatic Sprinkler Co., Inc.
 - u. Shurjoint Piping Products.
 - v. Tyco Fire & Building Products LP.
 - w. United Brass Works, Inc.
 - x. Venus Fire Protection Ltd.
 - y. Victaulic Company.
 - z. Viking Corporation.
 - aa. Watts Water Technologies, Inc.
 - bb. **<Insert manufacturer's name>**.
 - cc. or approved equal.
3. Standard: UL 312.
 4. Pressure Rating: [250 psig (1725 kPa) **minimum**] [300 psig (2070 kPa)].
 5. Type: Swing check.
 6. Body Material: Cast iron.
 7. End Connections: Flanged or grooved.
- H. Bronze OS&Y Gate Valves:
1. Gate Valves - 2 inch and smaller: Body and bonnet of cast bronze, 175 pound cold water working pressure, nonshock, threaded ends, solid wedge, outside screw and yoke (OS&Y), rising stem, screw-in bonnet, and malleable iron handwheel. Valves shall be capable of being repacked under pressure, with valve wide open.
 2. Supervisory switches are required.
 3. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Crane Co.; Crane Valve Group; Crane Valves.
 - b. Crane Co.; Crane Valve Group; Stockham Division.
 - c. Milwaukee Valve Company.
 - d. NIBCO INC.
 - e. United Brass Works, Inc.
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
 4. Standard: UL 262.
 5. Pressure Rating: 175 psig (1200 kPa).
 6. Body Material: Bronze.
 7. End Connections: Threaded.

I. Iron OS&Y Gate Valves:

1. Gate Valves - 2-1/2 inch and Larger: Iron body, bronze mounted, 175 pound cold water working pressure, nonshock. Valves shall have solid taper wedge, outside screw and yoke (OS&Y), rising stem, flanged bonnet, with body and bonnet conforming to ASTM A 126, Class B; replaceable bronze wedge facing rings, flanged ends, and a packing assembly consisting of a cast iron gland flange, brass gland, packing, bonnet, and bronze bonnet bushing. Valves shall be capable of being repacked under pressure, with valve wide open.
2. Supervisory switches are required.
3. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Cast Iron Pipe Company; Waterous Company Subsidiary.
 - b. American Valve, Inc.
 - c. Clow Valve Company; a division of McWane, Inc.
 - d. Crane Co.; Crane Valve Group; Crane Valves.
 - e. Crane Co.; Crane Valve Group; Jenkins Valves.
 - f. Crane Co.; Crane Valve Group; Stockham Division.
 - g. Hammond Valve.
 - h. Milwaukee Valve Company.
 - i. Mueller Co.; Water Products Division.
 - j. NIBCO INC.
 - k. Shurjoint Piping Products.
 - l. Tyco Fire & Building Products LP.
 - m. United Brass Works, Inc.
 - n. Watts Water Technologies, Inc.
 - o. **<Insert manufacturer's name>**.
 - p. or approved equal.
4. Standard: UL 262.
5. Pressure Rating: [250 psig (1725 kPa) **minimum**] [300 psig (2070 kPa)].
6. Body Material: Cast or ductile iron.
7. End Connections: Flanged or grooved.

J. Indicating-Type Butterfly Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil International, Inc.
 - b. Fivalco Inc.
 - c. Global Safety Products, Inc.
 - d. Kennedy Valve; a division of McWane, Inc.
 - e. Milwaukee Valve Company.
 - f. NIBCO INC.
 - g. Shurjoint Piping Products.
 - h. Tyco Fire & Building Products LP.
 - i. Victaulic Company.
 - j. **<Insert manufacturer's name>**.

- k. or approved equal.
 2. Standard: UL 1091.
 3. Pressure Rating: **175 psig** (1200 kPa) minimum.
 4. Valves **NPS 2** (DN 50) and Smaller:
 - a. Valve Type: Ball or butterfly.
 - b. Body Material: Bronze.
 - c. End Connections: Threaded.
 5. Valves **NPS 2-1/2** (DN 65) and Larger:
 - a. Valve Type: Butterfly.
 - b. Body Material: Cast or ductile iron.
 - c. End Connections: Flanged, grooved, or wafer.
 6. Valve Operation: Integral [**electrical, 115-V ac, prewired, single-circuit, supervisory switch**] [**electrical, 115-V ac, prewired, two-circuit, supervisory switch**] [**visual**] indicating device.
- K. NRS Gate Valves:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Cast Iron Pipe Company; Waterous Company Subsidiary.
 - b. American Valve, Inc.
 - c. Clow Valve Company; a division of McWane, Inc.
 - d. Crane Co.; Crane Valve Group; Stockham Division.
 - e. Kennedy Valve; a division of McWane, Inc.
 - f. Mueller Co.; Water Products Division.
 - g. NIBCO INC.
 - h. Tyco Fire & Building Products LP.
 - i. **<Insert manufacturer's name>**.
 - j. or approved equal.
 2. Standard: UL 262.
 3. Pressure Rating: [**250 psig** (1725 kPa) **minimum**] [**300 psig** (2070 kPa)].
 4. Body Material: Cast iron with indicator post flange.
 5. Stem: Nonrising.
 6. End Connections: Flanged or grooved.
- L. Indicator Posts:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Cast Iron Pipe Company; Waterous Company Subsidiary.
 - b. American Valve, Inc.
 - c. Clow Valve Company; a division of McWane, Inc.

- d. Crane Co.; Crane Valve Group; Stockham Division.
 - e. Kennedy Valve; a division of McWane, Inc.
 - f. Mueller Co.; Water Products Division.
 - g. NIBCO INC.
 - h. Tyco Fire & Building Products LP.
 - i. **<Insert manufacturer's name>**.
 - j. or approved equal.
2. Standard: UL 789.
 3. Type: Horizontal for wall mounting.
 4. Body Material: Cast iron with extension rod and locking device.
 5. Operation: **[Wrench] [Hand wheel]**.

2.7 TRIM AND DRAIN VALVES

A. General Requirements:

1. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
2. Pressure Rating: **175 psig** (1200 kPa) minimum.
3. Ball or Globe valve: Ball valves are required for all dry system auxiliary drum drip drains.

B. Angle Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Fire Protection Products, Inc.
 - b. United Brass Works, Inc.
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.

C. Ball Valves:

1. Valves up to 2 Inches: Bronze, two piece body, stainless steel ball, Teflon seats and stuffing box ring, lever handle, threaded ends.
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Affiliated Distributors.
 - b. Anvil International, Inc.
 - c. Barnett.
 - d. Conbraco Industries, Inc.; Apollo Valves.
 - e. Fire-End & Croker Corporation.
 - f. Fire Protection Products, Inc.
 - g. Flowserve.
 - h. FNW.

- i. Jomar International, Ltd.
- j. Kennedy Valve; a division of McWane, Inc.
- k. Kitz Corporation.
- l. Legend Valve.
- m. Metso Automation USA Inc.
- n. Milwaukee Valve Company.
- o. NIBCO INC.
- p. Potter Roemer.
- q. Red-White Valve Corporation.
- r. Southern Manufacturing Group.
- s. Stewart, M. A. and Sons Ltd.
- t. Tyco Fire & Building Products LP.
- u. Victaulic Company.
- v. Watts Water Technologies, Inc.
- w. <Insert manufacturer's name>.
- x. or approved equal.

D. Globe Valves:

- 1. Brass body with renewable composition disc.
- 2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Fire Protection Products, Inc.
 - b. United Brass Works, Inc.
 - c. <Insert manufacturer's name>.
 - d. or approved equal.

E. Plug Valves:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Southern Manufacturing Group.
 - b. <Insert manufacturer's name>.
 - c. or approved equal.

2.8 SPECIALTY VALVES

A. General Requirements:

- 1. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
- 2. Pressure Rating:
 - a. Standard-Pressure Piping Specialty Valves: 175 psig (1200 kPa) minimum.
 - b. High-Pressure Piping Specialty Valves: [250 psig (1725 kPa) **minimum**] [300 psig (2070 kPa)].

3. Body Material: Cast or ductile iron.
4. Size: Same as connected piping.
5. End Connections: Flanged or grooved.

B. Alarm Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AFAC Inc.
 - b. Globe Fire Sprinkler Corporation.
 - c. Reliable Automatic Sprinkler Co., Inc.
 - d. Tyco Fire & Building Products LP.
 - e. Venus Fire Protection Ltd.
 - f. Victaulic Company.
 - g. Viking Corporation.
 - h. **<Insert manufacturer's name>**.
 - i. or approved equal.
2. Standard: UL 193.
3. Design: For horizontal or vertical installation.
4. Include trim sets for bypass, drain, electrical sprinkler alarm switch, pressure gages, [**retarding chamber**,] and fill-line attachment with strainer.
5. Drip Cup Assembly: Pipe drain without valves and separate from main drain piping.
6. Drip Cup Assembly: Pipe drain with check valve to main drain piping.

C. Dry-Pipe Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AFAC Inc.
 - b. Globe Fire Sprinkler Corporation.
 - c. Reliable Automatic Sprinkler Co., Inc.
 - d. Tyco Fire & Building Products LP.
 - e. Venus Fire Protection Ltd.
 - f. Victaulic Company.
 - g. Viking Corporation.
 - h. **<Insert manufacturer's name>**.
 - i. or approved equal.
2. Standard: UL 260.
3. Design: Differential-pressure type.
4. Include UL 1486, quick-opening devices, trim sets for air supply, drain, priming level, alarm connections, ball drip valves, pressure gages, priming chamber attachment, and fill-line attachment.
5. Air-Pressure Maintenance Device:
 - a. Manufacturers: Subject to compliance with requirements, provide products

by one of the following:

- 1) AFAC Inc.
- 2) Globe Fire Sprinkler Corporation.
- 3) Reliable Automatic Sprinkler Co., Inc.
- 4) Tyco Fire & Building Products LP.
- 5) Venus Fire Protection Ltd.
- 6) Victaulic Company.
- 7) Viking Corporation.
- 8) **<Insert manufacturer's name>**.
- 9) or approved equal.

- b. Standard: UL 260.
- c. Type: Automatic device to maintain minimum air pressure in piping.
- d. Include shutoff valves to permit servicing without shutting down sprinkler piping, bypass valve for quick filling, pressure regulator or switch to maintain pressure, strainer, pressure ratings with **14- to 60-psig** (95- to 410-kPa) adjustable range, and **[175-psig** (1200-kPa)] **[300-psig** (2070-kPa)] outlet pressure.

6. Air Compressor:

- a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Gast Manufacturing Inc.
 - 2) General Air Products, Inc.
 - 3) Viking Corporation.
 - 4) **<Insert manufacturer's name>**.
 - 5) or approved equal.
- b. Standard: UL's "Fire Protection Equipment Directory" listing.
- c. Motor Horsepower: Fractional.
- d. Power: 120-V ac, 60 Hz, single phase.

D. Deluge Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AFAC Inc.
 - b. BERMAD Control Valves.
 - c. CLA-VAL Automatic Control Valves.
 - d. Globe Fire Sprinkler Corporation.
 - e. OCV Control Valves.
 - f. Reliable Automatic Sprinkler Co., Inc.
 - g. Tyco Fire & Building Products LP.
 - h. Venus Fire Protection Ltd.
 - i. Victaulic Company.
 - j. Viking Corporation.

- k. **<Insert manufacturer's name>**.
 - l. or approved equal.
 2. Standard: UL 260.
 3. Design: Hydraulically operated, differential-pressure type.
 4. Include trim sets for bypass, drain, electrical sprinkler alarm switch, pressure gages, drip cup assembly piped without valves and separate from main drain line, fill-line attachment with strainer, and push-rod chamber supply connection.
 5. Wet, Pilot-Line Trim Set: Include gage to read push-rod chamber pressure, globe valve for manual operation of deluge valve, and connection for actuation device.
 6. Dry, Pilot-Line Trim Set: Include dry, pilot-line actuator; air- and water-pressure gages; low-air-pressure warning switch; air relief valve; and actuation device. Dry, pilot-line actuator includes cast-iron, operated, diaphragm-type valve with resilient facing plate, resilient diaphragm, and replaceable bronze seat. Valve includes threaded water and air inlets and water outlet. Loss of air pressure on dry, pilot-line side allows pilot-line actuator to open and causes deluge valve to open immediately.
 7. Air-Pressure Maintenance Device:
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) AFAC Inc.
 - 2) Globe Fire Sprinkler Corporation.
 - 3) Reliable Automatic Sprinkler Co., Inc.
 - 4) Tyco Fire & Building Products LP.
 - 5) Venus Fire Protection Ltd.
 - 6) Victaulic Company.
 - 7) Viking Corporation.
 - 8) **<Insert manufacturer's name>**.
 - 9) or approved equal.
 - b. Standard: UL 260.
 - c. Type: Automatic device to maintain minimum air pressure in piping.
 - d. Include shutoff valves to permit servicing without shutting down sprinkler piping, bypass valve for quick filling, pressure regulator, or switch to maintain pressure, strainer, pressure ratings with **14- to 60-psig** (95- to 410-kPa) adjustable range, and **[175-psig (1200-kPa)] [300-psig (2070-kPa)]** outlet pressure.
 8. Air Compressor:
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Gast Manufacturing Inc.
 - 2) General Air Products, Inc.
 - 3) Viking Corporation.
 - 4) **<Insert manufacturer's name>**.
 - 5) or approved equal.

- b. Standard: UL's "Fire Protection Equipment Directory" listing.
- c. Motor Horsepower: Fractional.
- d. Power: 120-V ac, 60 Hz, single phase.

E. Pressure-Reducing Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AFAC Inc.
 - b. Elkhart Brass Mfg. Company, Inc.
 - c. Fire-End & Croker Corporation.
 - d. Fire Protection Products, Inc.
 - e. GMR International Equipment Corporation.
 - f. Guardian Fire Equipment, Inc.
 - g. Potter Roemer.
 - h. Tyco Fire & Building Products LP.
 - i. Wilson & Cousins Inc.
 - j. Zurn Plumbing Products Group; Wilkins Water Control Products Division.
 - k. **<Insert manufacturer's name>**.
 - l. or approved equal.
2. UL 668 hose valve, with integral UL 1468 reducing device.
3. Pressure Rating: **300 psig** (2070 kPa) minimum.
4. Material: Brass or bronze.
5. Inlet: Female pipe threads.
6. Outlet: Threaded with or without adapter having male hose threads.
7. Pattern: **[Angle] [or] [gate]**.
8. Finish: **[Polished chrome plated] [Rough brass or bronze] [Rough chrome plated]**.

F. Automatic (Ball Drip) Drain Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AFAC Inc.
 - b. Reliable Automatic Sprinkler Co., Inc.
 - c. Tyco Fire & Building Products LP.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
2. Standard: UL 1726.
3. Pressure Rating: **175 psig** (1200 kPa) minimum.
4. Type: Automatic draining, ball check.
5. Size: **NPS 3/4** (DN 20).
6. End Connections: Threaded.

G. SWING CHECK VALVES

1. Per NFPA 13: UL listed and FM Global approved butterfly control valves for use with tamper switches, flanged or grooved connections. Carbon steel body, 150 lb full ANSI rated bidirectional, 316 SS electrodeposit nickel plated eccentric rotating disc, dynamic sealed, TFE seal ring, 17 4 PH stainless steel shaft, teflon chevron stem packing, 316 SS graphite impregnated bearings, and gear operator. Provide Supervisory switches.
2. Per NFPA 13 UL-Listed and FM Global approved grooved end control valves for use as zone control and/or sectional valves may be used with appropriate pressure ratings for intended service.
3. Supervisory switches are required on all control valves.

H. DOUBLE CHECK VALVE ASSEMBLY (BACK FLOW PREVENTER)

1. Provide UL/FM Global approved, double check valve assembly, in fire pump room or at service entry points, between flange spigot piece and fire pump suction.
2. At every backflow preventer there shall be displayed, on the assembly, a permanent placard with the greatest total flow anticipated by the hydraulic calculations and the corresponding net pressure lose utilized for the device in the hydraulic data. This information must be substantiated by means of a full flow discharge test during system acceptance to assure proper valve operation per NFPA. The placard shall be a standard red background, white letters, a minimum of $\frac{3}{4}$ " tall. A ball valve shall be provided on each end of the device and a common liquid filled gauge cross connected to achieve a net differential reading for comparison to the hydraulic calculations.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Febco Master Series 850
 - 2) Watts
 - 3) **<Insert manufacturer's name>**
 - 4) or approved equal.

2.9 HOSE CONNECTIONS

A. Adjustable-Valve Hose Connections:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AFAC Inc.
 - b. Elkhart Brass Mfg. Company, Inc.
 - c. Fire-End & Croker Corporation.
 - d. Fire Protection Products, Inc.
 - e. GMR International Equipment Corporation.
 - f. Guardian Fire Equipment, Inc.
 - g. Potter Roemer.
 - h. Tyco Fire & Building Products LP.

- i. Wilson & Cousins Inc.
 - j. Zurn Plumbing Products Group; Wilkins Water Control Products Division.
 - k. **<Insert manufacturer's name>**.
 - l. or approved equal.
2. Standard: UL 668 hose valve, with integral UL 1468 reducing or restricting pressure-control device, for connecting fire hose.
 3. Pressure Rating: **300 psig** (2070 kPa) minimum.
 4. Material: Brass or bronze.
 5. Size: **NPS 1-1/2 or NPS 2-1/2** (DN 40 or DN 65, as indicated) , as indicated.
 6. Inlet: Female pipe threads.
 7. Outlet: Male hose threads with lugged cap, gasket, and chain. Include hose valve threads according to NFPA 1963 and matching local fire-department threads.
 8. Pattern: **[Angle] [or] [gate]**.
 9. Pressure-Control Device Type: Pressure **[reducing] [restricting]**.
 10. Design Outlet Pressure Setting: **<Insert psig (kPa)>**.
 11. Finish: **[Polished chrome plated] [Rough brass or bronze] [Rough chrome plated]**.
 - a. Nonadjustable-Valve Hose Connections:
 12. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Potter Roemer 4065, w/5941 cap and chain, w/2810 reducer and cap and chain.
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.
 13. Standard: UL 668 hose valve for connecting fire hose.
 14. Pressure Rating: **300 psig** (2070 kPa) minimum.
 15. Material: Brass
 16. Size: **NPS 2-1/2** (DN 65), as indicated.
 17. Reducer: NPS 2-1/2 x 1-1/2 (DN 65 x DN 40) chrome-plated reducer.
 18. Inlet: Female pipe threads.
 19. Outlet: Male hose threads with lugged cap, gasket, and chain. Include hose valve threads according to NFPA 1963 and matching Denver Fire Department threads.
 20. Pattern: **[Angle]** .
 21. Finish: **[Rough brass or bronze] [Rough chrome plated]**.

2.10 MONITORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. AFAC Inc.
 2. Elkhart Brass Mfg. Company, Inc.
 3. Fire-End & Croker Corporation.
 4. Guardian Fire Equipment, Inc.

5. Potter Roemer.
 6. **<Insert manufacturer's name>**.
 7. or approved equal.
- B. Type: Stationary.
- C. Nozzle: UL 401, **NPS 2-1/2** (DN 65), brass, adjustable from fog spray to straight stream to shutoff.
- D. Horizontal Rotation: 360 degrees with locking device.
- E. Vertical Rotation: 80-degree elevation and 60-degree depression with locking device.
- F. Waterway: [**Double**] [**Single**] brass or stainless-steel tube.
- G. Waterway Size: [**NPS 2-1/2** (DN 65)] **<Insert value>** minimum.
- H. Water Stream Flow: [**500 gpm** (31.5 L/s)] [**750 gpm** (47.3 L/s)] [**1000 gpm** (63 L/s)] **<Insert value>**.
- I. Operation: [**Lever**] [**Wheel**].
- J. Base Inlet Size: [**NPS 2-1/2** (DN 65)] [**NPS 3** (DN 80)] [**NPS 4** (DN 100)].
- K. Finish: Red-painted body with brass trim.

2.11 FIRE-DEPARTMENT CONNECTIONS

- A. Flush-Type, Fire-Department Connection:
1. Fire Department Connection: Two-Way [2], flush-mounted wall type, Fire Department Connection, (threading as required by Denver Fire Department. Complete with 3/4 inch automatic ball drip.
 2. Provide additional 2.5 inch outlet for each 250 GPM design discharge over 500 GPM per NFPA 13.
 3. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Potter Roemer 5020 Series.
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.
 4. Standard: UL 405.
 5. Type: Flush, for wall mounting.
 6. Pressure Rating: **175 psig** (1200 kPa) minimum.
 7. Body Material: Corrosion-resistant metal.
 8. Inlets: Brass with threads according to NFPA 1963 and matching Denver Fire Department sizes and threads. Include extension pipe nipples, brass lugged swivel connections, and check devices or clappers.

9. Caps: Brass, lugged type, with gasket and chain.
10. Escutcheon Plate: Rectangular, brass, wall type.
11. Outlet: With pipe threads.
12. Body Style: **[Horizontal]** **[Square]** **[Vertical]**.
13. Number of Inlets: **[Two]** **[Three]** **[Four]** **[Six]**.
14. Outlet Location: **[Back]** **[Bottom]** **[Left side]** **[Right side]** **[Top]**.
15. Escutcheon Plate Marking: Similar to "AUTO SPKR & STP "
16. Finish: Polished chrome plated.
17. Outlet Size: **[NPS 4 (DN 100)]** **[NPS 5 (DN 125)]** **[NPS 6 (DN 150)]** **[NPS 8 (DN 200)]**.

B. Fire Department Outlet Connections:

1. Flush mounted wall type; chrome plated finish; 2 1/2 inch size, thread to match Denver Fire Department requirements, 300 psig working pressure, with threaded cap and chain of same material and finish.

C. Hose Outlet Valves:

1. Install 2-1/2 inch hose outlet valves with quick-disconnect 2-1/2 to 1-1/2 inch reducing coupling and flow restriction device at each standpipe outlet for hose connections. Valve shall be nonadjustable pressure regulating valve. Hose threads shall be compatible with local fire department specifications.
 - a. Subject to compliance with requirements, provide products by one of the following:
 - 1) Potter Roemer Model 4053
 - 2) or approved equal.

D. Yard-Type, Fire-Department Connection:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AFAC Inc.
 - b. Elkhart Brass Mfg. Company, Inc.
 - c. Fire-End & Croker Corporation.
 - d. Fire Protection Products, Inc.
 - e. GMR International Equipment Corporation.
 - f. Guardian Fire Equipment, Inc.
 - g. Wilson & Cousins Inc.
 - h. **<Insert manufacturer's name>**.
 - i. or approved equal.
2. Standard: UL 405.
3. Type: Exposed, freestanding.
4. Pressure Rating: **[175 psig (1200 kPa) minimum]** **[300 psig (2070 kPa)]**.
5. Body Material: Corrosion-resistant metal.

6. Inlets: Brass with threads according to NFPA 1963 and matching Denver Fire Department sizes and threads. Include extension pipe nipples, brass lugged swivel connections, and check devices or clappers.
7. Caps: Brass, lugged type, with gasket and chain.
8. Escutcheon Plate: Round, brass, floor type.
9. Outlet: Bottom, with pipe threads.
10. Number of Inlets: **[Two]** **[Three]** **[Four]**.
11. Sleeve: **[Brass]** **[Not required]**.
12. Sleeve Height: **18 inches** (460 mm).
13. Escutcheon Plate Marking: Similar to "**[AUTO SPKR & STP] [STANDPIPE]**."
14. Finish, **including Sleeve**: **[Polished chrome plated]** **[Rough brass or bronze]** **[Rough chrome plated]**.
15. Outlet Size: **[NPS 4 (DN 100)]** **[NPS 5 (DN 125)]** **[NPS 6 (DN 150)]**.

2.12 ALARM DEVICES

- A. Alarm-device types shall match piping and equipment connections.
- B. Water-Motor-Operated Alarm:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Globe Fire Sprinkler Corporation.
 - b. Tyco Fire & Building Products LP.
 - c. Victaulic Company.
 - d. Viking Corporation.
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.
 2. Standard: UL 753.
 3. Type: Mechanically operated, with Pelton wheel.
 4. Alarm Gong: Cast aluminum with red-enamel factory finish.
 5. Size: **10-inch** (250-mm) diameter.
 6. Components: Shaft length, bearings, and sleeve to suit wall construction.
 7. Inlet: **NPS 3/4** (DN 20).
 8. Outlet: **NPS 1** (DN 25) drain connection.
- C. Electrically Operated Alarm Bell:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Fire-Lite Alarms, Inc.; a Honeywell company.
 - b. Notifier; a Honeywell company.
 - c. Potter Electric Signal Company.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.

2. Standard: UL 464.
3. Type: Vibrating, metal alarm bell.
4. Size: [6-inch (150-mm) **minimum**] [8-inch (200-mm) **minimum**] [10-inch (250-mm)] diameter.
5. Finish: Red-enamel factory finish, suitable for outdoor use.

D. Water-Flow Indicators:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ADT Security Services, Inc.
 - b. McDonnell & Miller; ITT Industries.
 - c. Potter Electric Signal Company.
 - d. System Sensor; a Honeywell company.
 - e. Viking Corporation.
 - f. Watts Industries (Canada) Inc.
 - g. <Insert manufacturer's name>
 - h. or approved equal.
2. Standard: UL 346.
3. Water-Flow Detector: Electrically supervised.
4. Components: Two single-pole, double-throw circuit switches for isolated alarm and auxiliary contacts, 7 A, 125-V ac and 0.25 A, 24-V dc; complete with factory-set, field-adjustable retard element to prevent false signals and tamperproof cover that sends signal if removed.
5. Type: Paddle operated.
6. Pressure Rating: 250 psig (1725 kPa).
7. Design Installation: Horizontal or vertical.
8. Retard feature must be of the instantly recycling type so that flows less than retard period will not produce a cumulative effect.
9. Flow switch shall not be installed in a fitting or within 12 inches of any fitting that changes the direction of water flow.
10. Design detector with a sensitivity setting to signal any flow of water that equals or exceeds the discharge from one sprinkler head.
11. Provide weatherproof and dust tight flow detector.
12. Provide a 3/4 inch conduit entrance per detector.

E. Pressure Switches:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AFAC Inc.
 - b. Barksdale, Inc.
 - c. Detroit Switch, Inc.
 - d. Potter Electric Signal Company.
 - e. System Sensor; a Honeywell company.
 - f. Tyco Fire & Building Products LP.
 - g. United Electric Controls Co.

- h. Viking Corporation.
 - i. **<Insert manufacturer's name>**.
 - j. or approved equal.
 2. Standard: UL 346.
 3. Type: Electrically supervised water-flow switch with retard feature.
 4. Components: Single-pole, double-throw switch with normally closed contacts.
 5. Design Operation: Rising pressure signals water flow.
 6. Rated to 250 psig; designed for vertical installation; having two, spdt circuit switches to provide isolated alarm and auxiliary contacts, 7 ampere, 125 Vac and 0.25 ampere, 24 Vdc; complete with factory-set, field-adjustable tamperproof cover.
 7. Design detector with a sensitivity setting to signal any flow of water that equals or exceeds the discharge from one sprinkler head.
 8. Provide weatherproof and dust tight flow detector.
 9. Provide a 3/4 inch conduit entrance per detector.
- F. Valve Supervisory Switches:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Fire-Lite Alarms, Inc.; a Honeywell company.
 - b. Kennedy Valve; a division of McWane, Inc.
 - c. Potter Electric Signal Company.
 - d. System Sensor; a Honeywell company.
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.
 2. Standard: UL 346.
 3. Type: Electrically supervised.
 4. Components: Single-pole, double-throw switch with normally closed contacts.
 5. Design: Signals that controlled valve is in other than fully open position.
- G. Indicator-Post Supervisory Switches:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Potter Electric Signal Company.
 - b. System Sensor; a Honeywell company.
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.
 2. Standard: UL 346.
 3. Type: Electrically supervised.
 4. Components: Single-pole, double-throw switch with normally closed contacts.
 5. Design: Signals that controlled indicator-post valve is in other than fully open position.

2.13 MANUAL CONTROL STATIONS

- A. Description: UL listed or FM approved, hydraulic operation, with union, **NPS 1/2 (DN 15)** pipe nipple, and bronze ball valve. Include metal enclosure labeled "MANUAL CONTROL STATION" with operating instructions and cover held closed by breakable strut to prevent accidental opening.

2.14 CONTROL PANELS

- A. Description: Single-area, two-area, or single-area cross-zoned control panel as indicated, including NEMA ICS 6, Type 1 enclosure, detector, alarm, and solenoid-valve circuitry for operation of deluge valves. Panels contain power supply; battery charger; standby batteries; field-wiring terminal strip; electrically supervised solenoid valves and polarized fire-alarm bell; lamp test facility; single-pole, double-throw auxiliary alarm contacts; and rectifier.

1. Panels: UL listed and FM approved when used with thermal detectors and Class A detector circuit wiring. Electrical characteristics are 120-V ac, 60 Hz, with 24-V dc rechargeable batteries.
2. Manual Control Stations: Electric operation, metal enclosure, labeled "MANUAL CONTROL STATION" with operating instructions and cover held closed by breakable strut to prevent accidental opening.
3. Manual Control Stations: Hydraulic operation, with union, **NPS 1/2 (DN 15)** pipe nipple, and bronze ball valve. Include metal enclosure labeled "MANUAL CONTROL STATION" with operating instructions and cover held closed by breakable strut to prevent accidental opening.

2.15 PRESSURE GAGES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. AMETEK; U.S. Gauge Division.
 2. Ashcroft Inc.
 3. Brecco Corporation.
 4. WIKA Instrument Corporation.
 5. **<Insert manufacturer's name>**.
 6. or approved equal.
- B. Standard: UL 393.
- C. Dial Size: **3-1/2- to 4-1/2-inch** (90- to 115-mm) diameter.
- D. Pressure Gage Range: **[0 to 250 psig (0 to 1725 kPa) minimum] [0 to 300 psig (0 to 2070 kPa)]**.
- E. Water System Piping Gage: Include "WATER" or "AIR/WATER" label on dial face.

- F. Air System Piping Gage: Include[**retard feature and**] "AIR" or "AIR/WATER" label on dial face.

2.16 SIGNAGE AND LABELING

- A. Signage shall be per the requirements of NFPA 13, FM Global, and any applicable Insurance Underwriter.
 - 1. Signs shall be pre-manufactured metal, approximately 3" x 6", located at all valves, main drains, auxiliary drains, air, alarm, and similar devices.
 - 2. Every drain and control valve shall be permanently labeled with the DEN designated system I.D. number and a consecutive number indicating quantity of drains on the system, i.e. T-4-43 / 3 of 7 in the terminal or FZ – 03 / 2 of 2 .
 - 3. Hydraulic Plaques shall be provided at all risers with the appropriate information.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Perform fire-hydrant flow test according to NFPA 14 and NFPA 291. Use results for system design calculations required in "Quality Assurance" Article.
- B. Report test results promptly and in writing.
- C. Ream pipe and tube ends to full inside diameter.
- D. Remove burrs, and bevel plain end ferrous pipe.
- E. Remove scale and foreign material, inside and outside, before assembly.

3.2 SEQUENCE AND SCHEDULING

- A. Comply with DEN Maintenance and Engineering system interruption requirements and provide Denver Fire Department approved Fire Watch during entire time of system interruption.
- B. In no case shall the building structure remain without fire protection for more than four (4) hours.
- C. Schedule rough-in installations with installations of other building components.

3.3 DELIVERY, STORAGE AND HANDLING

- A. Deliver and store valves, cabinets, extinguishers and other equipment in shipping containers, with labeling in place, under provisions of Division 01.

- B. Provide temporary protective coating on cast iron and steel valves.
- C. Provide temporary end caps and closures. Maintain in place until installation.

3.4 EXAMINATION

- A. Examine roughing-in for hose connections and stations to verify actual locations of piping connections before installation.
- B. Examine walls and partitions for suitable thickness, fire- and smoke-rated construction, framing for hose-station cabinets, and other conditions where hose connections and stations are to be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.5 SERVICE-ENTRANCE PIPING

- A. Connect fire-suppression standpipe piping to water-service piping at service entrance into building. Comply with requirements for exterior piping in Section 211100 "Facility Fire-Suppression Water-Service Piping."
- B. Install shutoff valve,[**backflow preventer,**] pressure gage, drain, and other accessories at connection to fire-suppression water-service piping.[**Comply with requirements for backflow preventers in Section 211100 "Facility Fire-Suppression Water-Service Piping."**]
- C. Install shutoff valve, check valve, pressure gage, and drain at connection to water service.

3.6 WATER-SUPPLY CONNECTIONS

- A. Connect fire-suppression standpipe piping to building's interior water-distribution piping. Comply with requirements for interior piping in Section 221116 "Domestic Water Piping."
- B. Install shutoff valve,[**backflow preventer,**] pressure gage, drain, and other accessories at connection to water-distribution piping.[**Comply with requirements for backflow preventers in Section 221119 "Domestic Water Piping Specialties."**]
- C. Install shutoff valve, check valve, pressure gage, and drain at connection to water supply.

3.7 PIPING INSTALLATION

- A. Locations and Arrangements: Drawing plans, schematics, and diagrams indicate general location and arrangement of piping. Install piping as indicated, as far as practical.

1. Deviations from approved working plans for piping require written approval from authorities having jurisdiction. File written approval with DEN Project Manager before deviating from approved working plans.
- B. Piping Standard: Comply with requirements in NFPA 14 for installation of fire-suppression standpipe piping.
- C. Route piping in orderly manner, plumb and parallel to building structure. Maintain gradient.
- D. Install piping to conserve building space, to not interfere with use of space and other work.
- E. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment.
- F. In steel piping, main sized saddle branch connections or direct connection of branch lines to mains is permitted if main is one pipe size larger than the branch for up to 6 inch mains and if main is two pipe sizes larger than branch for 8 inch and larger mains. Do not project branch pipes inside the main pipe.
- G. Use approved fittings to make all changes in direction, branch takeoffs from mains, and reductions in pipe sizes.
- H. Install unions in pipes 2 inch and smaller, adjacent to each valve. Unions are not required on flanged devices or in piping installations using grooved mechanical couplings.
- I. Install flanges or flange adapters on valves, apparatus, and equipment having a 2-1/2 inch and larger connections.
- J. Install test connections sized and located in accordance with NFPA 13 complete with shutoff valve. Test connections may also serve as drainpipes. Victaulic "Test Master" or DEN Project Manager approved equal may be used in lieu of test and drainpipe and fittings. Test and drain discharge pipe shall have hose thread connection or discharge as indicated.
- K. Install pressure gauge on the riser or feed main at or near each test connection. Provide gauge with a connection not less than 1/4 inch and having a soft metal seated globe valve, arranged for draining pipe between gauge and valve. Install gauges to permit removal, and where they will not be subject to freezing.
- L. Locate fire department connection 18 inches above grade, unless directed otherwise by Denver Fire Department.
- M. Provide a minimum of 100 psi at any hose station, provide pressure reducing valve to prevent pressure on hose exceeding Denver Fire Department maximum.
- N. Provide outlet branch piping on standpipes for sprinkler systems where indicated and/or required.

- O. Fire Proofing: Where hangers require removal of fire proofing, remove minimum amount of fire proofing for hanger attachment. Repair fire proofing per Section 078100 "Applied Fireproofing"..
- P. Install seismic restraints on piping. Comply with requirements in NFPA 13 for seismic-restraint device materials and installation.
- Q. Install listed fittings to make changes in direction, branch takeoffs from mains, and reductions in pipe sizes.
- R. Install drain valves on standpipes. Extend drain piping to outside of building.
- S. Install automatic (ball drip) drain valves to drain piping between fire-department connections and check valves. Drain to floor drain or outside building.
- T. Install alarm devices in piping systems.
- U. Install hangers and supports for standpipe system piping according to NFPA 14. Comply with requirements in NFPA 13 for hanger materials.
- V. Hanger and support spacing and locations for piping joined with grooved mechanical couplings shall be in accordance with NFPA 13 and the grooved mechanical coupling manufacturer's written instructions, for rigid systems. Indicate all hangers on shop drawings.
 - 1. Install hangers to provide minimum 1/2 inch space between finished covering and adjacent work.
 - 2. Support vertical piping at every floor. Support riser piping independently of connected horizontal piping.
 - 3. Modifications or additions to system: Provide new independent supports from existing building structural components or walls suitable for the support of the added or modified sprinkler piping system.
 - 4. Install new piping, hangers, supports, etc. to avoid interference with existing building systems and operational characteristics of material handling systems.
 - 5. Supports not addressed by NFPA 13 or 14: Submit pipe support shop drawings bearing the wet stamp of a Licensed Colorado Professional Structural engineer for approval. All welding and drilling of existing structural components must be reviewed and approved by the DEN Project Manager prior to proceeding.
 - 6. Support all horizontal piping within 1'-0" of end.
- W. Install pressure gages on riser or feed main and at top of each standpipe. Include pressure gages with connection not less than **NPS 1/4 (DN 8)** and with soft-metal seated globe valve, arranged for draining pipe between gage and valve. Install gages to permit removal, and install where they will not be subject to freezing.
- X. Drain dry-type standpipe system piping.
- Y. Pressurize and check dry-type standpipe system piping and **[air-pressure maintenance devices] [air compressors]**.

- Z. Fill wet-type standpipe system piping with water.
 - AA. Install electric heating cables and pipe insulation on wet-type, fire-suppression standpipe piping in areas subject to freezing. Comply with requirements for heating cables in Section 210533 "Heat Tracing for Fire-Suppression Piping" and for piping insulation in Section 210700 "Fire-Suppression Systems Insulation."
 - BB. Connect compressed-air supply to dry-pipe sprinkler piping.
 - CC. Connect air compressor to the following piping and wiring:
 - 1. Pressure gages and controls.
 - 2. Electrical power system.
 - 3. Fire-alarm devices, including low-pressure alarm.
 - DD. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 210517 "Sleeves and Sleeve Seals for Fire-Suppression Piping."
 - 1. Do not penetrate building structural members unless indicated. Penetration of structural members requires structural engineer review and approval.
 - 2. X-RAY: Provide X-ray of structural walls and floors prior to attempting drilling or saw cutting to guarantee structural or electrical members are not interrupted by process. Comply with DEN Standard X-ray procedures.
 - EE. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 210517 "Sleeves and Sleeve Seals for Fire-Suppression Piping."
 - FF. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 210518 "Escutcheons for Fire-Suppression Piping."
 - GG. Prepare pipe, fittings, supports, and accessories for finish painting.
 - HH. All work in existing areas shall require daily cleaning, including cleaning and removal of any foreign materials. Final cleaning will require all dust to be recovered and removed.
- 3.8 JOINT CONSTRUCTION
- A. Install couplings, flanges, flanged fittings, unions, nipples, and transition and special fittings that have finish and pressure ratings same as or higher than system's pressure rating for aboveground applications unless otherwise indicated.
 - B. Install unions adjacent to each valve in pipes **NPS 2** (DN 50) and smaller.
 - C. Criteria:
 - 1. Up to and including 2 inch diameter: Screw joint and grooved joint steel piping.

2. 2 -1/2 inch diameter and larger: Welded joints (only shop welds), screw joints, or grooved joints.
- D. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 (DN 65) and larger end connections.
- E. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- F. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.
- G. Flanged Joints: Select appropriate gasket material in size, type, and thickness suitable for water service. Join flanges with gasket and bolts according to ASME B31.9.
1. Align flange surfaces parallel. Assemble joints by sequencing bolt tightening to make initial contact of flanges and gaskets as flat and parallel as possible. Use suitable lubricants on bolt threads. Tighten bolts gradually and uniformly to appropriate torque specified by the bolt manufacturer.
- H. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
1. Apply appropriate tape or thread compound to external pipe threads.
 2. Note the internal length of threads in fittings or valve ends, and proximity of internal seat or wall, to determine how far pipe should be threaded into joint.
 3. Below grade joints: Die cut screw joints with full cut standard taper pipe threads with red lead and linseed oil or other nontoxic joint compound applied to male threads only.
 4. Assemble joint to appropriate thread depth. When using a wrench on valves, place the wrench on the valve end into which the pipe is being threaded.
 5. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. If a weld opens during cutting or threading operations, that portion of pipe shall not be used.
- I. Steel-Piping, Cut-Grooved Joints: Cut square-edge groove in end of pipe according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings according to AWWA C606 for steel-pipe joints.
1. Mechanical grooved joints may be used instead of threaded or welded joints at accessible aboveground locations. Cut grooves on pipe ends dimensionally compatible with the couplings.
- J. Steel-Piping, Roll-Grooved Joints: Roll rounded-edge groove in end of pipe according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings according to AWWA C606 for steel-pipe grooved joints.
- K. Welded Joints: Construct joints according to AWS D10.12M/D10.12, using qualified processes and welding operators according to "Quality Assurance" Article.

1. Shop weld pipe joints where welded piping is indicated. Do not use welded joints for galvanized-steel pipe.

- L. Brazed Joints: Join copper tube and fittings according to CDA's "Copper Tube Handbook," "Braze Joints" Chapter.
- M. Copper-Tubing Grooved Joints: Roll rounded-edge groove in end of tube according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join copper tube and grooved-end fittings according to AWWA C606 for steel-pipe grooved joints.
- N. Dissimilar-Material Piping Joints: Make joints using adapters compatible with materials of both piping systems.

3.9 VALVE AND SPECIALTIES INSTALLATION

- A. Install listed fire-protection valves, trim and drain valves, specialty valves and trim, controls, and specialties according to NFPA 14 and authorities having jurisdiction.
- B. Install listed fire-protection shutoff valves supervised-open, located to control sources of water supply except from fire-department connections. Install permanent identification signs indicating portion of system controlled by each valve.
- C. Install check valve in each water-supply connection. Install backflow preventers instead of check valves in potable-water-supply sources.
- D. Install valves with stems upright or horizontal, not inverted.
- E. Provide gate valves for shut off or isolating service. Provide double check valve (Back flow preventer) assembly at sprinkler system water source connection.
- F. Gate Valves: Install supervised-open gate valves indicating type so located to control all sources of water supply, except fire department connections. Where there is more than one control valve, provide permanently marked identification signs indicating the portion of the system controlled by each valve. Refer to Section 220553 "Identification for Plumbing Piping and Equipment" for valve tags and signs.
- G. Where approved and/or indicated, butterfly valves may be used instead of gate valves.
- H. Provide drain valves at main shut off valves, low points of piping and apparatus.
- I. Valves: Bear UL, FM Global label or marking. Provide manufacturer's name and pressure rating marked on valve body.
- J. Specialty Valves:
 - 1. General Requirements: Install in vertical position for proper direction of flow, in main supply to system.
 - 2. Alarm Valves: Install bypass check valve and retarding chamber drain-line connection.

3. **[Dry-Pipe] [and] [Deluge]** Valves: Install trim sets for air supply, drain, priming level, alarm connections, ball drip valves, pressure gages, priming chamber attachment, and fill-line attachment.
 - a. Install air compressor and compressed-air supply piping.
 - b. Air-Pressure Maintenance Device: Install shutoff valves to permit servicing without shutting down sprinkler system; bypass valve for quick system filling; pressure regulator or switch to maintain system pressure; strainer; pressure ratings with [14- to 60-psig (95- to 410-kPa)] **<Insert value>** adjustable range; and [175-psig (1200-kPa)] **<Insert value>** maximum inlet pressure.
 - c. Install compressed-air supply piping from building's compressed-air piping system.

3.10 HOSE-CONNECTION INSTALLATION

- A. Install hose connections adjacent to standpipes.
- B. Install freestanding hose connections for access and minimum passage restriction.
- C. Install **NPS 2-1/2** (DN 65) hose connections with quick-disconnect **NPS 2-1/2** by **NPS 1-1/2** (DN 65 by DN 40) reducer adapter and flow-restricting device.
- D. Install wall-mounted-type hose connections in cabinets. Include pipe escutcheons, with finish matching valves, inside cabinet where water-supply piping penetrates cabinet. Install valves at angle required for connection of fire hose. Comply with requirements for cabinets in Section 104413 "Fire Extinguisher Cabinets."

3.11 MONITOR INSTALLATION

- A. Install monitors on standpipe piping.

3.12 FIRE-DEPARTMENT CONNECTION INSTALLATION

- A. Install wall-type, fire-department connections.
- B. Install yard-type, fire-department connections in concrete slab support. Comply with requirements for concrete in Section 033000 "Cast-in-Place Concrete."
 1. Install [**two**] [**three**] **<Insert number>** protective pipe bollards [**around**] [**on sides of**] each fire-department connection. Comply with requirements for bollards in Section 055000 "Metal Fabrications."
- C. Install automatic (ball drip) drain valve at each check valve for fire-department connection.

3.13 CLEANING

- A. Clean all dirt and all debris from work area.
- B. Clean exterior of all installation to be painted. Reference Section "Identification for Plumbing Piping and Equipment".

3.14 IDENTIFICATION

- A. Install labeling and pipe markers on equipment and piping according to requirements in NFPA 14.
- B. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

3.15 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
- B. Tests and Inspections:
 - 1. Leak Test: After installation, charge systems and test for leaks. Repair leaks and retest until no leaks exist.
 - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - 3. Flush, test, and inspect standpipe systems according to NFPA 14, "System Acceptance" Chapter.
 - 4. Energize circuits to electrical equipment and devices.
 - 5. Start and run air compressors.
 - 6. Coordinate with fire-alarm tests. Operate as required.
 - 7. Coordinate with fire-pump tests. Operate as required.
 - 8. Verify that equipment hose threads are same as local fire-department equipment.
- C. Fire-suppression standpipe system will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.
- E. Water Damage: The Fire Protection Work Contractor shall be responsible for any damage to the work of others, to building and property/materials of others caused by leaks in automatic sprinkler equipment, unplugged or disconnected pipes or fittings, and shall pay for necessary replacement or repair of work or items so damaged during the installation and testing periods of the automatic sprinkler work.

3.16 CLEANING

- A. Flush entire system of foreign matter.

- B. Clean exterior surfaces to be painted.

3.17 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain specialty valves.
- B. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

3.18 WARRANTY

- A. All work and equipment shall be warranted to be free from defects in workmanship and material for a period of twelve (12) months from the date of Substantial Completion. Any material or equipment found to be defective during this period shall be repaired or replaced without expense to the Owner.

3.19 PIPING SCHEDULE

- A. Piping between Fire-Department Connections and Check Valves: Galvanized, standard-weight steel pipe with **[threaded ends; cast-iron threaded fittings; and threaded] [grooved ends; grooved-end fittings; grooved-end-pipe couplings; and grooved]** joints.
- B. Standard-pressure, wet-type, fire-suppression standpipe piping, **[NPS 2]** (DN 50) **and smaller]** **<Insert pipe size range>**, shall be **[one of]** the following:
 - 1. **[Schedule 40]**, ASTM A53 Type "F" continuous welded black-steel pipe with threaded and coupled ends; with protective coating , gray-iron threaded fittings; and threaded joints. Only pipe identified and conforming to schedule 40 wall thickness shall be used. In example, "Dyna Flow", "Eddy Pipe", "Super Flow" and / or similar products which are not true Schedule 40 thickness will not be allowed. Do not weld pipe or attach welded flanges or fittings.
- C. Standard-pressure, wet-type, fire-suppression standpipe piping, **[NPS 2.5 and larger]** (DN 50 and larger) **<Insert pipe size range>**, shall be **[one of]** the following:
 - 1. **Schedule 40** ,ASTM A53 Type "E" ERW black-steel pipe with threaded ends; with protective coating , gray-iron threaded fittings; butt weld ends. .
 - a. Joints: Shall be cut grooved for ASTM A106, Gr. B couplings.
 - 2. Optional Standpipe Piping (if approved by DEN Project Manager): ASTM A135 Gr. B ERW thinwall pipe or acceptable alternates per NFPA 13. Maximum pressure shall be 300 psig conforming to NFPA 13, Chapter 3. Reference Section 211316 "Dry-Pipe Sprinkler Systems" for additional instructions for dry pipe system piping.

- a. Sizes 2-1/2" through 5": Schedule 10 or an NFPA approved alternate.
- b. 6" size: 0.134" wall thickness or an NFPA approved alternate.
- c. 8" and 10" size: 0.188" wall thickness or an NFPA approved alternate.
- d. Joints: ASTM A536, dimensionally compatible with mechanical couplings.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 211200

SECTION 211313 - WET-PIPE SPRINKLER SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Pipes, fittings, and specialties.
2. Fire-protection valves.
3. Fire-department connections.
4. Sprinklers.
5. Alarm devices.
6. Manual control stations.
7. Control panels.
8. Pressure gages.

B. Related Sections:

1. Section 210500 "Common Work Results for Fire Suppression".
2. Section 210517 "Sleeves and Sleeve Seals for Fire Suppression Piping".
3. Section 210518 "Escutcheons for Fire Suppression Piping".
4. Section 210529 "Hangers & Supports for Fire Suppression Piping and Equipment".
5. Section 210533 "Heat Tracing for Fire Suppression Piping".
6. Section 210548 "Vibration and Seismic Controls for Fire-Suppression Piping and Equipment".
7. Section 210553 "Identification for Fire Suppression Piping and Equipment".
8. Section 210700 "Fire Suppression Systems Insulation".
9. Section 211100 "Facility Fire-Suppression Water-Service Piping".
10. Section 211200 "Fire-Suppression Standpipes" for standpipe piping.
11. Section 211316 "Dry-Pipe Sprinkler Systems" for dry-pipe sprinkler piping.
12. Section 211339 "Foam-Water Systems" for AFFF piping.
13. Section 212200 "Clean Agent Fire Extinguishing Systems".
14. Section 213113 "Electric-Drive, Centrifugal Fire Pumps" for fire pumps, pressure-maintenance pumps, and fire-pump controllers.
15. Section 283100 "Intelligent Life Safety Fire Management System" for alarm devices not specified in this Section.

C. Work furnished under other Sections:

1. Furnish pipe sleeves, complete with drawing(s) locating all sleeves and indicating sleeve size to Divisions 03, 04 or 09 contractors for placement.
 2. Fireproofing repair.
 3. Fire sealants.
 4. Painting.
- D. Include all design, fabrication, and installation of all wet-pipe fire protection systems in association with fire pump installation, dry-pipe sprinkler installation, and all fire and smoke alarm interface in accordance with design criteria and fire/smoke zoning requirements indicated on drawings. The Fire Protection Work Contractor (FPWC) shall provide all special tools required for installation or maintenance for the equipment provided. If conflicts occur in this specification or between this specification and the contract documents, the most stringent requirement shall apply.
- E. Work on all systems require DEN Shut Down Requests be completed and filed five (5) days before work is to be done. Work on wet systems must be done during off hour periods, 10:00 p.m. to 6:00 a.m. Sunday night through Friday morning. No system may be shut down for periods longer than ten (10) hours. The Fire Sprinkler Contractor is responsible for the required fire watch and must remain ON SITE for the entire period of time that the system is not in service. Failure to comply may be reason for immediate suspension of work privileges.
- F. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 REFERENCE STANDARDS

- A. Materials and workmanship shall conform to the latest issue of all industry standards, publications, or regulations referenced in this section and with the following references as applicable. Appendices and/or Annexes referenced by these standards shall apply.
- B. International Building Code (IBC) with the Denver Amendments.
- C. International Fire Code (IFC) with the Denver Amendments.
- D. National Fire Protection Association (NFPA):
 1. NFPA 13 - Installation of Sprinkler Systems.
 2. The most stringent interpretations shall apply. All appendices and/or Annexes shall apply.

1.4 DEFINITIONS

- A. Standard-Pressure Sprinkler Piping: Wet-pipe sprinkler system piping designed to operate at working pressure of **175 psig** (1200 kPa) maximum.
- B. High-Pressure Sprinkler Piping: Wet-pipe sprinkler system piping designed to operate at working pressure higher than standard **175 psig** (1200 kPa), but not higher than **[250 psig** (1725 kPa)] **[300 psig** (2070 kPa)].

- C. Pipe sizes used in this specification are Nominal Pipe Size (NPS).
- D. Working plans as used in this Section refer to documents, including drawings and calculations, prepared pursuant to requirements in NFPA 13 and City and County of Denver Code agencies for obtaining approval of authority having jurisdiction.
- E. Other definitions for fire protection systems are included in referenced NFPA standards.

1.5 SYSTEM DESCRIPTIONS

- A. Wet-Pipe Sprinkler System: Automatic sprinklers are attached to piping containing water and that is connected to water supply through alarm valve. Water discharges immediately from sprinklers when they are opened. Sprinklers open when heat melts fusible link or destroys frangible device. Hose connections are included if indicated.
- B. Deluge Sprinkler System: Open sprinklers are attached to piping connected to water supply through deluge valve. Fire-detection system, in same area as sprinklers, opens valve. Water flows into piping system and discharges from attached sprinklers when valve opens.
- C. Interface system with building fire alarm system.
- D. All conveyor and baggage handling openings and escalator openings shall be protected with a closed head water curtain.
- E. Closed head water curtains shall be designed with heads 6 feet o.c. and discharge shall be calculated in accordance with NFPA 13 for water curtains.
- F. Design Criteria:
 - 1. Occupancy hazard class: [**ordinary hazard**] [], Group [**2**] [].
 - 2. Density: [**.20**] [] GPM/SF flowing over [**1,500**] [] of the remote area.
 - 3. Hose stream allowance: Include [**250**] [] GPM for hose stream at the riser.
 - 4. Provide a 10% safety margin in hydraulic calculations.
 - 5. Velocities in pipes shall be shown on hydraulic calculations. Velocities in overhead piping shall not exceed 20 feet per second. Velocities in underground piping shall not exceed 16 feet per second.
 - 6. Hydraulic calculation submittal shall clearly define all devices that will cause friction loss with equivalent lengths of pipe. This includes vane type electric water flow switches. Assume 10 feet of equivalent length of pipe unless actual pressure drop data is available from the manufacturer.
 - 7. Design information shall be permanently affixed to the risers as described in NFPA 13.
 - 8. Sprinkler shop drawings and hydraulic calculations shall be prepared in accordance with NFPA 13 and FM Global.
 - 9. Like or similar small volume drains shall be increased to 1" minimum size and shall be tied together.
 - 10. Current Denver Water Department test reports (less than 6 months old) for the

underground supply shall be provided for all new calculations. Where accepted by all authorities having jurisdiction, the most current DEN Fire Pump Test may be used.

11. Provide fire proofing repair damaged by this work.
12. Provide all required fire sealants and smoke stopping required by this work

1.6 PERFORMANCE REQUIREMENTS

- A. Standard-Pressure Piping System Component: Listed for **175-psig** (1200-kPa) minimum working pressure.
- B. High-Pressure Piping System Component: Listed for **[250-psig** (1725-kPa) **minimum]** **[300-psig** (2070-kPa)] working pressure.
- C. Design and obtain approval from authority having jurisdiction for fire protection systems specified.
- D. Minimum Pipe Sizes: Not smaller than existing pipe sizes of sprinklers being relocated.
- E. Should the relocation of sprinkler heads cause the calculated remote zone to change, hydraulic calculations shall be performed and approved by the authority having jurisdiction.
- F. Sprinkler system zone shall not serve multiple smoke control zones. Verify that the no conflict exists between the design drawings and this requirement.
- G. System modifications, remodeling:
 1. Minimum Pipe Sizes: Not smaller than existing pipe sizes of sprinklers being relocated.
 2. Should the relocation of sprinkler heads cause the calculated remote zone to change, hydraulic calculations shall be performed and approved by the Authority Having Jurisdiction (AHJ). Verify with AHJ all requirements for new calculations.
- H. Delegated Design: Design sprinkler system(s), including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
 1. Available fire-hydrant flow test records indicate the following conditions:
 - a. Date: **<Insert test date>**.
 - b. Time: **<Insert time>** [a.m.] [p.m.]
 - c. Performed by: **<Insert operator's name>** of **<Insert firm>**.
 - d. Location of Residual Fire Hydrant R: **<Insert location>**.
 - e. Location of Flow Fire Hydrant F: **<Insert location>**.
 - f. Static Pressure at Residual Fire Hydrant R: **<Insert psig** (kPa)>.
 - g. Measured Flow at Flow Fire Hydrant F: **<Insert gpm** (L/s)>.
 - h. Residual Pressure at Residual Fire Hydrant R: **<Insert psig** (kPa)>.
- I. Sprinkler system design shall be approved by authorities having jurisdiction.

1. Margin of Safety for Available Water Flow and Pressure: **[10] [20] <Insert number>** percent, including losses through water-service piping, valves, and backflow preventers.
2. Sprinkler Occupancy Hazard Classifications:
 - a. Automobile Parking Areas: **[Ordinary Hazard, Group 1] <Insert classification>**.
 - b. Building Service Areas: **[Ordinary Hazard, Group 1] <Insert classification>**.
 - c. Electrical Equipment Rooms: **[Ordinary Hazard, Group 1] <Insert classification>**.
 - d. General Storage Areas: **[Ordinary Hazard, Group 1] <Insert classification>**.
 - e. Laundries: **[Ordinary Hazard, Group 1] <Insert classification>**.
 - f. Machine Shops: **[Ordinary Hazard, Group 2] <Insert classification>**.
 - g. Mechanical Equipment Rooms: **[Ordinary Hazard, Group 1] <Insert classification>**.
 - h. Office and Public Areas: **[Light Hazard] <Insert classification>**.
 - i. Repair Garages: **[Ordinary Hazard, Group 2] <Insert classification>**.
 - j. Restaurant Service Areas: **[Ordinary Hazard, Group 1] <Insert classification>**.
 - k. Solvent Cleaning Areas: **[Extra Hazard, Group 2] <Insert classification>**.
 - l. **<Insert classification>**.
3. Minimum Density for Automatic-Sprinkler Piping Design:
 - a. Light-Hazard Occupancy: **[0.10 gpm over 1500-sq. ft. (4.1 mm/min. over 139-sq. m)] <Insert value>** area.
 - b. Ordinary-Hazard, Group 1 Occupancy: **[0.15 gpm over 1500-sq. ft. (6.1 mm/min. over 139-sq. m)] <Insert value>** area.
 - c. Ordinary-Hazard, Group 2 Occupancy: **[0.20 gpm over 1500-sq. ft. (8.1 mm/min. over 139-sq. m)] <Insert value>** area.
 - d. Extra-Hazard, Group 1 Occupancy: **[0.30 gpm over 2500-sq. ft. (12.2 mm/min. over 232-sq. m)] <Insert value>** area.
 - e. Extra-Hazard, Group 2 Occupancy: **[0.40 gpm over 2500-sq. ft. (16.3 mm/min. over 232-sq. m)] <Insert value>** area.
 - f. Special Occupancy Hazard: As determined by authorities having jurisdiction.
4. Minimum Density for Deluge-Sprinkler Piping Design:
 - a. Ordinary-Hazard, Group 1 Occupancy: **[0.15 gpm (6.1 mm/min.) <Insert value>** over entire area.
 - b. Ordinary-Hazard, Group 2 Occupancy: **[0.20 gpm (8.1 mm/min.) <Insert value>** over entire area.
 - c. Extra-Hazard, Group 1 Occupancy: **[0.30 gpm (12.2 mm/min.) <Insert value>** over entire area.
 - d. Extra-Hazard, Group 2 Occupancy: **[0.40 gpm (16.3 mm/min.) <Insert value>** over entire area.

- e. Special Occupancy Hazard: As determined by authorities having jurisdiction.
- 5. Maximum Protection Area per Sprinkler: Per UL listing.
- 6. Maximum Protection Area per Sprinkler:
 - a. Residential Areas: [400 sq. ft. (37 sq. m)] **<Insert dimension>**.
 - b. Office Spaces: [120 sq. ft. (11.1 sq. m)] [225 sq. ft. (20.9 sq. m)] **<Insert dimension>**.
 - c. Storage Areas: [130 sq. ft. (12.1 sq. m)] **<Insert dimension>**.
 - d. Mechanical Equipment Rooms: [130 sq. ft. (12.1 sq. m)] **<Insert dimension>**.
 - e. Electrical Equipment Rooms: [130 sq. ft. (12.1 sq. m)] **<Insert dimension>**.
 - f. Other Areas: According to NFPA 13 recommendations unless otherwise indicated.
- 7. Total Combined Hose-Stream Demand Requirement: According to NFPA 13 unless otherwise indicated:
 - a. Light-Hazard Occupancies: [100 gpm (6.3 L/s) for 30 minutes] **<Insert requirement>**.
 - b. Ordinary-Hazard Occupancies: [250 gpm (15.75 L/s) for 60 to 90 minutes] **<Insert requirement>**.
 - c. Extra-Hazard Occupancies: [500 gpm (31.5 L/s) for 90 to 120 minutes] **<Insert requirement>**.
 - d. **<Insert requirements>**.
- J. Seismic Performance: Sprinkler piping shall withstand the effects of earthquake motions determined according to NFPA 13 and [ASCE/SEI 7] **<Insert requirement>**.

1.7 REGULATORY REQUIREMENTS

- A. Comply with NFPA 13 - Standard for the Installation of Sprinkler Systems, latest edition.
- B. Comply with NFPA 72 - Installation, Maintenance, and Use of Protective Signaling Systems.
- C. Comply with City and County of Denver Code Agency requirements.
- D. UL and FM Global Compliance: Fire protection system materials and components shall be UL listed and labeled, and FM Global approved.
- E. Hydraulic Calculations, Product Data, Shop Drawings, Dry Pipe System Equipment, and Low Air Switch, Air Maintenance Device: Bear stamp of approval of Designer of Record, DEN Life Safety Team and Owner's Representative and Denver Fire Department.
- F. All applicable insurance authorities underwriting requirements.

1.8 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. [**Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.**]
1. Include data substantiating that materials comply with requirements.
- B. LEED Submittal:
1. Product Data for Credit EQ 4.1: For solvent cements and adhesive primers, including printed statement of VOC content and chemical components.
- C. Shop Drawings: For wet-pipe sprinkler systems. Include plans, elevations, sections, details, and attachments to other work.
1. Wiring Diagrams: For power, signal, and control wiring.
- D. Delegated-Design Submittal: For sprinkler systems indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- E. Submit working plans and product data under provisions of Division 01. Submittal shall include drawings, hydraulic calculations, hydraulic reference points, detailed pipe layout, hangers and supports, components and accessories and other items as defined by NFPA 13. Indicate pipe materials used, jointing methods, supports, floor and wall penetration seals. Indicate installation, layout, weights, mounting and support details, and piping connections.
- F. Working Plans drawings shall be submitted in Revit format in hard copy and on Compact Disk. (2) sets of full size drawings (34x44) and (1) Compact Disk containing all drawing files shall be submitted to the DEN Life Safety Team as part of each submittal.
- G. Working Plan drawings for remodel areas shall include as built depiction of all sprinkler work within at least a 50 foot radius of the work proposed. Risers and main supply pipes shall also be indicated by size and location.
- H. Final Submittal: Working plans submitted for approval shall have the signed wet stamp of a registered Fire Protection Engineer licensed in the State of Colorado (or N.I.C.E.T. 4), certifying that the fire sprinkler system has been designed and hydraulically calculated in compliance with NFPA and governing authorities requirements.
- I. Obtain DEN Life Safety Team review and stamp prior to submittal for permit.
- J. Submit working plans and product data to Denver Fire Department for approval. Subject to approval, submit copy of approved submittal and permit to the DEN Project Manager.
- K. Submit additional non-returnable copies of current permits and agency approved working plan drawings with System Interruption Request.

- L. Contractor shall submit fully dimensioned spool drawings for all welded piping work. Drawings shall indicate all weld types, sizes, and materials to be used. The spool drawing size shall match the full size contract documents of either 24x36 or 34x44. Spool drawings shall be submitted in either the latest version of Revit or the latest version of Adobe Acrobat (pdf). Adobe Acrobat files shall not contain security. Other file formats will not be accepted.
- M. Supports not addressed by NFPA 13 or 14: Submit pipe support shop drawings bearing the wet stamp of a Licensed Colorado Professional Structural Engineer for approval. All welding and drilling of existing structural components must be reviewed and approved by the DEN Project Manager prior to proceeding.

1.9 INFORMATIONAL SUBMITTALS

- A. Subject to approval, submit copy of permit and submittal approved by Denver Fire Department to the DEN Project Manager.
- B. Current Welders' qualification certificates and procedures. Reference Section 059990 "Welding".
- C. Test reports and certificates including "Contractor's Material and Test Certificate for Aboveground Piping" as described in NFPA 13.
- D. Coordination Drawings: Sprinkler systems, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 - 1. Domestic water piping.
 - 2. Compressed air piping.
 - 3. HVAC hydronic piping.
 - 4. Items penetrating finished ceiling include the following:
 - a. Lighting fixtures.
 - b. Air outlets and inlets.
 - c. **<Insert item>**.
 - 5. **<Insert item>**.
- E. Qualification Data: For qualified Installer[**and professional engineer**].
- F. Installer's Qualifications: Firms qualified to install and alter fire protection piping, equipment, specialties, and accessories, and repair and service equipment. A qualified firm is one that is experienced in such work, with minimum of five (5) previous projects similar in size and scope to this Project, is familiar with precautions required, and in compliance with the requirements of the authority having jurisdiction. The firm shall be in possession of City and County of Denver Fire Protection License Class A or B. Refer to Division 01 Section Reference Standards and Definitions for definition of Installer.
 - 1. The qualified installer shall be licensed for the design and installation for the

- specific type of system in the City and County of Denver and the State of Colorado and have been in business under the current name for five (5) years.
2. All field personnel must be a current holder of the City & County of Denver Fire Department Fire Protection Installers license.
- G. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum five (5) years' documented experience.
- H. Approved Sprinkler Piping Drawings: Working plans, prepared according to NFPA 13, that have been approved by authorities having jurisdiction, including hydraulic calculations if applicable.
- I. Welding certificates.
- J. Copy of City and County of Denver Fire Protection Contractors License, and Fire protection Supervisor's certificate for class of equipment being installed.
- K. Fire-hydrant flow test report.
- L. Field Test Reports and Certificates: Indicate and interpret test results for compliance with performance requirements and as described in NFPA 13. Include "Contractor's Material and Test Certificate for Aboveground Piping."
- M. Field quality-control reports.
- 1.10 CLOSEOUT SUBMITTALS
- A. Operation and Maintenance Data: For sprinkler specialties to include in emergency, operation, and maintenance manuals.
 1. Maintenance data for each type sprinkler head, valve, piping specialty, fire protection specialty, fire department valve, and hose cabinet specified, for inclusion in operating and maintenance manual specified in Division 01.
 - a. Include written maintenance data on components of system, servicing requirements, and Record Drawings.
 - b. Include pump operation, maintenance, and inspection data, replacement part numbers and availability, and location and telephone numbers and website of service depot.
 - B. Test reports and certificates including "Contractor's Material and Test Certificate for Aboveground Piping" as described in NFPA 13.
 - C. All sprinkler system record drawings shall be submitted in the form of hard copies and electronic format in compliance with DEN requirements.

1.11 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
- B. Sprinkler Cabinets: Finished, wall-mounted, steel cabinet with hinged cover, and with space for minimum of six spare sprinklers plus sprinkler wrench. Include number of sprinklers required by NFPA 13 and sprinkler wrench. Include separate cabinet with sprinklers and wrench for each type of sprinkler used on Project.
- C. The following must be delivered and accepted prior to any testing:
 - 1. Provide a spare parts list. The list is to be provided with material submittal cut sheets.
 - 2. Provide extra sprinkler heads: Furnish each style with its own sprinkler head cabinet under provisions of NFPA 13 and Division 01.
 - 3. Provide suitable wrenches for each head type.
 - 4. Provide metal storage cabinet in location designated.
 - 5. Provide one set of renewable parts and seals for each dry valve installed.
 - 6. Provide DEN representatives all special tools required for installation and maintenance.

1.12 QUALITY ASSURANCE

- A. Installer Qualifications:
 - 1. Firms qualified to install and alter fire protection piping, equipment, specialties, and accessories, and repair and service equipment. A qualified firm is one that is experienced in such work, with minimum of 5 previous projects similar in size and scope to this Project, familiar with precautions required, and in compliance with the requirements of the authority having jurisdiction. The firm shall be in possession of City and County of Denver Fire Protection License Class A or B. Refer to Division 01 Section Reference Standards and Definitions for definition of Installer.
 - 2. The qualified installer shall be licensed for the design and installation for the specific type of system in the City and County of Denver and the State of Colorado and have been in business under the current name for five (5) years.
 - 3. All field personnel must be a current holder of the City & County of Denver Fire Department Fire Protection Installers license.
 - 4. Submit evidence of such qualifications to the DEN Project Manager.
 - 5. Installer's responsibilities include designing, fabricating, and installing sprinkler systems and providing professional engineering services needed to assume engineering responsibility. Base calculations on results of fire hydrant flow test.
 - a. Engineering Responsibility: Preparation of working plans, calculations, and field test reports by a qualified professional engineer.

- B. Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. NFPA Standards: Sprinkler system equipment, specialties, accessories, installation, and testing shall comply with the following:
 - 1. NFPA 13, "Installation of Sprinkler Systems."
 - 2.
 - 3. NFPA 24, "Installation of Private Fire Service Mains and Their Appurtenances."
- E. Design and installation to conform to Denver Fire Department requirements.
- F. Equipment and Components: Bear UL, FM GLOBAL label or marking.
- G. Qualifications for Welding Processes and Operators: Comply with the requirements of AWS B2.1, Specifications for Procedure and Performance Qualifications.
- H. Sprinkler design drawings and hydraulic calculations submitted for approval shall have the signed wet stamp of a Colorado registered Fire Protection Engineer practicing in the fire protection field in the state of the project or a N.I.C.E.T. Level 4, certifying that the fire sprinkler system has been designed and hydraulically calculated in compliance with NFPA and governing authorities requirements.
- I. Obtain DEN Life Safety Team review and stamp prior to submittal for permit.
- J. Fire Proofing: Where hangers require removal of fire proofing, remove minimum amount of fire proofing for hanger attachment. Repair fireproofing per requirements specified in Section 078100 "Applied Fireproofing".
- K. Comply with all requirements of Owner's Insurance Underwriter.

1.13 PROJECT CONDITIONS, SEQUENCE AND SCHEDULING

- A. Comply with DEN Maintenance and Engineering system interruption requirements and provide Denver Fire Department approved Fire Watch during entire time of system interruption.
- B. In no case shall the building structure remain without fire protection for more than ten (10) hours.
- C. Prior to system shut down, Contractor shall certify all equipment and materials are on site for removing, capping, valving, tagging, and reconnection of system.
- D. Schedule rough-in installations with installations of other building components.
- E. Conform to NFPA 13 for sprinkler systems.

1.14 COORDINATION

- A. Coordinate layout and installation of sprinklers with other construction that penetrates ceilings, including light fixtures, HVAC equipment, and partition assemblies.

1.15 DELIVERY, STORAGE, AND HANDLING

- A. Deliver and store pumps in shipping containers with labeling in place under provisions of Division 01.
- B. Provide temporary inlet and outlet caps to be used throughout system construction until systems are in service.
- C. Maintain caps in place until installation.

1.16 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PIPING MATERIALS

- A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, and fitting materials, and for joining methods for specific services, service locations, and pipe sizes.
- B. Equipment and components: Bear UL or FM Global label or marking where required.

2.2 STEEL PIPE AND FITTINGS

- A. Threadable lightwall, black and galvanized, for threaded joints is not allowed.
- B. Black steel pipe, ASTM A-53, A-135, Schedule 40. Only pipe identified and conforming to schedule 40 wall thickness shall be used.
 - 1. "Dyna Flow", "Eddy Pipe", "Super Flow" and/or similar products which are not true schedule 40 thickness will NOT be allowed.
- C. Thin Wall pipe:
 - 1. Thin wall pipes shall have grooved fittings only. Threaded thin wall piping shall not be used. Welded outlets are allowed as long as all welding qualifications are met.

- D. Cast Iron Threaded Fittings: ANSI B16.4, Class 125 or 250 as required, standard pattern, for threaded joints. Threads shall conform to ANSI B1.20.1.
- E. Malleable Iron Threaded Fittings: ANSI B16.3, Class 150 or 300 as required, standard pattern, for threaded joints. Threads shall conform to ANSI B1.20.1.
- F. Deluge and exterior dry systems connections must have galvanized fittings
- G. Steel Fittings: ASTM A 234, seamless or welded, for welded joints.
- H. Wrought Copper Fittings: ANSI B16.22, streamlined pattern.
- I. Cast Iron Threaded Flanges: ANSI B16.1, Class 125 or 250 as required. Raised face flanges shall be mated with raised face, and flat face flanges shall be mated with flat face only.
- J. Use of Hooker style fittings and/or any similar rubber gasketed, drill to mount, 2" and smaller clamp on tees will NOT be permitted.
- K. Use of threaded thin wall pipe. Pressfit fittings or similar non-threaded connections of any kind will NOT be permitted.
- L. "EZ-T's" are NOT permitted.
- M. Unions: 150 to 300 psi as required malleable iron for threaded ferrous piping.
- N. Welding Materials: Field welding shall not be permitted; perform only shop welding. Comply with Section II, Part C, ASME Boiler and Pressure Vessel Code for welding materials appropriate for the wall thickness and chemical analysis of the pipe being welded. Welded outlets are permitted as long as the welding is done in compliance with NFPA welding requirements and welding requirements of these specifications.
- O. Steel Welding Fittings: ASTM A 234/A 234M and ASME B16.9.
- P. Grooved-Joint, Steel-Pipe Appurtenances:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil International, Inc.
 - b. Corcoran Piping System Co.
 - c. National Fittings, Inc.
 - d. Shurjoint Piping Products.
 - e. Tyco Fire & Building Products LP.
 - f. Victaulic Company.
 - g. <Insert manufacturer's name>.
 - h. or approved equal.
 - 2. Pressure Rating: [175 psig (1200 kPa)] [250 psig (1725 kPa)] [300 psig (2070 kPa)] minimum.

3. **[Galvanized] [and] [Uncoated]**, Grooved-End Fittings for Steel Piping: ASTM A 47/A 47M, malleable-iron casting or ASTM A 536, ductile-iron casting; with dimensions matching steel pipe.
 4. Grooved-End-Pipe Couplings for Steel Piping: AWWA C606 and UL 213, rigid pattern, unless otherwise indicated, for steel-pipe dimensions. Include ferrous housing sections, EPDM-rubber gasket, and bolts and nuts.
 - a. Malleable iron housing clamps to engage and lock, designed to permit some angular deflection, contraction, and expansion: "C" shaped composition sealing gasket, steel bolts, nuts, and washers.
- Q. Steel Pressure-Seal Fittings: UL 213, FM-approved, **175-psig** (1200-kPa) pressure rating with steel housing, rubber O-rings, and pipe stop; for use with fitting manufacturers' pressure-seal tools.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Victaulic Company.
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.

2.3 PIPING JOINING MATERIALS

- A. Pipe-Flange Gasket Materials: **[AWWA C110, rubber, flat face, 1/8 inch (3.2 mm) thick] [or] [ASME B16.21, nonmetallic and asbestos free]**.
1. Class 125, Cast-Iron Flanges and Class 150, Bronze Flat-Face Flanges: Full-face gaskets.
 2. Class 250, Cast-Iron Flanges and Class 300, Steel Raised-Face Flanges: Ring-type gaskets.
- B. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.
- C. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for general-duty brazing unless otherwise indicated.
- D. Welding Materials: Field welding shall not be permitted. Perform only shop welding. Comply with Section II, Part C, ASME Boiler and Pressure Vessel Code for welding materials appropriate for the wall thickness and chemical analysis of the pipe being welded. Welded outlets are permitted as long as the welding is done in compliance with NFPA welding requirements and Section 059990 "Welding".
- E. Welding Filler Metals: Comply with AWS D10.12M/D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- F. Brazing: ANSI/AWS A5.8.

- G. Gasket Materials: Thickness, material, and type suitable for fluid or gas to be handled, and design temperatures and pressures.
- H. Threaded Joint Compound or “Teflon” tape.

2.4 LISTED FIRE-PROTECTION VALVES

A. General Requirements:

- 1. Valves shall be UL listed or FM approved.
- 2. Minimum Pressure Rating for Standard-Pressure Piping: 175 psig (1200 kPa).
- 3. Minimum Pressure Rating for High-Pressure Piping: [250 psig (1725 kPa)] [300 psig (2070 kPa)].

B. Ball Valves:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil International, Inc.
 - b. Victaulic Company.
 - c. <Insert manufacturer's name>.
 - d. or approved equal.
- 2. Standard: UL 1091 except with ball instead of disc.
- 3. Valves NPS 1-1/2 (DN 40) and Smaller: Bronze body with threaded ends.
- 4. Valves NPS 2 and NPS 2-1/2 (DN 50 and DN 65): Bronze body with threaded ends or ductile-iron body with grooved ends.
- 5. Valves NPS 3 (DN 80): Ductile-iron body with grooved ends.

C. Butterfly and grooved end control valves

- 1. Per NFPA 13: UL listed and FM Global approved butterfly control valves for use with tamper switches, flanged or grooved connections. Carbon steel body, 150 lb full ANSI rated bi directional, 316 SS electro-deposit nickel plated eccentric rotating disc, dynamic sealed, TFE seal ring, 17 4 PH stainless steel shaft, teflon chevron stem packing, 316 SS graphite impregnated bearings, and gear operator. Provide Supervisory switches.
- 2. Per NFPA-13 UL-Listed and FM Global approved grooved end control valves for use as zone control and/or sectional valves may be used with appropriate pressure ratings for intended service.
- 3. Supervisory switches are required on all control valves.

D. Check Valves:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AFAC Inc.
 - b. American Cast Iron Pipe Company; Waterous Company Subsidiary.

- c. Anvil International, Inc.
 - d. Clow Valve Company; a division of McWane, Inc.
 - e. Crane Co.; Crane Valve Group; Crane Valves.
 - f. Crane Co.; Crane Valve Group; Jenkins Valves.
 - g. Crane Co.; Crane Valve Group; Stockham Division.
 - h. Fire-End & Croker Corporation.
 - i. Fire Protection Products, Inc.
 - j. Fivalco Inc.
 - k. Globe Fire Sprinkler Corporation.
 - l. Groeniger & Company.
 - m. Kennedy Valve; a division of McWane, Inc.
 - n. Matco-Norca.
 - o. Metraflex, Inc.
 - p. Milwaukee Valve Company.
 - q. Mueller Co.; Water Products Division.
 - r. NIBCO INC.
 - s. Potter Roemer.
 - t. Reliable Automatic Sprinkler Co., Inc.
 - u. Shurjoint Piping Products.
 - v. Tyco Fire & Building Products LP.
 - w. United Brass Works, Inc.
 - x. Venus Fire Protection Ltd.
 - y. Victaulic Company.
 - z. Viking Corporation.
 - aa. Watts Water Technologies, Inc.
 - bb. **<Insert manufacturer's name>**.
 - cc. or approved equal.
2. Standard: UL 312.
 3. Pressure Rating: [250 psig (1725 kPa) **minimum**] [300 psig (2070 kPa)].
 4. Type: Swing check.
 5. Body Material: Cast iron, bronze trim, swing disc, renewable disc, and seat.
 - a. Iron body, bronze trim spring loaded, renewable composition disc, where indicated on drawings.
 6. End Connections: Flanged or grooved.
- E. Bronze OS&Y Gate Valves:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Crane Co.; Crane Valve Group; Crane Valves.
 - b. Crane Co.; Crane Valve Group; Stockham Division.
 - c. Milwaukee Valve Company.
 - d. NIBCO INC.
 - e. United Brass Works, Inc.
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.

2. Standard: UL 262.
3. Pressure Rating: 175 psig (1200 kPa).
4. Body Material: Bronze.
5. End Connections: Threaded.

F. Iron OS&Y Gate Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Cast Iron Pipe Company; Waterous Company Subsidiary.
 - b. American Valve, Inc.
 - c. Clow Valve Company; a division of McWane, Inc.
 - d. Crane Co.; Crane Valve Group; Crane Valves.
 - e. Crane Co.; Crane Valve Group; Jenkins Valves.
 - f. Crane Co.; Crane Valve Group; Stockham Division.
 - g. Hammond Valve.
 - h. Milwaukee Valve Company.
 - i. Mueller Co.; Water Products Division.
 - j. NIBCO INC.
 - k. Shurjoint Piping Products.
 - l. Tyco Fire & Building Products LP.
 - m. United Brass Works, Inc.
 - n. Watts Water Technologies, Inc.
 - o. <Insert manufacturer's name>.
 - p. or approved equal.
2. Standard: UL 262.
3. Pressure Rating: [250 psig (1725 kPa) minimum] [300 psig (2070 kPa)].
4. Body Material: Cast or ductile iron.
5. End Connections: Flanged or grooved.

G. Indicating-Type Butterfly Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil International, Inc.
 - b. Fivalco Inc.
 - c. Global Safety Products, Inc.
 - d. Kennedy Valve; a division of McWane, Inc.
 - e. Milwaukee Valve Company.
 - f. NIBCO INC.
 - g. Shurjoint Piping Products.
 - h. Tyco Fire & Building Products LP.
 - i. Victaulic Company.
 - j. <Insert manufacturer's name>.
 - k. or approved equal.
2. Standard: UL 1091.

3. Pressure Rating: **175 psig** (1200 kPa) minimum.
4. Valves **NPS 2** (DN 50) and Smaller:
 - a. Valve Type: Ball or butterfly.
 - b. Body Material: Bronze.
 - c. End Connections: Threaded.
5. Valves **NPS 2-1/2** (DN 65) and Larger:
 - a. Valve Type: Butterfly.
 - b. Body Material: Cast or ductile iron.
 - c. End Connections: Flanged, grooved, or wafer.
6. Valve Operation: Integral [**electrical, 115-V ac, prewired, single-circuit, supervisory switch**] [**electrical, 115-V ac, prewired, two-circuit, supervisory switch**] [**visual**] indicating device.

H. Gate Valves:

1. Gate Valves, 2- Inch and Smaller: Body and bonnet of cast bronze, 175 pound cold water working pressure, nonshock, threaded ends, solid wedge, outside screw and yoke, rising stem, screw-in bonnet, and malleable iron handwheel. Valves shall be capable of being repacked under pressure, with valve wide open. Provide Supervisory switches.
2. Gate Valves, 2-1/2 inch and larger: Iron body, bronze mounted, 175 pound cold water working pressure, nonshock. Valves shall have solid taper wedge, outside screw and yoke, rising stem, flanged bonnet, with body and bonnet conforming to ASTM A 126, Class B; replaceable bronze wedge facing rings, flanged ends, and a packing assembly consisting of a cast iron gland flange, brass gland, packing, bonnet, and bronze bonnet bushing. Valves shall be capable of being repacked under pressure, with valve wide open. Provide Supervisory switches.
3. Iron body, bronze trim, rising stem, OS&Y, solid wedge.
4. Supervisory switches are required.
5. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Cast Iron Pipe Company; Waterous Company Subsidiary.
 - b. American Valve, Inc.
 - c. Clow Valve Company; a division of McWane, Inc.
 - d. Crane Co.; Crane Valve Group; Stockham Division.
 - e. Kennedy Valve; a division of McWane, Inc.
 - f. Mueller Co.; Water Products Division.
 - g. NIBCO INC.
 - h. Tyco Fire & Building Products LP.
 - i. **<Insert manufacturer's name>**.
 - j. or approved equal.

I. NRS Gate Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Cast Iron Pipe Company; Waterous Company Subsidiary.
 - b. American Valve, Inc.
 - c. Clow Valve Company; a division of McWane, Inc.
 - d. Crane Co.; Crane Valve Group; Stockham Division.
 - e. Kennedy Valve; a division of McWane, Inc.
 - f. Mueller Co.; Water Products Division.
 - g. NIBCO INC.
 - h. Tyco Fire & Building Products LP.
 - i. **<Insert manufacturer's name>**.
 - j. or approved equal.
2. Standard: UL 262.
3. Pressure Rating: [250 psig (1725 kPa) **minimum**] [300 psig (2070 kPa)].
4. Body Material: Cast iron with indicator post flange.
5. Stem: Nonrising.
6. End Connections: Flanged or grooved.

J. Indicator Posts:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Cast Iron Pipe Company; Waterous Company Subsidiary.
 - b. American Valve, Inc.
 - c. Clow Valve Company; a division of McWane, Inc.
 - d. Crane Co.; Crane Valve Group; Stockham Division.
 - e. Kennedy Valve; a division of McWane, Inc.
 - f. Mueller Co.; Water Products Division.
 - g. NIBCO INC.
 - h. Tyco Fire & Building Products LP.
 - i. **<Insert manufacturer's name>**.
 - j. or approved equal.
2. Standard: UL 789.
3. Type: Horizontal for wall mounting.
4. Body Material: Cast iron with extension rod and locking device.
5. Operation: [**Wrench**] [**Hand wheel**].

2.5 TRIM AND DRAIN VALVES

A. General Requirements:

1. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
2. Pressure Rating: 175 psig (1200 kPa) minimum.

B. Angle Valves:

1. Brass body with renewable composition disc.
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Fire Protection Products, Inc.
 - b. United Brass Works, Inc.
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.

C. Ball Valves:

1. Valves up to 2 Inches: Bronze, two piece body, stainless steel ball, teflon seats and stuffing box ring, lever handle, threaded ends.
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Affiliated Distributors.
 - b. Anvil International, Inc.
 - c. Barnett.
 - d. Conbraco Industries, Inc.; Apollo Valves.
 - e. Fire-End & Croker Corporation.
 - f. Fire Protection Products, Inc.
 - g. Flowserve.
 - h. FNW.
 - i. Jomar International, Ltd.
 - j. Kennedy Valve; a division of McWane, Inc.
 - k. Kitz Corporation.
 - l. Legend Valve.
 - m. Metso Automation USA Inc.
 - n. Milwaukee Valve Company.
 - o. NIBCO INC.
 - p. Potter Roemer.
 - q. Red-White Valve Corporation.
 - r. Southern Manufacturing Group.
 - s. Stewart, M. A. and Sons Ltd.
 - t. Tyco Fire & Building Products LP.
 - u. Victaulic Company.
 - v. Watts Water Technologies, Inc.
 - w. **<Insert manufacturer's name>**.
 - x. or approved equal.

D. Globe Valves:

1. Brass body with renewable composition disc.

2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Fire Protection Products, Inc.
 - b. United Brass Works, Inc.
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.

E. Plug Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Southern Manufacturing Group.
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.

2.6 SPECIALTY VALVES

A. General Requirements:

1. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
2. Pressure Rating:
 - a. Standard-Pressure Piping Specialty Valves: **175 psig** (1200 kPa) minimum.
 - b. High-Pressure Piping Specialty Valves: **[250 psig (1725 kPa) minimum]** **[300 psig (2070 kPa)]**.
3. Body Material: Cast or ductile iron.
4. Size: Same as connected piping.
5. End Connections: Flanged or grooved.

B. Alarm Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AFAC Inc.
 - b. Globe Fire Sprinkler Corporation.
 - c. Reliable Automatic Sprinkler Co., Inc.
 - d. Tyco Fire & Building Products LP.
 - e. Venus Fire Protection Ltd.
 - f. Victaulic Company.
 - g. Viking Corporation.
 - h. **<Insert manufacturer's name>**.
 - i. or approved equal.
2. Standard: UL 193.
3. Design: For horizontal or vertical installation.

4. Include trim sets for bypass, drain, electrical sprinkler alarm switch, pressure gages, [**retarding chamber**,] and fill-line attachment with strainer.
5. Drip Cup Assembly: Pipe drain without valves and separate from main drain piping.
6. Drip Cup Assembly: Pipe drain with check valve to main drain piping.

C. Deluge Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AFAC Inc.
 - b. BERMAD Control Valves.
 - c. CLA-VAL Automatic Control Valves.
 - d. Globe Fire Sprinkler Corporation.
 - e. OCV Control Valves.
 - f. Reliable Automatic Sprinkler Co., Inc.
 - g. Tyco Fire & Building Products LP.
 - h. Venus Fire Protection Ltd.
 - i. Victaulic Company.
 - j. Viking Corporation.
 - k. **<Insert manufacturer's name>**.
 - l. or approved equal.
2. Standard: UL 260.
3. Design: Hydraulically operated, differential-pressure type.
4. Include trim sets for bypass, drain, electrical sprinkler alarm switch, pressure gages, drip cup assembly piped without valves and separate from main drain line, fill-line attachment with strainer, and push-rod chamber supply connection.
5. Wet, Pilot-Line Trim Set: Include gage to read push-rod chamber pressure, globe valve for manual operation of deluge valve, and connection for actuation device.

D. Automatic (Ball Drip) Drain Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AFAC Inc.
 - b. Reliable Automatic Sprinkler Co., Inc.
 - c. Tyco Fire & Building Products LP.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
2. Standard: UL 1726.
3. Pressure Rating: **175 psig** (1200 kPa) minimum.
4. Type: Automatic draining, ball check.
5. Size: **NPS 3/4** (DN 20).
6. End Connections: Threaded.

2.7 FIRE-DEPARTMENT CONNECTIONS

- A. Fire Department Connection: Two-Way, flush-mounted wall type, Fire Department Connection, threading as required by Denver Fire Department, with nameplate marked "AUTO SPKR -STP".
1. Finish: polished, chrome plated. Complete with 3/4 inch automatic ball drip.
 2. Provide additional 2.5 inch outlet for each 250 GPM design discharge over 500 GPM per NFPA 13.
 3. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Potter Roemer, 5020 series.
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.

2.8 SPRINKLER SPECIALTY PIPE FITTINGS

- A. Branch Outlet Fittings:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil International, Inc.
 - b. National Fittings, Inc.
 - c. Shurjoint Piping Products.
 - d. Tyco Fire & Building Products LP.
 - e. Victaulic Company.
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
 2. Standard: UL 213.
 3. Pressure Rating: [175 psig (1200 kPa) **minimum**] [300 psig (2070 kPa)].
 4. Body Material: Ductile-iron housing with EPDM seals and bolts and nuts.
 5. Type: Mechanical-T and -cross fittings.
 6. Configurations: Snap-on and strapless, ductile-iron housing with branch outlets.
 7. Size: Of dimension to fit onto sprinkler main and with outlet connections as required to match connected branch piping.
 8. Branch Outlets: Grooved, plain-end pipe, or threaded.
- B. Flow Detection and Test Assemblies:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AGF Manufacturing Inc.
 - b. Reliable Automatic Sprinkler Co., Inc.
 - c. Tyco Fire & Building Products LP.
 - d. Victaulic Company.

- e. **<Insert manufacturer's name>**.
 - f. or approved equal.
 2. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
 3. Pressure Rating: [175 psig (1200 kPa) **minimum**] [300 psig (2070 kPa)].
 4. Body Material: Cast- or ductile-iron housing with orifice, sight glass, and integral test valve.
 5. Size: Same as connected piping.
 6. Inlet and Outlet: Threaded.
- C. Branch Line Testers:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Elkhart Brass Mfg. Company, Inc.
 - b. Fire-End & Croker Corporation.
 - c. Potter Roemer.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
 2. Standard: UL 199.
 3. Pressure Rating: 175 psig (1200 kPa).
 4. Body Material: Brass.
 5. Size: Same as connected piping.
 6. Inlet: Threaded.
 7. Drain Outlet: Threaded and capped.
 8. Branch Outlet: Threaded, for sprinkler.
- D. Sprinkler Inspector's Test Fittings:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AGF Manufacturing Inc.
 - b. Triple R Specialty.
 - c. Tyco Fire & Building Products LP.
 - d. Victaulic Company.
 - e. Viking Corporation.
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
 2. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
 3. Pressure Rating: [175 psig (1200 kPa) **minimum**] [300 psig (2070 kPa)].
 4. Body Material: Cast- or ductile-iron housing with sight glass.
 5. Size: Same as connected piping.
 6. Inlet and Outlet: Threaded.

E. Adjustable Drop Nipples:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. CECA, LLC.
 - b. Corcoran Piping System Co.
 - c. Merit Manufacturing; a division of Anvil International, Inc.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
2. Standard: UL 1474.
3. Pressure Rating: [250 psig (1725 kPa) **minimum**] [300 psig (2070 kPa)].
4. Body Material: Steel pipe with EPDM-rubber O-ring seals.
5. Size: Same as connected piping.
6. Length: Adjustable.
7. Inlet and Outlet: Threaded.

F. Flexible, Sprinkler Hose Fittings:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Fivalco Inc.
 - b. FlexHead Industries, Inc.
 - c. Gateway Tubing, Inc.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
2. Standard: UL 1474.
3. Type: Flexible hose for connection to sprinkler, and with bracket for connection to ceiling grid.
4. Pressure Rating: [175 psig (1200 kPa) **minimum**] [300 psig (2070 kPa)].
5. Size: Same as connected piping, for sprinkler.

2.9 SPRINKLERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. AFAC Inc.
2. Globe Fire Sprinkler Corporation.
3. Reliable Automatic Sprinkler Co., Inc.
4. Tyco Fire & Building Products LP.
5. Venus Fire Protection Ltd.
6. Victaulic Company.
7. Viking Corporation.
8. **<Insert manufacturer's name>**.
9. or approved equal.

B. General Requirements:

1. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
2. Pressure Rating for Residential Sprinklers: **175 psig** (1200 kPa) maximum.
3. Pressure Rating for Automatic Sprinklers: **175 psig** (1200 kPa) minimum.
4. Pressure Rating for High-Pressure Automatic Sprinklers: [**250 psig** (1725 kPa) **minimum**] [**300 psig** (2070 kPa)].

C. Automatic Sprinklers with Heat-Responsive Element:

1. Early-Suppression, Fast-Response Applications: [**UL 1767**] <Insert standard>.
2. Nonresidential Applications: [**UL 199**] <Insert standard>.
3. Residential Applications: [**UL 1626**] <Insert standard>.
4. Characteristics: Nominal **1/2-inch** (12.7-mm) orifice with Discharge Coefficient K of 5.6, and for "Ordinary" temperature classification rating unless otherwise indicated or required by application.

D. Open Sprinklers with Heat-Responsive Element Removed: UL 199.

1. Characteristics:
 - a. Nominal [**1/2-inch** (12.7-mm)] <Insert value> Orifice: With Discharge Coefficient K [**between 5.3 and 5.8**] <Insert value>.
 - b. Nominal [**17/32-inch** (13.5-mm)] <Insert value> Orifice: With Discharge Coefficient K [**between 7.4 and 8.2**] <Insert value>.

E. Sprinkler Finishes:

1. Chrome plated.
2. Bronze.
3. Painted.

F. Special Coatings:

1. Wax.
2. Lead.
3. Corrosion-resistant paint.

G. Sprinkler Escutcheons: Materials, types, and finishes for the following sprinkler mounting applications. Escutcheons for concealed, flush, and recessed-type sprinklers are specified with sprinklers.

1. Ceiling Mounting: [**Chrome-plated steel, one piece, flat**] [**Chrome-plated steel, two piece, with 1-inch** (25-mm) **vertical adjustment**] [**Plastic, white finish, one piece, flat**].
2. Sidewall Mounting: [**Chrome-plated steel**] [**Plastic, white finish**], one piece, flat.

H. Sprinkler Guards:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Reliable Automatic Sprinkler Co., Inc.
 - b. Tyco Fire & Building Products LP.
 - c. Victaulic Company.
 - d. Viking Corporation.
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.
2. Standard: UL 199.
3. Type: Wire cage with fastening device for attaching to sprinkler.

2.10 ALARM DEVICES

A. Alarm-device types shall match piping and equipment connections.

B. Water-Motor-Operated Alarm:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Globe Fire Sprinkler Corporation.
 - b. Tyco Fire & Building Products LP.
 - c. Victaulic Company.
 - d. Viking Corporation.
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.
2. Standard: UL 753.
3. Type: Mechanically operated, with Pelton wheel.
4. Alarm Gong: Cast aluminum with red-enamel factory finish.
5. Size: **10-inch** (250-mm) diameter.
6. Components: Shaft length, bearings, and sleeve to suit wall construction.
7. Inlet: **NPS 3/4** (DN 20).
8. Outlet: **NPS 1** (DN 25) drain connection.

C. Electrically Operated Alarm Bell:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Fire-Lite Alarms, Inc.; a Honeywell company.
 - b. Notifier; a Honeywell company.
 - c. Potter Electric Signal Company.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
2. Standard: UL 464.
3. Type: Vibrating, metal alarm bell.

4. Size: [6-inch (150-mm) **minimum-**] [8-inch (200-mm) **minimum-**] [10-inch (250-mm)] diameter.
5. Finish: Red-enamel factory finish, suitable for outdoor use.

D. Water-Flow Indicators:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ADT Security Services, Inc.
 - b. McDonnell & Miller; ITT Industries.
 - c. Potter Electric Signal Company.
 - d. System Sensor; a Honeywell company.
 - e. Viking Corporation.
 - f. Watts Industries (Canada) Inc.
 - g. **<Insert manufacturer's name>**.
 - h. or approved equal.
2. Vane type waterflow detector, rated to 250 psig: Designed for vertical or horizontal installation; having two (2), spdt circuit switches to provide isolated alarm and auxiliary contacts, 7 ampere, 125 Vac and 0.25 ampere, 24 Vdc; complete with factory-set, field-adjustable tamperproof cover.
 - a. Retard feature must be of the instantly recycling type so that flows less than retard period will not produce a cumulative effect.
 - b. Flow switch shall not be installed in a fitting or within 12 inches of any fitting that changes the direction of water flow.
 - c. Design detector with a sensitivity setting to signal any flow of water that equals or exceeds the discharge from one sprinkler head.
 - d. Provide weatherproof and dust tight flow detector.
 - e. Provide a 3/4 inch conduit entrance per detector.
 - f. Standard: UL 346.

E. Pressure Switches:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AFAC Inc.
 - b. Barksdale, Inc.
 - c. Detroit Switch, Inc.
 - d. Potter Electric Signal Company.
 - e. System Sensor; a Honeywell company.
 - f. Tyco Fire & Building Products LP.
 - g. United Electric Controls Co.
 - h. Viking Corporation.
 - i. **<Insert manufacturer's name>**.
 - j. or approved equal.
2. Rated to 250 psig; designed for vertical installation; having two, spdt circuit

switches to provide isolated alarm and auxiliary contacts, 7 ampere, 125 Vac and 0.25 ampere, 24 Vdc; complete with factory-set, field-adjustable tamperproof cover.

- a. Design detector with a sensitivity setting to signal any flow of water that equals or exceeds the discharge from one sprinkler head.
- b. Provide weatherproof and dust tight flow detector.
- c. Provide a 3/4 inch conduit entrance per detector.
- d. Standard: UL 346.

F. Valve Supervisory Switches:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Fire-Lite Alarms, Inc.; a Honeywell company.
 - b. Kennedy Valve; a division of McWane, Inc.
 - c. Potter Electric Signal Company.
 - d. System Sensor; a Honeywell company.
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.
2. Standard: UL 346.
3. Type: Electrically supervised.
4. Components: Single-pole, double-throw switch with normally closed contacts.
5. Design: Signals that controlled valve is in other than fully open position.

G. Indicator-Post Supervisory Switches:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Potter Electric Signal Company.
 - b. System Sensor; a Honeywell company.
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.
2. Standard: UL 346.
3. Type: Electrically supervised.
4. Components: Single-pole, double-throw switch with normally closed contacts.
5. Design: Signals that controlled indicator-post valve is in other than fully open position.

2.11 MANUAL CONTROL STATIONS

- A. Description: UL listed or FM approved, hydraulic operation, with union, **NPS 1/2** (DN 15) pipe nipple, and bronze ball valve. Include metal enclosure labeled "MANUAL CONTROL STATION" with operating instructions and cover held closed by breakable strut to prevent accidental opening.

2.12 CONTROL PANELS

- A. Description: Single-area, two-area, or single-area cross-zoned control panel as indicated, including NEMA ICS 6, Type 1 enclosure, detector, alarm, and solenoid-valve circuitry for operation of deluge valves. Panels contain power supply; battery charger; standby batteries; field-wiring terminal strip; electrically supervised solenoid valves and polarized fire-alarm bell; lamp test facility; single-pole, double-throw auxiliary alarm contacts; and rectifier.
1. Panels: UL listed and FM approved when used with thermal detectors and Class A detector circuit wiring. Electrical characteristics are 120-V ac, 60 Hz, with 24-V dc rechargeable batteries.
 2. Manual Control Stations: Electric operation, metal enclosure, labeled "MANUAL CONTROL STATION" with operating instructions and cover held closed by breakable strut to prevent accidental opening.
 3. Manual Control Stations: Hydraulic operation, with union, **NPS 1/2 (DN 15)** pipe nipple, and bronze ball valve. Include metal enclosure labeled "MANUAL CONTROL STATION" with operating instructions and cover held closed by breakable strut to prevent accidental opening.

2.13 PRESSURE GAGES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. AMETEK; U.S. Gauge Division.
 2. Ashcroft, Inc.
 3. Brecco Corporation.
 4. WIKA Instrument Corporation.
 5. **<Insert manufacturer's name>**.
 6. or approved equal.
- B. Standard: UL 393.
- C. Dial Size: **3-1/2- to 4-1/2-inch** (90- to 115-mm) diameter.
- D. Pressure Gage Range: **[0 to 250 psig (0 to 1725 kPa) minimum] [0 to 300 psig (0 to 2070 kPa)]**.
- E. Water System Piping Gage: Include "WATER" or "AIR/WATER" label on dial face.
- F. Air System Piping Gage: Include **[retard feature and]** "AIR" or "AIR/WATER" label on dial face.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Ream pipe and tube ends to full inside diameter.
- B. Remove burrs, and bevel plain end ferrous pipe.
- C. Remove scale and foreign material, inside and outside, before assembly.
- D. Perform fire-hydrant flow test according to NFPA 13 and NFPA 291. Use results for system design calculations required in "Quality Assurance" Article.
- E. Report test results promptly and in writing.

3.2 SERVICE-ENTRANCE PIPING

- A. Connect sprinkler piping to water-service piping for service entrance to building. Comply with requirements for exterior piping in Section 211100 "Facility Fire-Suppression Water-Service Piping."
- B. Install shutoff valve,[**backflow preventer**,] pressure gage, drain, and other accessories indicated at connection to water-service piping.[**Comply with requirements for backflow preventers in Section 211100 "Facility Fire-Suppression Water-Service Piping."**]
- C. Install shutoff valve, check valve, pressure gage, and drain at connection to water service.

3.3 WATER-SUPPLY CONNECTIONS

- A. Connect sprinkler piping to building's interior water-distribution piping. Comply with requirements for interior piping in Section 221116 "Domestic Water Piping."
- B. Install shutoff valve,[**backflow preventer**,] pressure gage, drain, and other accessories indicated at connection to water-distribution piping.[**Comply with requirements for backflow preventers in Section 221119 "Domestic Water Piping Specialties."**]
- C. Install shutoff valve, check valve, pressure gage, and drain at connection to water supply.

3.4 PIPE APPLICATIONS

- A. Schedule 40 steel pipe with threaded joints and fittings for 2-inch and smaller pipe.

- B. Schedule 40 steel pipe with cut grooved ends and mechanical couplings, flanged or screwed fittings for piping 2-1/2 inches and larger.
- C. Thinwall steel pipe with roll grooved ends and mechanical couplings with flanges or fittings.
- D. Use of threaded Hooker fittings and similar rubber gasketed, drill to mount, 2" and smaller clamp on tees will not be permitted.
- E. Use of threaded thin wall pipe: Pressfit fittings or similar non-threaded connections of any kind will NOT be permitted.

3.5 PIPING INSTALLATION

- A. Locations and Arrangements: Drawing plans, schematics, and diagrams indicate general location and arrangement of piping. Install piping as indicated, as far as practical.
 - 1. Deviations from approved working plans for piping require written approval from authorities having jurisdiction. File written approval with DEN Project Manager before deviating from approved working plans.
 - 2. Route piping in orderly manner, plumb and parallel to building structure. Maintain gradient.
 - 3. Install piping to conserve building space, to not interfere with use of space and other work.
 - 4. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment.
- B. Piping Standard: Comply with requirements for installation of sprinkler piping in NFPA 13.
- C. Cleaning:
 - 1. Thoroughly pre-clean internal surfaces of piping sections to be installed; install piping in accordance with NFPA 13.
 - 2. Prepare pipe, fittings, supports, and accessories for finish painting.
 - 3. All work in existing areas shall require daily cleaning, including cleaning and removal of any foreign materials. Final cleaning will require all dust to be recovered and removed.
- D. Penetrations:
 - 1. Do not penetrate building structural members unless indicated. Penetration of structural members requires structural engineer review and approval.
 - 2. X-ray: Provide X-ray of structural walls and floors prior to attempting drilling or saw cutting to guarantee structural or electrical members are not interrupted by process. Comply with DEN Standard X-ray procedures.
- E. Seals and sleeves:

1. Provide sleeves when penetrating footings, floors, partitions, and walls.
2. Seal pipe and sleeve penetration to achieve fire resistance equivalent to fire separation required.
3. Install mechanical sleeve seal at pipe penetrations in basement and foundation walls. Refer to Section 210517 "Sleeves and Sleeve Seals for Fire Suppression Piping".
4. In steel piping, main sized saddle branch connections or direct connection of branch lines to mains is permitted if main is one pipe size larger than the branch for up to 6 inch mains and if main is two pipe sizes larger than branch for 8 inch and larger mains. Do not project branch pipes inside the main pipe.
5. Install sprinkler piping to provide for system drainage in accordance with NFPA 13. Drainage shall be coordinated with locations of floor drains having capacity to receive flow.
6. Use approved fittings to make all changes in direction, branch takeoffs from mains, and reductions in pipe sizes.
7. Install unions in pipes 2 inch and smaller, adjacent to each valve. Unions are not required on flanged devices or in piping installations using grooved mechanical couplings.
8. Install flanges or flange adapters on valves, apparatus, and equipment having a 2-1/2 inch and larger connections.
9. Install test connections sized and located in accordance with NFPA 13 complete with shutoff valve. Test connections may also serve as drainpipes. Victaulic "Test Master" or Engineer approved equal may be used in lieu of test and drainpipe and fittings. Test and drain discharge pipe shall have hose thread connection or discharge as indicated.
10. Install pressure gauge on the riser or feed main at or near each test connection. Provide gauge with a connection not less than 1/4 inch and having a soft metal seated globe valve, arranged for draining pipe between gauge and valve. Install gauges to permit removal, and where they will not be subject to freezing.

F. Pipe hangers and supports:

1. Reference Section 210529 "Hangers & Supports for Fire Suppression Piping and Equipment".
2. Comply with the requirements of NFPA 13. Hanger and support spacing and locations for piping joined with grooved mechanical couplings shall be in accordance with NFPA 13 and the grooved mechanical coupling manufacturer's written instructions, for rigid systems. Indicate all hangers on shop drawings.
3. Install hangers to provide minimum 1/2 inch space between finished covering and adjacent work.
4. Place hangers per NFPA 13.
5. Support vertical piping at every floor. Support riser piping independently of connected horizontal piping.
6. Modifications or additions to system: Provide new independent supports from existing building structural components or walls suitable for the support of the added or modified sprinkler piping system.
7. Added sprinkler piping supports shall not be attached to any part of the existing equipment or its support members.
8. Install new piping, hangers, supports, etc. to avoid interference with existing building systems and operational characteristics of material handling systems.

9. Supports not addressed by NFPA 13: Submit pipe support shop drawings bearing the wet stamp of a Licensed Colorado Professional Structural engineer for approval. All welding and drilling of existing structural components must be reviewed and approved by the DEN Project Manager prior to proceeding.
 10. Support all horizontal piping within 1'0" of end.
- G. Install seismic restraints on piping. Comply with requirements for seismic-restraint device materials and installation in NFPA 13.
 - H. Use listed fittings to make changes in direction, branch takeoffs from mains, and reductions in pipe sizes.
 - I. Install unions adjacent to each valve in pipes **NPS 2** (DN 50) and smaller.
 - J. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having **NPS 2-1/2** (DN 65) and larger end connections.
 - K. Install "Inspector's Test Connections" in sprinkler system piping, complete with shutoff valve, and sized and located according to NFPA 13.
 - L. Install sprinkler piping with drains for complete system drainage.
 - M. Install sprinkler control valves, test assemblies, and drain risers adjacent to standpipes when sprinkler piping is connected to standpipes.
 - N. Install automatic (ball drip) drain valve at each check valve for fire-department connection, to drain piping between fire-department connection and check valve. Install drain piping to and spill over floor drain or to outside building.
 - O. Install alarm devices in piping systems.
 - P. Install hangers and supports for sprinkler system piping according to NFPA 13. Comply with requirements for hanger materials in NFPA 13.
 - Q. Install pressure gages on riser or feed main, at each sprinkler test connection, and at top of each standpipe. Include pressure gages with connection not less than **NPS 1/4** (DN 8) and with soft metal seated globe valve, arranged for draining pipe between gage and valve. Install gages to permit removal, and install where they will not be subject to freezing.
 - R. Pressurize and check preaction sprinkler system piping and **[air-pressure maintenance devices] [air compressors]**.
 - S. Fill sprinkler system piping with water.
 - T. Install electric heating cables and pipe insulation on sprinkler piping in areas subject to freezing. Comply with requirements for heating cables in Section 210533 "Heat Tracing for Fire-Suppression Piping" and for piping insulation in Section 210700 "Fire-Suppression Systems Insulation."

- U. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 210517 "Sleeves and Sleeve Seals for Fire-Suppression Piping."
- V. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 210517 "Sleeves and Sleeve Seals for Fire-Suppression Piping."
- W. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 210518 "Escutcheons for Fire-Suppression Piping."

3.6 JOINT CONSTRUCTION

- A. Install couplings, flanges, flanged fittings, unions, nipples, and transition and special fittings that have finish and pressure ratings same as or higher than system's pressure rating for aboveground applications unless otherwise indicated.
- B. Criteria:
 - 1. Up to and including 2-inch diameter: Screw joint and grooved joint steel piping.
 - 2. 2-1/2 inch diameter and larger: Welded joints (only shop welds), screw joints, or grooved joints.
- C. Welded Joints: AWS D10.9, Level AR-3, and Section 059990 "Welding".
- D. Threaded Joints: Conform to ANSI B1.20.1, tapered pipe threads for field cut threads. Join pipe, fittings, and valves as follows:
 - 1. Note the internal length of threads in fittings or valve ends, and proximity of internal seat or wall, to determine how far pipe should be threaded into joint.
 - 2. Below grade joints: Die cut screw joints with full cut standard taper pipe threads with red lead and linseed oil or other nontoxic joint compound applied to male threads only.
 - 3. Apply appropriate tape or thread compound to the external pipe threads.
 - 4. Assemble joint to appropriate thread depth. When using a wrench on valves, place the wrench on the valve end into which the pipe is being threaded.
 - 5. Damaged Threads: Do not use pipe with threads that are corroded or damaged. If a weld opens during cutting or threading operations, that portion of pipe shall not be used.
- E. Flanged Joints: Align flange surfaces parallel. Assemble joints by sequencing bolt tightening to make initial contact of flanges and gaskets as flat and parallel as possible. Use suitable lubricants on bolt threads. Tighten bolts gradually and uniformly to appropriate torque specified by the bolt manufacturer.
- F. Mechanical Grooved Joints: Mechanical grooved joints may be used instead of threaded or welded joints at accessible aboveground locations. Cut grooves on pipe ends dimensionally compatible with the couplings.

- G. End Treatment: After cutting pipe lengths, remove burrs and fins from pipe ends.
- H. Dissimilar Materials Piping Joints: Make joints using adapters compatible with both piping materials.
- I. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.

3.7 VALVE AND SPECIALTIES INSTALLATION

- A. Install listed fire-protection valves, trim and drain valves, specialty valves and trim, controls, and specialties according to NFPA 13 and authorities having jurisdiction.
- B. Install valves with stems upright or horizontal, not inverted.
- C. Provide gate valves for shut off or isolating service. Provide double check valve (Back flow preventer) assembly at sprinkler system water source connection.
- D. Gate Valves: Install supervised-open gate valves indicating type so located to control all sources of water supply, except fire department connections. Where there is more than one control valve, provide permanently marked identification signs indicating the portion of the system controlled by each valve. Refer to Section 210553 "Identification for Fire Suppression Piping and Equipment" for valve tags and signs.
- E. Where approved and/or indicated, butterfly valves may be used instead of gate valves.
- F. Provide drain valves at main shut off valves, low points of piping and apparatus.
- G. Valves: Bear UL, FM Global label or marking. Provide manufacturer's name and pressure rating marked on valve body.
- H. Install listed fire-protection shutoff valves supervised open, located to control sources of water supply except from fire-department connections. Install permanent identification signs indicating portion of system controlled by each valve.
- I. Install check valve in each water-supply connection. Install backflow preventers instead of check valves in potable-water-supply sources.
- J. Specialty Valves:
 - 1. General Requirements: Install in vertical position for proper direction of flow, in main supply to system.
 - 2. Alarm Valves: Include bypass check valve and retarding chamber drain-line connection.
 - 3. Deluge Valves: Install in vertical position, in proper direction of flow, and in main supply to deluge system. Install trim sets for drain, priming level, alarm connections, ball drip valves, pressure gages, priming chamber attachment, and fill-line attachment.

3.8 SPRINKLER INSTALLATION

- A. Install sprinklers in suspended ceilings in center of [**narrow dimension of**] acoustical ceiling panels.
- B. Install dry-type sprinklers with water supply from heated space. Do not install pendent or sidewall, wet-type sprinklers in areas subject to freezing.
- C. Install sprinklers into flexible, sprinkler hose fittings and install hose into bracket on ceiling grid.

3.9 FIRE-DEPARTMENT CONNECTION INSTALLATION

- A. Install wall-type, fire-department connections.
- B. Install yard-type, fire-department connections in concrete slab support. Comply with requirements for concrete in Section 033000 "Cast-in-Place Concrete."
 - 1. Install [**two**] [**three**] < **Insert number** > protective pipe bollards [**around**] [**on sides of**] each fire-department connection. Comply with requirements for bollards in Section 055000 "Metal Fabrications."
- C. Install automatic (ball drip) drain valve at each check valve for fire-department connection.

3.10 IDENTIFICATION

- A. Install labeling and pipe markers on equipment and piping according to requirements in NFPA 13.
- B. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

3.11 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
- B. Tests and Inspections:
 - 1. Leak Test: After installation, charge systems and test for leaks. Repair leaks and retest until no leaks exist.
 - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - 3. Flush, test, and inspect sprinkler systems according to NFPA 13, "Systems Acceptance" Chapter.
 - 4. Energize circuits to electrical equipment and devices.
 - 5. Coordinate with fire-alarm tests. Operate as required.
 - 6. Coordinate with fire-pump tests. Operate as required.

7. Verify that equipment hose threads are same as local fire-department equipment.
- C. Sprinkler piping system will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.

3.12 CLEANING

- A. Clean dirt and debris from sprinklers and work area.
- B. Remove and replace sprinklers with paint other than factory finish.
- C. Clean exterior of all installation to be painted.

3.13 DEMONSTRATION

- A. **[Engage a factory-authorized service representative to train] [Train]** Owner's maintenance personnel to adjust, operate, and maintain **[specialty valves] [and] [pressure-maintenance pumps]**.

3.14 SPRINKLER SCHEDULE

- A. Use sprinkler types in subparagraphs below for the following applications:
 1. Rooms without Ceilings: **[Upright sprinklers] <Insert type>**.
 2. Rooms with Suspended Ceilings: **[Pendent sprinklers] [Recessed sprinklers] [Flush sprinklers] [Concealed sprinklers] [Pendent, recessed, flush, and concealed sprinklers as indicated]**.
 3. Wall Mounting: Sidewall sprinklers.
 4. Spaces Subject to Freezing: **[Upright sprinklers] [Pendent, dry sprinklers] [Sidewall, dry sprinklers] [Upright, pendent, dry sprinklers; and sidewall, dry sprinklers as indicated] <Insert type>**.
 5. Deluge-Sprinkler Systems: **[Upright] [and] [pendent]**, open sprinklers.
 6. Special Applications: **[Extended-coverage, flow-control, and quick-response sprinklers where indicated] <Insert type>**.
- B. Provide sprinkler types in subparagraphs below with finishes indicated.
 1. Concealed Sprinklers: Rough brass, with factory-painted white cover plate.
 2. Flush Sprinklers: Bright chrome, with painted white escutcheon.
 3. Recessed Sprinklers: Bright chrome, with bright chrome escutcheon.
 4. **[Upright] [Pendent] [and] [Sidewall]** Sprinklers: Chrome plated in finished spaces exposed to view; rough bronze in unfinished spaces not exposed to view; wax coated where exposed to acids, chemicals, or other corrosive fumes.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 211313

SECTION 211316 - DRY-PIPE SPRINKLER SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Pipes, fittings, and specialties.
2. Fire-protection valves.
3. Fire-department connections.
4. Sprinkler specialty pipe fittings.
5. Sprinklers.
6. Alarm devices.
7. Manual control stations.
8. Control panels.
9. Pressure gages.

- B. Related Sections:

1. Section 210500 "Common Work Results for Fire Suppression".
2. Section 210517 "Sleeves and Sleeve Seals for Fire Suppression Piping".
3. Section 210518 "Escutcheons for Fire Suppression Piping".
4. Section 210529 "Hangers & Supports for Fire Suppression Piping and Equipment".
5. Section 210533 "Heat Tracing for Fire Suppression Piping".
6. Section 210548 "Vibration and Seismic Controls for Fire-Suppression Piping and Equipment".
7. Section 210553 "Identification for Fire Suppression Piping and Equipment".
8. Section 210700 "Fire Suppression Systems Insulation".
9. Section 211100 "Facility Fire-Suppression Water-Service Piping".
10. Section 211200 "Fire-Suppression Standpipes" for standpipe piping.
11. Section 211313 "Wet-Pipe Sprinkler Systems" for wet-pipe sprinkler piping.
12. Section 211339 "Foam-Water Systems" for AFFF piping.
13. Section 212200 "Clean-Agent Fire Extinguishing Systems" for clean-agent systems.
14. Section 213113 "Electric-Drive, Centrifugal Fire Pumps" for fire pumps, pressure-maintenance pumps, and fire-pump controllers.
15. Section 283100 "Intelligent Life Safety Fire Management System" for alarm devices not specified in this Section.

- C. Work furnished but installed under other sections:
1. Furnish pipe sleeves, complete with drawing(s) locating all sleeves and indicating sleeve size to Division 03 or 04 contractors for placement.
 2. Fire Proofing Repair.
 3. Fire Sealants.
 4. Painting.
- D. Include all design, pipe and fittings, valves, connections, fabrication, and installation of all dry-pipe fire protection systems for exterior areas, unheated areas, or areas subject to freezing where indicated on the Drawings in accordance with design criteria and requirements indicated herein and on the drawings.
- E. Major bulk runs, standpipe mains and risers, and sprinkler crossmains are shown to assist the contractor where interference with other trades may occur. However, all piping required to complete the fire protection systems shall be designed, fabricated and installed based on approved hydraulic calculations and shop drawings prepared and submitted by the Fire Protection Work Contractor (FPWC).
- F. The FPWC shall provide all special tools required for installation or maintenance for the equipment provided. If conflicts occur in this specification or between this specification and the contract documents, most stringent requirement shall apply.
- G. Work on all systems require DEN Shut Down Requests be completed and filed five (5) days before work is to be done. No system may be shut down for periods longer than ten (10) hours. The FPWC is responsible for the required Fire Watch and must remain ON SITE for the entire period of time that the system is not in service. Failure to comply may be reason for immediate suspension of work privileges.
- H. Install work in association with fire pump installation, wet-pipe sprinkler installation, and all fire and smoke alarm interface in accordance with design criteria and fire/smoke zoning requirements indicated on drawings.
- I. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 REFERENCE STANDARDS

- A. Materials and workmanship shall conform to the latest issue of all industry standards, publications, or regulations referenced in this section and with the following references as applicable. Appendices and/or Annexes referenced by these standards shall apply.
- B. International Building Code (IBC) with the Denver Amendments.
- C. International Fire Code (IFC) with the Denver Amendments.
- D. National Fire Protection Association (NFPA):
1. NFPA 13 - Installation of Sprinkler Systems.
 2. NFPA 415 - Standard on Airport Terminal Buildings, Fueling Ramp Drainage,

And Loading Walkways.

3. The most stringent interpretations shall apply. All appendices and/or Annexes shall apply.

1.4 DEFINITIONS

- A. Standard-Pressure Sprinkler Piping: Dry-pipe sprinkler system piping designed to operate at working pressure **175 psig** (1200 kPa) maximum.
- B. High-Pressure Piping System: Fire-suppression piping system designed to operate at working pressure higher than standard 175 psig (1200 kPa), but not higher than **[250 psig (1725 kPa)] [300 psig (2070 kPa)]**.
- C. Pipe sizes used in this specification are Nominal Pipe Size (NPS).
- D. "Working Plans" as used in this section means documents, including drawings and calculations, prepared pursuant to the requirements contained in NFPA 13 and City and County of Denver Code agencies for obtaining approval of the authority having jurisdiction.
- E. Other definitions for fire protection systems are included in referenced NFPA standards.

1.5 SYSTEM DESCRIPTIONS

- A. Dry-Pipe Sprinkler System: Automatic sprinklers are attached to piping containing compressed air. Opening of sprinklers releases compressed air and permits water pressure to open dry-pipe valve. Water then flows into piping and discharges from sprinklers that are open.
- B. Combined Dry-Pipe and Preaction Sprinkler System: Automatic sprinklers are attached to piping containing compressed air. Fire-detection system in same area as sprinklers actuates tripping devices that open dry-pipe valve without loss of air pressure and actuates fire alarm. Water discharges from sprinklers that have opened.
- C. Single-Interlock Preaction Sprinkler System: Automatic sprinklers are attached to piping containing low-pressure air. Actuation of fire-detection system in same area as sprinklers opens deluge valve, permitting water to flow into piping and to discharge from sprinklers that have opened.
- D. Double-Interlock Preaction Sprinkler System: Automatic sprinklers are attached to piping containing low-pressure air. Actuation of a fire-detection system in the same area as sprinklers opens the deluge valve permitting water to flow into the sprinkler piping; a closed solenoid valve in the sprinkler piping is opened by another fire-detection device; then water will discharge from sprinklers that have opened.
- E. System to provide coverage for un-heated building areas or areas subject to freezing as noted.

- F. Interface system with building fire alarm and smoke control system.
- G. Provide supervised compressed air system sized per NFPA 13 and DEN guidelines with Low Air Detection and Air Maintenance Device, for automatic air pressure maintenance and Low Air Alarm interface with building Fire Alarm System. Provide minimum of 20 gallon attached receiver (tank). The compressor shall be sized accordingly, minimum 1.5 HP, 480volt 3 phase, intermediate size 3.0 HP, and large size 5.0 HP shall have 30 gallon tanks.
- H. Design Criteria:
1. Occupancy hazard class: [**ordinary hazard**] [], Group [**2**] [].
 2. Density: [**.15**] [] GPM/SF flowing over [**1,500**] [] of the remote area.
 3. Hose stream allowance: Include [**250**] [] GPM for hose stream at the riser.
 4. Increase Dry-Pipe System calculated area by 30%.
 5. Provide a 10% safety margin in hydraulic calculations.
 6. Velocities in pipes shall be shown on hydraulic calculations. Velocities in overhead piping shall not exceed 20 feet per second. Velocities in underground piping shall not exceed 16 feet per second.
 7. Hydraulic calculation submittal shall clearly define all devices that will cause friction loss with equivalent lengths of pipe. This includes vane type electric water flow switches. Assume 10 feet of equivalent length of pipe unless actual pressure drop data is available from the manufacturer.
 8. Design information shall be permanently affixed to the risers as described in NFPA 13.
 9. Sprinkler shop drawings and hydraulic calculations shall be prepared in accordance with NFPA 13 and FM Global.
 10. Size compressor per NFPA 13. Minimum HP shall be 1-1/2 HP, 480/3 Phase.
 11. All trapped piping shall be provided with a 1" minimum size, 2 valve drum drip style auxiliary drain. Where similar drains are adjacent they shall be tied together as tie-in drains with a standard drum drip. Drain valves shall be located at a distance approximately 7'-0" above the floor.
 12. Current Denver Water Department test reports (less than 6 months old) for the underground supply shall be provided for all new calculations. Where accepted by all AHJ's the most current DEN Fire Pump Test may be used
 13. Provide fire proofing repair damaged by this work.
 14. Provide all required fire sealants and smoke stopping required by this work
 15. Actuation for deluge and clean agent systems shall be included in this sections work.

1.6 PERFORMANCE REQUIREMENTS

- A. Standard-Pressure Piping System Component: Listed for **175-psig** (1200-kPa) minimum working pressure.
- B. High-Pressure Piping System Component: Listed for [**250-psig** (1725-kPa) **minimum**] [**300-psig** (2070-kPa)] working pressure.

- C. Design and obtain approval from authority having jurisdiction for fire protection systems specified.
- D. Minimum Pipe Sizes: Not smaller than existing pipe sizes of sprinklers being relocated.
- E. Should the relocation of sprinkler heads cause the calculated remote zone to change, hydraulic calculations shall be performed and approved by the authority having jurisdiction.
- F. Sprinkler system zone shall not serve multiple smoke control zones. Verify that the no conflict exists between the design drawings and this requirement.
- G. System modifications, remodeling:
 - 1. Minimum Pipe Sizes: Not smaller than existing pipe sizes of sprinklers being relocated.
 - 2. Should the relocation of sprinkler heads cause the calculated remote zone to change, hydraulic calculations shall be performed and approved by the authority having jurisdiction.
- H. Systems shall not serve multiple smoke zone areas.
- I. Identify all drain valves per DEN Life Safety Team's Fire Zone number scheme. Numbers and letters shall be permanently applied to the wall within 1 foot of the drain valves in nonpublic areas. Letters and numbers shall be red paint and 3" tall. The identification shall be visible from a distance of 30'. In public areas, signs of at least 3" x 6" shall be attached to the drain valves with the same information. All materials shall be waterproof.
- J. Work on existing systems can be done during normal hours unless it effects the operation of the facility, tenants, or the support staff.
- K. Delegated Design: Design sprinkler system(s), including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
 - 1. Available fire-hydrant flow test records indicate the following conditions:
 - a. Date: **<Insert test date>**.
 - b. Time: **<Insert time> [a.m.] [p.m.]**
 - c. Performed by: **<Insert operator's name>** of **<Insert firm>**.
 - d. Location of Residual Fire Hydrant R: **<Insert location>**.
 - e. Location of Flow Fire Hydrant F: **<Insert location>**.
 - f. Static Pressure at Residual Fire Hydrant R: **<Insert psig (kPa)>**.
 - g. Measured Flow at Flow Fire Hydrant F: **<Insert gpm (L/s)>**.
 - h. Residual Pressure at Residual Fire Hydrant R: **<Insert psig (kPa)>**.
- L. Sprinkler system design shall be approved by authorities having jurisdiction.
 - 1. Margin of Safety for Available Water Flow and Pressure: **[10] [20] <Insert number>** percent, including losses through water-service piping, valves, and

- backflow preventers.
2. Sprinkler Occupancy Hazard Classifications:
 - a. Automobile Parking Areas: [Ordinary Hazard, Group 1] <Insert classification>.
 - b. Building Service Areas: [Ordinary Hazard, Group 1] <Insert classification>.
 - c. Electrical Equipment Rooms: [Ordinary Hazard, Group 1] <Insert classification>.
 - d. General Storage Areas: [Ordinary Hazard, Group 1] <Insert classification>.
 - e. Laundries: [Ordinary Hazard, Group 1] <Insert classification>.
 - f. Machine Shops: [Ordinary Hazard, Group 2] <Insert classification>.
 - g. Mechanical Equipment Rooms: [Ordinary Hazard, Group 1] <Insert classification>.
 - h. Office and Public Areas: [Light Hazard] <Insert classification>.
 - i. Repair Garages: [Ordinary Hazard, Group 2] <Insert classification>.
 - j. Restaurant Service Areas: [Ordinary Hazard, Group 1] <Insert classification>.
 - k. Solvent Cleaning Areas: [Extra Hazard, Group 2] <Insert classification>.
 - l. <Insert classification>.
 3. Minimum Density for Automatic-Sprinkler Piping Design:
 - a. Light-Hazard Occupancy: [0.10 gpm over 1500-sq. ft. (4.1 mm/min. over 139-sq. m)] <Insert value> area.
 - b. Ordinary-Hazard, Group 1 Occupancy: [0.15 gpm over 1500-sq. ft. (6.1 mm/min. over 139-sq. m)] <Insert value> area.
 - c. Ordinary-Hazard, Group 2 Occupancy: [0.20 gpm over 1500-sq. ft. (8.1 mm/min. over 139-sq. m)] <Insert value> area.
 - d. Extra-Hazard, Group 1 Occupancy: [0.30 gpm over 2500-sq. ft. (12.2 mm/min. over 232-sq. m)] <Insert value> area.
 - e. Extra-Hazard, Group 2 Occupancy: [0.40 gpm over 2500-sq. ft. (16.3 mm/min. over 232-sq. m)] <Insert value> area.
 - f. Special Occupancy Hazard: As determined by authorities having jurisdiction.
 4. Maximum Protection Area per Sprinkler: Per UL listing.
 5. Maximum Protection Area per Sprinkler: [_____]
 - a. Office Spaces: [120 sq. ft. (11.1 sq. m)] [225 sq. ft. (20.9 sq. m)] <Insert dimension>.
 - b. Storage Areas: [130 sq. ft. (12.1 sq. m)] <Insert dimension>.
 - c. Mechanical Equipment Rooms: [130 sq. ft. (12.1 sq. m)] <Insert dimension>.
 - d. Electrical Equipment Rooms: [130 sq. ft. (12.1 sq. m)] <Insert dimension>.
 - e. Other Areas: According to NFPA 13 recommendations unless otherwise indicated.
 6. Total Combined Hose-Stream Demand Requirement: According to NFPA 13

unless otherwise indicated:

- a. Light-Hazard Occupancies: [**100 gpm (6.3 L/s) for 30 minutes**] <Insert requirement>.
 - b. Ordinary-Hazard Occupancies: [**250 gpm (15.75 L/s) for 60 to 90 minutes**] <Insert requirement>.
 - c. Extra-Hazard Occupancies: [**500 gpm (31.5 L/s) for 90 to 120 minutes**] <Insert requirement>.
 - d. <Insert requirement>.
- M. Seismic Performance: Sprinkler piping shall withstand the effects of earthquake motions determined according to NFPA 13 and [**ASCE/SEI 7**] <Insert requirement>.

1.7 REGULATORY REQUIREMENTS

- A. Comply with NFPA 13 - Standard for the Installation of Sprinkler Systems, latest edition.
- B. Comply with NFPA 72 - Installation, Maintenance, and Use of Protective Signaling Systems.
- C. Comply with City and County of Denver Code Agency requirements.
- D. UL and FM Global Compliance: Fire protection system materials and components shall be UL listed and labeled, and FM Global approved.
- E. Hydraulic Calculations, Product Data, Shop Drawings, Dry Pipe System Equipment, and Low Air Switch, Air Maintenance Device: Bear stamp of approval of Designer of Record, DEN Life Safety Team and Owner's Representative and Denver Fire Department.
- F. All applicable insurance authorities underwriting requirements.

1.8 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. [**Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.**]
 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For dry-pipe sprinkler systems. Include plans, elevations, sections, details, and attachments to other work.
 1. Wiring Diagrams: For power, signal, and control wiring.
- C. Delegated-Design Submittal: For sprinkler systems indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

- D. Submit working plans and product data under provisions of Division 01. Submittal shall include drawings, hydraulic calculations, hydraulic reference points, detailed pipe layout, hangers and supports, components and accessories and other items as defined by NFPA 13. Indicate pipe materials used, jointing methods, supports, floor and wall penetration seals. Indicate installation, layout, weights, mounting and support details, and piping connections.
 - E. Verify that all formats noted below are most currently used by DEN. Working Plans drawings shall be submitted in Revit format in hard copy and on Compact Disk. Two(2) sets of full size drawings (34 x 44) and (1) Compact Disk containing all drawing files shall be submitted to the DEN Life Safety Team as part of each submittal.
 - F. Working Plan drawings for remodel areas shall include as built depiction of all sprinkler work within at least a 50 foot radius of the work proposed. Risers and main supply pipes shall also be indicated by size and location.
 - G. Final Submittal: Working plans submitted for approval shall have the signed wet stamp of a registered Fire Protection Engineer licensed in the State of Colorado (or N.I.C.E.T. 4), certifying that the fire sprinkler system has been designed and hydraulically calculated in compliance with NFPA and governing authorities requirements.
 - H. Obtain DEN Life Safety Team review and stamp prior to submittal for permit.
 - I. Submit working plans and product data to Denver Fire Department for approval. Subject to approval, submit copy of approved submittal and permit to the DEN Project Manager.
 - J. Submit additional non-returnable copies of current permits and agency approved working plan drawings with System Interruption Request.
 - K. Contractor shall submit fully dimensioned spool drawings for all welded piping work. Drawings shall indicate all weld types, sizes, and materials to be used. The spool drawing size shall match the full size contract documents of either 24 x 36 or 34 x 44. Spool drawings shall be submitted in either the latest version of Revit or the latest version of Adobe Acrobat (pdf). Adobe Acrobat files shall not contain security. Other file formats will not be accepted.
 - L. Supports not addressed by NFPA 13 or 14: Submit pipe support shop drawings bearing the wet stamp of a Licensed Colorado Professional Structural Engineer for approval. All welding and drilling of existing structural components must be reviewed and approved by the DEN Project Manager prior to proceeding.
- 1.9 INFORMATIONAL SUBMITTALS
- A. Subject to approval, submit copy of permit and submittal approved by Denver Fire Department to the DEN Project Manager.
 - B. Current Welders' qualification certificates and procedures. Reference Section 059990 "Welding".

- C. Test reports and certificates including "Contractor's Material and Test Certificate for Aboveground Piping" as described in NFPA 13.
- D. Coordination Drawings: Sprinkler systems, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 - 1. Domestic water piping.
 - 2. Compressed air piping.
 - 3. HVAC hydronic piping.
 - 4. Items penetrating finished ceiling including the following:
 - a. Lighting fixtures.
 - b. Air outlets and inlets.
 - c. <Insert item>.
 - 5. <Insert item>.
- E. Qualification Data: For qualified Installer[**and professional engineer**].
- F. Installer's Qualifications: Firms qualified to install and alter fire protection piping, equipment, specialties, and accessories, and repair and service equipment. A qualified firm is one that is experienced in such work, with minimum of five (5) previous projects similar in size and scope to this Project, is familiar with precautions required, and in compliance with the requirements of the authority having jurisdiction. The firm shall be in possession of City and County of Denver Fire Protection License Class A or B. Refer to Division 01 Section Reference Standards and Definitions for definition of Installer.
 - 1. The qualified installer shall be licensed for the design and installation for the specific type of system in the City and County of Denver and the State of Colorado and have been in business under the current name for five (5) years.
 - 2. All field personnel must be a current holder of the City & County of Denver Fire Department Fire Protection Installers license.
- G. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum five (5) years' documented experience.
- H. Approved Sprinkler Piping Drawings: Working plans, prepared according to NFPA 13, that have been approved by authorities having jurisdiction, including hydraulic calculations if applicable.
- I. Welding certificates.
- J. Copy of City and County of Denver Fire Protection Contractors License, and Fire protection Supervisor's certificate for class of equipment being installed.
- K. Fire-hydrant flow test report.

- L. Field Test Reports and Certificates: Indicate and interpret test results for compliance with performance requirements and as described in NFPA 13. Include "Contractor's Material and Test Certificate for Aboveground Piping."
- M. Field quality-control reports.

1.10 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For sprinkler specialties to include in emergency, operation, servicing requirements, and maintenance manuals.
 - 1. Maintenance data for each type sprinkler head, valve, piping specialty, fire protection specialty, fire department valve, and hose cabinet specified, for inclusion in operating and maintenance manual specified in Division 01.
 - a. Include written maintenance data on components of system, servicing requirements, and Record Drawings.
 - b. Include pump operation, maintenance, and inspection data, replacement part numbers and availability, and location and telephone numbers and website of service depot.
- B. Test reports and certificates including "Contractor's Material and Test Certificate for Aboveground Piping" as described in NFPA 13.
- C. All sprinkler system record drawings shall be submitted in the form of hard copies and electronic (CD) AutoDesk (release 14 minimum).

1.11 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
- B. Sprinkler Cabinets: Finished, wall-mounted, steel cabinet with hinged cover, and with space for minimum of six spare sprinklers plus sprinkler wrench. Include number of sprinklers required by NFPA 13 and sprinkler wrench. Include separate cabinet with sprinklers and wrench for each type of sprinkler used on Project.
- C. The following must be delivered and accepted prior to any testing:
 - 1. Provide a spare parts list. The list is to be provided with material submittal cut sheets.
 - 2. Provide extra sprinkler heads: Furnish each style with its own sprinkler head cabinet under provisions of NFPA 13 and Division 01.
 - 3. Provide suitable wrenches for each head type.
 - 4. Provide metal storage cabinet in location designated.
 - 5. Provide one set of renewable parts and seals for each dry valve installed.
 - 6. Provide DEN representatives all special tools required for installation and maintenance.

1.12 QUALITY ASSURANCE

A. Installer Qualifications:

1. Firms qualified to install and alter fire protection piping, equipment, specialties, and accessories, and repair and service equipment. A qualified firm is one that is experienced in such work, with minimum of 5 previous projects similar in size and scope to this Project, familiar with precautions required, and in compliance with the requirements of the authority having jurisdiction. The firm shall be in possession of City and County of Denver Fire Protection License Class A or B. Refer to Division 01 Section Reference Standards and Definitions for definition of Installer.
2. The qualified installer shall be licensed for the design and installation for the specific type of system in the City and County of Denver and the State of Colorado and have been in business under the current name for five (5) years.
3. All field personnel must be a current holder of the City & County of Denver Fire Department Fire Protection Installers license.
4. Submit evidence of such qualifications to the DEN Project Manager.
5. Installer's responsibilities include designing, fabricating, and installing sprinkler systems and providing professional engineering services needed to assume engineering responsibility. Base calculations on results of fire hydrant flow test.
 - a. Engineering Responsibility: Preparation of working plans, calculations, and field test reports by a qualified professional engineer.

B. Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. NFPA Standards: Sprinkler system equipment, specialties, accessories, installation, and testing shall comply with the following:

1. NFPA 13, "Installation of Sprinkler Systems."
2. NFPA 24, "Installation of Private Fire Service Mains and Their Appurtenances."

E. Design and installation to conform to Denver Fire Department requirements.

F. Equipment and Components: Bear UL, FM GLOBAL label or marking.

G. Qualifications for Welding Processes and Operators: Comply with the requirements of AWS B2.1, Specifications for Procedure and Performance Qualifications.

H. Sprinkler design drawings and hydraulic calculations submitted for approval shall have the signed wet stamp of a Colorado registered Fire Protection Engineer practicing in the fire protection field in the state of the project or a N.I.C.E.T. Level 4, certifying that

the fire sprinkler system has been designed and hydraulically calculated in compliance with NFPA and governing authorities requirements.

- I. Obtain DEN Life Safety Team review and stamp prior to submittal for permit.
- J. Fire Proofing: Where hangers require removal of fire proofing, remove minimum amount of fire proofing for hanger attachment. Repair fireproofing per requirements specified in Section 078100 "Applied Fireproofing".
- K. Comply with all requirements of Owner's Insurance Underwriter.

1.13 PROJECT CONDITIONS, SEQUENCE AND SCHEDULING

- A. Comply with DEN Maintenance and Engineering system interruption requirements and provide Denver Fire Department approved Fire Watch during entire time of system interruption.
- B. In no case shall the building structure remain without fire protection for more than ten (10) hours.
- C. Prior to system shut down, Contractor shall certify all equipment and materials are on site for removing, capping, valving, tagging, and reconnection of system.
- D. Schedule rough-in installations with installations of other building components.
- E. Conform to NFPA 13 for sprinkler systems.
- F. Environmental Conditions:
 - 1. The equipment shall be designed and constructed to operate successfully at the rated values under the following environmental conditions:
 - a. Location: Indoors and Outdoors.
 - b. Altitude: 5,500 feet (1677 m) above sea level.
 - c. Ambient temperature range: Minus 30 deg F (minus 35 deg C) to 120 deg F (49 deg C)
 - d. Wind Load: 115 mph with gust factor of 1.3

1.14 COORDINATION

- A. Coordinate layout and installation of sprinklers with other construction that penetrates ceilings, including light fixtures, HVAC equipment, and partition assemblies.

1.15 DELIVERY, STORAGE, AND HANDLING

- A. Deliver and store pumps in shipping containers with labeling in place under provisions of Division 01.

- B. Provide temporary inlet and outlet caps to be used throughout system construction until systems are in service.
- C. Maintain caps in place until installation.

1.16 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PIPING MATERIALS

- A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, and fitting materials, and joining methods for specific services, service locations, and pipe sizes.
- B. Equipment and components: Bear UL or FM Global label or marking where required.

2.2 STEEL PIPE AND FITTINGS

- A. Threaded thin wall piping, black and galvanized, for threaded joints, is NOT allowed on Dry-Pipe Sprinkler Systems.
 - 1. Exception: Thin wall pipe with approved joints and fittings may be used only on piping 2-1/2 inches and larger, if approved by DEN Project Manager.
- B. Galvanized-Steel Pipe: ASTM A 53/A 53M, ASTM A-135, Schedule 40 [**Type E**] <Insert type>, [**Grade B**] <Insert grade>. Pipe ends may be factory or field formed to match joining method.
 - 1. Only pipe identified and conforming to Schedule 40 wall thickness shall be used. In example, "Dyna Flow", "Eddy Pipe", "Super Flow" and / or similar products which are not true Schedule 40 thickness will not be allowed.
- C. Thinwall Galvanized-Steel Pipe: ASTM A 135 or ASTM A 795/A 795M, with wall thickness less than Schedule 30 and equal to or greater than Schedule 10. Pipe ends may be factory or field formed to match joining method.
 - 1. Thin wall pipe shall not be used in sizes less than NPS 2-1/2 inches.
 - a. Exception: Thin wall pipes may be used if approved by DEN Project Manager, but shall have grooved fittings only.
 - b. Threaded thin wall piping shall not be used.

- D. Galvanized-Steel Pipe Nipples: ASTM A 733, made of ASTM A 53/A 53M, standard-weight, seamless steel pipe with threaded ends.
- E. Galvanized, Steel Couplings: ASTM A 865, threaded.
- F. Mechanical Grooved Couplings: Malleable iron housing clamps to engage and lock, designed to permit some angular deflection, contraction, and expansion; "C" shaped composition sealing gasket, steel bolts, nuts, and washers.
- G. Galvanized, Gray-Iron Threaded Fittings: ASME B16.4, Class 125, standard pattern.
- H. Malleable- or Ductile-Iron Unions: UL 860.
- I. Cast-Iron Flanges: ASME B16.1, Class 125.
- J. Flanges: 150 psi forged steel slip on or weld-neck flanges for ferrous piping. Raised face flanges shall be mated with raised face, and flat face flanges shall be mated with flat face only.
- K. Plain-End-Pipe Fittings: UL 213, ductile-iron body with retainer lugs that require one-quarter turn or screwed retainer pin to secure pipe in fitting.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil International, Inc.
 - b. Shurjoint Piping Products.
 - c. **<Insert manufacturer's name>**
 - d. or approved equal.
- L. Grooved-Joint, Steel-Pipe Appurtenances:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil International, Inc.
 - b. Corcoran Piping System Co.
 - c. National Fittings, Inc.
 - d. Shurjoint Piping Products.
 - e. Tyco Fire & Building Products LP.
 - f. Victaulic Company.
 - g. **<Insert manufacturer's name>**
 - h. or approved equal.
 - 2. Pressure Rating: **[175 psig (1200 kPa)] [250 psig (1725 kPa)] [300 psig (2070 kPa)]** minimum.
 - 3. Galvanized, Grooved-End Fittings for Steel Piping: ASTM A 47/A 47M, malleable-iron casting or ASTM A 536, ductile-iron casting; with dimensions matching steel pipe.

4. Grooved-End-Pipe Couplings for Steel Piping: AWWA C606 and UL 213, rigid pattern, unless otherwise indicated, for steel-pipe dimensions. Include ferrous housing sections, EPDM-rubber gasket, and bolts and nuts.

2.3 PIPING JOINING MATERIALS

- A. Pipe-Flange Gasket Materials: **[AWWA C110, rubber, flat face, 1/8 inch (3.2 mm) thick] [or] [ASME B16.21, nonmetallic and asbestos free]**.
 1. Class 125, Cast-Iron and Class 150, Bronze Flat-Face Flanges: Full-face gaskets.
 2. Class 250, Cast-Iron and Class 300, Raised-Face Flanges: Ring-type gaskets.
- B. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.
- C. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for general-duty brazing unless otherwise indicated.
- D. Welding Materials: Field welding shall not be permitted; perform only shop welding. Comply with Section II, Part C, ASME Boiler and Pressure Vessel Code for welding materials appropriate for the wall thickness and chemical analysis of the pipe being welded. Welded outlets are permitted as long as the welding is done in compliance with NFPA welding requirements and Division 05 of these specifications.
- E. Gasket Materials: Thickness, material, and type suitable for fluid or gas to be handled, and design temperatures and pressures.
- F. Threaded Joint Compound or "Teflon" tape.

2.4 PIPE HANGERS AND SUPPORTS

- A. Reference Section 220529 "Hangers and Supports for Plumbing Piping and Equipment". Conform to NFPA 13.
- B. Hangers for Pipe Sizes 1/2 to 12 Inch: Malleable iron, adjustable swivel, split ring.
- C. All beam clamp type hangers shall be provided with retaining straps or surge restrainers.
- D. All hangers attached to metal grated mezzanines or floors and conveyor systems shall be provided with vibration spring isolators.
- E. All hangers support under the AGTS Tunnel must be only clevis style with double nuts for locking purposes.
- F. All hangers supported by attachment to the concrete structure shall be provided with fender washers and double nuts against the washer to assure locking.

- G. Earthquake bracing shall be added to the risers, supply mains both horizontal and vertical and crossmains. These braces shall be in accordance to NFPA 13. Bracing is to be Installed at each change in direction, tees in the mains, securing the risers and at the end of the crossmains. Long crossmains shall have bracing at intervals of 40' along their length.

2.5 LISTED FIRE-PROTECTION VALVES

A. General Requirements:

1. Valves shall be UL listed or FM approved.
2. Minimum Pressure Rating for Standard-Pressure Piping: **175 psig** (1200 kPa).

B. VALVE OPERATORS

1. Provide hand wheels for gate, globe [**or angle,**] and drain valves.
2. Butterfly valves provide gear operators for all sizes.
3. For valves located with a centerline more than 7 feet above finish floor, provide endless chain operated sheaves. Extend chains to 5 feet above floor and secure clear of walkways, as applicable.

C. VALVE CONNECTIONS

1. Provide valve connections to match pipe joints. Use valves of pipe size.
2. Provide butterfly valve for isolating service.

D. Ball Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil International, Inc.
 - b. Victaulic Company.
 - c. **<Insert manufacturer's name>**
 - d. or approved equal.
2. Standard: UL 1091 except with ball instead of disc.
3. Valves **NPS 2 (DN 50) and smaller: Bronze, two piece body, stainless steel ball, teflon seats and stuffing box ring, lever handle, threaded ends.**
4. **Valves NPS 2-1/2 (DN 65): Bronze body with threaded ends or ductile-iron body with grooved ends.**
5. **Valves NPS 3 (DN 80): Ductile-iron body with grooved ends.**

E. Butterfly and Grooved End Control Valves:

1. Per NFPA 13: UL listed and FM Global approved butterfly control valves for use with tamper switches, flanged or grooved connections. Carbon steel body, 150 lb full ANSI rated bi directional, 316 SS electrodeposit nickel plated eccentric rotating disc, dynamic sealed, TFE seal ring, 17 4 PH stainless steel shaft, Teflon chevron stem packing, 316 SS graphite impregnated bearings, and gear

- operator. Provide Supervisory switches.
2. Per NFPA-13 UL-Listed and FM Global approved grooved end control valves for use as zone control and/or sectional valves may be used with appropriate pressure ratings for intended service.
 3. Supervisory switches are required on all control valves.

F. Bronze Butterfly Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Fivalco Inc.
 - b. Global Safety Products, Inc.
 - c. Milwaukee Valve Company.
 - d. **<Insert manufacturer's name>**
 - e. or approved equal.
2. Standard: UL 1091.
3. Pressure Rating: 175 psig (1200 kPa).
4. Body Material: Bronze.
5. End Connections: Threaded.

G. Iron Butterfly Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil International, Inc.
 - b. Fivalco Inc.
 - c. Global Safety Products, Inc.
 - d. Kennedy Valve; a division of McWane, Inc.
 - e. Milwaukee Valve Company.
 - f. NIBCO INC.
 - g. Pratt, Henry Company.
 - h. Shurjoint Piping Products.
 - i. Tyco Fire & Building Products LP.
 - j. Victaulic Company.
 - k. **<Insert manufacturer's name>**
 - l. or approved equal.
2. Standard: UL 1091.
3. Pressure Rating: 175 psig (1200 kPa).
4. Body Material: Cast or ductile iron.
5. Style: Lug or wafer.
6. End Connections: Grooved.

H. Check Valves:

1. UL listed and FM Global approved wafer check valves, flanged or grooved connections.

- a. Iron body, bronze trim, swing disc, renewable disc, and seat.
 - b. Iron body, bronze trim spring loaded, renewable composition disc, where indicated on drawings.
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- a. AFAC Inc.
 - b. American Cast Iron Pipe Company; Waterous Company Subsidiary.
 - c. Anvil International, Inc.
 - d. Clow Valve Company; a division of McWane, Inc.
 - e. Crane Co.; Crane Valve Group; Crane Valves.
 - f. Crane Co.; Crane Valve Group; Jenkins Valves.
 - g. Crane Co.; Crane Valve Group; Stockham Division.
 - h. Fire-End & Croker Corporation.
 - i. Fire Protection Products, Inc.
 - j. Fivalco Inc.
 - k. Globe Fire Sprinkler Corporation.
 - l. Groeniger & Company.
 - m. Kennedy Valve; a division of McWane, Inc.
 - n. Matco-Norca.
 - o. Metraflex, Inc.
 - p. Milwaukee Valve Company.
 - q. Mueller Co.; Water Products Division.
 - r. NIBCO INC.
 - s. Potter Roemer.
 - t. Reliable Automatic Sprinkler Co., Inc.
 - u. Shurjoint Piping Products.
 - v. Tyco Fire & Building Products LP.
 - w. United Brass Works, Inc.
 - x. Venus Fire Protection Ltd.
 - y. Victaulic Company.
 - z. Viking Corporation.
 - aa. Watts Water Technologies, Inc.
 - bb. <Insert manufacturer's name>
 - cc. or approved equal.
3. Standard: UL 312
4. Pressure Rating: **[250 psig (1725 kPa) minimum] [300 psig (2070 kPa)]**.
5. Type: Swing check.
6. Body Material: Cast iron.
7. End Connections: Flanged or grooved.
- I. Bronze OS&Y Gate Valves:
1. Gate Valves - 2 inch and Smaller: Body and bonnet of cast bronze, 175 pound cold water working pressure, nonshock, threaded ends, solid wedge, outside screw and yoke, rising stem, screw-in bonnet, and malleable iron handwheel. Valves shall be capable of being repacked under pressure, with valve wide open. Provide Supervisory switches.

2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Crane Co.; Crane Valve Group; Crane Valves.
 - b. Crane Co.; Crane Valve Group; Stockham Division.
 - c. Milwaukee Valve Company.
 - d. NIBCO INC.
 - e. United Brass Works, Inc.
 - f. **<Insert manufacturer's name>**
 - g. or approved equal.
 3. Standard: UL 262.
 4. Pressure Rating: **175 psig** (1200 kPa).
 5. Body Material: Bronze.
 6. End Connections: Threaded.
- J. Iron OS&Y Gate Valves:
1. Gate Valves - 2-1/2 inch and Larger: Iron body, bronze mounted, 175 pound cold water working pressure, nonshock. Valves shall have solid taper wedge, outside screw and yoke, rising stem, flanged bonnet, with body and bonnet conforming to ASTM A 126, Class B; replaceable bronze wedge facing rings, flanged ends, and a packing assembly consisting of a cast iron gland flange, brass gland, packing, bonnet, and bronze bonnet bushing.
 - a. Valves shall be capable of being repacked under pressure, with valve wide open. Provide Supervisory switches.
 2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Cast Iron Pipe Company; Waterous Company Subsidiary.
 - b. American Valve, Inc.
 - c. Clow Valve Company; a division of McWane, Inc.
 - d. Crane Co.; Crane Valve Group; Crane Valves.
 - e. Crane Co.; Crane Valve Group; Jenkins Valves.
 - f. Crane Co.; Crane Valve Group; Stockham Division.
 - g. Hammond Valve.
 - h. Milwaukee Valve Company.
 - i. Mueller Co.; Water Products Division.
 - j. NIBCO INC.
 - k. Shurjoint Piping Products.
 - l. Tyco Fire & Building Products LP.
 - m. United Brass Works, Inc.
 - n. Watts Water Technologies, Inc.
 - o. **<Insert manufacturer's name>**
 - p. or approved equal.
 3. Standard: UL 262.
 4. Pressure Rating: **[250 psig (1725 kPa) minimum] [300 psig (2070 kPa)]**.

5. Body Material: Cast or ductile iron.
6. End Connections: Flanged or grooved.

K. Indicating-Type Butterfly Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil International, Inc.
 - b. Fivalco Inc.
 - c. Global Safety Products, Inc.
 - d. Kennedy Valve; a division of McWane, Inc.
 - e. Milwaukee Valve Company.
 - f. NIBCO INC.
 - g. Shurjoint Piping Products.
 - h. Tyco Fire & Building Products LP.
 - i. Victaulic Company.
 - j. **<Insert manufacturer's name>**
 - k. or approved equal.
2. Standard: UL 1091.
3. Pressure Rating: **175 psig** (1200 kPa) minimum.
4. Valves **NPS 2** (DN 50) and Smaller:
 - a. Valve Type: Ball or butterfly.
 - b. Body Material: Bronze.
 - c. End Connections: Threaded.
5. Valves **NPS 2-1/2** (DN 65) and Larger:
 - a. Valve Type: Butterfly.
 - b. Body Material: Cast or ductile iron.
 - c. End Connections: Flanged, grooved, or wafer.
6. Valve Operation: Integral [**electrical, 115-V ac, prewired, single-circuit, supervisory switch**] [**electrical, 115-V ac, prewired, two-circuit, supervisory switch**] [**visual**] indicating device.

L. NRS Gate Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Cast Iron Pipe Company; Waterous Company Subsidiary.
 - b. American Valve, Inc.
 - c. Clow Valve Company; a division of McWane, Inc.
 - d. Crane Co.; Crane Valve Group; Stockham Division.
 - e. Kennedy Valve; a division of McWane, Inc.
 - f. Mueller Co.; Water Products Division.
 - g. NIBCO INC.

- h. Tyco Fire & Building Products LP.
 - i. **<Insert manufacturer's name>**
 - j. or approved equal.
- 2. Standard: UL 262.
 - 3. Pressure Rating: **[250 psig (1725 kPa) minimum] [300 psig (2070 kPa)]**.
 - 4. Body Material: Cast iron with indicator post flange.
 - 5. Stem: Nonrising.
 - 6. End Connections: Flanged or grooved.

M. Indicator Posts:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Cast Iron Pipe Company; Waterous Company Subsidiary.
 - b. American Valve, Inc.
 - c. Clow Valve Company; a division of McWane, Inc.
 - d. Crane Co.; Crane Valve Group; Stockham Division.
 - e. Kennedy Valve; a division of McWane, Inc.
 - f. Mueller Co.; Water Products Division.
 - g. NIBCO INC.
 - h. Tyco Fire & Building Products LP.
 - i. **<Insert manufacturer's name>**
 - j. or approved equal.
- 2. Standard: UL 789.
- 3. Type: Horizontal for wall mounting.
- 4. Body Material: Cast iron with extension rod and locking device.
- 5. Operation: **[Wrench] [Hand wheel]**.

2.6 TRIM AND DRAIN VALVES

A. General Requirements:

- 1. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
- 2. Pressure Rating: **175 psig** (1200 kPa) minimum.
- 3. Ball valves are required for all dry system auxiliary drum drip drains.

B. Angle Valves:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Fire Protection Products, Inc.
 - b. United Brass Works, Inc.
 - c. **<Insert manufacturer's name>**
 - d. or approved equal.

C. Ball Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Affiliated Distributors.
 - b. Anvil International, Inc.
 - c. Barnett.
 - d. Conbraco Industries, Inc.; Apollo Valves.
 - e. Fire-End & Croker Corporation.
 - f. Fire Protection Products, Inc.
 - g. Flowserve.
 - h. FNW.
 - i. Jomar International, Ltd.
 - j. Kennedy Valve; a division of McWane, Inc.
 - k. Kitz Corporation.
 - l. Legend Valve.
 - m. Metso Automation USA Inc.
 - n. Milwaukee Valve Company.
 - o. NIBCO INC.
 - p. Potter Roemer.
 - q. Red-White Valve Corporation.
 - r. Southern Manufacturing Group.
 - s. Stewart, M. A. and Sons Ltd.
 - t. Tyco Fire & Building Products LP.
 - u. Victaulic Company.
 - v. Watts Water Technologies, Inc.
 - w. **<Insert manufacturer's name>**
 - x. or approved equal.

D. Globe Valves:

1. Brass body with renewable composition disc.
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Fire Protection Products, Inc.
 - b. United Brass Works, Inc.
 - c. **<Insert manufacturer's name>**
 - d. or approved equal.

E. Plug Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Southern Manufacturing Group.
 - b. **<Insert manufacturer's name>**
 - c. or approved equal.

2.7 SPECIALTY VALVES

A. General Requirements:

1. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
2. Pressure Rating:
 - a. Standard-Pressure Piping Specialty Valves: **175 psig** (1200 kPa) minimum.
 - b. High-Pressure Piping Specialty Valves: [**250 psig** (1725 kPa) **minimum**] [**300 psig** (2070 kPa)].
3. Body Material: Cast or ductile iron.
4. Size: Same as connected piping.
5. End Connections: Flanged or grooved.

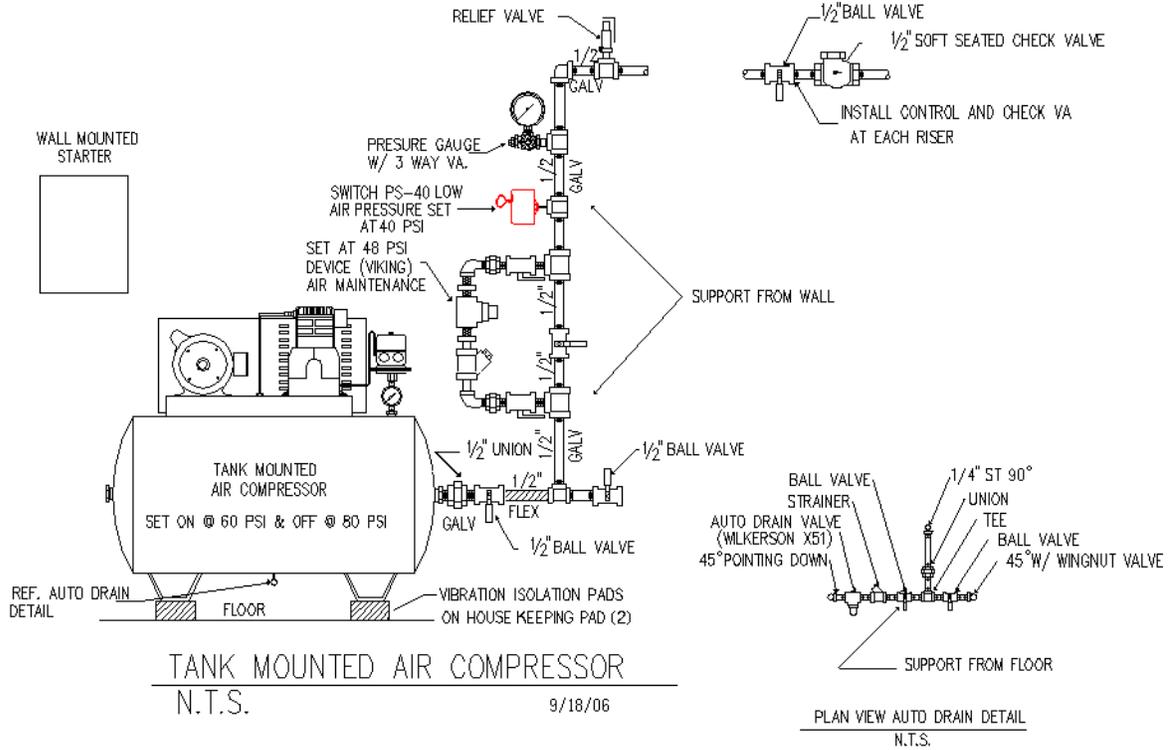

B. Automatic Dry-Pipe Valves: Each Automatic Dry Pipe Valve shall be provided with necessary trim, including but not limited to: accelerator as required, pressure alarm switch, low air switch, air maintenance device per NFPA 13, and drain.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Firematic Sprinkler Devices, Inc.
 - b. Globe Fire Sprinkler Corporation.
 - c. Grinnell Fire Protection
 - d. Reliable Automatic Sprinkler Co., Inc.
 - e. Star Sprinkler, Inc.
 - f. Victaulic Company.
 - g. Viking Corporation.
 - h. **<Insert manufacturer's name>**
 - i. or approved equal.
2. Standard: UL 260
3. Design: Differential-pressure type.
4. Include UL 1486, quick-opening devices, trim sets for air supply, drain, priming level, alarm connections, ball drip valves, pressure gages, priming chamber attachment, and fill-line attachment.
5. Air-Pressure Maintenance Device:
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) AFAC Inc.
 - 2) Globe Fire Sprinkler Corporation.
 - 3) Reliable Automatic Sprinkler Co., Inc.
 - 4) Tyco Fire & Building Products LP.
 - 5) Venus Fire Protection Ltd.
 - 6) Victaulic Company.
 - 7) Viking Corporation.

- 8) **<Insert manufacturer's name>**
 - 9) or approved equal.
 - b. Standard: UL 260.
 - c. Type: Automatic device to maintain minimum air pressure in piping.
6. Include shutoff valves to permit servicing without shutting down sprinkler piping, bypass valve for quick filling, pressure regulator or switch to maintain pressure, strainer, pressure ratings with **14- to 60-psig** (95- to 410-kPa) adjustable range, and [**175-psig** (1200-kPa)] [**300-psig** (2070-kPa)] outlet pressure.
7. Air Compressor:
- a. Electric motor driven, with ASME rated horizontal receiver tank, low air pressure operated electric switch, motor, motor starter, safety valves, check valves, automatic tank drain, muffler-filter, belt guard, and controls. Automatic drain shall have stop valve and manual valve upstream of stop valve for alternate service. Automatic air pressure maintenance shall be provided with dry pipe valves. Drains shall be piped to suitable location.
 - b. Provide 20 gallon tank mounted centrifugal electric motor driven compressor (1.5 HP, 480V 3 Phase, 60HZ.) with Automatic Air Maintenance Device, electric pressure switches, low air switch, motor starter, safety valves, and trimmings. As necessary provide intermediate size 3.0 HP, and large size 5.0 HP equipped with 30 gallon tanks.
 - c. Small Systems: Systems with total capacity of less than 40 gallons may use riser mounted centrifugal electric motor driven compressor, (1/2 HP, 120 VAC, 60 HZ) with Automatic Air Maintenance Device, electric pressure switch(s), low-air switch, motor starter, safety valves and trimmings.
 - d. Submit calculations substantiating total capacity of system if this option is to be proposed.
 - e. Air-Pressure Maintenance Device: UL 260, automatic device to maintain correct air pressure in piping. Include shutoff valves to permit servicing without shutting down sprinkler piping, bypass valve for quick filling, pressure regulator or switch to maintain pressure, strainer, pressure ratings with 14- to 60-psig adjustable range, and 175-psig maximum inlet pressure.
 - f. Provide vibration isolation for system connection and compressor mounting.
 - g. Mount motor starter on structure. Motor starter shall not be mounted on compressor.
 - h. Provide 4" thick minimum housekeeping pad poured in place and attached to existing structure.
 - i. Refer to detail provided:

GENERAL NOTES

- * ALL GALV MATL
- * 1/2" DIA. FOR SINGLE RISERS
- * 3/4" DIA. FOR MULTIPLE RISERS

- j. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Gast Manufacturing Inc.
 - 2) General Air Products, Inc,
 - 3) Viking Corporation.
 - 4) <Insert manufacturer's name>
 - 5) or approved equal.
- k. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
- l. Motor Horsepower: Fractional.
- m. Power: 120-V ac, 60 Hz, single phase.

C. Deluge Valves:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AFAC Inc.
 - b. BERMAD Control Valves.
 - c. CLA-VAL Automatic Control Valves.

- d. Globe Fire Sprinkler Corporation.
 - e. OCV Control Valves.
 - f. Reliable Automatic Sprinkler Co., Inc.
 - g. Tyco Fire & Building Products LP.
 - h. Venus Fire Protection Ltd.
 - i. Victaulic Company.
 - j. Viking Corporation.
 - k. **<Insert manufacturer's name>**
 - l. or approved equal.
2. Standard: UL 260.
 3. Design: Hydraulically operated, differential-pressure type.
 4. Include trim sets for bypass, drain, electrical sprinkler alarm switch, pressure gages, drip cup assembly piped without valves and separate from main drain line, fill-line attachment with strainer, and push-rod chamber supply connection.
 5. Dry, Pilot-Line Trim Set: Include dry, pilot-line actuator; air- and water-pressure gages; low-air-pressure warning switch; air relief valve; and actuation device. Dry, pilot-line actuator includes cast-iron, operated, diaphragm-type valve with resilient facing plate, resilient diaphragm, and replaceable bronze seat. Valve includes threaded water and air inlets and water outlet. Loss of air pressure on dry, pilot-line side allows pilot-line actuator to open and causes deluge valve to open immediately.
 6. Air-Pressure Maintenance Device:
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) AFAC Inc.
 - 2) Globe Fire Sprinkler Corporation.
 - 3) Reliable Automatic Sprinkler Co., Inc.
 - 4) Tyco Fire & Building Products LP.
 - 5) Venus Fire Protection Ltd.
 - 6) Victaulic Company.
 - 7) Viking Corporation.
 - 8) **<Insert manufacturer's name>**
 - 9) or approved equal.
 - b. Standard: UL 260.
 - c. Type: Automatic device to maintain minimum air pressure in piping.
 - d. Include shutoff valves to permit servicing without shutting down sprinkler piping, bypass valve for quick filling, pressure regulator or switch to maintain pressure, strainer, pressure ratings with **14- to 60-psig** (95- to 410-kPa) adjustable range, and **[175-psig (1200-kPa)] [300-psig (2070-kPa)]** outlet pressure.
 7. Air Compressor:
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- 1) Gast Manufacturing Inc.
- 2) General Air Products, Inc,
- 3) Viking Corporation.
- 4) **<Insert manufacturer's name>**
- 5) or approved equal.

- b. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
- c. Motor Horsepower: Fractional.
- d. Power: 120-V ac, 60 Hz, single phase.

D. Automatic (Ball Drip) Drain Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AFAC Inc.
 - b. Reliable Automatic Sprinkler Co., Inc.
 - c. Tyco Fire & Building Products LP.
 - d. **<Insert manufacturer's name>**
 - e. or approved equal.
2. Standard: UL 1726.
3. Pressure Rating: **175 psig** (1200 kPa) minimum.
4. Type: Automatic draining, ball check.
5. Size: **NPS 3/4** (DN 20).
6. End Connections: Threaded.

2.8 DOUBLE CHECK VALVE ASSEMBLY (BACK FLOW PREVENTER)

- A. Provide UL/FM Global approved, double check valve assembly, in fire pump room or at service entry points, between flange spigot piece and fire pump suction.
 1. Subject to compliance with requirements, provide products by one of the following:
 - a. Febco Master Series 850
 - b. Watts
 - c. **<Insert manufacturer's name>**
 - d. or approved equal.
- B. At every backflow preventer there shall be displayed, on the assembly a permanent placard with the greatest total flow anticipated by the hydraulic calculations and the corresponding net pressure lose utilized for the device in the hydraulic data. This information must be substantiated by means of a full flow discharge test during system acceptance to assure proper valve operation per NFPA. The placard shall be a standard red background, white letters, a minimum of $\frac{3}{4}$ " tall. A ball valve shall be provided on each end of the device and a common liquid filled gauge cross connected to achieve a net differential reading for comparison to the hydraulic calculations.

2.9 FIRE-DEPARTMENT CONNECTIONS

A. Flush-Type, Fire-Department Connection:

1. Fire Department Connection: Two-Way [2], flush mounted wall type, Fire Department Connection (threading as required by Denver Fire Department), with nameplate marked "AUTO SPKR -STP", finish; polished, chromeplated. Complete with 3/4 inch automatic ball drip.
2. Provide additional 2.5 inch outlet for each 250 GPM design discharge over 500 GPM per NFPA 13.
3. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Potter Roemer 5020 Series.
 - b. <Insert manufacturer's name>
 - c. or approved equal.
4. Standard: UL 405.
5. Type: Flush, for wall mounting.
6. Pressure Rating: 175 psig (1200 kPa) minimum.
7. Body Material: Corrosion-resistant metal.
8. Inlets: Brass with threads according to NFPA 1963 and matching local fire-department sizes and threads. Include extension pipe nipples, brass lugged swivel connections, and check devices or clappers.
9. Caps: Brass, lugged type, with gasket and chain.
10. Escutcheon Plate: Rectangular, brass, wall type.
11. Outlet: With pipe threads.
12. Body Style: [Horizontal] [Square] [Vertical].
13. Number of Inlets: [Two] [Three] [Four] [Six].
14. Outlet Location: [Back] [Bottom] [Left side] [Right side] [Top].
15. Escutcheon Plate Marking: Similar to "AUTO SPKR - STP"]
16. Finish: Polished chrome plated.
17. Outlet Size: [NPS 4 (DN 100)] [NPS 5 (DN 125)] [NPS 6 (DN 150)] [NPS 8 (DN 200)].

B. Yard-Type, Fire-Department Connection:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AFAC Inc.
 - b. Elkhart Brass Mfg. Company, Inc.
 - c. Fire-End & Croker Corporation.
 - d. Fire Protection Products, Inc.
 - e. GMR International Equipment Corporation.
 - f. Guardian Fire Equipment, Inc.
 - g. Wilson & Cousins Inc.
 - h. <Insert manufacturer's name>
 - i. or approved equal.

2. Standard: UL 405.
3. Type: Exposed, freestanding.
4. Pressure Rating: [**175 psig (1200 kPa) minimum**] [**300 psig (2070 kPa)**].
5. Body Material: Corrosion-resistant metal.
6. Inlets: Brass with threads according to NFPA 1963 and matching local fire-department sizes and threads. Include extension pipe nipples, brass lugged swivel connections, and check devices or clappers.
7. Caps: Brass, lugged type, with gasket and chain.
8. Escutcheon Plate: Round, brass, floor type.
9. Outlet: Bottom, with pipe threads.
10. Number of Inlets: [**Two**] [**Three**] [**Four**].
11. Sleeve: [**Brass**] [**Not required**].
12. Sleeve Height: **18 inches** (460 mm).
13. Escutcheon Plate Marking: Similar to "[**AUTO SPKR & STP**] [**AUTO SPKR**]."
14. Finish[, **Including Sleeve**]: [**Polished chrome plated**] .
15. Outlet Size: [**NPS 4 (DN 100)**] [**NPS 5 (DN 125)**] [**NPS 6 (DN 150)**].

2.10 FITTINGS

- A. Cast Iron Threaded Fittings: ANSI B16.4, Class 125 or 250 as required, standard pattern, for threaded joints. Threads shall conform to ANSI B1.20.1.
- B. Malleable Iron Threaded Fittings: ANSI B16.3, Class 150 or 300 as required, standard pattern, for threaded joints. Threads shall conform to ANSI B1.20.1.
- C. Deluge and exterior dry systems connections must have galvanized fittings
- D. Steel Fittings: ASTM A 234, seamless or welded, for welded joints.
- E. Wrought Copper Fittings: ANSI B16.22, streamlined pattern.
- F. Cast Iron Threaded Flanges: ANSI B16.1, Class 125 or 250 as required. Raised face flanges shall be mated with raised face, and flat face flanges shall be mated with flat face only.
- G. Use of Hooker style fittings and/or any similar rubber gasketed, drill to mount, 2" and smaller clamp on tees are NOT permitted.
- H. Use of threaded thin wall pipe: Pressfit fittings or similar non-threaded connections of any kind will NOT be permitted.
- I. "EZ-T's" are NOT permitted.
- J. Unions: 150 to 300psi as required malleable iron for threaded ferrous piping.

2.11 SPRINKLER SPECIALTY PIPE FITTINGS

- A. General Requirements for Dry-Pipe-System Fittings: [**UL listed**] <Insert standard> for dry-pipe service.

B. Branch Outlet Fittings:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil International, Inc.
 - b. National Fittings, Inc.
 - c. Shurjoint Piping Products.
 - d. Tyco Fire & Building Products LP.
 - e. Victaulic Company.
 - f. **<Insert manufacturer's name>**
 - g. or approved equal.
2. Standard: UL 213.
3. Pressure Rating: **[175 psig (1200 kPa) minimum] [300 psig (2070 kPa)]**.
4. Body Material: Ductile-iron housing with EPDM seals and bolts and nuts.
5. Type: Mechanical-T and -cross fittings.
6. Configurations: Snap-on and strapless, ductile-iron housing with branch outlets.
7. Size: Of dimension to fit onto sprinkler main and with outlet connections as required to match connected branch piping.
8. Branch Outlets: Grooved, plain-end pipe, or threaded.

C. Flow Detection and Test Assemblies:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AGF Manufacturing Inc.
 - b. Reliable Automatic Sprinkler Co., Inc.
 - c. Tyco Fire & Building Products LP.
 - d. Victaulic Company.
 - e. **<Insert manufacturer's name>**
 - f. or approved equal.
2. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
3. Pressure Rating: **[175 psig (1200 kPa) minimum] [300 psig (2070 kPa)]**.
4. Body Material: Cast- or ductile-iron housing with orifice, sight glass, and integral test valve.
5. Size: Same as connected piping.
6. Inlet and Outlet: Threaded.

D. Branch Line Testers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Elkhart Brass Mfg. Company, Inc.
 - b. Fire-End & Croker Corporation.
 - c. Potter Roemer.

- d. **<Insert manufacturer's name>**
 - e. or approved equal.
 2. Standard: UL 199.
 3. Pressure Rating: **175 psig** (1200 kPa) minimum.
 4. Body Material: Brass.
 5. Size: Same as connected piping.
 6. Inlet: Threaded.
 7. Drain Outlet: Threaded and capped.
 8. Branch Outlet: Threaded, for sprinkler.
- E. Sprinkler Inspector's Test Fittings:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AGF Manufacturing Inc.
 - b. Triple R Specialty.
 - c. Tyco Fire & Building Products LP.
 - d. Victaulic Company.
 - e. Viking Corporation.
 - f. **<Insert manufacturer's name>**
 - g. or approved equal.
 2. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
 3. Pressure Rating: **[175 psig (1200 kPa) minimum] [300 psig (2070 kPa)]**.
 4. Body Material: Cast- or ductile-iron housing with sight glass.
 5. Size: Same as connected piping.
 6. Inlet and Outlet: Threaded.
- F. Adjustable Drop Nipples:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. CECA, LLC.
 - b. Corcoran Piping System Co.
 - c. Merit Manufacturing; a division of Anvil International, Inc.
 - d. **<Insert manufacturer's name>**
 - e. or approved equal.
 2. Standard: UL 1474.
 3. Pressure Rating: **[250 psig (1725 kPa) minimum] [300 psig (2070 kPa)]**.
 4. Body Material: Steel pipe with EPDM O-ring seals.
 5. Size: Same as connected piping.
 6. Length: Adjustable.
 7. Inlet and Outlet: Threaded.
- G. Flexible, Sprinkler Hose Fittings:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Fivalco Inc.
 - b. FlexHead Industries, Inc.
 - c. Gateway Tubing, Inc.
 - d. **<Insert manufacturer's name>**
 - e. or approved equal.
2. Standard: UL 1474.
3. Type: Flexible hose for connection to sprinkler, and with bracket for connection to ceiling grid.
4. Pressure Rating: **[175 psig (1200 kPa) minimum] [300 psig (2070 kPa)]**.
5. Size: Same as connected piping, for sprinkler.

2.12 SPRINKLERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. AFAC Inc.
 2. Globe Fire Sprinkler Corporation.
 3. Reliable Automatic Sprinkler Co., Inc.
 4. Tyco Fire & Building Products LP.
 5. Venus Fire Protection Ltd.
 6. Victaulic Company.
 7. Viking Corporation.
 8. **<Insert manufacturer's name>**
 9. or approved equal.
- B. General Requirements:
1. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
 2. Pressure Rating for Automatic Sprinklers: **175 psig (1200 kPa) minimum**.
 3. Pressure Rating for High-Pressure Automatic Sprinklers: **[250 psig (1725 kPa) minimum] [300 psig (2070 kPa)]**.
- C. Automatic Sprinklers with Heat-Responsive Element:
1. Fusible link type, and style as indicated or required by the application.
 2. Nonresidential Applications: **[UL 199] <Insert standard>**.
 3. Characteristics: Nominal **1/2-inch (12.7-mm)** orifice with discharge coefficient K of 5.6, and for "Ordinary" temperature classification rating unless otherwise indicated or required by application.
 4. Exposed Area Type: Standard upright, pendent or sidewall type with brass finish.
 5. Dry Pendent Sprinklers: Flush type with escutcheon. Finish to be as indicated on Architectural Reflected Ceiling Plans or Ceiling Finish Schedules.

6. Provide corrosion proof sprinkler heads in areas subject to corrosive atmosphere or exposure to weather.
 7. Orifice: All sprinklers to be minimum 1/2 inch orifice unless noted otherwise.
 8. Temperature: All sprinklers to be temperature rated with manufacturer's color code, to correspond with hazard requirements, location, and proximity to heat producing media. Provide sprinklers with temperature ratings based on area conditions and heat producing equipment. Sprinkler temperature ratings shall conform to the requirements of the NFPA 13.
 9. Finished Ceilings: Flush type, semi-recessed, standard pendent or sidewall type sprinklers with escutcheon. Finishes and type of sprinkler to install to be as indicated on Architectural Reflected Ceiling Plans or Ceiling Finish Schedules.
- D. Sprinkler Heads to Match Existing:
1. Where new work is performed in an area of the existing building, the new heads must match the existing. If the existing heads cannot be matched, an area defined by walls may be replaced entirely so that all heads within the room are the same style and finish.
- E. Dry Pendent Heads:
1. Where dry pendent sprinklers are used to protect an unheated area, the minimum length for the dry barrel must be 12".
- F. Sprinkler Finishes:
1. Completely concealed sprinkler heads, GEM Concealed or approved equal, shall be installed in all public areas with suspended ceilings and concealed piping.
 2. Ceiling plate color shall match DEN Project Manager's color sample.
 3. Ceiling plate paint shall be applied by the manufacturer.
 4. Ceiling plates shall not be painted after installation.
 5. Use chrome finish recessed sprinklers, GEM or approved equal, with chrome recessed escutcheon in nonpublic areas with suspended ceilings and concealed piping.
 6. Use chrome horizontal type sidewall sprinklers where indicated and specified.
- G. Special Coatings:
1. Wax.
 2. Corrosion-resistant paint.
- H. Sprinkler Escutcheons: Materials, types, and finishes for the following sprinkler mounting applications. Escutcheons for concealed, flush, and recessed-type sprinklers are specified with sprinklers.
1. Ceiling Mounting: [**Chrome-plated steel, one piece, flat**] [**Chrome-plated steel, two piece, with 1-inch (25-mm) vertical adjustment**] [**Plastic, white finish, one piece, flat**].
 2. Sidewall Mounting: [**Chrome-plated steel**] [**Plastic, white finish**], one piece, flat.

I. Sprinkler Guards:

1. Head Guards: Provide sprinkler head guards where the Sprinkler Deflector is located 7'-0" or less above finish floor, or is otherwise subject to damage or injury. Head Guard finish to match applicable sprinkler head finish requirements, except brass sprinkler heads, which shall be "Red Enamel".
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Reliable Automatic Sprinkler Co., Inc.
 - b. Viking Corporation.
 - c. Automatic Sprinkler Corporation of America.
 - d. Central Sprinkler Corporation.
 - e. Firematic Sprinkler Devices, Inc.
 - f. Globe Fire Equipment Co.
 - g. Guardian Automatic Sprinkler Co., Inc.
 - h. GEM
 - i. Star Sprinkler Corporation.
 - j. **<Insert manufacturer's name>**
 - k. or approved equal.
3. Standard: UL 199.
4. Type: Wire cage with fastening device for attaching to sprinkler.

2.13 PIPE HANGERS AND SUPPORTS

- A. Reference Section 220529 "Hangers and Supports for Plumbing Piping and Equipment". All supports shall conform to the requirements of NFPA 13.
- B. Hangers for Pipe Sizes 1/2 to 12 inch: Adjustable band hanger or malleable iron split ring in accordance with NFPA 13.
- C. All beam clamp type hangers shall be provided with retaining straps and surge restrainers.
- D. All hangers attached to metal grated mezzanines or floors and conveyor systems shall be provided with vibration spring isolators.
- E. All hangers support under the AGTS Tunnel must be only clevis style with double nuts for locking purposes.
- F. All hangers supported by attachment to the concrete structure shall be provided with fender washers and double nuts against the washer to assure locking.

2.14 ALARM DEVICES

- A. Alarm-device types shall match piping and equipment connections.
- B. Water Flow Detectors: Vane type waterflow detector, rated to 250 psig; designed for

vertical or horizontal installation; having two, spdt circuit switches to provide isolated alarm and auxiliary contacts, 7 ampere, 125 Vac and 0.25 ampere, 24 Vdc; complete with factory-set, field-adjustable tamperproof cover.

1. Retard feature must be of the instantly recycling type so that flows less than retard period will not produce a cumulative effect.
2. Flow switch shall not be installed in a fitting or within 12 inches of any fitting that changes the direction of water flow.
3. Design detector with a sensitivity setting to signal any flow of water that equals or exceeds the discharge from one sprinkler head.
4. Provide weatherproof and dust tight flow detector.
5. Provide a 3/4 inch conduit entrance per detector.

C. Water-Motor-Operated Alarm:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Globe Fire Sprinkler Corporation.
 - b. Tyco Fire & Building Products LP.
 - c. Victaulic Company.
 - d. Viking Corporation.
 - e. **<Insert manufacturer's name>**
 - f. or approved equal.
2. Standard: UL 753.
3. Type: Mechanically operated, with Pelton wheel.
4. Alarm Gong: Cast aluminum with red-enamel factory finish.
5. Size: **10-inch** (250-mm) diameter.
6. Components: Shaft length, bearings, and sleeve to suit wall construction.
7. Inlet: **NPS 3/4** (DN 20).
8. Outlet: **NPS 1** (DN 25) drain connection.

D. Electrically Operated Alarm Bell:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Fire-Lite Alarms; a Honeywell company.
 - b. Notifier; a Honeywell company.
 - c. Potter Electric Signal Company.
 - d. **<Insert manufacturer's name>**
 - e. or approved equal.
2. Standard: UL 464.
3. Type: Vibrating, metal alarm bell.
4. Size: **[6-inch (150-mm) minimum] [8-inch (200-mm) minimum] [10-inch (250-mm)]** diameter.
5. Finish: Red-enamel factory finish, suitable for outdoor use.

E. Pressure Switches:

1. Pressure Alarm Switches: Rated to 250 psig; designed for vertical installation; having two, spdt circuit switches to provide isolated alarm and auxiliary contacts, 7 ampere, 125 Vac and 0.25 ampere, 24 Vdc; complete with factory-set, field-adjustable tamperproof cover.
 - a. Design detector with a sensitivity setting to signal any flow of water that equals or exceeds the discharge from one sprinkler head.
 - b. Provide weatherproof and dust tight flow detector.
 - c. Provide a 3/4 inch conduit entrance per detector.
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AFAC Inc.
 - b. Barksdale, Inc.
 - c. Detroit Switch, Inc.
 - d. Potter Electric Signal Company.
 - e. System Sensor; a Honeywell company.
 - f. Tyco Fire & Building Products LP.
 - g. United Electric Controls Co.
 - h. Viking Corporation.
 - i. **<Insert manufacturer's name>**
 - j. or approved equal.
3. Standard: UL 346.
4. Type: Electrically supervised water-flow switch with retard feature.
5. Components: Single-pole, double-throw switch with normally closed contacts.
6. Design Operation: Rising pressure signals water flow.

F. Valve Supervisory Switches:

1. Supervisory Tamper Switches: SPDT, normally closed contacts, designed to signal valve in other than full open position.
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Fire-Lite Alarms; a Honeywell company.
 - b. Kennedy Valve; a division of McWane, Inc.
 - c. Potter Electric Signal Company.
 - d. System Sensor; a Honeywell company.
 - e. **<Insert manufacturer's name>**
 - f. or approved equal.
3. Standard: UL 346.
4. Type: Electrically supervised.
5. Components: Single-pole, double-throw switch with normally closed contacts.
6. Design: Signals that controlled valve is in other than fully open position.

G. Indicator-Post Supervisory Switches:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Potter Electric Signal Company.
 - b. System Sensor; a Honeywell company.
 - c. <Insert manufacturer's name>
 - d. or approved equal.
2. Standard: UL 346.
3. Type: Electrically supervised.
4. Components: Single-pole, double-throw switch with normally closed contacts.
5. Design: Signals that controlled indicator-post valve is in other than fully open position.

2.15 MANUAL CONTROL STATIONS

- A. Description: UL listed or FM Global approved, hydraulic operation, with union, [NPS 1/2 \(DN 15\)](#) pipe nipple, and bronze ball valve. Include metal enclosure labeled "MANUAL CONTROL STATION" with operating instructions and cover held closed by breakable strut to prevent accidental opening.

2.16 CONTROL PANELS

- A. Description: Single-area, two-area, or single-area cross-zoned type control panel as indicated, including NEMA ICS 6, Type 1 enclosure, detector, alarm, and solenoid-valve circuitry for operation of deluge valves. Panels contain power supply; battery charger; standby batteries; field-wiring terminal strip; electrically supervised solenoid valves and polarized fire-alarm bell; lamp test facility; single-pole, double-throw auxiliary alarm contacts; and rectifier.
1. Panels: UL listed and FM Global approved when used with thermal detectors and Class A detector circuit wiring. Electrical characteristics are 120-V ac, 60 Hz, with 24-V dc rechargeable batteries.
 2. Manual Control Stations: Electric operation, metal enclosure, labeled "MANUAL CONTROL STATION" with operating instructions and cover held closed by breakable strut to prevent accidental opening.
 3. Manual Control Stations: Hydraulic operation, with union, [NPS 1/2 \(DN 15\)](#) pipe nipple, and bronze ball valve. Include metal enclosure labeled "MANUAL CONTROL STATION" with operating instructions and cover held closed by breakable strut to prevent accidental opening.

2.17 PRESSURE GAGES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. AMETEK, Inc.; U.S. Gauge Division.
 2. Ashcroft, Inc.
 3. Brecco Corporation.
 4. WIKA Instrument Corporation.
 5. **<Insert manufacturer's name>**
 6. or approved equal.
- B. Standard: UL 393.
- C. Dial Size: **3-1/2- to 4-1/2-inch** (90- to 115-mm) diameter.
- D. Pressure Gage Range: [**0 to 250 psig (0 to 1725 kPa) minimum**] [**0 to 300 psig (0 to 2070 kPa)**].
- E. Water System Piping Gage: Include "WATER" or "AIR/WATER" label on dial face.
- F. Air System Piping Gage: Include[**retard feature and**] "AIR" or "AIR/WATER" label on dial face.

2.18 SIGNAGE AND LABELING

- A. Signage shall be per the requirements of NFPA 13, FM Global, and any applicable Insurance underwriter.
1. Signs shall be pre-manufactured metal, approximately 2" x 6", located at all valves, main drains, auxiliary drains, air, alarm, and similar devices.
 2. Every drain and control valve shall be permanently labeled with the DEN designated system I.D. number and a consecutive number indicating quantity of drains on the system, i.e. T-4-43 / 3 of 7 in the terminal or FZ – 03 / 2 of 2 .
- B. Hydraulic Plaques shall be provided at all risers with the appropriate information.

PART 3 - EXECUTION

3.1 DELIVERY, STORAGE AND HANDLING

- A. Deliver and store valves, compressors and other equipment in shipping containers, with labeling in place, under provisions of Division 01.
- B. Provide temporary protective coating on cast iron and steel valves.
- C. Provide temporary end caps and closures. Maintain in place until installation.

3.2 PREPARATION

- A. Perform fire-hydrant flow test according to NFPA 13 and NFPA 291. Use results for system design calculations required in "Quality Assurance" Article.

1. Report test results promptly and in writing.
- B. Coordinate work of this Section with other affected work.
- C. Comply with coordination drawings requirements.
- D. Comply with DEN System Interruption Request requirements.
- E. Ream pipe and tube ends to full inside diameter.
- F. Remove burrs, and bevel plain end ferrous pipe.
- G. Remove scale and foreign material, inside and outside, before assembly.
- H. Cleaning:
 1. Thoroughly pre-clean internal surfaces of piping sections to be installed; install piping in accordance with NFPA 13.
 2. Prepare pipe, fittings, supports, and accessories for finish painting.
 3. All work in existing areas shall require daily cleaning, including cleaning and removal of any foreign materials. Final cleaning will require all dust to be recovered and removed.

3.3 SERVICE-ENTRANCE PIPING

- A. Connect sprinkler piping to water-service piping for service entrance to building. Comply with requirements in Section 211100 "Facility Fire-Suppression Water-Service Piping" for exterior piping.
- B. Install shutoff valve,[**backflow preventer**,] pressure gage, drain, and other accessories indicated at connection to water-service piping.[**Comply with requirements in Section 211100 "Facility Fire-Suppression Water-Service Piping" for backflow preventers.**]
- C. Install shutoff valve, check valve, pressure gage, and drain at connection to water service.

3.4 WATER-SUPPLY CONNECTIONS

- A. Connect sprinkler piping to building's interior water-distribution piping. Comply with requirements in Section 221116 "Domestic Water Piping" for interior piping.
- B. Install shutoff valve,[**backflow preventer**,] pressure gage, drain, and other accessories indicated at connection to water-distribution piping.[**Comply with requirements in Section 221119 "Domestic Water Piping Specialties" for backflow preventers.**]
- C. Install shutoff valve, check valve, pressure gage, and drain at connection to water supply.

3.5 PIPING INSTALLATION

- A. Locations and Arrangements: Drawing plans, schematics, and diagrams indicate general location and arrangement of piping. Install piping as indicated, as far as practical.
 - 1. Deviations from approved working plans for piping require written approval from authorities having jurisdiction. File written approval with DEN Project Manager before deviating from approved working plans.
- B. Piping Standard: Comply with requirements in NFPA 13 for installation of sprinkler piping.
- C. Route piping in orderly manner, plumb and parallel to building structure. Maintain gradient.
- D. Install piping to conserve building space, to not interfere with use of space and other work.
- E. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment.
- F. Install seismic restraints on piping. Comply with requirements in NFPA 13 for seismic-restraint device materials and installation.
- G. In steel piping, main sized saddle branch connections or direct connection of branch lines to mains is permitted if main is one pipe size larger than the branch for up to 6 inch mains and if main is two pipe sizes larger than branch for 8 inch and larger mains. Do not project branch pipes inside the main pipe.
- H. Use listed fittings to make changes in direction, branch takeoffs from mains, and reductions in pipe sizes.
- I. Install unions adjacent to each valve in pipes **NPS 2 (DN 50)** and smaller. Unions are not required on flanged devices or in piping installations using grooved mechanical couplings.
- J. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having **NPS 2-1/2 (DN 65)** and larger end connections.
- K. Install "Inspector's Test Connections" in sprinkler system piping, complete with shutoff valve, and sized and located according to NFPA 13.
 - 1. Install test connections sized and located in accordance with NFPA 13 complete with shutoff valve. Test connections may also serve as drainpipes.
 - 2. Victaulic "Test Master" or DEN Project Manager approved equal may be used in lieu of test and drainpipe and fittings. Test and drain discharge pipe shall have hose thread connection or discharge as indicated.
- L. Install sprinkler piping with drains for complete system drainage. Install sprinkler piping to provide for system drainage in accordance with NFPA 13. Drainage shall be

coordinated with locations of floor drains having capacity to receive flow.

- M. Install sprinkler control valves, test assemblies, and drain risers adjacent to standpipes when sprinkler piping is connected to standpipes.
- N. Install automatic (ball drip) drain valves to drain piping between fire-department connections and check valves. Drain to floor drain or to outside building.
- O. Connect compressed-air supply to dry-pipe sprinkler piping.
- P. Connect air compressor to the following piping and wiring:
 - 1. Pressure gages and controls.
 - 2. Electrical power system.
 - 3. Fire-alarm devices, including low-pressure alarm.
- Q. Install alarm devices in piping systems.
- R. Install pressure gages on riser or feed main, at each sprinkler test connection, and at top of each standpipe. Include pressure gages with connection not less than NPS 1/4 (DN 8) and with soft metal seated globe valve, arranged for draining pipe between gage and valve. Install gages to permit removal, and install where they will not be subject to freezing.
- S. Drain dry-pipe sprinkler piping. Piping must be sloped to drain points per NFPA requirements.
- T. Pressurize and check dry-pipe sprinkler system piping and **[air-pressure maintenance devices] [air compressors]**.
- U. Penetrations:
 - 1. Do not penetrate building structural members unless indicated. Penetration of structural members requires structural engineer review and approval.
 - 2. X-RAY: Provide X-ray of Structural walls and Floors prior to attempting drilling or saw cutting to guarantee structural or electrical members are not interrupted by process. Comply with DEN Standard X-ray procedures.
- V. Seals and Sleeves:
 - 1. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 210517 "Sleeves and Sleeve Seals for Fire-Suppression Piping."
 - 2. Seal pipe and sleeve penetration to achieve fire resistance equivalent to fire separation required.
 - 3. Install mechanical sleeve seal at pipe penetrations in basement and foundation walls.
 - 4. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 210517 "Sleeves and Sleeve Seals for Fire-Suppression Piping."
 - 5. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply

with requirements for escutcheons specified in Section 210518 "Escutcheons for Fire-Suppression Piping."

3.6 PIPE HANGERS AND SUPPORTS

- A. Reference Section 220529 "Hangers and Supports for Plumbing Piping and Equipment" for more information on pipe hangers and supports.
- B. Comply with the requirements of NFPA 13 and NFPA 14. Comply with requirements in NFPA 13 for hanger materials. Hanger and support spacing and locations for piping joined with grooved mechanical couplings shall be in accordance with NFPA 13 and the grooved mechanical coupling manufacturer's written instructions, for rigid systems. Indicate all hangers on shop drawings.
 - 1. Install hangers to provide minimum 1/2 inch space between finished covering and adjacent work.
 - 2. Place hangers per NFPA 13.
 - 3. Support vertical piping at every floor. Support riser piping independently of connected horizontal piping.
- C. Modifications or additions to system: Provide new independent supports from existing building structural components or walls suitable for the support of the added or modified sprinkler piping system.
 - 1. Added sprinkler piping supports shall not be attached to any part of the existing equipment or its support members.
 - 2. Install new piping, hangers, supports, etc., to avoid interference with existing building systems and operational characteristics of material handling systems.
- D. Supports not addressed by NFPA 13 or 14: Submit pipe support shop drawings bearing the wet stamp of a Licensed Colorado Professional Structural engineer for approval. All welding and drilling of existing structural components must be reviewed and approved by the DEN Project Manager prior to proceeding.
- E. Support all horizontal piping within 1'-0" of end.

3.7 JOINT CONSTRUCTION

- A. Install couplings, flanges, flanged fittings, unions, nipples, and transition and special fittings that have finish and pressure ratings same as or higher than system's pressure rating for aboveground applications unless otherwise indicated.
- B. Criteria:
 - 1. Up to and including 2 inch diameter: Screw joint and grooved joint steel piping
 - 2. 2- 1/2 inch diameter and larger: Welded joints (only shop welds), screw joints, or grooved joints.
- C. Install unions adjacent to each valve in pipes **NPS 2** (DN 50) and smaller.

- D. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 (DN 65) and larger end connections.
- E. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- F. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.
- G. Flanged Joints: Select appropriate gasket material in size, type, and thickness suitable for water service. Join flanges with gasket and bolts according to ASME B31.9. Align flange surfaces parallel. Assemble joints by sequencing bolt tightening to make initial contact of flanges and gaskets as flat and parallel as possible. Use suitable lubricants on bolt threads. Tighten bolts gradually and uniformly to appropriate torque specified by the bolt manufacturer.
- H. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
 - 1. Apply appropriate tape or thread compound to external pipe threads.
 - 2. Note the internal length of threads in fittings or valve ends, and proximity of internal seat or wall, to determine how far pipe should be threaded into joint.
 - 3. Below grade joints: Die-cut screw joints with full cut standard taper pipe threads with red lead and linseed oil or other nontoxic joint compound applied to male threads only.
 - 4. Assemble joint to appropriate thread depth. When using a wrench on valves, place the wrench on the valve end into which the pipe is being threaded.
 - 5. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. If a weld opens during cutting or threading operations, that portion of pipe shall not be used.
- I. Twist-Locked Joints: Insert plain end of steel pipe into plain-end-pipe fitting. Rotate retainer lugs one-quarter turn or tighten retainer pin.
- J. Steel-Piping, Cut-Grooved Joints: Mechanical grooved joints may be used instead of threaded or welded joints at accessible aboveground locations. Cut grooves on pipe ends dimensionally compatible with the couplings. Cut square-edge groove in end of pipe according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings according to AWWA C606 for steel-pipe joints.
- K. Welded Joints: AWS D10.9, Level AR-3
- L. Dissimilar-Material Piping Joints: Make joints using adapters compatible with materials of both piping systems.

3.8 VALVE AND SPECIALTIES INSTALLATION

- A. Install listed fire-protection valves, trim and drain valves, specialty valves and trim,

controls, and specialties according to NFPA 13 and authorities having jurisdiction.

- B. Install listed fire-protection shutoff valves supervised open, located to control sources of water supply except from fire-department connections. Install permanent identification signs indicating portion of system controlled by each valve.
- C. Install check valve in each water-supply connection. Install backflow preventers instead of check valves in potable-water-supply sources.
- D. Install valves with stems upright or horizontal, not inverted.
- E. Provide gate valves for shut off or isolating service. Provide double check valve (backflow preventer) assembly at sprinkler system water source connection.
- F. Gate Valves: Install supervised-open gate valves indicating type so located to control all sources of water supply, except fire department connections. Where there is more than one control valve, provide permanently marked identification signs indicating the portion of the system controlled by each valve. Refer to Section 230553 "Identification for HVAC Piping and Equipment" for valve tags and signs.
- G. Where approved and/or indicated, butterfly valves may be used instead of gate valves.
- H. Provide drain valves at main shut off valves, low points of piping and apparatus.
- I. Valves: Bear UL, FM Global label or marking. Provide manufacturer's name and pressure rating marked on valve body.
- J. Specialty Valves:
 - 1. General Requirements: Install in vertical position for proper direction of flow, in main supply to system.
 - 2. **[Dry-Pipe] [and] [Deluge]** Valves: Install trim sets for air supply, drain, priming level, alarm connections, ball drip valves, pressure gages, priming chamber attachment, and fill-line attachment.
 - a. Install air compressor and compressed-air supply piping.
 - b. Air-Pressure Maintenance Device: Install shutoff valves to permit servicing without shutting down sprinkler system; bypass valve for quick system filling; pressure regulator or switch to maintain system pressure; strainer; pressure ratings with **[14- to 60-psig (95- to 410-kPa)] <Insert value>** adjustable range; and **[175-psig (1200-kPa)] <Insert value>** maximum inlet pressure.
 - c. Install compressed-air supply piping from building's compressed-air piping system.

3.9 SPRINKLER INSTALLATION

- A. Install sprinklers in suspended ceilings in center of **[narrow dimension of]** acoustical ceiling panels.

- B. Install dry-type sprinklers with water supply from heated space. Do not install pendent or sidewall, wet-type sprinklers in areas subject to freezing.
- C. Install sprinklers into flexible, sprinkler hose fittings and install hose into bracket on ceiling grid.

3.10 AIR COMPRESSOR INSTALLATION

- A. Install air compressor on vibration isolators specified in Section 230548 "Vibration and Seismic Controls for HVAC Piping and Equipment".
- B. Install air compressor on 4" minimum concrete housekeeping pad.
- C. Installation shall maintain clearances conforming to manufacturer's recommendations.
- D. Pipe automatic receiver tank drain to drain. In cases where drain is remote from compressor location, mount compressor in elevated location to allow positive flow and piping to floor drain. Do not drain system in areas of foot traffic, office or in areas subject to freezing.
- E. Field adjust low air pressure switch, start / stop points for the air compressor air and maintenance devise regulator per instruction of DEN Project Manager at pre-check jobsite meeting and record settings on the as built plans.
- F. Installation to comply with Standard Tank Mounted Air Compressor Detail drawing.
- G. Work effecting existing dry system compressors, either adding of new zones or modifying existing, will require that the existing components be changed to fully and completely upgrade the old systems, to match the Standard Tank Mounted Air Compressor Detail drawing.
- H. All air compressors shall be equipped with a magnetic starter mounted on the wall adjacent to the electrical disconnect, within sight of the unit less than 30' travel distance.

3.11 FIRE-DEPARTMENT CONNECTION INSTALLATION

- A. Install wall-type, fire-department connections.
- B. Install yard-type, fire-department connections in concrete slab support. Comply with requirements for concrete in Section 033000 "Cast-in-Place Concrete."
 - 1. Install **[two] [three] <Insert number>** protective pipe bollards **[around] [on sides of]** each fire-department connection. Comply with requirements for bollards in Section 055000 "Metal Fabrications."
- C. Install automatic (ball drip) drain valve at each check valve for fire-department connection.

3.12 IDENTIFICATION

- A. Install labeling and pipe markers on equipment and piping according to requirements in NFPA 13.
- B. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

3.13 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
- B. General Requirements: All System Function tests shall be performed during evening hours between 10:00 P.M. and 6:00 A.M. Sunday night through Friday morning.
 - 1. Prior to the time of test observation, the Contractor shall provide written verification that:
 - a. All equipment involved in the test is functioning and is placed as required by contract documents and approved submittals.
 - b. Piping shall have been flushed, as required by NFPA 13, to remove any foreign matter that could have entered the system during installation.
 - 2. Contractor shall submit a system shutdown request form a minimum of five working days prior to testing. The shutdown request shall include at least two alternate times and dates for requested testing. Testing dates will be established in cooperation with all DEN Divisions and the Contractor. Night Testing will be required. An additional fee shall be assessed by the Denver Fire Department. The Contractor shall coordinate and fund these fees prior to the time of the requested test.
 - 3. For cancellation of a test, at least 48 hours notice is required, or it shall be considered a re-test. The Contractor shall be responsible for costs of re-tests incurred by all parties involved.
 - 4. Perform final system testing in conjunction with the fire alarm and detection system specified under Division 28. Test control sequence for operation.
 - 5. Re-tests:
 - a. If a system fails any test, the same scheduling procedure shall be as listed above shall be followed.
 - b. Replace piping system components that do not pass test procedures specified, and then retest to demonstrate compliance. Repeat procedure until satisfactory results are obtained.
 - c. For the re-scheduled test(s), the Contractor shall be responsible for any added costs incurred by all parties affected.
 - 6. The Contractor shall supply all necessary equipment such as ladders and special tools.
 - 7. Signing of certificate by Owner shall in no way prejudice any claim against Contractor for faulty material, poor workmanship, or failure to comply with the

construction documents.

C. Acceptance Tests:

1. The Contractor shall conduct the following tests for acceptance of the system installation. Contractor shall record the test results on a copy of Material and Test Certificate shown in NFPA 13. Test report(s) information shall be completed by the Contractor prior to final observation.
 - a. A separate test record shall be completed for each observation by the installing Contractor.
 - b. Functional tests shall be performed on all valves and manual operating devices.

D. Specific System Tests for Dry-Pipe Systems:

1. All hydrostatic testing requirements listed for wet pipe system above in this Section shall be conducted. If weather prevents these tests, the optional air tests can be done to facilitate system commissioning, with hydrostatic testing being completed as weather permits.
2. Optional air test may be performed as follows when weather conditions prevent the hydrostatic test prior to placing the system in service.
 - a. Air pressure of 40 psi shall be maintained for 24 hours without losing more than 1.5 psi during the test period.
3. A functional test shall be conducted on all detection devices, valves, and drainage facilities for Dry Pipe systems.

- E. Maximum water delivery time to the inspector's test connection is 60 seconds from when the inspector's test valve is completely open.
- a. The system must be totally drained and placed back in service by the contractor. This includes all additional trips necessary to assure that all the lines are dry.
 2. Coordinate all tests with the DEN Project Manager and authorities having jurisdiction.

F. Sprinkler piping system will be considered defective if it does not pass tests and inspections.

G. Prepare test and inspection reports.

3.14 WATER DAMAGE

- A. The Fire Protection Work Contractor shall be responsible for any damage to the work of others, to building and property/materials of others caused by leaks in automatic sprinkler equipment, unplugged or disconnected pipes or fittings, and shall pay for necessary replacement or repair of work or items so damaged during the installation and testing periods of the automatic sprinkler work.

3.15 CLEANING

- A. Clean dirt and debris from sprinklers.
- B. Flush entire piping system of foreign matter.
- C. Apply strippable tape or paper bag covers to ensure concealed sprinkler head cover plates do not receive field paint finish. Remove covers after painting.
- D. Clean exterior of all installation to be painted. Reference Section 230553 "Identification for HVAC Piping and Equipment".
- E. Remove and replace sprinklers with paint other than factory finish.

3.16 DEMONSTRATION

- A. **Engage a factory-authorized service representative to assist Contractor and** train Owner's maintenance personnel to adjust, operate, and maintain specialty valves.
- B. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.
- C. The Fire Protection Work Contractor shall conduct two (2) training sessions to familiarize the Owner's Maintenance personnel with the features, operation and maintenance and related emergency actions or repairs for the sprinkler systems. The amount of time required for training sessions will be based on the complexity of the system, but in no case should it be less than four (4) hours for each session.

3.17 WARRANTY

- A. All work and equipment shall be warranted to be free from defects in workmanship and material for a period of twelve (12) months from the date of Substantial Completion. Any material or equipment found to be defective or malfunctioning during this period shall be repaired or replaced by Contractor without expense to the Owner.

3.18 PIPING SCHEDULE

- A. Piping between Fire-Department Connections and Check Valves: Galvanized, standard-weight steel pipe with **[threaded ends; cast-iron threaded fittings; and threaded] [grooved ends; grooved-end fittings; grooved-end-pipe couplings; and grooved]** joints.
- B. Sprinkler specialty fittings may be used, downstream of control valves, instead of specified fittings.
- C. Standard-pressure, dry-pipe sprinkler system, **[NPS 2 (DN 50) and smaller]** **<Insert pipe size range>**, shall be **[one of]** the following:

1. **Schedule 40** , galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.
- D. Standard-pressure, dry-pipe sprinkler system, [**NPS 2-1/2 and larger**] (DN 65 and larger) <Insert pipe size range>, shall be[**one of**] the following:
1. **Schedule 40** , galvanized-steel pipe with cut-grooved ends and mechanical couplings, flanged or screwed fittings.
 2. Thinwall galvanized steel pipe, with roll grooved ends and mechanical couplings with flanges or fittings, may be used if approved by DEN Project Manager.
 - a. Threaded thinwall piping shall not be used.
 - b. Pressfit fittings or similar non-threaded connections of any kind will not be permitted.
 3. Use of threaded Hooker fittings and similar rubber gasketed, drill to mount, 2" and smaller clamp on tees will not be permitted.

3.19 SPRINKLER SCHEDULE

- A. Use sprinkler types in subparagraphs below for the following applications:
1. Rooms without Ceilings: [**Upright sprinklers**] <Insert type>.
 2. Rooms with Suspended Ceilings: [**Dry pendent sprinklers**] [**Dry recessed sprinklers**] [**Dry flush sprinklers**] [**Dry concealed sprinklers**] [**Dry pendent, recessed, flush, and concealed sprinklers as indicated**].
 3. Wall Mounting: Dry sidewall sprinklers.
 4. Spaces Subject to Freezing: [**Upright sprinklers**] [**Dry pendent sprinklers**] [**Dry sidewall sprinklers**] [**Upright, dry pendent sprinklers; and dry sidewall sprinklers as indicated**] <Insert type>.
 5. Special Applications: [**Extended-coverage and quick-response sprinklers where indicated**] <Insert type>.
- B. Provide sprinkler types in subparagraphs below with finishes indicated.
1. Concealed Sprinklers: Rough brass, with factory-painted white cover plate.
 2. Flush Sprinklers: Bright chrome, with painted white escutcheon.
 3. Recessed Sprinklers: Bright chrome, with bright chrome escutcheon.
 4. [**Upright,**] [**Pendent,**] [**and**] [**Sidewall**] Sprinklers: Chrome plated in finished spaces exposed to view; rough bronze in unfinished spaces not exposed to view; wax coated where exposed to acids, chemicals, or other corrosive fumes.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 211316

SECTION 211339 - FOAM-WATER SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Concentrate piping and piping specialties.
2. Bladder tanks and proportioning devices.
3. Foam concentrate.
4. Discharge devices.
5. Monitoring and alarm devices.

B. Related Sections:

1. Section 211200 "Fire-Suppression Standpipes" for standpipe systems. .
2. Section 211313 "Wet-Pipe Sprinkler Systems" for wet-pipe sprinkler systems.
3. Section 211316 "Dry-Pipe Sprinkler Systems" for dry-pipe sprinkler systems.
4. Section 212200 "Clean-Agent Fire Extinguishing Systems" for clean-agent systems.
5. Section 213113 "Electric-Drive, Centrifugal Fire Pumps" [**Section 213213 "Electric-Drive, Vertical-Turbine Fire Pumps"**] for fire pumps, pressure-maintenance pumps, and fire-pump controllers.
6. Section 283111 "Digital, Addressable Fire-Alarm System" [**Section 283112 "Zoned (DC Loop) Fire-Alarm System"**] for alarm devices not specified in this Section.

C. Work furnished but installed under other sections:

1. Furnish pipe sleeves, complete with drawings locating all sleeves and indicating sleeve size to Division 03 or 04 contractors for placement.
2. Fireproofing repair.
3. Fire sealants.
4. Painting.

D. Include all design, pipe and fittings, valves, connections, fabrication, and installation of all fire protection systems in accordance with design criteria and requirements indicated herein and on the drawings.

E. Major bulk runs, standpipe mains and risers, and sprinkler crossmains are shown to

assist the contractor where interference with other trades may occur. However, all piping required to complete the fire protection systems shall be designed, fabricated and installed based on approved hydraulic calculations and shop drawings prepared and submitted by the Fire Protection Work Contractor (FPWC). The FPWC shall provide all special tools required for installation or maintenance for the equipment provided. If conflicts occur in this specification or between this specification and the contract documents, most stringent requirement shall apply.

- F. Work on all systems require DEN Shut Down Requests be completed and filed five (5) days before work is to be done. Work on wet systems must be done during offhour periods, 10:00 p.m. to 6:00 a.m., Sunday night through Friday morning. No system may be shut down for periods longer than ten (10) hours. The FPWC is responsible for the required Fire Watch and must remain ON SITE for the entire period of time that the system is not in service. Failure to comply may be reason for immediate suspension of work privileges.
- G. Work on existing systems can be done during normal hours unless it effects the operation of the facility, its tenants, or the support staff.
- H. Install work in association with fire pump installation, wet-pipe and/or dry-pipe sprinkler installation, and all fire and smoke alarm interface in accordance with design criteria and fire/smoke zoning requirements indicated on drawings.
- I. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. AFFF: Aqueous film-forming foam.
- B. AR-AFFF: Alcohol-resistant aqueous film-forming foam.
- C. Standard-Pressure Sprinkler Piping: Sprinkler system piping designed to operate at working pressure 175 psig (1200 kPa) maximum.
- D. High-Pressure Piping System: Sprinkler system piping system designed to operate at working pressure higher than standard 175 psig (1200 kPa)
- E. Pipe sizes used in this specification are Nominal Pipe Size (NPS).
- F. Other definitions for fire protection systems are listed in NFPA 13 and 16.
- G. "Working Plans" as used in this section means those documents (including drawings and calculations) prepared pursuant to the requirements contained in NFPA 13 and NFPA 16 for obtaining approval of the authority having jurisdiction.

1.4 REFERENCE STANDARDS

- A. Materials and workmanship shall conform to the latest issue of all industry standards,

publications, or regulations referenced in this section and with the following references as applicable. Appendices and/or Annexes referenced by these standards shall apply.

B. National Fire Protection Association (NFPA):

1. NFPA 13 - Installation of Sprinkler Systems.
2. NFPA 16 - Standard for the Installation of Foam-Water Sprinkler and Foam-Water Spray Systems.
3. NFPA 415 - Standard on Airport Terminal Buildings, Fueling Ramp Drainage, And Loading Walkways.

1.5 REGULATORY REQUIREMENTS

A. Comply with the requirements of the latest editions of following codes:

1. Comply with City and County of Denver Code Agency requirements.
2. UL and FM Global Compliance: Fire protection system materials and components shall be UL listed and labeled, and FM Global approved.
3. Hydraulic Calculations, Product Data, Shop Drawings, Dry Pipe System Equipment, and Low Air Switch, Air Maintenance Device: Bear stamp of approval of Designer of Record, DEN Life Safety Team and Owner's Representative and Denver Fire Department.
4. All applicable insurance authorities underwriting requirements.

1.6 SYSTEM DESCRIPTION

- A. Description: Engineered, fixed, **[wet-pipe] [dry-pipe] [preaction] [deluge]**, automatically actuated, low-expansion, **[AR-]AFFF** fire-extinguishing system for flammable-liquid fires. System includes diaphragm proportioning tanks and devices as described in NFPA 16.
- B. Coordinate all work of this Section with the work of Section 211313 "Wet-Pipe Sprinkler Systems" and Section 211316 "Dry-Pipe Sprinkler Systems".
- C. Interface system with building fire alarm and smoke control system.
- D. System to provide coverage for the specified building area.

1.7 PERFORMANCE REQUIREMENTS

- A. Standard Working Pressure of Piping-System Component: Listed for at least **175 psig** (1200 kPa).
- B. Unless authorities having jurisdiction have stricter requirements, minimum design parameters are as follows:
 1. Solution: **[3] <Insert number>** percent foam-water solution.

2. Sprinkler Spacing: Maximum of [100 sq. ft. (9.5 sq. m)] <Insert area> per sprinkler, and maximum [12-foot (3.7-m)] <Insert dimension> spacing.
 3. Design Density: Minimum [0.16 gpm/sq. ft. (0.108 L/s per sq. m)].
 4. Foam Supply: Minimum [10] <Insert number>-minute discharge time.
 5. Water Supply: Minimum [60] <Insert number> minutes.
 6. Remote Area: Minimum [5000-sq. ft. (476-sq. m)] <Insert area> design area for closed-sprinkler systems. Open-sprinkler systems shall discharge over the entire system area.
 7. Sprinkler Temperature Rating: Maximum 250 to 300 deg F (121 to 149 deg C) at a roof or ceiling, and 135 to 170 deg F (57 to 77 deg C) for intermediate sprinklers.
- C. Seismic Performance: Fire-suppression piping shall withstand the effects of earthquake motions determined according to NFPA 13.
1. Comply with requirements for Seismic Zone 1.
- D. Design and obtain approval from authorities having jurisdiction for fire protection systems specified.
- E. System modifications and remodeling:
1. Minimum Pipe Sizes: Not smaller than existing pipe sizes of sprinklers being relocated.
 2. Should the relocation of sprinklers cause the calculated remote zone to change, hydraulic calculations shall be performed and approved by the authorities having jurisdiction.
- F. Systems shall not serve multiple smoke zone areas.
- 1.8 ACTION SUBMITTALS
- A. Submit working plans and product data under provisions of Division 01.
- B. Product Data: For each type of product indicated. Include the following:
1. Piping, valves, fittings, and hangers.
 2. Seismic restraints for all equipment.
 3. Bladder tanks and proportioning devices.
 4. Foam concentrate.
 5. Discharge devices. Include flow characteristics.
 6. Monitoring and alarm devices. Include electrical data and supervision method.
 7. Foam-concentrate pumps. Include power supply and controller.
 8. Foam-concentrate storage tanks.
 9. Strainers.
 10. Test connections.
 11. Include data substantiating that materials comply with requirements.
- C. Shop Drawings: For each hazard area, drawn to scale, and signed and sealed by a qualified professional engineer. Include plans, elevations, sections, details, and

attachments to other work.

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 2. Submittal shall include drawings, hydraulic calculations, hydraulic reference points, detailed pipe layout, hangers and supports, components and accessories and other items as defined by NFPA 13 and NFPA 16.
 3. Indicate pipe materials used, connections, jointing methods, supports, floor and wall penetration seals.
 4. Wiring Diagrams: For power, signal, and control wiring.
 5. Design Calculations: For amount of foam concentrate required for each hazard area.
 6. Plans: Show the following:
 - a. Foam-solution proportioning tanks and devices, piping, discharge devices, monitoring and alarm devices, and accessories.
 - b. Method of attaching hangers to building structure.
 - c. Fire-alarm panel.
 - d. Equipment and furnishings.
 7. Working Plans drawings shall be submitted in hard copy and on recordable digital media. Electronic format to be as approved by DEN Project Manager. Two (2) sets of full size drawings (34"x44") and one (1) copy recordable digital media containing all drawing files shall be submitted to the DEN Life Safety Team as part of each submittal.
 8. Working Plan drawings for remodel areas shall include as built depiction of all sprinkler work within at least a 50 foot radius of the work proposed. Risers and main supply pipes shall also be indicated by size and location.
 9. Final Submittal: Working plans submitted for approval shall have the signed wet stamp of a Professional Engineer, licensed in the State of Colorado with experience in Fire Protection Engineering or the name, certificate number and expiration date for a technician with certification as NICET IV in Water-Based Fire Protection Systems Layout or demonstrable equivalent, certifying that the fire sprinkler system has been designed and hydraulically calculated in compliance with NFPA and governing authorities requirements.
- D. Permit-Approved Drawings: Working plans prepared according to NFPA 16 and approved by authorities having jurisdiction. Include hydraulic calculations complying with NFPA 13.
- E. Submit working plans and product data to Denver Fire Department for approval. Subject to approval, submit copy of approved submittal and permit to the DEN Project Manager.
- F. Submit additional non-returnable copies of current permits and agency approved working plan drawings with System Interruption Request.
- G. Obtain DEN Life Safety Team review and stamp prior to submittal for permit.

1.9 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Sprinkler systems, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Domestic water piping.
 2. Compressed air piping.
 3. HVAC hydronic piping.
 4. Items penetrating finished ceiling including the following:
 - a. Lighting fixtures.
 - b. Air outlets and inlets.
 - c. **<Insert item>**.
- B. Qualification Data: For qualified Installer and professional engineer.
- C. Installer's Qualifications: Firms qualified to install and alter fire protection piping, equipment, specialties, and accessories, and repair and service equipment. A qualified firm is one that is experienced in such work, with minimum of five (5) previous projects similar in size and scope to this Project, is familiar with precautions required, and is in compliance with the requirements of the authority having jurisdiction. The firm shall be in possession of City and County of Denver Fire Protection License Class A or B. Refer to Division 01 Section Reference Standards and Definitions for definition of Installer.
1. The qualified installer shall be licensed for the design and installation for the specific type of system in the City and County of Denver and the State of Colorado and have been in business under the current name for five (5) years.
 2. All field personnel must be a current holder of the City & County of Denver Fire Department Fire Protection Installers license.
- D. Manufacturers Qualifications: Company specializing in manufacturing the products specified in this section with minimum five (5) years of documented experience.
- E. Welding certificates: Current welder's qualification certificates and procedures. Reference Division 05.
- F. Field Test Reports and Certificates: Indicate and interpret test results for compliance with performance requirements and as described in NFPA 13 and NFPA 16. Include "Contractor's Material and Test Certificate for Aboveground Piping."
- G. Field quality-control reports.

1.10 CLOSEOUT SUBMITTALS

- A. Submit manufacturer's operation and maintenance data under provisions of Division 01.
- B. Include written maintenance data on components of system, servicing requirements,

and Record Drawings.

- C. Operation and Maintenance Data: For foam fire extinguishing to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
1. Valves and specialties.
 2. Bladder tanks and proportioning devices.
 3. Foam concentrate.
 4. Discharge devices. Include flow characteristics.
 5. Monitoring and alarm devices. Include supervision method.
 6. Foam-concentrate pumps. Include controller.
 7. Foam-concentrate storage tanks.
 8. Strainers.
 9. Test connections.
- D. "As-Built" Plans shall be provided in the same format and manner as described above. Each set shall be equipped with a plan holder equal to "Stacor Plan Clamps" for the appropriate size drawings.
- E. In addition, all sprinkler system record drawings shall be submitted in the form of hard copies and recordable digital media in format as approved by DEN Project Manager.

1.11 EXTRA MATERIALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Discharge Devices: Not less than 20 percent of amount of each type installed.
 2. Foam Concentrate: Not less than 200 percent of amount installed.
- B. The following must be delivered and accepted prior to any testing:
1. Provide a spare parts list. The list is to be provided with material submittal cut sheets.
 2. Provide one set of renewable parts and seals for each dry valve installed.
 3. Provide DEN Representatives all special tools required for installation and maintenance.

1.12 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code: Section IX.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

- C. FM Global Compliance: Provide components that are FM Approved and that are listed in FM's "Approval Guide."
- D. UL Compliance: Provide equipment listed in UL's "Fire Protection Equipment Directory."
- E. Obtain DEN Life Safety Team review and stamp prior to submittal for permit.
- F. Fireproofing: Where hangers require removal of fireproofing, remove minimum amount of fireproofing for hanger attachment. Repair fireproofing per requirements specified in Section 078100 "Applied Fireproofing".
- G. Comply with all requirements of Owner's Insurance Underwriter.

1.13 PROJECT CONDITIONS

- A. Interruption of Existing Sprinkler Service: Do not interrupt sprinkler service to facilities occupied by Owner or others unless permitted under the following conditions, and then only after arranging to provide temporary sprinkler service according to requirements indicated:
 - 1. Notify DEN Project Manager no fewer than five (5) days in advance of proposed interruption of sprinkler service.
 - 2. Do not proceed with interruption of sprinkler service without DEN Project Manager's written permission.
 - 3. Comply with DEN Maintenance and Engineering system interruption requirements and provide Denver Fire Department approved Fire Watch during entire time of system interruption.
 - 4. In no case shall the building structure remain without fire protection for more than ten (10) hours.
- B. Schedule rough-in installations with installations of other building components.
- C. Environmental Conditions:
 - 1. The equipment shall be designed and constructed to operate successfully at the rated values under the following environmental conditions:
 - a. Location: Indoors and Outdoors.
 - b. Altitude: 5,500 feet (1677 m) above sea level.
 - c. Ambient temperature range: Minus 30 deg F (minus 35 deg C) to 120 deg F (49 deg C)
 - d. Wind Load: 115 mph with gust factor of 1.3

1.14 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 CONCENTRATE PIPING MATERIALS

- A. Comply with requirements specified in Section 211313 "Wet-Pipe Sprinkler Systems" or Section 211316 "Dry-Pipe Sprinkler Systems" for pipes, fittings, joining materials, hangers, valves, and any other required items for a complete system.
- B. Threaded thinwall piping, black and galvanized, is NOT ALLOWED..
 - 1. Exception: Thinwall piping with approved joints and fittings may be used only on piping 2-1/2 inches and larger, if approved by DEN Project Manager.
- C. Schedule 40, Black Steel Pipe: ASTM A 53/A 53M, [**Type E**] <Insert type>, [**Grade B**] <Insert grade> or ASTM A 795/A 795M, [**Type E**] <Insert type>. Pipe ends may be factory or field formed to match joining method.
 - 1. Gray Iron Threaded Fittings, Classes 125 and 250: ASME B16.4.
 - 2. Gray Iron Pipe Flanges and Flanged Fittings: ASME B16.1.
 - 3. Malleable Iron Threaded Fittings, Classes 150 and 300: ASME B16.3.
- D. Stainless-Steel Pipe: ASTM A 312/A 312M, Schedule 40, [**Grade 304**] [or] [**Grade 316**], with factory-formed threaded or beveled ends; ASTM A 376/A 376M for seamless pipe; or ASTM A 213/A 213M, ASTM A 249/A 249M, and ASTM A 269 for seamless and welded tubing.
 - 1. Class 150 Threaded Fittings: ASME B16.3 and MSS SP 114.
 - 2. Butt-Weld Fittings: ASTM A 403/A 403M.
 - 3. Flanges, Forged Fittings and Flanges, and Socket-Weld Fittings: ASTM A 182/A 182M.
 - 4. Bar Stock and Compression Fittings: ASTM A 276 and ASTM A 479/A 479M.
- E. Red Brass Pipe: ASTM B 43, Schedule 40, with factory- or field-formed threaded ends.
 - 1. Threaded Fittings: ASME B16.11.

2.2 VALVES

- A. General Valve Requirements:
 - 1. UL listed or FM Approved for use in fire-protection systems.
 - 2. Compatible with type of foam concentrate used.
- B. Ball Valves:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil International.

- b. Crane Co.; Crane Valve Group; Stockham Division.
- c. Milwaukee Valve Company.
- d. NIBCO INC.
- e. Victaulic Company.
- f. Watts Water Technologies, Inc.
- g. **<Insert manufacturer's name>**
- h. or approved equal.

2. Description:

- a. Standard: UL 258.
- b. For trim and drain functions.
- c. Valves **NPS 1-1/2 (DN 40)** and Smaller: Bronze body with threaded ends.
- d. Valves **NPS 2 and NPS 2-1/2 (DN 50 and DN 65)**: Bronze body with threaded ends or ductile-iron body with grooved ends.
- e. Valves **NPS 3 (DN 80)**: Ductile-iron body with grooved ends.

C. OS&Y Gate Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Crane Co.; Crane Valve Group; Crane Valves.
- b. Crane Co.; Crane Valve Group; Stockham Division.
- c. Milwaukee Valve Company.
- d. NIBCO INC.
- e. United Brass Works, Inc.
- f. Watts Water Technologies, Inc.
- g. **<Insert manufacturer's name>**
- h. or approved equal.

2. Description:

- a. Standard: UL 262.
- b. Accessories: Pregrooved stem for mounting tamper switch for monitoring by fire-alarm panel.
- c. Body Material: Cast or ductile iron.
- d. Ends: Flanged or mechanical.
- e. Packing: Asbestos free.

D. Indicating-Type Butterfly Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Anvil International.
- b. Fivalco Inc.
- c. Kennedy Valve; a division of McWane, Inc.
- d. Milwaukee Valve Company.
- e. NIBCO INC.

- f. Shurjoint Piping Products.
- g. Tyco Fire Products LP.
- h. Victaulic Company.
- i. **<Insert manufacturer's name>**
- j. or approved equal.

2. Description:

- a. Standard: UL 1091.
- b. Pressure Rating: **175 psig** (1200 kPa) minimum.
- c. Valves **NPS 2** (DN 50) and Smaller:
 - 1) Body Material: Bronze.
 - 2) End Connections: Threaded.
- d. Valves **NPS 2-1/2** (DN 65) and Larger:
 - 1) Body Material: Cast or ductile iron.
 - 2) End Connections: Flanged, grooved, or wafer.
 - 3) Ends: Flanged or mechanical.
- e. Accessories: Tamper switch for monitoring by fire-alarm panel.

E. Swing Check Valves:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil International.
 - b. Clow Valve Company; a division of McWane, Inc.
 - c. Crane Co.; Crane Valve Group; Crane Valves.
 - d. Crane Co.; Crane Valve Group; Jenkins Valves.
 - e. Crane Co.; Crane Valve Group; Stockham Division.
 - f. Fire-End & Croker Corporation.
 - g. Fire Protection Products, Inc.
 - h. Globe Fire Sprinkler Corporation.
 - i. Kennedy Valve; a division of McWane, Inc.
 - j. Kidde Fire Fighting; a UTC business unit.
 - k. Milwaukee Valve Company.
 - l. Mueller Co. Ltd.; Water Products Division.
 - m. NIBCO INC.
 - n. Potter Roemer; a division of Acorn Engineering Company.
 - o. Reliable Automatic Sprinkler Co., Inc. (The).
 - p. Tyco Fire Products LP.
 - q. United Brass Works, Inc.
 - r. Victaulic Company.
 - s. Viking Group Inc.
 - t. Waterous Company.
 - u. Watts Water Technologies, Inc.
 - v. **<Insert manufacturer's name>**

w. or approved equal.

2. Description:

- a. Standard: UL 312.
- b. Pressure Rating: **[250 psig (1725 kPa) minimum] [300 psig (2070 kPa)]**.
- c. Body Material: Cast iron.
- d. End Connections: Flanged or grooved.

F. Trim and Drain Valves:

1. General Requirements:

- a. Compatible with type of foam concentrate used.
- b. Pressure Rating: **175 psig (1200 kPa) minimum**.

2. Angle Valves:

- a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Fire Protection Products, Inc.
 - 2) United Brass Works, Inc.
 - 3) **<Insert manufacturer's name>**
 - 4) or approved equal.

3. Globe Valves:

- a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Fire Protection Products, Inc.
 - 2) United Brass Works, Inc.
 - 3) **<Insert manufacturer's name>**
 - 4) or approved equal.

4. Plug Valves:

- a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Southern Manufacturing Group.
 - 2) **<Insert manufacturer's name>**
 - 3) or approved equal.

2.3 SPECIALTIES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Ansul Incorporated.
 2. Chemguard Inc.
 3. National Foam; part of the Kidde Fire Fighting organization.
 4. Viking Group Inc.
 5. **<Insert manufacturer's name>**
 6. or approved equal.
- B. Specialties shall comply with NFPA 16, be compatible with the foam concentrate, and be designed to be drained and cleaned.
- C. Foam-Concentrate Storage Tanks: Buna-N, bladder-type proportioning tank complying with UL 162 and ASME Boiler and Pressure Vessel Code: Section VIII; designed for use with foam-concentrate pumps and for specific type of foam concentrate used. Include bladder, internal piping, fill and drain, glass sight gage, piping, and valves. Contain concentrate in the bladder.
1. Orientation: **[Horizontal design with saddle] [Vertical design with skirt]** support.
- D. Foam-Concentrate Storage Tanks: Atmospheric type, complying with UL 162 and ASME Boiler and Pressure Vessel Code: Section VIII; designed for use with foam-concentrate pumps and for specific type of foam concentrate used. Include pressure-vacuum vent, fill and drain, glass sight gage, piping, and valves.
- E. Foam-Concentrate Pumps: Listed for use in foam-water systems according to NFPA 20. Include supply side pressure relief valve and drain cock or valve.
- F. Proportioning Controllers: Venturi type complying with UL 162 and of capacity to match design at minimum and maximum flow.
- G. Concentrate Control Valves: Water-operated ball or deluge valve designed to open with flow through the proportioning controller.
- H. Concentrate Strainers: Bronze body and stainless-steel mesh strainer with minimum **0.125-inch (3.2-mm)** perforations to remove solids that would block system components.
- I. Pressure Gages: Comply with UL 393; with **3-1/2-inch (90-mm)** minimum-diameter dial, **0- to 300-psig (0- to 2070-kPa)** dial range, and caption "WATER" or "CONCENTRATE" on dial face.
- 2.4 FOAM CONCENTRATE
- A. Description: **[AR-]AFFF** liquid concentrate, complying with NFPA 11 and UL 162, for making foam-water fire-extinguishing foam solution.
- 2.5 DISCHARGE DEVICES
- A. Discharge devices shall be UL listed or FM Approved.

- B. Sprinklers: [**Closed,**] [**Open,**] [**non-**]air-aspirating type; UL listed or FM Approved and listed for use with type of foam concentrate used.
- C. Spray Nozzles: For foam water; include foam generator and distributing deflector to distribute foam or water.

2.6 MONITORING DEVICES

- A. Valve Supervisory Switches: Single pole, double throw, with normally closed contacts complying with UL 753. Switch shall signal fire-alarm panel or releasing panel when valve is in other than fully open position.
- B. Pressure Switches: Single pole, double throw, UL listed or FM Approved and complying with UL 753. Switch shall signal an alarm condition at the fire-alarm panel or releasing panel when switch is in other than fully open position.
- C. Flow Switches: Single pole, double throw, UL listed or FM Approved and complying with UL 753. Switch shall signal an alarm condition at the fire-alarm panel or releasing panel when switch is in other than fully open position.

2.7 ALARM DEVICES

- A. Description: UL listed or FM Approved, low voltage, and surface mounting. Alarm and monitoring devices are specified in Section 283111 "Digital, Addressable Fire-Alarm System" or Section 283112 "Zoned (DC Loop) Fire-Alarm System."

2.8 SIGNAGE AND LABELING

- A. Signage shall be per the requirements of NFPA 13, NFPA 16, FM Global, and any applicable Insurance underwriter.
 - 1. Signs shall be pre-manufactured metal, approximately 3" x 6", located at all valves, main drains, auxiliary drains, air, alarm, and similar devices.
 - 2. Letters and numbers shall be red paint. The identification shall be visible from a distance of 30'.
 - 3. Every drain and control valve shall be permanently labeled with the DEN designated system I.D. number and a consecutive number indicating quantity of drains on the system, i.e. T-4-43 / 3 of 7 in the terminal or FZ – 03 / 2 of 2 .
 - 4. Hydraulic Plaques shall be provided at all risers with the appropriate information
 - 5. All materials shall be waterproof.

PART 3 - EXECUTION

3.1 CONCENTRATE STORAGE TANK INSTALLATION

- A. Equipment Mounting: Install concentrate storage tanks on cast-in-place concrete

equipment bases. Comply with requirements for equipment bases specified in **[Section 033000 "Cast-in-Place Concrete."]** **[Section 033053 "Miscellaneous Cast-in-Place Concrete."]**

1. Coordinate sizes and locations of concrete bases with actual equipment provided.
 2. Construct bases to withstand, without damage to equipment, seismic force required by code.
 3. Construct concrete bases **[4 inches (100 mm)] [6 inches (150 mm)] [8 inches (200 mm)]** <Insert dimension> high and extend base not less than **6 inches (150 mm)** in all directions beyond the maximum dimensions of concentrate storage tank unless otherwise indicated or unless required for seismic anchor support.
 4. Minimum Compressive Strength: **[5000 psi (34.5 MPa)] [4500 psi (31 MPa)] [4000 psi (27.6 MPa)] [3500 psi (24.1 MPa)] [3000 psi (20.7 MPa)]** <Insert value> at 28 days.
 5. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on **18-inch (450-mm)** centers around the full perimeter of concrete base.
 6. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base, and anchor into structural concrete floor.
 7. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 8. Install anchor bolts to elevations required for proper attachment to supported equipment.
- B. Install concentrate storage tanks anchored to substrate according to tank manufacturer's written instructions.
- C. Install tanks level and plumb, according to layout drawings, original design, and referenced standards. Maintain manufacturer's recommended clearances. Arrange units so controls and devices needing service are accessible.
- D. Install seismic restraints for tanks in compliance with requirements for Seismic Zone 1. Anchor tanks to substrate.
- ### 3.2 PIPING INSTALLATION
- A. Install piping and other components level and plumb.
- B. Install pipe and fittings, valves, and discharge devices according to requirements listed in NFPA 16, "Installation of Foam-Water Sprinkler and Foam-Water Spray Systems."
1. Support piping using supports and methods according to NFPA 13.
 2. Install seismic restraints for concentrate storage tanks and piping systems.
 3. Install monitoring and alarm devices according to NFPA 16 and NFPA 72.
- C. Install flanges, flange adapters, or couplings for grooved-end piping on piping, valves, apparatus, and equipment having **NPS 2-1/2 (DN 65)** and larger end connections.

- D. Ream ends of pipes and tubes and remove burrs.
- E. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.
- F. Flanged Joints: Select appropriate gasket material in size, type, and thickness suitable for foam concentrate. Join flanges with gasket and bolts according to ASME B31.9.
- G. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
 - 1. Apply appropriate tape or thread compound to external pipe threads.
 - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.
- H. Steel-Piping, Cut-Grooved Joints: Cut square-edge groove in end of pipe according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings according to AWWA C606 for steel-pipe joints.
- I. Steel-Piping, Roll-Grooved Joints: Roll rounded-edge groove in end of pipe according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings according to AWWA C606 for steel-pipe grooved joints.
- J. Welded Joints: Construct joints according to AWS D10.12M/D10.12, using qualified processes and welding operators according to "Quality Assurance" Article.
 - 1. Shop weld pipe joints where welded piping is indicated.
- K. Dissimilar-Material Piping Joints: Make joints using adapters compatible with materials of both piping systems and with foam concentrate.

3.3 CONNECTIONS

- A. Comply with requirements for piping specified in Section 211313 "Wet-Pipe Sprinkler Systems" or Section 211316 "Dry-Pipe Sprinkler Systems." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Provide concentrate control and drain valves with piping to permit maintenance of the foam concentrate with continuous sprinkler-system service.
- C. Install proportioning controller in fire-suppression piping to provide coverage to area indicated on Drawings.
- D. Where installing piping adjacent to equipment, allow space for service and maintenance of equipment.

- E. Connect electrical devices to building's fire-alarm system. Comply with requirements for wiring and connections in Section 283111 "Digital, Addressable Fire-Alarm System" or Section 283112 "Zoned (DC Loop) Fire-Alarm System."
- F. Install a fire department connection on the supply side of the proportioning controller when required.

3.4 LABELING

- A. Install labeling on piping, equipment, and panels as per DEN requirements, and according to Section 220553 "Identification for Plumbing Piping and Equipment."
- B. Identify all drain valves per DEN Life Safety Team's Fire Zone number scheme.

3.5 CHARGING SYSTEM

- A. Fill proportioning tanks with foam concentrate after field quality-control testing is complete and satisfactory results have been achieved.

3.6 FIELD QUALITY CONTROL

- A. Coordinate all testing requirements of this Section with testing requirements of Section 211313 "Wet-Pipe Sprinkler Systems" and Section 211316 "Dry-Pipe Sprinkler Systems".
- B. Inspection: Engage the services of a qualified professional engineer to inspect installed fire-extinguishing systems, prepare installation report, and certify that installation complies with the Contract Documents, calculations, and requirements of authorities having jurisdiction.
- C. Comply with operating instructions and procedures in NFPA 16, "Acceptance Tests" Chapter. Include the following tests and inspections to demonstrate compliance with requirements:
 - 1. Check mechanical items.
 - 2. Inspect equipment and check mountings for adequate anchoring to substrate.
 - 3. Check electrical systems.
 - 4. Flush supply piping.
 - 5. Perform hydrostatic pressure test.
 - 6. Perform acceptance test.
 - 7. Perform proportioning system test.
 - 8. Perform discharge test.
 - 9. Flush system piping.
 - 10. Correct malfunctioning equipment; retest to demonstrate compliance. Replace equipment that cannot be satisfactorily corrected or does not perform as specified and indicated; retest to demonstrate compliance. Repeat procedure until satisfactory results are obtained.

- D. Perform tests and inspections.
1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations including connections, and to assist Contractor in testing.
- E. General Requirements: All System Function tests shall be performed during evening hours between 10:00 P.M. and 6:00 A.M. Sunday night through Friday morning.
- F. Prior to the time of test observation, the Contractor shall provide written verification that:
1. All equipment involved in the test is functioning and is placed as required by contract documents and approved submittals.
 2. Piping shall have been flushed, as required by NFPA 13, to remove any foreign matter that could have entered the system during installation.
- G. Contractor shall submit a system shutdown request form a minimum of five (5) working days prior to testing. The shutdown request shall include at least two alternate times and dates for requested testing. Testing dates will be established in cooperation with all DEN Divisions and the Contractor. Night Testing will be required. An additional fee shall be assessed by the Denver Fire Department. The Contractor shall coordinate and fund these fees prior to the time of the requested test.
- H. For cancellation of a test, at least 48 hours notice is required, or it shall be considered a re-test. The Contractor shall be responsible for costs of re-tests incurred by all parties involved.
- I. Perform final system testing in conjunction with the fire alarm and detection system specified under Division 28. Test control sequence for operation.
- J. Re-tests:
1. If a system fails any test, the same scheduling procedure shall be as listed above shall be followed.
 2. Replace piping system components that do not pass test procedures specified, then retest to demonstrate compliance. Repeat procedure until satisfactory results are obtained.
 3. For the re-scheduled test(s), the Contractor shall be responsible for any added costs incurred by all parties affected.
- K. The Contractor shall supply all necessary equipment such as ladders and special tools.
- L. Signing of certificate by Owner shall in no way prejudice any claim against Contractor for faulty material, poor workmanship, or failure to comply with the construction documents.
- M. Tests and Inspections:
1. After installing foam fire-extinguishing piping system and after electrical circuitry

- has been energized, test for compliance with requirements.
2. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 3. Operational Test: After electrical circuitry has been energized, start systems to confirm proper unit operation.
 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

N. Acceptance Tests:

1. The Contractor shall conduct the following tests for acceptance of the system installation. Contractor shall record the test results on a copy of Material and Test Certificate shown in NFPA 13. Test report(s) information shall be completed by the Contractor prior to final observation.
 - a. A separate test record shall be completed for each observation by the installing Contractor.
 - b. Functional tests shall be performed on all valves and manual operating devices.

O. Foam fire-extinguishing piping system will be considered defective if it does not pass tests and inspections.

P. Prepare test and inspection reports.

3.7 DAMAGE

- A. The Fire Protection Work Contractor shall be responsible for any damage to the work of others, to building and property/materials of others caused by leaks in automatic sprinkler equipment, unplugged or disconnected pipes or fittings, and shall pay for necessary replacement or repair of work or items so damaged during the installation and testing periods of the automatic sprinkler work.

3.8 TRAINING

- A. The Fire Protection Work Contractor shall conduct two minimum (2) training sessions to familiarize the Owner's Maintenance personnel with the features, operation and maintenance and related emergency actions or repairs for the sprinkler systems. Training sessions shall be scheduled with the DEN Project Manager. The amount of time required for training sessions will be based on the complexity of the system, but in no case should it be less than four (4) hours each session.
- B. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

3.9 WARRANTY

- A. All work and equipment shall be warranted to be free from defects in workmanship and

material for a period of twelve (12) months from the date of Substantial Completion. Any material or equipment found to be defective or malfunctioning during this period shall be repaired or replaced without expense to the Owner.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 211339

SECTION 211340 - FOAM EXTINGUISHING SYSTEMS FOR AIRCRAFT HANGARS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. This Section includes criteria for the supply, installation and testing of low expansion foam fire suppression systems for aircraft hangars. Materials and equipment specified in this Section include:
 - a. Pipe, fittings, valves, and specialties.
 - b. Sprinklers, foam-water hose racks, and monitor nozzles.
 - c. Low-expansion (AFFF) foam concentrate, foam concentrate storage tanks, and foam concentrate pumps.
2. Products furnished but not installed include sprinkler cabinet with spare sprinklers. Furnish to the DEN's maintenance personnel.
3. Related Work:
 - a. Section 210517 "Sleeves and Sleeve Seals for Fire Suppression Piping" for materials and methods for sealing pipe penetrations through walls and fire/smoke barriers.
 - b. Section 210553 "Identification for Fire Suppression Piping and Equipment" for labeling and identification of fire protection piping system and components.
 - c. Section 213113 "Electric-Drive Centrifugal Fire Pumps" for fire water pumps, motors, controllers, and accessories.

1.3 REFERENCES

- A. Applicable Standards:

1. American National Standards Institute (ANSI):
 - a. B16.5 - Pipe Flanges and Flanged Fittings.
 - b. B16.9 - Factory-made Wrought Steel Buttweld Fittings.
 - c. B16.11 - Forged Steel Fittings, Socket Welded and Threaded.

2. ASME International (ASME):
 - a. B1.20.1 - Pipe Threads, General Purpose.
 - b. B16.3 - Malleable-Iron Threaded Fittings, Classes 150 and 300.
 - c. B16.4 - Cast-Iron Threaded Fittings, Class 125 and 250.
3. American Society for Testing and Materials (ASTM):
 - a. A53 - Pipe, Steel, Black and Hot-Dipped, Zinc Coated Welded and Seamless.
 - b. A105 - Forgings, Carbon Steel, for Piping Components.
 - c. A126 - Gray Iron Castings for Valves, Flanges, and Pipe Fittings.
 - d. A234 - Piping Fittings of Wrought Carbon Steel and Alloy Steel for Moderate Elevated Temperatures.
 - e. A312/312M – Seamless and Welded Austenitic Stainless Steel Pipes.
 - f. A403/403M – Wrought Austenitic Stainless Steel Piping Fittings.
 - g. A536 - Ductile Iron Castings.
4. American Welding Society (AWS):
 - a. D10.9 - Qualifications of Welding Procedures and Welders for Piping and Tubing.
5. Factory Mutual (FM).
6. National Electrical Manufacturers' Association (NEMA).
7. National Fire Protection Association (NFPA):
 - a. 11 - Foam Extinguishing Systems, Low Expansion, and Combined Agent.
 - b. 13 - Installation of Sprinkler Systems.
 - c. 16 - Installation of Deluge Foam-Water Sprinkler Systems and Foam-Water Spray Systems.
 - d. 20 - Stationary Pumps for Fire Protection.
 - e. 70 - National Electrical Code (NEC).
 - f. 72E - Automatic Fire Detectors.
 - g. 409 - Aircraft Hangars.
8. International Fire Code (UFC).
9. Underwriters Laboratories (UL).

1.4 DEFINITIONS

- A. Pipe sizes used in this Specification are Nominal Pipe Size (NPS).
- B. Other definitions for fire protection systems are listed in NFPA 11, 13, 16, and 409.
- C. Working Plans as used in this Section means those documents, including drawings and calculations, prepared pursuant to the requirements contained in NFPA 11, 13, 16, and 409 for obtaining approval of the authority having jurisdiction.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include catalog data sheets and technical information for each major component and/or device specified.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings with Engineer stamp, prepared in accordance with NFPA 13, identified as "Working Plans," including hydraulic calculations where applicable, and which have been approved by the authority having jurisdiction.
- C. Welders' qualification certificates.
- D. Test Reports and Certificates as described in NFPA 11 and NFPA 16.
- E. Foam Pumps:
 - 1. Product Data: Submit manufacturer's technical product data, UL listing and FM approval, including current accurate pump characteristic performance curves with selection points clearly indicated; weights, furnished specialties and accessories; and installation and start-up instructions.
 - 2. Shop Drawings: Submit manufacturer's assembly-type shop drawings indicating dimensions, weight loadings, required clearances, and methods of assembly of components.
 - 3. Wiring Diagrams: Submit foam pump controller manufacturer's electrical requirements for power supply wiring to foam pumps. Submit manufacturer's ladder-type wiring diagrams for interlock and control wiring. Clearly differentiate between portions of wiring that are factory-installed and portions to be field-installed. Foam pump controller shall be furnished by the foam pump manufacturer to comply with listing.

1.6 INFORMATIONAL SUBMITTALS

- A. Seismic Qualification Certificates: For fire pumps, accessories, and components, from manufacturer.
 - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- B. Product Certificates: For each fire pump, from manufacturer.
- C. Source quality-control reports.
- D. Field quality-control reports.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: Submit maintenance data and parts lists for each foam pump, driver, control, and accessory; include "troubleshooting" maintenance guide. Include this data, product data, shop drawings, and wiring diagrams in Operating and Maintenance Manual in accordance with requirements of Division 01.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 QUALITY ASSURANCE

- A. Design system under the direct supervision of a Professional Engineer who is a member of the Society of Fire Protection Engineers, experienced in design of this type of work and licensed in the State of Colorado using an approved calculation method as determined by the Denver Fire Department.
- B. Qualifications for Welding Processes and Operators: Comply with the requirements of AWS D10.9, Level AR 3.
- C. Regulatory Requirements: Comply with the most current requirements of the following codes: (Note: All NFPA Standards listed shall include applicable Appendix requirements).
 - 1. NEC Compliance: Install foam pumps in accordance with NFPA 70.
 - 2. NEMA Compliance: Provide electrical motors and devices in accordance with NEMA standards.
 - 3. NFPA 11.
 - 4. NFPA 13.
 - 5. NFPA 16.
 - 6. NFPA 20.
 - 7. NFPA 72E.
 - 8. NFPA 409.
 - 9. UL and FM Compliance: Fire protection system materials, pumps, and components shall be UL listed and labeled, or FM approved for the application anticipated.
 - 10. International Fire Code.

1.9 SEQUENCING AND SCHEDULING

- A. Schedule rough-in installations with installations of other building components.

1.10 EXTRA MATERIALS

- A. Sprinkler Wrenches: Furnish to DEN Project Manager with two (2) sprinkler wrenches for each type of sprinkler installed.

- B. Sprinklers and Cabinets: Furnish six (6) extra sprinklers of each style included in the project. Furnish each style with its own sprinkler cabinet and special wrenches as specified in this Section.

1.11 PRODUCT DELIVERY, STORAGE, AND HANDLING

- A. Handle foam pumps, controllers, and components carefully to prevent damage, breaking, denting, and scoring. Do not install damaged foam pumps or components; replace with new.
- B. Store foam pumps, controllers, and components in clean dry place. Protect from weather, dirt, fumes, water, construction debris, and physical damage.
- C. Comply with manufacturer's rigging and installation instructions for unloading foam pumps and moving them to final location.

1.12 HYDRAULIC CALCULATIONS

- A. General: Hydraulic calculations shall be performed in accordance with the requirements of NFPA, FM, IRI, the authority having jurisdiction, and as specified herein.
- B. Velocity: Velocities in excess of 20 feet per second will not be allowed.
- C. Friction Losses: Calculate friction losses in water and foam-water piping in accordance with the Hazen-Williams formula using a "c" value of 120 for steel piping (and 140 for cement-lined ductile iron piping).
- D. Discharge Rate: Uniform discharge rate of sprinkler heads shall be based upon a maximum variation of 15% above the indicated discharge rate. Variation below the indicated discharge rates will not be permitted. Perform both supply and demand calculations.
- E. Foam Concentrate Friction Losses: Calculate friction losses in foam concentrate piping in accordance with the Darcy Formula (a.k.a. Fanning Formula) as indicated in NFPA 16 and NFPA 20. Consideration shall be given to the foam concentrate viscosity.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

A. MANUFACTURERS

1. Subject to compliance with requirements, provide fire protection system products from one of the following:
 - a. Gate Valves:
 - 1) Jenkins.
 - 2) Kennedy Valve, Div. of McWane, Inc.
 - 3) Mueller Co.
 - 4) Stockham.
 - 5) **<Insert manufacturer's name>**
 - 6) or approved equal.
 - b. Ball Valves:
 - 1) Victaulic Company of America.
 - 2) **<Insert manufacturer's name>**
 - 3) or approved equal.
 - c. Check Valves:
 - 1) Flomatic Corp.
 - 2) The Metraflex Co.
 - 3) Val-Matic Valve & Manufacturing Corp.
 - 4) Victaulic Company of America.
 - 5) **<Insert manufacturer's name>**
 - 6) or approved equal.
 - d. Grooved Mechanical Couplings:
 - 1) Stockham.
 - 2) Victaulic Company of America.
 - 3) **<Insert manufacturer's name>**
 - 4) or approved equal.
 - e. Flow Control/Deluge Valves:
 - 1) Cla-Val Co.
 - 2) Reliable Automatic Sprinkler Co., Inc.
 - 3) Star Sprinkler Corp.
 - 4) Viking Corp.
 - f. In-Line Balanced Pressure Proportioner Module:
 - 1) National Foam Systems, Inc.
 - 2) Ansul Fire Protection.
 - 3) Spectrum Mfg. Inc.
 - 4) Viking Corp.
 - 5) **<Insert manufacturer's name>**
 - 6) or approved equal.

- g. Low Expansion Foam:
- 1) Ansul Fire Protection.
 - 2) National Foam Systems, Inc.
 - 3) Viking Corp.
 - 4) **<Insert manufacturer's name>**
 - 5) or approved equal.
- h. Foam Concentrate Tanks:
- 1) National Foam Systems, Inc.
 - 2) Wishert-Thompson, Inc.
 - 3) **<Insert manufacturer's name>**
 - 4) or approved equal.
- i. Oscillating Monitor Nozzles:
- 1) Ansul Fire Protection.
 - 2) National Foam Systems, Inc.
 - 3) Spectrum Mfg. Inc.
 - 4) Viking Corp.
 - 5) **<Insert manufacturer's name>**
 - 6) or approved equal.
- j. 1Foam-Water Hose Reel Stations:
- 1) Allenco, J. W. Moore, Inc.
 - 2) National Foam Systems, Inc.
 - 3) Sierra Fire Equipment Co.
 - 4) **<Insert manufacturer's name>**
 - 5) or approved equal.
- k. Water Pressure Regulating Valve:
- 1) Fisher Controls Co.
 - 2) **<Insert manufacturer's name>**
 - 3) or approved equal.
- l. Flow Meters:
- 1) Dieterich Standard, A Dover Industries Co.
 - 2) Taco, Inc.
 - 3) **<Insert manufacturer's name>**
 - 4) or approved equal.
- m. Sprinklers:
- 1) ITT Grinnell.
 - 2) Reliable Automatic Sprinkler Co., Inc.
 - 3) Star Sprinkler Corp.

- 4) Viking Corp.
- 5) **<Insert manufacturer's name>**
- 6) or approved equal.

n. Refractometer:

- 1) American Optical.
- 2) **<Insert manufacturer's name>**
- 3) or approved equal.

o. Foam Concentrate Pump:

- 1) Edwards Manufacturing, Inc.
- 2) Viking Corp.
- 3) **<Insert manufacturer's name>**
- 4) or approved equal.

p. Foam Jockey Pump:

- 1) Edwards Manufacturing, Inc.
- 2) MTH Pump Co.
- 3) **<Insert manufacturer's name>**
- 4) or approved equal.

2.2 PIPE MATERIALS

- A. General: Refer to Part 3 Article "PIPE APPLICATIONS" for identification of systems where the below specified pipe and fitting materials are used.
- B. Steel Pipe: ASTM A53, Grade B, seamless, black steel pipe with Schedule as listed in PART 3.
- C. Stainless Steel Pipe: ASTM A312, Schedule 409, Grade TP304L.

2.3 FITTINGS

- A. Cast-Iron Threaded Fittings: ASME B16.4, Class 250, standard pattern, for threaded joints. Threads shall conform to ASME B1.20.1.
- B. Malleable-Iron Threaded Fittings: ASME B16.3, Class 300, standard pattern, for threaded joints. Threads shall conform to ASME B1.20.1.
- C. Steel Fittings: ANSI B16.9, wall thickness equal to attached pipe, ASTM A234, seamless or welded, for welded joints.
- D. Socket Weld Fittings: ANSI B16.11, Schedule 80, Class 3000, ASTM A105.
- E. Steel Flanges and Flanged Fittings: ANSI B16.5, including bolts, nuts, and gaskets of

the following material group, end connections, facing, and Class.

1. Material Group: 1.1.
2. End Connections: Weld neck or slip on.
3. Facing: Raised face.
4. Class: 150 or 300.

F. Stainless Steel Fittings: Seamless socket weld or buttweld type, conforming to ASTM 403, Grade WP304L.

G. Grooved Mechanical Fittings: ASTM A536, Grade 65-45-12 ductile iron with grooves or shoulders designed to accept grooved end couplings.

1. Subject to compliance with requirements, provide products from one of the following:
 - a. Victaulic Style 741 for Class 150, Style 743 for Class 300.
 - b. **<Insert manufacturer's name>**
 - c. or approved equal.

H. Grooved Mechanical Couplings: Consist of ductile iron housing, a synthetic rubber gasket of central cavity pressure-responsive design with nuts and bolts to secure grooved pipe and fittings. Grooved mechanical couplings including gaskets used on dry-pipe systems shall be of the flush seal type.

1. Subject to compliance with requirements, provide products from one of the following:
 - a. Victaulic Style 77, 07, 005.
 - b. **<Insert manufacturer's name>**
 - c. or approved equal.

2.4 JOINING MATERIALS

- A. Welding Materials: Comply with Section II, Part C, ASME Boiler and Pressure Vessel Code for welding materials appropriate for the wall thickness and chemical analysis of the pipe being welded.
- B. Gasket Materials: Thickness, material, and type suitable for AFFF foam concentrate to be handled and design temperatures and pressures.
- C. Pipe Thread Compound: Loctite pipe sealant with Teflon.

2.5 GENERAL DUTY VALVES

- A. Drain and Trim Valves: Sprinkler system drain and trim valves shall be cast bronze or brass, globe or gate valves. These valves shall be rated for a minimum of 300 psi and suitable for sprinkler system applications.

- B. Gate Valves - 2-inch and Smaller: Body and bonnet of cast bronze, 175 pound cold water working pressure - nonshock, threaded ends, solid wedge, outside screw and yoke, rising stem, screw-in bonnet, and malleable iron handwheel. Valves shall be capable of being repacked under pressure, with valve wide open.
- C. Gate Valves - 2-1/2-inch and Larger: Iron body, bronze mounted, 175-pound cold water working pressure - nonshock. Valves shall have solid taper wedge, outside screw and yoke, rising stem, flanged bonnet, with body and bonnet conforming to ASTM A126, Class B; replaceable bronze wedge facing rings; flanged ends; and a packing assembly consisting of a cast-iron gland flange, brass gland, packing, bonnet and bronze bonnet bushing. Valves shall be capable of being repacked under pressure, with valve wide open. Gate valves isolating sprinkler systems shall be provided with FM approved or UL listed valve tamper switches.
- D. Ball Valves: Ductile iron body, stainless steel ball and stem and TFE seats. Valve shall be rated for 300 psi service. Valve shall be provided with hand wheel and gear operator and grooved end connections.
- E. Check Valves: Double disc, spring loaded, normally closed, anti-water hammer design. Seat shall be resilient and water tight. Valve shall be rated for minimum 175 psi working pressure. Body shall be ductile iron with stainless steel shaft and spring(s). Discs and sealing element material shall be suitable for use with foam concentrate supplied. Valve shall be suitable for installation in horizontal or vertical position between ANSI flanges. When installed in piping systems with grooved mechanical joints, valve may be supplied with grooved end connections.

2.6 SPECIALTY VALVES

- A. Deluge Valves:
 - 1. General:
 - a. Construction: Hydraulically operated, globe or angle pattern, and size as required or indicated on drawings. Diaphragm and seat shall be field replaceable. End connections shall be threaded for 2-inch valves and flanged for 3-inch and larger.
 - b. Materials: Cast or ductile iron body and cover, bronze and stainless steel internal valve trim, and synthetic rubber diaphragm and disc.
 - c. Pressure Rating: 175-psig working pressure.
 - d. Approvals: UL-listed or FM-approved.
 - e. External Trim: Valve shall be complete with all external trim and accessories required for remote actuation from fire alarm system and remote manual trip. Provide trim sets for bypass, drain, electric sprinkler alarm switch, pressure gauges, and drip cup assembly piped without valves separate from main drain line. Provide fill line attachment with strainer. Provide electric actuation trim including normally closed solenoid. Valve shall remain open after resetting of automatic or manual trip and shall require manual closing.
 - f. Remote manual trip shall function hydraulically with no electrical

connections required. Operation shall be by means of a quick opening 1/4 turn ball valve. Valve shall be brass with chrome-plated brass ball and Teflon seat and seal. Valve shall be housed in stainless steel enclosure of adequate size to allow free operation of the valve. Enclosure shall be painted red and labeled with "Manual Emergency Station."

- 1) Subject to compliance with requirements, provide products from one of the following:
 - a) Viking Model C-1 Emergency Release Valve.
 - b) **<Insert manufacturer's name>**
 - c) or approved equal.
 2. Water Deluge Valve: Valve shall serve as on-off control of water supply to foam/water systems.
 3. Foam Deluge Valve: Valve shall serve as on-off control of foam flow to the proportioner module for foam/water systems.
- B. Water Pressure Control Valve: Valve shall serve to regulate water pressure for the overhead deluge system and monitor nozzle system. The valve shall maintain a constant downstream pressure regardless of varying inlet pressure.
1. Construction: Hydraulically operated, diaphragm actuated, globe or angle pattern, and size as required or indicated on drawings. End connections shall be flanged.
 2. Materials: Cast or ductile iron body and cover, bronze and stainless steel internal valve trim, and synthetic rubber diaphragm and disc.
 3. Pressure Rating: 175-psig working pressure.
 4. Pressure Adjustment Range: 30 to 165 psi.
 5. Approvals: UL-listed or FM-approved.
 6. External Trim: Valve shall be complete with all external trim and accessories required for self-contained operation. Pilot control shall be a direct-acting, adjustable, spring-loaded, normally open, diaphragm valve, designed to permit flow when controlled pressure is less than the spring setting.
 - a. Subject to compliance with requirements, provide products from one of the following:
 - 1) Cla-Val Model No. 90G-01 Series Pressure Reducing Valve.
 - 2) **<Insert manufacturer's name>**
 - 3) or approved equal.
 7. A single UL-listed or FM-approved valve combining the functions of the water Deluge Valve and Water Pressure Control Valve may be used at the Contractor's option.
- C. Aqueous Film-Forming Foam (AFFF) Concentrate Control Valve Assembly: Valve shall serve as off-on control of foam flow to the proportioner for the foam/water system.
1. Construction: Assembly shall consist of a threaded ball valve with hydraulic

- actuator. Actuator shall be provided with a position indicator and shall have capability for manual over-ride.
2. Materials: Provide ball valve with bronze body, stainless steel ball, stem, packing nut, and Teflon valve seats.
 3. Accessories: Provide a normally closed two-way solenoid valve which, when energized, will direct a pressurized water supply to the valve hydraulic actuator. Valve solenoid shall be operable with a 24Vdc power supply.
- D. Aqueous Film-Forming Foam (AFFF) Pressure Regulating Valve: Valve shall serve to relieve excess foam pump discharge pressure and maintain constant foam concentrate system pressure to the foam/water proportioners.
1. Construction: Hydraulically operated, pilot-controlled, diaphragm type, globe or angle pattern, and size as required or indicated on drawings. Diaphragm and seat shall be field replaceable. End connections shall be flanged.
 2. Material: [**Cast or ductile iron body and cover,**] [**All bronze with**] bronze and stainless steel internal valve trim, and synthetic rubber diaphragm and disc. Provide integral coating, or approved alternate material, as required for corrosion resistance and compatibility with AFFF foam concentrate supplied.
 3. Pressure Rating: Class 250.
 4. Approvals: UL-listed or FM-approved.
 5. External Trim: Valve shall be complete with all external trim and accessories required to maintain constant foam pump discharge pressure regardless of demand changes. Pilot control shall be direct acting, adjustable, spring-loaded, diaphragm-type valve designed for modulating service.
 - a. Subject to compliance with requirements, provide products from one of the following:
 - 1) CLA-VAL Model 50G01.
 - 2) **<Insert manufacturer's name>**
 - 3) or approved equal.
- E. In-line Balanced Pressure Proportioner Module: In-line balanced pressure proportioner shall be used for overhead deluge system and monitor nozzle systems.
1. Construction: Module shall consist of all bronze in-line proportioner, pressure balancing valve, duplex pressure gauge, foam concentrate pressure gauge, foam concentrate isolation valve, and interconnecting piping, fittings, and accessories required for a complete functioning unit. The assembly shall have manual override capability.
 2. Material: Provide material suitable for use with AFFF concentrate supplied.
 3. Approvals: UL-listed or FM-approved.

2.7 AUTOMATIC SPRINKLERS

- A. Sprinklers: Nonair-aspirating open head style as indicated or required by the application. Unless otherwise indicated, provide sprinklers with nominal 1/2-inch discharge orifice.

- B. Sprinkler Finishes: Provide sprinklers with the following finishes.
 - 1. Upright, Pendent, and Sidewall Styles, chrome-plated in finish spaces, exposed to view; rough bronze finish for sprinklers in unfinished spaces. Sprinklers shall be wax-coated where installation exposes to acids, chemicals, or other corrosive fumes.
- C. Sprinkler Cabinet and Wrench: Finished steel cabinet, suitable for wall mounting, with hinged cover and space for six spare sprinklers plus two sprinkler wrenches. Provide a separate cabinet for each style sprinkler.

2.8 LOW EXPANSION FOAM

- A. General: Foam shall be 3% AFFF. The AFFF shall be an aqueous concentrate containing fluorocarbon surface active agents in combination with foam and storage life stabilizers and suitable for use in a mixture of 97% water and 3% concentrate.
- B. The foam concentrate shall meet the following:
 - 1. The AFFF shall be biodegradable after dilution and shall be nontoxic and nonirritating.
 - 2. The AFFF liquid concentrate shall have an uncontaminated minimum storage life of 15 years. The foam manufacturer shall have an established laboratory reexamination service available to the DEN Project Manager and shall furnish a supply of sample containers and detailed instructions for procuring the samples.
 - 3. The AFFF concentrate shall meet the requirements of UL for AFFF and shall be listed by UL for use with standard 1/2-inch orifice nonair-aspirating sprinkler heads without limitation.
 - 4. The foam shall meet the requirements of NFPA for use with overhead sprinkler discharge and shall be formulated to produce stable foam from air-aspirating and nonair-aspirating devices.
 - 5. The foam generated by the AFFF concentrate and water shall produce a fluid, fast-flowing, tough foam which yields a vapor-suppressing aqueous film on hydrocarbon fuels. The foam produced shall be so stabilized as to maintain its integrity as a foam to provide prolonged vapor suppression, heat-absorbing capabilities, and burnback resistance.
 - 6. The AFFF shall be completely compatible with dry chemicals.

2.9 FOAM CONCENTRATE TANKS

- A. General: Foam concentrate tanks shall be approved for AFFF storage and shall have usable capacity as indicated on drawings. Reserve foam concentrate tank shall have capacity equal to the primary tank and shall be permanently piped into the system and designed to be manually activated to supply the system through the foam pumps when the primary tank is off line.
- B. Material: Fiberglass or polyethylene.

- C. Construction: Vertical or horizontal as indicated on the drawings. Provide the following accessories:
1. Expansion dome and clean out.
 2. Inspection hatch.
 3. Fill connection with funnel.
 4. Pressure/vacuum vent.
 5. Drain valve.
 6. Supply and return connections.
 7. Tank support structure.
 8. Low level alarm device to signal when tank is approaching empty.
 9. Low level alarm device to signal when tank is not full.

2.10 FOAM CONCENTRATE AND FOAM JOCKEY PUMPS

- A. General: Provide UL listed and FM approved factory-assembled and tested positive displacement rotary pumps of capacity and electrical characteristics as scheduled, and acceptable to the authority having jurisdiction.
- B. Factory Test: Test each pump at rated condition and provide UL/FM performance curve prior to shipment.
- C. Construction: Provide foam concentrate pumps of **[all bronze] [ductile iron, bronze fitted] [stainless steel]** construction. Pump shafts shall be stainless steel and provided with mechanical seal or lip seal. Pump, motor, and accessories shall be factory assembled and mounted on a common base. Foam concentrate pumps shall be per NFPA 20 and UL listed, FM approved.
- D. Accessories: Provide the following accessories as required:
1. Relief Valve: Provide listed and approved external relief to protect the pump and piping system from over pressurization. Install relief valve per NFPA 20.
 2. Pump Speed: Not greater than 1800 rpm.
 3. Shaft/Coupling Guards: Manufacturer's standard.
 4. Mounting Base: Manufacturer's standard.
 5. Suction strainer per NFPA 20.
 6. Inlet and outlet pressure gauges.
- E. Electric motors: Provide horizontal, foot-mounted, ball-bearing, induction motor with open dripproof NEMA enclosure, of scheduled capacity, in accordance with the provisions in SECTION 15170 - MOTORS and NFPA 20.
- F. Motor Controllers: Provide foam pump motor controller, UL-listed or FM-approved for foam pump service.
1. Type: Across the line or part winding.
 2. Rate controller for scheduled horsepower. Provide controller capable of interrupting short circuit current at least equal to short circuit current in controller supply circuit.

3. Mounting: Floor or wall mounted for field electrical connections.
4. Provide foam concentrate pump controller suitable as electrical service entrance.
5. Enclosure shall be NEMA 2 or better, as suited to Site conditions.

2.11 FOAM-WATER MONITOR NOZZLE SYSTEM

- A. General: Monitor nozzles shall provide complete, self-contained, unmanned sweep protection for the areas indicated. The system shall be water powered type with manual override to allow manual control.
- B. Materials: Suitable for use with 3% AFFF.
- C. Construction:
 1. Pressure Rating: 150 psig minimum.
 2. Speed oscillation: Adjustable from 0 to 250 per second.
 3. Arc: Adjustable from 30° below horizontal to 60° above horizontal and 0 to 180° side to side without regard to mounting position.
 4. Monitor shall be capable of being driven by an external water supply for tests.

2.12 FOAM-WATER HOSE REEL STATIONS

- A. General: Provide foam/water hose stations as indicated on the drawings. Each station shall consist of hose, hose nozzle, hose reel, water pressure regulating valve and proportioner.
- B. Hose: 1-1/2-inch, continuous flow, suitable for use with 3% AFFF. Length shall be as indicated on the drawings. Hose shall be constructed of oil resistant braid with neoprene tube and cover. Provide hardware for attachment to hose reel and nozzle specified.
- C. Nozzle: Provide nozzle suitable for use with 3% AFFF with shutoff valve and pistol grip.
 1. Subject to compliance with requirements, provide products from one of the following:
 - a. National Foam Model JS 10.
 - b. **<Insert manufacturer's name>**
 - c. or approved equal.
- D. Hose Reel: Provide hose reel with capacity for 1-1/2-inch hose as indicated on drawings. Reel shall be suitable for use with 3% AFFF and shall have a working pressure of 300 psig. Provide reel with hand crank rewind and brake assembly and red polyurethane finish.
 1. Subject to compliance with requirements, provide products from one of the following:

- a. National Foam Model FD47-1-1/2.
 - b. **<Insert manufacturer's name>**
 - c. or approved equal.
- E. Water Pressure Regulating Valve: Provide pressure regulating valve in the water supply piping to the proportioner to maintain constant hose inlet pressure regardless of fire water supply pressure. Regulator shall have capacity as indicated on the drawings for the hose station. Outlet pressure shall be adjustable from 75 to 125 psig. Valve shall be constructed of cast iron with threaded end connections.
- 1. Subject to compliance with requirements, provide products from one of the following:
 - a. Fisher Controls Co. Model 95H.
 - b. **<Insert manufacturer's name>**
 - c. or approved equal.
- F. Proportioner: Provide in-line balanced pressure proportioner module as specified in this Section.

2.13 FLOW METERS

- A. Provide a UL-listed/FM-approved flow metering system for the foam pumps. Flow rate of elements and meters shall be the same as connected equipment or system. The test header shall return the foam concentrate to the supply tank.
- B. Flow meters shall consist of an annular flow measuring element and portable meter.
- C. Elements:
- 1. Type: Differential-pressure pitot tube-type design with probe for insertion into pipe.
 - 2. Construction: Stainless steel probe of length to span inside of pipe, with brass fittings and attached tag with flow conversion data. Elements shall be pressure rated for 150 psig and 250oF (120oC).
 - 3. Each station shall be complete with safety shutoff valves and quick connect coupling connections.
- D. Portable Meters: Differential-pressure gauge and two 12-foot hoses in carrying case with handle. Meter, hoses, and valves shall be suitable for use with AFFF. Meter shall become the property of DEN.
- 1. Scale: In inches of water unless otherwise indicated.
 - 2. Accuracy: +0.5% to +2% between 20% to 80% of range.

2.14 REFRACTOMETER

- A. Hand held, automatic temperature compensating refractometer for aqueous solutions

with hermetically sealed hollow prism and with a refractive index scale of 1.3330 to 1.3730. Unit shall be capable of refractive index readings to 0.0002.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions under which foam pumps, tanks, monitor nozzles, and hose stations are to be installed.
- B. Do not proceed with work until unsatisfactory conditions have been corrected in manner acceptable to Installer.

3.2 PIPE APPLICATIONS

A. Foam/Water System Piping:

- 1. Two-inch and smaller: Install Schedule 40 steel pipe with threaded, flanged, or mechanical joints and fittings.
 - a. Flanges and flanged fittings: Class 150, slip on flanges.
 - b. Grooved Mechanical Fittings: Straight runs shall use rigid couplings; flexible couplings may be used for change of direction.
- 2. 2-1/2-inch and larger: Install steel pipe with butt welded, flanged or mechanical joints and fittings.
 - a. Pipe schedule shall conform to the following:

Size (NPS) Inches	Schedule Buttwelded	Mechanical Joint
2-1/2 to 6	40	40
8 to 12	20	30
14 to 18	20	Standard Weight
20 to 24	20	XS

- b. Flanges and flanged fittings: Class 150, weld neck or slip on flanges.
- c. Grooved Mechanical Fittings: Straight runs shall use rigid couplings; flexible couplings may be used for change of direction.
 - 1) National Foam (NF) recommends the use of stainless steel or brass pipe for AFFF concentrates. However, National Foam is also noting that black steel can be used, as an alternate to save money on projects. However, NF recommends periodic testing of the foam concentrate in the piping. NF has been testing steel pipe with AFFF concentrate for the last 7 years and has found no corrosion to the steel pipe or changes to the AFFF concentrate itself. NF does note that galvanized pipe cannot be used for foam concentrate piping.

However, galvanized piping can be used for foam/water piping.

B. Foam Pump Suction Piping (Above Grade):

1. Two-inch and smaller: Install (Schedule 40 steel) (Schedule 40S stainless steel) pipe with socket welded joints and fittings, with flanged connections to equipment.
 - a. Flanges: Class 150, slip on flanges.
2. 2-1/2-inch and larger: Install (Schedule 40 steel) (Schedule 40S stainless steel) pipe with butt welded joints and fittings with flanged connection to equipment.
 - a. Flanges: Class 150, weld neck or slip on flanges.

C. Foam Pump Discharge Piping (Above Grade):

1. Two-inch and smaller: Install (Schedule 40 steel) (Schedule 40S stainless steel) pipe with socket welded joints and fittings, with flanged connections to equipment.
 - a. Flanges: Class 300, slip on flanges.
2. 2-1/2-inch and larger: Install (Schedule 40 steel) (Schedule 40S stainless steel) pipe with butt welded joints and fittings, with flanged connections to equipment.
 - a. Flanges: Class 300, weld neck or slip on flanges.

D. Foam Pump Suction Piping (Below Grade):

1. Two-inch and smaller: Install Schedule 40S stainless steel pipe with socket welded joints and fittings. Do not install flanges below grade.
2. 2-1/2-inch and larger: Install Schedule 40S stainless steel pipe with butt welded joints and fittings. Do not install flanges below grade.

E. Foam Pump Discharge Piping (Below Grade):

1. Two-inch and smaller: Install Schedule 40S stainless steel pipe with socket welded joints and fittings. Do not install flanges below grade.
2. 2-1/2-inch and larger: Install Schedule 40S stainless steel pipe with butt welded joints and fittings. Do not install flanges below grade.

3.3 PIPING INSTALLATIONS

A. Locations and Arrangements: Drawings (plans, schematics, and diagrams) indicate the general location and arrangement of piping systems. So far as practical, install piping as indicated.

1. Deviations from approved "Working Plans" for sprinkler piping require written

approval of the authority having jurisdiction. Written approval shall be on file with the Engineer of Record and DEN Project Manager prior to deviating from the approved "Working Plans."

- B. Install sprinkler piping to provide for system drainage in accordance with NFPA 13.
- C. Use approved fittings to make all changes in direction, branch takeoffs from mains, and reductions in pipe sizes.
- D. Install unions in pipes 2-inch and smaller adjacent to each valve. Unions are not required on flanged devices or in piping installations using grooved mechanical couplings.
- E. Install flanges or flange adapters on valves, apparatus, and equipment having 2-1/2-inch and larger connections.
- F. Hangers and Supports: Comply with the requirements of NFPA 13. Hanger and support spacing and locations for piping joined with grooved mechanical couplings shall be in accordance with the grooved mechanical coupling manufacturer's written instructions for rigid systems. Provide protection from damage where subject to earthquake in accordance with NFPA 13.
- G. Make connections between underground and aboveground piping using an approved transition piece strapped or fastened to prevent separation.
- H. Install mechanical sleeve seal at pipe penetrations in basement and foundation walls.
- I. Install test connections sized and located in accordance with NFPA 13 complete with shutoff valve and sign. Test connections may also serve as drainpipes.
- J. Install pressure gauge on the riser or feed main at or near each test connection. Provide gauge with a connection not less than 1/4-inch and having a soft-metal seated globe valve, arranged for draining pipe between gauge and valve. Install gauges to permit removal, and where they will not be subject to freezing.

3.4 PIPE JOINT CONSTRUCTION

- A. Welded Joints: AWS D10.9, Level AR-3.
- B. Threaded Joints: Conform to ASME B1.20.1, tapered pipe threads for field cut threads. Join pipe, fittings, and valves as follows:
 - 1. Note the internal length of threads in fittings or valve ends, and proximity of internal seat or wall, to determine how far pipe should be threaded into joint.
 - 2. Align threads at point of assembly.
 - 3. Apply Teflon tape and Loctite pipe sealant with Teflon to the external pipe threads.
 - 4. Assemble joint to appropriate thread depth. When using a wrench on valves, place the wrench on the valve end into which the pipe is being threaded.

5. Damaged Threads: Do not use pipe with threads that are corroded or damaged. If a weld opens during cutting or threading operations, that portion of pipe shall not be used.

C. Flanged Joints: Align flange surfaces parallel. Assemble joints by sequencing bolt tightening to make initial contact of flanges and gaskets as flat and parallel as possible. Use suitable lubricants on bolt threads. Tighten bolts gradually and uniformly to appropriate torque specified by the bolt manufacturer.

D. Mechanical Grooved Joints: Cut grooves on pipe ends dimensionally compatible with the couplings. Roll grooves are not allowed.

E. End Treatment: After cutting pipe lengths, remove burrs and fins from pipe ends.

3.5 INSTALLATION OF VALVES

A. General: Install fire protection specialty valves, fittings, and specialties in accordance with the manufacturer's written instructions, NFPA 11, 13, 16, and 409, and the authority having jurisdiction.

B. Gate Valves: Install supervised-open gate valves so located to control all sources of water supply except fire department connections. Where there is more than one control valve, provide permanently marked identification signs indicating the portion of the system controlled by each valve. Refer to Section 10553 "Identification for Fire Suppression Piping and Equipment" for valve tags and signs.

C. Miscellaneous Valves: Installation of gate or globe valves shall be in accordance with NFPA 11, 13, 16, and 409.

D. Flow Control and Deluge Valves: Install in the vertical or horizontal position, in proper direction of flow, in the main supply to the deluge system. Install the basic trim set in accordance with the manufacturer's written instructions. Connect system controls and test valve for proper operation.

3.6 SPRINKLER INSTALLATIONS

A. Use proper tools to prevent damage during installations.

B. INSTALLATION OF FOAM PUMPS

C. Install foam pumps and foam jockey pumps where shown, in accordance with manufacturer's published installation instructions, complying with UL and FM, NFPA 11, 16, 20, and 409, and with recognized industry practices, to ensure that foam pumps comply with requirements and serve intended purposes.

D. Install foam pumps on minimum of 4-inch high concrete base equal or greater than 3 times total weight of pump and motor, with anchor bolts poured in place. Set and level plumb; grout under pump base with nonshrink grout.

- E. Provide piping; accessories; hangers, supports, and anchors; valves; meters and suction and discharge gauges; and equipment supports as indicated for complete installation.
- F. Lubricate pumps before start-up. Start-up in accordance with manufacturer's instructions.
- G. Coordinate with other work including plumbing, standpipe, fire water, and sprinkler piping as necessary to interface installation of foam pumps properly with other components of fire water protection system.
- H. Check alignment and, when necessary (and possible), realign shafts of motors and pumps within tolerances recommended by manufacturer.
- I. Install pumps and pump drives on vibration isolators as indicated; comply with manufacturer's indicated installation method, if any, and with other Division 21 Sections.
- J. Electrical Wiring: Install electrical devices furnished by manufacturer but not specified to be factory mounted. Furnish copy of manufacturer's wiring diagram submittal to Electrical Installer.
 - 1. Verify that electrical wiring installation is in accordance with manufacturer's submittal and installation requirements of Division 26 Sections. Do not proceed with equipment start-up until wiring installation is acceptable to Equipment Installer.
 - 2. Provide rotational check of pumps to verify proper rotation.

3.7 FIELD QUALITY CONTROL

- A. Flush, test, and inspect piping systems in accordance with NFPA 11, 13, 16, and 409.
- B. Test and inspect all below ground piping before backfilling and covering pipe.
- C. Replace piping system components that do not pass the test procedures specified and retest repaired portion of the system.
- D. Upon completion of installation of foam pumps, perform field acceptance tests of pumps, complying with operating instructions and procedures of NFPA 20 to demonstrate compliance with requirements. Where possible, field correct malfunctioning units, then retest to demonstrate compliance. Replace units that cannot be satisfactorily corrected.
- E. Test all alarms, supervisory switches, and detectors for proper operation.
- F. Check foam tanks for leaks and fill with 3% AFFF concentrate.
- G. Clean strainers and check foam concentrate valves' tightness and action.

- H. Place all valves, controllers, proportioners, and other devices in the normal operating position.
- I. Complete all field quality control items before beginning final system testing.

3.8 TESTING

- A. Preliminary: Before beginning final system testing, all field quality control items and all testing of fire water pumps, foam pumps, detection systems, and alarms shall be completed and approved by the authority having jurisdiction and FM.
- B. Protection: Provide protection for all building components in the hangar subject to wetting from the tests.
 - 1. Protection shall include, but not be limited to, the following items:
 - a. Wrap and secure in waterproof material electrical equipment such as switches, outlets, panels, transformers, etc.
 - b. Cover and secure with waterproof material, all building and equipment components subject to damage from water or foam/water such as insulation, painted surfaces, exposed metals or wood.
 - c. Close and seal all doors and openings between hangar and other areas of the facility, such as office and shop areas, to prevent entry of water or foam/water during testing.
 - 2. Upon completion of testing, Contractor shall flush all areas exposed to foam/water with potable water and shall remove and dispose of all protection materials.
 - 3. Contractor shall repair or replace all materials and components damaged as a result of testing at no additional cost to DEN.
- C. Water Test: Perform a full flow automatic test with water only on each foam-water sprinkler system. Test shall be performed by activating an AFFF manual pull station for each system.
 - 1. Test each system individually to verify proper monitor nozzle and sprinkler distribution, installation, and discharge.
 - 2. Test the maximum number of systems specified to operate simultaneously in case of a fire. Systems shall be in full operation simultaneously during testing to verify proper monitor nozzle and sprinkler discharge.
 - 3. Provide suitable gauge connections, gauges, and meters to verify adequacy of water supply and hydraulic calculations.
 - 4. Check and adjust monitor nozzles for oscillation, and adjust deflector setting as required for indicated coverage pattern.
- D. Final System Test: Upon completion of the water only test, perform a foam-water system test using a 3% AFFF solution in accordance with the requirements of NFPA, FM, and the authority having jurisdiction.

1. Contractor shall test each proportion separately to verify proper proportioning of foam.
2. Foam pumps shall be tested through the flow meter to verify performance.
3. During foam system testing, the Contractor shall perform refractometer readings to verify that foam-water solution is within the limits approved by the authority having jurisdiction and FM.
4. Upon completion of testing, Contractor shall flush systems with potable water, arrange and pay for disposal of foam/water solution in a manner suitable to governing environmental agencies and DEN Project Manager, shall furnish AFFF and refill foam storage tanks, and shall completely prepare system for full operation by DEN.
5. Contractor shall arrange and pay for an experienced technician or Engineer from the foam system equipment manufacturer to be present during all testing and to instruct the DEN's personnel in the full system operation.
6. Contractor shall provide all foam, play pipes, meters, gauges, and other devices required for complete system testing and shall submit test results to the DEN Project Manager in accordance with the requirements of DIVISION 1. Refractometer shall become property of DEN upon completion of testing.
7. Contractor shall notify the DEN Project Manager at least ten days prior to testing. All tests may be witnessed by the DEN Project Manager, FM, authority having jurisdiction, and the Engineer of Record.

3.9 SEQUENCE OF OPERATION:

- A. The foam jockey pump shall cycle on and off to maintain pressure in the foam concentrate piping to the foam deluge valves and foam hose reel inlet. Foam jockey pump shall start when foam concentrate line pressure drops to 15 psig above starting pressure of the main foam concentrate pumps.
- B. The deluge valves shall open on a signal from the fire detection system or remote manual trip of the "Manual Emergency Station." The fire alarm signal to the solenoid actuation trim of the deluge valves will be provided by others under Division 26.
- C. The primary selected foam concentrate pump shall start on a decrease in pressure in the foam concentrate piping due to tripping of the foam deluge valve, a start signal from the alarm detection panel, or the operation of a foam hose station. A further decrease in foam concentrate piping pressure due to failure of the primary selected pump shall start the standby selected foam concentrate pump. A manual selector switch shall be provided to alternate selection of primary and standby foam concentrate pump. The foam jockey pump shall be automatically stopped when the foam concentrate pump starts.
- D. The in line balanced pressure proportioner module shall operate automatically to provide the specified foam/water mixture regardless of the inlet water pressure.
- E. The monitor nozzle system shall function automatically to provide the areas of coverage indicated on the Drawings.
- F. The deluge valve shall remain open until manually closed.

- G. The foam concentrate pump shall remain in operation until manually stopped.

3.10 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain system.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 211340

SECTION 212113.13 - HIGH-PRESSURE CARBON-DIOXIDE FIRE-EXTINGUISHING SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Carbon dioxide.
 - 2. Piping.
 - 3. Flexible-hose connectors.
 - 4. Carbon-dioxide cylinders.
 - 5. Cylinder valves.
 - 6. Discharge nozzles.
 - 7. Hangers and supports.
 - 8. Control panels.
 - 9. Detection devices.
 - 10. Manual stations.
 - 11. Switches.
 - 12. Alarm devices.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for control panels.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
 - 3. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For high-pressure carbon-dioxide fire-extinguishing system signed and sealed by a qualified professional engineer.
 - 1. Include plans, elevations, sections, and **[mounting]** **[attachment]** details.

2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 3. Include diagrams for power, signal, and control wiring.
- C. Delegated-Design Submittal: For high-pressure carbon-dioxide fire-extinguishing system signed and sealed by a qualified professional engineer.
1. Indicate compliance with performance requirements and design criteria, including analysis data.
 2. Design Calculations: For weight, volume, and concentration of extinguishing agent required for each hazard area.
 3. Reflected Ceiling Plans:
 - a. Show ceiling penetrations.
 - b. Ceiling-mounted carbon-dioxide fire-extinguishing system items.
 - c. Extinguishing-agent containers if mounted above floor.
 - d. Piping, discharge nozzles, detectors, and accessories.
 - e. Hangers and supports, including hanger types and spacing and methods for attaching hangers to building structure.
 - f. Coordination with items mounted in and above ceiling other than carbon-dioxide fire-extinguishing systems, including ceiling construction components.
 4. Occupied Work Area Plans:
 - a. Controls and alarms.
 - b. Extinguishing-agent containers, piping and discharge nozzles, detectors, and accessories.
 - c. Coordination with equipment and furnishings protected by the system.
 5. Access Floor Space Plans:
 - a. Extinguishing-agent containers, piping, discharge nozzles, detectors, and accessories.
 - b. Method of supporting piping.

1.4 INFORMATIONAL SUBMITTALS

- A. Permit-Approved Drawings: Working plans including design calculations, prepared according to NFPA 12, that have been approved by authorities having jurisdiction.
- B. Seismic Qualification Certificates: For container foundations, cylinder racks, supports, hangers, braces, accessories, and components, from manufacturer.
 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.

3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

- C. Welding certificates.
- D. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For carbon-dioxide fire-extinguishing system to include in emergency, operation, and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents. Deliver extra materials to Owner.
 - 1. Detection Devices: Not less than [20] <Insert number> percent of amount of each type installed.
 - 2. Container Valves: Not less than [10] <Insert number> percent of amount of each size and type installed.
 - 3. Nozzles: Not less than [20] <Insert number> percent of amount of each type installed.
 - 4. Extinguishing Agent: Not less than [100] <Insert number> percent of amount installed in largest hazard area. Include pressure-rated containers with valves.

1.7 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M.
- B. Pipe and Pressure-Vessel Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Ansul Incorporated.
 2. Chemetron Fire Systems; a UTC Fire & Security company.
 3. Fike Corporation.
 4. Kidde-Fenwal, Inc.; a UTC Fire & Security company.
 5. **<Insert manufacturer's name>**.
 6. or approved equal.
- B. Total-Flooding System: Pre-engineered carbon-dioxide fire-extinguishing system designed for total flooding of the hazard area including the room cavity above the ceiling, below the ceiling, and below the raised floor.
- C. Local Application: Pre-engineered carbon-dioxide fire-extinguishing system designed for local application directly on indicated hazards and adjacent areas.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- E. NFPA Compliance: Fire-extinguishing system, equipment, and components shall comply with NFPA 12.
- F. FM Global Compliance: Provide components that are FM Approved and that are listed in FM's "Approval Guide."
- G. UL Compliance: Provide equipment listed in UL's "Fire Protection Equipment Directory."

2.2 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design a carbon-dioxide fire-extinguishing system and obtain approval from authorities having jurisdiction.
1. Total-Flooding System Design Criteria:
 - a. Hazard Type: **[Data-processing center] [Manufacturing process] [Power generation] [Telecommunications center] [Electrical equipment room] <Insert hazard type>**.
 - b. Discharge carbon dioxide for **[60 seconds] <Insert time>** and maintain **[34] <Insert number>** percent concentration by volume at **70 deg F** (21 deg C) for **[10-minute] <Insert time>** holding time in hazard areas.

- c. System shall include separate zones above and below the ceiling[**and beneath the raised floor**].
 - d. Operations and Controls: If smoke is detected below the raised floor, extinguishing agent shall be discharged in the underfloor zone only. If smoke is detected below the ceiling, extinguishing agent shall be discharged in zones above and below the ceiling and below the floor. If smoke is detected above the ceiling, extinguishing agent shall be discharged in the zone above the ceiling only.
 2. Local-Application System Design Criteria:
 - a. Single zone with an individual nozzle protecting indicated hazard surface.
 - b. Discharge rate shall be determined by the listing information on the nozzle and as recommended by the fire-extinguishing system manufacturer.
 3. High-Pressure Piping Design Criteria:
 - a. Comply with ASME B31.1
 - b. Internal Pressure: **2800 psig** (19 306 kPa).
 - B. Seismic Performance: Cylinder racks, supports, hangers, and braces shall withstand the effects of earthquake motions determined according to [**ASCE/SEI 7**] **<Insert requirement>**.
 1. The term "withstand" means "the system will remain in place without separation of any parts when subjected to the seismic forces specified[**and the system will be fully operational after the seismic event**]."
 2. Component Importance Factor is [**1.5**] [**1.0**].
- 2.3 CARBON DIOXIDE
- A. Vapor Phase: Equal to or more than 99.5 percent carbon dioxide.
 - B. Taste and Odor: None detectable.
 - C. Water Content: Comply with CGA G-6.2.
 - D. Oil Content: Equal to or less than 10 ppm by weight.
- 2.4 PIPING MATERIALS
- A. Piping, Valves, and Discharge Nozzles: Comply with types and standards listed in NFPA 12, Section "Distribution," for charging pressure of system.

2.5 PIPES AND FITTINGS

- A. Steel Pipe: ASTM A 53/A 53M, Grade B, Schedule 40, **[Type E] [Type S]** or ASTM A 106/A 106M, **[Grade A] [Grade B] [Grade C]**, **[black] [and] [galvanized]** finish, seamless-steel pipe.
1. Threaded Fittings:
 - a. Malleable-Iron Fittings: ASME B16.3, Class 300.
 - b. Flanges and Flanged Fittings: ASME B16.5, Class 300 unless Class 600 is indicated.
 2. Welding Fittings: ASME B16.9.
 3. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
 - a. ASME B16.21, nonmetallic, flat, asbestos-free, **1/8-inch** (3.2-mm) maximum thickness unless thickness or specific material is indicated.
 4. Flange Bolts and Nuts: ASME B18.2.1, carbon steel.
 5. Welding Filler Metals: Comply with AWS D10.12M/D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- B. Stainless-Steel Pipe: ASTM A 269/A 269M or ASTM A 312/A 312M, **[Grade TP304] [Grade TP316] [Grade TP304L] [or] [Grade TP316L]**.
1. Stainless-Steel Fittings: ASTM A 182/A 182M, Class 3000.

2.6 FLEXIBLE-HOSE CONNECTORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Ansul Incorporated.
 2. Chemetron Fire Systems; a UTC Fire & Security company.
 3. Fike Corporation.
 4. Kidde-Fenwal, Inc.; a UTC Fire & Security company.
 5. **<Insert manufacturer's name>**.
 6. or approved equal.
- B. Description: Teflon-lined, braided hose with stainless-steel wire-braid covering.
1. Burst Pressure: **5000 psi** (34 474 kPa) minimum.
 2. End Connections: Threaded male couplings.

2.7 CARBON-DIOXIDE CYLINDERS

- A. Operating Pressure: Between **2400 psi** (16 547 kPa) and **3000 psi** (20 684 kPa).

1. Pressure Relief Device: Rupture-disk type.
 - a. Sized and fitted according to 49 CFR 178.
- B. Ambient Storage Conditions: Less than **120 deg F** (49 deg C) and more than **32 deg F** (0 deg C).
- C. Wall Storage Racks: Fabricate racks with chain restraints for upright cylinders as indicated or provide equivalent manufactured wall racks.
- D. Freestanding Storage Racks: Fabricate racks as indicated or provide equivalent manufactured storage racks.
- E. Storage Cylinder Nominal Size: **[50 lb (23 kg)] [75 lb (34 kg)] [100 lb (45 kg)] <Insert weight>**.

2.8 CYLINDER VALVES

- A. Bursting Pressure Rating:
 1. Valves under Constant Pressure: **6000 psi** (41 369 kPa).
 2. Valves Not under Constant Pressure: **5000 psi** (34 474 kPa).
- B. Discharge Valves:
 1. Actuation: **[Pneumatic] [Electric] [Manual]**.
 2. Solenoid Actuator: **[12-V dc] [24-V dc]**.
 3. Pilot Hose: **[Rigid] [Flexible]**.
 4. Valve Material: Brass or stainless steel.
 5. Slave Valve Material: Brass.
 6. Lock-Out: Key-operation selector, for prevention of discharge during maintenance.

2.9 DISCHARGE NOZZLES

- A. Equipment manufacturer's standard material of working pressure, size, discharge pattern, and capacity required for application.

2.10 HANGERS AND SUPPORTS

- A. Carbon-Steel Pipe Hangers and Supports:
 1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
 2. Galvanized Metallic Coatings: Pregalvanized or hot dipped.
 3. Nonmetallic Coatings: Plastic coating, jacket, or liner.
 4. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.

5. Hanger Rods: Continuous-thread rod with compatible nuts and washers.

B. Stainless-Steel Pipe Hangers and Supports:

1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
2. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
3. Hanger Rods: Continuous-thread rod with compatible nuts and washers.

2.11 CONTROL PANELS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Ansul Incorporated.
2. Chemetron Fire Systems; a UTC Fire & Security company.
3. Fike Corporation.
4. Kidde-Fenwal, Inc.; a UTC Fire & Security company.
5. **<Insert manufacturer's name>**.
6. or approved equal.

B. Description: FM Approved or listed and labeled by a nationally recognized testing agency acceptable to authorities having jurisdiction, including equipment and features required for testing, supervising, and operating fire-extinguishing system.

C. Power Requirements: 120/240-V ac; with electrical contacts for connection to system components and fire-alarm system, and transformer or rectifier as needed to produce power at voltage required for accessories and alarm devices.

2.12 DETECTION DEVICES

A. General Requirements for Detection Devices:

1. Comply with NFPA 12, NFPA 72, and UL 268.
2. 24-V dc, nominal.

B. Ionization Detectors: Dual-chamber type, having sampling and referencing chambers, with smoke-sensing element.

C. Photoelectric Detectors: LED light source and silicon photodiode receiving element.

D. Remote Air-Sampling Detector System: Include air-sampling pipe network, laser-based photoelectric detector, sample transport fan, and control unit.

1. Pipe Network: CPVC tubing connects control unit with calibrated sampling holes.
2. Smoke Detector: Particle-counting type with continuous laser beam. Sensitivity adjustable to a minimum of four preset values.

3. Sample Transport Fan: Centrifugal type, creating a minimum static pressure of **0.05 inch wg** (12.5 Pa) at all sampling ports.
4. Control Unit: Multizone unit as indicated on Drawings. Include same system power supply, supervision, and alarm features as specified for the control panel plus separate trouble indication for airflow and detector problems.
5. Signals to the Central Fire-Alarm Control Panel: Local system trouble is reported to the central fire-alarm control panel as a composite "trouble" signal. Alarms on each system zone are individually reported to the central fire-alarm control panel as separately identified zones.

2.13 MANUAL STATIONS

- A. Description: [**Surface**] [**Semirecessed**], FM Approved or listed and labeled by a nationally recognized testing agency acceptable to authorities having jurisdiction, with clear plastic hinged cover, 120-V ac or low voltage compatible with controls. Include contacts for connection to control panel.
- B. Manual Release: "MANUAL RELEASE" caption, with red finish. Unit can manually discharge extinguishing agent with operating device that remains engaged until unlocked.
- C. Abort Switch: "ABORT" caption, momentary contact, with green finish.
- D. EPO Switch: "EPO" caption, with yellow finish.

2.14 SWITCHES

- A. Description: FM Approved or listed and labeled by a nationally recognized testing agency acceptable to authorities having jurisdiction.
 1. Control Voltage: [**120-V ac**] <Insert electrical rating> compatible with controls.
 2. Include contacts for connection to control panel.
 3. Discharge Pressure Switches: Pneumatic operation for shutdown of equipment.
 4. Power Transfer Switches: Key-operation selector for transfer of release circuit signal from main supply to reserve supply.
 5. Door Closers: Magnetic retaining and release device or electrical interlock to cause the door operator to drive the door closed.

2.15 ALARM DEVICES

- A. Description: FM Approved or listed and labeled by a nationally recognized testing agency acceptable to authorities having jurisdiction; low voltage and surface mounting.
- B. Comply with requirements in [**Section 283111 "Digital, Addressable Fire-Alarm System"**] [**Section 283112 "Zoned (DC Loop) Fire-Alarm System"**] for alarm and monitoring devices.

- C. Bells: Minimum 6-inch (150-mm) diameter.
- D. Horns: 90 to 94 dBA.
- E. Strobe Lights: Translucent lens, with "FIRE" or similar caption.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with hazard-area leakage requirements, installation tolerances, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Comply with requirements in NFPA 12.
- B. Drawing plans, schematics, and diagrams indicate general location and arrangement of gas piping. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, air-compressor sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on coordination drawings.
- C. Install piping concealed from view and protected from physical contact by building occupants unless otherwise indicated and except in equipment rooms and service areas.
- D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal, and coordinate with other services occupying that space.
- F. Install piping adjacent to equipment and specialties to allow service and maintenance.
- G. Install nipples, unions, special fittings, and valves with pressure ratings same as or higher than system pressure rating.
- H. Install piping to permit valve servicing.
- I. Install piping free of sags and bends.
- J. Install fittings for changes in direction and for branch connections.

- K. Install pipe and fittings, valves, and discharge nozzles according to requirements listed in NFPA 12, Section "Distribution Systems."
 - 1. Install pressure relief devices in piping systems.
 - 2. Install seismic restraints for carbon-dioxide cylinders and piping systems.
 - 3. Install control panels, detection system components, alarms, and accessories, complying with requirements of NFPA 12, Section "Detection, Actuation, and Control," as required for supervised system application.
- L. Install carbon-dioxide cylinders in racks anchored to substrate.

3.3 HANGERS AND SUPPORTS

- A. Field fabricate hangers and supports from ASTM A 36/A 36M, carbon-steel shapes selected for loads being supported. Weld steel according to AWS D1.1/D1.1M.
- B. Install hangers and supports complete with necessary attachments, inserts, bolts, rods, nuts, washers, and other accessories.
- C. Equipment Support Installation: Fabricate from welded-structural-steel shapes.
- D. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.
- E. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, [NPS 2-1/2 (DN 65)] <Insert size> and larger, and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms and install reinforcing bars through openings at top of inserts.
- F. Load Distribution: Install hangers and supports so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.
- G. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes to facilitate draining moisture and to not exceed maximum pipe deflections allowed by ASME B31.9 for building-services piping.
- H. Install carbon-steel hangers and supports for steel piping and stainless-steel hangers and supports for stainless-steel piping.
- I. Vertical Piping: MSS Type 8 or 42, clamps.
- J. Individual, Straight, Horizontal Piping Runs:
 - 1. 100 Feet (30 m) and Less: MSS Type 1, adjustable, steel, clevis hangers.
 - 2. Longer than 100 Feet (30 m): MSS Type 43, adjustable, roller hangers.
- K. Base of Vertical Piping: MSS Type 52, spring hangers.

- L. Support horizontal piping within [12 inches (300 mm)] <Insert dimension> of each fitting and coupling.
- M. Rod diameter may be reduced one size for double-rod hangers, with 3/8-inch- (10-mm-) minimum rods.
- N. Install hangers with the following maximum horizontal spacing and minimum rod diameters:
 - 1. NPS 3/8 to NPS 1/2 (DN 10 to DN 15): 96 inches (2400 mm) with 3/8-inch (10-mm) rod.
 - 2. NPS 3/4 to NPS 1-1/4 (DN 20 to DN 32): 108 inches (2700 mm) with 3/8-inch (10-mm) rod.
 - 3. NPS 1-1/2 (DN 40): 12 feet (3.7 m) with 3/8-inch (10-mm) rod.
 - 4. NPS 2 (DN 50): 13 feet (4 m) with 3/8-inch (10-mm) rod.
 - 5. NPS 2-1/2 (DN 65): 14 feet (4.3 m) with 1/2-inch (13-mm) rod.
 - 6. NPS 3 (DN 80): 15 feet (4.6 m) with 1/2-inch (13-mm) rod.
 - 7. NPS 3-1/2 (DN 90): 16 feet (4.9 m) with 1/2-inch (13-mm) rod.
 - 8. NPS 4 (DN 100): 17 feet (5.2 m) with 5/8-inch (16-mm) rod.
 - 9. NPS 5 (DN 125): 19 feet (5.8 m) with 5/8-inch (16-mm) rod.
 - 10. NPS 6 (DN 150): 21 feet (6.4 m) with 3/4-inch (19-mm) rod.
 - 11. NPS 8 (DN 200): 24 feet (7.3 m) with 3/4-inch (19-mm) rod.
- O. Install seismic restraints on piping. Comply with requirements in Section 210548 "Vibration and Seismic Controls for Fire-Suppression Piping and Equipment."

3.4 CONNECTIONS

- A. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Where installing piping adjacent to equipment, allow space for service and maintenance.
- C. Connect electrical devices to control panel and to building's fire-alarm system. Comply with requirements in [Section 283111 "Digital, Addressable Fire-Alarm System"] [Section 283112 "Zoned (DC Loop) Fire-Alarm System"] for fire-alarm system wiring.
- D. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables" for electrical power wiring.
- E. Piping Connections for NPS 1/4 to 1/2 (DN 6 to DN 12): Braided stainless-steel hose with threaded male couplings.

3.5 IDENTIFICATION

- A. Identify system components and equipment. Comply with requirements for identification specified in Section 210553 "Identification for Fire-Suppression Piping and Equipment."
- B. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- C. Identify piping, extinguishing-agent containers, other equipment, and panels according to NFPA 12.
- D. Install signs at entry doors for protected areas to warn occupants that they are entering a room protected by a carbon-dioxide fire-extinguishing system.
- E. Install signs at entry doors to advise persons outside the room of the meaning of the horn(s), bell(s), and strobe light(s) outside the protected space.

3.6 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections according to NFPA 12[**with the assistance of a factory-authorized service representative**]:
 - 1. Visual Inspections:
 - a. Inspect piping, equipment, and nozzles for proper size and location.
 - b. Verify that locations of alarms and manual emergency releases comply with approved Drawings.
 - c. Compare actual hazard configuration to original specification.
 - d. Inspect system for openings or other possible leakage paths.
 - e. Inspect labeling of devices and equipment for proper identification and nameplate data.
 - 2. Testing: After installing carbon-dioxide fire-extinguishing piping system and after electrical circuitry has been energized, test for compliance with requirements.
 - a. Perform nondestructive operational tests on all equipment.
 - b. Perform full-discharge test on all hazards.
 - c. Perform each electrical test and visual and mechanical inspection stated in NETA's "Standard for Acceptance Testing Specifications for Electrical Power Equipment and Systems," Sections "Inspection and Test Procedures" and "System Function Tests." Certify compliance with test parameters.
 - d. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 - e. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation. Remove malfunctioning units, replace with new units, and retest.

- f. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- B. Carbon-dioxide fire-extinguishing system will be considered defective if it does not pass tests and inspections.
- C. Prepare test and inspection reports.

3.7 SYSTEM FILLING

- A. Preparation:
 - 1. Verify that piping system installation is complete and clean.
 - 2. Check system for complete enclosure integrity.
 - 3. Check operation of ventilation and exhaust systems.
- B. Filling Procedures:
 - 1. Fill extinguishing-agent containers with extinguishing agent, and pressurize to indicated charging pressure.
 - 2. Install filled extinguishing-agent containers.
 - 3. Energize circuits.
- C. Adjust operating controls.

3.8 MAINTENANCE SERVICE

- A. Maintenance Service: Beginning at Substantial Completion, maintenance service shall include **[three] [six] [nine] [12]** months' full maintenance by **[skilled employees of carbon-dioxide system Installer] [manufacturer's authorized service representative]**. Include **[monthly] [quarterly] [semiannual] [annual]** preventive maintenance, repair, or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper carbon-dioxide fire-extinguishing system operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

3.9 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain carbon-dioxide fire-extinguishing system.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 212113.13

SECTION 212113.16 - LOW-PRESSURE CARBON-DIOXIDE FIRE-EXTINGUISHING SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Carbon dioxide.
2. Piping.
3. Flexible-hose connectors.
4. Insulated carbon-dioxide containers.
5. Distribution valves.
6. Discharge nozzles.
7. Hangers and supports.
8. Control panels.
9. Detection devices.
10. Manual stations.
11. Switches.
12. Alarm devices.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for control panels.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
3. Include data substantiating that materials comply with requirements.

- B. Shop Drawings: For low-pressure carbon-dioxide fire-extinguishing system signed and sealed by a qualified professional engineer.

1. Include plans, elevations, sections, and **[mounting]** **[attachment]** details.

2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 3. Include diagrams for power, signal, and control wiring.
- C. Delegated-Design Submittal: For low-pressure carbon-dioxide fire-extinguishing system signed and sealed by a qualified professional engineer.
1. Indicate compliance with performance requirements and design criteria, including analysis data.
 2. Design Calculations: For weight, volume, and concentration of extinguishing agent required for each hazard area.
 3. Reflected Ceiling Plans:
 - a. Show ceiling penetrations.
 - b. Ceiling-mounted carbon-dioxide fire-extinguishing system items.
 - c. Extinguishing-agent containers if mounted above floor.
 - d. Piping, discharge nozzles, detectors, and accessories.
 - e. Hangers and supports, including hanger types and spacing and methods for attaching hangers to building structure.
 - f. Coordination with items mounted in and above ceiling other than carbon-dioxide fire-extinguishing systems, including ceiling construction components.
 4. Occupied Work Area Plans:
 - a. Controls and alarms.
 - b. Extinguishing-agent containers, piping and discharge nozzles, detectors, and accessories.
 - c. Coordination with equipment and furnishings protected by the system.
 5. Access Floor Space Plans:
 - a. Extinguishing-agent containers, piping, discharge nozzles, detectors, and accessories.
 - b. Method of supporting piping.

1.4 INFORMATIONAL SUBMITTALS

- A. Permit-Approved Drawings: Working plans including design calculations, prepared according to NFPA 12, that have been approved by authorities having jurisdiction.
- B. Seismic Qualification Certificates: For container foundations, container racks, supports, hangers, braces, accessories, and components, from manufacturer.
 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.

3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

- C. Welding certificates.
- D. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For carbon-dioxide fire-extinguishing system to include in emergency, operation, and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents. Deliver extra materials to Owner.
 - 1. Detection Devices: Not less than [20] <Insert number> percent of amount of each type installed.
 - 2. Container Valves: Not less than [10] <Insert number> percent of amount of each size and type installed.
 - 3. Nozzles: Not less than [20] <Insert number> percent of amount of each type installed.
 - 4. Extinguishing Agent: Not less than [100] <Insert number> percent of amount installed in largest hazard area. Include pressure-rated containers with valves.

1.7 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M.
- B. Pipe and Pressure-Vessel Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Ansul Incorporated.
 2. Chemetron Fire Systems; a UTC Fire & Security company.
 3. **<Insert manufacturer's name>**.
 4. or approved equal.
- B. Total-Flooding System: Pre-engineered carbon-dioxide fire-extinguishing system designed for total flooding of the hazard area including the room cavity above the ceiling, below the ceiling, and below the raised floor.
- C. Local Application: Pre-engineered carbon-dioxide fire-extinguishing system designed for local application directly on indicated hazards and adjacent areas.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- E. NFPA Compliance: Fire-extinguishing system, equipment, and components shall comply with NFPA 12.
- F. FM Global Compliance: Provide components that are FM Approved and that are listed in FM's "Approval Guide."
- G. UL Compliance: Provide equipment listed in UL's "Fire Protection Equipment Directory."

2.2 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design a low-pressure carbon-dioxide fire-extinguishing system and obtain approval from authorities having jurisdiction.
1. Total-Flooding System Design Criteria:
 - a. Hazards: **[Printing presses] [Transformer vaults] [Rolling mills] [Open pits] [Dip tanks] [Manufacturing process] [Power generation] [Telecommunications center] [Electrical equipment room] <Insert hazard type>**.
 - b. Discharge carbon dioxide for **[60 seconds] <Insert time>** and maintain **[34] <Insert number>** percent concentration by volume at **70 deg F** (21 deg C) for **[10-minute] <Insert time>** holding time in hazard areas.

- c. System shall include separate zones above and below the ceiling[**and beneath the raised floor**].
 - d. Operations and Controls: If smoke is detected below the raised floor, extinguishing agent shall be discharged in the underfloor zone only. If smoke is detected below the ceiling, extinguishing agent shall be discharged in zones above and below the ceiling and below the floor. If smoke is detected above the ceiling, extinguishing agent shall be discharged in the zone above the ceiling only.
2. Local-Application System Design Criteria:
- a. Single zone with an individual nozzle protecting indicated hazard surface.
 - b. Discharge rate shall be determined by the listing information on the nozzle and as recommended by the fire-extinguishing system manufacturer.
- B. Seismic Performance: Container foundations, supports, hangers, and braces shall withstand the effects of earthquake motions determined according to [**ASCE/SEI 7**] **<Insert requirement>**.
1. The term "withstand" means "the system will remain in place without separation of any parts when subjected to the seismic forces specified[**and the system will be fully operational after the seismic event**]."
 2. Component Importance Factor is [**1.5**] [**1.0**].
- C. Design low-pressure carbon-dioxide fire-extinguishing system and obtain approval from authorities having jurisdiction. Design system for **<Insert hazard type>** as appropriate for areas being protected and include safety factor.
- 2.3 CARBON DIOXIDE
- A. Vapor Phase: Equal to or more than 99.5 percent carbon dioxide.
 - B. Taste and Odor: None detectable.
 - C. Water Content: Comply with CGA G-6.2.
 - D. Oil Content: Equal to or less than 10 ppm by weight.
- 2.4 PIPING MATERIALS
- A. Piping, Valves, and Discharge Nozzles: Comply with types and standards listed in NFPA 12, Section "Distribution," for charging pressure of system.

2.5 PIPES AND FITTINGS

- A. Steel Pipe: ASTM A 53/A 53M, Schedule 40, Grade B, [**Type E**] [**Type S**] or ASTM A 106/A 106M, [**Grade A**] [**Grade B**] [**Grade C**], [**black**] [**and**] [**galvanized**] finish, seamless-steel pipe.
1. Threaded Fittings:
 - a. Malleable-Iron Fittings: ASME B16.3, Class 300.
 - b. Flanges and Flanged Fittings: ASME B16.5, Class 300.
 2. Welding Fittings: ASME B16.9.
 3. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
 - a. ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch (3.2-mm) maximum thickness unless thickness or specific material is indicated.
 4. Flange Bolts and Nuts: ASME B18.2.1, carbon steel.
 5. Welding Filler Metals: Comply with AWS D10.12M/D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
 6. Grooved-Joint Couplings and Fittings:
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Anvil International.
 - 2) Grinnell Mechanical Products; Tyco Fire Products LP.
 - 3) Shurjoint Piping Products.
 - 4) Victaulic Company.
 - 5) **<Insert manufacturer's name>**.
 - 6) or approved equal.
 - b. Specifically listed for carbon-dioxide fire-extinguishing systems.
 - c. Ductile-Iron Fittings for Grooved-End Steel Pipe: ASTM A 536, [**galvanized**] [**or**] [**painted**].
 - d. Malleable-Iron Fittings for Grooved-End Steel Pipe: ASTM A 47/A 47M.
 - e. Forged-Steel Fittings for Grooved-End Steel Pipe: ASTM A 234/A 234M or ASTM A 106/A 106M steel pipes with dimensions matching ASTM A 53/A 53M steel pipe, and complying with AWWA C606 for grooved ends.
 - f. Mechanical Couplings for Grooved-End Steel Piping: ASTM F 1476, Type I, [**Class 1 - rigid**] [**and**] [**Class 2 - flexible**]. Include ferrous housing sections with continuous curved keys, EPDM rubber gasket suitable for hot and cold water, and bolts and nuts.
- B. Stainless-Steel Pipe: ASTM A 269/A 269M or ASTM A 312/A 312M, [**Grade TP304**] [**Grade TP316**] [**Grade TP304L**] [**or**] [**Grade TP316L**].
1. Stainless-Steel Fittings: ASTM A 182/A 182M, Class 2000.

- a. Threaded: [**Type 304**] [or] [**Type 316**].
- b. Welded: [**Type 304**] [**Type 316**] [**Type 304L**] [or] [**Type 316L**].

2.6 FLEXIBLE-HOSE CONNECTORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Ansul Incorporated.
 2. Chemetron Fire Systems; a UTC Fire & Security company.
 3. **<Insert manufacturer's name>**.
 4. or approved equal.
- B. Description: Teflon-lined, braided hose with stainless-steel wire-braid covering.
 1. Design Standard: ASME B31.1.
 2. Internal Pressure: **450 psi** (3101 kPa).
 3. Burst Pressure: **1800 psi** (12 411 kPa) minimum.
 4. End Connections: Threaded male couplings.

2.7 INSULATED CARBON-DIOXIDE CONTAINERS

- A. Containers:
 1. Minimum Manufacturing Standard: ASME Boiler & Pressure Vessel Code, Section VIII, Division 1.
 2. Housing: [**Steel**] [or] [**fiberglass**].
 3. Working Pressure: **363 psi** (2503 kPa).
 4. Maintenance Pressure Requirements: **300 psi** (2068 kPa) and **0 deg F** (minus 18 deg C) with a design pressure of **325 psi** (2241 kPa.)
 5. Bulk System Storage Container Nominal Size: [**3/4 ton** (680 kg)] [**2 tons** (1814 kg)] [**10 tons** (9070 kg)] **<Insert weight>**.
 6. Mini-Bulk System Storage Container Nominal Size: [**800 lb** (363 kg)] [**1000 lb** (454 kg)] [**1500 lb** (680 kg)] **<Insert weight>**.
- B. Valves:
 1. Manual shutoff valve.
 2. Bleeder Valve: [**341 psi** (2352 kPa)] **<Insert pressure>**.
 3. Relief Valve: [**357 psi** (2462 kPa)] **<Insert pressure>**.
- C. Gages:
 1. Liquid level.
 2. Pressure.
- D. High- and Low-Pressure Supervisory Alarm:

1. Maximum Pressure Set Point: 90 percent of allowable working pressure.
2. Minimum Pressure Set Point: **250 psi** (1724 kPa).

E. Refrigeration System:

1. Maintenance Pressure: **300 psi** (2068 kPa) at maximum expected temperature.
2. Pressure Switch:
 - a. Start Pressure: **295 psi** (2034 kPa).
 - b. Stop Pressure: **305 psi** (2103 kPa).
3. Compressor: Commercial grade.
4. Refrigeration Coil Location: Lengthwise near top.
5. Motor:
 - a. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 210513 "Common Motor Requirements for Fire Suppression Equipment."
 - b. Efficiency: Premium efficient.
 - c. Electrical Characteristics:
 - 1) Horsepower: **[1] [1-1/2] [3] <Insert horsepower>**.
 - 2) Volts: **[120] [208] [230] [460] <Insert value>**.
 - 3) Phase: **[Single] [Poly]**.
 - 4) Hertz: 60.
 - 5) Full-Load Amperes: **<Insert value>**.
 - 6) Minimum Circuit Ampacity: **<Insert value>**.
 - 7) Maximum Overcurrent Protection: **<Insert amperage>**.

F. Heating System:

1. Maintenance Temperature: **32 deg F** (0 deg C) at minimum expected temperature.

2.8 DISTRIBUTION VALVES

A. Selector Valve:

1. Actuation: Pneumatic, electro pneumatic, or manual.
2. Design: **[Ball] [Butterfly]**, with spring-return actuator.
 - a. Minimum Burst Pressure: **5000 psi** (34 474 kPa).
 - b. Minimum Pressure without Permanent Distortion: **1800 psi** (12 411 kPa).

B. Master Valve:

1. Actuation: Pneumatic, electro pneumatic, or manual.
2. Design: **[Ball] [butterfly]**, with spring-return actuator.

- a. Minimum burst pressure: **5000 psi** (34 474 kPa).
- b. Minimum pressure without permanent distortion: **1800 psi** (12 411 kPa).

2.9 DISCHARGE NOZZLES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Ansul Incorporated.
 2. Chemetron Fire Systems; a UTC Fire & Security company.
 3. **<Insert manufacturer's name>**.
 4. or approved equal.
- B. Equipment manufacturer's standard material of working pressure, size, discharge pattern, and capacity required for application.
- C. Corrosion-resistant metal.
- D. Stamped with orifice size and type.

2.10 HANGERS AND SUPPORTS

- A. Carbon-Steel Pipe Hangers and Supports:
 1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
 2. Galvanized Metallic Coatings: Pregalvanized or hot dipped.
 3. Nonmetallic Coatings: Plastic coating, jacket, or liner.
 4. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
 5. Hanger Rods: Continuous-thread rod with compatible nuts and washers.
- B. Stainless-Steel Pipe Hangers and Supports:
 1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
 2. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
 3. Hanger Rods: Continuous-thread rod with compatible nuts and washers.

2.11 CONTROL PANELS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Ansul Incorporated.
 2. Chemetron Fire Systems; a UTC Fire & Security company.
 3. **<Insert manufacturer's name>**.
 4. or approved equal.

- B. Description: FM Approved or listed and labeled by a nationally recognized testing agency acceptable to authorities having jurisdiction, including equipment and features required for testing, supervising, and operating fire-extinguishing system.
- C. Power Requirements: 120/240-V ac; with electrical contacts for connection to system components and fire-alarm system, and transformer or rectifier as needed to produce power at voltage required for accessories and alarm devices.

2.12 DETECTION DEVICES

- A. General Requirements for Detection Devices:
 - 1. Comply with NFPA 12, NFPA 72, and UL 268.
 - 2. 24-V dc, nominal.
- B. Ionization Detectors: Dual-chamber type, having sampling and referencing chambers, with smoke-sensing element.
- C. Photoelectric Detectors: LED light source and silicon photodiode receiving element.
- D. Remote Air-Sampling Detector System: Include air-sampling pipe network, laser-based photoelectric detector, sample transport fan, and control unit.
 - 1. Pipe Network: CPVC tubing connects control unit with calibrated sampling holes.
 - 2. Smoke Detector: Particle-counting type with continuous laser beam. Sensitivity adjustable to a minimum of four preset values.
 - 3. Sample Transport Fan: Centrifugal type, creating a minimum static pressure of **0.05 inch wg** (12.5 Pa) at all sampling ports.
 - 4. Control Unit: Multizone unit as indicated on Drawings. Include same system power supply, supervision, and alarm features as specified for the control panel plus separate trouble indication for airflow and detector problems.
 - 5. Signals to the Central Fire-Alarm Control Panel: Local system trouble is reported to the central fire-alarm control panel as a composite "trouble" signal. Alarms on each system zone are individually reported to the central fire-alarm control panel as separately identified zones.

2.13 MANUAL STATIONS

- A. Description: [**Surface**] [**Semirecessed**], FM Approved or listed and labeled by a nationally recognized testing agency acceptable to authorities having jurisdiction, with clear plastic hinged cover, 120-V ac or low voltage compatible with controls. Include contacts for connection to control panel.
- B. Manual Release: "MANUAL RELEASE" caption, with red finish. Unit can manually discharge extinguishing agent with operating device that remains engaged until unlocked.
- C. Abort Switch: "ABORT" caption, momentary contact, with green finish.

- D. EPO Switch: "EPO" caption, with yellow finish.

2.14 SWITCHES

- A. Description: FM Approved or listed and labeled by a nationally recognized testing agency acceptable to authorities having jurisdiction.
 1. Control Voltage: [**120-V ac**] <Insert electrical rating> compatible with controls.
 2. Include contacts for connection to control panel.
 3. Discharge Pressure Switches: Pneumatic operation for shutdown of equipment.
 4. Power Transfer Switches: Key-operation selector for transfer of release circuit signal from main supply to reserve supply.
 5. Door Closers: Magnetic retaining and release device or electrical interlock to cause the door operator to drive the door closed.

2.15 ALARM DEVICES

- A. Description: FM Approved or listed and labeled by a nationally recognized testing agency acceptable to authorities having jurisdiction; low voltage and surface mounting.
- B. Comply with requirements in [**Section 283111 "Digital, Addressable Fire-Alarm System"**] [**Section 283112 "Zoned (DC Loop) Fire-Alarm System"**] for alarm and monitoring devices.
- C. Bells: Minimum 6-inch (150-mm) diameter.
- D. Horns: 90 to 94 dBA.
- E. Strobe Lights: Translucent lens, with "FIRE" or similar caption.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with hazard-area leakage requirements, installation tolerances, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Comply with requirements in NFPA 12.

- B. Drawing plans, schematics, and diagrams indicate general location and arrangement of gas piping. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, air-compressor sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on coordination drawings.
- C. Install piping concealed from view and protected from physical contact by building occupants unless otherwise indicated and except in equipment rooms and service areas.
- D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal, and coordinate with other services occupying that space.
- F. Install piping adjacent to equipment and specialties to allow service and maintenance.
- G. Install nipples, unions, special fittings, and valves with pressure ratings same as or higher than system pressure rating.
- H. Install piping to permit valve servicing.
- I. Install piping free of sags and bends.
- J. Install fittings for changes in direction and for branch connections.
- K. Install pipe and fittings, valves, and discharge nozzles according to requirements listed in NFPA 12, Section "Distribution Systems."
 - 1. Install pressure relief devices in piping systems.
 - 2. Install seismic restraints for carbon-dioxide containers and piping systems.
 - 3. Install control panels, detection system components, alarms, and accessories, complying with requirements of NFPA 12, Section "Detection, Actuation, and Control," as required for supervised system application.
- L. Install dirt trap, minimum **2 inches** (51 mm) long, with capped nipple at end of each pipe run.
- M. Install carbon-dioxide containers in racks anchored to substrate.

3.3 HANGERS AND SUPPORTS

- A. Field fabricate hangers and supports from ASTM A 36/A 36M, carbon-steel shapes selected for loads being supported. Weld steel according to AWS D1.1/D1.1M.
- B. Install hangers and supports complete with necessary attachments, inserts, bolts, rods, nuts, washers, and other accessories.

- C. Equipment Support Installation: Fabricate from welded-structural-steel shapes.
- D. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.
- E. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, [NPS 2-1/2 (DN 65)] <Insert size> and larger, and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms and install reinforcing bars through openings at top of inserts.
- F. Load Distribution: Install hangers and supports so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.
- G. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes to facilitate draining moisture and to not exceed maximum pipe deflections allowed by ASME B31.9 for building-services piping.
- H. Install carbon-steel hangers and supports for steel piping and stainless-steel hangers and supports for stainless-steel piping.
- I. Vertical Piping: MSS Type 8 or 42, clamps.
- J. Individual, Straight, Horizontal Piping Runs:
1. 100 Feet (30 m) and Less: MSS Type 1, adjustable, steel, clevis hangers.
 2. Longer Than 100 Feet (30 m): MSS Type 43, adjustable, roller hangers.
- K. Base of Vertical Piping: MSS Type 52, spring hangers.
- L. Support horizontal piping within [12 inches (300 mm)] <Insert dimension> of each fitting and coupling.
- M. Rod diameter may be reduced one size for double-rod hangers, with 3/8-inch- (10-mm-) minimum rods.
- N. Maximum Span between Hangers and Piping with Threaded or Welded Joints:
1. NPS 1/4 to NPS 1/2 (DN 8 to DN 15): 60 inches (1500 mm) with 3/8-inch (10-mm) rod.
 2. NPS 3/4 (DN 20): 72 inches (1800 mm) with 3/8-inch (10-mm) rod.
 3. NPS 1 (DN 25): 84 inches (2100 mm) with 3/8-inch (10-mm) rod.
 4. NPS 1-1/4 (DN 32): 96 inches (2400 mm) with 3/8-inch (10-mm) rod.
 5. NPS 1-1/2 (DN 40): 108 inches (2700 mm) with 3/8-inch (10-mm) rod.
 6. NPS 2 (DN 50): 10 feet (3 m) with 3/8-inch (10-mm) rod.
 7. NPS 2-1/2 (DN 65): 11 feet (3.4 m) with 3/8-inch (10-mm) rod.
 8. NPS 3 (DN 80): 12 feet (3.6 m) with 1/2-inch (13-mm) rod.
 9. NPS 4 (DN 100): 14 feet (4.3 m) with 1/2-inch (13-mm) rod.

- O. Maximum Span between Hangers and Piping with Mechanical Joints:
 - 1. NPS 3/4 to NPS 2 (DN 20 to DN 50): 84 inches (2100 mm) with 3/8-inch (10-mm) rod.
 - 2. NPS 3 to NPS 4 (DN 80 to DN 100): 10 feet (3 m) with 3/8-inch (10-mm) rod.
- P. Install seismic restraints on piping. Comply with requirements in Section 210548 "Vibration and Seismic Controls for Fire-Suppression Piping and Equipment."

3.4 CONNECTIONS

- A. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Where installing piping adjacent to equipment, allow space for service and maintenance.
- C. Connect electrical devices to control panel and to building's fire-alarm system. Comply with requirements in [**Section 283111 "Digital, Addressable Fire-Alarm System"**] [**Section 283112 "Zoned (DC Loop) Fire-Alarm System"**] for fire-alarm system wiring.
- D. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables" for electrical power wiring.
- E. Piping Connections for NPS 1/4 to 1/2 (DN 6 to DN 12): Braided stainless-steel hose with threaded male couplings.

3.5 IDENTIFICATION

- A. Identify system components and equipment. Comply with requirements for identification specified in Section 210553 "Identification for Fire-Suppression Piping and Equipment."
- B. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- C. Identify piping, extinguishing-agent containers, other equipment, and panels according to NFPA 12.
- D. Install signs at entry doors for protected areas to warn occupants that they are entering a room protected by a carbon-dioxide fire-extinguishing system.
- E. Install signs at entry doors to advise persons outside the room of the meaning of the horn(s), bell(s), and strobe light(s) outside the protected space.

3.6 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections according to NFPA 12[**with the assistance of a factory-authorized service representative**]:
1. Visual Inspections:
 - a. Inspect piping, equipment, and nozzles for proper size and location.
 - b. Verify that locations of alarms and manual emergency releases comply with approved Drawings.
 - c. Compare actual hazard configuration to original specification.
 - d. Inspect system for openings or other possible leakage paths.
 - e. Inspect labeling of devices and equipment for proper identification and nameplate data.
 2. Testing: After installing carbon-dioxide fire-extinguishing piping system and after electrical circuitry has been energized, test for compliance with requirements.
 - a. Perform nondestructive operational tests on all equipment.
 - b. Perform full-discharge test on all hazards.
 - c. Perform each electrical test and visual and mechanical inspection stated in NETA's "Standard for Acceptance Testing Specifications for Electrical Power Equipment and Systems," Sections "Inspection and Test Procedures" and "System Function Tests." Certify compliance with test parameters.
 - d. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 - e. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation. Remove malfunctioning units, replace with new units, and retest.
 - f. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- B. Carbon-dioxide fire-extinguishing system will be considered defective if it does not pass tests and inspections.
- C. Prepare test and inspection reports.

3.7 SYSTEM FILLING

- A. Preparation:
1. Verify that piping system installation is complete and clean.
 2. Check system for complete enclosure integrity.
 3. Check operation of ventilation and exhaust systems.
- B. Filling Procedures:

1. Fill extinguishing-agent containers with extinguishing agent, and pressurize to indicated charging pressure.
2. Install filled extinguishing-agent containers.
3. Energize circuits.

C. Adjust operating controls.

3.8 MAINTENANCE SERVICE

- A. Maintenance Service: Beginning at Substantial Completion, maintenance service shall include **[three] [six] [nine] [12]** months' full maintenance by **[skilled employees of carbon-dioxide system Installer] [manufacturer's authorized service representative]**. Include **[monthly] [quarterly] [semiannual] [annual]** preventive maintenance, repair, or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper carbon-dioxide fire-extinguishing system operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

3.9 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain carbon-dioxide fire-extinguishing system.

Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 212113.16

SECTION 212200 - CLEAN-AGENT FIRE-EXTINGUISHING SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Piping and piping specialties.
2. Extinguishing-agent containers.
3. Extinguishing agent.
4. Detection and alarm devices.
5. Control and alarm panels.
6. Accessories.
7. Connection devices for and wiring between system components.
8. Connection devices for power and integration into building's fire-alarm system.

B. DESCRIPTION OF WORK

1. Design and installation of an engineered fire detection and clean-agent total flooding, gaseous agent, fire suppression system.
2. The FPWC shall provide all special tools required for installation or maintenance for the equipment provided. Any conflicts in this specification or between this specification and the contract documents will require the most stringent requirement to apply.
3. Drawings: The contract drawings indicate the general arrangements of the areas to receive detection and clean-agent protection. Contractor is to review all drawings so that all items affecting the operation of the fire detection/clean-agent suppression system, such as equipment location, air diffusers, damper closures, and door openings, are considered in the design of the engineered system.
4. Assure design includes adequate dampers and venting to prevent over-pressurization of the space during clean-agent release.
5. If conflicts occur in this specification or between this specification and the contract documents, most stringent requirement shall apply.
6. Furnish all engineering design and materials for a complete fire detection/clean-agent suppression system including charged clean-agent storage cylinders (both active and reserve), nozzles, restorable release head/s, control panel, detectors, wiring, annunciators, project signage, alarm and all other equipment necessary for a complete operational system.
7. Major system components shall be produced by manufacturer's indicated, or

equal. Substitutions shall comply with all specifications requirements. Design, installation, and service of clean-agent suppression systems shall be supervised by an authorized manufacturer distributor.

8. Contractor shall, as a minimum, provide 24-hour emergency service, 7 days a week and shall be able to respond to an emergency situation within two (2) hours of receiving an emergency trouble call. In addition, Contractor shall maintain liability insurance as required by the General Conditions

C. RELATED SECTIONS

1. Section 210500 "Common Work Results for Fire Suppression".
2. Section 210517 "Sleeves and Sleeve Seals for Fire Suppression Piping".
3. Section 210518 "Escutcheons for Fire Suppression Piping".
4. Section 210529 "Hangers & Supports for Fire Suppression Piping and Equipment".
5. Section 210553 "Identification for Fire Suppression Piping and Equipment".
6. Section 210529 "Supports and Hangers for Fire Suppression Piping".
7. Section 210553 "Identification for Fire Suppression Piping and Equipment".
8. Section 283100 "Intelligent Life-Safety Fire-Management System".

- D. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 REFERENCE STANDARDS AND APPLICABLE PUBLICATIONS

- A. The following publications of the issues listed below, but referred to thereafter by basic designation only, form a part of this specification to the extent indicated by the reference thereto, latest editions:

1. National Fire Protection Association (NFPA):
 - a. No. 2001 Clean Agent Fire Extinguishing Systems.
 - b. No. 70 National Electric Code.
 - c. No. 72 National Fire Alarm Code.
2. FM Global and appropriate data sheets.
3. Underwriters Laboratories, Inc. (UL) Publication.
 - a. Fire Protection Equipment Directory with quarterly supplements.
4. Department of Transportation (DOT).
 - a. Title 49 Code of Federal Regulations Parts 100 to 199.
 - b. Transportation of Hazardous Materials, DOT3AAZ300 or 3AAZI ST.
5. National Electrical Manufacturers Association (NEMA) Publication. Enclosures for Industrial Controls and Systems.
6. Industrial Risk Insurers Interpretive Guide (Detection & Controls).
7. International Building Code (IBC) with the Denver Amendments.
8. International Fire Code (IFC) with the Denver Amendments.

9. U.S. Environmental Protection Agency, Protection of Stratospheric Ozone 59 FR 13044, March 18, 1994 (Final SNAP Ruling).
10. Requirements of the Authority Having Jurisdiction (AHJ).
11. All other appropriate insurance authorities.

1.4 PROJECT REQUIREMENTS

- A. This installation shall be made in strict accordance with the drawings, specifications, and applicable National Fire Protection Association Standards. All equipment and devices used shall be listed in both the UL Fire Equipment Directory and the FM Global data sheets.
- B. Design and installation of the fire detection/clean-agent suppression system shall be in strict accordance with the following guidelines and regulatory agencies:
 1. NFPA 2001 Clean Agent Fire Extinguishing Systems
 2. NFPA 72 National Fire Alarm Code, Latest Edition
 3. NFPA 70 National Electric Codes, Latest Edition
 4. Americans with Disabilities Act, Title 24, Latest Edition

1.5 DEFINITIONS

- A. ATS: Acceptance Testing Specifications.
- B. EPO: Emergency Power Off.

1.6 ACTION SUBMITTALS

- A. The following shall be submitted for approval within 21 days of award and prior to delivery of materials:
 1. Material and equipment information shall include manufacturer's catalog cut sheet and technical data for each component or device used in the system. This shall include, but not be limited to, the following:
 - a. Detectors.
 - b. Manual discharge switches.
 - c. Control panel.
 - d. Release devices.
 - e. Alarm devices.
 - f. Agent storage cylinders.
 - g. Mounting brackets.
 - h. Discharge nozzles.
 - i. Abort stations.
 - j. Piping isometrics.
 - k. Flow calculations.

- B. Provide information outlining the warranty of each component or device used in the

system.

- C. Provide information outlining the operation and maintenance procedures that will be required of the DEN Project Manager. This information shall explain any special knowledge or tools the DEN Project Manager will be required to employ and all spare parts that should be readily available.
- D. Drawings shall indicate locations, installation details, and operation details of all equipment associated with the clean-agent system. Floor plans shall be provided showing equipment locations, piping, point-to-point wiring, and other details as required. Floor plans shall be drawn to a scale of not less than 1/8"=1'-0". Elevations, cross sections, and other details shall be drawn to a larger scale as required. Isometric piping layouts shall be provided with the shop drawings. In addition, point-to-point electrical layout drawings shall be provided.
- E. Sequence of operation, electrical schematics, and connection diagrams shall be provided to completely describe the operation of the clean-agent system controls.
- F. Submit working plans and product data under provisions of Division 01. Submittal shall include drawings, flow calculations, flow reference points, detailed pip layout, hangers and supports, components and accessories and other items as defined by NFPA 13 & 2001. Indicate pipe materials used, jointing methods, supports, floor and wall penetration seals. Indicate installation, layout, weights, mounting and support details, and piping connections.
 - 1. Include plans, elevations, sections, details, and attachments to other work.
 - 2. Include design calculations.
 - 3. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 4. Wiring Diagrams: For power, signal, and control wiring.
- G. Working plans drawings shall be submitted in Revit format in hard copy and on Compact Disk. (2) sets of full size drawings (34x44) and (1) Compact Disk containing all drawing files shall be submitted to the DEN Life Safety Team as part of each submittal.
- H. Delegated-Design Submittal: For clean-agent fire-extinguishing system signed and sealed by the qualified professional engineer.
 - 1. Indicate compliance with performance requirements and design criteria, including analysis data.
 - 2. Include design calculations for weight, volume, and concentration of extinguishing agent required for each hazard area.
 - 3. Indicate the Following on Reflected Ceiling Plans:
 - a. Ceiling penetrations and ceiling-mounted items.
 - b. Extinguishing-agent containers if mounted above floor, piping and discharge nozzles, detectors, and accessories.
 - c. Method of attaching hangers to building structure.

- d. Other ceiling-mounted items including light fixtures, diffusers, grilles, speakers, sprinklers, and access panels.
4. Indicate the Following on Occupied Work Area Plans:
 - a. Controls and alarms.
 - b. Extinguishing-agent containers, piping, and discharge nozzles if mounted in space, detectors, and accessories.
 - c. Equipment and furnishings.
 5. Indicate the Following on Access Floor Space Plans:
 - a. Extinguishing-agent containers, piping and discharge nozzles, detectors, and accessories.
 - b. Method of supporting piping.
 6. Indicate the Following on Ceiling Plans:
 - a. Extinguishing-agent containers, piping and discharge nozzles, detectors, and accessories.
 - b. Method of supporting piping.
 - c. Other equipment located in the ceiling space that is being protected including sprinkler piping, HVAC equipment, raceways, or conduit.
- I. Product data and ratings for each type nozzle, valve, piping specialty, fire protection specialty, detector, manual pull box, control panel graphic panel and all specified items.
 1. Include data substantiating that materials comply with requirements.
 - J. Final Submittal: Working plans submitted for approval shall have the signed wet stamp of registered Fire Protection Engineer licensed in the State of Colorado (or N.I.C.E.T 4), certifying that the fire sprinkler system has been designed and flow calculated in compliance with NFPA and governing authorities requirements.
 - K. Obtain DEN Life Safety Team review and stamp prior to submittal for permit.
 - L. Submit working plans and product data to Denver Fire Department for approval. Subject to approval, submit copy of approved submittal and permit to the DEN Project Manager.
 - M. Submit additional non returnable copies of current permits and agency approved working plan drawings with System Interruption Request.
 - N. Maintenance data for each type nozzle, valve, piping specialty, fire protection specialty, detector, manual pull box, control panel, graphic panel and all specified items shall be included in operating and maintenance manual specified in Division 01 and Division 15 Sections.
 - O. LEED Submittals:

1. Product Data for Credit EA 4: Documentation indicating that clean agents comply.

1.7 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Sprinkler systems, drawn to scale, on which the following items are shown and coordinated with each other, using input from Installers of the items involved:
 1. Domestic water piping.
 2. Items Penetrating Finished Ceiling Include the Following:
 - a. Lighting fixtures.
 - b. Air outlets and inlets.
 - c. **<Insert item>**.
 3. **<Insert other items if required>**.
- B. Installer qualifications, as per requirements in Quality Assurance article in this Section.
- C. Current Welders' qualification certificates and procedures. Reference Division 5.
- D. Test reports and certificates including "Contractor's Material and Test Certificate for Aboveground Piping" as described in NFPA 13 and per the requirements of NFPA 2001.
- E. Permit Approved Drawings: Working plans, prepared according to NFPA 2001, that have been approved by authorities having jurisdiction. Include design calculations.
- F. Seismic Qualification Certificates: For extinguishing-agent containers and control panels from manufacturer.
 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- G. Field quality-control reports.

1.8 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For special agent system to include in emergency, operation, and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.9 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents. Deliver extra materials to Owner.
1. Detection Devices: Not less than 20 percent of amount of each type installed.
 2. Container Valves: Not less than 10 percent of amount of each size and type installed.
 3. Nozzles: Not less than 20 percent of amount of each type installed.
 4. Extinguishing Agent: Not less than 100 percent of amount installed in largest hazard area. Include pressure-rated containers with valves.

1.10 QUALITY ASSURANCE

- A. Installer Qualifications:
1. Installer's Qualifications: Firms qualified to install and alter fire protection piping, equipment, specialties, and accessories, and repair and service equipment.
 2. A qualified firm is one that is experienced, with minimum of five (5) previous projects similar in size and scope to this Project, in such work, familiar with precautions required, and in compliance with the requirements of the authority having jurisdiction. The firm shall be in possession of City and County of Denver Fire Protection License Class A. Refer to Section 014225 "Referenced Standards" for definition of Installer.
 - a. The qualified installer shall be licensed for the design and installation for the specific type of system in the City and County of Denver and the State of Colorado and have been in business under the current name for five (5) years.
 - b. Submit evidence of such qualifications to the DEN Project Manager.
- B. Manufacturer's Qualifications:
1. Company specializing in manufacturing the products specified in this section with minimum five (5) years documented experience.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. FM Global Compliance: Provide components that are FM Approved and that are listed in FM Global's "Approval Guide."
- E. UL Compliance: Provide equipment listed in UL's "Fire Protection Equipment Directory."

1.11 SYSTEM DESCRIPTION AND OPERATION

- A. The system shall be an clean-agent total flooding, gaseous, clean agent, fire suppression system designed to provide a uniform concentration of clean-agent for the protected area.
1. The amount of clean-agent to be provided shall be the amount required to obtain a uniform (minimum) concentration of **[37.5] [Insert number]** percent for ten (10) minutes, at an altitude of 5500 feet above sea level. Take into consideration such factors as unclosable openings, if any, "rundown" time of fans, time required for dampers to close, requirements for any additional dampers, and any other feature of the facility that could affect concentration. The design concentration shall be by volume at 70 degrees F.
- B. Cross-zoned or Counting Zone Smoke Detection: The clean-agent system shall be automatically actuated by either counting zone detection circuits or cross-zoned detection circuits. Smoke detectors shall be photoelectric with compatibility listings for use with the control unit. Smoke detectors shall be installed per manufacturer's requirements and applicable codes. The detectors shall be alternated throughout the protected area with the system requiring two (2) detectors in alarm prior to automatic agent release.

1.12 SEQUENCE OF OPERATION

- A. Activation of a single **[verified]** smoke detector in the detection zone shall:
1. Cause a first stage alarm condition.
 2. Transmit a "pre-release alarm" signal from the system control panel to the building fire alarm main panel (FAMP) either directly or via fire alarm remote panel (FARP).
 3. The FAMP shall transmit an alarm condition to the central station monitoring site and start standard building alarm programming for one device.
 4. Light an LED on the activated detector.
 5. Light an LED on the control panel **[and the point lit graphic annunciator]**.
 6. The FAMP shall operate all dampers to contain the room and prepare for agent release. Close any main system dampers and/or establish room tightness to assure that the agent is controlled.
- B. Activation of a second **[verified]** smoke detector in the detection zone shall:
1. Cause a second stage (pre-discharge) alarm condition at the local site.
 2. Activate a pre-discharge audible signal in the detection zone at the local site.
 3. Light an LED on the activated detector.
 4. Light an LED on the control panel **[and the point lit graphic annunciator]**.
 5. Operate auxiliary contacts for HVAC shutdown and damper closure.
 6. Initiate a programmable time delay for Agent release. Upon completion of the Agent release time delay, the system shall:
 - a. Cause a discharge alarm condition.

7. Transmit a "Discharge" signal from the system control panel to the building fire alarm main panel (FAMP) either directly or via fire alarm remote panel (FARP):
 - a. Activate a discharge horn/strobe signal in the detection zone at the local site zone.
 - b. Activate discharge visual signals (strobes) outside the detection zone area entrances.
 - c. Operate auxiliary contacts for emergency power off (EPO) of all electrical equipment (excluding lighting and emergency circuits for life safety).
 - d. Energize the control solenoid for Agent release to the detection zone.

C. Activation of a manual discharge station in the detection zone shall:

1. Cause a first stage alarm condition.
2. Transmit a "pre-release alarm" signal from the system control panel to the building fire alarm main panel (FAMP) either directly or via fire alarm remote panel (FARP).
3. The FAMP shall transmit an alarm condition to the central station monitoring site and start standard building alarm programming for one device.
4. Light an LED on the activated detector.
5. Light an LED at the control panel [**and the point lit graphic annunciator**].
6. The FAMP shall operate all dampers to contain the room and prepare for agent re-release. Close any main system dampers and/or establish room tightness to assure that the agent is contained.
7. Cause a second stage (pre-discharge) alarm condition at the local site.
8. Activate a pre-discharge audible signal in the detection zone at the local site.
9. Light an LED on the activated detector.
10. Light an LED on the control panel [**and the point lit graphic annunciator**].
11. Operate auxiliary contacts for HVAC shutdown and damper closure.
12. Initiate a programmable time delay for Agent release. Upon completion of the Agent release time delay, the system shall:
 - a. Cause a discharge alarm condition.
13. Transmit a "discharge" signal from the system control panel to the building fire alarm main panel (FAMP) either directly or via fire alarm remote panel (FARP):
 - a. Activate a discharge horn/strobe signal in the detection zone at the local site zone.
 - b. Activate discharge visual signals (strobes) outside the detection zone area entrances.
 - c. Operate auxiliary contacts for emergency power off (EPO) of all electrical equipment (excluding lighting and emergency circuits for life safety).
 - d. Energize the control solenoid for Agent release to the detection zone.

1.13 SYSTEM ARRANGEMENT

- A. Fire suppression system shall be of the engineered, permanently piped, fixed nozzle type with all pertinent components provided by Ansul Fire Protection or equal.

- B. All agent storage cylinders shall be centrally located as vertical, free-standing cylinders with wall and/or floor mounted retaining brackets. Where multiple cylinders are required for the same hazard, a common manifold shall be employed. Cylinders shall not be mounted horizontally.
- C. On multiple cylinder arrangement (discharging into a common hazard) one cylinder shall be designated as the pilot cylinder and employ both the restorable/resetable electric and mechanical manual actuators. All remaining cylinders shall be pneumatically operated from the clean-agent discharge of the pilot cylinder into the manifold.
- D. Manifoldded cylinders shall employ a flexible discharge hose to facilitate installation and system maintenance. Each cylinder on a manifold shall also include an agent check valve installed to the manifold inlet. Arrange piping to allow any cylinder to be removed without disrupting service of the system.
- E. Panel location shall be as approved by Denver Fire Department.

1.14 FLOW CALCULATIONS

- A. Computerized verification of flow calculations shall be submitted for each clean-agent fire suppression system and include the following data as a minimum:
 - 1. Quantity of agent per nozzle.
 - 2. Type of nozzle.
 - 3. Pressure at nozzle (psi).
 - 4. Nozzle body nominal pipe size (inch).
 - 5. Number and size of cylinders.
 - 6. Total agent.
 - 7. Pipe size per pipe section.
 - 8. Pipe schedule per pipe section.
 - 9. Number, size and type of fitting per pipe section.
 - 10. Actual length per pipe section (feet).
 - 11. Equivalent length per pipe section (feet).
 - 12. Discharge time (seconds).

1.15 AUXILIARY COMPONENTS

- A. Double action manual releasing stations shall be provided at each exit of the protected area and shall, when activated, immediately release the clean-agent agent and cause all audible/visual alarms to activate. In addition, activation of the manual releasing stations shall cause immediate shutdown of air and power circuits.
- B. Abort stations shall be provided at each exit of the protected area and shall, when operated, interrupt the discharge of clean-agent and emergency power-off functions. The abort stations shall be momentary devices (dead-man) requiring constant pressure to maintain contact closure.
 - 1. Manual Releasing Station activation shall override any abort station. Abort station

operation shall be per FM Global guidelines.

- C. Graphic annunciator (required) shall be provided at the control panel location. The graphic annunciator shall be provided by the equipment manufacturer in an approved NEMA enclosure with keyed face plate. The graphic annunciator shall display the entire clean-agent protected area and shall indicate each smoke detector and its proximity. Smoke detectors, when activated, will individually annunciate at the graphic annunciator as follows:
 - 1. Ceiling Detector: Red LED
 - 2. Subfloor Detector: Amber LED
- D. Provide one (1) set, for each system, of the tools necessary to reset both the control head and booster and all other specified tools.

1.16 WARRANTY

- A. All clean-agent system components furnished under this Contract shall be guaranteed against defect in design, material, and workmanship for the full warranty time which is standard with the manufacturer and/or supplier but not less than one (1) year from the date of system acceptance by Owner.
- B. The installing contractor must guarantee the system against false actuation or leakage due to faulty equipment, design, or workmanship for a period of one (1) year from final acceptance. In the event of clean-agent agent leakage or system discharge from any of the above conditions, the installing contractor shall completely recharge and recondition the system at no cost to the DEN Project Manager. In addition, the installing contractor shall be financially responsible for correcting all damages resulting from agent leakage or system discharge.

1.17 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 CLEAN-AGENT SYSTEMS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Ansul Incorporated.
 - 2. Chemetron Fire Systems; a UTC Fire & Security company.
 - 3. Fike Corporation.
 - 4. Pem All Fire Extinguisher Corporation; a division of Pem Systems Inc.

5. Pyro-Chem.
 6. Siemens Building Technologies, Inc.; Fire Safety Division.
 7. **<Insert manufacturer's name>**.
 8. or approved equal.
- B. The name of the manufacturer and the serial numbers shall appear on all major components.
- C. Description: Clean-agent fire-extinguishing system shall be an engineered system for total flooding of the hazard area including the room cavity above the ceiling, below the ceiling, and below the raised floor. System includes separate zones above and below the ceiling and beneath the raised floor. If smoke is detected below the raised floor, extinguishing agent shall be discharged in the underfloor zone only. If smoke is detected below the ceiling, extinguishing agent shall be discharged in zones above and below the ceiling and below the floor. If smoke is detected above the ceiling, extinguishing agent shall be discharged in the zone above the ceiling only.
- D. Delegated Design: Design clean-agent fire-extinguishing system and obtain approval from authorities having jurisdiction. Design system for Class A, B, and C fires as appropriate for areas being protected, and include safety factor. Use clean agent indicated and in concentration suitable for normally occupied areas.
- E. Performance Requirements: Discharge HFC 227ea within 10 seconds and maintain 7.1 percent concentration by volume at **70 deg F** (21 deg C) for 10-minute holding time in hazard areas.
1. HFC 227ea concentration in hazard areas greater than **[9.0] <Insert percent>** percent immediately after discharge or less than **[5.8] <Insert percent>** percent throughout holding time will not be accepted without written authorization from Owner and authorities having jurisdiction.
 2. System Capabilities: Minimum **620-psig** (4278-kPa) calculated working pressure and **360-psig** (2484-kPa) initial charging pressure.
- F. Performance Requirements: Discharge FK-5-1-12 within 10 seconds and maintain 6.6 percent concentration by volume at **70 deg F** (21 deg C) for 10-minute holding time in hazard areas.
1. FK-5-1-12 concentration in hazard areas greater than **[10.0] <Insert percent>** percent immediately after discharge or less than **[6.5] <Insert percent>** percent throughout holding time will not be accepted without written authorization from Owner and authorities having jurisdiction.
 2. System Capabilities: Minimum **620-psig** (4278-kPa) calculated working pressure and **360-psig** (2484-kPa) initial charging pressure.
- G. Performance Requirements: Discharge IG-541 within 60 seconds and maintain 38 percent concentration by volume at **70 deg F** (21 deg C) for 10-minute holding time in hazard areas.
1. IG-541 concentration in hazard areas greater than **[40] <Insert percent>** percent immediately after discharge or less than **[32] <Insert percent>** percent

- throughout holding time will not be accepted without written authorization from Owner and authorities having jurisdiction.
2. System Capabilities: Minimum **2175-psig** (15-MPa) calculated working pressure upstream from orifice union, minimum **1000-psig** (6895-kPa) calculated working pressure downstream from orifice union, and **2175-psig** (15-MPa) initial charging pressure.
- H. Cross-Zoned Detection: Devices located in two separate zones. Sound alarm on activating single-detection device, and discharge extinguishing agent on actuating single-detection device in other zone.
 - I. Verified Detection: Devices located in single zone. Sound alarm on activating single-detection device, and discharge extinguishing agent on actuating second-detection device.
 - J. Manual stations shall immediately discharge extinguishing agent when activated.
 - K. Operating abort switches will delay extinguishing-agent discharge while being activated, and switches must be reset to prevent agent discharge. Release of hand pressure on the switch will cause agent discharge if the time delay has expired.
 - L. EPO: Will terminate power to protected equipment immediately on actuation.
 - M. Low-Agent Pressure Switch: Initiate trouble alarm if sensing less than set pressure.
 - N. Power Transfer Switch: Transfer from normal to stand-by power source.
 - O. Seismic Performance: Fire-suppression piping and containers shall withstand the effects of earthquake motions determined according to **[ASCE/SEI 7] <Insert requirement>**.
 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."
- ## 2.2 PIPING MATERIALS
- A. See **["HFC 227ea Agent Piping Applications"] ["IG-541 Agent Piping Applications"] ["FK-5-1-12 Agent Piping Applications"]** Article for applications of pipe, tube, fitting, and joining materials.
 - B. Piping, Valves, and Discharge Nozzles: Comply with types and standards listed in NFPA 2001, Section "Distribution," for charging pressure of system.
- ## 2.3 PIPE AND FITTINGS
- A. System piping shall be of non-combustible materials having physical and chemical characteristics such that its integrity under stress can be predicted with reliability.

- B. As a minimum, piping materials shall be black steel pipe conforming to ASTM A-53A ERW or ASTM A-106A seamless.
- C. Under no conditions shall ordinary cast iron pipe, or steel pipe conforming to ASTM A-120 or ASTM A-531A-120 be used.
- D. Piping joints shall be suitable for the design conditions and shall be selected with consideration of joint tightness and mechanical strength.
- E. As a minimum, fittings beyond the orifice union/nipple shall be black, 300 lb. class fittings conforming to ANSI B-16.3. Ordinary cast iron fittings shall not be used.
- F. The system manifold up to the orifice union nipple must be constructed of Schedule 80 piping and 2000 lb. or 3000 lb. forged steel fittings. Distribution piping downstream of the orifice union must be a minimum of Schedule 40 with 300 lb. fittings.
- G. All piping shall comply with NFPA, latest edition.
- H. Piping shall be installed in accordance with good commercial practice to the appropriate codes, securely supported with UL Listed hangers and arranged with close attention to the design layout since deviations may alter the design flow performance as calculated.
- I. Piping shall be bracketed within 12" (.3 m) of all discharge nozzles.
- J. All piping shall be reamed, blown clear and swabbed with appropriate solvent to remove mill varnish and cutting oils before assembly.
- K. Multi-outlet fittings, other than tees, shall NOT be permitted.
- L. Assembly of all joints shall conform to the appropriate standards. Threaded pipe joints shall utilize Teflon tape applied to the male threads only
- M. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
 - 1. ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch (3.2-mm) maximum thickness unless thickness or specific material is indicated.
- N. Flange Bolts and Nuts: ASME B18.2.1, carbon steel.
- O. Welding Filler Metals: Comply with AWS D10.12M/D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- P. Steel, Keyed Couplings: UL 213, AWWA C606, approved or listed for clean-agent service, and matching steel-pipe dimensions. Include ASTM A 536, ductile-iron housing, rubber gasket, and steel bolts and nuts.

2.4 VALVES

A. General Valve Requirements:

1. UL listed or FM Approved for use in fire-protection systems.
2. Compatible with type of clean agent used.

B. Container Valves: With rupture disc or solenoid and manual-release lever, capable of immediate and total agent discharge and suitable for intended flow capacity.

C. Valves in Sections of Closed Piping and Manifolds: Fabricate to prevent entrapment of liquid, or install valve and separate pressure relief device.

D. Valves in Manifolds: Check valve; installed to prevent loss of extinguishing agent when container is removed from manifold.

2.5 VALVE ACTUATORS

A. Electric valve actuators shall be of brass construction and stackable design with swivel connections to allow removal of actuators for maintenance or testing.

B. Operation of actuators shall not require replacement of components. NO ELECTRO-EXPLOSIVE DEVICES may be used to actuate the valve assembly.

C. Electric actuators shall be the magnetic latch, continuous duty type for 24 VDC operation.

D. Actuation devices shall be UL listed and/or FM Global approved for use with the system.

2.6 DISCHARGE HOSE/CHECK VALVE

A. When manifolding, all cylinder assemblies shall include a flexible discharge hose and check valve for connection to the manifold inlet.

B. All hose/check valves shall be UL listed and/or FM Global approved for use with the CV-90 clean-agent valve as manufactured by Ansul Fire Protection.

2.7 EXTINGUISHING-AGENT CONTAINERS

A. Description: Steel tanks complying with ASME Boiler and Pressure Vessel Code: Section VIII, for unfired pressure vessels. Include minimum working-pressure rating that matches system charging pressure, valve, pressure switch, and pressure gage.

1. Finish: Manufacturer's standard red, epoxy paint.
2. Each cylinder shall be equipped with a pressure seat-type valve and gauge. The system shall utilize Ansul's CV-90 valve assemblies. When the system's capacity

exceeds 40 cylinders, a second pilot valve shall be provided and used for cylinder activation. Each valve shall be constructed of forged brass and shall attach to the cylinder providing a leak tight seal. Each valve shall also include a safety pressure relief device that provides relief at 3000-3360 PSI per CGA test methods.

3. Filling of the cylinder assembly shall be by Ansul Fire Protection or an authorized clean-agent systems distributor in conjunction with a factory authorized clean-agent agent filling station. Initial filling and recharge shall be performed in accordance with the manufacturer's established procedures and shall not require replacement components for normal service
4. Manifold: Fabricate with valves, pressure switches, and connections for multiple storage containers, as indicated.
5. Manifold: Fabricate with valves, pressure switches, selector switch, and connections for main- and reserve-supply banks of multiple storage containers.
6. Storage-Tank Brackets: Factory or field-fabricated retaining brackets consisting of steel straps and channels; suitable for container support, maintenance, and tank refilling or replacement.
 - a. Each cylinder assembly shall be furnished with a bracket made from welded steel. The brackets shall hold the cylinders in a saddle with a front bracket piece that secures the cylinders. The brackets shall be modular in design to allow added bracketing or stacking of cylinders depending on installation requirements.
 - b. Cylinder brackets shall be UL listed and/or FM Global approved for use with the system.

2.8 FIRE-EXTINGUISHING CLEAN AGENT

A. HFC 227ea Clean Agent: Heptafluoropropane.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. DuPont.
 - b. Great Lakes Chemical Corporation; a Chemtura company.
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.

B. FK-5-1-12 Clean Agent: Dodecafluoro-2-methylpentan-3-one.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. 3M.
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.

- C. IG-541 Clean Agent: Mixture of nitrogen, argon, and carbon dioxide inert gases.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ansul Incorporated.
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.

2.9 DISCHARGE NOZZLES

- A. Discharge nozzles shall be of two-piece construction and sized to provide flow rates in accordance with system design flow calculations.
- B. A nozzle inlet orifice plate shall be included. The orifice size shall be determined by a computerized UL listed flow calculation program.
- C. Orifice(s) shall be machined in the nozzle body to provide a horizontal discharge pattern based upon the approved coverage arrangements.
- D. Nozzles shall be permanently marked with the manufacturer's part number. The nozzles shall be threaded directly to the discharge piping without the use of special adapters.
- E. Nozzles shall be UL listed and FM Global approved as manufactured by Ansul Fire Protection.

2.10 MANIFOLD AND ORIFICE UNIONS

- A. An orifice union/nipple shall be included in the manifold to reduce pressure in the downstream pipe network.
- B. Orifice union/nipple assemblies shall be rated at 2000 lb. Class minimum.
- C. Orifice union/nipple assemblies shall be permanently marked with the manufacturer's orifice code. The union orifice/nipple shall be threaded directly to the manifold piping without the use of special adapters.
- D. Union orifice/nipple assemblies shall be UL Listed and/or FM Global Approved for use with the system.

2.11 CONTROL SYSTEMS - GENERAL

- A. All control systems shall be UL Listed or FM Global approved and be utilized with listed or approved compatible operating devices and shall be capable of the following features:
 - 1. Ground fault indication.

2. Supervised detection circuit(s).
3. Supervised alarm circuit(s).
4. Supervised release circuit(s).
5. Supervised manual pull circuit (if applicable).
6. Supervised primary power circuit.
7. Alarm overrides trouble logic.
8. Battery standby.
9. Front panel indicating lamps (LEDs).
10. Key lock steel enclosure.
11. Programmable time delay.
12. Programmable detection logic.
13. Prioritized trouble logic.
14. Microprocessor based logic.
15. History buffer.

2.12 CONTROL PANELS - AUTOPULSE FOUR CONTROL SYSTEM

- A. The Fire Alarm Control Panel (FACP) shall include an integral battery standby power supply. The control panel shall be listed as a "Releasing Device" and shall perform all the functions necessary to operate the clean-agent system including detection, actuation, and auxiliary system functions as outlined.
- B. The FACP shall be housed in a wall-mounted enclosure suitable for protecting electrical circuits. It shall be an 18 ga. metal cabinet with a hinged, locked door painted with an attractive finish. Provide six (6) keys for all panel enclosures. All panel enclosures shall be keyed the same.
- C. The FACP shall be capable of operating at either 120 VAC or 240 VAC, 50 or 60 Hz.
- D. The FACP shall provide an internal sounder to provide audible indication of status with distinctively different sounds for initiating circuit alarm, trouble condition and supervisory off-normal condition.
- E. The FACP shall include a self-contained, 24 VDC power supply including a battery charger.
- F. The FACP shall include the following additional features:
 1. Abort options including IRI method.
 2. Microcomputer based, circuit performance fully field programmable.
 3. History file records for 65 alarm, 65 trouble, and 2 service events.
 4. Backlit LCD display with 2 lines, 16 characters each, plus 3 LED indicators for alarm, trouble, and AC power.
 5. On-board keypad for direct user interface to program circuit performance.
 6. Optional RS 232 Communication Interface module for downloading a custom program created on a PC, retrieving a program from a control unit, and to retrieve history from control unit.
 7. Three (3) levels of security for user, service, and programming.
 8. Power limited circuits.

9. Four supervised circuits Style "B" or "D" Initiating or Style "Y" or "Z" indicating appliance circuits (Class "B" or "A").
10. Smoke detection circuit programmable as single zone, counting zone, cross zones, or alarm verification.
11. Output circuits protected with automatically resetting solid state polyfuse
12. Supervisory switch circuit capability.
13. Three service routines including system simulations, verification (walk test), and full function test.
14. Outputs can be disabled during service.
15. Self-diagnostics to pinpoint trouble.

G. Batteries:

1. Shall be 2- 12 volt, Gel-Cell type providing 24 VDC.
2. Batteries shall have sufficient capacity to power the fire detection, alarm, and release system for not less than 24 hours in standby plus 5 minutes in alarm upon a normal AC power failure.
3. The batteries are to be completely maintenance free. No liquids are required. Fluid level checks, refilling, spills, and leakage shall not be accepted.

2.13 DETECTION DEVICES

A. General Requirements for Detection Devices:

1. Comply with NFPA 2001, NFPA 72, and UL 268.
2. Smoke detectors shall be 24 VDC and shall be UL listed and F M Global approved.
3. Each detector shall include a visual status indicator, provide remote LED output, and include a built-in test capability.
4. The sensitivity shall be factory set per UL 268.
5. The detector cover and screen shall be easily removable for field cleaning.
6. A special vandal-resistant locking screw shall be provided to lock the head to the base.
7. The head-to-base connection shall be made by use of bifurcated contacts. Terminal connections to the base shall be the screw type that are accessible with the base installed on the mounting box.
8. Where specifically identified on the contract drawings, detector bases shall incorporate a relay with Form C contacts rated at 1 amp at 120 VAC or 2 amp at 28 VOC for remote LED alarm annunciation of the detector.
9. Ionization-type smoke detector shall be the dual chamber type and compatible with the Ansul control system. The detector shall have an LED in its base, which is illuminated in a steady-on mode when in alarm and pulse mode when in standby. Reset of the detector shall be performed by the control unit reset switch.
10. The design of the ionization detector compensating circuits shall provide stable operation with regard to minor changes in temperature, humidity, and atmospheric conditions.
11. Photoelectric-type smoke detector shall be the light reflective type and compatible with the Ansul control system. The detector shall have an LED in its base, which is illuminated in a steady-on mode when in alarm and pulse mode

when in standby. Reset of the detector shall be performed by the control unit reset switch.

12. The design of the photoelectric detector compensating circuits shall provide stable operation with regard to minor changes in temperature, humidity, and atmospheric conditions.
13. Photoelectric-type smoke detector with heat detector shall be the light reflective type and compatible with the Ansul control system. The detector shall have an LED in its base, which is illuminated in a steady-on mode when in alarm and pulse mode when in standby. Reset of the detector shall be performed by the control unit reset switch.

2.14 INDICATING APPLIANCES

A. Sounder/Strobe Combination:

1. The sounder/strobe combination shall operate on 24 VDC and shall be approved for use with the listed control system.
2. The sounder/strobe combination shall be polarized and powered from the control unit.
3. The device shall be UL listed or FM Global approved.
4. The strobe shall be listed to UL Standard 1971 for the Hearing Impaired, approved for Fire Protective Service, and rated per NFPA and ADA requirements.
5. The sounder shall have eight (8) tone options selected by means of programming clips.

B. Strobe:

1. The strobe shall operate at 24 VDC and shall be approved for use with the listed control system.
2. The strobe shall be polarized and powered from the control unit.
3. The strobe shall be UL listed or FM approved.
4. The strobe shall be listed to UL Standard UL 1971 for the Hearing Impaired, approved for Fire Protective Service and rated per NFPA and ADA requirements.

C. Sounder:

1. The sounder shall operate at 24 VDC and shall be approved for use with the listed control system.
2. The sounder shall be polarized and powered from the control unit.
3. The device shall be UL listed or F M Global approved.
4. The sounder shall have eight (8) tone options selected by means of programming clips.

D. Remote Air-Sampling Detector System: Includes air-sampling pipe network, a laser-based photoelectric detector, a sample transport fan, and a control unit.

1. Pipe Network: CPVC tubing connects control unit with calibrated sampling holes.
2. Smoke Detector: Particle-counting type with continuous laser beam. Sensitivity adjustable to a minimum of four preset values.

3. Sample Transport Fan: Centrifugal type, creating a minimum static pressure of 0.05-inch wg (12.5 Pa) at all sampling ports.
 4. Control Unit: Multizone unit as indicated on Drawings. Provide same system power supply, supervision, and alarm features as specified for the control panel plus separate trouble indication for airflow and detector problems.
- E. Signals to the Central Fire Alarm Control Panel: Any type of local system trouble is reported to the central fire alarm control panel as a composite "trouble" signal. Alarms on each system zone are individually reported to the central fire alarm control panel as separately identified

2.15 MANUAL STATIONS

A. General Requirements for Manual Stations:

1. The manual pull stations shall be provided for the release (electrical) of the fire suppression system in case of an emergency.
2. The device shall be UL and FM Global listed.
3. Manual stations shall be metal with clearly visible operating instructions provided on the cover. The word FIRE shall appear on the front and both sides of the stations.
4. Operation shall require two (2) actions.
5. Manual stations shall be re-setable with a key. Provide two (2) keys for each device. The key shall match the cabinet enclosure key.
6. Abort Switch: "ABORT" caption, momentary contact, with green finish.
7. EPO Switch: "EPO" caption, with yellow finish.

2.16 SWITCHES, GENERAL

- A. Description: FM Approved or NRTL listed, where available, [120-V] <Insert value> ac or low voltage compatible with controls. Include contacts for connection to control panel.

2.17 ABORT SWITCH

- A. The abort switch shall be used where an investigative delay is desired between detection and actuation of the fire suppression system.
- B. The switch shall be a momentary-contact "dead-man" type switch requiring constant pressure to transfer one set of contacts. Clear operating instructions shall be provided at the abort switch.
- C. This switch shall be rated at 28 VDC @ 1.1 amp make/break or 6 amp continuous carry.
- D. The terminal connections shall be of the screw type.

2.18 MAINTENANCE LOCK-OUT SWITCH

- A. The maintenance lock-out switch shall be used where it is desired to disable the fire suppression system during routine maintenance.
- B. This switch shall be key operated allowing removal of the key in either the "Normal" or "Lock-Out" position. A red indicator lamp shall be included on the switch assembly to be illuminated when in the "Lock-Out" position. The control unit is to indicate a trouble condition when in the "Lock-Out" position.
- C. The switch shall include one (1) set of normally open and one (1) set of normally closed contacts rated at 28 VDC @ 1.1 amp make/break or 6 amp continuous carry.
- D. The terminal connections shall be of the screw type.

2.19 SELECTOR SWITCH

- A. The selector switch shall be used where a connected reserve is required.
- B. This switch shall be key operated allowing removal of the key in either the "Main" or "Reserve" position.
- C. This switch shall be rated at 28 VDC @ 1.1 amp make/break or 6 amp continuous carry.
- D. The terminal connections shall be of the screw type.

2.20 OTHER SWITCHES

- A. Low Agent Pressure Switches: Pneumatic operation.
- B. Power Transfer Switches: Key-operation selector, for transfer of release circuit signal from main supply to reserve supply.
- C. Door Closers: Magnetic retaining and release device or electrical interlock to cause the door operator to drive the door closed.

2.21 ALARM DEVICES

- A. Description: Listed and labeled by an NRTL or FM Approved, low voltage, and surface mounting. Comply with requirements in Section 283100 "Intelligent Life-Safety Fire-Management System for alarm and monitoring devices.
- B. Bells: Minimum 6-inch (150-mm) diameter.
- C. Horns: 90 to 94 dBA.
- D. Strobe Lights: Translucent lens, with "FIRE" or similar caption.

2.22 ELECTRICAL POWER AND WIRING

A. General Requirements for Electrical Power and Wiring:

1. Electrical power, wiring, and devices are specified in Division 26.
2. All electrical enclosures, raceways, and conduits shall be employed in accordance with applicable codes and intended use and contain only those electrical circuits associated with the fire detection and control system and shall not contain any circuit that is unrelated to the system.
3. Unless specifically provided otherwise in each case, all conductors shall be enclosed in steel conduit, rigid or thin wall as conditions dictate.
4. Any conduit or raceway exposed to weather or other similar conditions shall be properly sealed and installed to prevent damage. Provisions for draining and/or drying shall be employed.
5. NEMA rating and/or electrically hazardous classifications shall be observed and any equipment or materials installed must meet or exceed the requirements of service.
6. Any wiring shall be of the proper size to conduct the circuit current but shall not be smaller than #18 AWG unless otherwise specified for a given purpose. Wire that has scrapes, nicks, gouges or crushed insulation shall not be used. The use of aluminum wire is strictly prohibited.
7. Wire splice is not allowed.
8. All wire terminations shall be made with crimp terminals for stranded wire. Terminations for solid wire shall not use crimp terminals.
9. All electrical circuits shall be numerically tagged with suitable devices at the terminating point and/or splice. All circuit numbers shall correspond with the installation drawings.
10. The use of colored wires is required and is dictated by drawings and project specification.
11. White colored wire shall be used exclusively for the identification of the neutral conductor of an alternating current circuit.
12. Green colored wire shall be used exclusively for the identification of the earth ground conductor of an AC or DC circuit.
13. Comply with DEN wire color requirements for all other wires.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with hazard-area leakage requirements, installation tolerances, and other conditions affecting work performance.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 CLEAN-AGENT PIPING INSTALLATION

- A. Install clean-agent extinguishing piping and other components level and plumb, according to manufacturers' written instructions.
- B. Grooved Piping Joints: Groove pipe ends according to AWWA C606 dimensions. Assemble grooved-end steel pipe and steel, grooved-end fittings with steel, keyed couplings and lubricant according to manufacturer's written instructions.
- C. Install extinguishing-agent containers anchored to substrate.
- D. Install pipe and fittings, valves, and discharge nozzles according to requirements listed in NFPA 2001, Section "Distribution."
 - 1. Install valves designed to prevent entrapment of liquid, or install pressure relief devices in valved sections of piping systems.
 - 2. Support piping using supports and methods according to NFPA 13.
 - 3. Install seismic restraints for extinguishing-agent containers and piping systems.
 - 4. Install control panels, detection system components, alarms, and accessories, complying with requirements of NFPA 2001, Section "Detection, Actuation, and Control Systems," as required for supervised system application.
- E. System shall be installed in accordance with manufacturer's instructions. Install piping in accordance with the following requirements:
 - 1. Piping shall be installed in accordance with good commercial practice to the appropriate codes, securely supported with hangers, and arranged with close attention to the design layout since deviations may alter the design flow performance as calculated.
 - 2. Contractor shall determine that appropriate venting from protected spaces is in place, and that provisions for containment of agent are adequate. Proceeding with project work shall mean acceptance of conditions.
 - 3. Piping shall be bracketed within 12 inches of all discharge nozzles.
 - 4. All piping shall be reamed, blown clear, and swabbed with appropriate solvent to remove mill varnish and cutting oils before assembly.
 - 5. Multi-outlet fittings, other than tees, shall not be permitted.
 - 6. Assembly of all joints shall conform to the appropriate standards. Threaded pipe joints shall utilize Teflon tape applied to the male threads only.

3.3 CONNECTIONS

- A. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Where installing piping adjacent to equipment, allow space for service and maintenance.
- C. Connect electrical devices to control panel and to building's fire-alarm system. Electrical power, wiring, and devices are specified in Section 283100 "Intelligent Life-Safety Fire-Management System"

3.4 IDENTIFICATION

- A. Identify system components and equipment. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- B. Identify piping, extinguishing-agent containers, other equipment, and panels according to NFPA 2001.
- C. Install signs at entry doors for protected areas to warn occupants that they are entering a room protected with a clean-agent fire-extinguishing system.
- D. Install signs at entry doors to advise persons outside the room the meaning of the horn(s), bell(s), and strobe light(s) outside the protected space.

3.5 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- C. Perform tests and inspections.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- D. Tests and Inspections:
 - 1. After installing clean-agent extinguishing piping system and after electrical circuitry has been energized, test for compliance with requirements.
 - 2. Perform each electrical test and visual and mechanical inspection stated in NETA ATS, Sections "Inspection and Test Procedures" and "System Function Tests." Certify compliance with test parameters.
 - 3. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 - 4. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation. Remove malfunctioning units, replace with new units, and retest.
 - 5. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - 6. Units will be considered defective if they do not pass tests and inspections.
- E. Prepare test and inspection reports.

3.6 SYSTEM CHECKOUT AND TESTING

- A. The completed installation shall be inspected by factory authorized and trained personnel. The inspection shall include a full operational test of all components per the equipment manufacturer's recommendations (including agent discharge).
- B. Inspection shall be performed in the presence of the DEN Project Manager's representative, insuring authority and/or the local authority having jurisdiction.
- C. All mechanical and electrical components shall be tested according to the manufacturer's recommended procedure to verify system integrity.
- D. Inspection shall include a complete checkout of the detection/control system and certification of cylinder pressure. A written report shall be filed with the DEN Project Manager.
- E. As-built drawings shall be provided by the Contractor (2 copies) indicating the installation details. All routing of piping, electrical conduit and accessories shall be noted.
- F. Equipment installation and maintenance manuals shall be provided in addition to the as-built drawings.
- G. Prior to final acceptance, the Contractor shall provide operational training in all concepts of the system to the DEN Project Manager's key personnel. Training shall include:
 - 1. Control system operation.
 - 2. Trouble procedures.
 - 3. Abort procedures.
 - 4. Emergency procedures.
 - 5. Safety requirements.
 - 6. Demonstration of the system (excluding clean-agent release).
- H. The quantity of agent shall reflect the actual design quantity of clean-agent.
- I. A functional test shall be completed prior to the concentration test consisting of detection, release, alarm, accessories related to the system, control unit and a review of the cylinders, piping, fittings, hangers and cylinder pressure.
- J. Concentration testing shall be performed under the supervision of the Contractor's authorized personnel in the presence of the DEN Project Manager's representative, local authorities, and any other insuring authority.
- K. Clean-agent test procedures shall be recommended by the equipment manufacturer and/or the clean-agent equipment supplier.
- L. The Contractor shall provide a gas analyzer capable of automatically recording sampling points. Concentration recording shall continue until authorities are satisfied with hazard integrity or until 10 minutes have elapsed, whichever is greater.

- M. The sampling point(s) shall be located at a strategic area(s) but no higher than the highest combustible contents.
- N. If the test results indicate that the design concentration was not achieved and/or held, the Contractor shall determine the cause of the failure. After determination of the cause, the system shall be recharged and again placed in operation. The Contractor shall only be responsible for retest based on equipment design failure.
- O. Refill cylinders after testing has been accepted by code agencies and DEN Life Safety Team.

3.7 CLEANING

- A. Each pipe section shall be cleaned internally after preparation and before assembly by means of swabbing, using a suitable nonflammable cleaner. Pipe network shall be free of particulate matter and oil residue before installing nozzles or discharge devices.

3.8 SYSTEM FILLING

A. Preparation:

1. Verify that piping system installation is completed and cleaned.
2. Check for complete enclosure integrity.
3. Check operation of ventilation and exhaust systems.

B. Filling Procedures:

1. Fill extinguishing-agent containers with extinguishing agent, and pressurize to indicated charging pressure.
2. Install filled extinguishing-agent containers.
3. Energize circuits.
4. Adjust operating controls.

3.9 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain clean-agent fire-extinguishing systems.
 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 212200

SECTION 213113 - ELECTRIC-DRIVE, CENTRIFUGAL FIRE PUMPS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. **[End-suction] [In-line] [Split-case]** fire pumps.
 - 2. Fire-pump accessories and specialties.
 - 3. Flowmeter systems.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Fire pumps shall withstand the effects of earthquake motions determined according to **[ASCE/SEI 7] <Insert requirement>**.
 - 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."
- B. Pump Equipment, Accessory, and Specialty Pressure Rating: **175 psig** (1200 kPa) minimum unless higher pressure rating is indicated.
- C. Environmental Conditions: The equipment shall be designed and constructed to operate successfully at the rated values under the following environmental conditions:
 - 1. Location: (Indoors/Outdoors).
 - 2. Altitude: 5,500 feet (1677 m) above sea level.
 - 3. Ambient Temperature Range: Minus 30 deg F (minus 35 deg C) to 120 deg F (49 deg C).
 - 4. Wind Load: 115 mph with gust factor of 1.3.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include manufacturer's product

literature, general assembly, rated capacities, operating characteristics, performance curves showing performance characteristics with pump and system, NPSB curve, electrical characteristics, wiring diagrams, and furnished specialties and accessories, and service conditions.

1. Manufacturer's Installation Instructions: Indicate support details and connection requirements, and include startup instructions for fire pump system.
2. Include data substantiating that materials comply with requirements.

B. Shop Drawings: For fire pumps, motor drivers, and fire-pump accessories and specialties. Include plans, elevations, sections, details, and attachments to other work.

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
2. Wiring Diagrams: For power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

A. Seismic Qualification Certificates: For fire pumps, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

B. Product Certificates: For each fire pump, from manufacturer:

1. Manufacturer's Certificate: The pump manufacturer will assume responsibility for authority having jurisdiction approval of a fully tested package unit and will assume unit responsibility for the proper operation of the entire package system. Certify that fire pumps meet or exceed specified requirements at specified operating conditions. Submit summary and results of shop tests performed in accordance with NFPA 20.
2. Company specializing in manufacturing the products specified in this section with minimum five (5) years' documented experience.

C. All field personnel must be a current holder of the City & County of Denver Fire Department Fire Protection Installer's license.

D. Installer: Company specializing in performing the work of this section with minimum five (5) years' documented experience. Comply with installer qualifications as indicated in all applicable specifications Sections.

E. Source quality-control reports.

F. Field quality-control reports:

1. Indicate summary of hydrostatic test and field acceptance tests performed in accordance with NFPA 20 and FM Data Sheets.

G. Obtain DEN Life Safety Team review and stamp prior to submittal for permit.

H. Provide sample copies of special product warranties.

1.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For fire pumps to include in operation and maintenance manuals.

1. Operation Data: Include manufacturer's instructions, startup data, and troubleshooting checklists for pumps, drivers, and controllers.
2. Maintenance Data: Include manufacturer's literature, cleaning procedures, replacement parts lists, and repair data for pumps, drivers, and controllers, inspection data, availability, addresses, and phone numbers of service depot.

B. As-Built Plans:

1. "As Built" Plans shall be provided in the same format and manner as described above for shop drawings. Each set shall be equipped with a plan holder equal to "Stacor Plan Clamps" for the appropriate size drawings.
2. Submit As-Built plans to Owner prior to final testing of fire pump systems.

1.7 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. NFPA Compliance: Comply with NFPA 20, "Installation of Stationary Pumps for Fire Protection."

C. Equipment and Components: Bear UL and FM label or marking.

D. Comply with all requirements of Owner's Insurance Underwriter.

1.8 WARRANTY

A. All work and equipment shall be warranted to be free from defects in workmanship and material for a period of minimum twelve (12) months from the date of Substantial Completion. Any material or equipment found to be defective during this period shall be repaired or replaced without expense to the Owner.

1.9 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.
- B. Coordinate installation of fire pumps with all existing DEN systems.

1.10 EXTRA STOCK

- A. Furnish under provisions of Division 01.
- B. Provide one complete set of gaskets, screens, tools, and packing seals for each pump type and model supplied.
- C. Provide DEN Representatives all special tools required for installation and maintenance

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR CENTRIFUGAL FIRE PUMPS

- A. Description: Factory-assembled and -tested fire-pump and driver unit.
- B. Base: Fabricated and attached to fire-pump and driver unit with reinforcement to resist movement of pump during seismic events when base is anchored to building substrate.
- C. Finish: Red paint applied to factory-assembled and -tested unit before shipping.
- D. Current Denver Water Department test reports (less than six (6) months old) for the underground supply shall be provided for all new calculations
- E. Information to be provided by Designer of Record:
 - 1. Rated discharge in GPM and net head of boost in PSI.
 - 2. Style and manufacture of pump and controller. The same information shall be provided for both the fire and jockey pump. In addition, the jockey pump will require both here and in the electric specification indications for the necessary electrical components.
- F. Provide fire proofing repair damaged by this work.

- G. Provide all required fire sealants and smoke stopping required by this work.
- H. Provide certificate of compliance from Denver Fire Department and DEN Project Manager indicating acceptance of final field testings.

2.2 END-SUCTION FIRE PUMPS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. A-C Fire Pump Systems; a business of ITT Industries.
 - 2. Corcoran Piping System Co.
 - 3. Patterson Pump Company; a subsidiary of the Gorman-Rupp Company.
 - 4. Peerless Pump, Inc.
 - 5. Reddy-Buffaloes Pump Company.
 - 6. S.A. Armstrong Limited.
 - 7. **<Insert manufacturer's name>**.
 - 8. or approved equal.
- B. Pump:
 - 1. Standard: **[UL 448]** **<Insert standard>**, for end-suction pumps for fire service.
 - 2. Casing: Radially split case, cast iron with ASME B16.1 pipe-flange connections.
 - 3. Impeller: Cast bronze, statically and dynamically balanced, and keyed to shaft.
 - 4. Wear Rings: Replaceable bronze.
 - 5. Shaft and Sleeve: Steel shaft with bronze sleeve.
 - a. Shaft Bearings: Grease-lubricated ball bearings in cast-iron housing.
 - b. Seals: Stuffing box with minimum of four rings of graphite-impregnated braided yarn and bronze packing gland.
 - 6. Mounting: Pump and driver shafts are horizontal, with pump and driver on same base.
- C. Coupling: Flexible and capable of absorbing torsional vibration and shaft misalignment. Include metal coupling guard.
- D. Driver:
 - 1. Standard: **[UL 1004A]** **<Insert standard>**.
 - 2. Type: Electric motor; NEMA MG 1, polyphase Design B.
- E. Capacities and Characteristics:
 - 1. Rated Capacity: **<Insert gpm (L/minute)>**.
 - 2. Total Rated Head: **<Insert feet or psig (kPa)>**.
 - 3. Inlet Flange: **[Class 125] [Class 250]**.
 - 4. Outlet Flange: **[Class 125] [Class 250] <Insert class>**.
 - 5. Suction Head Available at Pump: **<Insert feet (m)>**.
 - 6. Motor Horsepower: **<Insert value>**.

7. Motor Speed: **<Insert rpm>**.
8. Electrical Characteristics:
 - a. Volts: **[208] [230] [460] <Insert value>**.
 - b. Phase: Three.
 - c. Hertz: 60.
 - d. Full-Load Amperes: **<Insert value>**.
 - e. Minimum Circuit Ampacity: **<Insert value>**.
 - f. Maximum Overcurrent Protection: **<Insert amperage>**.
9. Pump-Start, Pressure-Switch Setting: **<Insert psig (kPa)>**.
10. Pump-Stop, Pressure-Switch Setting: **<Insert psig (kPa)>**.

2.3 IN-LINE FIRE PUMPS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. A-C Fire Pump Systems; a business of ITT Industries.
2. Corcoran Piping System Co.
3. Patterson Pump Company; a subsidiary of the Gorman-Rupp Company.
4. Peerless Pump, Inc.
5. Pentair Pump Group; Aurora Pump.
6. Pentair Pump Group; Fairbanks Morse.
7. Plad Equipment, Ltd.
8. Reddy-Buffaloes Pump Company.
9. S.A. Armstrong Limited.
10. **<Insert manufacturer's name>**.
11. or approved equal.

- B. Pump:

1. Standard: **[UL 448] <Insert standard>**, for in-line pumps for fire service.
2. Casing: Radially split case, cast iron with ASME B16.1 pipe-flange connections.
3. Impeller: Cast bronze, statically and dynamically balanced, and keyed to shaft.
4. Wear Rings: Replaceable bronze.
5. Shaft and Sleeve: Steel shaft with bronze sleeve.
 - a. Shaft Bearings: Grease-lubricated ball bearings in cast-iron housing.
 - b. Seals: Stuffing box with minimum of four rings of graphite-impregnated braided yarn and bronze packing gland.
6. Mounting: Pump and driver shaft is vertical, with motor above pump and pump on base.

- C. Coupling: None or rigid.

- D. Driver:

1. Standard: **[UL 1004A] <Insert standard>**.

2. Type: Electric motor; NEMA MG 1, polyphase Design B.

E. Capacities and Characteristics:

1. Rated Capacity: <Insert gpm (L/minute)>.
2. Total Rated Head: <Insert feet or psig (kPa)>.
3. Inlet Flange: **[Class 125] [Class 250]**.
4. Outlet Flange: **[Class 125] [Class 250] <Insert class>**.
5. Suction Head Available at Pump: <Insert feet (m)>.
6. Motor Horsepower: <Insert value>.
7. Motor Speed: <Insert rpm>.
8. Electrical Characteristics:
 - a. Volts: **[208] [230] [460] <Insert value>**.
 - b. Phase: Three.
 - c. Hertz: 60.
 - d. Full-Load Amperes: <Insert value>.
 - e. Minimum Circuit Ampacity: <Insert value>.
 - f. Maximum Overcurrent Protection: <Insert amperage>.
9. Pump-Start, Pressure-Switch Setting: <Insert psig (kPa)>.
10. Pump-Stop, Pressure-Switch Setting: <Insert psig (kPa)>.

2.4 HORIZONTALLY MOUNTED, SINGLE-STAGE, SPLIT-CASE FIRE PUMPS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. A-C Fire Pump Systems; a business of ITT Industries.
2. Corcoran Piping System Co.
3. Patterson Pump Company; a subsidiary of the Gorman-Rupp Company.
4. PACO Pumps; Grundfos Pumps Corporation, U.S.A.
5. Peerless Pump, Inc.
6. Pentair Pump Group; Aurora Pump.
7. Reddy-Buffaloes Pump Company.
8. Ruhrpumpen, Inc.
9. S.A. Armstrong Limited.
10. <Insert manufacturer's name>.
11. or approved equal.

B. Pump:

1. Standard: **[UL 448] <Insert standard>**, for split-case pumps for fire service.
2. Casing: Axially split case, cast iron with ASME B16.1 pipe-flange connections.
3. Impeller: Cast bronze, statically and dynamically balanced, and keyed to shaft.
4. Wear Rings: Replaceable bronze.
5. Shaft and Sleeve: Steel shaft with bronze sleeve.
 - a. Shaft Bearings: Grease-lubricated ball bearings in cast-iron housing.

- b. Seals: Stuffing box with minimum of four rings of graphite-impregnated braided yarn and bronze packing gland.
- 6. Mounting: Pump and driver shafts are horizontal, with pump and driver on same base.
- C. Coupling: Flexible and capable of absorbing torsional vibration and shaft misalignment. Include metal coupling guard.
- D. Driver:
 - 1. Standard: **[UL 1004A]** <Insert standard>.
 - 2. Type: Electric motor; NEMA MG 1, polyphase Design B.
- E. Capacities and Characteristics:
 - 1. Rated Capacity: <Insert gpm (L/minute)>.
 - 2. Total Rated Head: <Insert feet or psig (kPa)>.
 - 3. Inlet Flange: **[Class 125] [Class 250]**.
 - 4. Outlet Flange: **[Class 125] [Class 250]** <Insert class>.
 - 5. Suction Head Available at Pump: <Insert feet (m)>.
 - 6. Motor Horsepower: <Insert value>.
 - 7. Motor Speed: <Insert rpm>.
 - 8. Electrical Characteristics:
 - a. Volts: **[208] [230] [460]** <Insert value>.
 - b. Phase: Three.
 - c. Hertz: 60.
 - d. Full-Load Amperes: <Insert value>.
 - e. Minimum Circuit Ampacity: <Insert value>.
 - f. Maximum Overcurrent Protection: <Insert amperage>.
 - 9. Pump-Start, Pressure-Switch Setting: <Insert psig (kPa)>.
 - 10. Pump-Stop, Pressure-Switch Setting: <Insert psig (kPa)>.

2.5 HORIZONTALLY MOUNTED, MULTISTAGE, SPLIT-CASE FIRE PUMPS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. A-C Fire Pump Systems; a business of ITT Industries.
 - 2. Patterson Pump Company; a subsidiary of the Gorman-Rupp Company.
 - 3. Peerless Pump, Inc.
 - 4. Pentair Pump Group; Aurora Pump.
 - 5. Reddy-Buffaloes Pump Company.
 - 6. S.A. Armstrong Limited.
 - 7. <Insert manufacturer's name>.
 - 8. or approved equal.

- B. Pump:

1. Standard: **[UL 448]** <Insert standard>, for split-case pumps for fire service.
 2. Number of Stages: Two.
 3. Casing: Axially split case, cast iron with ASME B16.1 pipe-flange connections.
 4. Impeller: Cast bronze, statically and dynamically balanced, and keyed to shaft.
 5. Wear Rings: Replaceable bronze.
 6. Shaft and Sleeve: Steel shaft with bronze sleeve.
 - a. Shaft Bearings: Grease-lubricated ball bearings in cast-iron housing.
 - b. Seals: Stuffing box with minimum of four rings of graphite-impregnated braided yarn and bronze packing gland.
 7. Mounting: Pump and driver shafts are horizontal, with pump and driver on same base.
- C. Coupling: Flexible and capable of absorbing torsional vibration and shaft misalignment. Include metal coupling guard.
- D. Driver:
1. Standard: **[UL 1004A]** <Insert standard>.
 2. Type: Electric motor; NEMA MG 1, polyphase Design B.
- E. Capacities and Characteristics:
1. Rated Capacity: <Insert gpm (L/minute)>.
 2. Total Rated Head: <Insert feet or psig (kPa)>.
 3. Inlet Flange: **[Class 125]** **[Class 250]**.
 4. Outlet Flange: **[Class 125]** **[Class 250]** <Insert class>.
 5. Suction Head Available at Pump: <Insert feet (m)>.
 6. Motor Horsepower: <Insert value>.
 7. Motor Speed: <Insert rpm>.
 8. Electrical Characteristics:
 - a. Volts: **[208]** **[230]** **[460]** <Insert value>.
 - b. Phase: Three.
 - c. Hertz: 60.
 - d. Full-Load Amperes: <Insert value>.
 - e. Minimum Circuit Ampacity: <Insert value>.
 - f. Maximum Overcurrent Protection: <Insert amperage>.
 9. Pump-Start, Pressure-Switch Setting: <Insert psig (kPa)>.
 10. Pump-Stop, Pressure-Switch Setting: <Insert psig (kPa)>.

2.6 VERTICALLY MOUNTED, SINGLE-STAGE, SPLIT-CASE FIRE PUMPS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. A-C Fire Pump Systems; a business of ITT Industries.
 2. Patterson Pump Company; a subsidiary of the Gorman-Rupp Company.

3. Peerless Pump, Inc.
 4. Pentair Pump Group; Aurora Pump.
 5. Reddy-Buffaloes Pump Company.
 6. **<Insert manufacturer's name>**.
 7. or approved equal.
- B. Pump:
1. Standard: **[UL 448] <Insert standard>**, for split-case pumps for fire service.
 2. Casing: Axially split case, cast iron with ASME B16.1 pipe-flange connections.
 3. Impeller: Cast bronze, statically and dynamically balanced, and keyed to shaft.
 4. Wear Rings: Replaceable bronze.
 5. Shaft and Sleeve: Steel shaft with bronze sleeve.
 - a. Shaft Bearings: Grease-lubricated ball bearings in cast-iron housing.
 - b. Seals: Stuffing box with minimum of four rings of graphite-impregnated braided yarn and bronze packing gland.
 6. Mounting: Pump and driver shafts are vertical, with motor above pump and pump on base.
- C. Coupling: Flexible and capable of absorbing torsional vibration and shaft misalignment. Include metal coupling guard.
- D. Driver:
1. Standard: **[UL 1004A] <Insert standard>**.
 2. Type: Electric motor; NEMA MG 1, polyphase Design B.
- E. Capacities and Characteristics:
1. Rated Capacity: **<Insert gpm (L/minute)>**.
 2. Total Rated Head: **<Insert feet or psig (kPa)>**.
 3. Inlet Flange: **[Class 125] [Class 250]**.
 4. Outlet Flange: **[Class 125] [Class 250] <Insert class>**.
 5. Suction Head Available at Pump: **<Insert feet (m)>**.
 6. Motor Horsepower: **<Insert value>**.
 7. Motor Speed: **<Insert rpm>**.
 8. Electrical Characteristics:
 - a. Volts: **[208] [230] [460] <Insert value>**.
 - b. Phase: Three.
 - c. Hertz: 60.
 - d. Full-Load Amperes: **<Insert value>**.
 - e. Minimum Circuit Ampacity: **<Insert value>**.
 - f. Maximum Overcurrent Protection: **<Insert amperage>**.
 9. Pump-Start, Pressure-Switch Setting: **<Insert psig (kPa)>**.
 10. Pump-Stop, Pressure-Switch Setting: **<Insert psig (kPa)>**.

2.7 FIRE-PUMP ACCESSORIES AND SPECIALTIES

- A. Automatic Air-Release Valves: Comply with NFPA 20 for installation in fire-pump casing.
- B. Circulation Relief Valves: UL 1478, brass, spring loaded; for installation in pump discharge piping.
- C. Relief Valves:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. BERMAD Control Valves.
 - b. CLA-VAL Automatic Control Valves.
 - c. Kunkle Valve; a part of Tyco International Ltd.
 - d. OCV Control Valves.
 - e. Watts Regulator Company; a division of Watts Water Technologies, Inc.
 - f. Zurn Plumbing Products Group; Wilkins Water Control Products.
 - g. **<Insert manufacturer's name>**.
 - h. or approved equal.
 - 2. Description: UL 1478, bronze or cast iron, spring loaded; for installation in fire-suppression water-supply piping.
- D. Inlet Fitting: Eccentric tapered reducer at pump suction inlet.
- E. Outlet Fitting: Concentric tapered reducer at pump discharge outlet.
- F. Discharge Cone: [**Closed**] [**Open**] [**Closed or open**] type.
- G. Hose Valve Manifold Assembly:
 - 1. Standard: Comply with requirements in NFPA 20.
 - 2. Header Pipe: ASTM A 53/A 53M, Schedule 40, galvanized steel with ends threaded according to ASME B1.20.1.
 - 3. Header Pipe Fittings: ASME B16.4, galvanized cast-iron threaded fittings.
 - 4. Automatic Drain Valve: UL 1726.
 - 5. Manifold:
 - a. Test Connections: Comply with UL 405 except provide outlets without clappers instead of inlets.
 - b. Body: Flush type, brass or ductile iron, with number of outlets required by NFPA 20.
 - c. Nipples: ASTM A 53/A 53M, Schedule 40, galvanized-steel pipe with ends threaded according to ASME B1.20.1.
 - d. Adapters and Caps with Chain: Brass or bronze, with outlet threaded according to NFPA 1963 and matching local fire-department threads.
 - e. Escutcheon Plate: Brass or bronze; rectangular.

- f. Hose Valves: UL 668, bronze, with outlet threaded according to NFPA 1963 and matching local fire-department threads.
 - g. Exposed Parts Finish: **[Polished] [Rough] [brass] [, chrome plated]**.
 - h. Escutcheon Plate Marking: Equivalent to "FIRE PUMP TEST."
6. Manifold:
- a. Test Connections: Comply with UL 405 except provide outlets without clappers instead of inlets.
 - b. Body: Exposed type, brass, with number of outlets required by NFPA 20.
 - c. Escutcheon Plate: Brass or bronze; round.
 - d. Hose Valves: UL 668, bronze, with outlet threaded according to NFPA 1963 and matching local fire-department threads. Include caps and chains.
 - e. Exposed Parts Finish: **[Polished] [Rough] [brass] [, chrome plated]**.
 - f. Escutcheon Plate Marking: Equivalent to "FIRE PUMP TEST."

2.8 FLOWMETER SYSTEMS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- 1. Emerson Process Management; Rosemount Division.
 - 2. Fire Research Corp.
 - 3. Gerand Engineering Co.
 - 4. Hydro Flow Products, Inc.
 - 5. Hyspan Precision Products, Inc.
 - 6. Meriam Process Technologies.
 - 7. Preso Meters; Division of Racine Federated Inc.
 - 8. Reddy-Buffaloes Pump Company.
 - 9. Victaulic Company.
 - 10. **<Insert manufacturer's name>**.
 - 11. or approved equal.
- B. Description: UL-listed or FM-Approved, fire-pump flowmeter system with capability to indicate flow to not less than 175 percent of fire-pump rated capacity.
- C. Pressure Rating: **[175 psig (1200 kPa) minimum] [250 psig (1725 kPa)]**.
- D. Sensor: Annubar probe, orifice plate, or venturi unless otherwise indicated. Sensor size shall match pipe, tubing, flowmeter, and fittings.
- E. Permanently Mounted Flowmeter: Compatible with flow sensor; with dial not less than **4-1/2 inches (115 mm)** in diameter. Include bracket or device for wall mounting.
- 1. Tubing Package: **NPS 1/8 or NPS 1/4 (DN 6 or DN 10) [soft copper] [or] [plastic]** tubing with copper or brass fittings and valves.
- F. Portable Flowmeter: Compatible with flow sensor; with dial not less than **4-1/2 inches (115 mm)** in diameter and with two **12-foot- (3.7-m-)** long hoses in carrying case.

2.9 GROUT

- A. Standard: ASTM C 1107, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
- B. Characteristics: Nonshrink and recommended for interior and exterior applications.
- C. Design Mix: 5000-psi (34-MPa), 28-day compressive strength.
- D. Packaging: Premixed and factory packaged.

2.10 SOURCE QUALITY CONTROL

- A. Testing: Test and inspect fire pumps according to UL 448 requirements for "Operation Test" and "Manufacturing and Production Tests."
 - 1. Verification of Performance: Rate fire pumps according to UL 448.
- B. Fire pumps will be considered defective if they do not pass tests and inspections.
- C. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine equipment bases and anchorage provisions, with Installer present, for compliance with requirements and for conditions affecting performance of fire pumps.
- B. Examine roughing-in for fire-suppression piping systems to verify actual locations of piping connections before fire-pump installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 DELIVERY, STORAGE AND HANDLING

- A. Deliver, store, protect, and handle products to site under provisions of Division 01 requirements.
- B. Accept fire pumps and components onsite in factory packing. Inspect for damage. Comply with manufacturer's rigging and installation instructions.
- C. Protect fire pumps and components from physical damage, including effects of weather, water, and construction debris.
- D. Provide temporary inlet and outlet caps, and maintain in place until installation.

3.3 INSTALLATION

- A. Fire-Pump Installation Standard: Comply with NFPA 20 for installation of fire pumps, relief valves, and related components.
- B. Equipment Mounting: Install fire pumps on concrete bases. Comply with requirements for concrete bases specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]
 - 1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of concrete base.
 - 2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
 - 3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - 4. Install anchor bolts to elevations required for proper attachment to supported equipment.
- C. Install fire-pump suction and discharge piping equal to or larger than sizes required by NFPA 20.
- D. Support piping and pumps separately so weight of piping does not rest on pumps.
- E. Install valves that are same size as connecting piping. Comply with requirements for fire-protection valves specified in [**Section 211200 "Fire-Suppression Standpipes."**] [**Section 211313 "Wet-Pipe Sprinkler Systems."**]
- F. Install pressure gages on fire-pump suction and discharge flange pressure-gage tappings. Comply with requirements for pressure gages specified in [**Section 211200 "Fire-Suppression Standpipes."**] [**Section 211313 "Wet-Pipe Sprinkler Systems."**]
- G. Install piping hangers and supports, anchors, valves, gages, and equipment supports according to NFPA 20.
- H. Install flowmeters and sensors. Install flowmeter-system components and make connections according to NFPA 20 and manufacturer's written instructions.
- I. Electrical Wiring: Install electrical devices furnished by equipment manufacturers but not factory mounted. Furnish copies of manufacturers' wiring diagram submittals to electrical Installer.
- J. Wiring Method: Conceal conductors and cables in accessible ceilings, walls, and floors where possible.
- K. Pump installation shall commence 5 feet outside the building wall and shall include a backflow preventer approved by the City of Denver Water Department, installed in the supply to the fire pump.
- L. Provide approved fittings to comply with DEN cathodic protection requirements.

- M. Provide access space around pumps for service. Provide no less than the minimum clearance as recommended by manufacturer.
- N. Decrease from line size with long radius reducing elbows or reducers. Support piping adjacent to pump such that no weight is carried on pump casings. For base mounted pumps, provide supports under elbows on pump suction and discharge.
- O. Provide drains for bases and seals, piped to and discharging into floor drains. Closed cone waste to be piped to building exterior and spill on grade.
 - 1. Designer of Record: Confirm location of spill is properly graded to allow water flow to properly sized drains.
- P. Lubricate pumps before startup.
- Q. Check, align, and certify base mounted pumps by qualified millwright prior to startup.
- R. Provide connection to discharge line from north terminal fire pump and discharge line from terminal fire pump.

3.4 ALIGNMENT

- A. Align **[end-suction] [and] [split-case]** pump and driver shafts after complete unit has been leveled on concrete base, grout has set, and anchor bolts have been tightened.
- B. After alignment is correct, tighten anchor bolts evenly. Fill baseplate completely with grout, with metal blocks and shims or wedges in place. Tighten anchor bolts after grout has hardened. Check alignment and make required corrections.
- C. Align piping connections.
- D. Align pump and driver shafts for angular and parallel alignment according to HI 1.4 and to tolerances specified by manufacturer.

3.5 CONNECTIONS

- A. Comply with requirements for piping and valves specified in **[Section 211200 "Fire-Suppression Standpipes."]** **[Section 211313 "Wet-Pipe Sprinkler Systems."]** Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to pumps and equipment to allow service and maintenance.
- C. Connect relief-valve discharge to drainage piping or point of discharge.
- D. Connect flowmeter-system meters, sensors, and valves to tubing.
- E. Connect fire pumps to their controllers.

3.6 IDENTIFICATION

- A. Identify system components. Comply with requirements for fire-pump marking according to NFPA 20.

3.7 FIELD QUALITY CONTROL

- A. Test each fire pump with its controller as a unit. Comply with requirements for electric-motor-driver fire-pump controllers specified in Section 213900 "Controllers for Fire-Pump Drivers."
- B. Perform tests and inspections.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist Contractor in testing.
- C. Tests and Inspections:
 - 1. After installing components, assemblies, and equipment including controller, test for compliance with requirements.
 - 2. Test according to NFPA 20 for acceptance and performance testing.
 - 3. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 - 4. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 5. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- D. Components, assemblies, and equipment will be considered defective if they do not pass tests and inspections.
- E. Prepare test and inspection reports.
- F. Furnish fire hoses in number, size, and length required to reach storm drain or other acceptable location to dispose of fire-pump test water. Hoses are for tests only and do not convey to Owner.

3.8 STARTUP SERVICE

- A. Engage a factory-authorized service representative to assist Contractor and perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. **<Insert startup steps if any>.**

3.9 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain fire pumps.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - PART 4- MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PART 5- PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract. price.

END OF SECTION 213113

SECTION 213213 - ELECTRIC-DRIVE, VERTICAL-TURBINE FIRE PUMPS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Vertical-turbine fire pumps.
 - 2. Fire-pump accessories and specialties.
 - 3. Flowmeter systems.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Fire pumps shall withstand the effects of earthquake motions determined according to [ASCE/SEI 7] <Insert requirement>.
 - 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."
- B. Pump Equipment, Accessory, and Specialty Pressure Rating: 175 psig (1200 kPa) minimum unless higher pressure rating is indicated.
- C. Environmental Conditions: The equipment shall be designed and constructed to operate successfully at the rated values under the following environmental conditions:
 - 1. Location: (Indoors/Outdoors).
 - 2. Altitude: 5,500 feet (1677 m) above sea level.
 - 3. Ambient Temperature Range: Minus 30 deg F (minus 35 deg C) to 120 deg F (49 deg C).
 - 4. Wind Load: 115 mph with gust factor of 1.3.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include rated capacities,

manufacturer's product literature, operating characteristics, performance curves showing performance characteristics with pump and system, NPSB curve, electrical characteristics, wiring diagrams, and furnished specialties and accessories, and service conditions.

1. Manufacturer's Installation Instructions: Indicate support details and connection requirements, and include startup instructions for fire pump system.
2. Include data substantiating that materials comply with requirements.

B. Shop Drawings: For fire pumps, motor drivers, and fire-pump accessories and specialties. Include plans, elevations, sections, details, and attachments to other work.

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
2. Wiring Diagrams: For power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

A. Seismic Qualification Certificates: For fire pumps, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

B. Product Certificates: For each fire pump, from manufacturer.

1. Manufacturer's Certificate: The pump manufacturer will assume responsibility for authority having jurisdiction approval of a fully tested package unit and will assume unit responsibility for the proper operation of the entire package system. Certify that fire pumps meet or exceed specified requirements at specified operating conditions. Submit summary and results of shop tests performed in accordance with NFPA 20.
2. Company specializing in manufacturing the products specified in this section with minimum five (5) years' documented experience.

C. All field personnel must be a current holder of the City & County of Denver Fire Department Fire Protection Installer's license.

D. Installer: Company specializing in performing the work of this section with minimum five (5) years' documented experience. Comply with installer qualifications as indicated in all applicable specifications Sections.

E. Source quality-control reports.

F. Field quality-control reports.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For fire pumps to include in operation and maintenance manuals.
 - 1. Operation Data: Include manufacturer's instructions, startup data, and troubleshooting checklists for pumps, drivers, and controllers.
 - 2. Maintenance Data: Include manufacturer's literature, cleaning procedures, replacement parts lists, and repair data for pumps, drivers, and controllers, inspection data, availability, addresses, and phone numbers of service depot.
- B. As-Built Plans:
 - 1. "As Built" Plans shall be provided in the same format and manner as described above for shop drawings. Each set shall be equipped with a plan holder equal to "Stacor Plan Clamps" for the appropriate size drawings.
 - 2. Submit As-Built plans to Owner prior to final testing of fire pump systems.

1.7 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. NFPA Compliance: Comply with NFPA 20, "Installation of Stationary Pumps for Fire Protection."
- C. Equipment and Components: Bear UL and FM label or marking.
- D. Comply with all requirements of Owner's Insurance Underwriter.

1.8 WARRANTY

- A. All work and equipment shall be warranted to be free from defects in workmanship and material for a period of twelve (12) months from the date of Substantial Completion. Any material or equipment found to be defective during this period shall be repaired or replaced without expense to the Owner.

1.9 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.
- B. Coordinate installation of fire pumps with all existing DEN systems.

1.10 EXTRA STOCK

- A. Furnish under provisions of Division 01.

- B. Provide one complete set of gaskets, screens, tools, and packing seals for each pump type and model supplied.
- C. Provide DEN Representatives all special tools required for installation and maintenance

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR VERTICAL-TURBINE FIRE PUMPS

- A. Description: Factory-assembled and -tested fire-pump and driver unit.
- B. Base: Fabricated and attached to fire-pump and driver unit with reinforcement to resist movement of pump during seismic events when base is anchored to building substrate.
- C. Finish: Red paint applied to factory-assembled and -tested unit before shipping.
- D. Current Denver Water Department test reports (less than six (6) months old) for the underground supply shall be provided for all new calculations
- E. Information to be provided by Designer of Record:
 - 1. Rated discharge in GPM and net head of boost in PSI.
 - 2. Style and manufacture of pump and controller. The same information shall be provided for both the fire and jockey pump. In addition, the jockey pump will require both here and in the electric specification indications for the necessary electrical components.
- F. Provide fire proofing repair damaged by this work.
- G. Provide all required fire sealants and smoke stopping required by this work.
- H. Provide certificate of compliance from Denver Fire Department and DEN Project Manager indicating acceptance of final field testing.

2.2 VERTICAL-TURBINE FIRE PUMPS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. A-C Fire Pump Systems; a business of ITT Industries.
 2. Patterson Pump Company; a subsidiary of the Gorman-Rupp Company.
 3. Peerless Pump, Inc.
 4. Pentair Pump Group; Aurora Pump.
 5. Pentair Pump Group; Fairbanks Morse.
 6. Reddy-Buffaloes Pump Company.
 7. Ruhrpumpen, Inc.
 8. S.A. Armstrong Limited.
 9. Sulzer Pumps Ltd.
 10. Weir Floway Inc.; a company of Weir Clear Liquid.
 11. **<Insert manufacturer's name>**.
 12. or approved equal.
- B. Pump Head: Cast iron, for surface discharge.
1. Discharge Outlet: With flange according to ASME B16.1 except connections may be threaded according to ASME B1.20.1, in sizes where flanges are not available.
 2. Pump Head Seal: Stuffing box and packing.
 3. Base: Cast iron or steel with hole for electrical cable.
- C. Pump:
1. Standard: **[UL 448]** **<Insert standard>**, for vertical-turbine pumps for fire service.
 2. Line Shaft: Stainless steel or steel, with corrosion-resistant shaft sleeves.
 3. Line Shaft Bearings: Rubber sleeve, water lubricated.
 4. Line Shaft: Steel.
 5. Line Shaft Bearings: Corrosion resistant, oil lubricated.
 6. Impeller Shaft: Monel metal or stainless steel.
 7. Bowl Section: Multiple cast-iron bowls with closed-type bronze or stainless-steel impellers.
 8. Column Pipe: ASTM A 53/A 53M, Schedule 40, galvanized-steel pipe with threaded ends and cast-iron or steel fittings, in sections **10 feet** (3 m) or less.
 9. Suction Strainer: Cast or fabricated, bronze or stainless steel, and sized to restrict passage of **0.5-inch** (12.7-mm) spheres.
- D. Driver:
1. Standard: **[UL 1004A]** **<Insert standard>**.
 2. Type: Electric motor; NEMA MG 1, polyphase Design B.
 3. Mounting: On pump head above pump.
- E. Capacities and Characteristics:
1. Rated Capacity: **<Insert gpm** (L/minute)**>**.
 2. Total Rated Head: **<Insert feet or psig** (kPa)**>**.
 3. Inlet Column Size: **<Insert NPS**DN**>**.
 4. Pump Column Length: **<Insert feet** (m)**>**.
 5. Pump Head Outlet Flange: **[Class 125]** **[Class 250]** **<Insert class>**.
 6. Suction Head Available at Pump: **<Insert feet** (m)**>**.

7. Motor Horsepower: **<Insert value>**.
8. Motor Speed: **<Insert rpm>**.
9. Electrical Characteristics:
 - a. Volts: **[208] [230] [460] <Insert value>**.
 - b. Phase: Three.
 - c. Hertz: 60.
 - d. Full-Load Amperes: **<Insert value>**.
 - e. Minimum Circuit Ampacity: **<Insert value>**.
 - f. Maximum Overcurrent Protection: **<Insert amperage>**.
10. Pump-Start, Pressure-Switch Setting: **<Insert psig (kPa)>**.
11. Pump-Stop, Pressure-Switch Setting: **<Insert psig (kPa)>**.

2.3 FIRE-PUMP ACCESSORIES AND SPECIALTIES

- A. Automatic Air-Release Valves: Comply with NFPA 20 for installation in fire-pump discharge piping.
- B. Relief Valves:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. BERMAD Control Valves.
 - b. CLA-VAL Automatic Control Valves.
 - c. Kunkle Valve; a part of Tyco International Ltd.
 - d. OCV Control Valves.
 - e. Watts Regulator Company; a division of Watts Water Technologies, Inc.
 - f. Zurn Plumbing Products Group; Wilkins Water Control Products.
 - g. **<Insert manufacturer's name>**.
 - h. or approved equal.
 2. Description: UL 1478, bronze or cast iron, spring loaded; for installation in fire-suppression water-supply piping.
- C. Outlet Fitting: Concentric tapered reducer at pump-head discharge outlet.
- D. Discharge Cone: **[Closed] [Open] [Closed or open]** type.
- E. Hose Valve Manifold Assembly:
 1. Standard: Comply with requirements in NFPA 20.
 2. Header Pipe: ASTM A 53/A 53M, Schedule 40, galvanized steel with ends threaded according to ASME B1.20.1.
 3. Header Pipe Fittings: ASME B16.4, galvanized cast-iron threaded fittings.
 4. Automatic Drain Valve: UL 1726.
 5. Manifold:
 - a. Test Connections: Comply with UL 405 except provide outlets without

- b. clappers instead of inlets.
 - b. Body: Flush type, brass or ductile iron, with number of outlets required by NFPA 20.
 - c. Nipples: ASTM A 53/A 53M, Schedule 40, galvanized-steel pipe with ends threaded according to ASME B1.20.1.
 - d. Adapters and Caps with Chain: Brass or bronze, with outlet threaded according to NFPA 1963 and matching local fire-department threads.
 - e. Escutcheon Plate: Brass or bronze; rectangular.
 - f. Hose Valves: UL 668, bronze, with outlet threaded according to NFPA 1963 and matching local fire-department threads.
 - g. Exposed Parts Finish: **[Polished] [Rough] [brass] [, chrome plated]**.
 - h. Escutcheon Plate Marking: Equivalent to "FIRE PUMP TEST."
6. Manifold:
- a. Test Connections: Comply with UL 405 except provide outlets without clappers instead of inlets.
 - b. Body: Exposed type, brass, with number of outlets required by NFPA 20.
 - c. Escutcheon Plate: Brass or bronze; round.
 - d. Hose Valves: UL 668, bronze, with outlet threaded according to NFPA 1963 and matching local fire-department threads. Include caps and chains.
 - e. Exposed Parts Finish: **[Polished] [Rough] [brass] [, chrome plated]**.
 - f. Escutcheon Plate Marking: Equivalent to "FIRE PUMP TEST."

2.4 FLOWMETER SYSTEMS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- 1. Emerson Process Management; Rosemount Division.
 - 2. Fire Research Corp.
 - 3. Gerand Engineering Co.
 - 4. Hydro Flow Products, Inc.
 - 5. Hyspan Precision Products, Inc.
 - 6. Meriam Process Technologies.
 - 7. Preso Meters; Division of Racine Federated Inc.
 - 8. Reddy-Buffaloes Pump Company.
 - 9. Victaulic Company.
 - 10. **<Insert manufacturer's name>**.
 - 11. or approved equal.
- B. Description: UL-listed or FM-Approved, fire-pump flowmeter system with capability to indicate flow to not less than 175 percent of fire-pump rated capacity.
- C. Pressure Rating: **[175 psig (1200 kPa) minimum] [250 psig (1725 kPa)]**.
- D. Sensor: Annubar probe, orifice plate, or venturi unless otherwise indicated. Sensor size shall match pipe, tubing, flowmeter, and fittings.

- E. Permanently Mounted Flowmeter: Compatible with flow sensor; with dial not less than 4-1/2 inches (115 mm) in diameter. Include bracket or device for wall mounting.
 - 1. Tubing Package: NPS 1/8 or NPS 1/4 (DN 6 or DN 10) [soft copper] [or] [plastic] tubing with copper or brass fittings and valves.
- F. Portable Flowmeter: Compatible with flow sensor; with dial not less than 4-1/2 inches (115 mm) in diameter and with two 12-foot- (3.7-m-) long hoses in carrying case.

2.5 GROUT

- A. Standard: ASTM C 1107, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
- B. Characteristics: Nonshrink and recommended for interior and exterior applications.
- C. Design Mix: 5000-psi (34-MPa), 28-day compressive strength.
- D. Packaging: Premixed and factory packaged.

2.6 SOURCE QUALITY CONTROL

- A. Testing: Test and inspect fire pumps according to UL 448 requirements for "Operation Test" and "Manufacturing and Protection Tests."
 - 1. Verification of Performance: Rate fire pumps according to UL 448.
- B. Fire pumps will be considered defective if they do not pass tests and inspections.
- C. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and conditions affecting performance of fire pumps.
- B. Examine roughing-in for fire-suppression piping systems to verify actual locations of piping connections before fire-pump installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 DELIVERY, STORAGE AND HANDLING

- A. Deliver, store, protect, and handle products to site under provisions of Division 01

requirements.

- B. Accept fire pumps and components onsite in factory packing. Inspect for damage. Comply with manufacturer's rigging and installation instructions.
- C. Protect fire pumps and components from physical damage, including effects of weather, water, and construction debris.
- D. Provide temporary inlet and outlet caps, and maintain in place until installation.

3.3 INSTALLATION

- A. Fire-Pump Installation Standard: Comply with NFPA 20 for installation of fire pumps, relief valves, and related components.
- B. Equipment Mounting: Install fire pumps on concrete bases. Comply with requirements for concrete bases specified in [**Section 033000 "Cast-in-Place Concrete."**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**]
 - 1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of concrete base.
 - 2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
 - 3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - 4. Install anchor bolts to elevations required for proper attachment to supported equipment.
- C. Install fire-pump discharge piping equal to or larger than size required by NFPA 20.
- D. Support piping and pumps separately so weight of piping does not rest on pumps.
- E. Install valves that are same size as connecting piping. Comply with requirements for fire-protection valves specified in [**Section 211200 "Fire-Suppression Standpipes."**] [**Section 211313 "Wet-Pipe Sprinkler Systems."**]
- F. Install pressure gage on pump head discharge flange pressure-gage tapping. Comply with requirements for pressure gages specified in [**Section 211200 "Fire-Suppression Standpipes."**] [**Section 211313 "Wet-Pipe Sprinkler Systems."**]
- G. Install flowmeters and sensors. Install flowmeter-system components and make connections according to NFPA 20 and manufacturer's written instructions.
- H. Electrical Wiring: Install electrical devices furnished by equipment manufacturers but not factory mounted. Furnish copies of manufacturers' wiring diagram submittals to electrical Installer.
- I. Wiring Method: Conceal conductors and cables in accessible ceilings, walls, and floors where possible.

- J. Pump installation shall commence 5 feet outside the building wall and shall include a backflow preventor approved by the City of Denver Water Department, installed in the supply to the fire pump.
- K. Provide approved fittings to comply with DEN cathodic protection requirements.
- L. Provide access space around pumps for service. Provide no less than minimum as recommended by manufacturer.
- M. Decrease from line size with long radius reducing elbows or reducers. Support piping adjacent to pump such that no weight is carried on pump casings. For base mounted pumps, provide supports under elbows on pump suction and discharge.
- N. Provide drains for bases and seals, piped to and discharging into floor drains. Closed cone waste to be piped to building exterior and spill on grade.
 - 1. Designer of Record: Confirm location of spill is properly graded to allow water flow to properly sized drains.
- O. Lubricate pumps before startup.
- P. Check, align, and certify base mounted pumps by qualified millwright prior to startup.
- Q. Provide connection to discharge line from north terminal fire pump and discharge line from terminal fire pump.

3.4 ALIGNMENT

- A. Align pump and driver shafts after complete unit has been leveled on concrete base, grout has set, and anchor bolts have been tightened.
- B. After alignment is correct, tighten anchor bolts evenly. Fill baseplate completely with grout, with metal blocks and shims or wedges in place. Tighten anchor bolts after grout has hardened. Check alignment and make required corrections.
- C. Align piping connection.
- D. Align pump and driver shafts for angular and parallel alignment according to HI 2.4 and to tolerances specified by manufacturer.

3.5 CONNECTIONS

- A. Comply with requirements for piping and valves specified in [**Section 211200 "Fire-Suppression Standpipes."**] [**Section 211313 "Wet-Pipe Sprinkler Systems."**] Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to pumps and equipment to allow service and maintenance.
- C. Connect relief-valve discharge to drainage piping or point of discharge.

- D. Connect flowmeter-system meters, sensors, and valves to tubing.
- E. Connect fire pumps to their controllers.

3.6 IDENTIFICATION

- A. Identify system components. Comply with requirements for fire-pump marking according to NFPA 20.

3.7 FIELD QUALITY CONTROL

- A. Test each fire pump with its controller as a unit. Comply with requirements for electric-motor-driver fire-pump controllers specified in Section 213900 "Controllers for Fire-Pump Drivers."
- B. Perform tests and inspections.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist Contractor in testing.
- C. Tests and Inspections:
 - 1. After installing components, assemblies, and equipment including controller, test for compliance with requirements.
 - 2. Test according to NFPA 20 for acceptance and performance testing.
 - 3. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 - 4. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 5. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- D. Components, assemblies, and equipment will be considered defective if they do not pass tests and inspections.
- E. Prepare test and inspection reports.
- F. Furnish fire hoses in number, size, and length required to reach storm drain or other acceptable location to dispose of fire-pump test water. Hoses are for tests only and do not convey to Owner.

3.8 STARTUP SERVICE

- A. Engage a factory-authorized service representative to assist Contractor and perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written

instructions.

2. **<Insert startup steps if any>**.

3.9 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain fire pumps.
 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 213213

SECTION 213400 - PRESSURE-MAINTENANCE PUMPS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Multistage, pressure-maintenance pumps.
 - 2. Regenerative-turbine, pressure-maintenance pumps.
 - 3. Submersible, pressure-maintenance pumps.
 - 4. Vertical-turbine, pressure-maintenance pumps.
- B. Related Section:
 - 1. Section 213900 "Controllers for Fire-Pump Drivers" for pressure-maintenance-pump controllers.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 PERFORMANCE REQUIREMENTS

- A. Pump Equipment, Accessory, and Specialty Pressure Rating: 175 psig (1200 kPa) minimum unless higher pressure rating is indicated.
- B. Environmental Conditions: The equipment shall be designed and constructed to operate successfully at the rated values under the following environmental conditions:
 - 1. Location: (Indoors/Outdoors)
 - 2. Altitude: 5,500 feet (1677 m) above sea level.
 - 3. Ambient Temperature Range: Minus 30 deg F (minus 35 deg C) to 120 deg F (49 deg C).
 - 4. Wind Load: 115 mph with gust factor of 1.3

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include manufacturer's literature, general assembly, rated capacities, operating characteristics, performance curves

showing performance characteristics with pump and system, electrical characteristics, wiring diagrams, and furnished specialties and accessories, and service conditions.

1. Manufacturer's Installation Instructions: Indicate support details and connection requirements, and include startup instructions for fire pump system.
 2. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For pumps, accessories, and specialties. Include plans, elevations, sections, details, and attachments to other work.
1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 2. Wiring Diagrams: For power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For pumps to include in operation and maintenance manuals.
1. Operation Data: Include manufacturer's instructions, startup data, and troubleshooting checklists for pumps, drivers, and controllers.
 2. Maintenance Data: Include manufacturer's literature, cleaning procedures, replacement parts lists, and repair data for pumps, drivers, and controllers, inspection data, availability, addresses, and phone numbers of service depot.
- B. As-Built Plans:
1. "As Built" Plans shall be provided in the same format and manner as described above for shop drawings. Each set shall be equipped with a plan holder equal to "Stacor Plan Clamps" for the appropriate size drawings.
 2. Submit As-Built plans to Owner prior to final testing of fire pump systems.

1.7 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Equipment and Components: Bear UL and FM label or marking.
- C. Comply with all requirements of Owner's Insurance Underwriter.

1.8 WARRANTY

- A. All work and equipment shall be warranted to be free from defects in workmanship and material for a period of twelve (12) months from the date of Substantial Completion. Any material or equipment found to be defective during this period shall be repaired or replaced without expense to the Owner.

1.9 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.
- B. Coordinate installation of fire pumps with all existing DEN systems.

1.10 EXTRA STOCK

- A. Furnish under provisions of Division 01.
- B. Provide one complete set of gaskets, screens, tools, and packing seals for each pump type and model supplied.
- C. Provide DEN Representatives all special tools required for installation and maintenance

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MULTISTAGE, PRESSURE-MAINTENANCE PUMPS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. A-C Fire Pump Systems; a business of ITT Industries.
 - 2. Grundfos Management A/S; Grundfos Pumps Corporation U.S.A.
 - 3. PACO Pumps; Grundfos Pumps Corporation U.S.A.
 - 4. TACO Incorporated.
 - 5. **<Insert manufacturer's name>**.
 - 6. or approved equal.
- B. Description: Factory-assembled and -tested, multistage, barrel-type vertical pump as defined in HI 2.1-2.2 and HI 2.3; designed for surface installation with pump and motor direct coupled and mounted vertically.

C. Pump Construction:

1. Barrel: Stainless steel.
2. Suction and Discharge Chamber: Cast iron with flanged inlet and outlet.
3. Pump Head/Motor Mount: Cast iron.
4. Impellers: Stainless steel, balanced, and keyed to shaft.
5. Pump Shaft: Stainless steel.
6. Seal: Mechanical type with carbon rotating face and silicon-carbide stationary seat.
7. Intermediate Chamber Bearings: Aluminum-oxide ceramic or bronze.
8. Chamber-Base Bearing: Tungsten carbide.
9. O-Rings: EPDM or NBR.

D. Motor: Single speed with permanently lubricated ball bearings and rigidly mounted to pump head. Comply with requirements in Section 210513 "Common Motor Requirements for Fire Suppression Equipment."

1. Power Cord: Factory-connected to motor for field connection to controller and at least [10 feet (3 m)] <Insert dimension> long.

E. Nameplate: Permanently attached to pump and indicating capacity and characteristics.

F. Capacities and Characteristics:

1. Rated Capacity: <Insert gpm (L/minute)>.
2. Total Dynamic Head: <Insert feet (kPa)>.
3. Working Pressure: [175-psig (1200 kPa) **minimum**] [230 psig (1586 kPa)] [300 psig (2070 kPa)] <Insert value>.
4. Inlet and Outlet Size: [NPS 1-1/4 (DN 32)] <Insert size>.
5. Discharge and Suction Flanges: [Class 250] <Insert class>.
6. Suction Head Available at Pump: <Insert feet (m)>.
7. Motor Horsepower: <Insert value>.
8. Motor Speed: <Insert rpm>.
9. Electrical Characteristics:
 - a. Volts: [120] [240] <Insert value>.
 - b. Phases: [Single] [Three].
 - c. Hertz: [60] <Insert value>.
 - d. Full-Load Amperes: <Insert value>.
 - e. Minimum Circuit Ampacity: <Insert value>.
 - f. Maximum Overcurrent Protection: <Insert amperage>.
10. Pump-Start, Pressure-Switch Setting: <Insert psig (kPa)>.
11. Pump-Stop, Pressure-Switch Setting: <Insert psig (kPa)>.

2.2 REGENERATIVE-TURBINE, PRESSURE-MAINTENANCE PUMPS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. A-C Fire Pump Systems; a business of ITT Industries.
 2. Crane Pumps and Systems; a Crane Co. company.
 3. MTH Pumps/MTH Tool Company, Inc.
 4. PACO Pumps; Grundfos Pumps Corporation U.S.A.
 5. Pentair Pump Group; Aurora Pump.
 6. **<Insert manufacturer's name>**.
 7. or approved equal.
- B. Description: Factory-assembled and -tested, close-coupled, single-stage, regenerative-turbine centrifugal pump as defined in HI 1.1-1.2 and HI 1.3; with pump and motor mounted horizontally.
- C. Pump Construction:
1. Casing: Radially split, cast iron, with threaded inlet and outlet.
 2. Impeller: Bronze, balanced, and keyed to shaft.
 3. Pump Shaft: Stainless steel[**or steel**] with deflector.
 4. Shaft Sleeve: Bronze.
 5. Seal: Mechanical type with spring-loaded rotating head.
- D. Motor: Single speed with permanently lubricated ball bearings. Comply with requirements in Section 210513 "Common Motor Requirements for Fire Suppression Equipment."
1. Power Cord: Factory-connected to motor for field connection to controller and at least [10 feet (3 m)] **<Insert dimension>** long.
- E. Nameplate: Permanently attached to pump and indicating capacity and characteristics.
- F. Capacities and Characteristics:
1. Rated Capacity: **<Insert gpm (L/minute)>**.
 2. Total Dynamic Head: **<Insert feet (kPa)>**.
 3. Working Pressure: [175 psig (1200 kPa)] [300 psig (2070 kPa)] **<Insert value>**.
 4. Inlet Size: Threaded; **<Insert NPS (DN)>**.
 5. Outlet Size: Threaded; **<Insert NPS (DN)>**.
 6. Suction Head Available at Pump: **<Insert feet (m)>**.
 7. Motor Horsepower: **<Insert value>**.
 8. Motor Speed: **<Insert rpm>**.
 9. Electrical Characteristics:
 - a. Volts: [120] [240] **<Insert value>**.
 - b. Phases: [Single] [Three].
 - c. Hertz: [60] **<Insert value>**.
 - d. Full-Load Amperes: **<Insert value>**.
 - e. Minimum Circuit Ampacity: **<Insert value>**.
 - f. Maximum Overcurrent Protection: **<Insert amperage>**.
 10. Pump-Start, Pressure-Switch Setting: **<Insert psig (kPa)>**.
 11. Pump-Stop, Pressure-Switch Setting: **<Insert psig (kPa)>**.

2.3 SUBMERSIBLE, PRESSURE-MAINTENANCE PUMPS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. A-C Fire Pump Systems; a business of ITT Industries.
 2. Pentair Pump Group; Fairbanks Morse.
 3. Sulzer Pumps Ltd.
 4. Weir Floway; a company of Weir Clear Liquid.
 5. **<Insert manufacturer's name>**.
 6. or approved equal.
- B. Description: Factory-assembled and -tested, vertical, multistage, submersible pump as defined in HI 2.1-2.2 and HI 2.3; with pump motor mounted below pump.
- C. Pump Construction:
1. Pump Head or Elbow: Cast iron, for surface discharge, with flanged or threaded connections.
 2. Pump Shaft: Stainless steel.
 3. Bearings: Bronze.
 4. Bowl Section: Multiple cast-iron bowls with closed-type bronze or stainless-steel impellers.
 5. Column Pipe: ASTM A 53/A 53M, Schedule 40, galvanized-steel pipe with threaded ends and cast-iron or steel fittings, in sections **10 feet (3 m)** or less, with strainer of cast or fabricated bronze or stainless steel between pump and bowl section.
- D. Motor: Single speed with permanently lubricated ball bearings and capable of continuous operation under water. Comply with requirements in Section 210513 "Common Motor Requirements for Fire Suppression Equipment."
1. Power Cord: Capable of continuous under-water operation, factory-connected to motor for field connection to controller, and at least [**10 feet (3 m)**] **<Insert dimension>** long.
- E. Base: Cast iron or steel with hole for electrical cable.
- F. Nameplate: Permanently attached to pump and indicating capacity and characteristics.
- G. Capacities and Characteristics:
1. Rated Capacity: **<Insert gpm (L/minute)>**.
 2. Total Dynamic Head: **<Insert feet (kPa)>**.
 3. Working Pressure: **<Insert psig (kPa)>**.
 4. Inlet Column Size: **<Insert NPS (DN)>**.
 5. Pump Column Length: **<Insert feet (m)>**.
 6. Outlet Size: **<Insert NPS (DN)>**.
 7. Flange: [**Class 125**] **<Insert class>**.
 8. Suction Head Available at Pump: **<Insert feet (m)>**.

9. Motor Horsepower: <Insert value>.
10. Motor Speed: <Insert rpm>.
11. Electrical Characteristics:
 - a. Volts: [120] [240] <Insert value>.
 - b. Phases: [Single] [Three].
 - c. Hertz: [60] <Insert value>.
 - d. Full-Load Amperes: <Insert value>.
 - e. Minimum Circuit Ampacity: <Insert value>.
 - f. Maximum Overcurrent Protection: <Insert amperage>.
12. Pump-Start, Pressure-Switch Setting: <Insert psig (kPa)>.
13. Pump-Stop, Pressure-Switch Setting: <Insert psig (kPa)>.

2.4 VERTICAL-TURBINE, PRESSURE-MAINTENANCE PUMPS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. A-C Fire Pump Systems; a business of ITT Industries.
 2. Patterson Pump Company; a subsidiary of the Gorman-Rupp Company.
 3. Peerless Pump, Inc.
 4. Pentair Pump Group; Aurora Pump.
 5. Pentair Pump Group; Fairbanks Morse.
 6. Reddy-Buffaloes Pump Company.
 7. Ruhrpumpen, Inc.
 8. S.A. Armstrong Limited.
 9. Sulzer Pumps Ltd.
 10. Weir Floway; a company of Weir Clear Liquid.
 11. <Insert manufacturer's name>.
 12. or approved equal.
- B. Description: Factory-assembled and -tested, vertical, multistage, open-line-shaft turbine pump as defined in HI 2.1-2.2 and HI 2.3; with pump motor mounted above pump head.
- C. Pump Construction:
 1. Pump Head: Cast iron, for surface discharge, with flange except connections may be threaded in sizes in which flanges are not available.
 2. Pump Head Seal: Stuffing box and stuffing.
 3. Line Shaft: Stainless steel or steel, with corrosion-resistant shaft sleeves.
 4. Line Shaft Bearings: Rubber sleeve, water lubricated.
 5. Line Shaft: Steel.
 6. Line Shaft Bearings: Corrosion resistant, oil lubricated.
 7. Impeller Shaft: Monel metal or stainless steel.
 8. Bowl Section: Multiple cast-iron bowls with closed-type bronze or stainless-steel impellers.

9. Column Pipe: ASTM A 53/A 53M, Schedule 40, galvanized-steel pipe with threaded ends and cast-iron or steel fittings, in sections **10 feet** (3 m) or less, with strainer of cast or fabricated bronze or stainless steel at bottom.
- D. Motor: Single speed with permanently lubricated ball bearings. Comply with requirements in Section 210513 "Common Motor Requirements for Fire Suppression Equipment."
 1. Power Cord: Factory-connected to motor for field connection to controller and at least [**10 feet** (3 m)] **<Insert dimension>** long.
- E. Base: Cast iron or steel with hole for electrical cable.
- F. Nameplate: Permanently attached to pump and indicating capacity and characteristics.
- G. Capacities and Characteristics:
 1. Rated Capacity: **<Insert gpm** (L/minute)>.
 2. Total Dynamic Head: **<Insert feet** (kPa)>.
 3. Working Pressure: **<Insert psig** (kPa)>.
 4. Inlet Column Size: **<Insert NPS** (DN)>.
 5. Pump Column Length: **<Insert feet** (m)>.
 6. Outlet Size: **<Insert NPS** (DN)>.
 7. Flange: [**Class 125**] **<Insert class>**.
 8. Suction Head Available at Pump: **<Insert feet** (m)>.
 9. Motor Horsepower: **<Insert value>**.
 10. Motor Speed: **<Insert rpm>**.
 11. Electrical Characteristics:
 - a. Volts: [**120**] [**240**] **<Insert value>**.
 - b. Phases: [**Single**] [**Three**].
 - c. Hertz: [**60**] **<Insert value>**.
 - d. Full-Load Amperes: **<Insert value>**.
 - e. Minimum Circuit Ampacity: **<Insert value>**.
 - f. Maximum Overcurrent Protection: **<Insert amperage>**.
 12. Pump-Start, Pressure-Switch Setting: **<Insert psig** (kPa)>.
 13. Pump-Stop, Pressure-Switch Setting: **<Insert psig** (kPa)>.

2.5 MOTORS

- A. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 210513 "Common Motor Requirements for Fire Suppression Equipment."
 1. Motor Sizes: Minimum size as indicated; if not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine equipment bases and anchorage provisions, with Installer present, for compliance with requirements and for conditions affecting performance of fire pumps.
- B. Examine roughing-in for fire-suppression piping systems to verify actual locations of piping connections before fire-pump installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 DELIVERY, STORAGE AND HANDLING

- A. Deliver, store, protect, and handle products to site under provisions of Division 01 requirements.
- B. Accept fire pumps and components onsite in factory packing. Inspect for damage. Comply with manufacturer's rigging and installation instructions.
- C. Protect fire pumps and components from physical damage, including effects of weather, water, and construction debris.
- D. Provide temporary inlet and outlet caps, and maintain in place until installation.

3.3 EQUIPMENT INSTALLATION

- A. NFPA Standard: Comply with NFPA 20 for installation of pressure-maintenance pumps.
- B. Base-Mounted Pump Mounting: Install pumps on concrete bases. Comply with requirements for concrete bases specified in **[Section 033000 "Cast-in-Place Concrete.]"** **[Section 033053 "Miscellaneous Cast-in-Place Concrete.]"**
 - 1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on **18-inch** (450-mm) centers around the full perimeter of concrete base.
 - 2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
 - 3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - 4. Install anchor bolts to elevations required for proper attachment to supported equipment.
 - 5. Attach pumps to equipment base using anchor bolts.
- C. Install **[multistage]** **[and]** **[regenerative-turbine]**, pressure-maintenance pumps according to HI 1.4.

- D. Install [**submersible**] [**and**] [**vertical-turbine**], pressure-maintenance pumps according to HI 2.4.

3.4 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist Contractor in testing.
- B. Tests and Inspections:
 - 1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Pressure-maintenance pumps will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

3.5 ADJUSTING

- A. Lubricate pumps as recommended by manufacturer.
- B. Set field-adjustable pressure-switch ranges as indicated.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 213400

SECTION 213900 - CONTROLLERS FOR FIRE-PUMP DRIVERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Full-service, **[full] [reduced]**-voltage controllers rated 600 V and less.
 - 2. Limited-service controllers rated 600 V and less.
 - 3. Controllers for pressure-maintenance pumps.
 - 4. Remote alarm panels.
 - 5. Low-suction-shutdown panels.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

- A. ATS: Automatic transfer switches.
- B. ECM: Electronic control module.
- C. MCCB: Molded-case circuit breaker.
- D. N.O.: Normally open.

1.4 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Fire-pump controllers and alarm panels shall withstand the effects of earthquake motions determined according to **[ASCE/SEI 7] <Insert requirement>**.
 - 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified **[and the unit will be fully operational after the seismic event].**"

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include manufacturer's name and product number, rated capacities, operating characteristics, electrical characteristics and ratings, mounting method, mounting position, supports, and furnished specialties and accessories.
1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For each type of product indicated. Include dimensioned plans, elevations, sections, details, and attachments to other work, including required clearances and service spaces around controller enclosures.
1. Show tabulations of the following:
 - a. Each installed unit's type and details.
 - b. Enclosure types and details for types other than NEMA 250, Type 2.
 - c. Factory-installed devices.
 - d. Nameplate legends.
 - e. Short-circuit current (withstand) rating of integrated unit.
 - f. Features, characteristics, ratings, and factory settings of individual overcurrent protective devices.
 - g. Specified modifications.
 2. Detail equipment assemblies and indicate dimensions, weights, loads, method of field assembly, components, and location and size of each field connection.
 3. Schematic and Connection Diagrams: For power, signal, alarm, and control wiring and for pressure-sensing tubing.
- C. Coordination Drawings: Include floor plans and sections to show fire pump control layouts and relationships between components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate and certify field measurements.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data:
1. For qualified testing agency.
 2. For firms and persons specified in "Quality Assurance" Article.
- B. Seismic Qualification Certificates: For each type of product indicated, from manufacturer.
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

- C. Product Certificates: For each type of product indicated, from manufacturer.
- D. Manufacturer's factory test reports of fully assembled and tested equipment.
- E. Source quality-control reports: Indicate and interpret test results for compliance with performance requirements.
- F. Field quality-control reports.
- G. Warranty: Submit copies of special product warranties.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For each type of product indicated to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
 - 1. Manufacturer's written instructions for setting field-adjustable timers, controls, and status and alarm points.
 - 2. Manufacturer's written instructions for testing, adjusting, and reprogramming microprocessor-based logic controls.
- B. Torque Values: Submit torque values for all connections with a torque schedule and witness signature.

1.8 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials including ten (10) percent of installed Units, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents. Deliver materials as directed by DEN Project Manager.
- B. Extra materials to include the following:
 - 1. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - a. Indicating Lights: **[Two]** <Insert number> of each type and color of lens installed; **[two]** <Insert number> of each type and size of lamp installed.
 - b. Auxiliary Contacts: **[One]** <Insert number> for each size and type of magnetic contactor installed.
 - c. Power Contacts: **[Three]** <Insert number> for each size and type of magnetic contactor installed.
 - d. Contactor Coils: **[One]** <Insert number> for each size and type of magnetic controller installed.
 - e. Relay Boards: **[One]** <Insert number> for each size and type of relay board installed.
 - f. Operator Interface: **[One]** <Insert number> microprocessor board(s), complete with display and membrane keypad.

2. <Insert extra materials>.

1.9 QUALITY ASSURANCE

- A. Testing Agency Qualifications: Member company of an NRTL.
- B. Source Limitations: Obtain fire-pump controllers and all associated equipment from single source or producer.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Comply with standards of authorities having jurisdiction pertaining to materials and installation.
- E. Comply with NFPA 20 and NFPA 70 for all components and installation.
- F. Fire pump controller Assemblies, Devices, and Accessories: Listed and labeled as defined in NFPA 20 and NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction
- G. Comply with UL Standard 218, Factory Mutual, ASME and OSHA.
- H. IEEE Compliance: Fabricate and test enclosed controllers according to IEEE 344 to withstand seismic forces defined in Section 260548 "Vibration and Seismic Controls for Electrical Systems."
- I. Comply with the requirements of the reference standards noted herein, except where more stringent requirements are listed herein or otherwise required by the Contract Documents.
- J. The most stringent interpretations shall apply. All appendices shall apply.
- K. All work shall be in strict accordance with all applicable codes including Building Code for the City and County of Denver, National Electrical Code (NEC), National Fire Protection Association (NFPA), and Life Safety Code (NFPA 101).

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Store controllers indoors in clean, dry space with uniform temperature to prevent condensation. Protect enclosed controllers from exposure to dirt, fumes, water, corrosive substances, and physical damage.
- B. If stored in areas subject to weather, protect controllers from weather, dirt, dust, corrosive substances, and physical damage. Remove loose packing and flammable materials from inside controllers; **[install temporary electric heating, with at least 250 W per controller] [connect factory-installed space heaters to temporary electrical service]**.

1.11 PROJECT CONDITIONS

A. Environmental Limitations:

1. Ambient Temperature Rating: Not less than **40 deg F (5 deg C)** and not exceeding **122 deg F (50 deg C)** unless otherwise indicated.
2. Altitude Rating: Not exceeding **6600 feet (2010 m)** unless otherwise indicated.

B. Retain paragraph below if interruption of existing electric service is required. Power Outages: Any power outages necessary to install or test electrical systems and/or equipment shall be coordinated with Denver International Airport Maintenance/Engineering. A written shutdown request form shall be submitted to and approved by the DEN Project Manager two (2) weeks prior to the shutdown. Comply with NFPA 70E.

1.12 COORDINATION

- ### A. Coordinate layout and installation of controllers with other construction including conduit, piping, fire-pump equipment, and adjacent surfaces. Maintain required clearances for workspace and equipment access doors and panels. Ensure that controllers are within sight of fire-pump drivers.
- ### B. Coordinate sizes and locations of concrete bases with actual equipment provided.
- ### C. Construction Drawings:
1. The drawings are diagrammatic and indicate the general arrangement of electrical work. Locations are approximate and shall be subject to minor modifications as dictated by field conditions and as directed by DEN Project Manager.

1.13 CONSTRUCTION WASTE MANAGEMENT

- ### A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

- ### A. All materials, parts, and components used in system shall be new and of the highest grade.
- ### B. All magnetic power devices shall be vacuum impregnated.

2.2 FULL-SERVICE CONTROLLERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Aquarius Fluid Products, Inc.
 2. ASCO Power Technologies, LP; Firetrol Products.
 3. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 4. Hubbell Incorporated; Hubbell Industrial Controls.
 5. Joslyn Clark Corporation.
 6. Master Control Systems, Inc.
 7. Metron, Inc.
 8. Tornatech.
 9. **<Insert manufacturer's name>**.
 10. or approved equal.
- B. General Requirements for Full-Service Controllers:
1. Comply with NFPA 20 and **[UL 218] <Insert standard>**.
 2. Listed by an NRTL for electric-motor driver for fire-pump service.
 3. **[Combined automatic and nonautomatic] [Nonautomatic]** operation.
 4. Factory assembled, wired, and tested; continuous-duty rated.
 5. Service Equipment Label: NRTL labeled for use as service equipment.
- C. Method of Starting:
1. **[Pressure] [Nonpressure]**-switch actuated.
 - a. Water-pressure-actuated switch and pressure transducer with independent high- and low-calibrated adjustments responsive to water pressure in fire-suppression piping.
 - b. System pressure recorder, electric ac driven, with spring backup.
 - c. Programmable minimum-run-time relay to prevent short cycling.
 - d. Programmable timer for weekly tests.
 2. Magnetic Controller: **[Across-the-line] [Autotransformer] [Part-winding] [Primary-resistor] [Wye-delta (open transition)] [Wye-delta (closed transition)] <Insert type>** type.
 3. Solid-State Controller: **[Reduced-voltage] <Insert type>** type.
 4. Emergency Start: Mechanically operated start handle that closes and retains the motor RUN contactor independent of all electric or pressure actuators.
- D. Method of Stopping: **[Automatic and nonautomatic shutdown after automatic starting] [Nonautomatic]**.
- E. Capacity: Rated for fire-pump-driver horsepower and short-circuit-current (withstand) rating equal to or greater than short-circuit current available at controller location.

- F. Method of Isolation and Overcurrent Protection: Interlocked isolating switch and nonthermal MCCB; with a common, externally mounted operating handle, and providing locked-rotor protection.
- G. Door-Mounted Operator Interface and Controls:
1. Monitor, display, and control the devices, alarms, functions, and operations listed in NFPA 20 as required for drivers and controller types used.
 2. Method of Control and Indication:
 - a. **[Microprocessor-based logic]** <Insert logic type> controller, with multiline digital readout.
 - b. **[Membrane]** <Insert keypad type> keypad.
 - c. **[LED]** <Insert lamp type> alarm and status indicating lights.
 3. Local[**and Remote**] Alarm and Status Indications:
 - a. Controller power on.
 - b. Motor running condition.
 - c. Loss-of-line power.
 - d. Line-power phase reversal.
 - e. Line-power single-phase condition.
 - f. **<Insert indication>**.
 4. Audible alarm, with silence push button.
 5. Nonautomatic START and STOP push buttons or switches.
 6. **<Insert function>**.
- H. Optional Features:
1. Extra Output Contacts:
 - a. **[One]** <Insert number> N.O. contact(s) for motor running condition.
 - b. **[One]** <Insert number> set(s) of contacts for loss-of-line power.
 - c. **[One]** <Insert number> each, Form C contacts for high and low reservoir level.
 - d. **<Insert contact type>**.
 2. Local alarm bell.
 3. Door-mounted thermal or impact printer for alarm and status logs.
 4. Operator Interface Communications Ports: USB, Ethernet, and RS485.
 5. **<Insert optional feature>**.
- I. ATS:
1. Complies with NFPA 20, **[UL 218]** <Insert standard>, and **[UL 1008]** <Insert standard>.
 2. Integral with controller as a listed combination fire-pump controller and power transfer switch.

3. Automatically transfers fire-pump controller from normal power supply to alternate power supply in event of power failure.
4. Allows manual transfer from one source to the other.
5. Alternate-Source Isolating and Disconnecting Means: Integral molded-case switch, with an externally mounted operating handle.
6. Alternate-Source Isolating and Disconnecting Means: Mechanically interlocked isolation switch and circuit breaker rated at a minimum of 115 percent of rated motor full-load current, with an externally mounted operating handle; circuit breaker shall be provided with nonthermal sensing, instantaneous-only short-circuit overcurrent protection to comply with available fault currents.
7. Local[**and Remote**] Alarm and Status Indications:
 - a. Normal source available.
 - b. Alternate source available.
 - c. In normal position.
 - d. In alternate position.
 - e. Isolating means open.
 - f. **<Insert indication>**.
8. Audible alarm, with silence push button.
9. Nonautomatic (manual, nonelectric) means of transfer.
10. Engine test push button.
11. Start generator output contacts.
12. Timer for weekly generator tests.
13. **<Insert function>**.

2.3 LIMITED-SERVICE CONTROLLERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Aquarius Fluid Products, Inc.
 2. ASCO Power Technologies, LP; Firetrol Products.
 3. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 4. Hubbell Incorporated; Hubbell Industrial Controls.
 5. Joslyn Clark Corporation.
 6. Master Control Systems, Inc.
 7. Metron, Inc.
 8. Tornatech.
 9. **<Insert manufacturer's name>**.
 10. or approved equal.
- B. General Requirements for Limited-Service Controllers:
 1. Comply with NFPA 20 and **[UL 218] <Insert standard>**.
 2. Listed by an NRTL for electric-motor driver for fire-pump service.
 3. **[Combined automatic and nonautomatic] [Nonautomatic]** operation.
 4. Factory assembled, wired, and tested; continuous-duty rated.
 5. Service Equipment Label: NRTL labeled for use as service equipment.

- C. Method of Starting:
1. **[Pressure] [Nonpressure]**-switch actuated.
 - a. Water-pressure-actuated switch and pressure transducer with independent high- and low-calibrated adjustments responsive to water pressure in fire-suppression piping.
 - b. System pressure recorder, electric ac driven, with spring backup.
 - c. Programmable minimum-run-time relay to prevent short cycling.
 - d. Programmable timer for weekly tests.
 2. Across-the-line magnetic controller.
 3. Emergency Start: Mechanically operated start handle that closes and retains the motor RUN contactor independent of all electric or pressure actuators.
- D. Method of Stopping: **[Automatic and nonautomatic shutdown after automatic starting] [Nonautomatic]**.
- E. Capacity: Rated for fire-pump-driver horsepower and short-circuit-current (withstand) rating equal to or greater than short-circuit current available at controller location.
- F. Method of Isolation and Overcurrent Protection: Inverse-time, nonadjustable MCCB, with an externally mounted operating handle.
- G. Door-Mounted Operator Interface and Controls:
1. Monitor, display, and control the devices, alarms, functions, and operations listed in NFPA 20 as required for drivers and controller types used.
 2. Method of Control and Indication:
 - a. **[Microprocessor-based logic] <Insert logic type>** controller, with multiline **[LCD] <Insert display type>** digital readout.
 - b. **[Membrane] <Insert keypad type>** keypad.
 - c. **[LED] <Insert lamp type>** alarm and status indicating lights.
 3. Local[**and Remote**] Alarm and Status Indications:
 - a. Controller power on.
 - b. Motor running condition.
 - c. Loss-of-line power.
 - d. Line-power phase reversal.
 - e. Line-power single-phase condition.
 - f. **<Insert indication>**.
 4. Audible alarm, with silence push button.
 5. Nonautomatic START and STOP push buttons.
 6. **<Insert function>**.
- H. Optional Features:
1. Extra Output Contacts:

- a. [One] <Insert number> N.O. contact(s) for motor running condition.
 - b. [One] <Insert number> set(s) of contacts for loss-of-line power.
 - c. [One] <Insert number> each, Form C contacts for high and low reservoir level.
 - d. <Insert contact type>.
2. Local alarm bell.
 3. Door-mounted thermal or impact printer for alarm and status logs.
 4. Operator Interface Communications Ports: USB, Ethernet, and RS485.
 5. <Insert optional feature>.
- I. ATS:
1. Complies with NFPA 20, [UL 218] <Insert standard>, and [UL 1008] <Insert standard>.
 2. Integral with controller as a listed combination fire-pump controller and power transfer switch.
 3. Automatically transfers fire-pump controller from normal power supply to alternate power supply in event of power failure.
 4. Allows manual transfer from one source to the other.
 5. Alternate-Source Isolating and Disconnecting Means: Integral molded-case switch, with an externally mounted operating handle.
 6. Alternate-Source Isolating and Disconnecting Means: Mechanically interlocked isolation switch and circuit breaker rated at a minimum of 115 percent of rated motor full-load current, with an externally mounted operating handle; circuit breaker shall be provided with nonthermal sensing, instantaneous-only short-circuit overcurrent protection to comply with available fault currents.
 7. Local[and Remote] Alarm and Status Indications:
 - a. Normal source available.
 - b. Alternate source available.
 - c. In normal position.
 - d. In alternate position.
 - e. Isolating means open.
 - f. <Insert indication>.
 8. Audible alarm, with silence push button.
 9. Nonautomatic (manual, nonelectric) means of transfer.
 10. Engine test push button.
 11. Start generator output contacts.
 12. Timer for weekly generator tests.
 13. <Insert function>.

2.4 STANDALONE ATS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Aquarius Fluid Products, Inc.

2. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 3. Hubbell Incorporated; Hubbell Industrial Controls.
 4. **<Insert manufacturer's name>**.
 5. or approved equal.
- B. General Requirements for Standalone ATS:
- C. Complies with NFPA 20, **[UL 218] <Insert standard>**, and **[UL 1008] <Insert standard>**.
1. Listed by an NRTL for fire-pump service.
 2. Automatic and nonautomatic operation.
 3. Separate from controller and individually listed as a fire-pump-controller power transfer switch.
 4. Automatically transfers fire-pump controller from normal power supply to alternate power supply in event of power failure.
 5. Allows manual transfer from one source to the other; factory assembled, wired, and tested.
- D. Capacity: Rated for fire-pump-driver horsepower and short-circuit-current (withstand) rating equal to or greater than short-circuit current available at ATS location.
- E. Alternate-Source Isolating and Disconnecting Means: Integral molded-case switch, with an externally mounted operating handle.
- F. Alternate-Source Isolating and Disconnecting Means:
1. Mechanically interlocked isolation switch and circuit breaker rated at a minimum of 115 percent of rated motor full-load current.
 2. Externally mounted operating handle.
 3. Circuit breaker provided with nonthermal sensing, instantaneous-only, short-circuit overcurrent protection.
 4. Equipped with a voltage surge arrester.
- G. Door-Mounted Operator Interface and Controls:
1. Monitor, display, and control devices, alarms, functions, and operations listed in NFPA 20 as required for drivers and controller types used.
 2. Method of Control and Indication:
 - a. **[Microprocessor-based logic] <Insert logic type>** controller, with multiline **[LCD] <Insert display type>** readout.
 - b. **[Membrane] <Insert keypad type>** keypad.
 - c. **[LED] <Insert lamp type>** alarm and status indicating lights.
 3. Local[**and Remote**] Alarm and Status Indications:
 - a. Normal source available.
 - b. Alternate source available.
 - c. In normal position.

- d. In alternate position.
 - e. Isolating means open.
 - f. **<Insert indication>**.
4. Audible alarm, with silence push button.
 5. Nonautomatic (manual, nonelectric) means of transfer.
 6. Engine test push button.
 7. Start generator output contacts.
 8. Timer for weekly generator tests
 9. **<Insert function>**.
- H. Optional Features:
1. Extra Output Contacts:
 - a. **[One]** **<Insert number>** each, Form A; isolating means open.
 - b. **[One]** **<Insert number>** each, Form C; in normal or alternate position
 - c. **<Insert contact type>**.
 2. Door-mounted thermal or impact printer for alarm and status logs.
 3. Operator Interface Communications Ports: USB, Ethernet, and RS485.
 4. **<Insert optional feature>**.

2.5 CONTROLLERS FOR PRESSURE-MAINTENANCE PUMPS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Aquarius Fluid Products, Inc.
 2. ASCO Power Technologies, LP; Firetrol Products.
 3. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 4. Hubbell Incorporated; Hubbell Industrial Controls.
 5. Joslyn Clark Corporation.
 6. Master Control Systems, Inc.
 7. Metron, Inc.
 8. Tornatech.
 9. **<Insert manufacturer's name>**.
 10. or approved equal.
- B. General Requirements for Pressure-Maintenance-Pump Controllers:
1. Type: UL 508 factory assembled, -wired, and tested, across-the-line; for combined automatic and manual operation.
 2. Enclosure: UL 508 and NEMA 250, Type 2 for wall-mounting.
 3. Factory assembled, wired, and tested.
 4. Finish: Manufacturer's standard color paint.
- C. Rate controller for scheduled horsepower and include the following:
1. Fusible disconnect switch.

2. Pressure switch.
3. Hand-off-auto selector switch.
4. Pilot light.
5. Running period timer.

2.6 REMOTE ALARM PANELS

- A. General Requirements for Remote Alarm Panels: Comply with NFPA 20 and **[UL 218]** **<Insert standard>**; listed by an NRTL for fire-pump service.
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Aquarius Fluid Products, Inc.
 2. ASCO Power Technologies, LP; Firetrol Products.
 3. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 4. Hubbell Incorporated; Hubbell Industrial Controls.
 5. Joslyn Clark Corporation.
 6. Master Control Systems, Inc.
 7. Metron, Inc.
 8. Tornatech.
 9. **<Insert manufacturer's name>**.
 10. or approved equal.
- C. General Requirements for Remote Alarm Panels: Factory assembled, wired, and tested.
- D. Supervisory[**and Normal**] Control Voltage: **[120-V ac] [240-V ac] <Insert voltage>**; **[single] [dual]** source.
- E. Audible and Visual Alarm and Status Indications:
 1. Driver running.
 2. Loss of phase.
 3. Phase reversal.
 4. Supervised power on.
 5. **[Common] [Separate]** trouble on the controller.
 - a. **<Insert alarm>**.
 6. Controller connected to alternate power source.
 7. **<Insert indication>**.
- F. Audible and Visual Alarm and Status Indications: Manufacturer's standard indicating lights; **[push-to-test] [non-push-to-test, with separate test push button]**.
 1. Engine running.
 2. Controller main switch turned to the off or manual position.
 3. Supervised power on.
 4. **[Common] [Separate]** trouble on the controller or engine.

- a. **<Insert alarm>**.
- 5. Common pump room trouble.
- 6. Controller connected to alternate power source.
- 7. **<Insert indication>**.
- G. Audible alarm, with silence push button.
- H. Pump REMOTE START push button.

2.7 LOW-SUCTION-SHUTDOWN PANELS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Aquarius Fluid Products, Inc.
 - 2. ASCO Power Technologies, LP; Firetrol Products.
 - 3. Hubbell Incorporated; Hubbell Industrial Controls.
 - 4. Joslyn Clark Corporation.
 - 5. Master Control Systems, Inc.
 - 6. Metron, Inc.
 - 7. Tornatech.
 - 8. **<Insert manufacturer's name>**.
 - 9. or approved equal.
- B. General Requirements for Low-Suction-Shutdown Panels:
 - 1. Listed by an NRTL for fire-pump service.
 - 2. Factory assembled, wired, and tested.
 - 3. Prevents automatic start of fire pump, and shuts down automatically started fire pump, on low-suction pressure.
 - 4. **[Automatic] [Manual]** reset.
- C. Operation: **[External contact input] [Integral pressure switch] <Insert operation>**.
- D. Supervisory[**and Normal**] Control Voltage: **[120-V ac] [240-V ac] <Insert voltage>**; **[single] [dual]** source.
- E. Include audible and visual alarms and status indications, with silence push button, for the following conditions:
 - 1. Control power available.
 - 2. Low-suction pressure.
 - 3. Normal-suction pressure.
 - 4. **<Insert optional features>**.

2.8 ENCLOSURES

- A. Fire-Pump Controllers, ATS, Remote Alarm Panels, and Low-Suction-Shutdown

Panels: NEMA 250, to comply with environmental conditions at installed locations and NFPA 20.

1. Indoor, Dry and Clean Locations: [**Type 1 (IEC IP10)**] <Insert type>.
2. Indoor Locations Subject to Dripping Noncorrosive Liquids: [**Type 2 (IEC IP11)**] <Insert type>.
3. Outdoor Locations: [**Type 3R (IEC IP14)**] [**Type 4 (IEC IP56)**] [**Type 4X (IEC IP56)**] <Insert type>.
4. Other Wet or Damp, Indoor Locations: [**Type 4 (IEC IP56)**] [**Type 4X (IEC IP56)**] <Insert type>.
5. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: Type 12 (IEC IP12).

- B. Enclosure Color: [**Manufacturer's standard "fire-pump-controller red"**] <Insert color>.
- C. Nameplates: Comply with NFPA 20; complete with capacity, characteristics, approvals, listings, and other pertinent data.
- D. Optional Features:
1. Floor stands, **12 inches** (305 mm) high, for floor-mounted controllers.
 2. Space heater, [**120-V ac**] [**240-V ac**] [, with humidistat] [, with thermostat].
 3. Tropicalization.
 4. <Insert optional feature>.

2.9 SOURCE QUALITY CONTROL

- A. Testing: Test and inspect fire-pump controllers according to requirements in NFPA 20 and [**UL 218**] <Insert standard>.
1. Verification of Performance: Rate controllers according to operation of functions and features specified.
- B. Fire-pump controllers will be considered defective if they do not pass tests and inspections.
- C. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and surfaces to receive equipment, with Installer present, for compliance with requirements and other conditions affecting performance.
- B. Examine equipment before installation. Reject equipment that is wet or damaged by moisture or mold.

- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SEQUENCING AND SCHEDULING

- A. The fire pump controller installation is to be sequenced and scheduled with other work to reduce possibility of damage and soiling of equipment during the remainder of construction period.

3.3 FACTORY TESTING

- A. Before shipment, the manufacturer shall fully and completely test the system to factory standards to assure compliance with the specification. Each subassembly shall undergo thorough testing prior to installation in the system. The total system shall be exposed to a functional load test shall be subjected to a minimum of 48 hours "burn-in" test prior to shipment.
- B. A complete test report shall be submitted to DEN Project Manager for each unit and kept on file for future reference.

3.4 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle fire pump controller according to NEMA BU 1.1.

3.5 PROJECT CONDITIONS

- A. Field Measurements: Verify existing dimensions by field measurements. Verify clearances and locate obstructions within manufacturing and installation tolerances of fire pump controller assemblies.

3.6 CONTROLLER INSTALLATION

- A. Install controllers within sight of their respective drivers.
- B. Install fire pump controller assemblies according to manufacturer's written instructions, Shop Drawings, Coordination Drawings, and referenced standards.
- C. Support fire pump controller assemblies independent of supports for other elements such as equipment enclosure at connections to panelboards and switchboards, pipe, conduit, ceilings, and ducts.
 - 1. Fasten supports securely to building structure according to Section 230529 "Hangers and Supports for HVAC Piping and Equipment."
- D. Coordinate fire pump controller assembly terminations to equipment enclosures to ensure proper phasing, connection, and closure.

- E. Tighten fire pump controller assembly joints with torque wrench or similar tool recommended by bus assembly manufacturer. Tighten joints again after bus assemblies have been energized for 30 days.
- F. Connect fire pump controller assemblies and components to wiring system and to ground as indicated and instructed by manufacturer.
 - 1. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A.
 - 2. Torque Values: Submit torque values for all connections with a torque schedule and witness signature.
- G. Connect controllers to their dedicated pressure-sensing lines.
- H. Wall-Mounting Controllers: Install controllers on walls with disconnect operating handles not higher than **79 inches** (2006 mm) above finished floor, and bottom of enclosure not less than **12 inches** (305 mm) above finished floor unless otherwise indicated. Bolt units to wall or mount on lightweight structural-steel channels bolted to wall. For controllers not on walls, provide freestanding racks complying with Section 260529 "Hangers and Supports for Electrical Systems."
- I. Floor-Mounting Controllers: Install controllers on **4-inch** (100-mm) nominal-thickness concrete bases, using floor stands high enough so that the bottom of enclosure cabinet is not less than **12 inches** (305 mm) above finished floor. Comply with requirements for concrete bases specified in **[Section 033000 "Cast-in-Place Concrete. "] [Section 033053 "Miscellaneous Cast-in-Place Concrete. "]**
 - 1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on **18-inch** (450-mm) centers around the full perimeter of concrete base.
 - 2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base, and anchor into structural concrete floor.
 - 3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - 4. Install anchor bolts to elevations required for proper attachment to supported equipment.
- J. Seismic Bracing: Comply with requirements specified in Section 260548 "Vibration and Seismic Controls for Electrical Systems."
- K. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.
- L. Comply with NEMA ICS 15.

3.7 STANDALONE ATS INSTALLATION

- A. Wall-Mounting ATS: Install ATS on walls with disconnect operating handles not higher

than **79 inches** (2066 mm) above finished floor, and bottom of enclosure not less than **12 inches** (305 mm) above finished floor unless otherwise indicated. Bolt units to wall or mount on lightweight structural-steel channels bolted to wall. For ATS not on walls, provide freestanding racks complying with Section 260529 "Hangers and Supports for Electrical Systems."

- B. Floor-Mounting ATS: Install ATS on **4-inch** (100-mm) nominal-thickness concrete bases, using floor stands high enough so that the bottom of enclosure cabinet is not less than **12 inches** (305 mm) above finished floor. Comply with requirements for concrete bases specified in **[Section 033000 "Cast-in-Place Concrete.]"** **[Section 033053 "Miscellaneous Cast-in-Place Concrete.]"**
1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on **18-inch** (450-mm) centers around the full perimeter of concrete base.
 2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base, and anchor into structural concrete floor.
 3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 4. Install anchor bolts to elevations required for proper attachment to supported equipment.
- C. Seismic Bracing: Comply with requirements specified in Section 260548 "Vibration and Seismic Controls for Electrical Systems."
- D. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.

3.8 REMOTE ALARM[**AND LOW-SUCTION-SHUTDOWN**] PANEL INSTALLATION

- A. Install panels on walls with tops not higher than **[72 inches** (1829 mm)] **<Insert height>** above finished floor unless otherwise indicated. Bolt units to wall or mount on lightweight structural-steel channels bolted to wall. For ATS not on walls, provide freestanding racks complying with Section 260529 "Hangers and Supports for Electrical Systems."

3.9 POWER WIRING INSTALLATION

- A. Install power wiring between controllers and their services or sources, and between controllers and their drivers. Comply with requirements in NFPA 20, NFPA 70, and Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.10 CONTROL AND ALARM WIRING INSTALLATION

- A. Install wiring between controllers and remote devices[**and facility's central monitoring system**]. Comply with requirements in NFPA 20, NFPA 70, and Section 260523 "Control-Voltage Electrical Power Cables."

- B. Install wiring between remote alarm[**and low-suction-shutdown**] panels and controllers. Comply with requirements in NFPA 20, NFPA 70, and Section 260523 "Control-Voltage Electrical Power Cables."
- C. Install wiring between controllers and the building's fire-alarm system. Comply with requirements specified in Section 283111 "Digital, Addressable Fire-Alarm System."
- D. Bundle, train, and support wiring in enclosures.
- E. Connect remote manual and automatic activation devices where applicable.

3.11 IDENTIFICATION

- A. Comply with requirements in NFPA 20 for marking fire-pump controllers.
- B. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification in NFPA 20 and as specified in Section 260553 "Identification for Electrical Systems."

3.12 FIELD QUALITY CONTROL

- A. Testing Agency: [**Engage**] a qualified testing agency to perform tests and inspections.
- B. Perform tests and inspections.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist Contractor in testing.
- C. Acceptance Testing Preparation:
 - 1. Inspect and Test Each Component:
 - a. Inspect wiring, components, connections, and equipment installations. Test and adjust components and equipment.
 - b. Test insulation resistance for each element, component, connecting supply, feeder, and control circuits.
 - c. Test continuity of each circuit.
 - 2. Verify and Test Each Electric-Driver Controller:
 - a. Verify that voltages at controller locations are within plus 10 or minus 1 percent of motor nameplate rated voltages, with motors off. If outside this range for any motor, notify DEN Project Manager before starting the motor(s).
 - b. Test each motor for proper phase rotation.
 - 3. Operational Test: After electrical circuitry has been energized, start units to

- confirm proper unit operation.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

D. Field Acceptance Tests:

1. Do not begin field acceptance testing until suction piping has been flushed and hydrostatically tested and the certificate for flushing and testing has been submitted to DEN Project Manager and authorities having jurisdiction.
2. Prior to starting, notify authorities having jurisdiction of the time and place of the acceptance testing.
3. Engage manufacturer's factory-authorized service representative to be present during the testing.
4. Perform field acceptance tests as outlined in NFPA 20.

E. Controllers will be considered defective if they do not pass tests and inspections.

F. Prepare test and inspection reports.

3.13 STARTUP SERVICE

A. Engage a factory-authorized service representative to assist Contractor and perform startup service.

1. Complete installation and startup checks according to manufacturer's written instructions.
2. **<Insert startup steps if any>**.

3.14 ADJUSTING

A. Adjust controllers[**and battery charger systems**] to function smoothly and as recommended by manufacturer.

B. Set field-adjustable switches, auxiliary relays, time-delay relays, and timers.

C. Program microprocessors for required operational sequences, status indications, alarms, event recording, and display features. Clear events memory after final acceptance testing and prior to Substantial Completion.

D. Set field-adjustable pressure switches.

3.15 PROTECTION

A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions until enclosed controllers are ready to be energized and placed into service.

- B. Replace controllers whose interiors have been exposed to water or other liquids prior to Substantial Completion.
- C. ADJUSTING
 - 1. Set field-adjustments to match loads.
- D. CLEANING
 - 1. After completing system installation, including outlet fittings and devices, inspect exposed finish. Remove burrs, dirt, and construction debris. Repair damaged finish to match original finish.
- E. PROTECTION
 - 1. Provide final protection to ensure that moisture does not enter fire pump controller assembly.
- F. COMMISSIONING
 - 1. Manufacturer's representative shall visit site, verify installation, start up and test, and submit to DEN Project Manager, a letter stating equipment and installation meets intent of Contract Documents and manufacturer's warranties and guarantees are in effect.

3.16 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain controllers[, **remote alarm panels**] [, **low-suction-shutdown panels**] [, **and to use and reprogram microprocessor-based controls within this equipment**].
 - 1. Train Owner's maintenance personnel on procedures and schedules for starting up and shutting down, troubleshooting, servicing, and maintaining equipment and schedules.
 - 2. Review data in maintenance manuals in accordance with requirements of Division 01.
 - 3. Review data in maintenance manuals in accordance with requirements of Division 01.
 - a. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days' advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 213900

SECTION 220400 - BASIC PLUMBING REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Basic requirements common to the Work in general of Division 22 and other Divisions and Sections of the Specification where referenced.
- B. Provide, unless specified otherwise, all labor, materials and equipment necessary for completely finished and operational mechanical systems described and specified under other Sections of this Division 22.
- C. Provide all minor incidental items such as offsets, fittings, and accessories required as part of the Work even though not specified or indicated.
- D. Inspection: Inspect Work preceding or interfacing with Work of Division 22 and report any known or observed defects that affect the Work to the General Contractor. Do not proceed with the Work until defects are corrected.
- E. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 REFERENCES

- A. General:
 - 1. For products or workmanship specified by association, trades, or Federal Standards, comply with requirements of the standard, except when more rigid requirements are specified or are required by applicable Codes.
 - 2. The date of the standard is that in effect as the date of the Contract Documents, except when a specific date is specified.
 - 3. When required by individual Specifications Section by means of reference for cleaning or installation requirements, etc., obtain a copy of the standard. Maintain the copy at job site during work until substantial completion. Copy may be in electronic format.
 - 4. Schedule of Referenced Organizations: Reference Section 014210 "Referenced Material" for a list of the acronyms of organizations referenced in these Specifications:

1.4 DEFINITIONS

- A. Conform to Division 01: These Specifications are of abbreviated, simplified, or streamlined type and include incomplete sentences. Singular words will be interpreted as plural and plural words will be interpreted as singular where applicable and where full context of the Contract Documents so indicates.
- B. The following words are re-defined and/or elaborated on for the context of Division 22 Work:
 - 1. Furnish: Except as otherwise defined in greater detail, term "furnish" is used to mean supply and deliver to Project site, ready for unloading, unpacking, assembly, installation, etc., as applicable in each instance.
 - 2. Install: Except as otherwise defined in greater detail, term "install" is used to describe operations at Project site including unloading, unpacking, assembly, erection, placing, anchoring, applying, working to dimension, finishing, curing, protecting, cleaning and similar operations, as applicable in each instance.
 - 3. Provide: Except as otherwise defined in greater detail, term "provide" means furnish and install, complete and ready for intended use, as applicable in each instance.
 - 4. General Contractor: The term "General Contractor" used in Division 22 and elsewhere in the Contract Documents means the party with whom the Owner has executed the Owner-Contractor Agreement.

1.5 QUALITY CONTROL

- A. Conform to Division 01. Materials and apparatus required for the Work to be new; to be furnished, delivered, erected, connected and finished in every detail; and to be so selected and arranged so as to fit properly into the building spaces.
- B. Unless otherwise specifically indicated, equipment and materials to be installed in accordance with the recommendations of the Manufacturer. This includes the performance of tests as recommended by the Manufacturer.

1.6 REGULATORY REQUIREMENTS

- A. Comply with latest editions of all applicable Codes, Standards, Ordinances and Regulations in effect as of the date of the Contract Documents including but not necessarily limited to the following:
 - 1. ABMA - American Bearing Manufacturers Association.
 - 2. ACGIH - American Conference of Governmental Industrial Hygienists.
 - 3. ACI - American Concrete Institute.
 - 4. AGA - American Gas Association.
 - 5. ASHRAE - American Society of Heating, Refrigeration, and Air Conditioning Engineers.
 - 6. ANSI - American National Standards Institute.
 - 7. API - American Petroleum Institute.

8. ASTM - American Society for Testing of Materials.
9. AWS - American Welding Society.
10. AWWA - American Water Works Association.
11. FM - Factory Mutual Insurance Association.
12. MSS - Manufacturers Standardization Society of the Valve and Fittings Industry.
13. NACE - National Association of Corrosion Engineers.
14. NAPCA - National Association of Pipe Coating Applicators.
15. National Electrical Code NFPA-70.
16. NFPA - National Fire Protection Association.
17. SMACNA - Sheet Metal and Air Conditioning Contractors National Association.
18. SSPC - The Society for Protective Coatings.
19. STI - Steel Tank Institute.
20. UL - Underwriters Laboratories.

- B. If discrepancies occur between the Contract Documents and any applicable Codes, Guidelines, Ordinances, Acts, or Standards, the most stringent requirements shall apply.
- C. Where hourly fire ratings are indicated or required, provide components and assemblies meeting requirements of the American Insurance Association, Factory Mutual Insurance Association and listed by Underwriters Laboratories, Inc.

1.7 PRODUCT OPTIONS AND SUBSTITUTIONS

- A. Substitutions: Refer to Division 01, General Requirements.
- B. Some materials and equipment are specified by Manufacturer and catalog numbers. The Manufacturer and catalog numbers are used to establish a degree of quality and style for such equipment and material.
- C. When alternate or substitute materials and equipment are used, Contractor shall be responsible for space requirements, configurations, performance, changes in bases, supports, structural members and openings in structure, electrical changes and other apparatus and trades that may be affected by their use.
- D. When providing a product and/or service under the qualification of "acceptable equal," Contractor shall be entirely responsible for additional costs incurred due to modifications to the civil, architectural, structural, mechanical, and electrical design that may be required to accommodate the "acceptable equal."
- E. Substitute materials and equipment are only allowed to be provided from the Manufacturers listed as approved.

1.8 SHOP DRAWINGS AND PRODUCT DATA

- A. General: Comply with the General Conditions of the Contract and with Division 01 - General Requirements.
- B. All documents shall be submitted in electronic format. Each submittal shall be in a

single security free PDF document. PDF documents shall be compatible with Adobe Acrobat 10.0 or newer. All as-built documents shall be submitted in Revit in accordance with Division 1 requirements.

1.9 CONTRACT RECORD DOCUMENTS

- A. General: Comply with the General Conditions of the Contract and with Division 01 - General Requirements,

1.10 OPERATING AND MAINTENANCE DATA

- A. Plumbing Contractor shall submit electronic copy containing a single PDF file of the entire maintenance manual to the DEN Project Manager, General Contractor for their approval.

- B. The manual shall have:

1. Alphabetical list of all system components including the name, address, and 24-hour phone number of the company responsible for servicing each item during the first year's operation.
2. Operating instructions for complete system, including emergency procedures for fire or failure of major equipment and procedures for normal starting/operating/shutdown and long-term shutdown.
3. Maintenance instructions, including valves, valve tag and other identified equipment lists, proper lubricants and lubricating instructions for each piece of equipment and necessary cleaning/replacing/adjusting schedules.
4. Manufacturer's data on each piece of equipment, including:
 - a. Installation instructions.
 - b. Drawings and specifications (approved shop drawings).
 - c. Parts lists.
 - d. Complete wiring and temperature control diagrams (approved shop drawings).
5. Each piece identified on any schedule shall be bookmarked in the electronic file by its scheduled tag ID (IE: WH-1)

- C. In addition to the maintenance manual, and keyed to it, the equipment shall be identified and tagged as specified.

1. Identify all starters, disconnect switches, and manually operated controls, except integral equipment switches with permanently applied, legible markers corresponding to operating instructions in the "Maintenance Manual".
2. Tag all manual operating valves with 1-1/2" diameter brass tags attached with chains. Tags are to be sequence numbered with legible metal stamps.
3. Provide a typed tag list or schedule mounted under glass in the room designated by DEN Project Manager stating number, location, and function of each tagged item. Insert a copy of tag list in each "Maintenance Manual".

- D. Plumbing Contractor shall be responsible for scheduling instructional meetings for maintenance personnel on the proper operation and maintenance of all mechanical systems, using the maintenance manual as a guide. These meetings must be scheduled through the DEN Project Manager, and General Contractor far enough in advance so that all personnel can be notified.
- E. Division 22 Contractor shall provide proof of performance certification of all Plumbing Equipment and Systems to demonstrate that all Plumbing Equipment and Systems are operating to the intent of the design.

1.11 FINAL OBSERVATION

- A. Comply with the requirements of Division 01 and the following:
 - 1. Prior to the request for final observation, all Work under the contract shall be complete; all systems shall be in proper working order and placed in operation for a minimum duration of 48 hours.
 - 2. All plumbing systems shall be properly functioning with quantities shown on the Drawings, and all water circuits shall be adjusted to provide the proper flows.
 - 3. All equipment shall be cleaned. All debris and construction materials shall be removed from the DEN property to a DEN approved landfill off-airport.
 - 4. Pumps shall be tested in accordance with other Division 22 Sections and shall be in proper working order and placed in operation.
 - 5. The temperature control system shall be complete and in proper working order. All instruments shall be properly and accurately field calibrated.
 - 6. At the request of the DEN Project Manager, a representative of the Contractor who is thoroughly familiar with the Project and operation of the various systems shall be present during the final observation to demonstrate proper operation of the equipment and controls. If requested by the DEN Project Manager, the Contractor shall have representatives from the Contractor's subcontractors present to assist during final observation.

1.12 PROJECT CONDITIONS

- A. Accessibility:
 - 1. Division 22 Contractor shall locate all equipment, which must be serviced, operated, or maintained in fully accessible positions. Such equipment shall include (but not be limited to) valves, shock absorbers, motors, controllers, switchgear, and drain points. If required for better accessibility, furnish access doors for this purpose. Minor deviations from Drawings may be allowed to provide for better accessibility. Any changes shall be approved by the DEN Project Manager prior to making the change.
 - 2. Division 22 Contractor shall provide the General Contractor with the exact locations of access doors for each concealed valve, shock absorber control, damper, or other device requiring service. Locations of these doors shall be submitted in sufficient time to be installed in the normal course of work.
 - 3. Provide carpentry, masonry, concrete and metalwork required for work of this

Division where not specifically called for under other Sections.

B. Freeze Protection:

1. Do not run plumbing systems piping in outside walls, or locations where freezing may occur. Piping next to outside walls shall be in furred spaces with insulation between the piping and the outside wall. Insulation of piping shall not be considered freeze protection.

C. Scaffolding, Rigging and Hoisting:

- a. Provide all scaffolding, rigging, hoisting and services necessary for erection and delivery into the premises of any equipment and apparatus furnished; remove same from premises when no longer required. Conform to OSHA requirements and standards.

1.13 COORDINATION

- A. General: Coordinate and order the progress of plumbing Work to conform to the progress of the Work of the other trades. Complete the entire installation as soon as the condition of the building will permit.
- B. Coordinate Work with Division 21 Fire Suppression, Division 23 HVAC, Division 26 Electrical, and Division 33 Utilities and other Divisions as required to perform the Work.
- C. Existing System Interruptions: Comply with Division 01.
- D. Cutting and Patching: Reference Section 017330 "Cutting and Patching".
- E. Drawings and Specifications: The Plumbing Drawings indicate the general design and arrangement of lines, equipment, systems, etc. Information shown is diagrammatic in character and does not necessarily indicate every required offset, fitting, etc. Do not scale the Drawings for dimensions. Take dimensions, measurements, locations, levels, etc., from the Architectural and Engineering Drawings and equipment to be furnished.
- F. Discrepancies: Examine Drawings and Specifications for other parts of the Work, and if any discrepancies occur between the plans for the Work of this Division and the plans for the work of others, report such discrepancies to the DEN Project Manager and obtain written instructions for any changes necessary.
- G. Order of Precedence: The precedence of construction documents are as Specified in the General Conditions.

1.14 START-UP PROCEDURES

- A. Before start-up, each piece of equipment comprising a part of the system shall be checked for proper lubrication, drive rotation, proper control sequence, and any other condition, which may cause damage to equipment or endanger personnel.

- B. Ensure that all control systems are fully operational in automatic mode.
- C. If systems are not to continue in use following the start-up procedures, steps should be taken to ensure against accidental operation or operation by unauthorized personnel.
- D. Factory personnel shall be notified as appropriate to start systems requiring their services.
- E. Notify the DEN Project Manager in writing a minimum of 72 hours prior to start-up of all major mechanical equipment and systems if no shutdown request is required.
- F. Should there be any equipment found which had not been properly started up, it will be the responsibility of this Contractor to arrange for the appropriate personnel to start up the equipment at the Contractor's expense and at a time as scheduled by the DEN Project Manager.

1.15 SCHEDULE OF TESTING

- A. Provide testing in accordance with the General Conditions of the Contract and as per requirements in Division 22 Sections.
- B. A schedule of testing shall be drawn up by the Division 22 Contractor in such a manner that it will show areas tested, test pressure, length of test, date, time and signature of testing personnel.
- C. Notify the DEN Project Manager, DEN Mechanical Inspector and DEN Mechanical Engineer in writing a minimum of 72 hours prior to testing of any mechanical equipment and systems if no shutdown request is required.
- D. All testing must be performed in the presence DEN Project Manager and or designated representative; the DEN Project Manager's signature for verification of the test must appear on the schedule.
- E. All testing must be performed in accord with the procedures set forth in Division 22 and other Sections of the Specifications where referenced. At completion of testing, the schedule shall then be submitted in triplicate to the DEN Project Manager.
- F. Ensure operational and performance tests are made on seasonal equipment.
- G. Complete all tests required by Code Authorities, such as health codes, building codes, and safety codes.
- H. After test runs have been completed and systems have been demonstrated to be satisfactory and ready for permanent operation, all permanent pipeline strainers and filters shall be cleaned, valve and pump packing properly adjusted, final adjustments made, drive guards secured in place, lubrication checked and replenished if required.

1.16 CLEANING AND FINISHING

- A. Provide cleaning in accordance with the General Requirements of the Contract
- B. Cleaning shall include but not be limited to removing grease, dirt, dust, stains, labels, fingerprints, and other foreign materials from sight-exposed piping, equipment, fixtures, and other such items installed under Division 22 of the Work. If finishes have been damaged, refinish to original condition and leave everything in proper working order and of intended appearance.
- C. Clean Domestic Water Systems in accordance with applicable Division 22 Sections.

1.17 WARRANTIES

- A. Conform to Division 01: Provide a written warranty covering the entire plumbing Work to be free from defective materials, equipment, and workmanship for a minimum period of two (2) years after date of acceptance. During this period, provide labor and materials as required to repair or replace defects. Provide certificates for such items of equipment, which have or are specified to have warranties in excess of one (1) year.

1.18 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION (Not Applicable)

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 220400

SECTION 220500 - COMMON WORK RESULTS FOR PLUMBING EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes the following basic mechanical materials and methods to complement other Division 22 Sections.
1. Piping materials and installation instructions common to most piping systems.
 2. Dielectric fittings.
 3. Sleeves.
 4. Nonshrink grout for equipment installations.
 5. Flowable backfill for underground piping.
 6. Field-fabricated metal equipment supports.
 7. Concrete bases
 8. Installation requirements common to equipment specification Sections.
 9. Cutting and patching.
 10. Touch up painting and finishing.

for Alternates with DEN Project Manager.

- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.2 RELATED SECTIONS

- A. Drawings and general provisions of Contract, including General and the Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- B. Section 050510 "Welding"
- C. Section 220400 "Basic Plumbing Requirements".
- D. Section 220553 "Identification for Plumbing Piping and Equipment".
- E. Division 31 Earthwork Sections.

1.3 DEFINITIONS

- A. Pipe, pipe fittings, and piping include tube, tube fittings, and tubing.
- B. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct shafts, unheated spaces immediately below the roof, spaces above ceilings, unexcavated spaces, crawl spaces, and tunnels.

- C. Exposed Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- D. Exposed Exterior Installations: Exposed to view outdoors, or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
- E. Concealed Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and in duct shafts.
- F. Concealed Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants, but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.

1.4 SUBMITTALS

- A. General: Submit the following according to the Conditions of the Contract and Division 01 Specification Sections:
 - 1. Shop drawings detailing fabrication and installation for metal and wood supports and anchorage for mechanical materials and equipment.
 - 2. Prepare coordination drawings according to Division 01 Section "Submittals" to a 1/4 inch equals 1 foot scale or larger. Detail major elements, components, and systems of mechanical equipment and materials in relationship with other systems, installations, and building components. Show space requirements for installation and access. Show where sequence and coordination of installations are important to the efficient flow of the Work. Include the following:
 - a. Clearances for servicing and maintaining equipment, including space for equipment disassembly required for periodic maintenance.
 - b. Pump metal support details.
 - 3. Welder certificates signed by Contractor certifying that welders comply with requirements specified under the Quality Assurance Article.
 - 4. Floor x-rays and/or ground penetrating radar reports.
 - 5. All documents shall be submitted in electronic format. Each submittal shall be in a single security free PDF document. PDF documents shall be compatible with Adobe Acrobat 10.0 or newer. All as-built documents shall be submitted in Revit in accordance with Division 1 requirements.
 - 6. Contractor shall submit fully dimensioned spool drawings for all welded piping work. Drawings shall indicate all weld types, sizes and materials to be used. The spool drawing size shall match the full size contract documents of either 24"x36" or 34"x44". Spool drawings shall be submitted in electronic format in Revit in compliance with Division 1 requirements. Files shall not contain security. Other file formats will not be accepted.
 - 7. Field Test Reports: Written reports of each pressure tests specified in Division 22 Sections. Include the following:
 - a. Test procedures used.
 - b. Test results that comply with requirements.

- c. Failed test results and corrective action taken to achieve requirements.

1.5 QUALITY CONTROL

- A. Equipment Selection: Equipment of greater or larger power, dimensions, capacities, and ratings may be furnished provided such proposed equipment is approved in writing by the DEN Project Manager and connecting mechanical and electrical services, circuit breakers, conduit, motors, bases, and equipment spaces are increased. No additional costs will be approved for these increases, if larger equipment is approved. If minimum energy ratings or efficiencies of the equipment are specified, the equipment must meet the design requirements and commissioning requirements.
- B. Electronic Equipment Compliance:
1. Contractor warrants that all equipment, devices, items, systems, software, hardware, or firmware provided shall properly, appropriately, and consistently function and accurately process date and time data (including without limitation: calculating, comparing, and sequencing). This warranty supersedes anything in the Specifications or other Contract Documents which might be construed inconsistently. This warranty is applicable whether the equipment, device, item, system, software, hardware, or firmware is specified with or without reference to a manufacturer's name, make, or model number.
- C. Unless specified otherwise, all materials and equipment shall be of domestic (USA) manufacture and shall be of the best quality used for the purpose in commercial practice.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver pipes and tubes with factory-applied end-caps. Maintain end-caps through shipping, storage, and handling to prevent pipe-end damage and prevent entrance of dirt, debris, and moisture.
- B. Protect stored, pipes and tubes from moisture and dirt. Elevate above grade. When stored inside, do not exceed structural capacity of the floor.
- C. Store plastic pipes protected from direct sunlight. Support to prevent sagging and bending.
- D. Protect flanges, fittings, and piping specialties from moisture and dirt.
- E. Deliver fittings with plastic sheeting to protect it from elements. Inspect duct liner for exposure to dirt and tears.

1.7 SEQUENCING AND SCHEDULING

- A. Coordinate plumbing equipment installation with other building components.

- B. Coordinate the installation of required supporting devices.
- C. Sequence, coordinate, and integrate installations of plumbing materials and equipment for efficient flow of the Work.
- D. Coordinate connection of electrical services.
- E. Coordinate installation of identifying devices after completing covering and painting where devices are applied to surfaces.

PART 2 - PRODUCTS

2.1 PIPE AND PIPE FITTINGS

- A. Refer to individual piping system specification Sections for pipe and fitting materials and joining methods.
- B. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.

2.2 JOINING MATERIALS

- A. Refer to individual piping system specification Sections in Division 22 for special joining materials not listed below.
- B. Grooved Mechanical Couplings: Acceptable only for fire protection piping; not acceptable for any other applications.
- C. Pipe Flange Gasket Materials: Suitable for the chemical, pressure, and thermal conditions of the piping system contents.
 - 1. ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch maximum thickness, except where thickness or specific material is indicated.
 - a. Full-Face Type: For flat-face, Class 125 cast-iron and cast-bronze flanges.
 - b. Narrow-Face Type: For raised-face, Class 250 cast-iron and steel flanges.
- D. Solder Filler Metal: ASTM B 32.
 - 1. Alloy Sn95 or Alloy Sn94: Tin (approximately 95 percent) and silver (approximately 5 percent) – Not industry standard, usually 5% antimony.
- E. Brazing Filler Metals: AWS A5.8.
 - 1. BCuP Series: Copper-phosphorus alloys.
 - 2. BAg1: Silver alloy.
- F. Welding Filler Metals: Comply with AWS D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded. All welding rod is to

be kept in a operable rod oven at all times.

2.3 PIPING SPECIALTIES

- A. Dielectric Fittings: Assembly or fitting having insulating material isolating joined dissimilar metals to prevent galvanic action and stop corrosion.
1. Description: Combination of copper alloy and ferrous; threaded, solder, plain, and weld neck end types and matching piping system materials.
 2. Insulating Material: Suitable for system fluid, pressure, and temperature.
 3. Dielectric Waterway Fittings: Dielectric fittings designed to effectively separate dissimilar metals exposed to water or other electrolytes, conforming to NSF and ASTM F492 standards for continuous use at temperatures up to 225 degrees F and pressures up to 300 psi. Fittings to have electro-zinc-plated steel casings providing for maintained exterior electrical continuity, threaded or flanged ends as applicable, and inert linings.
 4. Dielectric Flanges: Factory-fabricated, companion-flange assembly for 150- or 300-psig minimum pressure to suit system pressures.
 5. Dielectric-Flange Insulation Kits: Field-assembled, companion-flange assembly, full-face or ring type. Components include neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers.
 - a. Provide separate companion flanges and steel bolts and nuts for 150- or 300-psig minimum working pressure to suit system pressures.

2.4 SLEEVE SEALS

- A. Reference Section 220517 "Sleeves and Sleeve Seals for Plumbing Piping" for sleeve seals.

2.5 ESCUTCHEONS

- A. Reference Section 220518 "Escutcheons for Plumbing Piping" for escutcheons.

2.6 GROUT

- A. Nonshrink, Nonmetallic Grout: ASTM C 1107, Grade B.
1. Characteristics: Post-hardening, volume-adjusting, dry, hydraulic-cement grout, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
 2. Design Mix: 5000-psi, 28-day compressive strength.
 3. Packaging: Premixed and factory-packaged.

2.7 BACKFILL

- A. Flowable Backfill: Designed in accordance with ASTM C 94 and ASTM D 4832.
 - 1. Refer to Section 033350 "Flowable Backfill Low-Strength Concrete" for material and installation requirements.
 - 2. Minimum Requirements:
 - a. Compressive Strength: 50-100 psi
 - b. Slump: 6-8 inches.
 - 3. Required for all piping and ductwork installed below concrete slabs, apron paving, and roadways.

PART 3 - EXECUTION

3.1 PIPING SYSTEMS - COMMON REQUIREMENTS

- A. General: Install piping as described below, except where system Sections specify otherwise. Individual piping system specification Sections in Division 22 specify piping installation requirements unique to the piping system.
- B. General Locations and Arrangements: Drawings indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated, except where deviations to layout are approved on coordination drawings.
- C. Install piping at indicated slope.
- D. Install piping free of sags and bends.
- E. Install piping plumb and at right angles and plumb or parallel to building walls. Diagonal runs are prohibited, except where indicated.
- F. Install piping tight to slabs, beams, joists, columns, walls, and other building elements.
- G. Install fittings for changes in direction and branch connections.
- H. Install couplings according to manufacturer's printed instructions.
- I. Piping Joint Construction: Join pipe and fittings as follows and as specifically required in individual piping system Sections.
 - 1. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
 - 2. Remove scale, slag, dirt, rust, and debris from inside and outside of pipe and fittings before assembly.
 - 3. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends

to remove burrs and restore full inside diameter. Join pipe fittings and valves as follows:

- a. Note the internal length of threads in fittings or valve ends, and proximity of internal seat or wall, to determine how far pipe should be threaded into joint.
- b. Apply appropriate tape or thread compound to external pipe threads (except where dry seal threading is specified).
- c. Align threads at point of assembly.
- d. Tighten joint with wrench. Apply wrench to valve end into which pipe is being threaded.
- e. Damaged Threads: Do not use pipe or pipe fittings having threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

J. Piping Connections: Except as otherwise indicated, make piping connections as specified below.

1. Install unions in piping 2 inches and smaller adjacent to each valve and at final connection to each piece of equipment having a 2-inch or smaller threaded pipe connection.
2. Wet Piping Systems: Install dielectric coupling and nipple fittings to connect piping materials of dissimilar metals.

K. Piping below apron, concrete slabs or paving shall be encased in flowable backfills.

3.2 EQUIPMENT INSTALLATION - COMMON REQUIREMENTS

- A. Install equipment to provide the maximum possible headroom where mounting heights are not indicated.
- B. Install equipment according to approved submittal data. Portions of the Work are shown only in diagrammatic form. Refer conflicts to the DEN Project Manager.
- C. Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces, except where otherwise indicated.
- D. Install mechanical equipment to facilitate servicing, maintenance, and repair or replacement of equipment components. Connect equipment for ease of disconnecting, with minimum of interference with other installations. Extend grease fittings to an accessible location.
- E. Install equipment giving right-of-way to piping systems installed at a required slope.

3.3 PAINTING AND FINISHING

- A. Refer to Division 09 Sections for Painting for field painting requirements. Paint color schedule shall conform to ASME A13.1-1996, "Scheme for the Identification of Piping Systems."

- B. Damage and Touch Up: Repair marred and damaged factory-painted finishes with materials and procedures to match original factory finish.
- C. All rooftop equipment exposed to public or aircraft view shall be painted flat white or grey in accordance with Division 09.

3.4 CONCRETE PENETRATIONS

- A. Reference Section 017330 "Cutting and Patching" for core drilling and saw cutting requirements.
- B. Reference Section 024119 "Selective Demolition" for demolition and removal of selected portions of a building or structure, and repair procedures for selective demolition operations.
- C. All penetrations required through completed concrete construction shall be core drilled or saw cut at minimum size required. All penetrations in concrete require an x-ray or ground penetrating radar to determine if the location is clear of reinforcing steel and embedded systems. Precautions shall be taken when drilling to prevent damage to structural concrete.
 - 1. The Contractor shall provide an interpretation of the x-rays or radar shot and obtain written acceptance from the DEN Project Manager before proceeding with drilling.

3.5 CONCRETE BASES

- A. Concrete Bases: Anchor equipment to concrete base according to equipment manufacturer's written instructions and according to seismic codes at Project location.
 - 1. Construct concrete bases of dimensions indicated, but not less than 4 inches (100 mm) larger in both directions than supported unit.
 - 2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of the base.
 - 3. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
 - 4. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - 5. Install anchor bolts to elevations required for proper attachment to supported equipment.
 - 6. Install anchor bolts according to anchor-bolt manufacturer's written instructions.
 - 7. Use [**3000-psi**] <Insert other>, 28-day compressive-strength concrete and reinforcement as specified in Division 03.

3.6 WELDING

- A. Qualify welding processes and operators for structural steel according to AWS D1.1 Structural Welding Code - Steel. See Division 05 for additional requirements.
- B. All welding shall be inspected in process by a contractor-provided, Certified, Independent Testing Agency by an AWS certified welding inspector.
- C. Qualify welding processes and operators for piping according to ASME Boiler and Pressure Vessel Code, Section IX, Welding and Brazing Qualifications.
 - 1. Comply with provisions of ASME B31 Series "Code for Pressure Piping."
 - 2. Certify that each welder has passed AWS qualification tests for the welding processes involved and that certification is current.

3.7 ERECTION OF METAL SUPPORTS AND ANCHORAGE

- A. Refer to Division 05 for structural steel.
- B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor mechanical materials and equipment.
- C. Field Welding: Comply with AWS D1.1 Structural Welding Code - Steel, as referenced in Part 1.

3.8 DEMOLITION

- A. Refer to Division 01 and Division 02 for general demolition requirements and procedures.
- B. Where pipe, ductwork, insulation, or equipment to remain is damaged or disturbed, remove damaged portions and install new products of equal capacity and quality.
- C. Temporary Disconnection: Remove, store, clean, reinstall, reconnect, and make operational equipment indicated for relocation.
- D. Disconnect, demolish, and remove mechanical systems, equipment, and components indicated to be removed.
 - 1. Piping to Be Removed: Remove portion of piping and associated supports indicated to be removed, provide a shutoff valve with plug or cap in pressurized systems and cap or plug remaining piping with same or compatible piping material. No piping shall be abandoned in place. Repair insulation.
 - 2. Equipment to Be Removed: Disconnect and cap services and remove equipment.
 - 3. Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make equipment operational.
 - 4. Equipment to Be Removed and Salvaged: Disconnect and cap services and

- remove equipment and deliver to Owner.
5. If pipe, insulation, or equipment to remain is damaged in appearance or is unserviceable, remove damaged or unserviceable portions and replace with new products of equal capacity and quality.
 6. Repair structure [**floor, ceilings, roof, slabs**] from removed supports in accordance with [**Division 03**], [**Division 05**], [**and Division 09**]

3.9 GROUTING

- A. Mix and install grout for mechanical equipment base bearing surfaces, pump and other equipment base plates, and anchors.
- B. Clean surfaces that will come into contact with grout.
- C. Provide forms as required for placement of grout.
- D. Avoid air entrapment during placement of grout.
- E. Place grout, completely filling equipment bases.
- F. Place grout on concrete bases and provide smooth bearing surface for equipment.
- G. Place grout around anchors.
- H. Cure placed grout.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the applicable unit price item, work order or lump sum bid item.

END OF SECTION 220500

SECTION 220505 - COATINGS AND CORROSION PROTECTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Field and shop applied corrosion protective coatings for [fuel] [deicing] systems piping, valves, fittings, flanges, equipment, and all related materials to be installed underground.
2. Internal [linings] [and] [coatings] for [fuel] [deicing] system tanks and associated pipe and fittings.

B. Related Sections:

1. Section 099113 "Exterior Painting" for exterior painting of items not covered in this Section.
2. Section 099123 "Interior Painting" for interior painting of items not covered in this Section.
3. Section 211110 "Facility Fire-Suppression Water-Service Piping.
4. Section 220400 "Basic Plumbing Requirements".
5. Section 220500 "Common Work Results for Plumbing".
6. Section 221016 "Facility Hydraulic Piping and Fittings".
7. Section 221113 "Facility Water Distribution Piping".
8. Section 22221116 "Domestic Water Piping".
9. Section 264200 "Cathodic Protection"
10. Section 335243.13 "Aviation Fuel Piping, Valves and Fittings".
11. Section 335643.13 "Aboveground Aviation Fuel Storage Tanks".

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 REFERENCED STANDARDS

- A. Materials and workmanship shall conform to the latest issue of all industry standards, publications, or regulations referenced in this section and with the following references as applicable. Refer to Section 014200 "References" for listing of issuing organizations or agencies.

B. Applicable Standards:

1. American Water Works Association (AWWA).
 - a. AWWA C-210 - Liquid Epoxy Coating Systems for the Interior and Exterior of Steel Water Pipelines.
 - b. AWWA C-213 - Fusion Bonded Epoxy Coating for the Interior and Exterior of Steel Water Pipelines.
2. International Fire Code (IFC) with the Denver Amendments.
3. International Building Code (IBC) with the Denver Amendments.
4. National Association of Corrosion Engineers.
 - a. NAPCA 12-78-83 - Application Specifications for Mill Applied Fusion Bonded Epoxy Coatings.
5. National Bureau of Standards (NBS).
 - a. Certified Coating Thickness Calibration Standards.
6. U.S. Government Specification.
 - a. MIL-C-4556-E - Coating Kit, Epoxy for Interior, Steel Fuel Tanks.
7. Steel Structures Painting Council (SSPC).
 - a. SSPC-SP5 - White Metal Blast Cleaning.
 - b. SSPC-SP10 - Near-White Metal Blast Cleaning.

1.4 ACTION SUBMITTALS

- A. Product Data: Submit manufacturer's product data and application instructions for all coatings and linings.
 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings shall be submitted in accordance with Division 01 General Requirements.
- C. "As Built" Plans shall be provided in the same format and manner as described above. Each set shall be equipped with a plan holder equal to "Stacor Plan Clamps" for the appropriate size drawing.

1.5 EXTENT OF WORK

- A. All **[fuel] [deicing systems]** pipe and fittings to be partially or completely buried shall be externally factory coated.

- B. Field welded joints in referenced piping systems and underground structures shall be coated and wrapped in accordance with "Field Procedures".
- C. All **[internal surfaces of the tank[s], along with all] [fuel] [Type II deicing fluid]** supply, transfer, drain, and vent piping and fittings 2-1/2 inches and larger shall be internally epoxy coated. Pipes and fittings smaller than 2-1/2 inches need not be internally coated.
- D. Apply internal epoxy-based paint coating system for storage tank[s] for **[Type I deicing fluid] [gasoline]**, including **[bottom surface of fixed roof,] [tank bottom, sides and all surfaces of structure and piping which will contact the fluid.]**
- E. All **[internal surfaces of the tank[s], along with all] [fuel] [Type II deicing fluid]** supply, transfer, drain, and vent piping and fittings 2-1/2 inches and larger shall be coated internally with polyurethane coating system. Pipes and fittings smaller than 2-1/2 inches need not be internally coated.
- F. External painting of all piping, equipment, valves, fittings, flanges, tanks, gauge connections, structural and miscellaneous steel and other appurtenances aboveground **[and in pits]** is specified in Section 099113 "Exterior Painting".

1.6 MAINTENANCE MATERIALS

- A. Leave on premises, where directed by the DEN Project Manager, not less than one (1) unopened gallon of each field-applied paint product and color used.
- B. Containers shall be tightly sealed and clearly labeled for identification.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. All materials and products to be stored as approved by manufacturer and completely protected from from damaging elements.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 SHOP-APPLIED EXTERNAL PROTECTIVE PIPE COATING

- A. All **[fuel] [deicing system]** pipe and fittings to be installed underground **[, or in pits,]** shall have an external coating system applied either in the pipe manufacturer's shop or in the mill of an approved custom applicator.

- B. Coating system shall meet the following specifications:
1. Surface preparation, material, application, testing, inspection, handling, storage, and field installation shall be in accordance with the applicable requirements of AWWA C213, Fusion Bonded Epoxy Coating.
 2. Coatings shall be applied in accordance with NAPCA Bulletin 12-78-83. Application Specifications Mill Applied Fusion Bonded Epoxy Coatings.
 3. Surfaces shall be sandblasted in accordance with Steel Structures Painting Council Surface Preparation Specification No. 10, "near-white" metal blast.
 4. Sandblasting shall be coordinated with coating application, which shall be applied as soon as possible after blasting. If blasted surface remains uncoated overnight, it shall be reblasted.
 5. Care shall be taken to prevent grease, oil, or other organic matter from contacting the blasted surface prior to application of the prime coat.
 6. All burrs and rough protrusions on the outer surface of the pipe shall be ground smooth prior to coating.
 7. Apply coating to produce a uniform dry film thickness of 15 mils.
 8. Dry film thickness shall be spot checked at random on ten percent of the coated surfaces. If film thickness is not found to be uniform and to specification, the Contractor shall apply additional coats at no cost to the Owner until the specified film thickness has been obtained.
 - a. Dry film thickness shall be checked by the Contractor at the Contractor's expense.
 - b. Provide complete records of dry film thickness measurements to DEN Project Manager.
 9. Provide a 3 inch cut-back from each end.
- C. The coating shall be holiday tested in the shop prior to shipment. Surfaces shall be checked for freedom from defects using a low-pulse electronic holiday detector at 125 volts per mil of coating thickness.
- D. The Contractor shall secure the services of an independent testing and inspection laboratory to witness the coating application and testing and to certify that the pipe and fittings were prepared, cleaned, and coated using methods and materials conforming with these specifications.
- E. Contractor shall perform final holiday test of all coatings prior to backfilling in accordance with the requirements of Section 330850 "Commissioning of Fuel Distribution Facilities" and other Division 22 and Division 33 requirements.

2.2 SHOP-APPLIED INTERNAL EPOXY LINING (COATING) FOR PIPING

- A. All **[fuel]** **[Type II deicing fluid]** supply, transfer, drain, and vent piping and pipe fittings 2-1/2 inches and larger in size shall be internally coated in the manufacturer's shop or in the mill of an approved internal epoxy applicator with a two coat high solids amine-cured epoxy system in accordance with Military Specification MIL-C-4556E and the following specifications. All materials used shall be lead-free, and shall not contain

not more than VOC component quantities permitted by local regulatory authorities, as applied (in thinned state) unless noted otherwise.

1. Remove all grease or oil by thorough cleaning using an oil-free solvent.
 2. Sandblast inside of pipe to "near-white" metal, confirming with Steel Structures Painting Council Surface Preparation Specification No. 10. No rust preventative coating material or other temporary coating shall be applied after sandblasting and before application of the internal epoxy coating. Care shall be taken to prevent grease, oil, or other organic matter from contacting the blasted surface prior to application of the prime coat. Blasting shall be coordinated with primer application, which shall be applied as soon as possible after blasting. If the blasted surface remains uncoated overnight, it shall be re-blasted.
 3. The ends of the pipe and fittings shall have the paint wiped back 2-inches with cloth or other approved absorbent material. Masking the ends will not be acceptable as a thin film of paint is desired to prevent rust until installation of the material.
 4. Apply one coat polyamide cured orange two-component epoxy resin primer. The thickness of the cured primer shall be not less than [3] <insert thickness> mils, but shall not exceed [4] <insert thickness> mils.
 5. The prime coat shall be allowed to cure in accordance with manufacturer's recommendation for immersion service.
 6. Apply one coat of polyamide-cured off-white two-component epoxy resin protective top coating. The cured thickness of the top coat shall be not less than [3] <insert thickness> mils, but shall not exceed [4] <insert thickness> mils.
 7. After the top coat has been cured in accordance with manufacturer's recommendation for immersion service, the internal epoxy lining shall be tested electrically using an approved holiday detector and shall be free of missed spots, pinholes or holidays. Apply additional primer and finished coats to areas requiring touch-up.
 8. Dry film thickness shall be spot checked at random on ten percent of the coated surfaces. If film thickness is not found to be uniform and to specification, the Contractor shall be required to apply additional coats at no cost to the Owner until the specified film thickness has been obtained.
 - a. Dry film thickness is to be checked by the Contractor at the Contractor's expense.
 - b. Provide complete records of dry film thickness measurements to DEN Project Manager.
 9. If, in the opinion of the DEN Project Manager, the coatings show ridges, waves, runs or holidays indicating uneven coverage or improper application, the Contractor shall be required to remove and reapply the coating at no cost to the Owner.
 10. Prior to shipping to the project site, the ends of the pipe shall be capped using suitable plastic caps secured with a double wrap of 2-inch wide pressure sensitive tape.
- B. All applications shall be in accordance with the manufacturer's published instructions.
- C. The Contractor shall secure the services of an independent testing and inspection

laboratory to witness the lining application and testing and to certify that the pipe and fittings were prepared, cleaned and lined using methods and materials conforming with these specifications.

- D. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Amercoat 395, as manufactured by Ameron Protective Coatings Division, Diamond Vogel's Amerlock 400 FD.
 2. or approved equal.

2.3 FIELD-APPLIED EXTERNAL PROTECTIVE COATING AND PROCEDURE

A. All field welds of **[fuel] [deicing system]** piping, including fittings and areas of thermit welding and where the shop coat has been damaged, valves and equipment in pits, shall receive a field-applied external protective coating using a two part liquid epoxy coating system in accordance with AWWA C-210.

1. Sandblast surfaces to "near-white" metal, conforming with Steel Structures Painting Council Surface Preparation Specification No. 10. No rust preventative coating material or other temporary coating shall be applied after sandblasting and before application of the epoxy coating. Care shall be taken to prevent grease, oil or other organic matter from contacting the blasted surface prior to application of the prime coat. Blasting shall be coordinated with primer application, which shall be applied as soon as possible after blasting. If the blasted surface remains uncoated overnight, it shall be reblasted.
2. Grind smooth all burrs and sharp protrusions.
3. Surfaces must be dry before application of coating system.
4. Apply primer following manufacturer's recommendations. The thickness of the cured primer shall be not less than 1.5 mils.
5. Apply finish coat(s) of epoxy top coating in accordance with manufacturer's recommendations. The cured thickness of the total system shall be not less than 15 mils, but shall not exceed 25 mils.
6. After the top coat has been cured in accordance with manufacturer's recommendation, the epoxy coating shall be tested electrically using an approved holiday detector and shall be free of missed spots, pinholes or holidays. Apply additional primer and finished coats to areas requiring touch-up.
7. Coatings for piping to be pressure tested shall be applied after testing and acceptance.
8. Application, testing, and inspection shall be in accordance with AWWA C210.
9. Leave welds uncovered until after testing and acceptance.

B. Alternatives for Joint and Fitting Wrapping and Coating:

1. Thermofit pipe sleeves; Tapecoat CSS 1100 primer and CSS wrap around sleeve, or approved equal. Sleeve length shall overlap pipe coating four inches minimum on each side of joint.
2. Hot-applied tape:

- a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Tapecoat 20 with TC primecoat. Provide a two-layered, half-lapped, spiral wrap.
 - 2) **<Insert manufacturer>**
 - 3) or approved equal.
- C. Do not coat manufacture's nametags, identification tags, instruction tag(s) or control mechanisms.
- D. Holiday test all coatings prior to backfilling in accordance with the applicable requirements of Section 330850 "Commissioning of Fuel Distribution Facilities" and other Division 22 and Division 33 requirements.

2.4 [FIELD] [SHOP] APPLIED INTERNAL TANK LINING

- A. The interior surfaces of **[fuel] [Type II deicing fluid]** storage tanks including **[bottom of fixed roof, roof supports, tank bottom, side and]** all surfaces of structure and piping systems within the tank which will contact the **[deicing fluid] [fuel]**, shall be coated with a two coat high solids amine-cured epoxy in accordance with Military Specification MIL-C-4556E. All materials used shall be lead-free, and shall not contain not more than VOC component quantities permitted by local regulatory authorities, as applied (in thinned state) unless noted otherwise.
- B. The interior surfaces of fuel storage tanks including **[bottom of fixed roof, roof supports, tank bottom, side and]** all surfaces of structure and piping systems within the tank which will contact the fuel, shall be coated with a polyurethane coating system, as follows:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Corrocote II Petroliner, as manufactured by Madison Chemical Industries, Inc.
 - b. **<Insert manufacturer>**
 - c. Or approved equal.
 - 2. All materials used shall contain not more than VOC component quantities permitted by local regulatory authorities, as applied, unless noted otherwise.
- C. Thoroughly examine surfaces scheduled to be **[painted] [and] [coated]** prior to commencement of work. Report in writing, to DEN Project Manager, any condition that may potentially affect proper application. Do not commence until such defects have been corrected.
- D. Delivery, Storage and Handling:
 - 1. Deliver **[paint] [and] [coating]** materials in sealed original labeled containers bearing manufacturer's name, type of product, brand name, color designation,

- and instructions for mixing and/or reducing.
2. Provide adequate storage facilities. Store paint materials at minimum ambient temperature of 45 degrees F.
3. Store all materials in well-ventilated area.
4. Take precautionary measures to prevent fire hazards and spontaneous combustion.

E. Protection:

1. Adequately protect other surfaces from paint and damage. Repair damage as a result of inadequate or unsuitable protection.
2. Furnish sufficient drop cloths, shields and protective equipment to prevent spray or droppings from fouling surfaces not being painted and, in particular, surfaces within storage and preparation area.
3. Place cotton waste, cloths and material, which may constitute a fire hazard in closed metal containers and remove daily from site.

F. Preparation of Surfaces:

1. Surfaces shall be sandblasted in accordance with Steel Structures Painting Council Surface Preparation Specification No. 10, "near-white" metal blast.
2. Sandblasting shall be coordinated with primer application, which shall be applied as soon as possible after blasting. If blasted surface remains uncoated overnight, it shall be reblasted.
3. Care shall be taken to prevent grease, oil, or other organic matter from contacting the blasted surface prior to application of the prime coat.

G. Applications:

1. Apply coatings in accordance with manufacturer's recommendations.
2. Allow ample curing time in accordance with manufacturer's recommendations for immersion service.
3. Finished surfaces shall be free from runs, drips, ridges, brush marks, and variation in color, texture and finish.
4. Do not paint when temperature is below 50 degrees F. or during periods of inclement weather.

H. Cleaning:

1. As work proceeds and upon completion, promptly remove paint where spilled, splashed, or spattered.
2. During progress of work, keep premises free from any unnecessary accumulation of tools, equipment, surplus material, and debris. Remove waste materials from painting operations daily.
3. Upon completion of work, leave premises neat and clean, to the satisfaction of the Construction Manager.

I. The tank lining system shall be as follows:

1. Manufacturers: Subject to compliance with requirements, provide products by

one of the following:

- a. Amercoat 395, manufactured by Ameron Protective Coatings Division.
- b. **<Insert manufacturer>**
- c. or approved equal.

J. The tank lining system shall be as follows:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Corrocote II Petroliner, as manufactured by Madison Chemical Industries, Inc.
 - b. **<Insert manufacturer>**
 - c. or approved equal.
2. Coating product shall be a plural component 100% solids polyurethane coating system for use as a lining in petroleum products storage tanks, consisting of a polyisocyanate resin and polyol resin which meets the following performance and properties requirements:

Property or Test:	Requirement:
Percent Solids	100
Mix Ratio	1:1
Elcometer Adhesion to Steel (white blast 2.5 mil/65 micron profile; no primer)	>1800 psi
Cathodic Disbondment per ASTM G-8 (28 day/20 degrees C/18 mils, near-white blast)	<10 mm radius
Flexibility (ASTM D522) over 1" mandrel	180 minimum
Hardness (ASTM D543)	Shore D 80 " 5

3. Surface preparation shall be by sandblasting as specified in this section. Surfaces to be coated shall be completely dry and free of moisture, dust, grease, or any other deleterious substances at the time the coating or lining is applied.
4. Nominal coating thickness shall be 18 mils, with minimum acceptable thickness of 15 mils. Bolts, rivets, or other protrusions shall be coated to a thickness of 30 mils, using five passes from all directions.
5. A heated, plural-component airless spray pump shall be used to apply the coating in a one-coat, multi-pass operation. No primers shall be used; Contractor shall consult manufacturer for temperature and humidity restrictions.
6. Repair and field touch-up shall be compatible with the main coating system and shall be applied in accordance with manufacturer's recommendations.
7. Holiday inspection shall be conducted by using a wet sponge tester for thicknesses less than 20 mils and a low voltage spark tester (100 volts per mil) for coatings of 20 mils to greater thickness.

2.5 FIELD APPLIED INTERNAL TANK PAINTING

- A. Paint all interior surfaces, including underside of roof and roof framing and interior of all nozzles and tank fittings, as specified in Section 099113 "Exterior Painting".

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine all coating systems carefully and document any damages or coating work that does not meet industry standards or specifications.

3.2 COATING REPAIRS

- A. Repair all damages to pipe coating systems on pipe and fittings before the piping is holiday tested.
- B. Repair all cuts, breaks, voids, bruised or scarred spots, and any other damage caused prior to delivery, or resulting from handling or installation of the pipe and fittings, or from any cause whatsoever.
- C. Repair the coating where welds are made and where the coating is damaged or broken by the installation of instrumentation or other accessories or appurtenances.
- D. Perform all repairs in accordance with the requirements specified herein before under "Field-Applied External Protective Coating and Procedure".
- E. Repairs to shop-applied coating shall be such as to provide a thickness equal to or greater than the factory applied coating.

3.3 CERTIFICATION

- A. A log of mill procedure and quality control tests shall be kept daily by the coating, lining and wrapping applicator(s) and a certified copy of this log(s) shall be submitted to the DEN Project Manager with each delivery of pipe and equipment.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement will be made for work under this Section.

PART 5 - PAYMENT

5.1 PAYMENT

- A. No separate payment will be made for work under this section. The cost of the work described in this section shall be included in the Lump Sum Contract price.

END OF SECTION 220523

SECTION 220513 - COMMON MOTOR REQUIREMENTS FOR PLUMBING EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes general requirements for single-phase and polyphase, general-purpose, horizontal, small and medium, squirrel-cage induction motors for use on ac power systems up to 600 V and installed at equipment manufacturer's factory or shipped separately by equipment manufacturer for field installation.
- B. Related Sections:
 - 1. Section 262419 "Motor-Control Centers".
 - 2. Section 262913 "Enclosed Controllers".
 - 3. Section 262923 "Variable-Frequency Motor Controllers".
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 COORDINATION

- A. Coordinate features of motors, installed units, and accessory devices to be compatible with the following:
 - 1. Motor controllers.
 - 2. Torque, speed, and horsepower requirements of the load.
 - 3. Ratings and characteristics of supply circuit and required control sequence.
 - 4. Ambient and environmental conditions of installation location.

1.4 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL MOTOR REQUIREMENTS

- A. Comply with NEMA MG 1 unless otherwise indicated.
- B. Comply with IEEE 841 for severe-duty motors.

2.2 MOTOR CHARACTERISTICS

- A. Duty: Continuous duty at ambient temperature of 40 deg C and at altitude of 5500 feet above sea level.
- B. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.

2.3 POLYPHASE MOTORS

- A. Description: NEMA MG 1, Design B, medium induction motor.
- B. Efficiency: Energy efficient, as defined in NEMA MG 1.
- C. Service Factor: 1.15.
- D. Multispeed Motors: Variable torque.
 - 1. For motors with 2:1 speed ratio, consequent pole, single winding.
 - 2. For motors with other than 2:1 speed ratio, separate winding for each speed.
- E. Multispeed Motors: Separate winding for each speed.
- F. Rotor: Random-wound, squirrel cage.
- G. Bearings: Regreasable, shielded, antifriction ball bearings suitable for radial and thrust loading.
- H. Temperature Rise: Match insulation rating.
- I. Insulation: **[Class F]** <Insert class>.
- J. Code Letter Designation:
 - 1. Motors **[15]** <Insert number> HP and Larger: NEMA starting Code F or Code G.
 - 2. Motors Smaller than **[15]** <Insert number> HP: Manufacturer's standard starting characteristic.

- K. Enclosure Material: Cast iron for motor frame sizes [324T] <Insert number> and larger; rolled steel for motor frame sizes smaller than [324T] <Insert number>.

2.4 POLYPHASE MOTORS WITH ADDITIONAL REQUIREMENTS

- A. Motors Used with Reduced-Voltage and Multispeed Controllers: Match wiring connection requirements for controller with required motor leads. Provide terminals in motor terminal box, suited to control method.
- B. Motors Used with Variable Frequency Controllers: **[Ratings, characteristics, and features coordinated with and approved by controller manufacturer.]**
1. Windings: Copper magnet wire with moisture-resistant insulation varnish, designed and tested to resist transient spikes, high frequencies, and short time rise pulses produced by pulse-width modulated inverters.
 2. Energy- and Premium-Efficient Motors: Class B temperature rise; Class F insulation.
 3. Inverter-Duty Motors: Class F temperature rise; Class H insulation.
 4. Thermal Protection: Comply with NEMA MG 1 requirements for thermally protected motors.
- C. Severe-Duty Motors: Comply with IEEE 841, with 1.15 minimum service factor.

2.5 SINGLE-PHASE MOTORS

- A. Motors larger than 1/20 hp shall be one of the following, to suit starting torque and requirements of specific motor application:
1. Permanent-split capacitor.
 2. Split phase.
 3. Capacitor start, inductor run.
 4. Capacitor start, capacitor run.
- B. Multispeed Motors: Variable-torque, permanent-split-capacitor type.
- C. Bearings: Prelubricated, antifriction ball bearings or sleeve bearings suitable for radial and thrust loading.
- D. Motors 1/20 HP and Smaller: Shaded-pole type.
- E. Thermal Protection: Internal protection to automatically open power supply circuit to motor when winding temperature exceeds a safe value calibrated to temperature rating of motor insulation. Thermal-protection device shall automatically reset when motor temperature returns to normal range.

PART 3 - EXECUTION (Not Applicable)

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 220513

SECTION 220516 - EXPANSION FITTINGS AND LOOPS FOR PLUMBING PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This section includes fittings and practices used to compensate for thermal expansion and other movements in piping systems; in fire protection, plumbing, hydronic, and refrigerant systems.

- B. Section Includes:

1. Flexible-hose packless expansion joints.
2. Metal-bellows packless expansion joints.
3. Rubber packless expansion joints.
4. Grooved-joint expansion joints.
5. Pipe loops and swing connections.
6. Alignment guides and anchors.
7. Expansion compensators.
8. Packed slip expansion joints.
9. Flexible ball joints.

- C. Related Sections:

1. Section 220400 "Basic Plumbing Requirements".
2. Section 220500 "Common Work Results for Plumbing".
3. Section 220529 "Hangers and Supports for Plumbing Piping and Equipment".
4. Section 221116 "Domestic Water Piping".
5. Section 221119 "Domestic Water Piping Specialties".

- D. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 REFERENCES

- A. Materials and workmanship shall conform to the latest issue of all industry standards, publications, or regulations referenced in this section and with the following references as applicable. Refer to Section 014225 "Referenced Standards" for listing of issuing organizations or agencies.

- B. Applicable Standards:
- C. American Society for Testing and Materials (ASTM):
 - 1. A36/A36M - Carbon Structural Steel.
 - 2. A183 - Carbon Steel Track Bolts and Nuts.
 - 3. A307 - Carbon Steel Bolts and Studs, 60,000 psi Tensile Strength.
 - 4. C881 - Epoxy-Resin-Base Bonding Systems for Concrete.
 - 5. C1107 - Packaged Dry, Hydraulic-Cement Grout (Nonshrink).
 - 6. F844 - Washers, Steel, Plain (flat), Unhardened for General Use.
 - 7. F1007 - Pipe-Line Expansion Joints of the Packed Slip Type for Marine Application.
 - 8. F1120 - Circular Metallic Bellows Type Expansion Joints for Piping Applications.
 - 9. F1123 - Nonmetallic Expansion Joints.
- D. American Welding Society (AWS):
 - 1. D1.1 - Structural Welding Code - Steel.
- E. ASME International (ASME):
 - 1. B18.10 - Track Bolts and Nuts.
 - 2. B31.9 - Building Services Piping.
 - 3. ASME Boiler and Pressure Vessel Code: Section II, "Materials;" Section IX, "Welding and Brazing Qualifications."
- F. International Fire Code (IFC) with the Denver Amendments
- G. International Building Code (IBC) with the Denver Amendments.
- H. Fluid Sealing Association (994 Old Eagle School Rd., #1019, Wayne, PA 19087-1866; 610-971-4850):
 - 1. Technical Handbook: Nonmetallic Expansion Joints and Flexible Pipe Connectors.
- I. U.S. Government Specification:
 - 1. MIL-E-17814E - Expansion Joints, Pipe, Slip-Type, Packed.
- J. Conform to Standards of Expansion Joint Manufacturer's Association.

1.4 DEFINITIONS

- A. BR: Butyl rubber.
- B. Buna-N: Nitrile rubber.
- C. CR: Chlorosulfonated polyethylene synthetic rubber.

- D. CSM: Chlorosulfonyl-polyethylene rubber.
- E. EPDM: Ethylene-propylene-diene terpolymer rubber.
- F. NR: Natural rubber.
- G. PTFE: Polytetrafluoroethylene plastic.

1.5 PERFORMANCE REQUIREMENTS

- A. Compatibility: Products shall be suitable for piping service fluids, materials, working pressures, and temperatures.
- B. Provide structural work and equipment required to control expansion and contraction of piping. Verify that anchors, guides, and expansion joints provided, adequately protect system.
 - 1. Capability: Products to absorb 200 percent of maximum axial movement between anchors.
- C. Expansion Calculations:
 - 1. Installation Temperature: 50 degrees F.
 - 2. Domestic Hot Water: 140 degrees F.
 - 3. Safety Factor: 30 percent.
- D. Compatibility: Products shall be suitable for piping system fluids, materials, working pressures, and temperatures.
- E. ACTION SUBMITTALS
- F. Product Data: For each type of product indicated, and as follows:
 - 1. Include data substantiating that materials comply with requirements.
 - 2. Flexible Pipe Connectors: Indicate maximum temperature and pressure rating, face-to-face length, live length, hose wall thickness, hose convolutions per foot and per assembly, fundamental frequency of assembly, braid structure, and total number of wires in braid.
 - 3. Expansion Joints: Indicate maximum temperature and pressure rating, and the estimated number of full flexures before joint failure. Provide multi-wall convoluted bellows where possible to reduce joint end force reactions on building structure.
 - 4. Design Data: Indicate selection calculations.
 - 5. For each type of pipe expansion joint and alignment guide indicated.
 - 6. Include data substantiating that materials comply with requirements.
- G. Shop Drawings:
 - 1. Expansion Joints: Submit for each assembly shop drawings, along with detailed

calculations and procedures applied in making selections as appropriate to lifetime cycles ratings specified. Identify materials of construction and indicate maximum temperature and pressure ratings.

- H. Shop Drawings: Signed and sealed by a qualified professional engineer.
 - 1. Design Calculations: Calculate requirements for thermal expansion of piping systems and for selecting and designing expansion joints, loops, and bends.
 - 2. Drawings: Plans and sections identifying locations of all expansion fittings and anchors.
 - 3. Anchor Details: Detail fabrication of each anchor indicated. Show dimensions and methods of assembly and attachment to building structure.
 - 4. Alignment Guide Details: Detail field assembly and attachment to building structure.
 - 5. Schedule: Indicate type, manufacturer's number, size, material, pressure rating, end connections, and location for each expansion joint.
- I. Design Data: Indicate selection calculations.
- J. Delegated-Design Submittal: For each anchor and alignment guide indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
 - 1. Design Calculations: Calculate requirements for thermal expansion of piping systems and for selecting and designing expansion joints, loops, and swing connections.
 - 2. Anchor Details: Detail fabrication of each anchor indicated. Show dimensions and methods of assembly and attachment to building structure.
 - 3. Alignment Guide Details: Detail field assembly and attachment to building structure.
 - 4. Schedule: Indicate type, manufacturer's number, size, material, pressure rating, end connections, and location for each expansion joint.

1.6 INFORMATIONAL SUBMITTALS

- A. Welding certificates.
- B. Product Certificates: For each type of expansion joint, from manufacturer.
- C. Operation and Maintenance Data: For pipe expansion joints to include in emergency, operation, and maintenance manuals.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For expansion joints to include in maintenance manuals.
 - 1. General: O&M data shall comply with the requirements as outlined in Division 01.

2. Maintenance Data: Include maintenance and adjustment instructions.

B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1. Record actual locations of flexible pipe connectors, expansion joints, anchors, and guides.

1.8 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing the products specified in this Section with minimum of three (3) years experience.

B. Contractor shall design expansion compensating system under direct supervision of a Professional Engineer experienced in design of this work and licensed in the State of Colorado.

1.9 QUALITY ASSURANCE

A. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
2. ASME Boiler and Pressure Vessel Code: Section IX.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, protect and handle products under provisions of Division 01 and Section 220400 "Basic Plumbing Requirements"..

B. Accept expansion joints on site in factory packing with shipping bars and positioning devices intact. Inspect for damage.

C. Protect equipment from exposure by leaving factory coverings, pipe end protection, and packaging in place until installation.

1.11 CONSTRUCTION WASTE MANAGEMENT

A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Expansion compensation for us with steel piping:
1. Inner Hose: Stainless Steel.
 2. Exterior Sleeve: Double braided stainless steel.
 3. Pressure Rating: 125 psig WSP and 450 degrees F, 200 psig WOG and 250 degrees F at 70 degrees F.
 4. Joint: As specified for pipe joints.
 5. Size: Use pipe sized units.
 6. Maximum offset: 3/4 inch on each side of installed center line.
- B. Expansion compensation for us with copper piping:
1. Inner Hose: Bronze.
 2. Exterior Sleeve: Braided bronze.
 3. Pressure Rating: 125 psig WSP and 450 degrees F.
 4. Joint: As specified for pipe joints.
 5. Size: Use pipe sized units.
 6. Maximum offset: 3/4 inch on each side of installed center line.

2.2 EXPANSION JOINTS

- A. Stainless Steel Bellows Type:
1. Pressure Rating: 200 psig WOG and 250 degrees F.
 2. Maximum Operating Travel Criteria (not including installation misalignment allowances):
 - a. Axial Extension: <insert number> inches.
 - b. Axial Compression: <insert number> inches.
 - c. Lateral Offset: <insert number> inches.
 - d. Angular Displacement: <insert number> degrees.
 3. Required Design Lifetime (cycles): [1,000] [10,000] [100,000] <insert number>.
 4. Selection Requirements: Contractor shall select units based on operating travel and lifetime cycles as indicated (including appropriate and acceptable allowances for installation misalignment) and shall prepare and submit for approval shop drawings of each assembly required, along with detailed calculations and procedures applied in making selections.
 5. Joint: As specified for pipe joints.
 6. Size: Use pipe sized units.
 7. Application: Steel piping 3 inch and under.
- B. External Ring Controlled Stainless Steel Bellows Type:

1. Pressure Rating: 200 psig WOG and 250 degrees F
 2. Maximum Operating Travel Criteria (not including installation misalignment allowances):
 - a. Axial Extension: <insert number> inches.
 - b. Axial Compression: <insert number> inches.
 - c. Lateral Offset: <insert number> inches.
 - d. Angular Displacement: <insert number> degrees.
 3. Required Design Lifetime (cycles): [1,000] [10,000] [100,000] <insert number>.
 4. Selection Requirements: Contractor shall select units based on operating travel and lifetime cycles as indicated (including appropriate and acceptable allowances for installation misalignment) and shall prepare and submit for approval shop drawings of each assembly required, along with detailed calculations and procedures applied in making selections.
 5. Joint: Flanged.
 6. Size: Use pipe sized units.
 7. Accessories: Internal flow liner.
 8. Application: Steel piping over 3 inch.
- C. Two-Ply Bronze Bellows Type:
1. Construction: Bronze with anti-torque device, limit stops, internal guides.
 2. Pressure Rating: 200 psi WOG and 250 degrees F.
 3. Maximum Compression: [1-3/4 inch] [3 inch].
 4. Maximum Extension: 1/4 inch.
 5. Joint: As specified for pipe joints.
 6. Size: Use pipe sized units.
 7. Application: Copper piping.
- D. Low Pressure Compensator with Two-Ply Bronze Bellows:
1. Working Pressure: [75 psig] [80 psig].
 2. Maximum Temperatures: 250 degrees F.
 3. Maximum Compression: 1/2 inch.
 4. Maximum Extension: 5/32 inch.
 5. Joint: Soldered.
 6. Size: Use pipe sized units.
 7. Application: Copper or steel piping 2 inch and under.
- E. Copper with Packed Sliding Sleeve:
1. Working Pressure: 125 psi.
 2. Maximum Temperature: 250 degrees F.
 3. Joint: As specified for pipe joints.
 4. Size: Use pipe sized units.
 5. Copper or steel piping 2 inches and over.
 6. Application: Copper or steel piping 2 inch and over.
- F. Flexible-Hose Expansion Joints: Manufactured assembly with two flexible-metal-hose

legs joined by long-radius, 180-degree return bend or center section of flexible hose; with inlet and outlet elbow fittings, corrugated-metal inner hoses, and braided outer sheaths.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Flex-Hose Co., Inc.
 - b. Flexicraft Industries.
 - c. Flex-Pression, Ltd.
 - d. Metraflex, Inc.
 - e. **<Insert manufacturer's name.>**
 - f. or approved equal.
 2. Flexible-Hose Expansion Joints for Copper Piping: Copper-alloy fittings with solder-joint end connections.
 - a. NPS 2 and Smaller: Bronze hoses and single-braid bronze sheaths with 450 psig at 70°F and 340 psig at 450°F (ratings).
 - b. NPS 2-1/2 to NPS 4: Stainless-steel hoses and single-braid, stainless-steel sheaths with 300 psig at 70°F and 225 psig at 450°F ratings.
 - c. NPS 2 and Smaller: Bronze hoses and double-braid bronze sheaths with 500 psig at 450°F ratings.
 - d. NPS 2-1/2 to NPS 4: Stainless-steel hoses and double-braid, stainless-steel sheaths with 420 psig at 70°F and 315 psig at 450°F ratings.
 3. Flexible-Hose Expansion Joints for Steel Piping: Carbon-steel fittings with threaded end connections for NPS 2 and smaller and **[flanged] [weld]** end connections for NPS 2-1/2 and larger.
 - a. NPS 2 and Smaller: Stainless-steel hoses and single-braid, stainless-steel sheaths with 450 psig at 70°F and 325 psig at 600°F ratings.
 - b. NPS 2-1/2 to NPS 6: Stainless-steel hoses and single-braid, stainless-steel sheaths with 200 psig at 70°F and 145 psig at 600°F ratings.
 - c. NPS 8 to NPS 12: Stainless-steel hoses and single-braid, stainless-steel sheaths with 125 psig at 70°F and 90 psig at 600°F ratings.
 - d. NPS 2 and Smaller: Stainless-steel hoses and double-braid, stainless-steel sheaths with 700 psig at 70°F and 515 psig at 600°F ratings.
 - e. NPS 2-1/2 to NPS 6: Stainless-steel hoses and double-braid, stainless-steel sheaths with 275 psig at 70°F and 200 psig at 600°F ratings.
 - f. NPS 8 and Larger: Stainless-steel hoses and double-braid, stainless-steel sheaths with 165 psig at 70°F and 120 psig at 600°F ratings.
- G. Swivel Joints: **[Fabricated steel] [Bronze] [Ductile Iron] [Cast steel]** <insert> body, double ball bearing race, field lubricated, with **[rubber (Buna-N)]** <insert> o-ring seals.

2.3 MATERIALS FOR ANCHORS

- A. Steel Shapes and Plates: ASTM A36/A36M.

- B. Bolts and Nuts: ASME B18.10 or ASTM A183, steel, hex head.
- C. Washers: ASTM F844, steel, plain, flat washers.
- D. Mechanical Fasteners: Insert-wedge-type stud with expansion plug anchor for use in hardened portland cement concrete, and tension and shear capacities appropriate for application.
 - 1. Stud: Threaded, zinc-coated carbon steel.
 - 2. Expansion Plug: Zinc-coated steel.
 - 3. Washer and Nut: Zinc-coated steel.
- E. Chemical Fasteners: Insert-type-stud bonding system anchor for use with hardened portland cement concrete, and tension and shear capacities appropriate for application.
 - 1. Bonding Material: ASTM C881, Type IV, Grade 3, 2-component epoxy resin suitable for surface temperature of hardened concrete where fastener is to be installed.
 - 2. Stud: ASTM A307, zinc-coated carbon steel with continuous thread on stud, unless otherwise indicated.
 - 3. Washer and Nut: Zinc-coated steel.
- F. Concrete: Portland cement mix, [**3000 psi**] minimum. Refer to Division 03 for formwork, reinforcement, and concrete.
- G. Grout: ASTM C1107, factory-mixed and -packaged, dry, hydraulic-cement, nonshrink, nonmetallic grout; suitable for interior and exterior applications.
 - 1. Properties: Nonstaining, noncorrosive, and nongaseous.
 - 2. Design Mix: [**5000-psi**], 28-day compressive strength.

PART 3 - EXECUTION

3.1 INSPECTION

- A. Examine piping layout and notify DEN Project Manager of additional anchors or expansion joints required to adequately protect system.
- B. Provide inspection services by flexible pipe manufacturer's representative for final installing and certify installation is in accordance with manufacturer's recommendations and connectors are performing satisfactorily.

3.2 INSTALLATION - GENERAL

- A. Install flexible pipe connectors on pipes connected to equipment supported by vibration isolation. Axial and lateral offsets shall not exceed manufacturers'

recommendations.

- B. Accomplish structural work and provide equipment required to control expansion and contraction of piping, loops, pipe offsets, and swing joints, and provide corrugated bellows type expansion joints where required.
- C. Install flexible connectors at right angles to displacement. Install one end immediately adjacent to isolated equipment and anchor other end.
- D. Rigidly anchor pipe to building structure where necessary. Provide pipe guides so movement is directed along axis of pipe only. Erect piping such that strain and weight is not on cast connections or apparatus.
- E. Provide support and equipment required to control expansion and contraction of piping. Provide loops, pipe offsets, and swing joints, or expansion joints where **[required]** **[indicated]**.
- F. Provide expansion loops as indicated on drawings.

3.3 EXPANSION-JOINT INSTALLATION

- A. Install expansion joints of sizes matching sizes of piping in which they are installed.
- B. Install metal-bellows expansion joints according to EJMA's "Standards of the Expansion Joint Manufacturers Association, Inc."
- C. Install grooved-joint expansion joints to grooved-end steel piping

3.4 PIPE LOOP AND SWING CONNECTION INSTALLATION

- A. Install pipe loops cold-sprung in tension or compression as required to partly absorb tension or compression produced during anticipated change in temperature.
- B. Connect risers and branch connections to mains with at least **[five]** **<Insert number>** pipe fittings including tee in main.
- C. Connect risers and branch connections to terminal units with at least **[four]** **<Insert number>** pipe fittings including tee in riser.
- D. Connect mains and branch connections to terminal units with at least **[four]** **<Insert number>** pipe fittings including tee in main.
- E. Attach pipe bends and loops to anchors.
 - 1. Steel Anchors: Attach by welding. Comply with ASME B31.9 and ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
 - 2. Concrete Anchors: Attach by fasteners. Follow fastener manufacturer's written instructions.

3.5 SWING CONNECTIONS

- A. Connect risers and branch connections to mains with at least five pipe fittings, including tee in main.
- B. Connect risers and branch connections to terminal units with at least four pipe fittings, including tee in riser.
- C. Connect mains and branch connections to terminal units with at least four pipe fittings, including tee in main.

3.6 ALIGNMENT-GUIDE AND ANCHOR INSTALLATION

- A. Install alignment guides to guide expansion and to avoid end-loading and torsional stress.
- B. Install **[one]** **[two]** guide(s) on each side of pipe expansion fittings and loops. Install guides nearest to expansion joint not more than **[four]** **<Insert number>** pipe diameters from expansion joint.
- C. Attach guides to pipe and secure guides to building structure.
- D. Install anchors at locations to prevent stresses from exceeding those permitted by ASME B31.9 and to prevent transfer of loading and stresses to connected equipment.
- E. Anchor Attachments:
 - 1. Anchor Attachment to Black-Steel Pipe: Attach by welding. Comply with ASME B31.9 and ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
 - 2. Anchor Attachment to Galvanized-Steel Pipe: Attach with pipe hangers. Use MSS SP-69, Type 42, riser clamp welded to anchor.
 - 3. Anchor Attachment to Copper Tubing: Attach with pipe hangers. Use MSS SP-69, Type 24, U-bolts bolted to anchor.
- F. Fabricate and install steel anchors by welding steel shapes, plates, and bars. Comply with ASME B31.9 and AWS D1.1/D1.1M.
 - 1. Anchor Attachment to Steel Structural Members: Attach by welding.
 - 2. Anchor Attachment to Concrete Structural Members: Attach by fasteners. Follow fastener manufacturer's written instructions.
- G. Use grout to form flat bearing surfaces for guides and anchors attached to concrete.

3.7 MANUFACTURER'S FIELD SERVICES

- A. Provide services under provisions of Division 1 requirements.

- B. Provide inspection services by flexible pipe manufacturer's representative for final installing and certify installation is in accordance with manufacturer's recommendations and connectors are performing satisfactorily.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 220516

SECTION 220517 - SLEEVES AND SLEEVE SEALS FOR PLUMBING PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Sleeves.
 - 2. Stack-sleeve fittings.
 - 3. Sleeve-seal systems.
 - 4. Sleeve-seal fittings.
 - 5. Grout.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 REFERENCES

- A. Materials and workmanship shall conform to the latest issue of all industry standards, publications, codes, or regulations referenced in this Section and with the references listed in other Sections as applicable. Refer to Section 014225 "Referenced Standards" for listing of issuing organizations or agencies.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Include data substantiating that materials comply with requirements.
- B. Submit product samples if requested by DEN Project Manager.

1.5 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 SLEEVES

- A. Cast-Iron Wall Pipes: Cast or fabricated of cast or ductile iron and equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop unless otherwise indicated.
- B. Galvanized-Steel Wall Pipes: ASTM A 53/A 53M, Schedule 40, with plain ends and welded steel collar; zinc coated.
- C. Galvanized-Steel-Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, zinc coated, with plain ends.
- D. PVC-Pipe Sleeves: ASTM D 1785, Schedule 40.
- E. Galvanized-Steel-Sheet Sleeves: 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint.
- F. Stack Sleeve Fittings: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring, and bolts and nuts for membrane flashing.
 - 1. Underdeck Clamp: Clamping ring with set screws.
- G. Molded-PE or -PP Sleeves: Removable, tapered-cup shaped, and smooth outer surface with nailing flange for attaching to wooden forms.
- H. Molded-PVC Sleeves: With nailing flange for attaching to wooden forms.

2.2 STACK-SLEEVE FITTINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Smith, Jay R. Mfg. Co.
 - 2. Zurn Specification Drainage Operation; Zurn Plumbing Products Group.
 - 3. <Insert manufacturer's name>.
 - 4. or approved equal.
- B. Description: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring, bolts, and nuts for membrane flashing.
 - 1. Underdeck Clamp: Clamping ring with setscrews.

2.3 SLEEVE-SEAL SYSTEMS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Advance Products & Systems, Inc.
2. CALPICO, Inc.
3. Metraflex Company (The).
4. Pipeline Seal and Insulator, Inc.
5. Proco Products, Inc.
6. **<Insert manufacturer's name>**.
7. or approved equal.

B. Description: Modular sealing-element unit, designed for field assembly, for filling annular space between piping and sleeve.

1. Sealing Elements: [**EPDM-rubber**] [**NBR**] interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
2. Pressure Plates: [**Carbon steel**] [**Plastic**] [**Stainless steel**]. Include two (2) for each sealing element.
3. Connecting Bolts and Nuts: [**Carbon steel, with corrosion-resistant coating,**] [**Stainless steel**] of length required to secure pressure plates to sealing elements.

2.4 SLEEVE-SEAL FITTINGS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Presealed Systems.
2. **<Insert manufacturer's name>**.
3. or approved equal.

B. Description: Manufactured plastic, sleeve-type, waterstop assembly made for imbedding in concrete slab or wall. Unit has plastic or rubber waterstop collar with center opening to match piping OD.

2.5 GROUT

A. Standard: ASTM C 1107/C 1107M, Grade B. post-hardening and volume-adjusting, dry, hydraulic-cement grout.

B. Characteristics: Post-hardening and volume-adjusting, dry, hydraulic-cement grout; nonstaining, noncorrosive, nongaseous, nonshrink; recommended for interior and exterior applications.

C. Design Mix: **5000-psi (34.5-MPa)**, 28-day compressive strength.

D. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1 CONCRETE PENETRATIONS

- A. Reference Section 017330 "Cutting and Patching" for core drilling and saw cutting requirements.
- B. Reference Section 024119 "Selective Demolition" for demolition and removal of selected portions of a building or structure, and repair procedures for selective demolition operations.
- C. All penetrations required through completed concrete construction shall be core drilled or saw cut at minimum size required. All penetrations in concrete require an x-ray or ground penetrating radar to determine if the location is clear of reinforcing steel and embedded systems. Precautions shall be taken when drilling to prevent damage to structural concrete.
- D. The Contractor shall provide an interpretation of the x-rays or radar shot and obtain written acceptance from the DEN Project Manager before proceeding with drilling.

3.2 SLEEVE INSTALLATION

- A. Install sleeves for piping passing through penetrations in floors, partitions, roofs, and walls.
- B. For sleeves that will have sleeve-seal system installed, select sleeves of size large enough to provide [1-inch (25-mm)] <Insert dimension> annular clear space between piping and concrete slabs and walls.
 - 1. Sleeves are not required for core-drilled holes.
- C. Install sleeves in concrete floors, concrete roof slabs, and concrete walls as new slabs and walls are constructed.
 - 1. Permanent sleeves are not required for holes in slabs formed by molded-PE or -PP sleeves.
 - 2. Cut sleeves to length for mounting flush with both surfaces.
 - a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas [2 inches (50 mm)] <Insert dimension> above finished floor level.
 - 3. Using grout, seal the space outside of sleeves in slabs and walls without sleeve-seal system.
- D. Install sleeves for pipes passing through interior partitions.
 - 1. Cut sleeves to length for mounting flush with both surfaces.

2. Install sleeves that are large enough to provide **1/4-inch (6.4-mm)** annular clear space between sleeve and pipe or pipe insulation.
 3. Seal annular space between sleeve and piping or piping insulation; use joint sealants appropriate for size, depth, and location of joint. Comply with requirements for sealants specified in Section 079200 "Joint Sealants."
- E. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements for firestopping specified in Section 078413 "Penetration Firestopping."

3.3 STACK-SLEEVE-FITTING INSTALLATION

- A. Install stack-sleeve fittings in new slabs as slabs are constructed.
1. Install fittings that are large enough to provide **1/4-inch (6.4-mm)** annular clear space between sleeve and pipe or pipe insulation.
 2. Secure flashing between clamping flanges for pipes penetrating floors with membrane waterproofing. Comply with requirements for flashing specified in Section 076200 "Sheet Metal Flashing and Trim."
 3. Install section of cast-iron soil pipe to extend sleeve to **2 inches (50 mm)** above finished floor level.
 4. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.
 5. Using grout, seal the space around outside of stack-sleeve fittings.
- B. Fire-Barrier Penetrations: Maintain indicated fire rating of floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements for firestopping specified in Section 078413 "Penetration Firestopping."

3.4 SLEEVE-SEAL-SYSTEM INSTALLATION

- A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at service piping entries into building.
- B. Select type, size, and number of sealing elements required for piping material and size and for sleeve ID or hole size. Position piping in center of sleeve. Center piping in penetration, assemble sleeve-seal system components, and install in annular space between piping and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make a watertight seal.

3.5 SLEEVE-SEAL-FITTING INSTALLATION

- A. Install sleeve-seal fittings in new walls and slabs as they are constructed.
- B. Assemble fitting components of length to be flush with both surfaces of concrete slabs and walls. Position waterstop flange to be centered in concrete slab or wall.
- C. Secure nailing flanges to concrete forms.

- D. Using grout, seal the space around outside of sleeve-seal fittings.

3.6 SLEEVE AND SLEEVE-SEAL SCHEDULE

- A. Use sleeves and sleeve seals for the following piping-penetration applications:

1. Exterior Concrete Walls above Grade:

- a. Piping Smaller Than [**NPS 6 (DN 150)**] <Insert pipe size>: [**Cast-iron wall sleeves**] [**Galvanized-steel wall sleeves**] [**Galvanized-steel-pipe sleeves**] [**Sleeve-seal fittings**] <Insert material>.
- b. Piping [**NPS 6 (DN 150)**] <Insert pipe size> and Larger: [**Cast-iron wall sleeves**] [**Galvanized-steel wall sleeves**] [**Galvanized-steel-pipe sleeves**] <Insert material>.

2. Exterior Concrete Walls below Grade:

- a. Piping Smaller Than [**NPS 6 (DN 150)**] <Insert pipe size>: [**Cast-iron wall sleeves with sleeve-seal system**] [**Galvanized-steel wall sleeves with sleeve-seal system**] [**Galvanized-steel-pipe sleeves with sleeve-seal system**] [**Sleeve-seal fittings**] <Insert material>.
 - 1) Select sleeve size to allow for **1-inch (25-mm)** annular clear space between piping and sleeve for installing sleeve-seal system.
- b. Piping [**NPS 6 (DN 150)**] <Insert pipe size> and Larger: [**Cast-iron wall sleeves with sleeve-seal system**] [**Galvanized-steel wall sleeves with sleeve-seal system**] [**Galvanized-steel-pipe sleeves with sleeve-seal system**] <Insert material>.
 - 1) Select sleeve size to allow for **1-inch (25-mm)** annular clear space between piping and sleeve for installing sleeve-seal system.

3. Concrete Slabs-on-Grade:

- a. Piping Smaller Than [**NPS 6 (DN 150)**] <Insert pipe size>: [**Cast-iron wall sleeves with sleeve-seal system**] [**Galvanized-steel wall sleeves with sleeve-seal system**] [**Galvanized-steel-pipe sleeves with sleeve-seal system**] [**Sleeve-seal fittings**] <Insert material>.
 - 1) Select sleeve size to allow for **1-inch (25-mm)** annular clear space between piping and sleeve for installing sleeve-seal system.
- b. Piping [**NPS 6 (DN 150)**] <Insert pipe size> and Larger: [**Cast-iron wall sleeves with sleeve-seal system**] [**Galvanized-steel wall sleeves with sleeve-seal system**] [**Galvanized-steel-pipe sleeves with sleeve-seal system**] [**Galvanized-steel-pipe sleeves**] <Insert material>.
 - 1) Select sleeve size to allow for **1-inch (25-mm)** annular clear space between piping and sleeve for installing sleeve-seal system.

4. Concrete Slabs above Grade:
 - a. Piping Smaller Than [**NPS 6 (DN 150)**] <Insert pipe size>:
[Galvanized-steel-pipe sleeves] [PVC-pipe sleeves] [Stack-sleeve fittings] [Sleeve-seal fittings] [Molded-PE or -PP sleeves] [Molded-PVC sleeves] <Insert material>.
 - b. Piping [**NPS 6 (DN 150)**] <Insert pipe size> and Larger:
[Galvanized-steel-pipe sleeves] [PVC-pipe sleeves] [Stack-sleeve fittings] <Insert material>.

5. Interior Partitions:
 - a. Piping Smaller Than [**NPS 6 (DN 150)**] <Insert pipe size>:
[Galvanized-steel-pipe sleeves] [PVC-pipe sleeves] <Insert material>.
 - b. Piping [**NPS 6 (DN 150)**] <Insert pipe size> and Larger:
[Galvanized-steel-sheet sleeves] <Insert material>.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 220517

SECTION 220518 - ESCUTCHEONS FOR PLUMBING PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Escutcheons.
 - 2. Floor plates.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 REFERENCES

- A. Materials and workmanship shall conform to the latest issue of all industry standards, publications, codes, or regulations referenced in this Section and with the references listed in other Sections as applicable. Refer to Section 014200 "References" for listing of issuing organizations or agencies.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Include data substantiating that materials comply with requirements.

1.5 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 ESCUTCHEONS

- A. Description: Manufactured wall and ceiling escutcheons and floor plates, with an ID to closely fit around pipe, tube, and insulation of insulated piping and an OD that completely covers opening.
- B. One-Piece, Cast-Brass Type: With [polished, chrome-plated] [and] [rough-brass] finish and setscrew fastener.
- C. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with polished chrome-plated finish and spring-clip fasteners.
- D. One-Piece, Stamped-Steel Type: With chrome-plated finish and [**set screw**] [**spring-clip**] [**set screw or spring clips**] fasteners.
- E. Split-Casting Brass Type: With [**polished, chrome-plated**] [and] [**rough-brass**] finish and with concealed hinge and setscrew.
- F. Split-Plate, Stamped-Steel Type: With chrome-plated finish, [**concealed**] [and] [**exposed-rivet**] hinge, and [**set screw**] [**spring-clip**] [**set screw or spring clip**] fasteners.

2.2 FLOOR PLATES

- A. One-Piece Floor Plates: Cast-iron flange[**with holes for fasteners**].
- B. Split-Casting Floor Plates: Cast brass with concealed hinge and set screw.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install escutcheons for piping penetrations of walls, ceilings, and finished floors.
- B. Install escutcheons with ID to closely fit around pipe, tube, and insulation of insulated piping and with OD that completely covers opening.
 - 1. Escutcheons for New Piping:
 - a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
 - a. Chrome-Plated Piping: One-piece, cast-brass[**or split-casting brass**] type with polished, chrome-plated finish.
 - b. Insulated Piping: One-piece, stamped-steel type[or split-plate, stamped-steel type with concealed hinge] [or split-plate, stamped-steel

- c. type with exposed-riquet hinge].
Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, cast-brass[**or split-casting brass**] type with polished, chrome-plated finish.
 - d. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, stamped-steel type[or split-plate, stamped-steel type with concealed hinge] [or split-plate, stamped-steel type with exposed-riquet hinge].
 - e. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece, cast-brass[**or split-casting brass**] type with polished, chrome-plated finish.
 - f. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece, stamped-steel type[or split-plate, stamped-steel type with concealed hinge] [or split-plate, stamped-steel type with exposed-riquet hinge].
 - g. Bare Piping in Unfinished Service Spaces: One-piece, cast-brass[**or split-casting brass**] type with [**polished, chrome-plated**] [**rough-brass**] finish.
 - h. Bare Piping in Unfinished Service Spaces: One-piece, stamped-steel type[or split-plate, stamped-steel type with concealed hinge] [or split-plate, stamped-steel type with exposed-riquet hinge].
 - i. Bare Piping in Equipment Rooms: One-piece, cast-brass[**or split-casting brass**] type with [**polished, chrome-plated**] [**rough-brass**] finish.
 - j. Bare Piping in Equipment Rooms: One-piece, stamped-steel type[or split-plate, stamped-steel type with concealed hinge] [or split-plate, stamped-steel type with exposed-riquet hinge].
2. Escutcheons for Existing Piping:
- a. Chrome-Plated Piping: Split-casting brass type with polished, chrome-plated finish.
 - b. Insulated Piping: Split-plate, stamped-steel type with [**concealed**] [**or**] [**exposed-riquet**] hinge.
 - c. Bare Piping at Wall and Floor Penetrations in Finished Spaces: Split-casting brass type with polished, chrome-plated finish.
 - d. Bare Piping at Wall and Floor Penetrations in Finished Spaces: Split-plate, stamped-steel type with [**concealed**] [**or**] [**exposed-riquet**] hinge.
 - e. Bare Piping at Ceiling Penetrations in Finished Spaces: Split-casting brass type with polished, chrome-plated finish.
 - f. Bare Piping at Ceiling Penetrations in Finished Spaces: Split-plate, stamped-steel type with [**concealed**] [**or**] [**exposed-riquet**] hinge.
 - g. Bare Piping in Unfinished Service Spaces: Split-casting brass type with [**polished, chrome-plated**] [**rough-brass**] finish.
 - h. Bare Piping in Unfinished Service Spaces: Split-plate, stamped-steel type with [**concealed**] [**or**] [**exposed-riquet**] hinge.
 - i. Bare Piping in Equipment Rooms: Split-casting brass type with [**polished, chrome-plated**] [**rough-brass**] finish.
 - j. Bare Piping in Equipment Rooms: Split-plate, stamped-steel type with [**concealed**] [**or**] [**exposed-riquet**] hinge.
- C. Install floor plates for piping penetrations of equipment-room floors.

- D. Install floor plates with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.
 - 1. New Piping: One-piece, floor-plate type.
 - 2. Existing Piping: Split-casting, floor-plate type.

3.2 FIELD QUALITY CONTROL

- A. Replace broken and damaged escutcheons and floor plates using new materials.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 220518

SECTION 220519 - METERS AND GAUGES FOR PLUMBING PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Positive displacement meters.
2. Flow meters.
3. Pressure gauges and pressure gauge taps.
4. Thermometers and thermometer wells.
5. Static pressure gauges.
6. Filter gauges.
7. Bimetallic-actuated thermometers.
8. Filled-system thermometers.
9. Liquid-in-glass thermometers.
10. Light-activated thermometers.
11. Thermowells.
12. Dial-type pressure gages.
13. Gauge attachments.
14. Test plugs.
15. Test-plug kits.
16. Sight flow indicators.

- B. Related Sections:

1. Section 211100 "Facility Fire-Suppression Water-Service Piping" for fire-protection water-service meters outside the building.
2. Section 211200 "Fire-Suppression Standpipes" for fire protection pressure gages.
3. Section 211313 "Wet-Pipe Sprinkler Systems"
4. Section 211316 "Dry-Pipe Sprinkler Systems" for fire protection pressure gages.
5. Section 211339 "Foam-Water Systems" for fire protection pressure gages.
6. Section 221113 "Facility Water Distribution Piping" for domestic water meters and combined domestic and fire-protection water-service meters outside the building.
7. Section 221116 "Domestic Water Piping" for water meters inside the building.
8. Section 230523 "Meters and Gages for HVAC Piping" for meters and gages for HVAC systems.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 REFERENCES

- A. Materials and workmanship shall conform to the latest issue of all industry standards, publications, codes, or regulations referenced in this section and with the following references as applicable. Refer to Section 014225 "Referenced Standards" for listing of issuing organizations or agencies.
- B. Applicable Standards:
1. American Society of Mechanical Engineers (ASME):
 - a. ASME - B40.1 - Gauges - Pressure Indicating Dial Type - Elastic Element.
 - b. ASME MFC-3M - Measurement of Fluid Flow in Pipes Using Orifice, Nozzle, and Venturi.
 2. American Society for Testing of Materials (ASTM):
 - a. ASTM D 2458 - Method of Flow Measurement by The Venturi Motor Tube.
 - b. ASTM E 1 - Specification for ASTM Thermometers.
 - c. ASTM E 77 - Verification and Calibration of Liquid-in-Glass Thermometers.
 3. American Water Works Association (AWWA):
 - a. AWWA C700 - Cold Water Meters - Displacement Type.
 - b. AWWA C701 - Cold Water Meters - Turbine Type for Customer Service.
 - c. AWWA C702 - Cold Water Meters - Compound Type.
 - d. AWWA C706 - Direct Reading Remote Registration System for Cold Water Meters.
 - e. AWWA M6 - Water Meters - Selection, Installation, Testing, and Maintenance.
 4. Instrument Society of America (ISA):
 - a. ISA RP 3.2 - Flange Mounted Sharp Edged Orifice Plates for Flow Measurement.
 5. International Fire Code (IFC) with the Denver Amendments.
 6. International Building Code (IBC) with the Denver Amendments.
 7. Underwriters' Laboratories (UL).
 - a. UL 393 - Indicating Pressure Gauges for Fire and Protection Services.
 - b. UL 404 - Gauges, Indicating Pressure, for Compressed Gas Service.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

1. Provide list, which indicates use, operating range, total range and location for manufactured components.
2. Include data substantiating that materials comply with requirements.

1.5 INFORMATIONAL SUBMITTALS

- A. Product Certificates: For each type of meter and gauge, from manufacturer.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For meters and gauges to include in operation and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
 1. Record actual locations of components and instrumentation.

1.7 EXTRA MATERIALS

- A. Provide [**two (2)**] <insert number> bottles of red gauge oil for static pressure gauges.
- B. Provide [**two (2)**] <insert number> [**pressure gauges with pulsation damper**] [**dial thermometers**].

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 POSITIVE DISPLACEMENT AND TURBINE METERS (LIQUID)

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Hersey.
 2. Badger.
 3. <Insert manufacturer>
 4. or approved equal.
- B. [**AWWA C700**] [**AWWA C701**] [**AWWA C702**], positive displacement disc type suitable

for fluid with bronze case and cast iron [**frost-proof, breakaway**] bottom cap, hermetically sealed register[, **remote reading to AWWA C706**].

- C. Meter: Brass or stainless steel body turbine meter, insertion type removable through valve, with magnetic drive register.
- a. Service: [**Cold water, 122 degrees F**] [**Hot water, 200 degrees F**].
 - b. Nominal Flow: <insert number> gpm.
 - c. Pressure Drop at Nominal Flow: <insert number> psi.
 - d. Maximum Flow: <insert number> gpm.
 - e. Maximum Operating Pressure: <insert number> psi.
 - f. Accuracy: [**1-1/2**] <insert number> percent.
 - g. Maximum Counter Reading: [**10 million**] [**100 million**] gallons.
 - h. Size: [**1/2 inch**] [**3/4 inch**] [<insert number> inch].

2.2 HEAT CONSUMPTION METERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Clark Solutions.
 2. Onicon Incorporated.
 3. <Insert manufacturer>
 4. or approved equal.
- B. Meter: Brass or stainless steel body turbine meter, removable through valve, with magnetic drive register, platinum temperature sensors.
1. Maximum Service Temperature: 200 degrees F.
 2. Nominal Flow: <insert number> gpm.
 3. Pressure Drop at Nominal Flow: <insert number> psi.
 4. Maximum Flow: <insert number> gpm.
 5. Maximum Operating Pressure: <insert number> psi.
 6. Accuracy: [**1-1/2**] <insert number> percent.
 7. Maximum Counter Reading: [**1 million**] <insert number> btuh.
 8. Size: [**1/2 inch**] [**3/4 inch**] [<insert number> inch].
 9. Power: [**Alkaline Battery**] [**Lithium Battery**] [**24 Volt convertor**].

2.3 FLOW METERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Gustin-Bacon.
 2. BIF.
 3. Hersey Products Inc.
 4. Liquid Controls Corp.
 5. <Insert manufacturer>

6. or approved equal.
 - B. Orifice principle by-pass circuit with direct reading gauge, soldered or flanged piping connections for 125 psig working pressure, with shut off valves, and drain and vent connections.
 - C. Direct reading with insert pitot tube, threaded coupling, for 150 psig working pressure, maximum 240 degrees F, 5 percent accuracy.
 - D. Cast iron, wafer type, orifice insert flow meter for 250 psig working pressure, with read-out valves equipped with integral check valves with gasketed caps.
 - E. Calibrated, plug type balance valve with precision machined orifice, readout valves equipped with integral check valves and gasketed caps, calibrated nameplate and indicating pointer.
 - F. Cast iron or bronze, globe style, balance valve with handwheel with vernier type ring setting and memory stop, [drain connection,] readout valves **[equipped with integral check valves and gasketed caps]**.
 - G. Portable meter consisting of case containing **[one, 3 percent accuracy pressure gauge with 0-60 feet pressure range] [two, 3 percent accuracy pressure gauges with 0-135 inches and 0-60 feet pressure ranges]** for 500 psig maximum working pressure, color coded hoses for low and high pressure connections, and connectors suitable for connection to read-out valves.
 - H. Annular element flow stations with meter set.
 1. Measuring Station: Type 316 stainless steel pitot type flow element **[inserted through welded threaded couplet] [installed in threaded nipple pipe section]**, with safety shut-off valves and quick coupling connections, and permanent metal tag indicating design flow rate, reading for design flow rate, metered fluid, line size, station or location number.
 - a. Pressure rating: 275 psig.
 - b. Maximum temperature: 400 degrees F.
 - c. Accuracy: Plus 0.55 percent to minus 2.30 percent.
 2. Portable Meter Set: Dry single diaphragm type pressure gauge with 6 inch dial pointer, stainless steel wetted metal parts, variable pulsation damper, equalizing valve, two bleed valves, and master chart for direct conversion of meter readings to flow rate, mounted in rust-proof carrying case with two ten foot long rubber test hoses with brass valves or quick connections for measuring stations.
- 2.4 PRESSURE GAUGES
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Terice.

2. Moeller.
3. Dietz.
4. U.S. Gauge.
5. **<Insert manufacturer>**
6. or approved equal.

B. Gauge: ASME B40.1, [UL 393] [UL 404] drawn steel case, phosphor bronze bourdon tube, rotary brass movement, brass socket, with front recalibration adjustment, black scale on white background.

1. Case: [Steel with brass bourdon tube] [Cast aluminum with phosphor bronze bourdon tube].
2. Size: [3-1/2 inch] [4-1/2 inch] [6 inch] [8-1/2 inch] diameter.
3. Mid-Scale Accuracy: [One] [1/2] percent.
4. Scale: Pounds per square inch.
5. Range: System design pressure should be in the middle 20% of the gauge range

2.5 PRESSURE GAUGE TAPPINGS

- A. Needle Valve: Stainless Steel, 1/4 inch NPT for minimum 150 psig.
- B. Pulsation Damper: Pressure snubber, brass with 1/4 inch connections.
- C. Syphon: [Steel, Schedule 40] [Brass] [Iron] [Stainless Steel] [Bronze], 1/4 inch angle or straight pattern.

2.6 STEM TYPE THERMOMETERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Terrice.
 2. U.S. Gauge.
 3. Moeller.
 4. Dietz.
 5. **<Insert manufacturer>**
 6. or approved equal.
- B. Thermometer: ASTM E 1, adjustable angle, red or blue appearing organic liquid fill, lens front tube, cast aluminum case with enamel finish, cast aluminum adjustable joint with positive locking device.
 1. Size: [7 inch] [9 inch] [12 inch] scale.
 2. Window: Clear [glass] [Lexan].
 3. Stem: 3/4 inch NPT brass.
 4. Accuracy: [ASTM E 77] 2 percent.
 5. Calibration: [Degrees F] [Degrees C] [Both degrees F and degrees C].

2.7 DIAL THERMOMETERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Terrice.
 2. U.S. Gauge.
 3. Moeller.
 4. Dietz.
 5. **<Insert manufacturer>**
 6. or approved equal.
- B. Thermometer: ASTM E 1, stainless steel case, adjustable angle with front recalibration, bimetallic helix actuated with silicone fluid damping, white with black markings and black pointer hermetically sealed lens, stainless steel stem.
1. Size: **[3 inch] [5 inch] <insert number>** diameter dial.
 2. Lens: Clear Lexan.
 3. Accuracy: 1 percent.
 4. Calibration: **[Degrees F] [Degrees C] [Both degrees F and degrees C]**.

2.8 THERMOMETER SUPPORTS

- A. Socket: Brass separable sockets for thermometer stems with extensions where necessary to clear insulation, and with cap and chain.
- B. Flange: 3 inch outside diameter reversible flange, designed to fasten to sheet metal air ducts, with brass perforated stem.

2.9 TEST PLUGS

- A. Manufacturer: Subject to compliance with requirements, provide products by one of the following:
1. Peterson Equipment Co.
 2. **<Insert manufacturer>**
 3. or approved equal.
- B. Test Plug: 1/4 inch or 1/2 inch **[brass] [stainless steel]** fitting and cap for receiving 1/8 inch outside diameter pressure or temperature probe with **[neoprene core for temperatures up to 200 degrees F] [Nordel core for temperatures up to 350 degrees F] [Viton core for temperatures up to 400 degrees F]**.
- C. Test Kit: Carrying case, internally padded and fitted containing **[one] [two] [2-1/2 inch] [3-1/2 inch]** diameter pressure gauges, **[one] [two]** gauge adapters with 1/8 inch probes, two **[one inch] [1-1/2 inch]** dial thermometers.

2.10 STATIC PRESSURE GAUGES

- A. 3-1/2 inch diameter dial in metal case, diaphragm actuated, black figures on white background, front recalibration adjustment, 2 percent of full scale accuracy.
- B. Inclined manometer, red liquid on white background with black figures, front recalibration adjustment, 3 percent of full scale accuracy.
- C. Accessories: Static pressure tips with compression fittings for bulkhead mounting, 1/4 inch diameter tubing.

2.11 BIMETALLIC-ACTUATED THERMOMETERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following :
 - 1. Ashcroft Inc.
 - 2. Ernst Flow Industries.
 - 3. Marsh Bellofram.
 - 4. Miljoco Corporation.
 - 5. Nanmac Corporation.
 - 6. Noshok.
 - 7. Palmer Wahl Instrumentation Group.
 - 8. REOTEMP Instrument Corporation.
 - 9. Tel-Tru Manufacturing Company.
 - 10. Terrice, H. O. Co.
 - 11. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.
 - 12. Weiss Instruments, Inc.
 - 13. WIKA Instrument Corporation - USA.
 - 14. Winters Instruments - U.S.
 - 15. **<Insert manufacturer's name>**.
 - 16. or approved equal.
- B. Standard: ASME B40.200.
- C. Case: **[Liquid-filled] [and] [sealed]** type(s); stainless steel with **[3-inch (76-mm)] [5-inch (127-mm)] <Insert dimension>** nominal diameter.
- D. Dial: **[Nonreflective aluminum] <Insert material>** with permanently etched scale markings and scales in **[deg F (deg C)] [deg F and deg C]**.
- E. Connector Type(s): Union joint, **[adjustable angle] [rigid, back] [and] [rigid, bottom] <Insert type>**, with unified-inch screw threads.
- F. Connector Size: **[1/2 inch (13 mm)] <Insert dimension>**, with ASME B1.1 screw threads.
- G. Stem: **[0.25 or 0.375 inch (6.4 or 9.4 mm)]** in diameter; stainless steel.
- H. Window: **[Plain glass] [or] [plastic] <Insert material>**.

- I. Ring: Stainless steel.
- J. Element: Bimetal coil.
- K. Pointer: Dark-colored metal.
- L. Accuracy: Plus or minus [1] [1.5] <Insert number> percent of scale range.

2.12 FILLED-SYSTEM THERMOMETERS

A. Direct-Mounted, Metal-Case, Vapor-Actuated Thermometers:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ashcroft Inc.
 - b. Marsh Bellofram.
 - c. Miljoco Corporation.
 - d. Palmer Wahl Instrumentation Group.
 - e. REOTEMP Instrument Corporation.
 - f. Trerice, H. O. Co.
 - g. Weiss Instruments, Inc.
 - h. <Insert manufacturer's name>.
 - i. or approved equal.
- 2. Standard: ASME B40.200.
- 3. Case: Sealed type, [cast aluminum or drawn steel] <Insert material>; [4-1/2-inch (114-mm)] [5-inch (127-mm)] [6-inch (152-mm)] <Insert dimension> nominal diameter.
- 4. Element: Bourdon tube or other type of pressure element.
- 5. Movement: Mechanical, [dampening type,] with link to pressure element and connection to pointer.
- 6. Dial: Nonreflective aluminum with permanently etched scale markings graduated in [deg F (deg C)] [deg F and deg C].
- 7. Pointer: Dark-colored metal.
- 8. Window: [Glass] [or] [plastic] <Insert material>.
- 9. Ring: [Metal] [Stainless steel] <Insert material>.
- 10. Connector Type(s): Union joint, [adjustable, 180 degrees in vertical plane, 360 degrees in horizontal plane, with locking device] [rigid, back] [and] [rigid, bottom]; with ASME B1.1 screw threads.
- 11. Thermal System: Liquid-filled bulb in copper-plated steel, aluminum, or brass stem and of length to suit installation.
 - a. Design for Thermowell Installation: Bare stem.
- 12. Accuracy: Plus or minus [1] <Insert number> percent of scale range.

B. Direct-Mounted, Plastic-Case, Vapor-Actuated Thermometers:

- 1. Manufacturers: Subject to compliance with requirements, provide products by

one of the following:

- a. Ashcroft Inc.
 - b. Miljoco Corporation.
 - c. REOTEMP Instrument Corporation.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
2. Standard: ASME B40.200.
 3. Case: Sealed type, **[plastic]** **<Insert material>**; **[4-1/2-inch (114-mm)]** **[5-inch (127-mm)]** **[6-inch (152-mm)]** **<Insert dimension>** nominal diameter.
 4. Element: Bourdon tube or other type of pressure element.
 5. Movement: Mechanical, with link to pressure element and connection to pointer.
 6. Dial: Nonreflective aluminum with permanently etched scale markings graduated in **[deg F (deg C)]** **[deg F and deg C]**.
 7. Pointer: Dark-colored metal.
 8. Window: **[Glass]** **[or]** **[plastic]** **<Insert material>**.
 9. Ring: **[Metal]** **[or]** **[plastic]** **<Insert material>**.
 10. Connector Type(s): Union joint, **[adjustable, 180 degrees in vertical plane, 360 degrees in horizontal plane, with locking device]** **[rigid, back]** **[and]** **[rigid, bottom]**; with ASME B1.1 screw threads.
 11. Thermal System: Liquid-filled bulb in copper-plated steel, aluminum, or brass stem and of length to suit installation.
 - a. Design for Thermowell Installation: Bare stem.
 12. Accuracy: Plus or minus **[1]** **<Insert number>** percent of scale range.

C. Remote-Mounted, Metal-Case, Vapor-Actuated Thermometers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AMETEK, Inc.; U.S. Gauge.
 - b. Ashcroft Inc.
 - c. Marsh Bellofram.
 - d. Miljoco Corporation.
 - e. Palmer Wahl Instrumentation Group.
 - f. REOTEMP Instrument Corporation.
 - g. Terice, H. O. Co.
 - h. Weiss Instruments, Inc.
 - i. WIKA Instrument Corporation - USA.
 - j. **<Insert manufacturer's name>**.
 - k. or approved equal.
2. Standard: ASME B40.200.
3. Case: Sealed type, **[cast aluminum or drawn steel]** **<Insert material>**; **[4-1/2-inch (114-mm)]** **[6-inch (152-mm)]** **<Insert dimension>** nominal diameter with **[back]** **[front]** flange and holes for panel mounting.
4. Element: Bourdon tube or other type of pressure element.

5. Movement: Mechanical, with link to pressure element and connection to pointer.
6. Dial: Nonreflective aluminum with permanently etched scale markings graduated in [deg F (deg C)] [deg F and deg C].
7. Pointer: Dark-colored metal.
8. Window: [Glass] [or] [plastic] <Insert material>.
9. Ring: [Metal] [Stainless steel] <Insert material>.
10. Connector Type(s): Union joint, [back] [bottom]; with ASME B1.1 screw threads.
11. Thermal System: Liquid-filled bulb in copper-plated steel, aluminum, or brass stem and of length to suit installation.

a. Design for Thermowell Installation: Bare stem.

12. Accuracy: Plus or minus [1] <Insert number> percent of scale range.

D. Remote-Mounted, Plastic-Case, Vapor-Actuated Thermometers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AMETEK, Inc.; U.S. Gauge.
 - b. Ashcroft Inc.
 - c. Miljoco Corporation.
 - d. REOTEMP Instrument Corporation.
 - e. Terrice, H. O. Co.
 - f. <Insert manufacturer's name>.
 - g. or approved equal.
2. Standard: ASME B40.200.
3. Case: Sealed type, [plastic] <Insert material>; [4-1/2-inch (114-mm)] [6-inch (152-mm)] <Insert dimension> nominal diameter with [back] [front] flange and holes for panel mounting.
4. Element: Bourdon tube or other type of pressure element.
5. Movement: Mechanical, with link to pressure element and connection to pointer.
6. Dial: Nonreflective aluminum with permanently etched scale markings graduated in [deg F (deg C)] [deg F and deg C].
7. Pointer: Dark-colored metal.
8. Window: [Glass] [or] [plastic] <Insert material>.
9. Ring: [Metal] [or] [plastic] <Insert material>.
10. Connector Type(s): Union joint, threaded, [back] [bottom]; with ASME B1.1 screw threads.
11. Thermal System: Liquid-filled bulb in copper-plated steel, aluminum, or brass stem and of length to suit installation.
 - a. Design for Thermowell Installation: Bare stem.
12. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

2.13 LIQUID-IN-GLASS THERMOMETERS

A. Metal-Case, Compact-Style, Liquid-in-Glass Thermometers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Terice, H. O. Co.
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.
2. Standard: ASME B40.200.
3. Case: [**Cast aluminum**] **<Insert material>**; 6-inch (152-mm) nominal size.
4. Case Form: [**Back angle**] [**Straight**] unless otherwise indicated.
5. Tube: Glass with magnifying lens and blue[**or red**] organic liquid.
6. Tube Background: Nonreflective aluminum with permanently etched scale markings graduated in [**deg F (deg C)**] [**deg F and deg C**].
7. Window: Glass or plastic.
8. Stem: Aluminum or brass and of length to suit installation.
 - a. Design for Thermowell Installation: Bare stem.
9. Connector: 3/4 inch (19 mm), with ASME B1.1 screw threads.
10. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

B. Plastic-Case, Compact-Style, Liquid-in-Glass Thermometers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Flo Fab Inc.
 - b. Miljoco Corporation.
 - c. Tel-Tru Manufacturing Company.
 - d. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.
 - e. Weiss Instruments, Inc.
 - f. WIKA Instrument Corporation - USA.
 - g. **<Insert manufacturer's name>**.
 - h. or approved equal.
2. Standard: ASME B40.200.
3. Case: [**Plastic**] **<Insert material>**; 6-inch (152-mm) nominal size.
4. Case Form: [**Back angle**] [**Straight**] unless otherwise indicated.
5. Tube: Glass with magnifying lens and blue[**or red**] organic liquid.
6. Tube Background: Nonreflective with permanently etched scale markings graduated in [**deg F (deg C)**] [**deg F and deg C**].
7. Window: Glass or plastic.
8. Stem: Aluminum or brass and of length to suit installation.
 - a. Design for Thermowell Installation: Bare stem.

9. Connector: **3/4 inch (19 mm)**, with ASME B1.1 screw threads.
10. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

C. Metal-Case, Industrial-Style, Liquid-in-Glass Thermometers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Flo Fab Inc.
 - b. Miljoco Corporation.
 - c. Palmer Wahl Instrumentation Group.
 - d. Tel-Tru Manufacturing Company.
 - e. Trerice, H. O. Co.
 - f. Weiss Instruments, Inc.
 - g. Winters Instruments - U.S.
 - h. **<Insert manufacturer's name>**.
 - i. or approved equal.
2. Standard: ASME B40.200.
3. Case: [**Cast aluminum**] **<Insert material>**; [**7-inch (178-mm)**] [**9-inch (229-mm)**] nominal size unless otherwise indicated.
4. Case Form: [**Adjustable angle**] [**Back angle**] [**Straight**] **<Insert form>** unless otherwise indicated.
5. Tube: Glass with magnifying lens and blue[**or red**] organic liquid.
6. Tube Background: Nonreflective aluminum with permanently etched scale markings graduated in [**deg F (deg C)**] [**deg F and deg C**].
7. Window: [**Glass**] [**or**] [**plastic**] **<Insert material>**.
8. Stem: [**Aluminum**] **<Insert material>** and of length to suit installation.
 - a. Design for Thermowell Installation: Bare stem.
9. Connector: **1-1/4 inches (32 mm)**, with ASME B1.1 screw threads.
10. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

D. Plastic-Case, Industrial-Style, Liquid-in-Glass Thermometers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ernst Flow Industries.
 - b. Marsh Bellofram.
 - c. Miljoco Corporation.
 - d. Palmer Wahl Instrumentation Group.
 - e. REOTEMP Instrument Corporation.
 - f. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.
 - g. Weiss Instruments, Inc.
 - h. WIKA Instrument Corporation - USA.
 - i. **<Insert manufacturer's name>**.

- j. or approved equal.
2. Standard: ASME B40.200.
3. Case: [**Plastic**] <Insert material>; [7-inch (178-mm)] [9-inch (229-mm)] nominal size unless otherwise indicated.
4. Case Form: [**Adjustable angle**] [**Back angle**] [**Straight**] <Insert form> unless otherwise indicated.
5. Tube: Glass with magnifying lens and blue[or red] organic liquid.
6. Tube Background: Nonreflective aluminum with permanently etched scale markings graduated in [deg F (deg C)] [deg F and deg C].
7. Window: [**Glass**] [or] [**plastic**] <Insert material>.
8. Stem: [**Aluminum**] [**Brass**] [**Stainless steel**] [**Aluminum, brass, or stainless steel**] <Insert material> and of length to suit installation.
 - a. Design for Thermowell Installation: Bare stem.
9. Connector: 1-1/4 inches (32 mm), with ASME B1.1 screw threads.
10. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

2.14 LIGHT-ACTIVATED THERMOMETERS

A. Direct-Mounted, Light-Activated Thermometers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Flo Fab Inc.
 - b. REOTEMP Instrument Corporation.
 - c. Trerice, H. O. Co.
 - d. Weiss Instruments, Inc.
 - e. WIKA Instrument Corporation - USA.
 - f. Winters Instruments - U.S.
 - g. <Insert manufacturer's name>.
 - h. or approved equal.
2. Case: [**Plastic**] [**Metal**] <Insert material>; [7-inch (178-mm)] [9-inch (229-mm)] nominal size unless otherwise indicated.
3. Scale(s): [Deg F (Deg C)] [Deg F and deg C].
4. Case Form: [**Adjustable angle**] <Insert form>.
5. Connector: [1-1/4 inches (32 mm)] <Insert dimension>, with ASME B1.1 screw threads.
6. Stem: [**Aluminum**] <Insert material> and of length to suit installation.
 - a. Design for Thermowell Installation: Bare stem.
7. Display: Digital.
8. Accuracy: Plus or minus 2 deg F (1 deg C).

B. Remote-Mounted, Light-Activated Thermometers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Miljoco Corporation.
 - b. Weiss Instruments, Inc.
 - c. Winters Instruments - U.S.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
2. Case: Plastic, for wall mounting.
3. Scale(s): [Deg F (Deg C)] [Deg F and deg C].
4. Sensor: Bulb and thermister wire.
 - a. Design for Thermowell Installation: Bare stem.
5. Display: Digital.
6. Accuracy: Plus or minus 2 deg F (1 deg C).

2.15 THERMOWELLS

A. Thermowells:

1. Standard: ASME B40.200.
2. Description: Pressure-tight, socket-type fitting made for insertion into piping tee fitting.
3. Material for Use with Copper Tubing: [CNR] [or] [CUNI] **<Insert material>**.
4. Material for Use with Steel Piping: [CRES] [CSA] **<Insert material>**.
5. Type: Stepped shank unless straight or tapered shank is indicated.
6. External Threads: NPS 1/2, NPS 3/4, or NPS 1, (DN 15, DN 20, or NPS 25,) ASME B1.20.1 pipe threads.
7. Internal Threads: 1/2, 3/4, and 1 inch (13, 19, and 25 mm), with ASME B1.1 screw threads.
8. Bore: Diameter required to match thermometer bulb or stem.
9. Insertion Length: Length required to match thermometer bulb or stem.
10. Lagging Extension: Include on thermowells for insulated piping and tubing.
11. Bushings: For converting size of thermowell's internal screw thread to size of thermometer connection.

B. Heat-Transfer Medium: [Mixture of graphite and glycerin] **<Insert material>**.

2.16 PRESSURE GAGES

A. Direct-Mounted, Metal-Case, Dial-Type Pressure Gages:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. AMETEK, Inc.; U.S. Gauge.
 - b. Ashcroft Inc.
 - c. Ernst Flow Industries.
 - d. Flo Fab Inc.
 - e. Marsh Bellofram.
 - f. Miljoco Corporation.
 - g. Noshok.
 - h. Palmer Wahl Instrumentation Group.
 - i. REOTEMP Instrument Corporation.
 - j. Tel-Tru Manufacturing Company.
 - k. Trerice, H. O. Co.
 - l. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.
 - m. Weiss Instruments, Inc.
 - n. WIKA Instrument Corporation - USA.
 - o. Winters Instruments - U.S.
 - p. <Insert manufacturer's name>.
 - q. or approved equal.
2. Standard: ASME B40.100.
 3. Case: [**Liquid-filled**] [**Sealed**] [**Open-front, pressure relief**] [**Solid-front, pressure relief**] <Insert type> type(s); [**cast aluminum or drawn steel**] <Insert material>; [**4-1/2-inch (114-mm)**] [**6-inch (152-mm)**] <Insert dimension> nominal diameter.
 4. Pressure-Element Assembly: Bourdon tube unless otherwise indicated.
 5. Pressure Connection: Brass, with [**NPS 1/4 (DN 8)**] [**NPS 1/4 or NPS 1/2 (DN 8 or DN 15)**] [**NPS 1/2 (DN 15)**], ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
 6. Movement: Mechanical, with link to pressure element and connection to pointer.
 7. Dial: Nonreflective aluminum with permanently etched scale markings graduated in [**psi (kPa)**] [**psi and kPa**].
 8. Pointer: Dark-colored metal.
 9. Window: [**Glass**] [**or**] [**plastic**] <Insert material>.
 10. Ring: [**Metal**] [**Brass**] [**Stainless steel**].
 11. Accuracy: [**Grade A, plus or minus 1 percent of middle half of**] [**Grade B, plus or minus 2 percent of middle half of**] [**Grade C, plus or minus 3 percent of middle half of**] [**Grade D, plus or minus 5 percent of whole**] scale range.

B. Direct-Mounted, Plastic-Case, Dial-Type Pressure Gages:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AMETEK, Inc.; U.S. Gauge.
 - b. Ashcroft Inc.
 - c. Flo Fab Inc.
 - d. Marsh Bellofram.
 - e. Miljoco Corporation.
 - f. Noshok.
 - g. Palmer Wahl Instrumentation Group.
 - h. REOTEMP Instrument Corporation.

- i. Tel-Tru Manufacturing Company.
 - j. Trerice, H. O. Co.
 - k. Weiss Instruments, Inc.
 - l. WIKA Instrument Corporation - USA.
 - m. Winters Instruments - U.S.
 - n. **<Insert manufacturer's name>**.
 - o. or approved equal.
2. Standard: ASME B40.100.
 3. Case: [**Sealed**] **<Insert type>** type; [**plastic**] **<Insert material>**; [**4-1/2-inch (114-mm)**] [**6-inch (152-mm)**] **<Insert dimension>** nominal diameter.
 4. Pressure-Element Assembly: Bourdon tube unless otherwise indicated.
 5. Pressure Connection: Brass, with [**NPS 1/4 (DN 8)**] [**NPS 1/4 or NPS 1/2 (DN 8 or DN 15)**] [**NPS 1/2 (DN 15)**], ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
 6. Movement: Mechanical, with link to pressure element and connection to pointer.
 7. Dial: Nonreflective aluminum with permanently etched scale markings graduated in [**psi (kPa)**] [**psi and kPa**].
 8. Pointer: Dark-colored metal.
 9. Window: [**Glass**] [**or**] [**plastic**] **<Insert material>**.
 10. Accuracy: [**Grade A, plus or minus 1 percent of middle half of**] [**Grade B, plus or minus 2 percent of middle half of**] [**Grade C, plus or minus 3 percent of middle half of**] [**Grade D, plus or minus 5 percent of whole**] scale range.

C. Remote-Mounted, Metal-Case, Dial-Type Pressure Gages:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AMETEK, Inc.; U.S. Gauge.
 - b. Ashcroft Inc.
 - c. Ernst Flow Industries.
 - d. Flo Fab Inc.
 - e. Marsh Bellofram.
 - f. Miljoco Corporation.
 - g. Noshok.
 - h. Palmer Wahl Instrumentation Group.
 - i. REOTEMP Instrument Corporation.
 - j. Tel-Tru Manufacturing Company.
 - k. Trerice, H. O. Co.
 - l. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.
 - m. Weiss Instruments, Inc.
 - n. WIKA Instrument Corporation - USA.
 - o. Winters Instruments - U.S.
 - p. **<Insert manufacturer's name>**.
 - q. or approved equal.
2. Standard: ASME B40.100.
3. Case: [**Liquid-filled**] [**Sealed**] **<Insert type>** type; [**cast aluminum or drawn steel**] [**metal**] **<Insert material>**; [**4-1/2-inch (114-mm)**] [**6-inch (152-mm)**]

- <Insert dimension> nominal diameter with [back] [front] flange and holes for panel mounting.
4. Pressure-Element Assembly: Bourdon tube unless otherwise indicated.
 5. Pressure Connection: Brass, with [NPS 1/4 (DN 8)] [NPS 1/4 or NPS 1/2 (DN 8 or DN 15)] [NPS 1/2 (DN 15)], ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
 6. Movement: Mechanical, with link to pressure element and connection to pointer.
 7. Dial: Nonreflective aluminum with permanently etched scale markings graduated in [psi (kPa)] [psi and kPa].
 8. Pointer: Dark-colored metal.
 9. Window: [Glass] [or] [plastic] <Insert material>.
 10. Ring: [Metal] [Stainless steel] <Insert material>.
 11. Accuracy: [Grade A, plus or minus 1 percent of middle half of] [Grade B, plus or minus 2 percent of middle half of] [Grade C, plus or minus 3 percent of middle half of] [Grade D, plus or minus 5 percent of whole] scale range.
- D. Remote-Mounted, Plastic-Case, Dial-Type Pressure Gages:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AMETEK, Inc.; U.S. Gauge.
 - b. Ashcroft Inc.
 - c. Miljoco Corporation.
 - d. Noshok.
 - e. Palmer Wahl Instrumentation Group.
 - f. REOTEMP Instrument Corporation.
 - g. Tel-Tru Manufacturing Company.
 - h. Terice, H. O. Co.
 - i. Weiss Instruments, Inc.
 - j. WIKA Instrument Corporation - USA.
 - k. Winters Instruments - U.S.
 - l. <Insert manufacturer's name>.
 - m. or approved equal.
 2. Standard: ASME B40.100.
 3. Case: [Sealed] <Insert type> type; [plastic] <Insert material>; [4-1/2-inch (114-mm)] [6-inch (152-mm)] <Insert dimension> nominal diameter with [back] [front] flange and holes for panel mounting.
 4. Pressure-Element Assembly: Bourdon tube unless otherwise indicated.
 5. Pressure Connection: Brass, with [NPS 1/4 (DN 8)] [NPS 1/4 or NPS 1/2 (DN 8 or DN 15)] [NPS 1/2 (DN 15)], ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
 6. Movement: Mechanical, with link to pressure element and connection to pointer.
 7. Dial: Nonreflective aluminum with permanently etched scale markings graduated in [psi (kPa)] [psi and kPa].
 8. Pointer: Dark-colored metal.
 9. Window: [Glass] [or] [plastic] <Insert material>.

10. Accuracy: **[Grade A, plus or minus 1 percent of middle half of]** **[Grade B, plus or minus 2 percent of middle half of]** **[Grade C, plus or minus 3 percent of middle half of]** **[Grade D, plus or minus 5 percent of whole]** scale range.

2.17 GAUGE ATTACHMENTS

- A. Snubbers: ASME B40.100, brass; with **[NPS 1/4 (DN 8)]** **[NPS 1/4 or NPS 1/2 (DN 8 or DN 15)]** **[NPS 1/2 (DN 15)]**, ASME B1.20.1 pipe threads and **[piston]** **[porous-metal]**-type surge-dampening device. Include extension for use on insulated piping.
- B. Valves: **[Brass ball]** **[Brass or stainless-steel needle]**, with **[NPS 1/4 (DN 8)]** **[NPS 1/4 or NPS 1/2 (DN 8 or DN 15)]** **[NPS 1/2 (DN 15)]**, ASME B1.20.1 pipe threads.

2.18 TEST PLUGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Flow Design, Inc.
 2. Miljoco Corporation.
 3. National Meter, Inc.
 4. Peterson Equipment Co., Inc.
 5. Sisco Manufacturing Company, Inc.
 6. Terice, H. O. Co.
 7. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.
 8. Weiss Instruments, Inc.
 9. **<Insert manufacturer's name>**.
 10. or approved equal.
- B. Description: Test-station fitting made for insertion into piping tee fitting.
- C. Body: Brass or stainless steel with core inserts and gasketed and threaded cap. Include extended stem on units to be installed in insulated piping.
- D. Thread Size: **[NPS 1/4 (DN 8)]** **[or]** **[NPS 1/2 (DN 15)]**, ASME B1.20.1 pipe thread.
- E. Minimum Pressure and Temperature Rating: **[500 psig at 200 deg F (3450 kPa at 93 deg C)]** **<Insert ratings>**.
- F. Core Inserts: **[Chlorosulfonated polyethylene synthetic]** **[and]** **[EPDM]** self-sealing rubber.

2.19 TEST-PLUG KITS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Flow Design, Inc.
 2. Miljoco Corporation.
 3. National Meter, Inc.
 4. Peterson Equipment Co., Inc.
 5. Sisco Manufacturing Company, Inc.
 6. Terrice, H. O. Co.
 7. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.
 8. Weiss Instruments, Inc.
 9. **<Insert manufacturer's name>**.
 10. or approved equal.
- B. Furnish **[one]** **<Insert number>** test-plug kit(s) containing **[one]** **[two]** thermometer(s), one pressure gauge and adapter, and carrying case. Thermometer sensing elements, pressure gauge, and adapter probes shall be of diameter to fit test plugs and of length to project into piping.
- C. Low-Range Thermometer: Small, bimetallic insertion type with **[1- to 2-inch- (25- to 51-mm-)]** **<Insert dimension>** diameter dial and tapered-end sensing element. Dial range shall be at least **[25 to 125 deg F (minus 4 to plus 52 deg C)]** **<Insert temperature range>**.
- D. High-Range Thermometer: Small, bimetallic insertion type with **[1- to 2-inch- (25- to 51-mm-)]** **<Insert dimension>** diameter dial and tapered-end sensing element. Dial range shall be at least **[0 to 220 deg F (minus 18 to plus 104 deg C)]** **<Insert temperature range>**.
- E. Pressure Gauge: Small, Bourdon-tube insertion type with **[2- to 3-inch- (51- to 76-mm-)]** **<Insert dimension>** diameter dial and probe. Dial range shall be at least **[0 to 200 psig (0 to 1380 kPa)]** **<Insert range>**.
- F. Carrying Case: Metal or plastic, with formed instrument padding.

2.20 SIGHT FLOW INDICATORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Archon Industries, Inc.
 2. Dwyer Instruments, Inc.
 3. Emerson Process Management; Brooks Instrument.
 4. Ernst Co., John C., Inc.
 5. Ernst Flow Industries.
 6. KOBOLD Instruments, Inc. - USA; KOBOLD Messring GmbH.
 7. OPW Engineered Systems; a Dover company.
 8. Penberthy; A Brand of Tyco Valves & Controls - Prophetstown.
 9. **<Insert manufacturer's name>**.
 10. or approved equal.
- B. Description: Piping inline-installation device for visual verification of flow.

- C. Construction: Bronze or stainless-steel body, with sight glass and [**ball, flapper, or paddle wheel**] <Insert device> indicator, and threaded or flanged ends.
- D. Minimum Pressure Rating: [**125 psig (860 kPa)**] [**150 psig (1034 kPa)**] <Insert value>.
- E. Minimum Temperature Rating: [**200 deg F (93 deg C)**] <Insert temperature>.
- F. End Connections for **NPS 2 (DN 50)** and Smaller: Threaded.
- G. End Connections for **NPS 2-1/2 (DN 65)** and Larger: Flanged.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install thermowells with socket extending [**a minimum of 2 inches (51 mm) into fluid**] [**one-third of pipe diameter**] [**to center of pipe**] and in vertical position in piping tees.
- B. Install thermowells of sizes required to match thermometer connectors. Include bushings if required to match sizes.
- C. Install thermowells with extension on insulated piping.
- D. Fill thermowells with heat-transfer medium.
- E. Install direct-mounted thermometers in thermowells and adjust vertical and tilted positions.
- F. Install remote-mounted thermometer bulbs in thermowells and install cases on panels; connect cases with tubing and support tubing to prevent kinks. Use minimum tubing length.
- G. Install direct-mounted pressure gages in piping tees with pressure gauge located on pipe at the most readable position.
- H. Install remote-mounted pressure gages on panel.
- I. Install valve and snubber in piping for each pressure gauge for fluids.
- J. Install test plugs in piping tees.
- K. Install thermometers in the following locations:
 - 1. Inlet and outlet of each water heater.
 - 2. Inlets and outlets of each domestic water heat exchanger.
 - 3. Inlet and outlet of each domestic hot-water storage tank.
 - 4. Inlet and outlet of each remote domestic water chiller.
 - 5. <Insert location>.

- L. Install pressure gages in the following locations:
1. Building water service entrance into building.
 2. Inlet and outlet of each pressure-reducing valve.
 3. Suction and discharge of each domestic water pump.
 4. **<Insert location>**.

3.2 CONNECTIONS

- A. Install meters and gages adjacent to machines and equipment to allow service and maintenance of meters, gages, machines, and equipment.

3.3 ADJUSTING

- A. Adjust faces of meters and gages to proper angle for best visibility.

3.4 THERMOMETER SCHEDULE

- A. Thermometers at inlet and outlet of each domestic water heater shall be[**one of**] the following:
1. **[Liquid-filled] [Sealed]**, bimetallic-actuated type.
 2. **[Direct] [Remote]**-mounted, **[metal] [plastic]**-case, vapor-actuated type.
 3. **[Compact] [Industrial]**-style, liquid-in-glass type.
 4. **[Direct] [Remote]**-mounted, light-activated type.
 5. Test plug with **[chlorosulfonated polyethylene synthetic] [EPDM]** self-sealing rubber inserts.
- B. Thermometers at inlets and outlets of each domestic water heat exchanger shall be[**one of**] the following:
1. **[Liquid-filled] [Sealed]**, bimetallic-actuated type.
 2. **[Direct] [Remote]**-mounted, **[metal] [plastic]**-case, vapor-actuated type.
 3. **[Compact] [Industrial]**-style, liquid-in-glass type.
 4. **[Direct] [Remote]**-mounted, light-activated type.
 5. Test plug with **[chlorosulfonated polyethylene synthetic] [EPDM]** self-sealing rubber inserts.
- C. Thermometers at inlet and outlet of each domestic hot-water storage tank shall be[**one of**] the following:
1. **[Liquid-filled] [Sealed]**, bimetallic-actuated type.
 2. **[Direct] [Remote]**-mounted, **[metal] [plastic]**-case, vapor-actuated type.
 3. **[Compact] [Industrial]**-style, liquid-in-glass type.
 4. **[Direct] [Remote]**-mounted, light-activated type.
 5. Test plug with **[chlorosulfonated polyethylene synthetic] [EPDM]** self-sealing rubber inserts.

- D. Thermometers at inlet and outlet of each remote domestic water chiller shall be **one of** the following:
1. **[Liquid-filled] [Sealed]**, bimetallic-actuated type.
 2. **[Direct] [Remote]**-mounted, **[metal] [plastic]**-case, vapor-actuated type.
 3. **[Compact] [Industrial]**-style, liquid-in-glass type.
 4. **[Direct] [Remote]**-mounted, light-activated type.
 5. Test plug with **[chlorosulfonated polyethylene synthetic] [EPDM]** self-sealing rubber inserts.
- E. Thermometer stems shall be of length to match thermowell insertion length.

3.5 THERMOMETER SCALE-RANGE SCHEDULE

- A. Scale Range for Domestic Cold-Water Piping: **[0 to 100 deg F (Minus 20 to plus 50 deg C)] [0 to 100 deg F and minus 20 to plus 50 deg C]**.
- B. Scale Range for Domestic Cold-Water Piping: **[0 to 150 deg F (Minus 20 to plus 70 deg C)] [0 to 150 deg F and minus 20 to plus 70 deg C]**.
- C. Scale Range for Domestic Cold-Water Piping: **[30 to 240 deg F (0 to plus 115 deg C)] [30 to 240 deg F and 0 to plus 115 deg C]**.
- D. Scale Range for Domestic Hot-Water Piping: **[0 to 250 deg F (0 to 150 deg C)] [0 to 250 deg F and 0 to 150 deg C]**.
- E. Scale Range for Domestic Hot-Water Piping: **[20 to 240 deg F (0 to 150 deg C)] [20 to 240 deg F and 0 to 150 deg C]**.
- F. Scale Range for Domestic Hot-Water Piping: **[30 to 240 deg F (0 to plus 115 deg C)] [30 to 240 deg F and 0 to plus 115 deg C]**.
- G. Scale Range for Domestic Cooled-Water Piping: **[0 to 100 deg F (Minus 20 to plus 50 deg C)] [0 to 100 deg F and minus 20 to plus 50 deg C]**.
- H. Scale Range for Domestic Cooled-Water Piping: **[0 to 150 deg F (Minus 20 to plus 70 deg C)] [0 to 150 deg F and minus 20 to plus 70 deg C]**.

3.6 PRESSURE-GAUGE SCHEDULE

- A. Pressure gages at discharge of each water service into building shall be **one of** the following:
1. **[Liquid-filled] [Sealed] [Open-front, pressure-relief] [Solid-front, pressure-relief] <Insert type>**, **[direct] [remote]**-mounted, metal case.
 2. **[Sealed] <Insert type>**, **[direct] [remote]**-mounted, plastic case.
 3. Test plug with **[chlorosulfonated polyethylene synthetic] [EPDM]** self-sealing rubber inserts.

- B. Pressure gages at inlet and outlet of each water pressure-reducing valve shall be[**one of**] the following:
1. **[Liquid-filled] [Sealed] [Open-front, pressure-relief] [Solid-front, pressure-relief] <Insert type>, [direct] [remote]-mounted, metal case.**
 2. **[Sealed] <Insert type>, [direct] [remote]-mounted, plastic case.**
 3. Test plug with **[chlorosulfonated polyethylene synthetic] [EPDM]** self-sealing rubber inserts.
- C. Pressure gages at suction and discharge of each domestic water pump shall be[**one of**] the following:
1. **[Liquid-filled] [Sealed] [Open-front, pressure-relief] [Solid-front, pressure-relief] <Insert type>, [direct] [remote]-mounted, metal case.**
 2. **[Sealed] <Insert type>, [direct] [remote]-mounted, plastic case.**
 3. Test plug with **[chlorosulfonated polyethylene synthetic] [EPDM]** self-sealing rubber inserts.

3.7 PRESSURE-GAUGE SCALE-RANGE SCHEDULE

- A. Scale Range for Water Service Piping: **[0 to 100 psi (0 to 600 kPa)] [0 to 100 psi and 0 to 600 kPa].**
- B. Scale Range for Water Service Piping: **[0 to 160 psi (0 to 1100 kPa)] [0 to 160 psi and 0 to 1100 kPa].**
- C. Scale Range for Water Service Piping: **[0 to 200 psi (0 to 1400 kPa)] [0 to 200 psi and 0 to 1400 kPa].**
- D. Scale Range for Domestic Water Piping: **[0 to 100 psi (0 to 600 kPa)] [0 to 100 psi and 0 to 600 kPa].**
- E. Scale Range for Domestic Water Piping: **[0 to 160 psi (0 to 1100 kPa)] [0 to 160 psi and 0 to 1100 kPa].**
- F. Scale Range for Domestic Water Piping: **[0 to 200 psi (0 to 1400 kPa)] [0 to 200 psi and 0 to 1400 kPa].**
- G. Scale Range for Domestic Water Piping: **[0 to 300 psi (0 to 2500 kPa)] [0 to 300 psi and 0 to 2500 kPa].**

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 220519

SECTION 220523 - GENERAL-DUTY VALVES FOR PLUMBING PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Bronze angle valves.
2. Bronze ball valves.
3. Iron ball valves.
4. Iron, single-flange butterfly valves.
5. Iron, grooved-end butterfly valves.
6. Bronze lift check valves.
7. Bronze swing check valves.
8. Iron swing check valves.
9. Iron swing check valves with closure control.
10. Iron, grooved-end swing check valves.
11. Iron, center-guided check valves.
12. Iron, plate-type check valves.
13. Bronze gate valves.
14. Iron gate valves.
15. Bronze globe valves.
16. Iron globe valves.
17. Lubricated plug valves.
18. Chainwheels.

- B. Related Sections:

1. Section 220553 "Identification for Plumbing Piping and Equipment" for valve tags and schedules.
2. Section 221113 "Facility Water Distribution Piping" for valves applicable only to this piping.
3. Section 221116 "Domestic Water Piping" for valves applicable only to this piping.
4. Section 221319 "Sanitary Waste Piping Specialties" for valves applicable only to this piping.
5. Section 221423 "Storm Drainage Piping Specialties" for valves applicable only to this piping.
6. Section 221513 "General-Service Compressed-Air Piping" for valves applicable only to this piping.

7. Section 226113 "Compressed-Air Piping for Laboratory and Healthcare Facilities" for valves applicable only to this piping.
 8. Section 226213 "Vacuum Piping for Laboratory and Healthcare Facilities" for valves applicable only to this piping.
 9. Section 226313 "Gas Piping for Laboratory and Healthcare Facilities" for valves applicable only to this piping.
 10. Section 334100 "Storm Utility Drainage Piping" for valves applicable only to this piping.
 11. Section 334600 "Subdrainage" for valves applicable only to this piping.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. CWP: Cold working pressure.
- B. EPDM: Ethylene propylene copolymer rubber.
- C. NBR: Acrylonitrile-butadiene, Buna-N, or nitrile rubber.
- D. NRS: Nonrising stem.
- E. OS&Y: Outside screw and yoke.
- F. RS: Rising stem.
- G. SWP: Steam working pressure.

1.4 REFERENCES

- A. Materials and workmanship shall conform to the latest issue of all industry standards, publications, or regulations referenced in this section and with the following references as applicable. Refer to Section 014200 "References" for listing of issuing organizations or agencies.
- B. Applicable Standards:
 1. American Society of Mechanical Engineers:
 - a. ASME - Boiler and Pressure Vessel Code.
 - b. ASME Sec. 9 - Welding and Brazing Qualifications.
 - c. ASME - Boiler and Pressure Vessel Code.
 - d. ASME B16.1 - Cast Iron Pipe Flanges and Flanged Fittings Class 25, 125, 250 and 800.
 - e. ASME B16.3 - Malleable Iron Threaded Fittings.
 - f. ASME B16.4 - Cast Iron Threaded Fittings Class 125 and 250.
 - g. ASME B16.22 - Wrought Copper and Bronze Solder-Joint Pressure Fittings.

- h. ASME B31.8 – Gas Transmission and Distribution Piping Systems.
 - i. ASME B31.9 - Building Service Piping.
2. American Society for Testing and Materials (ASTM):
- a. ASTM A 53 - Pipe, Steel, Black and Hot-Dipped Zinc Coated, Welded and Seamless.
 - b. ASTM A 74 - Cast Iron Soil Pipe and Fittings.
 - c. ASTM A 234 - Pipe Fittings of Wrought Carbon Steel and Alloy Steel for Moderate and Elevated Temperatures.
 - d. ASTM B 32 - Solder Metal.
 - e. ASTM B 88 - Seamless Copper Water Tube.
 - f. ASTM B 251 - Wrought Seamless Copper and Copper-Alloy Tube.
 - g. ASTM C 14 - Concrete Sewer, Storm Drain, and Culvert Pipe.
 - h. ASTM C 443 - Joints for Circular Concrete Sewer and Culvert Pipe, Using Rubber Gaskets.
 - i. ASTM C 564 - Rubber Gaskets for Cast Iron Soil Pipe and Fittings.
 - j. ASTM D 1785 - Poly (Vinyl Chloride) (PVC) Plastic Pipe, Schedules 40, 80, and 120.
 - k. ASTM D 2513 - Thermoplastic Gas Pressure Pipe, Tubing and Fittings.
 - l. ASTM D 2683 - Socket-Type Polyethylene Fittings for Outside Diameter-Controlled Polyethylene Pipe.
 - m. ASTM D 3033 - Type PSP Poly (Vinyl Chloride) (PVC) Sewer Pipe and Fittings.
 - n. ASTM D 3034 - Type PSM Poly (Vinyl Chloride) (PVC) Sewer Pipe and Fittings.
 - o. ASTM F 477 - Elastomeric Seals (Gaskets) for Joining Plastic Pipe.
3. American Water Works Association (AWWA):
- a. AWWA C105 - Polyethylene Encasement for Ductile Iron Piping for Water and Other Liquids.
 - b. AWWA C110 - Ductile - Iron and Gray - Iron Fittings 3 in. through 48 in., for Water and Other Liquids.
 - c. AWWA C111- Rubber-Gasket Joints for Ductile Iron and Gray-Iron Pressure Pipe and Fittings.
 - d. AWWA C151 - Ductile-Iron Pipe, Centrifugally Cast in Metal Molds or Sand-Lined Molds, for Water or Other Liquids.
 - e. AWWA C651 - Disinfecting Water Mains.
 - f. M6 - Water Meters - Selection, Installation, Testing, and Maintenance.
4. American Welding Society (AWS):
- a. AWS A5.8 - Brazing Filler Metal.
5. Cast-Iron Soil Pipe Institute (CISPI):
- a. CISPI 301 - Cast Iron Soil Pipe and Fittings for Hubless Cast Iron Sanitary Systems.

6. International Building Code (IBC) with the Denver Amendments.
7. International Fire Code (IFC) with the Denver Amendments.
8. National Certified Pipe Welding Bureau (NCPWB):
 - a. NCPWB - Procedure Specifications for Pipe Welding.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of valve indicated.

1. Include data substantiating that materials comply with requirements.
2. Provide manufacturers catalog information. Indicate valve data and ratings.

B. CLOSEOUT DOCUMENTS

C. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1. Record actual locations of valves.

D. Operation and maintenance data.

1. Maintenance data: Include installation instructions, spare parts lists, exploded assembly views.

E. EXTRA MATERIALS

1. Provide two (2) re-packing kits for each type and size valve.

1.6 QUALITY ASSURANCE

A. Source Limitations for Valves: Obtain each type of valve from single source from single manufacturer.

B. Valve Identification: Manufacturer's name and pressure rating marked on valve body.

C. ASME Compliance:

1. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
2. ASME B31.1 for power piping valves.
3. ASME B31.9 for building services piping valves.

D. NSF Compliance: NSF 61 for valve materials for potable-water service.

E. Perform Work in accordance with City and County of Denver plumbing code.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Prepare valves for shipping as follows:
1. Accept valves on site in shipping containers with labeling in place. Inspect for damage.
 2. Provide temporary protective coating on cast iron and steel valves.
 3. Provide temporary end caps and closures on piping and fittings. Maintain in place until installation.
 4. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the work, and isolating parts of completed system.
 5. Protect internal parts against rust and corrosion.
 6. Protect threads, flange faces, grooves, and weld ends.
 7. Set angle, gate, and globe valves closed to prevent rattling.
 8. Set ball and plug valves open to minimize exposure of functional surfaces.
 9. Set butterfly valves closed or slightly open.
 10. Block check valves in either closed or open position.
- B. Use the following precautions during storage:
1. Maintain valve end protection.
 2. Store valves indoors and maintain at higher than ambient dew point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.
- C. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR VALVES

- A. Refer to valve schedule articles for applications of valves.
- B. Valve Pressure and Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.
- C. Valve Sizes: Same as upstream piping unless otherwise indicated.
- D. Valve Actuator Types:
1. Gear Actuator: For quarter-turn valves **NPS 8 (DN 200)** and larger.

2. Handwheel: For valves other than quarter-turn types.
 3. Handlever: For quarter-turn valves **NPS 6 (DN 150)** and smaller[**except plug valves**].
 4. Wrench: For plug valves with square heads. Furnish Owner with 1 wrench for every **[5] [10] <Insert number>** plug valves, for each size square plug-valve head.
 5. Chainwheel: Device for attachment to valve handwheel, stem, or other actuator; of size and with chain for mounting height, as indicated in the "Valve Installation" Article.
- E. Valves in Insulated Piping: With **2-inch (50-mm)** stem extensions and the following features:
1. Gate Valves: With rising stem.
 2. Ball Valves: With extended operating handle of non-thermal-conductive material, and protective sleeve that allows operation of valve without breaking the vapor seal or disturbing insulation.
 3. Butterfly Valves: With extended neck.
- F. Valve-End Connections:
1. Flanged: With flanges according to ASME B16.1 for iron valves.
 2. Grooved: With grooves according to AWWA C606.
 3. Solder Joint: With sockets according to ASME B16.18.
 4. Threaded: With threads according to ASME B1.20.1.
- G. Valve Bypass and Drain Connections: MSS SP-45.

2.2 BRONZE ANGLE VALVES

- A. Class 125, Bronze Angle Valves with Bronze Disc:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Hammond Valve.
 - b. Milwaukee Valve Company.
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.
 2. Description:
 - a. Standard: MSS SP-80, Type 1.
 - b. CWP Rating: **200 psig (1380 kPa)**.
 - c. Body Material: ASTM B 62, bronze with integral seat and screw-in bonnet.
 - d. Ends: Threaded.
 - e. Stem and Disc: Bronze.
 - f. Packing: Asbestos free.
 - g. Handwheel: Malleable iron[, **bronze, or aluminum**].

B. Class 125, Bronze Angle Valves with Nonmetallic Disc:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Valve, Inc.
 - b. NIBCO INC.
 - c. <Insert manufacturer's name>.
 - d. or approved equal.
2. Description:
 - a. Standard: MSS SP-80, Type 2.
 - b. CWP Rating: 200 psig (1380 kPa).
 - c. Body Material: ASTM B 62, bronze with integral seat and screw-in bonnet.
 - d. Ends: Threaded.
 - e. Stem: Bronze.
 - f. Disc: PTFE or TFE.
 - g. Packing: Asbestos free.
 - h. Handwheel: Malleable iron[, **bronze, or aluminum**].

C. Class 150, Bronze Angle Valves with Bronze Disc:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Crane Co.; Crane Valve Group; Stockham Division.
 - b. Kitz Corporation.
 - c. <Insert manufacturer's name>.
 - d. or approved equal.
2. Description:
 - a. Standard: MSS SP-80, Type 1.
 - b. CWP Rating: 300 psig (2070 kPa).
 - c. Body Material: ASTM B 62, bronze with integral seat and union-ring bonnet.
 - d. Ends: Threaded.
 - e. Stem and Disc: Bronze.
 - f. Packing: Asbestos free.
 - g. Handwheel: Malleable iron[, **bronze, or aluminum**].

D. Class 150, Bronze Angle Valves with Nonmetallic Disc:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Crane Co.; Crane Valve Group; Crane Valves.
 - b. Crane Co.; Crane Valve Group; Jenkins Valves.
 - c. Crane Co.; Crane Valve Group; Stockham Division.
 - d. Hammond Valve.

- e. Milwaukee Valve Company.
- f. NIBCO INC.
- g. Powell Valves.
- h. **<Insert manufacturer's name>**.
- i. or approved equal.

2. Description:

- a. Standard: MSS SP-80, Type 2.
- b. CWP Rating: **300 psig (2070 kPa)**.
- c. Body Material: ASTM B 62, bronze with integral seat and union-ring bonnet.
- d. Ends: Threaded.
- e. Stem: Bronze.
- f. Disc: PTFE or TFE.
- g. Packing: Asbestos free.
- h. Handwheel: Malleable iron[, **bronze, or aluminum**].

2.3 BRASS BALL VALVES

A. One-Piece, Reduced-Port, Brass Ball Valves with Brass Trim:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Kitz Corporation.
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.

2. Description:

- a. Standard: MSS SP-110.
- b. CWP Rating: **400 psig (2760 kPa)**.
- c. Body Design: One piece.
- d. Body Material: Forged brass.
- e. Ends: Threaded.
- f. Seats: PTFE or TFE.
- g. Stem: Brass.
- h. Ball: Chrome-plated brass.
- i. Port: Reduced.

B. Two-Piece, Full-Port, Brass Ball Valves with Brass Trim:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Crane Co.; Crane Valve Group; Crane Valves.
 - b. Crane Co.; Crane Valve Group; Jenkins Valves.
 - c. DynaQuip Controls.
 - d. Flow-Tek, Inc.; a subsidiary of Bray International, Inc.

- e. Hammond Valve.
- f. Jamesbury; a subsidiary of Metso Automation.
- g. Jomar International, LTD.
- h. Kitz Corporation.
- i. Legend Valve.
- j. Marwin Valve; a division of Richards Industries.
- k. Milwaukee Valve Company.
- l. NIBCO INC.
- m. Red-White Valve Corporation.
- n. RuB Inc.
- o. **<Insert manufacturer's name>**.
- p. or approved equal.

2. Description:

- a. Standard: MSS SP-110.
- b. SWP Rating: **150 psig (1035 kPa)**.
- c. CWP Rating: **600 psig (4140 kPa)**.
- d. Body Design: Two piece.
- e. Body Material: Forged brass.
- f. Ends: Threaded.
- g. Seats: PTFE or TFE.
- h. Stem: Brass.
- i. Ball: Chrome-plated brass.
- j. Port: Full.

C. Two-Piece, Full-Port, Brass Ball Valves with Stainless-Steel Trim:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Crane Co.; Crane Valve Group; Crane Valves.
- b. Crane Co.; Crane Valve Group; Jenkins Valves.
- c. Flow-Tek, Inc.; a subsidiary of Bray International, Inc.
- d. Hammond Valve.
- e. Jamesbury; a subsidiary of Metso Automation.
- f. Kitz Corporation.
- g. Marwin Valve; a division of Richards Industries.
- h. Milwaukee Valve Company.
- i. RuB Inc.
- j. **<Insert manufacturer's name>**.
- k. or approved equal.

2. Description:

- a. Standard: MSS SP-110.
- b. SWP Rating: **150 psig (1035 kPa)**.
- c. CWP Rating: **600 psig (4140 kPa)**.
- d. Body Design: Two piece.
- e. Body Material: Forged brass.

- f. Ends: Threaded.
- g. Seats: PTFE or TFE.
- h. Stem: Stainless steel.
- i. Ball: Stainless steel, vented.
- j. Port: Full.

D. Two-Piece, Regular-Port, Brass Ball Valves with Brass Trim:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Hammond Valve.
- b. Jamesbury; a subsidiary of Metso Automation.
- c. Legend Valve.
- d. Marwin Valve; a division of Richards Industries.
- e. Milwaukee Valve Company.
- f. **<Insert manufacturer's name>**.
- g. or approved equal.

2. Description:

- a. Standard: MSS SP-110.
- b. SWP Rating: 150 psig (1035 kPa).
- c. CWP Rating: 600 psig (4140 kPa).
- d. Body Design: Two piece.
- e. Body Material: Forged brass.
- f. Ends: Threaded.
- g. Seats: PTFE or TFE.
- h. Stem: Brass.
- i. Ball: Chrome-plated brass.
- j. Port: Regular.

E. Two-Piece, Regular-Port, Brass Ball Valves with Stainless-Steel Trim:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Jamesbury; a subsidiary of Metso Automation.
- b. Marwin Valve; a division of Richards Industries.
- c. **<Insert manufacturer's name>**.
- d. or approved equal.

2. Description:

- a. Standard: MSS SP-110.
- b. SWP Rating: 150 psig (1035 kPa).
- c. CWP Rating: 600 psig (4140 kPa).
- d. Body Design: Two piece.
- e. Body Material: Brass or bronze.
- f. Ends: Threaded.

- g. Seats: PTFE or TFE.
- h. Stem: Stainless steel.
- i. Ball: Stainless steel, vented.
- j. Port: Regular.

F. Three-Piece, Full-Port, Brass Ball Valves with Brass Trim:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Jomar International, LTD.
- b. Kitz Corporation.
- c. Red-White Valve Corporation.
- d. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
- e. **<Insert manufacturer's name>**.
- f. or approved equal.

2. Description:

- a. Standard: MSS SP-110.
- b. SWP Rating: 150 psig (1035 kPa).
- c. CWP Rating: 600 psig (4140 kPa).
- d. Body Design: Three piece.
- e. Body Material: Forged brass.
- f. Ends: Threaded.
- g. Seats: PTFE or TFE.
- h. Stem: Brass.
- i. Ball: Chrome-plated brass.
- j. Port: Full.

G. Three-Piece, Full-Port, Brass Ball Valves with Stainless-Steel Trim:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Jomar International, LTD.
- b. Kitz Corporation.
- c. Marwin Valve; a division of Richards Industries.
- d. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
- e. **<Insert manufacturer's name>**.
- f. or approved equal.

2. Description:

- a. Standard: MSS SP-110.
- b. SWP Rating: 150 psig (1035 kPa).
- c. CWP Rating: 600 psig (4140 kPa).
- d. Body Design: Three piece.
- e. Body Material: Forged brass.
- f. Ends: Threaded.

- g. Seats: PTFE or TFE.
- h. Stem: Stainless steel.
- i. Ball: Stainless steel, vented.
- j. Port: Full.

2.4 BRONZE BALL VALVES

A. One-Piece, Reduced-Port, Bronze Ball Valves with Bronze Trim:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Valve, Inc.
 - b. Bray.
 - c. Conbraco Industries, Inc.; Apollo Valves.
 - d. Jenkins.
 - e. Milwaukee.
 - f. NIBCO INC.
 - g. Stockham.
 - h. **<Insert manufacturer's name>**.
 - i. or approved equal.
2. Description:
 - a. Standard: MSS SP-110.
 - b. CWP Rating: **400 psig (2760 kPa)**.
 - c. Body Design: One piece.
 - d. Body Material: Bronze.
 - e. Ends: Threaded.
 - f. Seats: PTFE or TFE.
 - g. Stem: Bronze.
 - h. Ball: Chrome-plated brass.
 - i. Port: Reduced.

B. One-Piece, Reduced-Port, Bronze Ball Valves with Stainless-Steel Trim:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Valve, Inc.
 - b. Bray.
 - c. Conbraco Industries, Inc.; Apollo Valves.
 - d. Jenkins.
 - e. Milwaukee.
 - f. NIBCO INC.
 - g. Stockham.
 - h. **<Insert manufacturer's name>**.
 - i. or approved equal.

2. Description:

- a. Standard: MSS SP-110.
- b. CWP Rating: 600 psig (4140 kPa).
- c. Body Design: One piece.
- d. Body Material: Bronze.
- e. Ends: Threaded.
- f. Seats: PTFE or TFE.
- g. Stem: Stainless steel.
- h. Ball: Stainless steel, vented.
- i. Port: Reduced.

C. Two-Piece, Full-Port, Bronze Ball Valves with Bronze Trim:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. American Valve, Inc.
- b. Bray.
- c. Conbraco Industries, Inc.; Apollo Valves.
- d. Crane Co.; Crane Valve Group; Crane Valves.
- e. Hammond Valve.
- f. Jenkins.
- g. Lance Valves; a division of Advanced Thermal Systems, Inc.
- h. Legend Valve.
- i. Milwaukee Valve Company.
- j. NIBCO INC.
- k. Red-White Valve Corporation.
- l. Stockham.
- m. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
- n. <Insert manufacturer's name>.
- o. or approved equal.

2. Description:

- a. Standard: MSS SP-110.
- b. SWP Rating: 150 psig (1035 kPa).
- c. CWP Rating: 600 psig (4140 kPa).
- d. Body Design: Two piece.
- e. Body Material: Bronze.
- f. Ends: Threaded.
- g. Seats: PTFE or TFE.
- h. Stem: Bronze.
- i. Ball: Chrome-plated brass.
- j. Port: Full.

D. Two-Piece, Full-Port, Bronze Ball Valves with Stainless-Steel Trim:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. American Valve, Inc.
- b. Bray.
- c. Conbraco Industries, Inc.; Apollo Valves.
- d. Crane Co.; Crane Valve Group; Crane Valves.
- e. Hammond Valve.
- f. Jenkins.
- g. Lance Valves; a division of Advanced Thermal Systems, Inc.
- h. Milwaukee Valve Company.
- i. NIBCO INC.
- j. Stockham.
- k. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
- l. **<Insert manufacturer's name>**.
- m. or approved equal.

2. Description:

- a. Standard: MSS SP-110.
- b. SWP Rating: 150 psig (1035 kPa).
- c. CWP Rating: 600 psig (4140 kPa).
- d. Body Design: Two piece.
- e. Body Material: Bronze.
- f. Ends: Threaded.
- g. Seats: PTFE or TFE.
- h. Stem: Stainless steel.
- i. Ball: Stainless steel, vented.
- j. Port: Full.

E. Two-Piece, Regular-Port, Bronze Ball Valves with Bronze Trim:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. American Valve, Inc.
- b. Bray.
- c. Conbraco Industries, Inc.; Apollo Valves.
- d. Crane Co.; Crane Valve Group; Jenkins Valves.
- e. Crane Co.; Crane Valve Group; Stockham Division.
- f. DynaQuip Controls.
- g. Hammond Valve.
- h. Jenkins.
- i. Lance Valves; a division of Advanced Thermal Systems, Inc.
- j. Milwaukee Valve Company.
- k. NIBCO INC.
- l. Stockham.
- m. **<Insert manufacturer's name>**.
- n. or approved equal.

2. Description:

- a. Standard: MSS SP-110.
- b. SWP Rating: 150 psig (1035 kPa).
- c. CWP Rating: 600 psig (4140 kPa).
- d. Body Design: Two piece.
- e. Body Material: Bronze.
- f. Ends: Threaded.
- g. Seats: PTFE or TFE.
- h. Stem: Bronze.
- i. Ball: Chrome-plated brass.
- j. Port: Regular.

F. Two-Piece, Regular-Port, Bronze Ball Valves with Stainless-Steel Trim:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. American Valve, Inc.
- b. Bray.
- c. Conbraco Industries, Inc.; Apollo Valves.
- d. Crane Co.; Crane Valve Group; Jenkins Valves.
- e. Hammond Valve.f
- f. Jenkins.
- g. Milwaukee Valve Company.
- h. NIBCO Inc.
- i. Stockham.
- j. <Insert manufacturer's name>.
- k. or approved equal.

2. Description:

- a. Standard: MSS SP-110.
- b. SWP Rating: 150 psig (1035 kPa).
- c. CWP Rating: 600 psig (4140 kPa).
- d. Body Design: Two piece.
- e. Body Material: Bronze.
- f. Ends: Threaded.
- g. Seats: PTFE or TFE.
- h. Stem: Stainless steel.
- i. Ball: Stainless steel, vented.
- j. Port: Regular.

G. Three-Piece, Full-Port, Bronze Ball Valves with Bronze Trim:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. American Valve, Inc.
- b. Bray.
- c. Conbraco Industries, Inc.; Apollo Valves.
- d. DynaQuip Controls.

- e. Hammond Valve.
- f. Jenkins.
- g. Milwaukee Valve Company.
- h. NIBCO INC.
- i. Red-White Valve Corporation.
- j. Stockham.
- k. **<Insert manufacturer's name>**.
- l. or approved equal.

2. Description:

- a. Standard: MSS SP-110.
- b. SWP Rating: 150 psig (1035 kPa).
- c. CWP Rating: 600 psig (4140 kPa).
- d. Body Design: Three piece.
- e. Body Material: Bronze.
- f. Ends: Threaded.
- g. Seats: PTFE or TFE.
- h. Stem: Bronze.
- i. Ball: Chrome-plated brass.
- j. Port: Full.

H. Three-Piece, Full-Port, Bronze Ball Valves with Stainless-Steel Trim:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. American Valve, Inc.
- b. Bray.
- c. Conbraco Industries, Inc.; Apollo Valves.
- d. Hammond Valve.
- e. Jenkins.
- f. Milwaukee Valve Company.
- g. NIBCO INC.
- h. Stockham.
- i. **<Insert manufacturer's name>**.
- j. or approved equal.

2. Description:

- a. Standard: MSS SP-110.
- b. SWP Rating: 150 psig (1035 kPa).
- c. CWP Rating: 600 psig (4140 kPa).
- d. Body Design: Three piece.
- e. Body Material: Bronze.
- f. Ends: Threaded.
- g. Seats: PTFE or TFE.
- h. Stem: Stainless steel.
- i. Ball: Stainless steel, vented.
- j. Port: Full.

2.5 IRON BALL VALVES

A. Class 125, Iron Ball Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Valve, Inc.
 - b. Bray.
 - c. Conbraco Industries, Inc.; Apollo Valves.
 - d. Jenkins.
 - e. Kitz Corporation.
 - f. Milwaukee.
 - g. NIBCO Inc.
 - h. Stockham.
 - i. Sure Flow Equipment Inc.
 - j. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
 - k. <Insert manufacturer's name>.
 - l. or approved equal.
2. Description:
 - a. Standard: MSS SP-72.
 - b. CWP Rating: 200 psig (1380 kPa).
 - c. Body Design: Split body.
 - d. Body Material: ASTM A 126, gray iron.
 - e. Ends: Flanged.
 - f. Seats: PTFE or TFE.
 - g. Stem: Stainless steel.
 - h. Ball: Stainless steel.
 - i. Port: Full.

2.6 IRON, SINGLE-FLANGE BUTTERFLY VALVES

A. 200 CWP, Iron, Single-Flange Butterfly Valves with EPDM Seat and Aluminum-Bronze Disc:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ABZ Valve and Controls; a division of ABZ Manufacturing, Inc.
 - b. Bray.
 - c. Conbraco Industries, Inc.; Apollo Valves.
 - d. Cooper Cameron Valves; a division of Cooper Cameron Corporation.
 - e. Crane Co.; Crane Valve Group; Jenkins Valves.
 - f. Crane Co.; Crane Valve Group; Stockham Division.
 - g. DeZurik Water Controls.
 - h. Flo Fab Inc.
 - i. Hammond Valve.

- j. Keystone/Tyco.
- k. Kitz Corporation.
- l. Legend Valve.
- m. Milwaukee Valve Company.
- n. NIBCO INC.
- o. Norriseal; a Dover Corporation company.
- p. Red-White Valve Corporation.
- q. Spence Strainers International; a division of CIRCOR International, Inc.
- r. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
- s. **<Insert manufacturer's name>**.
- t. or approved equal.

2. Description:

- a. Standard: MSS SP-67, Type I.
- b. CWP Rating: **200 psig (1380 kPa)**.
- c. Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
- d. Body Material: ASTM A 126, cast iron or ASTM A 536, ductile iron.
- e. Seat: EPDM.
- f. Stem: One- or two-piece stainless steel.
- g. Disc: Aluminum bronze.

B. 200 CWP, Iron, Single-Flange Butterfly Valves with NBR Seat and Aluminum-Bronze Disc:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. ABZ Valve and Controls; a division of ABZ Manufacturing, Inc.
- b. Bray.
- c. Conbraco Industries, Inc.; Apollo Valves.
- d. Cooper Cameron Valves; a division of Cooper Cameron Corporation.
- e. Crane Co.; Crane Valve Group; Jenkins Valves.
- f. Crane Co.; Crane Valve Group; Stockham Division.
- g. DeZurik Water Controls.
- h. Flo Fab Inc.
- i. Hammond Valve.
- j. Keystone/Tyco.
- k. Kitz Corporation.
- l. Legend Valve.
- m. Milwaukee Valve Company.
- n. NIBCO INC.
- o. Norriseal; a Dover Corporation company.
- p. Red-White Valve Corporation.
- q. Spence Strainers International; a division of CIRCOR International, Inc.
- r. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
- s. **<Insert manufacturer's name>**.
- t. or approved equal.

2. Description:

- a. Standard: MSS SP-67, Type I.
- b. CWP Rating: 200 psig (1380 kPa).
- c. Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
- d. Body Material: ASTM A 126, cast iron or ASTM A 536, ductile iron.
- e. Seat: NBR.
- f. Stem: One- or two-piece stainless steel.
- g. Disc: Aluminum bronze.

C. 200 CWP, Iron, Single-Flange Butterfly Valves with EPDM Seat and Ductile-Iron Disc:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. ABZ Valve and Controls; a division of ABZ Manufacturing, Inc.
- b. American Valve, Inc.
- c. Bray.
- d. Conbraco Industries, Inc.; Apollo Valves.
- e. Cooper Cameron Valves; a division of Cooper Cameron Corporation.
- f. Crane Co.; Crane Valve Group; Center Line.
- g. Crane Co.; Crane Valve Group; Stockham Division.
- h. DeZurik Water Controls.
- i. Flo Fab Inc.
- j. Hammond Valve.
- k. Keystone/Tyco.
- l. Kitz Corporation.
- m. Legend Valve.
- n. Milwaukee Valve Company.
- o. Mueller Steam Specialty; a division of SPX Corporation.
- p. NIBCO INC.
- q. Norriseal; a Dover Corporation company.
- r. Spence Strainers International; a division of CIRCOR International, Inc.
- s. Sure Flow Equipment Inc.
- t. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
- u. <Insert manufacturer's name>.
- v. or approved equal.

2. Description:

- a. Standard: MSS SP-67, Type I.
- b. CWP Rating: 200 psig (1380 kPa).
- c. Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
- d. Body Material: ASTM A 126, cast iron or ASTM A 536, ductile iron.
- e. Seat: EPDM.
- f. Stem: One- or two-piece stainless steel.
- g. Disc: Nickel-plated[or -coated] ductile iron.

D. 200 CWP, Iron, Single-Flange Butterfly Valves with NBR Seat and Ductile-Iron Disc:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. ABZ Valve and Controls; a division of ABZ Manufacturing, Inc.
- b. American Valve, Inc.
- c. Bray.
- d. Conbraco Industries, Inc.; Apollo Valves.
- e. Cooper Cameron Valves; a division of Cooper Cameron Corporation.
- f. Crane Co.; Crane Valve Group; Center Line.
- g. Crane Co.; Crane Valve Group; Stockham Division.
- h. DeZurik Water Controls.
- i. Flo Fab Inc.
- j. Hammond Valve.
- k. Keystone/Tyco.
- l. Kitz Corporation.
- m. Legend Valve.
- n. Milwaukee Valve Company.
- o. Mueller Steam Specialty; a division of SPX Corporation.
- p. NIBCO INC.
- q. Norriseal; a Dover Corporation company.
- r. Spence Strainers International; a division of CIRCOR International, Inc.
- s. Sure Flow Equipment Inc.
- t. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
- u. **<Insert manufacturer's name>**.
- v. or approved equal.

2. Description:

- a. Standard: MSS SP-67, Type I.
- b. CWP Rating: 200 psig (1380 kPa).
- c. Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
- d. Body Material: ASTM A 126, cast iron or ASTM A 536, ductile iron.
- e. Seat: NBR.
- f. Stem: One- or two-piece stainless steel.
- g. Disc: Nickel-plated[**or -coated**] ductile iron.

E. 200 CWP, Iron, Single-Flange Butterfly Valves with EPDM Seat and Stainless-Steel Disc:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. ABZ Valve and Controls; a division of ABZ Manufacturing, Inc.
- b. American Valve, Inc.
- c. Bray.
- d. Conbraco Industries, Inc.; Apollo Valves.
- e. Cooper Cameron Valves; a division of Cooper Cameron Corporation.

- f. Crane Co.; Crane Valve Group; Jenkins Valves.
- g. Crane Co.; Crane Valve Group; Stockham Division.
- h. DeZurik Water Controls.
- i. Flo Fab Inc.
- j. Hammond Valve.
- k. Keystone/Tyco.
- l. Kitz Corporation.
- m. Legend Valve.
- n. Milwaukee Valve Company.
- o. Mueller Steam Specialty; a division of SPX Corporation.
- p. NIBCO INC.
- q. Norriseal; a Dover Corporation company.
- r. Red-White Valve Corporation.
- s. Spence Strainers International; a division of CIRCOR International, Inc.
- t. Sure Flow Equipment Inc.
- u. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
- v. **<Insert manufacturer's name>**.
- w. or approved equal.

2. Description:

- a. Standard: MSS SP-67, Type I.
- b. CWP Rating: 200 psig (1380 kPa).
- c. Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
- d. Body Material: ASTM A 126, cast iron or ASTM A 536, ductile iron.
- e. Seat: EPDM.
- f. Stem: One- or two-piece stainless steel.
- g. Disc: Stainless steel.

F. 200 CWP, Iron, Single-Flange Butterfly Valves with NBR Seat and Stainless-Steel Disc:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. ABZ Valves and Controls; A div. of ABZ Manufacturing, Inc.
- b. American Valve, Inc.
- c. Bray.
- d. Conbraco Industries, Inc.; Apollo Valves.
- e. Cooper Cameron Valves; A div. of Cooper Cameron Corp.
- f. Crane Co.; Crane Valve Group; Jenkins Valves.
- g. Crane Co.; Crane Valve Group; Stockham Div.
- h. DeZurik Water Controls.
- i. Flo Fab Inc.
- j. Hammond Valve.
- k. Keystone/Tyco.
- l. Kitz Corporation.
- m. Legend Valve.
- n. Milwaukee Valve Company.

- o. Mueller Steam Specialty; a division of SPX Corporation.
- p. NIBCO INC.
- q. Norriseal; a Dover Corporation company.
- r. Red-White Valve Corporation.
- s. Spence Strainers International; a division of CIRCOR International, Inc.
- t. Sure Flow Equipment Inc.
- u. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
- v. **<Insert manufacturer's name>**.
- w. or approved equal.

2. Description:

- a. Standard: MSS SP-67, Type I.
- b. CWP Rating: **200 psig (1380 kPa)**.
- c. Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
- d. Body Material: ASTM A 126, cast iron or ASTM A 536, ductile iron.
- e. Seat: NBR.
- f. Stem: One- or two-piece stainless steel.
- g. Disc: Stainless steel.

2.7 IRON, GROOVED-END BUTTERFLY VALVES

A. 175 CWP, Iron, Grooved-End Butterfly Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Bray.
- b. Kennedy Valve; a division of McWane, Inc.
- c. Keystone/Tyco.
- d. NIBCO, Inc.
- e. Norris.
- f. Shurjoint Piping Products.
- g. Tyco Fire Products LP; Grinnell Mechanical Products.
- h. Victaulic Company.
- i. **<Insert manufacturer's name>**.
- j. or approved equal.

2. Description:

- a. Standard: MSS SP-67, Type I.
- b. CWP Rating: **175 psig (1200 kPa)**.
- c. Body Material: Coated, ductile iron.
- d. Stem: Two-piece stainless steel.
- e. Disc: Coated, ductile iron.
- f. Seal: EPDM.

B. 300 CWP, Iron, Grooved-End Butterfly Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil International, Inc.
 - b. Bray.
 - c. Kennedy Valve; a division of McWane, Inc.
 - d. Keystone/Tyco.
 - e. Mueller Steam Specialty; a division of SPX Corporation.
 - f. NIBCO INC.
 - g. Norris.
 - h. Shurjoint Piping Products.
 - i. Tyco Fire Products LP; Grinnell Mechanical Products.
 - j. Victaulic Company.
 - k. **<Insert manufacturer's name>**.
 - l. or approved equal.

2. Description:
 - a. Standard: MSS SP-67, Type I.
 - b. **NPS 8 (DN 200)** and Smaller CWP Rating: **300 psig (2070 kPa)**.
 - c. **NPS 10 (DN 250)** and Larger CWP Rating: **200 psig (1380 kPa)**.
 - d. Body Material: Coated, ductile iron.
 - e. Stem: Two-piece stainless steel.
 - f. Disc: Coated, ductile iron.
 - g. Seal: EPDM.

2.8 BRONZE LIFT CHECK VALVES

A. Class 125, Lift Check Valves with Bronze Disc:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Crane Co.; Crane Valve Group; Crane Valves.
 - b. Crane Co.; Crane Valve Group; Jenkins Valves.
 - c. Crane Co.; Crane Valve Group; Stockham Division.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.

2. Description:
 - a. Standard: MSS SP-80, Type 1.
 - b. CWP Rating: **200 psig (1380 kPa)**.
 - c. Body Design: Vertical flow.
 - d. Body Material: ASTM B 61 or ASTM B 62, bronze.
 - e. Ends: Threaded.
 - f. Disc: Bronze.

B. Class 125, Lift Check Valves with Nonmetallic Disc:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Flo Fab Inc.
 - b. Hammond Valve.
 - c. Kitz Corporation.
 - d. Milwaukee Valve Company.
 - e. Mueller Steam Specialty; a division of SPX Corporation.
 - f. NIBCO INC.
 - g. Red-White Valve Corporation.
 - h. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
 - i. **<Insert manufacturer's name>**.
 - j. or approved equal.

2. Description:
 - a. Standard: MSS SP-80, Type 2.
 - b. CWP Rating: **200 psig (1380 kPa)**.
 - c. Body Design: Vertical flow.
 - d. Body Material: ASTM B 61 or ASTM B 62, bronze.
 - e. Ends: Threaded.
 - f. Disc: NBR, PTFE, or TFE.

2.9 BRONZE SWING CHECK VALVES

A. Class 125, Bronze Swing Check Valves with Bronze Disc:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Valve, Inc.
 - b. Crane Co.; Crane Valve Group; Crane Valves.
 - c. Crane Co.; Crane Valve Group; Jenkins Valves.
 - d. Crane Co.; Crane Valve Group; Stockham Division.
 - e. Hammond Valve.
 - f. Kitz Corporation.
 - g. Milwaukee Valve Company.
 - h. NIBCO INC.
 - i. Powell Valves.
 - j. Red-White Valve Corporation.
 - k. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
 - l. Zy-Tech Global Industries, Inc.
 - m. **<Insert manufacturer's name>**.
 - n. or approved equal.

2. Description:
 - a. Standard: MSS SP-80, Type 3.
 - b. CWP Rating: **200 psig (1380 kPa)**.

- c. Body Design: Horizontal flow.
- d. Body Material: ASTM B 62, bronze.
- e. Ends: Threaded.
- f. Disc: Bronze.

B. Class 125, Bronze Swing Check Valves with Nonmetallic Disc:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Crane Co.; Crane Valve Group; Crane Valves.
- b. Crane Co.; Crane Valve Group; Jenkins Valves.
- c. Crane Co.; Crane Valve Group; Stockham Division.
- d. Hammond Valve.
- e. Kitz Corporation.
- f. Milwaukee Valve Company.
- g. NIBCO INC.
- h. Red-White Valve Corporation.
- i. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
- j. **<Insert manufacturer's name>**.
- k. or approved equal.

2. Description:

- a. Standard: MSS SP-80, Type 4.
- b. CWP Rating: 200 psig (1380 kPa).
- c. Body Design: Horizontal flow.
- d. Body Material: ASTM B 62, bronze.
- e. Ends: Threaded.
- f. Disc: PTFE or TFE.

C. Class 150, Bronze Swing Check Valves with Bronze Disc:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. American Valve, Inc.
- b. Crane Co.; Crane Valve Group; Crane Valves.
- c. Crane Co.; Crane Valve Group; Jenkins Valves.
- d. Crane Co.; Crane Valve Group; Stockham Division.
- e. Kitz Corporation.
- f. Milwaukee Valve Company.
- g. NIBCO INC.
- h. Red-White Valve Corporation.
- i. Zy-Tech Global Industries, Inc.
- j. **<Insert manufacturer's name>**.
- k. or approved equal.

2. Description:

- a. Standard: MSS SP-80, Type 3.
- b. CWP Rating: 300 psig (2070 kPa).
- c. Body Design: Horizontal flow.
- d. Body Material: ASTM B 62, bronze.
- e. Ends: Threaded.
- f. Disc: Bronze.

D. Class 150, Bronze Swing Check Valves with Nonmetallic Disc:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Crane Co.; Crane Valve Group; Crane Valves.
- b. Crane Co.; Crane Valve Group; Jenkins Valves.
- c. Hammond Valve.
- d. Milwaukee Valve Company.
- e. NIBCO INC.
- f. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
- g. <Insert manufacturer's name>.
- h. or approved equal.

2. Description:

- a. Standard: MSS SP-80, Type 4.
- b. CWP Rating: 300 psig (2070 kPa).
- c. Body Design: Horizontal flow.
- d. Body Material: ASTM B 62, bronze.
- e. Ends: Threaded.
- f. Disc: PTFE or TFE.

2.10 IRON SWING CHECK VALVES

A. Class 125, Iron Swing Check Valves with Metal Seats:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Crane Co.; Crane Valve Group; Crane Valves.
- b. Crane Co.; Crane Valve Group; Jenkins Valves.
- c. Crane Co.; Crane Valve Group; Stockham Division.
- d. Hammond Valve.
- e. Kitz Corporation.
- f. Legend Valve.
- g. Milwaukee Valve Company.
- h. NIBCO INC.
- i. Powell Valves.
- j. Red-White Valve Corporation.
- k. Sure Flow Equipment Inc.
- l. Watts Regulator Co.; a division of Watts Water Technologies, Inc.

- m. Zy-Tech Global Industries, Inc.
- n. **<Insert manufacturer's name>**.
- o. or approved equal.

2. Description:

- a. Standard: MSS SP-71, Type I.
- b. CWP Rating: 200 psig (1380 kPa).
- c. Body Design: Clear or full waterway.
- d. Body Material: ASTM A 126, gray iron with bolted bonnet.
- e. Ends: Flanged.
- f. Trim: Bronze.
- g. Gasket: Asbestos free.

B. Class 125, Iron Swing Check Valves with Nonmetallic-to-Metal Seats:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Crane Co.; Crane Valve Group; Crane Valves.
- b. Crane Co.; Crane Valve Group; Stockham Division.
- c. **<Insert manufacturer's name>**.
- d. or approved equal.

2. Description:

- a. Standard: MSS SP-71, Type I.
- b. CWP Rating: 200 psig (1380 kPa).
- c. Body Design: Clear or full waterway.
- d. Body Material: ASTM A 126, gray iron with bolted bonnet.
- e. Ends: Flanged.
- f. Trim: Composition.
- g. Seat Ring: Bronze.
- h. Disc Holder: Bronze.
- i. Disc: PTFE or TFE.
- j. Gasket: Asbestos free.

C. Class 250, Iron Swing Check Valves with Metal Seats:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Crane Co.; Crane Valve Group; Crane Valves.
- b. Crane Co.; Crane Valve Group; Jenkins Valves.
- c. Crane Co.; Crane Valve Group; Stockham Division.
- d. Hammond Valve.
- e. Milwaukee Valve Company.
- f. NIBCO INC.
- g. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
- h. **<Insert manufacturer's name>**.

i. or approved equal.

2. Description:

- a. Standard: MSS SP-71, Type I.
- b. CWP Rating: 500 psig (3450 kPa).
- c. Body Design: Clear or full waterway.
- d. Body Material: ASTM A 126, gray iron with bolted bonnet.
- e. Ends: Flanged.
- f. Trim: Bronze.
- g. Gasket: Asbestos free.

2.11 IRON SWING CHECK VALVES WITH CLOSURE CONTROL

A. Class 125, Iron Swing Check Valves with Lever- and Spring-Closure Control:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. NIBCO INC.
- b. <Insert manufacturer's name>.
- c. or approved equal.

2. Description:

- a. Standard: MSS SP-71, Type I.
- b. CWP Rating: 200 psig (1380 kPa).
- c. Body Design: Clear or full waterway.
- d. Body Material: ASTM A 126, gray iron with bolted bonnet.
- e. Ends: Flanged.
- f. Trim: Bronze.
- g. Gasket: Asbestos free.
- h. Closure Control: Factory-installed, exterior lever and spring.

B. Class 125, Iron Swing Check Valves with Lever- and Weight-Closure Control:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Crane Co.; Crane Valve Group; Crane Valves.Crane Co.; Crane Valve Group; Jenkins Valves.
- b. Crane Co.; Crane Valve Group; Stockham Division.
- c. Hammond Valve.
- d. Milwaukee Valve Company.
- e. NIBCO INC.
- f. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
- g. <Insert manufacturer's name>.
- h. or approved equal.

2. Description:

- a. Standard: MSS SP-71, Type I.
- b. CWP Rating: 200 psig (1380 kPa).
- c. Body Design: Clear or full waterway.
- d. Body Material: ASTM A 126, gray iron with bolted bonnet.
- e. Ends: Flanged.
- f. Trim: Bronze.
- g. Gasket: Asbestos free.
- h. Closure Control: Factory-installed, exterior lever and weight.

2.12 IRON, GROOVED-END SWING CHECK VALVES

A. 300 CWP, Iron, Grooved-End Swing Check Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil International, Inc.
 - b. Shurjoint Piping Products.
 - c. Tyco Fire Products LP; Grinnell Mechanical Products.
 - d. Victaulic Company.
 - e. <Insert manufacturer's name>.
 - f. or approved equal.
2. Description:
 - a. CWP Rating: 300 psig (2070 kPa).
 - b. Body Material: ASTM A 536, ductile iron.
 - c. Seal: EPDM.
 - d. Disc: Spring-operated, ductile iron or stainless steel.

2.13 IRON, CENTER-GUIDED CHECK VALVES

A. Class 125, Iron, Compact-Wafer, Center-Guided Check Valves with Metal Seat:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil International, Inc.
 - b. APCO Willamette Valve and Primer Corporation.
 - c. Crispin Valve.
 - d. DFT Inc.
 - e. Flo Fab Inc.
 - f. GA Industries, Inc.
 - g. Hammond Valve.
 - h. Metraflex, Inc.
 - i. Milwaukee Valve Company.
 - j. Mueller Steam Specialty; a division of SPX Corporation.
 - k. NIBCO INC.

- I. Spence Strainers International; a division of CIRCOR International, Inc.
 - m. Sure Flow Equipment Inc.
 - n. Val-Matic Valve & Manufacturing Corp.
 - o. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
 - p. **<Insert manufacturer's name>**.
 - q. or approved equal.
 2. Description:
 - a. Standard: MSS SP-125.
 - b. CWP Rating: **200 psig (1380 kPa)**.
 - c. Body Material: ASTM A 126, gray iron.
 - d. Style: Compact wafer.
 - e. Seat: Bronze.
- B. Class 125, Iron, Globe, Center-Guided Check Valves with Metal Seat:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. APCO Willamette Valve and Primer Corporation.
 - b. Crispin Valve.
 - c. DFT Inc.
 - d. Flomatic Corporation.
 - e. Hammond Valve.
 - f. Metraflex, Inc.
 - g. Milwaukee Valve Company.
 - h. Mueller Steam Specialty; a division of SPX Corporation.
 - i. NIBCO INC.
 - j. Spence Strainers International; a division of CIRCOR International, Inc.
 - k. Sure Flow Equipment Inc.
 - l. Val-Matic Valve & Manufacturing Corp.
 - m. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
 - n. **<Insert manufacturer's name>**.
 - o. or approved equal.
 2. Description:
 - a. Standard: MSS SP-125.
 - b. CWP Rating: **200 psig (1380 kPa)**.
 - c. Body Material: ASTM A 126, gray iron.
 - d. Style: Globe, spring loaded.
 - e. Ends: Flanged.
 - f. Seat: Bronze.
- C. Class 150, Iron, Compact-Wafer, Center-Guided Check Valves with Metal Seat:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. APCO Willamette Valve and Primer Corporation.
- b. Crispin Valve.
- c. Val-Matic Valve & Manufacturing Corp.
- d. **<Insert manufacturer's name>**.
- e. or approved equal.

2. Description:

- a. Standard: MSS SP-125.
- b. CWP Rating: 300 psig (2070 kPa).
- c. Body Material: ASTM A 395/A 395M or ASTM A 536, ductile iron.
- d. Style: Compact wafer.
- e. Seat: Bronze.

D. Class 150, Iron, Globe, Center-Guided Check Valves with Metal Seat:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. APCO Willamette Valve and Primer Corporation.
- b. Crispin Valve.
- c. Val-Matic Valve & Manufacturing Corp.
- d. **<Insert manufacturer's name>**.
- e. or approved equal.

2. Description:

- a. Standard: MSS SP-125.
- b. CWP Rating: 300 psig (2070 kPa).
- c. Body Material: ASTM A 395/A 395M or ASTM A 536, ductile iron.
- d. Style: Globe, spring loaded.
- e. Ends: Flanged.
- f. Seat: Bronze.

E. Class 250, Iron, Compact-Wafer, Center-Guided Check Valves with Metal Seat:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. APCO Willamette Valve and Primer Corporation.
- b. Crispin Valve.
- c. DFT Inc.
- d. Flo Fab Inc.
- e. Hammond Valve.
- f. Metraflex, Inc.
- g. Milwaukee Valve Company.
- h. NIBCO INC.
- i. Sure Flow Equipment Inc.
- j. Val-Matic Valve & Manufacturing Corp.
- k. **<Insert manufacturer's name>**.

- I. or approved equal.
2. Description:
 - a. Standard: MSS SP-125.
 - b. CWP Rating: 400 psig (2760 kPa).
 - c. Body Material: ASTM A 126, gray iron.
 - d. Style: Compact wafer, spring loaded.
 - e. Seat: Bronze.
- F. Class 250, Iron, Globe, Center-Guided Check Valves with Metal Seat:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. APCO Willamette Valve and Primer Corporation.
 - b. Crispin Valve.
 - c. DFT Inc.
 - d. Flomatic Corporation.
 - e. Hammond Valve.
 - f. Metraflex, Inc.
 - g. Milwaukee Valve Company.
 - h. Mueller Steam Specialty; a division of SPX Corporation.
 - i. NIBCO INC.
 - j. Val-Matic Valve & Manufacturing Corp.
 - k. <Insert manufacturer's name>.
 - l. or approved equal.
 2. Description:
 - a. Standard: MSS SP-125.
 - b. CWP Rating: 400 psig (2760 kPa).
