 - 1. Contractor to maintain drawings of all applicable details at the Project site at all times for reference by workers.

3.5 SUBSTRATE PROTECTION APPLICATION

- A. Primer/Sealer: Apply over **[gypsum sheathing] <Insert substrate>** substrates to protect substrates from degradation and where required by EIFS manufacturer for improving adhesion of insulation to substrate.
- B. Waterproof Adhesive/Base Coat: Apply over **[sloped surfaces] [window sills] [parapets] [where indicated on Drawings] <Insert location>** to protect substrates from degradation.
- C. Flexible-Membrane Flashing: Install over weather-resistive barrier, applied and lapped to shed water; seal at openings, penetrations, terminations, and where indicated by EIFS manufacturer's written instructions to protect wall assembly from degradation. Prime substrates, if required, and install flashing to comply with EIFS manufacturer's written instructions and details.

3.6 TRIM INSTALLATION

- A. Trim: Apply trim accessories at perimeter of EIFS, at expansion joints, [**at window sills,**] and elsewhere as indicated, according to EIFS manufacturer's written instructions. Coordinate with installation of insulation.
1. Drip Screed/Track: Use at bottom edges of EIFS unless otherwise indicated.
 2. Window Sill Flashing: Use at windows unless otherwise indicated.
 3. Expansion Joint: Use where indicated on Drawings.
 4. Casing Bead: Use at other locations.
 5. Parapet Cap Flashing: Use where indicated on Drawings.
 6. **<Insert trim and requirements>**.

3.7 INSULATION INSTALLATION

- A. Board Insulation: [**Adhesively**] [**Mechanically**] [**Adhesively and mechanically**] attach insulation to substrate in compliance with ASTM C 1397, EIFS manufacturer's written instructions, and the following:
1. Apply adhesive to insulation by notched-trowel method in a manner that results in coating the entire surface of sheathing with adhesive once insulation is adhered to sheathing unless EIFS manufacturer's written instructions specify using primer/sealer with ribbon-and-dab method. Apply adhesive to a thickness of not less than **1/4 inch** (6.4 mm) for factory mixed and not less than **3/8 inch** (9.6 mm) for field mixed, measured from surface of insulation before placement.
 2. Press and slide insulation into place. Apply pressure over the entire surface of insulation to accomplish uniform contact, high initial grab, and overall level surface.
 3. Allow adhered insulation to remain undisturbed for period recommended by EIFS manufacturer, but not less than 24 hours, before [**installing mechanical fasteners,**] beginning rasping and sanding insulation, or applying base coat and reinforcing mesh.
 4. Mechanically attach insulation to substrate by method complying with EIFS manufacturer's written instructions. Install top surface of fastener heads flush with plane of insulation. Install fasteners into or through substrates with the following minimum penetration:
 - a. Steel Framing: **5/16 inch** (8 mm).
 - b. Wood Framing: **1 inch** (25 mm).
 - c. Concrete and Masonry: **1 inch** (25 mm).
 5. Apply insulation over dry substrates in courses with long edges of boards oriented horizontally.
 6. Begin first course of insulation from a level base line and work upward.
 7. Begin first course of insulation from screed/track and work upward. Work from perimeter casing beads toward interior of panels if possible.
 8. Stagger vertical joints of insulation boards in successive courses to produce running bond pattern. Locate joints so no piece of insulation is less than **12 inches** (300 mm) wide or **6 inches** (150 mm) high. Offset joints not less than **6**

inches (150 mm) from corners of window and door openings[**and not less than 4 inches** (100 mm) **from aesthetic reveals**].

- a. Adhesive Attachment: Offset joints of insulation not less than **6 inches** (150 mm) from horizontal and **4 inches** (100 mm) from vertical joints in sheathing.
 - b. Mechanical Attachment: Offset joints of insulation from horizontal joints in sheathing.
9. Interlock ends at internal and external corners.
 10. Abut insulation tightly at joints within and between each course to produce flush, continuously even surfaces without gaps or raised edges between boards. If gaps greater than **1/16 inch** (1.6 mm) occur, fill with insulation cut to fit gaps exactly; insert insulation without using adhesive or other material.
 11. Cut insulation to fit openings, corners, and projections precisely and to produce edges and shapes complying with details indicated.
 12. Rasp or sand flush entire surface of insulation to remove irregularities projecting more than [**1/32 inch** (0.8 mm)] [**1/16 inch** (1.6 mm)] from surface of insulation and to remove yellowed areas due to sun exposure; do not create depressions deeper than **1/16 inch** (1.6 mm).
 13. Cut aesthetic reveals in outside face of insulation with high-speed router and bit configured to produce grooves, rabbets, and other features that comply with profiles and locations indicated. Do not reduce insulation thickness at aesthetic reveals to less than **3/4 inch** (19 mm).
 14. Install foam shapes and attach to [**sheathing**] [**structure**].
 15. Interrupt insulation for expansion joints where indicated.
 16. Form joints for sealant application by leaving gaps between adjoining insulation edges and between insulation edges and dissimilar adjoining surfaces. Make gaps wide enough to produce joint widths indicated after encapsulating joint substrates with base coat and reinforcing mesh.
 17. Form joints for sealant application with back-to-back casing beads for joints within EIFS and with perimeter casing beads at dissimilar adjoining surfaces. Make gaps between casing beads and between perimeter casing beads and adjoining surfaces of width indicated.
 18. After installing insulation and before applying reinforcing mesh, fully wrap board edges with strip reinforcing mesh. Cover edges of board and extend encapsulating mesh not less than **2-1/2 inches** (64 mm) over front and back face unless otherwise indicated on Drawings.
 19. Treat exposed edges of insulation as follows:
 - a. Except for edges forming substrates of sealant joints, encapsulate with base coat, reinforcing mesh, and finish coat.
 - b. Encapsulate edges forming substrates of sealant joints within EIFS or between EIFS and other work with base coat and reinforcing mesh.
 - c. At edges trimmed by accessories, extend base coat, reinforcing mesh, and finish coat over face leg of accessories.
 20. Coordinate installation of flashing and insulation to produce wall assembly that does not allow water to penetrate behind flashing and EIFS protective-coating lamina.

- B. Expansion Joints: Install at locations indicated, where required by EIFS manufacturer, and as follows:
1. At expansion joints in substrates behind EIFS.
 2. Where EIFS adjoin dissimilar substrates, materials, and construction, including other EIFS.
 3. At floor lines in multilevel wood-framed construction.
 4. Where wall height or building shape changes.
 5. Where EIFS manufacturer requires joints in long continuous elevations.
 6. Where panels abut one another.
 7. **<Insert location>**.

3.8 BASE-COAT INSTALLATION

- A. Base Coat: Apply to exposed surfaces of insulation[**and foam shapes**] in minimum thickness recommended in writing by EIFS manufacturer, but not less than **[1/16-inch (1.6-mm)] <Insert dimension>** dry-coat thickness.
- B. Reinforcing Mesh: Embed type indicated below in wet base coat to produce wrinkle-free installation with mesh continuous at corners and overlapped not less than **2-1/2 inches (64 mm)** or otherwise treated at joints to comply with ASTM C 1397 and EIFS manufacturer's written instructions. Do not lap reinforcing mesh within **8 inches (204 mm)** of corners. Completely embed mesh, applying additional base-coat material if necessary, so reinforcing-mesh color and pattern are not visible.
1. Standard-impact reinforcing mesh [**unless otherwise indicated**] **<Insert location>**.
 2. Intermediate-impact reinforcing mesh [**where indicated**] **<Insert location>**.
 3. High-impact reinforcing mesh [**where indicated**] **<Insert location>**.
 4. Heavy-duty reinforcing mesh [**where indicated**] **<Insert location>**.
- C. Double-Layer Reinforcing Mesh Application: Where indicated, apply second base coat and second layer of [**standard**] [**intermediate**]-impact reinforcing mesh, overlapped not less than **2-1/2 inches (64 mm)** or otherwise treated at joints to comply with ASTM C 1397 and EIFS manufacturer's written instructions in same manner as first application. Do not apply until first base coat has cured.
- D. Additional Reinforcing Mesh: Apply strip reinforcing mesh around openings extending **4 inches (100 mm)** beyond perimeter. Apply additional **9-by-12-inch (230-by-300-mm)** strip reinforcing mesh diagonally at corners of openings (re-entrant corners). Apply **8-inch- (200-mm-)** wide strip reinforcing mesh at both inside and outside corners unless base layer of mesh is lapped not less than **4 inches (100 mm)** on each side of corners.
1. At aesthetic reveals, apply strip reinforcing mesh not less than **8 inches (200 mm)** wide.
 2. Embed strip reinforcing mesh in base coat before applying first layer of reinforcing mesh.
- E. Foam Shapes: Fully embed reinforcing mesh in base coat.

- F. Double Base-Coat Application: Where indicated, apply second base coat in same manner and thickness as first application except without reinforcing mesh. Do not apply until first base coat has cured.

3.9 FINISH-COAT INSTALLATION

- A. Primer: Apply over dry base coat according to EIFS manufacturer's written instructions.
- B. Finish Coat: Apply over dry **[primed]** base coat, maintaining a wet edge at all times for uniform appearance, in thickness required by EIFS manufacturer to produce a uniform finish of color and texture matching approved sample and free of cold joints, shadow lines, and texture variations.
1. Texture: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range]**.
 2. Embed aggregate in finish coat according to EIFS manufacturer's written instructions to produce a uniform applied-aggregate finish of color and texture matching approved sample.
- C. Sealer Coat: Apply over dry finish coat, in number of coats and thickness required by EIFS manufacturer.

3.10 INSTALLATION OF PREFABRICATED PANELS

- A. General: Install panels according to Shop Drawings. Install **[by welding metal framing to structural-steel frame] [by welding to steel-weld plates anchored in concrete]** <Insert requirements> to comply with requirements in Section 054000 "Cold-Formed Metal Framing" unless otherwise indicated.
1. Lift panels only as indicated on Shop Drawings.
 2. Do not warp or stress panels by forcing alignment.
 3. Adjust connections to align panels and maintain correct and uniform joint widths.
 4. Install bracing as panels are erected. Weld securely to panel framing and to structure.
- B. Erection Tolerances: Install panels level, plumb, and true to line with no variation in plane or alignment exceeding **1/16 inch** (1.6 mm) and no variation in position exceeding **1/8 inch** (3.2 mm).
1. Maintain clearance between panels required for installing joint sealants.

3.11 INSTALLATION OF JOINT SEALANTS

- A. Prepare joints and apply sealants, of type and at locations indicated, to comply with applicable requirements in Section 079200 "Joint Sealants" and in ASTM C 1481.

1. Apply joint sealants after base coat has cured but before applying finish coat.
2. Clean surfaces to receive sealants to comply with indicated requirements and EIFS manufacturer's written instructions.
3. Apply primer recommended in writing by sealant manufacturer for surfaces to be sealed.
4. Install sealant backing to control depth and configuration of sealant joint and to prevent sealant from adhering to back of joint.
5. Apply masking tape to protect areas adjacent to sealant joints. Remove tape immediately after tooling joints, without disturbing joint seal.
6. Recess sealant sufficiently from surface of EIFS so an additional sealant application, including cylindrical sealant backing, can be installed without protruding beyond EIFS surface.

3.12 FIELD QUALITY CONTROL

- A. Special Inspections: **Owner will engage** a qualified special inspector to perform the following special inspections:
1. According to **[ICC-ES AC24] [ICC-ES AC219]**.
 2. **<Insert special inspections>**.
- B. Testing Agency: **Owner will engage** a qualified testing agency to perform tests and inspections.
- C. EIFS Tests and Inspections: For the following:
1. According to **[ICC-ES AC24] [ICC-ES AC219]**.
 2. **<Insert testing requirements of authorities having jurisdiction>**.
- D. Prefabricated Panels: Test and inspect field welds.
- E. Remove and replace EIFS where test results indicate that EIFS do not comply with specified requirements.
- F. Prepare test and inspection reports.

3.13 CLEANING AND PROTECTION

- A. Remove temporary covering and protection of other work. Promptly remove coating materials from window and doorframes and other surfaces outside areas indicated to receive EIFS coatings.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 072413

SECTION 072419 - WATER-DRAINAGE EXTERIOR INSULATION AND FINISH SYSTEM (EIFS)

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes water-drainage exterior insulation and finish system (EIFS) applied over **[water-resistive coating over sheathing] [weather-resistant sheathing paper over sheathing] [weather-resistant sheathing paper over exterior cement board] [exterior cement board over weather-resistant sheathing paper] <Insert substrate>**.
- B. Related Sections:
 - 1. Section 061600 "Sheathing" for sheathing[**and weather-resistant sheathing paper**].
 - 2. Section 079200 "Joint Sealants" for sealing joints in EIFS with elastomeric joint sealants.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 SYSTEM DESCRIPTION

- A. Class PB EIFS: A non-load-bearing, exterior wall cladding system that consists of an insulation board attached adhesively, mechanically, or both to the substrate; an integrally reinforced base coat; and a textured protective finish coat.
- B. Water-Drainage EIFS: EIFS with a means that allows water entering into an EIFS assembly to drain to the exterior.

1.4 PERFORMANCE REQUIREMENTS

- A. EIFS Performance: Comply with the following:

1. Bond Integrity: Free from bond failure within EIFS components or between system and supporting wall construction, resulting from exposure to fire, wind loads, weather, or other in-service conditions.
 2. Weathertightness: Resistant to water penetration from exterior into water-drainage EIFS and assemblies behind it or through them into interior of building that results in deterioration of thermal-insulating effectiveness or other degradation of EIFS and assemblies behind it, including substrates, supporting wall construction, and interior finish, and including a means that allows water entering into an EIFS assembly to drain to the exterior.
- B. Class PB EIFS: Provide EIFS having physical properties and structural performance that comply with the following:
1. Abrasion Resistance: Sample consisting of **1-inch-** (25.4-mm-) thick EIFS mounted on **1/2-inch-** (12.7-mm-) thick gypsum board; cured for a minimum of 28 days; and showing no cracking, checking, or loss of film integrity after exposure to **528 quarts** (500 L) of sand when tested per ASTM D 968, Method A.
 2. Absorption-Freeze Resistance: No visible deleterious effects and negligible weight loss after 60 cycles per EIMA 101.01.
 3. Accelerated Weathering: Five samples per ICC-ES AC235 showing no cracking, checking, crazing, erosion, rusting, blistering, peeling, delamination, or other characteristics that might affect performance as a wall cladding after testing for 2000 hours when viewed under 5 times magnification per **[ASTM G 153 or ASTM G 154] [ASTM G 153 or ASTM G 155] <Insert test method>**.
 4. Freeze-Thaw: No surface changes, cracking, checking, crazing, erosion, rusting, blistering, peeling, or delamination, or indications of delamination between components when viewed under 5 times magnification after **[60 cycles per EIMA 101.01] [10 cycles per ICC-ES AC235]**.
 5. Mildew Resistance of Finish Coat: Sample applied to **2-by-2-inch** (50.8-by-50.8-mm) clean glass substrate, cured for 28 days, and showing no growth when tested per ASTM D 3273 and evaluated according to ASTM D 3274.
 6. Salt-Spray Resistance: No deleterious effects when tested according to ICC-ES AC235.
 7. Tensile Adhesion: No failure in the EIFS, adhesive, base coat, or finish coat when tested per **[EIMA 101.03] [ICC-ES AC235]**.
 8. Water Penetration: Sample consisting of **1-inch-** (25.4-mm-) thick EIFS mounted on **1/2-inch-** (12.7-mm-) thick gypsum board, cured for 28 days, and showing no water penetration into the plane of the base coat to expanded polystyrene board interface of the test specimen after 15 minutes at **6.24 lbf/sq. ft.** (299 Pa) of air pressure difference or 20 percent of positive design wind pressure, whichever is greater, across the specimen during a test period when tested per EIMA 101.02.
 9. Water Resistance: Three samples, each consisting of **1-inch-** (25.4-mm-) thick EIFS mounted on **1/2-inch-** (12.7-mm-) thick gypsum board; cured for 28 days; and showing no cracking, checking, crazing, erosion, rusting, blistering, peeling, or delamination after testing for 14 days per ASTM D 2247.
 10. Impact Resistance: Sample consisting of **1-inch-** (25.4-mm-) thick EIFS when constructed, conditioned, and tested per EIMA 101.86; and meeting or exceeding the following:

- a. Standard Impact Resistance: **25 to 49 inch-lb** (2.8 to 5.6 J).
 - b. Medium Impact Resistance: **50 to 89 inch-lb** (5.7 to 10.1 J).
 - c. High Impact Resistance: **90 to 150 inch-lb** (10.2 to 17 J).
 - d. Ultra-High Impact Resistance: More than **150 inch-lb** (17 J).
11. Drainage: According to **[ICC-ES AC24] [ICC-ES AC235]**.
 12. Structural Performance Testing: EIFS assembly and components shall comply with ICC-ES AC235 when tested per ASTM E 330.
 13. **<Insert additional testing to suit products>**.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type and component of EIFS indicated.
 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 1. Product Data for Credit IEQ 4.1: For adhesives and sealants used inside the weatherproofing system, documentation including printed statement of VOC content.
 2. Laboratory Test Reports for Credit IEQ 4: For adhesives and sealants used inside the weatherproofing system documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: For EIFS. Include plans, elevations, sections, details of components, details of penetration and termination, flashing details, joint locations and configurations, fastening and anchorage details including mechanical fasteners, and connections and attachments to other work.
- D. Samples for Initial Selection: For each type of finish-coat color and texture indicated.
 1. Include similar Samples of joint sealants[**and exposed accessories**] involving color selection.
- E. Samples for Verification: **24-inch-** (600-mm-) square panels for each type of finish-coat color and texture indicated, prepared using same tools and techniques intended for actual work including **[custom trim, each profile,] [an aesthetic reveal,]** a typical control joint filled with sealant of color selected.
 1. Include sealants[**and exposed accessory**] Samples to verify color selected.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer and testing agency.

- B. **Manufacturer Certificates:** Signed by manufacturers certifying that EIFS[**and joint sealants**] comply with requirements.
 - C. **Material or Product Certificates:** For[**cementitious materials and aggregates and for**] each insulation and joint sealant, from manufacturer.
 - D. **Product Test Reports:** Based on evaluation of comprehensive tests performed by a qualified testing agency, for each [**water-/weather-resistive barrier,**]insulation, reinforcing mesh,[**joint sealant,**] and coating.
 - E. **Compatibility and Adhesion Test Reports:** For joint sealants from sealant manufacturer indicating the following:
 - 1. Materials forming joint substrates and joint-sealant backings have been tested for compatibility and adhesion with joint sealants.
 - 2. Interpretation of test results and written recommendations for primers and substrate preparation needed for adhesion.
 - F. **Field quality-control reports[and special inspection reports].**
 - G. **Evaluation Reports:** For [**exterior cement-board sheathing**] [**fasteners**] [**water-resistive coating**] [**adhesive membrane flashing**] and EIFS (including insulation), from <**Insert applicable model code organization**>.
- 1.7 CLOSEOUT SUBMITTALS
- A. **Maintenance Data:** For EIFS to include in maintenance manuals.
- 1.8 CLOSEOUT SUBMITTALS
- A. **As-Built Plans:** Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
- 1.9 QUALITY ASSURANCE
- A. **Installer Qualifications:** [**An installer who is certified in writing by EIFS manufacturer as qualified to install manufacturer's system using trained workers**] <**Insert requirements**>.
 - 1. A firm that has specialized in installation of types of EIFS required for project for not less than five (5) years and which is acceptable to manufacturer(s) of primary materials.
 - B. **Source Limitations:** Obtain EIFS from single source from single EIFS manufacturer and from sources approved by EIFS manufacturer as compatible with system components.

- C. Fire-Test-Response Characteristics: Provide EIFS and system components with the following fire-test-response characteristics as determined by testing identical EIFS and system components per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify products with appropriate markings of applicable testing agency.
1. Fire-Resistance Characteristics: Provide materials and construction tested for fire resistance per ASTM E 119.
 2. Full-Scale Multistory Fire Test: Tested mockup, representative of completed multistory wall assembly of which EIFS is a part, complies with UBC Standard 26-4 for test method and required fire-test-response characteristics of exterior non-load-bearing wall panel assemblies containing foam-plastic insulation.
 3. Full-Scale Diversified Fire Test: Tested mockup, representative of completed multistory wall assembly of which EIFS is a part, showing no significant contribution to vertical or horizontal flame spread per ASTM E 108 modified for testing vertical walls.
 4. Intermediate-Scale Multistory Fire Test: Tested mockup, representative of completed multistory wall assembly of which EIFS is a part, complies with **[NFPA 285] [UBC Standard 26-9]** for test method and required fire-test-response characteristics of exterior non-load-bearing wall panel assemblies containing foam-plastic insulation.
 5. Radiant Heat Exposure: No ignition of EIFS when tested according to NFPA 268.
 6. Potential Heat: Acceptable level when tested according to NFPA 259.
 7. Surface-Burning Characteristics: Provide insulation board, adhesives, base coats, and finish coats with flame-spread index of 25 or less and smoke-developed index of 450 or less, per **[ASTM E 84] [UBC Standard 8-1] <Insert test method>**.
- D. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution and set quality standards for fabrication and installation.
1. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- E. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]<Insert location>**.
- 1.10 DELIVERY, STORAGE, AND HANDLING
- A. Deliver materials in original, unopened packages with manufacturers' labels intact and clearly identifying products.
 - B. Store materials inside and under cover; keep them dry and protected from weather, direct sunlight, surface contamination, aging, corrosion, damaging temperatures, construction traffic, and other causes.
 1. Stack insulation board flat and off the ground.

2. Protect plastic insulation against ignition at all times. Do not deliver plastic insulating materials to Project site before installation time.
3. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

1.11 PROJECT CONDITIONS

- A. Weather Limitations: Maintain ambient temperatures above **40 deg F (4.4 deg C)** for a minimum of 24 hours before, during, and after adhesives or coatings are applied. Do not apply EIFS adhesives or coatings during rainfall. Proceed with installation only when existing and forecasted weather conditions and ambient outdoor air, humidity, and substrate temperatures permit EIFS to be applied, dried, and cured according to manufacturers' written instructions and warranty requirements.

1.12 COORDINATION

- A. Coordinate installation of EIFS with related Work specified in other Sections to ensure that wall assemblies, including sheathing, weather-resistant sheathing paper, flashing, trim, joint sealants, windows, and doors, are protected against damage from the effects of weather, age, corrosion, moisture, and other causes. Do not allow water to penetrate behind flashing and drainage plane that is behind water-drainage EIFS.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Acrocrete, Inc.
 2. Corev America, Inc.
 3. Dryvit Systems, Inc.
 4. El Rey Stucco Company, Inc.; a brand of ParexLahabra, Inc.
 5. Finestone; Degussa Wall Systems, Inc.
 6. Master Wall, Inc.
 7. Omega Products International, Inc.
 8. Parex, Inc.; a brand of ParexLahabra, Inc.
 9. Pleko LLC.
 10. Senergy; Degussa Wall Systems, Inc.

11. SonoWall; Degussa Wall Systems, Inc.
12. Sto Corp.
13. Stuc-O-Flex International, Inc.
14. TEC; an H. B. Fuller company.
15. Total Wall Inc.
16. **<Insert manufacturer's name>**.
17. or approved equal.

2.2 MATERIALS

- A. Compatibility: Provide water-resistive coating, adhesive, fasteners, board insulation, reinforcing meshes, base- and finish-coat systems, sealants, and accessories that are compatible with one another and with substrates and approved for use by EIFS manufacturer for Project.
- B. Exterior Cement Board: Not less than **[5/16-inch- (8-mm-)] [7/16-inch- (11-mm-)]** **<Insert dimension>** thick, fiber cement board complying with ASTM C 1186, Type A, for exterior applications.
 1. Fasteners: Wafer-head or flat-head steel drill screws complying with ASTM C 954, with an organic-polymer coating or other corrosion-protective coating having a salt-spray resistance of more than 500 hours per ASTM B 117.
 - a. Size and Length: **[As recommended by sheathing manufacturer for type and thickness of sheathing board to be attached] <Insert size and length>**.
- C. Water-Resistive Coatings: EIFS manufacturer's standard formulation and accessories for use as water/weather-resistive barriers, compatible with substrate, and complying with physical and performance criteria of **[ICC-ES AC209] [ICC-ES AC212]**.
 1. Sheathing Joint **[Tape] [Compound and Tape]**: Type recommended by EIFS manufacturer for sealing joints between and penetrations through sheathing.
 2. VOC Content of Coatings Used as Insulation Adhesive: 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 3. Low-Emitting Coatings Used as Insulation Adhesive: Adhesives shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- D. Primer/Sealer: EIFS manufacturer's standard substrate conditioner **[with VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24),] [that complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers,"]** designed to seal substrates from moisture penetration and to improve the bond between substrate of type indicated and adhesive used for application of insulation.

- E. Flexible-Membrane Flashing: Cold-applied, fully self-adhering, self-healing, rubberized-asphalt and polyethylene-film composite sheet or tape and primer; EIFS manufacturer's standard or product recommended in writing by EIFS manufacturer.
- F. Drainage Mat: [**Three-dimensional, nonwoven, entangled filament, nylon or plastic**] [**Woven or fused, self-furring, PVC mesh lath**] <Insert type> mat designed to drain incidental moisture by gravity; EIFS manufacturer's standard or product recommended in writing by EIFS manufacturer[**with manufacturer's standard corrosion-resistant mechanical fasteners suitable for intended substrate**].
- G. Spacers: [**Closed-cell polyethylene**] [**Woven or fused, self-furring, PVC mesh lath**] <Insert type> furring strips; EIFS manufacturer's standard or product recommended in writing by EIFS manufacturer[**with manufacturer's standard corrosion-resistant mechanical fasteners suitable for intended substrate**].
- H. Insulation Adhesive: EIFS manufacturer's standard formulation designed for indicated use; compatible with substrate;[**with VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24);**] [**that complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers";**] and complying with[**one of**] the following:
1. Job-mixed formulation of Portland cement complying with ASTM C 150, Type I, and polymer-based adhesive specified for base coat.
 2. Factory-blended dry formulation of Portland cement, dry polymer admixture, and fillers specified for base coat.
 3. Factory-mixed noncementitious formulation designed for adhesive attachment of insulation to substrates of type indicated, as recommended by EIFS manufacturer.
- I. Molded, Rigid Cellular Polystyrene Board Insulation: Comply with ASTM C 578, Type I; EIFS manufacturer's requirements; and EIMA's "EIMA Guideline Specification for Expanded Polystyrene (EPS) Insulation Board" for most stringent requirements for material performance and qualities of insulation, including dimensions and permissible variations, and the following:
1. Aging: Before cutting and shipping, age insulation in block form by air drying for not less than six weeks or by another method approved by EIMA that produces equivalent results.
 2. Flame-Spread and Smoke-Developed Indexes: 25 and 450 or less, respectively, per ASTM E 84.
 3. Dimensions: Provide insulation boards not more than **24 by 48 inches** (610 by 1219 mm) and in thickness indicated but not more than **4 inches** (102 mm) thick or less than thickness allowed by ASTM C 1397.
 4. Channeled Board Insulation: EIFS manufacturer's standard factory-fabricated profile with linear, vertical drainage channels, slots, or waves on the back side of board.

5. Board Insulation Closure Blocks: EIFS manufacturer's standard density, size, and configuration.
 6. Foam Shapes: Provide with profiles and dimensions indicated on Drawings.
- J. Reinforcing Mesh: Balanced, alkali-resistant, open-weave, glass-fiber mesh treated for compatibility with other EIFS materials, made from continuous multiend strands with retained mesh tensile strength of not less than **120 lbf/in.** (21 dN/cm) per **[ASTM E 2098] [EIMA 105.01]**; complying with ASTM D 578 and the following:
1. Standard-Impact Reinforcing Mesh: Not less than **[4.0 oz./sq. yd. (136 g/sq. m)] <Insert weight>**.
 2. Intermediate-Impact Reinforcing Mesh: Not less than **[10 oz./sq. yd. (339 g/sq. m)] [12.0 oz./sq. yd. (407 g/sq. m)] <Insert weight>**.
 3. High-Impact Reinforcing Mesh: Not less than **[15 oz./sq. yd. (509 g/sq. m)] <Insert weight>**.
 4. Heavy-Duty Reinforcing Mesh: Not less than **[20 oz./sq. yd. (678 g/sq. m)] <Insert weight>**.
 5. Strip Reinforcing Mesh: Not less than **[3.75 oz./sq. yd. (127 g/sq. m)] <Insert weight>**.
 6. Detail Reinforcing Mesh: Not less than **[4.0 oz./sq. yd. (136 g/sq. m)] <Insert weight>**.
 7. Corner Reinforcing Mesh: Not less than **[7.2 oz./sq. yd. (244 g/sq. m)] <Insert weight>**.
- K. Base-Coat Materials: EIFS manufacturer's standard mixture complying with **[one of]** the following requirements:
1. Job-mixed formulation of Portland cement complying with ASTM C 150, Type I, white or natural color; and manufacturer's standard polymer-emulsion adhesive designed for use with Portland cement.
 2. Job-combined formulation of manufacturer's standard polymer-emulsion adhesive and manufacturer's standard dry mix containing Portland cement.
 3. Factory-blended dry formulation of Portland cement, dry polymer admixture, and inert fillers to which only water is added at Project site.
 4. Factory-mixed noncementitious formulation of polymer-emulsion adhesive and inert fillers that is ready to use without adding other materials.
- L. Waterproof Adhesive/Base-Coat Materials: EIFS manufacturer's standard waterproof formulation **[with VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24);] [that complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers"]**; and complying with **[one of]** the following:
1. Job-mixed formulation of Portland cement complying with ASTM C 150, Type I, white or natural color; and manufacturer's standard polymer-emulsion adhesive designed for use with Portland cement.

2. Job-combined formulation of manufacturer's standard polymer-emulsion adhesive and manufacturer's standard dry mix containing Portland cement.
- M. Primer: EIFS manufacturer's standard factory-mixed, elastomeric-polymer primer for preparing base-coat surface for application of finish coat.
- N. Finish-Coat Materials: EIFS manufacturer's **[standard acrylic-based coating]** **[standard acrylic-based coating with enhanced mildew resistance]** **[siliconized acrylic-based coating]** **<Insert coating>** complying with the following:
1. Factory-mixed formulation of polymer-emulsion binder, colorfast mineral pigments, sound stone particles, and fillers.
 2. Factory-mixed formulation of polymer-emulsion binder, colorfast mineral pigments, and fillers used with stone particles for embedding in finish coat to produce an applied-aggregate finish.
 - a. Aggregate: Marble chips of size and color **[as indicated by manufacturer's designations]** **[to match DEN Project Manager's samples]** **[as selected by DEN Project Manager from manufacturer's full range]**.
 3. Sealer: Manufacturer's waterproof, clear acrylic-based sealer for protecting finish coat.
 4. Colors: **[As indicated by manufacturer's designations]** **[Match DEN Project Manager's samples]** **[As selected by DEN Project Manager from manufacturer's full range]**.
- O. Water: Potable.
- P. Mechanical Fasteners: EIFS manufacturer's standard corrosion-resistant fasteners consisting of thermal cap, standard washer and shaft attachments, and fastener indicated below; selected for properties of pullout, tensile, and shear strength required to resist design loads of application indicated; capable of pulling fastener head below surface of insulation board; and of the following description:
1. For attachment to steel studs from **0.033 to 0.112 inch** (0.84 to 2.84 mm) in thickness, provide steel drill screws complying with ASTM C 954.
 2. For attachment to light-gage steel framing members not less than **0.0179 inch** (0.45 mm) in thickness, provide steel drill screws complying with ASTM C 1002.
 3. For attachment to wood framing members and plywood sheathing, provide steel drill screws complying with ASTM C 1002, Type W.
 4. For attachment to masonry and concrete substrates, provide sheathing dowel in form of a plastic wing-tipped fastener with thermal cap, sized to fit insulation thickness indicated and to penetrate substrate to depth required to secure anchorage.
 5. For attachment, provide manufacturer's standard fasteners suitable for substrate.
 6. **<Insert fastener requirements>**.
- Q. Trim Accessories: Type as designated or required to suit conditions indicated and to comply with EIFS manufacturer's written instructions; manufactured from UV-stabilized

PVC; and complying with ASTM D 1784, manufacturer's standard Cell Class for use intended, and ASTM C 1063.

1. Casing Bead: Prefabricated, one-piece type for attachment behind insulation, of depth required to suit thickness of coating and insulation, with face leg perforated for bonding to coating and back leg.
2. Drip Screed/Track: Prefabricated, one-piece type for attachment behind insulation with face leg extended to form a drip, of depth required to suit thickness of coating and insulation, with face leg perforated for bonding to coating and back leg.
3. Weep Screed/Track: Prefabricated, one-piece type for attachment behind insulation with perforated face leg[**extended to form a drip**] and weep holes in track bottom, of depth required to suit thickness of coating and insulation, with face leg perforated for bonding to coating and back leg; designed to drain incidental moisture that gets into wall construction to the exterior at terminations of EIFS with drainage.
4. Expansion Joint: Prefabricated, one-piece V profile; designed to relieve stress of movement.
5. Window Sill Flashing: Prefabricated type for both flashing and sloping sill over framing beneath windows; with end and back dams; designed to direct water to exterior.
6. Parapet Cap Flashing: Type for both flashing and covering parapet top[**with design complying with ASTM C 1397**].
7. **<Insert trim and requirements>**.

2.3 ELASTOMERIC SEALANTS

- A. Elastomeric Sealant Products: Provide EIFS manufacturer's listed and recommended chemically curing, elastomeric sealant that is compatible with joint fillers, joint substrates, and other related materials, and complies with requirements for products and testing indicated in ASTM C 1481 and with requirements in Section 079200 "Joint Sealants" for products corresponding to description indicated below:
1. Multicomponent, nonsag urethane sealant.
 2. Single-component, nonsag, neutral-curing silicone sealant.
 3. **<Insert sealant>**.
 4. Sealants used inside the weatherproofing system shall have a VOC content of **[250] <Insert value>** g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 5. Sealants used inside the weatherproofing system shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- B. Preformed Foam Sealant Products: Provide sealant compatible with adjacent materials and complying with requirements in Section 079200 "Joint Sealants."

- C. Sealant Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range].**

2.4 MIXING

- A. General: Comply with EIFS manufacturer's requirements for combining and mixing materials. Do not introduce admixtures, water, or other materials except as recommended by EIFS manufacturer. Mix materials in clean containers. Use materials within time period specified by EIFS manufacturer or discard.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of EIFS.
- B. Examine roof edges, wall framing, flashings, openings, substrates, and junctures at other construction for suitable conditions where EIFS will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.
 - 1. Begin coating application only after surfaces are dry.
 - 2. Application of coating indicates acceptance of surfaces and conditions.

3.2 PREPARATION

- A. Protect contiguous work from moisture deterioration and soiling caused by application of EIFS. Provide temporary covering and other protection needed to prevent spattering of exterior finish coats on other work.
- B. Protect EIFS, substrates, and wall construction behind them from inclement weather during installation. Prevent penetration of moisture behind drainage plane of EIFS and deterioration of substrates.
- C. Prepare and clean substrates to comply with EIFS manufacturer's written instructions to obtain optimum bond between substrate and adhesive for insulation.

3.3 EXTERIOR CEMENT-BOARD INSTALLATION

- A. Exterior Cement Board: Install on metal framing to comply with cement-board manufacturer's written instructions and evaluation report acceptable to authorities having jurisdiction. Install board with steel drill screws spaced no more than **[8 inches**

(203 mm)] <Insert spacing> o.c. along framing with perimeter fasteners at least **3/8 inch** (9.6 mm) but less than **5/8 inch** (15.9 mm) from edges of boards.

3.4 EIFS INSTALLATION, GENERAL

- A. Comply with EIFS manufacturer's written instructions for installation of EIFS as applicable to each type of substrate indicated.
- B. Install EIFS system as per approved shop drawings and in strict compliance with manufacturer's details approved for type of system, including type of products, and sequence and methods of installation.
 - 1. Contractor to maintain drawings of all applicable details at the Project site at all times for reference by workers.

3.5 SUBSTRATE PROTECTION APPLICATION

- A. Primer/Sealer: Apply over [**gypsum sheathing**] <Insert substrate> substrates to protect substrates from degradation and where required by EIFS manufacturer for improving adhesion of insulation to substrate.
- B. Water-Resistive Coatings: Apply over substrates to protect substrates from degradation and to provide water-/weather-resistive barrier.
 - 1. Tape and seal joints, exposed edges, terminations, and inside and outside corners of sheathing unless otherwise indicated by EIFS manufacturer's written instructions.
- C. Waterproof Adhesive/Base Coat: Apply over [**sloped surfaces**] [**window sills**] [**parapets**] [**where indicated on Drawings**] <Insert locations> to protect substrates from degradation.
- D. Flexible-Membrane Flashing: Install over weather-resistive barrier, applied and lapped to shed water; seal at openings, penetrations, terminations, and where indicated by EIFS manufacturer's written instructions to protect wall assembly from degradation. Prime substrates, if required, and install flashing to comply with EIFS manufacturer's written instructions and details.

3.6 TRIM INSTALLATION

- A. Trim: Apply trim accessories at perimeter of EIFS, at expansion joints, [**at window sills,**] and elsewhere as indicated, according to EIFS manufacturer's written instructions. Coordinate with installation of insulation.
 - 1. Weep Screed/Track: Use at bottom termination edges, at window and door heads[, **and at floor line expansion joints**] of water-drainage EIFS unless otherwise indicated.

2. Window Sill Flashing: Use at windows unless otherwise indicated.
3. Expansion Joint: Use where indicated on Drawings.
4. Casing Bead: Use at other locations.
5. Parapet Cap Flashing: Use where indicated on Drawings.
6. <Insert trim and requirements>.

3.7 DRAINAGE MAT INSTALLATION

- A. Drainage Mat: Apply wrinkle free, continuously, with edges [**butted**] [**overlapped**] and [**adhesively secured**] [**mechanically secured with fasteners**] over water-/weather-resistive barrier according to manufacturer's written instructions.

3.8 INSULATION INSTALLATION

- A. Board Insulation: [**Adhesively**] [**Mechanically**] [**Adhesively and mechanically**] attach insulation to substrate in compliance with ASTM C 1397, EIFS manufacturer's written instructions, and the following:
 1. Apply adhesive to insulation by notched-trowel method in a manner that results in coating the entire surface of sheathing with adhesive once insulation is adhered to sheathing unless EIFS manufacturer's written instructions specify using primer/sealer with ribbon-and-dab method. Apply adhesive to a thickness of not less than **1/4 inch** (6.4 mm) for factory mixed and not less than **3/8 inch** (9.6 mm) for field mixed, measured from surface of insulation before placement.
 2. Apply adhesive to insulation by notched-trowel method in a manner that results in coating the entire surface of drainage mat with adhesive once insulation is adhered to drainage mat.
 3. Apply adhesive to ridges on back of insulation by notched-trowel method in a manner that results in full adhesive contact over the entire surface of ridges, leaving channels free of adhesive once insulation is adhered to substrate.
 4. Press and slide insulation into place. Apply pressure over the entire surface of insulation to accomplish uniform contact, high initial grab, and overall level surface.
 5. Allow adhered insulation to remain undisturbed for period recommended by EIFS manufacturer, but not less than 24 hours, before [**installing mechanical fasteners,**] beginning rasping and sanding insulation, or applying base coat and reinforcing mesh.
 6. Mechanically attach insulation to substrate by method complying with EIFS manufacturer's written instructions. Install top surface of fastener heads flush with plane of insulation. Install fasteners into or through substrates with the following minimum penetration:
 - a. Steel Framing: **5/16 inch** (8 mm).
 - b. Wood Framing: **1 inch** (25 mm).
 - c. Concrete and Masonry: **1 inch** (25 mm).
 7. Apply insulation over drainage mat and dry substrates in courses with long edges of boards oriented horizontally.

8. Begin first course of insulation from a level base line and work upward.
9. Begin first course of insulation from screed/track and work upward. Work from perimeter casing beads toward interior of panels if possible.
10. Stagger vertical joints of insulation boards in successive courses to produce running bond pattern. Locate joints so no piece of insulation is less than **12 inches** (300 mm) wide or **6 inches** (150 mm) high. Offset joints not less than **6 inches** (150 mm) from corners of window and door openings[**and not less than 4 inches** (100 mm) **from aesthetic reveals**].
 - a. Adhesive Attachment: Offset joints of insulation not less than **6 inches** (150 mm) from horizontal and **4 inches** (100 mm) from vertical joints in sheathing.
 - b. Mechanical Attachment: Offset joints of insulation from horizontal joints in sheathing.
11. Place insulation with adhesive strips and channels, slots, or waves aligned in the vertical position for drainage.[**Align drainage channels, slots, or waves with channels, slots, or waves in insulation boards above and below.**]
12. Interlock ends at internal and external corners.
13. Abut insulation tightly at joints within and between each course to produce flush, continuously even surfaces without gaps or raised edges between boards. If gaps greater than **1/16 inch** (1.6 mm) occur, fill with insulation cut to fit gaps exactly; insert insulation without using adhesive or other material.
14. Cut insulation to fit openings, corners, and projections precisely and to produce edges and shapes complying with details indicated.
15. Rasp or sand flush entire surface of insulation to remove irregularities projecting more than [**1/32 inch** (0.8 mm)] [**1/16 inch** (1.6 mm)] from surface of insulation and to remove yellowed areas due to sun exposure; do not create depressions deeper than **1/16 inch** (1.6 mm).
16. Cut aesthetic reveals in outside face of insulation with high-speed router and bit configured to produce grooves, rabbets, and other features that comply with profiles and locations indicated. Do not reduce insulation thickness at aesthetic reveals to less than **3/4 inch** (19 mm).
17. Install foam shapes and attach to [**sheathing**] [**structure**].
18. Interrupt insulation for expansion joints where indicated.
19. Install insulation closure blocks using ribbon-and-dab method to create air zones where indicated.
20. Form joints for sealant application by leaving gaps between adjoining insulation edges and between insulation edges and dissimilar adjoining surfaces. Make gaps wide enough to produce joint widths indicated after encapsulating joint substrates with base coat and reinforcing mesh.
21. Form joints for sealant application with back-to-back casing beads for joints within EIFS and with perimeter casing beads at dissimilar adjoining surfaces. Make gaps between casing beads and between perimeter casing beads and adjoining surfaces of width indicated.
22. After installing insulation and before applying field-applied reinforcing mesh, fully wrap board edges. Cover edges of board and extend encapsulating mesh not less than **2-1/2 inches** (64 mm) over front and back face unless otherwise indicated on Drawings.
23. Treat exposed edges of insulation as follows:

- a. Except for edges forming substrates of sealant joints, encapsulate with base coat, reinforcing mesh, and finish coat.
 - b. Encapsulate edges forming substrates of sealant joints within EIFS or between EIFS and other work with base coat and reinforcing mesh.
 - c. At edges trimmed by accessories, extend base coat, reinforcing mesh, and finish coat over face leg of accessories.
24. Coordinate installation of flashing and insulation to produce wall assembly that does not allow water to penetrate behind flashing and water-/weather-resistive barrier.
- B. Expansion Joints: Install at locations indicated, where required by EIFS manufacturer, and as follows:
1. At expansion joints in substrates behind EIFS.
 2. Where EIFS adjoin dissimilar substrates, materials, and construction, including other EIFS.
 3. At floor lines in multilevel wood-framed construction.
 4. Where wall height or building shape changes.
 5. Where EIFS manufacturer requires joints in long continuous elevations.
 6. **<Insert location>**.

3.9 BASE-COAT INSTALLATION

- A. Base Coat: Apply to exposed surfaces of insulation [**and foam shapes**] in minimum thickness recommended in writing by EIFS manufacturer, but not less than [**1/16-inch (1.6-mm)**] **<Insert dimension>** dry-coat thickness.
- B. Reinforcing Mesh: Embed type indicated below in wet base coat to produce wrinkle-free installation with mesh continuous at corners and overlapped not less than **2-1/2 inches (64 mm)** or otherwise treated at joints to comply with ASTM C 1397 and EIFS manufacturer's written instructions. Do not lap reinforcing mesh within **8 inches (204 mm)** of corners. Completely embed mesh, applying additional base-coat material if necessary, so reinforcing-mesh color and pattern are not visible.
1. Standard-impact reinforcing mesh [**unless otherwise indicated**] **<Insert location>**.
 2. Intermediate-impact reinforcing mesh [**where indicated**] **<Insert location>**.
 3. High-impact reinforcing mesh [**where indicated**] **<Insert location>**.
 4. Heavy-duty reinforcing mesh [**where indicated**] **<Insert location>**.
- C. Double-Layer Reinforcing Mesh Application: Where indicated, apply second base coat and second layer of [**standard**] [**intermediate**]-impact reinforcing mesh, overlapped not less than **2-1/2 inches (64 mm)** or otherwise treated at joints to comply with ASTM C 1397 and EIFS manufacturer's written instructions in same manner as first application. Do not apply until first base coat has cured.
- D. Additional Reinforcing Mesh: Apply strip reinforcing mesh around openings extending **4 inches (100 mm)** beyond perimeter. Apply additional **9-by-12-inch (230-by-300-mm)**

strip reinforcing mesh diagonally at corners of openings (re-entrant corners). Apply **8-inch-** (200-mm-) wide strip reinforcing mesh at both inside and outside corners unless base layer of mesh is lapped not less than **4 inches** (100 mm) on each side of corners.

1. At aesthetic reveals, apply strip reinforcing mesh not less than **8 inches** (200 mm) wide.
2. Embed strip reinforcing mesh in base coat before applying first layer of reinforcing mesh.

E. Foam Shapes: Fully embed reinforcing mesh in base coat.

F. Double Base-Coat Application: Where indicated, apply second base coat in same manner and thickness as first application except without reinforcing mesh. Do not apply until first base coat has cured.

3.10 FINISH-COAT INSTALLATION

A. Primer: Apply over dry base coat according to EIFS manufacturer's written instructions.

B. Finish Coat: Apply over dry **[primed]** base coat, maintaining a wet edge at all times for uniform appearance, in thickness required by EIFS manufacturer to produce a uniform finish of color and texture matching approved sample and free of cold joints, shadow lines, and texture variations.

1. Texture: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range]**.
2. Embed aggregate in finish coat according to EIFS manufacturer's written instructions to produce a uniform applied-aggregate finish of color and texture matching approved sample.

C. Sealer Coat: Apply over dry finish coat, in number of coats and thickness required by EIFS manufacturer.

3.11 INSTALLATION OF JOINT SEALANTS

A. Prepare joints and apply sealants, of type and at locations indicated, to comply with applicable requirements in Section 079200 "Joint Sealants" and in ASTM C 1481.

1. Apply joint sealants after base coat has cured but before applying finish coat.
2. Clean surfaces to receive sealants to comply with indicated requirements and EIFS manufacturer's written instructions.
3. Apply primer recommended in writing by sealant manufacturer for surfaces to be sealed.
4. Install sealant backing to control depth and configuration of sealant joint and to prevent sealant from adhering to back of joint.
5. Apply masking tape to protect areas adjacent to sealant joints. Remove tape immediately after tooling joints, without disturbing joint seal.

6. Recess sealant sufficiently from surface of EIFS so an additional sealant application, including cylindrical sealant backing, can be installed without protruding beyond EIFS surface.

3.12 FIELD QUALITY CONTROL

- A. Special Inspections: **Owner will engage** a qualified special inspector to perform the following special inspections:
 1. According to **[ICC-ES AC24] [ICC-ES AC235]**.
 2. **<Insert special inspections>**.
- B. Testing Agency: **Owner will engage** a qualified testing agency to perform tests and inspections.
- C. EIFS Tests and Inspections: For the following:
 1. According to **[ICC-ES AC24] [ICC-ES AC235]**.
 2. **<Insert testing requirements of authorities having jurisdiction>**.
- D. Remove and replace EIFS where test results indicate that EIFS do not comply with specified requirements.
- E. Prepare test and inspection reports.

3.13 CLEANING AND PROTECTION

- A. Remove temporary covering and protection of other work. Promptly remove coating materials from window and doorframes and other surfaces outside areas indicated to receive EIFS coatings.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 072419

SECTION 072500 - WEATHER BARRIERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

- 1.
2. Building wrap.
3. Flexible flashing.

- B. Related Requirements:

1. Section 061600 "Sheathing" for sheathing joint and penetration treatment.
2. Section 072713 "Modified Bituminous Sheet Air Barriers" for sheet air barrier applied over wall sheathing.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1. For building wrap, include data on air and water-vapor permeance based on testing according to referenced standards.
2. Include data substantiating that materials comply with specified requirements.

1.4 INFORMATIONAL SUBMITTALS

- A. Evaluation Reports: For [**water-resistive barrier**] [**and**] [**flexible flashing**], from ICC-ES.

1.5 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300

"Submittal Procedures".

1.6 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 WATER-RESISTIVE BARRIER

- A. Building Wrap: ASTM E 1677, Type I air barrier; with flame-spread and smoke-developed indexes of less than 25 and 450, respectively, when tested according to ASTM E 84; UV stabilized; and acceptable to authorities having jurisdiction.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Dow Chemical Company (The); Styrofoam Weathermate Plus Brand Housewrap.
 - b. DuPont (E. I. du Pont de Nemours and Company); Tyvek **[CommercialWrap] [StuccoWrap] [HomeWrap] [HomeWrap and HeaderWrap]**.
 - c. Ludlow Coated Products; **[Air Stop Housewrap] [Barricade Building Wrap] [EnergyWrap Housewrap] [R-Wrap Protective House Wrap]**.
 - d. Pactiv, Inc.; GreenGuard **[Classic Wrap] [RainDrop] [Ultra Wrap] [Value Wrap]**.
 - e. Raven Industries Inc.; Fortress Pro Weather Protective Barrier.
 - f. Reemay, Inc.; Typar HouseWrap.
 - g. **<Insert manufacturer's name; product name or designation>**.
 - h. or approved equal.
 2. Water-Vapor Permeance: Not less than **[500] [150] [125] [50] <Insert number> g** through 1 sq. m of surface in 24 hours per ASTM E 96/E 96M, Desiccant Method (Procedure A).
 3. Air Permeance: Not more than **0.004 cfm/sq. ft. at 0.3-inch wg** (0.02 L/s x sq. m at 75 Pa) when tested according to ASTM E 2178.
 4. Allowable UV Exposure Time: Not less than three months.
- B. Building-Wrap Tape: Pressure-sensitive plastic tape recommended by building-wrap manufacturer for sealing joints and penetrations in building wrap.

2.2 MISCELLANEOUS MATERIALS

- A. Flexible Flashing: Composite, self-adhesive, flashing product consisting of a pliable, **[butyl rubber] [or] [rubberized-asphalt]** compound, bonded to a high-density

polyethylene film, aluminum foil, or spunbonded polyolefin to produce an overall thickness of not less than **[0.025 inch (0.6 mm)] [0.030 inch (0.8 mm)] [0.040 inch (1.0 mm)]**.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. DuPont (E. I. du Pont de Nemours and Company); DuPont Flashing Tape.
 - b. Grace Construction Products, a unit of W. R. Grace & Co. - Conn.; Vycor Butyl Self Adhered Flashing.
 - c. Protecto Wrap Company; BT-25 XL.
 - d. Raven Industries Inc.; Fortress Flashshield.
 - e. Advanced Building Products Inc.; Wind-o-wrap.
 - f. Carlisle Coatings & Waterproofing; CCW-705-TWF Thru-Wall Flashing.
 - g. Fiberweb, Clark Hammerbeam Corp.; Aquaflash 500.
 - h. Fortifiber Building Systems Group; **[Fortiflash 25] [Fortiflash 40]**.
 - i. Grace Construction Products, a unit of W. R. Grace & Co. - Conn.; **[Vycor Plus Self-Adhered Flashing] [Vycor V40 Self-Adhered Flashing]**.
 - j. MFM Building Products Corp.; Window Wrap.
 - k. Polyguard Products, Inc.; **[Polyguard JT-20 Tape] [Polyguard JT-30 Tape]**.
 - l. Sandell Manufacturing Co., Inc.; Presto-Seal.
 - m. **<Insert manufacturer's name; product name or designation>**.
 - n. or approved equal.
- B. Primer for Flexible Flashing: Product recommended by manufacturer of flexible flashing for substrate.
- C. Nails and Staples: ASTM F 1667.

PART 3 - EXECUTION

3.1 WATER-RESISTIVE BARRIER INSTALLATION

- A. Cover exposed exterior surface of sheathing with water-resistive barrier securely fastened to framing immediately after sheathing is installed.
- B. Cover sheathing with water-resistive barrier as follows:
 1. Cut back barrier **1/2 inch (13 mm)** on each side of the break in supporting members at expansion- or control-joint locations.
 2. Apply barrier to cover vertical flashing with a minimum **4-inch (100-mm)** overlap unless otherwise indicated.
- C. Building Wrap: Comply with manufacturer's written instructions.
 1. Seal seams, edges, fasteners, and penetrations with tape.
 2. Extend into jambs of openings and seal corners with tape.

3.2 FLEXIBLE FLASHING INSTALLATION

- A. Apply flexible flashing where indicated to comply with manufacturer's written instructions.
 - 1. Prime substrates as recommended by flashing manufacturer.
 - 2. Lap seams and junctures with other materials at least **4 inches** (100 mm) except that at flashing flanges of other construction, laps need not exceed flange width.
 - 3. Lap flashing over water-resistive barrier at bottom and sides of openings.
 - 4. Lap water-resistive barrier over flashing at heads of openings.
 - 5. After flashing has been applied, roll surfaces with a hard rubber or metal roller to ensure that flashing is completely adhered to substrates.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 072500

SECTION 072713 - MODIFIED BITUMINOUS SHEET AIR BARRIERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes self-adhering, vapor-retarding, modified bituminous sheet air barriers.
- B. Related Requirements:
 - 1. Section 061600 "Sheathing" for wall sheathings and wall sheathing joint-and-penetration treatments.
 - 2. Section 072500 "Weather Barriers" for weather barriers, including [**building paper**] [**flexible flashing**] [**and**] [**building wraps with air-barrier properties**].
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

- A. Air-Barrier Material: A primary element that provides a continuous barrier to the movement of air.
- B. Air-Barrier Accessory: A transitional component of the air barrier that provides continuity.
- C. Air-Barrier Assembly: The collection of air-barrier materials and accessory materials applied to an opaque wall, including joints and junctions to abutting construction, to control air movement through the wall.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at [**Project site**] [**location and time as determined by DEN Project Manager**]<Insert location>.
 - 1. Review air-barrier requirements and installation, special details, mockups, air-leakage and bond testing, air-barrier protection, and work scheduling that covers air barriers.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include manufacturer's written instructions for evaluating, preparing, and treating substrate; technical data; and tested physical and performance properties of products.
 - 2. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Credit IEQ 4.2: For air-barrier products, documentation including printed statement of VOC content.
 - 2. Laboratory Test Reports for Credit IEQ 4: For air barriers, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: For air-barrier assemblies.
 - 1. Show locations and extent of air barrier. Include details for substrate joints and cracks, counterflashing strips, penetrations, inside and outside corners, terminations, and tie-ins with adjoining construction.
 - 2. Include details of interfaces with other materials that form part of air barrier.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer. [**Include list of ABAA-certified installers and supervisors employed by the Installer, who work on Project.**]
- B. Product Certificates: From air-barrier manufacturer, certifying compatibility of air barriers and accessory materials with Project materials that connect to or that come in contact with air barrier.
- C. Product Test Reports: For each air-barrier assembly, for tests performed by a qualified testing agency.

1.7 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

1. A firm that has specialized in installation of types of products required for Project for not less than five (5) years and which is acceptable to manufacturer(s) of primary materials.
 2. Installer shall be licensed by ABAA according to ABAA's Quality Assurance Program and shall employ ABAA-certified installers and supervisors on Project.
- B. Mockups: Build mockups to set quality standards for materials and execution[**and for preconstruction testing**].
1. Build integrated mockups of exterior wall assembly [**as shown on Drawings**] [, **150 sq. ft. (14 sq. m)**] **<Insert requirement>**, incorporating backup wall construction, external cladding, window, storefront, door frame and sill, insulation, ties and other penetrations, and flashing to demonstrate surface preparation, crack and joint treatment, application of air barriers, and sealing of gaps, terminations, and penetrations of air-barrier assembly.
 - a. Coordinate construction of mockups to permit inspection by Owner's testing agency of air barrier before external insulation and cladding are installed.
 - b. Include junction with roofing membrane[, **building corner condition,**] [**and foundation wall intersection**].
 - c. If DEN Project Manager determines mockups do not comply with requirements, reconstruct mockups and apply air barrier until mockups are approved.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 PRECONSTRUCTION TESTING

- A. Preconstruction Testing Service: Owner will engage a qualified testing agency to perform preconstruction testing on field mockups.
- B. Mockup Testing: Air-barrier assemblies shall comply with performance requirements indicated, as evidenced by reports based on mockup testing by a qualified testing agency.
1. Qualitative Air-Leakage Testing: Mockups will be tested for evidence of air leakage according to [**ASTM E 1186, chamber pressurization or depressurization with smoke tracers**] [**ASTM E 1186, chamber depressurization with detection liquids**] **<Insert requirement>**.
 2. Quantitative Air-Leakage Testing: Mockups will be tested for air leakage according to [**ASTM E 783**] **<Insert test>**.
 3. Adhesion Testing: Mockups will be tested for minimum air-barrier adhesion of [**16 lbf/sq. in. (110 kPa)**] **<Insert value>** according to ASTM D 4541.
 4. Notify DEN Project Manager [**seven**] **<Insert number>** days in advance of the dates and times when mockups will be tested.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Remove and replace liquid materials that cannot be applied within their stated shelf life.
- B. Protect stored materials from direct sunlight.

1.11 FIELD CONDITIONS

- A. Environmental Limitations: Apply air barrier within the range of ambient and substrate temperatures recommended by air-barrier manufacturer.
 - 1. Protect substrates from environmental conditions that affect air-barrier performance.
 - 2. Do not apply air barrier to a damp or wet substrate or during snow, rain, fog, or mist.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

- A. Source Limitations: Obtain primary air-barrier materials and air-barrier accessories from single source from single manufacturer.
- B. VOC Content: [250] <Insert value> g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24) and complying with VOC content limits of authorities having jurisdiction.
- C. Low-Emitting Materials: Air barriers shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.2 PERFORMANCE REQUIREMENTS

- A. General: Air barrier shall be capable of performing as a continuous vapor-retarding air barrier[**and as a liquid-water drainage plane flashed to discharge to the exterior incidental condensation or water penetration**]. Air-barrier assemblies shall be capable of accommodating substrate movement and of sealing substrate expansion and control joints, construction material changes, penetrations[, **tie-ins to installed**

waterproofing], and transitions at perimeter conditions without deterioration and air leakage exceeding specified limits.

- B. Air-Barrier Assembly Air Leakage: Maximum **[0.04 cfm/sq. ft. of surface area at 1.57 lbf/sq. ft. (0.2 L/s x sq. m of surface area at 75 Pa)]** <Insert value>, when tested according to **[ASTM E 283] [ASTM E 783] [or] [ASTM E 2357]** <Insert test>.

2.3 SELF-ADHERING SHEET AIR BARRIER

- A. Modified Bituminous Sheet: **40-mil-** (1.0-mm-) thick, self-adhering sheet consisting of **36 mils** (0.9 mm) of rubberized asphalt laminated to a **4-mil-** (0.1-mm-) thick, cross-laminated polyethylene film with release liner on adhesive side[**and formulated for application with primer that complies with VOC limits of authorities having jurisdiction**].

1. Products: Subject to compliance with requirements, provide one of the following:

- a. Carlisle Coatings & Waterproofing Inc.; CCW-705.
- b. Grace, W. R. & Co. - Conn.; Perm-A-Barrier Wall Membrane.
- c. Henry Company; **[Blueskin SA] [or] [Blueskin SA LT]**.
- d. Meadows, W. R., Inc.; SealTight Air-Shield.
- e. Tremco Incorporated, an RPM company; ExoAir 110/110LT.
- f. **<Insert manufacturer's name; product name or designation>**.
- g. or approved equal.

2. Physical and Performance Properties:

- a. Air Permeance: Maximum **[0.004 cfm/sq. ft. of surface area at 1.57-lbf/sq. ft. (0.02 L/s x sq. m of surface area at 75-Pa)]** <Insert value> pressure difference; ASTM E 2178.
- b. Tensile Strength: Minimum **[250 psi (1.7 MPa)]** <Insert value>; ASTM D 412, Die C.
- c. Ultimate Elongation: Minimum **[200]** <Insert number> percent; ASTM D 412, Die C.
- d. Puncture Resistance: Minimum **[40 lbf (180 N)]** <Insert value>; ASTM E 154.
- e. Water Absorption: Maximum **[0.15]** <Insert number> percent weight gain after 48-hour immersion at **70 deg F** (21 deg C); ASTM D 570.
- f. Vapor Permeance: Maximum **[0.05 perm (2.9 ng/Pa x s x sq. m)]** <Insert value>; ASTM E 96/E 96M, Water Method.

2.4 ACCESSORY MATERIALS

- A. General: Accessory materials recommended by air-barrier manufacturer to produce a complete air-barrier assembly and compatible with primary air-barrier membrane.
- B. Primer: Liquid **[waterborne] [solvent-borne]** primer recommended for substrate by air-barrier material manufacturer.

- C. Counterflashing Strip: Modified bituminous **40-mil-** (1.0-mm-) thick, self-adhering sheet consisting of **32 mils** (0.8 mm) of rubberized asphalt laminated to an **8-mil-** (0.2-mm-) thick, cross-laminated polyethylene film with release liner backing.
- D. Butyl Strip: Vapor retarding, **30 to 40 mils** (0.76 to 1.0 mm) thick, self-adhering; polyethylene-film-reinforced top surface laminated to layer of butyl adhesive, with release liner backing.
- E. Modified Bituminous Strip: Vapor retarding, **40 mils** (1.0 mm) thick, smooth surfaced, self-adhering; consisting of **36 mils** (0.9 mm) of rubberized asphalt laminated to a **4-mil-** (0.1-mm-) thick, cross-laminated polyethylene film with release liner backing.
- F. Termination Mastic: Air-barrier manufacturer's standard cold fluid-applied elastomeric liquid; trowel grade.
- G. Substrate-Patching Membrane: Manufacturer's standard trowel-grade substrate filler.
- H. Adhesive and Tape: Air-barrier manufacturer's standard adhesive and pressure-sensitive adhesive tape.
- I. Stainless-Steel Sheet: ASTM A 240/A 240M, Type 304, [**0.0187 inch** (0.5 mm)] [**0.0250 inch** (0.64 mm)] **<Insert dimension>** thick, and Series 300 stainless-steel fasteners.
- J. Sprayed Polyurethane Foam Sealant: One- or two-component, foamed-in-place, polyurethane foam sealant, **1.5- to 2.0-lb/cu. ft.** (24- to 32-kg/cu. m) density; flame-spread index of 25 or less according to ASTM E 162; with primer and noncorrosive substrate cleaner recommended by foam sealant manufacturer.
- K. Modified Bituminous Transition Strip: Vapor retarding, **40 mils** (1.0 mm) thick, smooth surfaced, self-adhering; consisting of **36 mils** (0.9 mm) of rubberized asphalt laminated to a **4-mil-** (0.1-mm-) thick polyethylene film with release liner backing.
- L. Elastomeric Flashing Sheet: ASTM D 2000, minimum **50- to 65-mil-** (1.3- to 1.6-mm-) thick, cured sheet neoprene with manufacturer-recommended contact adhesives and lap sealant with [**stainless-steel termination bars and fasteners**] [**aluminum termination bars and stainless-steel fasteners**] [**galvanized-steel termination bars and fasteners**].
- M. Preformed Silicone-Sealant Extrusion: Manufacturer's standard system consisting of cured low-modulus silicone extrusion, sized to fit opening widths, with a single-component, neutral-curing, Class 100/50 (low-modulus) silicone sealant for bonding extrusions to substrates.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Dow Corning Corporation; 123 Silicone Seal.
 - b. Momentive Performance Materials Inc.; US11000 UltraSpan.
 - c. Pecora Corporation; Sil-Span.
 - d. Tremco Incorporated, an RPM company; Spectrem Simple Seal.
 - e. **<Insert manufacturer's name; product name or designation>**.

f. or approved equal.

- N. Joint Sealant: ASTM C 920, single-component, neutral-curing silicone; Class 100/50 (low modulus), Grade NS, Use NT related to exposure, and, as applicable to joint substrates indicated, Use O. Comply with Section 079200 "Joint Sealants."

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.
1. Verify that substrates are sound and free of oil, grease, dirt, excess mortar, or other contaminants.
 2. Verify that concrete has cured and aged for minimum time period recommended by air-barrier manufacturer.
 3. Verify that concrete is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D 4263.
 4. Verify that masonry joints are flush and completely filled with mortar.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SURFACE PREPARATION

- A. Clean, prepare, and treat substrate according to manufacturer's written instructions. Provide clean, dust-free, and dry substrate for air-barrier application.
- B. Mask off adjoining surfaces not covered by air barrier to prevent spillage and overspray affecting other construction.
- C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.
- D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids in concrete with substrate-patching membrane.
- E. Remove excess mortar from masonry ties, shelf angles, and other obstructions.
- F. Prepare, fill, prime, and treat joints and cracks in substrates. Remove dust and dirt from joints and cracks according to ASTM D 4258.
1. Install modified bituminous strips and center over treated construction and contraction joints and cracks exceeding a width of **1/16 inch** (1.6 mm).
- G. Bridge and cover **[isolation joints] [expansion joints] [and]** discontinuous wall-to-wall, deck-to-wall, and deck-to-deck joints with overlapping modified bituminous strips.

- H. At changes in substrate plane, apply sealant or termination mastic beads at sharp corners and edges to form a smooth transition from one plane to another.
- I. Cover gaps in substrate plane and form a smooth transition from one substrate plane to another with stainless-steel sheet mechanically fastened to structural framing to provide continuous support for air barrier.

3.3 INSTALLATION

- A. General: Install modified bituminous sheets and accessory materials according to air-barrier manufacturer's written instructions and according to recommendations in ASTM D 6135.
 - 1. When ambient and substrate temperatures range between 25 and 40 deg F (minus 4 and plus 5 deg C), install self-adhering, modified bituminous air-barrier sheet produced for low-temperature application. Do not install low-temperature sheet if ambient or substrate temperature is higher than 60 deg F (16 deg C).
- B. Corners: Prepare, prime, and treat inside and outside corners according to ASTM D 6135.
 - 1. Install modified bituminous strips centered over vertical inside corners. Install 3/4-inch (19-mm) fillets of termination mastic on horizontal inside corners.
- C. Prepare, treat, and seal vertical and horizontal surfaces at terminations and penetrations with termination mastic and according to ASTM D 6135.
- D. Apply primer to substrates at required rate and allow it to dry. Limit priming to areas that will be covered by air-barrier sheet on same day. Reprime areas exposed for more than 24 hours.
 - 1. Prime glass-fiber-surfaced gypsum sheathing with number of prime coats needed to achieve required bond, with adequate drying time between coats.
- E. Apply and firmly adhere modified bituminous sheets horizontally over area to receive air barrier. Accurately align sheets and maintain uniform 2-1/2-inch- (64-mm-) minimum lap widths and end laps. Overlap and seal seams, and stagger end laps to ensure airtight installation.
 - 1. Apply sheets in a shingled manner to shed water without interception by any exposed sheet edges.
 - 2. Roll sheets firmly to enhance adhesion to substrate.
- F. Apply continuous modified bituminous sheets over modified bituminous strips bridging substrate cracks, construction, and contraction joints.
- G. CMU: Install air-barrier sheet horizontally against the CMU beginning at base of wall. Align top edge of air-barrier sheet immediately below protruding masonry ties or joint reinforcement or ties, and firmly adhere in place.

1. Overlap horizontally adjacent sheets a minimum of **2 inches** (50 mm) and roll seams.
 2. Apply overlapping sheets with bottom edge slit to fit around masonry reinforcing or ties. Roll firmly into place.
 3. Seal around masonry reinforcing or ties and penetrations with termination mastic.
 4. Continue the membrane into all openings in the wall, such as doors and windows, and terminate at points to maintain an airtight barrier that is not visible from interior.
- H. Seal top of through-wall flashings to air-barrier sheet with an additional **6-inch-** (150-mm-) wide, [**modified bituminous**] [**counterflashing**] strip.
- I. Seal exposed edges of sheet at seams, cuts, penetrations, and terminations not concealed by metal counterflashings or ending in reglets with termination mastic.
- J. Install air-barrier sheet and accessory materials to form a seal with adjacent construction and to maintain a continuous air barrier.
1. Coordinate air-barrier installation with installation of roofing membrane and base flashing to ensure continuity of air barrier with roofing membrane.
 2. Install [**butyl**] [**modified bituminous**] strip on roofing membrane or base flashing so that a minimum of **3 inches** (75 mm) of coverage is achieved over each substrate.
- K. Connect and seal exterior wall air-barrier membrane continuously to roofing-membrane air barrier, concrete below-grade structures, floor-to-floor construction, exterior glazing and window systems, glazed curtain-wall systems, storefront systems, exterior louvers, exterior door framing, and other construction used in exterior wall openings, using accessory materials.
- L. Wall Openings: Prime concealed, perimeter frame surfaces of windows, curtain walls, storefronts, and doors. Apply [**modified bituminous transition strip**] [**elastomeric flashing sheet**] [**preformed silicone-sealant extrusion**] so that a minimum of **3 inches** (75 mm) of coverage is achieved over each substrate. Maintain **3 inches** (75 mm) of full contact over firm bearing to perimeter frames with not less than **1 inch** (25 mm) of full contact.
1. Modified Bituminous Transition Strip: Roll firmly to enhance adhesion.
 2. Elastomeric Flashing Sheet: Apply adhesive to wall, frame, and flashing sheet. Install flashing sheet and termination bars, fastened at **6 inches** (150 mm) o.c. Apply lap sealant over exposed edges and on cavity side of flashing sheet.
 3. Preformed Silicone-Sealant Extrusion: Set in full bed of silicone sealant applied to walls, frame, and membrane.
- M. Fill gaps in perimeter frame surfaces of windows, curtain walls, storefronts, doors, and miscellaneous penetrations of air-barrier membrane with foam sealant.
- N. At end of each working day, seal top edge of air-barrier material to substrate with termination mastic.

- O. Apply joint sealants forming part of air-barrier assembly within manufacturer's recommended application temperature ranges. Consult manufacturer when sealant cannot be applied within these temperature ranges.
- P. Repair punctures, voids, and deficient lapped seams in air barrier. Slit and flatten fishmouths and blisters. Patch with air-barrier sheet extending **6 inches** (150 mm) beyond repaired areas in all directions.
- Q. Do not cover air barrier until it has been tested and inspected by Owner's testing agency.
- R. Correct deficiencies in or remove air barrier that does not comply with requirements; repair substrates and reapply air-barrier components.

3.4 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
- B. Inspections: Air-barrier materials, accessories, and installation are subject to inspection for compliance with requirements. [**Inspections may include the following:**]
 - 1. Continuity of air-barrier system has been achieved throughout the building envelope with no gaps or holes.
 - 2. Continuous structural support of air-barrier system has been provided.
 - 3. Masonry and concrete surfaces are smooth, clean, and free of cavities, protrusions, and mortar droppings.
 - 4. Site conditions for application temperature and dryness of substrates have been maintained.
 - 5. Maximum exposure time of materials to UV deterioration has not been exceeded.
 - 6. Surfaces have been primed.
 - 7. Laps in sheet materials have complied with the minimum requirements and have been shingled in the correct direction (or mastic applied on exposed edges), with no fishmouths.
 - 8. Termination mastic has been applied on cut edges.
 - 9. Air barrier has been firmly adhered to substrate.
 - 10. Compatible materials have been used.
 - 11. Transitions at changes in direction and structural support at gaps have been provided.
 - 12. Connections between assemblies (membrane and sealants) have complied with requirements for cleanliness, surface preparation and priming, structural support, integrity, and continuity of seal.
 - 13. All penetrations have been sealed.
- C. Tests: As determined by Owner's testing agency from among the following tests:
 - 1. Qualitative Air-Leakage Testing: Air-barrier assemblies will be tested for evidence of air leakage according to [**ASTM E 1186, smoke pencil with**

pressurization or depressurization] [ASTM E 1186, chamber pressurization or depressurization with smoke tracers] [ASTM E 1186, chamber depressurization using detection liquids].

2. Quantitative Air-Leakage Testing: Air-barrier assemblies will be tested for air leakage according to **[ASTM E 783] <Insert test>**.
3. Adhesion Testing: Air-barrier assemblies will be tested for minimum air-barrier adhesion of **[16 lbf/sq. in. (110 kPa)] <Insert value>** according to ASTM D 4541 for each **[600 sq. ft. (56 sq. m)] <Insert value>** of installed air barrier or part thereof.

- D. Air barriers will be considered defective if they do not pass tests and inspections.
1. Apply additional air-barrier material, according to manufacturer's written instructions, where inspection results indicate insufficient thickness.
 2. Remove and replace deficient air-barrier components for retesting as specified above.
- E. Repair damage to air barriers caused by testing; follow manufacturer's written instructions.

3.5 CLEANING AND PROTECTION

- A. Protect air-barrier system from damage during application and remainder of construction period, according to manufacturer's written instructions.
1. Protect air barrier from exposure to UV light and harmful weather exposure as required by manufacturer. If exposed to these conditions for more than **[30] <Insert number>** days, remove and replace air barrier or install additional, full-thickness, air-barrier application after repairing and preparing the overexposed membrane according to air-barrier manufacturer's written instructions.
 2. Protect air barrier from contact with incompatible materials and sealants not approved by air-barrier manufacturer.
- B. Clean spills, stains, and soiling from construction that would be exposed in the completed Work, using cleaning agents and procedures recommended by manufacturer of affected construction.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 072713

SECTION 072726 - FLUID-APPLIED MEMBRANE AIR BARRIERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes fluid-applied, [**vapor-retarding**] [**and**] [**vapor-permeable**] membrane air barriers.
- B. Related Requirements:
 - 1. Section 061600 "Sheathing" for wall sheathings and wall sheathing joint-and-penetration treatments.
 - 2. Section 072500 "Weather Barriers" for weather barriers, including [**building paper**] [**flexible flashing**] [**and**] [**building wraps with air-barrier properties**].
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

- A. Air-Barrier Material: A primary element that provides a continuous barrier to the movement of air.
- B. Air-Barrier Accessory: A transitional component of the air barrier that provides continuity.
- C. Air-Barrier Assembly: The collection of air-barrier materials and accessory materials applied to an opaque wall, including joints and junctions to abutting construction, to control air movement through the wall.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at [**Project site**] [**location and time as determined by DEN Project Manager**]<Insert location>.
 - 1. Review air-barrier requirements and installation, special details, mockups, air-leakage and bond testing, air-barrier protection, and work scheduling that covers air barriers.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include manufacturer's written instructions for evaluating, preparing, and treating substrate; technical data; and tested physical and performance properties of products.
 - 2. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Credit IEQ 4.2: For air-barrier products, documentation including printed statement of VOC content.
 - 2. Laboratory Test Reports for Credit IEQ 4: For air barriers, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: For air-barrier assemblies.
 - 1. Show locations and extent of air barrier. Include details for substrate joints and cracks, counterflashing strips, penetrations, inside and outside corners, terminations, and tie-ins with adjoining construction.
 - 2. Include details of interfaces with other materials that form part of air barrier.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer. [**Include list of ABAA-certified installers and supervisors employed by the Installer, who work on Project.**]
- B. Product Certificates: From air-barrier manufacturer, certifying compatibility of air barriers and accessory materials with Project materials that connect to or that come in contact with the barrier.
- C. Product Test Reports: For each air-barrier assembly, for tests performed by a qualified testing agency.

1.7 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

1. A firm that has specialized in installation of types of products required for Project for not less than five (5) years and which is acceptable to manufacturer(s) of primary materials.
 2. Installer shall be licensed by ABAA according to ABAA's Quality Assurance Program and shall employ ABAA-certified installers and supervisors on Project.
- B. Mockups: Build mockups to set quality standards for materials and execution[**and for preconstruction testing**].
1. Build integrated mockups of exterior wall assembly [**as shown on Drawings**] [, **150 sq. ft. (14 sq. m)**] **<Insert area or dimensions>**, incorporating backup wall construction, external cladding, window, storefront, door frame and sill, insulation, ties and other penetrations, and flashing to demonstrate surface preparation, crack and joint treatment, application of air barriers, and sealing of gaps, terminations, and penetrations of air-barrier assembly.
 - a. Coordinate construction of mockups to permit inspection by Owner's testing agency of air barrier before external insulation and cladding are installed.
 - b. Include junction with roofing membrane[, **building corner condition,**] [**and foundation wall intersection**].
 - c. If DEN Project Manager determines mockups do not comply with requirements, reconstruct mockups and apply air barrier until mockups are approved.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 PRECONSTRUCTION TESTING

- A. Preconstruction Testing Service: Owner will engage a qualified testing agency to perform preconstruction testing on field mockups.
- B. Mockup Testing: Air-barrier assemblies shall comply with performance requirements indicated, as evidenced by reports based on mockup testing by a qualified testing agency.
 1. Qualitative Air-Leakage Testing: Mockups will be tested for evidence of air leakage according to [**ASTM E 1186, chamber pressurization or depressurization with smoke tracers**] [**ASTM E 1186, chamber depressurization with detection liquids**] **<Insert requirement>**.
 2. Quantitative Air-Leakage Testing: Mockups will be tested for air leakage according to [**ASTM E 783**] **<Insert test>**.
 3. Adhesion Testing: Mockups will be tested for minimum air-barrier adhesion of [**30 lbf/sq. in. (207 kPa)**] **<Insert value>** according to ASTM D 4541.

4. Notify DEN Project Manager [**seven**] <Insert number> days in advance of the dates and times when mockups will be tested.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Remove and replace liquid materials that cannot be applied within their stated shelf life.
- B. Protect stored materials from direct sunlight.

1.11 FIELD CONDITIONS

- A. Environmental Limitations: Apply air barrier within the range of ambient and substrate temperatures recommended by air-barrier manufacturer.
 1. Protect substrates from environmental conditions that affect air-barrier performance.
 2. Do not apply air barrier to a damp or wet substrate or during snow, rain, fog, or mist.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

- A. Source Limitations: Obtain primary air-barrier materials and air-barrier accessories from single source from single manufacturer.
- B. VOC Content: [**250**] <Insert value> g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24) and complying with VOC content limits of authorities having jurisdiction.
- C. Low-Emitting Materials: Air barriers shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.2 PERFORMANCE REQUIREMENTS

- A. General: Air barrier shall be capable of performing as a continuous vapor-[retarding] [permeable] air barrier[and as a liquid-water drainage plane flashed to discharge to the exterior incidental condensation or water penetration]. Air-barrier assemblies shall be capable of accommodating substrate movement and of sealing substrate expansion and control joints, construction material changes, penetrations[, tie-ins to installed waterproofing], and transitions at perimeter conditions without deterioration and air leakage exceeding specified limits.
- B. Air-Barrier Assembly Air Leakage: Maximum **[0.04 cfm/sq. ft. of surface area at 1.57 lbf/sq. ft. (0.2 L/s x sq. m of surface area at 75 Pa)] <Insert value>**, when tested according to **[ASTM E 283] [ASTM E 783] [or] [ASTM E 2357] <Insert test>**.

2.3 VAPOR-RETARDING MEMBRANE AIR BARRIER

- A. Fluid-Applied, Vapor-Retarding Membrane Air Barrier: **[Elastomeric, modified bituminous] [or] [synthetic polymer]** membrane.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Elastomeric, Modified Bituminous Membrane:
 - 1) Carlisle Coatings & Waterproofing Inc.; **[Barriseal R] [or] [Barriseal S]**.
 - 2) Epro Services, Inc.; **[Ecoflex-R] [or] [Ecoflex-S]**.
 - 3) Henry Company; **[Air-Bloc 06] [Air-Bloc 06 QS] [Air-Bloc 06 WB]**.
 - 4) Hohmann & Barnard, Inc.; Tetroflash Liquid.
 - 5) Meadows, W. R., Inc.; Air-Shield LM.
 - 6) Tremco Incorporated, an RPM company; ExoAir 120SP/R.
 - 7) **<Insert manufacturer's name; product name or designation>**.
 - 8) or approved equal.
 - b. Synthetic Polymer Membrane:
 - 1) Grace, W. R., & Co. - Conn.; Perm-A-Barrier Liquid.
 - 2) Henry Company; Air-Bloc 32.
 - 3) Rubber Polymer Corporation, Inc.; Rub-R-Wall Airtight.
 - 4) **<Insert manufacturer's name; product name or designation>**.
 - 5) or approved equal.
 2. Physical and Performance Properties:
 - a. Air Permeance: Maximum **[0.004 cfm/sq. ft. of surface area at 1.57-lbf/sq. ft. (0.02 L/s x sq. m of surface area at 75-Pa)] <Insert value>** pressure difference; ASTM E 2178.
 - b. Vapor Permeance: Maximum **[0.1 perm (5.8 ng/Pa x s x sq. m)] <Insert value>**; ASTM E 96/E 96M.

- c. Ultimate Elongation: Minimum **[500]** <Insert number> percent; ASTM D 412, Die C.

2.4 VAPOR-PERMEABLE MEMBRANE AIR-BARRIER

- A. Fluid-Applied, Vapor-Permeable Membrane Air Barrier: **[Elastomeric, modified bituminous]** [or] **[synthetic polymer]** membrane.

1. Products: Subject to compliance with requirements, provide one of the following:

- a. Elastomeric, Modified Bituminous Membrane:

- 1) Henry Company; Air-Bloc 07.
- 2) Hohmann & Barnard, Inc.; Textroflash Liquid VP.
- 3) Meadows, W. R., Inc.; Air-Shield LMP.
- 4) Tremco Incorporated, an RPM company; ExoAir 220R.
- 5) **<Insert manufacturer's name; product name or designation>**.
- 6) or approved equal.

- b. Synthetic Polymer Membrane:

- 1) Carlisle Coatings & Waterproofing Inc.; Barritech VP.
- 2) Grace, W. R., & Co. - Conn.; Perm-A-Barrier VP.
- 3) Henry Company; **[Air-Bloc 31]** [or] **[Air-Bloc 33]**.
- 4) Rubber Polymer Corporation, Inc.; Rub-R-Wall Airtight VP.
- 5) Tremco Incorporated, an RPM company; ExoAir 230.
- 6) **<Insert manufacturer's name; product name or designation>**.
- 7) or approved equal.

2. Physical and Performance Properties:

- a. Air Permeance: Maximum **[0.004 cfm/sq. ft. of surface area at 1.57-lbf/sq. ft. (0.02 L/s x sq. m of surface area at 75-Pa)]** <Insert value> pressure difference; ASTM E 2178.
- b. Vapor Permeance: Minimum **[10 perms (580 ng/Pa x s x sq. m)]** **[5.5 perms (320 ng/Pa x s x sq. m)]** <Insert value>; ASTM E 96/E 96M.
- c. Ultimate Elongation: Minimum **[200]** <Insert number> percent; ASTM D 412, Die C.

2.5 ACCESSORY MATERIALS

- A. General: Accessory materials recommended by air-barrier manufacturer to produce a complete air-barrier assembly and compatible with primary air-barrier material.
- B. Primer: Liquid **[waterborne]** **[solvent-borne]** primer recommended for substrate by air-barrier material manufacturer.

- C. Counterflashing Strip: Modified bituminous, **40-mil-** (1.0-mm-) thick, self-adhering sheet consisting of **32 mils** (0.8 mm) of rubberized asphalt laminated to an **8-mil-** (0.2-mm-) thick, cross-laminated polyethylene film with release liner backing.
- D. Butyl Strip: Vapor retarding, **30 to 40 mils** (0.76 to 1.0 mm) thick, self-adhering; polyethylene-film-reinforced top surface laminated to layer of butyl adhesive with release liner backing.
- E. Modified Bituminous Strip: Vapor retarding, **40 mils** (1.0 mm) thick, smooth surfaced, self-adhering; consisting of **36 mils** (0.9 mm) of rubberized asphalt laminated to a **4-mil-** (0.1-mm-) thick polyethylene film with release liner backing.
- F. Joint Reinforcing Strip: Air-barrier manufacturer's glass-fiber-mesh tape.
- G. Substrate-Patching Membrane: Manufacturer's standard trowel-grade substrate filler.
- H. Adhesive and Tape: Air-barrier manufacturer's standard adhesive and pressure-sensitive adhesive tape.
- I. Stainless-Steel Sheet: ASTM A 240/A 240M, Type 304, [**0.0187 inch (0.5 mm)**] [**0.0250 inch (0.64 mm)**] <Insert dimension> thick, and Series 300 stainless-steel fasteners.
- J. Sprayed Polyurethane Foam Sealant: One- or two-component, foamed-in-place, polyurethane foam sealant, **1.5- to 2.0-lb/cu. ft** (24- to 32-kg/cu. m) density; flame-spread index of 25 or less according to ASTM E 162; with primer and noncorrosive substrate cleaner recommended by foam sealant manufacturer.
- K. Modified Bituminous Transition Strip: Vapor retarding, **40 mils** (1.0 mm) thick, smooth surfaced, self-adhering; consisting of **36 mils** (0.9 mm) of rubberized asphalt laminated to a **4-mil-** (0.1-mm-) thick polyethylene film with release liner backing.
- L. Adhesive-Coated Transition Strip: Vapor-permeable, **17-mil-** (0.43-mm-) thick, self-adhering strip consisting of an adhesive coating over a permeable laminate with a permeance value of **37 perms** (2145 ng/Pa x s x sq. m).
- M. Elastomeric Flashing Sheet: ASTM D 2000, minimum **50- to 65-mil-** (1.3- to 1.6-mm-) thick, cured sheet neoprene with manufacturer-recommended contact adhesives and lap sealant with [**stainless-steel termination bars and fasteners**] [**aluminum termination bars and stainless-steel fasteners**] [**galvanized-steel termination bars and fasteners**].
- N. Preformed Silicone-Sealant Extrusion: Manufacturer's standard system consisting of cured low-modulus silicone extrusion, sized to fit opening widths, with a single-component, neutral-curing, Class 100/50 (low-modulus) silicone sealant for bonding extrusions to substrates.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Dow Corning Corporation; 123 Silicone Seal.
 - b. Momentive Performance Materials Inc.; US11000 UltraSpan.
 - c. Pecora Corporation; Sil-Span.

- d. Tremco Incorporated, an RPM company; Spectrem Simple Seal.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.
- O. Joint Sealant: ASTM C 920, single-component, neutral-curing silicone; Class 100/50 (low modulus), Grade NS, Use NT related to exposure, and, as applicable to joint substrates indicated, Use O. Comply with Section 079200 "Joint Sealants."
- P. Termination Mastic: Air-barrier manufacturer's standard cold fluid-applied elastomeric liquid; trowel grade.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.
- 1. Verify that substrates are sound and free of oil, grease, dirt, excess mortar, or other contaminants.
 - 2. Verify that concrete has cured and aged for minimum time period recommended by air-barrier manufacturer.
 - 3. Verify that concrete is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D 4263.
 - 4. Verify that masonry joints are flush and completely filled with mortar.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SURFACE PREPARATION

- A. Clean, prepare, treat, and seal substrate according to manufacturer's written instructions. Provide clean, dust-free, and dry substrate for air-barrier application.
- B. Mask off adjoining surfaces not covered by air barrier to prevent spillage and overspray affecting other construction.
- C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.
- D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids in concrete with substrate-patching membrane.
- E. Remove excess mortar from masonry ties, shelf angles, and other obstructions.
- F. At changes in substrate plane, apply sealant or termination mastic beads at sharp corners and edges to form a smooth transition from one plane to another.

- G. Cover gaps in substrate plane and form a smooth transition from one substrate plane to another with stainless-steel sheet mechanically fastened to structural framing to provide continuous support for air barrier.

3.3 JOINT TREATMENT

- A. Concrete and Masonry: Prepare, treat, rout, and fill joints and cracks in substrate according to ASTM C 1193 and air-barrier manufacturer's written instructions. Remove dust and dirt from joints and cracks complying with ASTM D 4258 before coating surfaces.
 - 1. Prime substrate and apply a single thickness of air-barrier manufacturer's recommended preparation coat extending a minimum of **3 inches** (75 mm) along each side of joints and cracks. Apply a double thickness of fluid air-barrier material and embed a joint reinforcing strip in preparation coat.
- B. Gypsum Sheathing: Fill joints greater than **1/4 inch** (6 mm) with sealant according to ASTM C 1193 and air-barrier manufacturer's written instructions. Apply first layer of fluid air-barrier material at joints. Tape joints with joint reinforcing strip after first layer is dry. Apply a second layer of fluid air-barrier material over joint reinforcing strip.

3.4 TRANSITION STRIP INSTALLATION

- A. General: Install strips, transition strips, and accessory materials according to air-barrier manufacturer's written instructions to form a seal with adjacent construction and maintain a continuous air barrier.
 - 1. Coordinate the installation of air barrier with installation of roofing membrane and base flashing to ensure continuity of air barrier with roofing membrane.
 - 2. Install [**butyl**] [**modified bituminous**] strip on roofing membrane or base flashing so that a minimum of **3 inches** (75 mm) of coverage is achieved over each substrate.
- B. Apply primer to substrates at required rate and allow it to dry. Limit priming to areas that will be covered by fluid air-barrier material on same day. Reprime areas exposed for more than 24 hours.
 - 1. Prime glass-fiber-surfaced gypsum sheathing with number of prime coats needed to achieve required bond, with adequate drying time between coats.
- C. Connect and seal exterior wall air-barrier material continuously to roofing-membrane air barrier, concrete below-grade structures, floor-to-floor construction, exterior glazing and window systems, glazed curtain-wall systems, storefront systems, exterior louvers, exterior door framing, and other construction used in exterior wall openings, using accessory materials.
- D. At end of each working day, seal top edge of strips and transition strips to substrate with termination mastic.

- E. Apply joint sealants forming part of air-barrier assembly within manufacturer's recommended application temperature ranges. Consult manufacturer when sealant cannot be applied within these temperature ranges.
- F. Wall Openings: Prime concealed, perimeter frame surfaces of windows, curtain walls, storefronts, and doors. Apply [**modified bituminous transition strip**] [**adhesive-coated transition strip**] [**elastomeric flashing sheet**] [**preformed silicone-sealant extrusion**] so that a minimum of **3 inches** (75 mm) of coverage is achieved over each substrate. Maintain **3 inches** (75 mm) of full contact over firm bearing to perimeter frames with not less than **1 inch** (25 mm) of full contact.
 - 1. Modified Bituminous Transition Strip: Roll firmly to enhance adhesion.
 - 2. Adhesive-Coated Transition Strip: Roll firmly to enhance adhesion.
 - 3. Elastomeric Flashing Sheet: Apply adhesive to wall, frame, and flashing sheet. Install flashing sheet and termination bars, fastened at **6 inches** (150 mm) o.c. Apply lap sealant over exposed edges and on cavity side of flashing sheet.
 - 4. Preformed Silicone-Sealant Extrusion: Set in full bed of silicone sealant applied to walls, frame, and air-barrier material.
- G. Fill gaps in perimeter frame surfaces of windows, curtain walls, storefronts, and doors, and miscellaneous penetrations of air-barrier material with foam sealant.
- H. Seal strips and transition strips around masonry reinforcing or ties and penetrations with termination mastic.
- I. Seal top of through-wall flashings to air barrier with an additional **6-inch-** (150-mm-) wide, [**modified bituminous**] [**counterflashing**] strip.
- J. Seal exposed edges of strips at seams, cuts, penetrations, and terminations not concealed by metal counterflashings or ending in reglets with termination mastic.
- K. Repair punctures, voids, and deficient lapped seams in strips and transition strips. Slit and flatten fishmouths and blisters. Patch with transition strips extending **6 inches** (150 mm) beyond repaired areas in strip direction.

3.5 FLUID AIR-BARRIER MEMBRANE INSTALLATION

- A. General: Apply fluid air-barrier material to form a seal with strips and transition strips and to achieve a continuous air barrier according to air-barrier manufacturer's written instructions. Apply fluid air-barrier material within manufacturer's recommended application temperature ranges.
 - 1. Apply primer to substrates at required rate and allow it to dry.
 - 2. Limit priming to areas that will be covered by fluid air-barrier material on same day. Reprime areas exposed for more than 24 hours.
 - 3. Prime glass-fiber-surfaced gypsum sheathing with number of prime coats needed to achieve required bond, with adequate drying time between coats.

- B. Membrane Air Barriers: Apply a continuous unbroken air-barrier membrane to substrates according to the following thickness. Apply air-barrier membrane in full contact around protrusions such as masonry ties.
1. Vapor-Retarding Membrane Air Barrier: Total **[dry film thickness as recommended in writing by manufacturer to meet performance requirements, but not less than 40-mil (1.0-mm) dry film thickness] [40-mil (1.0-mm) dry film thickness] [45-mil (1.1-mm) dry film thickness]** <Insert dimension>, applied in **[one coat] [two equal coats] [one or more equal coats]**.
 2. Vapor-Permeable Membrane Air Barrier: Total **[dry film thickness as recommended in writing by manufacturer to meet performance requirements, but not less than 40-mil (1.0-mm) dry film thickness] [40-mil (1.0-mm) dry film thickness] [45-mil (1.1-mm) dry film thickness]** <Insert dimension>, applied in **[one coat] [two equal coats] [one or more equal coats]**.
- C. Apply **[strip and transition strip a minimum of 1 inch (25 mm) onto cured air-barrier material] [or] [strip and transition strip over cured air-barrier material overlapping 3 inches (75 mm) onto each surface]** according to air-barrier manufacturer's written instructions.
- D. Do not cover air barrier until it has been tested and inspected by Owner's testing agency.
- E. Correct deficiencies in or remove air barrier that does not comply with requirements; repair substrates and reapply air-barrier components.

3.6 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
- B. Inspections: Air-barrier materials, accessories, and installation are subject to inspection for compliance with requirements. **[Inspections may include the following:]**
1. Continuity of air-barrier system has been achieved throughout the building envelope with no gaps or holes.
 2. Continuous structural support of air-barrier system has been provided.
 3. Masonry and concrete surfaces are smooth, clean, and free of cavities, protrusions, and mortar droppings.
 4. Site conditions for application temperature and dryness of substrates have been maintained.
 5. Maximum exposure time of materials to UV deterioration has not been exceeded.
 6. Surfaces have been primed, if applicable.
 7. Laps in strips and transition strips have complied with minimum requirements and have been shingled in the correct direction (or mastic has been applied on exposed edges), with no fishmouths.

8. Termination mastic has been applied on cut edges.
9. Strips and transition strips have been firmly adhered to substrate.
10. Compatible materials have been used.
11. Transitions at changes in direction and structural support at gaps have been provided.
12. Connections between assemblies (air-barrier and sealants) have complied with requirements for cleanliness, surface preparation and priming, structural support, integrity, and continuity of seal.
13. All penetrations have been sealed.

C. Tests: As determined by Owner's testing agency from among the following tests:

1. Qualitative Air-Leakage Testing: Air-barrier assemblies will be tested for evidence of air leakage according to **[ASTM E 1186, smoke pencil with pressurization or depressurization]** **[ASTM E 1186, chamber pressurization or depressurization with smoke tracers]** **[ASTM E 1186, chamber depressurization using detection liquids]**.
2. Quantitative Air-Leakage Testing: Air-barrier assemblies will be tested for air leakage according to **[ASTM E 783]** **<Insert test>**.
3. Adhesion Testing: Air-barrier assemblies will be tested for minimum air-barrier adhesion of **[30 lbf/sq. in. (207 kPa)]** **<Insert value>** according to ASTM D 4541 for each **[600 sq. ft. (56 sq. m)]** **<Insert value>** of installed air barrier or part thereof.

D. Air barriers will be considered defective if they do not pass tests and inspections.

1. Apply additional air-barrier material, according to manufacturer's written instructions, where inspection results indicate insufficient thickness.
2. Remove and replace deficient air-barrier components for retesting as specified above.

E. Repair damage to air barriers caused by testing; follow manufacturer's written instructions.

3.7 CLEANING AND PROTECTION

A. Protect air-barrier system from damage during application and remainder of construction period, according to manufacturer's written instructions.

1. Protect air barrier from exposure to UV light and harmful weather exposure as required by manufacturer. If exposed to these conditions for more than **[30]** **[60]** **<Insert number>** days, remove and replace air barrier or install additional, full-thickness, air-barrier application after repairing and preparing the overexposed membrane according to air-barrier manufacturer's written instructions.
2. Protect air barrier from contact with incompatible materials and sealants not approved by air-barrier manufacturer.

- B. Clean spills, stains, and soiling from construction that would be exposed in the completed work using cleaning agents and procedures recommended by manufacturer of affected construction.
- C. Remove masking materials after installation.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 072726

SECTION 072729 - AIR-BARRIER COATINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes [**vapor-retarding**] [**and**] [**vapor-permeable**] air-barrier coatings.
- B. Related Requirements:
 - 1. Section 061600 "Sheathing" for wall sheathings and wall sheathing joint-and-penetration treatments.
 - 2. Section 072500 "Weather Barriers" for weather barriers, including [**building paper**] [**flexible flashing**] [**and**] [**building wraps with air-barrier properties**].
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

- A. Air-Barrier Material: A primary element that provides a continuous barrier to the movement of air.
- B. Air-Barrier Accessory: A transitional component of the air barrier that provides continuity.
- C. Air-Barrier Assembly: The collection of air-barrier materials and accessory materials applied to an opaque wall, including joints and junctions to abutting construction, to control air movement through the wall.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at [**Project site**] [**location and time as determined by DEN Project Manager**] <Insert location>
 - 1. Review air-barrier requirements and installation, special details, mockups, air-leakage and bond testing, air-barrier protection, and work scheduling that covers air barriers.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include manufacturer's written instructions for evaluating, preparing, and treating substrate; technical data; and tested physical and performance properties of products.
 - 2. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Credit IEQ 4.2: For air-barrier products, documentation including printed statement of VOC content.
 - 2. Laboratory Test Reports for Credit IEQ 4: For air barriers, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: For air-barrier assemblies.
 - 1. Show locations and extent of air barrier. Include details for substrate joints and cracks, counterflashing, penetrations, inside and outside corners, terminations, and tie-ins with adjoining construction.
 - 2. Include details of interfaces with other materials that form part of air barrier.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer. [**Include list of ABAA-certified installers and supervisors employed by the Installer, who work on Project.**]
- B. Product Certificates: From air-barrier manufacturer, certifying compatibility of air barriers and accessory materials with Project materials that connect to or that come in contact with the barrier.
- C. Product Test Reports: For each air-barrier assembly, for tests performed by a qualified testing agency.

1.7 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

1. A firm that has specialized in installation of types of products required for Project for not less than five (5) years and which is acceptable to manufacturer(s) of primary materials.
 2. Installer shall be licensed by ABAA according to ABAA's Quality Assurance Program and shall employ ABAA-certified installers and supervisors on Project.
- B. Mockups: Build mockups to set quality standards for materials and execution[**and for preconstruction testing**].
1. Build integrated mockups of exterior wall assembly [**as shown on Drawings**] [, **150 sq. ft. (14 sq. m)**] **<Insert area or dimensions>**, incorporating backup wall construction, external cladding, window, storefront, door frame and sill, insulation, ties and other penetrations, and flashing to demonstrate surface preparation, crack and joint treatment, application of air barriers, and sealing of gaps, terminations, and penetrations of air-barrier assembly.
 - a. Coordinate construction of mockups to permit inspection by Owner's testing agency of air barrier before external insulation and cladding are installed.
 - b. Include junction with roofing membrane[, **building corner condition,**] [**and foundation wall intersection**].
 - c. If DEN Project Manager determines mockups do not comply with requirements, reconstruct mockups and apply air barrier until mockups are approved.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 PRECONSTRUCTION TESTING

- A. Preconstruction Testing Service: Owner will engage a qualified testing agency to perform preconstruction testing on field mockups.
- B. Mockup Testing: Air-barrier assemblies shall comply with performance requirements indicated, as evidenced by reports based on mockup testing by a qualified testing agency.
1. Qualitative Air-Leakage Testing: Mockups will be tested for evidence of air leakage according to [**ASTM E 1186, chamber pressurization or depressurization with smoke tracers**] [**ASTM E 1186, chamber depressurization with detection liquids**] **<Insert requirement>**.
 2. Quantitative Air-Leakage Testing: Mockups will be tested for air leakage according to [**ASTM E 783**] **<Insert test>**.
 3. Adhesion Testing: Mockups will be tested for minimum air-barrier adhesion of [**30 lbf/sq. in. (207 kPa)**] **<Insert value>** according to ASTM D 4541.

4. Notify DEN Project Manager [**seven**] <Insert number> days in advance of the dates and times when mockups will be tested.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Remove and replace liquid materials that cannot be applied within their stated shelf life.
- B. Protect stored materials from direct sunlight.

1.11 FIELD CONDITIONS

- A. Environmental Limitations: Apply air barrier within the range of ambient and substrate temperatures recommended by air-barrier manufacturer.
 1. Protect substrates from environmental conditions that affect air-barrier performance.
 2. Do not apply air barrier to a damp or wet substrate or during snow, rain, fog, or mist.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

- A. Source Limitations: Obtain primary air-barrier materials and air-barrier accessories from single source from single manufacturer.
- B. VOC Content: [**250**] <Insert value> g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24) and complying with VOC content limits of authorities having jurisdiction.
- C. Low-Emitting Materials: Air barriers shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.2 PERFORMANCE REQUIREMENTS

- A. General: Air barrier shall be capable of performing as a continuous vapor-[**retarding**]

[permeable] air barrier[**and as a liquid-water drainage plane flashed to discharge to the exterior incidental condensation or water penetration**]. Air-barrier assemblies shall be capable of accommodating substrate movement and of sealing substrate expansion and control joints, construction material changes, penetrations[, **tie-ins to installed waterproofing**], and transitions at perimeter conditions without deterioration and air leakage exceeding specified limits.

- B. Air-Barrier Assembly Air Leakage: Maximum **[0.04 cfm/sq. ft. of surface area at 1.57 lbf/sq. ft. (0.2 L/s x sq. m of surface area at 75 Pa)]** <Insert value>, when tested according to **[ASTM E 283] [ASTM E 783] [or] [ASTM E 2357]** <Insert test>.

2.3 VAPOR-RETARDING, AIR-BARRIER COATING

- A. Vapor-Retarding, Air-Barrier Coating: Synthetic polymer membrane.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Protective Coatings Technology, Inc.; Poly-Wall Airloc Flex.
 - b. Sto Corp.; VaporSeal in [**two-**] [**three-**]component assembly.
 - c. <Insert manufacturer's name; product name or designation>.
 - d. or approved equal.
2. Physical and Performance Properties:
 - a. Air Permeance: Maximum **[0.004 cfm/sq. ft. of surface area at 1.57-lbf/sq. ft. (0.02 L/s x sq. m of surface area at 75-Pa)]** <Insert value> pressure difference; ASTM E 2178.
 - b. Vapor Permeance: Maximum **[0.1 perm (5.8 ng/Pa x s x sq. m)]** <Insert value>; ASTM E 96/E 96M.
 - c. Ultimate Elongation: Minimum **[140]** <Insert number> percent; ASTM D 412, Die C.

2.4 VAPOR-PERMEABLE, AIR-BARRIER COATING

- A. Vapor-Permeable, Air-Barrier Coating: Synthetic polymer membrane.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Prosoco, Inc.; [**R-Guard Spray Wrap in two-component, System II**] [**R-Guard Spray Wrap in three-component, System I**] [**R-Guard MVP in two-component, System II**] [**R-Guard MVP in three-component, System I**] assembly.
 - b. Protective Coatings Technology, Inc.; Poly-Wall Airloc Flex VP.
 - c. Sto Corp.; [**Emerald Coat**] [or] [**Gold Coat**] in [**two-**] [**three-**]component assembly.
 - d. <Insert manufacturer's name; product name or designation>.
 - e. or approved equal.
2. Physical and Performance Properties:

- a. Air Permeance: Maximum [**0.004 cfm/sq. ft. of surface area at 1.57-lbf/sq. ft. (0.02 L/s x sq. m of surface area at 75-Pa)**] <Insert value> pressure difference; ASTM E 2178.
- b. Vapor Permeance: Minimum [**5.7 perms (327 ng/Pa x s x sq. m)**] <Insert value>; ASTM E 96/E 96M.
- c. Ultimate Elongation: Minimum [**500**] <Insert number> percent; ASTM D 412, Die C.

2.5 ACCESSORY MATERIALS

- A. General: Accessory materials recommended by air-barrier manufacturer to produce a complete air-barrier assembly and compatible with primary air-barrier material.
- B. Primer: Liquid [**waterborne**] [**solvent-borne**] primer recommended for substrate by air-barrier material manufacturer.
- C. Butyl Strip: Vapor retarding, **30 to 40 mils** (0.76 to 1.0 mm) thick, self-adhering; polyethylene-film-reinforced top surface laminated to layer of butyl adhesive with release liner backing.
- D. Joint Reinforcing Fabric: Air-barrier manufacturer's nonwoven, reinforcement fabric.
- E. Joint Reinforcing Strip: Air-barrier manufacturer's self-adhering glass-fiber-mesh tape.
- F. Substrate-Patching Membrane: Manufacturer's standard trowel-grade substrate filler.
- G. Adhesive and Tape: Air-barrier manufacturer's standard adhesive and pressure-sensitive adhesive tape.
- H. Stainless-Steel Sheet: ASTM A 240/A 240M, Type 304, [**0.0187 inch (0.5 mm)**] [**0.0250 inch (0.64 mm)**] <Insert dimension> thick, and Series 300 stainless-steel fasteners.
- I. Sprayed Polyurethane Foam Sealant: One- or two-component, foamed-in-place, polyurethane foam sealant, **1.5- to 2.0-lb/cu. ft** (24- to 32-kg/cu. m) density; flame-spread index of 25 or less according to ASTM E 162; with primer and noncorrosive substrate cleaner recommended by foam sealant manufacturer.
- J. Modified Bituminous Transition Strip: Vapor retarding, **40 mils** (1.0 mm) thick, smooth surfaced, self-adhering; consisting of **36 mils** (0.9 mm) of rubberized asphalt laminated to a **4-mil-** (0.1-mm-) thick polyethylene film with release liner backing.
- K. Elastomeric Flashing Sheet: ASTM D 2000, minimum **50- to 65-mil-** (1.3- to 1.6-mm-) thick, cured sheet neoprene with manufacturer-recommended contact adhesives and lap sealant with [**stainless-steel termination bars and fasteners**] [**aluminum termination bars and stainless-steel fasteners**] [**galvanized-steel termination bars and fasteners**].
- L. Preformed Silicone-Sealant Extrusion: Manufacturer's standard system consisting of cured low-modulus silicone extrusion, sized to fit opening widths, with a

single-component, neutral-curing, Class 100/50 (low-modulus) silicone sealant for bonding extrusions to substrates.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Dow Corning Corporation; 123 Silicone Seal.
 - b. Momentive Performance Materials Inc.; US11000 UltraSpan.
 - c. Pecora Corporation; Sil-Span.
 - d. Tremco Incorporated, an RPM company; Spectrem Simple Seal.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.
- M. Joint Sealant: ASTM C 920, single-component, neutral-curing silicone; Class 100/50 (low modulus), Grade NS, Use NT related to exposure, and, as applicable to joint substrates indicated, Use O. Comply with Section 079200 "Joint Sealants."
- N. Termination Mastic: Air-barrier manufacturer's standard cold fluid-applied elastomeric liquid; trowel grade.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.
 1. Verify that substrates are sound and free of oil, grease, dirt, excess mortar, or other contaminants.
 2. Verify that concrete has cured and aged for minimum time period recommended by air-barrier manufacturer.
 3. Verify that concrete is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D 4263.
 4. Verify that masonry joints are flush and completely filled with mortar.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SURFACE PREPARATION

- A. Clean, prepare, treat, and seal substrate according to manufacturer's written instructions. Provide clean, dust-free, and dry substrate for air-barrier application.
- B. Mask off adjoining surfaces not covered by air barrier to prevent spillage and overspray affecting other construction.
- C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.

- D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids in concrete with substrate-patching membrane.
- E. Remove excess mortar from masonry ties, shelf angles, and other obstructions.
- F. At changes in substrate plane, apply sealant or termination mastic beads at sharp corners and edges to form a smooth transition from one plane to another.
- G. Cover gaps in substrate plane and form a smooth transition from one substrate plane to another with stainless-steel sheet mechanically fastened to structural framing to provide continuous support for air barrier.

3.3 JOINT TREATMENT

- A. Concrete and Masonry: Prepare, treat, rout, and fill joints and cracks in substrate according to ASTM C 1193 and air-barrier manufacturer's written instructions. Remove dust and dirt from joints and cracks complying with ASTM D 4258 before coating surfaces.
 - 1. Prime substrate and apply a single thickness of air-barrier manufacturer's recommended preparation coat extending a minimum of **3 inches** (75 mm) along each side of joints and cracks. Apply a double thickness of air-barrier coating material and embed joint reinforcing in preparation coat.
- B. Gypsum Sheathing: Fill joints greater than **1/4 inch** (6 mm) with sealant according to ASTM C 1193 and air-barrier manufacturer's written instructions. Apply first layer of air-barrier coating material at joints. Tape joints with joint reinforcing after first layer is dry. Apply a second layer of air-barrier coating material over joint reinforcing.

3.4 TRANSITION STRIP INSTALLATION

- A. General: Install strips, transition strips, and accessory materials according to air-barrier manufacturer's written instructions to form a seal with adjacent construction and maintain a continuous air barrier.
 - 1. Coordinate the installation of air barrier with installation of roofing membrane and base flashing to ensure continuity of air barrier with roofing membrane.
 - 2. Install [**butyl**] [**modified bituminous transition**] strip on roofing membrane or base flashing so that a minimum of **3 inches** (75 mm) of coverage is achieved over each substrate.
- B. Apply primer to substrates at required rate and allow it to dry. Limit priming to areas that will be covered by air-barrier coating material on same day. Reprime areas exposed for more than 24 hours.
 - 1. Prime glass-fiber-surfaced gypsum sheathing with number of prime coats needed to achieve required bond, with adequate drying time between coats.
- C. Connect and seal exterior wall air-barrier material continuously to roofing-membrane

air barrier, concrete below-grade structures, floor-to-floor construction, exterior glazing and window systems, glazed curtain-wall systems, storefront systems, exterior louvers, exterior door framing, and other construction used in exterior wall openings, using accessory materials.

- D. At end of each working day, seal top edge of strips and transition strips to substrate with termination mastic.
- E. Apply joint sealants forming part of air-barrier assembly within manufacturer's recommended application temperature ranges. Consult manufacturer when sealant cannot be applied within these temperature ranges.
- F. Wall Openings: Prime concealed, perimeter frame surfaces of windows, curtain walls, storefronts, and doors. Apply [**modified bituminous transition strip**] [**elastomeric flashing sheet**] [**preformed silicone-sealant extrusion**] so that a minimum of **3 inches** (75 mm) of coverage is achieved over each substrate. Maintain **3 inches** (75 mm) of full contact over firm bearing to perimeter frames with not less than **1 inch** (25 mm) of full contact.
 - 1. Modified Bituminous Transition Strip: Roll firmly to enhance adhesion.
 - 2. Elastomeric Flashing Sheet: Apply adhesive to wall, frame, and flashing sheet. Install flashing sheet and termination bars, fastened at **6 inches** (150 mm) o.c. Apply lap sealant over exposed edges and on cavity side of flashing sheet.
 - 3. Preformed Silicone-Sealant Extrusion: Set in full bed of silicone sealant applied to walls, frame, and air-barrier material.
- G. Fill gaps in perimeter frame surfaces of windows, curtain walls, storefronts, and doors, and miscellaneous penetrations of air-barrier material with foam sealant.
- H. Seal strips and transition strips around masonry reinforcing or ties and penetrations with termination mastic.
- I. Seal exposed edges of strips at seams, cuts, penetrations, and terminations not concealed by metal counterflashings or ending in reglets with termination mastic.
- J. Repair punctures, voids, and deficient lapped seams in strips and transition strips. Slit and flatten fishmouths and blisters. Patch with transition strips extending **6 inches** (150 mm) beyond repaired areas in strip direction.

3.5 AIR-BARRIER COATING INSTALLATION

- A. General: Apply air-barrier coating to form a seal with strips and transition strips and to achieve a continuous air barrier according to air-barrier manufacturer's written instructions. Apply air-barrier coating within manufacturer's recommended application temperature ranges.
 - 1. Apply primer to substrates at required rate and allow it to dry.
 - 2. Limit priming to areas that will be covered by air-barrier coating on same day. Reprime areas exposed for more than 24 hours.

3. Prime glass-fiber-surfaced gypsum sheathing with number of prime coats needed to achieve required bond, with adequate drying time between coats.
- B. Air-Barrier Coatings: Apply a continuous unbroken air-barrier coating to substrates according to the following thickness. Apply an increased thickness of air-barrier coating in full contact around protrusions such as masonry ties.
1. Vapor-Retarding, Air-Barrier Coating: Total **[dry film thickness as recommended in writing by manufacturer to meet performance requirements] [17-mil (0.4-mm) dry film thickness] [20-mil (0.5-mm) dry film thickness]** <Insert dimension>, applied in **[one coat] [two equal coats] [one or more equal coats]**.
 2. Vapor-Permeable, Air-Barrier Coating: Total **[dry film thickness as recommended in writing by manufacturer to meet performance requirements] [14-mil (0.4-mm) dry film thickness]** <Insert dimension>, applied in **[one coat] [two equal coats] [one or more equal coats]**.
 3. Apply additional coats as needed to achieve void- and pinhole-free surface.
- C. Apply **[strip and transition strip a minimum of 1 inch (25 mm) onto cured air-barrier material] [or] [strip and transition strip over cured air-barrier material overlapping 3 inches (75 mm) onto each surface]** according to air-barrier manufacturer's written instructions.
- D. Do not cover air barrier until it has been tested and inspected by Owner's testing agency.
- E. Correct deficiencies in or remove air barrier that does not comply with requirements; repair substrates and reapply air-barrier components.
- 3.6 FIELD QUALITY CONTROL
- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
- B. Inspections: Air-barrier materials, accessories, and installation are subject to inspection for compliance with requirements. **[Inspections may include the following:]**
1. Continuity of air-barrier system has been achieved throughout the building envelope with no gaps or holes.
 2. Continuous structural support of air-barrier system has been provided.
 3. Masonry and concrete surfaces are smooth, clean, and free of cavities, protrusions, and mortar droppings.
 4. Site conditions for application temperature and dryness of substrates have been maintained.
 5. Maximum exposure time of materials to UV deterioration has not been exceeded.
 6. Surfaces have been primed, if applicable.

7. Laps in strips and transition strips have complied with minimum requirements and have been shingled in the correct direction (or mastic has been applied on exposed edges), with no fishmouths.
8. Termination mastic has been applied on cut edges.
9. Strips and transition strips have been firmly adhered to substrate.
10. Compatible materials have been used.
11. Transitions at changes in direction and structural support at gaps have been provided.
12. Connections between assemblies (air-barrier and sealants) have complied with requirements for cleanliness, surface preparation and priming, structural support, integrity, and continuity of seal.
13. All penetrations have been sealed.

C. Tests: As determined by Owner's testing agency from among the following tests:

1. Qualitative Air-Leakage Testing: Air-barrier assemblies will be tested for evidence of air leakage according to **[ASTM E 1186, smoke pencil with pressurization or depressurization]** **[ASTM E 1186, chamber pressurization or depressurization with smoke tracers]** **[ASTM E 1186, chamber depressurization using detection liquids]**.
2. Quantitative Air-Leakage Testing: Air-barrier assemblies will be tested for air leakage according to **[ASTM E 783]** **<Insert test>**.
3. Adhesion Testing: Air-barrier assemblies will be tested for minimum air-barrier adhesion of **[30 lbf/sq. in. (207 kPa)]** **<Insert value>** according to ASTM D 4541 for each **[600 sq. ft. (56 sq. m)]** **<Insert value>** of installed air barrier or part thereof.

D. Air barriers will be considered defective if they do not pass tests and inspections.

1. Apply additional air-barrier material, according to manufacturer's written instructions, where inspection results indicate insufficient thickness.
2. Remove and replace deficient air-barrier components for retesting as specified above.

E. Repair damage to air barriers caused by testing; follow manufacturer's written instructions.

3.7 CLEANING AND PROTECTION

A. Protect air-barrier system from damage during application and remainder of construction period, according to manufacturer's written instructions.

1. Protect air barrier from exposure to UV light and harmful weather exposure as required by manufacturer. If exposed to these conditions for more than **[30]** **[60]** **<Insert number>** days, remove and replace air barrier or install additional, full-thickness, air-barrier application after repairing and preparing the overexposed membrane according to air-barrier manufacturer's written instructions.

2. Protect air barrier from contact with incompatible materials and sealants not approved by air-barrier manufacturer.
- B. Clean spills, stains, and soiling from construction that would be exposed in the completed work using cleaning agents and procedures recommended by manufacturer of affected construction.
 - C. Remove masking materials after installation.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 072729

SECTION 073116 - METAL SHINGLES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Metal-shingle panels.
2. Individual metal shingles.
3. Underlayment.
4. Ridge vents.
5. Snow guards.

B. Related Sections:

1. Section 061600 "Sheathing" for [**sheathing**] [**substrate board**] [**and**] [**building wrap**].
2. Section 072100 "Thermal Insulation" for roof insulation and sheet vapor retarders separate from self-adhering underlayments.
3. Section 074113.13 "Formed Metal Roof Panels" for factory-formed horizontal-seam (Bermuda-type) metal roof panels.
4. Section 074113.16 "Standing-Seam Metal Roof Panels" for factory-formed standing-seam metal roof panels.
5. Section 074113.19 "Batten-Seam Metal Roof Panels" for factory-formed batten-seam metal roof panels.
6. [**Section 076200 "Sheet Metal Flashing and Trim"**] [**Section 077100 "Roof Specialties"**] for gutters, downspouts, reglets, and counterflashings.
7. Section 077200 "Roof Accessories" for roof ventilators and accessories.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Roofing Terminology: See ASTM D 1079 and glossary in NRCA's "The NRCA Roofing and Waterproofing Manual" for definitions of terms related to roofing work in this Section.

1.4 PERFORMANCE REQUIREMENTS

- A. General Performance: Metal shingles shall withstand exposure to weather and resist thermally induced movement without failure, rattling, leaking, or fastener disengagement due to defective manufacture, fabrication, installation, or other defects in construction.
- B. Wind-Uplift Resistance: Provide metal-shingle assemblies that comply with the following wind-uplift requirements.
 - 1. Class: [15] [30] [60] [90] when tested according to UL 580.
 - 2. Uplift Resistance: [75 lbf/sq. ft. (3.6 kPa)] [120 lbf/sq. ft. (5.75 kPa)] [165 lbf/sq. ft. (7.9 kPa)] <Insert value> when tested according to UL 1897.
- C. Impact Resistance: [Class 3] [Class 4] <Insert value> when tested according to UL 2218.
- D. Solar Reflectance Index: Not less than 29 when calculated according to ASTM E 1980, based on testing identical products by a qualified testing agency.
- E. Energy Performance, ENERGY STAR: Provide roofing system that is listed on the DOE's "Roof Products Qualified Product List" for steep-slope roof products.
- F. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each manufactured product and accessory.
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Test Reports for Credit SS 7.2: For metal shingles, documentation indicating compliance with Solar Reflectance Index requirement.
 - 2. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
- C. Shop Drawings: For metal shingles. Show roof plans[**and wall elevations**]; sections at hips, gables, ridges, valleys, and eaves; details of metal shingles, flashing, trim, and accessories; and attachments to other work.
- D. Samples for Initial Selection: For each type of metal shingle and accessory indicated with factory-applied color finishes.

- E. Samples for Verification: Full-size components of each type of metal shingle indicated, including visible accessories.

1.6 INFORMATIONAL SUBMITTALS

- A. Product Test Reports: Based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency or performed by a qualified testing agency, for metal shingles, demonstrating compliance with requirements specified in "Performance Requirements" Article.
- B. Warranty: Sample of special warranties.

1.7 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials from the same production run that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Metal Shingles: [100 sq. ft. (9.3 sq. m)] <Insert dimension> of exposed area, in each type and color, in unbroken bundles.

1.9 QUALITY ASSURANCE

- A. Source Limitations: Obtain metal shingles from single source from single manufacturer.
- B. Installer: A firm which has specialized in installation of types of products required for Project for not less than five (5) years and which is acceptable to manufacturer(s) of primary materials.
- C. Fire-Test Exposure Rating: [Class A] [Class B] [Class C]; for application and roof slopes indicated, as determined by testing identical products per test method UL 790 or ASTM E 108 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.
- D. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects.
 - 1. Build mockups of metal shingles, including related roofing materials.

- a. Size: **[48 inches (1200 mm) long by 96 inches (2400 mm) wide]** <Insert dimensions>.
 - b. Include gutter and downspout complying with requirements in Section 076200 "Sheet Metal Flashing and Trim."
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
 3. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
 - E. Preinstallation Conference: Conduct conference at **[Project site]** **[location and time as determined by DEN Project Manager]**<Insert location>.
- 1.10 DELIVERY, STORAGE, AND HANDLING
- A. Do not store metal-shingle materials in contact with other materials that might cause staining, denting, or other surface damage. Store metal-shingle materials away from uncured concrete and masonry.
 - B. Protect strippable protective covering on metal shingles from exposure to sunlight and high humidity, except to the extent necessary for the period of metal-shingle installation.
- 1.11 PROJECT CONDITIONS
- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing to be performed according to manufacturer's written instructions and warranty requirements.
 1. Install self-adhering sheet underlayment within the range of ambient and substrate temperatures recommended by manufacturer.
- 1.12 WARRANTY
- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace metal shingles and accessories that fail in materials within specified warranty period.
 1. Failures include, but are not limited to, the following:
 - a. Structural failures including wind uplift.
 - b. Water penetration[**and hail perforation**].
 - c. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
 - d. **<Insert failure modes>**.

2. Materials-Only Warranty Period: Minimum **[15] [25] [50]** <Insert number> years from date of Substantial Completion.
- B. Special Project Warranty: Roofing Installer's Warranty, on warranty form at end of this Section, signed by roofing Installer, covering Work of this Section, in which Installer agrees to repair or replace components of roofing that fail in materials or workmanship within the following warranty period:
 1. Warranty Period: Minimum **[Two] [Five]** <Insert number> years from date of Substantial Completion.
- C. Special Warranty on Painted Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal shingles that show evidence of deterioration of factory-applied finishes within specified warranty period.
 1. Fluoropolymer Finish: Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 2. Warranty Period: Minimum **[10] [20]** <Insert number> years from date of Substantial Completion.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 SHEET METAL MATERIALS

- A. Recycled Content of Sheet Metal Materials: Postconsumer recycled content plus one-half of preconsumer recycled content not less than <Insert number> percent by weight.
- B. Aluminum Sheet: [ASTM B 209](#) (ASTM B 209M), alloy as standard with manufacturer for finish required, with temper to suit forming operations and performance required.
 1. Mill Finish: Uncoated aluminum sheet.
 2. High-Performance Organic Coating (Coil-Coated Finishes): Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

- a. Two-Coat Fluoropolymer: AAMA 620. System consisting of primer and fluoropolymer color topcoat containing not less than 70 percent PVDF resin by weight.
 - b. Three-Coat Fluoropolymer: AAMA 620. System consisting of primer, fluoropolymer color coat, and clear fluoropolymer topcoat, with both color coat and clear topcoat containing not less than 70 percent PVDF resin by weight.
 - c. Concealed Surface: Pretreat with manufacturer's standard white or light-colored acrylic or polyester backer finish consisting of prime coat and wash coat and with a minimum total dry film thickness of **0.5 mil (0.013 mm)**.
- C. Aluminum-Zinc Alloy-Coated Steel Sheet: ASTM A 792/A 792M, **Class AZ50 coating designation, Grade 37** (Class AZM150 coating designation, Grade 255); structural quality.
1. Mill Finish: Satin-finish, aluminum-zinc alloy-coated steel sheet without additional coating.
 2. Granular-Coating Finish: Entire upper surface of shingle, including flange edges, coated with ceramic-colored quartz granules or crushed stone chips bonded to shingle with a resin adhesive and sealed with a clear overglaze.
- D. Zinc-Coated (Galvanized) Steel Sheet: ASTM A 653/A 653M, **G90 (Z275)** coating designation; structural quality.
1. Mill Finish: Zinc-coated (galvanized) steel sheet [**without additional coating**] [**with manufacturer's standard mill-phosphatized finish**].
 2. High-Performance Organic Coating, (Coil-Coated Finishes): Prepainted by the coil-coating process to comply with ASTM A 755/A 755M. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - a. Two-Coat Fluoropolymer: AAMA 621. System consisting of primer and fluoropolymer color topcoat containing not less than 70 percent PVDF resin by weight.
 - b. Three-Coat Fluoropolymer: AAMA 621. System consisting of primer, fluoropolymer color coat, and clear fluoropolymer topcoat, with both color coat and clear topcoat containing not less than 70 percent PVDF resin by weight.
- E. Copper Sheet: ASTM B 370; Temper H00, cold rolled, unless Temper 060 is required for forming.
1. Mill Finish: Nonpatinated and exposed.
 2. Pre-Patinated Finish: [**Dark brown**] [**Verdigris**] <Insert color>, pre-patinated according to ASTM B 882.
- F. Zinc-Alloy Sheet: [**Alloy of 99.995 percent pure electrolytic high-grade zinc with alloy additives of copper (0.08 to 0.20 percent), titanium (0.07 to 0.12 percent), and aluminum (0.015 percent)**] [**Zinc alloy consisting of 99 percent pure zinc with 0.08 to 1.00 percent copper, 0.06 to 0.20 percent titanium, and up to 0.015**

percent aluminum]; with manufacturer's standard factory-applied, flexible, protective back coating.

1. Bright-Rolled Finish: Uncoated, bright-rolled zinc-alloy sheet.
2. Preweathered Finish: Factory-applied preweathering to uniform color.

2.2 METAL SHINGLES

A. Aluminum Shingles: Factory-formed, interlocking [**shingle panels**] [**individual shingles**].

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [ATAS International, Inc.](#)
- b. [Classic Metal Roofing Systems.](#)
- c. [Custom-Bilt Metals Inc.](#)
- d. [Paradigm Shingles, Inc.](#)
- e. [Reinke Shakes; Div. of Jame Kari LLC.](#)
- f. [Zappone Manufacturing.](#)
- g. <Insert manufacturer's name>.
- h. or approved equal.

2. Shingle Panels: Stamped panels resembling multiple [**shakes**] [**shingles**] [**Spanish tiles**] [**flat tiles**] [**scalloped tiles**] <Insert description>.

- a. Material: Formed aluminum, [**0.020 inch (0.51 mm) thick**] [**0.032 inch (0.81 mm) thick**] [**thickness as needed to meet performance requirements**] <Insert thickness>.
- b. Reinforcement: Manufacturer's standard insert material in units to increase rigidity.
- c. Exposure: [**48 by 12 inches (1219 by 305 mm)**] <Insert dimensions>.
- d. Finish: [**Mill**] [**High-performance organic coating**].
- e. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.

3. Individual Shingles: [**Rectangular**] [**Diamond**] shingle units.

- a. Material: Formed aluminum, [**0.020 inch (0.51 mm) thick**] [**0.032 inch (0.81 mm) thick**] [**thickness as needed to meet performance requirements**] <Insert thickness>.
- b. Reinforcement: Manufacturer's standard insert material in units to increase rigidity.
- c. Exposure: [**14 by 14 inches (356 by 356 mm)**] <Insert dimensions>.
- d. Finish: [**Mill**] [**High-performance organic coating**].
- e. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.

- B. Steel Shingles: Factory-formed, interlocking [**shingle panels**] [**individual shingles**].
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [ATAS International, Inc.](#)
 - b. [Berridge Manufacturing Company.](#)
 - c. [Classic Metal Roofing Systems.](#)
 - d. [Custom-Bilt Metals Inc.](#)
 - e. [Decra Roofing Systems, Inc.:](#) a Fletcher Building company.
 - f. [Dura-Loc Roofing Systems Limited;](#) a division of Metals USA Building Products Canada Inc.
 - g. [Gerard Roofing Technologies, Inc.:](#) a Metals USA company.
 - h. [Metro Roof Products.](#)
 - i. [Met-Tile, Inc.](#)
 - j. [Millennium Tiles LLC.](#)
 - k. [Paradigm Shingles, Inc.](#)
 - l. [TAMKO Building Products Inc.](#)
 - m. <Insert manufacturer's name>.
 - n. or approved equal.
 2. Shingle Panels: Stamped panels resembling multiple [**shakes**] [**shingles**] [**Spanish tiles**] [**flat tiles**] [**scalloped tiles**] <Insert description>.
 - a. Material: [**Aluminum-zinc alloy-coated**] [**Zinc-coated (galvanized)**] steel sheet, nominal [**0.022 inch (0.56 mm) thick**] [**0.028 inch (0.71 mm) thick**] [**thickness as needed to meet performance requirements**] <Insert thickness>.
 - b. Exposure: [**47-1/4 by 15-13/16 inches (1200 by 402 mm)**] <Insert dimensions>.
 - c. Finish: [**Mill**] [**Granular coating**] [**High-performance organic coating**].
 - d. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
 3. Individual Shingles: Rectangular shingle units.
 - a. Material: [**Aluminum-zinc alloy coated**] [**Zinc-coated (galvanized)**] steel sheet, nominal [**0.022 inch (0.56 mm) thick**] [**0.028 inch (0.71 mm) thick**] [**thickness as needed to meet performance requirements**] <Insert thickness>.
 - b. Exposure: [**9 by 12 inches (229 by 305 mm)**] <Insert dimensions>.
 - c. Finish: [**Mill**] [**Granular coating**] [**High-performance organic coating**].
 - d. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
- C. Copper Shingles: Factory-formed, interlocking [**shingle panels**] [**individual shingles**].

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [ATAS International, Inc.](#)
 - b. [Classic Metal Roofing Systems.](#)
 - c. [Custom-Bilt Metals Inc.](#)
 - d. [Dura-Loc Roofing Systems Limited; a division of Metals USA Building Products Canada Inc.](#)
 - e. [Paradigm Shingles, Inc.](#)
 - f. [Reinke Shakes; Div. of Jame Kari LLC.](#)
 - g. [Zappone Manufacturing.](#)
 - h. **<Insert manufacturer's name>.**
 - i. or approved equal.

2. Shingle Panels: Stamped panels resembling multiple [**shakes**] [**shingles**] **<Insert description>.**
 - a. Material: Copper sheet, [**12 oz./sq. ft. (0.41 mm thick)**] [**16 oz./sq. ft. (0.55 mm thick)**] [**weight (thickness) as needed to meet performance requirements**] **<Insert weight (thickness)>.**
 - b. Exposure: [**33-1/4 by 10 inches (845 by 254 mm)**] **<Insert dimensions>.**
 - c. Finish: [**Mill**] [**Pre-patinated dark brown**] [**Pre-patinated verdigris**] **<Insert finish>.**

3. Individual Shingles: [**Rectangular**] [**Diamond**] shingle units.
 - a. Material: Copper sheet, [**12 oz./sq. ft. (0.41 mm thick)**] [**16 oz./sq. ft. (0.55 mm-thick)**] [**weight (thickness) as needed to meet performance requirements**] **<Insert weight (thickness)>.**
 - b. Exposure: [**9-1/2 by 7-1/4 inches (241 by 184 mm)**] **<Insert dimensions>.**
 - c. Finish: [**Mill**] [**Pre-patinated dark brown**] [**Pre-patinated verdigris**] **<Insert finish>.**

- D. Zinc Shingles: Factory-formed, interlocking [**shingle panels**] [**individual shingles**].
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [ATAS International, Inc.](#)
 - b. [Dura-Loc Roofing Systems Limited; a division of Metals USA Building Products Canada Inc.](#)
 - c. [Rheinzink America Inc.](#)
 - d. [Umicore Building Products USA, Inc.](#)
 - e. **<Insert manufacturer's name>.**
 - f. or approved equal.

 2. Shingle Panels: Stamped panels resembling multiple [**shakes**] [**shingles**] **<Insert description>.**

- a. Material: Zinc-alloy sheet, **[0.027 inch (0.70 mm) thick]** **[thickness as needed to meet performance requirements]** <Insert thickness>.
 - b. Exposure: **[47-1/4 by 15-13/16 inches (1200 by 402 mm)]** <Insert dimensions>.
 - c. Finish: **[Bright rolled]** **[Preweathered gray]** **[Preweathered black]** <Insert finish>.
3. Individual Shingles: **[Rectangular]** **[Diamond]** shingle units.
- a. Material: Zinc-alloy sheet, **[0.027 inch (0.70 mm) thick]** **[thickness as needed to meet performance requirements]** <Insert thickness>.
 - b. Exposure: **[14 by 14 inches (356 by 356 mm)]** <Insert dimensions>.
 - c. Finish: **[Bright rolled]** **[Preweathered gray]** **[Preweathered black]** <Insert finish>.

2.3 UNDERLAYMENT

- A. Felt Underlayment: **[ASTM D 226]** **[or]** **[ASTM D 4869]**, **[Type I]** **[Type II]**, asphalt-saturated organic felt, nonperforated.
- B. Self-Adhering Sheet Underlayment, Polyethylene Faced: ASTM D 1970, a minimum of **40-mil-** (1.0-mm-) thick, slip-resisting, polyethylene-film-reinforced top surface laminated to SBS-modified asphalt adhesive, with release paper backing; cold applied. **[Provide primer for adjoining concrete or masonry surfaces to receive underlayment.]**
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Carlisle Coatings & Waterproofing.](#)
 - b. [Grace Construction Products; a unit of W. R. Grace & Co.](#)
 - c. [Henry Company.](#)
 - d. [Johns Manville.](#)
 - e. [Owens Corning.](#)
 - f. [Polyguard Products, Inc.](#)
 - g. [Protecto Wrap Company.](#)
 - h. **<Insert manufacturer's name>.**
 - i. or approved equal.
- C. Self-Adhering Sheet Underlayment, High Temperature: A minimum of **30- to 40-mil-** (0.76- to 1.0-mm-) thick, slip-resisting, polyethylene-film-reinforced top surface laminated to layer of butyl or SBS-modified asphalt adhesive, with release paper backing; cold applied. Provide primer **[for adjoining concrete or masonry surfaces to receive underlayment and]** when recommended by underlayment manufacturer.
1. Thermal Stability: Stable after testing at **240 deg F** (116 deg C); ASTM D 1970.
 2. Low-Temperature Flexibility: Passes after testing at minus **20 deg F** (29 deg C); ASTM D 1970.

3. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Carlisle Coatings & Waterproofing.
- b. Grace Construction Products; a unit of W. R. Grace & Co.
- c. Henry Company.
- d. Metal-Fab Manufacturing, LLC.
- e. Owens Corning.
- f. **<Insert manufacturer's name>.**
- g. or approved equal.

D. Slip Sheet: Building paper, 3-lb/100 sq. ft. (0.16-kg/sq. m) minimum, rosin sized.

2.4 ACCESSORIES

A. General: Provide materials and types of fasteners, protective coatings, separators, sealants, and other accessory items as required for a complete roofing system and as recommended by metal-shingle manufacturer unless otherwise indicated.

B. Sheet Metal Flashing and Trim: Metal-shingle manufacturer's flashing and trim components matching shingle material, color, and finish unless otherwise indicated or recommended in writing by metal-shingle manufacturer. Fabricate to sizes and configurations shown or required. Unless otherwise indicated, fabricate sheet metal flashing and trim to comply with recommendations that apply to design, dimensions, metal, and other characteristics of the item in SMACNA's "Architectural Sheet Metal Manual."

C. Ridge Vents: Metal-shingle manufacturer's continuous vented ridge caps matching material and finish of metal shingles[**with insect screen or insect-resisting geotextile filter strips**] [and] [with external deflector baffles]; for use with specified metal shingles.

1. Minimum Net Free Area: **<Insert free area>.**
2. Accessories: Splices, end caps, and other accessories matching metal and finish.

D. Snow Guards: [**Stop**] [**Bar**]-type, prefabricated [**aluminum**] [**copper**] [**cast-bronze**] [**zinc**] [**stainless-steel**] **<Insert material>** units, designed to be installed without penetrating metal shingles.

1. Attachment: Designed to be [**attached to surface of metal shingles using construction adhesive, silicone or polyurethane sealant, or adhesive tape**] [**mechanically anchored through predrilled holes concealed by the metal shingles**] **<Insert requirement>.**
2. Finish: [**Matching the metal shingles**] **<Insert finish>.**

E. Wood Battens: Pressure-preservative-treated wood complying with requirements in [**Section 061000 "Rough Carpentry."**] [**Section 061053 "Miscellaneous Rough Carpentry."**]

1. Contoured Rigid Foam: Manufacturers standard rigid foam formed to match underside contour of metal shingles.
 - F. Metal Battens: Hat channels formed from zinc-coated (galvanized) steel sheet; ASTM A 653/A 653M, G90 (Z275) coating designation, not less than **[0.025-inch (0.64-mm)]** <Insert dimension> nominal thickness, and complying with requirements in Section 054000 "Cold-Formed Metal Framing."
 - G. Bituminous Coating: Cold-applied asphalt emulsion complying with ASTM D 1187.
 - H. Asphalt Roofing Cement: ASTM D 4586, Type II, asbestos free.
 - I. Sealant: ASTM C 920, one-part elastomeric polymer joint sealant as recommended by metal-shingle manufacturer for installation indicated; of type, grade, class, and use classifications required to seal joints in metal shingles and remain watertight. Where sealant will be exposed, provide in color matching shingle.
 - J. Sheet Metal Fasteners: Noncorrosive screws, nails, and anchors designed to withstand design loads as recommended in writing by metal-shingle manufacturer.
 1. Exposed Fasteners: Heads matching color of metal shingles using plastic caps or factory-applied coating. Provide metal-backed **[neoprene]** **[or]** **[EPDM]** washers under heads of exposed fasteners bearing on weather side of shingles.
 2. Fasteners for Flashing and Trim: Blind fasteners or self-drilling screws, gasketed, with hex-washer head.
 3. Blind Fasteners: High-strength aluminum or stainless-steel rivets suitable for metal being fastened.
 4. Fasteners for Aluminum Sheet: Aluminum or Series 300 stainless steel.
 5. Fasteners for **[Aluminum-Zinc Alloy-Coated]** **[Zinc-Coated]** Steel Sheet: Hot-dip galvanized steel according to ASTM A 153/A 153M, ASTM F 2329, or Series 300 stainless steel.
 6. Fasteners for Copper Sheet: Copper, hardware bronze, or Series 300 stainless steel.
 7. Fasteners for Zinc Sheet: Hot-dip galvanized steel according to ASTM A 153/A 153M, ASTM F 2329, or Series 300 stainless steel.
 - K. Felt Underlayment Nails: Aluminum, stainless-steel, or hot-dip galvanized-steel wire with low-profile capped heads or disc caps, **1-inch (25-mm)** minimum diameter.
 1. Where nails are in contact with metal shingles or flashing, use nails made from same metal as metal shingles.
 - L. Wood Batten Nails: ASTM F 1667; common or box, steel wire, flat head, and smooth shank; hot-dip galvanized.
- 2.5 GENERAL FINISH REQUIREMENTS
- A. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
 - 1. Examine roof sheathing to verify that sheathing joints are supported by framing and blocking, that tops of fasteners are flush with surface, and that installation is within flatness tolerances.
 - 2. Verify that substrate is sound, dry to the maximum moisture content recommended by metal-shingle manufacturer, smooth, clean, sloped for drainage, and completely anchored and that provision has been made for flashings and penetrations through metal shingles.
 - 3. Verify that vent stacks and other penetrations through metal shingles have been installed and are securely fastened.
- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 UNDERLAYMENT INSTALLATION

- A. General: Comply with metal-shingle and underlayment manufacturers' written installation instructions applicable to products and applications indicated unless more stringent requirements apply.
- B. Single-Layer Felt Underlayment: Install on roof deck parallel with and starting at the eaves. Lap sides a minimum of **2 inches** (50 mm) over underlying course. Lap ends a minimum of **4 inches** (100 mm). Stagger end laps between succeeding courses at least **72 inches** (1830 mm). Fasten with felt underlayment nails.
 - 1. Install felt underlayment on roof deck not covered by self-adhering sheet underlayment. Lap sides of felt over self-adhering sheet underlayment not less than **3 inches** (75 mm) in direction to shed water. Lap ends of felt not less than **6 inches** (152 mm) over self-adhering sheet underlayment.
- C. Double-Layer Felt Underlayment: Install on roof deck parallel with and starting at the eaves. Install a **19-inch-** (485-mm-) wide starter course at eaves and completely cover with full-width second course. Install succeeding courses lapping previous courses **19 inches** (485 mm) in shingle fashion. Lap ends a minimum of **6 inches** (152 mm). Stagger

end laps between succeeding courses at least **72 inches** (1830 mm). Fasten with felt underlayment nails.

1. Apply a continuous layer of asphalt roofing cement over starter course and on felt underlayment surface to be concealed by succeeding courses as each felt course is installed. Apply [**over entire roof**] [**at locations indicated on Drawings**].
 2. Install felt underlayment on roof sheathing not covered by self-adhering sheet underlayment. Lap edges over self-adhering sheet underlayment not less than **3 inches** (75 mm) in direction to shed water.
 3. Terminate felt underlayment [**flush**] [**extended up not less than 4 inches** (100 mm)] against sidewalls, curbs, chimneys, and other roof projections.
- D. Self-Adhering Sheet Underlayment: Install wrinkle free; comply with low-temperature installation restrictions of underlayment manufacturer if applicable. Install at locations indicated [**below**] [**on Drawings**], lapped in direction to shed water. Lap sides not less than **3-1/2 inches** (89 mm). Lap ends not less than **6 inches** (152 mm), staggered **24 inches** (610 mm) between courses. Roll laps with roller. Cover underlayment within seven days.
1. Prime concrete and masonry surfaces to receive self-adhering sheet underlayment.
 2. Eaves: Extend from edges of eaves [**24 inches** (610 mm)] [**36 inches** (914 mm)] <Insert dimension> beyond interior face of exterior wall.
 3. Rakes: Extend from edges of rakes [**24 inches** (610 mm)] [**36 inches** (914 mm)] <Insert dimension> beyond interior face of exterior wall.
 4. Valleys: Extend from lowest to highest point [**18 inches** (455 mm)] <Insert dimension> on each side.
 5. Hips: Extend [**18 inches** (455 mm)] <Insert dimension> on each side.
 6. Ridges: Extend [**36 inches** (914 mm)] <Insert dimension> on each side[**without obstructing continuous ridge vent slot**].
 7. Sidewalls: Extend [**18 inches** (455 mm)] <Insert dimension> beyond sidewalls and return vertically against sidewalls not less than [**4 inches** (100 mm)] <Insert dimension>.
 8. Dormers, Chimneys, Skylights, and Other Roof-Penetrating Elements: Extend [**18 inches** (455 mm)] <Insert dimension> beyond penetrating elements and return vertically against penetrating elements not less than [**4 inches** (100 mm)] <Insert dimension>.
 9. Roof-Slope Transitions: Extend [**18 inches** (455 mm)] <Insert dimension> on each roof slope.
- E. Metal-Flashed, Open-Valley Underlayment: Install one layer of **36-inch-** (914-mm-) wide [**felt underlayment**] [**or**] [**self-adhering sheet underlayment**] centered in valley and running the full length of valley in addition to the underlayment required for metal shingles. Stagger end laps between layers and lap ends of each layer at least **12 inches** (305 mm) in direction to shed water.
1. Solidly cement valley felt underlayment with asphalt roofing cement to the underlayment required for metal shingles.

- F. Apply slip sheet with adhesive or tape before installing metal flashing and shingles.

3.3 METAL-SHINGLE INSTALLATION

- A. General: Install metal shingles according to manufacturer's written instructions applicable to products and applications indicated; install level, plumb, and true to line.
- B. Felt Interlayment: Install 18-inch- (455-mm-) wide strip of felt underlayment over top portion of first and each succeeding course. Stagger fasten to roof deck with felt underlayment nails.
- C. Maintain uniform exposure and coursing of metal shingles throughout roof.
- D. Apply sealant between shingles, flashing, trim, and exposed fasteners to achieve a weathertight system.
- E. Interlock and overlap shingles and [**stagger end joints from**] [**align joints of tile-form**] shingle courses above and below.
- F. Metal Protection: Where dissimilar metals will contact each other, protect against galvanic action by painting contact surfaces with bituminous coating, by applying self-adhering sheet underlayment to each contact surface, or by other permanent separation as recommended by manufacturer of metal shingles or of the metals in contact.
 - 1. Do not use graphite pencils to mark metal surfaces.

3.4 ACCESSORY INSTALLATION

- A. General: Install accessories according to manufacturers' written instructions unless more stringent requirements are indicated.
- B. Metal Flashings and Trim: Install metal flashings and trim according to recommendations in NRCA's "The NRCA Roofing and Waterproofing Manual" unless more stringent requirements are indicated.
- C. Ridge Vents: Install ridge vents with end closures at locations indicated.
- D. Stop-Type Snow Guards: Install <Insert number> rows of snow guards at locations indicated. Space rows <Insert dimension> apart horizontally, beginning <Insert dimension> from gutter. Space snow guards <Insert dimension> apart in each row, offsetting by half this dimension between succeeding rows.
- E. Bar-Type Snow Guards: Install <Insert number> rows of snow guards at locations indicated. Space rows <Insert dimension> apart horizontally, beginning <Insert dimension> from gutter.
- F. Battens: Install battens according to metal-shingle manufacturer's written instructions and as needed to meet performance requirements.

1. Wood Battens: Install [**nominal 2-by-2-inch (38-by-38-mm)**] <Insert dimensions> wood battens horizontally over installed underlayment with ends separated by **1/2 inch (13 mm)**, at spacing required by metal-shingle manufacturer, and securely fasten to roof deck with wood batten nails.
 2. Metal Battens: Install [**1-1/2-inch (38-mm)**] <Insert dimension> metal battens horizontally over installed underlayment with ends separated by **1/2 inch (13 mm)**, at spacing required by metal-shingle manufacturer, and securely fasten to roof deck with sheet metal fasteners.
 3. Intermediate Battens: Install [**nominal 1-inch- (19-mm-)**] <Insert dimension> thick wood battens[**with double strip of contoured rigid foam**] horizontally with ends separated by **1/2 inch (13 mm)**, at spacing required by metal-shingle manufacturer to uniformly support underside of metal shingles between main battens, and securely fasten to roof deck with wood batten nails.
- G. Metal Protection: Where dissimilar metals will contact each other, protect against galvanic action by painting contact surfaces with bituminous coating, by applying self-adhering sheet underlayment to each contact surface, or by other permanent separation as recommended by manufacturer of metal shingles or of the metals in contact.

3.5 ERECTION TOLERANCES

- A. Installation Tolerances: Shim and align metal shingles within installed tolerance of **1/4 inch in 20 feet (6 mm in 6 m)** on slope and location lines as indicated and within **1/8-inch (3-mm)** offset of adjoining faces and of alignment of matching profiles.
- B. Installation Tolerances: Shim and align metal shingles within installed tolerances specified in MCA's "Guide Specification for Residential Metal Roofing."

3.6 ADJUSTING AND CLEANING

- A. Remove and replace damaged or deformed metal shingles or metal shingles that do not comply with specified requirements. Replace shingles with damaged or deteriorated finishes and other components of the Work that cannot be successfully repaired by finish touchup or similar minor repair procedures.
- B. Remove temporary protective coverings and strippable films as metal shingles are installed unless otherwise indicated in manufacturer's written installation instructions.
- C. On completion of installation, clean exposed surfaces of metal shingles according to manufacturer's written instructions, and touch up minor nicks and abrasions in finish. Remove excess sealants. Maintain metal shingles in a clean condition during construction.
- D. Remove excess metal shingles and debris from Project site.

3.7 ROOFING INSTALLER'S WARRANTY

- A. WHEREAS **<Insert name>** of **<Insert address>**, herein called the "Roofing Installer," has performed roofing and associated work ("work") on the following project:
1. Owner: **<Insert name of Owner>**.
 2. Address: **<Insert address>**.
 3. Building Name/Type: **<Insert information>**.
 4. Address: **<Insert address>**.
 5. Area of Work: **<Insert information>**.
 6. Acceptance Date: **<Insert date>**.
 7. Warranty Period: **<Insert time>**.
 8. Expiration Date: **<Insert date>**.
- B. AND WHEREAS Roofing Installer has contracted (either directly with Owner or indirectly as a subcontractor) to warrant said work against leaks and faulty or defective materials and workmanship for designated Warranty Period,
- C. NOW THEREFORE Roofing Installer hereby warrants, subject to terms and conditions herein set forth, that during Warranty Period he will, at his own cost and expense, make or cause to be made such repairs to or replacements of said work as are necessary to correct faulty and defective work and as are necessary to maintain said work in a watertight condition.
- D. This Warranty is made subject to the following terms and conditions:
1. Specifically excluded from this Warranty are damages to work and other parts of the building, and to building contents, caused by:
 - a. Lightning;
 - b. Peak gust wind speed exceeding **<Insert wind speed> mph (m/s)**;
 - c. Fire;
 - d. Failure of roofing system substrate, including cracking, settlement, excessive deflection, deterioration, and decomposition;
 - e. Faulty construction of parapet walls, copings, chimneys, skylights, vents, equipment supports, and other edge conditions and penetrations of the work;
 - f. Vapor condensation on bottom of roofing; and
 - g. Activity on roofing by others, including construction contractors, maintenance personnel, other persons, and animals, whether authorized or unauthorized by Owner.
 2. When work has been damaged by any of the foregoing causes, Warranty shall be null and void until such damage has been repaired by Roofing Installer and until cost and expense thereof have been paid by Owner or by another responsible party so designated.
 3. Roofing Installer is responsible for damage to work covered by this Warranty but is not liable for consequential damages to building or building contents resulting from leaks or faults or defects of work.

4. During Warranty Period, if Owner allows alteration of work by anyone other than Roofing Installer, including cutting, patching, and maintenance in connection with penetrations, attachment of other work, and positioning of anything on roof, this Warranty shall become null and void on date of said alterations, but only to the extent said alterations affect work covered by this Warranty. If Owner engages Roofing Installer to perform said alterations, Warranty shall not become null and void unless Roofing Installer, before starting said work, shall have notified Owner in writing, showing reasonable cause for claim, that said alterations would likely damage or deteriorate work, thereby reasonably justifying a limitation or termination of this Warranty.
5. During Warranty Period, if original use of roof is changed and it becomes used for, but was not originally specified for, a promenade, work deck, spray-cooled surface, flooded basin, or other use or service more severe than originally specified, this Warranty shall become null and void on date of said change, but only to the extent said change affects work covered by this Warranty.
6. Owner shall promptly notify Roofing Installer of observed, known, or suspected leaks, defects, or deterioration and shall afford reasonable opportunity for Roofing Installer to inspect work and to examine evidence of such leaks, defects, or deterioration.
7. This Warranty is recognized to be the only warranty of Roofing Installer on said work and shall not operate to restrict or cut off Owner from other remedies and resources lawfully available to Owner in cases of roofing failure. Specifically, this Warranty shall not operate to relieve Roofing Installer of responsibility for performance of original work according to requirements of the Contract Documents, regardless of whether Contract was a contract directly with Owner or a subcontract with Owner's General Contractor.

E. IN WITNESS THEREOF, this instrument has been duly executed this **<Insert day>** day of **<Insert month>**, **<Insert year>**.

1. Authorized Signature: **<Insert signature>**.
2. Name: **<Insert name>**.
3. Title: **<Insert title>**.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 073116

SECTION 074113.13 - FORMED METAL ROOF PANELS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Exposed-fastener, lap-seam, metal roof panels.
 - 2. Horizontal-seam (Bermuda-type) metal roof panels.
- B. Related Sections:
 - 1. Section 074213.53 "Metal Soffit Panels" for metal panels used in horizontal soffit applications.
 - 2. Section 077253 "Snow Guards" for prefabricated devices designed to hold snow on the roof surface, allowing it to melt and drain off slowly.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]<Insert location>**.
 - 1. Meet with DEN Project Manager, Owner's insurer if applicable, metal panel Installer, metal panel manufacturer's representative, structural-support Installer, and installers whose work interfaces with or affects metal panels, including installers of roof accessories and roof-mounted equipment.
 - 2. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - 3. Review methods and procedures related to metal panel installation, including manufacturer's written instructions.
 - 4. Examine support conditions for compliance with requirements, including alignment between and attachment to structural members.
 - 5. Review structural loading limitations of **[deck] [purlins and rafters]** during and after roofing.

6. Review flashings, special details, drainage, penetrations, equipment curbs, and condition of other construction that affect metal panels.
7. Review governing regulations and requirements for insurance, certificates, and tests and inspections if applicable.
8. Review temporary protection requirements for metal panel systems during and after installation.
9. Review procedures for repair of metal panels damaged after installation.
10. Document proceedings, including corrective measures and actions required, and furnish copy of record to each participant.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of panel and accessory.
2. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Test Reports for Credit SS 7.2: For roofing materials, documentation indicating that roofing materials comply with Solar Reflectance Index requirement.

C. Shop Drawings:

1. Include fabrication and installation layouts of metal panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories; and special details.
2. Accessories: Include details of the flashing, trim, and anchorage systems, at a scale of not less than **1-1/2 inches per 12 inches (1:10)**.

D. Samples for Initial Selection: For each type of metal panel indicated with factory-applied color finishes.

1. Include similar Samples of trim and accessories involving color selection.

E. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below:

1. Metal Panels: **12 inches (305 mm)** long by actual panel width. Include fasteners, closures, and other metal panel accessories.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Product Test Reports: For each product, for tests performed by a qualified testing agency.
- C. Field quality-control reports.
- D. Sample Warranties: For special warranties.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For metal panels to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
 - 1. A firm that has specialized in installation of types of products required for Project for not less than five (5) years and which is acceptable to manufacturer(s) of primary materials.
- B. UL-Certified, Portable Roll-Forming Equipment: UL-certified, portable roll-forming equipment capable of producing metal panels warranted by manufacturer to be the same as factory-formed products. Maintain UL certification of portable roll-forming equipment for duration of work.
- C. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
 - 1. Build mockup of typical roof area and eave[, **including fascia,**] [**and soffit**] as shown on Drawings; approximately [**48 inches (1200 mm)**] [**12 feet (3.5 m)**] **<Insert dimension>** square by full thickness, including attachments[, **underlayment,**] and accessories.
 - 2. Build mockups for typical roof area only, including accessories.
 - a. Size: [**12 feet (3.5 m) long by 6 feet (1.75 m)**] **<Insert dimension>**.
 - b. [**Each type of exposed seam and seam termination**] **<Insert mockup item>**.
 - 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.

4. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver components, metal panels, and other manufactured items so as not to be damaged or deformed. Package metal panels for protection during transportation and handling.
- B. Unload, store, and erect metal panels in a manner to prevent bending, warping, twisting, and surface damage.
- C. Stack metal panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal panels to ensure dryness, with positive slope for drainage of water. Do not store metal panels in contact with other materials that might cause staining, denting, or other surface damage.
- D. Retain strippable protective covering on metal panels during installation.
- E. Copper Panels: Wear gloves when handling to prevent fingerprints and soiling of surface.

1.9 FIELD CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of metal panels to be performed according to manufacturers' written instructions and warranty requirements.

1.10 COORDINATION

- A. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.
- B. Coordinate metal panel installation with rain drainage work, flashing, trim, construction of soffits, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.11 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal panel systems that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
 - a. Structural failures including rupturing, cracking, or puncturing.
 - b. Deterioration of metals and other materials beyond normal weathering.

2. Warranty Period: Minimum **[two (2)] <Insert number>** years from date of Substantial Completion.
- B. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal panels that show evidence of deterioration of factory-applied finishes within specified warranty period.
1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 2. Finish Warranty Period: Minimum **[20] [10] <Insert number>** years from date of Substantial Completion.
- 1.12 CONSTRUCTION WASTE MANAGEMENT
- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

- 2.1 PERFORMANCE REQUIREMENTS
- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25] <Insert number>** percent.
 - B. Solar Reflectance Index: Not less than **[78] [29]** according to ASTM E 1980.
 - C. Energy Performance: Provide roof panels that are listed on the EPA/DOE's ENERGY STAR "Roof Product List" for **[low] [steep]**-slope roof products.
 - D. Energy Performance: Provide roof panels with an aged Solar Reflectance Index of not less than **[0.64] <Insert value>** when tested according to CRRC-1.
 - E. Structural Performance: Provide metal panel systems capable of withstanding the effects of the following loads, based on testing according to ASTM E 1592:
 1. Wind Loads: 115 mph with gust factor of 1.3.
 2. Other Design Loads: **[As indicated on Drawings] <Insert loads>**.
 3. Deflection Limits: For wind loads, no greater than **[1/180] [1/240] <Insert deflection>** of the span.
 4. Ambient Temperature Range: Minus 30 deg F (minus 35 deg C) to 120 deg F (49 deg C).

5. <Insert serviceability requirements>.

- F. Air Infiltration: Air leakage of not more than **0.06 cfm/sq. ft.** (0.3 L/s per sq. m) when tested according to ASTM E 1680[**or ASTM E 283**] at the following test-pressure difference:
1. Test-Pressure Difference: [**1.57 lbf/sq. ft. (75 Pa)**] [**6.24 lbf/sq. ft. (300 Pa)**].
- G. Water Penetration under Static Pressure: No water penetration when tested according to ASTM E 1646[**or ASTM E 331**] at the following test-pressure difference:
1. Test-Pressure Difference: [**2.86 lbf/sq. ft. (137 Pa)**] [**6.24 lbf/sq. ft. (300 Pa)**].
- H. Hydrostatic-Head Resistance: No water penetration when tested according to ASTM E 2140.
- I. Wind-Uplift Resistance: Provide metal roof panel assemblies that comply with UL 580 for wind-uplift-resistance class indicated.
1. Uplift Rating: [**UL 30**] [**UL 60**] [**UL 90**].
- J. FM Global Listing: Provide metal roof panels and component materials that comply with requirements in FM Global 4471 as part of a panel roofing system and that are listed in FM Global's "Approval Guide" for Class 1 or noncombustible construction, as applicable. Identify materials with FM Global markings.
1. Fire/Windstorm Classification: Class 1A-[**60**] [**75**] [**90**] [**105**] [**120**] <Insert number>.
 2. Hail Resistance: [**MH**] [**SH**].
- K. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
1. Temperature Change (Range): [**120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces**] <Insert temperature range>.

2.2 EXPOSED-FASTENER, LAP-SEAM, METAL ROOF PANELS

- A. General: Provide factory-formed metal roof panels designed to be installed by lapping side edges of adjacent panels and mechanically attaching panels to supports using exposed fasteners in side laps. Include accessories required for weathertight installation.
- B. Corrugated-Profile, Exposed-Fastener Metal Roof Panels <Insert drawing designation>: Formed with alternating curved ribs spaced at [**2.67 inches (68 mm)**] <Insert dimension> o.c. across width of panel.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [AEP Span; a BlueScope Steel company.](#)
 - b. [Alcoa Inc.](#)
 - c. [CENTRIA Architectural Systems.](#)
 - d. [Fabral.](#)
 - e. [Firestone Metal Products, LLC.](#)
 - f. [Flexospan Steel Buildings, Inc.](#)
 - g. [MBCI; a division of NCI Building Systems, L.P.](#)
 - h. [McElroy Metal, Inc.](#)
 - i. [Metal Sales Manufacturing Corporation.](#)
 - j. [Morin; a Kingspan Group company.](#)
 - k. [Union Corrugating Company.](#)
 - l. [VICWEST.](#)
 - m. <Insert manufacturer's name>.
 - n. or approved equal.

2. Metallic-Coated Steel Sheet: Zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, [G90 \(Z275\)](#) coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, [Class AZ50 \(Class AZM150\)](#) coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
 - a. Nominal Thickness: [**0.022 inch (0.56 mm)**] [**0.028 inch (0.71 mm)**] [**0.034 inch (0.86 mm)**] [**0.040 inch (1.02 mm)**] [**0.052 inch (1.32 mm)**].
 - b. Exterior Finish: [**Two-coat fluoropolymer**] [**Three-coat fluoropolymer**] [**Mica fluoropolymer**] [**Metallic fluoropolymer**] [**FEVE fluoropolymer**] [**Siliconized polyester**] <Insert finish>.
 - c. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.

3. Aluminum Sheet: Coil-coated sheet, [ASTM B 209 \(ASTM B 209M\)](#), alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
 - a. Thickness: [**0.032 inch (0.81 mm)**] [**0.040 inch (1.02 mm)**].
 - b. Surface: [**Smooth, flat**] [**Embossed**] finish.
 - c. Exterior Finish: [**Two-coat fluoropolymer**] [**Three-coat fluoropolymer**] [**Mica fluoropolymer**] [**Metallic fluoropolymer**] [**FEVE fluoropolymer**] [**Siliconized polyester**] [**Clear anodized**] [**Color anodized**] <Insert finish>.
 - d. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.

4. Stainless-Steel Sheet: ASTM A 240/A 240M, [**Type 304**] [**Type 316**], fully annealed.

- a. Nominal Thickness: [0.019 inch (0.48 mm)] [0.025 inch (0.64 mm)] [0.031 inch (0.79 mm)] [0.38 inch (0.96 mm)] [0.50 inch (1.27 mm)].
 - b. Exterior Finish: [4] [2B] <Insert finish>.
5. Copper Sheet: ASTM B 370, cold-rolled copper sheet, H00 temper.
- a. Thickness: [16 oz./sq. ft. (0.55 mm thick)] [20 oz./sq. ft. (0.68 mm thick)].
 - b. Exposed Finish: [Mill] [Prepatinated].
 - c. Prepatinated Color: [Dark brown] [Verdigris] <Insert color>.
6. Panel Coverage: [21.3 inches (541 mm)] [29.3 inches (744 mm)] [34.67 inches (881 mm)] [37.3 inches (947 mm)] [42.67 inches (1084 mm)] [45.3 inches (1151 mm)] <Insert dimension>.
7. Panel Height: [0.5 inch (13 mm)] [0.875 inch (22 mm)] <Insert dimension>.
- C. Tapered-Rib-Profile, Exposed-Fastener Metal Roof Panels <Insert drawing designation>: Formed with raised, trapezoidal major ribs and [intermediate stiffening ribs symmetrically spaced] [flat pan] between major ribs.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [AEP Span; a BlueScope Steel company.](#)
 - b. [Architectural Metal Systems; a Nucor company.](#)
 - c. [Berridge Manufacturing Company.](#)
 - d. [Butler Manufacturing; a BlueScope Steel company.](#)
 - e. [CENTRIA Architectural Systems.](#)
 - f. [Fabral.](#)
 - g. [Firestone Metal Products, LLC.](#)
 - h. [Flexospan Steel Buildings, Inc.](#)
 - i. [MBCI; a division of NCI Building Systems, L.P.](#)
 - j. [McElroy Metal, Inc.](#)
 - k. [Metal Sales Manufacturing Corporation.](#)
 - l. [Morin; a Kingspan Group company.](#)
 - m. [Petersen Aluminum Corporation.](#)
 - n. [Union Corrugating Company.](#)
 - o. [VICWEST.](#)
 - p. <Insert manufacturer's name>.
 - q. or approved equal.
 2. Metallic-Coated Steel Sheet: Zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, G90 (Z275) coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, Class AZ50 (Class AZM150) coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
 - a. Nominal Thickness: [0.022 inch (0.56 mm)] [0.028 inch (0.71 mm)] [0.034 inch (0.86 mm)] [0.040 inch (1.02 mm)] [0.052 inch (1.32 mm)].

- b. Exterior Finish: [**Two-coat fluoropolymer**] [**Three-coat fluoropolymer**] [**Mica fluoropolymer**] [**Metallic fluoropolymer**] [**FEVE fluoropolymer**] [**Siliconized polyester**] <Insert finish>.
 - c. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
 3. Aluminum Sheet: Coil-coated sheet, **ASTM B 209** (ASTM B 209M), alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
 - a. Thickness: [**0.032 inch (0.81 mm)**] [**0.040 inch (1.02 mm)**].
 - b. Surface: [**Smooth, flat**] [**Embossed**] finish.
 - c. Exterior Finish: [**Two-coat fluoropolymer**] [**Three-coat fluoropolymer**] [**Mica fluoropolymer**] [**Metallic fluoropolymer**] [**FEVE fluoropolymer**] [**Siliconized polyester**] [**Clear anodized**] [**Color anodized**] <Insert finish>.
 - d. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
 4. Stainless-Steel Sheet: ASTM A 240/A 240M, [**Type 304**] [**Type 316**], fully annealed.
 - a. Nominal Thickness: [**0.019 inch (0.48 mm)**] [**0.025 inch (0.64 mm)**] [**0.031 inch (0.79 mm)**] [**0.38 inch (0.96 mm)**] [**0.50 inch (1.27 mm)**].
 - b. Exterior Finish: [**4**] [**2B**] <Insert finish>.
 5. Copper Sheet: ASTM B 370, cold-rolled copper sheet, H00 temper.
 - a. Thickness: [**16 oz./sq. ft. (0.55 mm thick)**] [**20 oz./sq. ft. (0.68 mm thick)**].
 - b. Exposed Finish: [**Mill**] [**Prepatinated**].
 - c. Prepatinated Color: [**Dark brown**] [**Verdigris**] <Insert color>.
 6. Major-Rib Spacing: [**6 inches (152 mm)**] [**8 inches (203 mm)**] [**9 inches (229 mm)**] [**12 inches (305 mm)**] <Insert dimension> o.c.
 7. Panel Coverage: [**24 inches (610 mm)**] [**36 inches (914 mm)**] <Insert dimension>.
 8. Panel Height: [**0.625 inch (16 mm)**] [**0.75 inch (19 mm)**] [**1.0 inch (25 mm)**] [**1.25 inches (32 mm)**] [**1.5 inches (38 mm)**] <Insert dimension>.
- D. Vee-Rib-Profile, Exposed-Fastener Metal Roof Panels <Insert drawing designation>:
Formed with raised, V-shaped ribs and recesses that are approximately same size, evenly spaced across panel width, and with rib/recess sides angled at approximately 45 degrees.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [AEP Span; a BlueScope Steel company.](#)

- b. [Alcoa Inc.](#)
 - c. [Berridge Manufacturing Company.](#)
 - d. [CENTRIA Architectural Systems.](#)
 - e. [Fabral.](#)
 - f. [Flexospan Steel Buildings, Inc.](#)
 - g. [MBCI; a division of NCI Building Systems, L.P.](#)
 - h. [Metal Sales Manufacturing Corporation.](#)
 - i. [Morin; a Kingspan Group company.](#)
 - j. [Petersen Aluminum Corporation.](#)
 - k. [VICWEST.](#)
 - l. **<Insert manufacturer's name>.**
 - m. or approved equal.
2. Metallic-Coated Steel Sheet: Zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, **G90 (Z275)** coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, **Class AZ50 (Class AZM150)** coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
 - a. Nominal Thickness: **[0.022 inch (0.56 mm)] [0.028 inch (0.71 mm)] [0.034 inch (0.86 mm)] [0.040 inch (1.02 mm)] [0.052 inch (1.32 mm)].**
 - b. Exterior Finish: **[Two-coat fluoropolymer] [Three-coat fluoropolymer] [Mica fluoropolymer] [Metallic fluoropolymer] [FEVE fluoropolymer] [Siliconized polyester] <Insert finish>.**
 - c. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.**
3. Aluminum Sheet: Coil-coated sheet, **ASTM B 209 (ASTM B 209M)**, alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
 - a. Thickness: **[0.032 inch (0.81 mm)] [0.040 inch (1.02 mm)].**
 - b. Surface: **[Smooth, flat] [Embossed] finish.**
 - c. Exterior Finish: **[Two-coat fluoropolymer] [Three-coat fluoropolymer] [Mica fluoropolymer] [Metallic fluoropolymer] [FEVE fluoropolymer] [Siliconized polyester] [Clear anodized] [Color anodized] <Insert finish>.**
 - d. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.**
4. Stainless-Steel Sheet: ASTM A 240/A 240M, **[Type 304] [Type 316]**, fully annealed.
 - a. Nominal Thickness: **[0.019 inch (0.48 mm)] [0.025 inch (0.64 mm)] [0.031 inch (0.79 mm)] [0.38 inch (0.96 mm)] [0.50 inch (1.27 mm)].**
 - b. Exterior Finish: **[4] [2B] <Insert finish>.**
5. Copper Sheet: ASTM B 370, cold-rolled copper sheet, H00 temper.

- a. Thickness: [**16 oz./sq. ft. (0.55 mm thick)**] [**20 oz./sq. ft. (0.68 mm thick)**].
 - b. Exposed Finish: [**Mill**] [**Prepatinated**].
 - c. Prepatinated Color: [**Dark brown**] [**Verdigris**] <Insert color>.
6. Rib Spacing: [**5.3 inches (135 mm)**] [**7.2 inches (183 mm)**] [**12 inches (305 mm)**] <Insert dimension> o.c.
 7. Panel Coverage: [**30 inches (762 mm)**] [**32 inches (813 mm)**] [**36 inches (914 mm)**] [**40 inches (1016 mm)**] <Insert dimension>.
 8. Panel Height: [**1.375 inches (35 mm)**] [**1.5 inches (38 mm)**] [**1.75 inches (44 mm)**] [**2.0 inches (51 mm)**] [**3.0 inches (76 mm)**] <Insert dimension>.
- E. Box-Rib-Profile, Exposed-Fastener Metal Roof Panels <Insert drawing designation>:
Formed with raised, box-shaped ribs that are wider than recesses, evenly spaced across panel width, and with rib/recess sides angled 60 degrees or more.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Alcoa Inc.](#)
 - b. [Fabral.](#)
 - c. [MBCI; a division of NCI Building Systems, L.P.](#)
 - d. [Metal Sales Manufacturing Corporation.](#)
 - e. <Insert manufacturer's name>.
 - f. or approved equal.
 2. Metallic-Coated Steel Sheet: Zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, [G90 \(Z275\)](#) coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, [Class AZ50 \(Class AZM150\)](#) coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
 - a. Nominal Thickness: [**0.022 inch (0.56 mm)**] [**0.028 inch (0.71 mm)**] [**0.034 inch (0.86 mm)**] [**0.040 inch (1.02 mm)**] [**0.052 inch (1.32 mm)**].
 - b. Exterior Finish: [**Two-coat fluoropolymer**] [**Three-coat fluoropolymer**] [**Mica fluoropolymer**] [**Metallic fluoropolymer**] [**FEVE fluoropolymer**] [**Siliconized polyester**] <Insert finish>.
 - c. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
 3. Aluminum Sheet: Coil-coated sheet, [ASTM B 209 \(ASTM B 209M\)](#), alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
 - a. Thickness: [**0.032 inch (0.81 mm)**] [**0.040 inch (1.02 mm)**].
 - b. Surface: [**Smooth, flat**] [**Embossed**] finish.
 - c. Exterior Finish: [**Two-coat fluoropolymer**] [**Three-coat fluoropolymer**] [**Mica fluoropolymer**] [**Metallic fluoropolymer**] [**FEVE fluoropolymer**] [**Siliconized polyester**] [**Clear anodized**] [**Color anodized**] <Insert finish>.

- d. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
4. Stainless-Steel Sheet: ASTM A 240/A 240M, **[Type 304] [Type 316]**, fully annealed.
 - a. Nominal Thickness: **[0.019 inch (0.48 mm)] [0.025 inch (0.64 mm)] [0.031 inch (0.79 mm)] [0.38 inch (0.96 mm)] [0.50 inch (1.27 mm)]**.
 - b. Exterior Finish: **[4] [2B] <Insert finish>**.
 5. Copper Sheet: ASTM B 370, cold-rolled copper sheet, H00 temper.
 - a. Thickness: **[16 oz./sq. ft. (0.55 mm thick)] [20 oz./sq. ft. (0.68 mm thick)]**.
 - b. Exposed Finish: **[Mill] [Prepatinated]**.
 - c. Prepatinated Color: **[Dark brown] [Verdigris] <Insert color>**.
 6. Rib Spacing: **[2.67 inches (68 mm)] [4.0 inches (102 mm)] [5.3 inches (135 mm)] [6.0 inches (152 mm)] <Insert dimension> o.c.**
 7. Panel Coverage: **[24 inches (610 mm)] [28 inches (711 mm)] [30 inches (762 mm)] [32 inches (813 mm)] [36 inches (914 mm)] <Insert dimension>**.
 8. Panel Height: **[0.625 inch (16 mm)] [1.0 inch (25 mm)] [1.5 inches (38 mm)] [2.0 inches (51 mm)] <Insert dimension>**.
- F. Deep-Box-Rib-Profile, Exposed-Fastener Metal Roof Panels **<Insert drawing designation>**: Formed with raised, box-shaped ribs that are wider than recesses, evenly spaced across panel width, and with rib/recess sides angled more than 60 degrees.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [CENTRIA Architectural Systems](#).
 - b. [Fabral](#).
 - c. [Metal Sales Manufacturing Corporation](#).
 - d. [Morin; a Kingspan Group company](#).
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.
 2. Metallic-Coated Steel Sheet: Zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, **G90 (Z275)** coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, **Class AZ50 (Class AZM150)** coating designation; structural quality. Prepatinated by the coil-coating process to comply with ASTM A 755/A 755M.
 - a. Nominal Thickness: **[0.022 inch (0.56 mm)] [0.028 inch (0.71 mm)] [0.034 inch (0.86 mm)] [0.040 inch (1.02 mm)] [0.052 inch (1.32 mm)]**.
 - b. Exterior Finish: **[Two-coat fluoropolymer] [Three-coat fluoropolymer] [Mica fluoropolymer] [Metallic fluoropolymer] [FEVE fluoropolymer] [Siliconized polyester] <Insert finish>**.

- c. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
3. Aluminum Sheet: Coil-coated sheet, **ASTM B 209** (ASTM B 209M), alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
 - a. Thickness: **[0.032 inch (0.81 mm)] [0.040 inch (1.02 mm)]**.
 - b. Surface: **[Smooth, flat] [Embossed]** finish.
 - c. Exterior Finish: **[Two-coat fluoropolymer] [Three-coat fluoropolymer] [Mica fluoropolymer] [Metallic fluoropolymer] [FEVE fluoropolymer] [Siliconized polyester] [Clear anodized] [Color anodized] <Insert finish>**.
 - d. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
 4. Stainless-Steel Sheet: ASTM A 240/A 240M, **[Type 304] [Type 316]**, fully annealed.
 - a. Nominal Thickness: **[0.019 inch (0.48 mm)] [0.025 inch (0.64 mm)] [0.031 inch (0.79 mm)] [0.38 inch (0.96 mm)] [0.50 inch (1.27 mm)]**.
 - b. Exterior Finish: **[4] [2B] <Insert finish>**.
 5. Copper Sheet: ASTM B 370, cold-rolled copper sheet, H00 temper.
 - a. Thickness: **[16 oz./sq. ft. (0.55 mm thick)] [20 oz./sq. ft. (0.68 mm thick)]**.
 - b. Exposed Finish: **[Mill] [Prepatinated]**.
 - c. Prepatinated Color: **[Dark brown] [Verdigris] <Insert color>**.
 6. Rib Spacing: **[12 inches (305 mm)] <Insert dimension>** o.c.
 7. Panel Coverage: **[24 inches (610 mm)] <Insert dimension>**.
 8. Panel Height: **[3 inches (76 mm)] [4 inches (102 mm)] <Insert dimension>**.

2.3 HORIZONTAL-SEAM (BERMUDA-TYPE) METAL ROOF PANELS

- A. Horizontal-Seam (Bermuda-Type) Metal Roof Panels **<Insert drawing designation>**: Formed with horizontal seam at panel edges and smooth, flat pan; designed to be installed in sequential installation by engaging lower edge of each panel to upper edge of panel below and mechanically attaching panels to supports using concealed clips located under upper edge of panels.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Berridge Manufacturing Company](#).
 - b. [Metal-Fab Manufacturing, LLC](#).
 - c. [Ultra Seam, Inc](#).

- d. **<Insert manufacturer's name>**.
 - e. or approved equal.
2. Metallic-Coated Steel Sheet: Zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, **G90 (Z275)** coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, **Class AZ50 (Class AZM150)** coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
 - a. Nominal Thickness: **[0.022 inch (0.56 mm)] [0.028 inch (0.71 mm)] [0.034 inch (0.86 mm)] [0.040 inch (1.02 mm)] [0.052 inch (1.32 mm)]**.
 - b. Exterior Finish: **[Two-coat fluoropolymer] [Three-coat fluoropolymer] [Mica fluoropolymer] [Metallic fluoropolymer] [FEVE fluoropolymer] [Siliconized polyester] <Insert finish>**.
 - c. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
3. Aluminum Sheet: Coil-coated sheet, **ASTM B 209 (ASTM B 209M)**, alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
 - a. Thickness: **[0.032 inch (0.81 mm)] [0.040 inch (1.02 mm)]**.
 - b. Surface: **[Smooth, flat] [Embossed]** finish.
 - c. Exterior Finish: **[Two-coat fluoropolymer] [Three-coat fluoropolymer] [Mica fluoropolymer] [Metallic fluoropolymer] [FEVE fluoropolymer] [Siliconized polyester] [Clear anodized] [Color anodized] <Insert finish>**.
 - d. Color: **[As indicated by manufacturer's designations] [Match DiA Project Manager's samples] [As selected by DiA Project Manager from manufacturer's full range] <Insert color>**.
4. Stainless-Steel Sheet: ASTM A 240/A 240M, **[Type 304] [Type 316]**, fully annealed.
 - a. Nominal Thickness: **[0.019 inch (0.48 mm)] [0.025 inch (0.64 mm)] [0.031 inch (0.79 mm)] [0.38 inch (0.96 mm)] [0.50 inch (1.27 mm)]**.
 - b. Exterior Finish: **[4] [2B] <Insert finish>**.
5. Copper Sheet: ASTM B 370, cold-rolled copper sheet, H00 temper.
 - a. Thickness: **[16 oz./sq. ft. (0.55 mm thick)] [20 oz./sq. ft. (0.68 mm thick)]**.
 - b. Exposed Finish: **[Mill] [Prepatinated]**.
 - c. Prepatinated Color: **[Dark brown] [Verdigris] <Insert color>**.
6. Clips: One piece.
 - a. Material: **0.028-inch- (0.71-mm-) nominal thickness, [zinc-coated (galvanized)] [or] [aluminum-zinc alloy-coated]** steel sheet.
 - b. Material: **0.025-inch- (0.64-mm-) thick, stainless-steel sheet.**

7. Seal: Factory-applied sealant or vinyl weatherseal in seam.
8. Exposure: [9.5 inches (241 mm)] [11 inches (279 mm)] <Insert dimension> nominal.
9. Seam Height: [1.0 inch (25 mm)] [1.5 inches (38 mm)] <Insert dimension>.

2.4 UNDERLAYMENT MATERIALS

- A. Self-Adhering, High-Temperature Underlayment: Provide self-adhering, cold-applied, sheet underlayment, a minimum of 30 mils (0.76 mm) thick, specifically designed to withstand high metal temperatures beneath metal roofing. Provide primer when recommended by underlayment manufacturer.
1. Thermal Stability: Stable after testing at 220 deg F (111 deg C); ASTM D 1970.
 2. Low-Temperature Flexibility: Passes after testing at minus 20 deg F (29 deg C); ASTM D 1970.
 3. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. Carlisle Residential, a division of Carlisle Construction Materials; WIP 300HT.
 - b. Grace Construction Products, a unit of W. R. Grace & Co.; [Grace Ice and Water Shield HT] [Ultra].
 - c. Henry Company; Blueskin PE200 HT.
 - d. Kirsch Building Products, LLC; Sharkskin Ultra SA.
 - e. Metal-Fab Manufacturing, LLC; MetShield.
 - f. Owens Corning; WeatherLock Specialty Tile and Metal Underlayment.
 - g. <Insert manufacturer's name; product name or designation>.
 - h. or approved equal.
- B. Felt Underlayment: ASTM D 226/D 226M, Type II (No. 30), asphalt-saturated organic felts.
- C. Slip Sheet: Manufacturer's recommended slip sheet, of type required for application.

2.5 MISCELLANEOUS MATERIALS

- A. Miscellaneous Metal Subframing and Furring: ASTM C 645; cold-formed, metallic-coated steel sheet, ASTM A 653/A 653M, G90 (Z275 hot-dip galvanized) coating designation or ASTM A 792/A 792M, Class AZ50 (Class AZM150) aluminum-zinc-alloy coating designation unless otherwise indicated. Provide manufacturer's standard sections as required for support and alignment of metal panel system.
- B. Panel Accessories: Provide components required for a complete, weathertight panel system including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal panels unless otherwise indicated.
1. Closures: Provide closures at eaves and ridges, fabricated of same metal as metal panels.

2. Backing Plates: Provide metal backing plates at panel end splices, fabricated from material recommended by manufacturer.
 3. Closure Strips: Closed-cell, expanded, cellular, rubber or crosslinked, polyolefin-foam or closed-cell laminated polyethylene; minimum **1-inch-** (25-mm-) thick, flexible closure strips; cut or premolded to match metal panel profile. Provide closure strips where indicated or necessary to ensure weathertight construction.
- C. Flashing and Trim: Provide flashing and trim formed from **same material as metal panels** as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, eaves, rakes, corners, bases, framed openings, ridges, fasciae, and fillers. Finish flashing and trim with same finish system as adjacent metal panels.
- D. Gutters: Formed from same material as roof panels, complete with end pieces, outlet tubes, and other special pieces as required. Fabricate in minimum **96-inch-** (2400-mm-) long sections, of size and metal thickness according to SMACNA's "Architectural Sheet Metal Manual." Furnish gutter supports spaced a maximum of **36 inches** (914 mm) o.c., fabricated from same metal as gutters. Provide wire ball strainers of compatible metal at outlets. Finish gutters to match **[metal roof panels] [roof fascia and rake trim]**.
- E. Downspouts: Formed from same material as roof panels. Fabricate in **10-foot-** (3-m-) long sections, complete with formed elbows and offsets, of size and metal thickness according to SMACNA's "Architectural Sheet Metal Manual." Finish downspouts to match gutters.
- F. Roof Curbs: Fabricated from same material as roof panels, **[0.048-inch- (1.2-mm-)]** **<Insert dimension>** nominal thickness; with bottom of skirt profiled to match roof panel profiles and with welded top box and integral full-length cricket. Fabricate curb subframing of **0.060-inch-** (1.52-mm-) nominal thickness, angle-, C-, or Z-shaped steel sheet. Fabricate curb and subframing to withstand indicated loads of size and height indicated. Finish roof curbs to match metal roof panels.
1. Insulate roof curb with **1-inch-** (25-mm-) thick, rigid insulation.
- G. Panel Fasteners: Self-tapping screws designed to withstand design loads. Provide exposed fasteners with heads matching color of metal panels by means of plastic caps or factory-applied coating. Provide EPDM or PVC sealing washers for exposed fasteners.
- H. Panel Sealants: Provide sealant types recommended by manufacturer that are compatible with panel materials, are nonstaining, and do not damage panel finish.
1. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape **1/2 inch** (13 mm) wide and **1/8 inch** (3 mm) thick.
 2. Joint Sealant: ASTM C 920; elastomeric polyurethane or silicone sealant; of type, grade, class, and use classifications required to seal joints in metal panels and

remain weathertight; and as recommended in writing by metal panel manufacturer.

3. Butyl-Rubber-Based, Solvent-Release Sealant: ASTM C 1311.

2.6 FABRICATION

- A. General: Fabricate and finish metal panels and accessories at the factory, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.
- B. On-Site Fabrication: Subject to compliance with requirements of this Section, metal panels may be fabricated on-site using UL-certified, portable roll-forming equipment if panels are of same profile and warranted by manufacturer to be equal to factory-formed panels. Fabricate according to equipment manufacturer's written instructions and to comply with details shown.
- C. Provide panel profile, including major ribs and intermediate stiffening ribs, if any, for full length of panel.
- D. Fabricate metal panel joints with factory-installed captive gaskets or separator strips that provide a weathertight seal and prevent metal-to-metal contact, and that minimize noise from movements.
- E. Sheet Metal Flashing and Trim: Fabricate flashing and trim to comply with manufacturer's recommendations and recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated.
 1. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
 2. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints for additional strength.
 3. Seams for Other Than Aluminum: Fabricate nonmoving seams in accessories with flat-lock seams. Tin edges to be seamed, form seams, and solder.
 4. Sealed Joints: Form nonexpansion, but movable, joints in metal to accommodate sealant and to comply with SMACNA standards.
 5. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.
 6. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended in writing by metal panel manufacturer.
 - a. Size: As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal panel manufacturer for application, but not less than thickness of metal being secured.

2.7 FINISHES

- A. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in same piece are unacceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- C. Steel Panels and Accessories:
1. Two-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 2. Three-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 3. Mica Fluoropolymer: AAMA 621. Two-coat fluoropolymer finish with suspended mica flakes containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 4. Metallic Fluoropolymer: AAMA 621. Three-coat fluoropolymer finish with suspended metallic flakes containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 5. FEVE Fluoropolymer: AAMA 621. Two-coat fluoropolymer finish containing 100 percent fluorinated ethylene vinyl ether resin in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 6. Siliconized Polyester: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than **0.2 mil** (0.005 mm) for primer and **0.8 mil** (0.02 mm) for topcoat.
 7. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish consisting of prime coat and wash coat with a minimum total dry film thickness of **0.5 mil** (0.013 mm).
- D. Aluminum Panels and Accessories:
1. Two-Coat Fluoropolymer: AAMA 620. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 2. Three-Coat Fluoropolymer: AAMA 620. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat.

- Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
3. Mica Fluoropolymer: AAMA 620. Two-coat fluoropolymer finish with suspended mica flakes containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 4. Metallic Fluoropolymer: AAMA 620. Three-coat fluoropolymer finish with suspended metallic flakes containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 5. FEVE Fluoropolymer: AAMA 620. Two-coat fluoropolymer finish containing 100 percent fluorinated ethylene vinyl ether resin in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 6. Siliconized Polyester: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than **0.2 mil (0.005 mm)** for primer and **0.8 mil (0.02 mm)** for topcoat.
 7. Exposed Anodized Finish:
 - a. Clear Anodic Finish: AAMA 611, [**AA-M12C22A41, Class I, 0.018 mm**] [**AA-M12C22A31, Class II, 0.010 mm**] or thicker.
 - b. Color Anodic Finish: AAMA 611, [**AA-M12C22A42/A44, Class I, 0.018 mm**] [**AA-M12C22A32/A34, Class II, 0.010 mm**] or thicker.
- E. Stainless-Steel Panels and Accessories:
1. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
 2. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - a. Run grain of directional finishes with long dimension of each piece.
 - b. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
 - c. Directional Satin Finish: No. 4.
 3. Bright, Cold-Rolled, Unpolished Finish: No. 2B.
- F. Copper Panels and Accessories:
1. Prepatination: Factory prepatinate according to ASTM B 882 to convert the copper surface to an inorganic crystalline structure with the appearance and durability of naturally formed patina.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, metal panel supports, and other conditions affecting performance of the Work.
 - 1. Examine primary and secondary roof framing to verify that rafters, purlins, angles, channels, and other structural panel support members and anchorages have been installed within alignment tolerances required by metal roof panel manufacturer.
 - 2. Examine solid roof sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by metal roof panel manufacturer.
 - a. Verify that air- or water-resistive barriers have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.
- B. Examine roughing-in for components and systems penetrating metal panels to verify actual locations of penetrations relative to seam locations of metal panels before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Miscellaneous Supports: Install subframing, furring, and other miscellaneous panel support members and anchorages according to ASTM C 754 and metal panel manufacturer's written recommendations.

3.3 UNDERLAYMENT INSTALLATION

- A. Self-Adhering Sheet Underlayment: Apply primer if required by manufacturer. Comply with temperature restrictions of underlayment manufacturer for installation. Apply at locations indicated [below] [on Drawings], wrinkle free, in shingle fashion to shed water, and with end laps of not less than 6 inches (152 mm) staggered 24 inches (610 mm) between courses. Overlap side edges not less than 3-1/2 inches (90 mm). [Extend underlayment into gutter trough.] Roll laps with roller. Cover underlayment within 14 days.
 - 1. Apply over the entire roof surface.
 - 2. Apply over the roof area indicated below:
 - a. Roof perimeter for a distance up from eaves of [24 inches (610 mm)] [36 inches (914 mm)] <Insert dimension> beyond interior wall line.

- b. Valleys, from lowest point to highest point, for a distance on each side of [18 inches (460 mm)] <Insert dimension>. Overlap ends of sheets not less than 6 inches (152 mm).
 - c. Rake edges for a distance of [18 inches (460 mm)] <Insert dimension>.
 - d. Hips and ridges for a distance on each side of [12 inches (305 mm)] <Insert dimension>.
 - e. Roof-to-wall intersections for a distance from wall of [18 inches (460 mm)] <Insert dimension>.
 - f. Around dormers, chimneys, skylights, and other penetrating elements for a distance from element of [18 inches (460 mm)] <Insert dimension>.
- B. Felt Underlayment: Apply at locations indicated [below] [on Drawings], in shingle fashion to shed water, and with lapped joints of not less than 2 inches (50 mm).
1. Apply over the entire roof surface.
 2. Apply on roof not covered by self-adhering sheet underlayment. Lap over edges of self-adhering sheet underlayment not less than 3 inches (75 mm), in shingle fashion to shed water.
- C. Slip Sheet: Apply slip sheet over underlayment before installing metal roof panels.
- D. Flashings: Install flashings to cover underlayment to comply with requirements specified in Section 076200 "Sheet Metal Flashing and Trim."

3.4 METAL PANEL INSTALLATION

- A. General: Install metal panels according to manufacturer's written instructions in orientation, sizes, and locations indicated. Install panels perpendicular to supports unless otherwise indicated. Anchor metal panels and other components of the Work securely in place, with provisions for thermal and structural movement.
1. Shim or otherwise plumb substrates receiving metal panels.
 2. Flash and seal metal panels at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until air or water-resistive barriers and flashings that are concealed by metal panels are installed.
 3. Install screw fasteners in predrilled holes.
 4. Locate and space fastenings in uniform vertical and horizontal alignment.
 5. Install flashing and trim as metal panel work proceeds.
 6. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
 7. Align bottoms of metal panels and fasten with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws.
 8. Provide weathertight escutcheons for pipe- and conduit-penetrating panels.
- B. Fasteners:
1. Steel Panels: Use stainless-steel fasteners for surfaces exposed to the exterior; use galvanized-steel fasteners for surfaces exposed to the interior.

2. Aluminum Panels: Use aluminum or stainless-steel fasteners for surfaces exposed to the exterior; use aluminum or galvanized-steel fasteners for surfaces exposed to the interior.
 3. Copper Panels: Use copper, stainless-steel, or hardware-bronze fasteners.
 4. Stainless-Steel Panels: Use stainless-steel fasteners.
- C. Metal Protection: Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action as recommended in writing by metal panel manufacturer.
- D. Lap-Seam Metal Panels: Fasten metal panels to supports with fasteners at each lapped joint at location and spacing recommended by manufacturer.
1. Lap ribbed or fluted sheets one full rib. Apply panels and associated items true to line for neat and weathertight enclosure.
 2. Provide metal-backed washers under heads of exposed fasteners bearing on weather side of metal panels.
 3. Locate and space exposed fasteners in uniform vertical and horizontal alignment. Use proper tools to obtain controlled uniform compression for positive seal without rupture of washer.
 4. Install screw fasteners with power tools having controlled torque adjusted to compress washer tightly without damage to washer, screw threads, or panels. Install screws in predrilled holes.
 5. Flash and seal panels with weather closures at perimeter of all openings.
 6. Watertight Installation:
 - a. Apply a continuous ribbon of sealant or tape to seal lapped joints of metal panels, using sealant or tape as recommend by manufacturer on side laps of nesting-type panels and elsewhere as needed to make panels watertight.
 - b. Provide sealant or tape between panels and protruding equipment, vents, and accessories.
 - c. At panel splices, nest panels with minimum **6-inch (152-mm)** end lap, sealed with sealant and fastened together by interlocking clamping plates.
- E. Horizontal-Seam (Bermuda-Type) Metal Roof Panels: Fasten metal roof panels to supports with concealed clips at each horizontal-seam joint at location, spacing, and with fasteners recommended by manufacturer. Start at eave and work upward toward ridge.
1. Install clips to supports with self-drilling fasteners.
- F. Accessory Installation: Install accessories with positive anchorage to building and weathertight mounting, and provide for thermal expansion. Coordinate installation with flashings and other components.
1. Install components required for a complete metal panel system including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items. Provide types indicated by metal panel manufacturer; or, if not indicated, provide types recommended in writing by metal panel manufacturer.

- G. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level. Install work with laps, joints, and seams that are permanently watertight.
1. Install exposed flashing and trim that is without buckling and tool marks, and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and achieve waterproof performance.
 2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of **10 feet (3 m)** with no joints allowed within **24 inches (610 mm)** of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently waterproof, form expansion joints of intermeshing hooked flanges, not less than **1 inch (25 mm)** deep, filled with mastic sealant (concealed within joints).
- H. Gutters: Join sections with riveted and soldered or lapped and sealed joints. Attach gutters to eave with gutter hangers spaced not more than **36 inches (914 mm)** o.c. using manufacturer's standard fasteners. Provide end closures and seal watertight with sealant. Provide for thermal expansion.
- I. Downspouts: Join sections with telescoping joints. Provide fasteners designed to hold downspouts securely **1 inch (25 mm)** away from walls; locate fasteners at top and bottom and at approximately **60 inches (1524 mm)** o.c. in between.
1. Provide elbows at base of downspouts to direct water away from building.
 2. Connect downspouts to underground drainage system indicated.
- J. Roof Curbs: Install flashing around bases where they meet metal roof panels.
- K. Pipe Flashing: Form flashing around pipe penetration and metal roof panels. Fasten and seal to metal roof panels as recommended by manufacturer.

3.5 ERECTION TOLERANCES

- A. Installation Tolerances: Shim and align metal panel units within installed tolerance of **1/4 inch in 20 feet (6 mm in 6 m)** on slope and location lines and within **1/8-inch (3-mm)** offset of adjoining faces and of alignment of matching profiles.

3.6 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect completed metal panel installation, including accessories. Report results in writing.
- B. Remove and replace applications where tests and inspections indicate that they do not comply with specified requirements.

- C. Additional tests and inspections, at Contractor's expense, are performed to determine compliance of replaced or additional work with specified requirements.
- D. Prepare test and inspection reports.

3.7 CLEANING AND PROTECTION

- A. Remove temporary protective coverings and strippable films, if any, as metal panels are installed, unless otherwise indicated in manufacturer's written installation instructions. On completion of metal panel installation, clean finished surfaces as recommended by metal panel manufacturer. Maintain in a clean condition during construction.
- B. Replace metal panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 074113.13

SECTION 074113.16 - STANDING-SEAM METAL ROOF PANELS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes standing-seam metal roof panels.
- B. Related Sections:
 - 1. Section 074213.53 "Metal Soffit Panels" for metal panels used in horizontal soffit applications.
 - 2. Section 077253 "Snow Guards" for prefabricated devices designed to hold snow on the roof surface, allowing it to melt and drain off slowly.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager] <Insert location>**.
 - 1. Meet with DEN Project Manager Owner's insurer if applicable, metal panel Installer, metal panel manufacturer's representative, structural-support Installer, and installers whose work interfaces with or affects metal panels, including installers of roof accessories and roof-mounted equipment.
 - 2. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - 3. Review methods and procedures related to metal panel installation, including manufacturer's written instructions.
 - 4. Examine support conditions for compliance with requirements, including alignment between and attachment to structural members.
 - 5. Review structural loading limitations of **[deck] [purlins and rafters]** during and after roofing.
 - 6. Review flashings, special details, drainage, penetrations, equipment curbs, and condition of other construction that affect metal panels.
 - 7. Review governing regulations and requirements for insurance, certificates, and tests and inspections if applicable.

8. Review temporary protection requirements for metal panel systems during and after installation.
9. Review procedures for repair of metal panels damaged after installation.
10. Document proceedings, including corrective measures and actions required, and furnish copy of record to each participant.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of panel and accessory.
2. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Test Reports for Credit SS 7.2: For roofing materials, documentation indicating that roofing materials comply with Solar Reflectance Index requirement.

C. Shop Drawings:

1. Include fabrication and installation layouts of metal panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories; and special details.
2. Accessories: Include details of the flashing, trim, and anchorage systems, at a scale of not less than **1-1/2 inches per 12 inches (1:10)**.

D. Samples for Initial Selection: For each type of metal panel indicated with factory-applied color finishes.

1. Include similar Samples of trim and accessories involving color selection.

E. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below.

1. Metal Panels: **12 inches (305 mm)** long by actual panel width. Include clips, fasteners, closures, and other metal panel accessories.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Product Test Reports: For each product, for tests performed by a qualified testing agency.

- C. Field quality-control reports.
- D. Sample Warranties: For special warranties.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For metal panels to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
 - 1. A firm that has specialized in installation of types of products required for Project for not less than five (5) years and which is acceptable to manufacturer(s) of primary materials.
- B. UL-Certified, Portable Roll-Forming Equipment: UL-certified, portable roll-forming equipment capable of producing metal panels warranted by manufacturer to be the same as factory-formed products. Maintain UL certification of portable roll-forming equipment for duration of work.
- C. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
 - 1. Build mockup of typical roof area and eave[, **including fascia,**] [**and soffit**] as shown on Drawings; approximately [**48 inches (1200 mm)**] [**12 feet (3.5 m)**] **<Insert dimension>** square by full thickness, including attachments[, **underlayment,**] and accessories.
 - 2. Build mockups for typical roof area only, including accessories.
 - a. Size: [**12 feet (3.5 m) long by 6 feet (1.75 m)**] **<Insert dimension>**.
 - b. [**Each type of exposed seam and seam termination**] **<Insert mockup item>**.
 - 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
 - 4. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver components, metal panels, and other manufactured items so as not to be damaged or deformed. Package metal panels for protection during transportation and handling.
- B. Unload, store, and erect metal panels in a manner to prevent bending, warping, twisting, and surface damage.
- C. Stack metal panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal panels to ensure dryness, with positive slope for drainage of water. Do not store metal panels in contact with other materials that might cause staining, denting, or other surface damage.
- D. Retain strippable protective covering on metal panels during installation.
- E. Copper Panels: Wear gloves when handling to prevent fingerprints and soiling of surface.

1.9 FIELD CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of metal panels to be performed according to manufacturers' written instructions and warranty requirements.

1.10 COORDINATION

- A. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.
- B. Coordinate metal panel installation with rain drainage work, flashing, trim, construction of soffits, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.11 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal panel systems that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures including rupturing, cracking, or puncturing.
 - b. Deterioration of metals and other materials beyond normal weathering.
 - 2. Warranty Period: Minimum **[two (2)]** <Insert number> years from date of Substantial Completion.

- B. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal panels that show evidence of deterioration of factory-applied finishes within specified warranty period.
1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 2. Finish Warranty Period: Minimum **[20]** **[10]** **<Insert number>** years from date of Substantial Completion.
- C. Special Weathertightness Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace standing-seam metal roof panel assemblies that fail to remain weathertight, including leaks, within specified warranty period.
1. Warranty Period: Minimum **[20]** **<Insert number>** years from date of Substantial Completion.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]** **<Insert number>** percent.
- B. Solar Reflectance Index: Not less than **[78]** **[29]** when calculated according to ASTM E 1980.
- C. Energy Performance: Provide roof panels that are listed on the EPA/DOE's ENERGY STAR "Roof Product List" for **[low]** **[steep]**-slope roof products.
- D. Energy Performance: Provide roof panels with an aged Solar Reflectance Index of not less than **[0.64]** **<Insert value>** when tested according to CRRC-1.
- E. Structural Performance: Provide metal panel systems capable of withstanding the effects of the following loads, based on testing according to ASTM E 1592:
1. Wind Loads: 115 mph with gust factor of 1.3.

2. Other Design Loads: [**As indicated on Drawings**] <Insert loads>.
 3. Deflection Limits: For wind loads, no greater than [**1/180**] [**1/240**] <Insert deflection> of the span.
 4. Ambient Temperature Range: Minus 30 deg F (minus 35 deg C) to 120 deg F (49 deg C).
 5. <Insert serviceability requirements>.
- F. Air Infiltration: Air leakage of not more than **0.06 cfm/sq. ft.** (0.3 L/s per sq. m) when tested according to ASTM E 1680[**or ASTM E 283**] at the following test-pressure difference:
1. Test-Pressure Difference: [**1.57 lbf/sq. ft. (75 Pa)**] [**6.24 lbf/sq. ft. (300 Pa)**].
- G. Water Penetration under Static Pressure: No water penetration when tested according to ASTM E 1646[**or ASTM E 331**] at the following test-pressure difference:
1. Test-Pressure Difference: [**2.86 lbf/sq. ft. (137 Pa)**] [**6.24 lbf/sq. ft. (300 Pa)**].
- H. Hydrostatic-Head Resistance: No water penetration when tested according to ASTM E 2140.
- I. Wind-Uplift Resistance: Provide metal roof panel assemblies that comply with UL 580 for wind-uplift-resistance class indicated.
1. Uplift Rating: [**UL 30**] [**UL 60**] [**UL 90**].
- J. FM Global Listing: Provide metal roof panels and component materials that comply with requirements in FM Global 4471 as part of a panel roofing system and that are listed in FM Global's "Approval Guide" for Class 1 or noncombustible construction, as applicable. Identify materials with FM Global markings.
1. Fire/Windstorm Classification: Class 1A-[**60**] [**75**] [**90**] [**105**] [**120**] <Insert number>.
 2. Hail Resistance: [**MH**] [**SH**].
- K. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
1. Temperature Change (Range): [**120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces**] <Insert temperature range>.
- ## 2.2 STANDING-SEAM METAL ROOF PANELS
- A. General: Provide factory-formed metal roof panels designed to be installed by lapping and interconnecting raised side edges of adjacent panels with joint type indicated and mechanically attaching panels to supports using concealed clips in side laps. Include clips, cleats, pressure plates, and accessories required for weathertight installation.

1. Steel Panel Systems: Unless more stringent requirements are indicated, comply with ASTM E 1514.
 2. Aluminum Panel Systems: Unless more stringent requirements are indicated, comply with ASTM E 1637.
- B. Vertical-Rib, Snap-Joint, Standing-Seam Metal Roof Panels **<Insert drawing designation>**: Formed with vertical ribs at panel edges and **[intermediate stiffening ribs symmetrically spaced]** **[a flat pan]** between ribs; designed for sequential installation by mechanically attaching panels to supports using concealed clips located under one side of panels, engaging opposite edge of adjacent panels, and snapping panels together.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Advanced Architectural Products.](#)
 - b. [AEP Span; a BlueScope Steel company.](#)
 - c. [Architectural Building Components.](#)
 - d. [Architectural Metal Systems; a Nucor company.](#)
 - e. [CENTRIA Architectural Systems.](#)
 - f. [Dimensional Metals, Inc.](#)
 - g. [Englert, Inc.](#)
 - h. [Fabral.](#)
 - i. [Garland Company, Inc. \(The\)](#)
 - j. [IMETCO.](#)
 - k. [MBCI; a division of NCI Building Systems, L.P.](#)
 - l. [McElroy Metal, Inc.](#)
 - m. [Merchant & Evans.](#)
 - n. [Metal-Fab Manufacturing, LLC.](#)
 - o. [Metal Sales Manufacturing Corporation.](#)
 - p. [Morin; a Kingspan Group company.](#)
 - q. [Petersen Aluminum Corporation.](#)
 - r. [Ryerson, Inc.](#)
 - s. [Ultra Seam, Inc.](#)
 - t. [Union Corrugating Company.](#)
 - u. [VICWEST.](#)
 - v. **<Insert manufacturer's name>**.
 - w. or approved equal.
 2. Metallic-Coated Steel Sheet: Zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, **G90 (Z275)** coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, **Class AZ50 (Class AZM150)** coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
 - a. Nominal Thickness: **[0.022 inch (0.56 mm)] [0.028 inch (0.71 mm)] [0.034 inch (0.86 mm)] [0.040 inch (1.02 mm)] [0.052 inch (1.32 mm)]**.
 - b. Exterior Finish: **[Two-coat fluoropolymer] [Three-coat fluoropolymer] [Mica fluoropolymer] [Metallic fluoropolymer] [FEVE fluoropolymer] [Siliconized polyester] <Insert finish>**.

- c. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
3. Aluminum Sheet: Coil-coated sheet, **ASTM B 209 (ASTM B 209M)**, alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
 - a. Thickness: **[0.032 inch (0.81 mm)] [0.040 inch (1.02 mm)]**.
 - b. Surface: **[Smooth, flat] [Embossed]** finish.
 - c. Exterior Finish: **[Two-coat fluoropolymer] [Three-coat fluoropolymer] [Mica fluoropolymer] [Metallic fluoropolymer] [FEVE fluoropolymer] [Siliconized polyester] [Clear anodized] [Color anodized] <Insert finish>**.
 - d. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
 4. Stainless-Steel Sheet: ASTM A 240/A 240M, **[Type 304] [Type 316]**, fully annealed.
 - a. Nominal Thickness: **[0.019 inch (0.48 mm)] [0.025 inch (0.64 mm)] [0.031 inch (0.79 mm)] [0.38 inch (0.96 mm)] [0.50 inch (1.27 mm)]**.
 - b. Exterior Finish: **[4] [2B] <Insert finish>**.
 5. Copper Sheet: ASTM B 370, cold-rolled copper sheet, H00 temper.
 - a. Thickness: **[16 oz./sq. ft. (0.55 mm thick)] [20 oz./sq. ft. (0.68 mm thick)]**.
 - b. Exposed Finish: **[Mill] [Prepatinated]**.
 - c. Prepatinated Color: **[Dark brown] [Verdigris] <Insert color>**.
 6. Clips: **[One-piece fixed] [Two-piece floating]** to accommodate thermal movement.
 - a. Material: **[0.028-inch- (0.71-mm-)] [0.064-inch- (1.63-mm-)]** nominal thickness, zinc-coated (galvanized) or aluminum-zinc alloy-coated steel sheet.
 - b. Material: **[0.025-inch- (0.64-mm-)] [0.062-inch- (1.59-mm-)]** thick, stainless-steel sheet.
 7. Panel Coverage: **[10 inches (254 mm)] [12 inches (305 mm)] [14 inches (356 mm)] [16 inches (406 mm)] [18 inches (457 mm)] [24 inches (610 mm)] <Insert dimension>**.
 8. Panel Height: **[1.0 inch (25 mm)] [1.5 inches (38 mm)] [1.75 inches (44 mm)] <Insert dimension>**.
- C. Vertical-Rib, Seamed-Joint, Standing-Seam Metal Roof Panels **<Insert drawing designation>**: Formed with vertical ribs at panel edges and **[intermediate stiffening ribs symmetrically spaced] [a flat pan]** between ribs; designed for sequential installation by mechanically attaching panels to supports using concealed clips located

under one side of panels, engaging opposite edge of adjacent panels, and mechanically seaming panels together.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Advanced Architectural Products.](#)
 - b. [AEP Span; a BlueScope Steel company.](#)
 - c. [Architectural Building Components.](#)
 - d. [Architectural Metal Systems; a Nucor company.](#)
 - e. [ATAS International, Inc.](#)
 - f. [Berridge Manufacturing Company.](#)
 - g. [CENTRIA Architectural Systems.](#)
 - h. [Dimensional Metals, Inc.](#)
 - i. [Englert, Inc.](#)
 - j. [Fabral.](#)
 - k. [Firestone Metal Products, LLC.](#)
 - l. [Flexospan Steel Buildings, Inc.](#)
 - m. [Garland Company, Inc. \(The\)](#)
 - n. [IMETCO.](#)

 - p. [McElroy Metal, Inc.](#)
 - q. [Merchant & Evans.](#)
 - r. [Metal-Fab Manufacturing, LLC.](#)
 - s. [Metal Sales Manufacturing Corporation.](#)
 - t. [Morin; a Kingspan Group company.](#)
 - u. [Petersen Aluminum Corporation.](#)
 - v. [Ryerson, Inc.](#)
 - w. [Ultra Seam, Inc.](#)
 - x. [Union Corrugating Company](#)
 - y. **<Insert manufacturer's name>.**
 - z. or approved equal.

2. Metallic-Coated Steel Sheet: Zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, **G90 (Z275)** coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, **Class AZ50 (Class AZM150)** coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
 - a. Nominal Thickness: **[0.022 inch (0.56 mm)] [0.028 inch (0.71 mm)] [0.034 inch (0.86 mm)] [0.040 inch (1.02 mm)] [0.052 inch (1.32 mm)].**
 - b. Exterior Finish: **[Two-coat fluoropolymer] [Three-coat fluoropolymer] [Mica fluoropolymer] [Metallic fluoropolymer] [FEVE fluoropolymer] [Siliconized polyester] <Insert finish>.**
 - c. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.**

3. Aluminum Sheet: Coil-coated sheet, **ASTM B 209** (ASTM B 209M), alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
 - a. Thickness: **[0.032 inch (0.81 mm)] [0.040 inch (1.02 mm)]**.
 - b. Surface: **[Smooth, flat] [Embossed]** finish.
 - c. Exterior Finish: **[Two-coat fluoropolymer] [Three-coat fluoropolymer] [Mica fluoropolymer] [Metallic fluoropolymer] [FEVE fluoropolymer] [Siliconized polyester] [Clear anodized] [Color anodized] <Insert finish>**.
 - d. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.

 4. Stainless-Steel Sheet: ASTM A 240/A 240M, **[Type 304] [Type 316]**, fully annealed.
 - a. Nominal Thickness: **[0.019 inch (0.48 mm)] [0.025 inch (0.64 mm)] [0.031 inch (0.79 mm)] [0.38 inch (0.96 mm)] [0.50 inch (1.27 mm)]**.
 - b. Exterior Finish: **[4] [2B] <Insert finish>**.

 5. Copper Sheet: ASTM B 370, cold-rolled copper sheet, H00 temper.
 - a. Thickness: **[16 oz./sq. ft. (0.55 mm thick)] [20 oz./sq. ft. (0.68 mm thick)]**.
 - b. Exposed Finish: **[Mill] [Prepatinated]**.
 - c. Prepatinated Color: **[Dark brown] [Verdigris] <Insert color>**.

 6. Clips: **[One-piece fixed] [Two-piece floating]** to accommodate thermal movement.
 - a. Material: **[0.028-inch- (0.71-mm-)] [0.064-inch- (1.63-mm-)]** nominal thickness, zinc-coated (galvanized) or aluminum-zinc alloy-coated steel sheet.
 - b. Material: **[0.025-inch- (0.64-mm-)] [0.062-inch- (1.59-mm-)]** thick, stainless-steel sheet.

 7. Joint Type: **[Single folded] [Double folded] [As standard with manufacturer]**.
 8. Panel Coverage: **[12 inches (305 mm)] [14 inches (356 mm)] [16 inches (406 mm)] [18 inches (457 mm)] [20 inches (508 mm)] [24 inches (610 mm)] <Insert dimension>**.
 9. Panel Height: **[1.5 inches (38 mm)] [2.0 inches (51 mm)] [2.5 inches (64 mm)] <Insert dimension>**.
- D. Trapezoidal-Rib, Snap-Joint, Standing-Seam Metal Roof Panels **<Insert drawing designation>**: Formed with raised trapezoidal ribs at panel edges and **[intermediate stiffening ribs symmetrically spaced] [a flat pan]** between ribs; designed for sequential installation by mechanically attaching panels to supports using concealed clips located under one side of panels, engaging opposite edge of adjacent panels, and snapping panels together.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

 - c. Color: [[As indicated by manufacturer's designations](#)] [[Match DEN Project Manager's samples](#)] [[As selected by DEN Project Manager from manufacturer's full range](#)] <Insert color>.
3. Aluminum Sheet: Coil-coated sheet, [ASTM B 209 \(ASTM B 209M\)](#), alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
- a. Thickness: [[0.032 inch \(0.81 mm\)](#)] [[0.040 inch \(1.02 mm\)](#)].
 - b. Surface: [[Smooth, flat](#)] [[Embossed](#)] finish.
 - c. Exterior Finish: [[Two-coat fluoropolymer](#)] [[Three-coat fluoropolymer](#)] [[Mica fluoropolymer](#)] [[Metallic fluoropolymer](#)] [[FEVE fluoropolymer](#)] [[Siliconized polyester](#)] [[Clear anodized](#)] [[Color anodized](#)] <Insert finish>.
 - d. Color: [[As indicated by manufacturer's designations](#)] [[Match DEN Project Manager's samples](#)] [[As selected by DEN Project Manager from manufacturer's full range](#)] <Insert color>.
4. Copper Sheet: ASTM B 370, cold-rolled copper sheet, H00 temper.
- a. Thickness: [[16 oz./sq. ft. \(0.55 mm thick\)](#)] [[20 oz./sq. ft. \(0.68 mm thick\)](#)].
 - b. Exposed Finish: [[Mill](#)] [[Prepatinated](#)].
 - c. Prepatinated Color: [[Dark brown](#)] [[Verdigris](#)] <Insert color>.
5. Clips: [[One-piece fixed](#)] [[Two-piece floating](#)] to accommodate thermal movement.
- a. Material: [[0.028-inch- \(0.71-mm-\)](#)] [[0.064-inch- \(1.63-mm-\)](#)] nominal thickness, zinc-coated (galvanized) or aluminum-zinc alloy-coated steel sheet.
 - b. Material: [[0.025-inch- \(0.64-mm-\)](#)] [[0.062-inch- \(1.59-mm-\)](#)] thick, stainless-steel sheet.
6. Panel Coverage: [[12 inches \(305 mm\)](#)] [[16 inches \(406 mm\)](#)] [[18 inches \(457 mm\)](#)] <Insert dimension>.

7. Panel Height: [**1.0 inch (25 mm)**] [**1.5 inches (38 mm)**] [**2.0 inches (51 mm)**]
<Insert dimension>.

G. Clipless, Integral-Standing-Seam Metal Roof Panels <Insert drawing designation>:
Formed with integral ribs at panel edges and [**intermediate stiffening ribs
symmetrically spaced**] [**a flat pan**] between ribs; designed for sequential installation
by mechanically attaching panels to supports using screw fasteners located under
concealed side of panels and lapping and interconnecting side edges of adjacent
panels.

1. Manufacturers: Subject to compliance with requirements, provide products by
one of the following:
 - a. [Dimensional Metals, Inc.](#)
 - b. [Englert, Inc.](#)
 - c. [Firestone Metal Products, LLC.](#)
 - d. [Metal-Fab Manufacturing, LLC.](#)
 - e. [Metal Sales Manufacturing Company.](#)
 - f. <Insert manufacturer's name>.
 - g. or approved equal.

2. Metallic-Coated Steel Sheet: Zinc-coated (galvanized) steel sheet complying with
ASTM A 653/A 653M, **G90 (Z275)** coating designation, or aluminum-zinc
alloy-coated steel sheet complying with ASTM A 792/A 792M, **Class AZ50** (Class
AZM150) coating designation; structural quality. Prepainted by the coil-coating
process to comply with ASTM A 755/A 755M.
 - a. Nominal Thickness: [**0.022 inch (0.56 mm)**] [**0.028 inch (0.71 mm)**] [**0.034
inch (0.86 mm)**].
 - b. Exterior Finish: [**Two-coat fluoropolymer**] [**Three-coat fluoropolymer**]
[**Mica fluoropolymer**] [**Metallic fluoropolymer**] [**FEVE fluoropolymer**]
[**Siliconized polyester**] <Insert finish>.
 - c. Color: [**As indicated by manufacturer's designations**] [**Match DEN
Project Manager's samples**] [**As selected by DEN Project Manager
from manufacturer's full range**] <Insert color>.

3. Aluminum Sheet: Coil-coated sheet, **ASTM B 209** (ASTM B 209M), alloy as
standard with manufacturer, with temper as required to suit forming operations
and structural performance required.
 - a. Thickness: [**0.032 inch (0.81 mm)**].
 - b. Surface: [**Smooth, flat**] [**Embossed**] finish.
 - c. Exterior Finish: [**Two-coat fluoropolymer**] [**Three-coat fluoropolymer**]
[**Mica fluoropolymer**] [**Metallic fluoropolymer**] [**FEVE fluoropolymer**]
[**Siliconized polyester**] [**Clear anodized**] [**Color anodized**] <Insert
finish>.
 - d. Color: [**As indicated by manufacturer's designations**] [**Match DEN
Project Manager's samples**] [**As selected by DEN Project Manager
from manufacturer's full range**] <Insert color>.

4. Copper Sheet: ASTM B 370, cold-rolled copper sheet, H00 temper.
 - a. Thickness: [16 oz./sq. ft. (0.55 mm thick)] [20 oz./sq. ft. (0.68 mm thick)].
 - b. Exposed Finish: [Mill] [Prepatinated].
 - c. Prepatinated Color: [Dark brown] [Verdigris] <Insert color>.
5. Panel Coverage: [9.75 inches (248 mm)] [10.63 inches (406 mm)] [11.63 inches (270 mm)] [12 inches (305 mm)] [14 inches (356 mm)] [16 inches (406 mm)] [17.75 inches (451 mm)] [18 inches (457 mm)] [19 inches (483 mm)] [20 inches (508 mm)] <Insert dimension>.
6. Panel Height: [0.87 inch (38 mm)] [1.0 inch (25 mm)] [1.25 inches (32 mm)] [1.5 inches (38 mm)] [1.9 inches (51 mm)] <Insert dimension>.

2.3 UNDERLAYMENT MATERIALS

- A. Self-Adhering, High-Temperature Underlayment: Provide self-adhering, cold-applied, sheet underlayment, a minimum of 30 mils (0.76 mm) thick, consisting of slip-resistant, polyethylene-film top surface laminated to a layer of butyl or SBS-modified asphalt adhesive, with release-paper backing. Provide primer when recommended by underlayment manufacturer.
 1. Thermal Stability: Stable after testing at 240 deg F (116 deg C); ASTM D 1970.
 2. Low-Temperature Flexibility: Passes after testing at minus 20 deg F (29 deg C); ASTM D 1970.
 3. Products: Subject to compliance with requirements, provide one of the following:
 - a. Carlisle Residential, a division of Carlisle Construction Materials; WIP 300HT.
 - b. Grace Construction Products, a unit of W. R. Grace & Co.; [Grace Ice and Water Shield HT] [Ultra].
 - c. Henry Company; Blueskin PE200 HT.
 - d. Kirsch Building Products, LLC; Sharkskin Ultra SA.
 - e. Metal-Fab Manufacturing, LLC; MetShield.
 - f. Owens Corning; WeatherLock Metal High Temperature Underlayment.
 - g. <Insert manufacturer's name; product name or designation>.
 - h. or approved equal.
- B. Felt Underlayment: ASTM D 226/D 22M, Type II (No. 30), asphalt-saturated organic felts.
- C. Slip Sheet: Manufacturer's recommended slip sheet, of type required for application.

2.4 MISCELLANEOUS MATERIALS

- A. Miscellaneous Metal Subframing and Furring: ASTM C 645; cold-formed, metallic-coated steel sheet, ASTM A 653/A 653M, G90 (Z275 hot-dip galvanized) coating designation or ASTM A 792/A 792M, Class AZ50 (Class AZM150) coating designation

unless otherwise indicated. Provide manufacturer's standard sections as required for support and alignment of metal panel system.

- B. Panel Accessories: Provide components required for a complete, weathertight panel system including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal panels unless otherwise indicated.
1. Closures: Provide closures at eaves and ridges, fabricated of same metal as metal panels.
 2. Backing Plates: Provide metal backing plates at panel end splices, fabricated from material recommended by manufacturer.
 3. Closure Strips: Closed-cell, expanded, cellular, rubber or crosslinked, polyolefin-foam or closed-cell laminated polyethylene; minimum **1-inch-** (25-mm-) thick, flexible closure strips; cut or premolded to match metal panel profile. Provide closure strips where indicated or necessary to ensure weathertight construction.
- C. Flashing and Trim: Provide flashing and trim formed from same material as metal panels as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, eaves, rakes, corners, bases, framed openings, ridges, fasciae, and fillers. Finish flashing and trim with same finish system as adjacent metal panels.
- D. Gutters: Formed from same material as roof panels, complete with end pieces, outlet tubes, and other special pieces as required. Fabricate in minimum **96-inch-** (2400-mm-) long sections, of size and metal thickness according to SMACNA's "Architectural Sheet Metal Manual." Furnish gutter supports spaced a maximum of **36 inches** (914 mm) o.c., fabricated from same metal as gutters. Provide wire ball strainers of compatible metal at outlets. Finish gutters to match **[metal roof panels] [roof fascia and rake trim]**.
- E. Downspouts: Formed from same material as roof panels. Fabricate in **10-foot-** (3-m-) long sections, complete with formed elbows and offsets, of size and metal thickness according to SMACNA's "Architectural Sheet Metal Manual." Finish downspouts to match gutters.
- F. Roof Curbs: Fabricated from same material as roof panels, **[0.048-inch (1.2-mm)]** **<Insert dimension>** nominal thickness; with bottom of skirt profiled to match roof panel profiles and with welded top box and integral full-length cricket. Fabricate curb subframing of **0.060-inch-** (1.52-mm-) nominal thickness, angle-, C-, or Z-shaped steel sheet. Fabricate curb and subframing to withstand indicated loads of size and height indicated. Finish roof curbs to match metal roof panels.
1. Insulate roof curb with **1-inch-** (25-mm-) thick, rigid insulation.
- G. Panel Fasteners: Self-tapping screws designed to withstand design loads.
- H. Panel Sealants: Provide sealant type recommended by manufacturer that are compatible with panel materials, are nonstaining, and do not damage panel finish.

1. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape **1/2 inch (13 mm)** wide and **1/8 inch (3 mm)** thick.
2. Joint Sealant: ASTM C 920; elastomeric polyurethane or silicone sealant; of type, grade, class, and use classifications required to seal joints in metal panels and remain weathertight; and as recommended in writing by metal panel manufacturer.
3. Butyl-Rubber-Based, Solvent-Release Sealant: ASTM C 1311.

2.5 FABRICATION

- A. General: Fabricate and finish metal panels and accessories at the factory, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.
- B. On-Site Fabrication: Subject to compliance with requirements of this Section, metal panels may be fabricated on-site using UL-certified, portable roll-forming equipment if panels are of same profile and warranted by manufacturer to be equal to factory-formed panels. Fabricate according to equipment manufacturer's written instructions and to comply with details shown.
- C. Provide panel profile, including major ribs and intermediate stiffening ribs, if any, for full length of panel.
- D. Fabricate metal panel joints with factory-installed captive gaskets or separator strips that provide a weathertight seal and prevent metal-to-metal contact, and that minimize noise from movements.
- E. Sheet Metal Flashing and Trim: Fabricate flashing and trim to comply with manufacturer's recommendations and recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated.
 1. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
 2. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints for additional strength.
 3. Seams for Other Than Aluminum: Fabricate nonmoving seams in accessories with flat-lock seams. Tin edges to be seamed, form seams, and solder.
 4. Sealed Joints: Form nonexpansion, but movable, joints in metal to accommodate sealant and to comply with SMACNA standards.
 5. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.
 6. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended in writing by metal panel manufacturer.

- a. Size: As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal panel manufacturer for application, but not less than thickness of metal being secured.

2.6 FINISHES

- A. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in same piece are unacceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- C. Steel Panels and Accessories:
 1. Two-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 2. Three-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 3. Mica Fluoropolymer: AAMA 621. Two-coat fluoropolymer finish with suspended mica flakes containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 4. Metallic Fluoropolymer: AAMA 621. Three-coat fluoropolymer finish with suspended metallic flakes containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 5. FEVE Fluoropolymer: AAMA 621. Two-coat fluoropolymer finish containing 100 percent fluorinated ethylene vinyl ether resin in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 6. Siliconized Polyester: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than 0.2 mil (0.005 mm) for primer and 0.8 mil (0.02 mm) for topcoat.
 7. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil (0.013 mm).
- D. Aluminum Panels and Accessories:
 1. Two-Coat Fluoropolymer: AAMA 620. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply

- coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
2. Three-Coat Fluoropolymer: AAMA 620. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 3. Mica Fluoropolymer: AAMA 620. Two-coat fluoropolymer finish with suspended mica flakes containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 4. Metallic Fluoropolymer: AAMA 620. Three-coat fluoropolymer finish with suspended metallic flakes containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 5. FEVE Fluoropolymer: AAMA 620. Two-coat fluoropolymer finish containing 100 percent fluorinated ethylene vinyl ether resin in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 6. Siliconized Polyester: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than **0.2 mil (0.005 mm)** for primer and **0.8 mil (0.02 mm)** for topcoat.
 7. Exposed Anodized Finish:
 - a. Clear Anodic Finish: AAMA 611, [**AA-M12C22A41, Class I, 0.018 mm**] [**AA-M12C22A31, Class II, 0.010 mm**] or thicker.
 - b. Color Anodic Finish: AAMA 611, [**AA-M12C22A42/A44, Class I, 0.018 mm**] [**AA-M12C22A32/A34, Class II, 0.010 mm**] or thicker.
- E. Stainless-Steel Panels and Accessories:
1. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
 2. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - a. Run grain of directional finishes with long dimension of each piece.
 - b. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
 - c. Directional Satin Finish: No. 4.
 3. Bright, Cold-Rolled, Unpolished Finish: No. 2B.
- F. Copper Panels and Accessories:
1. Prepatination: Factory prepatinate according to ASTM B 882 to convert the copper surface to an inorganic crystalline structure with the appearance and durability of naturally formed patina.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, metal panel supports, and other conditions affecting performance of the Work.
 - 1. Examine primary and secondary roof framing to verify that rafters, purlins, angles, channels, and other structural panel support members and anchorages have been installed within alignment tolerances required by metal roof panel manufacturer.
 - 2. Examine solid roof sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by metal roof panel manufacturer.
 - a. Verify that air- or water-resistive barriers have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.
- B. Examine roughing-in for components and systems penetrating metal panels to verify actual locations of penetrations relative to seam locations of metal panels before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Miscellaneous Supports: Install subframing, furring, and other miscellaneous panel support members and anchorages according to ASTM C 754 and metal panel manufacturer's written recommendations.

3.3 UNDERLAYMENT INSTALLATION

- A. Self-Adhering Sheet Underlayment: Apply primer if required by manufacturer. Comply with temperature restrictions of underlayment manufacturer for installation. Apply at locations indicated [below] [on Drawings], wrinkle free, in shingle fashion to shed water, and with end laps of not less than 6 inches (152 mm) staggered 24 inches (610 mm) between courses. Overlap side edges not less than 3-1/2 inches (90 mm). [Extend underlayment into gutter trough.] Roll laps with roller. Cover underlayment within 14 days.
 - 1. Apply over the entire roof surface.
 - 2. Apply over the roof area indicated below:
 - a. Roof perimeter for a distance up from eaves of [24 inches (610 mm)] [36 inches (914 mm)] <Insert dimension> beyond interior wall line.

- b. Valleys, from lowest point to highest point, for a distance on each side of [18 inches (460 mm)] <Insert dimension>. Overlap ends of sheets not less than 6 inches (152 mm).
 - c. Rake edges for a distance of [18 inches (460 mm)] <Insert dimension>.
 - d. Hips and ridges for a distance on each side of [12 inches (305 mm)] <Insert dimension>.
 - e. Roof-to-wall intersections for a distance from wall of [18 inches (460 mm)] <Insert dimension>.
 - f. Around dormers, chimneys, skylights, and other penetrating elements for a distance from element of [18 inches (460 mm)] <Insert dimension>.
- B. Felt Underlayment: Apply at locations indicated [below] [on Drawings], in shingle fashion to shed water, and with lapped joints of not less than 2 inches (50 mm).
1. Apply over the entire roof surface.
 2. Apply on roof not covered by self-adhering sheet underlayment. Lap over edges of self-adhering sheet underlayment not less than 3 inches (75 mm), in shingle fashion to shed water.
- C. Slip Sheet: Apply slip sheet over underlayment before installing metal roof panels.
- D. Flashings: Install flashings to cover underlayment to comply with requirements specified in Section 076200 "Sheet Metal Flashing and Trim."

3.4 METAL PANEL INSTALLATION

- A. General: Install metal panels according to manufacturer's written instructions in orientation, sizes, and locations indicated. Install panels perpendicular to supports unless otherwise indicated. Anchor metal panels and other components of the Work securely in place, with provisions for thermal and structural movement.
1. Shim or otherwise plumb substrates receiving metal panels.
 2. Flash and seal metal panels at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until air- or water-resistive barriers and flashings that will be concealed by metal panels are installed.
 3. Install screw fasteners in predrilled holes.
 4. Locate and space fastenings in uniform vertical and horizontal alignment.
 5. Install flashing and trim as metal panel work proceeds.
 6. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
 7. Align bottoms of metal panels and fasten with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws.
 8. Provide weathertight escutcheons for pipe- and conduit-penetrating panels.
- B. Fasteners:
1. Steel Panels: Use stainless-steel fasteners for surfaces exposed to the exterior; use galvanized-steel fasteners for surfaces exposed to the interior.

2. Aluminum Panels: Use aluminum or stainless-steel fasteners for surfaces exposed to the exterior; use aluminum or galvanized-steel fasteners for surfaces exposed to the interior.
 3. Copper Panels: Use copper, stainless-steel, or hardware-bronze fasteners.
 4. Stainless-Steel Panels: Use stainless-steel fasteners.
- C. Anchor Clips: Anchor metal roof panels and other components of the Work securely in place, using manufacturer's approved fasteners according to manufacturers' written instructions.
- D. Metal Protection: Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action as recommended in writing by metal panel manufacturer.
- E. Standing-Seam Metal Roof Panel Installation: Fasten metal roof panels to supports with concealed clips at each standing-seam joint at location, spacing, and with fasteners recommended in writing by manufacturer.
1. Install clips to supports with self-tapping fasteners.
 2. Install pressure plates at locations indicated in manufacturer's written installation instructions.
 3. Snap Joint: Nest standing seams and fasten together by interlocking and completely engaging factory-applied sealant.
 4. Seamed Joint: Crimp standing seams with manufacturer-approved, motorized seamer tool so clip, metal roof panel, and factory-applied sealant are completely engaged.
 5. Watertight Installation:
 - a. Apply a continuous ribbon of sealant or tape to seal joints of metal panels, using sealant or tape as recommend in writing by manufacturer as needed to make panels watertight.
 - b. Provide sealant or tape between panels and protruding equipment, vents, and accessories.
 - c. At panel splices, nest panels with minimum **6-inch (152-mm)** end lap, sealed with sealant and fastened together by interlocking clamping plates.
- F. Clipless Metal Panel Installation: Fasten metal panels to supports with screw fasteners at each lapped joint at location and spacing recommended by manufacturer.
- G. Accessory Installation: Install accessories with positive anchorage to building and weathertight mounting, and provide for thermal expansion. Coordinate installation with flashings and other components.
1. Install components required for a complete metal panel system including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items. Provide types indicated by metal roof panel manufacturers; or, if not indicated, types recommended by metal roof panel manufacturer.
- H. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide

concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.

1. Install exposed flashing and trim that is without buckling and tool marks, and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and achieve waterproof and weather-resistant performance.
 2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of **10 feet (3 m)** with no joints allowed within **24 inches (610 mm)** of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently weather resistant and waterproof, form expansion joints of intermeshing hooked flanges, not less than **1 inch (25 mm)** deep, filled with mastic sealant (concealed within joints).
- I. Gutters: Join sections with riveted and soldered or lapped and sealed joints. Attach gutters to eave with gutter hangers spaced not more than **36 inches (914 mm)** o.c. using manufacturer's standard fasteners. Provide end closures and seal watertight with sealant. Provide for thermal expansion.
- J. Downspouts: Join sections with telescoping joints. Provide fasteners designed to hold downspouts securely **1 inch (25 mm)** away from walls; locate fasteners at top and bottom and at approximately **60 inches (1524 mm)** o.c. in between.
1. Provide elbows at base of downspouts to direct water away from building.
 2. Connect downspouts to underground drainage system indicated.
- K. Roof Curbs: Install flashing around bases where they meet metal roof panels.
- L. Pipe Flashing: Form flashing around pipe penetration and metal roof panels. Fasten and seal to metal roof panels as recommended by manufacturer.

3.5 ERECTION TOLERANCES

- A. Installation Tolerances: Shim and align metal panel units within installed tolerance of **1/4 inch in 20 feet (6 mm in 6 m)** on slope and location lines as indicated and within **1/8-inch (3-mm)** offset of adjoining faces and of alignment of matching profiles.

3.6 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect metal roof panel installation, including accessories. Report results in writing.
- B. Remove and replace applications of metal roof panels where tests and inspections indicate that they do not comply with specified requirements.
- C. Additional tests and inspections, at Contractor's expense, are performed to determine compliance of replaced or additional work with specified requirements.

- D. Prepare test and inspection reports.

3.7 CLEANING AND PROTECTION

- A. Remove temporary protective coverings and strippable films, if any, as metal panels are installed, unless otherwise indicated in manufacturer's written installation instructions. On completion of metal panel installation, clean finished surfaces as recommended by metal panel manufacturer. Maintain in a clean condition during construction.
- B. Replace metal panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 074113.16

SECTION 074113.23 - INSULATED METAL ROOF PANELS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes insulated metal roof panels.
- B. Related Sections:
 - 1. Section 074213.53 "Metal Soffit Panels" for metal panels used in horizontal soffit applications.
 - 2. Section 077253 "Snow Guards" for prefabricated devices designed to hold snow on the roof surface, allowing it to melt and drain off slowly.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]<Insert location>**.
 - 1. Meet with DEN Project Manager Owner's insurer if applicable, metal panel Installer, metal panel manufacturer's representative, structural-support Installer, and installers whose work interfaces with or affects metal panels, including installers of roof accessories and roof-mounted equipment.
 - 2. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - 3. Review methods and procedures related to metal panel installation, including manufacturer's written instructions.
 - 4. Examine support conditions for compliance with requirements, including alignment between and attachment to structural members.
 - 5. Review structural loading limitations of purlins and rafters during and after roofing.
 - 6. Review flashings, special details, drainage, penetrations, equipment curbs, and condition of other construction that affect metal panels.
 - 7. Review governing regulations and requirements for insurance, certificates, and tests and inspections if applicable.

8. Review temporary protection requirements for metal panel systems during and after installation.
9. Review of procedures for repair of metal panels damaged after installation.
10. Document proceedings, including corrective measures and actions required, and furnish copy of record to each participant.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of panel and accessory.
2. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Test Reports for Credit SS 7.2: For roofing materials, documentation indicating that roofing materials comply with Solar Reflectance Index requirement.

C. Shop Drawings:

1. Include fabrication and installation layouts of metal panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories; and special details.
2. Accessories: Include details of the flashing, trim, and anchorage systems, at a scale of not less than **1-1/2 inches per 12 inches (1:10)**.

D. Samples for Initial Selection: For each type of metal panel indicated with factory-applied color finishes.

1. Include similar Samples of trim and accessories involving color selection.

E. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below.

1. Metal Panels: **12 inches (305 mm)** long by actual panel width. Include clips, fasteners, closures, and other metal panel accessories.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Product Test Reports: For each product, for tests performed by a qualified testing agency.

- C. Field quality-control reports.
- D. Sample Warranties: For special warranties.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For metal panels to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
 - 1. A firm that has specialized in installation of types of products required for Project for not less than five (5) years and which is acceptable to manufacturer(s) of primary materials.
- B. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
 - 1. Build mockup of typical roof area and eave[, **including fascia,**] [**and soffit**] as shown on Drawings; approximately [**48 inches (1200 mm)**] [**12 feet (3.5 m)**] **<Insert dimension>** square by full thickness, including attachments[, **underlayment,**] and accessories.
 - 2. Build mockups for typical roof area only, including accessories.
 - a. Size: [**12 feet (3.5 m) long by 6 feet (1.75 m)**] **<Insert dimension>**.
 - b. [**Each type of exposed seam and seam termination**] **<Insert mockup item>**.
 - 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
 - 4. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver components, metal panels, and other manufactured items so as not to be damaged or deformed. Package metal panels for protection during transportation and handling.
- B. Unload, store, and erect metal panels in a manner to prevent bending, warping, twisting, and surface damage.

- C. Stack metal panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal panels to ensure dryness, with positive slope for drainage of water. Do not store metal panels in contact with other materials that might cause staining, denting, or other surface damage.
- D. Retain strippable protective covering on metal panels during installation.

1.9 FIELD CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of metal panels to be performed according to manufacturers' written instructions and warranty requirements.

1.10 COORDINATION

- A. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.
- B. Coordinate metal panel installation with rain drainage work, flashing, trim, construction of soffits, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.11 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal panel systems that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures including rupturing, cracking, or puncturing.
 - b. Deterioration of metals and other materials beyond normal weathering.
 - 2. Warranty Period: Minimum **[two (2)]** <Insert number> years from date of Substantial Completion.
- B. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal panels that show evidence of deterioration of factory-applied finishes within specified warranty period.
 - 1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2. Finish Warranty Period: Minimum **[20]** **[10]** **<Insert number>** years from date of Substantial Completion.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]** **<Insert number>** percent.
- B. Solar Reflectance Index: Not less than **[78]** **[29]** when calculated according to ASTM E 1980 based on testing identical products by a qualified testing agency.
- C. Energy Performance: Provide roof panels that are listed on the EPA/DOE's ENERGY STAR "Roof Product List" for **[low]** **[steep]**-slope roof products.
- D. Energy Performance: Provide roof panels with an aged Solar Reflectance Index of not less than **[0.64]** **<Insert value>** when tested according to CRR-1.
- E. Structural Performance: Provide metal panel systems capable of withstanding the effects of the following loads, based on testing according to ASTM E 72:
 1. Wind Loads: 115 mph with gust factor of 1.3.
 2. Other Design Loads: **[As indicated on Drawings]** **<Insert loads>**.
 3. Deflection Limits: For wind loads, no greater than **[1/180]** **[1/240]** **<Insert deflection>** of the span.
 4. Ambient Temperature Range: Minus 30 deg F (minus 35 deg C) to 120 deg F (49 deg C).
 5. **<Insert serviceability requirements>**.
- F. Air Infiltration: Air leakage of not more than **0.06 cfm/sq. ft.** (0.3 L/s per sq. m) when tested according to ASTM E 1680[**or ASTM E 283**] at the following test-pressure difference:
 1. Test-Pressure Difference: **[1.57 lbf/sq. ft. (75 Pa)]** **[6.24 lbf/sq. ft. (300 Pa)]**.
- G. Water Penetration under Static Pressure: No water penetration when tested according to ASTM E 1646[**or ASTM E 331**] at the following test-pressure difference:
 1. Test-Pressure Difference: **[2.86 lbf/sq. ft. (137 Pa)]** **[6.24 lbf/sq. ft. (300 Pa)]**.

- H. Wind-Uplift Resistance: Provide metal roof panel assemblies that comply with UL 580 for wind-uplift-resistance class indicated.
1. Uplift Rating: **[UL 30] [UL 60] [UL 90]**.
- I. FM Global Listing: Provide metal roof panels and component materials that comply with requirements in FM Global 4471 as part of a panel roofing system and that are listed in FM Global's "Approval Guide" for Class 1 or noncombustible construction, as applicable. Identify materials with FM Global markings.
1. Fire/Windstorm Classification: Class 1A-**[60] [75] [90] [105] [120] <Insert number>**.
 2. Hail Resistance: **[MH] [SH]**.
- J. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
1. Temperature Change (Range): **[120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces] <Insert temperature range>**.

2.2 FOAMED-INSULATION-CORE METAL ROOF PANELS

- A. General: Provide factory-formed and -assembled metal roof panels fabricated from two sheets of metal with insulation core foamed in place during fabrication with joints between panels designed to form weathertight seals. Include accessories required for weathertight installation.
1. Panel Performance:
 - a. Flatwise Tensile Strength: **30 psi (200 kPa)** when tested according to ASTM C 297/C 297M.
 - b. Humid Aging: Volume increase not greater than 6.0 percent and no delamination or metal corrosion when tested for seven days at **140 deg F (60 deg C)** and 100 percent relative humidity according to ASTM D 2126.
 - c. Heat Aging: Volume increase not greater than 2.0 percent and no delamination, surface blistering, or permanent bowing when tested for seven days at **200 deg F (93 deg C)** according to ASTM D 2126.
 - d. Cold Aging: Volume decrease not more than 1.0 percent and no delamination, surface blistering, or permanent bowing when tested for seven days at minus **20 deg F (29 deg C)** according to ASTM D 2126.
 - e. Fatigue: No evidence of delamination, core cracking, or permanent bowing when tested to a **20-lbf/sq. ft. (958-kPa)** positive and negative wind load and with deflection of L/180 for 2 million cycles.
 - f. Autoclave: No delamination when exposed to **2-psi (13.8-kPa)** pressure at a temperature of **212 deg F (100 deg C)** for 2-1/2 hours.
 - g. Fire-Test-Response Characteristics: Class A according to ASTM E 108.

2. Insulation Core: Modified isocyanurate or polyurethane foam using a non-CFC blowing agent, with maximum flame-spread and smoke-developed indexes of 25 and 450, respectively.
 - a. Closed-Cell Content: 90 percent when tested according to ASTM D 6226.
 - b. Density: 2.0 to 2.6 lb/cu. ft. (32 to 42 kg/cu. m) when tested according to ASTM D 1622.
 - c. Compressive Strength: Minimum 20 psi (140 kPa) when tested according to ASTM D 1621.
 - d. Shear Strength: 26 psi (179 kPa) when tested according to ASTM C 273.

- B. Lap-Seam-Profile, Foamed-Insulation-Core Metal Roof Panels **<Insert drawing designation>**: Formed for lapping side edges of adjacent panels and mechanically attaching to supports using exposed fasteners in side laps.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. IPS - Insulated Panel Systems; an NCI company.
 - b. Kingspan.
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.

 2. Metallic-Coated Steel Sheet: Facings of zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, G90 (Z275) coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, Class AZ50 (Class AZM150) coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
 - a. Nominal Thickness: [0.022 inch (0.56 mm)] [0.028 inch (0.71 mm)] [0.034 inch (0.86 mm)].
 - b. Exterior Finish: [Two-coat fluoropolymer] [Three-coat fluoropolymer] [Mica fluoropolymer] [Metallic fluoropolymer] [FEVE fluoropolymer] [Siliconized polyester] **<Insert finish>**.
 - 1) Color: [As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] **<Insert color>**.
 - c. Interior Finish: [Siliconized polyester] [Acrylic or polyester] **<Insert finish>**.
 - 1) Color: [As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] **<Insert color>**.

 3. Batten: Same material, finish, and color as exterior facings of roof panels.
 4. Panel Coverage: [24 inches (610 mm)] [30 inches (762 mm)] [36 inches (914 mm)] [39.6 inches (1000 mm)] [40 inches (1016 mm)] [44.5 inches (1130 mm)] **<Insert dimension>**.

5. Panel Thickness: [1.0 inch (25 mm)] [1.5 inches (38 mm)] [2.0 inches (51 mm)] [2.5 inches (64 mm)] [3.0 inches (76 mm)] [4.0 inches (102 mm)] [5.0 inches (127 mm)] [6.0 inches (152 mm)] <Insert dimension>.
 6. Thermal-Resistance Value (R-Value): <Insert number> according to ASTM C 1363.
- C. Standing-Seam-Profile, Foamed-Insulation-Core Metal Roof Panels <Insert drawing designation>: Formed with vertical tongue-and-groove ribs at panel edges and [intermediate stiffening ribs symmetrically spaced] [a flat pan] between ribs; designed for sequential installation by interlocking tongue-and-groove panel edges and mechanically attaching panels to supports using concealed clips located between panels and engaging edges of adjacent panels, and mechanically seaming panels together.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Butler Manufacturing; a BlueScope Steel company.](#)
 - b. [IPS - Insulated Panel Systems; an NCI company.](#)
 - c. [Metl-Span.](#)
 - d. <Insert manufacturer's name>.
 - e. or approved equal.
 2. Metallic-Coated Steel Sheet: Facings of zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, G90 (Z275) coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, Class AZ50 (Class AZM150) coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
 - a. Nominal Thickness: [0.022 inch (0.56 mm)] [0.028 inch (0.71 mm)] [0.034 inch (0.86 mm)].
 - b. Exterior Finish: [Two-coat fluoropolymer] [Three-coat fluoropolymer] [Mica fluoropolymer] [Metallic fluoropolymer] [FEVE fluoropolymer] [Siliconized polyester] <Insert finish>.
 - 1) Color: [As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.
 - c. Interior Finish: [Siliconized polyester] [Acrylic or polyester] <Insert finish>.
 - 1) Color: [As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.
 3. Joint Type: [Single folded] [Double folded] [As standard with manufacturer].
 4. Panel Coverage: [36 inches (914 mm)] [42 inches (1067 mm)] <Insert dimension>.

5. Panel Thickness: [2.0 inches (51 mm)] [2.5 inches (64 mm)] [3.0 inches (76 mm)] [4.0 inches (102 mm)] [5.0 inches (127 mm)] [6.0 inches (152 mm)] <Insert dimension>.
 6. Thermal-Resistance Value (R-Value): <Insert number> according to ASTM C 1363.
- D. Batten-Seam-Profile, Foamed-Insulation-Core Metal Roof Panels <Insert drawing designation>: Formed with vertical or tapered tongue-and-groove ribs at panel edges and [intermediate stiffening ribs symmetrically spaced] [a flat pan] between ribs; designed for sequential installation by interlocking tongue-and-groove panel edges and mechanically attaching panels to supports using concealed clips located between panels and engaging edges of adjacent panels, and installing snap-on battens over panel joints.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [CENTRIA Architectural Systems](#).
 - b. <Insert manufacturer's name>.
 - c. or approved equal.
 2. Metallic-Coated Steel Sheet: Facings of zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, G90 (Z275) coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, Class AZ50 (Class AZM150) coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
 - a. Nominal Thickness: 0.022 inch (0.56 mm).
 - b. Exterior Finish: [Two-coat fluoropolymer] [Three-coat fluoropolymer] [Mica fluoropolymer] [Metallic fluoropolymer] [FEVE fluoropolymer] [Siliconized polyester] <Insert finish>.
 - 1) Color: [As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.
 - c. Interior Finish: [Siliconized polyester] [Acrylic or polyester] <Insert finish>.
 - 1) Color: [As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.
 3. Batten: Same material, finish, and color as exterior facings of roof panels.
 4. Clips: One piece; [0.064-inch- (1.63-mm-)] [0.097-inch- (2.50-mm-)] nominal thickness, [zinc-coated (galvanized)] [or] [aluminum-zinc alloy-coated] steel sheet.
 5. Panel Coverage: [36 inches (914 mm)] [39.6 inches (1000 mm)] <Insert dimension>.

6. Panel Thickness: [1.75 inches (44 mm)] [2.0 inches (51 mm)] [2.5 inches (64 mm)] [3.0 inches (76 mm)] [4.0 inches (102 mm)] [5.0 inches (127 mm)] [6.0 inches (152 mm)] <Insert dimension>.
7. Thermal-Resistance Value (R-Value): <Insert number> according to ASTM C 1363.

2.3 MISCELLANEOUS MATERIALS

- A. Miscellaneous Metal Subframing and Furring: ASTM C 645, cold-formed, metallic-coated steel sheet, ASTM A 653/A 653M, G90 (Z275 hot-dip galvanized) coating designation or ASTM A 792/A 792M, Class AZ50 (Class AZM150) coating designation unless otherwise indicated. Provide manufacturer's standard sections as required for support and alignment of metal panel system.
- B. Panel Accessories: Provide components required for a complete, weathertight panel system including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal panels unless otherwise indicated.
 1. Closures: Provide closures at eaves and ridges, fabricated of same metal as metal panels.
 2. Backing Plates: Provide metal backing plates at panel end splices, fabricated from material recommended by manufacturer.
 3. Closure Strips: Closed-cell, expanded, cellular, rubber or crosslinked, polyolefin-foam or closed-cell laminated polyethylene; minimum 1-inch- (25-mm-) thick, flexible closure strips; cut or premolded to match metal panel profile. Provide closure strips where indicated or necessary to ensure weathertight construction.
- C. Flashing and Trim: Provide flashing and trim formed from same material as exterior facings of metal panels as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, eaves, rakes, corners, bases, framed openings, ridges, fasciae, and fillers. Finish flashing and trim with same finish system as adjacent metal panels.
- D. Gutters: Formed from same material, finish, and color as exterior facings of panels, complete with end pieces, outlet tubes, and other special pieces as required. Fabricate in minimum 96-inch- (2400-mm-) long sections, of size and metal thickness according to SMACNA's "Architectural Sheet Metal Manual." Furnish gutter supports spaced a maximum of 36 inches (914 mm) o.c., fabricated from same metal as gutters. Provide wire ball strainers of compatible metal at outlets. Finish gutters to match [metal roof panels] [roof fascia and rake trim].
- E. Downspouts: Formed from same material, finish, and color as exterior facings of roof panels. Fabricate in 10-foot- (3-m-) long sections, complete with formed elbows and offsets, of size and metal thickness according to SMACNA's "Architectural Sheet Metal Manual." Finish downspouts to match gutters.

- F. Roof Curbs: Fabricated from same material, finish, and color as exterior facings of roof panels, **[0.048-inch (1.2-mm)]** <Insert dimension> nominal thickness; with bottom of skirt profiled to match roof panel profiles and with welded top box and integral full-length cricket. Fabricate curb subframing of **0.060-inch-** (1.52-mm-) nominal thickness, angle-, C-, or Z-shaped steel sheet. Fabricate curb and subframing to withstand indicated loads of size and height indicated. Finish roof curbs to match metal roof panels.
1. Insulate roof curb with **1-inch-** (25-mm-) thick, rigid insulation.
- G. Panel Fasteners: Self-tapping screws designed to withstand design loads. Provide exposed fasteners with heads matching color of metal panels by means of plastic caps or factory-applied coating. Provide EPDM or PVC sealing washers for exposed fasteners.
- H. Panel Sealants: Provide sealant types recommended by manufacturer that are compatible with panel materials, are nonstaining, and do not damage panel finish.
1. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape **1/2 inch** (13 mm) wide and **1/8 inch** (3 mm) thick.
 2. Joint Sealant: ASTM C 920; elastomeric polyurethane or silicone sealant; of type, grade, class, and use classifications required to seal joints in metal panels and remain weathertight; and as recommended in writing by metal panel manufacturer.
 3. Butyl-Rubber-Based, Solvent-Release Sealant: ASTM C 1311.

2.4 FABRICATION

- A. General: Fabricate and finish metal panels and accessories at the factory, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.
- B. Provide panel profile, including major ribs and intermediate stiffening ribs, if any, for full length of panel.
- C. Fabricate metal panel joints with factory-installed captive gaskets or separator strips that provide a weathertight seal and prevent metal-to-metal contact, and that minimize noise from movements.
- D. Sheet Metal Flashing and Trim: Fabricate flashing and trim to comply with manufacturer's recommendations and recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated.

1. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
2. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints for additional strength.
3. Seams for Other Than Aluminum: Fabricate nonmoving seams in accessories with flat-lock seams. Tin edges to be seamed, form seams, and solder.
4. Sealed Joints: Form nonexpansion, but movable, joints in metal to accommodate sealant and to comply with SMACNA standards.
5. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.
6. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended in writing by metal panel manufacturer.
 - a. Size: As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal panel manufacturer for application but not less than thickness of metal being secured.

2.5 FINISHES

- A. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in same piece are unacceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- C. Exterior Facings and Accessories:
 1. Two-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 2. Three-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 3. Mica Fluoropolymer: AAMA 621. Two-coat fluoropolymer finish with suspended mica flakes containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 4. Metallic Fluoropolymer: AAMA 621. Three-coat fluoropolymer finish with suspended metallic flakes containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

5. FEVE Fluoropolymer: AAMA 621. Two-coat fluoropolymer finish containing 100 percent fluorinated ethylene vinyl ether resin in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
6. Siliconized Polyester: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than 0.2 mil (0.005 mm) for primer and 0.8 mil (0.02 mm) for topcoat.

D. Interior Facings:

1. Siliconized Polyester: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than 0.2 mil (0.005 mm) for primer and 0.8 mil (0.02 mm) for topcoat.
2. Acrylic or Polyester Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester finish consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil (0.013 mm).

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, metal panel supports, and other conditions affecting performance of the Work.
 1. Examine primary and secondary roof framing to verify that rafters, purlins, angles, channels, and other structural panel support members and anchorages have been installed within alignment tolerances required by metal roof panel manufacturer.
- B. Examine roughing-in for components and systems penetrating metal panels to verify actual locations of penetrations relative to seam locations of metal panels before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Miscellaneous Supports: Install subframing, furring, and other miscellaneous panel support members and anchorages according to ASTM C 754 and metal panel manufacturer's written recommendations.

3.3 METAL PANEL INSTALLATION

- A. General: Install metal panels according to manufacturer's written instructions in orientation, sizes, and locations indicated. Install panels perpendicular to supports

unless otherwise indicated. Anchor metal panels and other components of the Work securely in place, with provisions for thermal and structural movement.

1. Apply continuous ribbon of sealant to panel joint on concealed side of insulated metal roof panels as vapor seal; apply sealant to panel joint on exposed side of panels for weather seal.
 2. Shim or otherwise plumb substrates receiving metal panels.
 3. Flash and seal metal panels at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until air- or water-resistive barriers and flashings that will be concealed by metal panels are installed.
 4. Install screw fasteners in predrilled holes.
 5. Locate and space fastenings in uniform vertical and horizontal alignment.
 6. Install flashing and trim as metal panel work proceeds.
 7. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
 8. Align bottoms of metal panels and fasten with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws.
 9. Provide weathertight escutcheons for pipe- and conduit-penetrating panels.
- B. Fasteners: Use stainless-steel fasteners for surfaces exposed to the exterior; use galvanized-steel fasteners for surfaces exposed to the interior.
- C. Anchor Clips: Anchor metal roof panels and other components of the Work securely in place, using manufacturer's approved fasteners according to manufacturers' written instructions.
- D. Metal Protection: Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action as recommended in writing by metal panel manufacturer.
- E. Lap-Seam, Foamed-Insulation-Core Metal Roof Panels: Fasten insulated metal roof panels to supports with fasteners at each lapped joint at location and spacing recommended by manufacturer.
1. Lap ribbed or fluted sheets one full-rib corrugation. Apply panels and associated items for neat and weathertight enclosure. Avoid "panel creep" or applications not true to line.
 2. Provide metal-backed washers under heads of exposed fasteners bearing on weather side of insulated metal roof panels.
 3. Locate and space exposed fasteners in uniform vertical and horizontal alignment. Use proper tools to obtain controlled uniform compression for positive seal without rupture of washer.
 4. Provide sealant tape at lapped joints of insulated metal roof panels and between panels and protruding equipment, vents, and accessories.
 5. Apply a continuous ribbon of sealant tape to panel side laps and elsewhere as needed to weatherproof panels.
 6. Apply snap-on battens to seams of insulated metal roof panels to conceal fasteners.

- F. Standing-Seam, Foamed-Insulation-Core Metal Roof Panels: Fasten insulated metal roof panels to supports with concealed clips at each standing-seam joint at location, spacing, and with fasteners recommended in writing by manufacturer.
1. Install clips to supports with self-tapping fasteners.
 2. Seamed Joint: Crimp standing seams with manufacturer-approved, motorized seamer tool so cleat, insulated metal roof panel, and factory-applied side-lap sealant are completely engaged.
- G. Batten-Seam, Foamed-Insulation-Core Metal Roof Panels: Fasten insulated metal roof panels to supports with concealed clips at each batten-seam joint at location, spacing, and with fasteners recommended in writing by manufacturer.
1. Apply battens to insulated metal roof panel seams, fully engaged to provide weathertight joints.
- H. Accessory Installation: Install accessories with positive anchorage to building and weathertight mounting, and provide for thermal expansion. Coordinate installation with flashings and other components.
1. Install components required for a complete metal panel system including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items. Provide types indicated by metal roof panel manufacturers; or, if not indicated, provide types recommended in writing by metal roof panel manufacturer.
- I. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level. Install work with laps, joints, and seams that are permanently watertight and weather resistant.
1. Install exposed flashing and trim that is without buckling and tool marks, and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and achieve waterproof performance.
 2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of **10 feet (3 m)** with no joints allowed within **24 inches (610 mm)** of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently waterproof, form expansion joints of intermeshing hooked flanges, not less than **1 inch (25 mm)** deep, filled with mastic sealant (concealed within joints).
- J. Gutters: Join sections with riveted and soldered or lapped and sealed joints. Attach gutters to eave with gutter hangers spaced not more than **36 inches (914 mm) o.c.** using manufacturer's standard fasteners. Provide end closures and seal watertight with sealant. Provide for thermal expansion.
- K. Downspouts: Join sections with telescoping joints. Provide fasteners designed to hold downspouts securely **1 inch (25 mm)** away from walls; locate fasteners at top and bottom and at approximately **60 inches (1500 mm) o.c.** in between.

1. Provide elbows at base of downspouts to direct water away from building.
2. Connect downspouts to underground drainage system indicated.

L. Roof Curbs: Install flashing around bases where they meet metal roof panels.

M. Pipe Flashing: Form flashing around pipe penetration and metal roof panels. Fasten and seal to metal roof panels as recommended by manufacturer.

3.4 ERECTION TOLERANCES

A. Installation Tolerances: Shim and align metal panel units within installed tolerance of **1/4 inch in 20 feet** (6 mm in 6 m) on slope and location lines as indicated and within **1/8-inch** (3-mm) offset of adjoining faces and of alignment of matching profiles.

3.5 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect completed metal panel installation, including accessories. Report results in writing.

B. Remove and replace applications where tests and inspections indicate that they do not comply with specified requirements.

C. Additional tests and inspections, at Contractor's expense, are performed to determine compliance of replaced or additional work with specified requirements.

D. Prepare test and inspection reports.

3.6 CLEANING AND PROTECTION

A. Remove temporary protective coverings and strippable films, if any, as metal panels are installed, unless otherwise indicated in manufacturer's written installation instructions. On completion of metal panel installation, clean finished surfaces as recommended by metal panel manufacturer. Maintain in a clean condition during construction.

B. Replace metal panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 074113.23

SECTION 074213.13 - FORMED METAL WALL PANELS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Exposed-fastener, lap-seam metal wall panels.
2. Concealed-fastener, lap-seam metal wall panels.
3. Metal liner panels.

- B. Related Sections:

1. Section 074213.16 "Metal Plate Wall Panels" for solid metal plate wall panels.
2. Section 074213.19 "Insulated Metal Wall Panels" for foamed-in-place, laminated and honeycomb insulated metal wall panels.
3. Section 074213.23 "Metal Composite Material Wall Panels" for metal-faced composite wall panels.
4. Section 074213.53 "Metal Soffit Panels" for metal panels used in horizontal soffit applications.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]<Insert location>**.

1. Meet with DEN Project Manager, Owner's insurer if applicable, metal panel Installer, metal panel manufacturer's representative, structural-support Installer, and installers whose work interfaces with or affects metal panels, including installers of doors, windows, and louvers.
2. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
3. Review methods and procedures related to metal panel installation, including manufacturer's written instructions.

4. Examine support conditions for compliance with requirements, including alignment between and attachment to structural members.
5. Review flashings, special siding details, wall penetrations, openings, and condition of other construction that affect metal panels.
6. Review governing regulations and requirements for insurance, certificates, and tests and inspections if applicable.
7. Review temporary protection requirements for metal panel assembly during and after installation.
8. Review of procedures for repair of metal panels damaged after installation.
9. Document proceedings, including corrective measures and actions required, and furnish copy of record to each participant.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include product specifications, certified product test results, installation instructions and general recommendations, construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of panel and accessory.
2. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.

C. Shop Drawings:

1. Include fabrication and installation layouts of metal panels; large-scale details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories; and special details. Distinguish between factory and field assembly work.
2. Accessories: Include details of the flashing, trim, and anchorage systems, at a scale of not less than **1-1/2 inches per 12 inches (1:10)**.

D. Samples for Initial Selection: For each type of metal panel indicated with factory-applied finishes.

1. Include Samples of trim and accessories involving color selection.

E. Samples for Verification: For each type of exposed finish and color, prepared on Samples of size indicated below:

1. Metal Panels: Submit three (3) samples **12 inches (305 mm)** long by actual panel width. Include miscellaneous trim piece, anchors, insulation, sealants and compressible gasket, fasteners, closures, and other metal panel accessories.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Certificate from installer evidencing minimum ten (10) years experience successfully installing this type of work on projects of this scale and proof of acceptance by manufacturer.
- C. Certificate from the manufacturer stating that all materials are per contract requirements and proof of minimum ten (10) years experience manufacturing products of this type on projects of this scale.
- D. Certificate from manufacturer that panel system is approved for use in Denver or has ICBO approval for Class 1 non-combustible construction.
- E. Product Test Reports: For each product, for tests performed by a qualified testing agency.
- F. Structural Calculations: Signed and stamped by a Colorado licensed structural engineer.
- G. Field quality-control reports.
- H. Sample Warranties: For special warranties.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For metal panels to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 MAINTENANCE SUBMITTALS

- A. Provide minimum four (4) gallons touch-up paint for each color used on Project. Store in area directed by DEN Project Manager.
 - 1. Instruct Owners personnel in appropriate paint touch-up procedures.

1.8 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
 - 1. A firm that has specialized in installation of types of products required for Project for not less than ten (10) years and which is acceptable to manufacturer(s) of primary materials.

B. Manufacturer's Qualifications:

1. A firm that has specialized in manufacture of products required for Project with a minimum of ten (10) years experience manufacturing products of this type on projects of this scale.

C. UL-Certified, Portable Roll-Forming Equipment: UL-certified, portable roll-forming equipment capable of producing metal panels warranted by manufacturer to be the same as factory-formed products. Maintain UL certification of portable roll-forming equipment for duration of work.

D. Performance Test Standards: Submit evidence that preformed panel system has been pretested by an independent laboratory and certified by manufacturer to provide specified resistance to air and water infiltration and structural deflection and failure when installed as indicated and when tested in accordance with AAMA Standard Test TM 1, "Specification for Method of Test for Metal Curtain Walls for Water Penetration Using Dynamic Pressure".

E. Fire Resistances:

1. Wall panels shall be rated and carry the following listings:
 - a. U.L. classification for "Surface Burning Characteristics", U.L. Standard 723 (ASTM-E84) File R6863.

	Finished Panel:	Core Only:
Flame Spread:	25 max.	25 max.
Fuel Contributed:	0	0
Smoke Developed:	450 max.	200 max.

- b. U.L. classification per "Insulated Wall Construction" U.L. Subject 1040 (corner test).
- c. Factory mutual approval as Class 1 panels.
- d. ICBO Research Report for Class 1 non-combustible construction and approval by the City and County of Denver.

F. Required Performances: Fabricate panels and other components of wall system for the following installed as indicated performances:

1. Wind Loading: Refer to Part 1 of this Section.
2. Water Penetration: No significant, uncontrolled leakage at 6.24 lbs. per sq. ft. per ASTM E 331.
3. Air Infiltration: 0.060 cfm per sq. ft. for wall areas, with 1.56 lbs. per sq. ft. differential pressure, as tested per ASTM E 283.
4. Sound Transmission: STC rating of 28.
5. Thermal Performance: Factory-assembled panel shall have a U-value of 0.072 btu/hr./SF when tested in accordance with ASTM C236.
6. Bond Strength: No metal primer interface corrosion or delamination shall occur after 500 hrs. at 120 deg F and 100% relative humidity.
7. Design to withstand thermal movements resulting from an ambient temperature

- range of minus 30 deg F (minus 35 deg C) to 120 deg F (67 deg C), which may cause preformed siding range of 180 deg F (100 deg. C), without causing buckling, failure of joint seals, undue stress on fasteners or other detrimental effects.
8. Pressure Equalization: Provide Rain Screen Test showing that with liner seal broken, there shall be no water rise in joint cavity under 10 psf in accordance with ASTM E331-70. A fully designed and tested gutter system meeting the same test requirements will be acceptable upon submittal of supporting documents.
 9. Galvanic Reaction: Provide galvanic protection between dissimilar metals.
- G. Provide complete structural calculations, including calculation for cold-formed metal framing and metal fabrications back-up, signed and stamped by an engineer registered in the state of Colorado. Calculations are to be based on the following:
1. Wind load exposure C, Importance factor I = 1.15.
 2. Minimum basic wind speed: 85 M.P.H., but not less than 50 p.s.f., positive and negative pressure.
 3. Wind Load Deflection: L/180, 3/4" max.
 4. Maximum Wind Load: 115 mph with gust factor of 1.3.
- H. Field Measurements: It is the intent of these specifications for Contractor to shop fabricate metal panels completely. Contractor to make all field measurements required to shop fabricate panel system accurately. Field cutting and trimming be held to an absolute minimum.
- I. Single Source Responsibility: The "Exterior Skin Installer" is to provide the structural calculations, coordination, fabrication, installation and warranty for all work associated with the exterior skin, which includes: Section 083213 "Sliding Aluminum Frame Glass Doors", Section 084413 "Glazed Aluminum Curtainwall", Section 089119 "Fixed Louvers", and Section 089516 "Wall Vents", and the following:
1. All cold formed metal framing or metal fabrications associated with the above. Cold formed metal framing to be of the size and spacing indicated on the drawings, except gauge shall be as needed as determined by the structural calculations required, but in no case less than 14 gauge. Metal fabrications shall be of the size indicated on the drawings, except thickness shall be as determined by the structural calculations required. Provide additional fabrications as needed.
 - a. All of this work to be in accordance with requirements of Section 054000 "Cold Formed Metal Framing" and Section 055000 "Metal Fabrications".
 2. All expansion joints in the exterior side of the above exterior wall, per Section 079500 "Expansion Control".
 3. All joint sealers installed within the above-described work including joints between adjacent work, per Section 079000, "Joint Sealants".
 4. All glazing installed within the above-described work per Section 088000, "Glazing".
 5. All painting, finishes, or coatings associated with the above described work.
 6. All firestopping associated with exterior skin intersection with rated roofs or floors per Section 078413 "Penetration Firestopping."

- J. Testing Agency: Contractor to employ an independent testing agency to make on-site inspections on at least a weekly basis during skin construction. Testing Agency to measure actual installed tolerances, and inspect all facets of construction with regard to compliance with contract requirements. Submit weekly report to DEN Project Manager. Immediately note any areas not in compliance. Independent Testing Agency shall verify existing installed tolerances prior to start of work and notify DEN Project Manager of any discrepancies to specified tolerances prior to start of prefabrication.
- K. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation. Coordinate installation of mock-up with work by other trades.
1. Build mockup of typical metal panel assembly [**as shown on Drawings**] <Insert **size**>, including [**corner,**] [**soffits,**] supports, attachments, and accessories.
 2. Demonstrate each type of detail condition to the greatest extent possible including; a minimum 100 square feet of masonry, an expansion joint, louver, curtainwall, glazing, preformed siding, sealants, painting, finishes, typical parapet and cap, typical cold formed metal framing, typical metal fabrications and a minimum 80 square feet of exterior soffit. This mockup may be constructed and approved in sections. Provide scaffolding to facilitate mockup review.
 3. Do not proceed with initial mockup prior to approval of initial submittals unless approved by the DEN Project Manager.
 4. Portions of the mockup that are not approved are to be reconstructed until approved. The approved mockup will serve as the standard of quality. Conduct field water test on approved initial mockup per AAMA 501.2-83
 5. Complete initial mockup a minimum of one (1) month prior to start of fabrication of panels, glazing, louvers, and curtainwall for the actual building.
 6. Remove initial mockup from the project site when directed by the DEN Project Manager, but not prior to Substantial Completion. Undamaged glass may be applied to overstock requirements. Salvage preformed siding, clean, protect, and store for Owner in area as directed by DEN Project Manager.
 7. Water-Spray Test: Conduct water-spray test of metal panel assembly mockup, testing for water penetration according to AAMA 501.2.
 8. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
 9. Construct additional mockups on the permanent structure as may be required to demonstrate each type of condition not demonstrated in initial mock-up. Notify DEN Project Manager when ready for review. Do not proceed with subsequent work until mockup is approved.
 10. Cost of components of this section incorporated into mockups, including separate structure for the initial mockup shall be by this Contractor.
 11. Structural performance for mockup shall be designed to withstand wind loads specified herein, with deflections equal to those required for the final building. See structural drawings.
 12. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver components, metal panels, and other manufactured items so as not to be damaged or deformed. Package metal panels for protection during transportation and handling.
- B. Unload, store, and erect metal panels in a manner to prevent bending, warping, twisting, and surface damage.
- C. Stack metal panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal panels to ensure dryness, with positive slope for drainage of water. Do not store metal panels in contact with other materials that might cause staining, denting, or other surface damage.
- D. Retain strippable protective covering on metal panels during installation.
- E. Copper Panels: Wear gloves when handling to prevent fingerprints and soiling of surface.

1.10 FIELD CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of metal panels to be performed according to manufacturers' written instructions and warranty requirements.

1.11 COORDINATION

- A. Coordinate metal panel installation with rain drainage work, flashing, trim, construction of soffits, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.12 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal panel systems that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures including rupturing, cracking, or puncturing.
 - b. Deterioration of metals and other materials beyond normal weathering.
 - 2. Warranty Period: Minimum **[two (2)]** <Insert number> years from date of Substantial Completion.
- B. Installer Warranty:
 - 1. Entire panel system, including weathertightness, material, finish, insulation,

seams, and fasteners for a period of minimum two (2) years from date of Substantial Completion.

- C. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal panels that show evidence of deterioration of factory-applied finishes within specified warranty period.
1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 2. Finish Warranty Period: Minimum **[20] [10] <Insert number>** years from date of Substantial Completion.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25] <Insert number>** percent.
- B. Structural Performance: Provide metal panel systems capable of withstanding the effects of the following loads, based on testing according to ASTM E 1592:
1. Wind Loads: 115 mph with gust factor of 1.3.
 2. Other Design Loads: **[As indicated on Drawings] <Insert loads>**.
 3. Deflection Limits: For wind loads, no greater than **[1/180] [1/240] <Insert deflection>** of the span.
 4. Ambient Temperature Range: Minus 30 deg F (minus 35 deg C) to 120 deg F (49 deg C).
 5. **<Insert serviceability requirements>**.
- C. Air Infiltration: Air leakage of not more than **0.06 cfm/sq. ft. (0.3 L/s per sq. m)** when tested according to ASTM E 283 at the following test-pressure difference:
1. Test-Pressure Difference: **[1.57 lbf/sq. ft. (75 Pa)] [6.24 lbf/sq. ft. (300 Pa)]**.

- D. Water Penetration under Static Pressure: No water penetration when tested according to ASTM E 331 at the following test-pressure difference:
1. Test-Pressure Difference: [**2.86 lbf/sq. ft. (137 Pa)**] [**6.24 lbf/sq. ft. (300 Pa)**].
- E. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
1. Temperature Change (Range): [**120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces**] <Insert temperature range>.
- F. Fire-Resistance Ratings: Comply with ASTM E 119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
1. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.

2.2 EXPOSED-FASTENER, LAP-SEAM METAL WALL PANELS

- A. General: Provide factory-formed metal panels designed to be field assembled by lapping side edges of adjacent panels and mechanically attaching panels to supports using exposed fasteners in side laps. Include accessories required for weathertight installation.
- B. Corrugated-Profile, Exposed-Fastener Metal Wall Panels <Insert drawing **designation**>: Formed with alternating curved ribs spaced at **2.67 inches (68 mm)** o.c. across width of panel.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [AEP Span; a BlueScope Steel company.](#)
 - b. [Alcoa Inc.](#)
 - c. [ATAS International, Inc.](#)
 - d. [Berridge Manufacturing Company.](#)
 - e. [CENTRIA Architectural Systems.](#)
 - f. [Englert, Inc.](#)
 - g. [Fabral.](#)
 - h. [Firestone Metal Products, LLC.](#)
 - i. [Flexospan Steel Buildings, Inc.](#)
 - j. [Industrial Building Panels.](#)
 - k. [MBCI; a division of NCI Building Systems, L.P.](#)
 - l. [McElroy Metal, Inc.](#)
 - m. [Metal Sales Manufacturing Corporation.](#)
 - n. [Morin; a Kingspan Group company.](#)
 - o. <Insert manufacturer's name>.

- p. or approved equal.
2. Metallic-Coated Steel Sheet: Zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, **G90 (Z275)** coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, **Class AZ50 (Class AZM150)** coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
 - a. Nominal Thickness: [**0.022 inch (0.56 mm)**] [**0.028 inch (0.71 mm)**] [**0.034 inch (0.86 mm)**] [**0.040 inch (1.02 mm)**] [**0.052 inch (1.32 mm)**].
 - b. Exterior Finish: [**Two-coat fluoropolymer**] [**Three-coat fluoropolymer**] [**Mica fluoropolymer**] [**Metallic fluoropolymer**] [**FEVE fluoropolymer**] [**Siliconized polyester**] <Insert finish>.
 - c. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
 3. Aluminum Sheet: Coil-coated sheet, **ASTM B 209 (ASTM B 209M)**, alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
 - a. Thickness: [**0.032 inch (0.81 mm)**] [**0.040 inch (1.02 mm)**].
 - b. Surface: [**Smooth, flat**] [**Embossed**] finish.
 - c. Exterior Finish: [**Two-coat fluoropolymer**] [**Three-coat fluoropolymer**] [**Mica fluoropolymer**] [**Metallic fluoropolymer**] [**FEVE fluoropolymer**] [**Siliconized polyester**] [**Clear anodized**] [**Color anodized**] <Insert finish>.
 - d. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
 4. Stainless-Steel Sheet: ASTM A 240/A 240M, [**Type 304**] [**Type 316**], fully annealed.
 - a. Nominal Thickness: [**0.019 inch (0.48 mm)**] [**0.025 inch (0.64 mm)**] [**0.031 inch (0.79 mm)**] [**0.38 inch (0.96 mm)**] [**0.50 inch (1.27 mm)**].
 - b. Exterior Finish: [**4**] [**2B**] <Insert finish>.
 5. Copper Sheet: ASTM B 370, cold-rolled copper sheet, H00 temper.
 - a. Thickness: [**16 oz./sq. ft. (0.55 mm thick)**] [**20 oz./sq. ft. (0.68 mm thick)**].
 - b. Exposed Finish: [**Mill**] [**Prepatinated**].
 - c. Prepatinated Color: [**Dark brown**] [**Verdigris**] <Insert color>.
 6. Rib Spacing: [**2.67 inches (68 mm)**] <Insert dimension> o.c.
 7. Panel Coverage: [**21.3 inches (541 mm)**] [**29.3 inches (744 mm)**] [**34.6 inches (881 mm)**] [**37.3 inches (947 mm)**] [**42.6 inches (1084 mm)**] [**45.3 inches (1151 mm)**] <Insert dimension>.
 8. Panel Height: [**0.5 inch (13 mm)**] [**0.875 inch (22 mm)**] <Insert dimension>.

- C. Tapered-Rib-Profile, Exposed-Fastener Metal Wall Panels <Insert drawing designation>: Formed with raised, trapezoidal major ribs and [intermediate stiffening ribs symmetrically spaced] [a flat pan] between major ribs.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Architectural Metal Systems; a Nucor company.](#)
 - b. [Berridge Manufacturing Company.](#)
 - c. [Butler Manufacturing Company; a BlueScope Steel company.](#)
 - d. [CENTRIA Architectural Systems.](#)
 - e. [Englert, Inc.](#)
 - f. [Fabral.](#)
 - g. [Firestone Metal Products, LLC.](#)
 - h. [Flexospan Steel Buildings, Inc.](#)
 - i. [MBCI; a division of NCI Building Systems, L.P.](#)
 - j. [McElroy Metal, Inc.](#)
 - k. [Metal Sales Manufacturing Corporation.](#)
 - l. [Morin; a Kingspan Group company.](#)
 - m. [Petersen Aluminum Corporation.](#)
 - n. [Union Corrugating Company.](#)
 - o. [United Steel Deck, Inc.; Subsidiary of Bouras Industries Inc.](#)
 - p. [VICWEST.](#)
 - q. <Insert manufacturer's name>.
 - r. or approved equal.
 2. Metallic-Coated Steel Sheet: Zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, [G90 \(Z275\)](#) coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, [Class AZ50 \(Class AZM150\)](#) coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
 - a. Nominal Thickness: [[0.022 inch \(0.56 mm\)](#)] [[0.028 inch \(0.71 mm\)](#)] [[0.034 inch \(0.86 mm\)](#)] [[0.040 inch \(1.02 mm\)](#)] [[0.052 inch \(1.32 mm\)](#)].
 - b. Exterior Finish: [[Two-coat fluoropolymer](#)] [[Three-coat fluoropolymer](#)] [[Mica fluoropolymer](#)] [[Metallic fluoropolymer](#)] [[FEVE fluoropolymer](#)] [[Siliconized polyester](#)] <Insert finish>.
 - c. Color: [[As indicated by manufacturer's designations](#)] [[Match DEN Project Manager's samples](#)] [[As selected by DEN Project Manager from manufacturer's full range](#)] <Insert color>.
 3. Aluminum Sheet: Coil-coated sheet, [ASTM B 209 \(ASTM B 209M\)](#), alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
 - a. Thickness: [[0.032 inch \(0.81 mm\)](#)] [[0.040 inch \(1.02 mm\)](#)].
 - b. Surface: [[Smooth, flat](#)] [[Embossed](#)] finish.
 - c. Exterior Finish: [[Two-coat fluoropolymer](#)] [[Three-coat fluoropolymer](#)] [[Mica fluoropolymer](#)] [[Metallic fluoropolymer](#)] [[FEVE fluoropolymer](#)]

- [Siliconized polyester] [Clear anodized] [Color anodized] <Insert finish>.
- d. Color: [As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.
4. Stainless-Steel Sheet: ASTM A 240/A 240M, [Type 304] [Type 316], fully annealed.
- a. Nominal Thickness: [0.019 inch (0.48 mm)] [0.025 inch (0.64 mm)] [0.031 inch (0.79 mm)] [0.38 inch (0.96 mm)] [0.50 inch (1.27 mm)].
- b. Exterior Finish: [4] [2B] <Insert finish>.
5. Copper Sheet: ASTM B 370, cold-rolled copper sheet, H00 temper.
- a. Thickness: [16 oz./sq. ft. (0.55 mm thick)] [20 oz./sq. ft. (0.68 mm thick)].
- b. Exposed Finish: [Mill] [Prepatinated].
- c. Prepatinated Color: [Dark brown] [Verdigris] <Insert color>.
6. Major-Rib Spacing: [6 inches (152 mm)] [8 inches (203 mm)] [9 inches (229 mm)] [12 inches (305 mm)] <Insert dimension> o.c.
7. Panel Coverage: [24 inches (610 mm)] [36 inches (914 mm)] <Insert dimension>.
8. Panel Height: [0.625 inch (16 mm)] [0.75 inch (19 mm)] [1.0 inch (25 mm)] [1.25 inches (32 mm)] [1.5 inches (38 mm)] <Insert dimension>.
- D. Reverse-Rib-Profile, Exposed-Fastener Metal Wall Panels <Insert drawing designation>: Formed with recessed, trapezoidal major valleys and [intermediate stiffening valleys symmetrically spaced] [a flat pan] between major valleys.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- a. [Architectural Metal Systems; a Nucor company.](#)
- b. [Flexospan Steel Buildings, Inc.](#)
- c. [Union Corrugating Company.](#)
- d. [United Steel Deck, Inc.; Subsidiary of Bouras Industries Inc.](#)
- e. <Insert manufacturer's name>.
- f. or approved equal.
2. Metallic-Coated Steel Sheet: Zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, G90 (Z275) coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, Class AZ50 (Class AZM150) coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
- a. Nominal Thickness: [0.022 inch (0.56 mm)] [0.028 inch (0.71 mm)] [0.034 inch (0.86 mm)] [0.040 inch (1.02 mm)] [0.052 inch (1.32 mm)].

- b. Exterior Finish: [**Two-coat fluoropolymer**] [**Three-coat fluoropolymer**] [**Mica fluoropolymer**] [**Metallic fluoropolymer**] [**FEVE fluoropolymer**] [**Siliconized polyester**] <Insert finish>.
 - c. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
 3. Aluminum Sheet: Coil-coated sheet, **ASTM B 209** (ASTM B 209M), alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
 - a. Thickness: [**0.032 inch (0.81 mm)**] [**0.040 inch (1.02 mm)**].
 - b. Surface: [**Smooth, flat**] [**Embossed**] finish.
 - c. Exterior Finish: [**Two-coat fluoropolymer**] [**Three-coat fluoropolymer**] [**Mica fluoropolymer**] [**Metallic fluoropolymer**] [**FEVE fluoropolymer**] [**Siliconized polyester**] [**Clear anodized**] [**Color anodized**] <Insert finish>.
 - d. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
 4. Stainless-Steel Sheet: ASTM A 240/A 240M, [**Type 304**] [**Type 316**], fully annealed.
 - a. Nominal Thickness: [**0.019 inch (0.48 mm)**] [**0.025 inch (0.64 mm)**] [**0.031 inch (0.79 mm)**] [**0.38 inch (0.96 mm)**] [**0.50 inch (1.27 mm)**].
 - b. Exterior Finish: [**4**] [**2B**] <Insert finish>.
 5. Copper Sheet: ASTM B 370, cold-rolled copper sheet, H00 temper.
 - a. Thickness: [**16 oz./sq. ft. (0.55 mm thick)**] [**20 oz./sq. ft. (0.68 mm thick)**].
 - b. Exposed Finish: [**Mill**] [**Prepatinated**].
 - c. Prepatinated Color: [**Dark brown**] [**Verdigris**] <Insert color>.
 6. Major-Rib Spacing: [**12 inches (305 mm)**] <Insert dimension> o.c.
 7. Panel Coverage: [**36 inches (914 mm)**] <Insert dimension>.
 8. Panel Height: [**1.25 inches (32 mm)**] <Insert dimension>.
- E. Vee-Rib-Profile, Exposed-Fastener Metal Wall Panels <Insert drawing designation>:
Formed with raised, V-shaped ribs and recesses that are approximately same size, evenly spaced across panel width, and with rib/recess sides angled at approximately 45 degrees.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [AEP Span; a BlueScope Steel company.](#)
 - b. [Alcoa Inc.](#)
 - c. [ATAS International, Inc.](#)
 - d. [CENTRIA Architectural Systems.](#)

- e. [Englert, Inc.](#)
 - f. [Fabral.](#)
 - g. [Firestone Metal Products, LLC.](#)
 - h. [Flexospan Steel Buildings, Inc.](#)
 - i. [Industrial Building Panels.](#)
 - j. [MBCI; a division of NCI Building Systems, L.P.](#)
 - k. [McElroy Metal, Inc.](#)
 - l. [Metal Sales Manufacturing Corporation.](#)
 - m. [Morin; a Kingspan Group company.](#)
 - n. [United Steel Deck, Inc.; Subsidiary of Bouras Industries Inc.](#)
 - o. **<Insert manufacturer's name>.**
 - p. or approved equal.
2. Metallic-Coated Steel Sheet: Zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, **G90 (Z275)** coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, **Class AZ50 (Class AZM150)** coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
- a. Nominal Thickness: **[0.022 inch (0.56 mm)] [0.028 inch (0.71 mm)] [0.034 inch (0.86 mm)] [0.040 inch (1.02 mm)] [0.052 inch (1.32 mm)].**
 - b. Exterior Finish: **[Two-coat fluoropolymer] [Three-coat fluoropolymer] [Mica fluoropolymer] [Metallic fluoropolymer] [FEVE fluoropolymer] [Siliconized polyester] <Insert finish>.**
 - c. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.**
3. Aluminum Sheet: Coil-coated sheet, **ASTM B 209 (ASTM B 209M)**, alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
- a. Thickness: **[0.032 inch (0.81 mm)] [0.040 inch (1.02 mm)].**
 - b. Surface: **[Smooth, flat] [Embossed] finish.**
 - c. Exterior Finish: **[Two-coat fluoropolymer] [Three-coat fluoropolymer] [Mica fluoropolymer] [Metallic fluoropolymer] [FEVE fluoropolymer] [Siliconized polyester] [Clear anodized] [Color anodized] <Insert finish>.**
 - d. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.**
4. Stainless-Steel Sheet: ASTM A 240/A 240M, **[Type 304] [Type 316]**, fully annealed.
- a. Nominal Thickness: **[0.019 inch (0.48 mm)] [0.025 inch (0.64 mm)] [0.031 inch (0.79 mm)] [0.38 inch (0.96 mm)] [0.50 inch (1.27 mm)].**
 - b. Exterior Finish: **[4] [2B] <Insert finish>.**
5. Copper Sheet: ASTM B 370, cold-rolled copper sheet, H00 temper.

- a. Thickness: [**16 oz./sq. ft. (0.55 mm thick)**] [**20 oz./sq. ft. (0.68 mm thick)**].
 - b. Exposed Finish: [**Mill**] [**Prepatinated**].
 - c. Prepatinated Color: [**Dark brown**] [**Verdigris**] <Insert color>.
6. Rib Spacing: [**5.3 inches (135 mm)**] [**7.2 inches (183 mm)**] [**12 inches (305 mm)**] <Insert dimension> o.c.
 7. Panel Coverage: [**30 inches (762 mm)**] [**32 inches (813 mm)**] [**36 inches (914 mm)**] [**40 inches (1016 mm)**] <Insert dimension>.
 8. Panel Height: [**1.375 inches (35 mm)**] [**1.5 inches (38 mm)**] [**1.75 inches (44 mm)**] [**2.0 inches (51 mm)**] [**3.0 inches (76 mm)**] <Insert dimension>.
- F. Box-Rib-Profile, Exposed-Fastener Metal Wall Panels <Insert drawing designation>:
Formed with raised, box-shaped ribs, evenly spaced across panel width, and with rib/recess sides angled 60 degrees or more.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [AEP Span; a BlueScope Steel company.](#)
 - b. [Alcoa Inc.](#)
 - c. [Fabral.](#)
 - d. [Industrial Building Panels.](#)
 - e. [MBCI; a division of NCI Building Systems, L.P.](#)
 - f. [Metal Sales Manufacturing Corporation.](#)
 - g. [United Steel Deck, Inc.; Subsidiary of Bouras Industries Inc.](#)
 - h. [VICWEST.](#)
 - i. <Insert manufacturer's name>.
 - j. or approved equal.
 2. Metallic-Coated Steel Sheet: Zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, **G90 (Z275)** coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, **Class AZ50 (Class AZM150)** coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
 - a. Nominal Thickness: [**0.022 inch (0.56 mm)**] [**0.028 inch (0.71 mm)**] [**0.034 inch (0.86 mm)**] [**0.040 inch (1.02 mm)**] [**0.052 inch (1.32 mm)**].
 - b. Exterior Finish: [**Two-coat fluoropolymer**] [**Three-coat fluoropolymer**] [**Mica fluoropolymer**] [**Metallic fluoropolymer**] [**FEVE fluoropolymer**] [**Siliconized polyester**] <Insert finish>.
 - c. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
 3. Aluminum Sheet: Coil-coated sheet, **ASTM B 209 (ASTM B 209M)**, alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
 - a. Thickness: [**0.032 inch (0.81 mm)**] [**0.040 inch (1.02 mm)**].
 - b. Surface: [**Smooth, flat**] [**Embossed**] finish.

- c. Exterior Finish: [**Two-coat fluoropolymer**] [**Three-coat fluoropolymer**] [**Mica fluoropolymer**] [**Metallic fluoropolymer**] [**FEVE fluoropolymer**] [**Siliconized polyester**] [**Clear anodized**] [**Color anodized**] <Insert finish>.
 - d. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
 4. Stainless-Steel Sheet: ASTM A 240/A 240M, [**Type 304**] [**Type 316**], fully annealed.
 - a. Nominal Thickness: [**0.019 inch (0.48 mm)**] [**0.025 inch (0.64 mm)**] [**0.031 inch (0.79 mm)**] [**0.38 inch (0.96 mm)**] [**0.50 inch (1.27 mm)**].
 - b. Exterior Finish: [**4**] [**2B**] <Insert finish>.
 5. Copper Sheet: ASTM B 370, cold-rolled copper sheet, H00 temper.
 - a. Thickness: [**16 oz./sq. ft. (0.55 mm thick)**] [**20 oz./sq. ft. (0.68 mm thick)**].
 - b. Exposed Finish: [**Mill**] [**Prepatinated**].
 - c. Prepatinated Color: [**Dark brown**] [**Verdigris**] <Insert color>.
 6. Rib Spacing: [**2.67 inches (68 mm)**] [**4.0 inches (102 mm)**] [**5.3 inches (135 mm)**] [**6.0 inches (152 mm)**] <Insert dimension> o.c.
 7. Panel Coverage: [**24 inches (610 mm)**] [**28 inches (711 mm)**] [**30 inches (762 mm)**] [**32 inches (813 mm)**] [**36 inches (914 mm)**] <Insert dimension>.
 8. Panel Height: [**0.625 inch (16 mm)**] [**1.0 inch (25 mm)**] [**1.5 inches (38 mm)**] [**2.0 inches (51 mm)**] <Insert dimension>.
- G. Deep-Box-Rib-Profile, Exposed-Fastener Metal Wall Panels <Insert drawing **designation**>: Formed with raised, box-shaped ribs, evenly spaced across panel width, and with rib/recess sides angled more than 60 degrees.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [ATAS International, Inc.](#)
 - b. [CENTRIA Architectural Systems.](#)
 - c. [Fabral.](#)
 - d. [Metal Sales Manufacturing Corporation.](#)
 - e. [Morin; a Kingspan Group company.](#)
 - f. <Insert manufacturer's name>.
 - g. or approved equal.
 2. Metallic-Coated Steel Sheet: Zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, **G90 (Z275)** coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, **Class AZ50 (Class AZM150)** coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.

- a. Nominal Thickness: [0.022 inch (0.56 mm)] [0.028 inch (0.71 mm)] [0.034 inch (0.86 mm)] [0.040 inch (1.02 mm)] [0.052 inch (1.32 mm)].
 - b. Exterior Finish: [Two-coat fluoropolymer] [Three-coat fluoropolymer] [Mica fluoropolymer] [Metallic fluoropolymer] [FEVE fluoropolymer] [Siliconized polyester] <Insert finish>.
 - c. Color: [As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.
3. Aluminum Sheet: Coil-coated sheet, ASTM B 209 (ASTM B 209M), alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
- a. Thickness: [0.032 inch (0.81 mm)] [0.040 inch (1.02 mm)].
 - b. Surface: [Smooth, flat] [Embossed] finish.
 - c. Exterior Finish: [Two-coat fluoropolymer] [Three-coat fluoropolymer] [Mica fluoropolymer] [Metallic fluoropolymer] [FEVE fluoropolymer] [Siliconized polyester] [Clear anodized] [Color anodized] <Insert finish>.
 - d. Color: [As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.
4. Stainless-Steel Sheet: ASTM A 240/A 240M, [Type 304] [Type 316], fully annealed.
- a. Nominal Thickness: [0.019 inch (0.48 mm)] [0.025 inch (0.64 mm)] [0.031 inch (0.79 mm)] [0.38 inch (0.96 mm)] [0.50 inch (1.27 mm)].
 - b. Exterior Finish: [4] [2B] <Insert finish>.
5. Copper Sheet: ASTM B 370, cold-rolled copper sheet, H00 temper.
- a. Thickness: [16 oz./sq. ft. (0.55 mm thick)] [20 oz./sq. ft. (0.68 mm thick)].
 - b. Exposed Finish: [Mill] [Prepatinated].
 - c. Prepatinated Color: [Dark brown] [Verdigris] <Insert color>.
6. Rib Spacing: [12 inches (305 mm)] <Insert dimension> o.c.
7. Panel Coverage: [24 inches (610 mm)] <Insert dimension>.
8. Panel Height: [3.0 inches (76 mm)] [4.0 inches (102 mm)] <Insert dimension>.

2.3 CONCEALED-FASTENER, LAP-SEAM METAL WALL PANELS

- A. General: Provide factory-formed metal panels designed to be field assembled by lapping and interconnecting side edges of adjacent panels and mechanically attaching through panel to supports using concealed fasteners[**and factory-applied sealant**] in side laps. Include accessories required for weathertight installation.

- B. Flush-Profile, Concealed-Fastener Metal Wall Panels <Insert drawing designation>:
Formed with vertical panel edges and [intermediate stiffening ribs symmetrically spaced] [a flat pan] between panel edges; with flush joint between panels.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [AEP Span; a BlueScope Steel company.](#)
 - b. [Alcoa Inc.](#)
 - c. [Architectural Building Components.](#)
 - d. [Architectural Metal Systems; a Nucor company.](#)
 - e. [ATAS International, Inc.](#)
 - f. [Berridge Manufacturing Company.](#)
 - g. [CENTRIA Architectural Systems.](#)
 - h. [Dimension Metals, Inc.](#)
 - i. [Fabral.](#)
 - j. [Flexospan Steel Buildings, Inc.](#)
 - k. [MBCI; a division of NCI Building Systems, L.P.](#)
 - l. [Metal-Fab Manufacturing, LLC](#)
 - m. [Morin; a Kingspan Group company.](#)
 - n. [Petersen Aluminum Corporation.](#)
 - o. [United Steel Deck, Inc.; Subsidiary of Bouras Industries Inc.](#)
 - p. [VICWEST.](#)
 - q. <Insert manufacturer's name>.
 - r. or approved equal.
 2. Metallic-Coated Steel Sheet: Zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, [G90 \(Z275\)](#) coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, [Class AZ50 \(Class AZM150\)](#) coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
 - a. Nominal Thickness: [[0.022 inch \(0.56 mm\)](#)] [[0.028 inch \(0.71 mm\)](#)] [[0.034 inch \(0.86 mm\)](#)] [[0.040 inch \(1.02 mm\)](#)] [[0.052 inch \(1.32 mm\)](#)].
 - b. Exterior Finish: [[Two-coat fluoropolymer](#)] [[Three-coat fluoropolymer](#)] [[Mica fluoropolymer](#)] [[Metallic fluoropolymer](#)] [[FEVE fluoropolymer](#)] [[Siliconized polyester](#)] <Insert finish>.
 - c. Color: [[As indicated by manufacturer's designations](#)] [[Match DEN Project Manager's samples](#)] [[As selected by DEN Project Manager from manufacturer's full range](#)] <Insert color>.
 3. Aluminum Sheet: Coil-coated sheet, [ASTM B 209 \(ASTM B 209M\)](#), alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
 - a. Thickness: [[0.032 inch \(0.81 mm\)](#)] [[0.040 inch \(1.02 mm\)](#)].
 - b. Surface: [[Smooth, flat](#)] [[Embossed](#)] finish.
 - c. Exterior Finish: [[Two-coat fluoropolymer](#)] [[Three-coat fluoropolymer](#)] [[Mica fluoropolymer](#)] [[Metallic fluoropolymer](#)] [[FEVE fluoropolymer](#)]

- [Siliconized polyester] [Clear anodized] [Color anodized] <Insert finish>.
- d. Color: [As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.
4. Stainless-Steel Sheet: ASTM A 240/A 240M, [Type 304] [Type 316], fully annealed.
- a. Nominal Thickness: [0.019 inch (0.48 mm)] [0.025 inch (0.64 mm)] [0.031 inch (0.79 mm)] [0.38 inch (0.96 mm)] [0.50 inch (1.27 mm)].
- b. Exterior Finish: [4] [2B] <Insert finish>.
5. Copper Sheet: ASTM B 370, cold-rolled copper sheet, H00 temper.
- a. Thickness: [16 oz./sq. ft. (0.55 mm thick)] [20 oz./sq. ft. (0.68 mm thick)].
- b. Exposed Finish: [Mill] [Prepatinated].
- c. Prepatinated Color: [Dark brown] [Verdigris] <Insert color>.
6. Panel Coverage: [12 inches (305 mm)] <Insert dimension>.
7. Panel Height: [1.0 inch (25 mm)] [1.5 inches (38 mm)] <Insert dimension>.
- C. Reveal-Joint, Concealed-Fastener Metal Wall Panels <Insert drawing designation>:
Formed with vertical panel edges and [intermediate stiffening ribs symmetrically spaced] [a flat pan] between panel edges; with narrow reveal joint between panels.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- a. [ATAS International, Inc.](#)
- b. [CENTRIA Architectural Systems.](#)
- c. [Metal Sales Manufacturing Corporation.](#)
- d. [Morin; a Kingspan Group company.](#)
- e. [Petersen Aluminum Corporation.](#)
- f. <Insert manufacturer's name>.
- g. or approved equal.
2. Metallic-Coated Steel Sheet: Zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, G90 (Z275) coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, Class AZ50 (Class AZM150) coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
- a. Nominal Thickness: [0.022 inch (0.56 mm)] [0.028 inch (0.71 mm)] [0.034 inch (0.86 mm)] [0.040 inch (1.02 mm)] [0.052 inch (1.32 mm)].
- b. Exterior Finish: [Two-coat fluoropolymer] [Three-coat fluoropolymer] [Mica fluoropolymer] [Metallic fluoropolymer] [FEVE fluoropolymer] [Siliconized polyester] <Insert finish>.

- c. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
 3. Aluminum Sheet: Coil-coated sheet, **ASTM B 209** (ASTM B 209M), alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
 - a. Thickness: **[0.032 inch (0.81 mm)] [0.040 inch (1.02 mm)]**.
 - b. Surface: **[Smooth, flat] [Embossed]** finish.
 - c. Exterior Finish: **[Two-coat fluoropolymer] [Three-coat fluoropolymer] [Mica fluoropolymer] [Metallic fluoropolymer] [FEVE fluoropolymer] [Siliconized polyester] [Clear anodized] [Color anodized] <Insert finish>**.
 - d. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
 4. Stainless-Steel Sheet: ASTM A 240/A 240M, **[Type 304] [Type 316]**, fully annealed.
 - a. Nominal Thickness: **[0.019 inch (0.48 mm)] [0.025 inch (0.64 mm)] [0.031 inch (0.79 mm)] [0.38 inch (0.96 mm)] [0.50 inch (1.27 mm)]**.
 - b. Exterior Finish: **[4] [2B] <Insert finish>**.
 5. Copper Sheet: ASTM B 370, cold-rolled copper sheet, H00 temper.
 - a. Thickness: **[16 oz./sq. ft. (0.55 mm thick)] [20 oz./sq. ft. (0.68 mm thick)]**.
 - b. Exposed Finish: **[Mill] [Prepatinated]**.
 - c. Prepatinated Color: **[Dark brown] [Verdigris] <Insert color>**.
 6. Panel Coverage: **[12 inches (305 mm)] <Insert dimension>**.
 7. Panel Height: **[1.0 inch (25 mm)] [1.5 inches (38 mm)] <Insert dimension>**.
- D. Wide-Reveal-Joint, Concealed-Fastener Metal Wall Panels **<Insert drawing designation>**: Formed with vertical panel edges and a stepped profile between panel edges, resulting in a wide reveal joint between panels.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Alcoa Inc.](#)
 - b. [Architectural Metal Systems; a Nucor company.](#)
 - c. [ATAS International, Inc.](#)
 - d. [CENTRIA Architectural Systems.](#)
 - e. [Englert, Inc.](#)
 - f. [Fabral.](#)
 - g. [Flexospan Steel Buildings, Inc.](#)
 - h. [Morin; a Kingspan Group company.](#)
 - i. [United Steel Deck, Inc.; Subsidiary of Bouras Industries Inc.](#)

- j. VICWEST.
 - k. <Insert manufacturer's name>.
 - l. or approved equal.
2. Metallic-Coated Steel Sheet: Zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, **G90 (Z275)** coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, **Class AZ50 (Class AZM150)** coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
- a. Nominal Thickness: [**0.022 inch (0.56 mm)**] [**0.028 inch (0.71 mm)**] [**0.034 inch (0.86 mm)**] [**0.040 inch (1.02 mm)**] [**0.052 inch (1.32 mm)**].
 - b. Exterior Finish: [**Two-coat fluoropolymer**] [**Three-coat fluoropolymer**] [**Mica fluoropolymer**] [**Metallic fluoropolymer**] [**FEVE fluoropolymer**] [**Siliconized polyester**] <Insert finish>.
 - c. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
3. Aluminum Sheet: Coil-coated sheet, **ASTM B 209 (ASTM B 209M)**, alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
- a. Thickness: [**0.032 inch (0.81 mm)**] [**0.040 inch (1.02 mm)**].
 - b. Surface: [**Smooth, flat**] [**Embossed**] finish.
 - c. Exterior Finish: [**Two-coat fluoropolymer**] [**Three-coat fluoropolymer**] [**Mica fluoropolymer**] [**Metallic fluoropolymer**] [**FEVE fluoropolymer**] [**Siliconized polyester**] [**Clear anodized**] [**Color anodized**] <Insert finish>.
 - d. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
4. Stainless-Steel Sheet: ASTM A 240/A 240M, [**Type 304**] [**Type 316**], fully annealed.
- a. Nominal Thickness: [**0.019 inch (0.48 mm)**] [**0.025 inch (0.64 mm)**] [**0.031 inch (0.79 mm)**] [**0.38 inch (0.96 mm)**] [**0.50 inch (1.27 mm)**].
 - b. Exterior Finish: [**4**] [**2B**] <Insert finish>.
5. Copper Sheet: ASTM B 370, cold-rolled copper sheet, H00 temper.
- a. Thickness: [**16 oz./sq. ft. (0.55 mm thick)**] [**20 oz./sq. ft. (0.68 mm thick)**].
 - b. Exposed Finish: [**Mill**] [**Prepatinated**].
 - c. Prepatinated Color: [**Dark brown**] [**Verdigris**] <Insert color>.
6. Panel Coverage: [**12 inches (305 mm)**] <Insert dimension>.
7. Panel Height: [**1.5 inches (38 mm)**] <Insert dimension>.

- E. V-Groove-Profile, Concealed-Fastener Metal Wall Panels <Insert drawing designation>: Formed with vertical panel edges and [intermediate stiffening ribs symmetrically spaced] [a flat pan] between panel edges.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [ATAS International, Inc.](#)
 - b. <Insert manufacturer's name>.
 - c. or approved equal.
 2. Metallic-Coated Steel Sheet: Zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, G90 (Z275) coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, Class AZ50 (Class AZM150) coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
 - a. Nominal Thickness: [0.022 inch (0.56 mm)] [0.028 inch (0.71 mm)] [0.034 inch (0.86 mm)] [0.040 inch (1.02 mm)] [0.052 inch (1.32 mm)].
 - b. Exterior Finish: [Two-coat fluoropolymer] [Three-coat fluoropolymer] [Mica fluoropolymer] [Metallic fluoropolymer] [FEVE fluoropolymer] [Siliconized polyester] <Insert finish>.
 - c. Color: [As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.
 3. Aluminum Sheet: Coil-coated sheet, ASTM B 209 (ASTM B 209M), alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
 - a. Thickness: [0.032 inch (0.81 mm)] [0.040 inch (1.02 mm)].
 - b. Surface: [Smooth, flat] [Embossed] finish.
 - c. Exterior Finish: [Two-coat fluoropolymer] [Three-coat fluoropolymer] [Mica fluoropolymer] [Metallic fluoropolymer] [FEVE fluoropolymer] [Siliconized polyester] [Clear anodized] [Color anodized] <Insert finish>.
 - d. Color: [As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.
 4. Stainless-Steel Sheet: ASTM A 240/A 240M, [Type 304] [Type 316], fully annealed.
 - a. Nominal Thickness: [0.019 inch (0.48 mm)] [0.025 inch (0.64 mm)] [0.031 inch (0.79 mm)] [0.38 inch (0.96 mm)] [0.50 inch (1.27 mm)].
 - b. Exterior Finish: [4] [2B] <Insert finish>.
 5. Copper Sheet: ASTM B 370, cold-rolled copper sheet, H00 temper.
 - a. Thickness: [16 oz./sq. ft. (0.55 mm thick)] [20 oz./sq. ft. (0.68 mm thick)].

- b. Exposed Finish: **[Mill]** **[Prepatinated]**.
 - c. Prepatinated Color: **[Dark brown]** **[Verdigris]** **<Insert color>**.
 6. Panel Coverage: **[6 inches (152 mm)]** **[8 inches (203 mm)]** **[12 inches (305 mm)]** **<Insert dimension>**.
 7. Panel Height: **[0.625 inch (16 mm)]** **[1.25 inches (32 mm)]** **<Insert dimension>**.
- F. Creased-Rib-Profile, Concealed-Fastener Metal Wall Panels **<Insert drawing designation>**: Formed with raised, center-creased, trapezoidal major ribs; with reveal joint between panels.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Alcoa Inc.](#)
 - b. [ATAS International, Inc.](#)
 - c. [Morin; a Kingspan Group company.](#)
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
 2. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
 - a. Nominal Thickness: **[0.022 inch (0.56 mm)]** **[0.028 inch (0.71 mm)]** **[0.034 inch (0.86 mm)]** **[0.040 inch (1.02 mm)]** **[0.052 inch (1.32 mm)]**.
 - b. Exterior Finish: **[Two-coat fluoropolymer]** **[Three-coat fluoropolymer]** **[Mica fluoropolymer]** **[Metallic fluoropolymer]** **[FEVE fluoropolymer]** **[Siliconized polyester]** **<Insert finish>**.
 - c. Color: **[As indicated by manufacturer's designations]** **[Match DEN Project Manager's samples]** **[As selected by DEN Project Manager from manufacturer's full range]** **<Insert color>**.
 3. Aluminum Sheet: Coil-coated sheet, **ASTM B 209 (ASTM B 209M)**, alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
 - a. Thickness: **[0.032 inch (0.81 mm)]** **[0.040 inch (1.02 mm)]**.
 - b. Surface: **[Smooth, flat]** **[Embossed]** finish.
 - c. Exterior Finish: **[Two-coat fluoropolymer]** **[Three-coat fluoropolymer]** **[Mica fluoropolymer]** **[Metallic fluoropolymer]** **[FEVE fluoropolymer]** **[Siliconized polyester]** **[Clear anodized]** **[Color anodized]** **<Insert finish>**.
 - d. Color: **[As indicated by manufacturer's designations]** **[Match DEN Project Manager's samples]** **[As selected by DEN Project Manager from manufacturer's full range]** **<Insert color>**.

4. Stainless-Steel Sheet: ASTM A 240/A 240M, [Type 304] [Type 316], fully annealed.
 - a. Nominal Thickness: [0.019 inch (0.48 mm)] [0.025 inch (0.64 mm)] [0.031 inch (0.79 mm)] [0.38 inch (0.96 mm)] [0.50 inch (1.27 mm)].
 - b. Exterior Finish: [4] [2B] <Insert finish>.
5. Copper Sheet: ASTM B 370, cold-rolled copper sheet, H00 temper.
 - a. Thickness: [16 oz./sq. ft. (0.55 mm thick)] [20 oz./sq. ft. (0.68 mm thick)].
 - b. Exposed Finish: [Mill] [Prepatinated].
 - c. Prepatinated Color: [Dark brown] [Verdigris] <Insert color>.
6. Panel Coverage: [12 inches (305 mm)] <Insert dimension>.
7. Panel Height: [0.875 inch (22 mm)] [1.5 inches (38 mm)] <Insert dimension>.

2.4 METAL LINER PANELS

- A. General: Provide factory-formed metal liner panels designed for interior side walls and field assembled by lapping and interconnecting side edges of adjacent panels and mechanically attaching through panel to supports using concealed fasteners in side laps. Include accessories required for a complete installation.
- B. Metal Liner Panels <Insert drawing designation>: [Solid] [Perforated] panels formed with [intermediate stiffening ribs symmetrically spaced] [a flat pan] between panel edges; with a flush joint between panels.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Alcoa Inc.](#)
 - b. [Architectural Metal Systems; a Nucor company.](#)
 - c. [Berridge Manufacturing Company.](#)
 - d. [CENTRIA Architectural Systems.](#)
 - e. [Englert, Inc.](#)
 - f. [Fabral.](#)
 - g. [Flexospan Steel Buildings, Inc.](#)
 - h. [MBCI; a division of NCI Building Systems, L.P.](#)
 - i. [Metal Sales Manufacturing Corporation.](#)
 - j. [Morin; a Kingspan Group company.](#)
 - k. [United Steel Deck, Inc.; Subsidiary of Bouras Industries Inc.](#)
 - l. <Insert manufacturer's name>.
 - m. or approved equal.
 2. Metallic-Coated Steel Sheet: Zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, G90 (Z275) coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, Class AZ50 (Class AZM150) coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.

- a. Nominal Thickness: [0.022 inch (0.56 mm)] [0.028 inch (0.71 mm)] [0.034 inch (0.86 mm)] [0.040 inch (1.02 mm)] [0.052 inch (1.32 mm)].
 - b. Exterior Finish: [Two-coat fluoropolymer] [Three-coat fluoropolymer] [Mica fluoropolymer] [Metallic fluoropolymer] [FEVE fluoropolymer] [Siliconized polyester] <Insert finish>.
 - c. Color: [As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.
3. Aluminum Sheet: Coil-coated sheet, ASTM B 209 (ASTM B 209M), alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
- a. Thickness: [0.032 inch (0.81 mm)] [0.040 inch (1.02 mm)].
 - b. Surface: [Smooth, flat] [Embossed] finish.
 - c. Exterior Finish: [Two-coat fluoropolymer] [Three-coat fluoropolymer] [Mica fluoropolymer] [Metallic fluoropolymer] [FEVE fluoropolymer] [Siliconized polyester] [Clear anodized] [Color anodized] <Insert finish>.
 - d. Color: [As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.
4. Stainless-Steel Sheet: ASTM A 240/A 240M, [Type 304] [Type 316], fully annealed.
- a. Nominal Thickness: [0.019 inch (0.48 mm)] [0.025 inch (0.64 mm)] [0.031 inch (0.79 mm)] [0.38 inch (0.96 mm)] [0.50 inch (1.27 mm)].
 - b. Exterior Finish: [4] [2B] <Insert finish>.
5. Panel Coverage: [12 inches (305 mm)] [16 inches (406 mm)] [24 inches (610 mm)] [36 inches (914 mm)] <Insert dimension>.
6. Seam Profile: [Flush] [Tapered] [Striated].
7. Seam Height: [1.5 inches (38 mm)] [2.0 inches (51 mm)] [3.0 inches (76 mm)] <Insert dimension>.
8. Acoustical Performance: Where sound-absorption requirement is indicated, fabricate interior liner panels with 1/8-inch- (3-mm-) diameter holes uniformly spaced approximately 1000 holes/sq. ft. (10 750 holes/sq. m).
- a. NRC of not less than [0.65] [0.85] [1.00] <Insert rating> when tested according to ASTM C 423.

2.5 MISCELLANEOUS MATERIALS

- A. Miscellaneous Metal Subframing and Furring: ASTM C 645, cold-formed, metallic-coated steel sheet, ASTM A 653/A 653M, G90 (Z275 hot-dip galvanized) coating designation or ASTM A 792/A 792M, Class AZ50 (Class AZM150) aluminum-zinc-alloy coating designation unless otherwise indicated. Provide manufacturer's standard sections as required for support and alignment of metal panel system.

- B. Panel Accessories: Provide components required for a complete, weathertight panel system including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal panels unless otherwise indicated.
1. Closures: Provide closures at eaves and rakes, fabricated of same metal as metal panels.
 2. Backing Plates: Provide metal backing plates at panel end splices, fabricated from material recommended by manufacturer.
 3. Closure Strips: Closed-cell, expanded, cellular, rubber or crosslinked, polyolefin-foam or closed-cell laminated polyethylene; minimum 1-inch- (25-mm-) thick, flexible closure strips; cut or premolded to match metal panel profile. Provide closure strips where indicated or necessary to ensure weathertight construction.
- C. Flashing and Trim: Provide flashing and trim formed from same material as metal panels as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, bases, drips, sills, jambs, corners, endwalls, framed openings, rakes, fasciae, parapet caps, soffits, reveals, and fillers. Finish flashing and trim with same finish system as adjacent metal panels.
- D. Panel Fasteners: Self-tapping screws designed to withstand design loads. Provide exposed fasteners with heads matching color of metal panels by means of plastic caps or factory-applied coating. Provide EPDM or PVC sealing washers for exposed fasteners.
- E. Panel Sealants: Provide sealant type recommended by manufacturer that are compatible with panel materials, are nonstaining, and do not damage panel finish.
1. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch (13 mm) wide and 1/8 inch (3 mm) thick.
 2. Joint Sealant: ASTM C 920; elastomeric polyurethane or silicone sealant; of type, grade, class, and use classifications required to seal joints in metal panels and remain weathertight; and as recommended in writing by metal panel manufacturer.
 3. Butyl-Rubber-Based, Solvent-Release Sealant: ASTM C 1311.

2.6 FABRICATION

- A. General: Fabricate and finish metal panels and accessories at the factory, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.
- B. On-Site Fabrication: Subject to compliance with requirements of this Section, metal panels may be fabricated on-site using UL-certified, portable roll-forming equipment if panels are of same profile and warranted by manufacturer to be equal to

factory-formed panels. Fabricate according to equipment manufacturer's written instructions and to comply with details shown.

- C. Provide panel profile, including major ribs and intermediate stiffening ribs, if any, for full length of panel.
- D. Fabricate metal panel joints with factory-installed captive gaskets or separator strips that provide a weathertight seal and prevent metal-to-metal contact, and that minimize noise from movements.
- E. Sheet Metal Flashing and Trim: Fabricate flashing and trim to comply with manufacturer's recommendations and recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated.
 - 1. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
 - 2. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints for additional strength.
 - 3. Seams for Other Than Aluminum: Fabricate nonmoving seams in accessories with flat-lock seams. Tin edges to be seamed, form seams, and solder.
 - 4. Sealed Joints: Form nonexpansion, but movable, joints in metal to accommodate sealant and to comply with SMACNA standards.
 - 5. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.
 - 6. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended in writing by metal panel manufacturer.
 - a. Size: As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal wall panel manufacturer for application but not less than thickness of metal being secured.

2.7 FINISHES

- A. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- C. Steel Panels and Accessories:
 - 1. Two-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply

- coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
2. Three-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 3. Mica Fluoropolymer: AAMA 621. Two-coat fluoropolymer finish with suspended mica flakes containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 4. Metallic Fluoropolymer: AAMA 621. Three-coat fluoropolymer finish with suspended metallic flakes containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 5. FEVE Fluoropolymer: AAMA 621. Two-coat fluoropolymer finish containing 100 percent fluorinated ethylene vinyl ether resin in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 6. Siliconized Polyester: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than **0.2 mil (0.005 mm)** for primer and **0.8 mil (0.02 mm)** for topcoat.
 7. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish consisting of prime coat and wash coat with a minimum total dry film thickness of **0.5 mil (0.013 mm)**.

D. Aluminum Panels and Accessories:

1. Two-Coat Fluoropolymer: AAMA 620. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
2. Three-Coat Fluoropolymer: AAMA 620. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
3. Mica Fluoropolymer: AAMA 620. Two-coat fluoropolymer finish with suspended mica flakes containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
4. Metallic Fluoropolymer: AAMA 620. Three-coat fluoropolymer finish with suspended metallic flakes containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
5. FEVE Fluoropolymer: AAMA 620. Two-coat fluoropolymer finish containing 100 percent fluorinated ethylene vinyl ether resin in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

6. Siliconized Polyester: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than **0.2 mil (0.005 mm)** for primer and **0.8 mil (0.02 mm)** for topcoat.
 7. Exposed Anodized Finish:
 - a. Clear Anodic Finish: AAMA 611, [**AA-M12C22A41, Class I, 0.018 mm**] [**AA-M12C22A31, Class II, 0.010 mm**] or thicker.
 - b. Color Anodic Finish: AAMA 611, [**AA-M12C22A42/A44, Class I, 0.018 mm**] [**AA-M12C22A32/A34, Class II, 0.010 mm**] or thicker.
- E. Stainless-Steel Panels and Accessories:
1. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
 2. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - a. Run grain of directional finishes with long dimension of each piece.
 - b. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
 - c. Directional Satin Finish: No. 4.
 3. Bright, Cold-Rolled, Unpolished Finish: No. 2B.
- F. Copper Panels and Accessories:
1. Prepatination: Factory prepatinate according to ASTM B 882 to convert the copper surface to an inorganic crystalline structure with the appearance and durability of naturally formed patina.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, metal panel supports, and other conditions affecting performance of the Work.
1. Examine wall framing to verify that girts, angles, channels, studs, and other structural panel support members and anchorage have been installed within alignment tolerances required by metal wall panel manufacturer.
 2. Examine wall sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by metal wall panel manufacturer.
 - a. Verify that air- or water-resistive barriers have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.

- B. Examine roughing-in for components and systems penetrating metal panels to verify actual locations of penetrations relative to seam locations of metal panels before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Miscellaneous Supports: Install subframing, furring, and other miscellaneous panel support members and anchorages according to ASTM C 754 and metal panel manufacturer's written recommendations.

3.3 METAL PANEL INSTALLATION

- A. General: Install metal panels according to manufacturer's written instructions in orientation, sizes, and locations indicated. Install panels perpendicular to supports unless otherwise indicated. Anchor metal panels and other components of the Work securely in place, with provisions for thermal and structural movement.
 - 1. Install panels with concealed fasteners. Concealed self-tapping screws or nut and bolt are acceptable. Installation shall include no exposed wet sealant or tape except where noted on Drawings.
 - 2. All panels shall be removable from the exterior side without need for panel cutting or removal of curtainwall mullions or louvers.
 - 3. Shim or otherwise plumb substrates receiving metal panels.
 - 4. Flash and seal metal panels at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until air- or water-resistive barriers and flashings that will be concealed by metal panels are installed.
 - 5. Install screw fasteners in predrilled holes.
 - 6. Locate and space fastenings in uniform vertical and horizontal alignment.
 - 7. Install flashing and trim as metal panel work proceeds.
 - 8. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
 - 9. Align bottoms of metal panels and fasten with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws.
 - 10. Provide weathertight escutcheons for pipe- and conduit-penetrating panels.
- B. Fasteners:
 - 1. Steel Panels: Use stainless-steel fasteners for surfaces exposed to the exterior; use galvanized-steel fasteners for surfaces exposed to the interior.
 - 2. Aluminum Panels: Use aluminum or stainless-steel fasteners for surfaces exposed to the exterior; use aluminum or galvanized-steel fasteners for surfaces exposed to the interior.
 - 3. Copper Panels: Use copper, stainless-steel, or hardware-bronze fasteners.
 - 4. Stainless-Steel Panels: Use stainless-steel fasteners.

- C. Installation Tolerances: Shim and align panel units within installed tolerance of 1/4" in 20' 0" on level/plumb/slope and location/line as indicated, and within 1/16" offset at flush conditions of adjoining faces and alignment of matching profiles. Maximum 3/8" deviation of any material at any given theoretical point.
- D. Wall Panel Support Framing System: To be supplied and installed by metal wall Contractor. Final alignment to be the responsibility of this Contractor.
- E. Shop Drawings: Do not proceed with installation until approved shop drawings have been received.
- F. Inspection:
1. Examine alignment of structural steel prior to installation.
 2. Inspect all material including spandrel panels.
- G. Installation and Erection: Install the metal wall panels, fasteners, trim and related items in accordance with approved shop/erection drawings and manufacturer's specifications. Panels shall be installed by the manufacturer and/or approved erectors who have been trained and have experience in the installation of the particular type of wall panel and/or curtain wall systems specified.
1. The factory assembled wall panels shall be attached to the structural steel from the exterior of the building using self-tapping fasteners and clips spaced at each girt. Flashings and accessories shall be fastened 12" on center.
 2. Erection of the wall panels shall be started per manufacturer's recommendation and the panels held true to line. Horizontal lines are to be straight and level and vertical lines plumb.
- H. Joint Sealants: Install joint fillers gaskets and sealants where indicated and where required for weatherproof performance of panel systems.
1. Refer to Section 079000 "Joint Sealants" of these specifications for product and installation requirements applicable to indicated joint sealants.
- I. Joint Sealants, Post-Installation: Refer to Section 079000 "Joint Sealants" of these specifications for post installation requirements on joint sealers.
- J. Metal Protection: Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action as recommended in writing by metal panel manufacturer.
- K. Lap-Seam Metal Panels: Fasten metal panels to supports with fasteners at each lapped joint at location and spacing recommended by manufacturer.
1. Lap ribbed or fluted sheets one full rib. Apply panels and associated items true to line for neat and weathertight enclosure.
 2. Provide metal-backed washers under heads of exposed fasteners bearing on weather side of metal panels.

3. Locate and space exposed fasteners in uniform vertical and horizontal alignment. Use proper tools to obtain controlled uniform compression for positive seal without rupture of washer.
 4. Install screw fasteners with power tools having controlled torque adjusted to compress washer tightly without damage to washer, screw threads, or panels. Install screws in predrilled holes.
 5. Flash and seal panels with weather closures at perimeter of all openings.
- L. Watertight Installation:
1. Apply a continuous ribbon of sealant or tape to seal lapped joints of metal panels, using sealant or tape as recommend by manufacturer on side laps of nesting-type panels; and elsewhere as needed to make panels watertight.
 2. Provide sealant or tape between panels and protruding equipment, vents, and accessories.
 3. At panel splices, nest panels with minimum **6-inch (152-mm)** end lap, sealed with sealant and fastened together by interlocking clamping plates.
- M. Metal Liner Panels: Install panels on [**exterior side of girts, with girts exposed to the interior**] [**interior side of girts with flush appearance on the inside**].
- N. Accessory Installation: Install accessories with positive anchorage to building and weathertight mounting, and provide for thermal expansion. Coordinate installation with flashings and other components.
1. Install components required for a complete metal panel system including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items. Provide types indicated by metal wall panel manufacturer; or, if not indicated, provide types recommended by metal panel manufacturer.
- O. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that are permanently watertight.
1. Install exposed flashing and trim that is without buckling and tool marks, and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and achieve waterproof performance.
 2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of **10 feet (3 m)** with no joints allowed within **24 inches (610 mm)** of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently waterproof, form expansion joints of intermeshing hooked flanges, not less than **1 inch (25 mm)** deep, filled with mastic sealant (concealed within joints).

3.4 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections.
- B. Water-Spray Test: After installation, test area of assembly **[shown on Drawings] [as directed by DEN Project Manager]** <Insert area> for water penetration according to AAMA 501.2.
- C. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect completed metal wall panel installation, including accessories.
- D. Remove and replace metal wall panels where tests and inspections indicate that they do not comply with specified requirements.
- E. Additional tests and inspections, at Contractor's expense, are performed to determine compliance of replaced or additional work with specified requirements.
- F. Prepare test and inspection reports.

3.5 CLEANING AND PROTECTION

- A. Remove temporary protective coverings and strippable films, if any, as metal panels are installed, unless otherwise indicated in manufacturer's written installation instructions. On completion of metal panel installation, clean finished surfaces as recommended by metal panel manufacturer. Maintain in a clean condition during construction.
- B. After metal panel installation, clear weep holes and drainage channels of obstructions, dirt, and sealant.
- C. Damaged Material: Repair or replace all damaged material to the satisfaction of the DEN Project Manager if damage has been caused by the manufacturer or wall panel erector/contractor. The General Contractor shall be responsible for the protection of completed or installed walls from damage by other trades. Installed areas or portions of the work shall be inspected by the Owner for approval following the completion of such areas.
- D. Replace metal panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 074213.13

SECTION 074213.19 - INSULATED METAL WALL PANELS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Foamed-insulation-core metal wall panels.
 - 2. Laminated-insulation-core metal wall panels.
 - 3. Honeycomb-core metal wall panels.
- B. Related Requirements:
 - 1. Section 074213.53 "Metal Soffit Panels" for metal panels used in horizontal soffit applications.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]<Insert location>**.
 - 1. Meet with Owner, DEN Project Manager, Owner's insurer if applicable, metal panel Installer, metal panel manufacturer's representative, structural-support Installer, and installers whose work interfaces with or affects metal panels, including installers of doors, windows, and louvers.
 - 2. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - 3. Review methods and procedures related to metal panel installation, including manufacturer's written instructions.
 - 4. Examine support conditions for compliance with requirements, including alignment between and attachment to structural members.
 - 5. Review flashings, special siding details, wall penetrations, openings, and condition of other construction that affect metal panels.
 - 6. Review governing regulations and requirements for insurance, certificates, and tests and inspections if applicable.

7. Review temporary protection requirements for metal panel assembly during and after installation.
8. Review procedures for repair of metal panels damaged after installation.
9. Document proceedings, including corrective measures and actions required, and furnish copy of record to each participant.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include product specifications, certified product test results, installation instructions and general recommendations, construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of panel and accessory.
 - a. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.

C. Shop Drawings:

1. Include fabrication and installation layouts of metal panels; large scale details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories; and special details. Distinguish between factory and field assembly work.
2. Accessories: Include details of the flashing, trim, and anchorage systems, at a scale of not less than **1-1/2 inches per 12 inches (1:10)**.

D. Samples for Initial Selection: For each type of metal panel indicated with factory-applied color finishes.

1. Include similar Samples of trim and accessories involving color selection.

E. Samples for Verification: For each type of exposed finish, prepared on Samples of size indicated below.

1. Metal Panels: Submit three (3) samples **12 inches (305 mm)** long by actual panel width. Include fasteners, closures, and other metal panel accessories.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Certificate from installer evidencing minimum ten (10) years experience successfully

installing this type of work on projects of this scale and proof of acceptance by manufacturer.

- C. Certificate from the manufacturer stating that all materials are per contract requirements and proof of minimum ten (10) years experience manufacturing products of this type on projects of this scale.
- D. Certificate from manufacturer that panel system is approved for use in Denver or has ICBO approval for Class 1 non-combustible construction.
- E. Product Test Reports: For each product, tests performed by a qualified testing agency.
- F. Structural Calculations: Signed and stamped by a Colorado licensed structural engineer.
- G. Field quality-control reports.
- H. Sample Warranties: For special warranties.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For metal panels to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 MAINTENANCE SUBMITTALS

- A. Provide minimum four (4) gallons touch-up paint for each color used on Project. Store in area directed by DEN Project Manager.
 - 1. Instruct Owners personnel in appropriate paint touch-up procedures.

1.8 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
 - 1. A firm that has specialized in installation of types of products required for Project for not less than ten (10) years and which is acceptable to manufacturer(s) of primary materials.
- B. Manufacturer's Qualifications:
 - 1. A firm that has specialized in manufacture of products required for Project with a minimum of ten (10) years experience manufacturing products of this type on projects of this scale.

C. Performance Test Standards: Submit evidence that preformed panel system has been pretested by an independent laboratory and certified by manufacturer to provide specified resistance to air and water infiltration and structural deflection and failure when installed as indicated and when tested in accordance with AAMA Standard Test TM 1, "Specification for Method of Test for Metal Curtain Walls for Water Penetration Using Dynamic Pressure".

D. Fire Resistances:

1. Wall panels shall be rated and carry the following listings:

a. U.L. classification for "Surface Burning Characteristics", U.L. Standard 723 (ASTM-E84) File R6863.

	Finished Panel:	Core Only:
Flame Spread	25 max.	25 max.
Fuel Contributed	0	0
Smoke Developed	450 max.	200 max.

b. U.L. classification per "Insulated Wall Construction" U.L. Subject 1040 (corner test).

c. Factory mutual approval as Class 1 panels.

d. ICBO Research Report for Class 1 non-combustible construction and approval by the City and County of Denver.

E. Required Performances: Fabricate panels and other components of wall system for the following installed as indicated performances:

1. Wind Loading: Refer to Part 1 of this Section.
2. Water Penetration: No significant, uncontrolled leakage at 6.24 lbs. per sq. ft. per ASTM E 331.
3. Air Infiltration: 0.060 cfm per sq. ft. for wall areas, with 1.56 lbs. per sq. ft. differential pressure, as tested per ASTM E 283.
4. Sound Transmission: STC rating of 28.
5. Thermal Performance: Factory-assembled panel shall have a U-value of 0.072 btu/hr./SF when tested in accordance with ASTM C236.
6. Bond Strength: No metal primer interface corrosion or delamination shall occur after 500 hrs. at 120 deg F and 100% relative humidity.
7. Design to withstand thermal movements resulting from an ambient temperature range of minus 30 deg F (minus 35 deg C) to 120 deg F (67 deg C), which may cause preformed siding range of 180 deg F (100 deg C), without causing buckling, failure of joint seals, undue stress on fasteners or other detrimental effects.
8. Pressure Equalization: Provide Rain Screen Test showing that with liner seal broken, there shall be no water rise in joint cavity under 10 psf in accordance with ASTM E331-70. A fully designed and tested gutter system meeting the same test requirements will be acceptable upon submittal of supporting documents.
9. Galvanic Reaction: Provide galvanic protection between dissimilar metals.

F. Provide complete structural calculations, including calculation for cold-formed metal

framing and metal fabrications back-up, signed and stamped by an engineer registered in the state of Colorado. Calculations are to be based on the following:

1. Wind load exposure C, Importance factor I = 1.15.
 2. Minimum basic wind speed: 85 M.P.H., but not less than 50 p.s.f., positive and negative pressure.
 3. Wind Load Deflection: L/180, 3/4" max.
 4. Maximum Wind Load: 115 mph with gust factor of 1.3.
- G. Field Measurements: It is the intent of these specifications for Contractor to shop fabricate metal panels completely. Contractor to make all field measurements required to shop fabricate panel system accurately. Field cutting and trimming be held to an absolute minimum.
- H. Single Source Responsibility: The "Exterior Skin Installer" is to provide the structural calculations, coordination, fabrication, installation and warranty for all work associated with the exterior skin, which includes: Section 083213 "Sliding Aluminum Frame Glass Doors", Section 084413 "Glazed Aluminum Curtainwall", Section 089119 "Fixed Louvers", and Section 089516 "Wall Vents", and the following:
1. All cold formed metal framing or metal fabrications associated with the above. Cold formed metal framing to be of the size and spacing indicated on the drawings, except gauge shall be as needed as determined by the structural calculations required, but in no case less than 14 gauge. Metal fabrications shall be of the size indicated on the drawings, except thickness shall be as determined by the structural calculations required. Provide additional fabrications as needed.
 - a. All of this work to be in accordance with requirements of Section 054000 "Cold Formed Metal Framing" and Section 055000 "Metal Fabrications".
 2. All expansion joints in the exterior side of the above exterior wall, per Section 079500 "Expansion Control".
 3. All joint sealers installed within the above described work including joints between adjacent work, per Section 079000, "Joint Sealants".
 4. All glazing installed within the above described work per Section 088000, "Glazing".
 5. All painting, finishes or coatings associated with the above described work.
 6. All firestopping associated with exterior skin intersection with rated roofs or floors per Section 078413 "Penetration Firestopping."
- I. Testing Agency: Contractor to employ an independent testing agency to make on-site inspections on at least a weekly basis during skin construction. Testing Agency to measure actual installed tolerances, and inspect all facets of construction with regard to compliance with contract requirements. Submit weekly report to DEN Project Manager. Immediately note any areas not in compliance. Independent Testing Agency shall verify existing installed tolerances prior to start of work and notify DEN Project Manager of any discrepancies to specified tolerances prior to start of prefabrication.
- J. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.

Coordinate installation of mock-up with work by other trades.

1. Build mockup of typical metal panel assembly [**as shown on Drawings**] <Insert **size**>, including [**corner,**] [**soffits,**] supports, attachments, and accessories.
2. Demonstrate each type of detail condition to the greatest extent possible including; a minimum 100 square feet of masonry, an expansion joint, louver, curtainwall, glazing, preformed siding, sealants, painting, finishes, typical parapet and cap, typical cold formed metal framing, typical metal fabrications and a minimum 80 square feet of exterior soffit. This mockup may be constructed and approved in sections. Provide scaffolding to facilitate mockup review.
3. Do not proceed with initial mockup prior to approval of initial submittals unless approved by the DEN Project Manager.
4. Portions of the mockup that are not approved are to be reconstructed until approved. The approved mockup will serve as the standard of quality. Conduct field water test on approved initial mockup per AAMA 501.2-83
5. Complete initial mockup a minimum of one (1) month prior to start of fabrication of panels, glazing, louvers, and curtainwall for the actual building.
6. Remove initial mockup from the project site when directed by the DEN Project Manager, but not prior to Substantial Completion. Undamaged glass may be applied to overstock requirements. Salvage preformed siding, clean, protect, and store for Owner in area as directed by DEN Project Manager.
7. Water-Spray Test: Conduct water-spray test of metal panel assembly mockup, testing for water penetration according to AAMA 501.2.
8. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
9. Construct additional mockups on the permanent structure as may be required to demonstrate each type of condition not demonstrated in initial mock-up. Notify DEN Project Manager when ready for review. Do not proceed with subsequent work until mockup is approved.
10. Cost of components of this section incorporated into mockups, including separate structure for the initial mockup, shall be by this Contractor.
11. Structural performance for mockup shall be designed to withstand wind loads specified herein, with deflections equal to those required for the final building. See structural drawings.
12. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver components, metal panels, and other manufactured items so as not to be damaged or deformed. Package metal panels for protection during transportation and handling.
- B. Unload, store, and erect metal panels in a manner to prevent bending, warping, twisting, and surface damage.
- C. Stack metal panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal panels to ensure dryness, with

positive slope for drainage of water. Do not store metal panels in contact with other materials that might cause staining, denting, or other surface damage.

- D. Retain strippable protective covering on metal panels during installation.

1.10 FIELD CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of metal panels to be performed according to manufacturers' written instructions and warranty requirements.

1.11 COORDINATION

- A. Coordinate metal panel installation with rain drainage work, flashing, trim, construction of soffits, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.12 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal panel systems that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

- a. Structural failures including rupturing, cracking, or puncturing.
- b. Deterioration of metals and other materials beyond normal weathering.

2. Warranty Period: Minimum **[Two]** <Insert number> years from date of Substantial Completion.

- B. Installer Warranty:

1. Entire panel system, including weathertightness, material, finish, insulation, seams, and fasteners for a period of minimum two (2) years from date of Substantial Completion.

- C. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal panels that show evidence of deterioration of factory-applied finishes within specified warranty period.

1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:

- a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
- b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
- c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2. Finish Warranty Period: Minimum **[20]** **[10]** **<Insert number>** years from date of Substantial Completion.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]** **<Insert number>** percent.
- B. Structural Performance: Provide metal panel systems capable of withstanding the effects of the following loads, based on testing according to ASTM E 72:
 1. Wind Loads: 115 mph with gust factor of 1.3.
 2. Other Design Loads: **[As indicated on Drawings]** **<Insert loads>**.
 3. Deflection Limits: For wind loads, no greater than **[1/180]** **[1/240]** **<Insert deflection>** of the span.
 4. Ambient Temperature Range: Minus 30 deg F (minus 35 deg C) to 120 deg F (49 deg C).
 5. **<Insert serviceability requirements>**.
- C. Air Infiltration: Air leakage of not more than **0.06 cfm/sq. ft. (0.3 L/s per sq. m)** when tested according to ASTM E 283 at the following test-pressure difference:
 1. Test-Pressure Difference: **[1.57 lbf/sq. ft. (75 Pa)]** **[6.24 lbf/sq. ft. (300 Pa)]**.
- D. Water Penetration under Static Pressure: No water penetration when tested according to ASTM E 331 at the following test-pressure difference:
 1. Test-Pressure Difference: **[2.86 lbf/sq. ft. (137 Pa)]** **[6.24 lbf/sq. ft. (300 Pa)]**.
- E. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 1. Temperature Change (Range): **[120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces]** **<Insert temperature range>**.
- F. Fire-Test-Response Characteristics: Provide metal wall panels and system components with the following fire-test-response characteristics, as determined by

testing identical panels and system components per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify products with appropriate markings of applicable testing agency.

1. Fire-Resistance Characteristics: Provide materials and construction tested for fire resistance per ASTM E 119.
2. Intermediate-Scale Multistory Fire Test: Tested mockup, representative of completed multistory wall assembly of which wall panel is a part, complies with NFPA 285 for test method and required fire-test-response characteristics of exterior non-load-bearing wall panel assemblies.
3. Radiant Heat Exposure: No ignition when tested according to NFPA 268.
4. Potential Heat: Acceptable level when tested according to NFPA 259.
5. Surface-Burning Characteristics: Provide wall panels with a flame-spread index of 25 or less and a smoke-developed index of 450 or less, per ASTM E 84.

2.2 FOAMED-INSULATION-CORE METAL WALL PANELS

A. General: Provide factory-formed and -assembled metal wall panels fabricated from two metal facing sheets and insulation core foamed in place during fabrication, and with joints between panels designed to form weathertight seals. Include accessories required for weathertight installation.

1. Panel Performance:
 - a. Flatwise Tensile Strength: 30 psi (207 kPa) when tested according to ASTM C 297/C 297M.
 - b. Humid Aging: Volume increase not greater than 6.0 percent and no delamination or metal corrosion when tested for seven days at 140 deg F (60 deg C) and 100 percent relative humidity according to ASTM D 2126.
 - c. Heat Aging: Volume increase not greater than 2.0 percent and no delamination, surface blistering, or permanent bowing when tested for seven days at 200 deg F (93 deg C) according to ASTM D 2126.
 - d. Cold Aging: Volume decrease not more than 1.0 percent and no delamination, surface blistering, or permanent bowing when tested for seven days at minus 20 deg F (29 deg C) according to ASTM D 2126.
 - e. Fatigue: No evidence of delamination, core cracking, or permanent bowing when tested to a 20-lbf/sq. ft. (958-kPa) positive and negative wind load and with deflection of L/180 for 2 million cycles.
 - f. Autoclave: No delamination when exposed to 2-psi (13.8-kPa) pressure at a temperature of 212 deg F (100 deg C) for 2-1/2 hours.
2. Insulation Core: Modified isocyanurate or polyurethane foam using a non-CFC blowing agent, with maximum flame-spread and smoke-developed indexes of 25 and 450, respectively.
 - a. Closed-Cell Content: 90 percent when tested according to ASTM D 6226.
 - b. Density: 2.0 to 2.6 lb/cu. ft. (32 to 42 kg/cu. m) when tested according to ASTM D 1622.

- c. Compressive Strength: Minimum **20 psi** (140 kPa) when tested according to ASTM D 1621.
 - d. Shear Strength: **26 psi** (179 kPa) when tested according to ASTM C 273/C 273M.
- B. Exposed-Fastener, Foamed-Insulation-Core Metal Wall Panels **<Insert drawing designation>**: Formed with a raised, trapezoidal major rib at panel edge and two intermediate stiffening ribs symmetrically spaced between major rib and panel edge; designed for lapping side edges of adjacent panels and mechanically attaching to supports using exposed fasteners in side laps.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **IPS - Insulated Panel Systems, an NCI Company; RWP Wall Panel.**
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
 2. Metallic-Coated Steel Sheet: Facings of zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, **G90 (Z275)** coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, **Class AZ50 (Class AZM150)** coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
 - a. Nominal Thickness: [**0.022 inch (0.56 mm)**] [**0.028 inch (0.71 mm)**] [**0.034 inch (0.86 mm)**].
 - b. Exterior Finish: [**Two-coat fluoropolymer**] [**Three-coat fluoropolymer**] [**Mica fluoropolymer**] [**Metallic fluoropolymer**] [**FEVE fluoropolymer**] [**Siliconized polyester**] **<Insert finish>**.
 - 1) Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**] **<Insert color>**.
 - c. Interior Finish: [**Siliconized polyester**] **<Insert finish>**.
 - 1) Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**] **<Insert color>**.
 3. Backer Board: On back side of exterior facing.
 4. Snap-on Batten: Same material, finish, and color as exterior facings of wall panels.
 5. Panel Coverage: [**36 inches (914 mm)**] **<Insert dimension>** nominal.
 6. Panel Thickness: [**3.0 inches (76 mm)**] [**4.0 inches (102 mm)**] [**5.0 inches (127 mm)**] **<Insert dimension>**.
 7. Thermal-Resistance Value (R-Value): **<Insert R-value>** according to ASTM C 1363.
- C. Concealed-Fastener, Foamed-Insulation-Core Metal Wall Panels **<Insert drawing designation>**: Formed with tongue-and-groove panel edges; designed for sequential

installation by interlocking panel edges and mechanically attaching panels to supports using concealed clips or fasteners.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. [CENTRIA Architectural Systems](#); [Formawall 1000] [Versapanel] [Versawall].
 - b. [IPS - Insulated Panel Systems, an NCI company](#); [ESP] [EWP] [RWP] Wall Panel.
 - c. [Kingspan](#); [AW-200] [AWS-300] [AWS-300] [AWS-400] Series Wall Panel.
 - d. [MBCI, a division of NCI Building Systems, L.P.](#); TW-100 Wall Panel.
 - e. [Metl-Span LLC](#); [7.2 Insul-Rib] [CF Architectural] [CF Fluted] [CFI Fluted] [CF Mesa] [CFI Mesa] [CFI Metl-Plank] [CF Striated] [CFI Striated] [CFI-V-Rib] Insulated Metal Wall Panel.
 - f. <Insert manufacturer's name; product name or designation>.
2. Metallic-Coated Steel Sheet: Facings of zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, [G90 \(Z275\)](#) coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, [Class AZ50 \(Class AZM150\)](#) coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
 - a. Nominal Thickness: [[0.022 inch \(0.56 mm\)](#)] [[0.028 inch \(0.71 mm\)](#)] [[0.034 inch \(0.86 mm\)](#)].
 - b. Exterior Finish: [Two-coat fluoropolymer] [Three-coat fluoropolymer] [Mica fluoropolymer] [Metallic fluoropolymer] [FEVE fluoropolymer] [Siliconized polyester] <Insert finish>.
 - 1) Color: [As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.
 - c. Interior Finish: [Siliconized polyester] <Insert finish>.
 - 1) Color: [As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.
3. Backer Board: On back side of exterior facing.
4. Snap-on Batten: Same material, finish, and color as exterior facings of wall panels.
5. Panel Coverage: [[36 inches \(914 mm\)](#)] [[40 inches \(1016 mm\)](#)] <Insert dimension> nominal.
6. Panel Thickness: [[1.0 inch \(25 mm\)](#)] [[1.5 inches \(38 mm\)](#)] [[2.0 inches \(51 mm\)](#)] [[2.5 inches \(64 mm\)](#)] [[3.0 inches \(76 mm\)](#)] [[4.0 inches \(102 mm\)](#)] [[5.0 inches \(127 mm\)](#)] <Insert dimension>.
7. Thermal-Resistance Value (R-Value): <Insert R-value> according to ASTM C 1363.

2.3 LAMINATED-INSULATION-CORE METAL WALL PANELS

- A. General: Provide factory-formed and -assembled metal wall panels fabricated from two metal facing sheets and core material laminated or otherwise securely bonded to facing sheets during fabrication without use of contact adhesives, and with joints between panels designed to form weathertight seals. Include accessories required for weathertight installation.

1. Panel Performance:

- a. Flatwise Tensile Strength: **27 psi (186 kPa)** when tested according to ASTM C 297/C 297M.
- b. Humid Aging: Volume increase not greater than 6.0 percent and no delamination or metal corrosion when tested for seven days at **140 deg F (60 deg C)** and 100 percent relative humidity according to ASTM D 2126.
- c. Heat Aging: Volume increase not greater than 2.0 percent and no delamination, surface blistering, or permanent bowing when tested for seven days at **200 deg F (93 deg C)** according to ASTM D 2126.
- d. Cold Aging: Volume decrease not more than 1.0 percent and no delamination, surface blistering, or permanent bowing when tested for seven days at **minus 20 deg F (29 deg C)** according to ASTM D 2126.
- e. Fatigue: No evidence of delamination, core cracking, or permanent bowing when tested to a **20-lbf/sq. ft. (958-kPa)** positive and negative wind load and with deflection of L/180 for 2 million cycles.
- f. Autoclave: No delamination when exposed to **2-psi (13.8-kPa)** pressure at a temperature of **212 deg F (100 deg C)** for 2-1/2 hours.

- B. **Wrapped-Edge, Laminated-Insulation-Core Metal Wall Panels <Insert drawing designation>**: Formed with flush exterior panel facing wrapped over panel edges; designed for independent installation by mechanically attaching [**panels to supports using staggered, concealed side clips engaging panel edges**] [**through extended panel edges to supports using concealed fasteners**]; with [**sealant**] [**gasketed**] joints.

1. Products: Subject to compliance with requirements, provide one of the following:

- a. [Architectural Specialty Products, Inc.](#); Series 500.
- b. [Kingspan](#); Designwall 1000.
- c. [Protean Construction Products, Inc.](#); FM-100 Panel.
- d. **<Insert manufacturer's name; product name or designation>**.
- e. or approved equal.

2. **Metallic-Coated Steel Sheet**: Facings of zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, **G90 (Z275)** coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, **Class AZ50 (Class AZM150)** coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.

- a. Nominal Thickness: [**0.028 inch (0.71 mm)**] [**0.034 inch (0.86 mm)**] [**0.040 inch (1.02 mm)**] [**0.052 inch (1.32 mm)**].

- b. Exterior Finish: [**Two-coat fluoropolymer**] [**Three-coat fluoropolymer**] [**Mica fluoropolymer**] [**Metallic fluoropolymer**] [**FEVE fluoropolymer**] [**Siliconized polyester**] <Insert finish>.
 - 1) Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
- c. Interior Finish: [**Siliconized polyester**] <Insert finish>.
 - 1) Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
3. Aluminum Sheet: Fabricate panel with exterior and interior facings of same material and thickness. Provide facings of aluminum coil-coated sheet, [ASTM B 209](#) (ASTM B 209M), alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
 - a. Thickness: [**0.032 inch (0.81 mm)**] [**0.040 inch (1.02 mm)**] [**0.050 inch (1.27 mm)**] [**0.063 inch (1.60 mm)**] [**0.080 inch (2.03 mm)**].
 - b. Surface: [**Smooth, flat**] [**Embossed**] finish.
 - c. Exterior Finish: [**Two-coat fluoropolymer**] [**Three-coat fluoropolymer**] [**Mica fluoropolymer**] [**Metallic fluoropolymer**] [**FEVE fluoropolymer**] [**Siliconized polyester**] [**Clear anodized**] [**Color anodized**] <Insert finish>.
 - 1) Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
 - d. Interior Finish: [**Siliconized polyester**] <Insert finish>.
 - 1) Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
4. Core Material: [**Manufacturers' standard.**][**Board insulation of the following type:**]
 - a. Polyisocyanurate Insulation: Closed cell, modified polyisocyanurate foam using a non-CFC blowing agent, board type, with a maximum flame-spread index of 25 and a smoke-developed index of 450.
 - 1) Closed-Cell Content: 90 percent when tested according to ASTM D 6226.
 - b. Extruded-Polystyrene Board Insulation: ASTM C 578, Type IV, [1.60-lb/cu. ft.](#) ([26-kg/cu. m](#)) minimum density, unless otherwise indicated; with a maximum flame-spread index of 25 and a smoke-developed index of 450.

- c. Molded-Polystyrene Board Insulation: ASTM C 578, [**Type I, 0.9 lb/cu. ft.** (14 kg/cu. m)] [**Type II, 1.35 lb/cu. ft.** (22 kg/cu. m)], **Class 2 or 3, Grade 3**, with a maximum flame-spread index of 25 and a smoke-developed index of 450.
 5. Backer Board: [**0.125-inch- (3-mm-)**] [**0.250-inch- (6-mm-)**] thick hardboard behind exterior facing for increased impact resistance.
 6. Clips: Manufacturer's standard one piece, formed from [**zinc-coated (galvanized) or aluminum-zinc alloy-coated steel sheet**] [**stainless steel**].
 7. Gaskets: Extruded, dry seal silicone.
 8. Sealant: Manufacturer's standard silicone.
 9. Panel Thickness: [**1.0 inch (25 mm)**] [**2.0 inches (51 mm)**] [**3.0 inches (76 mm)**] [**4.0 inches (102 mm)**] [**5.0 inches (127 mm)**] [**6.0 inches (152 mm)**] <Insert dimension>.
 10. Thermal-Resistance Value (R-Value): <Insert R-value> according to ASTM C 1363.
- C. Shiplap-Edge, Laminated-Insulation-Core Metal Wall Panels <Insert drawing designation>: Formed with flush exterior panel facing and with shiplap edges; designed for sequential installation by mechanically attaching panels to supports using concealed clips and fasteners; with factory-applied [**sealant**] [**gaskets**] in side laps.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. [Alply LLC](#); Classic Wall.
 - b. [Architectural Specialty Products, Inc.](#); Series [**HF Vertical**] [**SCR-DR Horizontal**] Preinsulated Metal Siding.
 - c. [Industrial Building Panels, Inc.](#); 900 Series Thermaply Panels.
 - d. [Kingspan](#); Designwall [**2000**] [**4000**].
 - e. [Protean Construction Products, Inc.](#); FM-200 Panel.
 - f. <Insert manufacturer's name; product name or designation>.
 - g. or approved equal.
 2. Metallic-Coated Steel Sheet: Facings of zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, **G90 (Z275)** coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, **Class AZ50 (Class AZM150)** coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
 - a. Nominal Thickness: [**0.028 inch (0.71 mm)**] [**0.034 inch (0.86 mm)**] [**0.040 inch (1.02 mm)**].
 - b. Exterior Finish: [**Two-coat fluoropolymer**] [**Three-coat fluoropolymer**] [**Mica fluoropolymer**] [**Metallic fluoropolymer**] [**FEVE fluoropolymer**] [**Siliconized polyester**] <Insert finish>.
 - 1) Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
 - c. Interior Finish: [**Siliconized polyester**] <Insert finish>.

- 1) Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.**
3. Aluminum Sheet: Fabricate panel with exterior and interior facings of same material and thickness. Provide facings of aluminum coil-coated sheet, **ASTM B 209** (ASTM B 209M), alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
 - a. Thickness: **[0.032 inch (0.81 mm)] [0.040 inch (1.02 mm)] [0.050 inch (1.27 mm)] [0.063 inch (1.60 mm)].**
 - b. Surface: **[Smooth, flat] [Embossed]** finish.
 - c. Exterior Finish: **[Two-coat fluoropolymer] [Three-coat fluoropolymer] [Mica fluoropolymer] [Metallic fluoropolymer] [FEVE fluoropolymer] [Siliconized polyester] [Clear anodized] [Color anodized] <Insert finish>.**
 - 1) Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.**
 - d. Interior Finish: **[Siliconized polyester] <Insert finish>.**
 - 1) Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.**
4. Core Material: **[Manufacturers' standard.][Board insulation of the following type:]**
 - a. Polyisocyanurate Insulation: Closed cell, modified polyisocyanurate foam using a non-CFC blowing agent, board type, with a maximum flame-spread index of 25 and a smoke-developed index of 450.
 - 1) Closed-Cell Content: 90 percent when tested according to ASTM D 6226.
 - b. Extruded-Polystyrene Board Insulation: ASTM C 578, Type IV, **1.60-lb/cu. ft. (26-kg/cu. m)** minimum density unless otherwise indicated; with a maximum flame-spread index of 25 and a smoke-developed index of 450.
 - c. Molded-Polystyrene Board Insulation: ASTM C 578, **[Type I, 0.9 lb/cu. ft. (14 kg/cu. m)] [Type II, 1.35 lb/cu. ft. (22 kg/cu. m), Class 2 or 3, Grade 3]**, with a maximum flame-spread index of 25 and a smoke-developed index of 450.
5. Backer Board: **[0.125-inch- (3-mm-)] [0.250-inch- (6-mm-)]** thick hardboard behind exterior facing for increased impact resistance.
6. Clips: Manufacturer's standard one piece, formed from **[zinc-coated (galvanized) or aluminum-zinc alloy-coated steel sheet] [stainless steel].**
7. Gaskets: Extruded, dry seal silicone.

8. Sealant: Manufacturer's standard silicone.
 9. Panel Thickness: [1.0 inch (25 mm)] [2.0 inches (51 mm)] [3.0 inches (76 mm)] [4.0 inches (102 mm)] [5.0 inches (127 mm)] [6.0 inches (152 mm)] <Insert dimension>.
 10. Thermal-Resistance Value (R-Value): <Insert R-value> according to ASTM C 1363.
- D. Framed-Edge, Laminated-Insulation-Core Metal Wall Panels <Insert drawing designation>: Formed with flush exterior panel facing and integral, extruded edge members; designed for independent installation by mechanically attaching panels to supports through edge framing using concealed fasteners; with gasketed joints.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. [Alply LLC](#); Snug-Seam.
 - b. [Architectural Specialty Products, Inc.](#); Series MLW.
 - c. [Protean Construction Products, Inc.](#); FM-210 Panel.
 - d. <Insert manufacturer's name; product name or designation>.
 - e. or approved equal.
 2. Metallic-Coated Steel Sheet: Facings of zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, G90 (Z275) coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, Class AZ50 (Class AZM150) coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
 - a. Nominal Thickness: [0.028 inch (0.71 mm)] [0.034 inch (0.86 mm)] [0.040 inch (1.02 mm)].
 - b. Exterior Finish: [Two-coat fluoropolymer] [Three-coat fluoropolymer] [Mica fluoropolymer] [Metallic fluoropolymer] [FEVE fluoropolymer] [Siliconized polyester] <Insert finish>.
 - 1) Color: [As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.
 - c. Interior Finish: [Siliconized polyester] <Insert finish>.
 - 1) Color: [As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.
 3. Aluminum Sheet: Fabricate panel with exterior and interior facings of same material and thickness. Provide facings of aluminum coil-coated sheet, ASTM B 209 (ASTM B 209M), alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
 - a. Thickness: [0.032 inch (0.81 mm)] [0.040 inch (1.02 mm)] [0.050 inch (1.27 mm)] [0.063 inch (1.60 mm)] [0.080 inch (2.03 mm)].
 - b. Surface: [Smooth, flat] [Embossed] finish.

- c. Exterior Finish: **[Two-coat fluoropolymer] [Three-coat fluoropolymer] [Mica fluoropolymer] [Metallic fluoropolymer] [FEVE fluoropolymer] [Siliconized polyester] [Clear anodized] [Color anodized] <Insert finish>**.
 - 1) Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
 - d. Interior Finish: **[Siliconized polyester] <Insert finish>**.
 - 1) Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
4. Core Material: **[Manufacturers' standard.] [Board insulation of the following type:]**
- a. Polyisocyanurate Insulation: Closed cell, modified polyisocyanurate foam using a non-CFC blowing agent, board type, with a maximum flame-spread index of 25 and a smoke-developed index of 450.
 - 1) Closed-Cell Content: 90 percent when tested according to ASTM D 6226.
 - b. Extruded-Polystyrene Board Insulation: ASTM C 578, Type IV, **1.60-lb/cu. ft. (26-kg/cu. m)** minimum density unless otherwise indicated; with a maximum flame-spread index of 25 and a smoke-developed index of 450.
 - c. Molded-Polystyrene Board Insulation: ASTM C 578, **[Type I, 0.9 lb/cu. ft. (14 kg/cu. m)] [Type II, 1.35 lb/cu. ft. (22 kg/cu. m), Class 2 or 3, Grade 3]**, with maximum flame-spread index of 25 and smoke-developed index of 450.
5. Backer Board: **[0.125-inch- (3-mm-)] [0.250-inch- (6-mm-)]** thick hardboard behind exterior facing for increased impact resistance.
6. Edge Members: Extruded aluminum, not less than **0.063-inch (1.60-mm)** wall thickness.
7. Gaskets: Extruded, dry seal silicone.
8. Panel Thickness: **[1.0 inch (25 mm)] [2.0 inches (51 mm)] [3.0 inches (76 mm)] [4.0 inches (102 mm)] [5.0 inches (127 mm)] [6.0 inches (152 mm)] <Insert dimension>**.
9. Thermal-Resistance Value (R-Value): **<Insert R-value>** according to ASTM C 1363.

2.4 HONEYCOMB-CORE METAL WALL PANELS

- A. General: Provide factory-formed and -assembled metal wall panels fabricated from two metal facing sheets and honeycomb-core material laminated or otherwise securely bonded to facing sheets during fabrication without use of contact adhesives or pinch

rollers, and with joints between panels designed to form weathertight seals. Include accessories required for weathertight installation.

1. Panel Performance:

- a. Fatigue: No evidence of delamination, core cracking, or permanent bowing when tested to a **20-lbf/sq. ft. (958-kPa)** positive and negative wind load and with deflection of L/180 for 2 million cycles.
- b. Autoclave: No delamination when exposed to **2-psi (13.8-kPa)** pressure at a temperature of **212 deg F (100 deg C)** for 2-1/2 hours.

B. **Wrapped-Edge, Honeycomb-Core Metal Wall Panels <Insert drawing designation>**: Formed with flush exterior panel facing wrapped over panel edges; designed for independent installation by mechanically attaching **[panels to supports using staggered, concealed side clips engaging panel edges]** **[through extended panel edges to supports using concealed fasteners]**; with **[sealant]** **[gasketed]** joints.

1. Products: Subject to compliance with requirements, provide one of the following:

- a. [Architectural Specialty Products, Inc.](#); Series 500.
- b. [Firestone Metal Products, LLC](#); UNA-CORE Series **[10 Calked Joint System]** **[30 Glazing Panel]** **[45 Spandrel Panel]**.
- c. [Industrial Building Panels, Inc.](#); Honeycomb 1000 Series.
- d. [Protean Construction Products, Inc.](#); HC-100 Panel.
- e. **<Insert manufacturer's name; product name or designation>**.
- f. or approved equal.

2. **Metallic-Coated Steel Sheet**: Facings of zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, **G90 (Z275)** coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, **Class AZ50 (Class AZM150)** coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.

- a. Nominal Thickness: **[0.028 inch (0.71 mm)]** **[0.034 inch (0.86 mm)]** **[0.040 inch (1.02 mm)]**.
- b. Exterior Finish: **[Two-coat fluoropolymer]** **[Three-coat fluoropolymer]** **[Mica fluoropolymer]** **[Metallic fluoropolymer]** **[FEVE fluoropolymer]** **[Siliconized polyester]** **<Insert finish>**.

1) Color: **[As indicated by manufacturer's designations]** **[Match DEN Project Manager's samples]** **[As selected by DEN Project Manager from manufacturer's full range]** **<Insert color>**.

c. Interior Finish: **[Siliconized polyester]** **<Insert finish>**.

1) Color: **[As indicated by manufacturer's designations]** **[Match DEN Project Manager's samples]** **[As selected by DEN Project Manager from manufacturer's full range]** **<Insert color>**.

3. Aluminum Sheet: Fabricate panel with exterior and interior facings of same material and thickness. Provide facings of aluminum coil-coated sheet, **ASTM B 209** (ASTM B 209M), alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
 - a. Thickness: **[0.032 inch (0.81 mm)] [0.040 inch (1.02 mm)] [0.050 inch (1.27 mm)] [0.063 inch (1.60 mm)]**.
 - b. Surface: **[Smooth, flat] [Embossed]** finish.
 - c. Exterior Finish: **[Two-coat fluoropolymer] [Three-coat fluoropolymer] [Mica fluoropolymer] [Metallic fluoropolymer] [FEVE fluoropolymer] [Siliconized polyester] [Clear anodized] [Color anodized] <Insert finish>**.
 - 1) Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
 - d. Interior Finish: **[Siliconized polyester] <Insert finish>**.
 - 1) Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
 4. Kraft-Paper Honeycomb Core: Manufacturer's standard phenolic-resin impregnated paper, with not less than 15 percent resin content by weight and chemically treated for fire resistance; with maximum **1/2-inch (13-mm)** cell size.
 5. Aluminum Honeycomb Core: Manufacturer's standard **0.003-inch-** (0.08-mm-) thick, commercial-grade aluminum with maximum **3/4-inch (19-mm)** cell size.
 6. Clips: Manufacturer's standard one piece, formed from **[zinc-coated (galvanized) or aluminum-zinc alloy-coated steel sheet] [stainless steel]**.
 7. Gaskets: Extruded, dry seal silicone.
 8. Sealant: Manufacturer's standard silicone.
 9. Panel Thickness: **[0.25 inch (6 mm)] [1.0 inch (25 mm)] [2.0 inches (51 mm)] [3.0 inches (76 mm)] [4.0 inches (102 mm)] <Insert dimension>**.
- C. Shiplap-Edge, Honeycomb-Core Metal Wall Panels **<Insert drawing designation>**: Formed with flush exterior panel facing and with shiplap edges; designed for sequential installation by mechanically attaching panels to supports using concealed clips and fasteners; with factory-applied **[sealant] [gaskets]** in side laps.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. [Architectural Specialty Products, Inc.](#); Series 5000.
 - b. [Kingspan](#); Designwall 3000.
 - c. [Protean Construction Products, Inc.](#); HC-200 Panel.
 - d. **<Insert manufacturer's name; product name or designation>**.
 - e. or approved equal.
 2. Metallic-Coated Steel Sheet: Facings of zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, **G90 (Z275)** coating designation, or

aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, **Class AZ50** (Class AZM150) coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.

- a. Nominal Thickness: [**0.028 inch (0.71 mm)**] [**0.034 inch (0.86 mm)**] [**0.040 inch (1.02 mm)**].
 - b. Exterior Finish: [**Two-coat fluoropolymer**] [**Three-coat fluoropolymer**] [**Mica fluoropolymer**] [**Metallic fluoropolymer**] [**FEVE fluoropolymer**] [**Siliconized polyester**] <Insert finish>.
 - 1) Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
 - c. Interior Finish: [**Siliconized polyester**] <Insert finish>.
 - 1) Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
3. Aluminum Sheet: Fabricate panel with exterior and interior facings of same material and thickness. Provide facings of aluminum coil-coated sheet, **ASTM B 209** (ASTM B 209M), alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
- a. Thickness: [**0.032 inch (0.81 mm)**] [**0.040 inch (1.02 mm)**] [**0.050 inch (1.27 mm)**] [**0.063 inch (1.60 mm)**].
 - b. Surface: [**Smooth, flat**] [**Embossed**] finish.
 - c. Exterior Finish: [**Two-coat fluoropolymer**] [**Three-coat fluoropolymer**] [**Mica fluoropolymer**] [**Metallic fluoropolymer**] [**FEVE fluoropolymer**] [**Siliconized polyester**] [**Clear anodized**] [**Color anodized**] <Insert finish>.
 - 1) Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
 - d. Interior Finish: [**Siliconized polyester**] <Insert finish>.
 - 1) Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
4. Kraft-Paper Honeycomb Core: Manufacturer's standard phenolic-resin-impregnated paper, with not less than 15 percent resin content by weight and chemically treated for fire resistance; with maximum **1/2-inch (13-mm)** cell size.
5. Aluminum Honeycomb Core: Manufacturer's standard **0.003-inch-** (0.08-mm-) thick, commercial-grade aluminum with maximum **3/4-inch (19-mm)** cell size.

6. Clips: Manufacturer's standard one piece, formed from [**zinc-coated (galvanized) steel or aluminum-zinc alloy-coated steel**] [**stainless steel**].
 7. Gaskets: Extruded, dry seal silicone.
 8. Sealant: Manufacturer's standard silicone.
 9. Panel Thickness: [**1.0 inch (25 mm)**] [**1.25 inches (32 mm)**] [**2.0 inches (51 mm)**] **<Insert dimension>**.
- D. Framed-Edge, Honeycomb-Core Metal Wall Panels **<Insert drawing designation>**: Formed with flush exterior panel facing and integral, extruded edge members; designed for independent installation by mechanically attaching panels to supports through edge framing using concealed fasteners; with gasketed joints.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. [Architectural Specialty Products, Inc.](#); Series MLW.
 - b. [Firestone Metal Products, LLC](#); UNA-CLAD Series 2000 Vertical Oriented Dry-Set System.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.
 2. Metallic-Coated Steel Sheet: Facings of zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, **G90 (Z275)** coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, **Class AZ50 (Class AZM150)** coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
 - a. Nominal Thickness: **0.028 inch (0.71 mm)**.
 - b. Exterior Finish: [**Two-coat fluoropolymer**] [**Three-coat fluoropolymer**] [**Mica fluoropolymer**] [**Metallic fluoropolymer**] [**FEVE fluoropolymer**] [**Siliconized polyester**] **<Insert finish>**.
 - 1) Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**] **<Insert color>**.
 - c. Interior Finish: [**Siliconized polyester**] **<Insert finish>**.
 - 1) Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**] **<Insert color>**.
 3. Aluminum Sheet: Fabricate panel with exterior and interior facings of same material and thickness. Provide facings of aluminum coil-coated sheet, **ASTM B 209 (ASTM B 209M)**, alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
 - a. Thickness: [**0.040 inch (1.02 mm)**] [**0.063 inch (1.60 mm)**].
 - b. Surface: [**Smooth, flat**] [**Embossed**] finish.
 - c. Exterior Finish: [**Two-coat fluoropolymer**] [**Three-coat fluoropolymer**] [**Mica fluoropolymer**] [**Metallic fluoropolymer**] [**FEVE fluoropolymer**]

[Siliconized polyester] [Clear anodized] [Color anodized] <Insert finish>.

1) Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.**

d. Interior Finish: **[Siliconized polyester] <Insert finish>.**

1) Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.**

4. Kraft-Paper Honeycomb Core: Manufacturer's standard phenolic-resin-impregnated paper, with not less than 15 percent resin content by weight and chemically treated for fire resistance; with maximum **1/2-inch (13-mm)** cell size.
5. Aluminum Honeycomb Core: Manufacturer's standard **0.003-inch- (0.08-mm-)** thick, commercial-grade aluminum with maximum **3/4-inch (19-mm)** cell size.
6. Edge Members: Extruded aluminum, not less than **0.063-inch (1.6-mm)** wall thickness.
7. Gaskets: Extruded, dry seal silicone.
8. Panel Thickness: **[1.0 inch (25 mm)] [2.0 inches (51 mm)] [3.0 inches (76 mm)] <Insert dimension>.**

2.5 MISCELLANEOUS MATERIALS

- A. Miscellaneous Metal Subframing and Furring: ASTM C 645, cold-formed, metallic-coated steel sheet, ASTM A 653/A 653M, **G90 (Z275 hot-dip galvanized)** coating designation or ASTM A 792/A 792M, **Class AZ50 (Class AZM150)** aluminum-zinc-alloy coating designation unless otherwise indicated. Provide manufacturer's standard sections as required for support and alignment of metal panel system.
- B. Panel Accessories: Provide components required for a complete, weathertight panel system including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal panels unless otherwise indicated.
 1. Closures: Provide closures at eaves and rakes, fabricated of same metal as metal panels.
 2. Backing Plates: Provide metal backing plates at panel end splices, fabricated from material recommended by manufacturer.
 3. Closure Strips: Closed-cell, expanded, cellular, rubber or crosslinked, polyolefin-foam or closed-cell laminated polyethylene; minimum **1-inch- (25-mm-)** thick, flexible closure strips; cut or premolded to match metal panel profile. Provide closure strips where indicated or necessary to ensure weathertight construction.

- C. Backer Board: Hardboard complying with ANSI A135.4, Class 1 tempered, [**1/8 inch (3 mm)**] [**1/4 inch (6 mm)**] thick unless otherwise indicated.
- D. Flashing and Trim: Provide flashing and trim formed from same material as metal panels as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, bases, drips, sills, jambs, corners, endwalls, framed openings, rakes, fasciae, parapet caps, soffits, reveals, and fillers. Finish flashing and trim with same finish system as adjacent metal panels.
- E. Panel Fasteners: Self-tapping screws designed to withstand design loads. Provide exposed fasteners with heads matching color of metal panels by means of plastic caps or factory-applied coating. Provide EPDM or PVC sealing washers for exposed fasteners.
- F. Panel Sealants: Provide sealant type recommended by manufacturer that are compatible with panel materials, are nonstaining, and do not damage panel finish.
 - 1. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape **1/2 inch (13 mm)** wide and **1/8 inch (3 mm)** thick.
 - 2. Joint Sealant: ASTM C 920; elastomeric polyurethane or silicone sealant; of type, grade, class, and use classifications required to seal joints in metal panels and remain weathertight; and as recommended in writing by metal panel manufacturer.
 - 3. Butyl-Rubber-Based, Solvent-Release Sealant: ASTM C 1311.

2.6 FABRICATION

- A. General: Fabricate and finish metal panels and accessories at the factory, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.
- B. Provide panel profile, including major ribs and intermediate stiffening ribs, if any, for full length of panel.
- C. Fabricate metal panel joints with factory-installed captive gaskets or separator strips that provide a weathertight seal and prevent metal-to-metal contact, and that minimize noise from movements.
- D. Honeycomb-Core Metal Wall Panels: Fabricate panels using manufacturer's standard thermosetting structural adhesive in a lamination process that bonds panel under minimum **10-psi (69-kPa)** pressure. Use of contact adhesives with pinch-roll process is unacceptable.
 - 1. Panel Bow Tolerance: Not more than 0.5 percent of panel width or length.

- E. Sheet Metal Flashing and Trim: Fabricate flashing and trim to comply with manufacturer's recommendations and recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated.
1. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
 2. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints for additional strength.
 3. Seams for Other Than Aluminum: Fabricate nonmoving seams in accessories with flat-lock seams. Tin edges to be seamed, form seams, and solder.
 4. Sealed Joints: Form nonexpansion, but movable, joints in metal to accommodate sealant and to comply with SMACNA standards.
 5. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.
 6. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended in writing by metal panel manufacturer.
 - a. Size: As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal wall panel manufacturer for application but not less than thickness of metal being secured.

2.7 FINISHES

- A. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- C. Steel Panels and Accessories:
1. Two-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 2. Three-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 3. Mica Fluoropolymer: AAMA 621. Two-coat fluoropolymer finish with suspended mica flakes containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

4. Metallic Fluoropolymer: AAMA 621. Three-coat fluoropolymer finish with suspended metallic flakes containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
5. FEVE Fluoropolymer: AAMA 621. Two-coat fluoropolymer finish containing 100 percent fluorinated ethylene vinyl ether resin in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
6. Siliconized Polyester: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than **0.2 mil (0.005 mm)** for primer and **0.8 mil (0.02 mm)** for topcoat.
7. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish consisting of prime coat and wash coat with a minimum total dry film thickness of **0.5 mil (0.013 mm)**.

D. Aluminum Panels and Accessories:

1. Two-Coat Fluoropolymer: AAMA 620. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
2. Three-Coat Fluoropolymer: AAMA 620. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
3. Mica Fluoropolymer: AAMA 620. Two-coat fluoropolymer finish with suspended mica flakes containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
4. Metallic Fluoropolymer: AAMA 620. Three-coat fluoropolymer finish with suspended metallic flakes containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
5. FEVE Fluoropolymer: AAMA 620. Two-coat fluoropolymer finish containing 100 percent fluorinated ethylene vinyl ether resin in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
6. Siliconized Polyester: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than **0.2 mil (0.005 mm)** for primer and **0.8 mil (0.02 mm)** for topcoat.
7. Exposed Anodized Finish:
 - a. Clear Anodic Finish: AAMA 611, [**AA-M12C22A41, Class I, 0.018 mm**] [**AA-M12C22A31, Class II, 0.010 mm**] or thicker.
 - b. Color Anodic Finish: AAMA 611, [**AA-M12C22A42/A44, Class I, 0.018 mm**] [**AA-M12C22A32/A34, Class II, 0.010 mm**] or thicker.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, metal panel supports, and other conditions affecting performance of the Work.
 - 1. Examine wall framing to verify that girts, angles, channels, studs, and other structural panel support members and anchorage have been installed within alignment tolerances required by metal wall panel manufacturer.
 - 2. Examine wall sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by metal wall panel manufacturer.
 - a. Verify that air- or water-resistive barriers have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.
- B. Examine roughing-in for components and systems penetrating metal panels to verify actual locations of penetrations relative to seam locations of metal panels before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Miscellaneous Supports: Install subframing, furring, and other miscellaneous panel support members and anchorages according to ASTM C 754 and metal panel manufacturer's written recommendations.

3.3 METAL PANEL INSTALLATION

- A. General: Install metal panels according to manufacturer's written instructions in orientation, sizes, and locations indicated. Install panels perpendicular to supports unless otherwise indicated. Anchor metal panels and other components of the Work securely in place, with provisions for thermal and structural movement.
 - 1. Install panels with concealed fasteners. Concealed self-tapping screws or nut and bolt are acceptable. Installation shall include no exposed wet sealant or tape except where noted on Drawings.
 - 2. All panels shall be removable from the exterior side without need for panel cutting or removal of curtainwall mullions or louvers.
 - 3. Shim or otherwise plumb substrates receiving metal panels.
 - 4. Flash and seal metal panels at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until air- or water-resistive barriers and flashings that will be concealed by metal panels are installed.
 - 5. Install screw fasteners in predrilled holes.
 - 6. Locate and space fastenings in uniform vertical and horizontal alignment.

7. Install flashing and trim as metal panel work proceeds.
 8. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
 9. Align bottoms of metal panels and fasten with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws.
 10. Provide weathertight escutcheons for pipe- and conduit-penetrating panels.
- B. Fasteners:
1. Steel Panels: Use stainless-steel fasteners for surfaces exposed to the exterior; use galvanized-steel fasteners for surfaces exposed to the interior.
 2. Aluminum Panels: Use aluminum or stainless-steel fasteners for surfaces exposed to the exterior; use aluminum or galvanized-steel fasteners for surfaces exposed to the interior.
- C. Installation Tolerances: Shim and align panel units within installed tolerance of 1/4" in 20' 0" on level/plumb/slope and location/line as indicated, and within 1/16" offset at flush conditions of adjoining faces and alignment of matching profiles. Maximum 3/8" deviation of any material at any given theoretical point.
- D. Wall Panel Support Framing System: To be supplied and installed by metal wall Contractor. Final alignment to be the responsibility of this Contractor.
- E. Shop Drawings: Do not proceed with installation until approved shop drawings have been received.
- F. Inspection:
1. Examine alignment of structural steel prior to installation.
 2. Inspect all material including spandrel panels.
- G. Installation and Erection: Install the metal wall panels, fasteners, trim and related items in accordance with approved shop/erection drawings and manufacturer's specifications. Panels shall be installed by the manufacturer and/or approved erectors who have been trained and have experience in the installation of the particular type of wall panel and/or curtain wall systems specified.
1. The factory assembled wall panels shall be attached to the structural steel from the exterior of the building using self-tapping fasteners and clips spaced at each girt. Flashings and accessories shall be fastened 12" on center.
 2. Erection of the wall panels shall be started per manufacturer's recommendation and the panels held true to line. Horizontal lines are to be straight and level and vertical lines plumb.
- H. Joint Sealants: Install joint fillers gaskets and sealants where indicated and where required for weatherproof performance of panel systems.
1. Refer to Section 079000 "Joint Sealants" of these specifications for product and installation requirements applicable to indicated joint sealants.

- I. Joint Sealants, Post-Installation: Refer to Section 079000 "Joint Sealants" of these specifications for post installation requirements on joint sealers.
- J. Metal Protection: Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action as recommended in writing by metal panel manufacturer.
- K. Joint Sealers: Install gaskets, joint fillers, and sealants where indicated and where required for weathertight performance of metal wall panel assemblies. Provide types of gaskets, fillers, and sealants indicated by metal panel manufacturer; or, if not indicated, provide types recommended by metal wall panel manufacturer.
 - 1. Seal metal wall panel end laps with double beads of tape or sealant, full width of panel. Seal side joints where recommended by metal wall panel manufacturer.
 - 2. Prepare joints and apply sealants to comply with requirements in Section 079200 "Joint Sealants."

3.4 INSULATED METAL WALL PANEL INSTALLATION

- A. General: Apply continuous ribbon of sealant to panel joint on concealed side of insulated metal wall panels as vapor seal; apply sealant to panel joint on exposed side of panels for weather seal.
 - 1. Fasten foamed-insulation-core metal wall panels to supports with fasteners at each lapped joint at location and spacing and with fasteners recommended by manufacturer.
 - 2. Apply panels and associated items true to line for neat and weathertight enclosure. Avoid "panel creep" or application not true to line.
 - 3. Provide metal-backed washers under heads of exposed fasteners on weather side of insulated metal wall panels.
 - 4. Locate and space exposed fasteners in uniform vertical and horizontal alignment. Use proper tools to obtain controlled uniform compression for positive seal without rupture of washer.
 - 5. Provide sealant tape at lapped joints of insulated metal wall panels and between panels and protruding equipment, vents, and accessories.
 - 6. Apply a continuous ribbon of sealant tape to panel side laps and elsewhere as needed to make panels weathertight.
 - 7. Apply snap-on battens to exposed-fastener, insulated-core metal wall panel seams to conceal fasteners.
- B. Foamed-Insulation-Core Metal Wall Panels: Fasten metal wall panels to supports with concealed clips at each joint at location and spacing and with fasteners recommended by manufacturer. Fully engage tongue and groove of adjacent panels.
 - 1. Install clips to supports with self-tapping fasteners.
- C. Laminated-Insulation-Core Metal Wall Panels:

1. Wrapped-Edge Panels: Mechanically attach wall panels to supports using staggered, concealed side clips engaging wrapped panel edges. Install clips to supports with self-tapping fasteners. Seal joints with **[backer rod and sealant] [manufacturer's standard gaskets]**.
 2. Wrapped-Edge Panels: Mechanically attach wall panels through extended edge of panels to supports using self-tapping fasteners. Seal joints with **[backer rod and sealant] [manufacturer's standard gaskets]**.
 3. Shiplap-Edge Panels: Mechanically attach wall panels to supports using staggered, concealed side clips engaging tongue-and-groove panel edges. Install clips to supports with self-tapping fasteners.
 - a. Horizontal Joints: **[Maintain reveal joint of consistent width] [Seal joints with backer rod and sealant] [Seal joints with manufacturer's standard gaskets]**.
 - b. Vertical Joints: **[Maintain reveal joint of consistent width] [Seal joints with backer rod and sealant] [Seal joints with manufacturer's standard gaskets]**.
 4. Framed-Edge Panels: Mechanically attach wall panels through integral, extruded edge members to supports using self-tapping fasteners. Seal joints with manufacturer's standard gaskets.
- D. Honeycomb-Core Metal Wall Panels:
1. Wrapped-Edge Panels: Mechanically attach wall panels to supports using staggered, concealed side clips engaging wrapped panel edges. Install clips to supports with self-tapping fasteners. Seal joints with **[backer rod and sealant] [manufacturer's standard gaskets]**.
 2. Wrapped-Edge Panels: Mechanically attach wall panels through extended edge of panels to supports using self-tapping fasteners. Seal joints with **[backer rod and sealant] [manufacturer's standard gaskets]**.
 3. Shiplap-Edge Panels: Mechanically attach wall panels to supports using staggered, concealed side clips engaging tongue-and-groove panel edges. Install clips to supports with self-tapping fasteners.
 - a. Horizontal Joints: **[Maintain reveal joint of consistent width] [Seal joints with backer rod and sealant] [Seal joints with manufacturer's standard gaskets]**.
 - b. Vertical Joints: **[Maintain reveal joint of consistent width] [Seal joints with backer rod and sealant] [Seal joints with manufacturer's standard gaskets]**.
 4. Framed-Edge Panels: Mechanically attach wall panels through integral, extruded edge members to supports using self-tapping fasteners. Seal joints with manufacturer's standard gaskets.
- E. Accessory Installation: Install accessories with positive anchorage to building and weathertight mounting, and provide for thermal expansion. Coordinate installation with flashings and other components.

1. Install components required for a complete metal panel system including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items. Provide types indicated by metal panel manufacturer; or, if not indicated, provide types recommended by metal panel manufacturer.
- F. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level. Install work with laps, joints, and seams that are permanently watertight.
1. Install exposed flashing and trim that is without buckling and tool marks, and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and to achieve waterproof performance.
 2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of **10 feet (3 m)** with no joints allowed within **24 inches (610 mm)** of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently waterproof, form expansion joints of intermeshing hooked flanges, not less than **1 inch (25 mm)** deep, filled with mastic sealant (concealed within joints).

3.5 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections.
- B. Water-Spray Test: After installation, test area of assembly **[shown on Drawings] [as directed by DEN Project Manager]** <Insert area> for water penetration according to AAMA 501.2.
- C. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect completed metal wall panel installation, including accessories.
- D. Metal wall panels will be considered defective if they do not pass test and inspections.
- E. Additional tests and inspections, at Contractor's expense, are performed to determine compliance of replaced or additional work with specified requirements.
- F. Prepare test and inspection reports.

3.6 CLEANING AND PROTECTION

- A. Remove temporary protective coverings and strippable films, if any, as metal panels are installed, unless otherwise indicated in manufacturer's written installation instructions. On completion of metal panel installation, clean finished surfaces as recommended by metal panel manufacturer. Maintain in a clean condition during construction.

- B. After metal panel installation, clear weep holes and drainage channels of obstructions, dirt, and sealant.
- C. Damaged Material: Repair or replace all damaged material to the satisfaction of the DEN Project Manager if damage has been caused by the manufacturer or wall panel erector/contractor. The General Contractor shall be responsible for the protection of completed or installed walls from damage by other trades. Installed areas or portions of the work shall be inspected by the Owner for approval following the completion of such areas.
- D. Replace metal panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 074213.19

SECTION 074213.23 - METAL COMPOSITE MATERIAL WALL PANELS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes metal composite material wall panels.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager] <Insert location>**.
 1. Meet with DEN Project Manager, Owner's insurer if applicable, metal composite material panel Installer, structural-support Installer, and installers whose work interfaces with or affects metal composite material panels, including installers of doors, windows, and louvers.
 2. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 3. Review methods and procedures related to metal composite material panel installation, including manufacturer's written instructions.
 4. Examine support conditions for compliance with requirements, including alignment between and attachment to structural members.
 5. Review flashings, special siding details, wall penetrations, openings, and condition of other construction that affect metal composite material panels.
 6. Review governing regulations and requirements for insurance, certificates, and tests and inspections if applicable.
 7. Review temporary protection requirements for metal composite material panel assembly during and after installation.
 8. Review procedures for repair of panels damaged after installation.
 9. Document proceedings, including corrective measures and actions required, and furnish copy of record to each participant.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
1. Include product specifications, certified product test results, installation instructions and general recommendations, construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of panel and accessory.
 2. Include data substantiating that materials comply with requirements.
- B. Shop Drawings:
1. Include fabrication and installation layouts of metal composite material panels; large-scale details of edge conditions, joints, panel profiles, corners, anchorages, attachment assembly, trim, flashings, closures, and accessories; and special details. Distinguish between factory and field assembly work.
 2. Accessories: Include details of the flashing, trim and anchorage, at a scale of not less than 1-1/2 inches per 12 inches (1:10).
- C. Samples for Initial Selection: For each type of metal composite material panel indicated with factory-applied color finishes.
1. Include similar Samples of trim and accessories involving color selection.
- D. Samples for Verification: For each type of exposed finish and color required, prepared on Samples of size indicated below.
1. Metal Composite Material Panels: Submit three (3) samples 12 inches (305 mm) long by actual panel width. Include miscellaneous trim piece, anchors, insulation, sealants and compressible gasket, fasteners, closures, and other metal composite material panel accessories.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Certificate from installer evidencing minimum ten (10) years experience successfully installing this type of work on projects of this scale and proof of acceptance by manufacturer.
- C. Certificate from the manufacturer stating that all materials are per contract requirements and proof of minimum ten (10) years experience manufacturing products of this type on projects of this scale.
- D. Certificate from manufacturer that panel system is approved for use in Denver or has ICBO approval for Class 1 non-combustible construction.
- E. Product Test Reports: For each product, tests performed by a qualified testing agency.

- F. Structural Calculations: Signed and stamped by a Colorado licensed structural engineer.
- G. Field quality-control reports.
- H. Sample Warranties: For special warranties.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For metal composite material panels to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 MAINTENANCE SUBMITTALS

- A. Provide minimum four (4) gallons touch-up paint for each color used on Project. Store in area directed by DEN Project Manager.
 - 1. Instruct Owners personnel in appropriate paint touch-up procedures.

1.8 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
 - 1. A firm that has specialized in installation of types of products required for Project for not less than ten (10) years and which is acceptable to manufacturer(s) of primary materials.
- B. Manufacturer's Qualifications:
 - 1. A firm that has specialized in manufacture of products required for Project with a minimum of ten (10) years experience manufacturing products of this type on projects of this scale.
- C. Performance Test Standards: Submit evidence that preformed panel system has been pretested by an independent laboratory and certified by manufacturer to provide specified resistance to air and water infiltration and structural deflection and failure when installed as indicated and when tested in accordance with AAMA Standard Test TM 1, "Specification for Method of Test for Metal Curtain Walls for Water Penetration Using Dynamic Pressure".
- D. Fire Resistances:
 - 1. Wall panels shall be rated and carry the following listings:

- a. U.L. classification for "Surface Burning Characteristics", U.L. Standard 723 (ASTM-E84) File R6863.

	Finished Panel:	Core Only:
Flame Spread	25 max.	25 max.
Fuel Contributed	0	0
Smoke Developed	450 max.	200 max.

- b. U.L. classification per "Insulated Wall Construction" U.L. Subject 1040 (corner test).
c. Factory mutual approval as Class 1 panels.
d. ICBO Research Report for Class 1 non-combustible construction and approval by the City and County of Denver.

- E. Required Performances: Fabricate panels and other components of wall system for the following installed as indicated performances:

1. Wind Loading: Refer to Part 1 of this Section.
2. Water Penetration: No significant, uncontrolled leakage at 6.24 lbs. per sq. ft. per ASTM E 331.
3. Air Infiltration: 0.060 cfm per sq. ft. for wall areas, with 1.56 lbs. per sq. ft. differential pressure, as tested per ASTM E 283.
4. Sound Transmission: STC rating of 28.
5. Thermal Performance: Factory-assembled panel shall have a U-value of 0.072 btu/hr./SF when tested in accordance with ASTM C236.
6. Bond Strength: No metal primer interface corrosion or delamination shall occur after 500 hrs. at 120 deg F and 100% relative humidity.
7. Design to withstand thermal movements resulting from an ambient temperature range of minus 30 deg F (minus 35 deg C) to 120 deg F (67 deg C), which may cause preformed siding range of 180 deg.F (100 deg C), without causing buckling, failure of joint seals, undue stress on fasteners or other detrimental effects.
8. Pressure Equalization: Provide Rain Screen Test showing that with liner seal broken, there shall be no water rise in joint cavity under 10 psf in accordance with ASTM E331-70. A fully designed and tested gutter system meeting the same test requirements will be acceptable upon submittal of supporting documents.
9. Galvanic Reaction: Provide galvanic protection between dissimilar metals.

- F. Provide complete structural calculations, including calculation for cold-formed metal framing and metal fabrications back-up, signed and stamped by an engineer registered in the state of Colorado. Calculations are to be based on the following:

1. Wind load exposure C, Importance factor I = 1.15.
2. Minimum basic wind speed: 85 M.P.H., but not less than 50 p.s.f., positive and negative pressure.
3. Wind Load Deflection: L/180, 3/4" max.
4. Maximum Wind Load: 115 mph with gust factor of 1.3.

- G. Field Measurements: It is the intent of these specifications for Contractor to shop fabricate metal panels completely. Contractor to make all field measurements required

to shop fabricate panel system accurately. Field cutting and trimming be held to an absolute minimum.

- H. Single Source Responsibility: The "Exterior Skin Installer" is to provide the structural calculations, coordination, fabrication, installation and warranty for all work associated with the exterior skin, which includes: Section 083213 "Sliding Aluminum Frame Glass Doors", Section 084413 "Glazed Aluminum Curtainwall", Section 089119 "Fixed Louvers", and Section 089516 "Wall Vents", and the following:
1. All cold formed metal framing or metal fabrications associated with the above. Cold formed metal framing to be of the size and spacing indicated on the drawings, except gauge shall be as needed as determined by the structural calculations required, but in no case less than 14 gauge. Metal fabrications shall be of the size indicated on the drawings, except thickness shall be as determined by the structural calculations required. Provide additional fabrications as needed.
 - a. All of this work to be in accordance with requirements of Section 054000 "Cold Formed Metal Framing" and Section 055000 "Metal Fabrications".
 2. All expansion joints in the exterior side of the above exterior wall, per Section 079500 "Expansion Control".
 3. All joint sealers installed within the above described work including joints between adjacent work, per Section 079000, "Joint Sealants".
 4. All glazing installed within the above described work per Section 088000, "Glazing".
 5. All painting, finishes, or coatings associated with the above described work.
 6. All firestopping associated with exterior skin intersection with rated roofs or floors per Section 078413 "Penetration Firestopping."
- I. Testing Agency: Contractor to employ an independent testing agency to make on-site inspections on at least a weekly basis during skin construction. Testing Agency to measure actual installed tolerances, and inspect all facets of construction with regard to compliance with contract requirements. Submit weekly report to DEN Project Manager. Immediately note any areas not in compliance. Independent Testing Agency shall verify existing installed tolerances prior to start of work and notify DEN Project Manager of any discrepancies to specified tolerances prior to start of prefabrication.
- J. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation. Coordinate installation of mock-up with work by other trades.
1. Build mockup of typical metal composite material panel assembly [**as shown on Drawings**] <Insert size>, including [**corner,**] [**soffits,**] supports, attachments, and accessories.
 2. Demonstrate each type of detail condition to the greatest extent possible including; a minimum 100 square feet of masonry, an expansion joint, louver, curtainwall, glazing, preformed siding, sealants, painting, finishes, typical parapet and cap, typical cold formed metal framing, typical metal fabrications and a minimum 80 square feet of exterior soffit. This mockup may be constructed and approved in sections. Provide scaffolding to facilitate mockup review.

3. Do not proceed with initial mockup prior to approval of initial submittals unless approved by the DEN Project Manager.
4. Portions of the mockup that are not approved are to be reconstructed until approved. The approved mockup will serve as the standard of quality. Conduct field water test on approved initial mockup per AAMA 501.2-83
5. Complete initial mockup a minimum of one (1) month prior to start of fabrication of panels, glazing, louvers, and curtainwall for the actual building.
6. Remove initial mockup from the project site when directed by the DEN Project Manager, but not prior to Substantial Completion. Undamaged glass may be applied to overstock requirements. Salvage preformed siding, clean, protect, and store for Owner in area as directed by DEN Project Manager.
7. Water-Spray Test: Conduct water-spray test of mockup of metal composite material panel assembly, testing for water penetration according to AAMA 501.2.
8. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
9. Construct additional mockups on the permanent structure as may be required to demonstrate each type of condition not demonstrated in initial mock-up. Notify DEN Project Manager when ready for review. Do not proceed with subsequent work until mockup is approved.
10. Cost of components of this section incorporated into mockups, including separate structure for the initial mockup, shall be by this Contractor.
11. Structural performance for mockup shall be designed to withstand wind loads specified herein, with deflections equal to those required for the final building. See structural drawings.
12. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver components, metal composite material panels, and other manufactured items so as not to be damaged or deformed. Package metal composite material panels for protection during transportation and handling.
- B. Unload, store, and erect metal composite material panels in a manner to prevent bending, warping, twisting, and surface damage.
- C. Stack metal composite material panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal composite material panels to ensure dryness, with positive slope for drainage of water. Do not store metal composite material panels in contact with other materials that might cause staining, denting, or other surface damage.
- D. Retain strippable protective covering on metal composite material panels during installation.
- E. Copper Panels: Wear gloves when handling to prevent fingerprints and soiling of surface.

1.10 FIELD CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of metal composite material panels to be performed according to manufacturers' written instructions and warranty requirements.

1.11 COORDINATION

- A. Coordinate metal composite material panel installation with rain drainage work, flashing, trim, construction of soffits, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.12 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal composite material panel systems that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
 - a. Structural failures including rupturing, cracking, or puncturing.
 - b. Deterioration of metals and other materials beyond normal weathering.
2. Warranty Period: Minimum [**two (2)**] <Insert number> years from date of Substantial Completion.

- B. Installer Warranty:

1. Entire panel system, including weathertightness, material, finish, insulation, seams, and fasteners for a period of minimum two (2) years from date of Substantial Completion.

- C. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal composite material panels that show evidence of deterioration of factory-applied finishes within specified warranty period.

1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
2. Finish Warranty Period: Minimum [**20**] [**10**] <Insert number> years from date of Substantial Completion.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Provide metal composite material panel systems capable of withstanding the effects of the following loads, based on testing according to ASTM E 330:
1. Wind Loads: 115 mph with gust factor of 1.3.
 2. Other Design Loads: [**As indicated on Drawings**] <Insert loads>.
 3. Deflection Limits: For wind loads, no greater than [**1/180**] [**1/240**] <Insert deflection> of the span.
 4. Ambient Temperature Range: Minus 30 deg F (minus 35 deg C) to 120 deg F (49 deg C).
 5. <Insert serviceability requirements>.
- B. Air Infiltration: Air leakage of not more than **0.06 cfm/sq. ft.** (0.3 L/s per sq. m) when tested according to ASTM E 283 at the following test-pressure difference:
1. Test-Pressure Difference: [**1.57 lbf/sq. ft. (75 Pa)**] [**6.24 lbf/sq. ft. (300 Pa)**].
- C. Water Penetration under Static Pressure: No water penetration when tested according to ASTM E 331 at the following test-pressure difference:
1. Test-Pressure Difference: [**2.86 lbf/sq. ft. (137 Pa)**] [**6.24 lbf/sq. ft. (300 Pa)**].
- D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
1. Temperature Change (Range): [**120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces**] <Insert temperature range>.
- E. Fire-Resistance Ratings: Comply with ASTM E 119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
1. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.

2.2 METAL COMPOSITE MATERIAL WALL PANELS <Insert drawing designation>

- A. Metal Composite Material Wall Panel Systems: Provide factory-formed and -assembled, metal composite material wall panels fabricated from two metal facings that are bonded to a solid, extruded thermoplastic core; formed into profile for installation method indicated. Include attachment assembly components[, **panel stiffeners**], and accessories required for weathertight system.
- Products: Subject to compliance with requirements, provide one of the following:
 - [3A Composites USA, Inc.](#); [**Alucobond**] [**Alucobond Plus**].
 - [Alcoa Inc.](#); Reynobond [**FR**] [**PE**].
 - [CENTRIA Architectural Systems](#); Formabond Wall System.
 - [Citadel Architectural Products, Inc.](#); Envelope 2000 [**RR**] [**RS**].
 - [Firestone Metal Products, LLC](#); UNA-FAB [**Series 1000**] [**Series 1500**].
 - [Protean Construction Products, Inc.](#); ACM 100.
 - <Insert manufacturer's name; product name or designation>.
 - or approved equal.
- B. Aluminum-Faced Composite Wall Panels <Insert drawing designation>: Formed with **0.020-inch-** (0.50-mm-) thick, [**coil-coated**] [**anodized**] aluminum sheet facings.
- Panel Thickness: [**0.118 inch (3 mm)**] [**0.157 inch (4 mm)**] [**0.197 inch (5 mm)**] [**0.236 inch (6 mm)**] [**As indicated on Drawings**].
 - Core: [**Standard**] [**Fire retardant**].
 - Exterior Finish: [**Two-coat fluoropolymer**] [**Three-coat fluoropolymer**] [**Mica fluoropolymer**] [**Metallic fluoropolymer**] [**FEVE fluoropolymer**] [**Clear anodized**] [**Color anodized**] <Insert finish>.
 - Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
- C. Copper-Faced Composite Wall Panels <Insert drawing designation>: Formed with [**12-oz./sq. ft. (0.41-mm-thick)**] [**14-oz./sq. ft. (0.48-mm-thick)**] copper sheet facings.
- Panel Thickness: [**0.157 inch (4 mm)**] [**0.236 inch (6 mm)**] [**As indicated on Drawings**].
 - Core: [**Standard**] [**Fire retardant**].
 - Exterior Finish: [**Mill**] [**Prepatinated**].
- D. Attachment Assembly Components: Formed from [**extruded aluminum**] [**material compatible with panel facing**].
- E. Attachment Assembly: [**Manufacturer's standard**] [**Clip**] [**Subgirt and spline**] [**Track support**] [**Rainscreen principle system**] <Insert method>.

2.3 MISCELLANEOUS MATERIALS

- A. Miscellaneous Metal Subframing and Furring: ASTM C 645, cold-formed, metallic-coated steel sheet ASTM A 653/A 653M, G90 (Z275 hot-dip galvanized) coating designation or ASTM A 792/A 792M, Class AZ50 (Class AZM150) aluminum-zinc-alloy coating designation unless otherwise indicated. Provide manufacturer's standard sections as required for support and alignment of metal composite material panel system.
- B. Panel Accessories: Provide components required for a complete, weathertight panel system including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal composite material panels unless otherwise indicated.
- C. Flashing and Trim: Provide flashing and trim formed from same material as metal composite material panels as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, bases, drips, sills, jambs, corners, endwalls, framed openings, rakes, fasciae, parapet caps, soffits, reveals, and fillers. Finish flashing and trim with same finish system as adjacent metal composite material panels.
- D. Panel Fasteners: Self-tapping screws designed to withstand design loads. Provide exposed fasteners with heads matching color of metal composite material panels by means of plastic caps or factory-applied coating. Provide EPDM or PVC sealing washers for exposed fasteners.
- E. Panel Sealants: ASTM C 920; elastomeric polyurethane or silicone sealant; of type, grade, class, and use classifications required to seal joints in metal composite material panels and remain weathertight; and as recommended in writing by metal composite material panel manufacturer.

2.4 FABRICATION

- A. General: Fabricate and finish metal composite material panels and accessories at the factory, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.
- B. Fabricate metal composite material panel joints with factory-installed captive gaskets or separator strips that provide a weathertight seal and prevent metal-to-metal contact, and that minimize noise from movements.
- C. Sheet Metal Flashing and Trim: Fabricate flashing and trim to comply with manufacturer's recommendations and recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated.

1. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
2. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints for additional strength.
3. Seams for Other Than Aluminum: Fabricate nonmoving seams in accessories with flat-lock seams. Tin edges to be seamed, form seams, and solder.
4. Sealed Joints: Form non-expansion, but movable, joints in metal to accommodate sealant and to comply with SMACNA standards.
5. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.
6. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended in writing by metal panel manufacturer.
 - a. Size: As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal wall panel manufacturer for application but not less than thickness of metal being secured.

2.5 FINISHES

- A. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- C. Aluminum Panels and Accessories:
 1. Two-Coat Fluoropolymer: AAMA 620. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 2. Three-Coat Fluoropolymer: AAMA 620. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 3. Mica Fluoropolymer: AAMA 620. Two-coat fluoropolymer finish with suspended mica flakes containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 4. Metallic Fluoropolymer: AAMA 620. Three-coat fluoropolymer finish with suspended metallic flakes containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

5. 5. FEVE Fluoropolymer: AAMA 620. **[Two-coat fluoropolymer] [Three-coat fluoropolymer] [Two-coat fluoropolymer with suspended mica flakes] [Three-coat fluoropolymer with suspended metallic flakes]** finish containing 100 percent fluorinated ethylene vinyl ether resin in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 6. Exposed Anodized Finish:
 - a. Clear Anodic Finish: AAMA 611, **[AA-M12C22A41, Class I, 0.018 mm] [AA-M12C22A31, Class II, 0.010 mm]** or thicker.
 - b. Color Anodic Finish: AAMA 611, **[AA-M12C22A42/A44, Class I, 0.018 mm] [AA-M12C22A32/A34, Class II, 0.010 mm]** or thicker.
- D. Copper Panels and Accessories:
1. Prepatination: Factory prepatinate according to ASTM B 882 to convert the copper surface to an inorganic crystalline structure with the appearance and durability of naturally formed patina.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, metal composite material panel supports, and other conditions affecting performance of the Work.
 1. Examine wall framing to verify that girts, angles, channels, studs, and other structural panel support members and anchorage have been installed within alignment tolerances required by metal composite material wall panel manufacturer.
 2. Examine wall sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by metal composite material wall panel manufacturer.
 - a. Verify that air- or water-resistive barriers have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.
- B. Examine roughing-in for components and assemblies penetrating metal composite material panels to verify actual locations of penetrations relative to seam locations of metal composite material panels before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Miscellaneous Supports: Install subframing, furring, and other miscellaneous panel support members and anchorages according to ASTM C 754 and metal composite material panel manufacturer's written recommendations.

3.3 METAL COMPOSITE MATERIAL PANEL INSTALLATION

- A. General: Install metal composite material panels according to manufacturer's written instructions in orientation, sizes, and locations indicated on Drawings. Install panels perpendicular to supports unless otherwise indicated. Anchor metal composite material panels and other components of the Work securely in place, with provisions for thermal and structural movement.
1. Install panels with concealed fasteners. Concealed self-tapping screws or nut and bolt are acceptable. Installation shall include no exposed wet sealant or tape except where noted on Drawings.
 2. All panels shall be removable from the exterior side without need for panel cutting or removal of curtainwall mullions or louvers.
 3. Shim or otherwise plumb substrates receiving metal composite material panels.
 4. Flash and seal metal composite material panels at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until air- or water-resistive barriers and flashings that will be concealed by metal composite material panels are installed.
 5. Install screw fasteners in predrilled holes.
 6. Locate and space fastenings in uniform vertical and horizontal alignment.
 7. Install flashing and trim as metal composite material panel work proceeds.
 8. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
 9. Align bottoms of metal composite material panels and fasten with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws.
 10. Provide weathertight escutcheons for pipe- and conduit-penetrating panels.
- B. Fasteners:
1. Aluminum Panels: Use aluminum or stainless-steel fasteners for surfaces exposed to the exterior; use aluminum or galvanized-steel fasteners for surfaces exposed to the interior.
 2. Copper Panels: Use copper, stainless-steel or hardware-bronze fasteners.
- C. Installation Tolerances: Shim and align panel units within installed tolerance of 1/4" in 20' 0" on level/plumb/slope and location/line as indicated, and within 1/16" offset at flush conditions of adjoining faces and alignment of matching profiles. Maximum 3/8" deviation of any material at any given theoretical point.
- D. Wall Panel Support Framing System: To be supplied and installed by metal wall Contractor. Final alignment to be the responsibility of this Contractor.

- E. Shop Drawings: Do not proceed with installation until approved shop drawings have been received.
- F. Inspection:
 - 1. Examine alignment of structural steel prior to installation.
 - 2. Inspect all material including spandrel panels.
- G. Installation and Erection: Install the metal wall panels, fasteners, trim and related items in accordance with approved shop/erection drawings and manufacturer's specifications. Panels shall be installed by the manufacturer and/or approved erectors who have been trained and have experience in the installation of the particular type of wall panel and/or curtain wall systems specified.
 - 1. The factory assembled wall panels shall be attached to the structural steel from the exterior of the building using self-tapping fasteners and clips spaced at each girt. Flashings and accessories shall be fastened 12" on center.
 - 2. Erection of the wall panels shall be started per manufacturer's recommendation and the panels held true to line. Horizontal lines are to be straight and level and vertical lines plumb.
- H. Joint Sealants: Install joint fillers gaskets and sealants where indicated and where required for weatherproof performance of panel systems.
 - 1. Refer to Section 079000 "Joint Sealants" of these specifications for product and installation requirements applicable to indicated joint sealants.
- I. Joint Sealants, Post-Installation: Refer to Section 079000 "Joint Sealants" of these specifications for post installation requirements on joint sealers.
- J. Metal Protection: Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action as recommended in writing by metal composite material panel manufacturer.
- K. Attachment Assembly, General: Install attachment assembly required to support metal composite material wall panels and to provide a complete weathertight wall system, including subgirts, perimeter extrusions, tracks, drainage channels, panel clips, and anchor channels.
 - 1. Include attachment to supports, panel-to-panel joinery, panel-to-dissimilar-material joinery, and panel-system joint seals.
- L. Installation: Attach metal composite material wall panels to supports at locations, spacings, and with fasteners recommended by manufacturer to achieve performance requirements specified.
 - 1. Wet Seal Systems: Seal horizontal and vertical joints between adjacent metal composite material wall panels with sealant backing and sealant. Install sealant backing and sealant according to requirements specified in Section 079200 "Joint Sealants."

2. composite material
 3. Rainscreen Systems: Do not apply sealants to joints unless otherwise indicated.
- M. Clip Installation: Attach panel clips to supports at locations, spacings, and with fasteners recommended by manufacturer. Attach routed-and-returned flanges of wall panels to panel clips with manufacturer's standard fasteners.
1. Seal horizontal and vertical joints between adjacent panels with sealant backing and sealant. Install sealant backing and sealant according to requirements specified in Section 079200 "Joint Sealants."
 2. Seal horizontal and vertical joints between adjacent metal composite material wall panels with manufacturer's standard gaskets.
- N. Subgirt-and-Spline Installation: Install support assembly at locations, spacings, and with fasteners recommended by manufacturer. Use manufacturer's standard subgirts and splines that provide support and complete secondary drainage assembly, draining to the exterior at horizontal joints. Attach metal composite material wall panels by interlocking perimeter extrusions attached to panels with subgirts and splines. Fully engage integral subgirt-and-spline gaskets and leave horizontal and vertical joints with open reveal. Terminate edge of panels flush with perimeter extrusions.
1. Install wall panels to allow individual panels to "free float" and be installed and removed without disturbing adjacent panels.
 2. Do not apply sealants to joints unless otherwise indicated.
- O. Track-Support Installation: Install support assembly at locations, spacings, and with fasteners recommended by manufacturer. Use manufacturer's standard horizontal tracks and vertical **[tracks] [drain channels]** that provide support and secondary drainage assembly, draining to the exterior at horizontal joints through drain tube. Attach metal composite material wall panels to tracks by interlocking panel edges with manufacturer's standard "T" clips.
1. Attach routed-and-returned flanges of wall panels to perimeter extrusions with manufacturer's standard fasteners.
 2. Attach flush wall panels to perimeter extrusions by engaging panel edges and by attaching with manufacturer's standard structural silicone adhesive.
 3. Install wall panels to allow individual panels to "free float" and be installed and removed without disturbing adjacent panels.
 4. Do not apply sealants to joints unless otherwise indicated.
- P. Rainscreen-Principle Installation: Install using manufacturer's standard assembly with vertical channel that provides support and secondary drainage assembly, draining at base of wall. Notch vertical channel to receive support pins. Install vertical channels supported by channel brackets or adjuster angles and at locations, spacings, and with fasteners recommended by manufacturer. Attach metal composite material wall panels by inserting horizontal support pins into notches in vertical channels and into flanges of panels. Leave horizontal and vertical joints with open reveal.
1. Install wall panels to allow individual panels to be installed and removed without disturbing adjacent panels.

2. Do not apply sealants to joints unless otherwise indicated.

Q. Accessory Installation: Install accessories with positive anchorage to building and weathertight mounting, and provide for thermal expansion. Coordinate installation with flashings and other components.

1. Install components required for a complete metal composite material panel assembly including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items. Provide types indicated by metal composite material panel manufacturer; or, if not indicated, provide types recommended in writing by metal composite material panel manufacturer.

R. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that are permanently watertight.

1. Install exposed flashing and trim that is without buckling and tool marks and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and to result in waterproof performance.

2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of **10 feet (3 m)** with no joints allowed within **24 inches (605 mm)** of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently waterproof, form expansion joints of intermeshing hooked flanges, not less than **1 inch (25 mm)** deep, filled with mastic sealant (concealed within joints).

3.4 ERECTION TOLERANCES

A. Installation Tolerances: Shim and align metal composite material wall panel units within installed tolerance of **1/4 inch in 20 feet (6 mm in 6 m)**, non-accumulative, on level, plumb, and location lines as indicated, and within **1/8-inch (3-mm)** offset of adjoining faces and of alignment of matching profiles.

3.5 FIELD QUALITY CONTROL

A. Testing Agency: **[Owner will engage] [Engage]** a qualified independent testing agency to perform field tests and inspections.

B. Water-Spray Test: After installation, test area of assembly **[shown on Drawings] [as directed by DEN Project Manager]** **<Insert area>** for water penetration according to AAMA 501.2.

C. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect completed metal composite material wall panel installation, including accessories.

- D. Metal composite material wall panels will be considered defective if they do not pass test and inspections.
- E. Additional tests and inspections, at Contractor's expense, are performed to determine compliance of replaced or additional work with specified requirements.
- F. Prepare test and inspection reports.

3.6 CLEANING AND PROTECTION

- A. Remove temporary protective coverings and strippable films, if any, as metal composite material panels are installed, unless otherwise indicated in manufacturer's written installation instructions. On completion of metal composite material panel installation, clean finished surfaces as recommended by metal composite material panel manufacturer. Maintain in a clean condition during construction.
- B. After metal composite material panel installation, clear weep holes and drainage channels of obstructions, dirt, and sealant.
- C. Damaged Material: Repair or replace all damaged material to the satisfaction of the DEN Project Manager if damage has been caused by the manufacturer or wall panel erector/contractor. The General Contractor shall be responsible for the protection of completed or installed walls from damage by other trades. Installed areas or portions of the work shall be inspected by the Owner for approval following the completion of such areas.
- D. Replace metal composite material panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 074213.23

SECTION 075323 - ETHYLENE-PROPYLENE-DIENE-MONOMER (EPDM) ROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Adhered EPDM membrane roofing system.
2. Mechanically fastened EPDM membrane roofing system.
3. Loosely laid and ballasted EPDM membrane roofing system.
4. Auxiliary roofing materials.
5. Substrate boards.
6. Vapor retarder.
7. Roof insulation.
8. Accessories.
9. Walkways.

- B. Section includes the installation of acoustical roof deck rib insulation strips furnished under Section 053100 "Steel Decking."

C. Related Sections:

1. Section 053100 "Steel Decking" for furnishing acoustical deck rib insulation.
2. **[Section 061000 "Rough Carpentry"] [Section 061053 "Miscellaneous Rough Carpentry"]** for wood nailers, curbs, and blocking[; **and for wood-based, structural-use roof deck panels**].
3. Section 070150.19 "Preparation for Re-Roofing" for recover board beneath new membrane roofing.
4. Section 072100 "Thermal Insulation" for insulation beneath the roof deck.
5. Section 076200 "Sheet Metal Flashing and Trim" for metal roof penetration flashings, flashings, and counterflashings.
6. Section 077129 "Manufactured Roof Expansion Joints" for proprietary manufactured roof expansion-joint assemblies.
7. Section 079200 "Joint Sealants" for joint sealants, joint fillers, and joint preparation.
8. Section 221423 "Storm Drainage Piping Specialties" for roof drains.

- D. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

- A. Roofing Terminology: See ASTM D 1079 and glossary of NRCA's "The NRCA Roofing and Waterproofing Manual" for definitions of terms related to roofing work in this Section.
- B. Thermal Resistivity: Where thermal resistivity properties of insulating materials are designated by R-values, they represent the rate of heat flow through a homogenous material exactly 1" thick, measured by test method included in referenced material standard or otherwise indicated. They are expressed by the temperature difference in degrees F between the two exposed faces required to cause one BTU to flow through one square foot per hour at mean temperatures indicated.
- C. Thermal Resistance: Where thermal resistance properties of insulating materials are designated by R values they represent the rate of heat flow through a material of thickness indicated, measured by test method included in referenced material standard or otherwise indicated. They are expressed by the temperature difference in degrees F between the two exposed faces required to cause one BTU to flow through one square foot per hour at mean temperatures indicated.
- D. Combustibility Characteristics: ASTM E 136.
- E. Maximum Allowable Asbestos Content of Inorganic Insulations: Provide insulations which contain less than 0.25 percent by weight of asbestos of any type or mixture of types occurring naturally as impurities, as determined by polarized light microscopy test per Appendix A of 40 CFR 763.

1.4 PERFORMANCE REQUIREMENTS

- A. General Performance: Installed membrane roofing and base flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Membrane roofing and base flashings shall remain watertight.
- B. Material Compatibility: Provide roofing materials that are compatible with one another under conditions of service and application required, as demonstrated by membrane roofing manufacturer based on testing and field experience.
- C. Roofing System Design: Provide membrane roofing system that is identical to systems that have been successfully tested by a qualified testing and inspecting agency to resist uplift pressure calculated according to ASCE/SEI 7.
 - 1. Corner Uplift Pressure: <Insert lbf/sq. ft. (kPa/sq. m)>.
 - 2. Perimeter Uplift Pressure: <Insert lbf/sq. ft. (kPa/sq. m)>.
 - 3. Field-of-Roof Uplift Pressure: <Insert lbf/sq. ft. (kPa/sq. m)>.
- D. FM Approvals Listing: Provide membrane roofing, base flashings, and component materials that comply with requirements in FM Approvals 4450 and FM Approvals 4470 as part of a membrane roofing system, and that are listed in FM Approvals'

"RoofNav" for Class 1 or noncombustible construction, as applicable. Identify materials with FM Approvals' markings.

1. Fire/Windstorm Classification: [**Class 1A-90**] [**Class 1A-105**] [**Class 1A-120**] <Insert class>.
2. Hail Resistance: [**MH**] [**SH**].

- E. Solar Reflectance Index: Not less than [**78**] [**29**] when calculated according to ASTM E 1980 based on testing identical products by a qualified testing agency.
- F. Energy Performance: Provide roofing system that is listed on the DOE's ENERGY STAR "Roof Products Qualified Product List" for [**low**] [**steep**]-slope roof products.
- G. Energy Performance: Provide roofing system with initial solar reflectance not less than [**0.70**] <Insert value> and emissivity not less than [**0.75**] <Insert value> when tested according to CRRC-1.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
1. Include data substantiating that materials comply with requirements.
 2. Submit product data, specifications, installation instructions, and general recommendations from manufacturers of flexible sheet roofing system materials, for types of roofing required.
- B. LEED Submittals:
1. Product Test Reports for Credit SS 7.2: For roof materials, documentation indicating that roof materials comply with Solar Reflectance Index requirement.
 2. Product Data for Credit IEQ 4.1: For adhesives and sealants used inside the weatherproofing system, documentation including printed statement of VOC content.
 3. Laboratory Test Reports for Credit IEQ 4: For adhesives and sealants used inside the weatherproofing system, documentation indicating that they comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: For roofing system. Include plans, elevations, sections, details, and attachments to other work.
1. Base flashings and membrane terminations.
 2. Tapered insulation, including slopes.
 3. Roof plan showing orientation of steel roof deck and orientation of membrane roofing and fastening spacings and patterns for mechanically fastened membrane roofing.
 4. Insulation fastening patterns for corner, perimeter, and field-of-roof locations.

5. Sheet layout, seam locations, colors (as applicable), details, and special conditions.

D. Samples for Verification: For the following products, in manufacturer's standard sizes:

1. Submit 12" square samples of sheet roofing, of color specified, including T-shaped side and end lap seam.
2. Submit 12" square samples of roof insulation.
3. **10 lb (4.5 kg)** of aggregate ballast in gradation[**and color**] indicated.
4. Roof paver[, **full sized,**] in each color and texture required.
5. Walkway pads or rolls.
6. Termination bars.
7. Battens.
8. Six insulation fasteners of each type, length, and finish.
9. Six roof cover fasteners of each type, length, and finish.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified Installer and manufacturer.

B. Installer to submit certificate that he has not less than five (5) years of successful experience installing roof systems similar to those required by this project.

C. Manufacturer Certificate: Signed by roofing manufacturer certifying that membrane roofing system complies with requirements specified in "Performance Requirements" Article.

1. Submit evidence of complying with performance requirements.
2. Manufacturer to submit certificate that he has not less than ten (10) years experience in manufacturing of the types of products specified.
3. Manufacturer shall submit evidence describing in detail, to what extent is the insulation product to be supplied for this project an ozone depleting product, as relates to its manufacturing process, or other.

D. Product Test Reports: Based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency, for components of membrane roofing system.

E. Research/Evaluation Reports: For components of membrane roofing system, from [**the ICC-ES**] <Insert applicable model code organization>.

F. Field quality-control reports.

G. Warranties: Sample of special warranties.

1.7 CLOSEOUT SUBMITTALS

A. Maintenance Data: For membrane roofing system to include in maintenance manuals.

- B. Provide minimum 2% extra roof pavers. Store in area directed by DEN Project Manager.

1.8 QUALITY ASSURANCE

- A. **Manufacturer Qualifications:** A qualified manufacturer that is **[UL listed] [FM Approvals approved]** for membrane roofing system identical to that used for this Project.
 - 1. Obtain primary flexible sheet roofing from a single manufacturer. Provide secondary materials as recommended and approved in writing by manufacturer of primary materials. Manufacturer shall not have less than ten (10) years experience in manufacturing of the types of products specified.
- B. **Installer Qualifications:** A qualified firm that is approved, authorized, or licensed by membrane roofing system manufacturer to install manufacturer's product and that is eligible to receive manufacturer's special warranty.
 - 1. A firm with not less than five (5) years of successful experience installing of roofing systems similar to those required for this project and which is acceptable to or licensed by manufacturer of primary roofing materials.
 - 2. Work associated with flexible sheet roofing, including (but not limited to) insulation, flashing and counterflashing, expansion joints, and flexible sheet joint sealers, is to be performed by Installer of flexible sheet roofing.
- C. **Source Limitations:** Obtain components including **[roof insulation] [fasteners] <Insert products>** for membrane roofing system **[from same manufacturer as membrane roofing] [or] [approved by membrane roofing manufacturer]**.
- D. **Exterior Fire-Test Exposure:** ASTM E 108, **[Class A] [Class B] [Class C]**; for application and roof slopes indicated, as determined by testing identical membrane roofing materials by a qualified testing agency. Materials shall be identified with appropriate markings of applicable testing agency.
- E. **Fire-Resistance Ratings:** Where indicated, provide fire-resistance-rated roof assemblies identical to those of assemblies tested for fire resistance per ASTM E 119 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. **UL Listing:** Provide labeled materials that have been tested and listed by UL in "Building Materials Directory" for application indicated, with "Class A" rated materials/system for roof slopes shown.
- F. **Flood Test:** Conduct and pass two inch (2") minimum depth flood testing at roof high point for 24 hours on all horizontal installations. Conduct flood test after roof drains are installed and after all construction activities are completed that require access to roof or penetration of roof systems.
- G. **Insurance Certification:** Assist Owner in preparation and submittal of roof installation

acceptance certification necessary in connection with fire and extended coverage insurance on roofing and associated work.

- H. Preliminary Roofing Conference: Before starting roof deck construction, conduct conference at **[Project site] [location and time as determined by DEN Project Manager] <Insert location>**.
1. Meet with DEN Project Manager, Owner's insurer if applicable, testing and inspecting agency representative, roofing Installer, roofing system manufacturer's representative, deck Installer, and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.
 2. Review methods and procedures related to roofing installation, including manufacturer's written instructions.
 3. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 4. Review requirements for deck substrate conditions and finishes, including flatness and fastening.
 5. Review structural loading limitations of roof deck during and after roofing.
 6. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that will affect roofing system.
 7. Review governing regulations and requirements for insurance and certificates if applicable.
 8. Review temporary protection requirements for roofing system during and after installation.
 9. Review roof observation and repair procedures after roofing installation.
 10. Record discussions and agreements and furnish copy to each participant. Provide at least 72 hours advance notice to participants prior to convening preliminary roofing conference.
- I. Preinstallation Roofing Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager] <Insert location>**.
1. Meet with DEN Project Manager, Owner's insurer if applicable, testing and inspecting agency representative, roofing Installer, roofing system manufacturer's representative, deck Installer, and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.
 2. Review methods and procedures related to roofing installation, including manufacturer's written instructions.
 3. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 4. Examine deck substrate conditions and finishes for compliance with requirements, including flatness and fastening.
 5. Review structural loading limitations of roof deck during and after roofing.
 6. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that will affect roofing system.

7. Review governing regulations and requirements for insurance and certificates if applicable.
8. Review temporary protection requirements for roofing system during and after installation.
9. Review roof observation and repair procedures after roofing installation.
10. Record discussions and agreements and furnish copy to each participant. Provide at least 72 hours advance notice to participants prior to convening preinstallation roofing conference.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.
- B. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer. Protect stored liquid material from direct sunlight.
 1. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.
- C. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.
- D. Handle and store roofing materials and place equipment in a manner to avoid permanent deflection of deck.

1.10 PROJECT CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed according to manufacturer's written instructions and warranty requirements.

1.11 WARRANTY

- A. Special Project Warranty: Manufacturer's standard or customized form, without monetary limitation, signed by Manufacturer of primary roofing materials and his authorized Installer, in which manufacturer and installer agree to repair or replace components of membrane roofing system that fail in materials or workmanship within specified warranty period.
 1. Special Project Warranty includes membrane roofing, base flashings, **[roof insulation,] [fasteners,] [cover boards,] [substrate board,] [roofing**

- accessories,] [roof pavers,]** and other components of membrane roofing system. Warranty shall include all components specified by this section.
2. Warranty Period: Minimum **[10] [15] [20] <Insert number>** years from date of Substantial Completion.
 3. Provide system tested and approved for FM I-90, secured per FM Data Sheets I-28 and I-29S.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Performance: Provide roofing materials recognized to be of generic type indicated and tested to show compliance with indicated performances, or provide other similar materials certified in writing by manufacturer to be equal or better than specified in every significant respect, and acceptable to DEN Project Manager.
- B. Compatibility: Provide products that are recommended by manufacturers to be fully compatible with indicated substrates, or provide separation materials as required to eliminate contact between incompatible materials.
- C. Slip Sheet: Between insulation and EPDM membrane provide manufacturers standard fiberglass slip sheet, meeting requirements for type of roof specified.

2.2 EPDM MEMBRANE ROOFING

- A. EPDM: ASTM D 4637, **[Type I, non-reinforced,] [Type II, scrim or fabric internally reinforced,]** uniform, flexible EPDM sheet.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Carlisle SynTec Incorporated.
 - b. ERSystems.
 - c. Firestone Building Products.
 - d. GAF Materials Corporation.
 - e. GenFlex Roofing Systems.
 - f. International Diamond Systems.
 - g. Johns Manville.
 - h. Mule-Hide Products Co., Inc.
 - i. Protective Coatings, Inc.
 - j. Roofing Products International, Inc.
 - k. StaFast Building Products.
 - l. Versico Incorporated.
 - m. **<Insert manufacturer's name>**.
 - n. or approved equal.
 2. Thickness: **[45 mils (1.1 mm)] [60 mils (1.5 mm)] [75 mils (1.9 mm)] [90 mils (2.2**

- mm)] <Insert thickness>, nominal.
3. Exposed Face Color: [**Black**] [**White on black**] <Insert color>.
- B. Fabric-Backed EPDM: ASTM D 4637, Type III, non-reinforced, uniform, flexible EPDM sheet, laminated to a nonwoven polyester fabric backing except at selvages.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Carlisle SynTec Incorporated.
 - b. Versico Incorporated.
 - c. <Insert manufacturer's name>.
 - d. or approved equal.
 2. Composite Thickness: [**90 mils** (2.3 mm)] [**100 mils** (2.5 mm)] [**105 mils** (2.7 mm)] [**115 mils** (2.9 mm)], nominal.
 3. Exposed Face Color: [**White on black**] <Insert color>.

2.3 AUXILIARY MEMBRANE ROOFING MATERIALS

- A. General: Auxiliary membrane roofing materials recommended by roofing system manufacturer for intended use and compatible with membrane roofing.
1. Liquid-type auxiliary materials shall comply with VOC limits of authorities having jurisdiction.
 2. Adhesives and sealants that are not on the exterior side of weather barrier shall comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
 - a. Plastic Foam Adhesives: 50 g/L.
 - b. Gypsum Board and Panel Adhesives: 50 g/L.
 - c. Multipurpose Construction Adhesives: 70 g/L.
 - d. Fiberglass Adhesives: 80 g/L.
 - e. Single-Ply Roof Membrane Adhesives: 250 g/L.
 - f. Single-Ply Roof Membrane Sealants: 450 g/L.
 - g. Nonmembrane Roof Sealants: 300 g/L.
 - h. Sealant Primers for Nonporous Substrates: 250 g/L.
 - i. Sealant Primers for Porous Substrates: 775 g/L.
 - j. Other Adhesives and Sealants: 250 g/L.
 3. Adhesives and sealants that are not on the exterior side of weather barrier shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- B. Sheet Flashing: **60-mil-** (1.5-mm-) thick EPDM, partially cured or cured, according to application.

- C. Protection Sheet: Epichlorohydrin or neoprene non-reinforced flexible sheet, **55- to 60-mil-** (1.4- to 1.5-mm-) thick, recommended by EPDM manufacturer for resistance to hydrocarbons, non-aromatic solvents, grease, and oil.
- D. Bonding Adhesive: Manufacturer's standard[, **water based**].
- E. Modified Asphaltic Fabric-Backed Membrane Adhesive: Roofing system manufacturer's standard modified asphalt, asbestos-free, cold-applied adhesive formulated for compatibility and use with fabric-backed membrane roofing.
- F. Water-Based, Fabric-Backed Membrane Adhesive: Roofing system manufacturer's standard water-based, cold-applied adhesive formulated for compatibility and use with fabric-backed membrane roofing.
- G. Low-Rise, Urethane, Fabric-Backed Membrane Adhesive: Roof system manufacturer's standard spray-applied, low-rise, two-component urethane adhesive formulated for compatibility and use with fabric-backed membrane roofing.
- H. Seaming Material: [**Single-component, butyl splicing adhesive and splice cleaner**] [**Manufacturer's standard, synthetic-rubber polymer primer and 3-inch-** (75-mm-) **wide minimum, butyl splice tape with release film**].
- I. Lap Sealant: Manufacturer's standard, single-component sealant[, **colored to match membrane roofing**].
- J. Water Cutoff Mastic: Manufacturer's standard butyl mastic sealant.
- K. Metal Termination Bars: Manufacturer's standard, predrilled stainless-steel or aluminum bars, approximately **1 by 1/8 inch** (25 by 3 mm) thick; with anchors.
- L. Metal Battens: Manufacturer's standard, aluminum-zinc-alloy-coated or zinc-coated steel sheet, approximately **1 inch wide by 0.05 inch thick** (25 mm wide by 1.3 mm thick), prepunched.
- M. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening membrane to substrate, and acceptable to roofing system manufacturer.
- N. Miscellaneous Accessories: Provide pourable sealers, preformed cone and vent sheet flashings, preformed inside and outside corner sheet flashings, reinforced EPDM securement strips, T-joint covers, in-seam sealants, termination reglets, cover strips, and other accessories.
- O. Liquid coating, specifically formulated for coating EPDM membrane roofing, as follows:
 - 1. Type: [**Acrylic emulsion**] [**Hypalon**].
 - 2. Color: [**White**] [**Gray**] [**Tan**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.

2.4 SUBSTRATE BOARDS

- A. Substrate Board: ASTM C 1396/C 1396M, Type X gypsum board, **5/8 inch** (16 mm) thick.
- B. Substrate Board: ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum substrate, [**1/4 inch** (6 mm)] [**1/2 inch** (13 mm)] [**Type X, 5/8 inch** (16 mm)] thick.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Georgia-Pacific Corporation; Dens Deck.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
- C. Substrate Board: ASTM C 1278/C 1278M, cellulosic-fiber-reinforced, water-resistant gypsum substrate, [**1/4 inch** (6 mm)] [**3/8 inch** (10 mm)] [**1/2 inch** (13 mm)] [**5/8 inch** (16 mm)] thick.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. USG Corporation; Secureck.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
- D. Substrate Board: ASTM C 728, perlite board, [**3/4 inch** (19 mm)] [**1 inch** (25 mm)] thick, seal coated.
- E. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening substrate panel to roof deck.

2.5 VAPOR RETARDER

- A. Polyethylene Film: ASTM D 4397, **6 mils** (0.15 mm) thick, minimum, with maximum permeance rating of **0.13 perm** (7.5 ng/Pa x s x sq. m).
1. Tape: Pressure-sensitive tape of type recommended by vapor-retarder manufacturer for sealing joints and penetrations in vapor retarder.
 2. Adhesive: Manufacturer's standard lap adhesive, FM Approvals approved for vapor-retarder application.

2.6 ROOF INSULATION

- A. General: Preformed roof insulation boards manufactured[**or approved**] by EPDM membrane roofing manufacturer, selected from manufacturer's standard sizes suitable for application, of thicknesses indicated[**and that produce FM Approvals-approved roof insulation**].

- B. Extruded-Polystyrene Board Insulation: ASTM C 578, [**Type IV, 1.6-lb/cu. ft.** (26-kg/cu. m)] [**Type X, 1.3-lb/cu. ft.** (21-kg/cu. m)] minimum density, square edged.
- C. Molded-Polystyrene Board Insulation: ASTM C 578, [**Type II, 1.35-lb/cu. ft.** (22-kg/cu. m)] [**Type VIII, 1.15-lb/cu. ft.** (18-kg/cu. m)] [**Type IX, 1.8-lb/cu. ft.** (29-kg/cu. m)] minimum density.
- D. Composite Molded-Polystyrene Board Insulation: ASTM C 578, [**Type II, 1.35-lb/cu. ft.** (22-kg/cu. m)] [**Type VIII, 1.15-lb/cu. ft.** (18-kg/cu. m)] [**Type IX, 1.8-lb/cu. ft.** (29-kg/cu. m)] minimum density, with factory-applied facings, as follows:
1. Facer: ASTM C 208, Type II, Grade 2, cellulosic-fiber insulation board, asphalt coated, **1/2 inch** (13 mm) thick.
 2. Facer: DOC PS 2, Exposure 1, OSB, **7/16 inch** (11 mm) thick.
- E. Polyisocyanurate Board Insulation: ASTM C 1289, [**Type II, Class 1, Grade 2**] [**Type II, Class I, Grade 3**], felt or glass-fiber mat facer on both major surfaces.
- F. Composite Polyisocyanurate Board Insulation: ASTM C 1289, Type II, Class 1, Grade 2 with factory-applied facing board on one major surface, as indicated below by type, and felt or glass-fiber mat facer on the other.
1. Type IV, cellulosic-fiber-insulation-board facer, Grade 2, **1/2 inch** (13 mm) thick.
 2. Type V, OSB facer, **7/16 inch** (11 mm) thick.
 3. Type VII, glass mat faced gypsum board facer, **1/4 inch** (6 mm) thick.
- G. Perlite Board Insulation: ASTM C 728, rigid, mineral-aggregate thermal insulation board composed of expanded perlite, cellulosic fibers, binders, and waterproofing agents with top surface seal coated.
- H. Cellulosic-Fiber Board Insulation: ASTM C 208, Type II, Grade 2, fibrous-felted, rigid insulation boards of wood fiber or other cellulosic-fiber and water-resistant binders, asphalt impregnated, chemically treated for deterioration.
- I. Cellular-Glass Board Insulation: ASTM C 552, Type IV, rigid, cellular-glass thermal board insulation faced with manufacturer's standard kraft-paper sheets.
- J. Tapered Insulation: Provide factory-tapered insulation boards fabricated to slope of [**1/4 inch per 12 inches (1:48)**] <Insert slope> unless otherwise indicated.
- K. Provide preformed saddles, crickets, tapered edge strips, and other insulation shapes where indicated for sloping to drain. Fabricate to slopes indicated.

2.7 INSULATION ACCESSORIES

- A. General: Furnish roof insulation accessories recommended by insulation manufacturer for intended use and compatibility with membrane roofing.

- B. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening roof insulation[**and cover boards**] to substrate, and acceptable to roofing system manufacturer.
- C. Modified Asphaltic Insulation Adhesive: Insulation manufacturer's recommended modified asphalt, asbestos-free, cold-applied adhesive formulated to attach roof insulation to substrate or to another insulation layer.
- D. Bead-Applied Insulation Adhesive: Insulation manufacturer's recommended bead-applied, low-rise, one- or multicomponent urethane adhesive formulated to attach roof insulation to substrate or to another insulation layer.
- E. Full-Spread Applied Insulation Adhesive: Insulation manufacturer's recommended spray-applied, low-rise, two-component urethane adhesive formulated to attach roof insulation to substrate or to another insulation layer.
- F. Cover Board: ASTM C 208, Type II, Grade 2, cellulosic-fiber insulation board, **1/2 inch** (13 mm) thick.
- G. Cover Board: DOC PS 2, Exposure 1, OSB, **7/16 inch** (11 mm) thick.
- H. Cover Board: ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum substrate, [**1/4 inch** (6 mm)] [**1/2 inch** (13 mm)] [**5/8 inch** (16 mm)] thick[, **factory primed**].
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Georgia-Pacific Corporation; [**Dens Deck**] [**Dens Deck Prime**] [**Dens Deck DuraGuard**].
 - b. <**Insert manufacturer's name; product name or designation**>.
 - c. or approved equal.
- I. Cover Board: ASTM C 1278/C 1278M, cellulosic-fiber reinforced, water-resistant gypsum substrate, [**1/4 inch** (6 mm)] [**3/8 inch** (10 mm)] [**1/2 inch** (13 mm)] [**5/8 inch** (16 mm)] thick.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. USG Corporation; Securock.
 - b. <**Insert manufacturer's name; product name or designation**>.
 - c. or approved equal.
- J. Protection Mat: Woven or nonwoven polypropylene, polyolefin, or polyester fabric, water permeable and resistant to UV degradation, type and weight as recommended by roofing system manufacturer for application.

2.8 ASPHALT MATERIALS

- A. Roofing Asphalt: [**ASTM D 312, Type III or Type IV**] [**ASTM D 6152, SEBS modified**].

- B. Asphalt Primer: ASTM D 41.

2.9 AGGREGATE BALLAST

- A. Aggregate Ballast: Provide aggregate ballast that will withstand weather exposure without significant deterioration and will not contribute to membrane degradation, of the following type and size:

1. Aggregate Type: **[Smooth, washed, riverbed gravel or other acceptable smooth-faced stone] [Crushed gravel or crushed stone]**.
2. Size: ASTM D 448, Size 4, ranging in size from **3/4 to 1-1/2 inches** (19 to 38 mm).
3. Size: ASTM D 448, Size 2, ranging in size from **1-1/2 to 2-1/2 inches** (38 to 63 mm).
4. Size: ASTM D 448, Size 3, ranging in size from **1 to 2 inches** (25 to 50 mm).

2.10 ROOF PAVERS

- A. Lightweight Roof Pavers: Interlocking, lightweight concrete units, specially factory cast for use as roof ballast; grooved back, with four-way drainage capability; beveled, doweled, or otherwise profiled; and as follows:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Hanover Architectural Products.
 - b. Rapid Building Systems.
 - c. Roofblok Limited.
 - d. Westile Roofing Products.
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.
2. Size: **<Insert actual size(s) of pavers>**.
3. Weight: **<Insert weight or weight range>**.
4. Compressive Strength: **[2500 psi (17 MPa)] [5000 psi (34 MPa)] <Insert strength>**, minimum.
5. Colors and Textures: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range]**.

- B. Rubber Roof Pavers: Interlocking, lightweight rubber units, **24 by 24 by 2-1/4 inches** (600 by 600 by 57 mm), **6 lb/sq. ft.** (30 kg/sq. m) specially manufactured for use as roof ballast; with grooved back for four-way drainage, beveled and doweled; and as follows:

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Carlisle SynTec Incorporated; Interlocking Rubber Paver.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.

2. Perimeter Securement Strip: Manufacturer's standard [**coated steel sheet channel**] [**aluminum sheet channel**] [**mill-finish aluminum sheet hold down**] [**coated aluminum sheet hold down, color as selected by DEN Project Manager,**] and fasteners.
 3. Color: [**Black**] [**Gray**] [**Terra cotta**] <Insert color>.
- C. Heavyweight Roof Pavers: Heavyweight, hydraulically pressed, concrete units, [**square edged**] [**with top edges beveled 3/16 inch (5 mm)**], factory cast for use as roof pavers; absorption not greater than 5 percent, ASTM C 140; no breakage and maximum 1 percent mass loss when tested for freeze-thaw resistance, ASTM C 67; and as follows:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Hanover Architectural Products.
 - b. Rapid Building Systems.
 - c. Roofblok Limited.
 - d. Sunny Brook Pressed Concrete.
 - e. Wausau Tile, Inc.; Terra-Paving Division.
 - f. Westile Roofing Products.
 - g. <Insert manufacturer's name>.
 - h. or approved equal.
 2. Size: [**24 by 24 inches (600 by 600 mm)**] <Insert dimensions>. Manufacture pavers to dimensional tolerances of plus or minus **1/16 inch (1.6 mm)** in length, height, and thickness.
 3. Weight: [**18 lb/sq. ft. (90 kg/sq. m)**] [**22 lb/sq. ft. (110 kg/sq. m)**] <Insert weight>.
 4. Compressive Strength: [**7500 psi (52 MPa)**] [**6500 psi (45 MPa)**] <Insert strength>, minimum.
 5. Colors and Textures: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**].

2.11 WALKWAYS

- A. Flexible Walkways: Factory-formed, nonporous, heavy-duty, solid-rubber, slip-resisting, surface-textured walkway [**pads**] [**or**] [**rolls**], approximately **3/16 inch (5 mm)** thick, and acceptable to membrane roofing system manufacturer.
- B. Walkway Roof Pavers: Heavyweight, hydraulically pressed, concrete units, [**square edged**] [**with top edges beveled 3/16 inch (5 mm)**], factory cast for use as roof pavers; absorption not greater than 5 percent, ASTM C 140; no breakage and maximum 1 percent mass loss when tested for freeze-thaw resistance, ASTM C 67; and as follows:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Hanover Architectural Products.

- b. Rapid Building Systems.
 - c. Roofblok Limited.
 - d. Sunny Brook Pressed Concrete.
 - e. Wausau Tile, Inc.; Terra-Paving Division.
 - f. Westile Roofing Products.
 - g. **<Insert manufacturer's name>**.
 - h. or approved equal.
2. Size: **[24 by 24 inches (600 by 600 mm)] <Insert dimensions>**. Manufacture pavers to dimensional tolerances of plus or minus **1/16 inch (1.6 mm)** in length, height, and thickness.
 3. Weight: **[18 lb/sq. ft. (90 kg/sq. m)] [22 lb/sq. ft. (110 kg/sq. m)] <Insert weight>**.
 4. Compressive Strength: **[7500 psi (52 MPa)] [6500 psi (45 MPa)] <Insert strength>**, minimum.
 5. Colors and Textures: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range]**.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with the following requirements and other conditions affecting performance of roofing system:
 1. Verify that roof openings and penetrations are in place and curbs are set and braced and that roof drain bodies are securely clamped in place.
 2. Verify that wood blocking, curbs, and nailers are securely anchored to roof deck at penetrations and terminations and that nailers match thicknesses of insulation.
 3. Verify that surface plane flatness and fastening of steel roof deck complies with requirements in Section 053100 "Steel Decking."
 4. Verify that minimum concrete drying period recommended by roofing system manufacturer has passed.
 5. Verify that concrete substrate is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D 4263.
 6. Verify that concrete curing compounds that will impair adhesion of roofing components to roof deck have been removed.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing installation according to roofing system manufacturer's written instructions. Remove sharp projections.

- B. Comply with manufacturers' instructions for preparation of substrate to receive EPDM system.
- C. Install cant strips, flashings, and accessory items as shown, and as recommended by manufacturer even if products are not shown on Drawings.
- D. Prime substrate where recommended by manufacturer of materials being installed.
- E. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.
- F. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing system at the end of the workday or when rain is forecast. Remove and discard temporary seals before beginning work on adjoining roofing.
- G. Install acoustical roof deck rib insulation strips, specified in Section 053100 "Steel Decking," according to acoustical roof deck manufacturer's written instructions, immediately before installation of overlying construction and to remain dry.

3.3 SUBSTRATE BOARD

- A. Install substrate board with long joints in continuous straight lines, perpendicular to roof slopes with end joints staggered between rows. Tightly butt substrate boards together.
 - 1. Fasten substrate board to top flanges of steel deck according to recommendations in FM Approvals' "RoofNav" and FM Global Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification.
 - 2. Fasten substrate board to top flanges of steel deck to resist uplift pressure at corners, perimeter, and field of roof according to membrane roofing system manufacturers' written instructions.

3.4 VAPOR-RETARDER INSTALLATION

- A. Polyethylene Film: Loosely lay polyethylene-film vapor retarder in a single layer over area to receive vapor retarder, side and end lapping each sheet a minimum of **2 inches** (50 mm) and **6 inches** (150 mm), respectively.
 - 1. Continuously seal side and end laps with **[tape] [adhesive]**.
- B. Completely seal vapor retarder at terminations, obstructions, and penetrations to prevent air movement into membrane roofing system.

3.5 INSULATION INSTALLATION

- A. Coordinate installing membrane roofing system components so insulation is not exposed to precipitation or left exposed at the end of the workday.
- B. Comply with membrane roofing system and insulation manufacturer's written instructions for installing roof insulation.
- C. Install tapered insulation under area of roofing to conform to slopes indicated.
- D. Install insulation under area of roofing to achieve required thickness. Where overall insulation thickness is **2.7 inches** (68 mm) or greater, install two or more layers with joints of each succeeding layer staggered from joints of previous layer a minimum of **6 inches** (150 mm) in each direction.
 - 1. Where installing composite and noncomposite insulation in two or more layers, install noncomposite board insulation for bottom layer and intermediate layers, if applicable, and install composite board insulation for top layer.
- E. Trim surface of insulation where necessary at roof drains so completed surface is flush and does not restrict flow of water.
- F. Install insulation with long joints of insulation in a continuous straight line with end joints staggered between rows, abutting edges and ends between boards. Fill gaps exceeding **1/4 inch** (6 mm) with insulation.
 - 1. Cut and fit insulation within **1/4 inch** (6 mm) of nailers, projections, and penetrations.
- G. Adhered Insulation: Install each layer of insulation and adhere to substrate as follows:
 - 1. Prime surface of concrete deck with asphalt primer at rate of **3/4 gal./100 sq. ft.** (0.3 L/sq. m) and allow primer to dry.
 - 2. Set each layer of insulation in a solid mopping of hot roofing asphalt, applied within plus or minus **25 deg F** (14 deg C) of equiviscous temperature.
 - 3. Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - 4. Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
- H. Mechanically Fastened Insulation: Install each layer of insulation and secure to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.
 - 1. Fasten insulation according to requirements in FM Approvals' "RoofNav" for specified Windstorm Resistance Classification.
 - 2. Fasten insulation to resist uplift pressure at corners, perimeter, and field of roof.
- I. Mechanically Fastened and Adhered Insulation: Install first layer of insulation to deck using mechanical fasteners specifically designed and sized for fastening specified

board-type roof insulation to deck type.

1. Fasten first layer of insulation according to requirements in FM Approvals' "RoofNav" for specified Windstorm Resistance Classification.
2. Fasten first layer of insulation to resist uplift pressure at corners, perimeter, and field of roof.
3. Set each subsequent layer of insulation in a solid mopping of hot roofing asphalt, applied within plus or minus 25 deg F (14 deg C) of equiviscous temperature.
4. Set each subsequent layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
5. Set each subsequent layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.

J. Loosely Laid Insulation: Loosely lay insulation units over substrate.

K. Install cover boards over insulation with long joints in continuous straight lines with end joints staggered between rows. Offset joints of insulation below a minimum of 6 inches (150 mm) in each direction. Loosely butt cover boards together[**and fasten to roof deck**].

1. Fasten cover boards according to requirements in FM Approvals' "RoofNav" for specified Windstorm Resistance Classification.
2. Fasten cover boards to resist uplift pressure at corners, perimeter, and field of roof.

3.6 ADHERED MEMBRANE ROOFING INSTALLATION

- A. Adhere [**fabric-backed**] membrane roofing over area to receive roofing according to membrane roofing system manufacturer's written instructions. Unroll membrane roofing and allow to relax before installing.
- B. Start installation of membrane roofing in presence of membrane roofing system manufacturer's technical personnel.
- C. Accurately align membrane roofing and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.
- D. Bonding Adhesive: Apply to substrate and underside of membrane roofing at rate required by manufacturer and allow to partially dry before installing membrane roofing. Do not apply to splice area of membrane roofing.
- E. Hot Roofing Asphalt: Apply a solid mopping of hot roofing asphalt to substrate at temperature and rate required by manufacturer and install fabric-backed membrane roofing. Do not apply to splice area of membrane roofing.
- F. Fabric-Backed Membrane Adhesive: Apply to substrate at rate required by manufacturer and install fabric-backed membrane roofing.

- G. In addition to adhering, mechanically fasten membrane roofing securely at terminations, penetrations, and perimeters.
- H. Apply membrane roofing with side laps shingled with slope of roof deck where possible.
- I. Adhesive Seam Installation: Clean both faces of splice areas, apply splicing cement, and firmly roll side and end laps of overlapping membrane roofing according to manufacturer's written instructions to ensure a watertight seam installation. Apply lap sealant and seal exposed edges of membrane roofing terminations.
 - 1. Apply a continuous bead of in-seam sealant before closing splice if required by membrane roofing system manufacturer.
- J. Tape Seam Installation: Clean and prime both faces of splice areas, apply splice tape, and firmly roll side and end laps of overlapping membrane roofing according to manufacturer's written instructions to ensure a watertight seam installation. Apply lap sealant and seal exposed edges of membrane roofing terminations.
- K. Repair tears, voids, and lapped seams in roofing that does not comply with requirements.
- L. Spread sealant or mastic bed over deck drain flange at roof drains and securely seal membrane roofing in place with clamping ring.
- M. Install membrane roofing and auxiliary materials to tie in to existing membrane roofing to maintain weather-tightness of transition [**and to not void warranty for existing membrane roofing system**].
- N. Adhere protection sheet over membrane roofing at locations indicated.

3.7 MECHANICALLY FASTENED MEMBRANE ROOFING INSTALLATION

- A. Mechanically fasten membrane roofing over area to receive roofing according to roofing system manufacturer's written instructions. Unroll membrane roofing and allow to relax before installing.
 - 1. For in-splice attachment, install membrane roofing with long dimension perpendicular to steel roof deck flutes.
- B. Start installation of membrane roofing in presence of roofing system manufacturer's technical personnel.
- C. Accurately align membrane roofing and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.
- D. Mechanically fasten or adhere membrane roofing securely at terminations, penetrations, and perimeter of roofing.

- E. Apply membrane roofing with side laps shingled with slope of roof deck where possible.
- F. Adhesive Seam Installation: Clean both faces of splice areas, apply splicing cement, and firmly roll side and end laps of overlapping membrane roofing according to manufacturer's written instructions to ensure a watertight seam installation. Apply lap sealant and seal exposed edges of membrane roofing terminations.
 - 1. Apply a continuous bead of in-seam sealant before closing splice if required by membrane roofing system manufacturer.
- G. Tape Seam Installation: Clean and prime both faces of splice areas, apply splice tape, and firmly roll side and end laps of overlapping membrane roofing according to manufacturer's written instructions to ensure a watertight seam installation. Apply lap sealant and seal exposed edges of membrane roofing terminations.
- H. Repair tears, voids, and lapped seams in roofing that does not comply with requirements.
- I. Spread sealant or mastic bed over deck drain flange at roof drains and securely seal membrane roofing in place with clamping ring.
- J. In-Splice Attachment: Secure one edge of membrane roofing using fastening plates or metal battens centered within membrane splice and mechanically fasten membrane roofing to roof deck. Field splice seam.
- K. Through-Membrane Attachment: Secure membrane roofing using fastening plates or metal battens and mechanically fasten membrane roofing to roof deck. Cover battens and fasteners with a continuous cover strip.
- L. Install membrane roofing and auxiliary materials to tie in to existing roofing to maintain weather-tightness of transition [**and to not void warranty for existing membrane roofing system**].
- M. Adhere protection sheet over membrane roofing at locations indicated.

3.8 LOOSELY LAID AND BALLASTED MEMBRANE ROOFING INSTALLATION

- A. Loosely lay membrane roofing over area to receive roofing according to roofing system manufacturer's written instructions. Unroll membrane roofing and allow to relax before installing.
 - 1. Comply with requirements in SPRI RP-4 for [**System 1**] [**System 2**] [**System 3**].
- B. Start installation of membrane roofing in presence of roofing system manufacturer's technical personnel.
- C. Accurately align membrane roofing, without stretching, and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.

- D. Mechanically fasten or adhere perimeter of membrane roofing according to requirements in SPRI RP-4.
- E. **[Mechanically fasten] [or] [adhere]** membrane roofing at corners, perimeters, and transitions according to requirements in SPRI RP-4.
 - 1. At corners and perimeters, omit aggregate ballast leaving membrane roofing exposed.
 - 2. At corners and perimeters, adhere a second layer of membrane roofing
- F. Apply membrane roofing with side laps shingled with slope of deck where possible.
- G. Adhesive Seam Installation: Clean both faces of splice areas, apply splicing cement, and firmly roll side and end laps of overlapping membrane roofing according to manufacturer's written instructions to ensure a watertight seam installation. Apply lap sealant and seal exposed edges of membrane roofing terminations.
 - 1. Apply a continuous bead of in-seam sealant before closing splice if required by membrane roofing system manufacturer.
- H. Tape Seam Installation: Clean and prime both faces of splice areas, apply splice tape, and firmly roll side and end laps of overlapping membrane roofing according to manufacturer's written instructions to ensure a watertight seam installation. Apply lap sealant and seal exposed edges of membrane roofing terminations.
- I. Leave seams uncovered until inspected by **[membrane roofing system manufacturer] [testing agency]**.
- J. Repair tears, voids, and lapped seams in roofing that does not comply with requirements.
- K. Spread sealant or mastic bed over deck drain flange at roof drains and securely seal membrane roofing in place with clamping ring.
- L. Install membrane roofing and auxiliary materials to tie in to existing roofing to maintain weather-tightness of transition **[and to not void warranty for existing membrane roofing system]**.
- M. Adhere protection sheet over membrane roofing at locations indicated.
- N. Install protection mat over membrane roofing, overlapping a minimum of **6 inches** (150 mm). Install an additional protection mat layer at projections, pipes, vents, and drains, overlapping a minimum of **12 inches** (300 mm).
- O. Aggregate Ballast: Apply uniformly over membrane roofing at the rate required by membrane roofing system manufacturer, but not less than the following, spreading with care to minimize possibility of damage to membrane roofing system. Lay ballast as membrane roofing is installed, leaving membrane roofing ballasted at the end of the workday.

1. Ballast Weight: Size 4 aggregate, **10 lb/sq. ft.** (50 kg/sq. m).
2. Ballast Weight: Size 2 aggregate, **13 lb/sq. ft.** (65 kg/sq. m), at corners and perimeter; Size 4 aggregate, **10 lb/sq. ft.** (50 kg/sq. m), elsewhere.
3. Ballast Weight: Size 2 aggregate, **13 lb/sq. ft.** (65 kg/sq. m).
4. Ballast Weight: Size 3 aggregate, **<Insert weight>**, at corners, **<Insert weight>** at perimeter, and **<Insert weight>**, elsewhere.

P. Roof-Paver Ballast: Install [**lightweight**] [**heavyweight**] roof-paver ballast according to manufacturer's written instructions.

Q. Roof-Paver Ballast: Install rubber roof-paver ballast according to manufacturer's written instructions, in locations indicated.

1. Install perimeter paver edge securement.

R. Roof-Paver and Aggregate Ballast: Install heavyweight roof pavers according to manufacturer's written instructions on roof corners and perimeter.

1. Install Size 4 aggregate ballast elsewhere on roofing at a minimum rate of **10 lb/sq. ft.** (50 kg/sq. m).
2. Install Size 2 aggregate ballast elsewhere on roofing at a minimum rate of **13 lb/sq. ft.** (65 kg/sq. m).

3.9 BASE FLASHING INSTALLATION

- A. Install sheet flashings and preformed flashing accessories and adhere to substrates according to membrane roofing system manufacturer's written instructions.
- B. Apply bonding adhesive to substrate and underside of sheet flashing at required rate and allow to partially dry. Do not apply to seam area of flashing.
- C. Flash penetrations and field-formed inside and outside corners with cured or uncured sheet flashing.
- D. Clean splice areas, apply splicing cement, and firmly roll side and end laps of overlapping sheets to ensure a watertight seam installation. Apply lap sealant and seal exposed edges of sheet flashing terminations.
- E. Terminate and seal top of sheet flashings[**and mechanically anchor to substrate through termination bars**].

3.10 COATING INSTALLATION

- A. Apply coatings to [**membrane roofing**] [**base flashings**] according to manufacturer's written recommendations, by spray, roller, or other suitable application method.

3.11 WALKWAY INSTALLATION

- A. Flexible Walkways: Install walkway products in locations indicated. Adhere walkway products to substrate with compatible adhesive according to roofing system manufacturer's written instructions.
- B. Roof-Paver Walkways: Install walkway roof pavers according to manufacturer's written instructions in locations indicated, to form walkways. Leave **3 inches** (75 mm) of space between adjacent roof pavers.

3.12 FIELD QUALITY CONTROL

- A. Testing Agency: [**Owner will engage**] [**Engage**] a qualified independent testing agency to perform inspections.
- B. Final Roof Inspection: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion.
- C. Repair or remove and replace components of membrane roofing system where inspections indicate that they do not comply with specified requirements.
- D. Additional inspections, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.13 PROTECTING AND CLEANING

- A. Protect membrane roofing system from damage and wear during remainder of construction period. When remaining construction will not affect or endanger roofing, inspect roofing for deterioration and damage, describing its nature and extent in a written report, with copies to DEN Project Manager.
- B. Correct deficiencies in or remove membrane roofing system that does not comply with requirements, repair substrates and repair or reinstall membrane roofing system to a condition free of damage and deterioration at time of Substantial Completion and according to warranty requirements.
- C. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

3.14 ROOFING INSTALLER'S WARRANTY

- A. WHEREAS **<Insert name>** of **<Insert address>**, herein called the "Roofing Installer," has performed roofing and associated work ("work") on the following project:
 - 1. Owner: **<Insert name of Owner.>**
 - 2. Address: **<Insert address.>**
 - 3. Building Name/Type: **<Insert information.>**

4. Address: **<Insert address.>**
 5. Area of Work: **<Insert information.>**
 6. Acceptance Date: **<Insert date.>**
 7. Warranty Period: **<Insert time.>**
 8. Expiration Date: **<Insert date.>**
- B. AND WHEREAS Roofing Installer has contracted (either directly with Owner or indirectly as a subcontractor) to warrant said work against leaks and faulty or defective materials and workmanship for designated Warranty Period,
- C. NOW THEREFORE Roofing Installer hereby warrants, subject to terms and conditions herein set forth, that during Warranty Period he will, at his own cost and expense, make or cause to be made such repairs to or replacements of said work as are necessary to correct faulty and defective work and as are necessary to maintain said work in a watertight condition.
- D. This Warranty is made subject to the following terms and conditions:
1. Specifically excluded from this Warranty are damages to work and other parts of the building, and to building contents, caused by:
 - a. Lightning;
 - b. Peak gust wind speed exceeding **<Insert wind speed>** mph (m/sec);
 - c. Fire;
 - d. Failure of roofing system substrate, including cracking, settlement, excessive deflection, deterioration, and decomposition;
 - e. Faulty construction of parapet walls, copings, chimneys, skylights, vents, equipment supports, and other edge conditions and penetrations of the work;
 - f. Vapor condensation on bottom of roofing; and
 - g. Activity on roofing by others, including construction contractors, maintenance personnel, other persons, and animals, whether authorized or unauthorized by Owner.
 2. When work has been damaged by any of foregoing causes, Warranty shall be null and void until such damage has been repaired by Roofing Installer and until cost and expense thereof have been paid by Owner or by another responsible party so designated.
 3. Roofing Installer is responsible for damage to work covered by this Warranty but is not liable for consequential damages to building or building contents resulting from leaks or faults or defects of work.
 4. During Warranty Period, if Owner allows alteration of work by anyone other than Roofing Installer, including cutting, patching, and maintenance in connection with penetrations, attachment of other work, and positioning of anything on roof, this Warranty shall become null and void on date of said alterations, but only to the extent said alterations affect work covered by this Warranty. If Owner engages Roofing Installer to perform said alterations, Warranty shall not become null and void unless Roofing Installer, before starting said work, shall have notified Owner in writing, showing reasonable cause for claim, that said alterations would likely

- damage or deteriorate work, thereby reasonably justifying a limitation or termination of this Warranty.
5. During Warranty Period, if original use of roof is changed and it becomes used for, but was not originally specified for, a promenade, work deck, spray-cooled surface, flooded basin, or other use or service more severe than originally specified, this Warranty shall become null and void on date of said change, but only to the extent said change affects work covered by this Warranty.
 6. Owner shall promptly notify Roofing Installer of observed, known, or suspected leaks, defects, or deterioration and shall afford reasonable opportunity for Roofing Installer to inspect work and to examine evidence of such leaks, defects, or deterioration.
 7. This Warranty is recognized to be the only warranty of Roofing Installer on said work and shall not operate to restrict or cut off Owner from other remedies and resources lawfully available to Owner in cases of roofing failure. Specifically, this Warranty shall not operate to relieve Roofing Installer of responsibility for performance of original work according to requirements of the Contract Documents, regardless of whether Contract was a contract directly with Owner or a subcontract with Owner's General Contractor.

E. IN WITNESS THEREOF, this instrument has been duly executed this **<Insert day>** day of **<Insert month>**, **<Insert year>**.

1. Authorized Signature: **<Insert signature>**.
2. Name: **<Insert name>**.
3. Title: **<Insert title>**.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 075323

SECTION 076200 - SHEET METAL FLASHING AND TRIM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Manufactured through-wall flashing[**with snaplock receiver**] [**with counterflashing**].
2. Manufactured reglets[**with counterflashing**].
3. Formed roof-drainage sheet metal fabrications.
4. Formed low-slope roof sheet metal fabrications.
5. Formed steep-slope roof sheet metal fabrications.
6. Formed wall sheet metal fabrications.
7. Formed equipment support flashing.
8. Formed overhead-piping safety pans.

B. Related Requirements:

1. **[Section 061000 "Rough Carpentry"] [Section 061053 "Miscellaneous Rough Carpentry"]** for wood nailers, curbs, and blocking.
2. Section <Insert Section number> "<Insert Section title>" for [materials and]installation of sheet metal flashing and trim integral with roofing.
3. Section <Insert Section number> "<Insert Section title>" for sheet metal flashing and trim integral with metal wall panels.
4. Section 077200 "Roof Accessories" for set-on-type curbs, equipment supports, roof hatches, vents, and other manufactured roof accessory units.
5. Section 079500 "Expansion Control" for manufactured sheet metal expansion-joint covers.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 COORDINATION

- A. Coordinate sheet metal flashing and trim layout and seams with sizes and locations of penetrations to be flashed, and joints and seams in adjacent materials.

- B. Coordinate sheet metal flashing and trim installation with adjoining roofing and wall materials, joints, and seams to provide leakproof, secure, and noncorrosive installation.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]<Insert location>**.
 1. Meet with DEN Project Manager, Owner's insurer if applicable, Installer, and installers whose work interfaces with or affects sheet metal flashing and trim including installers of roofing materials, roof accessories, unit skylights, and roof-mounted equipment.
 2. Review methods and procedures related to sheet metal flashing and trim.
 3. Examine substrate conditions for compliance with requirements, including flatness and attachment to structural members.
 4. Review construction schedule. Verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 5. Review special roof details, roof drainage, roof-penetration flashing, equipment curbs, and condition of other construction that affect sheet metal flashing and trim.
 6. Review requirements for insurance and certificates if applicable.
 7. Review sheet metal flashing observation and repair procedures after flashing installation.
 8. Document proceedings, including corrective measures and actions required, and furnish copy of record to each participant.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each manufactured product and accessory.
 2. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
- C. Shop Drawings: For sheet metal flashing and trim.
 1. Include plans, elevations, sections, and attachment details at 1/4" = 1'-0" scale.
 2. Detail fabrication and installation layouts, expansion-joint locations, and keyed details. Distinguish between shop- and field-assembled work.

3. Include identification of material, thickness, weight, and finish for each item and location in Project.
4. Include details for forming, including profiles, shapes, seams, and dimensions.
5. Include details for joining, supporting, and securing, including layout and spacing of fasteners, cleats, clips, and other attachments. Include pattern of seams.
6. Include details of termination points and assemblies.
7. Include details of expansion joints and expansion-joint covers, including showing direction of expansion and contraction from fixed points.
8. Include details of roof-penetration flashing.
9. Include details of edge conditions, including eaves, ridges, valleys, rakes, crickets, and counterflashings as applicable.
10. Include details of special conditions.
11. Include details of connections to adjoining work.
12. Detail formed flashing and trim at scale of not less than **[3 inches per 12 inches (1:5)] <Insert scale>**.

D. Samples for Initial Selection: For each type of sheet metal and accessory indicated with factory-applied finishes.

E. Samples for Verification: For each type of exposed finish.

1. Sheet Metal Flashing: **12 inches (300 mm)** long by actual width of unit, including finished seam and in required profile. Include fasteners, cleats, clips, closures, and other attachments.
2. Trim, Metal Closures, Expansion Joints, Joint Intersections, and Miscellaneous Fabrications: **12 inches (300 mm)** long and in required profile. Include fasteners and other exposed accessories.
3. Unit-Type Accessories and Miscellaneous Materials: Full-size Sample.
4. Anodized Aluminum Samples: Samples to show full range to be expected for each color required.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For fabricator.

B. Submit certificate showing that manufacturer has not less than five (5) years' experience in the manufacturing of the types of products specified.

C. Product Certificates: For each type of coping and roof edge flashing that is **[SPRI ES-1 tested] [and] [FM Approvals approved]**.

D. Product Test Reports: For each product, for tests performed by a qualified testing agency.

E. Submit certificate showing that installation contractor has not less than three (3) years of successful experience in the installation of similar types of flashing and trim specified.

F. Sample Warranty: For special warranty.

1.7 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For sheet metal flashing and trim, and its accessories, to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 QUALITY ASSURANCE

- A. Coordinate work of this section with interfacing and adjoining work for proper sequencing of each installation. Ensure best possible weather resistance and durability of work and protection of materials and finishes.
- B. Fabricator Qualifications: Employs skilled workers who custom fabricate sheet metal flashing and trim similar to that required for this Project and whose products have a record of successful in-service performance.
- C. Manufacturer shall have not less than five (5) years' experience in the manufacturing of the types of products specified.
 - 1. For copings and roof edge flashings that are **[SPRI ES-1 tested] [and] [FM Approvals approved]**, shop shall be listed as able to fabricate required details as tested and approved.
- D. Installation contractor shall have not less than three (3) years of successful experience in the installation of similar types of flashing and trim specified.
- E. Coordinate with other systems to assure watertight assemblies.
- F. Workmanship performed at the job site to be equal to that performed in the shop.
- G. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
 - 1. Build mockup of typical roof **[edge] [eave]**, including **[built-in gutter] [fascia] [fascia trim] [apron flashing]** <Insert item>, approximately **[10 feet (3.0 m)]** <Insert dimension> long, including supporting construction cleats, seams, attachments[, **underlayment,**] and accessories.
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
 - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver sheet metal flashing materials and fabrications undamaged. Protect sheet metal flashing and trim materials and fabrications during transportation and handling.
- B. Unload, store, and install sheet metal flashing materials and fabrications in a manner to prevent bending, warping, twisting, and surface damage.
- C. Do not store sheet metal flashing and trim materials in contact with other materials that might cause staining, denting, or other surface damage. Store sheet metal flashing and trim materials away from uncured concrete and masonry.
- D. Stack materials on platforms or pallets, covered with suitable weathertight and ventilated covering. Do not store sheet metal flashing and trim materials in contact with other materials that might cause staining, denting, or other surface damage.
- E. Protect strippable protective covering on sheet metal flashing and trim from exposure to sunlight and high humidity, except to extent necessary for period of sheet metal flashing and trim installation.

1.10 WARRANTY

- A. Special Warranty on Finishes: Manufacturer agrees to repair finish or replace sheet metal flashing and trim that shows evidence of deterioration of factory-applied finishes within specified warranty period.
 - 1. Warranty: Shall be required for a period of **[two (2)] <Insert number>** years by installer. Reference roof system warranty in other Division 07 Sections.
 - 2. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 - 3. Finish Warranty Period: Minimum **[20] [10] <Insert number>** years from date of Substantial Completion.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. General: Sheet metal flashing and trim assemblies shall withstand wind loads, structural movement, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Completed sheet metal flashing and trim shall not rattle, leak, or loosen, and shall remain watertight.
- B. Sheet Metal Standard for Flashing and Trim: Comply with **[NRCA's "The NRCA Roofing Manual"] [and] [SMACNA's "Architectural Sheet Metal Manual"]** requirements for dimensions and profiles shown unless more stringent requirements are indicated.
- C. Sheet Metal Standard for Copper: Comply with CDA's "Copper in Architecture Handbook." Conform to dimensions and profiles shown unless more stringent requirements are indicated.
- D. FM Approvals Listing: Manufacture and install **[copings] [roof edge flashings]** that are listed in FM Approvals' "RoofNav" and approved for windstorm classification, **[Class 1-60] [Class 1-75] [Class 1-90] [Class 1-105] [Class 1-120] <Insert class>**. Identify materials with name of fabricator and design approved by FM Approvals.
- E. SPRI Wind Design Standard: Manufacture and install **[copings] [roof edge flashings]** tested according to SPRI ES-1 and capable of resisting the following design pressure:
1. Design Pressure: **[As indicated on Drawings] <Insert design pressure>**.
- F. Recycled Content of Copper-Sheet Flashing and Trim: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[40] <Insert number>** percent.
- G. Recycled Content of Steel-Sheet Flashing and Trim: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25] <Insert number>** percent.
- H. Recycled Content of Zinc-Sheet Flashing and Trim: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[15] <Insert number>** percent.
- I. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes to prevent buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
1. Temperature Change: **[120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces] <Insert temperature change>**.

J. Finishes:

1. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
2. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
3. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or in-stalled to minimize contrast.

2.2 SHEET METALS

A. General: Protect mechanical and other finishes on exposed surfaces from damage by applying strippable, temporary protective film before shipping.

B. Copper Sheet: ASTM B 370, cold-rolled copper sheet, H00 or H01 temper.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Hussey Copper Ltd.
 - b. Revere Copper Products, Inc.
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.
2. Nonpatinated Exposed Finish: Mill.
3. Nonpatinated, Exposed, Lacquered Finish: Finish designations for copper alloys comply with system defined in NAAMM's "Metal Finishes Manual for Architectural and Metal Products."
 - a. Brushed Satin (Lacquered): M32-06x (Mechanical Finish: directionally textured, medium satin; with clear organic coating); coating of "Incralac," **[waterborne,] [solvent-borne,]** methyl methacrylate copolymer lacquer with UV inhibitor, applied by air spray in two coats per manufacturer's written instructions to total thickness of **1 mil** (0.025 mm).
 - b. Mirror Polished (Lacquered): M22-06x (Mechanical Finish: buffed, specular; with clear organic coating); coating of "Incralac," **[waterborne,] [solvent-borne,]** air-drying, methyl methacrylate copolymer lacquer with UV inhibitor, applied by air spray in two coats per manufacturer's written instructions to total thickness of **1 mil** (0.025 mm).
4. Prepatinated Copper-Sheet Finish: **[Dark brown] [Verdigris] <Insert color>**, prepatinated according to ASTM B 882.

C. Aluminum Sheet: **ASTM B 209** (ASTM B 209M), alloy as standard with manufacturer for finish required, with temper as required to suit forming operations and performance required; with **[smooth, flat] [embossed]** surface.

1. As-Milled Finish: **[Mill]** **[One-side bright mill]** **[Standard one-side bright]** **[Standard two-side bright]**.
2. Alclad Finish: Metallurgically bonded surfacing alloy on both sides, forming aluminum sheet with reflective luster.
3. Factory Prime Coating: Where painting after installation is required, pretreat metal with white or light-colored, factory-applied, baked-on epoxy primer coat; minimum dry film thickness of **0.2 mil** (0.005 mm).
4. Clear Anodic Finish, Coil Coated: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.
5. Color Anodic Finish, Coil Coated: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or thicker.
 - a. Color: **[Champagne]** **[Light bronze]** **[Medium bronze]** **[Dark bronze]** **[Black]** **<Insert color>**.
 - b. Color: **[Match DEN Project Manager's sample]** **[As selected by DEN Project Manager from full range of industry colors and color densities]**.
 - c. Color Range: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
6. Exposed Coil-Coated Finish:
 - a. Two-Coat Fluoropolymer: AAMA 620. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - b. Three-Coat Fluoropolymer: AAMA 620. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - c. Mica Fluoropolymer: AAMA 620. Two-coat fluoropolymer finish with suspended mica flakes containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - d. Metallic Fluoropolymer: AAMA 620. Three-coat fluoropolymer finish with suspended metallic flakes containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - e. FEVE Fluoropolymer: AAMA 620. Two-coat fluoropolymer finish containing 100 percent fluorinated ethylene vinyl ether resin in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - f. Siliconized Polyester: Epoxy primer and silicone-modified, polyester-enamel topcoat; with dry film thickness of not less than **0.2 mil** (0.005 mm) for primer and **0.8 mil** (0.02 mm) for topcoat.

7. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
 8. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with minimum total dry film thickness of **0.5 mil** (0.013 mm).
- D. Stainless-Steel Sheet: ASTM A 240/A 240M[**or ASTM A 666**], [**Type 304**] [**Type 316**], dead soft, fully annealed; with [**smooth, flat**] [**embossed**] surface.
1. Finish: [**2D (dull, cold rolled)**] [**2B (bright, cold rolled)**] [**3 (coarse, polished directional satin)**] [**4 (polished directional satin)**] <Insert finish>.
- E. Zinc-Tin Alloy-Coated Stainless-Steel Sheet: ASTM A 240/A 240M, Type 304, dead-soft, fully annealed, stainless-steel sheet of minimum uncoated thickness indicated; coated on both sides with zinc-tin alloy (50 percent zinc, 50 percent tin), with factory-applied gray preweathering.
1. **Products**: Subject to compliance with requirements, provide one of the following:
 - a. **Follansbee Steel**; [**TCS II**] [**TCS Satin**].
 - b. <Insert manufacturer's name; product name or designation>.
 - c. or approved equal.
- F. Zinc-Tin Alloy-Coated Copper Sheet: ASTM B 370, cold-rolled copper sheet, H00 temper, of minimum uncoated weight (thickness) indicated; coated on both sides with zinc-tin alloy (50 percent zinc, 50 percent tin).
1. **Products**: Subject to compliance with requirements, provide one of the following:
 - a. **Revere Copper Products, Inc.**; FreedomGray.
 - b. <Insert manufacturer's name; product name or designation>.
 - c. or approved equal.
- G. Metallic-Coated Steel Sheet: Provide [**zinc-coated (galvanized) steel sheet according to ASTM A 653/A 653M, G90 (Z275) coating designation**] [or] [**aluminum-zinc alloy-coated steel sheet according to ASTM A 792/A 792M, Class AZ50 (Class AZM150) coating designation, Grade 40 (Grade 275)**]; prepainted by coil-coating process to comply with ASTM A 755/A 755M.
1. Surface: [**Smooth, flat**] [**Embossed**] [**and mill phosphatized for field painting**] [**and with manufacturer's standard clear acrylic coating on both sides**].
 2. Exposed Coil-Coated Finish:
 - a. Two-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - b. Three-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear

- topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
- c. Mica Fluoropolymer: AAMA 621. Two-coat fluoropolymer finish with suspended mica flakes containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - d. Metallic Fluoropolymer: AAMA 621. Three-coat fluoropolymer finish with suspended metallic flakes containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - e. FEVE Fluoropolymer: AAMA 621. Two-coat fluoropolymer finish containing 100 percent fluorinated ethylene vinyl ether resin in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - f. Siliconized Polyester: Epoxy primer and silicone-modified, polyester-enamel topcoat; with dry film thickness of not less than **0.2 mil** (0.005 mm) for primer and **0.8 mil** (0.02 mm) for topcoat.
3. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
 4. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with minimum total dry film thickness of **0.5 mil** (0.013 mm).
- H. **Zinc Sheet**: [99.995 percent electrolytic high-grade zinc with alloy additives of copper (0.08 to 0.20 percent), titanium (0.07 to 0.12 percent), and aluminum (0.015 percent)] [Zinc, 99 percent pure, alloyed with 0.08 to 1.00 percent copper, 0.06 to 0.20 percent titanium, and up to 0.015 percent aluminum]; with manufacturer's standard factory-applied, flexible, protective back coating.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. [Contrarian Metal Resources](#); Alloy 710 Zinc.
 - b. [Jarden Zinc Products](#); Solid Zinc Strip.
 - c. [Rheinzink America Inc.](#); RHEINZINK.
 - d. [Umicore Building Products USA, Inc.](#); VM ZINC series.
 - e. <Insert manufacturer's name; product name or designation>.
 - f. or approved equal.
 2. Finish: [**Bright rolled**] [**Prewathered gray**] [**Prewathered black**] <Insert finish>.
- I. Copper-Clad Stainless-Steel Sheet: ASTM B 506, annealed Temper O61.
1. **Products**: Subject to compliance with requirements, provide one of the following:

- a. [Engineering Materials Solutions, a member of the Wickeder Group](#); CopperPlus.
 - b. [SEMCO Southeastern Metals, a Gibraltar Industries company](#); CopperXT.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.
2. Nonpatinated Exposed Finish: Mill.
3. Nonpatinated, Exposed, Lacquered Finish: Finish designations for copper alloys comply with system defined in NAAMM's "Metal Finishes Manual for Architectural and Metal Products."
- a. Brushed Satin (Lacquered): M32-06x (Mechanical Finish: directionally textured, medium satin; with clear organic coating); coating of "Incralac," **[waterborne,] [solvent-borne,]** methyl methacrylate copolymer lacquer with UV inhibitor, applied by air spray in two coats per manufacturer's written instructions to total thickness of **1 mil (0.025 mm)**.
 - b. Mirror Polished (Lacquered): M22-06x (Mechanical Finish: buffed, specular; with clear organic coating); coating of "Incralac," **[waterborne,] [solvent-borne,]** air-drying, methyl methacrylate copolymer lacquer with UV inhibitor, applied by air spray in two coats per manufacturer's written instructions to total thickness of **1 mil (0.025 mm)**.

2.3 UNDERLAYMENT MATERIALS

- A. Felt: ASTM D 226/D 226M, Type II (No. 30), asphalt-saturated organic felt; nonperforated.
- B. Synthetic Underlayment: Laminated or reinforced, woven polyethylene or polypropylene, synthetic roofing underlayment; bitumen free; slip resistant; suitable for high temperatures over **220 deg F (111 deg C)**; and complying with physical requirements of ASTM D 226/D 226M for Type I and Type II felts.
1. **Products**: Subject to compliance with requirements, provide one of the following:
 - a. [Atlas Roofing Corporation](#); Summit.
 - b. [Engineered Coated Products](#); Nova-Seal II.
 - c. [Kirsch Building Products, LLC](#); **[Sharkskin Comp] [Sharkskin Ultra]**.
 - d. [SDP Advanced Polymer Products Inc](#); Palisade.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.
- C. Self-Adhering, High-Temperature Sheet: Minimum **30 mils (0.76 mm)** thick, consisting of a slip-resistant polyethylene- or polypropylene-film top surface laminated to a layer of butyl- or SBS-modified asphalt adhesive, with release-paper backing; specifically designed to withstand high metal temperatures beneath metal roofing. Provide primer according to written recommendations of underlayment manufacturer.
1. **Products**: Subject to compliance with requirements, provide one of the following:

- a. [Carlisle Residential, a division of Carlisle Construction Materials](#); WIP 300HT.
 - b. [Grace Construction Products, a unit of W. R. Grace & Co.-Conn.](#); [**Grace Ice and Water Shield HT**] [**Ultra**].
 - c. [Henry Company](#); Blueskin PE200 HT.
 - d. [Kirsch Building Products, LLC](#); Sharkskin Ultra SA.
 - e. [Metal-Fab Manufacturing, LLC](#); MetShield.
 - f. [Owens Corning](#); WeatherLock Specialty Tile & Metal Underlayment.
 - g. [Polyguard Products, Inc.](#); Deck Guard HT.
 - h. [Protecto Wrap Company](#); Protecto Jiffy Seal Ice & Water Guard HT.
 - i. [SDP Advanced Polymer Products Inc](#); Palisade SA-HT.
 - j. <Insert manufacturer's name; product name or designation>.
 - k. or approved equal.
2. Thermal Stability: ASTM D 1970; stable after testing at **240 deg F** (116 deg C) or higher.
 3. Low-Temperature Flexibility: ASTM D 1970; passes after testing at minus **20 deg F** (29 deg C) or lower.
- D. Slip Sheet: Rosin-sized building paper, **3 lb/100 sq. ft.** (0.16 kg/sq. m) minimum.

2.4 MISCELLANEOUS MATERIALS

- A. General: Provide materials and types of fasteners[, **solder**], protective coatings, sealants, and other miscellaneous items as required for complete sheet metal flashing and trim installation and as recommended by manufacturer of primary sheet metal[**or manufactured item**] unless otherwise indicated.
- B. Fasteners: Wood screws, annular threaded nails, self-tapping screws, self-locking rivets and bolts, and other suitable fasteners designed to withstand design loads and recommended by manufacturer of primary sheet metal[**or manufactured item**].
1. General: Blind fasteners or self-drilling screws, gasketed, with hex-washer head.
 - a. Exposed Fasteners: Heads matching color of sheet metal using plastic caps or factory-applied coating. Provide metal-backed EPDM or PVC sealing washers under heads of exposed fasteners bearing on weather side of metal.
 - b. Blind Fasteners: High-strength aluminum or stainless-steel rivets suitable for metal being fastened.
 - c. Spikes and Ferrules: Same material as gutter; with spike with ferrule matching internal gutter width.
 2. Fasteners for [**Copper**] [**Zinc-Tin Alloy-Coated Copper**] [**Copper-Clad Stainless-Steel**] Sheet: Copper, hardware bronze or passivated Series 300 stainless steel.
 3. Fasteners for Aluminum Sheet: Aluminum or Series 300 stainless steel.
 4. Fasteners for Stainless-Steel Sheet: Series 300 stainless steel.

5. Fasteners for Zinc-Tin Alloy-Coated Stainless-Steel Sheet: Series 300 stainless steel.
 6. Fasteners for [**Zinc-Coated (Galvanized)**] [**Aluminum-Zinc Alloy-Coated**] Steel Sheet: Series 300 stainless steel or hot-dip galvanized steel according to ASTM A 153/A 153M or ASTM F 2329.
 7. Fasteners for Zinc Sheet: Series 300 stainless steel or hot-dip galvanized steel according to ASTM A 153/A 153M or ASTM F 2329.
- C. Solder:
1. For [**Copper**] [**Copper-Clad Stainless Steel**]: ASTM B 32, [**Grade Sn50, 50 percent tin and 50 percent lead**] [**with maximum lead content of 0.2 percent**].
 2. For Stainless Steel: ASTM B 32, [**Grade Sn60**] [**Grade Sn96**], with acid flux of type recommended by stainless-steel sheet manufacturer.
 3. For Zinc-Tin Alloy-Coated [**Stainless Steel**] [**Copper**]: ASTM B 32, 100 percent tin, with maximum lead content of 0.2 percent, as recommended by sheet metal manufacturer.
 4. For Zinc-Coated (Galvanized) Steel: ASTM B 32, [**Grade Sn50, 50 percent tin and 50 percent lead or Grade Sn60, 60 percent tin and 40 percent lead**] [**with maximum lead content of 0.2 percent**].
 5. For Zinc: ASTM B 32, [**40 percent tin and 60 percent lead with low antimony,**] [**with maximum lead content of 0.2 percent,**] as recommended by zinc manufacturer.
- D. Sealant Tape: Pressure-sensitive, 100 percent solids, polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape **1/2 inch (13 mm)** wide and **1/8 inch (3 mm)** thick.
- E. Elastomeric Sealant: ASTM C 920, elastomeric [**polyurethane**] [**polysulfide**] [**silicone**] polymer sealant; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.
- F. Butyl Sealant: ASTM C 1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied for hooked-type expansion joints with limited movement.
- G. Epoxy Seam Sealer: Two-part, noncorrosive, aluminum seam-cementing compound, recommended by aluminum manufacturer for exterior nonmoving joints, including riveted joints.
- H. Bituminous Coating: Cold-applied asphalt emulsion according to ASTM D 1187.
- I. Asphalt Roofing Cement: ASTM D 4586, asbestos free, of consistency required for application.

2.5 MANUFACTURED SHEET METAL FLASHING AND TRIM

- A. Through-Wall, Ribbed, Sheet Metal Flashing: Manufacture through-wall sheet metal flashing for embedment in masonry, with ribs at **3-inch (75-mm)** intervals along length of flashing to provide integral mortar bond. Manufacture through-wall flashing [**with snaplock receiver on exterior face to receive counterflashing**] [**with interlocking counterflashing on exterior face, of same metal as flashing**].
1. Copper: [**10-oz. (0.34-mm-thick)**] <Insert weight (thickness)> minimum for fully concealed flashing; [**16 oz. (0.55 mm thick)**] <Insert weight (thickness)> elsewhere.
 - a. **Products:** Subject to compliance with requirements, provide one of the following:
 - 1) [Cheney Flashing Company](#); Cheney Flashing [**Dovetail**] [**Sawtooth**].
 - 2) [Hohmann & Barnard, Inc.](#); STF Sawtooth Flashing.
 - 3) [Keystone Flashing Company, Inc.](#); Keystone Three-Way Interlocking Thruwall Flashing.
 - 4) [Sandell Manufacturing](#); Pre-Formed Metal Flashing.
 - 5) <Insert manufacturer's name; product name or designation>.
 - 6) or approved equal.
 2. Stainless Steel: [**0.016 inch (0.40 mm)**] <Insert dimension> thick.
 - a. **Products:** Subject to compliance with requirements, provide one of the following:
 - 1) [Cheney Flashing Company](#); Cheney Flashing [**Dovetail**] [**Sawtooth**].
 - 2) [Hohmann & Barnard, Inc.](#); STF Sawtooth Flashing.
 - 3) [Keystone Flashing Company, Inc.](#); Keystone Three-Way Interlocking Thruwall Flashing.
 - 4) [Sandell Manufacturing](#); Pre-Formed Metal Flashing.
 - 5) <Insert manufacturer's name; product name or designation>.
 - 6) or approved equal.

B. Reglets: Units of type, material, and profile required, formed to provide secure interlocking of separate reglet and counterflashing pieces, and compatible with flashing indicated [**with factory-mitered and -welded corners and junctions**] [**and**] [**with interlocking counterflashing on exterior face, of same metal as reglet**].

 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Cheney Flashing Company](#).
 - b. [Fry Reglet Corporation](#).
 - c. [Heckmann Building Products, Inc.](#)
 - d. [Hickman, W. P. Company](#).
 - e. [Hohmann & Barnard, Inc.](#)
 - f. [Keystone Flashing Company, Inc.](#)

- g. [National Sheet Metal Systems, Inc.](#)
 - h. [Sandell Manufacturing.](#)
 - i. <Insert manufacturer's name>.
 - j. or approved equal.
2. Material: [**Stainless steel, 0.019 inch (0.48 mm) thick**] [**Copper, 16 oz./sq. ft. (0.55 mm thick)**] [**Aluminum, 0.024 inch (0.61 mm) thick**] [**Galvanized steel, 0.022 inch (0.56 mm) thick**].
 3. Surface-Mounted Type: Provide with slotted holes for fastening to substrate, with neoprene or other suitable weatherproofing washers, and with channel for sealant at top edge.
 4. Stucco Type: Provide with upturned fastening flange and extension leg of length to match thickness of applied finish materials.
 5. Concrete Type: Provide temporary closure tape to keep reglet free of concrete materials, special fasteners for attaching reglet to concrete forms, and guides to ensure alignment of reglet section ends.
 6. Masonry Type: Provide with offset top flange for embedment in masonry mortar joint.
 7. Accessories:
 - a. Flexible-Flashing Retainer: Provide resilient plastic or rubber accessory to secure flexible flashing in reglet where clearance does not permit use of standard metal counterflashing or where Drawings show reglet without metal counterflashing.
 - b. Counterflashing Wind-Restraint Clips: Provide clips to be installed before counterflashing to prevent wind uplift of counterflashing's lower edge.
 8. Finish: [**Mill**] [**With manufacturer's standard color coating**] <Insert finish>.

2.6 FABRICATION, GENERAL

- A. General Metal Fabrication: Shop fabricate work to greatest extent possible. Comply with details shown, and with applicable requirements of SMACNA "Architectural Sheet Metal Manual" and other recognized industry practices.
 1. Fabricate for waterproof and weather resistant performance; with expansion provisions for running work, sufficient to permanently prevent leakage, damage, or deterioration of the work.
 2. Form work to fit substrates. Comply with material manufacturer instructions and recommendations for forming material.
 3. Form exposed sheet metal work without excessive oil canning, buckling and tool marks, true to line and levels indicated, with exposed edges folded back to form hems.
- B. General: Custom fabricate sheet metal flashing and trim to comply with details shown and recommendations in cited sheet metal standard that apply to design, dimensions, geometry, metal thickness, and other characteristics of item required. Fabricate sheet metal flashing and trim in shop to greatest extent possible.

1. Fabricate sheet metal flashing and trim in thickness or weight needed to comply with performance requirements, but not less than that specified for each application and metal.
 2. Obtain field measurements for accurate fit before shop fabrication.
 3. Form sheet metal flashing and trim to fit substrates without excessive oil canning, buckling, and tool marks; true to line, levels, and slopes; and with exposed edges folded back to form hems.
 4. Conceal fasteners and expansion provisions where possible. Do not use exposed fasteners on faces exposed to view.
- C. Fabrication Tolerances: Fabricate sheet metal flashing and trim that is capable of installation to a tolerance of **1/4 inch in 20 feet** (6 mm in 6 m) on slope and location lines indicated on Drawings and within **1/8-inch** (3-mm) offset of adjoining faces and of alignment of matching profiles.
- D. Fabrication Tolerances: Fabricate sheet metal flashing and trim that is capable of installation to tolerances specified in MCA's "Guide Specification for Residential Metal Roofing."
- E. Expansion Provisions: Form metal for thermal expansion of exposed flashing and trim.
1. Form expansion joints of intermeshing hooked flanges, not less than **1 inch** (25 mm) deep, filled with butyl sealant concealed within joints.
 2. Use lapped expansion joints only where indicated on Drawings.
- F. Sealant Joints: Where movable, nonexpansion-type joints are required, form metal to provide for proper installation of elastomeric sealant according to cited sheet metal standard.
- G. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal.
- H. Fabricate cleats and attachment devices of sizes as recommended by cited sheet metal standard[**and by FM Global Property Loss Prevention Data Sheet 1-49**] for application, but not less than thickness of metal being secured.
- I. Seams: Fabricate nonmoving seams with flat-lock seams. Tin edges to be seamed, form seams, and solder.
- J. Seams: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with elastomeric sealant unless otherwise recommended by sealant manufacturer for intended use. [**Rivet joints where necessary for strength.**]
- K. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. [**Rivet joints where necessary for strength.**]
- L. Separations: Provide for separation of metal from noncompatible metal or corrosive substrates by coating concealed surfaces at locations of contact, with bituminous coating or other permanent separation as recommended by manufacturer/fabricator.

- M. Do not use graphite pencils to mark metal surfaces.

2.7 ROOF-DRAINAGE SHEET METAL FABRICATIONS

- A. Hanging Gutters: Fabricate to cross section required, complete with end pieces, outlet tubes, and other accessories as required. Fabricate in minimum **96-inch-** (2400-mm-) long sections. Furnish flat-stock gutter brackets and **[flat-stock] [twisted]** gutter spacers and straps fabricated from same metal as gutters, of size recommended by cited sheet metal standard but with thickness not less than **[twice the gutter thickness] [dimension indicated on Drawings] <Insert dimension>**. Fabricate expansion joints, expansion-joint covers, **[gutter bead reinforcing bars,]** and gutter accessories from same metal as gutters. **[Shop fabricate interior and exterior corners.]**

1. Gutter Profile: **[Style A] [Style B] [Style C] [Style D] [Style E] [Style F] [Style G] [Style H] [Style I] [Style J] [Style K] [Style L]** according to cited sheet metal standard.
2. Expansion Joints: **[Lap type] [Butt type] [Butt type with cover plate] [Built in]**.
3. Accessories: **[Continuous, removable leaf screen with sheet metal frame and hardware cloth screen] [Wire-ball downspout strainer] [Valley baffles]**.
4. Gutters with Girth up to **15 Inches** (380 mm): Fabricate from the following materials:
 - a. Copper: **[16 oz./sq. ft. (0.55 mm thick)] <Insert weight (thickness)>**.
 - b. Aluminum: **[0.032 inch (0.81 mm)] <Insert dimension> thick**.
 - c. Stainless Steel: **[0.016 inch (0.40 mm)] <Insert dimension> thick**.
 - d. Zinc-Tin Alloy-Coated Stainless Steel: **[0.015 inch (0.38 mm)] <Insert dimension> thick**.
 - e. Zinc-Tin Alloy-Coated Copper: **[16 oz./sq. ft. (0.55 mm thick)] <Insert weight (thickness)>**.
 - f. Galvanized Steel: **[0.022 inch (0.56 mm)] <Insert dimension> thick**.
 - g. Aluminum-Zinc Alloy-Coated Steel: **[0.022 inch (0.56 mm)] <Insert dimension> thick**.
 - h. Zinc: **[0.032 inch (0.80 mm)] [0.039 inch (1.00 mm)] <Insert dimension> thick**.
 - i. Copper-Clad Stainless Steel: **[0.016 inch (0.40 mm)] <Insert dimension> thick**.
5. Gutters with Girth **16 to 20 Inches** (410 to 510 mm): Fabricate from the following materials:
 - a. Copper: **[16 oz./sq. ft. (0.55 mm thick)] <Insert weight (thickness)>**.
 - b. Aluminum: **[0.040 inch (1.02 mm)] <Insert dimension> thick**.
 - c. Stainless Steel: **[0.019 inch (0.48 mm)] <Insert dimension> thick**.
 - d. Zinc-Tin Alloy-Coated Stainless Steel: **[0.018 inch (0.46 mm)] <Insert dimension> thick**.
 - e. Zinc-Tin Alloy-Coated Copper: **[16 oz./sq. ft. (0.55 mm thick)] <Insert weight (thickness)>**.
 - f. Galvanized Steel: **[0.028 inch (0.71 mm)] <Insert dimension> thick**.

- g. Aluminum-Zinc Alloy-Coated Steel: [**0.028 inch (0.71 mm)**] <Insert dimension> thick.
 - h. Zinc: [**0.039 inch (1.00 mm)**] [**0.048 inch (1.25 mm)**] <Insert dimension> thick.
 - i. Copper-Clad Stainless-Steel: [**0.018 inch (0.46 mm)**] <Insert dimension> thick.
6. Gutters with Girth 21 to 25 Inches (530 to 640 mm): Fabricate from the following materials:
- a. Copper: [**20 oz./sq. ft. (0.68 mm thick)**] <Insert weight (thickness)>.
 - b. Aluminum: [**0.050 inch (1.27 mm)**] <Insert dimension> thick.
 - c. Stainless Steel: [**0.025 inch (0.64 mm)**] <Insert dimension> thick.
 - d. Zinc-Tin Alloy-Coated Stainless Steel: [**0.024 inch (0.61 mm)**] <Insert dimension> thick.
 - e. Zinc-Tin Alloy-Coated Copper: [**20 oz./sq. ft. (0.68 mm thick)**] <Insert weight (thickness)>.
 - f. Galvanized Steel: [**0.034 inch (0.86 mm)**] <Insert dimension> thick.
 - g. Aluminum-Zinc Alloy-Coated Steel: [**0.034 inch (0.86 mm)**] <Insert dimension> thick.
 - h. Zinc: [**0.048 inch (1.25 mm)**] [**0.059 inch (1.50 mm)**] <Insert dimension> thick.
 - i. Copper-Clad Stainless Steel: [**0.027 inch (0.69 mm)**] <Insert dimension> thick.
7. Gutters with Girth 26 to 30 Inches (660 to 760 mm): Fabricate from the following materials:
- a. Copper: [**24 oz./sq. ft. (0.82 mm thick)**] <Insert weight (thickness)>.
 - b. Aluminum: [**0.063 inch (1.60 mm)**] <Insert dimension> thick.
 - c. Stainless Steel: [**0.031 inch (0.79 mm)**] <Insert dimension> thick.
 - d. Zinc-Tin Alloy-Coated Copper: [**24 oz./sq. ft. (0.82 mm thick)**] <Insert weight (thickness)>.
 - e. Galvanized Steel: [**0.040 inch (1.02 mm)**] <Insert dimension> thick.
 - f. Aluminum-Zinc Alloy-Coated Steel: [**0.040 inch (1.02 mm)**] <Insert dimension> thick.
8. Gutters with Girth 31 to 35 Inches (790 to 890 mm): Fabricate from the following materials:
- a. Copper: [**24 oz./sq. ft. (0.82 mm thick)**] <Insert weight (thickness)>.
 - b. Stainless Steel: [**0.038 inch (0.95 mm)**] <Insert dimension> thick.
 - c. Zinc-Tin Alloy-Coated Copper: [**25 oz./sq. ft. (0.87 mm thick)**] <Insert weight (thickness)>.
 - d. Galvanized Steel: [**0.052 inch (1.32 mm)**] <Insert dimension> thick.
 - e. Aluminum-Zinc Alloy-Coated Steel: [**0.052 inch (1.32 mm)**] <Insert dimension> thick.
- B. Built-in Gutters: Fabricate to cross section required, with riveted and soldered joints, complete with end pieces, outlet tubes, and other special accessories as required.

Fabricate in minimum **96-inch-** (2400-mm-) long sections. Fabricate expansion joints and accessories from same metal as gutters unless otherwise indicated.

1. Fabricate gutters with built-in expansion joints[**and gutter-end expansion joints at walls**].
 2. Accessories: [**Continuous, removable leaf screen with sheet metal frame and hardware cloth screen**] [**Bronze wire-ball downspout strainer**] [**Wire-ball downspout strainer**].
 3. Fabricate from the Following Materials:
 - a. Copper: [**16 oz./sq. ft. (0.55 mm thick)**] <Insert weight (thickness)>.
 - b. Stainless Steel: [**0.016 inch (0.40 mm)**] <Insert dimension> thick.
 - c. Zinc-Tin Alloy-Coated Stainless Steel: [**0.015 inch (0.38 mm)**] <Insert dimension> thick.
 - d. Zinc-Tin Alloy-Coated Copper: [**16 oz./sq. ft. (0.55 mm thick)**] <Insert weight (thickness)>.
 - e. Zinc: [**0.032 inch (0.80 mm)**] [**0.039 inch (1.00 mm)**] <Insert dimension> thick.
 - f. Copper-Clad Stainless Steel: [**0.016 inch (0.40 mm)**] <Insert dimension> thick.
- C. Downspouts: Fabricate [**round**] [**rectangular**] [**open-face**] downspouts to dimensions indicated, complete with mitered elbows. Furnish with metal hangers from [**same material as downspouts and anchors**] <Insert material>.[**Shop fabricate elbows.**]
1. Fabricated Hanger Style: [**Fig 1-35A**] [**Fig 1-35B**] [**Fig 1-35C**] [**Fig 1-35D**] [**Fig 1-35E**] [**Fig 1-35F**] [**Fig 1-35G**] [**Fig 1-35H**] [**Fig 1-35I**] [**Fig 1-35J**] according to SMACNA's "Architectural Sheet Metal Manual."
 2. Manufactured Hanger Style: [**Fig 1-34A**] [**Fig 1-34B**] [**Fig 1-34C**] [**Fig 1-34D**] [**Fig 1-34E**] according to SMACNA's "Architectural Sheet Metal Manual."
 3. Hanger Style: <Insert description>.
 4. Fabricate from the following materials:
 - a. Copper: [**16 oz./sq. ft. (0.55 mm thick)**] <Insert weight (thickness)>.
 - b. Aluminum: [**0.024 inch (0.61 mm)**] <Insert dimension> thick.
 - c. Stainless Steel: [**0.016 inch (0.40 mm)**] <Insert dimension> thick.
 - d. Zinc-Tin Alloy-Coated Stainless Steel: [**0.015 inch (0.38 mm)**] <Insert dimension> thick.
 - e. Zinc-Tin Alloy-Coated Copper: [**16 oz./sq. ft. (0.55 mm thick)**] <Insert weight (thickness)>.
 - f. Galvanized Steel: [**0.022 inch (0.56 mm)**] <Insert dimension> thick.
 - g. Aluminum-Zinc Alloy-Coated Steel: [**0.022 inch (0.56 mm)**] <Insert dimension> thick.
 - h. Zinc: [**0.032 inch (0.80 mm)**] [**0.039 inch (1.00 mm)**] <Insert dimension> thick.
 - i. Copper-Clad Stainless Steel: [**0.016 inch (0.40 mm)**] <Insert dimension> thick.
- D. Parapet Scuppers: Fabricate scuppers to dimensions required, with closure flange trim to exterior, **4-inch-** (100-mm-) wide wall flanges to interior, and base extending **4 inches**

(100 mm) beyond cant or tapered strip into field of roof.[**Fasten gravel guard angles to base of scupper.**] Fabricate from the following materials:

1. Copper: [**16 oz./sq. ft. (0.55 mm thick)**] <Insert weight (thickness)>.
2. Aluminum: [**0.032 inch (0.81 mm)**] <Insert dimension> thick.
3. Stainless Steel: [**0.019 inch (0.48 mm)**] <Insert dimension> thick.
4. Zinc-Tin Alloy-Coated Stainless Steel: [**0.018 inch (0.46 mm)**] <Insert dimension> thick.
5. Zinc-Tin Alloy-Coated Copper: [**16 oz./sq. ft. (0.55 mm thick)**] <Insert weight (thickness)>.
6. Galvanized Steel: [**0.028 inch (0.71 mm)**] <Insert dimension> thick.
7. Aluminum-Zinc Alloy-Coated Steel: [**0.028 inch (0.71 mm)**] <Insert dimension> thick.
8. Zinc: [**0.032 inch (0.80 mm)**] [**0.039 inch (1.00 mm)**] <Insert dimension> thick.
9. Copper-Clad Stainless Steel: [**0.018 inch (0.46 mm)**] <Insert dimension> thick.

E. Conductor Heads: Fabricate conductor heads with flanged back and stiffened top edge and of dimensions and shape required, complete with outlet tubes[, **exterior flange trim,**] [**and**] [**built-in overflows**]. Fabricate from the following materials:

1. Copper: [**16 oz./sq. ft. (0.55 mm thick)**] <Insert weight (thickness)>.
2. Aluminum: [**0.032 inch (0.81 mm)**] <Insert dimension> thick.
3. Stainless Steel: [**0.016 inch (0.40 mm)**] <Insert dimension> thick.
4. Zinc-Tin Alloy-Coated Stainless Steel: [**0.015 inch (0.38 mm)**] <Insert dimension> thick.
5. Zinc-Tin Alloy-Coated Copper: [**16 oz./sq. ft. (0.55 mm thick)**] <Insert weight (thickness)>.
6. Galvanized Steel: [**0.028 inch (0.71 mm)**] <Insert dimension> thick.
7. Aluminum-Zinc Alloy-Coated Steel: [**0.028 inch (0.71 mm)**] <Insert dimension> thick.
8. Zinc: [**0.032 inch (0.80 mm)**] [**0.039 inch (1.00 mm)**] <Insert dimension> thick.
9. Copper-Clad Stainless Steel: [**0.016 inch (0.40 mm)**] <Insert dimension> thick.

F. Splash Pans: Fabricate to dimensions and shape required and from the following materials:

1. Copper: [**16 oz./sq. ft. (0.55 mm thick)**] <Insert weight (thickness)>.
2. Aluminum: [**0.040 inch (1.02 mm)**] <Insert dimension> thick.
3. Stainless Steel: [**0.019 inch (0.48 mm)**] <Insert dimension> thick.
4. Zinc-Tin Alloy-Coated Stainless Steel: [**0.018 inch (0.46 mm)**] <Insert dimension> thick.
5. Zinc-Tin Alloy-Coated Copper: [**16 oz./sq. ft. (0.55 mm thick)**] <Insert weight (thickness)>.
6. Zinc: [**0.032 inch (0.80 mm)**] [**0.039 inch (1.00 mm)**] <Insert dimension> thick.
7. Copper-Clad Stainless Steel: [**0.018 inch (0.46 mm)**] <Insert dimension> thick.

2.8 LOW-SLOPE ROOF SHEET METAL FABRICATIONS

- A. Roof Edge Flashing (Gravel Stop)[**and Fascia Cap**]: Fabricate in minimum 96-inch- (2400-mm-) long, but not exceeding 12-foot- (3.6-m-) long sections. Furnish with 6-inch- (150-mm-) wide, joint cover plates.[**Shop fabricate interior and exterior corners.**]
1. Joint Style: [**Overlapped, 4 inches (100 mm) wide**] [**Butted with expansion space and 6-inch- (150-mm-) wide, concealed backup plate**] [**Butted with expansion space and 6-inch- (150-mm-) wide, exposed cover plate**] <Insert description>.
 2. Fabricate with scuppers spaced [**10 feet (3 m)**] <Insert dimension> apart, to dimensions required with 4-inch- (100-mm-) wide flanges and base extending 4 inches (100 mm) beyond cant or tapered strip into field of roof. Fasten gravel guard angles to base of scupper.
 3. Fabricate from the Following Materials:
 - a. Copper: [**20 oz./sq. ft. (0.68 mm thick)**] <Insert weight (thickness)>.
 - b. Aluminum: [**0.050 inch (1.27 mm)**] <Insert dimension> thick.
 - c. Stainless Steel: [**0.019 inch (0.48 mm)**] <Insert dimension> thick.
 - d. Zinc-Tin Alloy-Coated Stainless Steel: [**0.018 inch (0.46 mm)**] <Insert dimension> thick.
 - e. Zinc-Tin Alloy-Coated Copper: [**20 oz./sq. ft. (0.68 mm thick)**] <Insert weight (thickness)>.
 - f. Galvanized Steel: [**0.028 inch (0.71 mm)**] <Insert dimension> thick.
 - g. Aluminum-Zinc Alloy-Coated Steel: [**0.028 inch (0.71 mm)**] <Insert dimension> thick.
 - h. Zinc: [**0.048 inch (1.25 mm)**] [**0.059 inch (1.50 mm)**] <Insert dimension> thick.
 - i. Copper-Clad Stainless Steel: [**0.018 inch (0.46 mm)**] <Insert dimension> thick.
- B. Copings: Fabricate in minimum 96-inch- (2400-mm-) long, but not exceeding 12-foot- (3.6-m-) long, sections. Fabricate joint plates of same thickness as copings. Furnish with continuous cleats to support edge of external leg and[**drill elongated holes for fasteners on**] interior leg. Miter corners, [**fasten and seal**] [**solder or weld**] watertight.[**Shop fabricate interior and exterior corners.**]
1. Coping Profile: [**Fig 3-4A**] [**Fig 3-4B**] [**Fig 3-4C**] [**Fig 3-4D**] [**Fig 3-4E**] [**Fig 3-4F**] [**Fig 3-4G**] according to SMACNA's "Architectural Sheet Metal Manual."
 2. Joint Style: [**Butted with expansion space and 6-inch- (150-mm-) wide, concealed backup plate**] [**Butted with expansion space and 6-inch- (150-mm-) wide, exposed cover plate**] <Insert description>.
 3. Fabricate from the Following Materials:
 - a. Copper: [**24 oz./sq. ft. (0.82 mm thick)**] <Insert weight (thickness)>.
 - b. Aluminum: [**0.050 inch (1.27 mm)**] <Insert dimension> thick.
 - c. Stainless Steel: [**0.025 inch (0.64 mm)**] <Insert dimension> thick.
 - d. Zinc-Tin Alloy-Coated Stainless Steel: [**0.024 inch (0.61 mm)**] <Insert dimension> thick.

- e. Zinc-Tin Alloy-Coated Copper: [**24 oz./sq. ft. (0.82 mm thick)**] <Insert weight (thickness)>.
 - f. Galvanized Steel: [**0.040 inch (1.02 mm)**] <Insert dimension> thick.
 - g. Aluminum-Zinc Alloy-Coated Steel: [**0.040 inch (1.02 mm)**] <Insert dimension> thick.
 - h. Zinc: [**0.048 inch (1.25 mm)**] [**0.059 inch (1.50 mm)**] <Insert dimension> thick.
 - i. Copper-Clad Stainless Steel: [**0.027 inch (0.69 mm)**] <Insert dimension> thick.
- C. [Roof] [and] [Roof-to-Wall Transition] [Roof-to-Roof Edge-Flashing (Gravel-Stop) Transition] [Roof-to-Roof Edge-Flashing (Gravel-Stop) and Fascia-Cap Transition] Expansion-Joint Cover: Fabricate from the following materials:[Shop fabricate interior and exterior corners.]
- 1. Copper: [**16 oz./sq. ft. (0.55 mm thick)**] <Insert weight (thickness)>.
 - 2. Aluminum: [**0.050 inch (1.27 mm)**] <Insert dimension> thick.
 - 3. Stainless Steel: [**0.025 inch (0.64 mm)**] <Insert dimension> thick.
 - 4. Zinc-Tin Alloy-Coated Stainless Steel: [**0.024 inch (0.61 mm)**] <Insert dimension> thick.
 - 5. Zinc-Tin Alloy-Coated Copper: [**16 oz./sq. ft. (0.55 mm thick)**] <Insert weight (thickness)>.
 - 6. Galvanized Steel: [**0.034 inch (0.86 mm)**] <Insert dimension> thick.
 - 7. Aluminum-Zinc Alloy-Coated Steel: [**0.034 inch (0.86 mm)**] <Insert dimension> thick.
 - 8. Zinc: [**0.032 inch (0.80 mm)**] [**0.039 inch (1.00 mm)**] <Insert dimension> thick.
 - 9. Copper-Clad Stainless Steel: [**0.027 inch (0.69 mm)**] <Insert dimension> thick.
- D. Base Flashing: [Shop fabricate interior and exterior corners.]Fabricate from the following materials:
- 1. Copper: [**20 oz./sq. ft. (0.68 mm thick)**] <Insert weight (thickness)>.
 - 2. Aluminum: [**0.040 inch (1.02 mm)**] <Insert dimension> thick.
 - 3. Stainless Steel: [**0.019 inch (0.48 mm)**] <Insert dimension> thick.
 - 4. Zinc-Tin Alloy-Coated Stainless Steel: [**0.018 inch (0.46 mm)**] <Insert dimension> thick.
 - 5. Zinc-Tin Alloy-Coated Copper: [**20 oz./sq. ft. (0.68 mm thick)**] <Insert weight (thickness)>.
 - 6. Galvanized Steel: [**0.028 inch (0.71 mm)**] <Insert dimension> thick.
 - 7. Aluminum-Zinc Alloy-Coated Steel: [**0.028 inch (0.71 mm)**] <Insert dimension> thick.
 - 8. Zinc: [**0.032 inch (0.80 mm)**] [**0.039 inch (1.00 mm)**] <Insert dimension> thick.
 - 9. Copper-Clad Stainless Steel: [**0.018 inch (0.46 mm)**] <Insert dimension> thick.
- E. Counterflashing: [Shop fabricate interior and exterior corners.]Fabricate from the following materials:
- 1. Copper: [**16 oz./sq. ft. (0.55 mm thick)**] <Insert weight (thickness)>.
 - 2. Aluminum: [**0.032 inch (0.81 mm)**] <Insert dimension> thick.
 - 3. Stainless Steel: [**0.019 inch (0.48 mm)**] <Insert dimension> thick.

4. Zinc-Tin Alloy-Coated Stainless Steel: [**0.018 inch (0.46 mm)**] <Insert dimension> thick.
5. Zinc-Tin Alloy-Coated Copper: [**16 oz./sq. ft. (0.55 mm thick)**] <Insert weight (thickness)>.
6. Galvanized Steel: [**0.022 inch (0.56 mm)**] <Insert dimension> thick.
7. Aluminum-Zinc Alloy-Coated Steel: [**0.022 inch (0.56 mm)**] <Insert dimension> thick.
8. Zinc: [**0.032 inch (0.80 mm)**] [**0.039 inch (1.00 mm)**] <Insert dimension> thick.
9. Copper-Clad Stainless Steel: [**0.018 inch (0.46 mm)**] <Insert dimension> thick.

F. Flashing Receivers: Fabricate from the following materials:

1. Copper: [**16 oz./sq. ft. (0.55 mm thick)**] <Insert weight (thickness)>.
2. Aluminum: [**0.032 inch (0.81 mm)**] <Insert dimension> thick.
3. Stainless Steel: [**0.016 inch (0.40 mm)**] <Insert dimension> thick.
4. Zinc-Tin Alloy-Coated Stainless Steel: [**0.015 inch (0.38 mm)**] <Insert dimension> thick.
5. Zinc-Tin Alloy-Coated Copper: [**16 oz./sq. ft. (0.55 mm thick)**] <Insert weight (thickness)>.
6. Galvanized Steel: [**0.022 inch (0.56 mm)**] <Insert dimension> thick.
7. Aluminum-Zinc Alloy-Coated Steel: [**0.022 inch (0.56 mm)**] <Insert dimension> thick.
8. Zinc: [**0.032 inch (0.80 mm)**] [**0.039 inch (1.00 mm)**] <Insert dimension> thick.
9. Copper-Clad Stainless Steel: [**0.016 inch (0.40 mm)**] <Insert dimension> thick.

G. Roof-Penetration Flashing: Fabricate from the following materials:

1. Copper: [**16 oz./sq. ft. (0.55 mm thick)**] <Insert weight (thickness)>.
2. Stainless Steel: [**0.019 inch (0.48 mm)**] <Insert dimension> thick.
3. Zinc-Tin Alloy-Coated Stainless Steel: [**0.018 inch (0.46 mm)**] <Insert dimension> thick.
4. Zinc-Tin Alloy-Coated Copper: [**16 oz./sq. ft. (0.55 mm thick)**] <Insert weight (thickness)>.
5. Galvanized Steel: [**0.028 inch (0.71 mm)**] <Insert dimension> thick.
6. Aluminum-Zinc Alloy-Coated Steel: [**0.028 inch (0.71 mm)**] <Insert dimension> thick.
7. Zinc: [**0.032 inch (0.80 mm)**] [**0.039 inch (1.00 mm)**] <Insert dimension> thick.
8. Copper-Clad Stainless Steel: [**0.018 inch (0.46 mm)**] <Insert dimension> thick.

H. Roof-Drain Flashing: Fabricate from the following materials:

1. Copper: [**12 oz./sq. ft. (0.41 mm thick)**] <Insert weight (thickness)>.
2. Stainless Steel: [**0.016 inch (0.40 mm)**] <Insert dimension> thick.
3. Zinc-Tin Alloy-Coated Stainless Steel: [**0.015 inch (0.38 mm)**] <Insert dimension> thick.
4. Copper-Clad Stainless Steel: [**0.016 inch (0.40 mm)**] <Insert dimension> thick.

2.9 STEEP-SLOPE ROOF SHEET METAL FABRICATIONS

A. Apron, Step, Cricket, and Backer Flashing: Fabricate from the following materials:

1. Copper: [**16 oz./sq. ft. (0.55 mm thick)**] <Insert weight (thickness)>.
2. Aluminum: [**0.032 inch (0.81 mm)**] <Insert dimension> thick.
3. Stainless Steel: [**0.016 inch (0.40 mm)**] <Insert dimension> thick.
4. Zinc-Tin Alloy-Coated Stainless Steel: [**0.015 inch (0.38 mm)**] <Insert dimension> thick.
5. Zinc-Tin Alloy-Coated Copper: [**16 oz./sq. ft. (0.55 mm thick)**] <Insert weight (thickness)>.
6. Galvanized Steel: [**0.022 inch (0.56 mm)**] <Insert dimension> thick.
7. Aluminum-Zinc Alloy-Coated Steel: [**0.022 inch (0.56 mm)**] <Insert dimension> thick.
8. Zinc: [**0.032 inch (0.80 mm)**] [**0.039 inch (1.00 mm)**] <Insert dimension> thick.
9. Copper-Clad Stainless Steel: [**0.016 inch (0.40 mm)**] <Insert dimension> thick.

B. Valley Flashing: Fabricate from the following materials:

1. Copper: [**16 oz./sq. ft. (0.55 mm thick)**] <Insert weight (thickness)>.
2. Stainless Steel: [**0.019 inch (0.48 mm)**] <Insert dimension> thick.
3. Zinc-Tin Alloy-Coated Stainless Steel: [**0.018 inch (0.46 mm)**] <Insert dimension> thick.
4. Zinc-Tin Alloy-Coated Copper: [**16 oz./sq. ft. (0.55 mm thick)**] <Insert weight (thickness)>.
5. Galvanized Steel: [**0.028 inch (0.71 mm)**] <Insert dimension> thick.
6. Aluminum-Zinc Alloy-Coated Steel: [**0.028 inch (0.71 mm)**] <Insert dimension> thick.
7. Zinc: [**0.032 inch (0.80 mm)**] [**0.039 inch (1.00 mm)**] <Insert dimension> thick.
8. Copper-Clad Stainless Steel: [**0.018 inch (0.46 mm)**] <Insert dimension> thick.

C. Drip Edges: Fabricate from the following materials:

1. Copper: [**16 oz./sq. ft. (0.55 mm thick)**] <Insert weight (thickness)>.
2. Aluminum: [**0.032 inch (0.81 mm)**] <Insert dimension> thick.
3. Stainless Steel: [**0.016 inch (0.40 mm)**] <Insert dimension> thick.
4. Zinc-Tin Alloy-Coated Stainless Steel: [**0.015 inch (0.38 mm)**] <Insert dimension> thick.
5. Zinc-Tin Alloy-Coated Copper: [**16 oz./sq. ft. (0.55 mm thick)**] <Insert weight (thickness)>.
6. Galvanized Steel: [**0.022 inch (0.56 mm)**] <Insert dimension> thick.
7. Aluminum-Zinc Alloy-Coated Steel: [**0.022 inch (0.56 mm)**] <Insert dimension> thick.
8. Zinc: [**0.032 inch (0.80 mm)**] [**0.039 inch (1.00 mm)**] <Insert dimension> thick.
9. Copper-Clad Stainless Steel: [**0.016 inch (0.40 mm)**] <Insert dimension> thick.

D. Eave, Rake[, Ridge, and Hip] Flashing: Fabricate from the following materials:

1. Copper: [**16 oz./sq. ft. (0.55 mm thick)**] <Insert weight (thickness)>.
2. Aluminum: [**0.032 inch (0.81 mm)**] <Insert dimension> thick.

3. Stainless Steel: [**0.016 inch (0.40 mm)**] <Insert dimension> thick.
 4. Zinc-Tin Alloy-Coated Stainless Steel: [**0.015 inch (0.38 mm)**] <Insert dimension> thick.
 5. Zinc-Tin Alloy-Coated Copper: [**16 oz./sq. ft. (0.55 mm thick)**] <Insert weight (thickness)>.
 6. Galvanized Steel: [**0.022 inch (0.56 mm)**] <Insert dimension> thick.
 7. Aluminum-Zinc Alloy-Coated Steel: [**0.022 inch (0.56 mm)**] <Insert dimension> thick.
 8. Zinc: [**0.032 inch (0.80 mm)**] [**0.039 inch (1.00 mm)**] <Insert dimension> thick.
 9. Copper-Clad Stainless Steel: [**0.016 inch (0.40 mm)**] <Insert dimension> thick.
- E. Counterflashing: [**Shop fabricate interior and exterior corners.**]Fabricate from the following materials:
1. Copper: [**16 oz./sq. ft. (0.55 mm thick)**] <Insert weight (thickness)>.
 2. Aluminum: [**0.032 inch (0.81 mm)**] <Insert dimension> thick.
 3. Stainless Steel: [**0.019 inch (0.48 mm)**] <Insert dimension> thick.
 4. Zinc-Tin Alloy-Coated Stainless Steel: [**0.018 inch (0.46 mm)**] <Insert dimension> thick.
 5. Zinc-Tin Alloy-Coated Copper: [**16 oz./sq. ft. (0.55 mm thick)**] <Insert weight (thickness)>.
 6. Galvanized Steel: [**0.022 inch (0.56 mm)**] <Insert dimension> thick.
 7. Aluminum-Zinc Alloy-Coated Steel: [**0.022 inch (0.56 mm)**] <Insert dimension> thick.
 8. Zinc: [**0.032 inch (0.80 mm)**] [**0.039 inch (1.00 mm)**] <Insert dimension> thick.
 9. Copper-Clad Stainless Steel: [**0.018 inch (0.46 mm)**] <Insert dimension> thick.
- F. Flashing Receivers: Fabricate from the following materials:
1. Copper: [**16 oz./sq. ft. (0.55 mm thick)**] <Insert weight (thickness)>.
 2. Aluminum: [**0.032 inch (0.81 mm)**] <Insert dimension> thick.
 3. Stainless Steel: [**0.016 inch (0.40 mm)**] <Insert dimension> thick.
 4. Zinc-Tin Alloy-Coated Stainless Steel: [**0.015 inch (0.38 mm)**] <Insert dimension> thick.
 5. Zinc-Tin Alloy-Coated Copper: [**16 oz./sq. ft. (0.55 mm thick)**] <Insert weight (thickness)>.
 6. Galvanized Steel: [**0.022 inch (0.56 mm)**] <Insert dimension> thick.
 7. Aluminum-Zinc Alloy-Coated Steel: [**0.022 inch (0.56 mm)**] <Insert dimension> thick.
 8. Zinc: [**0.032 inch (0.80 mm)**] [**0.039 inch (1.00 mm)**] <Insert dimension> thick.
 9. Copper-Clad Stainless Steel: [**0.016 inch (0.40 mm)**] <Insert dimension> thick.
- G. Roof-Penetration Flashing: Fabricate from the following materials:
1. Copper: [**16 oz./sq. ft. (0.55 mm thick)**] <Insert weight (thickness)>.
 2. Stainless Steel: [**0.019 inch (0.48 mm)**] <Insert dimension> thick.
 3. Zinc-Tin Alloy-Coated Stainless Steel: [**0.018 inch (0.46 mm)**] <Insert dimension> thick.
 4. Zinc-Tin Alloy-Coated Copper: [**16 oz./sq. ft. (0.55 mm thick)**] <Insert weight (thickness)>.

5. Galvanized Steel: **[0.028 inch (0.71 mm)]** <Insert dimension> thick.
6. Aluminum-Zinc Alloy-Coated Steel: **[0.028 inch (0.71 mm)]** <Insert dimension> thick.
7. Zinc: **[0.032 inch (0.80 mm)] [0.039 inch (1.00 mm)]** <Insert dimension> thick.
8. Copper-Clad Stainless Steel: **[0.018 inch (0.46 mm)]** <Insert dimension> thick.

2.10 WALL SHEET METAL FABRICATIONS

- A. Through-Wall Flashing: Fabricate continuous flashings in minimum **96-inch-** (2400-mm-) long, but not exceeding **12-foot-** (3.6-m-) long, sections, under copings, and at shelf angles. Fabricate discontinuous lintel, sill, and similar flashings to extend **6 inches** (150 mm) beyond each side of wall openings; and form with **2-inch-** (50-mm-) high, end dams. Fabricate from the following materials:

1. Copper: **[16 oz./sq. ft. (0.55 mm thick)]** <Insert weight (thickness)>.
2. Stainless Steel: **[0.016 inch (0.40 mm)]** <Insert dimension> thick.
3. Zinc-Tin Alloy-Coated Stainless Steel: **[0.015 inch (0.38 mm)]** <Insert dimension> thick.
4. Zinc-Tin Alloy-Coated Copper: **[16 oz./sq. ft. (0.55 mm thick)]** <Insert weight (thickness)>.
5. Zinc: **[0.032 inch (0.80 mm)] [0.039 inch (1.00 mm)]** <Insert dimension> thick.
6. Copper-Clad Stainless Steel: **[0.016 inch (0.40 mm)]** <Insert dimension> thick.

- B. Opening Flashings in Frame Construction: Fabricate head, sill, **[jamb,]** and similar flashings to extend **[4 inches (100 mm)]** <Insert dimension> beyond wall openings. Form head and sill flashing with **2-inch-** (50-mm-) high, end dams. Fabricate from the following materials:

1. Copper: **[16 oz./sq. ft. (0.55 mm thick)]** <Insert weight (thickness)>.
2. Aluminum: **[0.032 inch (0.81 mm)]** <Insert dimension> thick.
3. Stainless Steel: **[0.016 inch (0.40 mm)]** <Insert dimension> thick.
4. Zinc-Tin Alloy-Coated Stainless Steel: **[0.015 inch (0.38 mm)]** <Insert dimension> thick.
5. Zinc-Tin Alloy-Coated Copper: **[16 oz./sq. ft. (0.55 mm thick)]** <Insert weight (thickness)>.
6. Galvanized Steel: **[0.022 inch (0.56 mm)]** <Insert dimension> thick.
7. Aluminum-Zinc Alloy-Coated Steel: **[0.022 inch (0.56 mm)]** <Insert dimension> thick.
8. Zinc: **[0.032 inch (0.80 mm)] [0.039 inch (1.00 mm)]** <Insert dimension> thick.
9. Copper-Clad Stainless Steel: **[0.016 inch (0.40 mm)]** <Insert dimension> thick.

- C. Wall Expansion-Joint Cover: Fabricate from the following materials:

1. Copper: **[16 oz./sq. ft. (0.55 mm thick)]** <Insert weight (thickness)>.
2. Aluminum: **[0.040 inch (1.02 mm)]** <Insert dimension> thick.
3. Stainless Steel: **[0.019 inch (0.48 mm)]** <Insert dimension> thick.
4. Zinc-Tin Alloy-Coated Stainless Steel: **[0.018 inch (0.46 mm)]** <Insert dimension> thick.

5. Zinc-Tin Alloy-Coated Copper: [**16 oz./sq. ft. (0.55 mm thick)**] <Insert weight (thickness)>.
6. Galvanized Steel: [**0.028 inch (0.71 mm)**] <Insert dimension> thick.
7. Aluminum-Zinc Alloy-Coated Steel: [**0.028 inch (0.71 mm)**] <Insert dimension> thick.
8. Zinc: [**0.032 inch (0.80 mm)**] [**0.039 inch (1.00 mm)**] <Insert dimension> thick.
9. Copper-Clad Stainless Steel: [**0.018 inch (0.46 mm)**] <Insert dimension> thick.

2.11 MISCELLANEOUS SHEET METAL FABRICATIONS

A. Equipment Support Flashing: Fabricate from the following materials:

1. Copper: [**16 oz./sq. ft. (0.55 mm thick)**] <Insert weight (thickness)>.
2. Stainless Steel: [**0.019 inch (0.48 mm)**] <Insert dimension> thick.
3. Zinc-Tin Alloy-Coated Stainless Steel: [**0.018 inch (0.46 mm)**] <Insert dimension> thick.
4. Zinc-Tin Alloy-Coated Copper: [**16 oz./sq. ft. (0.55 mm thick)**] <Insert weight (thickness)>.
5. Galvanized Steel: [**0.028 inch (0.71 mm)**] <Insert dimension> thick.
6. Aluminum-Zinc Alloy-Coated Steel: [**0.028 inch (0.71 mm)**] <Insert dimension> thick.
7. Copper-Clad Stainless Steel: [**0.018 inch (0.46 mm)**] <Insert dimension> thick.

B. Overhead-Piping Safety Pans: Fabricate from the following materials:

1. Copper: [**24 oz./sq. ft. (0.82 mm thick)**] <Insert weight (thickness)>.
2. Stainless Steel: [**0.025 inch (0.64 mm)**] <Insert dimension> thick.
3. Zinc-Tin Alloy-Coated Stainless Steel: [**0.024 inch (0.61 mm)**] <Insert dimension> thick.
4. Zinc-Tin Alloy-Coated Copper: [**24 oz./sq. ft. (0.82 mm thick)**] <Insert weight (thickness)>.
5. Galvanized Steel: [**0.040 inch (1.02 mm)**] <Insert dimension> thick.
6. Aluminum-Zinc Alloy-Coated Steel: [**0.040 inch (1.02 mm)**] <Insert dimension> thick.
7. Copper-Clad Stainless Steel: [**0.027 inch (0.69 mm)**] <Insert dimension> thick.

PART 3 - EXECUTION

3.1 EXAMINATION

- #### A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, substrate, and other conditions affecting performance of the Work.
1. Verify compliance with requirements for installation tolerances of substrates.
 2. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.

3. Verify that air- or water-resistant barriers have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 UNDERLAYMENT INSTALLATION

A. Felt Underlayment: Install felt underlayment, wrinkle free, using adhesive to minimize use of mechanical fasteners under sheet metal flashing and trim. Apply in shingle fashion to shed water, with lapped joints of not less than **2 inches** (50 mm).

B. Synthetic Underlayment: Install synthetic underlayment, wrinkle free, according to manufacturers' written instructions, and using adhesive where possible to minimize use of mechanical fasteners under sheet metal.

C. Self-Adhering Sheet Underlayment: Install self-adhering sheet underlayment, wrinkle free. Prime substrate if recommended by underlayment manufacturer. Comply with temperature restrictions of underlayment manufacturer for installation; use primer for installing underlayment at low temperatures. Apply in shingle fashion to shed water, with end laps of not less than **6 inches** (150 mm) staggered **24 inches** (600 mm) between courses. Overlap side edges not less than **3-1/2 inches** (90 mm). Roll laps and edges with roller. Cover underlayment within 14 days.

D. Apply slip sheet, wrinkle free, [**over underlayment**] [**directly on substrate**] <Insert **requirement**> before installing sheet metal flashing and trim.

3.3 INSTALLATION, GENERAL

A. General: Anchor sheet metal flashing and trim and other components of the Work securely in place, with provisions for thermal and structural movement. Use fasteners[, **solder**], protective coatings, separators, sealants, and other miscellaneous items as required to complete sheet metal flashing and trim system.

1. Install sheet metal flashing and trim true to line, levels, and slopes. Provide uniform, neat seams with minimum exposure of solder, welds, and sealant.

2. Install sheet metal flashing and trim to fit substrates and to result in watertight performance. Verify shapes and dimensions of surfaces to be covered before fabricating sheet metal.

3. Space cleats not more than **12 inches** (300 mm) apart. Attach each cleat with at least two fasteners. Bend tabs over fasteners.

4. Install exposed sheet metal flashing and trim with limited oil canning, and free of buckling and tool marks.

5. Torch cutting of sheet metal flashing and trim is not permitted.

6. Do not use graphite pencils to mark metal surfaces.

B. Metal Protection: Where dissimilar metals contact each other, or where metal contacts pressure-treated wood or other corrosive substrates, protect against galvanic action or corrosion by painting contact surfaces with bituminous coating or by other permanent

separation as recommended by sheet metal manufacturer or cited sheet metal standard.

1. Coat concealed side of **[uncoated-aluminum] [and] [stainless-steel]** sheet metal flashing and trim with bituminous coating where flashing and trim contact wood, ferrous metal, or cementitious construction.
 2. Underlayment: Where installing sheet metal flashing and trim directly on cementitious or wood substrates, install underlayment and cover with slip sheet.
- C. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at maximum of **[10 feet (3 m)] <Insert dimension>** with no joints within **24 inches (600 mm)** of corner or intersection.
1. Form expansion joints of intermeshing hooked flanges, not less than **1 inch (25 mm)** deep, filled with sealant concealed within joints.
 2. Use lapped expansion joints only where indicated on Drawings.
- D. Fasteners: Use fastener sizes that penetrate **[wood blocking or sheathing not less than 1-1/4 inches (32 mm) for nails and not less than 3/4 inch (19 mm) for wood screws] [substrate not less than recommended by fastener manufacturer to achieve maximum pull-out resistance] <Insert size requirement>**.
- E. Conceal fasteners and expansion provisions where possible in exposed work and locate to minimize possibility of leakage. Cover and seal fasteners and anchors as required for a tight installation.
- F. Seal joints as required for watertight construction.
1. Use sealant-filled joints unless otherwise indicated. Embed hooked flanges of joint members not less than **1 inch (25 mm)** into sealant. Form joints to completely conceal sealant. When ambient temperature at time of installation is between **40 and 70 deg F (4 and 21 deg C)**, set joint members for 50 percent movement each way. Adjust setting proportionately for installation at higher ambient temperatures. Do not install sealant-type joints at temperatures below **40 deg F (4 deg C)**.
 2. Prepare joints and apply sealants to comply with requirements in Section 079200 "Joint Sealants."
- G. Soldered Joints: Clean surfaces to be soldered, removing oils and foreign matter. Pre-tin edges of sheets with solder to width of **1-1/2 inches (38 mm)**; however, reduce pre-tinning where pre-tinned surface would show in completed Work.
1. Do not solder **[metallic-coated steel] [and] [aluminum]** sheet.
 2. Do not pre-tin **[zinc-tin alloy-coated stainless steel] [and] [zinc-tin alloy-coated copper]**.
 3. Do not use torches for soldering.
 4. Heat surfaces to receive solder, and flow solder into joint. Fill joint completely. Completely remove flux and spatter from exposed surfaces.
 5. Stainless-Steel Soldering: Tin edges of uncoated sheets, using solder for stainless steel and acid flux. Promptly remove acid flux residue from metal after

- tinning and soldering. Comply with solder manufacturer's recommended methods for cleaning and neutralization.
6. Copper Soldering: Tin edges of uncoated sheets, using solder for copper.
 7. Copper-Clad Stainless-Steel Soldering: Tin edges of uncoated sheets, using solder for copper-clad stainless steel.

H. Rivets: Rivet joints in **[uncoated aluminum]** **[zinc]** where necessary for strength.

3.4 ROOF-DRAINAGE SYSTEM INSTALLATION

A. General: Install sheet metal roof-drainage items to produce complete roof-drainage system according to cited sheet metal standard unless otherwise indicated. Coordinate installation of roof perimeter flashing with installation of roof-drainage system.

B. Hanging Gutters: Join sections with **[riveted and soldered joints]** **[or]** **[joints sealed with sealant]**. Provide for thermal expansion. Attach gutters at eave or fascia to firmly anchor gutters in position. Provide end closures and seal watertight with sealant. Slope to downspouts.

1. Fasten gutter spacers to front and back of gutter.
2. Anchor and loosely lock back edge of gutter to continuous **[cleat]** **[eave or apron flashing]**.
3. Anchor back of gutter that extends onto roof deck with cleats spaced not more than **[24 inches (600 mm)]** **<Insert dimension>** apart.
4. Anchor gutter with **[gutter brackets]** **[straps]** **[twisted straps]** spaced not more than **[24 inches (600 mm)]** **[30 inches (760 mm)]** **[36 inches (910 mm)]** **<Insert dimension>** apart to roof deck, unless otherwise indicated, and loosely lock to front gutter bead.
5. Install gutter with expansion joints at locations indicated, but not exceeding, **[50 feet (15.24 m)]** **<Insert dimension>** apart. Install expansion-joint caps.
6. Install continuous gutter screens on gutters with noncorrosive fasteners, **[removable]** **[hinged to swing open]** for cleaning gutters.

C. Built-in Gutters: Join sections with **[riveted and soldered joints]** **[or]** **[joints sealed with sealant]**. Provide for thermal expansion. Slope to downspouts. Provide end closures and seal watertight with sealant.

1. Install underlayment layer in built-in gutter trough and extend to drip edge at eaves and under underlayment on roof sheathing. Lap sides minimum of **2 inches (50 mm)** over underlying course. Lap ends minimum of **4 inches (100 mm)**. Stagger end laps between succeeding courses at least **72 inches (1830 mm)**. Fasten with roofing nails. Install slip sheet over underlayment.
2. Anchor and loosely lock back edge of gutter to continuous **[cleat]** **[eave or apron flashing]**.
3. Anchor back of gutter that extends onto roof deck with cleats spaced not more than **[18 inches (460 mm)]** **<Insert dimension>** apart.
4. Install gutter with expansion joints at locations indicated, but not exceeding, **[50 feet (15.24 m)]** **<Insert dimension>** apart. Install expansion-joint caps.

- D. Downspouts: Join sections with **1-1/2-inch (38-mm)** telescoping joints.
1. Provide hangers with fasteners designed to hold downspouts securely to walls. Locate hangers at top and bottom and at approximately **60 inches (1500 mm)** o.c.
 2. Provide elbows at base of downspout to direct water away from building.
 3. Connect downspouts to underground drainage system.
- E. Splash Pans: Install where downspouts discharge on [**low-slope roofs**] <Insert **surface**>. Set in [**asphalt roofing cement**] [**or**] [**elastomeric sealant**] compatible with the substrate.
- F. Parapet Scuppers: Continuously support scupper, set to correct elevation, and seal flanges to interior wall face, over cants or tapered edge strips, and under roofing membrane.
1. Anchor scupper closure trim flange to exterior wall and [**solder**] [**or**] [**seal with elastomeric sealant**] to scupper.
 2. Loosely lock front edge of scupper with conductor head.
 3. [**Solder**] [**or**] [**seal with elastomeric sealant**] exterior wall scupper flanges into back of conductor head.
- G. Conductor Heads: Anchor securely to wall, with elevation of conductor head rim at minimum of **1 inch (25 mm)** below [**scupper**] [**or**] [**gutter**] discharge.
- H. Expansion-Joint Covers: Install expansion-joint covers at locations and of configuration indicated. Lap joints minimum of **4 inches (100 mm)** in direction of water flow.

3.5 ROOF FLASHING INSTALLATION

- A. General: Install sheet metal flashing and trim to comply with performance requirements[, **sheet metal manufacturer's written installation instructions,**] and cited sheet metal standard. Provide concealed fasteners where possible, and set units true to line, levels, and slopes. Install work with laps, joints, and seams that are permanently watertight and weather resistant.
- B. Roof Edge Flashing: Anchor to resist uplift and outward forces according to recommendations in cited sheet metal standard unless otherwise indicated. Interlock bottom edge of roof edge flashing with continuous cleat anchored to substrate at [**staggered 3-inch (75-mm)**] <Insert **spacing**> centers.
- C. Roof Edge Flashing: Anchor to resist uplift and outward forces according to recommendations in FM Global Property Loss Prevention Data Sheet 1-49 for FM Approvals' listing for required windstorm classification.
- D. Copings: Anchor to resist uplift and outward forces according to recommendations in cited sheet metal standard unless otherwise indicated.
1. Interlock exterior bottom edge of coping with continuous cleat anchored to substrate at [**24-inch (600-mm)**] [**16-inch (400-mm)**] <Insert **dimension**> centers.

2. Anchor interior leg of coping with washers and screw fasteners through slotted holes at **[24-inch (600-mm)] <Insert dimension>** centers.
- E. Copings: Anchor to resist uplift and outward forces according to recommendations in FM Global Property Loss Prevention Data Sheet 1-49 for specified FM Approvals' listing for required windstorm classification.
- F. Pipe or Post Counterflashing: Install counterflashing umbrella with close-fitting collar with top edge flared for elastomeric sealant, extending minimum of **4 inches (100 mm)** over base flashing. Install stainless-steel draw band and tighten.
- G. Counterflashing: Coordinate installation of counterflashing with installation of base flashing. Insert counterflashing in reglets or receivers and fit tightly to base flashing. Extend counterflashing **4 inches (100 mm)** over base flashing. Lap counterflashing joints minimum of **4 inches (100 mm)**. Secure in waterproof manner by means of **[snap-in installation and sealant or lead wedges and sealant] [interlocking folded seam or blind rivets and sealant] [anchor and washer at 36-inch (910-mm) centers]** **<Insert requirement>** unless otherwise indicated.
- H. Roof-Penetration Flashing: Coordinate installation of roof-penetration flashing with installation of roofing and other items penetrating roof. Seal with **[elastomeric] [butyl]** sealant and clamp flashing to pipes that penetrate roof.

3.6 WALL FLASHING INSTALLATION

- A. General: Install sheet metal wall flashing to intercept and exclude penetrating moisture according to cited sheet metal standard unless otherwise indicated. Coordinate installation of wall flashing with installation of wall-opening components such as windows, doors, and louvers.
- B. Through-Wall Flashing: Installation of through-wall flashing is specified in **[Section 042000 "Unit Masonry."]** **[Section 044200 "Exterior Stone Cladding."]** **[Section <Insert Section number> "<Insert Section title>."]**
- C. Reglets: Installation of reglets is specified in **[Section 033000 "Cast-in-Place Concrete."]** **[Section 042000 "Unit Masonry."]** **[Section <Insert Section number> "<Insert Section title>."]**
- D. Opening Flashings in Frame Construction: Install continuous head, sill, **[jamb,]** and similar flashings to extend **[4 inches (100 mm)] <Insert dimension>** beyond wall openings.

3.7 MISCELLANEOUS FLASHING INSTALLATION

- A. Equipment Support Flashing: Coordinate installation of equipment support flashing with installation of roofing and equipment. Weld or seal flashing with elastomeric sealant to equipment support member.

- B. Overhead-Piping Safety Pans: Suspend pans from structure above, independent of other overhead items such as equipment, piping, and conduit, unless otherwise indicated on Drawings. Pipe and install drain line to plumbing waste or drainage system.

3.8 ERECTION TOLERANCES

- A. Installation Tolerances: Shim and align sheet metal flashing and trim within installed tolerance of **1/4 inch in 20 feet** (6 mm in 6 m) on slope and location lines indicated on Drawings and within **1/8-inch** (3-mm) offset of adjoining faces and of alignment of matching profiles.
- B. Installation Tolerances: Shim and align sheet metal flashing and trim within installed tolerances specified in MCA's "Guide Specification for Residential Metal Roofing."

3.9 CLEANING AND PROTECTION

- A. Protection: Advise Contractor of required procedures for surveillance and protection of flashings and sheet metal work during construction, to ensure that work will be without damage or deterioration, other than natural weathering at time of substantial completion.
- B. Clean exposed metal surfaces of substances that interfere with uniform oxidation and weathering.
- C. Clean and neutralize flux materials. Clean off excess solder.
- D. Clean off excess sealants.
- E. Remove temporary protective coverings and strippable films as sheet metal flashing and trim are installed unless otherwise indicated in manufacturer's written installation instructions. On completion of sheet metal flashing and trim installation, remove unused materials and clean finished surfaces as recommended by sheet metal flashing and trim manufacturer. Maintain sheet metal flashing and trim in clean condition during construction.
- F. Replace sheet metal flashing and trim that have been damaged or that have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 076200

SECTION 077100 - ROOF SPECIALTIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Copings.
2. Roof-edge flashings.
3. Roof-edge drainage systems.
4. Reglets and counterflashings.

B. Related Sections:

1. **[Section 061000 "Rough Carpentry"] [Section 061053 "Miscellaneous Rough Carpentry"]** for wood nailers, curbs, and blocking.
2. Section 074113.13 "Formed Metal Roof Panels" for roof-edge drainage-system components provided by metal-roof-panel manufacturer.
3. Section 074113.16 "Standing-Seam Metal Roof Panels" for roof-edge drainage-system components provided by metal-roof-panel manufacturer.
4. Section 074113.19 "Batten-Seam Metal Roof Panels" for roof-edge drainage-system components provided by metal-roof-panel manufacturer.
5. Section 074113.23 "Insulated Metal Roof Panels" for roof-edge drainage-system components provided by metal-roof-panel manufacturer.
6. Section 076200 "Sheet Metal Flashing and Trim" for custom- and site-fabricated sheet metal flashing and trim.
7. Section 077129 "Manufactured Roof Expansion Joints" for manufactured roof expansion-joint cover assemblies.
8. Section 077200 "Roof Accessories" for set-on-type curbs, equipment supports, roof hatches, vents, and other manufactured roof accessory units.
9. Section 079200 "Joint Sealants" for field-applied sealants between roof specialties and adjacent materials.
10. Section 079500 "Expansion Control" for manufactured sheet metal expansion-joint covers.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 PERFORMANCE REQUIREMENTS

- A. General Performance: Roof specialties shall withstand exposure to weather and resist thermally induced movement without failure, rattling, leaking, or fastener disengagement due to defective manufacture, fabrication, installation, or other defects in construction.
- B. FM Approvals' Listing: Manufacture and install [**copings**] [**roof-edge flashings**] that are listed in FM Approvals' "RoofNav" and approved for windstorm classification, [**Class 1-60**] [**Class 1-75**] [**Class 1-90**] [**Class 1-105**] [**Class 1-120**] <Insert class>. Identify materials with FM Approvals' markings.
- C. SPRI Wind Design Standard: Manufacture and install [**copings**] [**roof-edge flashings**] tested according to SPRI ES-1 and capable of resisting the following design pressures:
 - 1. Design Pressure: [**As indicated on Drawings**] <Insert design pressure>.
- D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes to prevent buckling, opening of joints, hole elongation, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Provide clips that resist rotation and avoid shear stress as a result of thermal movements. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 - 1. Temperature Change (Range): [**120 deg F (67 deg C), ambient; 180 deg F (100 deg C)**] <Insert temperature range>, material surfaces.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For roof specialties. Include plans, elevations, expansion-joint locations, keyed details, and attachments to other work. Distinguish between plant- and field-assembled work. Include the following:
 - 1. Details for expansion and contraction; locations of expansion joints, including direction of expansion and contraction.
 - 2. Pattern of seams and layout of fasteners, cleats, clips, and other attachments.
 - 3. Details of termination points and assemblies, including fixed points.
 - 4. Details of special conditions.
- C. Coordination Drawings: Submit coordination drawings for items interfacing with or supporting mechanical or electrical equipment, ductwork, piping, or conduit. Indicate dimensions and locations of items provided under this section, together with relationships and methods of attachment to adjacent construction and to mechanical/electrical items.

- D. Samples for Initial Selection: For each type of roof specialty indicated with factory-applied color finishes.
- E. Samples for Verification: For **[copings] [roof-edge flashings] [roof-edge drainage systems] [reglets and counterflashings]** made from **12-inch (300-mm)** lengths of full-size components including fasteners, cover joints, accessories, and attachments.

1.5 INFORMATIONAL SUBMITTALS

- A. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for **[copings] [and] [roof-edge flashings]**.
- B. Warranty: Sample of special warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For roofing specialties to include in maintenance manuals.

1.7 QUALITY ASSURANCE

- A. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
 - 1. Build mockup of typical roof edge, including **[fascia] [gutter] [and] [downspout] <Insert item>**, approximately **[10 feet (3.0 m)] <Insert dimension>** long, including supporting construction, seams, attachments, **[underlayment,]** and accessories.
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
 - 3. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- B. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager] <Insert location>**.
 - 1. Meet with DEN Project Manager, Owner's insurer if applicable, Installer, and installers whose work interfaces with or affects roof specialties including installers of roofing materials and accessories.
 - 2. Examine substrate conditions for compliance with requirements, including flatness and attachment to structural members.
 - 3. Review special roof details, roof drainage, and condition of other construction that will affect roof specialties.
- C. Standards: Comply with SMACNA "Architectural Sheet Metal Manual" details for fabrication of units, including flanges and cap flashing to coordinate with type of roofing indicated. Comply with "NRCA Roofing and Waterproofing Manual" details for installation of units, and other standards noted in this Section.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Do not store roof specialties in contact with other materials that might cause staining, denting, or other surface damage. Store roof specialties away from uncured concrete and masonry.
- B. Protect strippable protective covering on roof specialties from exposure to sunlight and high humidity, except to extent necessary for the period of roof specialties installation.

1.9 WARRANTY

- A. Special Warranty on Painted Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace roof specialties that show evidence of deterioration of factory-applied finishes within specified warranty period.
 - 1. Fluoropolymer Finish: Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 - 2. Finish Warranty Period: Minimum [20] [10] <Insert number> years from date of Substantial Completion.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Provide manufacturers' standard units, modified as necessary to comply with requirements. Shop fabricate each unit to greatest extent possible.

2.2 EXPOSED METALS

- A. Copper Sheet: ASTM B 370, cold-rolled copper sheet, H00 or H01 temper.
 - 1. Non-Patinated Exposed Finish: Mill.
 - 2. Pre-Patinated Copper-Sheet Finish: Pre-patinated according to ASTM B 882.

- B. Aluminum Sheet: **ASTM B 209** (ASTM B 209M), alloy as standard with manufacturer for finish required, with temper to suit forming operations and performance required.
1. Surface: [**Smooth, flat**] [**Embossed**] finish.
 2. Mill Finish: As manufactured.
 3. Exposed Coil-Coated Finishes: Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - a. Two-Coat Fluoropolymer: AAMA 620. System consisting of primer and fluoropolymer color topcoat containing not less than 70 percent PVDF resin by weight.
 - b. Three-Coat Fluoropolymer: AAMA 620. System consisting of primer, fluoropolymer color coat, and clear fluoropolymer topcoat, with both color coat and clear topcoat containing not less than 70 percent PVDF resin by weight.
 - c. Concealed Surface: Pretreat with manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with a minimum total dry film thickness of **0.5 mil** (0.013 mm).
 4. Clear Anodic Finish, Coil Coated: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.
 5. Color Anodic Finish, Coil Coated: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or thicker.
- C. Aluminum Extrusions: **ASTM B 221** (ASTM B 221M), alloy and temper recommended by manufacturer for type of use and finish indicated, finished as follows:
1. Exposed High-Performance Organic Finish: Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - a. Two-Coat Fluoropolymer: [**AAMA 2604**] [**AAMA 2605**]. System consisting of primer and fluoropolymer color topcoat containing not less than 70 percent PVDF resin by weight.
 - b. Three-Coat Fluoropolymer: AAMA 2605. System consisting of primer, fluoropolymer color coat, and clear fluoropolymer topcoat, with both color coat and clear topcoat containing not less than 70 percent PVDF resin by weight.
 2. Clear Anodic Finish, Coil Coated: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.
 3. Color Anodic Finish, Coil Coated: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or thicker.
- D. Stainless-Steel Sheet: ASTM A 240/A 240M or ASTM A 666, Type 304.
- E. Zinc-Coated (Galvanized) Steel Sheet: ASTM A 653/A 653M, **G90** (Z275) coating designation.

1. Surface: [**Smooth, flat**] [**Embossed**] finish.
2. Mill-Phosphatized Finish: Manufacturer's standard for field painting.
3. Exposed Coil-Coated Finishes: Prepainted by the coil-coating process to comply with ASTM A 755/A 755M. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - a. Two-Coat Fluoropolymer: AAMA 621. System consisting of primer and fluoropolymer color topcoat containing not less than 70 percent PVDF resin by weight.
 - b. Three-Coat Fluoropolymer: AAMA 621. System consisting of primer, fluoropolymer color coat, and clear fluoropolymer topcoat, with both color coat and clear topcoat containing not less than 70 percent PVDF resin by weight.

2.3 CONCEALED METALS

- A. Aluminum Sheet: [ASTM B 209](#) (ASTM B 209M), alloy and temper recommended by manufacturer for type of use and structural performance indicated, mill finished.
- B. Aluminum Extrusions: [ASTM B 221](#) (ASTM B 221M), alloy and temper recommended by manufacturer for type of use and structural performance indicated, mill finished.
- C. Stainless-Steel Sheet: ASTM A 240/A 240M or ASTM A 666, Type 304.
- D. Zinc-Coated (Galvanized) Steel Sheet: ASTM A 653/A 653M, [G90](#) ([Z275](#)) coating designation.

2.4 UNDERLAYMENT MATERIALS

- A. Felt: ASTM D 226, Type II (No. 30), asphalt-saturated organic felt, nonperforated.
- B. Self-Adhering, High-Temperature Sheet: Minimum [30 to 40 mils](#) (0.76 to 1.0 mm) thick, consisting of slip-resisting polyethylene-film top surface laminated to layer of butyl or SBS-modified asphalt adhesive, with release-paper backing; cold applied. Provide primer when recommended by underlayment manufacturer.
 1. Thermal Stability: ASTM D 1970; stable after testing at [240 deg F](#) (116 deg C).
 2. Low-Temperature Flexibility: ASTM D 1970; passes after testing at minus [20 deg F](#) (29 deg C).
 3. [Products](#): Subject to compliance with requirements, provide one of the following:
 - a. [Carlisle Coatings & Waterproofing](#); CCW WIP 300HT.
 - b. [Grace Construction Products, a unit of W. R. Grace & Co.](#); Ultra.
 - c. [Henry Company](#); Blueskin PE200 HT.
 - d. [Metal-Fab Manufacturing, LLC](#); MetShield.
 - e. [Owens Corning](#); WeatherLock Metal High Temperature Underlayment.
 - f. **<Insert manufacturer's name; product name or designation>**.
 - g. or approved equal.

- C. Polyethylene Sheet: **6-mil-** (0.15-mm-) thick polyethylene sheet complying with ASTM D 4397.
- D. Slip Sheet: Building paper, **3-lb/100 sq. ft.** (0.16-kg/sq. m) minimum, rosin sized.

2.5 MISCELLANEOUS MATERIALS

- A. General: Provide materials and types of fasteners, protective coatings, sealants, and other miscellaneous items required by manufacturer for a complete installation.
- B. Fasteners: Manufacturer's recommended fasteners, suitable for application and designed to meet performance requirements. Furnish the following unless otherwise indicated:
 - 1. Exposed Penetrating Fasteners: Gasketed screws with hex washer heads matching color of sheet metal.
 - 2. Fasteners for Copper Sheet: Copper, hardware bronze or passivated Series 300 stainless steel.
 - 3. Fasteners for Aluminum: Aluminum or Series 300 stainless steel.
 - 4. Fasteners for Stainless-Steel Sheet: Series 300 stainless steel.
 - 5. Fasteners for Zinc-Coated (Galvanized) Steel Sheet: Series 300 stainless steel or hot-dip zinc-coated steel according to ASTM A 153/A 153M or ASTM F 2329.
- C. Elastomeric Sealant: ASTM C 920, elastomeric [**polyurethane**] [**silicone**] polymer sealant of type, grade, class, and use classifications required by roofing-specialty manufacturer for each application.
- D. Butyl Sealant: ASTM C 1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied for hooked-type expansion joints with limited movement.
- E. Bituminous Coating: Cold-applied asphalt emulsion complying with ASTM D 1187.
- F. Asphalt Roofing Cement: ASTM D 4586, asbestos free, of consistency required for application.
- G. Solder for Copper: ASTM B 32, [**lead-free solder**] [**Grade Sn50, 50 percent tin and 50 percent lead**] <Insert solder grade>.

2.6 COPINGS

- A. Copings: Manufactured coping system consisting of formed-metal coping cap in section lengths not exceeding [**12 feet (3.6 m)**] <Insert dimension>, concealed anchorage; corner units, end cap units, and concealed splice plates with same finish as coping caps.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [Architectural Products Company](#).
 - b. [ATAS International, Inc.](#)
 - c. [Castle Metal Products](#).
 - d. [Cheney Flashing Company](#).
 - e. [Hickman Company, W. P.](#)
 - f. [Johns Manville](#).
 - g. [Merchant & Evans, Inc.](#)
 - h. [Metal-Era, Inc.](#)
 - i. [Metal-Fab Manufacturing, LLC](#).
 - j. [MM Systems Corporation](#).
 - k. [National Sheet Metal Systems, Inc.](#)
 - l. [Perimeter Systems; a division of Southern Aluminum Finishing Company, Inc.](#)
 - m. [Petersen Aluminum Corporation](#).
 - n. <Insert manufacturer's name>.
 - o. or approved equal.
2. Coping-Cap Material: Copper, [**20 oz./sq. ft. (0.68 mm thick)**] [**weight (thickness) as required to meet performance requirements**] <Insert **weight (thickness)**>.
- a. Finish: [**Non-patinated, mill**] [**Pre-patinated dark brown**] [**Pre-patinated verdigris**] <Insert finish>.
3. Coping-Cap Material: [**Formed**] [**Extruded**] aluminum, [**0.040 inch (1.02 mm) thick**] [**0.050 inch (1.27 mm) thick**] [**0.063 inch (1.60 mm) thick**] [**0.080 inch (2.03 mm) thick**] [**0.125 inch (3.18 mm) thick**] [**thickness as required to meet performance requirements**] <Insert thickness>.
- a. Finish: [**Mill**] [**Two-coat fluoropolymer**] [**Three-coat fluoropolymer**] [**Clear anodic**] [**Color anodic**] <Insert finish>.
 - b. Color: [**Light bronze**] [**Medium bronze**] [**Dark bronze**] [**Black**] [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
4. Coping-Cap Material: Zinc-coated steel, nominal [**0.028-inch (0.71-mm) thickness**] [**0.034-inch (0.86-mm) thickness**] [**thickness as required to meet performance requirements**] <Insert thickness>.
- a. Finish: [**Mill phosphatized for field painting**] [**Two-coat fluoropolymer**] [**Three-coat fluoropolymer**] <Insert finish>.
 - b. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
5. Corners: Factory mitered and [**soldered**] [**continuously welded**] [**mechanically clinched and sealed watertight**].
6. Special Fabrications: [**Radiussed sections**] [**Arched sections**] [**Bullnose face leg**] [**Two-way sloped coping cap**] <Insert description>.

7. Coping-Cap Attachment Method: [**Snap-on**] [**Face leg hooked to continuous cleat with back leg fastener exposed**], fabricated from coping-cap material.
8. Snap-on-Coping Anchor Plates: Concealed, galvanized-steel sheet, **12 inches (300 mm)** wide, with integral cleats.
9. Face Leg Cleats: Concealed, continuous [**galvanized-steel sheet**] [**stainless steel**].

2.7 ROOF-EDGE FLASHINGS

- A. Canted Roof-Edge [**Fascia**] [**and**] [**Gravel Stop**] <Insert drawing designation>: Manufactured, two-piece, roof-edge fascia consisting of [**snap-on**] [**compression-clamped**] metal fascia cover in section lengths not exceeding [**12 feet (3.6 m)**] <Insert dimension> and a continuous formed galvanized-steel sheet cant, **0.028 inch (0.71 mm)** thick, minimum, with extended vertical leg terminating in a drip-edge cleat. Provide matching corner units.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [Architectural Products Company](#).
- b. [ATAS International, Inc.](#)
- c. [Castle Metal Products](#).
- d. [Cheney Flashing Company](#).
- e. [Hickman Company, W. P.](#)
- f. [Johns Manville](#).
- g. [Merchant & Evans, Inc.](#)
- h. [Metal-Era, Inc.](#)
- i. [Metal-Fab Manufacturing, LLC](#).
- j. [MM Systems Corporation](#).
- k. [National Sheet Metal Systems, Inc.](#)
- l. [Petersen Aluminum Corporation](#).
- m. <Insert manufacturer's name>.
- n. or approved equal.

2. Fascia Cover: Fabricated from the following exposed metal:

- a. Formed Aluminum: [**0.040 inch (1.02 mm) thick**] [**0.050 inch (1.27 mm) thick**] [**0.063 inch (1.60 mm) thick**] [**Thickness as required to meet performance requirements**] <Insert thickness>.
- b. Extruded Aluminum: [**0.080 inch (2.03 mm) thick**] [**Thickness as required to meet performance requirements**] <Insert thickness>.
- c. Zinc-Coated Steel: Nominal [**0.028-inch (0.71-mm) thickness**] [**0.034-inch (0.86-mm) thickness**] [**thickness as required to meet performance requirements**] <Insert thickness>.

3. Corners: Factory mitered and [**soldered**] [**continuously welded**] [**mechanically clinched and sealed watertight**].
4. Splice Plates: [**Concealed**] [**Exposed**], of same material, finish, and shape as fascia cover.

5. Special Fabrications: [**Radiussed sections**] [**Arched sections**] [**Bullnose fascia cover**] [**Cornice fascia cover**] [**Cove fascia cover**] <Insert description>.
 6. Fascia Accessories: [**Fascia extenders with continuous hold-down cleats**] [**Wall cap**] [**Soffit trim**] [**Overflow scuppers**] [**Overflow scuppers with perforated screens**] [**Spillout scuppers**] [**Downspout scuppers with integral conductor head and downspout adapters**] [**Downspout scuppers with integral conductor head and downspout adapters and perforated screens**] <Insert description>.
- B. Roof-Edge Fascia: Manufactured, two-piece, roof-edge fascia consisting of snap-on metal fascia cover in section lengths not exceeding [**12 feet (3.6 m)**] <Insert dimension> and a continuous formed- or extruded-aluminum anchor bar with integral drip-edge cleat to engage fascia cover. Provide matching corner units.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Hickman Company, W. P.](#)
 - b. [Johns Manville.](#)
 - c. [Metal-Era, Inc.](#)
 - d. [Metal-Fab Manufacturing, LLC.](#)
 - e. [National Sheet Metal Systems, Inc.](#)
 - f. [Perimeter Systems; a division of Southern Aluminum Finishing Company, Inc.](#)
 - g. <Insert manufacturer's name>.
 - h. or approved equal.
 2. Fascia Cover: Fabricated from the following exposed metal:
 - a. Formed Aluminum: [**0.032 inch (0.81 mm) thick**] [**0.040 inch (1.02 mm) thick**] [**0.050 inch (1.27 mm) thick**] [**0.063 inch (1.60 mm) thick**] [**Thickness as required to meet performance requirements**] <Insert thickness>.
 - b. Zinc-Coated Steel: Nominal [**0.028 inch (0.71 mm) thick**] [**0.034 inch (0.86 mm) thick**] [**thickness as required to meet performance requirements**] <Insert thickness>.
 3. Corners: Factory mitered and [**soldered**] [**continuously welded**] [**mechanically clinched and sealed watertight**].
 4. Splice Plates: [**Concealed**] [**Exposed**], of same material, finish, and shape as fascia cover.
 5. Special Fabrications: [**Radiussed sections**] [**Arched sections**] [**Bullnose fascia cover**] [**Cornice fascia cover**] [**Cove fascia cover**] <Insert description>.
 6. Fascia Accessories: [**Fascia extenders with continuous hold-down cleats**] [**Wall cap**] [**Soffit trim**] [**Overflow scuppers**] [**Overflow scuppers with perforated screens**] [**Spillout scuppers**] [**Downspout scuppers with integral conductor head and downspout adapters**] [**Downspout scuppers with**

integral conductor head and downspout adapters and perforated screens]
<Insert description>.

- C. One-Piece Gravel Stops: Manufactured, one-piece, metal gravel stop in section lengths not exceeding **[12 feet (3.6 m)]** **<Insert dimension>**, with a horizontal flange and vertical leg[, **drain-through]** fascia[**terminating in a drip edge]**, and concealed splice plates of same material, finish, and shape as gravel stop. Provide matching corner units.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Architectural Products Company.](#)
 - b. [Berger Building Products, Inc.](#)
 - c. [Castle Metal Products.](#)
 - d. [Cheney Flashing Company.](#)
 - e. [Hickman Company, W. P.](#)
 - f. [Metal-Era, Inc.](#)
 - g. [Metal-Fab Manufacturing, LLC.](#)
 - h. [MM Systems Corporation.](#)
 - i. [National Sheet Metal Systems, Inc.](#)
 - j. [Perimeter Systems: a division of Southern Aluminum Finishing Company, Inc.](#)
 - k. [Petersen Aluminum Corporation.](#)
 - l. **<Insert manufacturer's name>.**
 - m. or approved equal.
 2. Fabricate from the following exposed metal:
 - a. Copper: **[16 oz./sq. ft. (0.55 mm thick)]** **[Weight (thickness) as required to meet performance requirements]** **<Insert weight (thickness)>**.
 - b. Formed Aluminum: **[0.032 inch (0.81 mm) thick]** **[0.040 inch (1.02 mm) thick]** **[0.050 inch (1.27 mm) thick]** **[Thickness as required to meet performance requirements]** **<Insert thickness>**.
 - c. Extruded Aluminum: **[0.080 inch (2.03 mm) thick]** **[Thickness as required to meet performance requirements]** **<Insert thickness>**.
 - d. Stainless Steel: **[0.025 inch (0.64 mm) thick]** **[Thickness as required to meet performance requirements]** **<Insert thickness>**.
 - e. Zinc-Coated Steel: Nominal **[0.028-inch (0.71-mm) thickness]** **[0.034-inch (0.86-mm) thickness]** **[thickness as required to meet performance requirements]** **<Insert thickness>**.
 3. Corners: Factory mitered and **[soldered]** **[continuously welded]** **[mechanically clinched and sealed watertight]**.
 4. Accessories: **[Fascia extenders with continuous hold-down cleats]** **[Wall cap]** **[Soffit trim]** **<Insert description>**.
- D. Copper Finish: **[Non-patinated, mill]** **[Pre-patinated dark brown]** **[Pre-patinated verdigris]** **<Insert finish>**.

- E. Aluminum Finish: [Mill] [Two-coat fluoropolymer] [Three-coat fluoropolymer] [Clear anodic] [Color anodic] <Insert finish>.
 - 1. Color: [Light bronze] [Medium bronze] [Dark bronze] [Black] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.
- F. Stainless-Steel Finish: [No. 2B (bright, cold rolled)] [No. 3 (coarse, polished directional satin)] [No. 4 (bright, polished directional satin)] <Insert finish>.
- G. Zinc-Coated Steel Finish: [Mill phosphatized for field painting] [Two-coat fluoropolymer] [Three-coat fluoropolymer] <Insert finish>.
 - 1. Color: [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.

2.8 ROOF-EDGE DRAINAGE SYSTEMS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. [Andreas Renner KG](#).
 - 2. [Architectural Products Company](#).
 - 3. [ATAS International, Inc.](#)
 - 4. [Berger Building Products, Inc.](#)
 - 5. [Castle Metal Products](#).
 - 6. [Cheney Flashing Company](#).
 - 7. [CopperCraft by FABRAL; a Euramax company](#).
 - 8. [Hickman Company, W. P.](#)
 - 9. [Klauer Manufacturing Company](#).
 - 10. [Merchant & Evans, Inc.](#)
 - 11. [Metal-Era, Inc.](#)
 - 12. [Metal-Fab Manufacturing, LLC](#).
 - 13. [MM Systems Corporation](#).
 - 14. [National Sheet Metal Systems, Inc.](#)
 - 15. [Perimeter Systems; a division of Southern Aluminum Finishing Company, Inc.](#)
 - 16. <Insert manufacturer's name>.
 - 17. or approved equal.
- B. Gutters: Manufactured in uniform section lengths not exceeding [12 feet (3.6 m)] <Insert dimension>, with matching corner units, ends, outlet tubes, and other accessories. Elevate back edge at least 1 inch (25 mm) above front edge. Furnish flat-stock gutter straps, gutter brackets, expansion joints, and expansion-joint covers fabricated from same metal as gutters.
 - 1. Fabricate from the following exposed metal:

- a. Copper: [16 oz./sq. ft. (0.55 mm thick)] [20 oz./sq. ft. (0.68 mm thick)] <Insert weight (thickness)>.
 - b. Formed Aluminum: [0.032 inch (0.81 mm)] [0.040 inch (1.02 mm)] [0.050 inch (1.27 mm)] [0.063 inch (1.60 mm)] <Insert thickness> thick.
 - c. Zinc-Coated Steel: Nominal [0.028-inch (0.71-mm)] [0.034-inch (0.86-mm)] <Insert thickness> thickness.
2. Gutter Profile: [Style A] [Style B] [Style F] [Style G] [Style H] [Style I] [Style K] [Style K highback] [Half-round single bead] [Half-round highback] [Quarter round] [Ogee] [As indicated] <Insert style> according to SMACNA's "Architectural Sheet Metal Manual."
 3. Embossed Surface: Embossed with design [as indicated by manufacturer's designations] [As selected by DEN Project Manager from manufacturer's full range] <Insert description>.
 4. Applied Fascia Cover (Concealed Gutter): Exposed, formed [copper, 16 oz./sq. ft. (0.55 mm thick)] [aluminum, 0.040 inch (1.02 mm) thick] <Insert material and weight or thickness>, with factory-mitered corners, ends, and concealed splice joints.
 5. Corners: Factory mitered and [soldered] [continuously welded] [mechanically clinched and sealed watertight].
 6. Gutter Supports: [Gutter brackets] [Straps] [Spikes and ferrules] [Manufacturer's standard supports as selected by DEN Project Manager] <Insert description> with finish matching the gutters.
 7. Special Fabrications: [Radiussed sections] <Insert description>.
 8. Gutter Accessories: [Continuous screened leaf guard with sheet metal frame] [Continuous hinged leaf guard of solid metal designed to shed leaves] [Continuous snap-in plastic leaf guard] [Bronze wire ball downspout strainer] [Wire ball downspout strainer] [Flat ends] [Bullnose ends for half-round gutter] <Insert description>.
- C. Downspouts: [Plain round] [Corrugated round] [Plain rectangular] [Corrugated rectangular] [Open-face rectangular] <Insert shape> complete with [machine-crimped] [mitered] [smooth-curve] elbows, manufactured from the following exposed metal. Furnish with metal hangers, from same material as downspouts, and anchors.
1. Copper: [16 oz./sq. ft. (0.55 mm thick)] <Insert weight (thickness)>.
 2. Formed Aluminum: [0.032 inch (0.81 mm)] [0.040 inch (1.02 mm)] [0.050 inch (1.27 mm)] [0.063 inch (1.60 mm)] <Insert thickness> thick.
 3. Extruded Aluminum: [0.125 inch (3.18 mm)] <Insert thickness> thick.
 4. Zinc-Coated Steel: Nominal [0.028-inch (0.71-mm)] [0.034-inch (0.86-mm)] <Insert thickness> thickness.
- D. Parapet Scuppers: Manufactured with closure flange trim to exterior, 4-inch- (100-mm-) wide wall flanges to interior, and base extending 4 inches (100 mm) beyond cant or tapered strip into field of roof. [Fasten gravel guard angles to base of scuppers.]
1. Fabricate from the following exposed metal:
 - a. Copper: [16 oz./sq. ft. (0.55 mm thick)] <Insert weight (thickness)>.

- b. Formed Aluminum: **[0.032 inch (0.81 mm)]** <Insert thickness> thick.
 - c. Stainless Steel: **[0.019 inch (0.48 mm)]** <Insert thickness> thick.
 - d. Zinc-Coated Steel: Nominal **[0.028-inch (0.71-mm)]** <Insert thickness> thickness.
- E. Conductor Heads: Manufactured conductor heads, each with flanged back and stiffened top edge and of dimensions and shape indicated, complete with outlet tube that nests into upper end of downspout[, **exterior flange trim,**] [and] [**built-in overflow**].
- 1. Fabricate from the following exposed metal:
 - a. Copper: **[16 oz./sq. ft. (0.55 mm thick)]** <Insert weight (thickness)>.
 - b. Formed Aluminum: **[0.032 inch (0.81 mm)]** <Insert thickness> thick.
 - c. Stainless Steel: **[0.016 inch (0.40 mm)]** <Insert thickness> thick.
 - d. Zinc-Coated Steel: Nominal **[0.028-inch (0.71-mm)]** <Insert thickness> thickness.
- F. Splash Pans: Fabricate from the following exposed metal:
- 1. Copper: **[16 oz./sq. ft. (0.55 mm thick)]** <Insert weight (thickness)>.
 - 2. Formed Aluminum: **[0.040 inch (1.02 mm)]** <Insert thickness> thick.
 - 3. Stainless Steel: **[0.019 inch (0.48 mm)]** <Insert thickness> thick.
 - 4. Zinc-Coated Steel: Nominal **[0.028-inch (0.71-mm)]** <Insert thickness> thickness.
- G. Copper Finish: **[Non-patinated, mill]** [**Pre-patinated dark brown**] [**Pre-patinated verdigris**] <Insert finish>.
- H. Aluminum Finish: **[Mill]** [**Two-coat fluoropolymer**] [**Three-coat fluoropolymer**] [**Clear anodic**] [**Color anodic**] <Insert finish>.
- 1. Color: **[Light bronze]** [**Medium bronze]** [**Dark bronze]** [**Black]** [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
- I. Stainless-Steel Finish: **[No. 2B (bright, cold rolled, unpolished)]** [**No. 3 (coarse, polished directional satin)**] [**No. 4 (bright, polished directional satin)**] <Insert finish>.
- J. Zinc-Coated Steel Finish: **[Mill phosphatized for field painting]** [**Two-coat fluoropolymer**] [**Three-coat fluoropolymer**] <Insert finish>.
- 1. Color: **[As indicated by manufacturer's designations]** [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.

2.9 REGLETS AND COUNTERFLASHINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [Castle Metal Products.](#)
 2. [Cheney Flashing Company.](#)
 3. [Fry Reglet Corporation.](#)
 4. [Heckmann Building Products Inc.](#)
 5. [Hickman Company, W. P.](#)
 6. [Keystone Flashing Company, Inc.](#)
 7. [Metal-Era, Inc.](#)
 8. [Metal-Fab Manufacturing, LLC.](#)
 9. [MM Systems Corporation.](#)
 10. [National Sheet Metal Systems, Inc.](#)
 11. or approved equal.
- B. Reglets: Manufactured units formed to provide secure interlocking of separate reglet and counterflashing pieces, from the following exposed metal:
1. Copper: [16 oz./sq. ft. (0.55 mm thick)] <Insert weight (thickness)>.
 2. Formed Aluminum: [0.024 inch (0.61 mm)] [0.050 inch (1.27 mm)] <Insert thickness> thick.
 3. Stainless Steel: [0.019 inch (0.48 mm)] [0.025 inch (0.64 mm)] <Insert thickness> thick.
 4. Zinc-Coated Steel: Nominal [0.022-inch (0.56-mm)] [0.028-inch (0.71-mm)] <Insert thickness> thickness.
 5. Corners: Factory mitered and [soldered] [continuously welded] [mechanically clinched and sealed watertight].
 6. Surface-Mounted Type: Provide reglets with slotted holes for fastening to substrate, with neoprene or other suitable weatherproofing washers, and with channel for sealant at top edge.
 7. Stucco Type, Embedded: Provide reglets with upturned fastening flange and extension leg of length to match thickness of applied finish materials.
 8. Concrete Type, Embedded: Provide temporary closure tape to keep reglet free of concrete materials, special fasteners for attaching reglet to concrete forms, and guides to ensure alignment of reglet section ends.
 9. Masonry Type, Embedded: Provide reglets with offset top flange for embedment in masonry mortar joint.
 10. Multiuse Type, Embedded: For multiuse embedment in [cast-in-place concrete] [masonry mortar joints].
- C. Counterflashings: Manufactured units of heights to overlap top edges of base flashings by 4 inches (100 mm) and in lengths not exceeding [12 feet (3.6 m)] <Insert dimension> designed to snap into [reglets] [or] [through-wall-flashing receiver] and compress against base flashings with joints lapped, from the following exposed metal:
1. Copper: [16 oz./sq. ft. (0.55 mm thick)] <Insert weight (thickness)>.
 2. Formed Aluminum: [0.024 inch (0.61 mm)] [0.032 inch (0.81 mm)] <Insert thickness> thick.

3. Stainless Steel: [**0.019 inch (0.48 mm)**] [**0.025 inch (0.64 mm)**] <Insert **thickness**> thick.
4. Zinc-Coated Steel: Nominal [**0.022-inch (0.56-mm)**] [**0.028-inch (0.71-mm)**] <Insert **thickness**> thickness.

D. Accessories:

1. Flexible-Flashing Retainer: Provide resilient plastic or rubber accessory to secure flexible flashing in reglet where clearance does not permit use of standard metal counterflashing or where reglet is provided separate from metal counterflashing.
2. Counterflashing Wind-Restraint Clips: Provide clips to be installed before counterflashing to prevent wind uplift of counterflashing lower edge.
3. <Insert **accessory**>.

E. Copper Finish: [**Non-patinated, mill**] [**Pre-patinated dark brown**] [**Pre-patinated verdigris**] <Insert **finish**>.

F. Aluminum Finish: [**Mill**] [**Two-coat fluoropolymer**] [**Three-coat fluoropolymer**] [**Clear anodic**] [**Color anodic**] <Insert **finish**>.

1. Color: [**Light bronze**] [**Medium bronze**] [**Dark bronze**] [**Black**] [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert **color**>.

G. Stainless-Steel Finish: [**No. 2B (bright, cold rolled, unpolished)**] [**No. 3 (coarse, polished directional satin)**] [**No. 4 (bright, polished directional satin)**] <Insert **finish**>.

H. Zinc-Coated Steel Finish: [**Mill phosphatized for field painting**] [**Two-coat fluoropolymer**] [**Three-coat fluoropolymer**] <Insert **finish**>.

1. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert **color**>.

2.10 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, to verify actual locations, dimensions, and other conditions affecting performance of the Work.
- B. Examine walls, roof edges, and parapets for suitable conditions for roof specialties.
- C. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

- A. Comply with manufacturer's instructions and recommendations. Coordinate with installation of roof deck and other substrates to receive accessory units, and vapor barriers, roof insulation, roofing and flashing, as required to ensure that each element of the Work performs properly, and that combined elements are waterproof and weathertight. Anchor units securely to supporting structural substrates, adequate to withstand lateral and thermal stresses as well as inward and outward loading pressures.
 - 1. Except as otherwise indicated install roof accessory items in accordance with construction details of "NRCA Roofing and Waterproofing Manual".

3.3 UNDERLAYMENT INSTALLATION

- A. Felt Underlayment: Install with adhesive for temporary anchorage to minimize use of mechanical fasteners under roof specialties. Apply in shingle fashion to shed water, with lapped joints of not less than **2 inches** (50 mm).
- B. Self-Adhering Sheet Underlayment: Install wrinkle free. Apply primer if required by underlayment manufacturer. Comply with temperature restrictions of underlayment manufacturer for installation; use primer rather than nails for installing underlayment at low temperatures. Apply in shingle fashion to shed water. Overlap edges not less than **3-1/2 inches** (90 mm). Roll laps with roller. Cover underlayment within 14 days.
- C. Polyethylene Sheet: Install with adhesive for temporary anchorage to minimize use of mechanical fasteners under roof specialties. Apply in shingle fashion to shed water, with lapped and taped joints of not less than **2 inches** (50 mm).
- D. Slip Sheet: Install with tape or adhesive for temporary anchorage to minimize use of mechanical fasteners under roof specialties. Apply in shingle fashion to shed water, with lapped joints of not less than **2 inches** (50 mm).

3.4 INSTALLATION, GENERAL

- A. General: Install roof specialties according to manufacturer's written instructions. Anchor roof specialties securely in place, with provisions for thermal and structural movement. Use fasteners, solder, protective coatings, separators, sealants, and other miscellaneous items as required to complete roof-specialty systems.
1. Install roof specialties level, plumb, true to line and elevation; with limited oil-canning and without warping, jogs in alignment, buckling, or tool marks.
 2. Provide uniform, neat seams with minimum exposure of solder and sealant.
 3. Install roof specialties to fit substrates and to result in watertight performance. Verify shapes and dimensions of surfaces to be covered before manufacture.
 4. Torch cutting of roof specialties is not permitted.
 5. Do not use graphite pencils to mark metal surfaces.
- B. Metal Protection: Protect metals against galvanic action by separating dissimilar metals from contact with each other or with corrosive substrates by painting contact surfaces with bituminous coating or by other permanent separation as recommended by manufacturer.
1. Coat concealed side of **[uncoated aluminum] [and] [stainless-steel]** roof specialties with bituminous coating where in contact with wood, ferrous metal, or cementitious construction.
 2. Underlayment: Where installing metal flashing directly on cementitious or wood substrates, install a course of **[felt underlayment and cover with a slip sheet] [self-adhering, high-temperature sheet underlayment] [or] [polyethylene sheet]**.
 3. Bed flanges in thick coat of asphalt roofing cement where required by manufacturers of roof specialties for waterproof performance.
- C. Expansion Provisions: Allow for thermal expansion of exposed roof specialties.
1. Space movement joints at a maximum of **[12 feet (3.6 m)] <Insert dimension>** with no joints within **[18 inches (450 mm)] <Insert dimension>** of corners or intersections unless otherwise shown on Drawings.
 2. When ambient temperature at time of installation is between **40 and 70 deg F (4 and 21 deg C)**, set joint members for 50 percent movement each way. Adjust setting proportionately for installation at higher ambient temperatures.
- D. Fastener Sizes: Use fasteners of sizes that will penetrate **[wood blocking or sheathing not less than 1-1/4 inches (32 mm) for nails and not less than 3/4 inch (19 mm) for wood screws] [substrate not less than recommended by fastener manufacturer to achieve maximum pull-out resistance] <Insert size requirement>**.
- E. Seal joints with **[elastomeric] [butyl]** sealant as required by roofing-specialty manufacturer.
- F. Seal joints as required for watertight construction. Place sealant to be completely concealed in joint. Do not install sealants at temperatures below **40 deg F (4 deg C)**.

- G. Soldered Joints: Clean surfaces to be soldered, removing oils and foreign matter. Pre-tin edges of sheets to be soldered to a width of **1-1/2 inches (38 mm)** except reduce pre-tinning where pre-tinned surface would show in completed Work. Tin edges of uncoated copper sheets using solder for copper. Do not use torches for soldering. Heat surfaces to receive solder and flow solder into joint. Fill joint completely. Completely remove flux and spatter from exposed surfaces.

3.5 COPING INSTALLATION

- A. Install cleats, anchor plates, and other anchoring and attachment accessories and devices with concealed fasteners.
- B. Anchor copings to meet performance requirements.
1. Interlock face and back leg drip edges of snap-on coping cap into cleated anchor plates anchored to substrate at **[30-inch (760-mm) centers] [40-inch (1015-mm) centers] [manufacturer's required spacing that meets performance requirements]** <Insert spacing>.
 2. Interlock face leg drip edge into continuous cleat anchored to substrate at **[24-inch (600-mm) centers] [16-inch (400-mm) centers] [manufacturer's required spacing that meets performance requirements]** <Insert spacing>. Anchor back leg of coping with screw fasteners and elastomeric washers at **[24-inch (600-mm) centers] [16-inch (400-mm) centers] [manufacturer's required spacing that meets performance requirements]** <Insert spacing>.

3.6 ROOF-EDGE FLASHING INSTALLATION

- A. Install cleats, cants, and other anchoring and attachment accessories and devices with concealed fasteners.
- B. Anchor roof edgings with manufacturer's required devices, fasteners, and fastener spacing to meet performance requirements.

3.7 ROOF-EDGE DRAINAGE-SYSTEM INSTALLATION

- A. General: Install components to produce a complete roof-edge drainage system according to manufacturer's written instructions. Coordinate installation of roof perimeter flashing with installation of roof-edge drainage system.
- B. Gutters: Join and seal gutter lengths. Allow for thermal expansion. Attach gutters to firmly anchored gutter supports spaced not more than **[12 inches (305 mm)] [24 inches (610 mm)] [30 inches (762 mm)]** <Insert dimension> apart. Attach ends with rivets and **[seal with sealant] [solder]** to make watertight. Slope to downspouts.
1. Install gutter with expansion joints at locations indicated but not exceeding **[50 feet (15.2 m)]** <Insert dimension> apart. Install expansion joint caps.
 2. Install continuous leaf guards on gutters with noncorrosive fasteners, **[removable] [hinged to swing open]** for cleaning gutters.

- C. Downspouts: Join sections with manufacturer's standard telescoping joints. Provide hangers with fasteners designed to hold downspouts securely to walls and **1 inch (25 mm)** away from walls; locate fasteners at top and bottom and at approximately **[60 inches (1500 mm)] <Insert dimension>** o.c.
 - 1. Provide elbows at base of downspout to direct water away from building.
 - 2. Connect downspouts to underground drainage system indicated.
- D. Splash Pans: Install where downspouts discharge on **[low-slope roofs] <Insert surface>**. Set in **[asphalt roofing cement] [elastomeric sealant]**.
- E. Parapet Scuppers: Install scuppers through parapet where indicated. Continuously support scupper, set to correct elevation, and seal flanges to interior wall face, over cants or tapered edge strips, and under roofing membrane.
 - 1. Anchor scupper closure trim flange to exterior wall and seal or solder to scupper.
 - 2. Loosely lock front edge of scupper with conductor head.
 - 3. Seal or solder exterior wall scupper flanges into back of conductor head.
- F. Conductor Heads: Anchor securely to wall with elevation of conductor top edge **1 inch (25 mm)** below **[scupper] [gutter]** discharge.

3.8 REGLET AND COUNTERFLASHING INSTALLATION

- A. General: Coordinate installation of reglets and counterflashings with installation of base flashings.
- B. Embedded Reglets: See **[Section 033000 "Cast-in-Place Concrete"] [and] [Section 042000 "Unit Masonry"]** for installation of reglets.
- C. Surface-Mounted Reglets: Install reglets to receive flashings where flashing without embedded reglets is indicated on Drawings. Install at height so that inserted counterflashings overlap **4 inches (100 mm)** over top edge of base flashings.
- D. Counterflashings: Insert counterflashings into reglets or other indicated receivers; ensure that counterflashings overlap **4 inches (100 mm)** over top edge of base flashings. Lap counterflashing joints a minimum of **4 inches (100 mm)** and bed with **[elastomeric] [butyl]** sealant. Fit counterflashings tightly to base flashings.

3.9 CLEANING AND PROTECTION

- A. Clean exposed metal surfaces of substances that interfere with uniform oxidation and weathering.
- B. Clean and neutralize flux materials. Clean off excess solder and sealants.
- C. Remove temporary protective coverings and strippable films as roof specialties are installed. On completion of installation, clean finished surfaces including removing

unused fasteners, metal filings, pop rivet stems, and pieces of flashing. Maintain roof specialties in a clean condition during construction.

- D. Replace roof specialties that have been damaged or that cannot be successfully repaired by finish touchup or similar minor repair procedures.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 077100

SECTION 077129 - MANUFACTURED ROOF EXPANSION JOINTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

- 1. Bellows-type roof expansion joints.
- 2. Aluminum roof expansion joints.

- B. Related Requirements:

- 1. Section 061000 "Rough Carpentry" for wooden curbs or cants for mounting roof expansion joints.
- 2. Section <Insert Section number> "<Insert Section title>" for roofing system.
- 3. Section 076200 "Sheet Metal Flashing and Trim" for shop- and field-fabricated sheet metal expansion-joint systems, flashing, and other sheet metal items.
- 4. Section 077200 "Roof Accessories" for manufactured and prefabricated metal roof curbs.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site][location and time as determined by DEN Project Manager] <Insert location>**.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.

- 1. Include data substantiating that materials comply with requirements.

- B. LEED Submittals:

- 1. Product Data for Credit EQ 4.1: For installation adhesives, documentation including printed statement of VOC content.

2. Laboratory Test Reports for Credit EQ 4: For adhesives, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: For roof expansion joints.
1. Include plans, elevations, sections, and attachment details.
 2. Include details of splices, intersections, transitions, fittings, method of field assembly, and location and size of each field splice.
 3. Provide isometric drawings of intersections, terminations, and changes in joint direction or planes, depicting how components interconnect with each other and adjacent construction to allow movement and achieve waterproof continuity.
- D. Samples: For each exposed product and for each color specified, **6 inches** (150 mm) in size.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Product Test Reports: For each fire-barrier provided as part of a roof-expansion-joint assembly, for tests performed by a qualified testing agency.
- C. Sample Warranties: For special warranties.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: Installer of roofing membrane.

1.7 WARRANTY

- A. Special Warranty: Manufacturer and Installer agree to repair or replace roof expansion joints and components that leak, deteriorate beyond normal weathering, or otherwise fail in materials or workmanship within specified warranty period.
1. Warranty Period: Minimum **[two (2)]** <Insert number> years from date of Substantial Completion.
- B. Special Warranty on Painted Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace roof expansion joints that show evidence of deterioration of factory-applied finishes within specified warranty period.
1. Fluoropolymer Finish: Deterioration includes, but is not limited to, the following:
 - a. Color fading more than five Hunter units when tested according to ASTM D 2244.

- b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
2. Warranty Period: Minimum **[20] [10] <Insert number>** years from date of Substantial Completion.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. General: Roof expansion joints shall withstand exposure to weather, remain watertight, and resist the movements indicated without failure, rattling, leaking, or fastener disengagement due to defective manufacture, fabrication, installation, or other defects in construction.
- B. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes to prevent buckling, opening of joints, hole elongation, overstressing of components, failure of joint seals, failure of connections, and other detrimental effects.
1. Temperature Change: **[120 deg F (67 deg C), ambient; 180 deg F (100 deg C)] <Insert temperature range>**, material surfaces.
- C. Fire-Test-Response Characteristics: Provide fire-barrier assemblies with fire-test-response characteristics as determined by testing identical products, per test method indicated, by UL or another testing agency acceptable to authorities having jurisdiction. Assemblies shall be capable of anticipated movement while maintaining fire rating. Fire-barrier products shall bear classification marking of qualified testing agency.

2.2 BELLOWS-TYPE ROOF EXPANSION JOINTS

- A. Source Limitations: Obtain bellows-type roof expansion joints approved by roofing manufacturer and that are part of roofing membrane warranty.
- B. Flanged Bellows Roof Expansion Joint **<Insert drawing designation>**: Manufactured, continuous, waterproof, joint-cover assembly, consisting of exposed membrane bellows, laminated to flexible, closed-cell support foam, and secured along each edge to a **3- to 4-inch-** (76- to 100-mm-) wide metal flange for nailing to substrate. Provide each size and type indicated[, **factory-fabricated units for corner and joint**

intersections and horizontal and vertical transitions including those to other building expansion joints], splicing units, adhesives, and other components as recommended by roof-expansion-joint manufacturer for complete installation. Fabricate each assembly specifically for installation configuration indicated on Drawings.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Architectural Art Manufacturing Inc.; a division of Pittcon Architectural Metals, LLC.
 - b. Balco, Inc.
 - c. Building Materials Corporation of America; GAF Materials Corporation.
 - d. C/S Group.
 - e. InPro Corporation.
 - f. Johns Manville; a Berkshire Hathaway company.
 - g. MM Systems Corporation.
 - h. Watson Bowman Acme Corp.
 - i. **<Insert manufacturer's name>**.
 - j. or approved equal.
2. Joint Movement Capability: Plus and minus **[25 percent of joint size] [50 percent of joint size] [As indicated on Drawings] <Insert dimension or percentage>**.
3. Bellows: **[EPDM] [Neoprene] [PVC] <Insert material>** flexible membrane, nominal **[60 mils (1.5 mm)] <Insert thickness>** thick.
 - a. Color: **[Black] [White] <Insert color>**.
4. Flanges: **[Galvanized steel, 0.022 inch (0.56 mm) thick] [Copper, 16 oz./sq. ft. (0.55 mm thick)] [Stainless steel, 0.019 inch (0.48 mm) thick] [Aluminum, 0.032 inch (0.81 mm) thick] [Non-metallic PVC membrane] <Insert requirement>**.
 - a. Form: **[Flat to fit cants] [Angle formed to fit curbs] <Insert requirement>** as indicated on Drawings.
 - b. Mortar Flanges: Where flanges will be embedded in concrete or mortar, provide perforated-metal mortar flanges.
5. Cover Membrane: **[EPDM] [Neoprene] [PVC] <Insert material>** flexible membrane, factory laminated to bellows and covering entire joint assembly and curbs.
 - a. Color: **[Black] [White] <Insert color>**.
6. Secondary Seal: Continuous, waterproof **[PVC]** membrane within joint and attached to substrate on sides of joint below the primary bellows assembly.
 - a. Drain-Tube Assemblies: Equip secondary seal with drain tubes and seals to direct collected moisture **[to drain] [to exterior-wall expansion joint cover] [as indicated on Drawings] <Insert requirement>**.

- b. Thermal Insulation: Fill space above secondary seal with **[mineral-fiber blanket] [manufacturer's standard, factory-installed glass-fiber] <Insert requirement>** insulation; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per ASTM E 84.
 7. Fire Barrier: Manufacturer's standard fire-resistive joint system with ratings determined per **[ASTM E 1966 or UL 2079] [ASTM E 119]** to resist spread of fire and to accommodate building thermal **[and seismic]** movements without impairing its ability to resist the passage of fire and hot gases.
 - a. Fire-Resistance Rating: Not less than **[1-hour] [2-hour] [fire-resistance rating of the roof assembly] <Insert rating>**.
- C. Extruded Bellows Roof Expansion Joint **<Insert drawing designation>**: Manufactured, continuous, waterproof, joint-cover assembly; consisting of primary and secondary, single-layered, elastomeric seals; secured along each edge with extruded-aluminum retainers for fastening to substrate. Provide each size and type indicated[, **factory-fabricated units for corner and joint intersections and horizontal and vertical transitions including those to other building expansion joints**], splicing units, adhesives, and other components as recommended by roof-expansion-joint manufacturer for complete installation. Fabricate each assembly specifically for installation configuration indicated on Drawings.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. C/S Group.
 - b. Michael Rizza Company.
 - c. MM Systems Corporation.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
 2. Joint Movement Capability: Plus and minus **[25 percent of joint size] [50 percent of joint size] [As indicated on Drawings] <Insert dimension or percentage>**.
 3. Primary Seal: Silicone extrusion; color: **[Black] [White] [Bronze] [Sandstone] [Gray] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
 4. Drain-Tube Assemblies: Equip secondary seal with drain tubes and seals to direct collected moisture **[to drain] [to exterior-wall expansion joint cover] [as indicated on Drawings] <Insert requirement>**.

2.3 ALUMINUM ROOF EXPANSION JOINTS

- A. Aluminum Roof Expansion Joint **<Insert drawing designation>**: Manufactured, continuous, waterproof, joint-cover assembly; consisting of a formed or extruded metal cover secured to extruded aluminum frames, with water-resistant gasketing between cover and frames, and with provision for securing assembly to substrate and sealing assembly to roofing membrane or flashing. Provide each size and type indicated[,

factory-fabricated units for corner and joint intersections and horizontal and vertical transitions including those to other building expansion joints], splicing units, adhesives, and other components as recommended by roof-expansion-joint manufacturer for complete installation. Fabricate each assembly specifically for installation configuration indicated on Drawings.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Architectural Art Manufacturing Inc.; a division of Pittcon Architectural Metals, LLC.
 - b. Balco, Inc.
 - c. C/S Group.
 - d. InPro Corporation.
 - e. MM Systems Corporation.
 - f. Nystrom Building Products.
 - g. Watson Bowman Acme Corp.
 - h. **<Insert manufacturer's name>**.
 - i. or approved equal.
2. Joint Movement Capability: Plus and minus **[25 percent of joint size] [50 percent of joint size] [As indicated on Drawings] <Insert dimension or percentage>**.
3. Frame Members: Extruded aluminum configured **[for curbs] [for sloped cants] [with integral 5-1/2-inch tall aluminum curb] <Insert requirement>** as indicated; with exposed finish **[matching cover] [as selected by DEN Project Manager from manufacturer's full range] <Insert requirement>**.
4. Cover: **[Formed aluminum] [Extruded aluminum] [Formed or extruded aluminum] [Stainless steel] <Insert material>**; thickness **[as recommended by manufacturer] <Insert thickness>**.
 - a. Aluminum Finish: **[Mill] [Clear anodic] [Color anodic] [High-performance organic] <Insert finish>**.
 - b. Aluminum Finish Color: **[Light bronze] [Medium bronze] [Dark bronze] [As indicated by manufacturer's designations] [As selected by DEN Project Manager from manufacturer's full range] <Insert requirement>**.
 - c. Stainless Steel Finish: **[2B] <Insert finish>**.
5. Centering Devices: **[Centering bars] [Snap-on spring clips attached to the cover] <Insert item>**.
6. Secondary Seal: Continuous, waterproof **[PVC]** membrane within joint and attached to substrate on sides of joint below the cover.
 - a. Drain-Tube Assemblies: Equip secondary seal with drain tubes and seals to direct collected moisture **[to drain] [to exterior-wall expansion joint cover] [as indicated on Drawings] <Insert requirement>**.
 - b. Thermal Insulation: Fill space above secondary seal with **[mineral-fiber blanket] <Insert requirement>** insulation; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per ASTM E 84.

7. Fire Barrier: Manufacturer's standard fire-resistive joint system with ratings determined per [ASTM E 1966 or UL 2079] [ASTM E 119] to resist spread of fire and accommodate building thermal[and seismic] movements without impairing its ability to resist the passage of fire and hot gases.
 - a. Fire-Resistance Rating: Not less than [1-hour] [2-hour] [fire-resistance rating of the roof assembly] <Insert rating>.

2.4 MATERIALS

- A. Galvanized-Steel Sheet: ASTM A 653/A 653M, hot-dip zinc-coating designation G90 (Z275).
- B. Copper Sheet: ASTM B 370, cold-rolled copper sheet, H00 or H01 temper.
- C. Stainless-Steel Sheet: ASTM A 240/A 240M or ASTM A 666, Type 304.
- D. Aluminum: ASTM B 209 (ASTM B 209M) for sheet and plate, ASTM B 221 (ASTM B 221M) for extrusions; alloy as standard with manufacturer for finish required, with temper to suit forming operations and performance required.
 1. Apply manufacturer's standard protective coating on aluminum surfaces to be placed in contact with cementitious or preservative-treated wood materials.
 2. Mill Finish: As manufactured.
 3. Class II, Clear Anodic Finish: Architectural Class II, clear coating 0.010 mm or thicker, complying with AAMA 611.
 4. Class I, Clear Anodic Finish: Architectural Class I, clear coating 0.018 mm or thicker, complying with AAMA 611.
 5. Class I, Color Anodic Finish: Architectural Class I, integrally colored or electrolytically deposited color coating 0.018 mm or thicker, complying with AAMA 611.
 6. High-Performance Organic Finish: Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - a. Two-Coat Fluoropolymer: System consisting of primer and fluoropolymer color topcoat containing not less than 70 percent PVDF resin by weight.
 - b. Three-Coat Fluoropolymer: System consisting of primer, fluoropolymer color coat, and clear fluoropolymer topcoat, with both color coat and clear topcoat containing not less than 70 percent PVDF resin by weight.
- E. EPDM Membrane: ASTM D 4637, Type standard with manufacturer for application.
- F. Neoprene Membrane: Neoprene sheet recommended by EPDM manufacturer for resistance to hydrocarbons, non-aromatic solvents, grease, and oil; and as standard with roof-expansion-joint manufacturer for application.
- G. PVC Membrane: ASTM D 4434, Type standard with manufacturer for application.
- H. Silicone Extrusions: ASTM D 2000, UV stabilized, and that does not propagate flame.

- I. Adhesives: As recommended by roof-expansion-joint manufacturer and with a VOC content of [70] <Insert value> g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- J. Adhesives: As recommended by roof-expansion-joint manufacturer and that comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- K. Fasteners: Manufacturer's recommended fasteners, suitable for application and designed to withstand design loads.
 - 1. Exposed Fasteners: Gasketed. Use screws with hex washer heads matching color of material being fastened.
- L. Mineral-Fiber Blanket: ASTM C 665.
- M. Bituminous Coating: Cold-applied asphalt emulsion complying with ASTM D 1187.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, to verify actual locations, dimensions, and other conditions affecting performance of the Work.
- B. Examine roof-joint openings, inside surfaces of parapets, and expansion-control joint systems that interface with roof expansion joints, for suitable conditions where roof expansion joints will be installed.
- C. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Comply with manufacturer's written instructions for handling and installing roof expansion joints.
 - 1. Anchor roof expansion joints securely in place, with provisions for required movement. Use fasteners, protective coatings, sealants, and miscellaneous items as required to complete roof expansion joints.
 - 2. Install roof expansion joints true to line and elevation; with limited oil-canning and without warping, jogs in alignment, buckling, or tool marks.
 - 3. Provide for linear thermal expansion of roof expansion joint materials.
 - 4. Provide uniform profile of roof expansion joint throughout its length; do not stretch or squeeze membranes.

5. Provide uniform, neat seams.
 6. Install roof expansion joints to fit substrates and to result in watertight performance.
 7. Torch cutting of roof expansion joints is not permitted.
 8. Do not use graphite pencils to mark aluminum surfaces.
- B. Directional Changes and Other Expansion-Control Joint Systems: Coordinate installation of roof expansion joints with other expansion-control joint systems to result in watertight performance. Install **factory-fabricated** units at directional changes and at transitions between roof expansion joints and exterior expansion-control joint systems specified in Section 079500 "Expansion Control" to provide continuous, uninterrupted, and watertight joints.
- C. Splices: Splice roof expansion joints with materials provided by roof-expansion-joint manufacturer for this purpose, to provide continuous, uninterrupted, and waterproof joints.
1. Install waterproof splices and prefabricated end dams to prevent leakage of secondary-seal membrane.
- D. Fire Barrier: Install fire barrier where indicated to provide continuous, uninterrupted fire resistance throughout length of roof expansion joint, including transitions and end joints.
- E. Metal Protection: Protect metals against galvanic action by separating dissimilar metals from contact with each other or with corrosive substrates by painting contact surfaces with bituminous coating or by other permanent separation as recommended by manufacturer.

3.3 PROTECTION

- A. Protect roof expansion joints from foot traffic, displacement, or other damage.
- B. Remove and replace roof expansion joints and components that become damaged by moisture or otherwise.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 077129

SECTION 077200 - ROOF ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Roof curbs.
2. Equipment supports.
3. Roof hatches.
4. Hatch-type heat and smoke vents.
5. Dropout-type heat and smoke vents.
6. Gravity ventilators.
7. Pipe supports.
8. Roof walkways.
9. Preformed flashing sleeves.

B. Related Sections:

1. Section 055000 "Metal Fabrications" for metal vertical ladders, ships' ladders, and stairs for access to roof hatches.
2. Section 055213 "Pipe and Tube Railings" for safety railing systems not attached to roof-hatch curbs.
3. Section 076100 "Sheet Metal Roofing" for shop- and field-formed roof curbs and snow guards for sheet metal roofing.
4. Section 076200 "Sheet Metal Flashing and Trim" for shop- and field-formed metal flashing, roof-drainage systems, roof expansion-joint covers, and miscellaneous sheet metal trim and accessories.
5. Section 077100 "Roof Specialties" for manufactured fasciae, copings, gravel stops, gutters and downspouts, and counterflashing.
6. Section 077129 "Manufactured Roof Expansion Joints" for manufactured roof expansion-joint covers.
7. Section 077253 "Snow Guards" for snow guards.
8. Section 086200 "Unit Skylights" for single- and double-glazed domed plastic skylights with curb frame.
9. Section 233423 "HVAC Power Ventilators" for power roof-mounted ventilators.
10. **[Section 283111 "Digital, Addressable Fire-Alarm System"] [Section 283112 "Zoned (DC Loop) Fire-Alarm System"]** for interconnects to automatically operated heat and smoke vents.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 PERFORMANCE REQUIREMENTS

- A. General Performance: Roof accessories shall withstand exposure to weather and resist thermally induced movement without failure, rattling, leaking, or fastener disengagement due to defective manufacture, fabrication, installation, or other defects in construction.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of roof accessory indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For roof accessories. Show fabrication and installation details. Include plans, elevations, keyed details, and attachments to other work. Indicate dimensions, weights, loadings, required clearances, methods of field assembly, components, and special conditions. Distinguish between plant- and field-assembled work.
- C. Samples: For each exposed product and for each color and texture specified, prepared on Samples of size to adequately show color.
 - 1. Samples for Initial Selection: Manufacturer's color charts showing the full range of colors available for roof accessories with factory-applied color finishes.
 - 2. Samples for Verification: For each type of exposed finish required, prepared on Samples in manufacturer's standard sizes, and of same thickness and material indicated for the Work. If finishes involve normal color or shade variations, include sample sets showing the full range of variations expected.

1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Roof plans, drawn to scale, and coordinating penetrations and roof-mounted items. Show the following:
 - 1. Size and location of roof accessories specified in this Section.
 - 2. Method of attaching roof accessories to roof or building structure.
 - 3. Other roof-mounted items including mechanical and electrical equipment, ductwork, piping, and conduit.
 - 4. Required clearances.
- B. Warranty: Sample of special warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For roof accessories to include in operation and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 COORDINATION

- A. Coordinate layout and installation of roof accessories with [**roofing membrane and base flashing and**]interfacing and adjoining construction to provide a leakproof, weathertight, secure, and noncorrosive installation.
- B. Coordinate dimensions with rough-in information or Shop Drawings of equipment to be supported.

1.8 QUALITY ASSURANCE

- A. Standards: Comply with SMACNA "Architectural Sheet Metal Manual" details for fabrication of units, including flanges and cap flashing to coordinate with type of roofing indicated. Comply with "NRCA Roofing and Waterproofing Manual" details for installation of units.

1.9 WARRANTY

- A. Special Warranty on Painted Finishes: Manufacturer's standard form in which manufacturer agrees to repair finishes or replace roof accessories that show evidence of deterioration of factory-applied finishes within specified warranty period.
 - 1. Fluoropolymer Finish: Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 - 2. Finish Warranty Period: Minimum [**20**] [**10**] **<Insert number>** years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 GENERAL PRODUCT REQUIREMENTS

- A. Provide manufacturers' standard units, modified as necessary to comply with requirements. Shop fabricate each unit to greatest extent possible.

2.2 METAL MATERIALS

- A. Zinc-Coated (Galvanized) Steel Sheet: ASTM A 653/A 653M, **G90 (Z275)** coating designation[**and mill phosphatized for field painting where indicated**].
1. Mill-Phosphatized Finish: Manufacturer's standard for field painting.
 2. Factory Prime Coating: Where field painting is indicated, apply pretreatment and white or light-colored, factory-applied, baked-on epoxy primer coat, with a minimum dry film thickness of **0.2 mil (0.005 mm)**.
 3. Exposed Coil-Coated Finish: Prepainted by the coil-coating process to comply with ASTM A 755/A 755M. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - a. Two-Coat Fluoropolymer Finish: AAMA 621. System consisting of primer and fluoropolymer color topcoat containing not less than 70 percent PVDF resin by weight.
 4. Baked-Enamel or Powder-Coat Finish: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat, with a minimum dry film thickness of **1 mil (0.025 mm)** for topcoat. Comply with coating manufacturer's written instructions for applying and baking to achieve a minimum dry film thickness of **2 mils (0.05 mm)**.
 5. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester-backer finish consisting of prime coat and wash coat, with a minimum total dry film thickness of **0.5 mil (0.013 mm)**.
- B. Aluminum-Zinc Alloy-Coated Steel Sheet: ASTM A 792/A 792M, **AZ50 (AZM150)** coated.
1. Factory Prime Coating: Where field painting is indicated, apply pretreatment and white or light-colored, factory-applied, baked-on epoxy primer coat, with a minimum dry film thickness of **0.2 mil (0.005 mm)**.
 2. Exposed Coil-Coated Finish: Prepainted by the coil-coating process to comply with ASTM A 755/A 755M. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - a. Two-Coat Fluoropolymer Finish: AAMA 621. System consisting of primer and fluoropolymer color topcoat containing not less than 70 percent PVDF resin by weight.

3. Baked-Enamel or Powder-Coat Finish: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat, with a minimum dry film thickness of **1 mil (0.025 mm)** for topcoat. Comply with coating manufacturer's written instructions for applying and baking to achieve a minimum dry film thickness of **2 mils (0.05 mm)**.
 4. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester-backer finish consisting of prime coat and wash coat, with a minimum total dry film thickness of **0.5 mil (0.013 mm)**.
- C. Aluminum Sheet: **ASTM B 209 (ASTM B 209M)**, manufacturer's standard alloy for finish required, with temper to suit forming operations and performance required.
1. Mill Finish: As manufactured.
 2. Factory Prime Coating: Where field painting is indicated, apply pretreatment and white or light-colored, factory-applied, baked-on epoxy primer coat, with a minimum dry film thickness of **0.2 mil (0.005 mm)**.
 3. Clear Anodic Finish: AAMA 611, [**AA-M12C22A41, Class I, 0.018 mm**] [**AA-M12C22A31, Class II, 0.010 mm**] or thicker.
 4. Color Anodic Finish: AAMA 611, [**AA-M12C22A42/A44, Class I, 0.018 mm**] [**AA-M12C22A32/A34, Class II, 0.010 mm**] or thicker.
 5. Exposed Coil-Coated Finish: Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - a. Two-Coat Fluoropolymer Finish: AAMA 620. System consisting of primer and fluoropolymer color topcoat containing not less than 70 percent PVDF resin by weight.
 6. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of **1.5 mils (0.04 mm)**. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
 7. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester-backer finish consisting of prime coat and wash coat, with a minimum total dry film thickness of **0.5 mil (0.013 mm)**.
- D. Aluminum Extrusions and Tubes: **ASTM B 221 (ASTM B 221M)**, manufacturer's standard alloy and temper for type of use, finished to match assembly where used, otherwise mill finished.
- E. Copper Sheet: ASTM B 370, manufacturer's standard temper.
- F. Stainless-Steel Sheet and Shapes: ASTM A 240/A 240M or ASTM A 666, Type 304.
- G. Steel Shapes: ASTM A 36/A 36M, hot-dip galvanized according to ASTM A 123/A 123M unless otherwise indicated.
- H. Steel Tube: ASTM A 500, round tube.

- I. Galvanized-Steel Tube: ASTM A 500, round tube, hot-dip galvanized according to ASTM A 123/A 123M.
- J. Steel Pipe: ASTM A 53/A 53M, galvanized.

2.3 MISCELLANEOUS MATERIALS

- A. General: Provide materials and types of fasteners, protective coatings, sealants, and other miscellaneous items required by manufacturer for a complete installation.
- B. Acrylic Glazing: ASTM D 4802, thermoformable, monolithic sheet, manufacturer's standard, Type UVA (formulated with UV absorber), Finish 1 (smooth or polished).
- C. Polycarbonate Glazing: Thermoformable, monolithic polycarbonate sheets manufactured by extrusion process, burglar-resistance rated according to UL 972 with an average impact strength of [12 to 16 ft-lbf/in. (640 to 854 J/m)] <Insert value> of width when tested according to ASTM D 256, Method A (Izod).
- D. Cellulosic-Fiber Board Insulation: ASTM C 208, Type II, Grade 1, thickness as indicated.
- E. Glass-Fiber Board Insulation: ASTM C 726, thickness as indicated.
- F. Polyisocyanurate Board Insulation: ASTM C 1289, thickness as indicated.
- G. Wood Nailers: Softwood lumber, pressure treated with waterborne preservatives for aboveground use, acceptable to authorities having jurisdiction, [**containing no arsenic or chromium,**] and complying with AWPA C2; not less than 1-1/2 inches (38 mm) thick.
- H. Security Grilles: [3/4-inch (19-mm)] <Insert dimension> diameter, ASTM A 1011/A 1011M steel bars spaced [6 inches (150 mm)] <Insert dimension> o.c. in one direction and [12 inches (300 mm)] <Insert dimension> o.c. in the other; factory finished as follows:
 - 1. Surface Preparation: Remove mill scale and rust, if any, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning," or SSPC-SP 8, "Pickling."
 - 2. Factory Priming for Field-Painted Finish: Apply shop primer specified below immediately after surface preparation and pretreatment.
 - 3. Shop Primer: Manufacturer's or fabricator's standard, fast-curing, lead- and chromate-free, universal primer; selected for resistance to normal atmospheric corrosion, for compatibility with substrate and field-applied finish paint system indicated, and for capability to provide a sound foundation for field-applied topcoats under prolonged exposure.
- I. Bituminous Coating: Cold-applied asphalt emulsion complying with ASTM D 1187.
- J. Underlayment:

1. Felt: ASTM D 226, Type II (No. 30), asphalt-saturated organic felt, nonperforated.
 2. Polyethylene Sheet: **6-mil-** (0.15-mm-) thick polyethylene sheet complying with ASTM D 4397.
 3. Slip Sheet: Building paper, **3-lb/100 sq. ft.** (0.16-kg/sq. m) minimum, rosin sized.
- K. Fasteners: Roof accessory manufacturer's recommended fasteners suitable for application and metals being fastened. Match finish of exposed fasteners with finish of material being fastened. Provide nonremovable fastener heads to exterior exposed fasteners. Furnish the following unless otherwise indicated:
1. Fasteners for Zinc-Coated or Aluminum-Zinc Alloy-Coated Steel: Series 300 stainless steel or hot-dip zinc-coated steel according to ASTM A 153/A 153M or ASTM F 2329.
 2. Fasteners for Aluminum Sheet: Aluminum or Series 300 stainless steel.
 3. Fasteners for Copper Sheet: Copper, hardware bronze, or passivated Series 300 stainless steel.
 4. Fasteners for Stainless-Steel Sheet: Series 300 stainless steel.
- L. Gaskets: Manufacturer's standard tubular or fingered design of neoprene, EPDM, PVC, or silicone or a flat design of foam rubber, sponge neoprene, or cork.
- M. Elastomeric Sealant: ASTM C 920, elastomeric [**polyurethane**] [**silicone**] polymer sealant as recommended by roof accessory manufacturer for installation indicated; low modulus; of type, grade, class, and use classifications required to seal joints and remain watertight.
- N. Butyl Sealant: ASTM C 1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied for expansion joints with limited movement.
- O. Asphalt Roofing Cement: ASTM D 4586, asbestos free, of consistency required for application.
- 2.4 ROOF CURBS
- A. Roof Curbs: Internally reinforced roof-curb units[**with integral spring-type vibration isolators and**] capable of supporting superimposed live and dead loads, including equipment loads and other construction indicated on Drawings; with welded or mechanically fastened and sealed corner joints,[**integral metal cant,**] [**stepped integral metal cant raised the thickness of roof insulation,**] and integrally formed deck-mounting flange at perimeter bottom.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [AES Industries, Inc.](#)
 - b. Colony Custom Curbs.
 - c. Commodity Products Company, Inc.
 - d. Conn-Fab Sales, Inc.
 - e. [Curbs Plus, Inc.](#)

- f. [Custom Solution Roof and Metal Products.](#)
 - g. Gieske Custom Metal Fabricators.
 - h. Goeller Enterprises.
 - i. [Greenheck Fan Corporation.](#)
 - j. [LM Curbs.](#)
 - k. Loren Cook Company.
 - l. [Metallic Products Corp.](#)
 - m. [Milcor Inc.; Commercial Products Group of Hart & Cooley, Inc.](#)
 - n. [Pate Company \(The\).](#)
 - o. [Roof Products, Inc.](#)
 - p. [Safe Air of Illinois.](#)
 - q. [Thybar Corporation.](#)
 - r. Uni-Curb, Inc.
 - s. [Vent Products Co., Inc.](#)
 - t. <Insert manufacturer's name>.
 - u. or approved equal.
- B. Size: Coordinate dimensions with roughing-in information or Shop Drawings of equipment to be supported.
- C. Loads: <Insert load requirements>.
- D. Material: Structural quality ASTM A 570, grade as required, [**Zinc-coated (galvanized)**] [**Aluminum-zinc alloy-coated**] steel sheet, [**0.079 inch (2.01 mm)**] <Insert dimension> thick, prepared for factory prime and paint finish.
1. Finish: Factory primed and painted with minimum 2-mil thickness of [**Two-coat fluoropolymer**] [**Baked enamel or powder coat**] <Insert finish> finish.
 2. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
- E. Construction:
1. Insulation: Factory insulated with [**1-1/2-inch- (38-mm-)**] <Insert dimension> thick [**cellulosic**] [**glass**]-fiber board insulation.
 2. Liner: Same material as curb, of manufacturer's standard thickness and finish.
 3. Factory-installed wood nailer at top of curb, continuous around curb perimeter.
 4. On ribbed or fluted metal roofs, form deck-mounting flange at perimeter bottom to conform to roof profile.
 5. Fabricate curbs to minimum height of [**12 inches (300 mm)**] <Insert dimension> unless otherwise indicated.
 6. Top Surface: Level around perimeter with roof slope accommodated by sloping the deck-mounting flange.
 7. Sloping Roofs: Where roof slope exceeds 1:48, fabricate curb with perimeter curb height tapered to accommodate roof slope so that top surface of perimeter curb is level. Equip unit with water diverter or cricket on side that obstructs water flow.
 8. Security Grille: Provide where indicated.

2.5 EQUIPMENT SUPPORTS

- A. Equipment Supports: Internally reinforced metal equipment supports capable of supporting superimposed live and dead loads, including equipment loads and other construction indicated on Drawings; with welded or mechanically fastened and sealed corner joints, [**integral metal cant,**] [**stepped integral metal cant raised the thickness of roof insulation,**] and integrally formed deck-mounting flange at perimeter bottom.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [AES Industries, Inc.](#)
 - b. Colony Custom Curbs.
 - c. Commodity Products Company, Inc.
 - d. Conn-Fab Sales, Inc.
 - e. [Curbs Plus, Inc.](#)
 - f. [Custom Solution Roof and Metal Products.](#)
 - g. Gieske Custom Metal Fabricators.
 - h. Goeller Enterprises.
 - i. [Greenheck Fan Corporation.](#)
 - j. [LM Curbs.](#)
 - k. Loren Cook Company.
 - l. [Milcor Inc.; Commercial Products Group of Hart & Cooley, Inc.](#)
 - m. [Pate Company \(The\).](#)
 - n. [Roof Products, Inc.](#)
 - o. [Thybar Corporation.](#)
 - p. Uni-Curb, Inc.
 - q. [Vent Products Co., Inc.](#)
 - r. **<Insert manufacturer's name>**.
 - s. or approved equal.
- B. Size: Coordinate dimensions with roughing-in information or Shop Drawings of equipment to be supported.
- C. Loads: **<Insert load requirements>**.
- D. Material: Structural quality ASTM A370, grade as required, [**Zinc-coated (galvanized)**] steel sheet, [**0.079 inch (2.01 mm)**] **<Insert dimension>** thick, prepared for factory prime and paint finish.
1. Finish: Factory primed and painted with minimum 2-mil thickness of [**Two-coat fluoropolymer**] [**Baked enamel or powder coat**] **<Insert finish>** finish.
 2. Color: [**As indicated by manufacturer's designations**] [**Match DI A Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] **<Insert color>**.
- E. Construction:

1. Insulation: Factory insulated with [**1-1/2-inch- (38-mm-)**] **<Insert dimension>** thick [**cellulosic**] [**glass**]-fiber board insulation.
2. Liner: Same material as equipment support, of manufacturer's standard thickness and finish.
3. Factory-installed continuous wood nailers [**3-1/2 inches (90 mm)**] [**5-1/2 inches (140 mm)**] **<Insert dimension>** wide at tops of equipment supports.
4. Metal Counterflashing: Manufacturer's standard, removable, fabricated of same metal and finish as equipment support.
5. On ribbed or fluted metal roofs, form deck-mounting flange at perimeter bottom to conform to roof profile.
6. Fabricate equipment supports to minimum height of [**12 inches (300 mm)**] **<Insert dimension>** unless otherwise indicated.
7. Sloping Roofs: Where roof slope exceeds 1:48, fabricate each support with height to accommodate roof slope so that tops of supports are level with each other. Equip supports with water diverters or crickets on sides that obstruct water flow.
8. Security Grille: Provide where indicated.

2.6 ROOF HATCH

- A. Roof Hatches: Metal roof-hatch units with lids and insulated [**single**] [**double**]-walled curbs, welded or mechanically fastened and sealed corner joints, continuous lid-to-curb counterflashing and weathertight perimeter gasketing, [**integral metal cant,**] [**stepped integral metal cant raised the thickness of roof insulation,**] and integrally formed deck-mounting flange at perimeter bottom.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [AES Industries, Inc.](#)
 - b. [Babcock-Davis.](#)
 - c. [Bilco Company \(The\).](#)
 - d. Bohem Skylites, Inc.
 - e. [Bristolite Skylights.](#)
 - f. [Custom Solution Roof and Metal Products.](#)
 - g. [Dur-Red Products.](#)
 - h. [Hi Pro International, Inc.](#)
 - i. [J. L. Industries, Inc.](#)
 - j. Faulkner Plastics, Inc.
 - k. Hillsdale Industries, Inc.
 - l. [Metallic Products Corp.](#)
 - m. [Milcor Inc.; Commercial Products Group of Hart & Cooley, Inc.](#)
 - n. [Naturalite Skylight Systems; Vistawall Group \(The\).](#)
 - o. [Nystrom.](#)
 - p. [O'Keeffe's Inc.](#)
 - q. [Pate Company \(The\).](#)
 - r. Plasteco, Inc.
 - s. [Precision Ladders, LLC.](#)
 - t. Wasco Products, Inc.

- u. **<Insert manufacturer's name>**.
 - v. or approved equal.
- B. Type and Size: Single-leaf lid unless otherwise indicated, [**30 by 36 inches (750 by 900 mm)**] [**30 by 54 inches (750 by 1370 mm)**] [**30 by 96 inches (750 by 2440 mm)**] **<Insert dimensions>**.
- C. Loads: Minimum [**40-lbf/sq. ft. (1.9-kPa)**] **<Insert value>** external live load and [**20-lbf/sq. ft. (0.95-kPa)**] **<Insert value>** internal uplift load.
- D. Hatch Material: [**Zinc-coated (galvanized)**] steel sheet, [**0.079 inch (2.01 mm)**] **<Insert dimension>** thick.
- 1. Finish: Factory primed and painted with minimum 2-mil thickness of [**Two-coat fluoropolymer**] [**Baked enamel or powder coat**] **<Insert finish>** finish.
 - 2. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] **<Insert color>**.
- E. Construction:
- 1. Insulation: 1" thick [**Cellulosic-fiber**] [**Glass-fiber**] [**Polyisocyanurate**] board.
 - 2. Hatch Lid: Opaque, insulated, and double walled, with manufacturer's standard metal liner of same material and finish as outer metal lid.
 - 3. Curb Liner: Manufacturer's standard, of same material and finish as metal curb.
 - 4. On ribbed or fluted metal roofs, form flange at perimeter bottom to conform to roof profile.
 - 5. Fabricate curbs to minimum height of [**12 inches (300 mm)**] **<Insert dimension>** unless otherwise indicated.
 - 6. Sloping Roofs: Where slope or roof deck exceeds 1:48, fabricate curb with perimeter curb height that is [**constant**] [**tapered to accommodate roof slope so that top surfaces of perimeter curb are level**]. Equip hatch with water diverter or cricket on side that obstructs water flow.
- F. Hardware: [**Galvanized**] [**Stainless**]-steel spring latch with turn handles, butt- or pintle-type hinge system, and padlock hasps inside and outside.
- 1. Provide two-point latch on lids larger than **84 inches (2130 mm)**.
 - 2. Provide remote-control operation.
- G. Safety Railing System: Roof-hatch manufacturer's standard system including rails, clamps, fasteners, safety barrier at railing opening, and accessories required for a complete installation; attached to roof hatch and complying with 29 CFR 1910.23 requirements and authorities having jurisdiction.
- 1. Height: [**42 inches (1060 mm)**] **<Insert dimension>** above finished roof deck.
 - 2. Posts and Rails: Galvanized-steel pipe, **1-1/4 inches (31 mm)** in diameter or galvanized-steel tube, **1-5/8 inches (41 mm)** in diameter.
 - 3. Flat Bar: Galvanized steel, **2 inches (50 mm)** high by **3/8 inch (9 mm)** thick.

4. Maximum Opening Size: System constructed to prevent passage of a sphere **21 inches (533 mm)** in diameter.
5. Chain Passway Barrier: Galvanized proof coil chain with quick link on fixed end.
6. Self-Latching Gate: Fabricated of same materials and rail spacing as safety railing system. Provide manufacturer's standard hinges and self-latching mechanism.
7. Post and Rail Tops and Ends: Weather resistant, closed or plugged with prefabricated end fittings.
8. Provide weep holes or another means to drain entrapped water in hollow sections of handrail and railing members.
9. Fabricate joints exposed to weather to be watertight.
10. Fasteners: Manufacturer's standard, finished to match railing system.
11. Finish: **[Manufacturer's standard] <Insert finish>**.
 - a. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.

H. Ladder-Assist Post: Roof-hatch manufacturer's standard device for attachment to roof-access ladder.

1. Operation: Post locks in place on full extension; release mechanism returns post to closed position.
2. Height: **[42 inches (1060 mm)] <Insert dimension>** above finished roof deck.
3. Material: **[Steel tube] [Stainless steel] [Aluminum]**.
4. Post: **[1-5/8-inch- (41-mm-)] <Insert dimension>** diameter pipe.
5. Finish: **[Manufacturer's standard baked enamel or powder coat] <Insert finish>**.
 - a. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.

2.7 HEAT AND SMOKE VENTS

A. Hatch-Type Heat and Smoke Vents: Manufacturer's standard, with **[single] [double]**-walled insulated curbs, welded or mechanically fastened and sealed corner joints, integral condensation gutter, and cap flashing. Fabricate with insulated double-walled lid and continuous weathertight perimeter lid gaskets, and equip with automatic self-lifting mechanisms and UL-listed **[fusible links rated at 165 deg F (74 deg C)] [fire-suppression system] [smoke-detection system]**.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Babcock-Davis](#).
 - b. [Bilco Company \(The\)](#).
 - c. [Bristolite Skylights](#).
 - d. Custom Curb, Inc.

- e. [Dur-Red Products.](#)
 - f. Goeller Enterprises.
 - g. [Hi Pro International, Inc.](#)
 - h. [J. L. Industries, Inc.](#)
 - i. [Milcor Inc.; Commercial Products Group of Hart & Cooley, Inc.](#)
 - j. [Naturalite Skylight Systems; Vistawall Group \(The\).](#)
 - k. [Nystrom.](#)
 - l. [O'Keeffe's Inc.](#)
 - m. [Pate Company \(The\).](#)
 - n. ThyCurb, Inc.
 - o. Wasco Products, Inc.
 - p. [Western Canwell.](#)
 - q. <Insert manufacturer's name>.
 - r. or approved equal.
2. Type and Size: Single-leaf lid, [**30 by 36 inches (750 by 900 mm)**] [**30 by 54 inches (750 by 1370 mm)**] [**30 by 96 inches (750 by 2440 mm)**] <Insert dimensions>.
3. Type and Size: Double-leaf lid, [**72 by 96 inches (1830 by 2440 mm)**] <Insert dimensions>.
4. Loads: Minimum [**40-lbf/sq. ft. (1.9-kPa)**] <Insert value> external live load and [**30-lbf/sq. ft. (1.4-kPa)**] <Insert value> internal uplift load.
- a. When release is actuated, lid shall open against [**10-lbf/sq. ft. (0.5-kPa)**] <Insert value> snow or wind load and lock in position.
 - b. Hatch-Lid Glazing: Minimum [**40-lbf/sq. ft. (1.9-kPa)**] <Insert value> external live load and [**20-lbf/sq. ft. (0.95-kPa)**] <Insert value> internal uplift load.
5. Heat and Smoke Vent Standard: Provide units that have been tested and [**listed to comply with UL 793**] [**and**] [**are FM Approved**].
6. Curb, Framing, and Lid Material: [**Zinc-coated (galvanized)**] [**Aluminum-zinc alloy-coated**] steel sheet, [**0.079 inch (2.01 mm)**] <Insert dimension> thick.
- a. Finish: Primed [**Two-coat fluoropoly**] factory primed and painted finish [**Baked enamel or powder coat**] <Insert finish>.
 - b. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
7. Curb, Framing, and Lid Material: Aluminum sheet, [**0.090 inch (2.28 mm)**] <Insert dimension> thick.
- a. Finish: [**Mill**] [**Factory prime coating**] [**Clear anodic**] [**Color anodic**] [**Two-coat fluoropolymer**] [**Baked enamel or powder coat**] <Insert finish>.
 - b. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] [**Light bronze**] [**Medium bronze**] [**Dark bronze**] <Insert color>.

8. Curb, Framing, and Lid Material: Stainless-steel sheet, **[0.078 inch (1.98 mm)]** <Insert dimension> thick.
 - a. Finish: **[Manufacturer's standard] [No. 2D, directional polish finish]** <Insert finish>.
 9. Construction:
 - a. Insulation: **[Cellulosic-fiber] [Glass-fiber] [Polyisocyanurate]** board.
 - b. Hatch Lid: Opaque, insulated, and double walled, with manufacturer's standard metal liner of same material and finish as outer metal lid.
 - c. Hatch Lid: Glazed, insulated, and double walled, with manufacturer's standard metal liner of same material and finish as outer metal lid.
 - d. Exterior Curb Liner: Manufacturer's standard, of same material and finish as metal curb.
 - e. Fabricate curbs to minimum height of **[12 inches (300 mm)]** <Insert dimension> unless otherwise indicated.
 - f. Sloping Roofs: Where slope or roof deck exceeds 1:48, fabricate curb with perimeter curb height that is **[constant] [tapered to accommodate roof slope so that top surfaces of perimeter curb are level]**. Equip hatch with water diverter or cricket on side that obstructs water flow.
 - g. Security Grille: Provide where indicated.
 10. Hatch-Lid Glazing: **[Single] [Double] [acrylic] [polycarbonate]** glazing of thickness capable of resisting indicated loads; **[colorless, transparent] [white, translucent]** <Insert color requirement>.
 11. Hardware: Manufacturer's standard, corrosion resistant or hot-dip galvanized; with hinges, hold-open devices, and independent manual-release devices for **[inside] [and] [outside]** operation of lids.
- B. Dropout-Type Heat and Smoke Vents: Manufacturer's standard, gravity operated and automatic; with **[single] [double]**-walled insulated curbs and frame, welded or mechanically fastened and sealed corner joints, integral condensation gutter, cap flashing, and heat-sensitive dome glazing that will deform and drop out of vent opening according to heat and smoke vent standard indicated.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Construction Specialties, Inc.](#)
 - b. Custom Curb, Inc.
 - c. Dur-Red Products, Inc.
 - d. Goeller Enterprises.
 - e. HiPro International, Inc.
 - f. Milcor, Inc.
 - g. [Naturalite Skylight Systems; Vistawall Group \(The\).](#)
 - h. O'Keeffe's, Inc.
 - i. [Pate Company \(The\).](#)
 - j. [Plasteco, Inc.](#)
 - k. Wasco Products, Inc.

- f. Inner Double-Dome Color: **[Colorless, transparent] [White, translucent] [Gray tinted, transparent] [Bronze tinted, transparent] <Insert requirement>**.
8. Hardware: Manufacturer's standard, corrosion resistant or hot-dip galvanized; with hinges, hold-open devices, and independent manual-release devices for **[inside] [and] [outside]** operation of lids.

2.8 GRAVITY VENTILATORS

- A. Low-Profile, Cylindrical-Style Gravity Ventilators: Manufacturer's standard, fabricated as indicated, with manufacturer's standard welded or sealed mechanical joints.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Active Ventilation Products, Inc.](#)
 - b. [Greenheck Fan Corporation.](#)
 - c. [Loren Cook Company.](#)
 - d. [Metallic Products Corp.](#)
 - e. [Thaler Metal USA Inc.](#)
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
 2. Construction: Integral base flange, vent cylinder, cylinder bird screen, and **[rain cap] [hood]**.
 3. Dimensions: **[As indicated on Drawings] <Insert dimensions>**.
 4. Configuration: **[As indicated on Drawings] <Insert requirements>**.
 5. Bird Screens: Manufacturer's standard mesh with rewirable frame.
 6. Insect Screens: Manufacturer's standard mesh with rewirable frame.
 7. Vent Cylinder, Base Flange, and **[Rain-Cap] [Hood]** Material: **[Zinc-coated (galvanized) steel] [Aluminum] [Copper] [Stainless-steel]** sheet, of manufacturer's standard thickness.
 8. Finish: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert finish>**.
- B. Louvered Penthouse-Style Gravity Ventilators: Manufacturer's standard, fabricated as indicated, with manufacturer's standard welded or sealed mechanical joints.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Dur-Red Products.](#)
 - b. [Greenheck Fan Corporation.](#)
 - c. [Loren Cook Company.](#)
 - d. [Safe Air of Illinois.](#)
 - e. [Vent Products Co., Inc.](#)
 - f. **<Insert manufacturer's name>**.

- g. or approved equal.
 2. Construction: Integral frame with base flange, weathertight cap[**with clear acrylic dome**] [**with white translucent acrylic dome**], and weatherproof sidewall louvers.
 3. Dimensions: [**As indicated on Drawings**] <Insert dimensions>.
 4. Configuration: [**As indicated on Drawings**] <Insert requirements>.
 5. Bird Screens: Manufacturer's standard mesh with rewirable frame.
 6. Insect Screens: Manufacturer's standard mesh with rewirable frame.
 7. Frame, Base Flange, Cap, and Louver Material: [**Zinc-coated (galvanized) steel**] [**Aluminum**] [**Stainless-steel**] sheet, of manufacturer's standard thickness.
 8. Finish: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert finish>.
- C. Turbine-Style Gravity Ventilators: Manufacturer's standard, fabricated as indicated, with manufacturer's standard welded or sealed mechanical joints:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Air Vent, Inc.; a Gibraltar company.](#)
 - b. [Metallic Products Corp.](#)
 - c. <Insert manufacturer's name>.
 - d. or approved equal.
 2. Provide integral weathertight base cap, outlet duct, and rotating louvered turbine.
 3. Dimensions: [**As indicated on Drawings**] <Insert dimensions>.
 4. Configuration: [**As indicated on Drawings**] <Insert requirements>.
 5. Bird Screens: Manufacturer's standard mesh with rewirable frame.
 6. Insect Screens: Manufacturer's standard mesh with rewirable frame.
 7. Weathertight Base Cap, Outlet Duct, and Turbine Material: [**Zinc-coated (galvanized) steel**] [**Aluminum**] sheet, of manufacturer's standard thickness.
 8. Finish: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert finish>.

2.9 PIPE SUPPORTS

- A. Pipe Supports: Adjustable-height, extruded-aluminum tube, filled with urethane insulation; [**2 inches (50 mm)**] <Insert dimension> in diameter; with aluminum baseplate, EPDM base seal, manufacturer's recommended hardware for mounting to structure or structural roof deck as indicated, and extruded-aluminum carrier assemblies; suitable for quantity of pipe runs and sizes.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Thaler Metal USA Inc.](#)

- b. **<Insert manufacturer's name>**.
 - c. or approved equal.
 2. Pipe Support Height: As indicated on Drawings.
 3. Roller Assembly: With stainless-steel roller, sized for supported pipes.
 4. Pipe Support Flashing: Manufacturer's standard [**insulated**] sleeve flashing with integral base flange; [**aluminum sheet, 0.063 inch (1.60 mm) thick**] [**copper sheet, 16 oz. (0.55 mm) thick**].
 5. Finish: [**Manufacturer's standard**] **<Insert finish>**.
- B. [**Terrace**] Lighting Supports: Epoxy-coated, hollow steel pipe support, filled with urethane insulation; with epoxy-coated steel baseplate, EPDM base seal, manufacturer's recommended hardware for mounting to structure or structural roof deck as indicated, and threaded stainless-steel cap.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Thaler Metal USA Inc.](#)
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.
 2. Height: [**14 inches (356 mm)**] [**18 inches (457 mm)**] **<Insert dimension>**.
 3. Lighting Pole Mounting: [**Stainless-steel lighting pole adapter**] [**Epoxy-coated steel plate with stainless-steel studs**].
 4. Pipe Support Flashing: Manufacturer's standard[**insulated**] sleeve flashing with integral base flange; [**aluminum sheet, 0.063 inch (1.60 mm) thick**] [**copper sheet, 16 oz. (0.55 mm) thick**].
 5. Finish: [**Manufacturer's standard**] **<Insert finish>**.
- C. Light-Duty Pipe Supports: Extruded-aluminum base assembly and Type 304 stainless-steel roller assembly for pipe sizes indicated, including manufacturer's recommended load-distributing baseplate.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Thaler Metal USA Inc.](#)
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.
 2. Finish: [**Manufacturer's standard**] **<Insert finish>**.
- D. Duct Supports: Extruded-aluminum, urethane-insulated supports, [**2 inches (50 mm)**] **<Insert dimension>** in diameter; with manufacturer's recommended hardware for mounting to structure or structural roof deck.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [Thaler Metal USA Inc.](#)
 - b. <Insert manufacturer's name>.
 - c. or approved equal.
2. Finish: **[Manufacturer's standard]** <Insert finish>.

2.10 ROOF WALKWAYS

- A. Roof Walkway: Metal planking formed from multiple C-shaped channels with upper surface punched in serrated diamond or rectangular shapes to produce raised slip-resistant surface and drainage holes. Provide support framing, brackets, connectors, nosings, and other accessories and components needed for complete installation. Include step units or stairs of similar construction for changes in elevation. Equip with safety railings that are acceptable to authorities having jurisdiction, where height of walkway or stairs requires them.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [GS Metals Corp.](#)
 - b. [Miro Industries, Inc.](#)
 - c. [PHP Systems/Design.](#)
 - d. [Unistrut Corporation.](#)
 - e. <Insert manufacturer's name>.
 - f. or approved equal.
2. Plank Width: **[4-3/4 inches (121 mm)] [7 inches (178 mm)] [9-1/2 inches (241 mm)] [11-3/4 inches (298 mm)] [18-3/4 inches (476 mm)] [24 inches (610 mm)] [As indicated]**.
3. Walkway Width: **[As indicated]** <Insert dimension>.
4. Channel Depth: **[1-1/2 inches (38 mm)] [2 inches (50 mm)] [2-1/2 inches (64 mm)] [3 inches (76 mm)] [As indicated]**.
5. Metal Material: **[0.079-inch- (2.01-mm-) thick zinc-coated (galvanized) steel sheet] [0.108-inch- (2.74-mm-) thick zinc-coated (galvanized) steel sheet] [0.062-inch- (1.59-mm-) thick stainless-steel sheet]** <Insert material and thickness>.
6. Support Stands: Manufacturer's standard, with protective pads compatible with roofing material.
7. Support Pads: Continuous wood isolation pads, pressure-preservative treated as specified in **[Section 061000 "Rough Carpentry"] [Section 061053 "Miscellaneous Rough Carpentry"]**; attach roof-walkway supports to pads so that supports are separated from roof membrane surface and walkway support loads are distributed evenly.
8. Finish: **[Manufacturer's standard]** <Insert finish>.

2.11 PREFORMED FLASHING SLEEVES

- A. Exhaust Vent Flashing: Double-walled metal flashing sleeve or boot, insulation filled, with integral deck flange, [**12 inches (300 mm)**] <Insert dimension> high, with removable metal hood and [**slotted**] [**perforated**] metal collar.
- Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - [Custom Solution Roof and Metal Products.](#)
 - [Thaler Metal USA Inc.](#)
 - <Insert manufacturer's name>.
 - or approved equal.
 - Metal: [**Aluminum sheet, 0.063 inch (1.60 mm) thick**] [**Copper sheet, 16 oz. (0.55 mm) thick**] <Insert material and thickness>.
 - Diameter: [**As indicated**] [**3 inches (76 mm)**] [**4 inches (100 mm)**] [**5 inches (125 mm)**] [**6 inches (150 mm)**] [**7 inches (175 mm)**] [**8 inches (200 mm)**] [**9 inches (225 mm)**] [**10 inches (250 mm)**] <Insert dimension>.
 - Finish: [**Manufacturer's standard**] <Insert finish>.
- B. Vent Stack Flashing: Metal flashing sleeve, uninsulated, with integral deck flange.
- Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - [Custom Solution Roof and Metal Products.](#)
 - [Milcor Inc.; Commercial Products Group of Hart & Cooley, Inc.](#)
 - [Thaler Metal USA Inc.](#)
 - <Insert manufacturer's name>.
 - or approved equal.
 - Metal: [**Aluminum sheet, 0.063 inch (1.60 mm) thick**] [**Copper sheet, 16 oz. (0.55 mm) thick**] <Insert material and thickness>.
 - Height: [**7 inches (175 mm)**] [**13 inches (330 mm)**] [**19 inches (480 mm)**] <Insert dimension>.
 - Diameter: [**As indicated**] [**2 inches (50 mm)**] [**3 inches (76 mm)**] [**4 inches (100 mm)**] [**5 inches (125 mm)**] [**6 inches (150 mm)**] <Insert dimension>.
 - Finish: [**Manufacturer's standard**] <Insert finish>.

2.12 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, to verify actual locations, dimensions, and other conditions affecting performance of the Work.
- B. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.
- C. Verify dimensions of roof openings for roof accessories.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install roof accessories according to manufacturer's written instructions. Coordinate with installation of roof deck and other substrates to receive accessory units, and vapor barriers, roof insulation, roofing, and flashing; as required to ensure that each element of the work performs properly and that combined elements are waterproof and weathertight. Anchor units securely to supporting structural substrates, adequate to withstand lateral and thermal stresses as well as inward and outward loading pressures.
 - 1. Except as otherwise indicated install roof accessory items in accordance with construction details of "NRCA Roofing and Waterproofing Manual".
 - 2. Install roof accessories level, plumb, true to line and elevation, and without warping, jogs in alignment, excessive oil canning, buckling, or tool marks.
 - 3. Anchor roof accessories securely in place so they are capable of resisting indicated loads.
 - 4. Use fasteners, separators, sealants, and other miscellaneous items as required to complete installation of roof accessories and fit them to substrates.
 - 5. Install roof accessories to resist exposure to weather without failing, rattling, leaking, or loosening of fasteners and seals.
- B. Metal Protection: Protect metals against galvanic action by separating dissimilar metals from contact with each other or with corrosive substrates by painting contact surfaces with bituminous coating or by other permanent separation as recommended by manufacturer.
 - 1. Coat concealed side of **[uncoated aluminum]** **[stainless-steel]** roof accessories with bituminous coating where in contact with wood, ferrous metal, or cementitious construction.
 - 2. Underlayment: Where installing roof accessories directly on cementitious or wood substrates, install a course of felt underlayment and cover with a slip sheet, or install a course of polyethylene sheet.
 - 3. Bed flanges in thick coat of asphalt roofing cement where required by manufacturers of roof accessories for waterproof performance.

- C. Cap Flashing: Where cap flashing is required as component of accessory, install to provide adequate waterproof overlap with roofing or roof flashing (as counter flashing). Seal with thick bead of mastic sealant, except where overlap is indicated to be left open for ventilation.
- D. Roof Curb Installation: Install each roof curb so top surface is level.
- E. Equipment Support Installation: Install equipment supports so top surfaces are level with each other.
- F. Roof-Hatch Installation:
1. Install roof hatch so top surface of hatch curb is level.
 2. Verify that roof hatch operates properly. Clean, lubricate, and adjust operating mechanism and hardware.
 3. Attach safety railing system to roof-hatch curb.
 4. Attach ladder-assist post according to manufacturer's written instructions.
- G. Heat and Smoke Vent Installation:
1. Install heat and smoke vent so top perimeter surfaces are level.
 2. Install and test heat and smoke vents and their components for proper operation according to NFPA 204.
- H. Gravity Ventilator Installation: Verify that gravity ventilators operate properly and have unrestricted airflow. Clean, lubricate, and adjust operating mechanisms.
- I. Pipe Support Installation: Install pipe supports so top surfaces are in contact with and provide equally distributed support along length of supported item.
- J. Security Grilles: Weld bar intersections and[, **using tamper-resistant bolts, attach the**] ends of bars to structural frame or primary curb walls.
- K. Roof Walkway Installation:
1. Verify that locations of access and servicing points for roof-mounted equipment are served by locations of roof walkways.
 2. Remove ballast from top surface of low-slope roofing at locations of contact with roof-walkway supports.
 3. Install roof walkway support pads prior to placement of roof walkway support stands onto low-slope roofing.
 4. Redistribute removed ballast after installation of support pads.
- L. Preformed Flashing-Sleeve Installation: Secure flashing sleeve to roof membrane according to flashing-sleeve manufacturer's written instructions.
- M. Seal joints with [**elastomeric**] [**or**] [**butyl**] sealant as required by roof accessory manufacturer.
- N. Operational Units: Test operate units with operable components. Clean and lubricate joints and hardware. Adjust for proper operation.

3.3 REPAIR AND CLEANING

- A. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing according to ASTM A 780.
- B. Touch up factory-primed surfaces with compatible primer ready for field painting according to Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."
- C. Clean exposed surfaces according to manufacturer's written instructions.
- D. Clean off excess sealants.
- E. Replace roof accessories that have been damaged or that cannot be successfully repaired by finish touchup or similar minor repair procedures.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 077200

SECTION 077253 - SNOW GUARDS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Pad-type, flat-mounted snow guards.
 - 2. Pad-type, seam-mounted snow guards.
 - 3. Rail-type, flat-mounted snow guards.
 - 4. Rail-type, seam-mounted snow guards.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for snow guards.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: Include roof plans showing layouts and attachment details of snow guards.
 - 1. Include details of rail-type snow guards.
 - 2. Include calculation of number and location of snow guards based on snow load, roof slope, roof type, components, spacings, and finish.
- C. Samples: **[Full-size unit] [Base, bracket, and 12-inch- (300-mm-) long rail]**.

1.4 INFORMATIONAL SUBMITTALS

- A. Product Test Reports: For each type of snow guard, for tests performed by manufacturer and witnessed by a qualified testing agency.

1.5 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Performance Requirements: Provide snow guards that withstand exposure to weather and resist thermally induced movement without failure, rattling, or fastener disengagement due to defective manufacture, fabrication, installation, or other defects in construction.

1. Temperature Change: [**120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces**] <Insert temperature change>.

- B. Structural Performance:

1. Snow Loads: [**As indicated on Drawings**] <Insert loading requirements>.

2.2 PAD-TYPE SNOW GUARDS

- A. Flat-Mounted Metal Snow Guard Pads:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [Alpine SnowGuards; a division of Vermont Slate & Copper Services, Inc.](#)
- b. [Berger Building Products.](#)
- c. [PMC Industries, Inc.](#)
- d. [Roofers Edge.](#)
- e. [Sieger Snow Guards Inc.](#)
- f. [Sno-Gem, Inc.](#)
- g. [SnoGuard.](#)
- h. [TRA-MAGE, Inc.](#)
- i. [Zaleski Snow-Guards for Roofs, Inc.](#)
- j. <Insert manufacturer's name>.
- k. or approved equal.

2. Material: [**Aluminum**] [**Cast aluminum**] [**Cast bronze**] [**Copper sheet**] [**Zinc sheet**] [**Zinc-tin-alloy-coated copper sheet**] [**Stainless-steel sheet**] [**Manufacturer's standard noncorrosive metal**] <Insert material>.
3. Finish and Color: Powder coat; [**color as selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
4. Finish: [**Mill**] [**Factory-primed black epoxy**] <Insert finish>.

B. Seam-Mounted Metal Snow Guard Pads:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Alpine SnowGuards; a division of Vermont Slate & Copper Services, Inc.](#)
 - b. [Berger Building Products.](#)
 - c. <Insert manufacturer's name>.
 - d. or approved equal.
2. Material, Finish, and Color: Cast aluminum; powder coat; [color as selected by DEN Project Manager from manufacturer's full range] <Insert color>.
3. Material and Finish: [Cast aluminum; mill] [Cast aluminum; factory-primed black epoxy] [Cast bronze; polished] [Cast brass; polished] <Insert material and finish>.

C. Seam-Mounted Plastic Snow Guard Pads:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Polar Blox.](#)
 - b. <Insert manufacturer's name>.
 - c. or approved equal.
2. Material: Clear UV-stabilized polycarbonate.

2.3 RAIL-TYPE SNOW GUARDS

A. Flat-Mounted, Rail-Type Snow Guards:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Alpine SnowGuards; a division of Vermont Slate & Copper Services, Inc.](#)
 - b. [Berger Building Products.](#)
 - c. [Sieger Snow Guards Inc.](#)
 - d. [SnoGuard.](#)
 - e. [Snow Management Systems; a division of Contek, Inc.](#)
 - f. [TRA-MAGE, Inc.](#)
 - g. <Insert manufacturer's name>.
 - h. or approved equal.
2. Description: Units fabricated from metal baseplate anchored to [adjustable] [fixed] bracket and equipped with [two] [three] bars.
3. Brackets and Baseplate: [Aluminum] [Bronze or brass] [Stainless steel] <Insert material>.
4. Bars: [Aluminum; mill finished] [Aluminum; clear anodized] [Stainless steel; mill finished] <Insert material>.

B. Seam-Mounted, Rail-Type Snow Guards:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Alpine SnowGuards; a division of Vermont Slate & Copper Services, Inc.](#)
 - b. [LMCurbs.](#)
 - c. [Metal Roof Innovations, Ltd.; S-5! Attachment Solutions.](#)
 - d. [Snow Management Systems; a division of Contek, Inc.](#)
 - e. [TRA-MAGE, Inc.](#)
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
2. Description: Snow guard rails fabricated from metal pipes, bars, or extrusions, anchored to brackets and equipped with **[one rail] [two rails] [three rails] [one rail with color-matching inserts of material and finish used for metal roofing]**.
3. Material and Finish: Aluminum; **[mill] [clear anodized] <Insert finish>**.
4. Material and Finish: Stainless steel; **[mill] [No. 2B] [No. 4] <Insert finish>**.
5. Material and Finish: Brass; **[polished] <Insert finish>**.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances, snow guard attachment, and other conditions affecting performance of the Work.
 1. Verify compatibility with and suitability of substrates including compatibility with existing finishes or primers.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean and prepare substrates for bonding snow guards.
- B. Prime substrates according to snow guard manufacturer's written instructions.

3.3 INSTALLATION

- A. Install snow guards according to manufacturer's written instructions. **[Space rows as recommended by manufacturer.]**
- B. Attachment for Metal Shingle Roofing:

1. Flat-Mounted, Snow Guard Pads: [**Mechanical anchor and counterflashing sleeve system**] <Insert attachment>.
- C. Attachment for Tile Roofing:
1. Flat-Mounted, Snow Guard Pads: [**Hook and mechanically anchored through predrilled holes concealed by roof tiles**] <Insert attachment>.
 2. Flat-Mounted, Rail-Type Snow Guards: [**Mounting plates bolted or screwed to the roof in place of a roof tile**] <Insert requirement>.
- D. Attachment for Copper Roofing:
1. Flat-Mounted, Snow Guard Pads: [**Soldered**] <Insert attachment>.
- E. Attachment for Standing-Seam Metal Roofing:
1. Do not use fasteners that will penetrate metal roofing, or fastening methods that void metal roofing finish warranty.
 2. Seam-Mounted Metal Snow Guard Pads: [**Stainless-steel clamps attached to vertical ribs of standing-seam metal roof panels**] <Insert attachment>.
 3. Seam-Mounted Plastic Snow Guard Pads: [**Stainless-steel clamps attached to vertical ribs of standing-seam metal roof panels**] <Insert attachment>.
 4. Seam-Mounted, Rail-Type Snow Guards: [**Stainless-steel clamps attached to vertical ribs of standing-seam metal roof panels**] <Insert attachment>.
- F. Attachment for <Insert roofing type> Roofing:
1. <Insert requirements>.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 077253

SECTION 078100 - APPLIED FIREPROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes sprayed fire-resistive materials (SFRM).
- B. Related Requirements:
 - 1. Section 078123 "Intumescent Mastic Fireproofing" for mastic and intumescent fire-resistive coatings.
 - 2. Section 099646 "Intumescent Painting" for intumescent paints that are fire retarding but not fire resistive.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

- A. Concealed Sprayed on Fireproofing: Concealed sprayed on fireproofing refers to applications where sprayed on materials are applied to surfaces that will be concealed from view when the Work is completed.
- B. Exposed Sprayed on Fireproofing: Exposed sprayed on fireproofing refers to applications where sprayed on materials are applied to surfaces that are exposed to view when the Work is completed.
- C. W/D Ratio: Weight-to-heated-perimeter ratio, the W/D ratio for a steel shape is determined by dividing the weight per linear foot (W) by the exposed surface area of the steel member (D); the higher the ratio, the greater the member's fire resistance, thus requiring less protection when calculating rating.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager] <Insert location>**.
 - 1. Review products, design ratings, restrained and unrestrained conditions,

- densities, thicknesses, bond strengths, and other performance requirements.
2. Review coordination of application of fireproofing materials with other trades, project schedule, and project requirements.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 1. Product Data for Credit EQ 4.2: For paints and coatings, documentation including printed statement of VOC content.
 2. Laboratory Test Reports for Credit EQ 4: For paints and coatings used inside the weatherproofing system, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: Framing plans, schedules, or both, indicating the following:
 1. Extent of fireproofing for each construction and fire-resistance rating.
 2. Applicable fire-resistance design designations of a qualified testing and inspecting agency acceptable to authorities having jurisdiction.
 3. Minimum fireproofing thicknesses needed to achieve required fire-resistance rating of each structural component and assembly.
 4. Treatment of fireproofing after application.
- D. Samples: For each exposed product and for each color and texture specified, **[in manufacturer's standard dimensions] [4 inches (102 mm) square] <Insert dimensions>** in size.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For **[Installer] [and] [testing agency]**.
- B. Product Certificates: For each type of fireproofing.
- C. Evaluation Reports: For fireproofing, from ICC-ES.
- D. Preconstruction Test Reports: For fireproofing.
- E. Field quality-control reports.

1.7 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with

other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 QUALITY ASSURANCE

- A. Installer Qualifications: A firm or individual certified, licensed, or otherwise qualified by fireproofing manufacturer as experienced and with sufficient trained staff to install manufacturer's products according to specified requirements.
- B. Testing Laboratory Qualifications: To qualify for acceptance, an independent testing laboratory must demonstrate to DEN Project Manager's satisfaction, based on evaluation of laboratory submitted criteria conforming to ASTM E 605, that it has the experience and capability to conduct satisfactorily the testing indicated without delaying the progress of the Work and that it complies with Section 01400, "Quality Control Requirements".
- C. Single Source Responsibility: Obtain sprayed on fireproofing materials from a single manufacturer for each different product required.
- D. Fire Performance Characteristics: Provide materials and construction that are identical to those tested for the following fire performance characteristics, per test method indicated, by UL or other testing and inspecting organizations acceptable to authorities having jurisdiction.
- E. Fire Resistance Ratings: As indicated by reference to design designation in UL "Fire Resistance Directory" for fire resistance rated assemblies in which sprayed on fireproofing serves as direct applied protection, tested per ASTM E 119.
- F. Surface Burning Characteristics: As indicated for each sprayed on fireproofing product required, tested per ASTM E 84 and listed in UL "Building Materials Directory".
- G. Warranty: Installer to warrant material and installation for two (2) years.
- H. Prior to the start of the application of the sprayed fireproofing a meeting will be held with the DEN Project Manager, Resident Engineer, General Contractor, City Inspector, Third Party Inspector, Fireproofing Applicator, Fireproofing Manufacturer and other parties as deemed necessary to review submittals, sequencing, project conditions and scheduling.
- I. Manufacturer shall submit a certificate that all products specified by the section are 100% asbestos free and mineral wool free.
- J. Field-Constructed Mockups: Prior to installation of exposed sprayed on fireproofing, apply each product indicated for exposed applications, in locations indicated or selected by DEN Project Manager , to represent completed work for qualities of appearance, materials and application.
 - 1. **Build mockups [to verify selections made under Sample submittals and to demonstrate aesthetic effects] [to set quality standards for materials and execution] [and] [for preconstruction testing].**

2. Build mockup of **[each type of fireproofing and different substrate] [and] [each required finish] <Insert description>** as shown on Drawings.
3. Extent of Mock Ups: Approximately 100 sq. ft. of surface for each product indicated.
4. Retain mock ups during construction as standard for judging completed work.
5. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
6. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 PRECONSTRUCTION TESTING

- A. Preconstruction Testing Service: **[Owner will engage] [Engage]** a qualified testing agency to perform preconstruction testing on **[field mockups of]** fireproofing.
 1. Provide test specimens and assemblies representative of proposed materials and construction.
- B. Preconstruction Adhesion and Compatibility Testing: Test for compliance with requirements for specified performance and test methods.
 1. Bond Strength: Test for cohesive and adhesive strength according to ASTM E 736. Provide bond strength indicated in referenced fire-resistance design, but not less than minimum specified in Part 2.
 2. Density: Test for density according to ASTM E 605. Provide density indicated in referenced fire-resistance design, but not less than minimum specified in Part 2.
 3. Verify that manufacturer, through its own laboratory testing or field experience, attests that primers or coatings are compatible with fireproofing.
 4. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
 5. For materials failing tests, obtain applied-fireproofing manufacturer's written instructions for corrective measures including the use of specially formulated bonding agents or primers.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Deliver products to project site in original, unopened packages with manufacturers' labels identifying products legible and intact. Include on labels names of products and manufacturers, date of manufacture and shelf life.
- B. Use materials with limited shelf life within period indicated. Remove from project site and discard any materials whose shelf life has expired.
- C. Store materials inside, under cover, off the ground and in a manner to keep them dry until ready to use. Remove from project site and discard any materials that have been exposed to moisture or have otherwise deteriorated.

1.11 FIELD CONDITIONS

- A. Environmental Limitations: Do not apply fireproofing when ambient or substrate temperature is [**40 deg F (4.4 deg C)**] <Insert temperature> or lower unless temporary protection and heat are provided to maintain temperature at or above this level for 24 hours before, during, and for 24 hours after product application.
1. Do not apply fireproofing when ambient or substrate temperature is below recommendations by fireproofing manufacturer.
- B. Ventilation: Ventilate building spaces during and after application of fireproofing, providing complete air exchanges according to manufacturer's written instructions. Use natural means or, if they are inadequate, forced-air circulation until fireproofing dries thoroughly.

1.12 SEQUENCING

- A. Sequence and coordinate application of sprayed on fireproofing with other, related work specified in other sections to comply with the following requirements:
1. Provide temporary enclosures to prevent deterioration of sprayed on fireproofing for interior applications due to exposure to unfavorable environmental conditions.
 2. Avoid unnecessary exposure of sprayed on fireproofing to abrasion and other damage.
 3. Do not install enclosing or concealing construction until after fireproofing has been applied, inspected, tested, and corrections made to any defective fireproofing.
- B. CONSTRUCTION WASTE MANAGEMENT
1. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

- A. Assemblies: Provide fireproofing, including auxiliary materials, according to requirements of each fire-resistance design and manufacturer's written instructions.
- B. Source Limitations: Obtain fireproofing[**for each fire-resistance design**] from single source.
- C. Fire-Resistance Design: Indicated on Drawings, tested according to [**ASTM E 119**] [**ASTM E 119 or UL 263**] <Insert testing requirement> by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Steel members are to be considered unrestrained unless specifically noted otherwise.
- D. VOC Content: Products shall comply with VOC content limits of authorities having jurisdiction[.][**and the following VOC limits when calculated according to 40 CFR 59, Subpart D (EPA Method 24):**]
 1. Flat Paints and Coatings: 50 g/L.
 2. Nonflat Paints and Coatings: 150 g/L.
 3. Primers, Sealers, and Undercoaters: 200 g/L.
 4. Anticorrosive and Antirust Paints Applied to Ferrous Metals: 250 g/L.
- E. Low-Emitting Materials: Fireproofing used within the weatherproofing system shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- F. Asbestos: Provide products containing no asbestos.

2.2 SPRAYED FIRE-RESISTIVE MATERIALS

- A. SFRM **<Insert drawing designation>**: Manufacturer's standard, factory-mixed, lightweight, dry formulation, complying with indicated fire-resistance design, and **[mixed with water at Project site to form a slurry or mortar before conveyance and application] [or] [conveyed in a dry state and mixed with atomized water at place of application]**.
- B. Products manufactured by the Construction Products Division of W.R. Grace and Co., or its approved processing distributors, are specified to establish a standard of material and quality.
- C. Concealed Sprayed-On Fireproofing Materials:
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Grace, W. R. & Co. - Conn.; Grace Construction Products; **[Monokote MK-6 Series]**
 - b. **<Insert manufacturer>**
 - c. or approved equal.
 - 1) Manufacturers not listed, who request approval, shall submit a completed Request for "Or Equal" approval form, contained in Part 1, Instructions to Bidders.
 - 2) Listed manufacturers other than the company whose products are specified, W.R. Grace Co., shall submit in addition to requirements of this section, the following:
 - a) Proposed U.L. numbers, W/D calculations.
 - b) A complete description of the process.
 - c) Samples of each product.

- d) A list of at least three (3) other projects of similar nature to this project where product has been in use.
 - e) Certificate stating that all materials comply with specified requirements, signed by the manufacturer.
2. Application: Designated for exterior use by a qualified testing agency acceptable to authorities having jurisdiction.
 3. Bond Strength: Minimum [**300 -lbf/sq. ft. (14.36 -kPa)**] <Insert value> cohesive and adhesive strength based on field testing according to ASTM E 736.
 4. Density: Not less than [**15 lb/cu. ft. (240 kg/cu. m)** and] <Insert requirement> as specified in the approved fire-resistance design, according to ASTM E 605.
 5. Thickness: As required for fire-resistance design indicated, measured according to requirements of fire-resistance design or ASTM E 605, whichever is thicker, but not less than **0.375 inch (9 mm)**.
 6. Combustion Characteristics: ASTM E 136.
 7. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - a. Flame-Spread Index: [**0**] <Insert number> .
 - b. Smoke-Developed Index: [**0**] <Insert number> .
 8. Compressive Strength: Maximum 10% deformation when subjected to [**1200 lbf/sq. in. (8268 kPa)**] <Insert value> according to ASTM E 761.
 9. Corrosion Resistance: No evidence of corrosion according to ASTM E 937.
 10. Deflection: No cracking, spalling, or delamination according to ASTM E 759.
 11. Effect of Impact on Bonding: No cracking, spalling, or delamination according to ASTM E 760.
 12. Air Erosion: Maximum weight loss of [**0.000 g/sq. ft. (0.000 g/sq. m)**] <Insert value> in 24 hours according to ASTM E 859.
 13. Fungal Resistance: Treat products with manufacturer's standard antimicrobial formulation to result in [**no growth on specimens per ASTM G 21**] .
 14. Sound Absorption: [**NRC**] [or] [**SAA**] of [**0.50 to 0.75**] [**0.60 to 0.70**] [**0.65 to 0.75**] [**not less than 0.60**] <Insert range or single value> according to ASTM C 423 for Type A mounting according to ASTM E 795.
 15. Finish: [**Spray-textured finish**] <Insert requirement>
- D. Exposed Sprayed-On Fireproofing Materials:
1. Products: Subject to compliance with requirements, provide products by one of the following:
 - a. Grace, W. R. & Co. - Conn.; Grace Construction Products; [**Monokote MK Z-106 Series**].
 - b. <Insert manufacturer>
 - c. or approved equal.
 - 1) Manufacturers not listed, who request approval, shall submit a completed Request for "Or Equal" approval form, contained in Part 1, Instructions to Bidders.

- 2) Listed manufacturers other than the company whose products are specified, W.R. Grace Co., shall submit in addition to requirements of this section, the following:
 - a) Proposed U.L. numbers, W/D calculations.
 - b) A complete description of the process.
 - c) Samples of each product.
 - d) A list of at least three (3) other projects of similar nature to this project where product has been in use.
 - e) Certificate stating that all materials comply with specified requirements, signed by the manufacturer.
 2. Application: Designated for exterior use by a qualified testing agency acceptable to authorities having jurisdiction.
 3. Bond Strength: Minimum **[2000-lbf/sq. ft. (95.76-kPa)] <Insert value>** cohesive and adhesive strength based on field testing according to ASTM E 736.
 4. Density: Not less than **[22 lb/cu. ft. (350 kg/cu. m) and] <Insert requirement>** as specified in the approved fire-resistance design, according to ASTM E 605.
 5. Thickness: As required for fire-resistance design indicated, measured according to requirements of fire-resistance design or ASTM E 605, whichever is thicker, but not less than **0.375 inch (9 mm)**.
 6. Combustion Characteristics: ASTM E 136.
 7. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - a. Flame-Spread Index: **[0] <Insert number>**.
 - b. Smoke-Developed Index: **[0] <Insert number>** .
 8. Compressive Strength: Maximum 10% deformation when subjected to **[100 lbf/sq. in. (689 kPa)] <Insert value>** according to ASTM E 761.
 9. Corrosion Resistance: No evidence of corrosion according to ASTM E 937.
 10. Deflection: No cracking, spalling, or delamination according to ASTM E 759.
 11. Effect of Impact on Bonding: No cracking, spalling, or delamination according to ASTM E 760.
 12. Air Erosion: Maximum weight loss of **[0.000 g/sq. ft. (0.000 g/sq. m)] <Insert value>** in 24 hours according to ASTM E 859.
 13. Fungal Resistance: Treat products with manufacturer's standard antimicrobial formulation to result in **[no growth on specimens per ASTM G 21]**.
 14. Sound Absorption: **[NRC] [or] [SAA] of [0.50 to 0.75] [0.60 to 0.70] [0.65 to 0.75] [not less than 0.60] <Insert range or single value>** according to ASTM C 423 for Type A mounting according to ASTM E 795.
 15. Finish: **[Spray-textured finish] <Insert requirement>**.
- E. High-Density Fireproofing for Exposed Columns:
1. General: Exposed steel columns up to full height shall be coated with high-density sprayed-on fireproofing, unless the column is to be encased in concrete as indicated on the Drawings.
 2. Products: Subject to compliance with requirements, provide one of the following:

- a. Grace, W. R. & Co. - Conn.; Grace Construction Products; **[Monokote MK Z-146 Series]**.
 - b. **<Insert Manufacturer>**
 - c. or approved equal.
 - 1) Manufacturers not listed, who request approval, shall submit a completed Request for "Or Equal" approval form, contained in Part 1, Instructions to Bidders.
 - 2) Listed manufacturers other than the company whose products are specified, W.R. Grace Co., shall submit in addition to requirements of this section, the following:
 - a) Proposed U.L. numbers, W/D calculations.
 - b) A complete description of the process.
 - c) Samples of each product.
 - d) A list of at least three (3) other projects of similar nature to this project where product has been in use.
 - e) Certificate stating that all materials comply with specified requirements, signed by the manufacturer.
3. Application: Designated for exterior use by a qualified testing agency acceptable to authorities having jurisdiction.
 4. Bond Strength: Minimum **[10000-lbf/sq. ft. (478.8-kPa)] <Insert value>** cohesive and adhesive strength based on field testing according to ASTM E 736.
 5. Density: Not less than **[40 lb/cu. ft. (636.36 kg/cu. m)] <Insert requirement>** and as specified in the approved fire-resistance design, according to ASTM E 605.
 6. Thickness: As required for fire-resistance design indicated, measured according to requirements of fire-resistance design or ASTM E 605, whichever is thicker, but not less than **0.375 inch (9 mm)**.
 7. Combustion Characteristics: ASTM E 136.
 8. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - a. Flame-Spread Index: **[0] <Insert number>**.
 - b. Smoke-Developed Index: **[0] <Insert number>** .
9. Compressive Strength: Maximum 10% deformation when subjected to **[500 lbf/sq. in. (3445 kPa)] <Insert value>** according to ASTM E 761.
 10. Corrosion Resistance: No evidence of corrosion according to ASTM E 937.
 11. Deflection: No cracking, spalling, or delamination according to ASTM E 759.
 12. Effect of Impact on Bonding: No cracking, spalling, or delamination according to ASTM E 760.
 13. Air Erosion: Maximum weight loss of **[0.000 g/sq. ft. (0.000 g/sq. m)] <Insert value>** in 24 hours according to ASTM E 859.
 14. Fungal Resistance: Treat products with manufacturer's standard antimicrobial formulation to result in **[no growth on specimens per ASTM G 21]**.
 15. Sound Absorption: **[NRC] [or] [SAA] of [0.50 to 0.75] [0.60 to 0.70] [0.65 to 0.75] [not less than 0.60] <Insert range or single value>** according to ASTM C 423 for Type A mounting according to ASTM E 795.

16. Finish: **[Spray-textured finish]** <Insert requirement>.

2.3 AUXILIARY MATERIALS

- A. General: Provide auxiliary materials that are compatible with fireproofing and substrates and are approved by UL or another testing and inspecting agency acceptable to authorities having jurisdiction for use in fire-resistance designs indicated.
- B. Substrate Primers: Primers approved by fireproofing manufacturer and complying with one or both of the following requirements:
 - 1. Primer and substrate are identical to those tested in required fire-resistance design by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.
 - 2. Primer's bond strength in required fire-resistance design complies with specified bond strength for fireproofing and with requirements in UL's "Fire Resistance Directory" or in the listings of another qualified testing agency acceptable to authorities having jurisdiction, based on a series of bond tests according to ASTM E 736.
- C. Bonding Agent: Product approved by fireproofing manufacturer and complying with requirements in UL's "Fire Resistance Directory" or in the listings of another qualified testing agency acceptable to authorities having jurisdiction.
- D. Metal Lath: Expanded metal lath fabricated from material of weight, configuration, and finish required, according to fire-resistance designs indicated and fireproofing manufacturer's written recommendations. Include clips, lathing accessories, corner beads, and other anchorage devices required to attach lath to substrates and to receive fireproofing.
- E. Reinforcing Fabric: Glass- or carbon-fiber fabric of type, weight, and form required to comply with fire-resistance designs indicated; approved and provided by fireproofing manufacturer.
- F. Reinforcing Mesh: Metallic mesh reinforcement of type, weight, and form required to comply with fire-resistance design indicated; approved and provided by fireproofing manufacturer. Include pins and attachment.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for substrates and other conditions affecting performance of the Work and according to each fire-resistance design. Verify compliance with the following:
 - 1. Substrates are free of dirt, oil, grease, release agents, rolling compounds, mill scale, loose scale, incompatible primers, paints, and encapsulants, or other

- foreign substances capable of impairing bond of fireproofing with substrates under conditions of normal use or fire exposure.
2. For steel, sheet metal ducts and other substrates suspected of being coated with oil, rolling compounds or other substances not readily identifiable but potentially capable of impairing bond, conduct tests recommended by fireproofing manufacturer to determine their presence and effect on adhesion of fireproofing.
 3. Objects penetrating fireproofing, including clips, hangers, support sleeves, and similar items, are securely attached to substrates.
 4. Substrates receiving fireproofing are not obstructed by ducts, piping, equipment, or other suspended construction that will interfere with fireproofing application.
- B. Do not proceed with installation of fireproofing until unsatisfactory conditions have been corrected.
- C. Verify that concrete work on steel deck has been completed before beginning fireproofing work.
- D. Verify that roof construction, installation of rooftop HVAC equipment, and other related work is complete before beginning fireproofing work.
- E. Conduct tests according to fireproofing manufacturer's written recommendations to verify that substrates are free of substances capable of interfering with bond.
- F. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- G. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Cover other work subject to damage from fallout or overspray of fireproofing materials during application.
- B. Provide temporary enclosure as required to confine spraying operations, protect the environment, and to ensure adequate ambient conditions for temperature and ventilation.
- C. Clean substrates of substances that could impair bond of fireproofing, including oil, grease, rolling compounds, incompatible primers, and loose mill scale, or any other conditions that may affect proper application of fireproofing materials.
- D. Prime substrates where included in fire-resistance design and where recommended in writing by fireproofing manufacturer unless compatible shop primer has been applied and is in satisfactory condition to receive fireproofing.
- E. For applications visible on completion of Project, repair substrates to remove surface imperfections that could affect uniformity of texture and thickness in finished surface of fireproofing. Remove minor projections and fill voids that would telegraph through fire-resistive products after application.

3.3 APPLICATION

- A. Coordinate installation of fireproofing with other work in order to minimize the need for other trades to cut or remove fireproofing. As other trades successively complete installation of their work, maintain protection of structure afforded by fireproofing by patching any areas that have been removed or damaged prior to concealment of fireproofing by other work.
- B. Construct fireproofing assemblies that are identical to fire-resistance design indicated and products as specified, tested, and substantiated by test reports; for thickness, primers, sealers, topcoats, finishing, and other materials and procedures affecting fireproofing work.
- C. Comply with fireproofing manufacturer's written instructions for mixing materials, application procedures, and types of equipment used to mix, convey, and apply fireproofing; as applicable to particular conditions of installation and as required to achieve fire-resistance ratings indicated.
- D. Coordinate application of fireproofing with other construction to minimize need to cut or remove fireproofing.
 - 1. Do not begin applying fireproofing until clips, hangers, supports, sleeves, and other items penetrating fireproofing are in place.
 - 2. Defer installing ducts, piping, and other items that would interfere with applying fireproofing until application of fireproofing is completed.
- E. Metal Decks:
 - 1. Do not apply fireproofing to underside of metal deck substrates until concrete topping, if any, has been completed.
 - 2. Do not apply fireproofing to underside of metal roof deck until roofing has been completed; prohibit roof traffic during application and drying of fireproofing.
- F. Install auxiliary materials as required, as detailed, and according to fire-resistance design and fireproofing manufacturer's written recommendations for conditions of exposure and intended use. For auxiliary materials, use attachment and anchorage devices of type recommended in writing by fireproofing manufacturer.
- G. Spray apply fireproofing to maximum extent possible. Following the spraying operation in each area, complete the coverage by trowel application or other placement method recommended in writing by fireproofing manufacturer.
- H. Extend fireproofing in full thickness over entire area of each substrate to be protected.
- I. Install body of fireproofing in a single course unless otherwise recommended in writing by fireproofing manufacturer.
- J. For applications over encapsulant materials, including lockdown (post-removal) encapsulants, apply fireproofing that differs in color from that of encapsulant over which it is applied.

- K. Where sealers are used, apply products that are tinted to differentiate them from fireproofing over which they are applied.
- L. Provide a uniform finish complying with description indicated for each type of fireproofing material and matching finish approved for required mockups.
- M. Cure fireproofing according to fireproofing manufacturer's written recommendations.
- N. Do not install enclosing or concealing construction until after fireproofing has been applied, inspected, and tested and corrections have been made to deficient applications.
- O. Finishes: Where indicated, apply fireproofing to produce the following finishes:
 - 1. Provide a uniform finish complying with description indicated for each type of material and matching DEN Project Manager's sample, or if none, finish approved by DEN Project Manager for field-erected mockup.
 - 2. Manufacturer's Standard Finishes: Finish according to manufacturer's written instructions for each finish selected.
 - 3. Spray-Textured Finish: Finish left as spray applied with no further treatment, unless indicated.
 - 4. Use trowel-on only in small areas for patching.

3.4 FIELD QUALITY CONTROL

- A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:
 - 1. Test and inspect as required by the IBC, 1704.10.
- B. Extent and Testing Methodology: Arrange for testing of completed fireproofing in successive stages in areas of extent described below. Do not proceed with fireproofing of next area until test results for previously completed work evidence compliance with requirements. Tested values must equal or exceed values as specified and as indicated and required for approved fire-resistance design.
- C. Extent of Each Test Area: Once every 10,000 sq. ft. of floor area, and no less than once per story, whichever produces the greatest number of test areas.
- D. Within each area, testing laboratory shall randomly select a typical bay, and test each fireproofed structural element within it for thickness and density per ASTM E 605.
- E. Within each area, testing laboratory shall randomly select one typical structural element of each type and test fireproofing for cohesion/adhesion per ASTM E 736.
- F. Testing Laboratory shall report test results within 48 hours of test in writing to Contractor and DEN Project Manager.
- G. Fireproofing will be considered defective if it does not pass tests and inspections.

1. Remove and replace fireproofing that does not pass tests and inspections, and retest.
2. Apply additional fireproofing, per manufacturer's written instructions, where test results indicate insufficient thickness, and retest.

H. Prepare test and inspection reports.

3.5 CLEANING, PROTECTING, AND REPAIRING

- A. Cleaning: Immediately after completing spraying operations in each containable area of Project, remove material overspray and fallout from surfaces of other construction and clean exposed surfaces to remove evidence of soiling.
- B. Protect fireproofing, according to advice of manufacturer, from damage resulting from construction operations or other causes, so fireproofing will be without damage or deterioration at time of Substantial Completion.
- C. All patching and repairing of sprayed fireproofing, due to damage by other trades, shall be performed under this section and paid for by the trade(s) responsible for the damage.
- D. As installation of other construction proceeds, inspect fireproofing and repair damaged areas and fireproofing removed due to work of other trades.
- E. Repair fireproofing damaged by other work before concealing it with other construction.
- F. Repair fireproofing by reapplying it using same method as original installation or using manufacturer's recommended trowel-applied product.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 078100

SECTION 078200 - BOARD FIREPROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

- 1. Calcium silicate board fire protection.
- 2. Mineral-fiber board fire protection.

- B. Related Sections:

- 1. Section 078100 "Applied Fireproofing" for applied coatings.
- 2. Section 078413 "Penetration Firestopping."
- 3. Section 078446 "Fire-Resistive Joint Systems."

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

- B. Shop Drawings: Structural framing plans indicating the following:

- 1. Locations and types of surface preparations required before applying board fire protection.
- 2. Extent of board fire protection for each construction and fire-resistance rating, including the following:
 - a. Applicable fire-resistance design designations of a qualified testing and inspecting agency acceptable to authorities having jurisdiction.
 - 1) For steel joist assemblies, include applicable fire-resistance design designations, with each steel joist tested with same maximum tensile stress as each steel joist indicated **[on Drawings] [in a schedule]**. Design designations with steel joists tested at lower maximum tensile stress than those indicated are not permitted.
 - b. Minimum thicknesses needed to achieve required fire-resistance ratings of structural components and assemblies.

1.4 INFORMATIONAL SUBMITTALS

- A. Product Certificates: For each type of board fire protection, from manufacturer.
- B. Research/Evaluation Reports: For board fire protection.

1.5 QUALITY ASSURANCE

- A. Source Limitations: Obtain board fire-protection materials from single source from single manufacturer.
- B. Fire-Resistance Ratings: Indicated by design designations from [**UL's "Fire Resistance Directory"**] [**UL's "Fire Resistance Directory"** or from the listings of another testing and inspecting agency] <Insert testing agency> acceptable to authorities having jurisdiction, for board fireproofing serving as direct-applied protection tested per ASTM E 119.
- C. Mockups: Build mockups to set quality standards for fabrication and installation.
 - 1. Approval of mockups is for other material and construction qualities specifically approved by Architect in writing.
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 3. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- D. Preinstallation Conference: Conduct conference at [**Project site**] <Insert location>.
 - 1. Review methods and procedures related to board fire protection including, but not limited to, the following:
 - a. Structural load limitations.
 - b. Construction schedule. Verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.

1.6 COORDINATION

- A. Coordinate installation of board fire protection with other construction specified in other Sections.
 - 1. Do not install board fire protection on structural members until piping and other construction behind fire-resistive materials have been completed, uninterrupted coverage of fire-resistive materials can be provided, and the need for subsequent cutting and patching of fire-resistive materials has been eliminated.
 - 2. Do not install enclosing or concealing construction until after board fire protection has been applied and inspected by authorities having jurisdiction.

PART 2 - PRODUCTS

2.1 BOARD FIRE PROTECTION

A. Calcium Silicate Board: Rigid board containing no asbestos and consisting primarily of lime, silica, inert fillers, and cellulosic reinforcing fibers; of thickness required to produce fire-resistance rating indicated; with flame-spread and smoke-developed indexes of zero per ASTM E 84; passing ASTM E 136 for combustion characteristics.

1. Products: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**

- a. BNZ Materials, Inc.; Marinite I.
- b. IIG, a Calsilite/Johns Manville Joint Venture; Super **[Firetemp L] [Firetemp M]**.
- c. **<Insert manufacturer's name; product name or designation>**.

2. Finish: Sanded finish on **[both sides] [one side]**.

B. Mineral-Fiber Board: **[Unfaced] [Foil-faced] [Fiberglass mat-faced]** rigid board produced by combining slag-wool-/rock-wool fibers with thermosetting resin binders passing ASTM E 136 for combustion characteristics; of thickness required to produce fire-resistance rating indicated.

1. Products: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**

- a. Albi Manufacturing, Division of StanChem Inc.; DriClad.
- b. Isolatek International, Inc.; Cafco-Board.
- c. **<Insert manufacturer's name; product name or designation>**.

2. Maximum Density: **[8 lb/cu. ft. (128 kg/cu. m)] [10 lb/cu. ft. (160 kg/cu. m)] [12 lb/cu. ft. (192 kg/cu. m)] <Insert value>** per ASTM C 612.

3. Surface-Burning Characteristics: Flame-spread and smoke-developed indexes of **[15] [zero]** and **[5] [zero]**, respectively, per ASTM E 84.

2.2 ACCESSORIES

A. Anchorage Accessories: Provide manufacturer's standard board-anchorage components complying with related design of UL or of another testing and inspecting agency acceptable to authorities having jurisdiction.

B. Joint Treatment and Finishing Materials: For exposed calcium silicate board applications, provide joint treatment tape and joint compounds recommended in writing by board manufacturer for finishing surfaces.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Remove rust and scale from steel substrates at welded steel stud anchorage locations.

3.2 INSTALLATION

- A. Install board fire protection according to manufacturer's written instructions.
- B. Install board fire protection to comply with requirements for layer thicknesses and number, construction of joints and corners, and anchorage methods applicable to fire-resistance-rated assemblies indicated.
- C. Finish exposed calcium silicate board to comply with board manufacturer's written instructions and as follows:
 - 1. At joints in calcium silicate board, embed tape in joint compound and apply first, fill, and finish coats of joint compounds over tape, fastener heads, and accessories.
 - 2. Apply a thin, uniform skim coat of joint compound over entire surface.
 - 3. Touch up and sand between coats and after last coat as needed to produce a surface free of visual defects, tool marks, and ridges.

3.3 PROTECTION

- A. Replace or repair board fire protection that has been cut away to facilitate other construction. Maintain complete coverage of full thickness on members and substrates protected by board fire protection.
 - 1. Provide final protection and maintain conditions in a manner acceptable to Installer, manufacturer, and authorities having jurisdiction to ensure that board fire protection is without damage or deterioration at time of Substantial Completion.

END OF SECTION 078200

SECTION 078413 - PENETRATION FIRESTOPPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Penetrations in fire-resistance-rated walls.
 - 2. Penetrations in horizontal assemblies.
 - 3. Penetrations in smoke barriers.
- B. Related Sections:
 - 1. Section 078446 "Fire-Resistive Joint Systems" for joints in or between fire-resistance-rated construction, at exterior curtain-wall/floor intersections, and in smoke barriers.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Credit IEQ 4.1: For penetration firestopping sealants and sealant primers, documentation including printed statement of VOC content.
 - 2. Laboratory Test Reports for Credit IEQ 4: For penetration firestopping sealants and sealant primers, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Product Schedule: For each penetration firestopping system. Include location and design designation of qualified testing and inspecting agency.

1. Where Project conditions require modification to a qualified testing and inspecting agency's illustration for a particular penetration firestopping condition, submit illustration, with modifications marked, approved by penetration firestopping manufacturer's fire-protection engineer as an engineering judgment or equivalent fire-resistance-rated assembly.

D. Product Samples for each type of product used.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified Installer.

B. Installer Certificates: From Installer indicating penetration firestopping has been installed in compliance with requirements and manufacturer's written recommendations.

C. Manufacturer's Certificate.

D. Certified Test Reports: With product data, submit copies of certified test reports showing compliance with specified performance values, including R-values (aged values for plastic insulations), densities, compression strengths, fire performance characteristics, perm ratings, water absorption ratings, and similar properties.

1. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for each type of penetration firestopping, evidencing full compliance with requirements.

E. Warranty: Submit copy of installer's warranty.

1.5 MAINTENANCE STOCK

A. Provide minimum two (2) gallons of each type of sealant. Store as directed by DEN Project Manager.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: A firm that has been approved by FM Global according to FM Global 4991, "Approval of Firestop Contractors," or been evaluated by UL and found to comply with its "Qualified Firestop Contractor Program Requirements."

B. Installer Qualifications: A firm experienced in installing penetration firestopping similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful performance. Qualifications include having the necessary experience, staff, and training to install manufacturer's products per specified requirements. Manufacturer's willingness to sell its penetration firestopping products to Contractor or to Installer engaged by Contractor does not in itself confer qualification on buyer.

- C. Installer Certificate: Engage an Installer who has successfully completed within the last 3 years at least three (3) sealer applications similar in type and size to that of this Project and is approved by manufacturer for this type of installation.
- D. Manufacturers Certificate: Not less than five (5) years experience manufacturing types of product specified.
- E. Fire-Test-Response Characteristics: Penetration firestopping shall comply with the following requirements:
 - 1. Penetration firestopping tests are performed by a qualified testing agency acceptable to authorities having jurisdiction.
 - 2. Penetration firestopping is identical to those tested per testing standard referenced in "Penetration Firestopping" Article. Provide rated systems complying with the following requirements:
 - a. Penetration firestopping products bear classification marking of qualified testing and inspecting agency.
 - b. Classification markings on penetration firestopping correspond to designations listed by the following:
 - 1) UL in its "Fire Resistance Directory."
 - 2) Intertek ETL SEMKO in its "Directory of Listed Building Products."
 - 3) FM Global in its "Building Materials Approval Guide."
 - 4) **<Insert name of qualified testing and inspecting agency>.**
- F. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Engineer] <Insert location>.**
- G. Install all firestopping materials to comply with all applicable authorities and referenced standards, and comply with requirements of the Denver Building Code.
- H. Warranty: Installer to warrant that the firestopping system will provide a permanent installation.

1.7 PROJECT CONDITIONS

- A. Environmental Limitations: Do not install penetration firestopping when ambient or substrate temperatures are outside limits permitted by penetration firestopping manufacturers or when substrates are wet because of rain, frost, condensation, or other causes.
- B. Joint Substrate Conditions: Do not proceed with installation of firestop joint sealers until all contaminants capable of interfering with their adhesion are removed from joint substrates.
- C. Install and cure penetration firestopping per manufacturer's written instructions using natural means of ventilations or, where this is inadequate, forced-air circulation.

1.8 COORDINATION

- A. Coordinate construction of openings and penetrating items to ensure that penetration firestopping is installed according to specified requirements.
- B. Coordinate sizing of sleeves, openings, core-drilled holes, or cut openings to accommodate penetration firestopping.
- C. Notify <Owner's> testing agency at least seven (7) days in advance of penetration firestopping installations; confirm dates and times on day preceding each series of installations.
- D. CONSTRUCTION WASTE MANAGEMENT
 - 1. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. A/D Fire Protection Systems Inc.
 - 2. Grace Construction Products.
 - 3. Hilti, Inc.
 - 4. Johns Manville.
 - 5. Nelson Firestop Products.
 - 6. NUCO Inc.
 - 7. Passive Fire Protection Partners.
 - 8. RectorSeal Corporation.
 - 9. Specified Technologies Inc.
 - 10. 3M Fire Protection Products.
 - 11. Tremco, Inc.; Tremco Fire Protection Systems Group.
 - 12. USG Corporation.
 - 13. <Insert manufacturer's name>.
 - 14. or approved equal.

2.2 PENETRATION FIRESTOPPING

- A. Provide penetration firestopping that is produced and installed to resist spread of fire according to requirements indicated, resist passage of smoke and other gases, and maintain original fire-resistance rating of construction penetrated. Penetration firestopping systems shall be compatible with one another, with the substrates forming openings, and with penetrating items if any.

- B. Penetrations in Fire-Resistance-Rated Walls: Provide penetration firestopping with ratings determined per ASTM E 814 or UL 1479, based on testing at a positive pressure differential of **0.01-inch wg** (2.49 Pa).
1. Fire-resistance-rated walls include **[fire walls] [fire-barrier walls] [smoke-barrier walls] [and] [fire partitions]**.
 2. F-Rating: Not less than the fire-resistance rating of constructions penetrated.
- C. Penetrations in Horizontal Assemblies: Provide penetration firestopping with ratings determined per ASTM E 814 or UL 1479, based on testing at a positive pressure differential of **0.01-inch wg** (2.49 Pa).
1. Horizontal assemblies include **[floors] [floor/ceiling assemblies] [and] [ceiling membranes of roof/ceiling assemblies]**.
 2. F-Rating: At least 1 hour, but not less than the fire-resistance rating of constructions penetrated.
 3. T-Rating: At least 1 hour, but not less than the fire-resistance rating of constructions penetrated except for floor penetrations within the cavity of a wall.
- D. Penetrations in Smoke Barriers: Provide penetration firestopping with ratings determined per UL 1479.
1. L-Rating: Not exceeding **5.0 cfm/sq. ft.** (0.025 cu. m/s per sq. m) of penetration opening at **0.30-inch wg** (74.7 Pa) at both ambient and elevated temperatures.
- E. W-Rating: Provide penetration firestopping showing no evidence of water leakage when tested according to UL 1479.
- F. Exposed Penetration Firestopping: Provide products with flame-spread and smoke-developed indexes of less than 25 and 450, respectively, as determined per ASTM E 84.
- G. VOC Content: Penetration firestopping sealants and sealant primers shall comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
1. Sealants: 250 g/L.
 2. Sealant Primers for Nonporous Substrates: 250 g/L.
 3. Sealant Primers for Porous Substrates: 775 g/L.
- H. Low-Emitting Materials: Penetration firestopping sealants and sealant primers shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- I. Accessories: Provide components for each penetration firestopping system that are needed to install fill materials and to maintain ratings required. Use only those components specified by penetration firestopping manufacturer and approved by qualified testing and inspecting agency for firestopping indicated.

1. Permanent forming/damming/backing materials, including the following:
 - a. Slag-wool-fiber or rock-wool-fiber insulation.
 - b. Sealants used in combination with other forming/damming/backing materials to prevent leakage of fill materials in liquid state.
 - c. Fire-rated form board.
 - d. Fillers for sealants.
2. Temporary forming materials.
3. Substrate primers.
4. Collars.
5. Steel sleeves.

2.3 FILL MATERIALS

- A. Cast-in-Place Firestop Devices: Factory-assembled devices for use in cast-in-place concrete floors and consisting of an outer metallic sleeve lined with an intumescent strip, a radial extended flange attached to one end of the sleeve for fastening to concrete formwork, and a neoprene gasket.
- B. Latex Sealants: Single-component latex formulations that do not re-emulsify after cure during exposure to moisture.
- C. Firestop Devices: Factory-assembled collars formed from galvanized steel and lined with intumescent material sized to fit specific diameter of penetrant.
- D. Intumescent Composite Sheets: Rigid panels consisting of aluminum-foil-faced elastomeric sheet bonded to galvanized-steel sheet.
- E. Intumescent Putties: Nonhardening dielectric, water-resistant putties containing no solvents, inorganic fibers, or silicone compounds.
- F. Intumescent Wrap Strips: Single-component intumescent elastomeric sheets with aluminum foil on one side.
- G. Mortars: Prepackaged dry mixes consisting of a blend of inorganic binders, hydraulic cement, fillers, and lightweight aggregate formulated for mixing with water at Project site to form a nonshrinking, homogeneous mortar.
- H. Pillows/Bags: Reusable heat-expanding pillows/bags consisting of glass-fiber cloth cases filled with a combination of mineral-fiber, water-insoluble expansion agents, and fire-retardant additives. Where exposed, cover openings with steel-reinforcing wire mesh to protect pillows/bags from being easily removed.
- I. Silicone Foams: Multicomponent, silicone-based liquid elastomers that, when mixed, expand and cure in place to produce a flexible, nonshrinking foam.
- J. Silicone Sealants: Single-component, silicone-based, neutral-curing elastomeric sealants of grade indicated below:

1. Grade: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces, and nonsag formulation for openings in vertical and sloped surfaces, unless indicated firestopping limits use of nonsag grade for both opening conditions.

2.4 FIRESTOPPING INSULATING MATERIALS

- A. General: Provide insulating materials that comply with requirements indicated for materials, compliance with referenced standards, and other characteristics.
- B. Semi-Refractory Fiber Board Safing Insulation: Semi-rigid boards designed for use as a firestop at openings between edge of slab and exterior wall panels at tops of rated walls and as shown, produced by combining semi-refractory mineral fiber manufactured from slag with thermosetting resin binders to comply with ASTM C 612, Class 1 and 2; nominal density of 4.0 lbs. per cu. ft.; passing ASTM E 136 for combustion characteristics; R-value of 4.0 at 75 deg. F (23.9 deg. C), meeting point exceeding 2000 deg. F. Supports to be 26 gauge galvanized steel.
- C. Manufacturers of Semi-Refractory Fiber Insulation:
 1. United States Gypsum Co.
 2. <Insert manufacturer>
 3. or approved equal.

2.5 MIXING

- A. For those products requiring mixing before application, comply with penetration firestopping manufacturer's written instructions for accurate proportioning of materials, water (if required), type of mixing equipment, selection of mixer speeds, mixing containers, mixing time, and other items or procedures needed to produce products of uniform quality with optimum performance characteristics for application indicated.

PART 3 - EXECUTION

3.1 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials to Project site in original unopened containers or bundles with labels informing about manufacturer, product name and designation, expiration period for use, pot life, curing time, and mixing instructions for multicomponent materials.
- B. Store and handle materials in compliance with manufacturers' recommendations to prevent their deterioration or damage due to moisture, high or low temperatures, contaminants, or other causes.
- C. General Protection: Protect insulations from physical damage and from becoming wet, soiled, or covered with ice or snow. Comply with manufacturer's recommendations for handling, storage, and protection during installation.

3.2 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for opening configurations, penetrating items, substrates, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PREPARATION

- A. Surface Cleaning: Clean out openings immediately before installing penetration firestopping to comply with manufacturer's written instructions and with the following requirements:
 - 1. Remove from surfaces of opening substrates and from penetrating items foreign materials that could interfere with adhesion of penetration firestopping.
 - 2. Clean opening substrates and penetrating items to produce clean, sound surfaces capable of developing optimum bond with penetration firestopping. Remove loose particles remaining from cleaning operation.
 - 3. Remove laitance and form-release agents from concrete.
- B. Priming: Prime substrates where recommended in writing by manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.
- C. Masking Tape: Use masking tape to prevent penetration firestopping from contacting adjoining surfaces that will remain exposed on completion of the Work and that would otherwise be permanently stained or damaged by such contact or by cleaning methods used to remove stains. Remove tape as soon as possible without disturbing firestopping's seal with substrates.

3.4 INSTALLATION

- A. General: Install penetration firestopping to comply with manufacturer's written installation instructions and published drawings for products and applications indicated.
- B. Install forming materials and other accessories of types required to support fill materials during their application and in the position needed to produce cross-sectional shapes and depths required to achieve fire ratings indicated.
 - 1. After installing fill materials and allowing them to fully cure, remove combustible forming materials and other accessories not indicated as permanent components of firestopping.
- C. Install fill materials for firestopping by proven techniques to produce the following results:
 - 1. Fill voids and cavities formed by openings, forming materials, accessories, and

- penetrating items as required to achieve fire-resistance ratings indicated.
 - 2. Apply materials so they contact and adhere to substrates formed by openings and penetrating items.
 - 3. For fill materials that will remain exposed after completing the Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.
- D. At full height fire rated walls: Install firesafing insulation as shown on the drawings at wall head condition and as required to meet Denver Building Code requirements.
- E. Protect all fire safing insulation by installing 22 gage galvanized sheet metal closure at top and bottom, which complies with the DBC for protection of fire safing insulation.
- F. Tool exposed surfaces of mortar or sealants.
- G. At plastic pipes penetrating floors provide a gauge galvanized steel sleeve around pipes, fire stop sealant within sleeve.
- H. At opening between exterior walls and floors/roofs install firesafing insulation per DBC requirements and in accordance with AAMA Tir-A3

3.5 IDENTIFICATION

- A. Identify penetration firestopping with preprinted metal or plastic labels. Attach labels permanently to surfaces adjacent to and within **6 inches (150 mm)** of firestopping edge so labels will be visible to anyone seeking to remove penetrating items or firestopping. Use mechanical fasteners or self-adhering-type labels with adhesives capable of permanently bonding labels to surfaces on which labels are placed. Include the following information on labels:
- 1. The words "Warning - Penetration Firestopping - Do Not Disturb. Notify Building Management of Any Damage."
 - 2. Contractor's name, address, and phone number.
 - 3. Designation of applicable testing and inspecting agency.
 - 4. Date of installation.
 - 5. Manufacturer's name.
 - 6. Installer's name.

3.6 FIELD QUALITY CONTROL

- A. **<Owner> <Contractor>** will engage a qualified testing agency to perform tests and inspections.
- B. Where deficiencies are found or penetration firestopping is damaged or removed because of testing, repair or replace penetration firestopping to comply with requirements.
- C. Proceed with enclosing penetration firestopping with other construction only after inspection reports are issued and installations comply with requirements.

3.7 CLEANING AND PROTECTION

- A. Clean off excess fill materials adjacent to openings as the Work progresses by methods and with cleaning materials that are approved in writing by penetration firestopping manufacturers and that do not damage materials in which openings occur.
- B. Provide final protection and maintain conditions during and after installation that ensure that penetration firestopping is without damage or deterioration at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, immediately cut out and remove damaged or deteriorated penetration firestopping and install new materials to produce systems complying with specified requirements.

3.8 PENETRATION FIRESTOPPING SCHEDULE

- A. Where UL-classified systems are indicated, they refer to system numbers in UL's "Fire Resistance Directory" under product Category XHEZ.
- B. Where Intertek ETL SEMKO-listed systems are indicated, they refer to design numbers in Intertek ETL SEMKO's "Directory of Listed Building Products" under "Firestop Systems."
- C. Where FM Global-approved systems are indicated, they refer to design numbers listed in FM Global's "Building Materials Approval Guide" under "Wall and Floor Penetration Fire Stops."
- D. Firestopping with No Penetrating Items[**FS-<#>**]:
 - 1. UL-Classified Systems: [**C-AJ-**] [**C-BJ-**] [**F-A-**] [**F-B-**] [**F-C-**] [**W-J-**] [**W-L-**] **<Insert four-digit number> [0001-0999]**.
 - 2. Intertek ETL SEMKO-Listed Systems: **<Insert design numbers>**.
 - 3. FM Global-Approved Systems: **<Insert design numbers>**.
 - 4. F-Rating: [**1 hour**] [**2 hours**] **<Insert number of hours>**.
 - 5. T-Rating: [**1 hour**] [**2 hours**] **<Insert number of hours>**.
 - 6. L-Rating at Ambient: Less than **<Insert cfm/sq. ft. (cu. m/s per sq. m)>**.
 - 7. L-Rating at **400 deg F (204 deg C)**: Less than **<Insert cfm/sq. ft. (cu. m/s per sq. m)>**.
 - 8. W-Rating: No leakage of water at completion of water leakage testing.
 - 9. Type of Fill Materials: [**As required to achieve rating**] **<Insert material>**.
- E. Firestopping for Metallic Pipes, Conduit, or Tubing[**FS-<#>**]:
 - 1. UL-Classified Systems: [**C-AJ-**] [**C-BJ-**] [**C-BK-**] [**F-A-**] [**F-B-**] [**F-C-**] [**F-E-**] [**W-J-**] [**W-K-**] [**W-L-**] [**W-N-**] **<Insert four-digit number> [1001-1999]**.
 - 2. Intertek ETL SEMKO-Listed Systems: **<Insert design number>**.
 - 3. FM Global-Approved Systems: **<Insert design number>**.
 - 4. F-Rating: [**1 hour**] [**2 hours**] **<Insert number of hours>**.
 - 5. T-Rating: [**1 hour**] [**2 hours**] **<Insert number of hours>**.
 - 6. L-Rating at Ambient: Less than **<Insert cfm/sq. ft. (cu. m/s per sq. m)>**.

7. L-Rating at 400 deg F (204 deg C): Less than <Insert cfm/sq. ft. (cu. m/s per sq. m)>.
8. W-Rating: No leakage of water at completion of water leakage testing.
9. Type of Fill Materials: **[As required to achieve rating]** <Insert material>.

F. Firestopping for Nonmetallic Pipe, Conduit, or Tubing[**FS-<#>**]:

1. UL-Classified Systems: [**C-AJ-**] [**C-BJ-**] [**C-BK-**] [**F-A-**] [**F-B-**] [**F-C-**] [**F-E-**] [**W-J-**] [**W-K-**] [**W-L-**] [**W-N-**] <Insert four-digit number> [2001-2999].
2. Intertek ETL SEMKO-Listed Systems: <Insert design number>.
3. FM Global-Approved Systems: <Insert design number>.
4. F-Rating: [1 hour] [2 hours] <Insert number of hours>.
5. T-Rating: [1 hour] [2 hours] <Insert number of hours>.
6. L-Rating at Ambient: Less than <Insert cfm/sq. ft. (cu. m/s per sq. m)>.
7. L-Rating at 400 deg F (204 deg C): Less than <Insert cfm/sq. ft. (cu. m/s per sq. m)>.
8. W-Rating: No leakage of water at completion of water leakage testing.
9. Type of Fill Materials: **[As required to achieve rating]** <Insert material>.

G. Firestopping for Electrical Cables[**FS-<#>**]:

1. UL-Classified Systems: [**C-AJ-**] [**C-BJ-**] [**C-BK-**] [**F-A-**] [**F-B-**] [**F-C-**] [**F-E-**] [**W-J-**] [**W-K-**] [**W-L-**] <Insert four-digit number> [3001-3999].
2. Intertek ETL SEMKO-Listed Systems: <Insert design number>.
3. FM Global-Approved Systems: <Insert design number>.
4. F-Rating: [1 hour] [2 hours] <Insert number of hours>.
5. T-Rating: [1 hour] [2 hours] <Insert number of hours>.
6. L-Rating at Ambient: Less than <Insert cfm/sq. ft. (cu. m/s per sq. m)>.
7. L-Rating at 400 deg F (204 deg C): Less than <Insert cfm/sq. ft. (cu. m/s per sq. m)>.
8. W-Rating: No leakage of water at completion of water leakage testing.
9. Type of Fill Materials: **[As required to achieve rating]** <Insert material>.

H. Firestopping for Cable Trays with Electric Cables[**FS-<#>**]:

1. UL-Classified Systems: [**C-AJ-**] [**C-BJ-**] [**F-A-**] [**F-B-**] [**F-C-**] [**W-J-**] [**W-K-**] [**W-L-**] <Insert four-digit number> [4001-4999].
2. Intertek ETL SEMKO-Listed Systems: <Insert design number>.
3. FM Global-Approved Systems: <Insert design number>.
4. F-Rating: [1 hour] [2 hours] <Insert number of hours>.
5. T-Rating: [1 hour] [2 hours] <Insert number of hours>.
6. L-Rating at Ambient: Less than <Insert cfm/sq. ft. (cu. m/s per sq. m)>.
7. L-Rating at 400 deg F (204 deg C): Less than <Insert cfm/sq. ft. (cu. m/s per sq. m)>.
8. W-Rating: No leakage of water at completion of water leakage testing.
9. Type of Fill Materials: **[As required to achieve rating]** <Insert material>.

I. Firestopping for Insulated Pipes[**FS-<#>**]:

1. UL-Classified Systems: [**C-AJ-**] [**C-BJ-**] [**C-BK-**] [**F-A-**] [**F-B-**] [**F-C-**] [**F-E-**] [**W-J-**]

- [W-L-] [W-N-] <Insert four-digit number> [5001-5999].**
 2. Intertek ETL SEMKO-Listed Systems: **<Insert design number>.**
 3. FM Global-Approved Systems: **<Insert design number>.**
 4. F-Rating: **[1 hour] [2 hours] <Insert number of hours>.**
 5. T-Rating: **[1 hour] [2 hours] <Insert number of hours>.**
 6. L-Rating at Ambient: Less than **<Insert cfm/sq. ft. (cu. m/s per sq. m)>.**
 7. L-Rating at **400 deg F (204 deg C):** Less than **<Insert cfm/sq. ft. (cu. m/s per sq. m)>.**
 8. W-Rating: No leakage of water at completion of water leakage testing.
 9. Type of Fill Materials: **[As required to achieve rating] <Insert material>.**
- J. Firestopping for Miscellaneous Electrical Penetrants[**FS-<#>**]:
1. UL-Classified Systems: **[C-AJ-] [C-BJ-] [F-A-] [W-L-] [W-J-] <Insert four-digit number> [6001-6999].**
 2. Intertek ETL SEMKO-Listed Systems: **<Insert design number>.**
 3. FM Global-Approved Systems: **<Insert design number>.**
 4. F-Rating: **[1 hour] [2 hours] <Insert number of hours>.**
 5. T-Rating: **[1 hour] [2 hours] <Insert number of hours>.**
 6. L-Rating at Ambient: Less than **<Insert cfm/sq. ft. (cu. m/s per sq. m)>.**
 7. L-Rating at **400 deg F (204 deg C):** Less than **<Insert cfm/sq. ft. (cu. m/s per sq. m)>.**
 8. W-Rating: No leakage of water at completion of water leakage testing.
 9. Type of Fill Materials: **[As required to achieve rating] <Insert material>.**
- K. Firestopping for Miscellaneous Mechanical Penetrants[**FS-<#>**]:
1. UL-Classified Systems: **[C-AJ-] [C-BJ-] [F-A-] [F-B-] [F-C-] [F-E-] [W-J-] [W-L-] [W-N-] <Insert four-digit number> [7001-7999].**
 2. Intertek ETL SEMKO-Listed Systems: **<Insert design number>.**
 3. FM Global-Approved Systems: **<Insert design number>.**
 4. F-Rating: **[1 hour] [2 hours] <Insert number of hours>.**
 5. T-Rating: **[1 hour] [2 hours] <Insert number of hours>.**
 6. L-Rating at Ambient: Less than **<Insert cfm/sq. ft. (cu. m/s per sq. m)>.**
 7. L-Rating at **400 deg F (204 deg C):** Less than **<Insert cfm/sq. ft. (cu. m/s per sq. m)>.**
 8. W-Rating: No leakage of water at completion of water leakage testing.
 9. Type of Fill Materials: **[As required to achieve rating] <Insert material>.**
- L. Firestopping for Groupings of Penetrants[**FS-<#>**]:
1. UL-Classified Systems: **[C-AJ-] [C-BJ-] [F-A-] [F-B-] [F-C-] [F-E-] [W-J-] [W-L-] <Insert four-digit number> [8001-8999].**
 2. Intertek ETL SEMKO-Listed Systems: **<Insert design number>.**
 3. FM Global-Approved Systems: **<Insert design number>.**
 4. F-Rating: **[1 hour] [2 hours] <Insert number of hours>.**
 5. T-Rating: **[1 hour] [2 hours] <Insert number of hours>.**
 6. L-Rating at Ambient: Less than **<Insert cfm/sq. ft. (cu. m/s per sq. m)>.**
 7. L-Rating at **400 deg F (204 deg C):** Less than **<Insert cfm/sq. ft. (cu. m/s per sq. m)>.**

8. W-Rating: No leakage of water at completion of water leakage testing.
9. Type of Fill Materials: **[As required to achieve rating] <Insert material>**.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement will be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the lump sum contract price.

END OF SECTION 078413

SECTION 078446 - FIRE-RESISTIVE JOINT SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Joints in or between fire-resistance-rated constructions.
 - 2. Joints at exterior curtain-wall/floor intersections.
 - 3. Joints in smoke barriers.
- B. Related Sections:
 - 1. Section 078413 "Penetration Firestopping" for penetrations in fire-resistance-rated walls, horizontal assemblies, and smoke barriers.
 - 2. Section 079500 "Expansion Control" for fire-resistive architectural joint systems.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated from manufacturers for each joint firestop sealer grout or safing insulation product required, including instructions for joint preparation and joint sealer application and insulation installation instructions.
 - 1. Include data substantiating that materials comply with requirements.
- B. Certified Test Reports: With product data, submit copies of certified test reports showing compliance with specified performance values, including r-values (aged values for plastic insulations), densities, compression strengths, fire performance characteristics, perm ratings, water absorption ratings, and similar properties.
- C. LEED Submittals:
 - 1. Product Data for Credit IEQ 4.1: For fire-resistive joint system sealants, documentation including printed statement of VOC content.
 - 2. Laboratory Test Reports for Credit IEQ 4: For fire-resistive joint system sealants, documentation indicating that products comply with the testing and product

requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- D. Product Schedule: For each fire-resistive joint system. Include location and design designation of qualified testing agency.
 - 1. Where Project conditions require modification to a qualified testing agency's illustration for a particular fire-resistive joint system condition, submit illustration, with modifications marked, approved by fire-resistive joint system manufacturer's fire-protection engineer as an engineering judgment or equivalent fire-resistance-rated assembly.
- E. Samples of each product to be used.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer.
- B. Installer Certificate: Engage an Installer who has successfully completed within the last three (3) years at least three (3) sealer applications similar in type and size to that of this Project and is approved by manufacturer for this type of installation.
- C. Installer Certificates: From Installer indicating fire-resistive joint systems have been installed in compliance with requirements and manufacturer's written recommendations.
- D. Manufacturer's Certificates: From manufacturers of joint firestop sealers and safing insulation attesting that their products comply with specification requirements and are suitable for the use indicated.
- E. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for fire-resistive joint systems, evidencing compliance with requirements.
- F. Copy of warranty from Contractor for firestopping system installation.

1.5 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 MAINTENANCE SUBMITTALS

- A. Overstock: Provide minimum two (2) gallons of each type of product used. Store materials as directed by DEN Project Manager.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: A firm that has been approved by FM Global according to FM Global 4991, "Approval of Firestop Contractors," or been evaluated by UL and found to comply with UL's "Qualified Firestop Contractor Program Requirements."
- B. Installer Qualifications: A firm experienced in installing fire-resistive joint systems similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful performance. Qualifications include having the necessary experience, staff, and training to install manufacturer's products per specified requirements. Manufacturer's willingness to sell its fire-resistive joint system products to Contractor or to Installer engaged by Contractor does not in itself confer qualification on buyer.
- C. Installer Certificate: Engage an Installer who has successfully completed within the last three (3) years at least three (3) sealer applications similar in type and size to that of this Project and is approved by manufacturer(s) for this type of installation.
- D. Manufacturers Certificate: Not less than five (5) years experience manufacturing types of product specified.
- E. Fire-Test-Response Characteristics: Fire-resistive joint systems shall comply with the following requirements:
1. Fire-resistive joint system tests are performed by a qualified testing agency acceptable to authorities having jurisdiction.
 2. Fire-resistive joint systems are identical to those tested per testing standard referenced in "Fire-Resistive Joint Systems" Article. Provide rated systems complying with the following requirements:
 - a. Fire-resistive joint system products bear classification marking of qualified testing agency.
 - b. Fire-resistive joint systems correspond to those indicated by reference to designations listed by the following:
 - 1) UL in its "Fire Resistance Directory."
 - 2) Intertek ETL SEMKO in its "Directory of Listed Building Products."
 - 3) **<Insert name of qualified testing agency>**.
 3. Install firestopping materials to comply with the following:
 - a. Openings between walls and connecting floors shall be per ASTM E 119 and comply with Underwriters Laboratories designs J-900 and U-900.
 - b. Openings around all pipes, ductwork, conduit, or similar penetrating a rated wall, floor or roof assembly shall comply with ASTM E 814.
 - c. Head of wall firestopping at fire rated full height partitions shall comply with ASTM E 119.
 - d. The current Denver Building Code.
- F. Preinstallation Conference: Conduct conference at **[Project site] [location and time]**

as determined by DEN Project Manager]<Insert location>.

1. Pre-installation conference to be attended by installer, contractor, DEN Project Manager, and representatives from affected trades.

1.8 DELIVERY, STORAGE AND HANDLING

- A. Deliver materials to Project site in original unopened containers or bundles with labels informing about manufacturer, product name and designation, expiration period for use, pot life, curing time, and mixing instructions for multicomponent materials.
- B. Store and handle materials in compliance with manufacturers' recommendations to prevent their deterioration or damage due to moisture, high or low temperatures, contaminants, or other causes.
- C. General Protection: Protect insulations from physical damage and from becoming wet, soiled, or covered with ice or snow. Comply with manufacturer's recommendations for handling, storage, and protection during installation.

1.9 PROJECT CONDITIONS

- A. Environmental Limitations: Do not install fire-resistive joint systems when ambient or substrate temperatures are outside limits permitted by fire-resistive joint system manufacturers or when substrates are wet due to rain, frost, condensation, or other causes.
- B. Install and cure fire-resistive joint systems per manufacturer's written instructions using natural means of ventilation or, where this is inadequate, forced-air circulation.
- C. Joint Substrate Conditions: Do not proceed with installation of firestop joint sealers until contaminants capable of interfering with their adhesion are removed from joint substrates.

1.10 COORDINATION

- A. Coordinate construction of joints to ensure that fire-resistive joint systems are installed according to specified requirements.
- B. Coordinate sizing of joints to accommodate fire-resistive joint systems.
- C. Notify Owner's testing agency at least seven (7) days in advance of fire-resistive joint system installations; confirm dates and times on day preceding each series of installations.

1.11 WARRANTY

- A. Installer to warrant that the firestopping system will provide a permanent installation.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 FIRE-RESISTIVE JOINT SYSTEMS

- A. Where required, provide fire-resistive joint systems that are produced and installed to resist spread of fire according to requirements indicated, resist passage of smoke and other gases, and maintain original fire-resistance rating of assemblies in or between which fire-resistive joint systems are installed. Fire-resistive joint systems shall accommodate building movements without impairing their ability to resist the passage of fire and hot gases.
- B. Joints in or between Fire-Resistance-Rated Construction: Provide fire-resistive joint systems with ratings determined per ASTM E 1966 or UL 2079:
1. Joints include those installed in or between fire-resistance-rated **[walls] [floor or floor/ceiling assemblies] [and] [roofs or roof/ceiling assemblies]**.
 2. Fire-Resistance Rating: Equal to or exceeding the fire-resistance rating of construction they will join.
 3. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. A/D Fire Protection Systems Inc.
 - b. CEMCO.
 - c. Fire Trak Corp.
 - d. Grace Construction Products.
 - e. Hilti, Inc.
 - f. Johns Manville.
 - g. Nelson Firestop Products.
 - h. NUCO Inc.
 - i. Passive Fire Protection Partners.
 - j. RectorSeal Corporation.
 - k. Specified Technologies Inc.
 - l. 3M Fire Protection Products.
 - m. Tremco, Inc.; Tremco Fire Protection Systems Group.
 - n. USG Corporation.
 - o. **<Insert manufacturer's name>**.
 - p. or approved equal.
- C. Joints at Exterior Curtain-Wall/Floor Intersections: Provide fire-resistive joint systems with rating determined by ASTM E 119 based on testing at a positive pressure differential of **0.01-inch wg** (2.49 Pa) or ASTM E 2307.

1. Fire-Resistance Rating: Equal to or exceeding the fire-resistance rating of the floor assembly.
 2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. A/D Fire Protection Systems Inc.
 - b. Grace Construction Products.
 - c. Hilti, Inc.
 - d. Johns Manville.
 - e. Nelson Firestop Products.
 - f. NUCO Inc.
 - g. Passive Fire Protection Partners.
 - h. RectorSeal Corporation.
 - i. Specified Technologies Inc.
 - j. 3M Fire Protection Products.
 - k. Thermafiber, Inc.
 - l. Tremco, Inc.; Tremco Fire Protection Systems Group.
 - m. USG Corporation.
 - n. **<Insert manufacturer's name>**.
 - o. or approved equal.
- D. Joints in Smoke Barriers: Provide fire-resistive joint systems with ratings determined per UL 2079.
1. L-Rating: Not exceeding **5.0 cfm/ft** (0.00775 cu. m/s x m) of joint at **0.30 inch wg** (74.7 Pa) at both ambient and elevated temperatures.
 2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. A/D Fire Protection Systems Inc.
 - b. Grace Construction Products.
 - c. Hilti, Inc.
 - d. Johns Manville.
 - e. Nelson Firestop Products.
 - f. NUCO Inc.
 - g. Passive Fire Protection Partners.
 - h. RectorSeal Corporation.
 - i. Specified Technologies Inc.
 - j. 3M Fire Protection Products.
 - k. Tremco, Inc.; Tremco Fire Protection Systems Group.
 - l. USG Corporation.
 - m. **<Insert manufacturer's name>**.
 - n. or approved equal.
- E. Exposed Fire-Resistive Joint Systems: Provide products with flame-spread and smoke-developed indexes of less than 25 and 450, respectively, as determined per ASTM E 84.

- F. VOC Content: Fire-resistive joint system sealants shall comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
1. Architectural Sealants: 250 g/L.
 2. Sealant Primers for Nonporous Substrates: 250 g/L.
 3. Sealant Primers for Porous Substrates: 775 g/L.
- G. Low-Emitting Materials: Fire-resistive joint system sealants shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- H. Accessories: Provide components of fire-resistive joint systems, including primers and forming materials that are needed to install fill materials and to maintain ratings required. Use only components specified by fire-resistive joint system manufacturer and approved by the qualified testing agency for systems indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for joint configurations, substrates, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Surface Cleaning: Clean joints immediately before installing fire-resistive joint systems to comply with fire-resistive joint system manufacturer's written instructions and the following requirements:
1. Remove from surfaces of joint substrates foreign materials that could interfere with adhesion of fill materials, including dust, paints, except for permanent, protective coatings tested and approved for sealant adhesion and compatibility by sealant manufacturer; old joint sealers, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.
 2. Clean joint substrates to produce clean, sound surfaces capable of developing optimum bond with fill materials. Remove loose particles remaining from cleaning operation by vacuuming or blowing out joints with oil-free compressed air.
 3. Remove laitance and form-release agents from concrete.
 4. Clean concrete, masonry, unglazed surfaces of ceramic tile and similar porous joint substrate surfaces, by brushing, grinding, blast cleaning, mechanical abrading, or a combination of these methods to produce a clean, sound substrate capable of developing optimum bond with joint sealers.

- B. Priming: Prime substrates where recommended in writing by fire-resistive joint system manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.
- C. Masking Tape: Use masking tape to prevent fill materials of fire-resistive joint system from contacting adjoining surfaces that will remain exposed on completion of the Work and that would otherwise be permanently stained or damaged by such contact or by cleaning methods used to remove stains. Remove tape as soon as possible without disturbing fire-resistive joint system's seal with substrates.

3.3 INSTALLATION

- A. General: Install fire-resistive joint systems to comply with manufacturer's written installation instructions and published drawings for products and applications indicated, except where more stringent requirements apply.
- B. Install forming materials and other accessories of types required to support fill materials during their application and in position needed to produce cross-sectional shapes and depths required to achieve fire ratings indicated.
 - 1. After installing fill materials and allowing them to fully cure, remove combustible forming materials and other accessories not indicated as permanent components of fire-resistive joint system.
- C. Install fill materials for fire-resistive joint systems by proven techniques to produce the following results:
 - 1. Fill voids and cavities formed by joints and forming materials as required to achieve fire-resistance ratings indicated.
 - 2. Apply fill materials so they contact and adhere to substrates formed by joints.
 - 3. For fill materials that will remain exposed after completing the Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.
- D. At Full Height Fire Rated Walls: Install firesafing insulation as shown on the drawings at wall head condition and as required to meet Denver Building Code (DBC) requirements.
- E. Protect all fire safing insulation by installing 22 gage galvanized sheet metal closure at top and bottom, which complies with the DBC for protection of fire safing insulation.
- F. Tool exposed surfaces of mortar or sealants.
- G. At plastic pipes penetrating floors provide a gauge galvanized steel sleeve around pipes, fire stop sealant within sleeve.
- H. At opening between exterior walls and floors/roofs install firesafing insulation per DBC requirements and in accordance with AAMA Tir-A3.

3.4 IDENTIFICATION

- A. Identify fire-resistive joint systems with preprinted metal or plastic labels. Attach labels permanently to surfaces adjacent to and within **6 inches (150 mm)** of joint edge so labels will be visible to anyone seeking to remove or penetrate joint system. Use mechanical fasteners or self-adhering-type labels with adhesives capable of permanently bonding labels to surfaces on which labels are placed. Include the following information on labels:
1. The words "Warning - Fire-Resistive Joint System - Do Not Disturb. Notify Building Management of Any Damage."
 2. Contractor's name, address, and phone number.
 3. Designation of applicable testing agency.
 4. Date of installation.
 5. Manufacturer's name.
 6. Installer's name.

3.5 FIELD QUALITY CONTROL

- A. Inspecting Agency: Owner will engage a qualified testing agency to perform tests and inspections.
- B. Where deficiencies are found or fire-resistive joint systems are damaged or removed due to testing, repair or replace fire-resistive joint systems so they comply with requirements.
- C. Proceed with enclosing fire-resistive joint systems with other construction only after inspection reports are issued and installations comply with requirements.

3.6 CLEANING AND PROTECTING

- A. Clean off excess fill materials adjacent to joints as the Work progresses by methods and with cleaning materials that are approved in writing by fire-resistive joint system manufacturers and that do not damage materials in which joints occur.
- B. Provide final protection and maintain conditions during and after installation that ensure fire-resistive joint systems are without damage or deterioration at time of Substantial Completion. If damage or deterioration occurs despite such protection, cut out and remove damaged or deteriorated fire-resistive joint systems immediately and install new materials to produce fire-resistive joint systems complying with specified requirements.

3.7 FIRE-RESISTIVE JOINT SYSTEM SCHEDULE

- A. Where UL-classified systems are indicated, they refer to system numbers in UL's "Fire Resistance Directory" under product [**Category XHBN**] [or] [**Category XHDG**].

- B. Where Intertek ETL SEMKO-listed systems are indicated, they refer to design numbers in Intertek ETL SEMKO's "Directory of Listed Building Products" under product category [**Expansion/Seismic Joints**] [or] [**Firestop Systems**].
- C. Floor-to-Floor, Fire-Resistive Joint Systems[**FRJS-<#>**]:
1. UL-Classified Systems: FF-[**D**] [**S**]-<Insert four-digit number> [0000-0999] [1000-1999] [2000-2999] [3000-3999] [4000-4999].
 2. Assembly Rating: [1 hour] [2 hours] <Insert number of hours>.
 3. Nominal Joint Width: [As indicated] <Insert dimension>.
 4. Movement Capabilities: [**Class I**] [**Class II**] [**Class III**] - <Insert number> percent [**compression or extension**] [compression, extension, or horizontal shear].
 5. L-Rating at Ambient: Less than <Insert cfm/ft. (cu. m/s x m)>.
 6. L-Rating at 400 deg F (204 deg C): Less than <Insert cfm/ft. (cu. m/s x m)>.
 7. W-Rating: No leakage of water at completion of water leakage testing.
- D. Wall-to-Wall, Fire-Resistive Joint Systems[**FRJS-<#>**]:
1. UL-Classified Systems: WW-[**D**] [**S**]-<Insert four-digit number> [0000-0999] [1000-1999] [2000-2999] [3000-3999] [4000-4999].
 2. Assembly Rating: [1 hour] [2 hours] <Insert number of hours>.
 3. Nominal Joint Width: [As indicated] <Insert dimension>.
 4. Movement Capabilities: [**Class I**] [**Class II**] [**Class III**] - <Insert number> percent[**compression or extension**].
 5. L-Rating at Ambient: Less than <Insert cfm/ft. (cu. m/s x m)>.
 6. L-Rating at 400 deg F (204 deg C): Less than <Insert cfm/ft. (cu. m/s x m)>.
- E. Floor-to-Wall, Fire-Resistive Joint Systems[**FRJS-<#>**]:
1. UL-Classified Systems: FW-[**D**] [**S**]-<Insert four-digit number> [0000-0999] [1000-1999] [2000-2999] [3000-3999] [4000-4999].
 2. Assembly Rating: [1 hour] [2 hours] <Insert number of hours>.
 3. Nominal Joint Width: [As indicated] <Insert dimension>.
 4. Movement Capabilities: [**Class I**] [**Class II**] [**Class III**] - <Insert number> percent [**compression or extension**] [compression, extension, or horizontal shear].
 5. L-Rating at Ambient: Less than <Insert cfm/ft. (cu. m/s x m)>.
 6. L-Rating at 400 deg F (204 deg C): Less than <Insert cfm/ft. (cu. m/s x m)>.
- F. Head-of-Wall, Fire-Resistive Joint Systems[**FRJS-<#>**]:
1. UL-Classified Systems: HW-[**D**] [**S**]-<Insert four-digit number> [0000-0999] [1000-1999] [2000-2999] [3000-3999] [4000-4999].
 2. Intertek ETL SEMKO-Listed Systems: <Insert design number>.
 3. Assembly Rating: [1 hour] [2 hours] <Insert number of hours>.
 4. Nominal Joint Width: [As indicated] <Insert dimension>.
 5. Movement Capabilities: [**Class I**] [**Class II**] [**Class III**] - <Insert number> percent[**compression or extension**].
 6. L-Rating at Ambient: Less than <Insert cfm/ft. (cu. m/s x m)>.
 7. L-Rating at 400 deg F (204 deg C): Less than <Insert cfm/ft. (cu. m/s x m)>.

- G. Bottom-of-Wall, Fire-Resistive Joint Systems[**FRJS-<#>**]:
1. UL-Classified Systems: BW-[D] [S]-<Insert four-digit number> [0000-0999] [1000-1999] [2000-2999] [3000-3999] [4000-4999].
 2. Assembly Rating: [1 hour] [2 hours] <Insert number of hours>.
 3. Nominal Joint Width: [As indicated] <Insert dimension>.
 4. Movement Capabilities: [Class I] [Class II] [Class III] - <Insert number> percent[**compression or extension**].
 5. L-Rating at Ambient: Less than <Insert cfm/ft. (cu. m/s x m)>.
 6. L-Rating at 400 deg F (204 deg C): Less than <Insert cfm/ft. (cu. m/s x m)>.
- H. Wall-to-Wall, Fire-Resistive Joint Systems Intended for Use as Corner Guards[**FRJS-<#>**]:
1. UL-Classified Systems: CG-[D] [S]-<Insert four-digit number> [0000-0999] [1000-1999] [2000-2999] [3000-3999] [4000-4999].
 2. Assembly Rating: [1 hour] [2 hours] <Insert number of hours>.
 3. Nominal Joint Width: [As indicated] <Insert dimension>.
 4. Movement Capabilities: [Class I] [Class II] [Class III] - <Insert number> percent[**compression or extension**].
 5. L-Rating at Ambient: Less than <Insert cfm/ft. (cu. m/s x m)>.
 6. L-Rating at 400 deg F (204 deg C): Less than <Insert cfm/ft. (cu. m/s x m)>.
- I. Perimeter Fire-Resistive Joint Systems[**PFRJS-<#>**]:
1. UL-Classified Perimeter Fire-Containment Systems: CW-[D] [S]-<Insert four-digit number> [0000-0999] [1000-1999] [2000-2999].
 2. Intertek ETL SEMKO-Listed, Perimeter Fire-Barrier Systems: <Insert design number>.
 3. Integrity Rating: [1 hour] [2 hours] <Insert number of hours>.
 4. Insulation Rating: [0 hour] [1/4 hour] [3/4 hour] [1 hour] <Insert number of hours>.
 5. Linear Opening Width: [2-1/2 inches (63 mm)] [8 inches (203 mm)] [As indicated] <Insert dimension>, maximum.
 6. Movement Capabilities: [Class I] [Class II] [Class III] - <Insert number> percent[**compression or extension**].
 7. L-Rating at Ambient Temperature: Less than <Insert cfm/ft. (cu. m/s x m)>.
 8. L-Rating at 400 deg F (204 deg C): Less than <Insert cfm/ft. (cu. m/s x m)>.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 078446

SECTION 079200 - JOINT SEALANTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Silicone joint sealants.
2. Urethane joint sealants.
3. Polysulfide joint sealants.
4. Latex joint sealants.
5. Solvent-release-curing joint sealants.
6. Preformed joint sealants.
7. Acoustical joint sealants.

B. Related Sections:

1. Section 042000 "Unit Masonry" for masonry control and expansion joint fillers and gaskets.
2. Section 079500 "Expansion Control" for building expansion joints.
3. Section 078446 "Fire-Resistive Joint Systems" for sealing joints in fire-resistance-rated construction.
4. Section 084423 "Structural-Sealant-Glazed Curtain Walls" for structural and other glazing sealants.
5. Section 088000 "Glazing" for glazing sealants.
6. Section 088400 "Plastic Glazing" for plastic glazing sealants.
7. Section 092613 "Gypsum Veneer Plastering" for sealing perimeter joints and penetrations.
8. Section 092900 "Gypsum Board" for sealing perimeter joints.
9. Section 093000 "Tiling" for sealing tile joints.
10. **[Section 095113 "Acoustical Panel Ceilings"] [and] [Section 095123 "Acoustical Tile Ceilings"]** for sealing edge moldings at perimeters with acoustical sealant.
11. Section 321373 "Concrete Paving Joint Sealants" for sealing joints in pavements, walkways, and curbing.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 PRECONSTRUCTION TESTING

- A. Preconstruction Compatibility and Adhesion Testing: Submit to joint-sealant manufacturers, for testing indicated below, samples of materials that will contact or affect joint sealants.
1. Use **[ASTM C 1087]** [**manufacturer's standard test method**] to determine whether priming and other specific joint preparation techniques are required to obtain rapid, optimum adhesion of joint sealants to joint substrates.
 2. Submit not fewer than **[eight (8)]** <Insert number> pieces of each kind of material, including joint substrates, shims, joint-sealant backings, secondary seals, and miscellaneous materials.
 3. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
 4. For materials failing tests, obtain joint-sealant manufacturer's written instructions for corrective measures including use of specially formulated primers.
 5. Testing will not be required if joint-sealant manufacturers submit joint preparation data that are based on previous testing, not older than 24 months, of sealant products for adhesion to, and compatibility with, joint substrates and other materials matching those submitted.
- B. Preconstruction Field-Adhesion Testing: Before installing sealants, field test their adhesion to Project joint substrates as follows:
1. Locate test joints where indicated on Project or, if not indicated, as directed by DEN Project Manager.
 2. Conduct field tests for each application indicated below:
 - a. Each kind of sealant and joint substrate indicated.
 3. Notify DEN Project Manager seven (7) days in advance of dates and times when test joints will be erected.
 4. Arrange for tests to take place with joint-sealant manufacturer's technical representative present.
 - a. Test Method: Test joint sealants according to Method A, Field-Applied Sealant Joint Hand Pull Tab, in Appendix X1 in ASTM C 1193 or Method A, Tail Procedure, in ASTM C 1521.
 - 1) For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.
 5. Report whether sealant failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. For sealants that fail adhesively, retest until satisfactory adhesion is obtained.
 6. Evaluation of Preconstruction Field-Adhesion-Test Results: Sealants not evidencing adhesive failure from testing, in absence of other indications of

noncompliance with requirements, will be considered satisfactory. Do not use sealants that fail to adhere to joint substrates during testing.

1.4 PERFORMANCE REQUIREMENTS

- A. Provide elastomeric joint sealants that establish and maintain watertight and airtight continuous joint seals without staining or deteriorating joint substrates.

1.5 ACTION SUBMITTALS

- A. Product Data: For each joint-sealant product indicated.
1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
1. Product Data for Credit IEQ 4.1: For sealants and sealant primers used inside the weatherproofing system, documentation including printed statement of VOC content.
 2. Laboratory Test Reports for Credit IEQ 4: For sealants and sealant primers used inside the weatherproofing system, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Samples for Initial Selection: Manufacturer's color charts consisting of strips of cured sealants showing the full range of colors available for each product exposed to view.
- D. Samples for Verification: For each kind and color of joint sealant required, provide Samples with joint sealants in **1/2-inch-** (13-mm-) wide joints formed between two **6-inch-** (150-mm-) long strips of material matching the appearance of exposed surfaces adjacent to joint sealants.
- E. Joint-Sealant Schedule: Include the following information:
1. Joint-sealant application, joint location, and designation.
 2. Joint-sealant manufacturer and product name.
 3. Joint-sealant formulation.
 4. Joint-sealant color.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified [**Installer**] [**and**] [**testing agency**].
- B. Product Certificates: For each kind of joint sealant and accessory, from manufacturer.
- C. Sealant, Waterproofing, and Restoration Institute (SWRI) Validation Certificate: For each sealant specified to be validated by SWRI's Sealant Validation Program.

- D. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, indicating that sealants comply with requirements.
 - E. Preconstruction Compatibility and Adhesion Test Reports: From sealant manufacturer, indicating the following:
 - 1. Materials forming joint substrates and joint-sealant backings have been tested for compatibility and adhesion with joint sealants.
 - 2. Interpretation of test results and written recommendations for primers and substrate preparation needed for adhesion.
 - F. Preconstruction Field-Adhesion Test Reports: Indicate which sealants and joint preparation methods resulted in optimum adhesion to joint substrates based on testing specified in "Preconstruction Testing" Article.
 - G. Field-Adhesion Test Reports: For each sealant application tested.
 - H. Warranties: Sample of special warranties.
- 1.7 CLOSEOUT SUBMITTALS
- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
- 1.8 DELIVERY, STORAGE, AND HANDLING
- A. Deliver materials to Project site in original unopened containers or bundles with labels indicating manufacturer, product name and designation, color, expiration date, pot life, curing time, and mixing instructions for multicomponent materials.
 - B. Store and handle materials in compliance with manufacturer's written instructions to prevent their deterioration or damage due to moisture, high or low temperatures, contaminants, or other causes.
- 1.9 QUALITY ASSURANCE
- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.
 - B. Source Limitations: Obtain each kind of joint sealant from single source from single manufacturer.
 - C. Product Testing: Test joint sealants using a qualified testing agency.
 - 1. Testing Agency Qualifications: An independent testing agency qualified according to ASTM C 1021 to conduct the testing indicated.

2. Test according to SWRI's Sealant Validation Program for compliance with requirements specified by reference to ASTM C 920 for adhesion and cohesion under cyclic movement, adhesion-in-peel, and indentation hardness.
- D. Mockups: Install sealant in mockups of assemblies specified in other Sections that are indicated to receive joint sealants specified in this Section. Use materials and installation methods specified in this Section.
- E. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager] <Insert location>**.

1.10 PROJECT CONDITIONS

- A. Do not proceed with installation of joint sealants under the following conditions:
 1. When ambient and substrate temperature conditions are outside limits permitted by joint-sealant manufacturer **[or are below 40 deg F (5 deg C)]**.
 2. When joint substrates are wet.
 3. Where joint widths are less than those allowed by joint-sealant manufacturer for applications indicated.
 4. Where contaminants capable of interfering with adhesion have not yet been removed from joint substrates.

1.11 WARRANTY

- A. Special Installer's Warranty: Manufacturer's standard form in which Installer agrees to repair or replace joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.
 1. Warranty Period: Minimum **[two (2)] <Insert number>** years from date of Substantial Completion.
- B. Special Manufacturer's Warranty: Manufacturer's standard form in which joint-sealant manufacturer agrees to furnish joint sealants to repair or replace those that do not comply with performance and other requirements specified in this Section within specified warranty period.
 1. Warranty Period: Minimum **[twenty (20)] <Insert number>** years from date of Substantial Completion.
- C. Special warranties specified in this article exclude deterioration or failure of joint sealants from the following:
 1. Movement of the structure caused by structural settlement or errors attributable to design or construction resulting in stresses on the sealant exceeding sealant manufacturer's written specifications for sealant elongation and compression.
 2. Disintegration of joint substrates from natural causes exceeding design specifications.
 3. Mechanical damage caused by individuals, tools, or other outside agents.

4. Changes in sealant appearance caused by accumulation of dirt or other atmospheric contaminants.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

- A. Compatibility: Provide joint sealants, backings, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by joint-sealant manufacturer, based on testing and field experience.
- B. VOC Content of Interior Sealants: Sealants and sealant primers used inside the weatherproofing system shall comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
 1. Architectural Sealants: 250 g/L.
 2. Sealant Primers for Nonporous Substrates: 250 g/L.
 3. Sealant Primers for Porous Substrates: 775 g/L.
- C. Low-Emitting Interior Sealants: Sealants and sealant primers used inside the weatherproofing system shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- D. Liquid-Applied Joint Sealants: Comply with ASTM C 920 and other requirements indicated for each liquid-applied joint sealant specified, including those referencing ASTM C 920 classifications for type, grade, class, and uses related to exposure and joint substrates.
 1. Suitability for Immersion in Liquids. Where sealants are indicated for Use I for joints that will be continuously immersed in liquids, provide products that have undergone testing according to ASTM C 1247. Liquid used for testing sealants is deionized water, unless otherwise indicated.
- E. Stain-Test-Response Characteristics: Where sealants are specified to be nonstaining to porous substrates, provide products that have undergone testing according to ASTM C 1248 and have not stained porous joint substrates indicated for Project.
- F. Suitability for Contact with Food: Where sealants are indicated for joints that will come in repeated contact with food, provide products that comply with 21 CFR 177.2600.

- G. Colors of Exposed Joint Sealants: **[As indicated by manufacturer's designations]** **[Match DEN Project Manager's samples]** **[As selected by DEN Project Manager from manufacturer's full range]**.

2.2 SILICONE JOINT SEALANTS

- A. Single-Component, Nonsag, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 100/50, for Use NT.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Dow Corning Corporation; **[790]** **[NS Parking Structure Sealant]**.
 - b. GE Advanced Materials - Silicones; SilPruf LM SCS2700.
 - c. May National Associates, Inc.; **[Bondaflex Sil 290]** **[Bondaflex Sil 728 NS]**.
 - d. Pecora Corporation; **[301 NS]** **[311 NS]** **[890]** **[890FTS]**.
 - e. Sika Corporation, Construction Products Division; SikaSil-C990.
 - f. Tremco Incorporated; **[Spectrem 1]** **[Spectrem 800]**.
 - g. **<Insert manufacturer's name; product>**.
 - h. or approved equal.

- B. Single-Component, Nonsag, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 50, for Use NT.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. BASF Building Systems; Omniseal 50.
 - b. Dow Corning Corporation; **[756 SMS]** **[791]** **[795]** **[995]**.
 - c. GE Advanced Materials - Silicones; **[SilGlaze II SCS2800]** **[SilPruf NB SCS9000]** **[SilPruf SCS2000]** **[UltraPruf II SCS2900]**.
 - d. May National Associates, Inc.; Bondaflex Sil 295.
 - e. Pecora Corporation; **[864]** **[895]** **[898]**.
 - f. Polymeric Systems, Inc.; PSI-641.
 - g. Sika Corporation, Construction Products Division; SikaSil-C995.
 - h. Tremco Incorporated; **[Spectrem 2]** **[Spectrem 3]**.
 - i. **<Insert manufacturer's name; product>**.
 - j. or approved equal.

- C. Single-Component, Nonsag, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 25, for Use NT.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Dow Corning Corporation; 799.
 - b. GE Advanced Materials - Silicones; **[UltraGlaze SSG4000]** **[UltraGlaze SSG4000AC]**.
 - c. May National Associates, Inc.; **[Bondaflex Sil 200 GPN]** **[Bondaflex Sil 201 FC]**.
 - d. Polymeric Systems, Inc.; PSI-631.

- e. Schnee-Morehead, Inc.; SM5731 Poly-Glaze Plus.
 - f. Tremco Incorporated; [**Proglaze SSG**] [**Tremsil 600**].
 - g. <Insert manufacturer's name; product>.
 - h. or approved equal.
- D. Single-Component, Nonsag, Acid-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 25, for Use NT.
- 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Bostik, Inc.; Chem-Calk 1200.
 - b. Dow Corning Corporation; 999-A.
 - c. GE Advanced Materials - Silicones; [**Contractors SCS1000**] [**Construction SCS1200**].
 - d. May National Associates, Inc.; [**Sil 100 GC**] [**Sil 100 GP**] [**Sil 100 WF**].
 - e. Pecora Corporation; 860.
 - f. Polymeric Systems, Inc.; PSI-601.
 - g. Schnee-Morehead, Inc.; SM5732 Polyglaze.
 - h. Tremco Incorporated; [**Proglaze**] [**Tremsil 200**].
 - i. <Insert manufacturer's name; product>.
 - j. or approved equal.
- E. Single-Component, Nonsag, Traffic-Grade, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 100/50, for Use T.
- 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Dow Corning Corporation; [**790**] [**NS Parking Structure Sealant**].
 - b. May National Associates, Inc.; Bondaflex Sil 728 NS.
 - c. Pecora Corporation; [**301 NS**] [**311 NS**].
 - d. Tremco Incorporated; Spectrem 800.
 - e. <Insert manufacturer's name; product>.
 - f. or approved equal.
- F. Single-Component, Pourable, Traffic-Grade, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade P, Class 100/50, for Use T.
- 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Dow Corning Corporation; [**890-SL**] [**SL Parking Structure Sealant**].
 - b. May National Associates, Inc.; Bondaflex [**Sil 728 SG**] [**Sil 728 SL**].
 - c. Pecora Corporation; [**300 SL**] [**310 SL**].
 - d. Tremco Incorporated; Spectrem 900 SL.
 - e. <Insert manufacturer's name; product>.
 - f. or approved equal.
- G. Multicomponent, Nonsag, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type M, Grade NS, Class 50, for Use NT.
- 1. Products: Subject to compliance with requirements, provide one of the following:

- a. Tremco Incorporated; Spectrem 4TS.
 - b. **<Insert manufacturer's name; product>**.
 - c. or approved equal.

- H. Multicomponent, Pourable, Traffic-Grade, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type M, Grade P, Class 100/50, for Use T.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Dow Corning Corporation; FC Parking Structure Sealant.
 - b. May National Associates, Inc.; Bondaflex Sil 728 RCS.
 - c. **<Insert manufacturer's name; product>**.
 - d. or approved equal.

- I. Mildew-Resistant, Single-Component, Nonsag, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 25, for Use NT.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Pecora Corporation; 898.
 - b. **<Insert manufacturer's name; product>**.
 - c. or approved equal.

- J. Mildew-Resistant, Single-Component, Acid-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 25, for Use NT.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. BASF Building Systems; Omniplus.
 - b. Dow Corning Corporation; 786 Mildew Resistant.
 - c. GE Advanced Materials - Silicones; Sanitary SCS1700.
 - d. May National Associates, Inc.; Bondaflex Sil 100 WF.
 - e. Tremco Incorporated; Tremsil 200 Sanitary.
 - f. **<Insert manufacturer's name; product>**.
 - g. or approved equal.

2.3 URETHANE JOINT SEALANTS

- A. Single-Component, Nonsag, Urethane Joint Sealant: ASTM C 920, Type S, Grade NS, Class 100/50, for Use NT.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Sika Corporation, Construction Products Division; Sikaflex - 15LM.
 - b. Tremco Incorporated; **[Vulkem 921] [Dymonic FC]**.
 - c. **<Insert manufacturer's name; product>**.
 - d. or approved equal.

- B. Single-Component, Nonsag, Urethane Joint Sealant: ASTM C 920, Type S, Grade NS, Class 50, for Use NT.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Pacific Polymers International, Inc.; Elasto-Thane 230 LM Type II.
 - b. Polymeric Systems, Inc.; PSI-901.
 - c. <Insert manufacturer's name; product>.
 - d. or approved equal.

- C. Single-Component, Nonsag, Urethane Joint Sealant: ASTM C 920, Type S, Grade NS, Class 25, for Use NT.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. BASF Building Systems; [**Sonolastic NP1**] [**Sonolastic TX1**] [**Sonolastic Ultra**].
 - b. Bostik, Inc.; Chem-Calk [**900**] [**915**] [**916 Textured**].
 - c. May National Associates, Inc.; [**Bondaflex PUR 25**] [**Bondaflex PUR 25 Textured**] [**Bondaflex PUR 40 FC**].
 - d. Pacific Polymers International, Inc.; Elasto-Thane 230 Type II.
 - e. Pecora Corporation; Dynatrol I-XL.
 - f. Polymeric Systems, Inc.; Flexiprene 1000.
 - g. Schnee-Morehead, Inc.; [**Permathane SM7100**] [**Permathane SM7108**] [**Permathane SM7110**].
 - h. Sika Corporation, Construction Products Division; Sikaflex - 1a.
 - i. Tremco Incorporated; [**Dymonic**] [**Vulkem 116**].
 - j. <Insert manufacturer's name; product>.
 - k. or approved equal.

- D. Single-Component, Nonsag, Traffic-Grade, Urethane Joint Sealant: ASTM C 920, Type S, Grade NS, Class 25, for Use T.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. BASF Building Systems; [**Sonolastic NP1**] [**Sonolastic Ultra**].
 - b. May National Associates, Inc.; Bondaflex PUR 40 FC.
 - c. Pacific Polymers International, Inc.; Elasto-Thane 230 Type II.
 - d. Sika Corporation, Construction Products Division; Sikaflex - 1a.
 - e. Tremco Incorporated; Vulkem 116.
 - f. <Insert manufacturer's name; product>.
 - g. or approved equal.

- E. Single-Component, Pourable, Traffic-Grade, Urethane Joint Sealant: ASTM C 920, Type S, Grade P, Class 25, for Use T.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. BASF Building Systems; Sonolastic SL 1.
 - b. Bostik, Inc.; Chem-Calk 950.
 - c. May National Associates, Inc.; Bondaflex PUR 35 SL.
 - d. Pecora Corporation; Urexpan NR-201.
 - e. Polymeric Systems, Inc.; Flexiprene 952.

- f. Schnee-Morehead, Inc.; Permthane SM7101.
 - g. Sika Corporation. Construction Products Division; Sikaflex - 1CSL.
 - h. Tremco Incorporated; Vulkem 45.
 - i. <Insert manufacturer's name; product>.
 - j. or approved equal.

- F. Multicomponent, Nonsag, Urethane Joint Sealant: ASTM C 920, Type M, Grade NS, Class 50, for Use NT.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Pecora Corporation; Dynatrol II.
 - b. Polymeric Systems, Inc.; PSI-270.
 - c. Tremco Incorporated; [Dymeric 240] [Dymeric 240 FC].
 - d. <Insert manufacturer's name; product>.
 - e. or approved equal.

- G. Multicomponent, Nonsag, Urethane Joint Sealant: ASTM C 920, Type M, Grade NS, Class 25, for Use NT.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. BASF Building Systems; Sonolastic NP 2.
 - b. Bostik, Inc.; Chem-Calk 500.
 - c. May National Associates, Inc.; Bondaflex PUR 2 NS.
 - d. Pacific Polymers International, Inc.; [Elasto-Thane 227 High Shore Type II] [Elasto-Thane 227 R Type II] [Elasto-Thane 227 Type II].
 - e. Pecora Corporation; Dynatred.
 - f. Sika Corporation, Construction Products Division; [Sikaflex - 2c NS] [Sikaflex - 2c EZ Mix].
 - g. Tremco Incorporated; Vulkem 227.
 - h. <Insert manufacturer's name; product>.
 - i. or approved equal.

- H. Multicomponent, Nonsag, Traffic-Grade, Urethane Joint Sealant: ASTM C 920, Type M, Grade NS, Class 50, for Use T.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Polymeric Systems, Inc.; PSI-270.
 - b. Tremco Incorporated; Dymeric 240 FC.
 - c. <Insert manufacturer's name; product>.
 - d. or approved equal.

- I. Multicomponent, Nonsag, Traffic-Grade, Urethane Joint Sealant: ASTM C 920, Type M, Grade NS, Class 25, for Use T.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. BASF Building Systems; Sonolastic NP 2.

- b. LymTal International, Inc.; Iso-Flex 885 SG.
 - c. May National Associates, Inc.; Bondaflex PUR 2 NS.
 - d. Pacific Polymers International, Inc.; [**Elasto-Thane 227 High Shore Type II**] [**Elasto-Thane 227 Type II**].
 - e. Pecora Corporation; Dynatred.
 - f. Sika Corporation, Construction Products Division; [**Sikaflex - 2c NS**] [**Sikaflex - 2c EZ Mix**].
 - g. Tremco Incorporated; Vulkem 227.
 - h. **<Insert manufacturer's name; product>**.
 - i. or approved equal.
- J. Immersible, Single-Component, Nonsag, Traffic-Grade, Urethane Joint Sealant: ASTM C 920, Type S, Grade NS, Class 25, for Uses T and I.
- 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. BASF Building Systems; Sonolastic NP1.
 - b. Sika Corporation, Construction Products Division; Sikaflex - 1a.
 - c. Tremco Incorporated; Vulkem 116.
 - d. **<Insert manufacturer's name; product>**.
 - e. or approved equal.
- K. Immersible, Single-Component, Pourable, Traffic-Grade, Urethane Joint Sealant: ASTM C 920, Type S, Grade P, Class 25, for Uses T and I.
- 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Sika Corporation, Construction Products Division; Sikaflex - 1CSL.
 - b. Tremco Incorporated; Vulkem 45.
 - c. **<Insert manufacturer's name; product>**.
 - d. or approved equal.
- L. Immersible Multicomponent, Nonsag, Traffic-Grade, Urethane Joint Sealant: ASTM C 920, Type M, Grade NS, Class 25, for Uses T and I.
- 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. BASF Building Systems; Sonolastic NP 2.
 - b. LymTal International, Inc.; Iso-Flex 885 SG.
 - c. May National Associates, Inc.; Bondaflex PUR 2 NS.
 - d. Pecora Corporation; Dynatred.
 - e. Tremco Incorporated; Vulkem 227.
 - f. **<Insert manufacturer's name; product>**.
 - g. or approved equal.
- M. Immersible Multicomponent, Pourable, Traffic-Grade, Urethane Joint Sealant: ASTM C 920, Type M, Grade P, Class 25, for Use T and I.
- 1. Products: Subject to compliance with requirements, provide one of the following:

- a. LymTal International, Inc.; Iso-Flex 880 GB.
- b. May National Associates, Inc.; Bondaflex PUR 2 SL.
- c. Tremco Incorporated; Vulkem 245.
- d. **<Insert manufacturer's name; product>**.
- e. or approved equal.

2.4 POLYSULFIDE JOINT SEALANTS

- A. Single-Component, Nonsag, Polysulfide Joint Sealant: ASTM C 920, Type S, Grade NS, Class 25, for Use NT.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Pacific Polymers International, Inc.; Elastoseal 230 Type I.
 - b. W. R. Meadows, Inc.; Deck-O-Seal One Step.
 - c. **<Insert manufacturer's name; product>**.
 - d. or approved equal.
- B. Multicomponent, Nonsag, Polysulfide Joint Sealant: ASTM C 920, Type M, Grade NS, Class 25, for Use NT.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. BASF Building Systems; Sonolastic Polysulfide Sealant.
 - b. Pacific Polymers International, Inc.; Elasto-Seal 227 Type II.
 - c. Pecora Corporation; Synthacalk GC-2+.
 - d. W. R. Meadows, Inc.; Deck-O-Seal Gun Grade.
 - e. **<Insert manufacturer's name; product>**.
 - f. or approved equal.
- C. Multicomponent, Nonsag, Traffic-Grade, Polysulfide Joint Sealant: ASTM C 920, Type M, Grade NS, Class 25, for Use T.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. BASF Building Systems; Sonolastic Polysulfide Sealant.
 - b. Pecora Corporation; Synthacalk GC-2+.
 - c. **<Insert manufacturer's name; product>**.
 - d. or approved equal.
- D. Multicomponent, Pourable, Traffic-Grade, Polysulfide Joint Sealant: ASTM C 920, Type M, Grade P, Class 25, for Use T.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Pacific Polymers International, Inc.; Elastoseal 227 Type I.
 - b. W. R. Meadows, Inc.; [**Deck-O-Seal 125**] [**Deck-O-Seal 150**].
 - c. **<Insert manufacturer's name; product>**.
 - d. or approved equal.

- E. Immersible, Multicomponent Nonsag, Traffic-Grade, Polysulfide Joint Sealant: ASTM C 920, Type M, Grade NS, Class 25, for Use T and Use I.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Pecora Corporation; Synthacalk GC-2+.
 - b. **<Insert manufacturer's name; product>**.
 - c. or approved equal.

2.5 LATEX JOINT SEALANTS

- A. Latex Joint Sealant: Acrylic latex or siliconized acrylic latex, ASTM C 834, Type OP, Grade NF.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. BASF Building Systems; Sonolac.
 - b. Bostik, Inc.; Chem-Calk 600.
 - c. May National Associates, Inc.; [**Bondaflex 600**] [**Bondaflex Sil-A 700**].
 - d. Pecora Corporation; AC-20+.
 - e. Schnee-Morehead, Inc.; SM 8200.
 - f. Tremco Incorporated; Tremflex 834.
 - g. **<Insert manufacturer's name; product>**.
 - h. or approved equal.

2.6 SOLVENT-RELEASE-CURING JOINT SEALANTS

- A. Acrylic-Based Joint Sealant: ASTM C 1311.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Schnee-Morehead, Inc.; Acryl-R Acrylic Sealant.
 - b. Tremco Incorporated; Mono 555.
 - c. **<Insert manufacturer's name; product>**.
 - d. or approved equal.
- B. Butyl-Rubber-Based Joint Sealant: ASTM C 1311.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Bostik, Inc.; Chem-Calk 300.
 - b. Pecora Corporation; BC-158.
 - c. Tremco Incorporated; Tremco Butyl Sealant.
 - d. **<Insert manufacturer's name; product>**.
 - e. or approved equal.

2.7 PREFORMED JOINT SEALANTS

- A. Preformed Silicone Joint Sealants: Manufacturer's standard sealant consisting of precured low-modulus silicone extrusion, in sizes to fit joint widths indicated, combined with a neutral-curing silicone sealant for bonding extrusions to substrates.

1. Products: Subject to compliance with requirements, provide one of the following:

- a. Dow Corning Corporation; 123 Silicone Seal.
- b. GE Advanced Materials - Silicones; UltraSpan US1100.
- c. May National Associates, Inc.; Bondaflex Silbridge 300.
- d. Pecora Corporation; Sil-Span.
- e. Sealex, Inc.; ImmerSeal.
- f. **<Insert manufacturer's name; product>**.
- g. or approved equal.

- B. Preformed Foam Joint Sealant: Manufacturer's standard preformed, precompressed, open-cell foam sealant manufactured from urethane foam with minimum density of **10 lb/cu. ft.** (160 kg/cu. m) and impregnated with a nondrying, water-repellent agent. Factory produce in precompressed sizes in roll or stick form to fit joint widths indicated; coated on one side with a pressure-sensitive adhesive and covered with protective wrapping.

1. Products: Subject to compliance with requirements, provide one of the following:

- a. Dayton Superior Specialty Chemicals; Polytite Standard.
- b. EMSEAL Joint Systems, Ltd.; Emseal 25V.
- c. Sandell Manufacturing Co., Inc.; Polyseal.
- d. Schul International, Inc.; **[Sealtite] [Sealtite 50N]**.
- e. Willseal USA, LLC; **[Willseal 150] [Willseal 250]**.
- f. **<Insert manufacturer's name; product>**.
- g. or approved equal.

2.8 ACOUSTICAL JOINT SEALANTS

- A. Acoustical Joint Sealant: Manufacturer's standard nonsag, paintable, nonstaining latex sealant complying with ASTM C 834. Product effectively reduces airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies according to ASTM E 90.

1. Products: Subject to compliance with requirements, provide one of the following:

- a. Pecora Corporation; **[AC-20 FTR] [AIS-919]**.
- b. USG Corporation; SHEETROCK Acoustical Sealant.
- c. **<Insert manufacturer's name; product>**.
- d. or approved equal.

2.9 JOINT SEALANT BACKING

- A. General: Provide sealant backings of material that are nonstaining; are compatible with joint substrates, sealants, primers, and other joint fillers; and are approved for applications indicated by sealant manufacturer based on field experience and laboratory testing.
- B. Cylindrical Sealant Backings: ASTM C 1330, [**Type C (closed-cell material with a surface skin)**] [**Type O (open-cell material)**] [**Type B (bicellular material with a surface skin)**] [**or any of the preceding types, as approved in writing by joint-sealant manufacturer for joint application indicated**], and of size and density to control sealant depth and otherwise contribute to producing optimum sealant performance.
- C. Bond-Breaker Tape: Polyethylene tape or other plastic tape recommended by sealant manufacturer for preventing sealant from adhering to rigid, inflexible joint-filler materials or joint surfaces at back of joint. Provide self-adhesive tape where applicable.

2.10 MISCELLANEOUS MATERIALS

- A. Primer: Material recommended by joint-sealant manufacturer where required for adhesion of sealant to joint substrates indicated, as determined from preconstruction joint-sealant-substrate tests and field tests.
- B. Cleaners for Nonporous Surfaces: Chemical cleaners acceptable to manufacturers of sealants and sealant backing materials, free of oily residues or other substances capable of staining or harming joint substrates and adjacent nonporous surfaces in any way, and formulated to promote optimum adhesion of sealants to joint substrates.
- C. Masking Tape: Nonstaining, nonabsorbent material compatible with joint sealants and surfaces adjacent to joints.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine joints indicated to receive joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting joint-sealant performance.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Surface Cleaning of Joints: Clean out joints immediately before installing joint sealants to comply with joint-sealant manufacturer's written instructions and the following

requirements:

1. Remove all foreign material from joint substrates that could interfere with adhesion of joint sealant, including dust, paints (except for permanent, protective coatings tested and approved for sealant adhesion and compatibility by sealant manufacturer), old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.
 2. Clean porous joint substrate surfaces by brushing, grinding, mechanical abrading, or a combination of these methods to produce a clean, sound substrate capable of developing optimum bond with joint sealants. Remove loose particles remaining after cleaning operations above by vacuuming or blowing out joints with oil-free compressed air. Porous joint substrates include the following:
 - a. Concrete.
 - b. Masonry.
 - c. Unglazed surfaces of ceramic tile.
 - d. Exterior insulation and finish systems (EIFS).
 - e. **<Insert other porous joint substrate>**.
 3. Remove laitance and form-release agents from concrete.
 4. Clean nonporous joint substrate surfaces with chemical cleaners or other means that do not stain, harm substrates, or leave residues capable of interfering with adhesion of joint sealants. Nonporous joint substrates include the following:
 - a. Metal.
 - b. Glass.
 - c. Porcelain enamel.
 - d. Glazed surfaces of ceramic tile.
 - e. **<Insert other nonporous joint substrate>**.
- B. Joint Priming: Prime joint substrates where recommended by joint-sealant manufacturer or as indicated by preconstruction joint-sealant-substrate tests or prior experience. Apply primer to comply with joint-sealant manufacturer's written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.
- C. Masking Tape: Use masking tape where required to prevent contact of sealant or primer with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling without disturbing joint seal.
- ### 3.3 INSTALLATION OF JOINT SEALANTS
- A. General: Comply with joint-sealant manufacturer's written installation instructions for products and applications indicated, unless more stringent requirements apply.
 - B. Sealant Installation Standard: Comply with recommendations in ASTM C 1193 for use of joint sealants as applicable to materials, applications, and conditions indicated.

- C. Install sealant backings of kind indicated to support sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.
1. Do not leave gaps between ends of sealant backings.
 2. Do not stretch, twist, puncture, or tear sealant backings.
 3. Remove absorbent sealant backings that have become wet before sealant application and replace them with dry materials.
- D. Install bond-breaker tape behind sealants where sealant backings are not used between sealants and backs of joints.
- E. Install sealants using proven techniques that comply with the following and at the same time backings are installed:
1. Place sealants so they directly contact and fully wet joint substrates.
 2. Completely fill recesses in each joint configuration.
 3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.
- F. Tooling of Nonsag Sealants: Immediately after sealant application and before skinning or curing begins, tool sealants according to requirements specified in subparagraphs below to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint.
1. Remove excess sealant from surfaces adjacent to joints.
 2. Use tooling agents that are approved in writing by sealant manufacturer and that do not discolor sealants or adjacent surfaces.
 3. Provide concave joint profile per Figure 8A in ASTM C 1193, unless otherwise indicated.
 4. Provide flush joint profile where indicated per Figure 8B in ASTM C 1193.
 5. Provide recessed joint configuration of recess depth and at locations indicated per Figure 8C in ASTM C 1193.
 - a. Use masking tape to protect surfaces adjacent to recessed tooled joints.
- G. Installation of Preformed Silicone-Sealant System: Comply with the following requirements:
1. Apply masking tape to each side of joint, outside of area to be covered by sealant system.
 2. Apply silicone sealant to each side of joint to produce a bead of size complying with preformed silicone-sealant system manufacturer's written instructions and covering a bonding area of not less than **3/8 inch** (10 mm). Hold edge of sealant bead **1/4 inch** (6 mm) inside masking tape.
 3. Within 10 minutes of sealant application, press silicone extrusion into sealant to wet extrusion and substrate. Use a roller to apply consistent pressure and ensure uniform contact between sealant and both extrusion and substrate.

4. Complete installation of sealant system in horizontal joints before installing in vertical joints. Lap vertical joints over horizontal joints. At ends of joints, cut silicone extrusion with a razor knife.

H. Installation of Preformed Foam Sealants: Install each length of sealant immediately after removing protective wrapping. Do not pull or stretch material. Produce seal continuity at ends, turns, and intersections of joints. For applications at low ambient temperatures, apply heat to sealant in compliance with sealant manufacturer's written instructions.

I. Acoustical Sealant Installation: At sound-rated assemblies and elsewhere as indicated, seal construction at perimeters, behind control joints, and at openings and penetrations with a continuous bead of acoustical sealant. Install acoustical sealant at both faces of partitions at perimeters and through penetrations. Comply with ASTM C 919 and with manufacturer's written recommendations.

3.4 FIELD QUALITY CONTROL

A. Testing Agency: Contractor shall engage a qualified independent testing and inspecting agency acceptable to the Owner to perform field tests and inspections, and prepare reports.

B. Field-Adhesion Testing: Field test joint-sealant adhesion to joint substrates as follows:

1. Extent of Testing: Test completed and cured sealant joints as follows:

- a. Perform [10] <Insert number> tests for the first [1000 feet (300 m)] <Insert dimension> of joint length for each kind of sealant and joint substrate.
- b. Perform 1 test for each [1000 feet (300 m)] <Insert dimension> of joint length thereafter or 1 test per each floor per elevation.

2. Test Method: Test joint sealants according to Method A, Field-Applied Sealant Joint Hand Pull Tab, in Appendix X1 in ASTM C 1193 or Method A, Tail Procedure, in ASTM C 1521.

- a. For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.

3. Inspect tested joints and report on the following:

- a. Whether sealants filled joint cavities and are free of voids.
- b. Whether sealant dimensions and configurations comply with specified requirements.
- c. Whether sealants in joints connected to pulled-out portion failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. Compare these results to determine if adhesion passes sealant manufacturer's field-adhesion hand-pull test criteria.

4. Record test results in a field-adhesion-test log. Include dates when sealants were installed, names of persons who installed sealants, test dates, test locations, whether joints were primed, adhesion results and percent elongations, sealant fill, sealant configuration, and sealant dimensions.
 5. Repair sealants pulled from test area by applying new sealants following same procedures used originally to seal joints. Ensure that original sealant surfaces are clean and that new sealant contacts original sealant.
- C. Evaluation of Field-Adhesion Test Results: Sealants not evidencing adhesive failure from testing or noncompliance with other indicated requirements will be considered satisfactory. Remove sealants that fail to adhere to joint substrates during testing or to comply with other requirements. Retest failed applications until test results prove sealants comply with indicated requirements.

3.5 CLEANING

- A. Clean off excess sealant or sealant smears adjacent to joints as the Work progresses by methods and with cleaning materials approved in writing by manufacturers of joint sealants and of products in which joints occur.

3.6 PROTECTION

- A. Protect joint sealants during and after curing period from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated joint sealants immediately so installations with repaired areas are indistinguishable from original work.

3.7 JOINT-SEALANT SCHEDULE

- A. Joint-Sealant Application: Exterior joints in horizontal traffic surfaces[<JS-#>].
1. Joint Locations:
 - a. Control and expansion joints in brick pavers.
 - b. Isolation and contraction joints in cast-in-place concrete slabs.
 - c. Joints between plant-precaster architectural concrete paving units.
 - d. Joints in stone paving units[, **including steps**].
 - e. Tile control and expansion joints.
 - f. Joints between different materials listed above.
 - g. **<Insert other joints>**.
 - h. Other joints as indicated.
 2. Silicone Joint Sealant: [**Single component, nonsag, traffic grade, neutral curing**] [**Single component, pourable, traffic grade, neutral curing**] [**Multicomponent, pourable, traffic grade, neutral curing**].

3. Urethane Joint Sealant: [**Single component, nonsag, traffic grade**] [**Single component, pourable, traffic grade**] [**Multicomponent, nonsag, traffic grade, Class 50**] [**Multicomponent, nonsag, traffic grade, Class 25**].
 4. Polysulfide Joint Sealant: [**Multicomponent, nonsag, traffic grade**] [**Multicomponent, pourable, traffic grade**].
 5. Preformed Joint Sealant: Preformed foam sealant.
 6. Joint Sealant: <Insert joint sealant>.
 7. Joint-Sealant Color: [**As selected by DEN Project Manager** from manufacturer's full range of colors] <Insert color>.
- B. Joint-Sealant Application: Exterior joints in horizontal traffic surfaces subject to water immersion[<JS-#>].
1. Joint Locations:
 - a. Joints in pedestrian plazas.
 - b. Joints in swimming pool decks.
 - c. <Insert other joints>.
 - d. Other joints as indicated.
 2. Urethane Joint Sealant: [**Immersible, single component, nonsag, traffic grade**] [**Immersible, single component, pourable, traffic grade**] [**Immersible, multicomponent, nonsag, traffic grade**] [**Immersible, multicomponent, pourable, traffic grade**].
 3. Polysulfide Joint Sealant: Immersible, multicomponent, nonsag, traffic grade.
 4. Joint Sealant: <Insert joint sealant>.
 5. Joint-Sealant Color: [**As selected by DEN Project Manager** from manufacturer's full range of colors] <Insert color>.
- C. Joint-Sealant Application: Exterior joints in vertical surfaces and horizontal nontraffic surfaces[<JS-#>].
1. Joint Locations:
 - a. Construction joints in cast-in-place concrete.
 - b. Joints between plant-precaster architectural concrete units.
 - c. Control and expansion joints in unit masonry.
 - d. Joints in dimension stone cladding.
 - e. Joints in glass unit masonry assemblies.
 - f. Joints in exterior insulation and finish systems.
 - g. Joints between metal panels.
 - h. Joints between different materials listed above.
 - i. Perimeter joints between materials listed above and frames of [**doors**] [**windows**] [**and**] [**louvers**].
 - j. Control and expansion joints in [**ceilings**] [**and other**] [**overhead surfaces**].
 - k. <Insert other joints>.
 - l. Other joints as indicated.
 2. Silicone Joint Sealant: [**Single component, nonsag, neutral curing, Class**

- 100/50] [Single component, nonsag, neutral curing, Class 50] [Single component, nonsag, neutral curing, Class 25] [Single component, nonsag, acid curing] [Multicomponent, nonsag, neutral curing].**
3. Urethane Joint Sealant: **[Single component, nonsag, Class 100/50] [Single component, nonsag, Class 50] [Single component, nonsag, Class 25] [Multicomponent, nonsag,, Class 50] [Multicomponent, nonsag,, Class 25].**
 4. Polysulfide Joint Sealant: **[Single component, nonsag] [Multicomponent, nonsag].**
 5. Preformed Joint Sealant: **[Preformed silicone] [Preformed foam].**
 6. Joint Sealant: **<Insert joint sealant>.**
 7. Joint-Sealant Color: **[As selected by DEN Project Manager from manufacturer's full range of colors] <Insert color>.**
- D. Joint-Sealant Application: Interior joints in horizontal traffic surfaces[**<JS-#>**].
1. Joint Locations:
 - a. Isolation joints in cast-in-place concrete slabs.
 - b. Control and expansion joints in stone flooring.
 - c. Control and expansion joints in brick flooring.
 - d. Control and expansion joints in tile flooring.
 - e. **<Insert other joints>.**
 - f. Other joints as indicated.
 2. Silicone Joint Sealant: **[Single component, nonsag, traffic grade, neutral curing] [Single component, pourable, traffic grade, neutral curing] [Multicomponent, pourable, traffic grade, neutral curing].**
 3. Urethane Joint Sealant: **[Single component, nonsag, traffic grade] [Single component, pourable, traffic grade] [Multicomponent, nonsag, traffic grade, Class 50] [Multicomponent, nonsag, traffic grade, Class 25].**
 4. Polysulfide Joint Sealant: **[Multicomponent, nonsag, traffic grade] [Multicomponent, pourable, traffic grade].**
 5. Preformed Joint Sealant: Preformed foam.
 6. Joint Sealant: **<Insert joint sealant>.**
 7. Joint-Sealant Color: **[As selected by DEN Project Manager from manufacturer's full range of colors] <Insert color>.**
- E. Joint-Sealant Application: Interior joints in vertical surfaces and horizontal nontraffic surfaces[**<JS-#>**].
1. Joint Locations:
 - a. Control and expansion joints on exposed interior surfaces of exterior walls.
 - b. Perimeter joints of exterior openings where indicated.
 - c. Tile control and expansion joints.
 - d. Vertical joints on exposed surfaces of **[interior unit masonry] [concrete] [walls] [and] [partitions].**
 - e. Joints on underside of plant-precast structural concrete **[beams] [and] [planks].**

- f. Perimeter joints between interior wall surfaces and frames of **[interior doors] [windows] [and] [elevator entrances]**.
 - g. **<Insert other joints>**.
 - h. Other joints as indicated.
 2. Joint Sealant: **[Latex] [Acrylic based] [Butyl rubber based] <Insert joint sealant>**.
 3. Joint-Sealant Color: **[As selected by DEN Project Manager]** from manufacturer's full range of colors] **<Insert color>**.
- F. Joint-Sealant Application: Mildew-resistant interior joints in vertical surfaces and horizontal nontraffic surfaces[**<JS-#>**].
 1. Joint Sealant Location:
 - a. Joints between plumbing fixtures and adjoining walls, floors, and counters.
 - b. Tile control and expansion joints where indicated.
 - c. **<Insert other joints>**.
 - d. Other joints as indicated.
 2. Joint Sealant: **[Mildew resistant, single component, nonsag, neutral curing, Silicone] [Single component, nonsag, mildew resistant, acid curing] <Insert joint sealant>**.
 3. Joint-Sealant Color: **[As selected by DEN Project Manager]** from manufacturer's full range of colors] **<Insert color>**.
- G. Joint-Sealant Application: Interior acoustical joints in vertical surfaces and horizontal nontraffic surfaces[**<JS-#>**].
 1. Joint Location:
 - a. Acoustical joints where indicated.
 - b. Other joints as indicated.
 2. Joint Sealant: **[Acoustical] <Insert joint sealant>**.
 3. Joint-Sealant Color: **[As selected by DEN Project Manager]** from manufacturer's full range] **<Insert color>**.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 079200

SECTION 079500 - EXPANSION CONTROL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

- 1. Interior expansion control systems.
- 2. Exterior wall expansion control systems.
- 3. Parking and open-air structure expansion control systems.

- B. Related Requirements:

- 1. Section 077129 "Manufactured Roof Expansion Joints" for factory-fabricated roof expansion control.
- 2. Section 078446 "Fire-Resistive Joint Systems" for liquid-applied joint sealants in fire-resistive building joints.
- 3. Section 079200 "Joint Sealants" for liquid-applied joint sealants and for elastomeric sealants without metal frames.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product data.

- 1. Include data substantiating that materials comply with requirements.

- B. Shop Drawings: For each expansion control system specified. Include plans, elevations, sections, details, splices, blockout requirement, attachments to other work, and line diagrams showing entire route of each expansion control system. Where expansion control systems change planes, provide isometric or clearly detailed drawing depicting how components interconnect.

- C. Samples: For each exposed expansion control system and for each color and texture specified, full width by 6 inches (150 mm) long in size.

- D. Samples for Initial Selection: For each type of expansion control system indicated.

1. Include manufacturer's color charts showing the full range of colors and finishes available for each exposed metal and elastomeric seal material.
- E. Samples for Verification: For each type of expansion control system indicated, full width by 6 inches (150 mm) long in size.
- F. Product Schedule: Prepared by or under the supervision of the supplier. Include the following information in tabular form:
1. Manufacturer and model number for each expansion control system.
 2. Expansion control system location cross-referenced to Drawings.
 3. Nominal joint width.
 4. Movement capability.
 5. Classification as thermal or seismic.
 6. Materials, colors, and finishes.
 7. Product options.
 8. Fire-resistance ratings.

1.4 INFORMATIONAL SUBMITTALS

- A. Product Test Reports: For each fire barrier provided as part of an expansion control system, for tests performed by a qualified testing agency.

1.5 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

- A. General: Provide expansion control systems of design, basic profile, materials, and operation indicated. Provide units with capability to accommodate variations in adjacent surfaces.
1. Furnish units in longest practicable lengths to minimize field splicing. Install with hairline mitered corners where expansion control systems change direction or abut other materials.
 2. Include factory-fabricated closure materials and transition pieces, T-joints, corners, curbs, cross-connections, and other accessories as required to provide continuous expansion control systems.
- B. Coordination: Coordinate installation of exterior wall[**and soffit**] expansion control systems with roof expansion control systems to ensure that wall transitions are watertight. Roof expansion joint assemblies are specified elsewhere.

2.2 PERFORMANCE REQUIREMENTS

- A. Fire-Resistance Ratings: Where indicated, provide expansion control systems with fire barriers identical to those of systems tested for fire resistance per UL 2079 or ASTM E 1966 by a testing and inspecting agency acceptable to authorities having jurisdiction.
1. Hose Stream Test: Wall-to-wall and wall-to-ceiling systems shall be subjected to hose stream testing.
- B. Seismic Performance: Expansion control systems shall withstand the effects of earthquake motions determined according to [ASCE/SEI 7] <Insert requirement>.
1. The term "withstand" means "the system will remain in place without separation of any parts when subjected to the seismic forces specified[**and the system will be fully operational after the seismic event**]."
 2. Component Importance Factor is [1.5] [1.0].

2.3 INTERIOR EXPANSION CONTROL SYSTEMS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Architectural Art Mfg., Inc.; Division of Pittcon Industries.
 2. Balco, Inc.
 3. Construction Specialties, Inc.
 4. JointMaster/InPro Corporation.
 5. Michael Rizza Company, LLC.
 6. MM Systems Corporation.
 7. Nystrom, Inc.
 8. Watson Bowman Acme Corp.; a BASF Construction Chemicals business.
 9. <Insert manufacturer's name>.
 10. or approved equal.
- B. Source Limitations: Obtain expansion control systems from single source from single manufacturer.
- C. Floor-to-Floor <Insert drawing designation>:
1. Design Criteria:
 - a. Nominal Joint Width: [As indicated on Drawings] [As scheduled] <Insert width>.
 - b. Minimum Joint Width: [As indicated on Drawings] [As scheduled] <Insert width>.
 - c. Maximum Joint Width: [As indicated on Drawings] [As scheduled] <Insert width>.
 - d. Movement Capability: [As indicated on Drawings] [As scheduled] [-25 percent/+75 percent] <Insert percentage>.
 - e. Type of Movement: [As indicated on Drawings] [As scheduled] [Thermal] [Seismic].

- f. Load Capacity:
 - 1) Uniform Load: **[150 lb/sq. ft. (732 kg/sq. m)] <Insert load>**.
 - 2) Concentrated Load: **[2000 lb (907 kg)] <Insert load>**.
 - 3) Maximum Deflection: **[0.5 inch (13 mm)] <Insert deflection>**.
 - g. Fire-Resistance Rating: Provide expansion control system and fire-barrier assembly with a rating not less than **[that indicated] [that of adjacent construction] [1 hour] [1-1/2 hours] [2 hours] [3 hours] [4 hours] <Insert rating>**.
2. Type: **[Cover plate] [Center plate] [Glide plate] [Hidden sightline] [Pan] [Elastomeric seal, recessed] [Elastomeric seal, surface mounted] [Dual elastomeric seal]**.
- a. Cover-Plate Design: **[Plain] [Serrated] [Abrasive filled] [Recessed to accept field-applied finish materials]**.
 - 1) Cover-Plate Recess Depth: **[As required to accommodate adjacent flooring] [1/8 inch (3 mm)] [3/8 inch (10 mm)] <Insert depth>**.
 - b. Metal: Aluminum.
 - 1) Finish: **[Mill] [Clear anodic, Class I] [Clear anodic, Class II] [Color anodic, Class I] [Color anodic, Class II] [Manufacturer's standard] <Insert finish>**.
 - c. Metal: Stainless steel.
 - 1) Finish: **[No. 2B] [No. 4] [Manufacturer's standard] <Insert finish>**.
 - d. Metal: **[Bronze] [Brass]**.
 - 1) Finish: **[Mill] [Manufacturer's standard] <Insert finish>**.
 - e. Seal Material: **[Santoprene] [Manufacturer's standard] <Insert material>**.
 - 1) Color: **[Black] [Brown] [Beige] [Tan] [Gray] [White] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
- D. Floor-to-Wall **<Insert drawing designation>**:
- 1. Design Criteria:
 - a. Nominal Joint Width: **[As indicated on Drawings] [As scheduled] <Insert width>**.
 - b. Minimum Joint Width: **[As indicated on Drawings] [As scheduled] <Insert width>**.
 - c. Maximum Joint Width: **[As indicated on Drawings] [As scheduled] <Insert width>**.

- d. Movement Capability: **[As indicated on Drawings] [As scheduled] [-25 percent/+75 percent] <Insert percentage>**.
 - e. Type of Movement: **[As indicated on Drawings] [As scheduled] [Thermal] [Seismic]**.
 - f. Fire-Resistance Rating: Provide expansion control system and fire-barrier assembly with a rating not less than **[that indicated] [that of adjacent construction] [1 hour] [1-1/2 hours] [2 hours] [3 hours] [4 hours] <Insert rating>**.
2. Type: **[Cover plate] [Center plate] [Glide plate] [Hidden sightline] [Pan] [Elastomeric seal, recessed] [Elastomeric seal, surface mounted] [Dual elastomeric seal]**.
- a. Cover-Plate Design: **[Plain] [Serrated] [Abrasive filled] [Recessed to accept field-applied finish materials]**.
 - 1) Cover-Plate Recess Depth: **[As required to accommodate adjacent flooring] [1/8 inch (3 mm)] [3/8 inch (10 mm)] <Insert depth>**.
 - b. Metal: Aluminum.
 - 1) Finish: **[Mill] [Clear anodic, Class I] [Clear anodic, Class II] [Color anodic, Class I] [Color anodic, Class II] [Manufacturer's standard] <Insert finish>**.
 - c. Metal: Stainless steel.
 - 1) Finish: **[No. 2B] [No. 4] [Manufacturer's standard] <Insert finish>**.
 - d. Metal: **[Bronze] [Brass]**.
 - 1) Finish: **[Mill] [Manufacturer's standard] <Insert finish>**.
 - e. Seal Material: **[Santoprene] [Manufacturer's standard] <Insert material>**.
 - 1) Color: **[Black] [Brown] [Beige] [Tan] [Gray] [White] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
- E. Wall-to-Wall **<Insert drawing designation>**:
1. Design Criteria:
 - a. Nominal Joint Width: **[As indicated on Drawings] [As scheduled] <Insert width>**.
 - b. Minimum Joint Width: **[As indicated on Drawings] [As scheduled] <Insert width>**.
 - c. Maximum Joint Width: **[As indicated on Drawings] [As scheduled] <Insert width>**.
 - d. Movement Capability: **[As indicated on Drawings] [As scheduled] [-25 percent/+75 percent] <Insert percentage>**.

- e. Type of Movement: **[As indicated on Drawings] [As scheduled] [Thermal] [Seismic]**.
 - f. Fire-Resistance Rating: Provide expansion control system and fire-barrier assembly with a rating not less than **[that indicated] [that of adjacent construction] [1 hour] [1-1/2 hours] [2 hours] [3 hours] [4 hours] <Insert rating>**.
2. Type: **[Cover plate] [Glide plate] [Snap-on cover] [Clip-in cover] [Elastomeric seal] [Dual elastomeric seal] [Accordion] [Flat seal]**.
- a. Metal: Aluminum.
 - 1) Finish: **[Mill] [Clear anodic, Class I] [Clear anodic, Class II] [Color anodic, Class I] [Color anodic, Class II] [Manufacturer's standard] <Insert finish>**.
 - b. Metal: Stainless steel.
 - 1) Finish: **[No. 2B] [No. 4] [Manufacturer's standard] <Insert finish>**.
 - c. Metal: **[Bronze] [Brass]**.
 - 1) Finish: **[Mill] [Manufacturer's standard] <Insert finish>**.
 - d. Seal Material: **[Santoprene] [PVC] [Manufacturer's standard] <Insert material>**.
 - 1) Color: **[Black] [Brown] [Beige] [Tan] [Gray] [White] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
- F. Wall Corner **<Insert drawing designation>**:
- 1. Design Criteria:
 - a. Nominal Joint Width: **[As indicated on Drawings] [As scheduled] <Insert width>**.
 - b. Minimum Joint Width: **[As indicated on Drawings] [As scheduled] <Insert width>**.
 - c. Maximum Joint Width: **[As indicated on Drawings] [As scheduled] <Insert width>**.
 - d. Movement Capability: **[As indicated on Drawings] [As scheduled] [-25 percent/+75 percent] <Insert percentage>**.
 - e. Type of Movement: **[As indicated on Drawings] [As scheduled] [Thermal] [Seismic]**.
 - f. Fire-Resistance Rating: Provide expansion control system and fire-barrier assembly with a rating not less than **[that indicated] [that of adjacent construction] [1 hour] [1-1/2 hours] [2 hours] [3 hours] [4 hours] <Insert rating>**.

2. Type: **[Cover plate] [Glide plate] [Snap-on cover] [Clip-in cover] [Elastomeric seal] [Dual elastomeric seal] [Accordion] [Flat seal]**.
 - a. Metal: Aluminum.
 - 1) Finish: **[Mill] [Clear anodic, Class I] [Clear anodic, Class II] [Color anodic, Class I] [Color anodic, Class II] [Manufacturer's standard] <Insert finish>**.
 - b. Metal: Stainless steel.
 - 1) Finish: **[No. 2B] [No. 4] [Manufacturer's standard] <Insert finish>**.
 - c. Metal: **[Bronze] [Brass]**.
 - 1) Finish: **[Mill] [Manufacturer's standard] <Insert finish>**.
 - d. Seal Material: **[Santoprene] [PVC] [Manufacturer's standard] <Insert material>**.
 - 1) Color: **[Black] [Brown] [Beige] [Tan] [Gray] [White] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
- G. Wall-to-Ceiling **<Insert drawing designation>**:
 1. Design Criteria:
 - a. Nominal Joint Width: **[As indicated on Drawings] [As scheduled] <Insert width>**.
 - b. Minimum Joint Width: **[As indicated on Drawings] [As scheduled] <Insert width>**.
 - c. Maximum Joint Width: **[As indicated on Drawings] [As scheduled] <Insert width>**.
 - d. Movement Capability: **[As indicated on Drawings] [As scheduled] [-25 percent/+75 percent] <Insert percentage>**.
 - e. Type of Movement: **[As indicated on Drawings] [As scheduled] [Thermal] [Seismic]**.
 - f. Fire-Resistance Rating: Provide expansion control system and fire-barrier assembly with a rating not less than **[that indicated] [that of adjacent construction] [1 hour] [1-1/2 hours] [2 hours] [3 hours] [4 hours] <Insert rating>**.
 2. Type: **[Cover plate] [Glide plate] [Snap-on cover] [Clip-in cover] [Elastomeric seal] [Dual elastomeric seal] [Accordion] [Flat seal]**.
 - a. Metal: Aluminum.
 - 1) Finish: **[Mill] [Clear anodic, Class I] [Clear anodic, Class II] [Color anodic, Class I] [Color anodic, Class II] [Manufacturer's standard] <Insert finish>**.

- b. Metal: Stainless steel.
 - 1) Finish: **[No. 2B]** **[No. 4]** **[Manufacturer's standard]** **<Insert finish>**.
 - c. Metal: **[Bronze]** **[Brass]**.
 - 1) Finish: **[Mill]** **[Manufacturer's standard]** **<Insert finish>**.
 - d. Seal Material: **[Santoprene]** **[PVC]** **[Manufacturer's standard]** **<Insert material>**.
 - 1) Color: **[Black]** **[Brown]** **[Beige]** **[Tan]** **[Gray]** **[White]** **[As selected by DEN Project Manager from manufacturer's full range]** **<Insert color>**.
- H. Ceiling-to-Ceiling **<Insert Drawing Designation>**:
- 1. Design Criteria:
 - a. Nominal Joint Width: **[As indicated on Drawings]** **[As scheduled]** **<Insert width>**.
 - b. Minimum Joint Width: **[As indicated on Drawings]** **[As scheduled]** **<Insert width>**.
 - c. Maximum Joint Width: **[As indicated on Drawings]** **[As scheduled]** **<Insert width>**.
 - d. Movement Capability: **[As indicated on Drawings]** **[As scheduled]** **[-25 percent/+75 percent]** **<Insert percentage>**.
 - e. Type of Movement: **[As indicated on Drawings]** **[As scheduled]** **[Thermal]** **[Seismic]**.
 - f. Fire-Resistance Rating: Provide expansion control system and fire-barrier assembly with a rating not less than **[that indicated]** **[that of adjacent construction]** **[1 hour]** **[1-1/2 hours]** **[2 hours]** **[3 hours]** **[4 hours]** **<Insert rating>**.
 - 2. Type: **[Cover plate]** **[Glide plate]** **[Snap-on cover]** **[Clip-in cover]** **[Elastomeric seal]** **[Dual elastomeric seal]** **[Accordion]** **[Flat seal]**.
 - a. Metal: Aluminum.
 - 1) Finish: **[Mill]** **[Clear anodic, Class I]** **[Clear anodic, Class II]** **[Color anodic, Class I]** **[Color anodic, Class II]** **[Manufacturer's standard]** **<Insert finish>**.
 - b. Metal: Stainless steel.
 - 1) Finish: **[No. 2B]** **[No. 4]** **[Manufacturer's standard]** **<Insert finish>**.
 - c. Metal: **[Bronze]** **[Brass]**.
 - 1) Finish: **[Mill]** **[Manufacturer's standard]** **<Insert finish>**.

- d. Seal Material: **[Santoprene] [PVC] [Manufacturer's standard] <Insert material>**.
- 1) Color: **[Black] [Brown] [Beige] [Tan] [Gray] [White] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.

2.4 EXTERIOR WALL EXPANSION CONTROL SYSTEMS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Architectural Art Mfg., Inc.; Division of Pittcon Industries.
2. Balco, Inc.
3. Chase Construction Products; Division of Chase Corporation.
4. Construction Specialties, Inc.
5. D. S. Brown Company (The).
6. EMSEAL Corporation.
7. Erie Metal Specialties, Inc.
8. JointMaster/InPro Corporation.
9. LymTal International, Inc.
10. Michael Rizza Company, LLC.
11. MM Systems Corporation.
12. Nystrom, Inc.
13. RJ Watson, Inc.
14. Schul International Company, Inc.
15. Tremco Incorporated.
16. Watson Bowman Acme Corp.; a BASF Construction Chemicals business.
17. Williams Products, Inc.
18. **<Insert manufacturer's name>**.
19. or approved equal.

- B. Source Limitations: Obtain expansion control systems from single source from single manufacturer.

- C. Wall-to-Wall **<Insert drawing designation>**:

1. Design Criteria:
 - a. Nominal Joint Width: **[As indicated on Drawings] [As scheduled] <Insert width>**.
 - b. Minimum Joint Width: **[As indicated on Drawings] [As scheduled] <Insert width>**.
 - c. Maximum Joint Width: **[As indicated on Drawings] [As scheduled] <Insert width>**.
 - d. Movement Capability: **[As indicated on Drawings] [As scheduled] [-25 percent/+75 percent] <Insert percentage>**.
 - e. Type of Movement: **[As indicated on Drawings] [As scheduled] [Thermal] [Seismic]**.

- f. Fire-Resistance Rating: Provide expansion control system and fire-barrier assembly with a rating not less than **[that indicated] [that of adjacent construction] [1 hour] [1-1/2 hours] [2 hours] [3 hours] [4 hours] <Insert rating>**.
2. Type: Cover plate.
 - a. Metal: Aluminum.
 - 1) Finish: **[Mill] [Clear anodic, Class I] [Clear anodic, Class II] [Color anodic, Class I] [Color anodic, Class II] [Manufacturer's standard] <Insert finish>**.
 - b. Metal: Stainless steel.
 - 1) Finish: **[No. 2B] [No. 4] [Manufacturer's standard] <Insert finish>**.
 - c. Metal: **[Bronze] [Brass]**.
 - 1) Finish: **[Mill] [Manufacturer's standard] <Insert finish>**.
 3. Type: Flat seal.
 - a. Metal: **[Aluminum] [Stainless steel]**.
 - b. Seal Material: **[Santoprene] [Neoprene] [Manufacturer's standard]**.
 - 1) Color: **[Black] [Brown] [Beige] [Tan] [Gray] [White] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
 - c. Pantograph Mechanism: Manufacturer's standard pantographic wind-load support mechanism with stainless-steel fasteners.
 4. Type: Preformed cellular foam.
 - a. Foam Material: **[Manufacturer's standard] [Non-extruded, low-density, crosslinked, nitrogen-blown, ethylene-vinyl-acetate copolymer] [Polyurethane]**.
 - 1) Color: **[Manufacturer's standard] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
- D. Wall Corner **<Insert drawing designation>**:
1. Design Criteria:
 - a. Nominal Joint Width: **[As indicated on Drawings] [As scheduled] <Insert width>**.
 - b. Minimum Joint Width: **[As indicated on Drawings] [As scheduled] <Insert width>**.
 - c. Maximum Joint Width: **[As indicated on Drawings] [As scheduled] <Insert width>**.

- d. Movement Capability: **[As indicated on Drawings] [As scheduled] [-25 percent/+75 percent] <Insert percentage>**.
 - e. Type of Movement: **[As indicated on Drawings] [As scheduled] [Thermal] [Seismic]**.
 - f. Fire-Resistance Rating: Provide expansion control system and fire-barrier assembly with a rating not less than **[that indicated] [that of adjacent construction] [1 hour] [1-1/2 hours] [2 hours] [3 hours] [4 hours] <Insert rating>**.
2. Type: Cover plate.
 - a. Metal: Aluminum.
 - 1) Finish: **[Mill] [Clear anodic, Class I] [Clear anodic, Class II] [Color anodic, Class I] [Color anodic, Class II] [Manufacturer's standard] <Insert finish>**.
 - b. Metal: Stainless steel.
 - 1) Finish: **[No. 2B] [No. 4] [Manufacturer's standard] <Insert finish>**.
 - c. Metal: **[Bronze] [Brass]**.
 - 1) Finish: **[Mill] [Manufacturer's standard] <Insert finish>**.
 3. Type: Flat seal.
 - a. Metal: **[Aluminum] [Stainless steel]**.
 - b. Seal Material: **[Santoprene] [Neoprene] [Manufacturer's standard]**.
 - 1) Color: **[Black] [Brown] [Beige] [Tan] [Gray] [White] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
 - c. Pantograph Mechanism: Manufacturer's standard pantographic wind-load support mechanism with stainless-steel fasteners.
 4. Type: Preformed cellular foam.
 - a. Foam Material: **[Manufacturer's standard] [Non-extruded, low-density, crosslinked, nitrogen-blown, ethylene-vinyl-acetate copolymer] [Polyurethane]**.
 - 1) Color: **[Manufacturer's standard] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
- E. Wall-to-Soffit **<Insert drawing designation>**:
1. Design Criteria:
 - a. Nominal Joint Width: **[As indicated on Drawings] [As scheduled] <Insert width>**.

- b. Minimum Joint Width: **[As indicated on Drawings] [As scheduled] <Insert width>**.
 - c. Maximum Joint Width: **[As indicated on Drawings] [As scheduled] <Insert width>**.
 - d. Movement Capability: **[As indicated on Drawings] [As scheduled] [-25 percent/+75 percent] <Insert percentage>**.
 - e. Type of Movement: **[As indicated on Drawings] [As scheduled] [Thermal] [Seismic]**.
 - f. Fire-Resistance Rating: Provide expansion control system and fire-barrier assembly with a rating not less than **[that indicated] [that of adjacent construction] [1 hour] [1-1/2 hours] [2 hours] [3 hours] [4 hours] <Insert rating>**.
2. Type: Cover plate.
- a. Metal: Aluminum.
 - 1) Finish: **[Mill] [Clear anodic, Class I] [Clear anodic, Class II] [Color anodic, Class I] [Color anodic, Class II] [Manufacturer's standard] <Insert finish>**.
 - b. Metal: Stainless steel.
 - 1) Finish: **[No. 2B] [No. 4] [Manufacturer's standard] <Insert finish>**.
 - c. Metal: **[Bronze] [Brass]**.
 - 1) Finish: **[Mill] [Manufacturer's standard] <Insert finish>**.
3. Type: Flat seal.
- a. Metal: **[Aluminum] [Stainless steel]**.
 - b. Seal Material: **[Santoprene] [Neoprene] [Manufacturer's standard]**.
 - 1) Color: **[Black] [Brown] [Beige] [Tan] [Gray] [White] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
4. Type: Preformed cellular foam.
- a. Foam Material: **[Manufacturer's standard] [Non-extruded, low-density, crosslinked, nitrogen-blown, ethylene-vinyl-acetate copolymer] [Polyurethane]**.
 - 1) Color: **[Manufacturer's standard] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
- F. Soffit-to-Soffit **<Insert drawing designation>**:
1. Design Criteria:

- a. Nominal Joint Width: **[As indicated on Drawings] [As scheduled] <Insert width>**.
 - b. Minimum Joint Width: **[As indicated on Drawings] [As scheduled] <Insert width>**.
 - c. Maximum Joint Width: **[As indicated on Drawings] [As scheduled] <Insert width>**.
 - d. Movement Capability: **[As indicated on Drawings] [As scheduled] [-25 percent/+75 percent] <Insert percentage>**.
 - e. Type of Movement: **[As indicated on Drawings] [As scheduled] [Thermal] [Seismic]**.
 - f. Fire-Resistance Rating: Provide expansion control system and fire-barrier assembly with a rating not less than **[that indicated] [that of adjacent construction] [1 hour] [1-1/2 hours] [2 hours] [3 hours] [4 hours] <Insert rating>**.
2. Type: Cover plate.
- a. Metal: Aluminum.
 - 1) Finish: **[Mill] [Clear anodic, Class I] [Clear anodic, Class II] [Color anodic, Class I] [Color anodic, Class II] [Manufacturer's standard] <Insert finish>**.
 - b. Metal: Stainless steel.
 - 1) Finish: **[No. 2B] [No. 4] [Manufacturer's standard] <Insert finish>**.
 - c. Metal: **[Bronze] [Brass]**.
 - 1) Finish: **[Mill] [Manufacturer's standard] <Insert finish>**.
3. Type: Flat seal.
- a. Metal: **[Aluminum] [Stainless steel]**.
 - b. Seal Material: **[Santoprene] [Neoprene] [Manufacturer's standard]**.
 - 1) Color: **[Black] [Brown] [Beige] [Tan] [Gray] [White] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
4. Type: Preformed cellular foam.
- a. Foam Material: **[Manufacturer's standard] [Non-extruded, low-density, crosslinked, nitrogen-blown, ethylene-vinyl-acetate copolymer] [Polyurethane]**.
 - 1) Color: **[Manufacturer's standard] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.

2.5 PARKING AND OPEN-AIR STRUCTURE EXPANSION CONTROL SYSTEMS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Architectural Art Mfg., Inc.; Division of Pittcon Industries.
2. Balco, Inc.
3. Chase Construction Products; Division of Chase Corporation.
4. Construction Specialties, Inc.
5. D. S. Brown Company (The).
6. EMSEAL Corporation.
7. Erie Metal Specialties, Inc.
8. JointMaster/InPro Corporation.
9. LymTal International, Inc.
10. Michael Rizza Company, LLC.
11. MM Systems Corporation.
12. Nystrom, Inc.
13. RJ Watson, Inc.
14. Schul International Company, Inc.
15. Tremco Incorporated.
16. Watson Bowman Acme Corp.; a BASF Construction Chemicals business.
17. Williams Products, Inc.
18. **<Insert manufacturer's name>**.
19. or approved equal.

B. Source Limitations: Obtain expansion control systems from single source from single manufacturer.

C. Slab-to-Slab **<Insert drawing designation>**:

1. Design Criteria:
 - a. Nominal Joint Width: **[As indicated on Drawings] [As scheduled] <Insert width>**.
 - b. Minimum Joint Width: **[As indicated on Drawings] [As scheduled] <Insert width>**.
 - c. Maximum Joint Width: **[As indicated on Drawings] [As scheduled] <Insert width>**.
 - d. Movement Capability: **[As indicated on Drawings] [As scheduled] [-25 percent/+75 percent] <Insert percentage>**.
 - e. Type of Movement: **[As indicated on Drawings] [As scheduled] [Thermal] [Seismic]**.
 - f. Load Capacity:
 - 1) Uniform Load: **[150 lb/sq. ft. (732 kg/sq. m)] <Insert load>**.
 - 2) Concentrated Load: **[2000 lb (907 kg)] <Insert load>**.
 - 3) Maximum Deflection: **[0.5 inch (13 mm)] <Insert deflection>**.
 - g. Fire-Resistance Rating: Provide expansion control system and fire-barrier assembly with a rating not less than **[that indicated] [that of adjacent**

- construction] [1 hour] [1-1/2 hours] [2 hours] [3 hours] [4 hours] <Insert rating>.**
2. Type: Metal plate.
 - a. Metal: Aluminum.
 - 1) Finish: **[Mill] [Manufacturer's standard] <Insert finish>.**
 - b. Metal: Stainless steel.
 - 1) Finish: **[No. 2B] [No. 4] [Manufacturer's standard] <Insert finish>.**
 - c. Attachment Method: **[Mechanical anchors] [Cast in].**
 3. Type: Sealant T-joint.
 - a. Material: Premolded polyurethane.
 - 1) Color: **[Black] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.**
 4. Type: **[Strip seal] [Split-slab membrane].**
 - a. Metal: Aluminum.
 - 1) Finish: **[Mill] [Manufacturer's standard] <Insert finish>.**
 - b. Metal: Stainless steel.
 - 1) Finish: **[No. 2B] [No. 4] [Manufacturer's standard] <Insert finish>.**
 - c. Seal Material: **[Santoprene] [Neoprene] [Silicone] [EPDM] [PVC] [Manufacturer's standard].**
 - 1) Color: **[Black] [Brown] [Beige] [Tan] [Gray] [White] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.**
 - d. Attachment Method: **[Mechanical anchors] [Cast in].**
 5. Type: **[Rubber pad] [Compression seal] [Winged seal] [Epoxy-bonded seal].**
 - a. Seal Material: **[Santoprene] [Neoprene] [Silicone] [EPDM] [PVC] [Manufacturer's standard].**
 - 1) Color: **[Black] [Brown] [Beige] [Tan] [Gray] [White] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.**
 6. Type: Preformed cellular foam.

- a. Foam Material: **[Manufacturer's standard] [Non-extruded, low-density, crosslinked, nitrogen-blown, ethylene-vinyl-acetate copolymer] [Polyurethane]**.
 - 1) Color: **[Manufacturer's standard] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
- D. Slab-to-Wall **<Insert drawing designation>**:
1. Design Criteria:
 - a. Nominal Joint Width: **[As indicated on Drawings] [As scheduled] <Insert width>**.
 - b. Minimum Joint Width: **[As indicated on Drawings] [As scheduled] <Insert width>**.
 - c. Maximum Joint Width: **[As indicated on Drawings] [As scheduled] <Insert width>**.
 - d. Movement Capability: **[As indicated on Drawings] [As scheduled] [-25 percent/+75 percent] <Insert percentage>**.
 - e. Type of Movement: **[As indicated on Drawings] [As scheduled] [Thermal] [Seismic]**.
 - f. Fire-Resistance Rating: Provide expansion control system and fire-barrier assembly with a rating not less than **[that indicated] [that of adjacent construction] [1 hour] [1-1/2 hours] [2 hours] [3 hours] [4 hours] <Insert rating>**.
 2. Type: Metal plate.
 - a. Metal: Aluminum.
 - 1) Finish: **[Mill] [Manufacturer's standard] <Insert finish>**.
 - b. Metal: Stainless steel.
 - 1) Finish: **[No. 2B] [No. 4] [Manufacturer's standard] <Insert finish>**.
 - c. Attachment Method: **[Mechanical anchors] [Cast in]**.
 3. Type: Sealant T-joint.
 - a. Material: Premolded polyurethane.
 - 1) Color: **[Black] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
 4. Type: **[Strip seal] [Split-slab membrane]**.
 - a. Metal: Aluminum.
 - 1) Finish: **[Mill] [Manufacturer's standard] <Insert finish>**.
 - b. Metal: Stainless steel.

- 1) Finish: **[No. 2B] [No. 4] [Manufacturer's standard] <Insert finish>**.
- c. Seal Material: **[Santoprene] [Neoprene] [Silicone] [EPDM] [PVC] [Manufacturer's standard]**.
 - 1) Color: **[Black] [Brown] [Beige] [Tan] [Gray] [White] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
- d. Attachment Method: **[Mechanical anchors] [Cast in]**.
5. Type: **[Rubber pad] [Compression seal] [Winged seal] [Epoxy-bonded seal]**.
 - a. Seal Material: **[Santoprene] [Neoprene] [Silicone] [EPDM] [PVC] [Manufacturer's standard]**.
 - 1) Color: **[Black] [Brown] [Beige] [Tan] [Gray] [White] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
6. Type: Preformed cellular foam.
 - a. Foam Material: **[Manufacturer's standard] [Non-extruded, low-density, crosslinked, nitrogen-blown, ethylene-vinyl-acetate copolymer] [Polyurethane]**.
 - 1) Color: **[Manufacturer's standard] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.

2.6 ACCESSORIES

- A. Moisture Barriers: Manufacturer's standard moisture barrier consisting of a continuous, waterproof membrane within joint and attached to substrate on sides of joint below the primary cover.
 1. Drain-Tube Assemblies: Equip moisture barrier with drain tubes and seals to direct collected moisture **[to drain] [to exterior-wall expansion control system] [as indicated on Drawings] <Insert requirement>**.

2.7 MATERIALS

- A. Aluminum: **ASTM B 221** (ASTM B 221M), Alloy 6063-T5 for extrusions; **ASTM B 209** (ASTM B 209M), Alloy 6061-T6 for sheet and plate.
 1. Apply manufacturer's standard protective coating on aluminum surfaces to be placed in contact with cementitious materials.
- B. Stainless Steel: ASTM A 240/A 240M or ASTM A 666, Type 304 for plates, sheet, and strips.

1. Remove tool and die marks and stretch lines or blend into finish.
- C. Brass: ASTM B 36/B 36M, UNS Alloy C26000 for half hard sheet and coil.
- D. Bronze: ASTM B 455, Alloy C38500 for extrusions; Alloy C23000 red brass for plates.
- E. Elastomeric Seals: ASTM E 1783; preformed elastomeric membranes or extrusions to be installed in metal frames.
- F. Compression Seals: ASTM E 1612; preformed elastomeric extrusions having an internal baffle system and designed to function under compression.
- G. Cellular Foam Seals: Extruded, compressible foam designed to function under compression.
- H. Elastomeric Concrete: Modified epoxy or polyurethane extended into a prepackaged aggregate blend, specifically designed for bonding to concrete substrates.
- I. Fire Barriers: Any material or material combination, when fire tested after cycling, designated to resist the passage of flame and hot gases through a movement joint and to meet performance criteria for required fire-resistance rating.
- J. Moisture Barrier: Flexible elastomeric material, **[PVC, minimum 30 mils thick]** **[EPDM, minimum 45 mils thick]** **[Santoprene]**.
- K. Nonmetallic, Shrinkage-Resistant Grout: ASTM C 1107/C 1107M, factory-packaged, nonmetallic aggregate grout, noncorrosive, nonstaining, mixed with water to consistency suitable for application and a 30-minute working time.
- L. Accessories: Manufacturer's standard anchors, clips, fasteners, set screws, spacers, and other accessories compatible with material in contact, as indicated or required for complete installations.

2.8 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.9 ALUMINUM FINISHES

- A. Mill finish.

- B. Clear Anodic Finish: AAMA 611, [**AA-M12C22A41, Class I, 0.018 mm**] [**AA-M12C22A31, Class II, 0.010 mm**] or thicker.
- C. Color Anodic Finish: AAMA 611, [**AA-M12C22A42/A44, Class I, 0.018 mm**] [**AA-M12C22A32/A34, Class II, 0.010 mm**] or thicker.
 - 1. Color: [**Light bronze**] [**Medium bronze**] [**Dark bronze**] [**Black**] <Insert color>.
 - 2. Color: [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry colors and color densities**].

2.10 STAINLESS-STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 1. Run grain of directional finishes with long dimension of each piece.
 - 2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
 - 3. Directional Satin Finish: No. 4.
- C. Bright, Cold-Rolled, Unpolished Finish: No. 2B.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine surfaces where expansion control systems will be installed for installation tolerances and other conditions affecting performance of work.
 - 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Prepare substrates according to expansion control system manufacturer's written instructions.
- B. Coordinate and furnish anchorages, setting drawings, and instructions for installing expansion control systems. Provide fasteners of metal, type, and size to suit type of construction indicated and to provide for secure attachment of expansion control systems.
- C. Cast-In Frames: Coordinate and furnish frames to be cast into concrete.

3.3 INSTALLATION

- A. Comply with manufacturer's written instructions for storing, handling, and installing expansion control systems and materials unless more stringent requirements are indicated.
- B. Metal Frames: Perform cutting, drilling, and fitting required to install expansion control systems.
1. Install in true alignment and proper relationship to joints and adjoining finished surfaces measured from established lines and levels.
 2. Adjust for differences between actual structural gap and nominal design gap due to ambient temperature at time of installation. Notify DEN Project Manager where discrepancies occur that will affect proper expansion control system installation and performance.
 3. Cut and fit ends to accommodate thermal expansion and contraction of metal without buckling of frames.
 4. Repair or grout blockout as required for continuous frame support using nonmetallic, shrinkage-resistant grout.
 5. Install frames in continuous contact with adjacent surfaces.
 - a. Shimming is not permitted.
 6. Locate anchors at interval recommended by manufacturer, but not less than **3 inches** (75 mm) from each end and not more than **24 inches** (600 mm) o.c.
- C. Seals in Metal Frames: Install elastomeric seals and membranes in frames to comply with manufacturer's written instructions. Install with minimum number of end joints.
1. Provide in continuous lengths for straight sections.
 2. Seal transitions according to manufacturer's written instructions. Vulcanize or heat-weld field-spliced joints as recommended by manufacturer.
 3. Installation: Mechanically lock seals into frames or adhere to frames with adhesive or pressure-sensitive tape as recommended by manufacturer.
- D. Compression Seals: Apply adhesive or lubricant adhesive as recommended by manufacturer to both **[frame interfaces]** **[sides of slabs]** before installing compression seals.
- E. Foam Seals: Install with adhesive recommended by manufacturer.
- F. Epoxy-Bonded Seals: Pressurize seal for time period and to pressure recommended by manufacturer. Do not overpressurize.
- G. Terminate exposed ends of expansion control systems with field- or factory-fabricated termination devices.
- H. Fire-Resistance-Rated Assemblies: Coordinate installation of expansion control system materials and associated work so complete assemblies comply with assembly performance requirements.

1. Fire Barriers: Install fire barriers to provide continuous, uninterrupted fire resistance throughout length of joint, including transitions and field splices.

- I. Moisture Barrier: Provide [**at all exterior joints and**]where indicated on Drawings. Provide drainage fittings[**at a maximum of 50 feet (15.2 m) or**] where indicated on Drawings.

3.4 PROTECTION

- A. Do not remove protective covering until finish work in adjacent areas is complete. When protective covering is removed, clean exposed metal surfaces to comply with manufacturer's written instructions.
- B. Protect the installation from damage by work of other Sections. Where necessary due to heavy construction traffic, remove and properly store cover plates or seals and install temporary protection over expansion control systems. Reinstall cover plates or seals prior to Substantial Completion of the Work.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 079500

SECTION 081113 - HOLLOW METAL DOORS AND FRAMES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes hollow-metal work.
- B. Related Requirements:
 - 1. Section 081119 "Stainless-Steel Doors and Frames" for hollow-metal doors and frames manufactured from stainless steel.
 - 2. Section 087100 "Door Hardware" for door hardware for hollow-metal doors.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

- A. Minimum Thickness: Minimum thickness of base metal without coatings according to NAAMM-HMMA 803 or SDI A250.8.

1.4 COORDINATION

- A. Coordinate anchorage installation for hollow-metal frames. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors. Deliver such items to Project site in time for installation.
- B. Coordinate shop drawings, fabrication, and delivery of welded frames with project schedule and installation of wall systems and other systems.

1.5 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] [at time and location as determined by DEN Project Manager] <Insert location>**.

1.6 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, core descriptions, **[fire-resistance ratings,] [temperature-rise ratings,]** and finishes.
2. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Local/Regional Materials: Indicate location of manufacturing facility including name, address, and distance between manufacturing facility and the project site. Provide manufacturer's documentation indicating location where the base materials were extracted, mined, quarried, harvested, etc., and the distance between this location and the project site. Also include material costs, excluding cost of installation.
3. Adhesives, Primers, Coatings and Sealants: Manufacturers' product data and material safety data sheets (MSDS) for adhesives, primers, coatings and sealants used on the interior of the building including printed statement of VOC content in g/L.

C. Shop Drawings: Include the following:

1. Elevations of each door type.
2. Details of doors, including vertical- and horizontal-edge details and metal thicknesses.
3. Frame details for each frame type, including dimensioned profiles and metal thicknesses.
4. Locations of reinforcement and preparations for hardware.
5. Details of each different wall opening condition.
6. Details of anchorages, joints, field splices, and connections.
7. Details of accessories.
8. Details of moldings, removable stops, and glazing.
9. Details of conduit and preparations for power, signal, and control systems.

D. Samples for Initial Selection: For units with factory-applied color finishes.

E. Samples for Verification:

1. For each type of exposed finish required, prepared on Samples of not less than **3 by 5 inches** (75 by 127 mm).
2. For "Doors" and "Frames" subparagraphs below, prepare Samples approximately **[12 by 12 inches (305 by 305 mm)] [8 by 10 inches (203 by 254 mm)] <Insert dimension>** to demonstrate compliance with requirements for quality of materials and construction:

- a. Doors: Show vertical-edge, top, and bottom construction; core construction; and hinge and other applied hardware reinforcement. Include separate section showing glazing if applicable.
 - b. Frames: Show profile, corner joint, floor and wall anchors, and silencers. Include separate section showing fixed hollow-metal panels and glazing if applicable.
- F. Schedule: Provide a schedule of hollow-metal work prepared by or under the supervision of supplier, using same reference numbers for details and openings as those on Drawings. Coordinate with final Door Hardware Schedule.

1.7 INFORMATIONAL SUBMITTALS

- A. Product Test Reports: For each type of hollow-metal door and frame assembly, for tests performed by a qualified testing agency.
- B. Oversize Construction Certification: For assemblies required to be fire rated and exceeding limitations of labeled assemblies.
- C. Warranty: Submit copy of product warranties.

1.8 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver hollow-metal work palletized, packaged, or crated to provide protection during transit and Project-site storage. Do not use nonvented plastic.
 - 1. Provide additional protection to prevent damage to factory-finished units.
- B. Deliver welded frames with two removable spreader bars across bottom of frames, tack welded to jambs and mullions.
- C. Store hollow-metal work vertically under cover at Project site with head up. Place on minimum 4-inch- (102-mm-) high wood blocking. Provide minimum 1/4-inch (6-mm) space between each stacked door to permit air circulation.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Ceco Door Products; an Assa Abloy Group company.
 2. Colorado Doorways
 3. Gateway
 4. NCS Manufacturing Co.
 5. Southwestern Hollow Metal.
 6. Steelcraft; an Ingersoll-Rand company.
 7. **<Insert manufacturer>**
 8. or approved equal.
- B. Source Limitations: Obtain hollow-metal work from single source from single manufacturer.

2.2 REGULATORY REQUIREMENTS

- A. Fire-Rated Assemblies: Complying with NFPA 80 and listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction for fire-protection ratings[**and temperature-rise limits**] indicated, based on testing at positive pressure according to NFPA 252 or UL 10C.
1. Smoke- and Draft-Control Assemblies: Provide an assembly with gaskets listed and labeled for smoke and draft control by a qualified testing agency acceptable to authorities having jurisdiction, based on testing according to UL 1784 and installed in compliance with NFPA 105.
- B. Fire-Rated, Borrowed-Light Assemblies: Complying with NFPA 80 and listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction for fire-protection ratings indicated, based on testing according to NFPA 257 or UL 9.

2.3 INTERIOR DOORS AND FRAMES

- A. Construct interior doors and frames to comply with the standards indicated for materials, fabrication, hardware locations, hardware reinforcement, tolerances, and clearances, and as specified.
- B. Heavy-Duty Doors and Frames: SDI A250.8, Level 2. [**At locations indicated in the Door and Frame Schedule**] **<Insert locations>**.
1. Physical Performance: Level B according to SDI A250.4.
 2. Doors:
 - a. Type: As indicated in the Door and Frame Schedule.

- b. Thickness: 1-3/4 inches (44.5 mm).
 - c. Face: **[Uncoated,]** cold-rolled steel sheet, minimum thickness of 0.042 inch (1.0 mm).
 - d. Edge Construction:**[Model 1, Full Flush] [Model 2, Seamless]**.
 - e. Core: **[Vertical steel stiffeners]**.
 - 1) Fire Door Cores: As required and approved to provide fire-protection and temperature-rise ratings indicated.
 3. Frames:
 - a. Materials: **[Uncoated]** steel sheet, minimum thickness of 0.053 inch (1.3 mm).
 - b. Construction: **[Face welded] [Full profile welded]**.
 4. Exposed Finish: **[Prime]** .
- C. Extra-Heavy-Duty Doors and Frames: SDI A250.8, Level 3. **[At locations indicated in the Door and Frame Schedule] <Insert locations>**.
 1. Physical Performance: Level A according to SDI A250.4.
 2. Doors:
 - a. Type: As indicated in the Door and Frame Schedule.
 - b. Thickness: 1-3/4 inches (44.5 mm).
 - c. Face: **[Uncoated,]** cold-rolled steel sheet, minimum thickness of 0.053 inch (1.3 mm).
 - d. Edge Construction:**[Model 1, Full Flush] [Model 2, Seamless]**
 - e. Core: **[Vertical steel stiffeners]**.
 - 1) Fire Door Cores: As required and approved to provide fire-protection and temperature-rise ratings indicated.
 3. Frames:
 - a. Materials: **[Uncoated,]** steel sheet, minimum thickness of 0.053 inch (1.3 mm).
 - b. Construction: **[Face welded] [Full profile welded]**.
 4. Exposed Finish: **[Prime]**.
- D. Maximum-Duty Doors and Frames: SDI A250.8, Level 4. **[At locations indicated in the Door and Frame Schedule] <Insert locations>**.
 1. Physical Performance: Level A according to SDI A250.4.
 2. Doors:
 - a. Type: As indicated in the Door and Frame Schedule.
 - b. Thickness: 1-3/4 inches (44.5 mm.)
 - c. Face: **[Uncoated,]** cold-rolled steel sheet, minimum thickness of 0.067 inch (1.7 mm).

- d. Edge Construction:[**Model 1, Full Flush**] [**Model 2, Seamless**].
 - e. Core: [**Vertical steel stiffeners**].
3. Frames:
- a. Materials: [**Uncoated**] steel sheet, minimum thickness of **0.067 inch** (1.7 mm).
 - b. Construction: [**Face welded**] [**Full profile welded**].
4. Exposed Finish: [**Prime**] .

2.4 EXTERIOR HOLLOW-METAL DOORS AND FRAMES

- A. Construct exterior doors and frames to comply with the standards indicated for materials, fabrication, hardware locations, hardware reinforcement, tolerances, and clearances, and as specified.
- B. Extra-Heavy-Duty Doors and Frames: SDI A250.8, Level 3. [**At locations indicated in the Door and Frame Schedule**] <Insert locations>.
- 1. Physical Performance: Level A according to SDI A250.4.
 - 2. Doors:
 - a. Type: As indicated in the Door and Frame Schedule.
 - b. Thickness: **1-3/4 inches** (44.5 mm.)
 - c. Face: Metallic-coated steel sheet, minimum thickness of **0.053 inch** (1.3 mm), with minimum **A40** (ZF120) coating.
 - d. Edge Construction:[**Model 1, Full Flush**] [**Model 2, Seamless**] .
 - 1) Retain either "Core" Subparagraph below. Unless otherwise specified, SDI A250.8 permits manufacturers to choose core types.
 - e. Core: Provide thermal-resistance-rated, steel-reinforced cores for exterior doors.
 - 1) Steel-reinforced core: 0.026-inch (0.7-mm-) thick, steel vertical stiffeners of same material as face sheets extending full-door height, with vertical webs spaced not more than 6 inches (152 mm) apart, spot-welded to face sheets at a maximum of 5 inches (127 mm) o.c. Spaces filled snugly between stiffeners with polystyrene insulation.
 - 2) Thermal-Rated Doors: Provide doors fabricated with thermal-resistance value (R-value) of not less than [**4.0 deg F x h x sq. ft./Btu** (**0.704 K x sq. m/W**)] <Insert R-value> when tested according to ASTM C 1363.
 - 3) Polystyrene Board: ASTM C 578, Type 1, with thermal-resistance value (R-value) of not less than 6.0 deg F x h x sq. ft./Btu when tested according to ASTM C 1363.
 - 4) Fire Door Cores: As required and approved to provide fire-protection and temperature-rise ratings indicated.

3. Frames:
 - a. Materials: Metallic-coated steel sheet, minimum thickness of **0.053 inch** (1.3 mm), with minimum **A40** (ZF120) coating.
 - b. Construction: **[Full profile welded]**.
4. Exposed Finish: **[Prime]** .

C. Maximum-Duty Doors and Frames: SDI A250.8, Level 4. **[At locations indicated in the Door and Frame Schedule] <Insert locations>**.

1. Physical Performance: Level A according to SDI A250.4.
2. Doors:
 - a. Type: As indicated in the Door and Frame Schedule.
 - b. Thickness: **1-3/4 inches** (44.5 mm.)
 - c. Face: Metallic-coated steel sheet, minimum thickness of **0.067 inch** (1.7 mm), with minimum **A40** (ZF120) coating.
 - d. Edge Construction:**[Model 1, Full Flush] [Model 2, Seamless]**.
 - e. Core: Provide thermal-resistance-rated, steel-reinforced cores for exterior doors.
 - 1) Steel-reinforced core: 0.026-inch (0.7-mm-) thick, steel vertical stiffeners of same material as face sheets extending full-door height, with vertical webs spaced not more than 6 inches (152 mm) apart, spot-welded to face sheets at a maximum of 5 inches (127 mm) o.c. Spaces filled snugly between stiffeners with polystyrene insulation.
 - 2) Thermal-Rated Doors: Provide doors fabricated with thermal-resistance value (R-value) of not less than **[4.0 deg F x h x sq. ft./Btu (0.704 K x sq. m/W)] <Insert R-value>** when tested according to ASTM C 1363.
 - 3) Polystyrene Board: ASTM C 578, Type 1, with thermal-resistance value (R-value) of not less than 6.0 deg F x h x sq. ft/Btu when tested according to ASTM C 1363.
 - 4) Fire Door Cores: As required and approved to provide fire-protection and temperature-rise ratings indicated.
3. Frames:
 - a. Materials: Metallic-coated steel sheet, minimum thickness of **0.067 inch** (1.7 mm), with minimum **A40** (ZF120) coating.
 - b. Construction: **[Full profile welded]**.
4. Exposed Finish: **[Prime]** .

2.5 HOLLOW-METAL PANELS

- A. Provide hollow-metal panels of same materials, construction, and finish as adjacent door assemblies.

2.6 FRAME ANCHORS

A. Jamb Anchors:

1. Masonry Type: Adjustable strap-and-stirrup or T-shaped anchors to suit frame size, not less than **0.042 inch** (1.0 mm) thick, with corrugated or perforated straps not less than **2 inches** (51 mm) wide by **10 inches** (254 mm) long; or wire anchors not less than **0.177 inch** (4.5 mm) thick.
2. Stud-Wall Type: Designed to engage stud, welded to back of frames; not less than **0.042 inch** (1.0 mm) thick.
3. Postinstalled Expansion Type for In-Place Concrete or Masonry: Minimum **3/8-inch** (9.5-mm-) diameter bolts with expansion shields or inserts. Provide pipe spacer from frame to wall, with throat reinforcement plate, welded to frame at each anchor location.

B. Floor Anchors: Formed from same material as frames, minimum thickness of **0.042 inch** (1.0 mm), and as follows:

1. Monolithic Concrete Slabs: Clip-type anchors, with two holes to receive fasteners.
2. Separate Topping Concrete Slabs: Adjustable-type anchors with extension clips, allowing not less than **2-inch** (51-mm) height adjustment. Terminate bottom of frames at finish floor surface.

2.7 MATERIALS

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25] <Insert number>** percent.
- B. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B; suitable for exposed applications.
- C. Hot-Rolled Steel Sheet: ASTM A 1011/A 1011M, Commercial Steel (CS), Type B; free of scale, pitting, or surface defects; pickled and oiled.
- D. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B.
- E. Frame Anchors: ASTM A 879/A 879M, Commercial Steel (CS), **04Z** (12G) coating designation; mill phosphatized.
 1. For anchors built into exterior walls, steel sheet complying with ASTM A 1008/A 1008M or ASTM A 1011/A 1011M, hot-dip galvanized according to ASTM A 153/A 153M, Class B.
- F. Inserts, Bolts, and Fasteners: Hot-dip galvanized according to ASTM A 153/A 153M.
- G. Power-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hollow-metal frames of type indicated.

1. Power-actuated fasteners shall be used only with prior approval by DEN Project Manager.
- H. Grout: ASTM C 476, except with a maximum slump of **4 inches** (102 mm), as measured according to ASTM C 143/C 143M.
- I. Mineral-Fiber Insulation: ASTM C 665, Type I (blankets without membrane facing); consisting of fibers manufactured from slag or rock wool; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively; passing ASTM E 136 for combustion characteristics.
- J. Glazing: Comply with requirements in Section 088000 "Glazing."
- K. Bituminous Coating: Cold-applied asphalt mastic, compounded for **15-mil** (0.4-mm) dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

2.8 FABRICATION

- A. Fabricate hollow-metal work to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for metal thickness. Where practical, fit and assemble units in manufacturer's plant. To ensure proper assembly at Project site, clearly identify work that cannot be permanently factory assembled before shipment.
- B. Tolerances: Fabricate hollow metalwork to tolerances indicated in SDI 117.
- C. Hollow-Metal Doors:
 1. Steel-Stiffened Door Cores: Provide minimum thickness **0.026 inch** (0.66 mm), steel vertical stiffeners of same material as face sheets extending full-door height, with vertical webs spaced not more than **6 inches** (152 mm) apart. Spot weld to face sheets no more than **5 inches** (127 mm) o.c. Fill spaces between stiffeners with glass- or mineral-fiber insulation.
 2. Fire Door Cores: As required to provide fire-protection[**and temperature-rise**] ratings indicated.
 3. Vertical Edges for Single-Acting Doors: [**Bevel edges 1/8 inch in 2 inches** (3.2 mm in 51 mm)] .
 4. Top Edge Closures: Close top edges of doors with [**inverted closures**] [**flush closures**] [**inverted closures, except provide flush closures at exterior doors**] of same material as face sheets.
 5. Bottom Edge Closures: Close bottom edges of doors[**where required for attachment of weather stripping**] with end closures or channels of same material as face sheets.
 6. Exterior Doors: Provide weep-hole openings in bottoms of exterior doors to permit moisture to escape. Seal joints in top edges of doors against water penetration.
 7. Astragals: Provide overlapping astragal on one leaf of pairs of doors where required by NFPA 80 for fire-performance rating or where indicated. Extend

minimum **3/4 inch** (19 mm) beyond edge of door on which astragal is mounted or as required to comply with published listing of qualified testing agency.

- D. Hollow-Metal Frames: Where frames are fabricated in sections due to shipping or handling limitations, provide alignment plates or angles at each joint, fabricated of same thickness metal as frames.
1. **[Sidelight] [and] [Transom Bar]** Frames: Provide closed tubular members with no visible face seams or joints, fabricated from same material as door frame. Fasten members at crossings and to jambs by butt welding.
 2. Provide countersunk, flat- or oval-head exposed screws and bolts for exposed fasteners unless otherwise indicated.
 3. Grout Guards: Weld guards to frame at back of hardware mortises in frames to be grouted.
 4. Floor Anchors: Weld anchors to bottoms of jambs with at least four spot welds per anchor; however, for slip-on drywall frames, provide anchor clips or countersunk holes at bottoms of jambs.
 5. Jamb Anchors: Provide number and spacing of anchors as follows:
 - a. Masonry Type: Locate anchors not more than **16 inches** (406 mm) from top and bottom of frame. Space anchors not more than **32 inches** (813 mm) o.c., to match coursing, and as follows:
 - 1) Two anchors per jamb up to **60 inches** (1524 mm) high.
 - 2) Three anchors per jamb from **60 to 90 inches** (1524 to 2286 mm) high.
 - 3) Four anchors per jamb from **90 to 120 inches** (2286 to 3048 mm) high.
 - 4) Four anchors per jamb plus one additional anchor per jamb for each **24 inches** (610 mm) or fraction thereof above **120 inches** (3048 mm) high.
 - b. Stud-Wall Type: Locate anchors not more than **18 inches** (457 mm) from top and bottom of frame. Space anchors not more than **32 inches** (813 mm) o.c. and as follows:
 - 1) Three anchors per jamb up to **60 inches** (1524 mm) high.
 - 2) Four anchors per jamb from **60 to 90 inches** (1524 to 2286 mm) high.
 - 3) Five anchors per jamb from **90 to 96 inches** (2286 to 2438 mm) high.
 - 4) Five anchors per jamb plus one additional anchor per jamb for each **24 inches** (610 mm) or fraction thereof above **96 inches** (2438 mm) high.
 - c. Postinstalled Expansion Type: Locate anchors not more than **6 inches** (152 mm) from top and bottom of frame. Space anchors not more than **26 inches** (660 mm) o.c.
 6. Head Anchors: Two anchors per head for frames more than **42 inches** (1067 mm) wide and mounted in metal-stud partitions.
 7. Door Silencers: Except on weather-stripped frames, drill stops to receive door silencers as follows. Keep holes clear during construction.
 - a. Single-Door Frames: Drill stop in strike jamb to receive three door silencers.

- b. Double-Door Frames: Drill stop in head jamb to receive two door silencers.
- 8. Terminated Stops: Terminate stops [**6 inches (152 mm)**] **<Insert dimension>** above finish floor with a [**45**] [**90**]-degree angle cut, and close open end of stop with steel sheet closure. Cover opening in extension of frame with welded-steel filler plate, with welds ground smooth and flush with frame.
- E. Fabricate concealed stiffeners and edge channels from either cold- or hot-rolled steel sheet.
- F. Hardware Preparation: Factory prepare hollow-metal work to receive templated mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping according to SDI A250.6, the Door Hardware Schedule, and templates.
 - 1. Reinforce doors and frames to receive nontemplated, mortised, and surface-mounted door hardware.
 - 2. Comply with applicable requirements in SDI A250.6 and BHMA A156.115 for preparation of hollow-metal work for hardware.
- G. Stops and Moldings: Provide stops and moldings around glazed lites and louvers where indicated. Form corners of stops and moldings with [**butted**] [**or**] [**mitered**] hairline joints.
 - 1. Single Glazed Lites: Provide fixed stops and moldings welded on secure side of hollow-metal work.
 - 2. Multiple Glazed Lites: Provide fixed and removable stops and moldings so that each glazed lite is capable of being removed independently.
 - 3. Provide fixed frame moldings on outside of exterior and on secure side of interior doors and frames.
 - 4. Provide loose stops and moldings on inside of hollow-metal work.
 - 5. Coordinate rabbet width between fixed and removable stops with glazing and installation types indicated.

2.9 STEEL FINISHES

- A. Prime Finish for Interior Units: Clean, pretreat, and apply manufacturer's standard primer.
 - 1. Shop Primer: Manufacturer's standard, fast-curing, lead- and chromate-free primer complying with SDI A250.10; recommended by primer manufacturer for substrate; compatible with substrate and field-applied coatings despite prolonged exposure.
- B. Factory Finish: Clean, pretreat, and apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat, complying with SDI A250.3.
 - 1. Color and Gloss: [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] **<Insert color and gloss>**.

- C. Zinc-Rich Primer for Exterior Units: Complying with SSPC-Paint 20 or SSPC-Paint 29 and compatible with topcoat.
1. Use primer with a VOC content of 420 g/L (3.5 lb/gal.) or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 2. Available Products: Subject to compliance with requirements, provide one of the following:
 - a. Benjamin Moore & Co.; Epoxy Zinc-Rich Primer CM18/19
 - b. Carboline Company; Carbozinc 621.
 - c. ICI Devboe Coatings; Catha-Coat 313.
 - d. International Coatings Ltd.; Interzinc 315 Epoxy Zinc-Rich Primer.
 - e. PPG Architectural Finishes, Inc.; Aquapon Zinc-Rich Primer 97-670.
 - f. Sherwin-Williams Co.; Corothane I GalvaPac Zinc Primer
 - g. Tnemec Company, Inc.; Tneme-Zinc 90-97.
 - h. or approved equal.

2.10 ACCESSORIES

- A. Louvers: Provide louvers for interior doors, where indicated, which comply with SDI 111C, with blades or baffles formed of 0.020-inch (0.5-mm-) thick, cold-rolled steel sheet set into 0.032-inch (0.8-mm-) thick steel frame.
1. Sightproof Louver: Stationary louvers constructed with inverted-V or inverted-Y blades.
 2. Lightproof Louver: Stationary louvers constructed with baffles to prevent light from passing from one side to the other.
 3. Fire-Rated Automatic Louvers: Louvers constructed with movable blades closed by actuating fusible link, and listed and labeled for use in fire-rated door assemblies of type and fire-resistance rating indicated by same qualified testing and inspecting agency that established fire-resistance rating of door assembly.
- B. Mullions and Transom Bars: Join to adjacent members by welding or rigid mechanical anchors.
- C. Grout Guards: Formed from same material as frames, not less than 0.016 inch (0.4 mm) thick.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for embedded and built-in anchors to verify actual locations before frame installation.

- C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Remove welded-in shipping spreaders installed at factory. Restore exposed finish by grinding, filling, and dressing, as required to make repaired area smooth, flush, and invisible on exposed faces.
- B. Drill and tap doors and frames to receive nontemplated, mortised, and surface-mounted door hardware.

3.3 INSTALLATION

- A. General: Install hollow-metal work plumb, rigid, properly aligned, and securely fastened in place. Comply with Drawings and manufacturer's written instructions.
- B. Hollow-Metal Frames: Install hollow-metal frames of size and profile indicated. Comply with SDI A250.11 or NAAMM-HMMA 840 as required by standards specified.
 - 1. Set frames accurately in position; plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces, leaving surfaces smooth and undamaged.
 - a. At fire-rated openings, install frames according to NFPA 80.
 - b. Where frames are fabricated in sections because of shipping or handling limitations, field splice at approved locations by welding face joint continuously; grind, fill, dress, and make splice smooth, flush, and invisible on exposed faces.
 - c. Install frames with removable stops located on secure side of opening.
 - d. Install door silencers in frames before grouting.
 - e. Remove temporary braces necessary for installation only after frames have been properly set and secured.
 - f. Check plumb, square, and twist of frames as walls are constructed. Shim as necessary to comply with installation tolerances.
 - g. Field apply bituminous coating to backs of frames that will be filled with grout containing antifreezing agents.
 - 2. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor, and secure with postinstalled expansion anchors.
 - a. Floor anchors may be set with powder-actuated fasteners instead of postinstalled expansion anchors if so indicated and approved on Shop Drawings.
 - 1) Powder-actuated fasteners shall be used only with prior approval by DEN Project Manager

3. Metal-Stud Partitions: Solidly pack mineral-fiber insulation inside frames.
4. Masonry Walls: Coordinate installation of frames to allow for solidly filling space between frames and masonry with grout.
5. Concrete Walls: Solidly fill space between frames and concrete with mineral-fiber insulation.
6. In-Place Concrete or Masonry Construction: Secure frames in place with postinstalled expansion anchors. Countersink anchors, and fill and make smooth, flush, and invisible on exposed faces.
7. In-Place Metal or Wood-Stud Partitions: Secure slip-on drywall frames in place according to manufacturer's written instructions.
8. Installation Tolerances: Adjust hollow-metal door frames for squareness, alignment, twist, and plumb to the following tolerances:
 - a. Squareness: Plus or minus **1/16 inch** (1.6 mm), measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
 - b. Alignment: Plus or minus **1/16 inch** (1.6 mm), measured at jambs on a horizontal line parallel to plane of wall.
 - c. Twist: Plus or minus **1/16 inch** (1.6 mm), measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
 - d. Plumbness: Plus or minus **1/16 inch** (1.6 mm), measured at jambs at floor.

C. Hollow-Metal Doors: Fit hollow-metal doors accurately in frames, within clearances specified below. Shim as necessary.

1. Non-Fire-Rated Steel Doors:
 - a. Between Door and Frame Jambs and Head: **1/8 inch** (3.2 mm) plus or minus **1/32 inch** (0.8 mm).
 - b. Between Edges of Pairs of Doors: **1/8 inch** (3.2 mm) to **1/4 inch** (6.3 mm) plus or minus **1/32 inch** (0.8 mm).
 - c. At Bottom of Door: [**3/4 inch** (19.1 mm)] [**5/8 inch** (15.8 mm)] plus or minus **1/32 inch** (0.8 mm).
 - d. Between Door Face and Stop: **1/16 inch** (1.6 mm) to **1/8 inch** (3.2 mm) plus or minus **1/32 inch** (0.8 mm).
2. Fire-Rated Doors: Install doors with clearances according to NFPA 80.
3. Smoke-Control Doors: Install doors and gaskets according to NFPA 105.

D. Glazing: Comply with installation requirements in Section 088000 "Glazing" and with hollow-metal manufacturer's written instructions.

1. Secure stops with countersunk flat- or oval-head machine screws spaced uniformly not more than **9 inches** (230 mm) o.c. and not more than **2 inches** (51 mm) o.c. from each corner.

3.4 ADJUSTING AND CLEANING

A. Final Adjustments: Check and readjust operating hardware items immediately before final inspection. Leave work in complete and proper operating condition. Remove and

- replace defective work, including hollow-metal work that is warped, bowed, or otherwise unacceptable.
- B. Remove grout and other bonding material from hollow-metal work immediately after installation.
 - C. Prime-Coat Touchup: Immediately after erection, sand smooth rusted or damaged areas of prime coat and apply touchup of compatible air-drying, rust-inhibitive primer.
 - D. Metallic-Coated Surface Touchup: Clean abraded areas and repair with galvanizing repair paint according to manufacturer's written instructions.
 - E. Factory-Finish Touchup: Clean abraded areas and repair with same material used for factory finish according to manufacturer's written instructions.
 - F. Touchup Painting: Cleaning and touchup painting of abraded areas of paint are specified in painting Sections.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 081113

SECTION 081119 - STAINLESS-STEEL DOORS AND FRAMES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

- 1. Stainless-steel, hollow-metal doors[**and panels**].
- 2. Stainless-steel, hollow-metal frames.

- B. Related Sections:

- 1. Section 042000 "Unit Masonry" for building anchors into and grouting stainless-steel frames in masonry construction.
- 2. Section 099113 "Exterior Painting" for field painting of factory-primed, stainless-steel doors and frames.
- 3. Section 099123 "Interior Painting" for field painting of factory-primed, stainless-steel doors and frames.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include construction details, material descriptions, core descriptions, [**fire-resistance rating,**] [**temperature-rise ratings,**] and finishes.

- 1. Include data substantiating that materials comply with requirements.

- B. Shop Drawings: Include the following:

- 1. Elevations of each door design.
- 2. Details of doors, including vertical and horizontal edge details and metal thicknesses.
- 3. Frame details for each frame type, including dimensioned profiles and metal thicknesses.
- 4. Locations of reinforcement and preparations for hardware.
- 5. Details of each different wall opening condition.

6. Details of anchorages, joints, field splices, and connections.
7. Details of accessories.
8. Details of moldings, removable stops, and glazing.
9. Details of conduit and preparations for power, signal, and control systems.

C. Samples for Verification:

1. Finishes: For each type of exposed finish required, prepared on Samples of not less than **3 by 5 inches** (75 by 125 mm).
2. Doors: Include section of vertical-edge, top, and bottom construction; core construction; **[glazing]**; and hinge and other applied hardware reinforcement.
3. Frames: Show profile, corner joint, floor and wall anchors, and silencers. Include separate section showing fixed hollow-metal panels and glazing if applicable.

D. Schedule: Provide a schedule of stainless-steel, hollow-metal work prepared by or under the supervision of supplier, using same reference numbers for details and openings as those on Drawings. Coordinate with a door hardware schedule.

1.4 INFORMATIONAL SUBMITTALS

- A. Oversize Construction Certification: For assemblies required to be fire rated and exceeding limitations of labeled assemblies.
- B. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for each type of stainless-steel, hollow-metal door and frame assembly.

1.5 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Source Limitations: Obtain stainless-steel, hollow-metal work from single source from single manufacturer.
- B. Fire-Rated Door Assemblies: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure according to NFPA 252 or UL 10C.
 1. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.
 2. Temperature-Rise Limit: **[Where indicated] [At vertical exit enclosures and exit passageways]**, provide doors that have a maximum transmitted

temperature end point of not more than **450 deg F** (250 deg C) above ambient after 30 minutes of standard fire-test exposure.

- C. Smoke- and Draft-Control Door Assemblies: **[Where indicated] [At corridors, smoke barriers, and smoke partitions]**, provide assemblies tested according to UL 1784 and installed in compliance with NFPA 105.
 - 1. Air Leakage Rate: Maximum air leakage of **0.3 cfm/sq. ft.** (3 cu. m per minute/sq. m) at the tested pressure differential of **0.3-inch wg** (75 Pa) of water.
- D. Fire-Rated, Borrowed-Light Frame Assemblies: Assemblies that are listed and labeled, by a testing agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on testing according to NFPA 257 or UL 9. Label each individual glazed lite. Install in compliance with NFPA 80.
- E. Mockups: Build mockups of each type of door assembly to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
 - 1. Stainless steel frames.
 - 2. Stainless steel doors.
- F. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]<Insert location>**.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver doors and frames palletized, wrapped, or crated to provide protection during transit and Project-site storage. Do not use nonvented plastic.
- B. Shipping Spreaders: Deliver welded frames with two removable spreader bars across bottom of frames, tack welded or mechanically attached to jambs and mullions.
- C. Store doors and frames under cover at Project site. Place units in a vertical position with heads up, spaced by blocking, on minimum **4-inch-** (100-mm-) high wood blocking. Avoid using nonvented plastic or canvas shelters that could create a humidity chamber.
 - 1. If wrappers on doors become wet, remove cartons immediately. Provide minimum **1/4-inch** (6-mm) space between each stacked door to permit air circulation.

1.8 PROJECT CONDITIONS

- A. Field Measurements: Verify actual dimensions of openings by field measurements before fabrication.

1.9 COORDINATION

- A. Coordinate installation of anchorages for stainless-steel frames. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, inserts, anchor bolts, and items with integral anchors. Deliver such items to Project site in time for installation.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 STAINLESS-STEEL DOORS AND FRAMES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Ambico Limited.
 2. Ceco Door Products; an ASSA ABLOY Group company.
 3. CURRIES Company; an ASSA ABLOY Group company.
 4. Dawson Doors.
 5. Fleming Steel Doors & Frames Products Ltd.; an ASSA ABLOY Group company.
 6. Forms+Surfaces.
 7. Gensteel Doors, Incorporated.
 8. Habersham Metal Products Company.
 9. Krieger Specialty Products Company.
 10. LaForce, Inc.
 11. Next Door Company.
 12. Security Metal Products Corporation.
 13. Stainless Doors, Incorporated.
 14. Steelcraft; an Ingersoll-Rand company.
 15. **<Insert manufacturer's name>**.
 16. or approved equal.

2.2 STAINLESS-STEEL DOORS

- A. Description: Stainless-steel doors, not less than **1-3/4 inches** (44 mm) thick, of **[seamed] [seamless]**, hollow-metal construction. Construct doors with smooth, flush surfaces without visible joints or seams on faces.
1. Face Sheets: Fabricate from **[0.050-inch- (1.27-mm-)] [0.062-inch- (1.59-mm-)] [0.078-inch- (1.98-mm-)]** thick, stainless-steel sheet.
 2. Core Construction: Fabricate doors with core indicated.

- a. Welded Steel-Stiffened Core: [0.031-inch- (0.79-mm-) **thick, stainless-steel**] [0.030-inch- (0.76-mm-) **nominal thickness uncoated steel**] [0.034-inch- (0.86-mm-) **nominal thickness metallic-coated steel**] vertical stiffeners extending full-door height, spaced not more than 6 inches (152 mm) apart, spot welded to face sheets a maximum of 5 inches (127 mm) o.c. Fill spaces between stiffeners with mineral-fiber insulation.
 - b. Laminated Core: [**Honeycomb of resin-impregnated kraft paper with maximum 1-inch (25.4-mm) cells**] [or] [**foam-plastic insulation**] fastened to face sheets with waterproof adhesive.
 - 1) Foam-Plastic Insulated Doors: Thermal-resistance value (R-value) of not less than [4.0 deg F x h x sq. ft./Btu (0.704 K x sq. m/W)] [6.0 deg F x h x sq. ft./Btu (1.057 K x sq. m/W)] [12.3 deg F x h x sq. ft./Btu (2.166 K x sq. m/W)] <Insert R-value> when tested according to ASTM C 1363.
 - a) Locations: [**Exterior doors**] [and] [**interior doors where indicated**].
 - c. Laminated Steel-Stiffened Core: [0.031-inch- (0.79-mm-) **thick, stainless-steel**] [0.030-inch- (0.76-mm-) **nominal thickness uncoated steel**] [0.034-inch- (0.86-mm-) **nominal thickness metallic-coated steel**] vertical stiffeners extending full-door height, spaced not more than 6 inches (152 mm) apart, fastened to face sheets with waterproof adhesive. Fill spaces between stiffeners with mineral-fiber insulation.
 - d. Fire-Rated Door Core: As required to provide fire-protection and temperature-rise ratings indicated.
3. Vertical Edges for Single-Acting Doors: Beveled 1/8 inch in 2 inches (3 mm in 50 mm).
 4. Vertical Edges for Double-Acting Doors: Round vertical edges with 2-1/8-inch (54-mm) radius.
 5. Moldings for Glazed Lites in Doors: 0.038-inch- (0.95-mm-) thick stainless steel.
 6. Loose Stops for Glazed Lites in Doors: 0.038-inch- (0.95-mm-) thick stainless steel.
 7. Top and Bottom Channels: Closed with continuous channels, [0.062-inch- (1.59-mm-) **thick stainless steel**] [0.060-inch- (1.52-mm-) **nominal thickness uncoated steel**] [0.064-inch- (1.63-mm-) **nominal thickness metallic-coated steel**].
 - a. Spot welded to both face sheets.
 - b. Securely fastened using adhesive.
 8. Hardware Reinforcement: Fabricate according to ANSI/NAAMM-HMMA 866 with reinforcing plates from [**stainless**] [**uncoated**] [**metallic-coated**] steel.
 9. Electrical Hardware Enclosures: Provide enclosures and junction boxes within doors for electrically operated door hardware, interconnected with UL-approved, 1/2-inch- (12.7-mm-) diameter conduit and connectors.
 - a. Where indicated for installation of wiring, provide access plates to junction

boxes, fabricate from same material and thickness as face sheet and fasten with at least four security fasteners spaced not more than 6 inches (152 mm) o.c.

B. Performance: Level A, ANSI A250.4.

C. Materials:

1. Stainless-Steel Sheet: ASTM A 240/A 240M, austenitic stainless steel, [Type 304] [Type 316] [Type 304 or 316 as indicated] <Insert type>.
2. Steel Sheet: ASTM A 1008/A 1008M or ASTM A 1011/A 1011M, Commercial Steel (CS), Type B.
3. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B; with minimum G60 (Z180) or A60 (ZF180) metallic coating.
4. Foam-Plastic Insulation: Manufacturer's standard [polystyrene] [urethane] board insulation with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, according to ASTM E 84. Enclose insulation completely within door.
5. Mineral-Fiber Insulation: Insulation composed of rock-wool fibers, slag-wool fibers, or glass fibers.

D. Stainless-Steel Finishes:

1. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
2. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - a. Run grain of directional finishes with long dimension of each piece.
 - b. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
 - c. Directional Satin Finish: No. 4.
 - d. Dull Satin Finish: No. 6.
 - e. Mirrorlike Reflective, Nondirectional Polish: No. 8.
3. Bright, Cold-Rolled, Unpolished Finish: No. 2B.[**Factory primed for field finish.**]

2.3 STAINLESS-STEEL PANELS

- A. Provide stainless-steel panels of same construction, materials, and finish as specified for adjoining stainless-steel doors.

2.4 STAINLESS-STEEL FRAMES

- A. Description: Fabricate stainless-steel frames of construction indicated, with faces of corners mitered and contact edges closed tight.

1. Doorframes: [**Machine mitered, faces only welded**] [**Saw mitered and full**

(continuously) welded [**Machine mitered and full welded**] [**Knock down**]
[**Slip on**] [**As indicated**].

- a. Weld frames according to HMMA 820.
2. [**Sidelight**] [**Transom**] [**and**] [**Borrowed-Light**] Frames: [**Machine mitered, faces only welded**] [**Saw mitered and full (continuously) welded**] [**Machine mitered and full welded**].
3. Doorframes for Openings **48 Inches** (1219 mm) Wide or Less: Fabricate from [**0.062-inch-** (1.59-mm-)] [**0.078-inch-** (1.98-mm-)] [**0.109-inch-** (2.78-mm-)] thick, stainless-steel sheet.
4. Doorframes for Openings More Than **48 Inches** (1219 mm) Wide: Fabricate from [**0.078-inch-** (1.98-mm-)] [**0.109-inch-** (2.78-mm-)] thick, stainless-steel sheet.
5. Borrowed-Light Frames: Fabricate from [**0.062-inch-** (1.59-mm-)] [**0.078-inch-** (1.98-mm-)] [**0.109-inch-** (2.78-mm-)] thick, stainless-steel sheet.
6. [**Sidelight**] [**and**] [**Transom**] Frames: Fabricate from stainless-steel sheet of same thickness as adjacent doorframe.
7. Glazing[**and Panel**] Stops: Formed integral with stainless-steel frames, minimum **5/8 inch** (16 mm) high, unless otherwise indicated.
8. Loose Stops for Glazed Lites[**and Panels**]: **0.038-inch-** (0.95-mm-) thick stainless steel.
9. Hardware Reinforcement: Fabricate according to ANSI/NAAMM-HMMA 866 with reinforcing plates from [**stainless**] [**uncoated**] [**metallic-coated**] steel.
10. Head Reinforcement: **0.109-inch-** (2.78-mm-) thick, stainless-steel channel or angle stiffener for openings widths more than **48 inches** (1219 mm).
11. Jamb Anchors:
 - a. Masonry Type: Adjustable strap-and-stirrup or T-shaped anchors to suit frame size, not less than [**0.062-inch-** (1.59-mm-) **thick stainless steel**] [**0.060-inch-** (1.52-mm-) **nominal thickness uncoated steel**] [**0.064-inch-** (1.63-mm-) **nominal thickness metallic-coated steel**] with corrugated or perforated straps not less than **2 inches** (50 mm) wide by **10 inches** (250 mm) long; or wire anchors not less than **0.156 inch** (4.0 mm) thick.
 - b. Stud-Wall Type: Designed to engage stud, welded to back of frames; not less than [**0.050-inch-** (1.27-mm-) **thick stainless steel**] [**0.048-inch-** (1.21-mm-) **nominal thickness uncoated steel**] [**0.052-inch-** (1.32-mm-) **nominal thickness metallic-coated steel**].
 - c. Compression Type for Slip-on Frames: Fabricate adjustable compression anchors from [**stainless**] [**uncoated**] [**metallic-coated**] steel.
 - d. Postinstalled Expansion Type for In-Place Concrete or Masonry: Minimum **3/8-inch-** (9.5-mm-) diameter, [**stainless-steel**] [**uncoated steel**] [**metallic-coated steel**] bolts with expansion shields or inserts. Provide pipe spacer from frame to wall, with throat reinforcement plate, welded to frame at each anchor location.
12. Floor Anchors: Not less than [**0.078-inch-** (1.98-mm-) **thick stainless steel**] [**0.075-inch-** (1.90-mm-) **nominal thickness uncoated steel**] [**0.079-inch-** (2.01-mm-) **nominal thickness metallic-coated steel**], and as follows:
 - a. Monolithic Concrete Slabs: Clip-type anchors, with two holes to receive

- fasteners.
- b. Separate Topping Concrete Slabs: Adjustable-type anchors with extension clips, allowing not less than **2-inch** (50-mm) height adjustment. Terminate bottom of frames at finish floor surface.
13. Ceiling Struts: Minimum **3/8-inch-thick by 2-inch-** (9.5-mm-thick by 50-mm-) wide from **[stainless] [uncoated] [metallic-coated]** steel.
14. Plaster Guards: Not less than **[0.019-inch-** (0.48-mm-) **thick stainless steel] [0.018-inch-** (0.46-mm-) **nominal thickness uncoated steel] [0.022-inch-** (0.56-mm-) **nominal thickness metallic-coated steel]**.
- B. Performance: Level A, ANSI A250.4.
- C. Materials:
1. Stainless-Steel Sheet: ASTM A 240/A 240M, austenitic stainless steel, **[Type 304] [Type 316] [Type 304 or 316 as indicated] <Insert type>**.
 2. Steel Sheet: ASTM A 1008/A 1008M or ASTM A 1011/A 1011M, Commercial Steel (CS), Type B.
 3. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B; with minimum **G60** (Z180) or **A60** (ZF180) metallic coating.
 4. Frame Anchors: Stainless-steel sheet. Same type as door face.
 5. Frame Anchors: **[Steel sheet] [Metallic-coated steel sheet]**, hot-dip galvanized according to ASTM A 153/A 153M, Class B.
 6. Inserts, Bolts, and Anchor Fasteners: Stainless-steel components complying with **ASTM F 593 and ASTM F 594, Alloy Group 1 or 2** (ASTM F 738M and ASTM F 836M, Alloy Group 1 or 4) for bolts and nuts.
 7. Inserts, Bolts, and Anchor Fasteners: Hot-dip galvanized steel according to ASTM A 153/A 153M or ASTM F 2329.
- D. Finishes:
1. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
 2. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - a. Run grain of directional finishes with long dimension of each piece.
 - b. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
 - c. Directional Satin Finish: No. 4.
 - d. Dull Satin Finish: No. 6.
 - e. Mirrorlike Reflective, Nondirectional Polish: No. 8.
 3. Bright, Cold-Rolled, Unpolished Finish: No. 2B.**[Factory primed for field finish.]**

2.5 ACCESSORIES

- A. Glazing: Comply with requirements in Section 088000 "Glazing."
- B. Grout: Comply with ASTM C 476, with a slump of not more than **4 inches** (102 mm) as measured according to ASTM C 143/C 143M.
- C. Corrosion-Resistant Coating: Cold-applied asphalt mastic, compounded for **15-mil** (0.4-mm) dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.
- D. Mineral Fiber Insulation: Insulation composed of rock-wool fibers, slag-wool fibers, or glass fibers.

2.6 FABRICATION

- A. Stainless-Steel Door Fabrication: Stainless-steel doors to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for thickness of metal.
 - 1. Seamed Edge Construction: Both vertical door edges joined by visible, continuous interlocking seam (lock seam) full height of door.
 - 2. Seamed Edge Construction: Both vertical door edges joined by visible seam that is projection, spot, or tack welded on inside edges of door at minimum **6 inches** (152 mm) o.c.
 - 3. Seamless Edge Construction: Door face sheets joined at vertical edges by continuous weld extending full height of door; with edges ground and polished, providing smooth, flush surfaces with no visible seams.
 - 4. Exterior Doors: Close top edges flush and seal joints against water penetration. Provide weep-hole openings in bottom of exterior doors to permit moisture to escape.
 - 5. Stops and Moldings: Factory cut openings in doors. Provide stops and moldings around glazed lites. Form corners of stops and moldings with butted or mitered hairline joints.
 - a. Glazed Lites: Provide fixed stops and moldings welded on secure side of door.
 - b. Coordinate rabbet width between fixed and removable stops with type of glazing and type of installation indicated.
 - 6. Hardware Preparation: Factory prepare stainless-steel doors to receive templated mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping, according to the Door Hardware Schedule and templates furnished as specified in [**Section 087100 "Door Hardware."**] [**Section 087111 "Door Hardware (Descriptive Specification)."**]
 - a. Reinforce doors to receive nontemplated mortised and surface-mounted door hardware.

7. Locate hardware as indicated, or if not indicated, according to HMMA 831, "Recommended Hardware Locations for Custom Hollow Metal Doors and Frames."
 8. Tolerances: Fabricate doors to tolerances indicated in ANSI/NAAMM-HMMA 866.
- B. Stainless-Steel Frame Fabrication: Fabricate stainless-steel frames to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for thickness of metal. Where practical, fit and assemble units in manufacturer's plant. To ensure proper assembly at Project site, clearly identify work that cannot be permanently factory assembled before shipment.
1. Weld flush face joints continuously; grind, fill, dress, and make smooth, flush, and invisible. Where frames are fabricated in sections due to shipping or handling limitations, provide alignment plates or angles at each joint, fabricated from same thickness metal as frames.
 2. **[Mullions] [Rails] [and] [Transom Bars]**: Provide closed tubular members with no visible face seams or joints. Fasten members at crossings and to jambs by butt welding according to joint designs in HMMA 820.
 - a. Provide false head member to receive lower ceiling where frames extend to finish ceilings of different heights.
 3. Provide countersunk, flat-, or oval-head exposed screws and bolts for exposed fasteners unless otherwise indicated.
 4. Floor Anchors: Weld anchors to bottom of jambs and mullions with at least four spot welds per anchor.
 5. Jamb Anchors: Provide number and spacing of anchors as follows:
 - a. Masonry Type: Locate anchors not more than **18 inches** (457 mm) from top and bottom of frame. Space anchors not more than **32 inches** (813 mm) o.c. and as follows:
 - 1) Two anchors per jamb up to **60 inches** (1524 mm) in height.
 - 2) Three anchors per jamb from **60 to 90 inches** (1524 to 2286 mm) in height.
 - 3) Four anchors per jamb from **90 to 96 inches** (2286 to 2438 mm) in height.
 - 4) Four anchors per jamb plus one additional anchor per jamb for each **24 inches** (610 mm) or fraction thereof more than **96 inches** (2438 mm) in height.
 - b. Stud-Wall Type: Locate anchors not more than **18 inches** (457 mm) from top and bottom of frame. Space anchors not more than **32 inches** (813 mm) o.c. and as follows:
 - 1) Three anchors per jamb up to **60 inches** (1524 mm) in height.
 - 2) Four anchors per jamb from **60 to 90 inches** (1524 to 2286 mm) in height.

- 3) Five anchors per jamb from **90 to 96 inches** (2286 to 2438 mm) in height.
 - 4) Five anchors per jamb plus one additional anchor per jamb for each **24 inches** (610 mm) or fraction thereof more than **96 inches** (2438 mm) in height.
 - 5) Two anchors per head for frames more than **42 inches** (1066 mm) wide and mounted in metal-stud partitions.
- c. Compression Type: Not less than two anchors in each jamb.
 - d. Postinstalled Expansion Type: Locate anchors not more than **6 inches** (152 mm) from top and bottom of frame. Space anchors not more than **26 inches** (660 mm) o.c.
6. Head Reinforcement: For frames more than **48 inches** (1219 mm) wide, provide continuous head reinforcement for full width of opening, welded to back of frame at head.
 7. Door Silencers: Except on weather-stripped frames, drill stops to receive door silencers as follows. Provide plastic plugs to keep holes clear during construction.
 - a. Single-Doorframes: Drill stop in strike jamb to receive three door silencers.
 - b. Double-Doorframes: Drill stop in head jamb to receive two door silencers.
 8. Stops and Moldings: Provide stops and moldings around [**glazed lites**] [**and**] [**solid panels**] where indicated. Form corners of stops and moldings with butted or mitered hairline joints.
 - a. Single Glazed Lites: Provide fixed stops and moldings welded on secure side of door or frame.
 - b. Multiple Glazed Lites: Provide fixed and removable stops and moldings such that each lite is capable of being removed independently.
 - c. Coordinate rabbet width between fixed and removable stops with type of glazing[**or panel**] and type of installation indicated.
 - d. Terminated Stops: Where indicated for interior doorframes, terminate stops **6 inches** (152 mm) above finish floor with a [**45**] [**90**]-degree angle cut, and close open end of stop with stainless-steel sheet closure. Cover opening in extension of frame with welded-stainless-steel filler plate, with welds ground smooth and flush with frame.
 9. Hardware Preparation: Factory prepare stainless-steel frames to receive templated mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping, according to the Door Hardware Schedule and templates furnished as specified in [**Section 087100 "Door Hardware."**] [**Section 087111 "Door Hardware (Descriptive Specification)."**]
 - a. Reinforce frames to receive nontemplated mortised and surface-mounted door hardware.
 - b. Locate hardware as indicated, or if not indicated, according to HMMA 831, "Recommended Hardware Locations for Custom Hollow Metal Doors and Frames."

10. Plaster Guards: Weld guards to frame at back of hardware mortises and mounting holes in frames to be grouted.
11. Tolerances: Fabricate frames to tolerances indicated in ANSI/NAAMM-HMMA 866.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of stainless-steel doors and frames.
- B. Examine roughing-in for embedded and built-in anchors to verify actual locations of stainless-steel, door-frame connections before frame installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Remove welded-in shipping spreaders installed at factory. Restore exposed finish by grinding, filling, and dressing, as required to make repaired area smooth, flush, and invisible on exposed faces.
- B. Prior to installation and with installation spreaders in place, adjust and securely brace stainless-steel doorframes for squareness, alignment, twist, and plumb to the following tolerances:
 1. Squareness: Plus or minus **1/16 inch** (1.6 mm), measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
 2. Alignment: Plus or minus **1/16 inch** (1.6 mm), measured at jambs on a horizontal line parallel to plane of wall.
 3. Twist: Plus or minus **1/16 inch** (1.6 mm), measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
 4. Plumbness: Plus or minus **1/16 inch** (1.6 mm), measured at jambs on a perpendicular line from head to floor.
- C. Drill and tap doors and frames to receive nontemplated mortised and surface-mounted door hardware.

3.3 INSTALLATION

- A. General: Install stainless-steel doors and frames plumb, rigid, properly aligned, and securely fastened in place; comply with ANSI/NAAMM-HMMA 866 and manufacturer's written instructions.
- B. Stainless-Steel Frames: Install stainless-steel frames of size and profile indicated.

1. Set frames accurately in position; plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces, leaving surfaces smooth and undamaged.
 - a. At fire-protection-rated openings, install frames according to NFPA 80.
 - b. Where frames are fabricated in sections due to shipping or handling limitations, field splice at approved locations by welding face joint continuously; grind, fill, dress, and make splice smooth, flush, and invisible on exposed faces.
 - c. Install frames with removable glazing stops located on secure side of opening.
 - d. Install door silencers in frames before grouting.
 - e. Remove temporary braces necessary for installation only after frames have been properly set and secured.
 - f. Check plumb, squareness, and twist of frames as walls are constructed. Shim as necessary to comply with installation tolerances.
 - g. Apply corrosion-resistant coating to backs of grout-filled frames.
2. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor and secure with postinstalled expansion anchors.
 - a. Floor anchors may be set with powder-actuated fasteners instead of postinstalled expansion anchors, if so indicated and approved on Shop Drawings.
3. Metal-Stud Partitions: Solidly pack mineral-fiber insulation behind frames.
4. In-Place Concrete or Masonry Construction: Secure frames in place with postinstalled expansion anchors. Countersink anchors, and fill and make smooth, flush, and invisible on exposed faces.
5. In-Place Gypsum Board Partitions: Secure frames in place with postinstalled expansion anchors through floor anchors at each jamb. Countersink anchors, and fill and make smooth, flush, and invisible on exposed faces.
6. Ceiling Struts: Extend struts vertically from top of frame at each jamb to supporting construction above, unless frame is anchored to masonry or to other structural support at each jamb. Bend top of struts to provide flush contact for securing to supporting construction above. Provide adjustable wedged or bolted anchorage to frame jamb members.
7. Grouted Frames: Solidly fill space between frames and substrate with grout. Take precautions, including bracing frames, to ensure that frames are not deformed or damaged by grout forces.
8. Installation Tolerances: Adjust stainless-steel frames for squareness, alignment, twist, and plumb to the following tolerances:
 - a. Squareness: Plus or minus **1/16 inch** (1.6 mm), measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
 - b. Alignment: Plus or minus **1/16 inch** (1.6 mm), measured at jambs on a horizontal line parallel to plane of wall.
 - c. Twist: Plus or minus **1/16 inch** (1.6 mm), measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
 - d. Plumbness: Plus or minus **1/16 inch** (1.6 mm), measured at jambs at floor.

- C. Stainless-Steel Doors: Fit non-fire-rated doors accurately in frames with the following clearances:
1. Non-Fire-Rated Doors:
 - a. Jambs and Head: **1/8 inch** (3 mm) plus or minus **1/16 inch** (1.6 mm).
 - b. Between Edges of Pairs of Doors: **1/8 inch** (3 mm) plus or minus **1/16 inch** (1.6 mm).
 - c. Between Bottom of Door and Top of Threshold: Maximum **3/8 inch** (9.5 mm).
 - d. Between Bottom of Door and Top of Finish Floor (No Threshold): Maximum **3/4 inch** (19 mm).
 2. Fire-Rated Doors: Install doors with clearances according to NFPA 80.
 3. Smoke-Control Doors: Install doors according to NFPA 105.
- D. Glazing: Install glazing in sidelights, transoms, and borrowed lights to comply with installation requirements in Section 088000 "Glazing."
1. Secure stops with countersunk, flat-, or oval-head machine screws spaced uniformly not more than **9 inches** (230 mm) o.c., and not more than **2 inches** (50 mm) o.c. from each corner.

3.4 ADJUSTING AND CLEANING

- A. Final Adjustments: Check and readjust operating hardware items immediately before final inspection. Leave work in complete and proper operating condition. Remove and replace defective work including stainless-steel doors or frames that are warped, bowed, or otherwise unacceptable.
- B. Clean grout and other bonding material off stainless-steel doors and frames immediately after installation.
- C. Stainless-Steel Touchup: Immediately after erection, smooth any abraded areas of stainless steel and polish to match undamaged finish.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work

described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 081119

SECTION 081416 - FLUSH WOOD DOORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Solid-core doors[**and transom panels**] with [**wood-veneer**] faces.
2. [**Factory finishing**] flush wood doors.
3. Factory fitting flush wood doors to frames and factory machining for hardware.

B. Related Sections:

1. [**Section 062023 "Interior Finish Carpentry"**] [**Section 064023 "Interior Architectural Woodwork"**] for wood doorframes[**including fire-rated wood doorframes**].
2. [**Section 064023 "Interior Architectural Woodwork"**] [**Section 064200 "Wood Paneling"**] for requirements for veneers from the same flitches for both flush wood doors and wood paneling.
3. Section 088000 "Glazing" for glass view panels in flush wood doors.
4. [**Section 099113 "Exterior Painting"**] [**Section 099123 "Interior Painting"**] [**and**] [**Section 099300 "Staining and Transparent Finishing"**] for field finishing doors.
5. Section 134900 "Radiation Protection" for lead-lined flush wood doors.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of door indicated. Include details of core and edge construction[, **louvers,**] and trim for openings.[**Include factory-finishing specifications.**]

1. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

1. Certificates for [**Credit MR 6**] [**Credit MR 7**]: Chain-of-custody certificates

- indicating that flush wood doors comply with forest certification requirements.[**Include documentation that manufacturer is certified for chain of custody by an FSC-accredited certification body.**] Include statement indicating cost for each certified wood product.
2. Product Data for Credit IEQ 4.4: For adhesives and composite wood products, documentation indicating that product contains no urea formaldehyde.
 3. Laboratory Test Reports for Credit IEQ 4: For **[adhesives] [composite wood products] [and] [paints and coatings]**, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: Indicate location, size, and hand of each door; elevation of each kind of door; construction details not covered in Product Data; location and extent of hardware blocking; and other pertinent data.
1. Indicate dimensions and locations of mortises and holes for hardware.
 2. Indicate dimensions and locations of cutouts.
 3. Indicate requirements for veneer matching.
 4. Indicate doors to be factory finished and finish requirements.
 5. Indicate fire-protection ratings for fire-rated doors.
- D. Samples for Initial Selection: For **[factory-finished doors]**.
- E. Samples for Verification:
1. Factory finishes applied to actual door face materials, approximately **8 by 10 inches** (200 by 250 mm), for each material and finish. **[For each wood species and transparent finish, provide set of three samples showing typical range of color and grain to be expected in the finished work.]**
 2. Plastic laminate, **6 inches** (150 mm) square, for each color, texture, and pattern selected.
 3. Corner sections of doors, approximately **8 by 10 inches** (200 by 250 mm), with door faces and edges representing actual materials to be used.
 - a. Provide samples for each species of veneer and solid lumber required.
 - b. Provide samples for each color, texture, and pattern of plastic laminate required.
 - c. Finish veneer-faced door samples with same materials proposed for factory-finished doors.
 4. Louver blade and frame sections, **6 inches** (150 mm) long, for each material and finish specified.
 5. Frames for light openings, **6 inches** (150 mm) long, for each material, type, and finish required.
- 1.4 INFORMATIONAL SUBMITTALS
- A. Warranty: Sample of special warranty.

1.5 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A qualified manufacturer that is certified for chain of custody by an FSC-accredited certification body.
- B. Source Limitations: Obtain flush wood doors[**and wood paneling**] from single manufacturer.
- C. Quality Standard: In addition to requirements specified, comply with **[AWI's "Architectural Woodwork Quality Standards Illustrated."]** **[WDMA I.S.1-A, "Architectural Wood Flush Doors."]** **[WI's "Manual of Millwork."]**
 - 1. Provide AWI Quality Certification Labels or an AWI letter of licensing for Project indicating that doors comply with requirements of grades specified.
 - 2. Provide WI-Certified Compliance Certificate indicating that doors comply with requirements of grades specified.
 - 3. Provide WI-Certified Compliance Certificate for installation.
- D. Fire-Rated Wood Doors: Doors complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at **[positive pressure]** **[as close to neutral pressure as possible]** according to **[NFPA 252]** **[UBC Standard 7-2]** **[or]** **[UL 10B]** **[UL 10C]**.
 - 1. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.
 - 2. Temperature-Rise Limit: **[Where indicated]** **[At vertical exit enclosures and exit passageways]**, provide doors that have a maximum transmitted temperature end point of not more than **450 deg F** (250 deg C) above ambient after 30 minutes of standard fire-test exposure.
- E. Preinstallation Conference: Conduct conference at **[Project site]** **[time and location as determined by DEN Project Manager]** **<Insert location>**.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Comply with requirements of referenced standard and manufacturer's written instructions.
- B. Package doors individually in **[plastic bags or cardboard cartons]** **[cardboard cartons and wrap bundles of doors in plastic sheeting]**.

- C. Mark each door on[**top and**] bottom rail with opening number used on Shop Drawings.

1.8 PROJECT CONDITIONS

- A. Environmental Limitations: Do not deliver or install doors until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
- B. Environmental Limitations: Do not deliver or install doors until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and HVAC system is operating and maintaining temperature between **60 and 90 deg F** (16 and 32 deg C) and relative humidity between **[25 and 55] [17 and 50] <Insert humidity range>** percent during the remainder of the construction period.

1.9 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace doors that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Warping (bow, cup, or twist) more than **1/4 inch** (6.4 mm) in a **42-by-84-inch** (1067-by-2134-mm) section.
 - b. Telegraphing of core construction in face veneers exceeding **0.01 inch in a 3-inch** (0.25 mm in a 76.2-mm) span.
 - 2. Warranty shall also include installation and finishing that may be required due to repair or replacement of defective doors.
 - 3. Warranty Period for Solid-Core Interior Doors: Life of installation.
- B. CONSTRUCTION WASTE MANAGEMENT
 - 1. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Algoma Hardwoods, Inc.

2. Ampco, Inc.
3. Buell Door Company Inc.
4. Chappell Door Co.
5. Eagle Plywood & Door Manufacturing, Inc .
6. Eggers Industries.
7. Graham; an Assa A bloy Group company.
8. Haley Brothers, Inc.
9. Ideal Architectural Doors & Plywood.
10. Ipik Door Company.
11. Lambton Doors.
12. Marlite.
13. Marshfield Door Systems, Inc.
14. Mohawk Flush Doors, Inc.; a Masonite company.
15. Oshkosh Architectural Door Company.
16. Poncraft Door Company.
17. Vancouver Door Company.
18. VT Industries Inc.
19. <Insert manufacturer>
20. or approved equal.

2.2 DOOR CONSTRUCTION, GENERAL

- A. Certified Wood: Fabricate doors with [**cores**] [**veneers**] [**not less than 70 percent of wood products**] [**all wood products**] produced from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."
- B. Low-Emitting Materials: Fabricate doors with adhesives and composite wood products that do not contain urea formaldehyde.
- C. Low-Emitting Materials: Fabricate doors with [**adhesives**] [**and**] [**composite wood products**] that comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- D. WDMA I.S.1-A Performance Grade: [**Extra Heavy Duty**] [**Heavy Duty**] [**Standard Duty**] [**As indicated**].
- E. WDMA I.S.1-A Performance Grade:
 1. Heavy Duty unless otherwise indicated.
 2. Extra Heavy Duty: [**Classrooms**] [**public toilets**] [**janitor's closets**] [**assembly spaces**] [**exits**] [**patient rooms**] <Insert locations> [**and where indicated**].
- F. Particleboard-Core Doors:
 1. Particleboard: ANSI A208.1, [**Grade LD-1**] [**or**] [**Grade LD-2**] [, made with **binder containing no urea-formaldehyde resin**].

2. Particleboard: Straw-based particleboard complying with ANSI A208.1, Grade LD-2 or M-2, except for density.
 3. Blocking: Provide wood blocking in particleboard-core doors [**as needed to eliminate through-bolting hardware.**] [**as follows:**]
 - a. 5-inch (125-mm) top-rail blocking, in doors indicated to have closers.
 - b. 5-inch (125-mm) bottom-rail blocking, in exterior doors and doors indicated to have kick, mop, or armor plates.
 - c. 5-inch (125-mm) midrail blocking, in doors indicated to have exit devices.
 4. Provide doors with [**glued-wood-stave**] [**structural-composite-lumber**] [**either glued-wood-stave or structural-composite-lumber**] cores instead of particleboard cores for doors indicated to receive exit devices.
- G. Structural-Composite-Lumber-Core Doors:
1. Structural Composite Lumber: WDMA I.S.10.
 - a. Screw Withdrawal, Face: 700 lbf (3100 N).
 - b. Screw Withdrawal, Edge: 400 lbf (1780 N).
- H. Fire-Protection-Rated Doors: Provide core specified or mineral core as needed to provide fire-protection rating indicated.
1. Edge Construction: Provide edge construction with intumescent seals concealed by outer stile. Comply with specified requirements for exposed edges.
 2. Pairs: Provide fire-retardant stiles that are listed and labeled for applications indicated without formed-steel edges and astragals. [**Provide stiles with concealed intumescent seals.**] Comply with specified requirements for exposed edges.
 3. Pairs: Provide formed-steel edges and astragals[**with intumescent seals**].
 - a. Finish steel edges and astragals with baked enamel[**same color as doors**].
 - b. Finish steel edges and astragals to match door hardware (locksets or exit devices).
- I. Mineral-Core Doors:
1. Core: Noncombustible mineral product complying with requirements of referenced quality standard and testing and inspecting agency for fire-protection rating indicated.
 2. Blocking: Provide composite blocking with improved screw-holding capability approved for use in doors of fire-protection ratings indicated [**as needed to eliminate through-bolting hardware.**] [**as follows:**]
 - a. 5-inch (125-mm) top-rail blocking.
 - b. 5-inch (125-mm) bottom-rail blocking, in doors indicated to have protection plates.
 - c. 5-inch (125-mm) midrail blocking, in doors indicated to have armor plates.

- d. [4-1/2-by-10-inch (114-by-250-mm) **lock blocks**] [5-inch (125-mm) **midrail blocking**], in doors indicated to have exit devices.
3. Edge Construction: At hinge stiles, provide laminated-edge construction with improved screw-holding capability and split resistance. Comply with specified requirements for exposed edges.

2.3 VENEERED-FACED DOORS FOR TRANSPARENT FINISH

A. Interior Solid-Core Doors <Insert drawing designation>:

1. Grade: [**Premium, with Grade AA faces**] [**Premium, with Grade A faces**]
2. Species: [**Red oak**] <Insert species>.
3. Cut: [**Rift cut**].
4. Match between Veneer Leaves: [**Slip**] match.
5. Assembly of Veneer Leaves on Door Faces: [**Running**] match.
6. Pair and Set Match: Provide for doors hung in same opening[**or separated only by mullions**].
7. Room Match: Match door faces within each separate room or area of building. Corridor-door faces do not need to match where they are separated by [10 feet (3 m)] [20 feet (6 m)] <Insert distance> or more.
8. Room Match: Provide door faces of compatible color and grain within each separate room or area of building.
9. Transom Match: [**Continuous match**] [**End match**] [**As indicated**].
10. Blueprint Match: Where indicated, provide doors with faces produced from same flitches as adjacent wood paneling and arranged to provide blueprint match with wood paneling. Comply with requirements in [**Section 064023 "Interior Architectural Woodwork."**] [**Section 064200 "Wood Paneling."**]
11. Exposed Vertical[and Top] Edges: [**Same species as faces or a compatible species**]
12. Core: [**Particleboard**] [**Glued wood stave**] [**Structural composite lumber**] [**Either glued wood stave or structural composite lumber**] [**Either glued or nonglued wood stave or structural composite lumber**].
13. Construction: [**Five**] [**Five or seven**] plies. Stiles and rails are bonded to core, then entire unit abrasive planed before veneering.[**Faces are bonded to core using a hot press.**]
14. Construction: Seven plies, either bonded or nonbonded construction.
15. WDMA I.S.1-A Performance Grade: [**Extra Heavy Duty**] [**Heavy Duty**] [**Standard Duty**] [**As indicated**].

2.4 LOUVERS AND LIGHT FRAMES

- A. Wood Louvers: Door manufacturer's standard solid-wood louvers unless otherwise indicated.
 1. Wood Species: [**Same species as door faces**].
- B. Metal Louvers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Air Louvers Inc.
 - b. Anemostat; a Mestek company.
 - c. Hiawatha Incorporated.
 - d. L & L Louvers, Inc.
 - e. LL Building Products, Inc.; a division of GAF Materials Corporation.
 - f. Louvers & Dampers, Inc.; a Mestek company.
 - g. McGill Architectural Products.
 - h. **<Insert manufacturer>**
 - i. or approved equal.
2. Blade Type: **[Vision-proof, inverted V]** .
3. Metal and Finish: Hot-dip galvanized steel, **0.040 inch** (1.0 mm) thick, **[with baked-enamel- or powder-coated finish]**.
4. Metal and Finish: Extruded aluminum with Class II, clear anodic finish, AA-M12C22A31.
5. Metal and Finish: Extruded aluminum with **[light bronze] [medium bronze] [dark bronze] [black]**, Class II, color anodic finish, AA-M12C22A32/A34.

C. Louvers for Fire-Rated Doors: Metal louvers with fusible link and closing device, listed and labeled for use in doors with fire-protection rating of 1-1/2 hours and less.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Air Louvers Inc.
 - b. Anemostat; a Mestek company.
 - c. Hiawatha Incorporated.
 - d. L & L Louvers, Inc.
 - e. LL Building Products, Inc.; a division of GAF Materials Corporation.
 - f. Louvers & Dampers, Inc.; a Mestek company.
 - g. McGill Architectural Products.
 - h. **<Insert manufacturer>**
 - i. or approved equal.
2. Metal and Finish: Hot-dip galvanized steel, **0.040 inch** (1.0 mm) thick, **[with baked-enamel- or powder-coated finish]**.

D. Metal Frames for Light Openings in Fire-Rated Doors: Manufacturer's standard frame formed of **0.048-inch-** (1.2-mm-) thick, cold-rolled steel sheet; **[with baked-enamel- or powder-coated finish]**; and approved for use in doors of fire-protection rating indicated.

2.5 FABRICATION

A. Factory fit doors to suit frame-opening sizes indicated. Comply with clearance requirements of referenced quality standard for fitting unless otherwise indicated.

1. Comply with requirements in NFPA 80 for fire-rated doors.
- B. Factory machine doors for hardware that is not surface applied. Locate hardware to comply with DHI-WDHS-3. Comply with final hardware schedules, doorframe Shop Drawings, DHI A115-W series standards, and hardware templates.
 1. Coordinate with hardware mortises in metal frames to verify dimensions and alignment before factory machining.
 2. Metal Astragals: Factory machine astragals and formed-steel edges for hardware for pairs of fire-rated doors.
- C. Transom and Side Panels: Fabricate matching panels with same construction, exposed surfaces, and finish as specified for associated doors. Finish bottom edges of transoms and top edges of rabbeted doors same as door stiles.
 1. Fabricate door and transom panels with full-width, solid-lumber[, **rabbeted,**] meeting rails. Provide factory-installed spring bolts for concealed attachment into jambs of metal doorframes.
- D. Openings: Cut and trim openings through doors in factory.
 1. Light Openings: Trim openings with moldings of material and profile indicated.
 2. Glazing: Factory install glazing in doors indicated to be factory finished. Comply with applicable requirements in Section 088000 "Glazing."
 3. Louvers: Factory install louvers in prepared openings.

2.6 FACTORY FINISHING

- A. General: Comply with referenced quality standard for factory finishing. Complete fabrication, including fitting doors for openings and machining for hardware that is not surface applied, before finishing.
 1. Finish faces, all four edges, edges of cutouts, and mortises. Stains and fillers may be omitted on[**top and**] bottom edges, edges of cutouts, and mortises.
- B. Finish doors at factory.
- C. Use only paints and coatings that comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- D. Transparent Finish:
 1. Grade: [**Premium**].
 2. Finish: AWI [**conversion varnish**] [or] [**catalyzed polyurethane**] <Insert finish **designation**> system.
 3. Finish: WDMA [**TR-4 conversion varnish**] [or] [**TR-6 catalyzed polyurethane**] <Insert finish **designation**>.

4. Finish: WI System [**4 clear conversion varnish**] [**5 catalyzed polyurethane**] [**or**] [**8 UV-curable coating**] <Insert finish designation>.
5. Staining: [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] [**None required**].
6. Effect: [**Open-grain finish**] [**Filled finish**] [**Semifilled finish, produced by applying an additional finish coat to partially fill the wood pores**].
7. Sheen: [**Satin**] [**Semigloss**].

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine doors and installed doorframes before hanging doors.
 1. Verify that frames comply with indicated requirements for type, size, location, and swing characteristics and have been installed with level heads and plumb jambs.
 2. Reject doors with defects.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Hardware: For installation, see Section 087100 "Door Hardware" and Section 087111 "Door Hardware (Descriptive Specification)."
- B. Installation Instructions: Install doors to comply with manufacturer's written instructions and the referenced quality standard, and as indicated.
 1. Install fire-rated doors in corresponding fire-rated frames according to NFPA 80.
- C. Job-Fitted Doors: Align and fit doors in frames with uniform clearances and bevels as indicated below; do not trim stiles and rails in excess of limits set by manufacturer or permitted for fire-rated doors. Machine doors for hardware. Seal edges of doors, edges of cutouts, and mortises after fitting and machining.
 1. Clearances: Provide **1/8 inch** (3.2 mm) at heads, jambs, and between pairs of doors. Provide **1/8 inch** (3.2 mm) from bottom of door to top of decorative floor finish or covering unless otherwise indicated. Where threshold is shown or scheduled, provide **1/4 inch** (6.4 mm) from bottom of door to top of threshold unless otherwise indicated.
 - a. Comply with NFPA 80 for fire-rated doors.
 2. Bevel non-fire-rated doors **1/8 inch in 2 inches** (3-1/2 degrees) at lock and hinge edges.
 3. Bevel fire-rated doors **1/8 inch in 2 inches** (3-1/2 degrees) at lock edge; trim stiles and rails only to extent permitted by labeling agency.

- D. Factory-Fitted Doors: Align in frames for uniform clearance at each edge.
- E. Factory-Finished Doors: Restore finish before installation if fitting or machining is required at Project site.

3.3 ADJUSTING

- A. Operation: Rehang or replace doors that do not swing or operate freely.
- B. Finished Doors: Replace doors that are damaged or that do not comply with requirements. Doors may be repaired or refinished if work complies with requirements and shows no evidence of repair or refinishing.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 081416

SECTION 083113 - ACCESS DOORS AND FRAMES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Access doors and frames for walls and ceilings.
 - 2. Floor access doors and frames.
- B. Related Requirements:
 - 1. Section 077200 "Roof Accessories" for roof hatches.
 - 2. Section 083113.53 "Security Access Doors and Frames" for access doors and frames for security applications.
 - 3. Section 233300 "Air Duct Accessories" for heating and air-conditioning duct access doors.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 ALLOWANCES

- A. Access doors and frames are part of an access door and frame allowance.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details[, **fire ratings**,] materials, individual components and profiles, and finishes.
 - 2. Include data substantiating that materials comply with requirements.
- B. Shop Drawings:
 - 1. Include plans, elevations, sections, details, and attachments to other work.
 - 2. Detail fabrication and installation of access doors and frames for each type of substrate.

- C. Samples: For each door face material, at least **3 by 5 inches** (75 by 125 mm) in size, in specified finish.
- D. Product Schedule: Provide complete access door and frame schedule, including types, locations, sizes, latching or locking provisions, and other data pertinent to installation.

1.5 QUALITY ASSURANCE

- A. General: Furnish each access door assembly manufactured as an integral unit, complete with all parts, and ready for installation.
- B. Single Source Responsibility: Obtain access doors for entire project from one source from a single manufacturer.
- C. Fire Resistance Ratings: Wherever a fire resistance classification is required, provide access door assembly with panel door, frame, hinge, and latch from manufacturer listed in Underwriters Laboratories, Inc.'s "Building Materials Directory" for rating required.
- D. Provide UL label on each fire rated access door.
- E. Size Variations: Obtain DEN Project Manager's acceptance of manufacturer's standard size units, which may vary slightly from sizes indicated.
- F. Coordination: Furnish inserts and anchoring devices that must be built into other work for installation of access doors. Coordinate delivery with other work to avoid delay.

1.6 PROJECT CONDITIONS

- A. Verification: Obtain specific locations and sizes for required access doors from trades requiring access to concealed equipment, and indicate on submittal schedule.
- B. Special Size Access Doors: Use where required or requested; indicate on schedule.

1.7 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Rated Access Doors and Frames: Units complying with NFPA 80 that are identical to access door and frame assemblies tested for fire-test-response characteristics

according to the following test method and that are listed and labeled by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:

1. NFPA 252 or UL 10B for fire-rated access door assemblies installed vertically.
2. NFPA 288 for fire-rated access door assemblies installed horizontally.

2.2 ACCESS DOORS AND FRAMES FOR WALLS AND CEILINGS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Access Panel Solutions.
2. Acudor Products, Inc.
3. Alfab, Inc.
4. Babcock-Davis.
5. Cendrex Inc.
6. Elmdor/Stoneman Manufacturing Co.; Div. of Acorn Engineering Co.
7. Jensen Industries; Div. of Broan-Nutone, LLC.
8. J. L. Industries, Inc.; Div. of Activar Construction Products Group.
9. Karp Associates, Inc.
10. Larsen's Manufacturing Company.
11. Maxam Metal Products Limited.
12. Metropolitan Door Industries Corp.
13. MIFAB, Inc.
14. Milcor Inc.
15. Nystrom, Inc.
16. Williams Bros. Corporation of America (The).
17. **<Insert manufacturer's name>**.
18. or approved equal.

B. Source Limitations: Obtain each type of access door and frame from single source from single manufacturer.

C. For projects with multiple access doors, consider providing a schedule, or distinguish between units by giving each a number designation and creating an additional set of requirements for each variation.

D. Flush Access Doors with Exposed Flanges **<Insert drawing designation>**:

1. Fabricate units of continuous welded steel construction unless otherwise indicated. Grind welds smooth and flush with adjacent surfaces. Furnish attachment devices and fasteners of type required to secure access panels to types of support shown.
2. Assembly Description: Fabricate door to fit flush to frame. Provide manufacturer's standard-width exposed flange, proportional to door size.
3. Locations: **[Wall] [Ceiling] [Wall and ceiling] <Insert location or substrate>**.
4. Door Size: **<Insert door size>**.
5. Uncoated Steel Sheet for Door: Minimum **[Nominal 0.060 inch (1.52 mm), 16 gage] <Insert thickness>**.

- a. Finish: **[Factory prime] [Factory finish]**.
 6. Metallic-Coated Steel Sheet for Door: Minimum **[Nominal 0.064 inch (1.63 mm), 16 gage] <Insert thickness>**.
 - a. Finish: **[Factory prime] [Factory finish]**.
 7. Stainless-Steel Sheet for Door: Minimum **[Nominal 0.062 inch (1.59 mm), @16 gage] <Insert thickness>**.
 - a. Finish: **[No. 4] [No. 2b]**.
 8. Frame Material: **[Same material, thickness, and finish as door] <Insert material, thickness, finish>**.
 - a. Fabricate frame with exposed flange nominal 1 inch wide around perimeter of frame for units installed in the following construction:
 - 1) Exposed masonry.
 - 2) Exposed concrete.
 - 3) Drywall finish.
 - 4) Ceramic tile finish.
 - b. For gypsum drywall or gypsum veneer plaster, furnish perforated frames with drywall bead.
 - c. For installation in masonry construction, furnish frames with adjustable metal masonry anchors.
 9. Hinges: **[Manufacturer's standard] <Insert hinge type> <concealed spring hinges or concealed continuous piano hinge set to open 175 degrees>**
 - a. For 2'-0" X 2'-0" or larger doors provide continuous piano hinge or minimum three (3) hinges.
 10. Hardware: Furnish flush, screwdriver operated cam locks of number required to hold door in flush, smooth plane when closed.
 - a. Provide one cylinder lock with automatic dust shutter. Type of cylinder is specified in Division 08 section "Door Hardware", master key.
- E. Flush Access Doors with Concealed Flanges **<Insert drawing designation>**:
1. Fabricate units of continuous welded steel construction unless otherwise indicated. Grind welds smooth and flush with adjacent surfaces. Furnish attachment devices and fasteners of type required to secure access panels to types of support shown.
 2. Assembly Description: Fabricate door to fit flush to frame. Provide frame with **[gypsum board] [plaster]** beads for concealed flange installation.
 3. Locations: **[Wall] [Ceiling] [Wall and ceiling] <Insert location or substrate>**.
 4. Door Size: **<Insert door size>**.

5. Uncoated Steel Sheet for Door: [Nominal 0.060 inch (1.52 mm), 16 gage] <Insert thickness>.
 - a. Finish: [Factory prime] [Factory finish].
 6. Metallic-Coated Steel Sheet for Door: [Nominal 0.064 inch (1.63 mm), 16 gage] <Insert thickness>.
 - a. Finish: [Factory prime] [Factory finish].
 7. Stainless-Steel Sheet for Door: [Nominal 0.062 inch (1.59 mm), 16 gage] <Insert thickness>.
 - a. Finish: [No. 4] [No. 2b].
 8. Frame Material: [Same material and thickness as door] <Insert material, thickness, finish>.
 9. Hinges: [Manufacturer's standard] <Insert hinge type>.
 10. Hardware: Furnish flush, screwdriver operated cam locks of number required to hold door in flush, smooth plane when closed.
 - a. Provide one cylinder lock with automatic dust shutter. Type of cylinder is specified in Division 08 section "Door Hardware", master key.
- F. Recessed Access Doors <Insert drawing designation>:
1. Fabricate units of continuous welded steel construction unless otherwise indicated. Grind welds smooth and flush with adjacent surfaces. Furnish attachment devices and fasteners of type required to secure access panels to types of support shown.
 2. Assembly Description: Fabricate door in the form of a pan recessed [1/2 inch (13 mm)] [5/8 inch (16 mm)] [1 inch (25 mm)] for [gypsum board] [plaster] [acoustical tile] <Insert material> infill. Provide frame with [gypsum board bead for concealed flange] [plaster bead for concealed flange] [no bead for acoustical tile] installation.
 3. Locations: [Wall] [Ceiling] [Wall and ceiling] <Insert location or substrate>.
 4. Door Size: <Insert door size>.
 5. Uncoated Steel Sheet for Door: [Nominal 0.060 inch (1.52 mm), 16 gage] <Insert thickness>.
 - a. Finish: [Factory prime] [Factory finish].
 6. Metallic-Coated Steel Sheet for Door: [Nominal 0.064 inch (1.63 mm), 16 gage] <Insert thickness>.
 - a. Finish: [Factory prime] [Factory finish].
 7. Stainless-Steel Sheet for Door: [Nominal 0.062 inch (1.59 mm), 16 gage] <Insert thickness>.

- a. Finish: **[No. 4] [No. 2b]**.
 8. Frame Material: **[Same material and thickness as door] <Insert material, thickness, finish>**.
 9. Hinges: **[Manufacturer's standard] <Insert hinge type>**.
 10. Hardware: Furnish flush, screwdriver operated cam locks of number required to hold door in flush, smooth plane when closed.
 - a. Provide one cylinder lock with automatic dust shutter. Type of cylinder is specified in Division 08 section "Door Hardware", master key.
- G. Exterior Flush Access Doors **<Insert drawing designation>**:
1. Fabricate units of continuous welded steel construction unless otherwise indicated. Grind welds smooth and flush with adjacent surfaces. Furnish attachment devices and fasteners of type required to secure access panels to types of support shown.
 2. Assembly Description: Fabricate door to be weatherproof and fit flush to frame. Provide manufacturer's standard **2-inch- (50-mm-)** thick fiberglass insulation and extruded door gaskets. Provide manufacturer's standard-width frame for surface mounting, proportional to door size.
 3. Locations: **[Wall] <Insert location or substrate>**.
 4. Door Size: **<Insert door size>**.
 5. Metallic-Coated Steel Sheet for Door: **[Nominal 0.064 inch (1.63 mm), 16 gage] <Insert thickness>**.
 - a. Finish: **[Factory prime] [Factory finish]**.
 6. Stainless-Steel Sheet for Door: **[Nominal 0.062 inch (1.59 mm), 16 gage] <Insert thickness>**.
 - a. Finish: **[No. 4] [No. 2b]**.
 7. Frame Material: **[Same material, thickness, and finish as door] <Insert material, thickness, finish>**.
 8. Hinges: **[Manufacturer's standard] <Insert hinge type>**.
 9. Hardware: Furnish flush, screwdriver operated cam locks of number required to hold door in flush, smooth plane when closed.
 - a. Provide one cylinder lock with automatic dust shutter. Type of cylinder is specified in Division 08 section "Door Hardware", master key.
- H. Fire-Rated, Flush Access Doors with Exposed Flanges **<Insert drawing designation>**:
1. Fabricate units of continuous welded steel construction unless otherwise indicated. Grind welds smooth and flush with adjacent surfaces. Furnish attachment devices and fasteners of type required to secure access panels to types of support shown.

2. Assembly Description: Fabricate door to fit flush to frame, [**with a core of mineral-fiber insulation enclosed in sheet metal**] [**uninsulated**]. Provide self-latching door with automatic closer and interior latch release. Provide manufacturer's standard-width exposed flange, proportional to door size.
 3. Locations: [**Wall**] [**Ceiling**] [**Wall and ceiling**] <Insert location or substrate>.
 4. Fire-Resistance Rating: Not less than [**that indicated**] [**that of adjacent construction**] [**45 minutes**] [**1 hour**] [**1-1/2 hours**] [**2 hours**] [**3 hours**] <Insert requirement>.
 5. Temperature-Rise Rating: [**450 deg F (250 deg C) at the end of 30 minutes**] [**250 deg F (139 deg C) at the end of 30 minutes**].
 6. Uncoated Steel Sheet for Door: [**Nominal 0.036 inch (0.91 mm), 20 gage**] <Insert thickness>.
 - a. Finish: [**Factory prime**] [**Factory finish**].
 7. Metallic-Coated Steel Sheet for Door: [**Nominal 0.040 inch (1.02 mm), 20 gage**] <Insert thickness>.
 - a. Finish: [**Factory prime**] [**Factory finish**].
 8. Stainless-Steel Sheet for Door: [**Nominal 0.038 inch (0.95 mm), 20 gage**] <Insert thickness>.
 - a. Finish: [**No. 4**] [**No. 2b**].
 9. Frame Material: [**Same material, thickness, and finish as door**] <Insert material, thickness, finish>.
 10. Hinges: [**Manufacturer's standard**] <Insert hinge type>.
 11. Hardware: Furnish flush, screwdriver operated cam locks of number required to hold door in flush, smooth plane when closed.
 - a. Provide one cylinder lock with automatic dust shutter. Type of cylinder is specified in Division 08 section "Door Hardware", master key.
- I. Fire-Rated, Flush Access Doors with Concealed Flanges <Insert drawing designation>:
1. Fabricate units of continuous welded steel construction unless otherwise indicated. Grind welds smooth and flush with adjacent surfaces. Furnish attachment devices and fasteners of type required to secure access panels to types of support shown.
 2. Assembly Description: Fabricate door to fit flush to frame, [**with a core of mineral-fiber insulation enclosed in sheet metal**] [**uninsulated**]. Provide self-latching door with automatic closer and interior latch release. Provide frame with [**gypsum board**] [**plaster**] beads for concealed flange installation.
 3. Locations: [**Wall**] [**Ceiling**] [**Wall and ceiling**] <Insert location or substrate>.
 4. Fire-Resistance Rating: Not less than [**that indicated**] [**that of adjacent construction**] [**45 minutes**] [**1 hour**] [**1-1/2 hours**] [**2 hours**] [**3 hours**] <Insert requirement>.

5. Temperature-Rise Rating: [450 deg F (250 deg C) at the end of 30 minutes] [250 deg F (139 deg C) at the end of 30 minutes].
 6. Uncoated Steel Sheet for Door: [Nominal 0.036 inch (0.91 mm), 20 gage] <Insert thickness>.
 - a. Finish: [Factory prime] [Factory finish].
 7. Metallic-Coated Steel Sheet for Door: [Nominal 0.040 inch (1.02 mm), 20 gage] <Insert thickness>.
 - a. Finish: [Factory prime] [Factory finish].
 8. Stainless-Steel Sheet for Door: [Nominal 0.038 inch (0.95 mm), 20 gage] <Insert thickness>.
 - a. Finish: [No. 4] [No. 2b].
 9. Frame Material: [Same material, thickness, and finish as door] <Insert material, thickness, finish>.
 10. Hinges: [Manufacturer's standard] <Insert hinge type>.
 11. Hardware: Furnish flush, screwdriver operated cam locks of number required to hold door in flush, smooth plane when closed.
 - a. Provide one cylinder lock with automatic dust shutter. Type of cylinder is specified in Division 08 section "Door Hardware", master key.
- J. Retain "Latch" or "Lock" Subparagraph below. Locks provide greater security than latches.
1. Latch: [Cam latch] <Insert latch> operated [by screwdriver] [as shown on Drawings] [as indicated in schedule] <Insert operator> [with interior release].
 2. Lock: [Cylinder] [As shown on Drawings] [As indicated in schedule] <Insert lock>.
 - a. Lock Preparation: Prepare door panel to accept cylinder specified in [Section 087100 "Door Hardware."] [Section 087111 "Door Hardware (Descriptive Specification)."]

2.3 FLOOR ACCESS DOORS AND FRAMES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Acudor Products, Inc.
 2. Babcock-Davis.
 3. Bilco Company (The).
 4. Cendrex Inc.
 5. Dur-Red Products.

6. Halliday Products.
 7. Jensen Industries; Div. of Broan-Nutone, LLC.
 8. Karp Associates, Inc.
 9. Maxam Metal Products Limited.
 10. Metropolitan Door Industries Corp.
 11. MIFAB, Inc.
 12. Milcor Inc.
 13. Nystrom, Inc.
 14. U.S.F. Fabrication.
 15. Williams Bros. Corporation of America (The).
 16. <Insert manufacturer's name>.
 17. or approved equal.
- B. Floor Doors, General: Equip each door with adjustable counterbalancing springs, heavy-duty hold-open arm that automatically locks door open at 90 degrees, release handle with red vinyl grip that allows for one-handed closure, and recessed lift handle.
- C. Steel Angle-Frame Floor Door: **[Single]** **[Double]**-leaf opening. **[Prime-painted structural]** **[Galvanized structural]** **[Stainless]**-steel frame with **[3/16- or 1/4-inch- (4.8- or 6.4-mm-)]** **[3/16-inch- (4.8-mm-)]** **[1/4-inch- (6.4-mm-)]** thick, diamond-pattern, **[prime-painted structural]** **[galvanized structural]** **[stainless]**-steel tread plate door; nonwatertight; loading capacity to support **[150-lbf/sq. ft. (7.2-kN/sq. m) pedestrian live]** **[300-lbf/sq. ft. (14.4-kN/sq. m) pedestrian live]** **[AASHTO H20 concentrated wheel]** load.
1. Fire-Resistance Rating: Not less than **[that indicated]** **[that of adjacent construction]** **[45 minutes]** **[1 hour]** **[1-1/2 hours]** **[2 hours]** **[3 hours]** <Insert requirement>.
 - a. Finish: Yellow with wording "FIRE DOOR - DO NOT STORE MATERIALS ON SURFACE."
- D. Watertight Steel Gutter-Frame Floor Door: **[Single]** **[Double]**-leaf opening. **[Prime-painted structural]** **[Galvanized structural]** **[Stainless]**-steel channel frame forming gutter with **NPS 1-1/2 (DN 40)** drainage coupling and **[3/16- or 1/4-inch- (4.8- or 6.4-mm-)]** **[3/16-inch- (4.8-mm-)]** **[1/4-inch- (6.4-mm-)]** thick, diamond-pattern, **[prime-painted structural]** **[galvanized structural]** **[stainless]**-steel tread plate door; watertight; loading capacity to support **[150-lbf/sq. ft. (7.2-kN/sq. m) pedestrian live]** **[300-lbf/sq. ft. (14.4-kN/sq. m) pedestrian live]** **[AASHTO H20 concentrated wheel]** load.
1. Fire-Resistance Rating: Not less than **[that indicated]** **[that of adjacent construction]** **[45 minutes]** **[1 hour]** **[1-1/2 hours]** **[2 hours]** **[3 hours]** <Insert requirement>.
 - a. Finish: Yellow with wording "FIRE DOOR - DO NOT STORE MATERIALS ON SURFACE."
- E. Hardware: Provide the following:

1. Hinges: Heavy-duty, [**zinc-coated steel**] [**stainless-steel**] [**brass**] butt hinges with stainless-steel pins.
2. Latch: Stainless-steel slam latch.
3. Lock: [**Staple for a padlock**] [**Recessed hasp**] [**Keyed deadbolt lock**] [**Hasp and staple**].
4. Hardware Material: [**Manufacturer's standard**] [**Stainless steel, including latch and lifting mechanism assemblies, hold-open arms, and all brackets, hinges, pins, and fasteners**].

F. Insulation: [**Fiberglass**] [**Urethane**] with liner pan.

G. Safety Accessories: Safety [**chains**] [**net**] [**railing**].

2.4 MATERIALS

A. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.

B. Rolled-Steel Floor Plate: ASTM A 786/A 786M, rolled from plate complying with ASTM A 36/A 36M or ASTM A 283/A 283M, Grade C or D.

C. Steel Sheet: Uncoated or electrolytic zinc coated, ASTM A 879/A 879M, with cold-rolled steel sheet substrate complying with ASTM A 1008/A 1008M, Commercial Steel (CS), exposed.

D. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B; with minimum **G60** (Z180) or **A60** (ZF180) metallic coating.

E. Rolled-Stainless-Steel Floor Plate: ASTM A 793, manufacturer's standard finish.

F. Stainless-Steel Sheet, Strip, Plate, and Flat Bars: ASTM A 666, [**Type 304**] [**Type 316**]. Remove tool and die marks and stretch lines or blend into finish.

G. Frame Anchors: Same type as door face.

H. Inserts, Bolts, and Anchor Fasteners: Hot-dip galvanized steel according to ASTM A 153/A 153M or ASTM F 2329.

2.5 FABRICATION

A. General: Provide access door and frame assemblies manufactured as integral units ready for installation.

B. Metal Surfaces: For metal surfaces exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, rolled trade names, or roughness.

C. Doors and Frames: Grind exposed welds smooth and flush with adjacent surfaces. Furnish attachment devices and fasteners of type required to secure access doors to types of supports indicated.

1. For concealed flanges with drywall bead, provide edge trim for **[gypsum board]** **[and]** **[gypsum base]** securely attached to perimeter of frames.
 2. For concealed flanges with plaster bead for full-bed plaster applications, provide zinc-coated expanded metal lath and exposed casing bead welded to perimeter of frames.
 3. Provide mounting holes in frames for attachment of units to metal or wood framing.
 4. Provide mounting holes in frame for attachment of masonry anchors.
- D. Recessed Access Doors: Form face of panel to provide recess for application of applied finish. Reinforce panel as required to prevent buckling.
1. For recessed doors with plaster infill, provide self-furring expanded metal lath attached to door panel.
- E. Latching Mechanisms: Furnish number required to hold doors in flush, smooth plane when closed.
1. For cylinder locks, furnish two keys per lock and key all locks alike.
 2. For recessed panel doors, provide access sleeves for each locking device. Furnish plastic grommets and install in holes cut through finish.

2.6 FINISHES

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- D. Steel and Metallic-Coated-Steel Finishes:
1. Factory Prime: Apply manufacturer's standard, fast-curing, lead- and chromate-free, universal primer immediately after surface preparation and pretreatment.
 2. Factory Finish: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat, with a minimum dry-film thickness of **1 mil** (0.025 mm) for topcoat.
- E. Stainless-Steel Finishes:
1. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
 2. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.

- a. Run grain of directional finishes with long dimension of each piece.
 - b. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
 - c. Directional Satin Finish: No. 4.
3. Bright, Cold-Rolled, Unpolished Finish: No. 2B.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Comply with manufacturer's written instructions for installing access doors and frames.
- B. Install doors flush with adjacent finish surfaces or recessed to receive finish material.

3.3 ADJUSTING

- A. Adjust doors and hardware, after installation, for proper operation.
- B. Remove and replace doors and frames that are warped, bowed, or otherwise damaged.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement will be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the lump sum contract price.

END OF SECTION 083113

SECTION 083113.53 - SECURITY ACCESS DOORS AND FRAMES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes security access doors and frames for walls and ceilings.
- B. Related Requirements:
 - 1. Section 077200 "Roof Accessories" for roof hatches.
 - 2. Section 083113 "Access Doors and Frames" for access doors and frames for nonsecurity applications.
 - 3. Section 233300 "Air Duct Accessories" for heating and air-conditioning duct access doors.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 ALLOWANCES

- A. Security access doors and frames are part of a security access door and frame allowance.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details[, **fire ratings**,] materials, individual components and profiles, and finishes.
 - 2. Include data substantiating that materials comply with requirements.
- B. Shop Drawings:
 - 1. Include plans, elevations, sections, details, and attachments to other work.
 - 2. Detail fabrication and installation of access doors and frames for each type of substrate.

- C. Samples: For each door face material, at least **3 by 5 inches** (75 by 125 mm) in size, in specified finish.
- D. Product Schedule: Provide complete access door and frame schedule, including types, locations, sizes, latching or locking provisions, and other data pertinent to installation.

1.5 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. General: Furnish each access door assembly manufactured as an integral unit, complete with all parts, and ready for installation.
- B. Single Source Responsibility: Obtain access doors for entire project from one source from a single manufacturer.
- C. Fire Resistance Ratings: Wherever a fire resistance classification is required, provide access door assembly with panel door, frame, hinge, and latch from manufacturer listed in Underwriters Laboratories, Inc.'s "Building Materials Directory" for rating required.
- D. Provide UL label on each fire rated access door.
- E. Size Variations: Obtain DEN Project Manager's acceptance of manufacturer's standard size units, which may vary slightly from sizes indicated.
- F. Coordination: Furnish inserts and anchoring devices that must be built into other work for installation of access doors. Coordinate delivery with other work to avoid delay.

1.7 PROJECT CONDITIONS

- A. Verification: Obtain specific locations and sizes for required access doors from trades requiring access to concealed equipment, and indicate on submittal schedule.
- B. Special Size Access Doors: Use where required or requested; indicate on schedule.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Rated Access Doors and Frames: Units complying with NFPA 80 that are identical to access door and frame assemblies tested for fire-test-response characteristics according to the following test method and that are listed and labeled by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:

1. NFPA 252 or UL 10B for fire-rated access door assemblies installed vertically.

2.2 SECURITY ACCESS DOORS AND FRAMES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Acudor Products, Inc.
2. Babcock-Davis.
3. Cendrex Inc.
4. Elmdor/Stoneman Manufacturing Co.; Div. of Acorn Engineering Co.
5. Jensen Industries; Div. of Broan-Nutone, LLC.
6. J. L. Industries, Inc.; Div. of Activar Construction Products Group.
7. Karp Associates, Inc.
8. Larsen's Manufacturing Company.
9. Maxam Metal Products Limited.
10. Metropolitan Door Industries Corp.
11. MIFAB, Inc.
12. Nystrom, Inc.
13. Williams Bros. Corporation of America (The).
14. **<Insert manufacturer's name>**.
15. or approved equal.

- B. Medium-Security Flush Access Doors with Exposed Flanges **<Insert drawing designation>**:

1. Fabricate units of continuous welded steel construction unless otherwise indicated. Grind welds smooth and flush with adjacent surfaces. Furnish attachment devices and fasteners of type required to secure access panels to types of support shown.
2. Assembly Description: Fabricate door to fit flush to frame. Provide manufacturer's standard-width exposed flange, proportional to door size.
3. Locations: **[Wall] [Ceiling] [Wall and ceiling] <Insert location or substrate>**.
4. Door Size: **<Insert door size>**.
5. Uncoated Steel Sheet for Door: **[Nominal 0.105 inch (2.66 mm), 12 gage] [Nominal 0.075 inch (1.90 mm), 14 gage]**.
 - a. Finish: Factory prime.

6. Metallic-Coated Steel Sheet for Door: **[Nominal 0.108 inch (2.74 mm), 12 gage]**
[Nominal 0.079 inch (2.01 mm), 14 gage].
 - a. Finish: Factory prime.
 7. Stainless-Steel Sheet for Door: **[Nominal 0.109 inch (2.78 mm), 12 gage]**
[Nominal 0.078 inch (1.98 mm), 14 gage].
 - a. Finish: No. 4.
 8. Frame Material: **[Same material, thickness, and finish as door]** **[Minimum 3/16-by-1-1/2-by-1-1/2-inch (4.7-by-38-by-38-mm) angle welded with joints ground smooth; factory prime]** **<Insert material, thickness, finish>**.
 - a. Fabricate frame with exposed flange nominal 1 inch wide around perimeter of frame for units installed in the following construction:
 - 1) Exposed masonry.
 - 2) Exposed concrete.
 - 3) Drywall finish.
 - 4) Ceramic tile finish.
 - b. For gypsum drywall or gypsum veneer plaster, furnish perforated frames with drywall bead.
 - c. For installation in masonry construction, furnish frames with adjustable metal masonry anchors.
 9. Hinges: **[Manufacturer's standard security hinge]** **<Insert hinge type>**.
 10. Hardware: Furnish flush cam locks of number required to hold door in flush, smooth plane when closed.
 - a. Provide one cylinder lock with automatic dust shutter. Type of cylinder is specified in Division 08 section "Door Hardware", master key.
- C. Medium-Security Flush Access Doors with Concealed Flanges **<Insert drawing designation>**:
1. Fabricate units of continuous welded steel construction unless otherwise indicated. Grind welds smooth and flush with adjacent surfaces. Furnish attachment devices and fasteners of type required to secure access panels to types of support shown.
 2. Assembly Description: Fabricate door to fit flush to frame. Provide frame with **[gypsum board]** **[plaster]** beads for concealed flange installation.
 3. Locations: **[Wall]** **[Ceiling]** **[Wall and ceiling]** **<Insert location or substrate>**.
 4. Door Size: **<Insert door size>**.
 5. Uncoated Steel Sheet for Door: **[Nominal 0.105 inch (2.66 mm), 12 gage]**
[Nominal 0.075 inch (1.90 mm), 14 gage].
 - a. Finish: Factory prime.

6. Metallic-Coated Steel Sheet for Door: **[Nominal 0.108 inch (2.74 mm), 12 gage]**
[Nominal 0.079 inch (2.01 mm), 14 gage].
 - a. Finish: Factory prime.
 7. Stainless-Steel Sheet for Door: **[Nominal 0.109 inch (2.78 mm), 12 gage]**
[Nominal 0.078 inch (1.98 mm), 14 gage].
 - a. Finish: No. 4.
 8. Frame Material: **[Same material, thickness, and finish as door] <Insert material, thickness, finish>**.
 9. Hinges: **[Manufacturer's standard security hinge] <Insert hinge type>**.
 10. Hardware: Furnish flush cam locks of number required to hold door in flush, smooth plane when closed.
 - a. Provide one cylinder lock with automatic dust shutter. Type of cylinder is specified in Division 08 section "Door Hardware", master key.
- D. High-Security Flush Access Doors **<Insert drawing designation>**:
1. Fabricate units of continuous welded steel construction unless otherwise indicated. Grind welds smooth and flush with adjacent surfaces. Furnish attachment devices and fasteners of type required to secure access panels to types of support shown.
 2. Assembly Description: Fabricate door to fit flush to frame. Provide manufacturer's standard-width exposed flange, proportional to door size.
 3. Locations: **[Wall] [Ceiling] [Wall and ceiling] <Insert location or substrate>**.
 4. Door Size: **<Insert door size>**.
 5. Uncoated Steel Sheet for Door: Nominal **0.134 inch (3.42 mm)**, 10 gage.
 - a. Finish: Factory prime.
 6. Metallic-Coated Steel Sheet for Door: Nominal **0.138 inch (3.50 mm)**, 10 gage.
 - a. Finish: Factory prime.
 7. Stainless-Steel Sheet for Door: Nominal **0.141 inch (3.57 mm)**, 10 gage.
 - a. Finish: No. 4.
 8. Frame Material: **[Same material, thickness, and finish as door] [Minimum 3/16-by-2-by-2-by-3-inch (4.7-by-50-by-50-by-76-mm) angle welded with joints ground smooth; factory prime] <Insert material, thickness, finish>**.
 9. Hinges: **[Manufacturer's standard security hinge] <Insert hinge type>**.
 10. Hardware: Furnish flush, cam locks of number required to hold door in flush, smooth plane when closed.
 - a. Provide one cylinder lock with automatic dust shutter. Type of cylinder is specified in Division 08 section "Door Hardware", master key.
- E. Maximum-Security Flush Access Doors **<Insert drawing designation>**:

1. Fabricate units of continuous welded steel construction unless otherwise indicated. Grind welds smooth and flush with adjacent surfaces. Furnish attachment devices and fasteners of type required to secure access panels to types of support shown.
 2. Assembly Description: Fabricate door to fit flush to frame. Provide manufacturer's standard-width exposed flange, proportional to door size.
 3. Locations: **[Wall] [Ceiling] [Wall and ceiling]** <Insert location or substrate>.
 4. Door Size: <Insert door size>.
 5. Uncoated Steel Sheet for Door: Nominal **0.180 inch** (4.55 mm), 7 gage.
 - a. Finish: Factory prime.
 6. Metallic-Coated Steel Sheet for Door: Nominal **0.183 inch** (4.65 mm), 7 gage.
 - a. Finish: Factory prime.
 7. Frame: Minimum **3/16-by-2-by-2-by-3-inch** (4.7-by-50-by-50-by-76-mm) angle welded with joints ground smooth.
 8. Hinges: Heavy-duty steel welded to door and frame.
 9. Hardware: Furnish flush cam locks of number required to hold door in flush, smooth plane when closed.
 - a. Provide one cylinder lock with automatic dust shutter. Type of cylinder is specified in Division 08 section "Door Hardware", master key.
- F. Fire-Rated, Medium-Security, Flush Access Doors <Insert drawing designation>:
1. Fabricate units of continuous welded steel construction unless otherwise indicated. Grind welds smooth and flush with adjacent surfaces. Furnish attachment devices and fasteners of type required to secure access panels to types of support shown.
 2. Assembly Description: Fabricate door to fit flush to frame, **[with a core of mineral-fiber insulation enclosed in sheet metal] [uninsulated]**. Provide manufacturer's standard-width exposed flange, proportional to door size.
 3. Locations: **[Wall] [Ceiling] [Wall and ceiling]** <Insert location or substrate>.
 4. Fire-Resistance Rating: Not less than **[that indicated] [that of adjacent construction] [45 minutes] [1 hour] [1-1/2 hours] [2 hours] [3 hours]** <Insert requirement>.
 5. Temperature-Rise Rating: Maximum **[450 deg F (250 deg C) at the end of 30 minutes] [250 deg F (139 deg C) at the end of 30 minutes]**.
 6. Door Size: <Insert door size>.
 7. Uncoated Steel Sheet for Door: **[Nominal 0.105 inch (2.66 mm), 12 gage] [Nominal 0.075 inch (1.90 mm), 14 gage]**.
 - a. Finish: Factory prime.
 8. Metallic-Coated Steel Sheet for Door: **[Nominal 0.108 inch (2.74 mm), 12 gage] [Nominal 0.079 inch (2.01 mm), 14 gage]**.
 - a. Finish: Factory prime.

9. Stainless-Steel Sheet for Door: [**Nominal 0.109 inch** (2.78 mm), **12 gage**] [**Nominal 0.078 inch** (1.98 mm), **14 gage**].
 - a. Finish: No. 4.
10. Frame Material: [**Same material, thickness, and finish as door**] [**Minimum 3/16-by-1-1/2-by-1-1/2-inch** (4.7-by-38-by-38-mm) **angle welded with joints ground smooth; factory prime**] <Insert material, thickness, finish>.
11. Hinges: [**Manufacturer's standard security hinge**] <Insert hinge type>.
12. Hardware: Furnish flush cam locks of number required to hold door in flush, smooth plane when closed.
 - a. Provide one cylinder lock with automatic dust shutter. Type of cylinder is specified in Division 08 section "Door Hardware", master key.

G. Hardware:

1. Latch: [**Cam latch**] <Insert latch> operated [**by hex-head wrench**] [**by pinned-hex-head wrench**] [**by flush key**] [**by paracentric key**] [**by ring turn**] [**as shown on Drawings**] [**as indicated in schedule**] <Insert operator> [**with interior release**].
2. Lock: [**Cylinder**] [**As shown on Drawings**] [**As indicated in schedule**] <Insert lock>.
3. Lock Preparation: Prepare door panel to accept cylinder specified in [**Section 087100 "Door Hardware."**] [**Section 087111 "Door Hardware (Descriptive Specification)."**] [**Section 087163 "Detention Door Hardware."**]

2.3 MATERIALS

- A. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.
- B. Steel Sheet: Uncoated or electrolytic zinc coated, ASTM A 879/A 879M, with cold-rolled steel sheet substrate complying with ASTM A 1008/A 1008M, Commercial Steel (CS), exposed.
- C. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B; with minimum **G60** (Z180) or **A60** (ZF180) metallic coating.
- D. Stainless-Steel Sheet, Strip, Plate, and Flat Bars: ASTM A 666, [**Type 304**] [**Type 316**]. Remove tool and die marks and stretch lines or blend into finish.
- E. Frame Anchors: Same type as door face.
- F. Inserts, Bolts, and Anchor Fasteners: Hot-dip galvanized steel according to ASTM A 153/A 153M or ASTM F 2329.

2.4 FABRICATION

- A. General: Provide access door and frame assemblies manufactured as integral units ready for installation.
- B. Metal Surfaces: For metal surfaces exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, rolled trade names, or roughness.
- C. Doors and Frames: Grind exposed welds smooth and flush with adjacent surfaces. Furnish attachment devices and fasteners of type required to secure access doors to types of supports indicated.
 - 1. For concealed flanges with drywall bead, provide edge trim for **[gypsum board]** **[and]** **[gypsum base]** securely attached to perimeter of frames.
 - 2. For concealed flanges with plaster bead for full-bed plaster applications, provide zinc-coated expanded metal lath and exposed casing bead welded to perimeter of frames.
 - 3. Provide mounting holes in frames for attachment of units to metal or wood framing.
 - 4. Provide mounting holes in frame for attachment of masonry anchors.
- D. Latching Mechanisms: Furnish number required to hold doors in flush, smooth plane when closed.
 - 1. For cylinder lock, furnish two keys per lock and key all locks alike.

2.5 FINISHES

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- D. Steel and Metallic-Coated-Steel Finishes:
 - 1. Factory Prime: Apply manufacturer's standard, fast-curing, lead- and chromate-free, universal primer immediately after surface preparation and pretreatment.
 - 2. Factory Finish: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat, with a minimum dry-film thickness of **1 mil** (0.025 mm) for topcoat.
- E. Stainless-Steel Finishes:

1. Surface Preparation: Remove tool and die marks and stretch lines or blend into finish.
2. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - a. Run grain of directional finishes with long dimension of each piece.
 - b. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
 - c. Directional Satin Finish: No. 4.
3. Bright, Cold-Rolled, Unpolished Finish: No. 2B.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Comply with manufacturer's written instructions for installing access doors and frames.
- B. Install doors flush with adjacent finish surfaces or recessed to receive finish material.

3.3 ADJUSTING

- A. Adjust doors and hardware, after installation, for proper operation.
- B. Remove and replace doors and frames that are warped, bowed, or otherwise damaged.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement will be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the lump sum contract price.

SECTION 083213 - SLIDING ALUMINUM-FRAMED GLASS DOORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes sliding aluminum-framed glass doors for exterior locations.
- B. Related Sections:
 - 1. Section 084113 "Aluminum-Framed Entrances and Storefronts" for coordinating finish among aluminum fenestration units on the building exterior.
 - 2. Section 085113 "Aluminum Windows" for related aluminum-framed transom and sidelite windows and mullions and for coordinating finish among aluminum fenestration units on the building exterior.
 - 3. Section 087100 "Door Hardware" for hardware not specified in this Section.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 PERFORMANCE REQUIREMENTS

- A. General: Provide sliding aluminum-framed glass doors capable of complying with performance requirements indicated, based on testing manufacturer's sliding doors that are representative of those specified, and that are of minimum test size indicated below:
 - 1. Size required by AAMA/WDMA/CSA 101/I.S.2/A440 for **optional performance grade**.
 - 2. Size indicated [**on Drawings**] [**in a schedule**].
 - 3. **<Insert size>**.
- B. Structural Performance: Provide sliding aluminum-framed glass doors capable of withstanding the effects of the following loads, based on testing units representative of those indicated for Project that pass AAMA/WDMA/CSA 101/I.S.2/A440, Uniform Load Structural Test:
 - 1. Design Wind Loads: Determine design wind loads under conditions indicated according to [**ASCE/SEI 7**] **<Insert requirement>**.

- a. Basic Wind Speed: 115 mph (51 m/s) with gust factor of 1.3. .
 - b. Importance Factor: 1.15 .
 - c. Exposure Category: **C** .
 - d. **<Insert factor>**.
2. Deflection Limits: Design glass framing system to limit lateral deflections of glass edges to less than 1/175 of glass-edge length or **3/4 inch (19 mm)**, whichever is less, at design pressure based on testing performed according to AAMA/WDMA/CSA 101/I.S.2/A440, Uniform Load Deflection Test, or structural computations.
- C. Windborne-Debris Resistance: Provide sliding aluminum-framed glass doors capable of resisting impact from windborne debris, based on the pass/fail criteria as determined from testing sliding aluminum-frames glass doors identical to those specified, according to **[ASTM E 1886 and testing information in ASTM E 1996] [or] [AAMA 506] <Insert test method>** and requirements of authorities having jurisdiction.
- D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
1. Temperature Change (Range): Minus 30 deg F (minus 35 de. C) to **120 deg F (67 deg C)**, **ambient; 180 deg F (100 deg C)** max, material surfaces.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include construction details, material descriptions, fabrication methods, dimensions of individual components and profiles, hardware, finishes, and operating instructions.
1. Include data substantiating that materials comply with requirements.
- B. Product certificates signed by the aluminum sliding glass door manufacturer certifying that door units comply with specified performance requirements.
- C. Shop Drawings: For sliding aluminum-framed glass doors. Include plans, elevations, sections, details, hardware, attachments to other work, operational clearances, and the following:
1. Mullion details for fenestration combinations including reinforcement and stiffeners.
 2. Joinery details.
 3. Expansion provisions.
 4. Flashing and drainage details.
 5. Weather-stripping details.
 6. Thermal-break details.
 7. Glazing details.
 8. Accessories.

- D. Samples for Initial Selection: For each type of sliding aluminum-framed glass door indicated.
1. Include similar Samples of hardware and accessories involving color selection.
- E. Samples for Verification: For sliding aluminum-framed glass doors and components required, prepared on Samples of size indicated below:
1. Main Framing Member: **12-inch- (300-mm-)** long section with[**weather stripping,**] glazing bead and factory-applied color finish.
 2. Hardware: Full-size units with factory-applied finish.
 3. **<Insert component>: <Insert description>.**
 4. The DEN Project Manager reserves the right to require additional samples that show fabrication techniques and workmanship, and design of hardware and accessories.
- F. Delegated-Design Submittal: For sliding aluminum-framed glass doors indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation and used to determine the following:
1. Structural test pressures and design pressures from wind loads indicated.
 2. Deflection limitations of glass framing systems.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified [**Installer**] [**manufacturer**] [**professional engineer**] [**and**] [**testing agency**].
- B. Product Test Reports: Based on evaluation of comprehensive tests performed[**within the last four years**] by a qualified testing agency, for each class, grade, and size of sliding aluminum-framed glass door.[**Test results based on use of downsized test doors will not be accepted.**]
- C. Field quality-control reports.
- D. Warranty: Sample of special warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For[**finishes,**] weather stripping, operable panels, and operating hardware to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A manufacturer capable of fabricating sliding aluminum-framed glass doors that meet or exceed performance requirements indicated and of documenting this performance by inclusion in lists and by labels, test reports, and calculations.
1. Provide only AAMA "Quality Certified" aluminum sliding glass doors with an attached label.
- B. Installer Qualifications: An installer acceptable to sliding door manufacturer for installation of units required for this Project.
1. Installer's responsibilities include providing professional engineering services needed to assume engineering responsibility including preparation of data for sliding aluminum-framed glass doors, including Shop Drawings and Designated-Design Submittal, based on testing and engineering analysis of manufacturer's standard units in assemblies similar to those indicated for this Project.
- C. Source Limitations: Obtain sliding aluminum-framed glass doors from single source from single manufacturer.
- D. Product Options: Information on Drawings and in Specifications establishes requirements for aesthetic effects and performance characteristics of sliding aluminum-framed glass doors. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction. Performance characteristics are indicated by criteria subject to verification by one or more methods including preconstruction testing, field testing, and in-service performance.
- E. Product Options: Drawings indicate size, profiles, and dimensional requirements of sliding aluminum-framed glass doors and are based on the specific system indicated. Refer to Section 016000 "Product Requirements." Do not modify size and dimensional requirements.
1. Do not modify intended aesthetic effects, as judged solely by DEN Project Manager, except with DEN Project Manager's approval. If modifications are proposed, submit comprehensive explanatory data to DEN Project Manager for review.
- F. Fenestration Standard: Comply with AAMA/WDMA/CSA 101/I.S.2/A440, "Standard/Specification for Windows, Doors, and Unit Skylights," for minimum standards of performance, materials, components, accessories, and fabrication. Comply with more stringent requirements if indicated.
1. Provide [**AAMA**] [**WDMA**]-certified, sliding aluminum-framed glass doors with an attached label.

- G. Safety Glass: Category II materials complying with testing requirements in 16 CFR 1201.
1. Subject to compliance with requirements, permanently mark safety glass with certification label of the SGCC or another certification agency acceptable to authorities having jurisdiction.
- H. Glazing Publications: Comply with published recommendations of glass manufacturers and with GANA's "Glazing Manual" unless more stringent requirements are indicated.
- I. Single Source Responsibility: The "Exterior skin installer" is to provide the structural calculations, coordination, fabrication, installation and warranty for all work associated with the exterior skin, which includes the following: Section 074213.12, "Formed Metal Wall Panels", Section 074213.16 "Metal Plate Wall Panels", Section 074213.19 "Insulated Metal Wall Panels", Section 074213.23 "Metal Composite Material Wall Panels", Section 084113, "Glazed Aluminum Curtain Walls", Section 084213 "Aluminum-Framed Entrances", Section 084413 "Glazed Aluminum Curtain Walls", Section 085113 "Aluminum Windows", Section 089116 "Operable Wall Louvers" Section 089119 "Fixed Louvers", Section 089516 "Wall Vents", and the following:
1. All cold-formed metal framing or metal fabrications associated with the above. Cold-formed metal framing to be of the size and spacing indicated on the drawings, except gauge shall be as needed as determined by the structural calculations required, but in no case less than 14 gauge. Metal fabrications shall be of the size indicated on the drawings, except thickness shall be as determined by the structural calculations required. Provide additional fabrications as needed. All of this work to be in accordance with requirements of Section 054000, "Cold-Formed Metal Framing" and Section 055000 "Metal Fabrications".
 2. All expansion joints in the exterior side of the above exterior wall, per Section 079500 "Expansion Control".
 3. All joint sealers installed within the above described work including joints between adjacent work, per Section 079200 "Joint Sealants".
 4. All glazing installed within the above described work per Section 088000, "Glazing".
 5. All painting, finishes, or coatings associated with the above described work.
 6. All firestopping associated with exterior skin and roof or floor structure per Section 078413 "Penetration Firestopping."
- J. Design Criteria: The drawings are based on a specific type and model of sliding glass door by a single manufacturer. An equivalent type of sliding glass door by an alternative manufacturer may be accepted provided deviations in dimensions and profiles are minor and do not materially detract from the design concept or intended performances as judged solely and approved by the DEN Project Manager.
- K. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
1. Build mockup for type(s) of sliding aluminum-framed glass door(s) indicated, in location(s) shown on Drawings.

- L. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]<Insert location>**.

1.8 PROJECT CONDITIONS

- A. Field Measurements: Verify actual dimensions of sliding aluminum-framed glass door openings by field measurements before fabrication.

1. Coordinate fabrication schedule with construction progress to avoid delay. Where necessary, proceed with fabrication without field measurements, and coordinate fabrication tolerances to ensure proper fit of sliding glass door units.

1.9 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of sliding aluminum-framed glass doors that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

- a. Failure to meet performance requirements.
- b. Structural failures including excessive deflection.
- c. Water leakage or air infiltration.
- d. Faulty operation of movable sash and hardware.
- e. Deterioration of metals, metal finishes, weatherstripping and other materials beyond normal weathering.
- f. Faulty operation of movable panels or hardware or other components.
- g. Deterioration of insulating glass[**and laminated glass**] as defined in Section 088000 "Glazing."
- h. **<Insert failure modes>**.

2. Warranty Period:

- a. Sliding Door: Minimum [**three (3)**] [**five (5)**] **<Insert number>** years from date of Substantial Completion.
- b. Glazing: Minimum [**10**] [**20**] **<Insert number>** years from date of Substantial Completion.
- c. Metal Finish: Minimum [**Five**] [**10**] [**15**] **<Insert number>** years from date of Substantial Completion.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. [Arcadia Architectural Products, Inc.](#)
2. [EFCO Corporation.](#)
3. [Fleetwood Aluminum Products, Inc.](#)
4. [Graham Architectural Products.](#)
5. [Hydro Aluminum North America.](#)
6. [Kawneer North America; an Alcoa company.](#)
7. [Milgard Windows.](#)
8. [MI Windows and Doors, Inc.](#)
9. [Peterson Architectural Products.](#)
10. [Plaza Door Co., Inc.](#)
11. [Thermal Windows, Inc.](#)
12. [TRACO.](#)
13. **<Insert manufacturer's name>.**
14. or approved equal.

2.2 MATERIALS

A. Aluminum Extrusions: Provide alloy and temper recommended by sliding aluminum-framed glass door manufacturer for strength, corrosion resistance, and application of required finish. Comply with AAMA/WDMA/CSA 101/I.S.2/A440.

B. Fasteners: Provide fasteners of aluminum, nonmagnetic stainless steel, or other materials warranted by manufacturer to be noncorrosive for SC 3 severe service conditions and compatible with members, trim, hardware, anchors, and other components of sliding aluminum-framed glass doors. Comply with AAMA/WDMA/CSA 101/I.S.2/A440.

1. Exposed Fasteners: Unless unavoidable for applying hardware, do not use exposed fasteners. For application of hardware, use fasteners that match finish of member or hardware being fastened, as appropriate.

C. Anchors, Clips, and Accessories: Provide anchors, clips, and accessories of aluminum, nonmagnetic stainless steel, or zinc-coated steel or iron for sliding aluminum-framed glass doors, complying with ASTM B 456 or ASTM B 633 for SC 3 severe service conditions; provide sufficient strength to withstand design pressure indicated.

D. Reinforcing Members: Provide aluminum, nonmagnetic stainless steel, or nickel/chrome-plated steel reinforcing members that are noncorrosive for SC 3 severe service conditions and that comply with AAMA/WDMA/CSA 101/I.S.2/A440; provide sufficient strength to withstand design pressure indicated.

- E. Compression-Type Weather Stripping: Provide compressible weather stripping designed for permanently resilient sealing under bumper or wiper action, and completely concealed when sliding aluminum-framed glass door is closed.
1. Weather-Stripping Material: Closed-cell elastomeric, preformed gaskets complying with ASTM C 509.
 2. Weather-Stripping Material: Dense elastomeric gaskets complying with ASTM C 864.
 3. Weather-Stripping Material: Manufacturer's standard system and materials complying with AAMA/WDMA/CSA 101/I.S.2/A440.
- F. Sliding-Type Weather Stripping: Provide woven-pile weather stripping of wool, polypropylene, or nylon pile and resin-impregnated backing fabric. Comply with AAMA 701.
1. Weather Seals: Provide weather stripping with integral barrier fin or fins of semirigid, polypropylene sheet or polypropylene-coated material. Comply with AAMA 702.
- G. Sealant: For sealants required within fabricated sliding doors, provide sliding aluminum-framed glass door manufacturer's standard, permanently elastic, nonshrinking, and nonmigrating type recommended by sealant manufacturer for joint size and movement.

2.3 SLIDING DOOR <Insert drawing designation>

- A. AAMA/WDMA/CSA Performance Requirements: Provide sliding aluminum-framed glass doors of performance indicated that comply with AAMA/WDMA/CSA 101/I.S.2/A440[**unless more stringent performance requirements are indicated**].
1. Performance Class and Grade: HC[40] [45] [50] <Insert grade>.
 2. Performance Class and Grade: AW[40] [45] [50] <Insert grade>.
 3. Performance Class and Grade: As indicated.
 4. Performance Class: [HC] [AW].
- B. Condensation Resistance: Provide sliding aluminum-framed glass doors with a minimum [**CRF when tested according to AAMA 1503**] [**CR determined according to NFRC 500**] of [45] [52] <Insert value>.
- C. Thermal Transmittance: Provide sliding aluminum-framed glass doors with a maximum whole fenestration product U-factor indicated, when [**tested according to AAMA 1503**] [**determined according to ASTM E 1423**] [**determined according to NFRC 100**].
1. U-Factor: [0.35] [0.40] [0.65] <Insert value appropriate to system of measure> Btu/sq. ft. x h x deg F (W/sq. m x K).
- D. Solar Heat-Gain Coefficient (SHGC): Provide sliding aluminum-framed glass doors with a whole-fenestration product SHGC maximum of [0.40] [0.55] <Insert value>, determined according to NFRC 200.

- E. Acoustical Performance: Provide sliding aluminum-framed glass doors with an **[STC]** **[OITC]** rating of **[29]** **[34]** **<Insert value>** when tested according to and determined by **[ASTM E 90 and ASTM E 413]** **[ASTM E 1425 and ASTM E 1332]**, respectively.
- F. Air Leakage Resistance: Maximum rate not more than indicated when tested according to AAMA/WDMA/CSA 101/I.S.2/A440, Air Leakage Resistance Test.
1. Maximum Rate: **0.3 cfm/sq. ft. (1.5 L/s x sq. m)** of area at an inward test pressure of **1.6 lbf/sq. ft. (75 Pa)**.
 2. Maximum Rate: **0.3 cfm/sq. ft. (1.5 L/s x sq. m)** of area at an inward test pressure of **6.2 lbf/sq. ft. (300 Pa)**.
 3. Maximum Rate: **<Insert rate and test pressure>**.
- G. Water Penetration Resistance: No water leakage as defined in the AAMA/WDMA/CSA referenced test methods at a water test pressure equaling that indicated, when tested according to AAMA/WDMA/CSA 101/I.S.2/A440, Water Penetration Resistance Test.
1. Test Pressure: 15 percent of positive design pressure, but not less than **2.9 lbf/sq. ft. (140 Pa)** or more than **12 lbf/sq. ft. (580 Pa)**.
 2. Test Pressure: 20 percent of positive design pressure, but not more than **12 lbf/sq. ft. (580 Pa)**.
 3. Test Pressure: **<Insert percent and pressure>**.
- H. Forced-Entry Resistance: Comply with Performance Grade **[10]** **<Insert performance grade>** requirements when tested according to ASTM F 842.
- I. Life-Cycle Testing: Tested according to and complying with AAMA/WDMA/CSA 101/I.S.2/A440.
- J. Operating Force and Auxiliary (Durability) Tests: Tested according to and complying with AAMA/WDMA/CSA 101/I.S.2/A440.

2.4 GLAZING

- A. Glass and Glazing System: Comply with Section 088000 "Glazing" for safety glass, insulating-glass units, laminated glass, and glazing requirements applicable to glazed sliding aluminum-framed glass doors.
- B. Glass **<Insert drawing designation>**: Comply with Section 088000 "Glazing" for requirements applicable to safety glazing, insulating-glass units, and laminated glass units.
1. Clear, insulating-glass units.
 2. Clear, insulating-glass units, with low-E coating pyrolytic on second surface or sputtered on second or third surface.
 3. Clear, insulating-glass units, argon gas filled, with low-E coating pyrolytic on second surface or sputtered on second or third surface.
 4. Clear, insulating-glass units; outer lite consisting of laminated glass unit with PVB interlayer for windborne-debris resistance.

5. Clear, insulating-glass units, with low-E coating pyrolytic on second surface or sputtered on second or third surface; outer lite consisting of laminated glass unit with PVB interlayer for windborne-debris resistance.
6. Monolithic laminated glass unit, with PVB interlayer, complying with windborne-debris resistance.
7. **<Insert glass type, description, and performance requirements>.**

- C. Glazing System: **[Manufacturer's standard factory-glazing system that produces weathertight seal.] [Manufacturer's standard factory-glazing system that produces weathertight seal and complies with requirements for windborne-debris resistance.] [Manufacturer's standard factory-glazing system as indicated in Section 088000 "Glazing."]** **<Insert glazing requirements.>**

2.5 HARDWARE

- A. General: Provide manufacturer's standard hardware, fabricated from a corrosion-resistant material compatible with aluminum complying with AAMA 907 and designed to smoothly operate, tightly close, and securely lock sliding aluminum-framed glass doors. Do not use aluminum in frictional contact with other metals. Where exposed, provide **[solid bronze] [extruded, cast, or wrought aluminum] [die-cast zinc with special coating finish] [or] [nonmagnetic stainless steel]**.
1. Hardware Finish: **[Manufacturer's standard] [Match aluminum appearance] <Insert finish>.**
- B. Roller Assemblies: Provide movable panels with adjustable-height roller assemblies, complying with AAMA 906, consisting of self-lubricating, dual tandem **[nylon] [steel] [stainless-steel] [manufacturer's standard nylon or steel]** ball-bearing rollers; with two roller assemblies per panel.
- C. Threshold and Sill Cap/Track: Provide extruded-aluminum threshold and track of thickness, dimensions, and profile indicated; designed to comply with performance requirements indicated **[and to drain to the exterior]**; with manufacturer's standard finish.
1. Low-Profile Floor Track: ADA-ABA compliant.
- D. Door Pulls: Provide manufacturer's standard extruded-aluminum pull grips.
- E. Lock: Install manufacturer's keyed cylinder lock and **[multipoint]**locking device on each movable panel, lockable from the inside **[only] [and outside]**. Adjust locking device to allow unobstructed movement of the panel across adjacent panel in the direction indicated.
1. Keying System: **[All cylinders keyed alike] [Keyed to match other building entrances] <Insert instructions>.**

2.6 FABRICATION

- A. Fabricate sliding aluminum-framed glass doors in sizes indicated. Include a complete system for assembling components and anchoring doors.
- B. Assembly: Assemble components into complete weathertight units with flush, rigid, hairline joints. Mill, cope, butt, and miter necessary joints; secure by mechanical devices or by other means to ensure permanently watertight joints. Provide at least 2 corrosion resistant, pre lubricated, or self lubricating rollers for each sliding panel, of sufficient capacity to assure easy, quiet, and smooth operation.
- C. Fabricate sliding aluminum-framed glass doors that are reglazable without dismantling panel framing.
- D. Thermally Improved Construction: Fabricate sliding aluminum-framed glass doors with an integral, concealed, low-conductance thermal barrier; locate between exterior materials and door members exposed on interior side, and in a manner that eliminates direct metal-to-metal contact.
 - 1. Provide thermal-break construction that has been in use for not less than three years and has been tested to demonstrate resistance to thermal conductance and condensation and to show adequate strength and security of glass retention.
 - 2. Provide thermal barriers tested according to AAMA 505; determine the allowable design shear flow per the appendix in AAMA 505.
 - 3. Provide hardware with low conductivity, or provide nonmetallic material for hardware bridging thermal breaks at frame.
- E. Weather Stripping: Provide operable panels with a double row of sliding weather stripping in horizontal rails and [~~single-~~] [~~or~~] [~~double-~~]row weather stripping in meeting or jamb stiles. Provide compression-type weather stripping at the perimeter of each movable panel where sliding-type weather stripping is not appropriate.
 - 1. Provide weather stripping locked into extruded grooves in door panels or frames.
- F. Weep Holes: Provide weep holes and internal drainage passages to conduct infiltrating water to exterior.
- G. Factory-Glazed Fabrication: Glaze sliding aluminum-framed glass doors in the factory where practical and possible for applications indicated. Comply with requirements in Section 088000 "Glazing" and with AAMA/WDMA/CSA 101/I.S.2/A440.
- H. Glazing Stops: Provide snap-on glazing stops coordinated with Section 088000 "Glazing" and with glazing system indicated. Provide glazing stops to match panel frames.

2.7 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.8 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, [**AA-M12C22A41, Class I, 0.018 mm**] [**AA-M12C22A31, Class II, 0.010 mm**] or thicker.
- B. Color Anodic Finish: AAMA 611, [**AA-M12C22A42/A44, Class I, 0.018 mm**] [**AA-M12C22A32/A34, Class II, 0.010 mm**] or thicker.
 - 1. Color: [**Light bronze**] [**Medium bronze**] [**Dark bronze**] [**Black**] <Insert color>.
 - 2. Color: [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry colors and color densities**].
- C. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of **1.5 mils** (0.04 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
 - 1. Color and Gloss: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color and gloss>.
- D. High-Performance Organic Finish: Two-coat fluoropolymer finish complying with [**AAMA 2604**] [**AAMA 2605**] and containing not less than [**50**] [**70**] percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 1. Color and Gloss: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color and gloss>.
- E. High-Performance Organic Finish: [**Three**] [**Four**]-coat fluoropolymer finish complying with AAMA 2605 and containing not less than [**50**] [**70**] percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 1. Color and Gloss: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color and gloss>.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine openings, substrates, structural support, anchorage, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of work.
 - 1. Masonry Surfaces: Visibly dry and free of excess mortar, sand, and other construction debris.
 - 2. Wood Frame Walls: Dry, clean, sound, well nailed, free of voids, and without offsets at joints. Ensure that nail heads are driven flush with surfaces in opening and within 3 inches (76 mm) of opening.
 - 3. Metal Surfaces: Dry; clean; free of grease, oil, dirt, rust, corrosion, and welding slag; without sharp edges or offsets at joints.
- B. Verify rough opening dimensions, levelness of threshold substrate, and operational clearances.
- C. Examine wall flashings, vapor retarders, water and weather barriers, and other built-in components to ensure a coordinated, weathertight sliding aluminum-framed glass door installation.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Comply with Drawings, Shop Drawings, and manufacturer's written instructions for installing doors, hardware, accessories, and other components.
- B. Install sliding aluminum-framed glass doors level, plumb, square, true to line, without distortion, warp or rack of frames and panels, or impeding thermal movement, anchored securely in place to structural support, and in proper relation to wall flashing, vapor retarders, air barriers, water/weather barriers, and other adjacent construction.
- C. Set sill members in bed of sealant or with gaskets, as indicated, to provide weathertight construction.
- D. Install sliding aluminum-framed glass doors and components to drain condensation, water penetrating joints, and moisture migrating within doors to the exterior.
- E. Separate aluminum and other corrodible surfaces from sources of corrosion or electrolytic action at points of contact with other materials according to ASTM E 2112, Section 5.12 "Dissimilar Materials."

3.3 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections.
- B. Tests and Inspections:
 - 1. Testing Methodology: Testing of sliding aluminum-framed glass doors for air penetration resistance and water resistance will be performed according to AAMA 502, **[Test Method A] [Test Method B]**, by applying same test pressures required to determine compliance with AAMA/WDMA/CSA 101/I.S.2/A440.
 - 2. Testing Extent: **[Three] [Three mockup] <Insert number or description>** sliding aluminum-framed glass doors as selected by DEN Project Manager and a qualified independent testing and inspecting agency. Sliding doors shall be tested immediately after installation.
- C. Sliding aluminum-framed glass door will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports according to AAMA 502. Testing agency will interpret test results and state in each report whether tested work complies with or deviates from requirements.

3.4 ADJUSTING, CLEANING, AND PROTECTION

- A. Lubricate hardware and moving parts.
- B. Adjust operating panels and screens to provide a tight fit at contact points and weather stripping for smooth operation, without binding, and a weathertight closure.
- C. Adjust hardware for proper alignment, smooth operation, and proper latching without unnecessary force or excessive clearance.
- D. Clean aluminum surfaces immediately after installing sliding doors. Comply with manufacturer's written recommendations for final cleaning and maintenance. Avoid damaging protective coatings and finishes. Remove nonpermanent labels, and clean surfaces.
- E. Clean glass immediately after installing sliding aluminum-framed glass doors. Comply with manufacturer's written recommendations for final cleaning and maintenance. Remove nonpermanent labels and clean surfaces.
- F. Remove and replace glass that has been broken, chipped, cracked, abraded, or damaged during construction period.
- G. Protect sliding door surfaces from contact with contaminating substances resulting from construction operations. During construction, monitor sliding door surfaces adjacent to and below exterior concrete and masonry surfaces for presence of dirt, scum, alkaline deposits, stains, or other contaminants. If contaminating substances do

contact sliding door surfaces, remove contaminants immediately according to manufacturer's written instructions.

- H. Refinish or replace sliding aluminum-framed glass doors with damaged finishes.
- I. Replace damaged components.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 083213

SECTION 083323 - OVERHEAD COILING DOORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Service doors[**with integral pass doors**].
2. Insulated service doors[**with integral pass doors**].
3. Counter doors.
4. Fire-rated service doors[**with integral pass doors**].
5. Fire-rated, insulated service doors[**with integral pass doors**].
6. Fire-rated counter doors.

B. Related Sections:

1. Section 055000 "Metal Fabrications" for miscellaneous steel supports.
2. **[Section 099113 "Exterior Painting"] [and] [Section 099123 "Interior Painting"]** for finish painting of factory-primed doors.
3. Section 111200 "Parking Control Equipment" for parking control equipment interlocked to overhead coiling doors.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design overhead coiling doors, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. Structural Performance, Exterior Doors: Exterior overhead coiling doors shall withstand the wind loads, the effects of gravity loads, and loads and stresses within limits and under conditions indicated according to **[SEI/ASCE 7] <Insert requirement>**.
1. Wind Loads: **[As indicated on Drawings] [Uniform pressure (velocity pressure) of 20 lbf/sq. ft. (960 Pa), acting inward and outward] <Insert loads>**.
 - a. Basic Wind Speed: **115 mph (51 m/s)** with gust factor of **[1.3] <Insert**

- value>.**
- b. Importance Factor: **[1.3] <Insert factor>.**
 - c. Exposure Category: **[D].**
2. Deflection Limits: Design overhead coiling doors to withstand design wind load without evidencing permanent deformation or disengagement of door components.
- C. Operability under Wind Load: Design overhead coiling doors to remain operable under **[design] [uniform pressure (velocity pressure) of 20 lbf/sq. ft. (960 Pa)] <Insert load>** wind load, acting inward and outward.
- D. Windborne-Debris-Impact-Resistance Performance: Provide **[glazed] [and] [impact-protective]** overhead coiling doors that pass missile-impact and cyclic-pressure tests when tested according to **[ASTM E 1886 and ASTM E 1996] <Insert requirement>.**
1. Large Missile Test: For overhead coiling doors located within **30 feet (9.144 m)** of grade.
 2. Small Missile Test: For overhead coiling doors located more than **30 feet (9.144 m)** above grade.
- E. Seismic Performance: Overhead coiling doors shall withstand the effects of earthquake motions determined according to **[SEI/ASCE 7] <Insert requirement>.**
1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified[**and the emergency-egress-door component will be fully operational after the seismic event**]."
 2. Seismic Component Importance Factor: **[1.5] [1.0].**
- F. Operation Cycles: Provide overhead coiling door components and operators capable of operating for not less than number of cycles indicated for each door. One operation cycle is complete when a door is opened from the closed position to the fully open position and returned to the closed position.
- 1.4 ACTION SUBMITTALS
- A. Product Data: For each type and size of overhead coiling door and accessory. Include the following:
1. Construction details, material descriptions, dimensions of individual components, profiles for slats, and finishes.
 2. Rated capacities, operating characteristics, electrical characteristics, and furnished accessories.
 3. For fire-rated doors, description of fire-release system including testing and resetting instructions.
 4. Include data substantiating that materials comply with requirements.

- B. Shop Drawings: For each installation and for special components not dimensioned or detailed in manufacturer's product data. Include plans, elevations, sections, details, and attachments to other work.
1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 2. Show locations of replaceable fusible links.
 3. Wiring Diagrams: For power, signal, and control wiring.
- C. Samples for Initial Selection: Manufacturer's finish charts showing full range of colors and textures available for units with factory-applied finishes.
1. Include similar Samples of accessories involving color selection.
- D. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below.
1. Curtain Slats: **12 inches** (305 mm) long[, **including vision window secured to slat**].
 2. Bottom Bar: **6 inches** (150 mm) long[**with sensor edge**].
 3. Guides: **6 inches** (150 mm) long.
 4. Brackets: **6 inches** (150 mm) square.
 5. Hood: **6 inches** (150 mm) square.
 6. Laminate-Clad Counter Panel Product: **6 inches** (150 mm) square; for each type, color, pattern, and surface finish; laminated to core.
- E. Delegated-Design Submittal: For overhead coiling doors indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
1. Detail fabrication and assembly of seismic restraints.
 2. Summary of forces and loads on walls and jambs.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer.
- B. Seismic Qualification Certificates: For overhead coiling doors, accessories, and components, from manufacturer.
- C. Oversize Construction Certification: For door assemblies required to be fire-rated and that exceed size limitations of labeled assemblies.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For overhead coiling doors to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with

other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for both installation and maintenance of units required for this Project.
- B. Source Limitations: Obtain overhead coiling doors from single source from single manufacturer.
 - 1. Obtain operators and controls from overhead coiling door manufacturer.
- C. Fire-Rated Door Assemblies: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at as close to neutral pressure as possible according to **[NFPA 252]** **[UBC Standard 7-2]** **[or]** **[UL 10B]**.
 - 1. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.
 - 2. Temperature-Rise Limit: **[Where indicated]** **[At vertical exit enclosures and exit passageways]**, provide doors that have a maximum transmitted temperature end point of not more than **450 deg F** (250 deg C) above ambient after 30 minutes of standard fire-test exposure.
 - 3. Smoke Control: **[Where indicated]** **[In corridors and smoke barriers]**, provide doors that are listed and labeled with the letter "S" on the fire-rating label by a qualified testing agency for smoke- and draft-control based on testing according to **[UBC Standard 7-2]** **[UL 1784]**; with maximum air-leakage rate of **3.0 cfm/sq. ft.** (0.01524 cu. m/s x sq. m) of door opening at **0.10 inch wg** (24.9 Pa) for both ambient and elevated temperature tests.
- D. Sound-Control Doors: Assemblies that have been fabricated and tested to control the passage of sound and have minimum certified STC rating according to ASTM E 413.
- E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- F. Regulatory Requirements: Comply with applicable provisions in **[the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines]** **[and]** **[ICC/ANSI A117.1]**.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 DOOR CURTAIN MATERIALS AND CONSTRUCTION

- A. Door Curtains: Fabricate overhead coiling-door curtain of interlocking metal slats, designed to withstand wind loading indicated, in a continuous length for width of door without splices. Unless otherwise indicated, provide slats of thickness and mechanical properties recommended by door manufacturer for performance, size, and type of door indicated, and as follows:
1. Steel Door Curtain Slats: Zinc-coated (galvanized), cold-rolled structural steel sheet; complying with ASTM A 653/A 653M, with G90 (Z275) zinc coating; nominal sheet thickness (coated) of **0.028 inch** (0.71 mm) and as required to meet requirements.
 2. Stainless-Steel Door Curtain Slats: ASTM A 666, Type 304; sheet thickness of **0.025 inch** (0.64 mm) and as required to meet requirements.
 3. Aluminum Door Curtain Slats: **ASTM B 209** (ASTM B 209M) sheet or **ASTM B 221** (ASTM B 221M) extrusions, alloy and temper standard with manufacturer for type of use and finish indicated; thickness of **0.050 inch** (1.27 mm) and as required to meet requirements.
 4. Vision-Panel Glazing: Manufacturer's standard clear glazing, fabricated from transparent acrylic sheet or fire-protection rated glass as required for type of door; set in glazing channel secured to curtain slats.
 5. Insulation: Fill slats for insulated doors with manufacturer's standard thermal insulation complying with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, according to ASTM E 84. Enclose insulation completely within slat faces.
 6. Metal Interior Curtain-Slat Facing: Match metal of exterior curtain-slat face.
 7. Plastic Interior Curtain-Slat Facing: Extruded PVC plastic with maximum flame-spread index of **[25] [75] [200]** and smoke-developed index of 450, according to ASTM E 84.
 8. Gasket Seal: Provide insulated slats with manufacturer's standard interior-to-exterior thermal break or with continuous gaskets between slats.
- B. Endlocks[**and Windlocks**] for Service Doors: Malleable-iron casings galvanized after fabrication, secured to curtain slats with galvanized rivets or high-strength nylon. Provide locks on not less than alternate curtain slats for curtain alignment and resistance against lateral movement.
- C. Endlocks for Counter Doors: Manufacturer's standard locks on not less than alternate curtain slats for curtain alignment and resistance against lateral movement.
- D. Bottom Bar for Service Doors: Consisting of two angles, each not less than **1-1/2 by 1-1/2 by 1/8 inch** (38 by 38 by 3 mm) thick; fabricated from manufacturer's standard hot-dip galvanized steel, stainless steel, or aluminum extrusions to match curtain slats and finish.

- E. Bottom Bar for Counter Doors: Manufacturer's standard continuous channel or tubular shape, fabricated from manufacturer's standard hot-dip galvanized steel, stainless steel, or aluminum extrusions to match curtain slats and finish.
- F. Astragal for Interior Doors: Equip each door bottom bar with a replaceable, adjustable, continuous, compressible gasket of flexible vinyl, rubber, or neoprene as a cushion bumper.
- G. Curtain Jamb Guides: Manufacturer's standard angles or channels and angles of same material and finish as curtain slats unless otherwise indicated, with sufficient depth and strength to retain curtain, to allow curtain to operate smoothly, and to withstand loading. Slot bolt holes for guide adjustment. Provide removable stops on guides to prevent overtravel of curtain[, **and a continuous bar for holding windlocks**].
 - 1. Removable Posts and Jamb Guides for Counter Doors: Manufacturer's standard.
- H. Pass Door(s): Door and frame assembly constructed integrally with the coiling-door assembly[**and bearing the same fire rating**]. Complying with egress and accessibility requirements of authorities having jurisdiction.
 - 1. Door Frame and Integral Jamb Guide: Fabricate of angles or channels and angles of same material and finish as curtain slats unless otherwise indicated, with sufficient depth and strength to retain curtain, to allow curtain to operate smoothly, and to withstand loading.
 - 2. Hinged Frame: Hinged pass door and frame that swings out of the way, as a unit, to allow use of the full coiling-door opening width. One jamb of the pass-door frame is hinged and the other jamb includes a guide for the lower, narrower part of the coiling-door curtain.
 - 3. Rigid Frame: Rigid pass door and frame that are built into the rigid lower part of the door curtain and that raise with the curtain.
 - 4. Locking Hardware:
 - a. **[Lockset] [Exit Hardware]: [As specified in Section 087100 "Door Hardware."] [As selected by DEN Project Manager from manufacturer's full range.] <Insert requirement.>**
 - b. Lock Cylinders: Provide cylinders **[specified in Section 087100 "Door Hardware"] [standard with manufacturer] [and keyed to building keying system]**.
 - c. Keys: **[Two] [Three] <Insert number>** for each cylinder.
 - 5. Thresholds: Equip pass doors with integral thresholds that comply with egress and accessibility requirements of authorities having jurisdiction.

2.2 HOOD

- A. General: Form sheet metal hood to entirely enclose coiled curtain and operating mechanism at opening head. Contour to fit end brackets to which hood is attached. Roll and reinforce top and bottom edges for stiffness. Form closed ends for surface-mounted hoods and fascia for any portion of between-jamb mounting that

projects beyond wall face. Equip hood with intermediate support brackets as required to prevent sagging.

1. Galvanized Steel: Nominal **0.028-inch-** (0.71-mm-) thick, hot-dip galvanized steel sheet with G90 (Z275) zinc coating, complying with ASTM A 653/A 653M.
2. Stainless Steel: **0.025-inch-** (0.64-mm-) thick stainless-steel sheet, Type 304, complying with ASTM A 666.
3. Aluminum: **0.040-inch-** (1.02-mm-) thick aluminum sheet complying with **ASTM B 209** (ASTM B 209M), of alloy and temper recommended by manufacturer and finisher for type of use and finish indicated.
4. Include automatic drop baffle on fire-rated doors to guard against passage of smoke or flame.
5. Exterior-Mounted Doors: Fabricate hood to act as weather protection and with a perimeter sealant-joint-bead profile for applying joint sealant.

2.3 COUNTER DOORS

- A. Integral Frame, Hood, and Fascia for Counter Door: Welded sheet metal assembly of the following sheet metal:
1. Galvanized Steel: Nominal [**0.064-inch-** (1.63-mm-)] **<Insert thickness>** thick, hot-dip galvanized steel sheet with **G90** (Z275) zinc coating, complying with ASTM A 653/A 653M.
 2. Stainless Steel: [**0.062-inch-** (1.59-mm-)] **<Insert thickness>** thick stainless-steel sheet, Type 304, complying with ASTM A 666.
- B. Integral Metal Sill for Counter Door: Fabricate sills as integral part of frame assembly of Type 304 stainless steel in manufacturer's standard thickness with **[No. 4] <Insert finish>** finish.
- C. Fire-Rated, Laminate Counter: Fire-door manufacturer's high-pressure decorative laminate-covered countertop, UL or ITS tested and labeled for 1-1/2-hour fire rating for approved use with fire-door assembly.

2.4 LOCKING DEVICES

- A. Slide Bolt: Fabricate with side-locking bolts to engage through slots in tracks for locking by padlock, located on both left and right jamb sides, operable from coil side.
- B. Locking Device Assembly: Fabricate with cylinder lock, spring-loaded dead bolt, operating handle, cam plate, and adjustable locking bars to engage through slots in tracks.
1. Lock Cylinders: Provide cylinders [**specified in Section 087100 "Door Hardware"**] [**standard with manufacturer**] [**and keyed to building keying system**].
 2. Keys: Provide [**two**] [**three**] **<Insert number>** for each cylinder.
- C. Chain Lock Keeper: Suitable for padlock.

- D. Safety Interlock Switch: Equip power-operated doors with safety interlock switch to disengage power supply when door is locked.

2.5 CURTAIN ACCESSORIES

- A. Smoke Seals: Equip each fire-rated door with smoke-seal perimeter gaskets for smoke and draft control as required for door listing and labeling by a qualified testing agency.
- B. Weatherseals: Equip each exterior door with weather-stripping gaskets fitted to entire perimeter of door for a weathertight installation, unless otherwise indicated.
 - 1. At door head, use **1/8-inch-** (3-mm-) thick, replaceable, continuous sheet secured to inside of hood.
 - 2. At doorjamb, use replaceable, adjustable, continuous, flexible, **1/8-inch-** (3-mm-) thick seals of flexible vinyl, rubber, or neoprene.
- C. Push/Pull Handles: Equip each push-up-operated or emergency-operated door with lifting handles on each side of door, finished to match door.
 - 1. Provide pull-down straps or pole hooks for doors more than **84 inches** (2130 mm) high.
- D. Automatic-Closing Device for Fire-Rated Doors: Equip each fire-rated door with an automatic-closing device that is inoperative during normal door operations and that has a governor unit complying with NFPA 80 and an easily tested and reset release mechanism designed to be activated by the following:
 - 1. Replaceable fusible links with temperature rise and melting point of [**165 deg F (74 deg C)**] <Insert temperature> interconnected and mounted on both sides of door opening.
 - 2. Manufacturer's standard UL-labeled smoke detector and door-holder-release devices.
 - 3. Manufacturer's standard UL-labeled heat detector and door-holder-release devices.
 - 4. Building fire-detection and -alarm systems and manufacturer's standard door-holder-release devices.

2.6 COUNTERBALANCING MECHANISM

- A. General: Counterbalance doors by means of manufacturer's standard mechanism with an adjustable-tension, steel helical torsion spring mounted around a steel shaft and contained in a spring barrel connected to top of curtain with barrel rings. Use grease-sealed bearings or self-lubricating graphite bearings for rotating members.
- B. Counterbalance Barrel: Fabricate spring barrel of manufacturer's standard hot-formed, structural-quality, welded or seamless carbon-steel pipe, of sufficient diameter and wall thickness to support rolled-up curtain without distortion of slats and to limit barrel deflection to not more than **0.03 in./ft.** (2.5 mm/m) of span under full load.

- C. Spring Balance: One or more oil-tempered, heat-treated steel helical torsion springs. Size springs to counterbalance weight of curtain, with uniform adjustment accessible from outside barrel. Secure ends of springs to barrel and shaft with cast-steel barrel plugs.
- D. Torsion Rod for Counterbalance Shaft: Fabricate of manufacturer's standard cold-rolled steel, sized to hold fixed spring ends and carry torsional load.
- E. Brackets: Manufacturer's standard mounting brackets of either cast iron or cold-rolled steel plate.

2.7 MANUAL DOOR OPERATORS

- A. Equip door with manufacturer's recommended manual door operator unless another type of door operator is indicated.
- B. Push-up Door Operation: Design counterbalance mechanism so required lift or pull for door operation does not exceed **[25 lbf (111 N)] <Insert force>**.
- C. Chain-Hoist Operator: Consisting of endless steel hand chain, chain-pocket wheel and guard, and gear-reduction unit with a maximum **[25 lbf (111 N)] [30 lbf (133 N)] <Insert force>** force for door operation. Provide alloy-steel hand chain with chain holder secured to operator guide.
- D. Crank Operator: Consisting of crank and crank gearbox, steel crank drive shaft, and gear-reduction unit, of type indicated. Size gears to require not more than **[25 lbf (111 N)] [30 lbf (133 N)] <Insert force>** force to turn crank. Fabricate gearbox to be oil tight and to completely enclose operating mechanism. Provide manufacturer's standard crank-locking device.

2.8 ELECTRIC DOOR OPERATORS

- A. General: Electric door operator assembly of size and capacity recommended and provided by door manufacturer for door[**and operation-cycles requirement**] specified, with electric motor and factory-prewired motor controls, starter, gear-reduction unit, solenoid-operated brake, clutch, remote-control stations, control devices, integral gearing for locking door, and accessories required for proper operation.
 - 1. Comply with NFPA 70.
 - 2. Provide control equipment complying with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6, with NFPA 70 Class 2 control circuit, maximum 24 V, ac or dc.
- B. Usage Classification: Electric operator and components capable of operating for not less than number of cycles per hour indicated for each door.
- C. Door Operator Location(s): Operator location indicated for each door.
 - 1. Top-of-Hood Mounted: Operator is mounted to the right or left door head plate

- with the operator on top of the door-hood assembly and connected to the door drive shaft with drive chain and sprockets. Headroom is required for this type of mounting.
2. Front-of-Hood Mounted: Operator is mounted to the right or left door head plate with the operator on coil side of the door-hood assembly and connected to the door drive shaft with drive chain and sprockets. Front clearance is required for this type of mounting.
 3. Wall Mounted: Operator is mounted to the inside front wall on the left or right side of door and connected to door drive shaft with drive chain and sprockets. Side room is required for this type of mounting. Wall mounted operator can also be mounted above or below shaft; if above shaft, headroom is required.
 4. Bench Mounted: Operator is mounted to the right or left door head plate and connected to the door drive shaft with drive chain and sprockets. Side room is required for this type of mounting.
 5. Through-Wall Mounted: Operator is mounted on other side of wall from coil side of door.
- D. Electric Motors: Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements specified in Section 110513 "Common Motor Requirements for Equipment" unless otherwise indicated.
1. Electrical Characteristics:
 - a. Phase: [**Single phase**] [**Polyphase**].
 - b. Volts: [**115**] [**208**] [**230**] [**460**] <Insert value> V.
 - c. Hertz: 60.
 2. Motor Type and Controller: Reversible motor and controller (disconnect switch) for motor exposure indicated.
 3. Motor Size: Minimum size as indicated. If not indicated, large enough to start, accelerate, and operate door in either direction from any position, at a speed not less than **8 in./sec.** (203 mm/s) and not more than **12 in./sec.** (305 mm/s), without exceeding nameplate ratings or service factor.
 4. Operating Controls, Controllers (Disconnect Switches), Wiring Devices, and Wiring: Manufacturer's standard unless otherwise indicated.
 5. Coordinate wiring requirements and electrical characteristics of motors and other electrical devices with building electrical system and each location where installed.
- E. Limit Switches: Equip each motorized door with adjustable switches interlocked with motor controls and set to automatically stop door at fully opened and fully closed positions.
- F. Obstruction Detection Device: Equip motorized door with indicated external automatic safety sensor capable of protecting full width of door opening. [**For non-fire-rated doors, activation of device immediately stops and reverses downward door travel.**] [**For fire-rated doors, activation delays closing.**]
1. Photoelectric Sensor: Manufacturer's standard system designed to detect an obstruction in door opening without contact between door and obstruction.

- a. Self-Monitoring Type: Designed to interface with door operator control circuit to detect damage to or disconnection of sensing device. When self-monitoring feature is activated, door closes only with sustained pressure on close button.
 2. Sensor Edge: Automatic safety sensor edge, located within astragal or weather stripping mounted to bottom bar. Contact with sensor activates device. Connect to control circuit using manufacturer's standard take-up reel or self-coiling cable.
 - a. Self-Monitoring Type: Four-wire configured device designed to interface with door operator control circuit to detect damage to or disconnection of sensor edge.
 - G. Remote-Control Station: Momentary-contact, three-button control station with push-button controls labeled "Open," "Close," and "Stop."
 1. Interior units, full-guarded, surface-mounted, heavy-duty type, with general-purpose NEMA ICS 6, Type 1 enclosure.
 2. Exterior units, full-guarded, standard-duty, surface-mounted, weatherproof type, NEMA ICS 6, Type 4 enclosure, key operated.
 - H. Emergency Manual Operation: Equip each electrically powered door with capability for emergency manual operation. Design manual mechanism so required force for door operation does not exceed **[25 lbf (111 N)] [30 lbf (133 N)] <Insert force>**.
 - I. Emergency Operation Disconnect Device: Equip operator with hand-operated disconnect mechanism for automatically engaging manual operator and releasing brake for emergency manual operation while disconnecting motor without affecting timing of limit switch. Mount mechanism so it is accessible from floor level. Include interlock device to automatically prevent motor from operating when emergency operator is engaged.
 - J. Motor Removal: Design operator so motor may be removed without disturbing limit-switch adjustment and without affecting emergency manual operation.
 - K. Audible and Visual Signals: Audible alarm and visual indicator lights in compliance with regulatory requirements for accessibility.
 - L. Radio-Control System: Consisting of the following:
 1. Three-channel universal coaxial receiver to open, close, and stop door; **[one] [two] <Insert number>** per operator.
 2. Multifunction remote control.
 3. Remote-antenna mounting kit.
- 2.9 DOOR ASSEMBLY **<Insert drawing designation>**
- A. **[Service] [Insulated Service] [Counter]** Door: Overhead coiling door formed with curtain of interlocking metal slats.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ACME Rolling Doors.
 - b. Alpine Overhead Doors, Inc.
 - c. AlumaTek, Inc.
 - d. C.H.I. Overhead Doors.
 - e. City-Gates.
 - f. Cookson Company.
 - g. Cornell Iron Works, Inc.
 - h. Dynamic Closures Corp.
 - i. Lawrence Roll-Up Doors, Inc.
 - j. Mahon Door Corporation.
 - k. McKeon Rolling Steel Door Company, Inc.
 - l. Metro Door.
 - m. Overhead Door Corporation.
 - n. QMI Security Solutions.
 - o. Raynor.
 - p. Southwestern Steel Rolling Door Co.
 - q. Wayne-Dalton Corp.
 - r. Windsor Door.
 - s. **<Insert manufacturer's name>**.
 - t. or approved equal.

- B. Operation Cycles: Not less than **[10,000] [20,000] [50,000] [100,000] <Insert number>**.

 1. Include tamperproof cycle counter.

- C. STC Rating: **[26] <Insert STC rating>**.

- D. Curtain R-Value: **[4.5 deg F x h x sq. ft./Btu (0.792 K x sq. m/W)] [5.0 deg F x h x sq. ft./Btu (0.881 K x sq. m/W)] [6.0 deg F x h x sq. ft./Btu (1.057 K x sq. m/W)] <Insert value>**.

- E. Door Curtain Material: **[Galvanized steel] [Stainless steel] [Aluminum]**.

- F. Door Curtain Slats: **[Curved] [Flat]** profile slats of **[1-1/4-inch (32-mm)] [1-1/2-inch (38-mm)] [1-7/8-inch (48-mm)] [2-5/8-inch (67-mm)] [3-1/4-inch (83-mm)] <Insert dimension>** center-to-center height.
 1. Perforated Slats: Approximately **[1/16-inch (1.6-mm) pinholes] [3/32-inch (2.4-mm) pinholes] [7/8-inch- (22-mm-) wide by 3/8-inch- (10-mm-) high slots] <Insert dimensions>**.
 2. Fenestrated Slats: Approximately **[3- by 5/8-inch (76- by 16-mm)] [4- by 5/8-inch (102- by 16-mm)] [10- by 1-5/8-inch (254- by 41-mm)] <Insert dimensions>** openings spaced approximately **[1-1/2 inches (38 mm)] <Insert dimension>** apart and beginning **12 inches (305 mm)** from jamb guides.
 3. Vision Panels: Approximately **10- by 1-5/8-inch (254- by 41-mm)** openings spaced approximately **2 inches (51 mm)** apart and beginning **12 inches (305 mm)** from end

- guides; in **[two]** **[three]** **<Insert number>** rows of slats at height indicated on Drawings; installed with **[insulated]** vision-panel glazing.
4. Insulated-Slat Interior Facing: **[Metal]** **[Plastic]**.
- G. Curtain Jamb Guides: **[Galvanized steel]** **[Stainless steel]** **[Aluminum]** with exposed finish matching curtain slats. **[Provide continuous integral wear strips to prevent metal-to-metal contact and to minimize operational noise.]** **[Provide removable post(s) and jamb guides where shown on Drawings.]**
- H. Pass Door(s): **[Hinged]** **[Rigid]** frame with **[lockset]** **[exit hardware]**.
- I. Hood: **[Match curtain material and finish]** **[Galvanized steel]** **[Stainless steel]** **[Aluminum]**.
1. Shape: **[Round]** **[Square]** **[As shown on Drawings]** **<Insert shape>**.
2. Mounting: **[Face of wall]** **[Between jambs]** **[As shown on Drawings]**.
- J. Integral Frame, Hood, and Fascia for Counter Door: **[Galvanized steel]** **[Stainless steel]**.
1. Mounting: **[Face of wall]** **[Between jambs]** **[As shown on Drawings]**.
- K. Sill Configuration for Counter Door: **[No sill]** **[Integral metal sill]**.
- L. Locking Devices: Equip door with **[slide bolt for padlock]** **[locking device assembly]** **[and]** **[chain lock keeper]**.
1. Locking Device Assembly: **[Single-jamb side]** **[Cremone type, both jamb sides]** locking bars, operable from **[inside with thumb turn]** **[outside with cylinder]** **[outside only, with cylinder]** **[inside and outside with cylinders]** **<Insert requirement>**.
- M. Manual Door Operator: **[Push-up operation]** **[Chain-hoist operator]** **[Manufacturer's standard crank operator]** **[Awning-crank operator]** **[Wall-crank operator]**.
1. Provide operator with through-wall shaft operation.
2. Provide operator with manufacturer's standard removable operating arm.
- N. Electric Door Operator:
1. Usage Classification: **[Heavy duty, 60 to 90 cycles per hour]** **[Standard duty, up to 60 cycles per hour]** **[Medium duty, up to 15 cycles per hour]** **[Light duty, up to 10 cycles per hour]** **<Insert classification>**.
2. Operator Location: **[Top of hood]** **[Front of hood]** **[Wall]** **[Bench]** **[Through wall]** **[As shown on Drawings]**.
3. Motor Exposure: **[Interior]** **[Exterior, wet, and humid]**.
4. Emergency Manual Operation: **[Push-up]** **[Chain]** **[Crank]** type.
5. Obstruction-Detection Device: Automatic **[photoelectric sensor]** **[electric sensor edge on bottom bar]** **[pneumatic sensor edge on bottom bar]** **[; self-monitoring type]**.

- a. Sensor Edge Bulb Color: **[Black] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
 6. Remote-Control Station: **[Interior] [Exterior] [Where shown on Drawings] <Insert location>**.
 7. Other Equipment: **[Audible and visual signals] [Radio-control system] <Insert device>**.
- O. Door Finish:
1. Aluminum Finish: **[Mill] [Clear anodized] [Light bronze anodized] [Medium bronze anodized] [Dark bronze anodized] [Black anodized] [Anodized color matching DEN Project Manager's sample] [Anodized color as selected by DEN Project Manager from full range of industry colors and color densities] <Insert color>**.
 2. Baked-Enamel or Powder-Coated Finish: **[Color as indicated by manufacturer's designations] [Color matching DEN Project Manager's sample] [Color as selected by DEN Project Manager from manufacturer's full range] <Insert color and gloss>**.
 3. Factory Prime Finish: Manufacturer's standard color.
 4. Stainless-Steel Finish: **[No. 2B (bright, cold rolled)] [No. 4 (polished directional satin)] <Insert finish>**.
 5. Interior Curtain-Slat Facing: **[Match finish of exterior curtain-slat face] [PVC plastic] <Insert finish>**.

2.10 FIRE-RATED DOOR ASSEMBLY <Insert drawing designation>

- A. Fire-Rated **[Service] [Insulated Service] [Counter]** Door: Overhead fire-rated coiling door formed with curtain of interlocking metal slats.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ACME Rolling Doors.
 - b. Alpine Overhead Doors, Inc.
 - c. AlumaTek, Inc.
 - d. C.H.I. Overhead Doors.
 - e. City-Gates.
 - f. Cookson Company.
 - g. Cornell Iron Works, Inc.
 - h. Lawrence Roll-Up Doors, Inc.
 - i. Mahon Door Corporation.
 - j. McKeon Rolling Steel Door Company, Inc.
 - k. Overhead Door Corporation.
 - l. Raynor.
 - m. Southwestern Steel Rolling Door Co.
 - n. Wayne-Dalton Corp.
 - o. Windsor Door.
 - p. **<Insert manufacturer's name>**.

- q. or approved equal.
- B. Operation Cycles: Not less than [10,000] [20,000] [50,000] [100,000] <Insert number>.
1. Include tamperproof cycle counter.
- C. Fire Rating: [3/4 hour] [1 hour] [1-1/2 hours] [3 hours] [4 hours] [with temperature-rise limit] [and] [with smoke control].
- D. STC Rating: [27] <Insert STC rating>.
- E. Curtain R-Value: [4.5 deg F x h x sq. ft./Btu (0.792 K x sq. m/W)] [5.0 deg F x h x sq. ft./Btu (0.881 K x sq. m/W)] [6.0 deg F x h x sq. ft./Btu (1.057 K x sq. m/W)] <Insert value>.
- F. Door Curtain Material: [Galvanized steel] [Stainless steel].
- G. Door Curtain Slats: [Curved] [Flat] profile slats of [1-1/4-inch (32-mm)] [1-1/2-inch (38-mm)] [1-7/8-inch (48-mm)] [2-5/8-inch (67-mm)] [3-1/4-inch (83-mm)] <Insert dimension> center-to-center height.
1. Vision Panels: Approximately 10- by 1-5/8-inch (254- by 41-mm) openings spaced approximately 2 inches (51 mm) apart and beginning 12 inches (305 mm) from end guides; in [two] [three] <Insert number> rows of slats at height indicated on Drawings; installed with fire-rated vision-panel glazing.
 2. Insulated-Slat Interior Facing: Metal.
- H. Curtain Jamb Guides: [Galvanized steel] [Stainless steel] with exposed finish matching curtain slats.
- I. Pass Door(s): [Hinged] [Rigid] frame with [lockset] [exit hardware].
- J. Hood: [Match curtain material and finish] [Galvanized steel] [Stainless steel].
1. Shape: [Round] [Square] [As shown on Drawings] <Insert shape>.
 2. Mounting: [Face of wall] [Between jambs] [As shown on Drawings].
- K. Integral Frame, Hood, and Fascia for Counter Door: [Galvanized steel] [Stainless steel].
1. Mounting: [Face of wall] [Between jambs] [As shown on Drawings].
- L. Sill Configuration for Fire-Rated Counter Door: [No sill] [Integral metal sill] [Fire-rated, laminate counter].
1. High-Pressure Decorative Laminate: Match color, pattern, and finish [as indicated by manufacturer's designations] [of DEN Project Manager sample] [as selected by DEN Project Manager from manufacturer's full range] <Insert requirement>.

- M. Locking Devices: Equip door with **[slide bolt for padlock] [locking device assembly] [and] [chain lock keeper]**.
1. Locking Device Assembly: **[Single-jamb side] [Cremone type, both jamb sides]** locking bars, operable from **[inside with thumbturn] [outside with cylinder] [outside only, with cylinder] [inside and outside with cylinders]** <Insert requirement>.
- N. Manual Door Operator: **[Push-up operation] [Chain-hoist operator] [Manufacturer's standard crank operator] [Awning-crank operator] [Wall-crank operator]**.
1. Provide operator with through-wall shaft operation.
 2. Provide operator with manufacturer's standard removable operating arm.
- O. Electric Door Operator:
1. Usage Classification: **[Heavy duty, 60 to 90 cycles per hour] [Standard duty, up to 60 cycles per hour] [Medium duty, up to 15 cycles per hour] [Light duty, up to 10 cycles per hour]** <Insert classification>.
 2. Operator Location: **[Top of hood] [Front of hood] [Wall] [Bench] [Through wall] [As shown on Drawings]**.
 3. Motor Exposure: **[Interior] [Exterior, wet, and humid]**.
 4. Emergency Manual Operation: **[Push-up] [Chain] [Crank]** type.
 5. Obstruction Detection Device: Automatic **[photoelectric sensor] [electric sensor edge on bottom bar] [pneumatic sensor edge on bottom bar] [; self-monitoring type]**.
 - a. Sensor Edge Bulb Color: **[Black] [As selected by DEN Project Manager from manufacturer's full range]** <Insert color>.
 6. Remote-Control Station: **[Interior] [Exterior] [Where shown on Drawings]** <Insert location>.
 7. Other Equipment: **[Audible and visual signals] [Radio-control system]** <Insert device>.
- P. Door Finish:
1. Baked-Enamel or Powder-Coated Finish: **[Color as indicated by manufacturer's designations] [Color matching DEN Project Manager's sample] [Color as selected by DEN Project Manager from manufacturer's full range]** <Insert color and gloss>.
 2. Factory Prime Finish: Manufacturer's standard color.
 3. Stainless-Steel Finish: **[No. 2B (bright, cold rolled)] [No. 4 (polished directional satin)]** <Insert finish>.
 4. Interior Curtain-Slat Facing: **[Match finish of exterior curtain-slat face]** <Insert finish>.

2.11 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.12 ALUMINUM FINISHES

- A. Mill Finish: Manufacturer's standard.
- B. Clear Anodic Finish: AAMA 611, [**AA-M12C22A41, Class I, 0.018 mm**] [**AA-M12C22A31, Class II, 0.010 mm**] or thicker.
- C. Color Anodic Finish: AAMA 611, [**AA-M12C22A42/A44, Class I, 0.018 mm**] [**AA-M12C22A32/A34, Class II, 0.010 mm**] or thicker.
- D. Baked-Enamel or Powder-Coat Finish: AAMA 2603. Comply with coating manufacturer's written instructions for cleaning, conversion coating, application, and baking.

2.13 STEEL AND GALVANIZED-STEEL FINISHES

- A. Factory Prime Finish: Manufacturer's standard primer, compatible with field-applied finish. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry film thickness.
- B. Baked-Enamel or Powder-Coat Finish: Manufacturer's standard baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry film thickness.

2.14 STAINLESS-STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 1. Run grain of directional finishes with long dimension of each piece.
 - 2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
 - 3. Directional Satin Finish: No. 4.
- C. Bright, Cold-Rolled, Unpolished Finish: No. 2B.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates areas and conditions, with Installer present, for compliance with requirements for substrate construction and other conditions affecting performance of the Work.
- B. Examine locations of electrical connections.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install overhead coiling doors and operating equipment complete with necessary hardware, anchors, inserts, hangers, and equipment supports; according to manufacturer's written instructions and as specified.
- B. Install overhead coiling doors, hoods, and operators at the mounting locations indicated for each door.
- C. Accessibility: Install overhead coiling doors, switches, and controls along accessible routes in compliance with regulatory requirements for accessibility.
- D. Fire-Rated Doors: Install according to NFPA 80.
- E. Smoke-Control Doors: Install according to NFPA 80 and NFPA 105.

3.3 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
 - 1. Perform installation and startup checks according to manufacturer's written instructions.
 - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - 3. Test door closing when activated by detector or alarm-connected fire-release system. Reset door-closing mechanism after successful test.

3.4 ADJUSTING

- A. Adjust hardware and moving parts to function smoothly so that doors operate easily, free of warp, twist, or distortion.
- B. Lubricate bearings and sliding parts as recommended by manufacturer.
- C. Adjust seals to provide weathertight fit around entire perimeter.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain overhead coiling doors.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 083323

SECTION 083326 - OVERHEAD COILING GRILLES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Open-curtain overhead coiling grilles.
 - 2. Closed-curtain overhead coiling grilles.
- B. Related Sections:
 - 1. Section 055000 "Metal Fabrications" for miscellaneous steel supports.
 - 2. Section 099123 "Interior Painting" for finish painting of factory-primed grilles.
 - 3. Section 111200 "Parking Control Equipment" for parking control equipment interlocked to overhead coiling grilles.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design overhead coiling grilles, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. Seismic Performance: Overhead coiling grilles shall withstand the effects of earthquake motions determined according to **[SEI/ASCE 7]** <Insert requirement>.
 - 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."
 - 2. Seismic Component Importance Factor: **[1.5]** **[1.0]**.
- C. Operation Cycles: Provide overhead coiling grille components and operators capable of operating for not less than number of cycles indicated for each grille. One operation cycle is complete when a grille is opened from the closed position to the fully open position and returned to the closed position.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type and size of overhead coiling grille and accessory. Include the following:
1. Construction details, material descriptions, dimensions of individual components, profiles for curtain components, and finishes.
 2. Rated capacities, operating characteristics, electrical characteristics, and furnished accessories.
 3. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For each installation and for special components not dimensioned or detailed in manufacturer's product data. Include plans, elevations, sections, details, and attachments to other work.
1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 2. Wiring Diagrams: For power, signal, and control wiring.
- C. Samples for Initial Selection: Manufacturer's finish charts showing full range of colors and textures available for units with factory-applied finishes.
1. Include similar Samples of accessories involving color selection.
- D. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below.
1. Open-Curtain Grille: **18-inch-** (457-mm-) square assembly with full-size components consisting of rods, spacers, and links as required to illustrate each assembly[, **including glazed inserts**].
 2. Closed-Curtain Grille: **18-inch-** (457-mm-) square assembly with full-size components consisting of ribs and infill as required to illustrate each assembly.
 3. Bottom Bar: **6 inches** (150 mm) long[**with sensor edge**].
 4. Guides: **6 inches** (150 mm) long.
 5. Mounting Frame: **6 inches** (150 mm) long.
 6. Brackets: **6 inches** (150 mm) square.
 7. Hood: **6 inches** (150 mm) square.
- E. Delegated-Design Submittal: For overhead coiling grilles indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
1. Detail fabrication and assembly of seismic restraints.
 2. Summary of forces and loads on walls and jambs.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer.

- B. Seismic Qualification Certificates: For overhead coiling grilles, accessories, and components, from manufacturer.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For overhead coiling grilles to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for both installation and maintenance of units required for this Project.
- B. Source Limitations: Obtain overhead coiling grilles from single source from single manufacturer.
 - 1. Obtain operators and controls from overhead coiling grille manufacturer.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Regulatory Requirements: Comply with applicable provisions in **[the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines] [and] [ICC/ANSI A117.1]**.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GRILLE CURTAIN MATERIALS AND CONSTRUCTION

- A. Open-Curtain Grilles: Fabricate metal grille curtain as an open network of horizontal rods, spaced at regular intervals, that are interconnected with vertical links, which are formed and spaced as indicated and are free to rotate on the rods.
 - 1. Aluminum Grille Curtain: **ASTM B 221** (ASTM B 221M), alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.

2. Stainless-Steel Grille Curtain: ASTM A 666, Type 300 series.
 3. Steel Grille Curtain: Hot-dip zinc-coated (galvanized) complying with ASTM A 123/A 123M, or electrogalvanized complying with ASTM 653/A 653M, and phosphatized before fabrication.
 4. Glazing Insert: Manufacturer's standard glazing of clear polycarbonate sheet secured by the curtain links.
- B. Closed-Curtain Grilles: Fabricate curtain as a series of horizontal double-C ribs, spaced at regular intervals that alternate with continuous horizontal infill panels secured by the ribs.
1. Aluminum Horizontal Ribs: [ASTM B 221](#) (ASTM B 221M), alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
 2. Glass Panels: Uncoated, clear, heat-treated, fully tempered float glass; complying with ASTM C 1048, Condition A, Type I, Class I, Quality q3, Kind FT; manufacturer's standard panel dimensions and thickness.
 3. Plastic Panels: Fire-retardant polycarbonate sheet manufactured by the extrusion process; UV resistant; manufacturer's standard panel dimensions and thickness.
 4. Aluminum Panels: [ASTM B 209](#) (ASTM B 209M), alloy and temper standard with manufacturer for type of use and finish indicated; manufacturer's standard panel dimensions and thickness; finished to match ribs.
 - a. Perforations: [**Manufacturer's standard pinholes**] <Insert description>.
- C. Endlocks: Continuous end links, chains, or other devices at ends of rods; locking and retaining grille curtain in guides against excessive pressures, maintaining grille curtain alignment, and preventing lateral movement.
- D. Bottom Bar: Manufacturer's standard continuous channel or tubular shape, finished to match grille.
1. Astragal: Equip each grille bottom bar with a replaceable, adjustable, continuous, compressible gasket of flexible vinyl, rubber, or neoprene as a cushion bumper.
 2. Provide motor-operated grilles with combination bottom astragal and sensor edge.
- E. Grille Curtain Jamb Guides: Manufacturer's standard shape having curtain groove with return lips or bars to retain curtain. Provide continuous integral wear strips to prevent metal-to-metal contact and to minimize operational noise; with removable stops on guides to prevent overtravel of curtain.
1. Removable Posts and Jamb Guides: Manufacturer's standard.

2.2 HOODS AND ACCESSORIES

- A. General: Form sheet metal hood to entirely enclose coiled curtain and operating mechanism at opening head. Contour to fit end brackets to which hood is attached. Roll and reinforce top and bottom edges for stiffness. Form closed ends for

surface-mounted hoods and fascia for any portion of between-jamb mounting that projects beyond wall face. Equip hood with intermediate support brackets as required to prevent sagging.

1. Galvanized Steel: Nominal **0.028-inch-** (0.71-mm-) thick, hot-dip galvanized steel sheet with G90 (Z275) zinc coating, complying with ASTM A 653/A 653M.
 2. Stainless Steel: **0.025-inch-** (0.64-mm-) thick stainless-steel sheet, Type 304, complying with ASTM A 666.
 3. Aluminum: **0.040-inch-** (1.02-mm-) thick aluminum sheet complying with **ASTM B 209** (ASTM B 209M), of alloy and temper recommended by manufacturer and finisher for type of use and finish indicated.
- B. Removable Metal Soffit: Formed or extruded from same metal and with same finish as curtain if hood is mounted above ceiling, unless otherwise indicated.
- C. Mounting Frame: Manufacturer's standard mounting frame designed to support grille; factory fabricated from ASTM A 36/A 36M structural-steel [**tubes**] [**or**] [**shapes**], hot-dip galvanized per ASTM A 123/A 123M; fastened to floor and structure above grille; to be built into wall construction; and complete with anchors, connections, and fasteners.
- D. Push/Pull Handles: Equip each push-up-operated or emergency-operated grille with lifting handles on each side of grille, finished to match grille.
1. Provide pull-down straps or pole hooks for grilles more than **84 inches** (2130 mm) high.

2.3 LOCKING DEVICES

- A. Slide Bolt: Fabricate with side-locking bolts to engage through slots in tracks for locking by padlock, located on both left and right jamb sides, operable from coil side.
- B. Locking Device Assembly: Fabricate with cylinder lock, spring-loaded dead bolt, operating handle, cam plate, and adjustable locking bars to engage through slots in tracks.
1. Lock Cylinders: Provide cylinders [**specified in Section 087100 "Door Hardware"**] [**standard with manufacturer**] [**and keyed to building keying system**].
 2. Keys: [**Two**] [**Three**] **<Insert number>** for each cylinder.
- C. Chain Lock Keeper: Suitable for padlock.
- D. Safety Interlock Switch: Equip power-operated grilles with safety interlock switch to disengage power supply when grille is locked.

2.4 COUNTERBALANCING MECHANISM

- A. General: Counterbalance grilles by means of manufacturer's standard mechanism with

an adjustable-tension, steel helical torsion spring mounted around a steel shaft and contained in a spring barrel connected to top of curtain with barrel rings. Use grease-sealed bearings or self-lubricating graphite bearings for rotating members.

- B. Counterbalance Barrel: Fabricate spring barrel of manufacturer's standard hot-formed, structural-quality, welded or seamless carbon-steel pipe, of sufficient diameter and wall thickness to support rolled-up curtain without distortion of parts and to limit barrel deflection to not more than 0.03 in./ft. (2.5 mm/m) of span under full load.
- C. Spring Balance: One or more oil-tempered, heat-treated steel helical torsion springs. Size springs to counterbalance weight of curtain, with uniform adjustment accessible from outside barrel. Secure ends of springs to barrel and shaft with cast-steel barrel plugs.
- D. Torsion Rod for Counterbalance Shaft: Fabricate of manufacturer's standard cold-rolled steel, sized to hold fixed spring ends and carry torsional load.
- E. Brackets: Manufacturer's standard mounting brackets of either cast iron or cold-rolled steel plate.

2.5 MANUAL GRILLE OPERATORS

- A. Equip grille with manufacturer's recommended manual grille operator unless another type of grille operator is indicated.
- B. Push-up Grille Operation: Design counterbalance mechanism so required lift or pull for grille operation does not exceed [25 lbf (111 N)] <Insert force>.
- C. Chain-Hoist Operator: Consisting of endless steel hand chain, chain-pocket wheel and guard, and gear-reduction unit with a maximum [25 lbf (111 N)] [30 lbf (133 N)] <Insert force> force for grille operation. Provide alloy-steel hand chain with chain holder secured to operator guide.
- D. Crank Operator: Consisting of crank and crank gearbox, steel crank drive shaft, and gear-reduction unit, of type indicated. Size gears to require not more than [25 lbf (111 N)] [30 lbf (133 N)] <Insert force> force to turn crank. Fabricate gearbox to be oil tight and to completely enclose operating mechanism. Provide manufacturer's standard crank-locking device.

2.6 ELECTRIC GRILLE OPERATORS

- A. General: Electric grille operator assembly of size and capacity recommended and provided by grille manufacturer for grille [and operation-cycles requirement] specified, with electric motor and factory-prewired motor controls, starter, gear-reduction unit, solenoid-operated brake, clutch, remote-control stations, control devices, integral gearing for locking grille, and accessories required for proper operation.

1. Comply with NFPA 70.

2. Provide control equipment complying with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6, with NFPA 70 Class 2 control circuit, maximum 24 V, ac or dc.
- B. Usage Classification: Electric operator and components capable of operating for not less than number of cycles per hour indicated for each grille.
- C. Grille Operator Location(s): Operator location indicated for each grille.
1. Top-of-Hood Mounted: Operator is mounted to the right or left grille head plate with the operator on top of the grille-hood assembly and connected to the grille drive shaft with drive chain and sprockets. Headroom is required for this type of mounting.
 2. Front-of-Hood Mounted: Operator is mounted to the right or left grille head plate with the operator on coil side of the grille-hood assembly and connected to the grille drive shaft with drive chain and sprockets. Front clearance is required for this type of mounting.
 3. Wall Mounted: Operator is mounted to the inside front wall on the left or right side of grille and connected to grille drive shaft with drive chain and sprockets. Side room is required for this type of mounting. Wall mounted operator can also be mounted above or below shaft; if above shaft, headroom is required.
 4. Bench Mounted: Operator is mounted to the right or left grille head plate and connected to the grille drive shaft with drive chain and sprockets. Side room is required for this type of mounting.
 5. Through-Wall Mounted: Operator is mounted on other side of wall from coil-side of grille.
- D. Electric Motors: Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements specified in Section 110513 "Common Motor Requirements for Equipment" unless otherwise indicated.
1. Electrical Characteristics:
 - a. Phase: **[Single phase]** **[Polyphase]**.
 - b. Volts: **[115]** **[208]** **[230]** **[460]** **<Insert value>** V.
 - c. Hertz: 60.
 2. Motor Type and Controller: Reversible motor and controller (disconnect switch) for motor exposure indicated.
 3. Motor Size: Minimum size as indicated. If not indicated, large enough to start, accelerate, and operate grille in either direction from any position, at a speed not less than **8 in./sec.** (203 mm/s) and not more than **12 in./sec.** (305 mm/s), without exceeding nameplate ratings or service factor.
 4. Operating Controls, Controllers (Disconnect Switches), Wiring Devices, and Wiring: Manufacturer's standard unless otherwise indicated.
 5. Coordinate wiring requirements and electrical characteristics of motors and other electrical devices with building electrical system and each location where installed.
- E. Limit Switches: Equip each motorized grille with adjustable switches interlocked with motor controls and set to automatically stop grille at fully opened and fully closed

positions.

- F. Obstruction Detection Device: Equip motorized grille with indicated external automatic safety sensor capable of protecting full width of grille opening. Activation of sensor immediately stops and reverses downward grille travel.
1. Photoelectric Sensor: Manufacturer's standard system designed to detect an obstruction in grille opening without contact between grille and obstruction.
 - a. Self-Monitoring Type: Designed to interface with grille operator control circuit to detect damage to or disconnection of sensing device. When self-monitoring feature is activated, grille closes only with sustained pressure on close button.
 2. Sensor Edge: Automatic safety sensor edge, located within astragal or weather stripping mounted to bottom bar. Contact with sensor activates device. Connect to control circuit using manufacturer's standard take-up reel or self-coiling cable.
 - a. Self-Monitoring Type: Four-wire configured device designed to interface with grille operator control circuit to detect damage to or disconnection of sensing device.
- G. Remote-Control Station: Momentary-contact, three-button control station with push-button controls labeled "Open," "Close," and "Stop."
1. Interior units, full-guarded, surface-mounted, heavy-duty type, with general-purpose NEMA ICS 6, Type 1 enclosure.
 2. Exterior units, full-guarded, standard-duty, surface-mounted, weatherproof type; NEMA ICS 6, Type 4 enclosure, key operated.
- H. Emergency Manual Operation: Equip each electrically powered grille with capability for emergency manual operation. Design manual mechanism so required force for grille operation does not exceed [25 lbf (111 N)] [30 lbf (133 N)] <Insert force>.
- I. Emergency Operation Disconnect Device: Equip operator with hand-operated disconnect mechanism for automatically engaging manual operator and releasing brake for emergency manual operation while disconnecting motor without affecting timing of limit switch. Mount mechanism so it is accessible from floor level. Include interlock device to automatically prevent motor from operating when emergency operator is engaged.
- J. Motor Removal: Design operator so motor may be removed without disturbing limit-switch adjustment and without affecting emergency manual operation.
- K. Audible and Visual Signals: Audible alarm and visual indicator lights in compliance with regulatory requirements for accessibility.
- L. Emergency-Egress Release: Flush, wall-mounted handle mechanism, for ADA-ABA-compliant egress feature, not dependent on electric power. The release allows an unlocked grille to partially open without affecting limit switches to permit

passage, and it automatically resets motor drive upon return of handle to original position.

- M. Self-Opening Mechanism: Automatic release mechanism triggered by [**smoke detector,**] [**emergency push-button station,**] fire alarm or power failure. When activated, the grille self opens by means of a fail-safe operator to the fully open position without the need of power operation or battery backup systems. When the [**emergency push-button is reset, and the**] alarm is cleared and power is restored, the grille will operate normally.

2.7 OPEN-CURTAIN GRILLE ASSEMBLY <Insert drawing designation>

- A. Open-Curtain Grille: Overhead coiling grille with a curtain having a network of horizontal rods that interconnect with vertical links.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ACME Rolling Doors.
 - b. Alpine Overhead Doors, Inc.
 - c. AlumaTek, Inc.
 - d. City-Gates.
 - e. Cookson Company.
 - f. Cornell Iron Works, Inc.
 - g. Dynaflair Corporation.
 - h. Dynamic Closures Corp.
 - i. Lawrence Roll-Up Doors, Inc.
 - j. Mahon Door Corporation.
 - k. McKeon Rolling Steel Door Company, Inc.
 - l. Metro Door.
 - m. Overhead Door Corporation.
 - n. Raynor.
 - o. Windsor Door.
 - p. <Insert manufacturer's name>.
 - q. or approved equal.
- B. Operation Cycles: Not less than [**10,000**] [**20,000**] [**50,000**] [**100,000**] <Insert number>.
1. Include tamperproof cycle counter.
- C. Grille Curtain Material: [**Aluminum**] [**Stainless steel**] [**Galvanized steel**].
1. Space rods at approximately [**1-1/2 inches** (38 mm)] [**2 inches** (51 mm)] [**3 inches** (76 mm)] <Insert dimension> o.c.
 2. Space links approximately [**3 inches** (76 mm)] [**6 inches** (152 mm)] [**9 inches** (228 mm)] <Insert dimension> apart in a [**straight in-line**] [**brick (staggered)**] <Insert pattern> pattern.
 3. Glazing Inserts: [**Manufacturer's standard**] <Insert description>.

4. Spacers: **[Metal tubes matching curtain material] [PVC] <Insert description>**.

- D. Curtain Jamb Guides: **[Aluminum] [Stainless steel] [Galvanized steel]** with exposed finish matching curtain slats. Provide continuous integral wear strips to prevent metal-to-metal contact and to minimize operational noise. **[Provide removable post(s) and jamb guides where shown on Drawings.]**

- E. Hood: **[Match curtain material and finish] [Aluminum] [Stainless steel] [Galvanized steel]**.
 1. Shape: **[Round] [Square] [As shown on Drawings] <Insert shape>**.
 2. Mounting: **[Face of wall] [Between jambs] [On mounting frame] [As shown on Drawings]**.

- F. Locking Devices: Equip grille with **[slide bolt for padlock] [locking device assembly] [and] [chain lock keeper]**.
 1. Locking Device Assembly: **[Single-jamb side] [Cremone type, both jamb sides]** locking bars, operable from **[inside with thumb turn] [outside with cylinder] [outside only, with cylinder] [inside and outside with cylinders] <Insert requirement>**.

- G. Manual Grille Operator: **[Push-up operation] [Chain-hoist operator] [Manufacturer's standard crank operator] [Awning-crank operator] [Wall-crank operator]**.
 1. Provide operator with through-wall shaft operation.
 2. Provide operator with manufacturer's standard removable operating arm.

- H. Electric Grille Operator:
 1. Usage Classification: **[Heavy duty, 60 to 90 cycles per hour] [Standard duty, up to 60 cycles per hour] [Medium duty, up to 15 cycles per hour] [Light duty, up to 10 cycles per hour] <Insert classification>**.
 2. Operator Location: **[Top of hood] [Front of hood] [Wall] [Bench] [Through wall] [As shown on Drawings]**.
 3. Motor Exposure: **[Interior] [Exterior, wet, and humid]**.
 4. Emergency Manual Operation: **[Push-up] [Chain] [Crank]** type.
 5. Obstruction-Detection Device: Automatic **[photoelectric sensor] [electric sensor edge on bottom bar] [pneumatic sensor edge on bottom bar] [; self-monitoring type]**.
 - a. Sensor Edge Bulb Color: **[Black] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
 6. Remote-Control Station: **[Interior] [Exterior] [Where shown on Drawings] <Insert location>**.
 7. Other Equipment: **[Audible and visual signals] [Emergency-egress release] [Self-opening mechanism] <Insert device>**.

- I. Grille Finish:

1. Aluminum Finish: **[Mill] [Clear anodized] [Light bronze anodized] [Medium bronze anodized] [Dark bronze anodized] [Black anodized] [Anodized color matching DEN Project Manager's sample] [Anodized color as selected by DEN Project Manager from full range of industry colors and color densities] <Insert color>**.
2. Baked-Enamel or Powder-Coated Finish: **[Color as indicated by manufacturer's designations] [Color matching DEN Project Manager's sample] [Color as selected by DEN Project Manager from manufacturer's full range] <Insert color and gloss>**.
3. Factory Prime Finish: Manufacturer's standard color.
4. Stainless-Steel Finish: **[No. 2B (bright, cold rolled)] [No. 4 (polished directional satin)] <Insert finish>**.
5. PVC Spacers: **[Color as indicated by manufacturer's designations] [Color as selected by DEN Project Manager from manufacturer's full range] <Insert color>**.

2.8 CLOSED-CURTAIN GRILLE ASSEMBLY <Insert drawing designation>

- A. Closed-Curtain Grille: Overhead coiling grille with a curtain having a series of horizontal ribs alternating with continuous horizontal infill panels secured by the ribs.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AlumaTek, Inc.
 - b. Dynaflair Corporation.
 - c. Dynamic Closures Corp.
 - d. QMI Security Solutions.
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.
- B. Operation Cycles: Not less than **[10,000] [20,000] [50,000] [100,000] <Insert number>**.
 1. Include tamperproof cycle counter.
- C. Grille Curtain Material: Aluminum ribs with continuous inserts indicated.
 1. Space ribs at approximately **[3 inches (76 mm)] <Insert dimension>** o.c.
 2. Inserts: Glass panels.
 3. Inserts: **[Clear, transparent] [Translucent]** plastic panels.
 4. Inserts: **[Solid] [Perforated]** aluminum panels.
- D. Curtain Jamb Guides: Aluminum with exposed finish matching curtain slats. Provide continuous integral wear strips to prevent metal-to-metal contact and to minimize operational noise. **[Provide removable post(s) and jamb guides where shown on Drawings.]**

- E. Hood: **[Match curtain material and finish] [Aluminum] [Stainless steel] [Galvanized steel]**.
1. Shape: **[Round] [Square] [As shown on Drawings] <Insert shape>**.
 2. Mounting: **[Face of wall] [Between jambs] [On mounting frame] [As shown on Drawings]**.
- F. Locking Devices: Equip grille with **[slide bolt for padlock] [locking device assembly] [and] [chain lock keeper]**.
1. Locking Device Assembly: **[Single-jamb side] [Cremone type, both jamb sides] locking bars, operable from [inside with thumbturn] [outside with cylinder] [outside only, with cylinder] [inside and outside with cylinders] <Insert requirement>**.
- G. Manual Grille Operator: **[Push-up operation] [Chain-hoist operator] [Manufacturer's standard crank operator] [Awning-crank operator] [Wall-crank operator]**.
1. Provide operator with through-wall shaft operation.
 2. Provide operator with manufacturer's standard removable operating arm.
- H. Electric Grille Operator:
1. Usage Classification: **[Heavy duty, 60 to 90 cycles per hour] [Standard duty, up to 60 cycles per hour] [Medium duty, up to 15 cycles per hour] [Light duty, up to 10 cycles per hour] <Insert classification>**.
 2. Operator Location: **[Top of hood] [Front of hood] [Wall] [Bench] [Through wall] [As shown on Drawings]**.
 3. Motor Exposure: **[Interior] [Exterior, wet, and humid]**.
 4. Emergency Manual Operation: **[Push-up] [Chain] [Crank] type**.
 5. Obstruction-Detection Device: Automatic **[photoelectric sensor] [electric sensor edge on bottom bar] [pneumatic sensor edge on bottom bar] [; self-monitoring type]**.
 - a. Sensor Edge Bulb Color: **[Black] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
 6. Remote-Control Station: **[Interior] [Exterior] [Where shown on Drawings] <Insert location>**.
 7. Other Equipment: **[Audible and visual signals] [Emergency-egress release] [Self-opening mechanism] <Insert device>**.
- I. Grille Finish:
1. Aluminum Finish: **[Mill] [Clear anodized] [Light bronze anodized] [Medium bronze anodized] [Dark bronze anodized] [Black anodized] [Anodized color matching DEN Project Manager's sample] [Anodized color as selected by DEN Project Manager from full range of industry colors and color densities] <Insert color>**.

2. Baked-Enamel or Powder-Coated Finish: [**Color as indicated by manufacturer's designations**] [**Color matching DEN Project Manager's sample**] [**Color as selected by DEN Project Manager from manufacturer's full range**] <Insert color and gloss>.
3. Factory Prime Finish: Manufacturer's standard color.
4. Stainless-Steel Finish: [**No. 2B (bright, cold rolled)**] [**No. 4 (polished directional satin)**] <Insert finish>.

2.9 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.10 ALUMINUM FINISHES

- A. Mill Finish: Manufacturer's standard.
- B. Clear Anodic Finish: AAMA 611, [**AA-M12C22A41, Class I, 0.018 mm**] [**AA-M12C22A31, Class II, 0.010 mm**] or thicker.
- C. Color Anodic Finish: AAMA 611, [**AA-M12C22A42/A44, Class I, 0.018 mm**] [**AA-M12C22A32/A34, Class II, 0.010 mm**] or thicker.
- D. Baked-Enamel or Powder-Coat Finish: AAMA 2603. Comply with coating manufacturer's written instructions for cleaning, conversion coating, application, and baking.

2.11 STEEL AND GALVANIZED-STEEL FINISHES

- A. Factory Prime Finish: Manufacturer's standard primer, compatible with field-applied finish. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry film thickness.
- B. Baked-Enamel or Powder-Coat Finish: Manufacturer's standard baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry film thickness.

2.12 STAINLESS-STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.

- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 1. Run grain of directional finishes with long dimension of each piece.
 - 2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
 - 3. Directional Satin Finish: No. 4.
- C. Bright, Cold-Rolled, Unpolished Finish: No. 2B.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates areas and conditions, with Installer present, for compliance with requirements for substrate construction and other conditions affecting performance of the Work.
- B. Examine locations of electrical connections.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install overhead coiling grilles and operating equipment complete with necessary hardware, anchors, inserts, hangers, and equipment supports; according to manufacturer's written instructions and as specified.
- B. Install overhead coiling grilles, hoods, and operators at the mounting locations indicated for each grille.
- C. Accessibility: Install overhead coiling grilles, switches, and controls along accessible routes in compliance with regulatory requirements for accessibility.

3.3 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
 - 1. Perform installation and startup checks according to manufacturer's written instructions.
 - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - 3. Test grille opening when activated by detector, fire-alarm system, emergency-egress release, or self-opening mechanism as required. Reset grille-opening mechanism after successful test.

3.4 ADJUSTING

- A. Adjust hardware and moving parts to function smoothly so that grilles operate easily, free of warp, twist, or distortion.
- B. Lubricate bearings and sliding parts as recommended by manufacturer.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain overhead coiling grilles.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 083326

SECTION 083513 - FOLDING DOORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Accordion folding doors.
2. Panel folding doors.
3. Bifold doors.
4. Bifold mirror doors.
5. Fire-rated folding doors.

B. Related Sections:

1. Section 055000 "Metal Fabrications" for support of and blocking for partition tracks, jamb conditions, pocket doors, motor operators, and controls; and for prepunching metal support members.
2. Section 061000 "Rough Carpentry" for support of and blocking for partition tracks, jamb conditions, pocket doors, motor operators, and controls.
3. Section 083113 "Access Doors and Frames" for access panels to controls of fire-rated folding doors.
4. Section 102238 "Operable Panel Partitions" for large-size, acoustically rated[**and fire-rated**], flat panel operable partitions.
5. Section 102226.13 "Accordion Folding Partitions" for large-size, acoustically rated, accordion folding partitions.
6. Section 283100 "Intelligent Life Safety Fire Management System" for fire alarm system requirements.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.[**Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for folding doors.**]

1. Include data substantiating that materials comply with requirements.

- B. Shop Drawings: For folding doors. Include plans, elevations, sections, details, attachments to other work, clearances required for operation, [**electronic operating and control mechanisms,**] [**access requirements,**] [**pockets and pocket doors,**] and accessory items. Show blocking.
 - 1. Fire-Release System: Describe system, including testing and resetting instructions.
 - 2. Wiring Diagrams: For power, signal, and control wiring.
- C. Setting Drawings: For anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors that are to be embedded in [**concrete**] [**or**] [**masonry**], and for cutouts required in other work, including support-beam punching template.
- D. Samples for Initial Selection: For units with factory-applied color finishes.
- E. Samples for Verification: For each type of folding door indicated and for each type of exposed finish required, in manufacturer's standard sizes.
- F. Product Schedule: For folding doors. [**Use same designations indicated on Drawings.**]

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer.
- B. Product Certificates: For the following, from manufacturer:
 - 1. Each type of fire-rated folding door.
 - 2. Each type of finish, covering, or facing for [**fire-rated**] folding doors.
- C. Material Test Reports: For each type of finish, covering, or facing indicated.
- D. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for fire-rated folding doors.
- E. Research/Evaluation Reports: For fire-rated folding doors, from <**Insert applicable model code organization**>.

1.5 CLOSEOUT SUBMITTALS

- A. [**Operation and**] Maintenance Data: For folding doors to include in [**emergency, operation, and**] maintenance manuals. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
 - 1. Finishes, coverings, or facings for folding doors, including finishes for exposed trim and accessories. Include precautions for cleaning materials and methods that could be detrimental to finishes and performance.
 - 2. Hardware, track, carriers, seals, [**fire release,**] and other operating components.
 - 3. Electric operator.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.
- B. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Flame-Spread Index: **[25] <Insert value>** or less.
 - 2. Smoke-Developed Index: **[50] [450] <Insert value>** or less.
- C. Fire-Rated Folding Door Assemblies: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing according to **[NFPA 252] [UBC Standard 7-2] [UL 10B] <Insert test method>**.
 - 1. Oversize Fire-Rated Folding Doors: For units exceeding sizes of tested assemblies, provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.
- D. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager] <Insert location>**.

1.7 PROJECT CONDITIONS

- A. Environmental Limitations: Do not deliver or install folding doors until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
- B. Field Measurements: Verify actual dimensions of openings by field measurements before fabrication

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 ACCORDION FOLDING DOORS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. [Curtition, Inc.](#)
 2. [FolDoor; Holcomb & Hoke Mfg. Co., Inc.](#)
 3. [Hufcor, Inc.](#)
 4. [KWIK-WALL Company.](#)
 5. [Moderco Inc.](#)
 6. [Modernfold, Inc; a DORMA Group company.](#)
 7. [Panelfold Inc.](#)
 8. **<Insert manufacturer's name>.**
 9. or approved equal.
- B. General: Top-supported, horizontal-sliding, manually operated accordion folding doors, with chain controlling the spacing and extension of pantographic or X-type accordion folding frames. Inner and outer covers are continuous surface facings that attach to and completely cover the folding frames and are pleated as the door is retracted.
- C. Outer Covering: Of type indicated below, complying with indicated surface-burning characteristics; attached to door support frames in a concealed manner at sufficient intervals to prevent sagging and separation and to permit on-site removal and repair, with vertical seams located in valleys and material hemmed at top and bottom.
1. Vinyl reinforced with woven backing weighing not less than [20 oz./linear yd. (567 g/m)] **<Insert weight>.**
 - a. Color, Texture, and Pattern: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color, texture, and pattern>.**
 2. Fabric weighing not less than [16 oz./linear yd. (496 g/m)] **<Insert weight>**, treated to resist stains.
 - a. Color, Texture, and Pattern: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color, texture, and pattern>.**
 3. Manufacturer's standard nonwoven carpet, needle punched with fused fibers to prevent unraveling.+
 - a. Color, Texture, and Pattern: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by**

DEN Project Manager from manufacturer's full range] <Insert color, texture, and pattern>.

- D. Sweep Seals: Manufacturer's standard top and bottom sweep seals on **[both] [one]** side(s).
- E. Carriers: Four-wheel carriers at lead post and two-wheel carriers at intermediate spacing, as necessary for size and weight of partition, to ensure secure, easy, and quiet operation.
1. Doors **96 Inches** (2438 mm) High or Less: Nylon wheels on steel shafts.
 2. Doors More Than **96 Inches** (2438 mm) High: Ball-bearing wheels with nylon tread and steel shafts.
- F. Tracks: Manufacturer's standard metal track made of extruded aluminum or formed steel with factory-applied, corrosion-resistant finish. Limit track deflection, independent of structural supporting system, to no more than 80 percent of bottom clearance. Design and fabricate track to support accordion folding doors and enable their operation without damage to track, folding unit, or adjacent surfaces; complying with the following requirements:
1. Head Trim: Prefinished wood molding for surface-mounted tracks.
 2. Center stop for center-opening partitions.
 3. Galvanized-steel sheet or aluminum subchannel for forming pocket for recessed suspension track.
 4. Metal ceiling contact guard to protect finished ceiling surface from damage by moving top sweep seals; with finish matching other exposed metal.
 5. Curved track sections with ceiling clips to accommodate configuration indicated.
 6. Glide switch to divert door to auxiliary track.
 7. Pivot switch to change track direction.
 8. Cross-track switch to allow one door to cross another.
- G. Hardware: Manufacturer's standard heavy-duty, manually operated metal pulls and latches as follows:
1. Finish: **[Clear-anodized aluminum] [Satin stainless steel] [Dull chromium-finish brass] [Dull chromium-finish steel]**.
 2. Latch: Operable from **[both] [one]** side(s) of closed door **[with coin-slot release on opposite side]**.
 3. Lock: **[Manufacturer's standard key-operated cylinder lock, operable from both sides] [Manufacturer's standard key-operated cylinder lock, operable from one side; privacy lock on other side] [Deadlock to receive cylinder, operable from both sides. Refer to Section 087100 "Door Hardware" for cylinder requirements] [Deadlock to receive cylinder, operable from both sides. Refer to Section 087111 "Door Hardware (Descriptive Specification)" for cylinder requirements] <Insert requirements>.**
 4. Foot bolts on lead post where indicated. Secure to post to avoid interference with seals.

- H. Jamb Molding: Manufacturer's standard wood or metal molding at closing jamb as required for light-tight jamb closure.
- I. Lead Posts and Jamb Posts: Not less than **0.048-inch- (1.2-mm-)** thick **[steel]** **[extruded aluminum]**, formed for rigidity and light seal at supporting construction.
 - 1. Nonferrous jamb strip for single-operating partitions to ensure tight closure by engaging rubber bumper on lead post.
- J. Meeting Post: **[Fixed single jamb for single-stacked doors]** **[Center meeting post for center-opening doors]**.
- K. Stacking: Tiebacks to maintain door in stacked position.
- L. Stacking Configuration: Stack **[single doors at one end of opening]** **[center-opening doors at both ends of opening]** **[doors in pockets with hinged pocket doors]**.
- M. Opening Size: **[As indicated on Drawings]** **<Insert size>**.

2.2 PANEL FOLDING DOORS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - 1. [American Folding Door Company, Inc.](#)
 - 2. [FolDoor; Holcomb & Hoke Mfg. Co., Inc.](#)
 - 3. [Panelfold Inc.](#)
 - 4. [Won-Door Corporation.](#)
 - 5. [Woodfold-Marco Mfg., Inc.](#)
 - 6. **<Insert manufacturer's name>**.
 - 7. or approved equal.
- B. General: Top-supported, horizontal-sliding, manually operated panel folding doors, with panels joined by continuous hinge connectors for the full height of panels.
- C. Core Material and Thickness: Manufacturer's standard.
- D. Panel Width: **[4-inch (100-mm)] [5-inch (125-mm)] [6-inch (150-mm)] [8-inch (200-mm)]** **<Insert dimension>** nominal width.
- E. Panel Facing: Facings that comply with indicated surface-burning characteristics.
 - 1. Vinyl Facing: Vinyl not less than **[7 mils (0.175 mm)]** **<Insert thickness>** thick, factory bonded to core.
 - a. Color and Texture: **[As indicated by manufacturer's designations]** **[Match DEN Project Manager's samples]** **[As selected by DEN Project Manager from manufacturer's full range]** **<Insert color and texture>**.

2. Vinyl Facing with Woven Backing: Vinyl reinforced with woven backing weighing not less than [12 oz./linear yd. (372 g/m)] <Insert weight>, factory bonded to core.
 - a. Color and Texture: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and texture>.**
 3. Plastic-Laminate Facing: Grade VGS, high-pressure plastic laminate complying with NEMA LD 3; adhesive applied under pressure to core.
 - a. Color, Texture, and Pattern: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color, texture, and pattern>.**
 4. Wood-Veneer Facing: <Insert species> wood veneer, laminated to core, with manufacturer's standard [clear] [stained] transparent finish.
 - a. Stain Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.**
- F. Carriers: Four-wheel carriers at lead post and two-wheel carriers at intermediate spacing, as necessary for size and weight of partition, to ensure secure, easy, and quiet operation.
1. Panels 5 Inches (125 mm) Wide or Less: Nylon wheels and axles.
 2. Panels More Than 5 Inches (125 mm) Wide: Ball-bearing wheels with nylon tread and steel shafts.
- G. Tracks: Manufacturer's standard [surface-mounted] [recessed], extruded-aluminum or steel track with factory-applied, corrosion-resistant finish. Limit track deflection, independent of structural supporting system, to no more than 80 percent of bottom clearance. Design and fabricate track to support operation without damage to track, folding unit, or adjacent surfaces; complying with the following requirements:
1. Prefinished ceiling guard/channel for recessed tracks.
 2. Center stop for biparting partitions.
 3. Galvanized-steel sheet or aluminum subchannel for forming pocket for recessed suspension track.
 4. Nonferrous jamb strip for single-operating partitions to ensure tight closure by engaging rubber bumper on lead post.
 5. Curved track sections to accommodate configuration indicated.
 6. Glide switch to divert door to auxiliary track.
 7. Pivot switch to change track direction.
 8. Cross-track switch to allow one door to cross another.
- H. Hinge Connector: Manufacturer's standard extruded-vinyl hinge connector.

1. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] [Match or coordinate with facing color] <Insert color>**.
 - I. Hardware: Manufacturer's standard heavy-duty, manually operated metal pulls and latches as follows:
 1. Finish: **[Clear-anodized aluminum] [Satin stainless steel] [Dull chromium-finish brass] [Dull chromium-finish steel]**.
 2. Latch: Operable from **[both] [one]** side(s) of closed door.
 3. Lock: **[Manufacturer's standard key-operated cylinder lock, operable from both sides] [Manufacturer's standard key-operated cylinder lock, operable from one side; privacy lock on other side] [Deadlock to receive cylinder, operable from both sides. Refer to Section 087100 "Door Hardware" for cylinder requirements] [Deadlock to receive cylinder, operable from both sides. Refer to Section 087111 "Door Hardware (Descriptive Specification)" for cylinder requirements] <Insert requirements>**.
 4. Foot bolts on lead post where indicated. Secure to post to avoid interference with seals.
 - J. Jamb Molding: Manufacturer's standard wood or metal molding at closing jamb as required for light-tight jamb closure.
 1. Wood: Match species and finish of panel facing.
 2. Metal: Manufacturer's standard finish.
 - K. Wood Track Molding: Manufacturer's standard wood molding on each side of surface-mounted track to match species and finish of panel facings. Install with tight, hairline joints with all fasteners concealed.
 - L. Meeting Post: **[Fixed single jamb for single-stacked doors] [Center meeting post for biparting doors]**.
 - M. Stacking: Tiebacks to maintain door in stacked position.
- 2.3 BIFOLD DOORS
- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 1. **Dunbarton Corporation**; Slimfold Products Division.
 2. **<Insert manufacturer's name>**.
 3. or approved equal.
 - B. General: Metal folding doors hinged together in pairs and supported on pivots at jamb, with floor and overhead track and door guide pins.

- C. Metal Panels: Sizes as indicated, formed from nominal **0.024-inch-** (0.6-mm-) thick, cold-rolled steel sheet. Channel form vertical edges and weld cross bracing to panel and channel-formed edges.
1. Surface Profile: [**Fully louvered**] [**Flush**] [**Paneled**] [**Louvered and paneled**] **<Insert profile>**.
 2. Configuration: [**Two**] [**Four**]-panel bifold.
 3. Sheet Metal Texture: [**Smooth**] [**Simulated leather**].
 4. Protective Finish: Hot-dip galvanized coating applied to panels, stiffeners, hinges, and decorative trim.
 5. Baked Finish: Baked-enamel factory finish in [**white**] [**ivory**] [**custom color as selected by DEN Project Manager**] **<Insert color>**.
- D. Hardware: Manufacturer's standard felt pads, screws, and pulls in standard finish. Hinges, pivots, and manufacturer's standard wheels factory installed and as follows:
1. Hinges: 3 self-aligning hinges.
 2. Guides and Pivots: Not less than **5/16-inch-** (7.9-mm-) diameter, adjustable screw-type, weight-bearing, zinc-plated pivot rod held in place by nylon rod clamp assemblies; with not less than **1/4-inch-** (6.4-mm-) diameter, spring-loaded, self-aligning, zinc-plated steel guide rods and top pivot rods held in place by nylon sleeves.
 3. Track: [**Prefinished rolled steel with baked-enamel paint finish**] [**Aluminum extrusion, Alloy 6063-T5, 0.05 inch (1.3 mm) thick, with manufacturer's standard metal finish**].

2.4 BIFOLD MIRROR DOORS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. **Dunbarton Corporation;** Slimfold Products Division.
 2. **<Insert manufacturer's name>**.
 3. or approved equal.
- B. General: Folding doors hinged together in pairs and supported on pivots at jamb, with floor and overhead track and door guide pins.
- C. Steel-Panel Door Construction: Sizes as indicated, flush profile, formed from nominal **0.024-inch-** (0.6-mm-) thick, cold-rolled steel sheet. Channel form vertical edges and weld cross bracing to panel- and channel-formed edges. Attach mirrored glass facing to steel sheet by means of mechanically attached channels at top and bottom and by dual-faced cushion tape.
1. Configuration: [**Two**] [**Four**]-panel bifold.
 2. Protective Finish: Hot-dip galvanized coating applied to panels, stiffeners, hinges, and decorative trim.
 3. Baked Finish: Baked-enamel factory finish in [**white**] [**custom color as selected by DEN Project Manager**] **<Insert color>**.

- D. Metal-Framed Door Construction: **[Aluminum]** **[Steel]** stiles and mechanically fitted rails with screw-attached stiffeners and with mirrored-glass facing attached securely to frames.
1. Panel Style: **[Exposed]** **[Concealed]** frame.
 2. Configuration: **[Two]** **[Four]**-panel bifold.
 3. Baked Finish: Electrostatically applied, baked-enamel factory finish in **[white]** **[custom color as selected by DEN Project Manager]** <Insert color>.
 4. Bright, Reflective Metallic Finish: **[Chrome]** **[Gold]** **[Selected by DEN Project Manager from manufacturer's full range]** <Insert finish>.
- E. Mirror Facing: **[Smooth]** **[Beveled]**-edged, silvered, mirrored, film-backed safety glass complying with 16 CFR 1201 for Category II safety glass; with ASTM C 1036 for Type I (transparent, flat), Class 1 (clear), Quality q2 (mirror) annealed float glass; with the following:
1. Glass Thickness: **[3 mm thick for doors up to 84 inches (2133 mm) in height]** **[4 mm thick for doors with height more than 84 inches (2133 mm)]**.
 2. Edge Protection: Vertical mirror edges protected by **[metal]** **[Mylar]** trim.
 3. Film-Backed Safety Mirrors: Apply film backing with pressure-sensitive adhesive coating over mirror-backing paint as recommended in writing by film-backing manufacturer to produce a surface free of bubbles, blisters, and other imperfections.
- F. Hardware: Manufacturer's standard felt pads, screws, and pulls in standard finish. Hinges, pivots, and manufacturer's standard wheels factory installed and as follows:
1. Hinges: 3 self-aligning hinges.
 2. Guides and Pivots: Manufacturer's standard.
 3. Guides and Pivots: Spring-loaded, zinc-plated steel guides and tops, and adjustable bottom pivot pins with nylon bushings and tips.
 4. Guides and Pivots: Not less than **5/16-inch-** (7.9-mm-) diameter, adjustable screw-type, weight-bearing, zinc-plated pivot rod held in place by nylon rod clamp assemblies; with not less than **1/4-inch-** (6.4-mm-) diameter, spring-loaded, self-aligning, zinc-plated steel guide rods and top pivot rods held in place by nylon sleeves.
- G. Track: **[Prefinished rolled steel with baked-enamel paint finish]** **[Aluminum extrusion, Alloy 6063-T5, 0.05 inch (1.3 mm) thick, with manufacturer's standard metal finish]**.

2.5 FIRE-RATED FOLDING DOORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [McKeon Rolling Steel Door Company, Inc.](#)
 2. [Won-Door Corporation.](#)
 3. **<Insert manufacturer's name>**.

4. or approved equal.
- B. General: **[Electrically]** **[Gravity-]** operated, automatic- or self-closing, UL- or ITS-listed, **[biparting]** folding fire-rated assembly; top supported from overhead track or dual tracks without floor guides; complete with hardware, seals, track, closing devices, releasing devices, controls, **[pocket doors,]** and accessories necessary for intended operation and complying with the following requirements:
 1. Assembly remains in normal open (stacked) position. Signal from fire-alarm system initiates self-closing operation.
 2. Controls allow manual operation in either conventional or emergency mode. When opened manually during emergency mode, control mechanism automatically closes assembly.
 3. **<Insert requirements>**.
- C. Fire Rating: **[1]** **[1-1/2]** **[3]** **<Insert number>** hour(s).
- D. Panel Construction: **[Formed-steel]** **[Formed stainless-steel]** sheet panels connected by **[formed-steel]** **[formed stainless-steel]** hinges.
- E. Fire Insulation:
 1. Cover interior surface of both series of panels in parallel panel doors with continuous fire-resistive blanket secured to each panel with metal clip system.
 2. Extend fire insulation from bottom edge of panels to tracks and meet at interior centers of fixed jamb and lead post, forming an effective fire barrier.
- F. Perimeter Seals and Closures: Manufacturer's standard vinyl or neoprene vertical seals, horizontal top and bottom seals, and closures identical to products tested for fire rating indicated, and forming an effective smoke and draft seal.
- G. Track and Trolley System: 1 track or 2 parallel steel tracks on **8-inch (200-mm)** centers, with ball-bearing roller trolleys and adjustable steel hanger rods for overhead support; designed for type of operation, size, and weight of fire-rated folding door indicated. Provide a continuous system of track sections and accessories identical to products tested for fire rating indicated, to accommodate configuration and layout indicated for door operation and storage.
- H. Lead Posts: Formed from not less than **0.026-inch (0.66-mm-)** thick **[steel]** **[stainless-steel]** sheet, connected to door panels by specially adapted panels and equipped with manufacturer's standard handle on each side.
- I. Electric Operators and Controls:
 1. Operators: Factory-assembled power-drive unit consisting of motor, **[remote-located]** control panel, limit switches, torque-limiting devices, clutch, reversing magnetic motor operator, leading-edge obstruction detectors, and key-switch control for conventional operation.

- a. Motor: [1/2 hp] <Insert horsepower>, controlled by reversing magnetic starter and equipped with overload protection.
 - b. Limit Switches: To prevent overtravel.
 - c. Roller Chain or Cable: Connected to lead posts by means of vertical stabilizer bar assembly.
 - d. Drive Mechanism: Protected by torque limiter and emergency clutch.
 - e. Travel Speed: 18 inches (450 mm) per second, maximum; 6 inches (150 mm) per second, minimum.
2. In case of fire, closing system is activated by building's fire- and smoke-detection equipment and automatically closes fire-rated folding doors.
 3. Electrical Service: Equip for [120 V, single phase, 60-cycle ac] <Insert service requirements>.
 4. Battery: Electrical current connects through relay to battery charger that continuously charges 12-V dc battery and automatically maintains battery at capacity. Automatic audible signal device sounds off if battery falls below or exceeds proper charge, power loss has occurred, or high-ac line voltage has been experienced.
 5. Leading-Edge Obstruction Detector:
 - a. Equip with pressure-sensitive leading edge that, on contact with an obstruction, causes door to stop and pause before attempting to re-close.
 - b. Disable leading-edge obstruction detector until fire-rated folding door has opened pocket door.
 6. Fire-rated folding doors can be manually opened at any time by pushing against leading edge.
 7. Audible alarm sounds at automatic closing of door.
- J. Accessories:
1. Vision panels.
 2. Exit Hardware: Located on both sides of fire-rated folding door. In emergency mode, slight pressure on hardware causes door to open a minimum of 32 inches (812 mm), pause for 3 seconds, and then automatically close. Furnish hardware that can be field programmable to allow automatic opening distances of up to the entire opening width. In conventional mode, hardware is used to operate door and move it back into storage pocket.
 3. <Insert accessory>.
- K. Finishes:
1. Baked-enamel finish for panels and hinges in colors selected by DEN Project Manager from manufacturer's full range.
 2. Manufacturer's standard finish for handles.
- L. Pocket Door:
1. Solid-core pocket doors with [reverse-action spring] [continuous] hinge; 90-degree minimum swing.

2. Face Finish: [**Match adjacent finishes**] <Insert finishes>.
3. Magnetic Catch: Holding force of no more than 30 lbf (133 N).
4. Maximum Opening Force: 50 lbf (222 N).
5. Bumper on interior side of pocket door as required by fire-rated folding door manufacturer to prevent interference with opening or retracting operation of fire-rated folding door.
6. Coordinate pocket door sizes with fire-rated folding door manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of folding doors.
- B. Verify that headers are level with finished floor to within plus or minus 1/16-inch (1.6-mm) tolerance over the length of opening.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. For folding doors supported by or anchored to permanent construction, advise installers of specific requirements for placement of anchorage devices. Furnish installers of other work with templates and drawings showing locations of anchorage devices and similar items.
- B. In path of fire-rated folding doors, level floor with header to tolerance of plus or minus 1/16 inch (1.6 mm) across opening; grind or fill floor as necessary.

3.3 INSTALLATION

- A. General: Install folding doors complying with manufacturer's written installation instructions. Install track in one piece.
 1. Comply with NFPA 80 for installing fire-rated folding doors.
- B. Standard Floor Clearances: 1/4 to 3/4 inch (6.4 to 19 mm) maximum (above floor finish).
 1. Comply with NFPA 80 for clearances required for fire-rated folding doors.
- C. Coordinate provisions for electrical service, sensing devices, and final connections for fire-rated folding doors.

3.4 ADJUSTING

- A. Adjust units as necessary to ensure smooth, quiet operation without warping or binding. Adjust hardware to function smoothly. Confirm that latches engage accurately and securely without forcing or binding.
 - 1. Fire-Rated Folding Doors: Verify that all operations are functional and comply with requirements of authorities having jurisdiction.
- B. Pocket Doors: Adjust to operate smoothly and easily, without binding or warping. Adjust hardware to function smoothly. Confirm that latches and locks engage accurately and securely without forcing or binding.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain fire-rated folding doors.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 083513

SECTION 083613 - SECTIONAL DOORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes **[manually] [electrically]** operated sectional doors **[with integral pass doors]**.
- B. Related Sections:
 - 1. Section 055000 "Metal Fabrications" for miscellaneous steel supports.
 - 2. **[Section 099113 "Exterior Painting"] [and] [Section 099123 "Interior Painting"]** for finish painting of factory-primed doors.
 - 3. Section 111200 "Parking Control Equipment" for parking control equipment interlocked to sectional doors.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 PERFORMANCE REQUIREMENTS

- A. General Performance: Sectional doors shall meet performance requirements specified without failure due to defective manufacture, fabrication, installation, or other defects in construction and without requiring temporary installation of reinforcing components.
- B. Delegated Design: Design sectional doors, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- C. Structural Performance: Exterior sectional doors shall withstand the effects of gravity loads, and the following loads and stresses within limits and under conditions indicated according to **[ASCE/SEI 7] <Insert requirement>**.
 - 1. Wind Loads: **[As indicated on Drawings] [Uniform pressure (velocity pressure) of 20 lbf/sq. ft. (960 Pa), acting inward and outward] <Insert loads>**.
 - a. Basic Wind Speed: **[85 mph (38 m/s)] [90 mph (40 m/s)] [100 mph (44 m/s)] [110 mph (49 m/s)] <Insert value>**.
 - b. Importance Factor: **<Insert factor>**.

- c. Exposure Category: **[A] [B] [C] [D]**.
 2. Deflection Limits: Design sectional doors to withstand design wind loads without evidencing permanent deformation or disengagement of door components. Deflection of door in horizontal position (open) shall not exceed 1/120 of the door width.
 - D. Air Infiltration: Maximum rate not more than indicated when tested according to **[ASTM E 283] [or] [DASMA 105]**.
 1. Air Infiltration: Maximum rate of **[0.08 cfm/sq. ft. (0.406 L/s per sq. m)] <Insert rate>** at **15 and 25 mph** (24.1 and 40.2 km/h).
 - E. Windborne-Debris-Impact-Resistance Performance: Provide **[glazed]** sectional doors that pass large-missile-impact and cyclic-pressure tests when tested according to **[ASTM E 1886 and ASTM E 1996] [DASMA 115] <Insert requirement>**.
 - F. Seismic Performance: Sectional doors shall withstand the effects of earthquake motions determined according to **[ASCE/SEI 7] <Insert requirement>**.
 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."
 2. Seismic Component Importance Factor: **[1.5] [1.0]**.
 - G. Operation Cycles: Provide sectional door components and operators capable of operating for not less than number of cycles indicated for each door. One operation cycle is complete when a door is opened from the closed position to the fully open position and returned to the closed position.
- 1.4 ACTION SUBMITTALS
- A. Product Data: For each type and size of sectional door and accessory. Include the following:
 1. Construction details, material descriptions, dimensions of individual components, profile door sections, and finishes.
 2. Rated capacities, operating characteristics, electrical characteristics, and furnished accessories.
 3. Include data substantiating that materials comply with requirements.
 - B. LEED Submittals:
 1. Certificates for **[Credit MR 6] [Credit MR 7]**: Chain-of-custody certificates certifying that flush wood doors comply with forest certification requirements. **[Include evidence that manufacturer is certified for chain of custody by an FSC-accredited certification body.]** Include statement indicating cost for each certified wood product.
 - C. Shop Drawings: For each installation and for special components not dimensioned or detailed in manufacturer's product data. Include plans, elevations, sections, details,

and attachments to other work.

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 2. Wiring Diagrams: For power, signal, and control wiring.
- D. Samples for Initial Selection: Manufacturer's finish charts showing full range of colors and textures available for units with factory-applied finishes.
1. Include similar Samples of accessories involving color selection.
- E. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below:
1. Flat Door Sections: **6 inches** (150 mm) square.
 2. Frame for Paneled Door Sections: **6 inches** (150 mm) long of each width of stile and rail required.
 3. Panel for Raised-Panel Door Sections: **12 inches** (300 mm) square at panel corner, but not smaller than required to show raised-panel profile.
- F. Delegated-Design Submittal: For sectional doors indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
1. Detail fabrication and assembly of seismic restraints.
 2. Summary of forces and loads on walls and jambs.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer.
- B. Seismic Qualification Certificates: For sectional doors, accessories, and components, from manufacturer.
- C. Warranties: Sample of special warranties.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For sectional doors to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Wood Door Manufacturer Qualifications: A qualified manufacturer that is certified for

chain of custody by an FSC-accredited certification body.

- B. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for both installation and maintenance of units required for this Project.
- C. Source Limitations: Obtain sectional doors from single source from single manufacturer.
 - 1. Obtain operators and controls from sectional door manufacturer.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- E. Standard for Sectional Doors: Fabricate sectional doors to comply with DASMA 102 unless otherwise indicated.
- F. Regulatory Requirements: Comply with applicable provisions in [**the U.S. Architectural & Transportation Barriers Compliance Board's "Americans with Disabilities Act (ADA) and Architectural Barriers Act (ABA) Accessibility Guidelines for Buildings and Facilities"**] [**and**] [**ICC/ANSI A117.1**].

1.8 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of sectional doors that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures including, but not limited to, excessive deflection.
 - b. Faulty operation of hardware.
 - c. Deterioration of metals, metal finishes, and other materials beyond normal weathering and use; rust through.
 - d. Delamination of exterior or interior facing materials.
 - 2. Warranty Period: Minimum [**two (2)**] [**five (5)**] <Insert number> years from date of Substantial Completion.
- B. Special Finish Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components that show evidence of deterioration of factory-applied finishes within specified warranty period.
 - 1. Warranty Period: Minimum [**10**] <Insert number> years from date of Substantial Completion.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419

"Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 STEEL DOOR SECTIONS

- A. Exterior Section Faces and Frames: Fabricate from zinc-coated (galvanized), cold-rolled, commercial steel (CS) sheet, complying with ASTM A 653/A 653M, with indicated zinc coating and thickness.
1. Fabricate section faces from single sheets to provide sections not more than **24 inches** (610 mm) high and of indicated thickness. Roll horizontal meeting edges to a continuous, interlocking, keyed, rabbeted, shiplap, or tongue-in-groove weathertight seal, with a reinforcing flange return.
 2. For insulated doors, provide sections with continuous thermal-break construction, separating the exterior and interior faces of door.
- B. Section Ends and Intermediate Stiles: Enclose open ends of sections with channel end stiles formed from galvanized-steel sheet not less than **0.064-inch-** (1.63-mm-) nominal coated thickness and welded to door section. Provide intermediate stiles formed from not less than **0.064-inch-** (1.63-mm-) thick galvanized-steel sheet, cut to door section profile, and welded in place. Space stiles not more than **48 inches** (1219 mm) apart.
- C. Reinforce bottom section with a continuous channel or angle conforming to bottom-section profile[**and allowing installation of astragal**].
- D. Reinforce sections with continuous horizontal and diagonal reinforcement, as required to stiffen door and for wind loading. Provide galvanized-steel bars, struts, trusses, or strip steel, formed to depth and bolted or welded in place.[**Ensure that reinforcement does not obstruct vision lites.**]
- E. Provide reinforcement for hardware attachment.
- F. Board Thermal Insulation: Insulate interior of steel sections with door manufacturer's standard[**CFC-free**] polystyrene or polyurethane board insulation, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, according to ASTM E 84; or with glass-fiber-board insulation. Secure insulation to exterior face sheet. Enclose insulation completely within steel sections that incorporate the following interior facing material, with no exposed insulation:
1. Interior Facing Material: Zinc-coated (galvanized), cold-rolled, commercial steel (CS) sheet, complying with ASTM A 653/A 653M, with indicated thickness.
 2. Interior Facing Material: Manufacturer's standard prefinished hardboard panel, **1/8 inch** (3 mm) thick and complying with ANSI A135.5.
- G. Foamed-in-Place Thermal Insulation: Insulate interior of steel sections with door manufacturer's standard[**CFC-free**] polyurethane insulation, foamed in place to completely fill interior of section and pressure bonded to face sheets to prevent

delamination under wind load, and with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, according to ASTM E 84. Enclose insulation completely within steel sections that incorporate the following interior facing material, with no exposed insulation:

1. Interior Facing Material: Zinc-coated (galvanized), cold-rolled, commercial steel (CS) sheet, complying with ASTM A 653/A 653M, with indicated thickness.
2. Interior Facing Material: Manufacturer's standard prefinished hardboard panel, **1/8 inch** (3 mm) thick and complying with ANSI A135.5.

H. Fabricate sections so finished door assembly is rigid and aligned, with tight hairline joints and free of warp, twist, and deformation.

2.2 WOOD DOOR SECTIONS

A. Paneled Sections: Fabricate stiles and rails of clear, vertical-grain, straight, kiln-dried Douglas fir, West Coast hemlock, or Sitka spruce, not less than **1-3/4 inches** (44 mm) thick. Form meeting rails to provide rabbeted, weathertight-seal joint.

1. Panel Inserts: Tempered hardboard, **1/4 inch** (6 mm) thick, smooth on two sides, complying with ANSI A135.4.
2. Glazed Panel Inserts: 6-mm-thick, clear float glass, complying with ASTM C 1036, Type I, Class 1, Quality Q3, with removable glazing stops of same wood as stiles and rails.

B. Flush Sections: Construct flush wood door sections with top, bottom, and end closures of clear, vertical-grain, straight, kiln-dried Douglas fir, West Coast hemlock, or Sitka spruce. Provide wood blocking to receive hardware, end stiles, and frames for glazing, glued and doweled in place. Form meeting rails to provide rabbeted weathertight-seal joint.

1. Core: Manufacturer's standard polystyrene or polyurethane board insulation[**or honeycomb core**] complying with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, according to ASTM E 84. Bond to facing.
2. Facing: **1/8-inch-** (3-mm-) thick, tempered hardboard complying with ANSI A135.4 and smooth on one side.

C. Certified Wood: Fabricate wood door sections with **[not less than 70 percent of] [all]** wood products produced from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."

D. Fabricate sections of mortise-and-tenon construction with waterproof glue and steel dowels, or of rabbeted construction with waterproof glue and steel dowels and pins.

E. Reinforce sections with continuous horizontal and diagonal galvanized-steel members as required to stiffen door and for wind loading.[**Ensure that reinforcement does not obstruct vision lites.**]

- F. Treat wood door members after machining with water-repellent preservative formulation according to WDMA I.S. 4.
- G. Fabricate sections so finished door assembly is rigid and aligned, with tight hairline joints and free of warp, twist, deformation, and delamination.
- H. Factory prime door sections with one coat of exterior primer compatible with field-applied finish, applied at a minimum dry film thickness of **1 mil** (0.025 mm).

2.3 ALUMINUM DOOR SECTIONS

- A. Sections: Construct door sections with stiles and rails formed from extruded-aluminum shapes, complying with **ASTM B 221** (ASTM B 221M), alloy and temper recommended by manufacturer for type of use and finish indicated, with wall thickness not less than **0.065 inch** (1.7 mm) for door section **1-3/4 inches** (44 mm) deep. Fabricate sections with stile and rail dimensions and profiles shown on Drawings. Join stiles and rails by welding or with concealed, **1/4-inch-** (6-mm-) minimum diameter, aluminum or nonmagnetic stainless-steel through bolts, full height of door section. Form meeting rails to provide a weathertight-seal joint.
 - 1. Reinforce sections with continuous horizontal and diagonal reinforcement, as required to stiffen door and for wind loading. [**Ensure that reinforcement does not obstruct vision lites.**]
 - 2. Provide reinforcement for hardware attachment.
- B. Solid Panels: Fabricate of aluminum sheet, complying with **ASTM B 209** (ASTM B 209M), alloy and temper standard with manufacturer for type of use and finish indicated, not less than **0.040 inch** (1.02 mm) thick, set in continuous vinyl channel retained with rigid, snap-in, extruded-vinyl moldings or with rubber or neoprene glazing gasket with aluminum stop.
- C. Full-Vision Sections: Manufacturer's standard, tubular, aluminum-framed section fully glazed with 6-mm-thick, clear acrylic glazing set in vinyl, rubber, or neoprene glazing channel and with removable extruded-vinyl or aluminum stops.

2.4 TRANSLUCENT DOOR SECTIONS

- A. Construct door sections of not less than **0.063-inch-** (1.6-mm-) thick, extruded-aluminum stiles and rails complying with **ASTM B 221** (ASTM B 221M) and with alloy and temper recommended by manufacturer for type of use and finish indicated, to provide door sections at least **1-3/4 inches** (44 mm) deep. Fabricate units with overlapped or interlocked weathertight-seal joints at meeting rails. Reinforce or truss each section as required for strength and rigidity. Provide reinforcement for hardware attachment.
- B. Provide translucent, ribbed, glass-fiber-reinforced plastic panels, secured and sealed watertight to framing, and reinforced to meet performance requirements.

2.5 TRACKS, SUPPORTS, AND ACCESSORIES

- A. Tracks: Manufacturer's standard, galvanized-steel track system of configuration indicated, sized for door size and weight, designed for lift type indicated and clearances shown on Drawings, and complying with ASTM A 653/A 653M for minimum **G60 (Z180)** zinc coating. Provide complete track assembly including brackets, bracing, and reinforcement for rigid support of ball-bearing roller guides for required door type and size. Slot vertical sections of track spaced **2 inches (51 mm)** apart for door-drop safety device. Slope tracks at proper angle from vertical or design tracks to ensure tight closure at jambs when door unit is closed.
- B. Track Reinforcement and Supports: Galvanized-steel track reinforcement and support members, complying with ASTM A 36/A 36M and ASTM A 123/A 123M. Secure, reinforce, and support tracks as required for door size and weight to provide strength and rigidity without sag, sway, and vibration during opening and closing of doors.
1. Vertical Track Assembly: Track with **[continuous reinforcing angle attached to track and attached to wall with jamb brackets] [wall jamb brackets attached to track and attached to wall]**.
 2. Horizontal Track Assembly: Track with continuous reinforcing angle attached to track and supported at points from curve in track to end of track by laterally braced attachments to overhead structural members.
- C. Removable Center Posts: Manufacturer's standard **[carry-away] [roll-away] [swing-up]** type for multiple doors in one opening.
- D. Weatherseals: Replaceable, adjustable, continuous, compressible weather-stripping gaskets of flexible vinyl, rubber, or neoprene fitted to bottom and top of sectional door unless otherwise indicated.
- E. Windows: Manufacturer's standard window units of type and size indicated and in arrangement shown. Set glazing in vinyl, rubber, or neoprene glazing channel for metal-framed doors and elastic glazing compound for wood doors, as required. Provide removable stops of same material as door-section frames.
- F. Pass Doors: Manufacturer's standard pass doors where indicated, complete with glazing, operating hardware, and mortise lock. Construct pass doors of same materials, design, and finish as sectional door assembly.
1. Lock Cylinders: Provide cylinders **[specified in Section 087100 "Door Hardware"] [standard with manufacturer] [and keyed to building keying system]**.
 2. Keys: **[Two] [Three] <Insert number>** for each cylinder.

2.6 HARDWARE

- A. General: Provide heavy-duty, corrosion-resistant hardware, with hot-dip galvanized, stainless-steel, or other corrosion-resistant fasteners, to suit door type.

- B. Hinges: Heavy-duty, galvanized-steel hinges of not less than **0.079-inch-** (2.01-mm-) nominal coated thickness at each end stile and at each intermediate stile, according to manufacturer's written recommendations for door size. Attach hinges to door sections through stiles and rails with bolts and lock nuts or lock washers and nuts. Use rivets or self-tapping fasteners where access to nuts is not possible. Provide double-end hinges where required, for doors over **16 feet** (4.88 m) wide unless otherwise recommended by door manufacturer.
- C. Rollers: Heavy-duty rollers with steel ball-bearings in case-hardened steel races, mounted with varying projections to suit slope of track. Extend roller shaft through both hinges where double hinges are required. Provide **3-inch-** (76-mm-) diameter roller tires for **3-inch-** (76-mm-) wide track and **2-inch-** (51-mm-) diameter roller tires for **2-inch-** (51-mm-) wide track.
- D. Push/Pull Handles: For push-up or emergency-operated doors, provide galvanized-steel lifting handles on each side of door.

2.7 LOCKING DEVICES

- A. Slide Bolt: Fabricate with side-locking bolts to engage through slots in tracks for locking by padlock, located on single-jamb side, operable from inside only.
- B. Locking Device Assembly: Fabricate with cylinder lock, spring-loaded deadbolt, operating handle, cam plate, and adjustable locking bars to engage through slots in tracks.
 - 1. Lock Cylinders: Provide cylinders [**specified in Section 087100 "Door Hardware"**] [**standard with manufacturer**] [**and keyed to building keying system**].
 - 2. Keys: [**Two**] [**Three**] <Insert number> for each cylinder.
- C. Chain Lock Keeper: Suitable for padlock.
- D. Safety Interlock Switch: Equip power-operated doors with safety interlock switch to disengage power supply when door is locked.

2.8 COUNTERBALANCE MECHANISM

- A. Torsion Spring: Counterbalance mechanism consisting of adjustable-tension torsion springs fabricated from steel-spring wire complying with ASTM A 229/A 229M, mounted on torsion shaft made of steel tube or solid steel. Provide springs designed for number of operation cycles indicated.
- B. Weight Counterbalance: Counterbalance mechanism consisting of filled pipe weights that move vertically in a galvanized-steel weight pipe. Connect pipe weights with cable to weight-cable drums mounted on torsion shaft made of steel tube or solid steel.
- C. Cable Drums and Shaft for Doors: Cast-aluminum or gray-iron casting cable drums mounted on torsion shaft and grooved to receive door-lifting cables as door is raised.

Mount counterbalance mechanism with manufacturer's standard ball-bearing brackets at each end of torsion shaft. Provide one additional midpoint bracket for shafts up to **16 feet** (4.88 m) long and two additional brackets at one-third points to support shafts more than **16 feet** (4.88 m) long unless closer spacing is recommended by door manufacturer.

- D. Cables: Galvanized-steel lifting cables with cable safety factor of at least **[5] [7]** to 1.
- E. Cable Safety Device: Include a spring-loaded steel or spring-loaded bronze cam mounted to bottom door roller assembly on each side and designed to automatically stop door if either lifting cable breaks.
- F. Bracket: Provide anchor support bracket as required to connect stationary end of spring to the wall and to level the shaft and prevent sag.
- G. Provide a spring bumper at each horizontal track to cushion door at end of opening operation.

2.9 MANUAL DOOR OPERATORS

- A. Equip door with manufacturer's recommended manual door operator unless another type of door operator is indicated.
- B. Push-up Operation: Lift handles and pull rope for raising and lowering doors, with counterbalance mechanism designed so that required lift or pull for door operation does not exceed **[25 lbf (111 N)] <Insert value>**.
- C. Chain-Hoist Operator: Consisting of endless steel hand chain, chain-pocket wheel and guard, and gear-reduction unit with a maximum **[25-lbf (111-N)] [35-lbf (155-N)] <Insert value>** force for door operation. Provide alloy-steel hand chain with chain holder secured to operator guide.

2.10 ELECTRIC DOOR OPERATORS

- A. General: Electric door operator assembly of size and capacity recommended and provided by door manufacturer for door[**and "operation cycles" requirement**] specified, with electric motor and factory-prewired motor controls, starter, gear-reduction unit, solenoid-operated brake, clutch, remote-control stations, control devices, integral gearing for locking door, and accessories required for proper operation.
 - 1. Comply with NFPA 70.
 - 2. Provide control equipment complying with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6; with NFPA 70, Class 2 control circuit, maximum 24-V ac or dc.
- B. Usage Classification: Electric operator and components capable of operating for not less than number of cycles per hour indicated for each door.

- C. Door-Operator Type: Unit consisting of electric motor, gears, pulleys, belts, sprockets, chains, and controls needed to operate door and meet required usage classification.
1. Trolley: Trolley operator mounted to ceiling above and to rear of door in raised position and directly connected to door with drawbar.
 2. Jackshaft, Center Mounted: Jackshaft operator mounted on the inside front wall above door and connected to torsion shaft with an adjustable coupling or drive chain.
 3. Jackshaft, Side Mounted: Jackshaft operator mounted on the inside front wall on right or left side of door and connected to torsion shaft with an adjustable coupling or drive chain.
- D. Electric Motors: Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements specified in Section 110513 "Common Motor Requirements for Equipment" unless otherwise indicated.
1. Electrical Characteristics:
 - a. Phase: **[Single phase] [Polyphase]**.
 - b. Volts: **[115] [208] [230] [460] <Insert value> V.**
 - c. Hertz: 60.
 2. Motor Type and Controller: Reversible motor and controller (disconnect switch) for motor exposure indicated.
 3. Motor Size: Minimum size as indicated. If not indicated, large enough to start, accelerate, and operate door in either direction from any position, at a speed not less than **8 in./sec. (203 mm/s)** and not more than **12 in./sec. (305 mm/s)**, without exceeding nameplate ratings or service factor.
 4. Operating Controls, Controllers (Disconnect Switches), Wiring Devices, and Wiring: Manufacturer's standard unless otherwise indicated.
 5. Coordinate wiring requirements and electrical characteristics of motors and other electrical devices with building electrical system and each location where installed.
 6. Use adjustable motor-mounting bases for belt-driven operators.
- E. Limit Switches: Equip each motorized door with adjustable switches interlocked with motor controls and set to automatically stop door at fully opened and fully closed positions.
- F. Obstruction Detection Device: Equip motorized door with indicated external automatic safety sensor capable of protecting full width of door opening. Activation of device immediately stops and reverses downward door travel.
1. Photoelectric Sensor: Manufacturer's standard system designed to detect an obstruction in door opening without contact between door and obstruction.
 - a. Self-Monitoring Type: Designed to interface with door operator control circuit to detect damage to or disconnection of sensor device. When self-monitoring feature is activated, door closes only with sustained pressure on close button.

2. Sensor Edge: Automatic safety sensor edge, located within astragal or weather stripping mounted to bottom bar. Contact with sensor activates device. Connect to control circuit using manufacturer's standard take-up reel or self-coiling cable.
 - a. Self-Monitoring Type: Four-wire configured device designed to interface with door-operator control circuit to detect damage to or disconnection of sensor edge.
 - G. Remote-Control Station: Momentary-contact, three-button control station with push-button controls labeled "Open," "Close," and "Stop."
 1. Interior units, full-guarded, surface-mounted, heavy-duty type, with general-purpose NEMA ICS 6, Type 1 enclosure.
 2. Exterior units, full-guarded, standard-duty, surface-mounted, weatherproof type, NEMA ICS 6, Type 4 enclosure, key operated.
 - H. Emergency Manual Operation: Equip each electrically powered door with capability for emergency manual operation. Design manual mechanism so required force for door operation does not exceed [25 lbf (111 N)] [35 lbf (155 N)] <Insert value>.
 - I. Emergency Operation Disconnect Device: Equip operator with hand-operated disconnect mechanism for automatically engaging manual operator and releasing brake for emergency manual operation while disconnecting motor without affecting timing of limit switch. Mount mechanism so it is accessible from floor level. Include interlock device to automatically prevent motor from operating when emergency operator is engaged.
 - J. Motor Removal: Design operator so motor may be removed without disturbing limit-switch adjustment and without affecting emergency manual operation.
 - K. Audible and Visual Signals: Audible alarm and visual indicator lights in compliance with regulatory requirements for accessibility.
 - L. Radio-Control System: Consisting of the following:
 1. Three-channel universal coaxial receiver to open, close, and stop door; [one] [two] <Insert number> per operator.
 2. Multifunction remote control.
 3. Remote antenna and mounting kit.
- 2.11 DOOR ASSEMBLY <Insert drawing designation>
- A. [Steel] [Wood] [Aluminum] [Full-Vision Aluminum] [Translucent] Sectional Door: Sectional door formed with hinged sections.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Amarr Garage Doors.
 - b. Arm-R-Lite.

- c. C.H.I. Overhead Doors.
 - d. Clopay Building Products; a Griffon company.
 - e. Fimbel Architectural Door Specialties.
 - f. General American Door Company.
 - g. Haas Door; a Nofziger company.
 - h. Martin Door Manufacturing.
 - i. Overhead Door Corporation.
 - j. Raynor.
 - k. Rite-Hite Corporation.
 - l. Wayne-Dalton Corp.
 - m. Windsor Republic Doors.
 - n. **<Insert manufacturer's name>**.
 - o. or approved equal.
- B. Operation Cycles: Not less than **[10,000] [20,000] [50,000] [100,000] <Insert number>**.
- C. **[Installed]** R-Value: **[4.5 deg F x h x sq. ft./Btu (0.792 K x sq. m/W)] [6.0 deg F x h x sq. ft./Btu (1.057 K x sq. m/W)] [12.0 deg F x h x sq. ft./Btu (2.113 K x sq. m/W)] [15.0 deg F x h x sq. ft./Btu (2.642 K x sq. m/W)] [17.5 deg F x h x sq. ft./Btu (3.082 K x sq. m/W)] <Insert value>**.
- D. Steel Sections: Zinc-coated (galvanized) steel sheet with **[G60 (Z180)] [G90 (Z275)]** zinc coating.
1. Section Thickness: **[1-3/8 inches (35 mm)] [1-3/4 inches (44 mm)] [2 inches (51 mm)] <Insert dimension>**.
 2. Exterior-Face, Steel Sheet Thickness: **[0.064-inch- (1.63-mm-)] [0.040-inch- (1.02-mm-)] [0.028-inch- (0.71-mm-)] [0.022-inch- (0.56-mm-)] [0.019-inch- (0.48-mm-)] <Insert dimension>** nominal coated thickness.
 - a. Surface: Flat.
 - b. Surface: Manufacturer's standard, **[grooved] [ribbed] [paneled] [wood-grain embossed] <Insert requirement>**.
 3. Insulation: **[Board] [Foamed in place]**.
 4. Interior Facing Material: Zinc-coated (galvanized) steel sheet of **[0.028-inch- (0.71-mm-)] [0.022-inch- (0.56-mm-)] [0.019-inch- (0.48-mm-)] [manufacturer's recommended thickness to meet performance requirements] <Insert thickness>** nominal coated thickness.
 5. Interior Facing Material: Hardboard panel.
- E. Wood Sections: **[Paneled] [Flush] [and with manufacturer's standard insulation]**.
- F. Aluminum Sections: **[Solid panels] [Full vision] [with manufacturer's standard, nonglazed panels across bottom section of door]**.
- G. Translucent Sections: Manufacturer's standard **[with manufacturer's standard, nonglazed panels across bottom section of door]**.

- H. Track Configuration: [**Standard-lift**] [**Low-headroom**] [**High-lift**] [**Vertical-lift**] [**Contour**] <Insert description> track[**with removable center post shared with adjacent door**].
- I. Weatherseals: Fitted to bottom and top[**and around entire perimeter**] of door.[**Provide combination bottom weatherseal and sensor edge.**]
- J. Windows: Approximately [**24 by 7 inches** (610 by 178 mm)] [**24 by 11 inches** (610 by 279 mm)] <Insert dimensions> [, **with curved corners,**] [, **with square corners,**] and spaced apart the approximate distance as indicated on Drawings; in [**one row**] [**two rows**] <Insert number of rows> at height indicated on Drawings; installed with[**insulated**] glazing of the following type:
1. Clear Float Glass: 3 mm thick and complying with ASTM C 1036, Type I, Class 1, Quality Q3.
 2. Clear Acrylic Plastic: 3 mm thick, transparent, smooth or polished, and formulated to be UV resistant.
 3. Clear Polycarbonate Plastic: 3-mm-thick, transparent, fire-retardant, UV-resistant, polycarbonate sheet manufactured by extrusion process.
 4. Insulating Glass: [**Manufacturer's standard**] <Insert description>.
- K. Pass Door: As shown.
- L. Roller-Tire Material: [**Case-hardened steel**] [**Neoprene or bronze**] [**Manufacturer's standard**].
- M. Locking Devices: Equip door with [**slide bolt for padlock**] [**locking device assembly**] [**and**] [**chain lock keeper**].
1. Locking Device Assembly: [**Single-jamb side**] [**Cremona type, both jamb sides,**] locking bars, operable from [**inside with thumbturn**] [**outside with cylinder**] [**outside only, with cylinder**] [**inside and outside, with cylinders**] <Insert requirement>.
- N. Counterbalance Type: [**Torsion spring**] [**Weight counterbalance**].
- O. Manual Door Operator: [**Push-up operation**] [**Chain-hoist operator**].
- P. Electric Door Operator:
1. Usage Classification: [**Heavy duty, 60 to 90 cycles per hour**] [**Standard duty, up to 60 cycles per hour**] [**Medium duty, up to 15 cycles per hour**] [**Light duty, up to 10 cycles per hour**] <Insert classification>.
 2. Operator Type: [**Trolley**] [**Jackshaft, center mounted**] [**Jackshaft, side mounted**] [**As shown on Drawings**].
 3. Motor Exposure: [**Interior, clean, and dry**] [**Exterior, dusty, wet, or humid**].
 4. Emergency Manual Operation: [**Push-up**] [**Chain**] type.
 5. Obstruction-Detection Device: Automatic [**photoelectric sensor**] [**electric sensor edge on bottom bar**] [**pneumatic sensor edge on bottom bar**]; [**self-monitoring type**].

- a. Sensor Edge Bulb Color: **[Black] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
 6. Remote-Control Station: **[Interior] [Exterior] [Where shown on Drawings] <Insert location>**.
 7. Other Equipment: **[Audible and visual signals] [Radio-control system] <Insert device>**.
- Q. Door Finish:
1. Aluminum Finish: **[Clear anodized] [Bronze anodized] [Anodized color matching DEN Project Manager's sample] [Anodized color as selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
 2. Baked-Enamel or Powder-Coated Finish: **[Color and gloss as indicated by manufacturer's designations] [Color and gloss matching DEN Project Manager's sample] [Color and gloss as selected by DEN Project Manager from manufacturer's full range] <Insert color and gloss>**.
 3. Factory Prime Finish: Manufacturer's standard color.
 4. Finish of Interior Facing Material: **[Match finish of exterior section face] [Finish as indicated by manufacturer's designations] [Finish matching DEN Project Manager's sample] [Finish as selected by DEN Project Manager from manufacturer's full range] <Insert finish>**.

2.12 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.13 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, **[AA-M12C22A41, Class I, 0.018 mm] [AA-M12C22A31, Class II, 0.010 mm]** or thicker.
- B. Color Anodic Finish: AAMA 611, **[AA-M12C22A42/A44, Class I, 0.018 mm] [AA-M12C22A32/A34, Class II, 0.010 mm]** or thicker.
- C. Baked-Enamel or Powder-Coat Finish: AAMA 2603. Comply with coating manufacturer's written instructions for cleaning, conversion coating, application, and baking.

2.14 STEEL AND GALVANIZED-STEEL FINISHES

- A. Factory Prime Finish: Manufacturer's standard primer, compatible with field-applied finish. Comply with coating manufacturer's written instructions for cleaning,

pretreatment, application, and minimum dry film thickness.

- B. Baked-Enamel or Powder-Coat Finish: Manufacturer's standard baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry film thickness.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for substrate construction and other conditions affecting performance of the Work.
- B. Examine locations of electrical connections.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install sectional doors and operating equipment complete with necessary hardware, anchors, inserts, hangers, and equipment supports; according to manufacturer's written instructions and as specified.
- B. Tracks:
 - 1. Fasten vertical track assembly to opening jambs and framing, spaced not more than **24 inches** (610 mm) apart.
 - 2. Hang horizontal track assembly from structural overhead framing with angles or channel hangers attached to framing by welding or bolting, or both. Provide sway bracing, diagonal bracing, and reinforcement as required for rigid installation of track and door-operating equipment.
 - 3. Repair galvanized coating on tracks according to ASTM A 780.
- C. Accessibility: Install sectional doors, switches, and controls along accessible routes in compliance with regulatory requirements for accessibility.

3.3 STARTUP SERVICES

- A. Engage a factory-authorized service representative to perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

3.4 ADJUSTING

- A. Adjust hardware and moving parts to function smoothly so that doors operate easily, free of warp, twist, or distortion.
- B. Lubricate bearings and sliding parts as recommended by manufacturer.
- C. Adjust doors and seals to provide weathertight fit around entire perimeter.
- D. Align and adjust motors, pulleys, belts, sprockets, chains, and controls according to manufacturer's written instructions.
- E. Touch-up Painting: Immediately after welding galvanized materials, clean welds and abraded galvanized surfaces and repair galvanizing to comply with ASTM A 780.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain sectional doors.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 083613

SECTION 084113 - ALUMINUM-FRAMED ENTRANCES AND STOREFRONTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. **[Exterior] [Interior] [Exterior and interior]** storefront framing.
2. Storefront framing for window walls.
3. Storefront framing for ribbon walls.
4. Storefront framing for punched openings.
5. **[Exterior] [Interior] [Exterior and interior]** manual-swing entrance doors[**and door-frame units**].

B. Related Sections:

1. Section 084126 "All-Glass Entrances and Storefronts" for systems without aluminum support framing.
2. Section 084229.13 "Folding Automatic Entrances" for folding automatic entrances.
3. Section 084229.23 "Sliding Automatic Entrances" for sliding automatic entrances.
4. Section 084229.33 "Swinging Automatic Entrances" for swinging automatic entrances.
5. Section 084233 "Revolving Door Entrances" for revolving entrances.
6. Section 084243 "Intensive Care Unit/Critical Care Unit (ICU/CCU) Entrances" for manual-sliding entrances.
7. Section 084413 "Glazed Aluminum Curtain Walls" for curtain-wall systems that mechanically retain glazing on four sides.
8. Section 084423 "Structural-Sealant-Glazed Curtain Walls" for curtain-wall systems that retain glazing with structural sealant.
9. Section 089116 "Operable Wall Louvers," Section 089119 "Fixed Louvers," and Section 089516 "Wall Vents" for units installed with aluminum-framed systems.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. ADA/ABA Accessibility Guidelines: U.S. Architectural & Transportation Barriers Compliance Board's "Americans with Disability Act (ADA) and Architectural Barriers Act (ABA) Accessibility Guidelines for Buildings and Facilities."

1.4 PERFORMANCE REQUIREMENTS

- A. General Performance: Aluminum-framed systems shall withstand the effects of the following performance requirements without exceeding performance criteria or failure due to defective manufacture, fabrication, installation, or other defects in construction:
1. Movements of supporting structure indicated on Drawings including, but not limited to, story drift and deflection from uniformly distributed and concentrated live loads.
 2. Dimensional tolerances of building frame and other adjacent construction.
 3. Failure includes the following:
 - a. Deflection exceeding specified limits.
 - b. Thermal stresses transferring to building structure.
 - c. Framing members transferring stresses, including those caused by thermal and structural movements to glazing.
 - d. Glazing-to-glazing contact.
 - e. Noise or vibration created by wind and by thermal and structural movements.
 - f. Loosening or weakening of fasteners, attachments, and other components.
 - g. Sealant failure.
 - h. Failure of operating units.
- B. Delegated Design: Design aluminum-framed systems, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- C. Structural Loads:
1. Wind Loads: **[As indicated on Drawings.] <Insert loads>**.
 - a. Basic Wind Speed: **[85 mph (38 m/s)] [90 mph (40 m/s)] [100 mph (44 m/s)] [110 mph (49 m/s)] <Insert value>**.
 - b. Importance Factor: **<Insert factor>**.
 - c. Exposure Category: **[A] [B] [C] [D]**.
 2. Seismic Loads: **[As indicated on Drawings] <Insert loads>**.
 3. Blast Loads: **[As indicated on Drawings] <Insert loads>**.
- D. Deflection of Framing Members:
1. Deflection Normal to Wall Plane: Limited to **[edge of glass in a direction perpendicular to glass plane shall not exceed L/175 of the glass edge length for each individual glazing lite] [1/175 of clear span for spans up to**

- 13 feet 6 inches (4.1 m) and to 1/240 of clear span plus 1/4 inch (6.35 mm) for spans greater than 13 feet 6 inches (4.1 m)] <Insert deflection limit> or an amount that restricts edge deflection of individual glazing lites to 3/4 inch (19 mm), whichever is less.**
2. Deflection Parallel to Glazing Plane: Limited to **[L/360 of clear span or 1/8 inch (3.2 mm), whichever is smaller] [amount not exceeding that which reduces glazing bite to less than 75 percent of design dimension and that which reduces edge clearance between framing members and glazing or other fixed components directly below them to less than 1/8 inch (3.2 mm) and clearance between members and operable units directly below them to less than 1/16 inch (1.5 mm)] <Insert deflection limit>.**
- E. Structural-Test Performance: Provide aluminum-framed systems tested according to ASTM E 330 as follows:
1. When tested at positive and negative wind-load design pressures, systems do not evidence deflection exceeding specified limits.
 2. When tested at **[150] <Insert number>** percent of positive and negative wind-load design pressures, systems, including anchorage, do not evidence material failures, structural distress, and permanent deformation of main framing members exceeding **[0.2] <Insert number>** percent of span.
 3. Test Durations: As required by design wind velocity, but not fewer than 10 seconds.
- F. Windborne-Debris-Impact-Resistance Performance: Provide aluminum-framed systems that pass missile-impact and cyclic-pressure tests when tested according to **[ASTM E 1886 and testing information in ASTM E 1996] [or] [AAMA 506] <Insert requirement>**.
1. Large-Missile Impact: For aluminum-framed systems located within **30 feet (9.1 m)** of grade.
 2. Small-Missile Impact: For aluminum-framed systems located more than **30 feet (9.1 m)** above grade.
- G. Story Drift: Provide aluminum-framed systems that accommodate design displacement of adjacent stories indicated.
1. Design Displacement: **[As indicated on Drawings] <Insert design displacement>**.
 2. Test Performance: Meet criteria for passing, based on building occupancy type, when tested according to AAMA 501.4 at design displacement **[and 1.5 times design displacement]**.
- H. Air Infiltration: Provide aluminum-framed systems with maximum air leakage through fixed glazing and framing areas of **[0.06 cfm/sq. ft. (0.03 L/s per sq. m)] <Insert rate>** of fixed wall area when tested according to ASTM E 283 at a minimum static-air-pressure difference of **[1.57 lbf/sq. ft. (75 Pa)] [6.24 lbf/sq. ft. (300 Pa)] <Insert pressure>**.
- I. Water Penetration under Static Pressure: Provide aluminum-framed systems that do not evidence water penetration through fixed glazing and framing areas when tested

- according to ASTM E 331 at a minimum static-air-pressure difference of 20 percent of positive wind-load design pressure, but not less than [6.24 lbf/sq. ft. (300 Pa)] <Insert pressure>.
- J. Water Penetration under Dynamic Pressure: Provide aluminum-framed systems that do not evidence water leakage through fixed glazing and framing areas when tested according to AAMA 501.1 under dynamic pressure equal to 20 percent of positive wind-load design pressure, but not less than [6.24 lbf/sq. ft. (300 Pa)] <Insert pressure>.
1. Maximum Water Leakage: [According to AAMA 501.1] [No uncontrolled water penetrating aluminum-framed systems or water appearing on systems' normally exposed interior surfaces from sources other than condensation]. Water leakage does not include water controlled by flashing and gutters that is drained to exterior and water that cannot damage adjacent materials or finishes.
- K. Thermal Movements: Provide aluminum-framed systems that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
1. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.
 2. Test Performance: No buckling; stress on glass; sealant failure; excess stress on framing, anchors, and fasteners; or reduction of performance when tested according to AAMA 501.5.
 - a. High Exterior Ambient-Air Temperature: That which produces an exterior metal-surface temperature of [180 deg F (82 deg C)] <Insert temperature>.
 - b. Low Exterior Ambient-Air Temperature: [0 deg F (minus 18 deg C)] <Insert temperature>.
 3. Interior Ambient-Air Temperature: [75 deg F (24 deg C)] <Insert temperature>.
- L. Condensation Resistance: Provide aluminum-framed systems with fixed glazing and framing areas having condensation-resistance factor (CRF) of not less than [45] [53] <Insert number> when tested according to AAMA 1503.
- M. Thermal Conductance: Provide aluminum-framed systems with fixed glazing and framing areas having an average U-factor of not more than [0.57 Btu/sq. ft. x h x deg F (3.23 W/sq. m x K)] [0.69 Btu/sq. ft. x h x deg F (3.92 W/sq. m x K)] <Insert U-factor> when tested according to AAMA 1503.
- N. Sound Transmission: Provide aluminum-framed systems with fixed glazing and framing areas having the following sound-transmission characteristics:
1. Sound Transmission Class (STC): Minimum [26] [30] [35] <Insert rating> STC when tested for laboratory sound transmission loss according to ASTM E 90 and determined by ASTM E 413.

2. Outdoor-Indoor Transmission Class (OITC): Minimum **[26] [30] [34] <Insert rating>** OITC when tested for laboratory sound transmission loss according to ASTM E 90 and determined by ASTM E 1332.
- O. Structural Sealant: Capable of withstanding tensile and shear stresses imposed by aluminum-framed systems without failing adhesively or cohesively. When tested for preconstruction adhesion and compatibility, cohesive failure of sealant shall occur before adhesive failure.
 1. Adhesive failure occurs when sealant pulls away from substrate cleanly, leaving no sealant material behind.
 2. Cohesive failure occurs when sealant breaks or tears within itself but does not separate from each substrate because sealant-to-substrate bond strength exceeds sealant's internal strength.
- P. Structural-Sealant Joints: Designed to produce tensile or shear stress of less than **20 psi (138 kPa)**.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for aluminum-framed systems.
 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 1. Product Data for Credit IEQ 4.1: For adhesives and sealants used inside of the weatherproofing system, documentation including printed statement of VOC content.
 2. Laboratory Test Reports for Credit IEQ 4: For adhesives and sealants used inside the weatherproofing system, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: For aluminum-framed systems. Include plans, elevations, sections, details, and attachments to other work.
 1. Include details of provisions for system expansion and contraction and for drainage of moisture in the system to the exterior.
 2. For entrance doors, include hardware schedule and indicate operating hardware types, functions, quantities, and locations.
- D. Samples for Initial Selection: For units with factory-applied color finishes.
- E. Samples for Verification: For each type of exposed finish required, in manufacturer's standard sizes.

- F. Fabrication Sample: Of each vertical-to-horizontal intersection of aluminum-framed systems, made from 12-inch (300-mm) lengths of full-size components and showing details of the following:
1. Joinery, including concealed welds.
 2. Anchorage.
 3. Expansion provisions.
 4. Glazing.
 5. Flashing and drainage.
- G. Other Action Submittals:
1. Entrance Door Hardware Schedule: Prepared by or under the supervision of supplier, detailing fabrication and assembly of entrance door hardware, as well as procedures and diagrams. Coordinate final entrance door hardware schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of entrance door hardware.
- H. Delegated-Design Submittal: For aluminum-framed systems indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
1. Detail fabrication and assembly of aluminum-framed systems.
 2. Include design calculations.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer[**and testing agency**].
- B. Seismic Qualification Certificates: For aluminum-framed systems, accessories, and components, from manufacturer.
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
- C. Welding certificates.
- D. Preconstruction Test Reports: For sealant.
- E. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for aluminum-framed systems, indicating compliance with performance requirements.
- F. Source quality-control reports.
- G. Quality-Control Program for Structural-Sealant-Glazed System: Include reports.
- H. Field quality-control reports.
- I. Warranties: Sample of special warranties.

1.7 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For aluminum-framed systems to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures"

1.8 QUALITY ASSURANCE

- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.
- B. Testing Agency Qualifications: Qualified according to ASTM E 699 for testing indicated.
- C. Engineering Responsibility: Prepare data for aluminum-framed systems, including Shop Drawings, based on testing and engineering analysis of manufacturer's standard units in systems similar to those indicated for this Project.
- D. Quality-Control Program for Structural-Sealant-Glazed System: Develop quality control program specifically for Project. Document quality-control procedures and verify results for aluminum-framed systems. Comply with ASTM C 1401 recommendations including, but not limited to, system material-qualification procedures, preconstruction sealant-testing program, procedures for system fabrication and installation, and intervals of reviews and checks.
- E. Product Options: Information on Drawings and in Specifications establishes requirements for systems' aesthetic effects and performance characteristics. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction. Performance characteristics are indicated by criteria subject to verification by one or more methods including preconstruction testing, field testing, and in-service performance.
 - 1. Do not revise intended aesthetic effects, as judged solely by DEN Project Manager, except with DEN Project Manager's approval. If revisions are proposed, submit comprehensive explanatory data to DEN Project Manager for review.
- F. Preconstruction Sealant Testing: For structural-sealant-glazed systems, perform sealant manufacturer's standard tests for compatibility with and adhesion of each material that will come in contact with sealants and each condition required by aluminum-framed systems.
 - 1. Test a minimum five samples each of metal, glazing, and other material.
 - 2. Prepare samples using techniques and primers required for installed systems.
 - 3. For materials that fail tests, determine corrective measures necessary to prepare each material to ensure compatibility with and adhesion of sealants including, but

not limited to, specially formulated primers. After performing these corrective measures on the minimum number of samples required for each material, retest materials.

- G. Accessible Entrances: Comply with applicable provisions in **[the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines]** **[and]** **[ICC/ANSI A117.1]**.
- H. Source Limitations for Aluminum-Framed Systems: Obtain from single source from single manufacturer.
- I. Structural-Sealant Glazing: Comply with ASTM C 1401, "Guide for Structural Sealant Glazing" for design and installation of structural-sealant-glazed systems.
- J. Structural-Sealant Joints: Design reviewed and approved by structural-sealant manufacturer.
- K. Welding Qualifications: Qualify procedures and personnel according to AWS D1.2, "Structural Welding Code - Aluminum."
- L. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
 - 1. Build mockup of typical wall area as shown on Drawings.
 - 2. Field testing shall be performed on mockups according to requirements in "Field Quality Control" Article.
 - 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
 - 4. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- M. Preinstallation Conference: Conduct conference at **[Project site]** **[location and time as determined by DEN Project Manager]** **<Insert location>**.

1.9 PROJECT CONDITIONS

- A. Field Measurements: Verify actual locations of structural supports for aluminum-framed systems by field measurements before fabrication and indicate measurements on Shop Drawings.

1.10 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of aluminum-framed systems that do not comply with requirements or that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:

- a. Structural failures including, but not limited to, excessive deflection.
 - b. Noise or vibration caused by thermal movements.
 - c. Deterioration of metals[, **metal finishes**,] and other materials beyond normal weathering.
 - d. Adhesive or cohesive sealant failures.
 - e. Water leakage through fixed glazing and framing areas.
 - f. Failure of operating components.
2. Warranty Period: Minimum **[two (2)] [five (5)] [ten (10)] <Insert number>** years from date of Substantial Completion.
- B. Special Finish Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components on which finishes do not comply with requirements or that fail in materials or workmanship within specified warranty period. Warranty does not include normal weathering.
1. Warranty Period: Minimum **[five (5)] [ten (10)] [twenty (20)] <Insert number>** years from date of Substantial Completion.
- 1.11 MAINTENANCE SERVICE
- A. Entrance Door Hardware:
1. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of entrance door hardware.
 2. Initial Maintenance Service: Beginning at Substantial Completion, provide **[six] <Insert number>** months' full maintenance by skilled employees of entrance door hardware Installer. Include quarterly preventive maintenance, repair, or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper entrance door hardware operation at rated speed and capacity. Provide parts and supplies the same as those used in the manufacture and installation of original equipment.
- B. Structural-Sealant-Glazed Systems:
1. Initial Maintenance Service: Beginning at Substantial Completion, provide **[six] [12] <Insert number>** months' full maintenance by skilled employees of structural-sealant-glazed system Installer. Include **[monthly] [quarterly] <Insert interval>** preventive maintenance, repair, or replacement to ensure long-term performance and durability of structural-sealant-glazed system as required for proper entrance door hardware operation at rated speed and capacity. Provide parts and supplies the same as those used in the manufacture and installation of original system.
 2. Continuing Maintenance Proposal: From Installer to Owner, in the form of a standard yearly (or other period) maintenance agreement, starting on date initial maintenance service is concluded. State services, obligations, conditions, and terms for agreement period and for future renewal options.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. [Arcadia, Inc.](#)
2. [Arch Aluminum & Glass Co., Inc.](#)
3. [CMI ArchitecturalCommercial Architectural Products, Inc.](#)
4. [EFCO Corporation.](#)
5. [Kawneer North America; an Alcoa company.](#)
6. [Leed Himmel Industries, Inc.](#)
7. [Pittco Architectural Metals, Inc.](#)
8. [TRACO.](#)
9. [Tubelite.](#)
10. [United States Aluminum.](#)
11. [Vistawall Architectural Products; The Vistawall Group; a Bluescope Steel company.](#)
12. [YKK AP America Inc.](#)
13. **<Insert manufacturer's name>.**
14. or approved equal.

2.2 MATERIALS

- A. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.

1. Sheet and Plate: [ASTM B 209](#) (ASTM B 209M).
2. Extruded Bars, Rods, Profiles, and Tubes: [ASTM B 221](#) (ASTM B 221M).
3. Extruded Structural Pipe and Tubes: ASTM B 429.
4. Structural Profiles: ASTM B 308/B 308M.
5. Welding Rods and Bare Electrodes: AWS A5.10/A5.10M.

- B. Steel Reinforcement: Manufacturer's standard zinc-rich, corrosion-resistant primer, complying with SSPC-PS Guide No. 12.00; applied immediately after surface preparation and pretreatment. Select surface preparation methods according to recommendations in SSPC-SP COM and prepare surfaces according to applicable SSPC standard.

1. Structural Shapes, Plates, and Bars: ASTM A 36/A 36M.
2. Cold-Rolled Sheet and Strip: ASTM A 1008/A 1008M.

3. Hot-Rolled Sheet and Strip: ASTM A 1011/A 1011M.

2.3 FRAMING SYSTEMS

- A. Framing Members: Manufacturer's standard extruded-aluminum framing members of thickness required and reinforced as required to support imposed loads.
 1. Construction: [**Nonthermal**] [**Thermally improved**] [**Thermally broken**] [**Structurally glazed**] <Insert description>.
 2. Glazing System: [**Retained mechanically with gaskets on four sides**] [**Retained by structural sealant at vertical edges and mechanically with gaskets at horizontal edges**] <Insert description>.
 3. Glazing Plane: [**As indicated**] [**Front**] [**Center**] [**Back**] [**Multiplane**] <Insert description>.
- B. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning system components.
- C. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.
 1. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
 2. Reinforce members as required to receive fastener threads.
 3. Use exposed fasteners with countersunk Phillips screw heads[, **finished to match framing system**] [, **fabricated from stainless steel**].
- D. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts, complying with ASTM A 123/A 123M or ASTM A 153/A 153M.
- E. Concealed Flashing: [**Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding flashing compatible with adjacent materials**] [**Dead-soft, 0.018-inch-(0.457-mm-) thick stainless steel, ASTM A 240/A 240M of type recommended by manufacturer**].
- F. Framing System Gaskets and Sealants: Manufacturer's standard, recommended by manufacturer for joint type.
 1. Sealants used inside the weatherproofing system shall have a VOC content of [**250**] <Insert value> g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 2. Sealants used inside the weatherproofing system shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.4 GLAZING SYSTEMS

- A. Glazing: As specified in Section 088000 "Glazing."

- B. Glazing Gaskets: Manufacturer's standard compression types; replaceable, molded or extruded, of profile and hardness required to maintain watertight seal.
- C. Spacers and Setting Blocks: Manufacturer's standard elastomeric type.
- D. Bond-Breaker Tape: Manufacturer's standard TFE-fluorocarbon or polyethylene material to which sealants will not develop adhesion.
- E. Glazing Sealants: For structural-sealant-glazed systems, as recommended by manufacturer for joint type, and as follows:
 - 1. Structural Sealant: ASTM C 1184, single-component neutral-curing silicone formulation that is compatible with system components with which it comes in contact, specifically formulated and tested for use as structural sealant and approved by a structural-sealant manufacturer for use in aluminum-framed systems indicated.
 - a. Sealants used inside the weatherproofing system shall have a VOC content of **[100] <Insert value>** g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - b. Sealants used inside the weatherproofing system shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
 - c. Color: **[Black] [As selected by DEN Project Manager from manufacturer's full range of colors].**
 - 2. Weatherseal Sealant: ASTM C 920 for Type S, Grade NS, Class 25, Uses NT, G, A, and O; single-component neutral-curing formulation that is compatible with structural sealant and other system components with which it comes in contact; recommended by structural-sealant, weatherseal-sealant, and aluminum-framed-system manufacturers for this use.
 - a. Sealants used inside the weatherproofing system shall have a VOC content of **[250] <Insert value>** g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - b. Sealants used inside the weatherproofing system shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
 - c. Color: Matching structural sealant.

2.5 ENTRANCE DOOR SYSTEMS

- A. Entrance Doors: Manufacturer's standard glazed entrance doors for manual-swing operation.
 - 1. Door Construction: **[1-3/4-inch (44.5-mm) overall thickness, with minimum 0.125-inch- (3.2-mm-)] [2-inch (50.8-mm) overall thickness, with minimum**

0.188-inch- (4.8-mm-)] [2- to 2-1/4-inch (50.8- to 57.2-mm) overall thickness, with minimum 0.125-inch- (3.2-mm-)] thick, extruded-aluminum tubular rail and stile members. Mechanically fasten corners with reinforcing brackets that are deeply penetrated and fillet welded or that incorporate concealed tie rods.

- a. Thermal Construction: **[High-performance plastic connectors separate aluminum members exposed to the exterior from members exposed to the interior] <Insert description>.**
 2. Door Design: **[As indicated] [Narrow stile; 2-1/8-inch (54-mm) nominal width] [Medium stile; 3-1/2-inch (88.9-mm) nominal width] [Wide stile; 5-inch (127-mm) nominal width] <Insert description>.**
 - a. Accessible Doors: Smooth surfaced for width of door in area within **10 inches (255 mm)** above floor or ground plane.
 3. Glazing Stops and Gaskets: **[Beveled] [Square] <Insert description>**, snap-on, extruded-aluminum stops and preformed gaskets.
 - a. Provide nonremovable glazing stops on outside of door.
- B. Entrance Door Hardware: As specified in Section 087100 "Door Hardware."

2.6 ENTRANCE DOOR HARDWARE

- A. General: Provide entrance door hardware[**and entrance door hardware sets indicated in door and frame schedule] [and entrance door hardware sets indicated in "Entrance Door Hardware Sets" Article]** for each entrance door to comply with requirements in this Section.
1. Entrance Door Hardware Sets: Provide quantity, item, size, finish or color indicated, and **[named manufacturers' products] [products equivalent in function and comparable in quality to named products] [products complying with BHMA standard referenced].**
 2. Sequence of Operation: Provide electrified door hardware function, sequence of operation, and interface with other building control systems indicated.
 3. Opening-Force Requirements:
 - a. Egress Doors: Not more than **15 lbf (67 N)** to release the latch and not more than **30 lbf (133 N)** to set the door in motion[**and not more than 15 lbf (67 N) to open the door to its minimum required width.**
 - b. Accessible Interior Doors: Not more than **5 lbf (22.2 N)** to fully open door.
- B. Designations: Requirements for design, grade, function, finish, size, and other distinctive qualities of each type of entrance door hardware are indicated in "Entrance Door Hardware Sets" Article. Products are identified by using entrance door hardware designations as follows:

1. Named Manufacturers' Products: Manufacturer and product designation are listed for each door hardware type required for the purpose of establishing minimum requirements. Manufacturers' names are abbreviated in "Entrance Door Hardware Sets" Article.
 2. References to BHMA Standards: Provide products complying with these standards and requirements for description, quality, and function.
- C. Opening-Force Requirements:
1. Delayed-Egress Locks: Lock releases within 15 seconds after applying a force of not more than **15 lbf (67 N)** for not more than 3 seconds.
 2. Latches and Exit Devices: Not more than **15 lbf (67 N)** required to release latch.
- D. Pivot Hinges: BHMA A156.4, Grade 1.
1. Offset-Pivot Hinges: Provide top, bottom, and intermediate offset pivots at each door leaf.
- E. Butt Hinges: BHMA A156.1, Grade 1, radius corner.
1. Nonremovable Pins: Provide set screw in hinge barrel that, when tightened into a groove in hinge pin, prevents removal of pin while entrance door is closed.
 2. Exterior Hinges: [**Stainless steel, with stainless-steel pin**] [**Nonferrous**] **<Insert material>**.
 3. Quantities:
 - a. For doors up to [**87 inches (2210 mm)**] **<Insert height>** high, provide 3 hinges per leaf.
 - b. For doors more than [**87 and up to 120 inches (2210 and up to 3048 mm)**] **<Insert range>** high, provide 4 hinges per leaf.
- F. Continuous-Gear Hinges: Manufacturer's standard with stainless-steel bearings between knuckles, fabricated to full height of door and frame.
- G. Mortise Auxiliary Locks: BHMA A156.5, Grade 1.
- H. Manual Flush Bolts: BHMA A156.16, Grade 1.
- I. Automatic and Self-Latching Flush Bolts: BHMA A156.3, Grade 1.
- J. Panic Exit Devices: BHMA A156.3, Grade 1, listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for panic protection, based on testing according to UL 305.
- K. Cylinders: [**As specified in Section 087100 "Door Hardware."**] [**BHMA A156.5, Grade 1.**]
1. Keying: [**No master**] [**Master**] key system. Permanently inscribe each key with a visual key control number and include notation [**"DO NOT DUPLICATE"**] [**to be furnished by Owner**].

- L. Strikes: Provide strike with black-plastic dust box for each latch or lock bolt; fabricated for aluminum framing.
- M. Operating Trim: BHMA A156.6.
- N. Removable Mullions: BHMA A156.3, extruded aluminum.
 - 1. When used with panic exit devices, provide removable mullions listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for panic protection, based on testing according to UL 305. Use only mullions that have been tested with exit devices to be used.
- O. Closers: BHMA A156.4, Grade 1, with accessories required for a complete installation, sized as required by door size, exposure to weather, and anticipated frequency of use; adjustable to meet field conditions and requirements for opening force.
- P. Concealed Overhead Holders: BHMA A156.8, Grade 1.
- Q. Surface-Mounted Holders: BHMA A156.16, Grade 1.
- R. Door Stops: BHMA A156.16, Grade 1, floor or wall mounted, as appropriate for door location indicated, with integral rubber bumper.
- S. Weather Stripping: Manufacturer's standard replaceable components.
 - 1. Compression Type: Made of ASTM D 2000, molded neoprene, or ASTM D 2287, molded PVC.
 - 2. Sliding Type: AAMA 701, made of wool, polypropylene, or nylon woven pile with nylon-fabric or aluminum-strip backing.
- T. Weather Sweeps: Manufacturer's standard exterior-door bottom sweep with concealed fasteners on mounting strip.
- U. Silencers: BHMA A156.16, Grade 1.
- V. Thresholds: BHMA A156.21, raised thresholds beveled with a slope of not more than 1:2, with maximum height of 1/2 inch (13 mm).
- W. Finger Guards: Manufacturer's standard collapsible neoprene or PVC gasket anchored to frame hinge-jamb at center-pivoted doors.

2.7 ACCESSORY MATERIALS

- A. Joint Sealants: For installation at perimeter of aluminum-framed systems, as specified in Section 079200 "Joint Sealants."
 - 1. Sealants used inside the weatherproofing system shall have a VOC content of **[250]** <Insert value> g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2. Sealants used inside the weatherproofing system shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- B. Bituminous Paint: Cold-applied, asphalt-mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos; formulated for **30-mil (0.762-mm)** thickness per coat.

2.8 FABRICATION

- A. Form or extrude aluminum shapes before finishing.
- B. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
- C. Framing Members, General: Fabricate components that, when assembled, have the following characteristics:
 1. Profiles that are sharp, straight, and free of defects or deformations.
 2. Accurately fitted joints with ends coped or mitered.
 3. Means to drain water passing joints, condensation within framing members, and moisture migrating within the system to exterior.
 4. Physical and thermal isolation of glazing from framing members.
 5. Accommodations for thermal and mechanical movements of glazing and framing to maintain required glazing edge clearances.
 6. Provisions for field replacement of glazing from **[exterior] [interior] [interior for vision glass and exterior for spandrel glazing or metal panels]**.
 7. Fasteners, anchors, and connection devices that are concealed from view to greatest extent possible.
- D. Mechanically Glazed Framing Members: Fabricate for flush glazing without projecting stops.
- E. Structural-Sealant-Glazed Framing Members: Include accommodations for using temporary support device to retain glazing in place while structural sealant cures.
- F. Storefront Framing: Fabricate components for assembly using **[shear-block system] [screw-spline system] [head-and-sill-receptor system with shear blocks at intermediate horizontal members] <Insert system>**.
- G. Entrance Door Frames: Reinforce as required to support loads imposed by door operation and for installing entrance door hardware.
 1. At exterior doors, provide compression weather stripping at fixed stops.
 2. At interior doors, provide silencers at stops to prevent metal-to-metal contact. Install three silencers on strike jamb of single-door frames and two silencers on head of frames for pairs of doors.

- H. Entrance Doors: Reinforce doors as required for installing entrance door hardware.
 - 1. At pairs of exterior doors, provide sliding-type weather stripping retained in adjustable strip and mortised into door edge.
 - 2. At exterior doors, provide weather sweeps applied to door bottoms.
- I. Entrance Door Hardware Installation: Factory install entrance door hardware to the greatest extent possible. Cut, drill, and tap for factory-installed entrance door hardware before applying finishes.
- J. After fabrication, clearly mark components to identify their locations in Project according to Shop Drawings.

2.9 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, [**AA-M12C22A41, Class I, 0.018 mm**] [**AA-M12C22A31, Class II, 0.010 mm**] or thicker.
- B. Color Anodic Finish: AAMA 611, [**AA-M12C22A42/A44, Class I, 0.018 mm**] [**AA-M12C22A32/A34, Class II, 0.010 mm**] or thicker.
 - 1. Color: [**Light bronze**] [**Medium bronze**] [**Dark bronze**] [**Champagne**] [**Black**] <Insert color>.
 - 2. Color: [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry colors and color densities**].
- C. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of **1.5 mils (0.04 mm)**. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
 - 1. Color and Gloss: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color and gloss>.
- D. High-Performance Organic Finish: 2-coat fluoropolymer finish complying with [**AAMA 2604**] [**AAMA 2605**] and containing not less than [**50**] [**70**] percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 1. Color and Gloss: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color and gloss>.
- E. High-Performance Organic Finish: [**3**] [**4**]-coat fluoropolymer finish complying with AAMA 2605 and containing not less than [**50**] [**70**] percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

1. Color and Gloss: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and gloss>**.

2.10 SOURCE QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to evaluate structural-sealant-glazed systems.
- B. Structural-Sealant-Glazed Systems: Perform quality-control procedures complying with ASTM C 1401 recommendations, including, but not limited to, system material-qualification procedures, sealant testing, and system fabrication reviews and checks.
- C. Structural-sealant-glazed system will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General:
 1. Comply with manufacturer's written instructions.
 2. Do not install damaged components.
 3. Fit joints to produce hairline joints free of burrs and distortion.
 4. Rigidly secure nonmovement joints.
 5. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration.
 6. Seal joints watertight unless otherwise indicated.
- B. Metal Protection:
 1. Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or applying sealant or tape, or by installing nonconductive spacers as recommended by manufacturer for this purpose.
 2. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.

- C. Install components to drain water passing joints, condensation occurring within framing members, and moisture migrating within the system to exterior.
- D. Set continuous sill members and flashing in full sealant bed as specified in Section 079200 "Joint Sealants" to produce weathertight installation.
- E. Install components plumb and true in alignment with established lines and grades, and without warp or rack.
- F. Install glazing as specified in Section 088000 "Glazing."
 - 1. Structural-Sealant Glazing:
 - a. Prepare surfaces that will contact structural sealant according to sealant manufacturer's written instructions to ensure compatibility and adhesion. Preparation includes, but is not limited to, cleaning and priming surfaces.
 - b. Install weatherseal sealant according to Section 079200 "Joint Sealants" and according to sealant manufacturer's written instructions to produce weatherproof joints. Install joint filler behind sealant as recommended by sealant manufacturer.
- G. Entrance Doors: Install doors to produce smooth operation and tight fit at contact points.
 - 1. Exterior Doors: Install to produce weathertight enclosure and tight fit at weather stripping.
 - 2. Field-Installed Entrance Door Hardware: Install surface-mounted entrance door hardware according to entrance door hardware manufacturers' written instructions using concealed fasteners to greatest extent possible.
- H. Install perimeter joint sealants as specified in Section 079200 "Joint Sealants" to produce weathertight installation.

3.3 ERECTION TOLERANCES

- A. Install aluminum-framed systems to comply with the following maximum erection tolerances:
 - 1. Location and Plane: Limit variation from true location and plane to **1/8 inch in 12 feet** (3 mm in 3.7 m); **1/4 inch** (6 mm) over total length.
 - 2. Alignment:
 - a. Where surfaces abut in line, limit offset from true alignment to **1/16 inch** (1.5 mm).
 - b. Where surfaces meet at corners, limit offset from true alignment to **1/32 inch** (0.8 mm).
- B. Diagonal Measurements: Limit difference between diagonal measurements to **1/8 inch** (3 mm).

3.4 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified independent testing and inspecting agency to perform field tests and inspections.
- B. Testing Services: Testing and inspecting of representative areas to determine compliance of installed systems with specified requirements shall take place as follows and in successive phases as indicated on Drawings. Do not proceed with installation of the next area until test results for previously completed areas show compliance with requirements.
1. Structural-Sealant Compatibility and Adhesion: Structural sealant shall be tested according to recommendations in ASTM C 1401.
 - a. Destructive Test Method A, "Hand Pull Tab (Destructive)," in ASTM C 1401, Appendix X2, shall be used.
 - 1) A minimum of **[two] [four] [six] <Insert number>** areas on each building face shall be tested.
 - 2) Repair installation areas damaged by testing.
 2. Structural-Sealant Glazing Inspection: After installation of aluminum-framed systems is complete, structural-sealant glazing shall be inspected and evaluated according to recommendations in ASTM C 1401.
 3. Air Infiltration: Areas shall be tested for air leakage of **[1.5 times the rate specified for laboratory testing under "Performance Requirements" Article, but not more than 0.09 cfm/sq. ft. (0.03 L/s per sq. m),] <Insert rate>** of fixed wall area when tested according to ASTM E 783 at a minimum static-air-pressure difference of **[1.57 lbf/sq. ft. (75 Pa)] [6.24 lbf/sq. ft. (300 Pa)] <Insert pressure>**.
 4. Water Penetration: Areas shall be tested according to ASTM E 1105 at a minimum **[uniform] [and] [cyclic]** static-air-pressure difference of **[0.67 times the static-air-pressure difference specified for laboratory testing under "Performance Requirements" Article, but not less than 4.18 lbf/sq. ft. (200 Pa)] <Insert pressure>**, and shall not evidence water penetration.
 5. Water Spray Test: Before installation of interior finishes has begun, a minimum area of **75 feet (23 m)** by 1 story of aluminum-framed systems designated by DEN Project Manager shall be tested according to AAMA 501.2 and shall not evidence water penetration.
- C. Repair or remove work if test results and inspections indicate that it does not comply with specified requirements.
- D. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
- E. Aluminum-framed assemblies will be considered defective if they do not pass tests and inspections.
- F. Prepare test and inspection reports.

3.5 ADJUSTING

- A. Adjust operating entrance door hardware to function smoothly as recommended by manufacturer.
 - 1. For entrance doors accessible to people with disabilities, adjust closers to provide a 3-second closer sweep period for doors to move from a 70-degree open position to **3 inches (75 mm)** from the latch, measured to the leading door edge.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain entrances and storefronts.
- B. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

3.7 ENTRANCE DOOR HARDWARE SETS

Door Hardware Set No. Insert number
Door No. Insert designation(s); each to have the following:

Qty.	Item	Description	Manufacturer	Finish
*	Hanging Devices	Insert description.	Insert manufacturer.	Insert finish.
#	Securing Devices (inactive leaf)	Insert description.	Insert manufacturer.	Insert finish.
#	Securing Devices (active leaf)	Insert description.	Insert manufacturer.	Insert finish.
#	Operating Trim	Insert description.	Insert manufacturer.	Insert finish.
#	Accessories for Pairs of Doors	Insert description.	Insert manufacturer.	Insert finish.
#	Closing Devices	Insert description.	Insert manufacturer.	Insert finish.
#	Protective Trim Units	Insert description.	Insert manufacturer.	Insert finish.
#	Stops and Holders	Insert description.	Insert manufacturer.	Insert finish.
#	Accessories	Insert description.	Insert manufacturer.	Insert finish.
#	Miscellaneous Items	Insert description.	Insert manufacturer.	
*	Number of hinges, as specified.			

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 084113

SECTION 084229.23 - SLIDING AUTOMATIC ENTRANCES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes **[exterior] [and] [interior]**, sliding, power-operated automatic entrances.
- B. Related Requirements:
 - 1. **[Section 033000 "Cast-in-Place Concrete"] [Section 033053 "Miscellaneous Cast-in-Place Concrete"]** for **[installing recessed metal frames for control mats in concrete] [and] [forming recesses in concrete for recessed thresholds]**.
 - 2. Section 087113 "Automatic Door Operators" for automatic door operators furnished separately from doors and frames.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. AAADM: American Association of Automatic Door Manufacturers.
- B. Activation Device: A control that, when actuated, sends an electrical signal to the door operator to open the door.
- C. IBC: International Building Code.
- D. Safety Device: A control that, to avoid injury, prevents a door from opening or closing.
- E. For automatic door terminology, refer to BHMA A156.10 for definitions of terms.

1.4 COORDINATION

- A. Coordinate sizes and locations of recesses in concrete floors for **[recessed sliding tracks] [and] [recessed control mats]** that control automatic entrances. Concrete, reinforcement, and formwork requirements are specified elsewhere.

- B. Templates: Distribute for doors, frames, and other work specified to be factory prepared for installing automatic entrances.
- C. Coordinate hardware with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish. Coordinate hardware for automatic entrances with hardware required for rest of Project.
- D. Electrical System Roughing-in: Coordinate layout and installation of automatic entrances with connections to power supplies[**and access-control system**].

1.5 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]<Insert location>**.

1.6 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for automatic entrances.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
 - 3. Include data substantiating that materials comply with requirements.
- B. Product certificates signed by the aluminum sliding glass door manufacturer certifying that door units comply with specified performance requirements.
- C. Shop Drawings: For automatic entrances.
 - 1. Include plans, elevations, sections, hardware mounting heights, and attachment details.
 - 2. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Include diagrams for power, signal, and control wiring.
 - 4. Indicate locations of activation and safety devices.
 - 5. Include hardware schedule and indicate hardware types, functions, quantities, and locations.
- D. Samples for Initial Selection: For units with factory-applied **[color] [and] [metal-clad]** finishes.
 - 1. Include Samples of hardware and accessories involving color or finish selection.
- E. Samples for Verification: For each type of exposed finish required, in manufacturer's standard sizes.
 - 1. The DEN Project Manager reserves the right to require additional samples that show fabrication techniques and workmanship, and design of hardware and

accessories.

- F. Delegated-Design Submittal: For automatic entrances.

1.7 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For [Installer] [manufacturer] [Certified Inspector].
- B. Product Certificates: For each type of automatic entrance. [**Include emergency-exit features of automatic entrances serving as a required means of egress.**]
- C. Product Test Reports: For each type of automatic entrance, for tests performed by a qualified testing agency.
- D. Field quality-control reports.
- E. Sample Warranties: For manufacturer's special warranties.

1.8 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For automatic entrances, safety devices, and control systems to include in operation and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.9 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A manufacturer with company certificate issued by AAADM indicating that manufacturer has a Certified Inspector on staff.
- B. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation and maintenance of units required for this Project[**and who employs a Certified Inspector**].
 - 1. Maintenance Proximity: Not more than [two] <Insert number> hours' normal travel time from Installer's place of business to Project site.
- C. Certified Inspector Qualifications: Certified by AAADM.

1.10 PROJECT CONDITIONS

- A. Field Measurements: Verify actual dimensions of sliding aluminum-framed glass door openings by field measurements before fabrication.
 - 1. Coordinate fabrication schedule with construction progress to avoid delay. Where

necessary, proceed with fabrication without field measurements, and coordinate fabrication tolerances to ensure proper fit of sliding glass door units.

1.11 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of automatic entrances that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

- a. Structural failures including, but not limited to, excessive deflection.
- b. Faulty operation of operators, controls, and hardware.
- c. Deterioration of metals, metal finishes, and other materials beyond normal weathering and use.

2. Warranty Period: Minimum **[two (2)] <Insert number>** years from date of Substantial Completion.

B. Special Finish Warranty: Manufacturer agrees to repair or replace components on which finishes fail in materials or workmanship within specified warranty period.

1. Deterioration includes, but is not limited to, the following:

- a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
- b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
- c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2. Warranty Period: Minimum **[five (5)] [ten (10)] [twenty (20)] <Insert number>** years from date of Substantial Completion.

1.12 CONSTRUCTION WASTE MANAGEMENT

A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 AUTOMATIC ENTRANCE ASSEMBLIES

A. Source Limitations: Obtain sliding **[folding] [and] [swinging]** automatic entrances from single source from single manufacturer.

- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Power-Operated Door Standard: BHMA A156.10.

2.2 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design automatic entrances.
- B. Structural Performance: Automatic entrances shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated according to **[ASCE/SEI 7] <Insert requirement>**.
 - 1. Seismic Loads: **<Insert loads>**.
 - 2. Wind Loads: **<Insert loads>**.
- C. Windborne-Debris Impact Resistance: Automatic entrances shall pass **[large-missile-impact] [small-missile-impact]** and cyclic-pressure tests of **[ASTM E 1996 according to the IBC] <Insert testing and code requirements>** for **[Wind Zone 1] [Wind Zone 2] [Wind Zone 3] [Wind Zone 4]**.
- D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
 - 1. Temperature Change: **[120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces] <Insert temperature change>**.
- E. Operating Temperature Range: Automatic entrances shall operate within **[minus 30 to plus 120 deg F (minus 35 to plus 49 deg C)] <Insert temperature range>**.
- F. Air Infiltration: Maximum air leakage through fixed glazing and framing areas of **[1.25 cfm/sq. ft. (6.4 L/s x sq. m)] <Insert value>** of fixed entrance-system area when tested according to ASTM E 283 at a minimum static-air-pressure difference of **[1.57 lbf/sq. ft. (75 Pa)] [6.24 lbf/sq. ft. (300 Pa)] <Insert value>**.
- G. Opening Force:
 - 1. Power-Operated Doors: Not more than **50 lbf (222 N)** required to manually set door in motion if power fails, and not more than **15 lbf (67 N)** required to open door to minimum required width.
 - 2. Breakaway Device for Power-Operated Doors: Not more than **50 lbf (222 N)** required for a breakaway door or panel to open.
- H. Entrapment-Prevention Force:
 - 1. Power-Operated Sliding Doors: Not more than **30 lbf (133 N)** required to prevent stopped door from closing.

2.3 SLIDING AUTOMATIC ENTRANCES

A. General: Provide manufacturer's standard automatic entrances including doors, sidelites, framing, headers, carrier assemblies, roller tracks, door operators, controls, and accessories required for a complete installation.

B. **[All-Glass] [Sliding] [Telescoping] Automatic Entrance <Insert drawing designation>:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. [Single-] [and] [Biparting-]Sliding Units:

- 1) Besam Entrance Solutions; Subsidiary of ASSA ABLOY Entrance Systems.
- 2) DORMA Automatics; Division of DORMA Group North America.
- 3) Gildor Automatic Doors.
- 4) Horton Automatics; a division of Overhead Door Corporation.
- 5) Hunter Automatics Inc.
- 6) Nabco Entrances Inc.
- 7) record-usa.
- 8) Stanley Access Technologies, LLC; Division of Stanley Security Solutions.
- 9) Tormax Technologies, Inc.
- 10) **<Insert manufacturer's name>.**
- 11) or approved equal.

b. [Single-] [and] [Biparting-]Telescoping Sliding Units:

- 1) Besam Entrance Solutions; Subsidiary of ASSA ABLOY Entrance Systems.
- 2) DORMA Automatics; Division of DORMA Group North America.
- 3) Gildor Automatic Doors.
- 4) Horton Automatics; a division of Overhead Door Corporation.
- 5) Nabco Entrances Inc.
- 6) record-usa.
- 7) Stanley Access Technologies, LLC; Division of Stanley Security Solutions.
- 8) Tormax Technologies, Inc.
- 9) **<Insert manufacturer's name>.**
- 10) or approved equal.

2. Configuration: Single-sliding door with one sliding leaf[, **transom,**] **[and] [pocketed]** sidelite.

- a. Traffic Pattern: **[One] [Two]** way.
- b. Emergency Breakaway Capability: **[As indicated on Drawings] [Sliding leaf only] [Sliding leaf and sidelite].**
- c. Mounting: **[Between jambs] [Surface].**

3. Configuration: Biparting-sliding doors with two sliding leaves[, **transom,**] **[and [pocketed]** sidelites on each side.
 - a. Traffic Pattern: **[One] [Two]** way.
 - b. Emergency Breakaway Capability: **[As indicated on Drawings] [Sliding leaves only] [Sliding leaves and sidelites]**.
 - c. Mounting: **[Between jambs] [Surface]**.

4. Configuration: **[Single-telescoping-sliding door with two] [Biparting-telescoping-sliding doors with four]** sliding leaves[, **transom,**] and sidelite(s).
 - a. Traffic Pattern: **[One] [Two]** way.
 - b. Emergency Breakaway Capability: **[As indicated on Drawings] [Center leaves only] [All leaves]**.
 - c. Mounting: Between jambs.

5. Operator Features:
 - a. Power opening and closing.
 - b. Drive System: **[Chain] [or] [belt]**.
 - c. Adjustable opening and closing speeds.
 - d. Adjustable hold-open time between zero and 30 seconds.
 - e. Obstruction recycle.
 - f. On-off/hold-open switch to control electric power to operator[, **key operated]**.
 - g. **<Insert features required>**.

6. Sliding-Door Carrier Assemblies and Overhead Roller Tracks: Carrier assembly that allows vertical adjustment; consisting of nylon- or delrin-covered, ball-bearing-center steel wheels operating on a continuous roller track, or ball-bearing-center steel wheels operating on a nylon- or delrin-covered, continuous roller track. Support doors from carrier assembly by cantilever and pivot assembly.
 - a. Rollers: Minimum of two ball-bearing roller wheels and two antirise rollers for each active leaf.

7. Sliding-Door Threshold: Threshold members and bottom-guide-track system with stainless-steel, ball-bearing-center roller wheels.
 - a. Configuration: Saddle-type threshold across door opening and **[surface-mounted] [recessed]** guide-track system at sidelites.
 - b. Configuration: No threshold across door opening and **[surface-mounted] [recessed]** guide-track system at sidelites.

8. Controls: Activation and safety devices **[as indicated on Drawings and]**according to BHMA standards.

- a. Activation Device: Motion sensor mounted on each side of door header to detect pedestrians in activating zone and to open door.
 - b. Activation Device: Control mat installed on ingress side of door to detect pedestrians in activating zone and to open door.
 - c. Activation Device: **[Push-plate switch] [Push-button switch] [Key switch][on each side of door]** to activate door operator.
 - d. Safety Device: Two photoelectric beams mounted in sidelite jambs on each side of door to detect pedestrians in presence zone and to prevent door from closing.
 - e. Safety Device: Presence sensor mounted to underside of door header and two photoelectric beams mounted in sidelite jambs on one side of the door to detect pedestrians in presence zone and to prevent door from closing.
 - f. Safety Device: Presence sensor mounted on each side of door header and two photoelectric beams mounted in sidelite jambs on one side of the door to detect pedestrians in presence zone and to prevent door from closing.
 - g. Safety Device: Control mat(s) installed on egress side of door to detect pedestrians in presence and safety zones and to prevent door from closing.
 - h. Sidelite Safety Device: Presence sensor, mounted above each sidelite on side of door opening through which doors travel, to detect obstructions and to prevent door from opening.
 - i. Opening-Width Control: Two-position switch that in the normal position allows sliding doors to travel to full opening width and in the alternate position reduces opening to a selected partial opening width.
9. Finish: Finish framing, door(s), and header with **[Class I, clear anodic finish] [Class II, clear anodic finish] [Class I, color anodic finish] [Class II, color anodic finish] [baked-enamel or powder-coat finish] [high-performance organic finish (two-coat fluoropolymer)] [high-performance organic finish (three-coat fluoropolymer)] [finish matching adjacent curtain wall] [finish matching adjacent storefront]**.
- a. Color: **[Light bronze] [Medium bronze] [Dark bronze] [Black] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors and color densities] <Insert color>**.
10. Metal Cladding and Finish: Clad framing, door(s), and header with **[No. 4 directional-satin-finish stainless-steel sheet] [No. 8 mirrorlike reflective, nondirectional-polish-finish stainless-steel sheet] [satin-brass sheet] [polished-brass sheet] [satin-bronze sheet] [polished-bronze sheet] [metal sheet in finish matching DEN Project Manager's sample] [metal sheet in finish as selected by DEN Project Manager from manufacturer's full range] [metal sheet in finish matching adjacent storefront] <Insert finish>**.

2.4 ENTRANCE COMPONENTS

- A. Framing Members: Extruded aluminum, minimum **0.125 inch (3.2 mm)** thick and reinforced as required to support imposed loads.

1. Nominal Size: **[As indicated on Drawings]** [1-3/4 by 4-1/2 inches (45 by 115 mm)] [1-3/4 by 6 inches (45 by 150 mm)] **<Insert dimensions>**.
 2. Extruded Glazing Stops and Applied Trim: Minimum **0.062-inch** (1.6-mm) wall thickness.
- B. Stile and Rail Doors: **1-3/4-inch-** (45-mm-) thick, glazed doors with minimum **0.125-inch-** (3.2-mm-) thick, extruded-aluminum tubular stile and rail members. Mechanically fasten corners with reinforcing brackets that are welded, or incorporate concealed tie-rods that span full length of top and bottom rails.
1. Glazing Stops and Gaskets: **[Beveled]** **[Square]**, snap-on, extruded-aluminum stops and preformed gaskets.
 2. Stile Design: **[As indicated on Drawings]** **[Thin stile, less than 1-3/4-inch** (45-mm) **nominal width]** **[Narrow stile, 2-1/8-inch** (55-mm) **nominal width]** **[Medium stile, 3-1/2-inch** (90-mm) **nominal width]** **[Wide stile, more than 4-inch** (100-mm) **nominal width]**.
 3. Rail Design: **[As indicated on Drawings]** **[5-inch** (125-mm) **nominal height]** **[6-1/2-inch** (165-mm) **nominal height]** **[10-inch** (254-mm) **nominal height]**.
 4. Muntin Bars: Horizontal tubular rail member for each door; match stile design and finish.
- C. All-Glass Sliding Doors: Fabricated from 13-mm-thick tempered glass, with polished vertical edges and minimum **0.125-inch-** (3.2-mm-) thick, extruded-aluminum top and bottom rails.
1. Rail Design: **[3-1/2-inch** (90-mm)] **[5-inch** (125-mm)] nominal height.
- D. **[Sidelite(s)] [and] [Transom]:** **1-3/4-inch-** (45-mm-) deep **[sidelite(s)] [and] [transom]** with minimum **0.125-inch-** (3.2-mm-) thick, extruded-aluminum tubular stile and rail members matching door design.
1. Glazing Stops and Gaskets: Same materials and design as for stile and rail door.
 2. Glazing Stops and Gaskets: **[Beveled]** **[Square]**, snap-on, extruded-aluminum stops and preformed gaskets.
 3. Muntin Bars: Horizontal tubular rail members for each sidelite; match stile design.
- E. Headers: Fabricated from minimum **0.125-inch-** (3.2-mm-) thick extruded aluminum and extending full width of automatic entrance units to conceal door operators and controls. Provide hinged or removable access panels for service and adjustment of door operators and controls. Secure panels to prevent unauthorized access.
1. Mounting: **[Surface mounted]** **[Concealed, with one side of header flush with framing]**.
 2. Capacity: Capable of supporting doors up to **[175 lb (79 kg) per leaf over spans up to 14 feet** (4.3 m)] **<Insert load and span required>** without intermediate supports.
 - a. Provide sag rods for spans exceeding **14 feet** (4.3 m).

- F. Brackets and Reinforcements: High-strength aluminum with nonstaining, nonferrous shims for aligning system components.
- G. Signage: As required by cited BHMA standard.
 - 1. Application Process: **[Decals] [Silk-screened] [Door manufacturer's standard process] <Insert requirement>**.
 - 2. Provide sign materials with instructions for field application after glazing is installed.

2.5 MATERIALS

- A. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
 - 1. Extrusions: **ASTM B 221** (ASTM B 221M).
 - 2. Sheet: **ASTM B 209** (ASTM B 209M).
- B. Steel Reinforcement: Reinforcement with corrosion-resistant primer complying with SSPC-PS Guide No. 12.00 applied immediately after surface preparation and pretreatment. Use surface preparation methods according to recommendations in SSPC-SP COM and prepare surfaces according to applicable SSPC standard.
- C. Stainless-Steel Bars: ASTM A 276 or ASTM A 666, **[Type 304] [Type 316] <Insert type>**.
- D. Stainless-Steel Tubing: ASTM A 554, **[Grade MT 304] [Grade MT 316] <Insert grade>**.
- E. Stainless-Steel Sheet: ASTM A 240/A 240M or ASTM A 666, **[Type 304] [Type 316] <Insert type>**, stretcher-leveled standard of flatness, in entrance manufacturer's standard thickness.
- F. Brass Sheet: ASTM B 36/B 36M, Alloy UNS No. C26000 (cartridge brass, 70 percent copper), in entrance manufacturer's standard thickness.
- G. Bronze Sheet: ASTM B 36/B 36M, Alloy UNS No. C28000 (muntz metal, 60 percent copper) or Alloy UNS No. C23000 (red brass, 85 percent copper), in entrance manufacturer's standard thickness.
- H. Expanded Aluminum Mesh: **[Expanded] [Expanded and flattened]** aluminum sheet according to the geometry of ASTM F 1267.
- I. Polycarbonate Sheet: ASTM C 1349, Appendix X1, Type II, coated, mar-resistant, UV-stabilized polycarbonate with coating on both surfaces.
- J. Glazing: As specified in **[Section 088000 "Glazing."] [Section 088853 "Security Glazing."]**
- K. Sealants and Joint Fillers: As specified in Section 079200 "Joint Sealants."

- L. Nonmetallic, Shrinkage-Resistant Grout: Premixed, nonmetallic, noncorrosive, nonstaining grout; complying with ASTM C 1107/C 1107M; of consistency suitable for application.
- M. Bituminous Coating: Cold-applied asphalt emulsion complying with ASTM D 1187.
- N. Fasteners and Accessories: Corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.

2.6 DOOR OPERATORS AND CONTROLS

- A. General: Provide operators and controls, which include activation and safety devices, according to BHMA standards, for condition of exposure, and for long-term, maintenance-free operation under normal traffic load for type of occupancy indicated.
- B. Door Operators: Provide door operators of size recommended by manufacturer for door size, weight, and movement.
 - 1. Door Operator Performance: Door operators shall open and close doors and maintain them in fully closed position when subjected to Project's design wind loads.
 - 2. Electromechanical Operators: Concealed, self-contained, overhead unit powered by fractional-horsepower, permanent-magnet dc motor; with closing speed controlled mechanically by gear train and dynamically by braking action of electric motor; with solid-state microprocessor controller; UL 325; and with manual operation with power off.
- C. Motion Sensors: Self-contained, K-band-frequency, microwave-scanner units; fully enclosed by its plastic housing; adjustable to provide detection-field sizes and functions required by BHMA A156.10.
 - 1. Provide capability for switching between bidirectional and unidirectional detection.
 - 2. For one-way traffic, sensor on egress side shall not be active when doors are fully closed.
- D. Presence Sensors: Self-contained, active-infrared scanner units; adjustable to provide detection-field sizes and functions required by BHMA A156.10. Sensors shall remain active at all times.
- E. Photoelectric Beams: Pulsed infrared, sender-receiver assembly for recessed mounting. Beams shall not be active when doors are fully closed.
- F. Control Mats: **1/2-inch- (13-mm-)** thick, synthetic-rubber or flexible-plastic mat in safety-ribbed surface pattern, with extruded-aluminum frame; with pressure switches for low-voltage control wiring; and complying with performance requirements of BHMA A156.10.
 - 1. Frame: [**Recessed to fit flush with floor, with concealed anchors**] [**Surface mounted, with tapered safety edge**].

2. Size: As indicated, but no smaller than required by BHMA A156.10 including Appendix A.
 3. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry colors and color densities**].
- G. Push-Plate Switch: Momentary-contact door-control switch with flat push-plate actuator[**with contrasting-colored, engraved message**].
1. Configuration: [**Round**] [**Square**] push plate with **4-by-4-inch** (100-by-100-mm) junction box.
 - a. Mounting: [**As indicated on Drawings**] [**Recess mounted, semiflush in wall**] [**Surface mounted on wall**].
 2. Configuration: Rectangular push plate with **2-by-4-inch** (50-by-100-mm) junction box.
 - a. Mounting: [**As indicated on Drawings**] [**Recess mounted, semiflush in wall**] [**Recess mounted in doorjamb**] [**Surface mounted on wall**] [**Surface mounted on post**] [**Surface mounted on guide rail**].
 3. Push-Plate Material: [**Stainless steel**] [**Plastic**] as selected by DEN Project Manager from manufacturer's full range.
 4. Message: [**Plain face with no message.**] [**"Push to Open."**] [**International symbol of accessibility.**] [**International symbol of accessibility and "Push to Open."**]
- H. Push-Button Switch: Momentary-contact door-control switch with one red-button actuator; enclosed in nominal [**2-by-4-inch** (50-by-100-mm)] [**4-by-4-inch** (100-by-100-mm)] junction box.
1. Provide faceplate engraved with "Press to Open" letters[**and international symbol of accessibility**] in contrasting color.
 2. Provide blue plastic cover engraved with "Press Button to Open" in white letters and international symbol of accessibility.
 3. Mounting: [**As indicated on Drawings**] [**Surface mounted on wall**] [**Surface mounted on post**] [**Surface mounted on guide rail**] [**Recess mounted in wall**].
 4. Face-Plate Material: [**Stainless steel**] [**Painted metal**] as selected by DEN Project Manager from manufacturer's full range.
- I. Key Switch: Recess-mounted, door-control switch with key-controlled actuator; enclosed in **2-by-4-inch** (50-by-100-mm) junction box. Provide faceplate engraved with letters indicating switch functions.
1. Face-Plate Material: [**Stainless steel**] [**Painted metal**] as selected by DEN Project Manager from manufacturer's full range.

2. Functions: **[On-off, momentary contact] [On-off, maintained contact] [Two-way automatic, hold open, one-way exit, and off] [Two-way automatic, hold open, one-way exit, off, full open, and partial open].**
 3. Mounting: **[As indicated on Drawings] [Recess mounted, semiflush in wall] [Recess mounted in doorjamb] [Surface mounted on wall] [Surface mounted on post].**
- J. Wireless or Remote Radio Control Switch: Auxiliary radio control system consisting of header-mounted receiver and **[wall-mounted] [hand-held, battery-operated]** transmitter switch **[for each entrance] <Insert requirement>**.
1. Wall-Mounted Transmitter Switch: One red-button, momentary-contact actuator enclosed in **4-by-4-inch (100-by-100-mm)** junction box. Provide blue plastic cover engraved with "Press Button to Open" in white letters and international symbol of accessibility.
- K. Electrical Interlocks: Unless units are equipped with self-protecting devices or circuits, provide electrical interlocks to prevent activation of operator when door is locked, latched, or bolted.

2.7 HARDWARE

- A. General: Provide units in sizes and types recommended by automatic entrance and hardware manufacturers for entrances and uses indicated. Finish exposed parts to match door finish **[unless otherwise indicated].**
- B. Breakaway Device for Power-Operated Doors: Device that allows door to swing out in direction of egress to full 90 degrees from any operating position. Maximum force to open door shall be as stipulated in "Performance Requirements" Article. Interrupt powered operation of door operator while in breakaway mode.
- C. Deadlocks: Deadbolt operated by exterior cylinder and interior thumb turn, with minimum **1-inch- (25-mm-)** long throw bolt; BHMA A156.5, Grade 1.
1. Cylinders: **[BHMA A156.5, Grade 1, six-pin mortise type.] [As specified in Section 087100 "Door Hardware."] [As specified in Section 087111 "Door Hardware (Descriptive Specification)."]**
 - a. Keying: **[No master] [Integrate into building master]** key system.
 2. Deadbolts: **[Laminated-steel hook] [Steel]**, mortise type, BHMA A156.5, Grade 1.
 3. Two-Point Locking for Stile and Rail Sliding Doors: Mechanism in stile of active door leaf that automatically extends second lockbolt into **[overhead carrier assembly] [threshold].**
- D. Automatic Locking: Electrically controlled device mounted in header that automatically locks sliding door against sliding when in closed position. Provide fail **[secure] [safe]** operation if power fails.

1. Include concealed, vertical-rod exit devices, UL 305, with latching into threshold and overhead carrier assembly and released by **[full-width panic bar] [push paddle]**; and that prevent emergency breakaway doors from swinging unless released to permit emergency egress.
 2. Include locking devices for sidelites to prevent manual break out.
- E. Dustproof Strikes for All-Glass Sliding Doors: **[Recessed, floor-type, BHMA A156.16, Grade 1, to receive deadbolt.] [As specified in Section 087100 "Door Hardware."]** **[As specified in Section 087111 "Door Hardware (Descriptive Specification)."]**
- F. Weather Stripping: Replaceable components.
1. Sliding Type: AAMA 701, made of wool, polypropylene, or nylon woven pile with nylon-fabric or aluminum-strip backing.

2.8 FABRICATION

- A. Fabricate sliding aluminum-framed glass doors in sizes indicated. Include a complete system for assembling components and anchoring doors.
- B. Assembly: Assemble components into complete weathertight units with flush, rigid, hairline joints. Mill, cope, butt, and miter necessary joints; secure by mechanical devices or by other means to ensure permanently watertight joints. Provide at least 2 corrosion resistant, pre lubricated, or self-lubricating rollers for each sliding panel, of sufficient capacity to assure easy, quiet, and smooth operation.
- C. Fabricate sliding aluminum-framed glass doors that are reglazable without dismantling panel framing.

2.9 ACCESSORIES

- A. Guide Rails: **[Anodized aluminum] [Baked-enamel or powder-coated aluminum] [Stainless steel]**, fabricated from **[bars] [or] [tubing]**, minimum **30 inches** (762 mm) high, and finished to match doors unless otherwise indicated; positioned and projecting from face of door jamb for distance as indicated, but not less than **[that required by BHMA A156.10 for type of door and direction of travel] <Insert dimension>**; with filler panel.
1. Filler Panel: **[Expanded aluminum mesh] [Clear polycarbonate sheet] [Colored polycarbonate sheet] <Insert material>**.
 - a. Orient expanded aluminum mesh with long dimension of diamonds **[parallel to top rail] [perpendicular to top rail]**.
 - b. Color: **[Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
 2. Mounting: **[As indicated on Drawings] [Jamb and floor] [Floor, freestanding]**.

3. Aluminum Finish: [**Class I, clear anodic finish**] [**Class II, clear anodic finish**] [**Class I, color anodic finish**] [**Class II, color anodic finish**] [**Baked-enamel or powder-coat finish**] [**Finish matching door and frame**] <Insert finish>.ol style="list-style-type: none;"> - a. Color: [**Light bronze**] [**Medium bronze**] [**Dark bronze**] [**Black**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry colors and color densities**] <Insert color>.
4. Stainless-Steel Finish: [**No. 4 directional-satin-finish stainless steel**] [**Finish matching door and frame**] <Insert finish>.
- B. Guide Rails: See [**Section 055213 "Pipe and Tube Railings."**] [**Section 057300 "Decorative Metal Railings."**]

2.10 FABRICATION

- A. General: Factory fabricate automatic entrance components to designs, sizes, and thicknesses indicated and to comply with indicated standards.
1. Form aluminum shapes before finishing.
 2. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
 3. Use concealed fasteners to greatest extent possible. Where exposed fasteners are required, use countersunk Phillips flat-head machine screws[, **finished to match framing**] [, **fabricated from stainless steel**].ol style="list-style-type: none;"> - a. Where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration, use self-locking devices.
 - b. Reinforce members as required to receive fastener threads.
4. Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape recommended by manufacturer for this purpose.
- B. Framing: Provide automatic entrances as prefabricated assemblies. Complete fabrication, assembly, finishing, hardware application, and other work before shipment to Project site.
1. Fabricate tubular and channel frame assemblies with welded or mechanical joints. Provide subframes and reinforcement as required for a complete system to support required loads.
 2. Perform fabrication operations in manner that prevents damage to exposed finish surfaces.
 3. Form profiles that are sharp, straight, and free of defects or deformations.
 4. Provide components with concealed fasteners and anchor and connection devices.
 5. Fabricate components with accurately fitted joints with ends coped or mitered to produce hairline joints free of burrs and distortion.

6. Fabricate exterior components to drain condensation and water passing joints within system to the exterior.
 7. Provide anchorage and alignment brackets for concealed support of assembly from building structure.
 8. Allow for thermal expansion of exterior units.
- C. Doors: Factory fabricated and assembled in profiles indicated. Reinforce as required to support imposed loads and for installing hardware.
- D. Metal Cladding: Factory-fabricated and installed metal cladding, completely covering all visible surfaces as part of prefabricated entrance assembly before shipment to Project site.
1. Perform fabrication operations in manner that prevents damage to exposed finish surfaces.
 2. Form profiles that are sharp, straight, and free of defects or deformations.
 3. Provide components with concealed fasteners and anchor and connection devices.
 4. Fabricate components with accurately fitted joints with ends coped or mitered to produce hairline joints free of burrs and distortion.
 5. Fabricate exterior components to drain water passing joints and condensation and moisture occurring or migrating within system to the exterior.
 6. Allow for thermal expansion at exterior entrances.
- E. Door Operators: Factory fabricated and installed in headers, including adjusting and testing.
- F. Glazing: Fabricate framing with minimum glazing edge clearances for thickness and type of glazing indicated, according to GANA's "Glazing Manual."
- G. Hardware: Factory install hardware to greatest extent possible; remove only as required for final finishing operation and for delivery to and installation at Project site. Cut, drill, and tap for factory-installed hardware before applying finishes.
1. Provide sliding-type weather stripping, mortised into door, at perimeter of doors[**and breakaway sidelites**].
- H. Controls:
1. General: Factory install activation and safety devices in doors and headers as required by BHMA A156.10 for type of door and direction of travel.
 2. Install photoelectric beams in vertical jambs of sidelites, with dimension above finished floor as follows:
 - a. Top Beam: [48 inches (1219 mm)] <Insert dimension>.
 - b. Bottom Beam: [24 inches (610 mm)] <Insert dimension>.

2.11 GENERAL FINISH REQUIREMENTS

- A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Apply organic and anodic finishes to formed metal after fabrication unless otherwise indicated.
- C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.12 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, [**AA-M12C22A41, Class I, 0.018 mm**] [**AA-M12C22A31, Class II, 0.010 mm**] or thicker.
- B. Color Anodic Finish: AAMA 611, [**AA-M12C22A42/A44, Class I, 0.018 mm**] [**AA-M12C22A32/A34, Class II, 0.010 mm**] or thicker.
- C. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of **1.5 mils (0.04 mm)**. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
- D. High-Performance Organic Finish: Two-coat fluoropolymer finish complying with [**AAMA 2604**] [**AAMA 2605**] and containing not less than [**50**] [**70**] percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
- E. High-Performance Organic Finish: Three-coat fluoropolymer finish complying with AAMA 2605 and containing not less than [**50**] [**70**] percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances, header support, and other conditions affecting performance of automatic entrances.
- B. Examine roughing-in for electrical systems to verify actual locations of power connections before automatic entrance installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install automatic entrances according to manufacturer's written instructions and cited BHMA standard for direction of pedestrian travel, including signage, controls, wiring, and connection to the building's power supply.
1. Do not install damaged components. Fit frame joints to produce hairline joints free of burrs and distortion. Rigidly secure nonmovement joints. Seal joints watertight.
 2. Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape recommended by manufacturer for this purpose.
 3. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous coating.
- B. Entrances: Install automatic entrances plumb and true in alignment with established lines and grades without warp or rack of framing members and doors. Anchor securely in place.
1. Install surface-mounted hardware using concealed fasteners to greatest extent possible.
 2. Set headers, carrier assemblies, tracks, operating brackets, and guides level and true to location with anchorage for permanent support.
 3. Install components to drain water passing joints, condensation occurring within framing members, and moisture migrating within system to exterior.
 4. Level recesses for recessed thresholds using nonshrink grout.
- C. Door Operators: Connect door operators to electrical power distribution system.
- D. Access-Control Devices: Connect access-control devices to access-control system as specified in Section 281300 "Access Control."
- E. Controls: Install and adjust activation and safety devices according to manufacturer's written instructions and cited BHMA standard for direction of pedestrian travel. Connect control wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- F. Guide Rails: Install rails according to BHMA A156.10, including Appendix A, and manufacturer's written instructions unless otherwise indicated.
- G. Glazing: Install glazing as specified in [**Section 088000 "Glazing."**] [**Section 088853 "Security Glazing."**]
- H. Sealants: Comply with requirements specified in Section 079200 "Joint Sealants" to provide weathertight installation.
1. Set [**thresholds,]** [**bottom-guide-track system,**] framing members and flashings in full sealant bed.
 2. Seal perimeter of framing members with sealant.

- I. Signage: Apply signage on both sides of each door[**and breakaway sidelite**] as required by cited BHMA standard for direction of pedestrian travel.
- J. Wiring within Automatic Entrance Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's written limitations on bending radii. Provide and use lacing bars and distribution spools.

3.3 FIELD QUALITY CONTROL

- A. Certified Inspector: [**Owner will engage**] [**Engage**] a Certified Inspector to test and inspect components, assemblies, and installations, including connections.
- B. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
 - 1. Test and inspect each automatic entrance, using AAADM inspection forms, to determine compliance of installed systems with applicable BHMA standards.
- C. Automatic entrances will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

3.4 ADJUSTING

- A. Adjust hardware, moving parts, door operators, and controls to function smoothly, and lubricate as recommended by manufacturer; comply with requirements of applicable BHMA standards.
 - 1. Adjust exterior doors for weathertight closure.
- B. Readjust door operators and controls after repeated operation of completed installation equivalent to three days' use by normal traffic (100 to 300 cycles).
- C. Occupancy Adjustments: When requested within [**12**] <Insert number> months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to [**two**] <Insert number> visits to Project during other-than-normal occupancy hours for this purpose.

3.5 CLEANING

- A. Clean glass and metal surfaces promptly after installation. Remove excess glazing and sealant compounds, dirt, and other substances. Repair damaged finish to match original finish.
 - 1. Comply with requirements in [**Section 088000 "Glazing"**] [**Section 088853 "Security Glazing"**] for cleaning and maintaining glass.

3.6 MAINTENANCE SERVICE

- A. Initial Maintenance Service: Beginning at Substantial Completion, maintenance service shall include **[three] [six] [nine] [12]** month's full maintenance by skilled employees of automatic entrance Installer. Include **[monthly] [quarterly]** preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper automatic entrance operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.
1. Engage a Certified Inspector to perform safety inspection after each adjustment or repair and at end of maintenance period. Furnish completed inspection reports to Owner.
 2. Perform maintenance, including emergency callback service, during normal working hours.
 3. Include 24-hour-per-day, 7-day-per-week, emergency callback service.

3.7 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain automatic entrances.
1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 084229.23

SECTION 084229.33 - SWINGING AUTOMATIC ENTRANCES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. **[Exterior] [and] [interior]**, swinging, power-operated automatic entrances.
 - 2. **[Exterior] [and] [interior]**, swinging, **[power-assist] [and] [low-energy]** automatic entrances.
- B. Related Requirements:
 - 1. **[Section 033000 "Cast-in-Place Concrete"] [Section 033053 "Miscellaneous Cast-in-Place Concrete"]** for installing recessed metal frames for control mats in concrete.
 - 2. Section 087113 "Automatic Door Operators" for automatic door operators furnished separately from doors and frames.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. AAADM: American Association of Automatic Door Manufacturers.
- B. Activation Device: A control that, when actuated, sends an electrical signal to the door operator to open the door.
- C. Double-Egress Doors: A pair of doors that simultaneously swing with the two doors moving in opposite directions with no mullion between them.
- D. Double-Swing Doors: A pair of doors that swing with the two doors moving in opposite directions with a mullion between them; each door functioning as a single-swing door.
- E. IBC: International Building Code.
- F. Safety Device: A control that, to avoid injury, prevents a door from opening or closing.

- G. For automatic door terminology, refer to **[BHMA A156.10]** [and] **[BHMA A156.19]** for definitions of terms.

1.4 COORDINATION

- A. Coordinate sizes and locations of recesses in concrete floors for recessed control mats that control automatic entrances. Concrete, reinforcement, and formwork requirements are specified elsewhere.
- B. Templates: Distribute for doors, frames, and other work specified to be factory prepared for installing automatic entrances.
- C. Coordinate hardware with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish. Coordinate hardware for automatic entrances with hardware required for rest of Project.
- D. Electrical System Roughing-in: Coordinate layout and installation of automatic entrances with connections to power supplies[**and access-control system**].

1.5 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site]** [location and time as determined by **DEN Project Manager**]<Insert location>.

1.6 ACTION SUBMITTALS

- A. Product Data: For each type of product.
1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for automatic entrances.
 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
 3. Include data substantiating that materials comply with requirements.
- B. Product certificates signed by the aluminum sliding glass door manufacturer certifying that door units comply with specified performance requirements.
- C. Shop Drawings: For automatic entrances.
1. Include plans, elevations, sections, hardware mounting heights, and attachment details.
 2. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 3. Include diagrams for power, signal, and control wiring.
 4. Indicate locations of activation and safety devices.
 5. Include hardware schedule and indicate hardware types, functions, quantities, and locations.

- D. Samples for Initial Selection: For units with factory-applied **[color] [and] [metal-clad]** finishes.
 - 1. Include Samples of hardware and accessories involving color or finish selection.
- E. Samples for Verification: For each type of exposed finish required, in manufacturer's standard sizes.
 - 1. The DEN Project Manager reserves the right to require additional samples that show fabrication techniques and workmanship, and design of hardware and accessories.
- F. Delegated-Design Submittal: For automatic entrances.

1.7 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For **[Installer] [manufacturer] [Certified Inspector]**.
- B. Product Certificates: For each type of automatic entrance. **[Include emergency-exit features of automatic entrances serving as a required means of egress.]**
- C. Product Test Reports: For each type of automatic entrance, for tests performed by a qualified testing agency.
- D. Field quality-control reports.
- E. Sample Warranties: For manufacturer's special warranties.

1.8 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For automatic entrances, safety devices, and control systems to include in operation and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.9 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A manufacturer with company certificate issued by AAADM indicating that manufacturer has a Certified Inspector on staff.
- B. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation and maintenance of units required for this Project **[and who employs a Certified Inspector]**.
 - 1. Maintenance Proximity: Not more than **[two] <Insert number>** hours' normal travel time from Installer's place of business to Project site.

- C. Certified Inspector Qualifications: Certified by AAADM.

1.10 PROJECT CONDITIONS

- A. Field Measurements: Verify actual dimensions of sliding aluminum-framed glass door openings by field measurements before fabrication.
1. Coordinate fabrication schedule with construction progress to avoid delay. Where necessary, proceed with fabrication without field measurements, and coordinate fabrication tolerances to ensure proper fit of sliding glass door units.

1.11 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of automatic entrances that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
 - a. Structural failures including, but not limited to, excessive deflection.
 - b. Faulty operation of operators, controls, and hardware.
 - c. Deterioration of metals, metal finishes, and other materials beyond normal weathering and use.
2. Warranty Period: Minimum [**two (2)**] <Insert number> years from date of Substantial Completion.

- B. Special Finish Warranty: Manufacturer agrees to repair or replace components on which finishes fail in materials or workmanship within specified warranty period.

1. Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
2. Warranty Period: Minimum [**five (5)**] [**ten (10)**] [**twenty (20)**] <Insert number> years from date of Substantial Completion.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 AUTOMATIC ENTRANCE ASSEMBLIES

- A. Source Limitations: Obtain swinging [**folding**] [**and**] [**sliding**] automatic entrances from single source from single manufacturer.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Power-Operated Door Standard: BHMA A156.10.
- D. Power-Assist and Low-Energy Door Standard: BHMA A156.19.

2.2 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design automatic entrances.
- B. Structural Performance: Automatic entrances shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated according to [**ASCE/SEI 7**] <Insert requirement>.
 - 1. Seismic Loads: <Insert loads>.
 - 2. Wind Loads: <Insert loads>.
- C. Windborne-Debris Impact Resistance: Automatic entrances shall pass [**large-missile-impact**] [**small-missile-impact**] and cyclic-pressure tests of [**ASTM E 1996 according to the IBC**] <Insert testing and code requirements> for [**Wind Zone 1**] [**Wind Zone 2**] [**Wind Zone 3**] [**Wind Zone 4**].
- D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
 - 1. Temperature Change: [**120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces**] <Insert temperature change>.
- E. Operating Temperature Range: Automatic entrances shall operate within [**minus 30 to plus 120 deg F (minus 35 to plus 49 deg C)**] <Insert temperature range>.
- F. Air Infiltration: Maximum air leakage through fixed glazing and framing areas of [**1.25 cfm/sq. ft. (6.4 L/s x sq. m)**] <Insert value> of fixed entrance-system area when tested according to ASTM E 283 at a minimum static-air-pressure difference of [**1.57 lbf/sq. ft. (75 Pa)**] [**6.24 lbf/sq. ft. (300 Pa)**] <Insert value>.
- G. Opening Force:

1. Power-Operated Doors: Not more than **50 lbf (222 N)** required to manually set door in motion if power fails, and not more than **15 lbf (67 N)** required to open door to minimum required width.
2. Power-Operated Swinging Doors: Not more than **30 lbf (133 N)** required to manually open door if power fails.
3. Breakaway Device for Power-Operated Doors: Not more than **50 lbf (222 N)** required for a breakaway door or panel to open.
4. Power-Assist and Low-Energy Doors: Not more than **15 lbf (67 N)** required to release a latch if provided, not more than **30 lbf (133 N)** required to manually set door in motion, and not more than **15 lbf (67 N)** required to fully open door if power fails.
5. Accessible, Power-Assist Interior Doors: Not more than **5 lbf (22 N)** to push or pull door to fully open position.

H. Entrapment-Prevention Force:

1. Power-Operated Swinging Doors: Not more than **40 lbf (178 N)** required to prevent stopped door in the last 10 degrees of opening from moving in the direction of opening; not more than **30 lbf (133 N)** required to prevent stopped door from moving in direction of closing.
2. Low-Energy Doors: Not more than **15 lbf (67 N)** required to prevent stopped door from closing or opening.

2.3 SWINGING AUTOMATIC ENTRANCES

- A. General: Provide manufacturer's standard automatic entrances including doors, framing, headers, door operators, controls, and accessories required for a complete installation.
- B. Swinging, Power-Operated Automatic Entrance **<Insert drawing designation>**:
 1. Manufacturers: Subject to compliance with requirements, provide products by the following] [provide products by one of the following:
 - a. [Besam Entrance Solutions; Subsidiary of ASSA ABLOY Entrance Systems.](#)
 - b. [DORMA Automatics; Division of DORMA Group North America.](#)
 - c. [Horton Automatics; a division of Overhead Door Corporation.](#)
 - d. [Nabco Entrances Inc.](#)
 - e. [Stanley Access Technologies, LLC; Division of Stanley Security Solutions.](#)
 - f. [Tormax Technologies, Inc.](#)
 - g. **<Insert manufacturer's name>**.
 - h. or approved equal.
 2. Configuration: Single-swinging door[**with transom**].
 - a. Traffic Pattern: [**One**] [**Two**] way.
 - b. Mounting: [**Between jambs**] [**Surface**].
 3. Configuration: Pair of swinging doors[**with transom**].

- a. Traffic Pattern: [**One way**] [**Two way**] [**Double egress**] [**Double swing**].
 - b. Mounting: [**Between jambs**] [**Surface**].
4. Operator Features:
- a. Power opening and [**power-assist**] spring closing.
 - b. Adjustable opening and closing speeds.
 - c. Adjustable hold-open time between zero and 30 seconds.
 - d. Adjustable backcheck and latching.
 - e. Obstruction recycle.
 - f. Automatic door re-open if stopped while closing.
 - g. On-off/hold-open switch to control electric power to operator[, **key operated**].
 - h. **<Insert features required>**.
5. Controls: Activation and safety devices [**as indicated on Drawings and**]
[according to BHMA standards.
- a. Activation Device: Motion sensor mounted on ingress side of door header to detect pedestrians in activating zone and to open door.
 - b. Activation Device: Control mat installed on ingress side of door to detect pedestrians in activating zone and to open door.
 - c. Activation Device: [**Push-plate switch**] [**Push-button switch**] [**Key switch**] [**on each side of door**] to activate door operator.
 - d. Safety Device: Presence sensor mounted on [**door header**] [**horizontal door muntin**] [**guide rail**] to detect pedestrians in presence zone and to prevent door from closing.
 - e. Safety Device: One photoelectric beam mounted in guide rails to detect pedestrians in presence zone and to prevent door from closing.
 - f. Safety Device: Control mat(s) installed on egress side of door to detect pedestrians in presence and safety zones and to prevent door from closing.
6. Finish: Finish framing, door(s), and header with [**Class I, clear anodic finish**] [**Class II, clear anodic finish**] [**Class I, color anodic finish**] [**Class II, color anodic finish**] [**baked-enamel or powder-coat finish**] [**high-performance organic finish (two-coat fluoropolymer)**] [**high-performance organic finish (three-coat fluoropolymer)**] [**finish matching adjacent curtain wall**] [**finish matching adjacent storefront**].
- a. Color: [**Light bronze**] [**Medium bronze**] [**Dark bronze**] [**Black**] [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry colors and color densities**] **<Insert color>**.
7. Metal Cladding and Finish: Clad framing, door(s), and header with [**No. 4 directional-satin-finish stainless-steel sheet**] [**No. 8 mirrorlike reflective, nondirectional-polish-finish stainless-steel sheet**] [**satin-brass sheet**] [**polished-brass sheet**] [**satin-bronze sheet**] [**polished-bronze sheet**] [**metal sheet in finish matching DEN Project Manager's sample**] [**metal sheet in**

finish as selected by DEN Project Manager from manufacturer's full range
[metal sheet in finish matching adjacent storefront] <Insert finish>.

- C. Swinging, **[Power-Assist] [Low-Energy, Power-Operated] [Low-Energy, Power-Open]** Automatic Entrance **<Insert drawing designation>**:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [DORMA Automatics; Division of DORMA Group North America.](#)
 - b. [Horton Automatics; a division of Overhead Door Corporation.](#)
 - c. [Nabco Entrances Inc.](#)
 - d. [Tormax Technologies, Inc.](#)
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.
 2. Configuration: Single-swinging door[**with transom**].
 - a. Traffic Pattern: **[One] [Two]** way.
 - b. Mounting: **[Between jambs] [Surface]**.
 3. Configuration: Pair of swinging doors[**with transom**].
 - a. Traffic Pattern: **[One way] [Two way] [Double egress] [Double swing]**.
 - b. Mounting: **[Between jambs] [Surface]**.
 4. Operator Features:
 - a. Power opening and **[power-assist]** spring closing.
 - b. Adjustable opening and closing speeds.
 - c. Adjustable hold-open time between zero and 30 seconds.
 - d. Adjustable backcheck and latching.
 - e. Obstruction recycle.
 - f. Automatic door re-open if stopped while closing.
 - g. On-off/hold-open switch to control electric power to operator[, **key operated**].
 - h. **<Insert features required>**.
 5. Activation Device: **[Push-plate switch] [Push-button switch] [Key switch] [on each side of door]** to activate door operator.
 6. Finish: Finish framing, door(s), and header with **[Class I, clear anodic finish] [Class II, clear anodic finish] [Class I, color anodic finish] [Class II, color anodic finish] [baked-enamel or powder-coat finish] [high-performance organic finish (two-coat fluoropolymer)] [high-performance organic finish (three-coat fluoropolymer)] [finish matching adjacent curtain wall] [finish matching adjacent storefront]**.
 - a. Color: **[Light bronze] [Medium bronze] [Dark bronze] [Black] [As indicated by manufacturer's designations] [Match DEN Project**

Manager's sample] [As selected by DEN Project Manager from full range of industry colors and color densities] <Insert color>.

7. Metal Cladding and Finish: Clad framing, door(s), and header with **[No. 4 directional-satin-finish stainless-steel sheet] [No. 8 mirrorlike reflective, nondirectional-polish-finish stainless-steel sheet] [satin-brass sheet] [polished-brass sheet] [satin-bronze sheet] [polished-bronze sheet] [metal sheet in finish matching DEN Project Manager's sample] [metal sheet in finish as selected by DEN Project Manager from manufacturer's full range] [metal sheet in finish matching adjacent storefront] <Insert finish>.**

2.4 ENTRANCE COMPONENTS

- A. Framing Members: Extruded aluminum, minimum **0.125 inch (3.2 mm)** thick and reinforced as required to support imposed loads.
 1. Nominal Size: **[As indicated on Drawings] [1-3/4 by 4-1/2 inches (45 by 115 mm)] [1-3/4 by 6 inches (45 by 150 mm)] <Insert dimensions>.**
 2. Extruded Glazing Stops and Applied Trim: Minimum **0.062-inch (1.6-mm)** wall thickness.
- B. Stile and Rail Doors: **1-3/4-inch- (45-mm-)** thick, glazed doors with minimum **0.125-inch- (3.2-mm-)** thick, extruded-aluminum tubular stile and rail members. Mechanically fasten corners with reinforcing brackets that are welded, or incorporate concealed tie-rods that span full length of top and bottom rails.
 1. Glazing Stops and Gaskets: **[Beveled] [Square]**, snap-on, extruded-aluminum stops and preformed gaskets.
 2. Stile Design: **[As indicated on Drawings] [Narrow stile, 2-1/8-inch (55-mm) nominal width] [Medium stile, 3-1/2-inch (90-mm) nominal width].**
 3. Rail Design: **[As indicated on Drawings] [5-inch (125-mm) nominal height] [6-1/2-inch (165-mm) nominal height] [10-inch (254-mm) nominal height].**
 4. Muntin Bars: Horizontal tubular rail member for each door; match stile design and finish.
- C. **[Sidelite(s)] [and] [Transom]: 1-3/4-inch- (45-mm-)** deep **[sidelite(s)] [and] [transom]** with minimum **0.125-inch- (3.2-mm-)** thick, extruded-aluminum tubular stile and rail members matching door design.
 1. Glazing Stops and Gaskets: Same materials and design as for stile and rail door.
 2. Muntin Bars: Horizontal tubular rail members for each sidelite; match stile design.
- D. Headers: Fabricated from minimum **0.125-inch- (3.2-mm-)** thick extruded aluminum and extending full width of automatic entrance units to conceal door operators and controls. Provide hinged or removable access panels for service and adjustment of door operators and controls. Secure panels to prevent unauthorized access.
 1. Mounting: **[Surface mounted] [Concealed, with one side of header flush with framing].**

- E. Brackets and Reinforcements: High-strength aluminum with nonstaining, nonferrous shims for aligning system components.
- F. Signage: As required by cited BHMA standard.
 - 1. Application Process: **[Decals] [Silk-screened] [Door manufacturer's standard process] <Insert requirement>**.
 - 2. Provide sign materials with instructions for field application after glazing is installed.

2.5 MATERIALS

- A. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
 - 1. Extrusions: **ASTM B 221** (ASTM B 221M).
 - 2. Sheet: **ASTM B 209** (ASTM B 209M).
- B. Steel Reinforcement: Reinforcement with corrosion-resistant primer complying with SSPC-PS Guide No. 12.00 applied immediately after surface preparation and pretreatment. Use surface preparation methods according to recommendations in SSPC-SP COM and prepare surfaces according to applicable SSPC standard.
- C. Stainless-Steel Bars: ASTM A 276 or ASTM A 666, **[Type 304] [Type 316] <Insert type>**.
- D. Stainless-Steel Tubing: ASTM A 554, **[Grade MT 304] [Grade MT 316] <Insert grade>**.
- E. Stainless-Steel Sheet: ASTM A 240/A 240M or ASTM A 666, **[Type 304] [Type 316] <Insert type>**, stretcher-leveled standard of flatness, in entrance manufacturer's standard thickness.
- F. Brass Sheet: ASTM B 36/B 36M, Alloy UNS No. C26000 (cartridge brass, 70 percent copper), in entrance manufacturer's standard thickness.
- G. Bronze Sheet: ASTM B 36/B 36M, Alloy UNS No. C28000 (muntz metal, 60 percent copper) or Alloy UNS No. C23000 (red brass, 85 percent copper), in entrance manufacturer's standard thickness.
- H. Expanded Aluminum Mesh: **[Expanded] [Expanded and flattened]** aluminum sheet according to the geometry of ASTM F 1267.
- I. Polycarbonate Sheet: ASTM C 1349, Appendix X1, Type II, coated, mar-resistant, UV-stabilized polycarbonate with coating on both surfaces.
- J. Glazing: As specified in **[Section 088000 "Glazing."] [Section 088853 "Security Glazing."]**
- K. Sealants and Joint Fillers: As specified in Section 079200 "Joint Sealants."

- L. Bituminous Coating: Cold-applied asphalt emulsion complying with ASTM D 1187.
- M. Fasteners and Accessories: Corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.

2.6 DOOR OPERATORS AND CONTROLS

- A. General: Provide operators and controls, which include activation and safety devices, according to BHMA standards, for condition of exposure, and for long-term, maintenance-free operation under normal traffic load for type of occupancy indicated.
- B. Door Operators: Provide door operators of size recommended by manufacturer for door size, weight, and movement.
 - 1. Door Operator Performance: Door operators shall open and close doors and maintain them in fully closed position when subjected to Project's design wind loads.
 - 2. Electromechanical Operators: Concealed, self-contained, overhead unit powered by fractional-horsepower, permanent-magnet dc motor; with closing speed controlled mechanically by gear train and dynamically by braking action of electric motor; with solid-state microprocessor controller; UL 325; and with manual operation with power off.
- C. Motion Sensors: Self-contained, K-band-frequency, microwave-scanner units; fully enclosed by its plastic housing; adjustable to provide detection-field sizes and functions required by BHMA A156.10.
 - 1. Provide capability for switching between bidirectional and unidirectional detection.
 - 2. For one-way traffic, sensor on egress side shall not be active when doors are fully closed.
- D. Presence Sensors: Self-contained, active-infrared scanner units; adjustable to provide detection-field sizes and functions required by BHMA A156.10. Sensors shall remain active at all times.
- E. Photoelectric Beams: Pulsed infrared, sender-receiver assembly for recessed mounting. Beams shall not be active when doors are fully closed.
- F. Control Mats: **1/2-inch- (13-mm-)** thick, synthetic-rubber or flexible-plastic mat in safety-ribbed surface pattern, with extruded-aluminum frame; with pressure switches for low-voltage control wiring; and complying with performance requirements of BHMA A156.10.
 - 1. Frame: [**Recessed to fit flush with floor, with concealed anchors**] [**Surface mounted, with tapered safety edge**].
 - 2. Size: As indicated, but no smaller than required by BHMA A156.10 including Appendix A.

3. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors and color densities].**
- G. Push-Plate Switch: Momentary-contact door-control switch with flat push-plate actuator **[with contrasting-colored, engraved message].**
1. Configuration: **[Round] [Square]** push plate with **4-by-4-inch** (100-by-100-mm) junction box.
 - a. Mounting: **[As indicated on Drawings] [Recess mounted, semiflush in wall] [Surface mounted on wall].**
 2. Configuration: Rectangular push plate with **2-by-4-inch** (50-by-100-mm) junction box.
 - a. Mounting: **[As indicated on Drawings] [Recess mounted, semiflush in wall] [Recess mounted in door jamb] [Surface mounted on wall] [Surface mounted on post] [Surface mounted on guide rail].**
 3. Push-Plate Material: **[Stainless steel] [Plastic]** as selected by DEN Project Manager from manufacturer's full range.
 4. Message: **[Plain face with no message.] ["Push to Open."] [International symbol of accessibility.] [International symbol of accessibility and "Push to Open."]**
- H. Push-Button Switch: Momentary-contact door-control switch with one red-button actuator; enclosed in nominal **[2-by-4-inch (50-by-100-mm)] [4-by-4-inch (100-by-100-mm)]** junction box.
1. Provide faceplate engraved with "Press to Open" letters **[and international symbol of accessibility]** in contrasting color.
 2. Provide blue plastic cover engraved with "Press Button to Open" in white letters and international symbol of accessibility.
 3. Mounting: **[As indicated on Drawings] [Surface mounted on wall] [Surface mounted on post] [Surface mounted on guide rail] [Recess mounted in wall].**
 4. Face-Plate Material: **[Stainless steel] [Painted metal]** as selected by DEN Project Manager from manufacturer's full range.
- I. Key Switch: Recess-mounted, door-control switch with key-controlled actuator; enclosed in **2-by-4-inch** (50-by-100-mm) junction box. Provide faceplate engraved with letters indicating switch functions.
1. Face-Plate Material: **[Stainless steel] [Painted metal]** as selected by DEN Project Manager from manufacturer's full range.
 2. Functions: **[On-off, momentary contact] [On-off, maintained contact] [Two-way automatic, hold open, one-way exit, and off] [Two-way automatic, hold open, one-way exit, off, full open, and partial open].**

3. Mounting: **[As indicated on Drawings] [Recess mounted, semiflush in wall] [Recess mounted in doorjamb] [Surface mounted on wall] [Surface mounted on post]**.
- J. Wireless or Remote Radio Control Switch: Auxiliary radio control system consisting of header-mounted receiver and **[wall-mounted] [hand-held, battery-operated]** transmitter switch **[for each entrance] <Insert requirement>**.
1. Wall-Mounted Transmitter Switch: One red-button, momentary-contact actuator enclosed in **4-by-4-inch (100-by-100-mm)** junction box. Provide blue plastic cover engraved with "Press Button to Open" in white letters and international symbol of accessibility.
- K. Electrical Interlocks: Unless units are equipped with self-protecting devices or circuits, provide electrical interlocks to prevent activation of operator when door is locked, latched, or bolted.
- 2.7 HARDWARE
- A. General: Provide units in sizes and types recommended by automatic entrance and hardware manufacturers for entrances and uses indicated. Finish exposed parts to match door finish **[unless otherwise indicated]**.
- B. Manual Opening for Power-Operated Swinging Doors: Provide hardware that, in a power failure, allows door to open with a manual force stipulated in "Performance Requirements" Article.
- C. Breakaway Device for Power-Operated Doors: Device that allows door to swing out in direction of egress to full 90 degrees from any operating position. Maximum force to open door shall be as stipulated in "Performance Requirements" Article. Interrupt powered operation of door operator while in breakaway mode.
- D. Manual Opening for Power-Assist and Low-Energy Doors: Provide hardware that, in a power failure, allows door to open with a manual force as stipulated in "Performance Requirements" Article.
- E. Hinges:
1. Center-Pivot Sets: BHMA A156.4, Grade 1, with exposed parts of cast-aluminum alloy.
 2. Offset Pivots: BHMA A156.4, Grade 1, with exposed parts of cast-aluminum alloy.
 3. Butt Hinges: BHMA A156.1, Grade 1, five-knuckle, **4-1/2-by-4-inch (114-by-102-mm)** ball-bearing butts.
 - a. Provide nonremovable pins at hinges exposed on outside of door.
 - b. Provide nonferrous hinges for doors exposed to weather.

- c. Provide three hinges at each leaf for doors up to **36 inches** (914 mm) wide and **80 inches** (2032 mm) tall; provide four hinges at each leaf for wider or taller doors.
 - F. Deadlocks: Deadbolt operated by exterior cylinder and interior thumb turn, with minimum **1-inch-** (25-mm-) long throw bolt; BHMA A156.5, Grade 1.
 - 1. Cylinders: **[BHMA A156.5, Grade 1, six-pin mortise type.] [As specified in Section 087100 "Door Hardware."] [As specified in Section 087111 "Door Hardware (Descriptive Specification)."]**
 - a. Keying: **[No master] [Integrate into building master]** key system.
 - 2. Deadbolts: Laminated-steel hook, mortise type, BHMA A156.5, Grade 1.
 - 3. Two-Point Locking for Swinging Doors: Mechanism in stile of active door leaf that automatically extends second lockbolt into **[header] [threshold]**.
 - G. Push Bars: **[As selected by DEN Project Manager from manufacturer's full range of full-door-width, single] [Manufacturer's standard surface-mounted, aluminum]** push bars.
 - H. Pull Handles: **[As selected by DEN Project Manager from manufacturer's full range of pull handles and plates] [Manufacturer's standard aluminum pull handles]**.
 - I. Thresholds: BHMA A156.21, extruded-aluminum raised thresholds; with beveled edges with a slope of not more than 1:2 and a maximum height of **1/2 inch** (13 mm). Provide cutouts as required for door operating hardware.
 - J. Weather Stripping: Replaceable components.
 - 1. Sliding Type: AAMA 701, made of wool, polypropylene, or nylon woven pile with nylon-fabric or aluminum-strip backing.
 - 2. Compression Type: Made of ASTM D 2000, molded neoprene, or ASTM D 2287, molded PVC.
 - 3. Weather Sweeps: Nylon brush sweep mounted to underside of door bottom.
 - K. Finger Guards: Collapsible neoprene or PVC gasket.
- 2.8 ACCESSORIES
- A. Guide Rails: **[Anodized aluminum] [Baked-enamel or powder-coated aluminum] [Stainless steel]**, fabricated from **[bars] [or] [tubing]**, minimum **30 inches** (762 mm) high, and finished to match doors unless otherwise indicated; positioned and projecting from face of door jamb for distance as indicated, but not less than **[that required by BHMA A156.10 for type of door and direction of travel] <Insert dimension>**; with filler panel.
 - 1. Filler Panel: **[Expanded aluminum mesh] [Clear polycarbonate sheet] [Colored polycarbonate sheet] <Insert material>**.

- a. Orient expanded aluminum mesh with long dimension of diamonds **[parallel to top rail] [perpendicular to top rail]**.
 - b. Color: **[Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
2. Provide intermediate rail in guide rail suitable for supporting photoelectric beams.
 3. Mounting: **[As indicated on Drawings] [Jamb and floor] [Floor, freestanding]**.
 4. Aluminum Finish: **[Class I, clear anodic finish] [Class II, clear anodic finish] [Class I, color anodic finish] [Class II, color anodic finish] [Baked-enamel or powder-coat finish] [Finish matching door and frame] <Insert finish>**.
 - a. Color: **[Light bronze] [Medium bronze] [Dark bronze] [Black] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors and color densities] <Insert color>**.
 5. Stainless-Steel Finish: **[No. 4 directional-satin-finish stainless steel] [Finish matching door and frame] <Insert finish>**.
- B. Guide Rails: See **[Section 055213 "Pipe and Tube Railings."]** **[Section 057300 "Decorative Metal Railings."]**

2.9 FABRICATION

- A. General: Factory fabricate automatic entrance components to designs, sizes, and thicknesses indicated and to comply with indicated standards.
1. Form aluminum shapes before finishing.
 2. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
 3. Use concealed fasteners to greatest extent possible. Where exposed fasteners are required, use countersunk Phillips flat-head machine screws, **finished to match framing** [, **fabricated from stainless steel**].
 - a. Where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration, use self-locking devices.
 - b. Reinforce members as required to receive fastener threads.
 4. Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape recommended by manufacturer for this purpose.
- B. Framing: Provide automatic entrances as prefabricated assemblies. Complete fabrication, assembly, finishing, hardware application, and other work before shipment to Project site.
1. Fabricate tubular and channel frame assemblies with welded or mechanical joints. Provide subframes and reinforcement as required for a complete system to support required loads.

2. Perform fabrication operations in manner that prevents damage to exposed finish surfaces.
 3. Form profiles that are sharp, straight, and free of defects or deformations.
 4. Provide components with concealed fasteners and anchor and connection devices.
 5. Fabricate components with accurately fitted joints with ends coped or mitered to produce hairline joints free of burrs and distortion.
 6. Fabricate exterior components to drain condensation and water passing joints within system to the exterior.
 7. Provide anchorage and alignment brackets for concealed support of assembly from building structure.
 8. Allow for thermal expansion of exterior units.
- C. Doors: Factory fabricated and assembled in profiles indicated. Reinforce as required to support imposed loads and for installing hardware.
- D. Metal Cladding: Factory-fabricated and installed metal cladding, completely covering all visible surfaces as part of prefabricated entrance assembly before shipment to Project site.
1. Perform fabrication operations in manner that prevents damage to exposed finish surfaces.
 2. Form profiles that are sharp, straight, and free of defects or deformations.
 3. Provide components with concealed fasteners and anchor and connection devices.
 4. Fabricate components with accurately fitted joints with ends coped or mitered to produce hairline joints free of burrs and distortion.
 5. Fabricate exterior components to drain water passing joints and condensation and moisture occurring or migrating within system to the exterior.
 6. Allow for thermal expansion at exterior entrances.
- E. Door Operators: Factory fabricated and installed in headers, including adjusting and testing.
- F. Glazing: Fabricate framing with minimum glazing edge clearances for thickness and type of glazing indicated, according to GANA's "Glazing Manual."
- G. Hardware: Factory install hardware to greatest extent possible; remove only as required for final finishing operation and for delivery to and installation at Project site. Cut, drill, and tap for factory-installed hardware before applying finishes.
1. Provide sliding-type weather stripping, mortised into door, at perimeter of doors[**and breakaway sidelites**].
 2. Provide compression-type weather stripping at fixed stops of exterior doors. At locations without fixed stops, provide sliding-type weather stripping retained in adjustable strip mortised into door edge.
 3. Provide weather sweeps mounted to underside of door bottoms of exterior doors.
 4. Provide finger guards at each swinging-door leaf that has clearance at hinge side greater than **1/4 inch (6 mm)** and less than **3/4 inch (19 mm)** with door in any position. Anchor guards to hinge-jamb frame.

H. Controls:

1. General: Factory install activation and safety devices in doors and headers as required by BHMA A156.10 for type of door and direction of travel.
2. Install photoelectric beams in sides of guide rails, with dimension above finished floor not less than **24 inches** (610 mm).

2.10 GENERAL FINISH REQUIREMENTS

- A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Apply organic and anodic finishes to formed metal after fabrication unless otherwise indicated.
- C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.11 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, [**AA-M12C22A41, Class I, 0.018 mm**] [**AA-M12C22A31, Class II, 0.010 mm**] or thicker.
- B. Color Anodic Finish: AAMA 611, [**AA-M12C22A42/A44, Class I, 0.018 mm**] [**AA-M12C22A32/A34, Class II, 0.010 mm**] or thicker.
- C. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of **1.5 mils** (0.04 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
- D. High-Performance Organic Finish: Two-coat fluoropolymer finish complying with [**AAMA 2604**] [**AAMA 2605**] and containing not less than [**50**] [**70**] percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
- E. High-Performance Organic Finish: Three-coat fluoropolymer finish complying with AAMA 2605 and containing not less than [**50**] [**70**] percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances, header support, and other conditions affecting performance of automatic entrances.
- B. Examine roughing-in for electrical systems to verify actual locations of power connections before automatic entrance installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install automatic entrances according to manufacturer's written instructions and cited BHMA standard for direction of pedestrian travel, including signage, controls, wiring, and connection to the building's power supply.
 - 1. Do not install damaged components. Fit frame joints to produce hairline joints free of burrs and distortion. Rigidly secure nonmovement joints. Seal joints watertight.
 - 2. Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape recommended by manufacturer for this purpose.
 - 3. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous coating.
- B. Entrances: Install automatic entrances plumb and true in alignment with established lines and grades without warp or rack of framing members and doors. Anchor securely in place.
 - 1. Install surface-mounted hardware using concealed fasteners to greatest extent possible.
 - 2. Set headers, operating brackets, and guides level and true to location with anchorage for permanent support.
 - 3. Install components to drain water passing joints, condensation occurring within framing members, and moisture migrating within system to exterior.
 - 4. Provide thresholds **[at exterior doors] [and] [where indicated]**.
- C. Door Operators: Connect door operators to electrical power distribution system.
- D. Access-Control Devices: Connect access-control devices to access-control system as specified in Section 281300 "Access Control."
- E. Controls: Install and adjust activation and safety devices according to manufacturer's written instructions and cited BHMA standard for direction of pedestrian travel. Connect control wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

- F. Guide Rails: Install rails according to BHMA A156.10, including Appendix A, and manufacturer's written instructions unless otherwise indicated.
- G. Glazing: Install glazing as specified in [**Section 088000 "Glazing."**] [**Section 088853 "Security Glazing."**]
- H. Sealants: Comply with requirements specified in Section 079200 "Joint Sealants" to provide weathertight installation.
 - 1. Set thresholds, framing members, and flashings in full sealant bed.
 - 2. Seal perimeter of framing members with sealant.
- I. Signage: Apply signage on both sides of each door[**and breakaway sidelite**] as required by cited BHMA standard for direction of pedestrian travel.
- J. Wiring within Automatic Entrance Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's written limitations on bending radii. Provide and use lacing bars and distribution spools.

3.3 FIELD QUALITY CONTROL

- A. Certified Inspector: [**Owner will engage**] [**Engage**] a Certified Inspector to test and inspect components, assemblies, and installations, including connections.
- B. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
 - 1. Test and inspect each automatic entrance, using AAADM inspection forms, to determine compliance of installed systems with applicable BHMA standards.
- C. Automatic entrances will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

3.4 ADJUSTING

- A. Adjust hardware, moving parts, door operators, and controls to function smoothly, and lubricate as recommended by manufacturer; comply with requirements of applicable BHMA standards.
 - 1. Adjust exterior doors for weathertight closure.
- B. Readjust door operators and controls after repeated operation of completed installation equivalent to three days' use by normal traffic (100 to 300 cycles).
- C. Occupancy Adjustments: When requested within [**12**] **<Insert number>** months of date of Substantial Completion, provide on-site assistance in adjusting system to suit

actual occupied conditions. Provide up to **[two]** <Insert number> visits to Project during other-than-normal occupancy hours for this purpose.

3.5 CLEANING

- A. Clean glass and metal surfaces promptly after installation. Remove excess glazing and sealant compounds, dirt, and other substances. Repair damaged finish to match original finish.
 - 1. Comply with requirements in **[Section 088000 "Glazing"]** **[Section 088853 "Security Glazing"]** for cleaning and maintaining glass.

3.6 MAINTENANCE SERVICE

- A. Initial Maintenance Service: Beginning at Substantial Completion, maintenance service shall include **[three]** **[six]** **[nine]** **[12]** months' full maintenance by skilled employees of automatic entrance Installer. Include **[monthly]** **[quarterly]** preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper automatic entrance operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.
 - 1. Engage a Certified Inspector to perform safety inspection after each adjustment or repair and at end of maintenance period. Furnish completed inspection reports to Owner.
 - 2. Perform maintenance, including emergency callback service, during normal working hours.
 - 3. Include 24-hour-per-day, 7-day-per-week, emergency callback service.

3.7 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain automatic entrances.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 084229.33

SECTION 084413 - GLAZED ALUMINUM CURTAIN WALLS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes conventionally glazed aluminum curtain walls installed as **[stick]** **[unitized]** **[unit-and-mullion]** assemblies.
- B. Related Sections:
 - 1. Section 079200 "Joint Sealants" for installation of joint sealants installed with glazed aluminum curtain walls **[and for sealants to the extent not specified in this Section]**.
 - 2. Section 084423 "Structural-Sealant-Glazed Curtain Walls" for structural-sealant-glazed curtain walls.
 - 3. Section 084433 "Sloped Glazing Assemblies" for sloped glazing **[installed with glazed aluminum curtain walls]**.
 - 4. Section 089116 "Operable Wall Louvers," Section 089119 "Fixed Louvers," and Section 089516 "Wall Vents" for units installed with glazed aluminum curtain walls.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ALLOWANCES

- A. Provide **[preconstruction]** **[field quality-control]** testing as part of testing and inspecting allowance.

1.4 PERFORMANCE REQUIREMENTS

- A. General Performance: Comply with performance requirements specified, as determined by **[preconstruction]** testing of **[manufacturer's standard]** glazed aluminum curtain walls representing those indicated for this Project without failure due to defective manufacture, fabrication, installation, or other defects in construction.
 - 1. Glazed aluminum curtain walls shall withstand movements of supporting structure **[indicated on Drawings]** including, but not limited to, story drift, twist,

- column shortening, long-term creep, and deflection from uniformly distributed and concentrated live loads.
2. Failure also includes the following:
 - a. Thermal stresses transferring to building structure.
 - b. Glass breakage.
 - c. Noise or vibration created by wind and thermal and structural movements.
 - d. Loosening or weakening of fasteners, attachments, and other components.
 - e. Failure of operating units.
- B. Delegated Design: Design glazed aluminum curtain walls, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- C. Structural Loads:
 1. Wind Loads:[**As indicated on Drawings.**]
 - a. Basic Wind Speed: **115 mph (50 m/s)**
 - b. Importance Factor: 1.15.
 - c. Exposure Category: C.
 2. Blast Loads: [**As indicated on Drawings**] **<Insert loads>**.
 3. Periodic Maintenance-Equipment Loads: [**As indicated on Drawings**] **<Insert loads>**.
- D. Structural-Test Performance: Test according to ASTM E 330 as follows:
 1. When tested at positive and negative wind-load design pressures, assemblies do not evidence deflection exceeding specified limits.
 2. When tested at [**150**] **<Insert number>** percent of positive and negative wind-load design pressures, assemblies, including anchorage, do not evidence material failures, structural distress, and permanent deformation of main framing members exceeding [**0.2**] **<Insert number>** percent of span.
 3. Test Durations: As required by design wind velocity, but not less than [**10**] **<Insert number>** seconds.
- E. Deflection of Framing Members: At design wind pressure, as follows:
 1. Deflection Normal to Wall Plane: Limited to [**edge of glass in a direction perpendicular to glass plane not exceeding L/175 of the glass edge length for each individual glazing lite**] [**1/175 of clear span for spans up to 13 feet 6 inches (4.1 m) and to 1/240 of clear span plus 1/4 inch (6.35 mm) for spans greater than 13 feet 6 inches (4.1 m)**] **<Insert deflection limit>** or an amount that restricts edge deflection of individual glazing lites to **3/4 inch (19 mm)**, whichever is less.
 2. Deflection Parallel to Glazing Plane: Limited to [**L/360 of clear span or 1/8 inch (3.2 mm), whichever is smaller**] [**amount not exceeding that which reduces glazing bite to less than 75 percent of design dimension and that which**

reduces edge clearance between framing members and glazing or other fixed components to less than 1/8 inch (3.2 mm)].

- a. Operable Units: Provide a minimum 1/16-inch (1.6-mm) clearance between framing members and operable units.
3. Cantilever Deflection: Where framing members overhang an anchor point, limit deflection to two times the length of cantilevered member, divided by 175.
- F. Windborne-Debris-Impact-Resistance Performance: Pass missile-impact and cyclic-pressure tests when tested according to ASTM E 1886 and testing information in ASTM E 1996 for Wind [**Zone 1**] [**Zone 2**] [**Zone 3**] [**Zone 4**].
 1. Large-Missile Test: For glazed openings located within 30 feet (9.1 m) of grade.
 2. Small-Missile Test: For glazed openings located more than 30 feet (9.1 m) above grade.
- G. Seismic Performance: Glazed aluminum curtain walls shall withstand the effects of earthquake motions determined according to [**SEI/ASCE 7**] <Insert requirement>.
 1. Component Importance Factor is [**1.3**] <Insert factor>.
- H. Story Drift: Accommodate design displacement of adjacent stories indicated.
 1. Design Displacement: [**As indicated on Drawings**] <Insert design displacement>.
 2. Test Performance: Meeting criteria for passing based on building occupancy type when tested according to AAMA 501.4 at design displacement[**and 1.5 times the design displacement**].
- I. Water Penetration under Static Pressure: No evidence of water penetration through fixed glazing and framing areas when tested according to ASTM E 331 at a minimum static-air-pressure differential of 20 percent of positive wind-load design pressure, but not less than [**6.24 lbf/sq. ft. (300 Pa)**] [**10 lbf/sq. ft. (480 Pa)**] [**15 lbf/sq. ft. (720 Pa)**] <Insert value>.
- J. Water Penetration under Dynamic Pressure: No evidence of water penetration through fixed glazing and framing areas when tested according to AAMA 501.1 at dynamic pressure equal to 20 percent of positive wind-load design pressure, but not less than [**6.24 lbf/sq. ft. (300 Pa)**] [**10 lbf/sq. ft. (480 Pa)**] [**15 lbf/sq. ft. (720 Pa)**] <Insert value>.
 1. Maximum Water Leakage: [**According to AAMA 501.1**] [**No uncontrolled water penetrating assemblies or water appearing on assemblies' normally exposed interior surfaces from sources other than condensation**]. Water leakage does not include water controlled by flashing and gutters that is drained to exterior.
- K. Thermal Movements: Allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures:

1. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.
 2. Test Interior Ambient-Air Temperature: [75 deg F (24 deg C)] <Insert temperature>.
 3. Test Performance: No buckling; stress on glass; sealant failure; excess stress on framing, anchors, and fasteners; or reduction of performance when tested according to AAMA 501.5.
- L. Energy Performance: Glazed aluminum curtain walls shall have certified and labeled energy performance ratings in accordance with NFRC.
1. Thermal Transmittance (U-factor): Fixed glazing and framing areas shall have U-factor of not more than [0.45 Btu/sq. ft. x h x deg F (2.55 W/sq. m x K)] [0.57 Btu/sq. ft. x h x deg F (3.23 W/sq. m x K)] [0.69 Btu/sq. ft. x h x deg F (3.92 W/sq. m x K)] <Insert value> as determined according to NFRC 100.
 2. Solar Heat Gain Coefficient: Fixed glazing and framing areas shall have a solar heat gain coefficient of no greater than [0.35] [0.40] [0.45] <Insert value> as determined according to NFRC 200.
 3. Air Infiltration: Maximum air leakage through fixed glazing and framing areas of [0.30 cfm/sq. ft. (1.50 L/s per sq. m)] <Insert value> of fixed wall area as determined according to ASTM E 283 at a minimum static-air-pressure differential of [1.57 lbf/sq. ft. (75 Pa)] [6.24 lbf/sq. ft. (300 Pa)] <Insert value>.
 4. Condensation Resistance: Fixed glazing and framing areas shall have an NFRC-certified condensation resistance rating of no less than [15] [25] [35] [45] <Insert value> as determined according to NFRC 500.
- M. Sound Transmission: Provide glazed aluminum curtain walls with fixed glazing and framing areas having the following sound-transmission characteristics:
1. Outdoor-Indoor Transmission Class: Minimum [26] [30] [34] <Insert number> when tested for laboratory sound transmission loss according to ASTM E 90 and determined by ASTM E 1332.

1.5 PRECONSTRUCTION TESTING

- A. Preconstruction Testing Service: Provide glazed aluminum curtain walls that comply with test-performance requirements indicated, as evidenced by reports [based on **Project-specific preconstruction testing**] [of tests performed on manufacturer's **standard assemblies**] by a qualified testing agency.
1. [Owner will engage] [Engage] a qualified testing agency to perform preconstruction testing on laboratory mockups.
 2. Build laboratory mockups at testing agency facility using personnel, materials, and methods of construction that will be used at Project site.
 3. Notify DEN Project Manager [seven] <Insert number> days in advance of the dates and times when laboratory mockups will be constructed.
 4. Preconstruction Testing Program: Perform tests specified in "Performance Requirements" Article on laboratory mockups in the following order:

- a. Structural-performance preloading at 50 percent of the specified wind-load design pressure when tested according to ASTM E 330.
- b. Air infiltration when tested according to ASTM E 283.
- c. Water penetration under static pressure when tested according to ASTM E 331.
- d. Water penetration under dynamic pressure when tested according to AAMA 501.1.
- e. Structural performance at design load when tested according to ASTM E 330.
- f. Repeat air filtration when tested according to ASTM E 283.
- g. Repeat water penetration under static pressure when tested according to ASTM E 331.
- h. Structural performance at maximum 150 percent of positive and negative wind-load design pressures when tested according to ASTM E 330.

1.6 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 1. Product Data for Credit IEQ 4.1: For glazing sealants used inside the weatherproofing system, documentation including printed statement of VOC content.
 2. Laboratory Test Reports for Credit IEQ 4: For glazing sealants used inside the weatherproofing system, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: For glazed aluminum curtain walls. Include plans, elevations, sections, full-size details, and attachments to other work.
 1. Include details of provisions for assembly expansion and contraction and for draining moisture occurring within the assembly to the exterior.
 2. Include full-size isometric details of each vertical-to-horizontal intersection of glazed aluminum curtain walls, showing the following:
 - a. Joinery, including concealed welds.
 - b. Anchorage.
 - c. Expansion provisions.
 - d. Glazing.
 - e. Flashing and drainage.
 3. Include laboratory mockup Shop Drawings, prepared by a qualified preconstruction testing agency, showing details of laboratory mockup.

- a. Resubmit Shop Drawings with changes made to glazed aluminum curtain walls to successfully complete preconstruction testing.
- D. Samples for Initial Selection: For units with factory-applied color finishes.
- E. Samples for Verification: For each type of exposed finish required, in manufacturer's standard sizes.
- F. Fabrication Sample: Of each vertical-to-horizontal intersection of assemblies, made from **12-inch (300-mm)** lengths of full-size components and showing details of the following:
 1. Joinery, including concealed welds.
 2. Anchorage.
 3. Expansion provisions.
 4. Glazing.
 5. Flashing and drainage.
- G. Delegated-Design Submittal: For glazed aluminum curtain walls indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.7 INFORMATIONAL SUBMITTALS

- A. Preconstruction Mockup Submittals:
 1. Preconstruction Testing Program: Developed specifically for Project.
 2. Preconstruction Test Reports: Prepared by a qualified preconstruction testing agency for each mockup test.
 3. Photographs:
 - a. Take a minimum of **[10] [20] <Insert number>** photographs at locations and intervals as required by DEN Project Manager.
 - b. Submit **[35mm color transparencies] [digital color images on CD-R] [VHS color videotape] <Insert medium requirements>** of mockup before, during, and after preconstruction testing.
 4. Record Drawings: Submit record drawings of preconstruction mockups prepared by preconstruction testing agency.
- B. Qualification Data: For qualified Installer[**and preconstruction testing agency**] [**and testing agency**].
- C. Seismic Qualification Certificates: For glazed aluminum curtain walls, accessories, and components[, **from manufacturer**].
 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
- D. Welding certificates.

- E. Energy Performance Certificates: For glazed aluminum curtain walls, accessories, and components, from manufacturer.
 - 1. Basis for Certification: NFRC-certified energy performance values for each glazed aluminum curtain wall.
- F. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified preconstruction testing agency, for glazed aluminum curtain walls, indicating compliance with performance requirements.
- G. Field quality-control reports.
- H. Warranties: Sample of special warranties.

1.8 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For glazed aluminum curtain walls to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.9 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A manufacturer capable of fabricating glazed aluminum curtain walls that meet or exceed energy performance requirements indicated and of documenting this performance by certification, labeling, and inclusion in lists.
- B. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.
 - 1. A firm that has specialized in installation of types of products required for Project for not less than five (5) years and which is acceptable to manufacturer(s) of primary materials.
- C. Preconstruction Testing Agency Qualifications: Qualified according to ISO/IEC 17025 and accredited by ICC-ES for preconstruction testing indicated.
- D. Testing Agency Qualifications: Qualified according to ASTM E 699 for testing indicated.
- E. Product Options: Information on Drawings and in Specifications establishes requirements for aesthetic effects and performance characteristics of assemblies. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.

1. Do not revise intended aesthetic effects, as judged solely by DEN Project Manager, except with DEN Project Manager's approval. If revisions are proposed, submit comprehensive explanatory data to DEN Project Manager for review.
- F. Welding Qualifications: Qualify procedures and personnel according to the following:
1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
 3. Comply with requirements of Section 050510 "Welding".
- G. Energy Performance Standards: Comply with NFRC for minimum standards of energy performance, materials, components, accessories, and fabrication. Comply with more stringent requirements if indicated.
1. Provide NFRC-certified glazed aluminum curtain walls with an attached label.
- H. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
1. Build mockup of typical wall area as shown on Drawings.
 2. Field testing shall be performed on mockups according to requirements in "Field Quality Control" Article.
 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
 4. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- I. Preinstallation Conference: Conduct conference at **[Project site][location and time as determined by DEN Project Manager] <Insert location>**.
- 1.10 PROJECT CONDITIONS
- A. Field Measurements: Verify actual locations of structural supports for glazed aluminum curtain walls by field measurements before fabrication and indicate measurements on Shop Drawings.
- 1.11 WARRANTY
- A. Special Assembly Warranty: Standard form in which **[manufacturer] [Installer]** agrees to repair or replace components of glazed aluminum curtain walls that do not comply with requirements or that fail in materials or workmanship within specified warranty period.
1. Failures include, but are not limited to, the following:
 - a. Structural failures including, but not limited to, excessive deflection.
 - b. Noise or vibration created by wind and thermal and structural movements.

- c. Deterioration of metals[, **metal finishes**,] and other materials beyond normal weathering.
 - d. Water penetration through fixed glazing and framing areas.
 - e. Failure of operating components.
 2. Warranty Period: Minimum [**two (2)**] [**five (5)**] [**ten (10)**] <Insert number> years from date of Substantial Completion.
- B. Special Finish Warranty: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of factory-applied finishes within specified warranty period.
 1. Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 2. Warranty Period: Minimum [**five (5)**] [**ten (10)**] [**twenty (20)**] <Insert number> years from date of Substantial Completion.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. [Arcadia, Inc.](#)
 2. [Arch Aluminum & Glass Co., Inc.](#)
 3. [Bruce Wall Systems Corporation.](#)
 4. [CMI Architectural.](#)
 5. [EFCO Corporation.](#)
 6. [Glassalum International Corporation.](#)
 7. [Kawneer North America; an Alcoa company.](#)
 8. [Pittco Architectural Metals, Inc.](#)
 9. [Tingwall Inc.](#)
 10. [TRACO.](#)
 11. [Tubelite.](#)
 12. [United States Aluminum.](#)

13. [Vistawall Architectural Products; The Vistawall Group; a Bluescope Steel company.](#)
14. [Waltek & Company Limited.](#)
15. [Wausau Window and Wall Systems.](#)
16. [YKK AP America Inc.](#)
17. **<Insert manufacturer's name>.**
18. or approved equal.

2.2 MATERIALS

- A. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
1. Sheet and Plate: [ASTM B 209](#) (ASTM B 209M).
 2. Extruded Bars, Rods, Profiles, and Tubes: [ASTM B 221](#) (ASTM B 221M).
 3. Extruded Structural Pipe and Tubes: ASTM B 429.
 4. Structural Profiles: ASTM B 308/B 308M.
 5. Welding Rods and Bare Electrodes: AWS A5.10/A5.10M.
- B. Steel Reinforcement: Manufacturer's standard zinc-rich, corrosion-resistant primer complying with SSPC-PS Guide No. 12.00; applied immediately after surface preparation and pretreatment. Select surface preparation methods according to recommendations in SSPC-SP COM and prepare surfaces according to applicable SSPC standard.
1. Structural Shapes, Plates, and Bars: ASTM A 36/A 36M.
 2. Cold-Rolled Sheet and Strip: ASTM A 1008/A 1008M.
 3. Hot-Rolled Sheet and Strip: ASTM A 1011/A 1011M.

2.3 FRAMING

- A. Framing Members: Manufacturer's standard extruded- or formed-aluminum framing members of thickness required and reinforced as required to support imposed loads.
1. Construction: [**Nonthermal**] [**Thermally improved**] [**Thermally broken**] **<Insert description>.**
 2. Glazing System: Retained mechanically with gaskets on four sides.
 3. Glazing Plane: Front.
- B. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning system components.
- C. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.
1. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
 2. Reinforce members as required to receive fastener threads.

3. Use exposed fasteners with countersunk Phillips screw heads[, **finished to match framing system**] [, **fabricated from 300 series stainless steel**].
- D. Anchors: Three-way adjustable anchors with minimum adjustment of [1 inch (25.4 mm)] **<Insert dimension>** that accommodate fabrication and installation tolerances in material and finish compatible with adjoining materials and recommended by manufacturer.
1. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts complying with ASTM A 123/A 123M or ASTM A 153/A 153M requirements.
- E. Concealed Flashing: [**Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding flashing compatible with adjacent materials**] [**Dead-soft, 0.018-inch-(0.457-mm-) thick stainless steel, ASTM A 240/A 240M of type recommended by manufacturer**].
- F. Framing Sealants: Manufacturer's standard sealants.
- 2.4 GLAZING
- A. Glazing: Comply with Section 088000 "Glazing."
- B. Glazing Gaskets: [**Manufacturer's standard sealed-corner pressure-glazing system of black, resilient elastomeric glazing gaskets, setting blocks, and shims or spacers.**] [**Comply with Section 088000 "Glazing."**]
- C. Glazing Sealants: [**As recommended by manufacturer.**] [**Comply with Section 088000 "Glazing."**]
1. Sealants used inside the weatherproofing system shall have a VOC content of [**250**] **<Insert value>** g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 2. Sealants used inside the weatherproofing system shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- 2.5 INSULATED SPANDREL PANELS
- A. Insulated Spandrel Panels: Comply with Section 074213.19 "Insulated Metal Wall Panels."
- B. Insulated Spandrel Panels: Laminated, metal-faced flat panels with no deviations in plane exceeding 0.8 percent of panel dimension in width or length.
1. Overall Panel Thickness: [**As indicated**] [1 inch (25.4 mm)] **<Insert thickness>**.
 2. Exterior Skin: Aluminum.

- a. Thickness: [**Manufacturer's standard for finish and texture indicated**] **<Insert thickness>**.
 - b. Finish: [**Matching framing system**] **<Insert finish>**.
 - c. Texture: [**Smooth**] [**Embossed**] **<Insert texture>**.
 - d. Backing Sheet: [**1/8-inch- (3.2-mm-) thick, tempered hardboard**] [**0.157-inch- (4-mm-) thick, cement board**] [**0.125-inch- (3.2-mm-) thick, corrugated, high-density polyethylene**] **<Insert material>**.
3. Interior Skin: [**Aluminum**] [**Manufacturer's standard galvanized-steel sheet**].
- a. Thickness: [**Manufacturer's standard for finish and texture indicated**] **<Insert thickness>**.
 - b. Finish: [**Matching curtain-wall framing**] [**Low-gloss, white baked enamel**] [**Mill finish**] **<Insert finish>**.
 - c. Texture: [**Smooth**] [**Embossed**] **<Insert texture>**.
 - d. Backing Sheet: [**1/8-inch- (3.2-mm-) thick, tempered hardboard**] [**0.157-inch- (4-mm-) thick, cement board**] [**1/2-inch- (12.7-mm-) thick, gypsum board with proprietary fire-resistance-rated core**] [**0.125-inch- (3.2-mm-) thick, corrugated, high-density polyethylene**] **<Insert material>**.
4. Thermal Insulation Core: Manufacturer's standard [**rigid, closed-cell, polyisocyanurate board**] [**extruded-polystyrene board**] [**expanded-perlite, mineral-insulation board**] **<Insert insulation>**.
5. Surface-Burning Characteristics: For exposed interior surfaces of panels, when tested according to ASTM E 84 as follows:
- a. Flame-Spread Index: [**25**] **<Insert number>** or less.
 - b. Smoke-Developed Index: [**450**] **<Insert number>** or less.
- 2.6 OPERABLE UNITS
- A. Venting Windows: Comply with Section 085113 "Aluminum Windows."
 - B. Doors: Comply with Section 084113 "Aluminum-Framed Entrances and Storefronts."
- 2.7 ACCESSORY MATERIALS
- A. Bituminous Paint: Cold-applied asphalt-mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos, formulated for **30-mil (0.762-mm)** thickness per coat.
- 2.8 FABRICATION
- A. Form or extrude aluminum shapes before finishing.

- B. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
- C. Fabricate components that, when assembled, have the following characteristics:
1. Profiles that are sharp, straight, and free of defects or deformations.
 2. Accurately fitted joints with ends coped or mitered.
 3. Physical and thermal isolation of glazing from framing members.
 4. Accommodations for thermal and mechanical movements of glazing and framing to maintain required glazing edge clearances.
 5. Provisions for field replacement of glazing from **[exterior] [interior] [interior for vision glass and exterior for spandrel glazing or metal panels]**.
 6. Provisions for safety railings mounted **[on interior face of mullions] [between mullions at interior]**.
 7. Fasteners, anchors, and connection devices that are concealed from view to greatest extent possible.
 8. Components curved to indicated radii.
- D. Fabricate components that, when assembled, have the following characteristics:
1. Internal guttering system or other means to drain water passing joints, condensation occurring within framing members, and moisture migrating within glazed aluminum curtain wall to exterior.
 2. Pressure-equalized system or double barrier design with primary air and vapor barrier at interior side of glazed aluminum curtain wall and secondary seal weeped and vented to exterior.
- E. Curtain-Wall Framing: Fabricate components for assembly using **[shear-block system] [screw-spline system] [head-and-sill-receptor system with shear blocks at intermediate horizontal members]** <Insert description>.
- F. Factory-Assembled Frame Units:
1. Rigidly secure nonmovement joints.
 2. Seal joints watertight unless otherwise indicated.
 3. Install glazing to comply with requirements in Section 088000 "Glazing."
- G. After fabrication, clearly mark components to identify their locations in Project according to Shop Drawings.

2.9 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, **[AA-M12C22A41, Class I, 0.018 mm] [AA-M12C22A31, Class II, 0.010 mm]** or thicker.
- B. Color Anodic Finish: AAMA 611, **[AA-M12C22A42/A44, Class I, 0.018 mm] [AA-M12C22A32/A34, Class II, 0.010 mm]** or thicker.

1. Color: [**Light bronze**] [**Medium bronze**] [**Dark bronze**] [**Champagne**] [**Black**] <Insert color>.
 2. Color: [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry colors and color densities**].
- C. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of **1.5 mils** (0.04 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
1. Color and Gloss: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color and gloss>.
- D. High-Performance Organic Finish: Two-coat fluoropolymer finish complying with [**AAMA 2604**] [**AAMA 2605**] and containing not less than [**50**] [**70**] percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
1. Color and Gloss: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color and gloss>.
- E. High-Performance Organic Finish: [**Three**] [**Four**]-coat fluoropolymer finish complying with AAMA 2605 and containing not less than [**50**] [**70**] percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
1. Color and Gloss: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color and gloss>.
- F. High-Performance Organic Finish: Two-coat fluoropolymer finish complying with AAMA 2604 and containing 100 percent FEVE resin in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
1. Color and Gloss: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color and gloss>.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General:

1. Comply with manufacturer's written instructions.
2. Do not install damaged components.
3. Fit joints to produce hairline joints free of burrs and distortion.
4. Rigidly secure nonmovement joints.
5. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.
6. Weld components in concealed locations to minimize distortion or discoloration of finish. Protect glazing surfaces from welding.
7. Seal joints watertight unless otherwise indicated.

B. Metal Protection:

1. Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape or installing nonconductive spacers as recommended by manufacturer for this purpose.
2. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.

C. Install components to drain water passing joints, condensation occurring within framing members, and moisture migrating within glazed aluminum curtain wall to exterior.

D. Install components plumb and true in alignment with established lines and grades.

E. Install operable units level and plumb, securely anchored, and without distortion. Adjust weather-stripping contact and hardware movement to produce proper operation.

F. Install glazing as specified in Section 088000 "Glazing."

3.3 ERECTION TOLERANCES

A. Erection Tolerances: Install glazed aluminum curtain walls to comply with the following maximum tolerances:

1. Plumb: **1/8 inch in 10 feet** (3.2 mm in 3 m); **1/4 inch in 40 feet** (6 mm in 12 m).
2. Level: **1/8 inch in 20 feet** (3.2 mm in 6 m); **1/4 inch in 40 feet** (6 mm in 12 m).
3. Alignment:
 - a. Where surfaces abut in line or are separated by reveal or protruding element up to **1/2 inch** (12.7 mm) wide, limit offset from true alignment to **1/16 inch** (1.6 mm).
 - b. Where surfaces are separated by reveal or protruding element from **1/2 to 1 inch** (12.7 to 25.4 mm) wide, limit offset from true alignment to **1/8 inch** (3.2 mm).
 - c. Where surfaces are separated by reveal or protruding element of **1 inch** (25.4 mm) wide or more, limit offset from true alignment to **1/4 inch** (6 mm).

4. Location: Limit variation from plane to **1/8 inch in 12 feet** (3.2 mm in 3.7 m); **1/2 inch** (12.7 mm) over total length.

3.4 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections.
- B. Testing Services: Testing and inspecting of representative areas of glazed aluminum curtain walls shall take place as installation proceeds to determine compliance of installed assemblies with specified requirements.
 1. Air Infiltration: Areas shall be tested for air leakage of **[1.5 times the rate specified for laboratory testing in "Performance Requirements" Article, but not more than 0.50 cfm/sq. ft. (2.25 L/s per sq. m),] <Insert rate>** of fixed wall area when tested according to ASTM E 783 at a minimum static-air-pressure differential of **[1.57 lbf/sq. ft. (75 Pa)] [6.24 lbf/sq. ft. (300 Pa)] <Insert value>**.
 - a. Test Area: **[One bay wide, but not less than 30 feet (9.1 m), by one story of glazed aluminum curtain wall] <Insert requirements>**.
 - b. Perform a minimum of **[two] [three] <Insert number>** tests in areas as directed by DEN Project Manager.
 - c. Perform tests in each test area as directed by DEN Project Manager. Perform at least three tests, prior to **[10, 35, and 70 percent completion] <Insert requirements>**.
 2. Water Penetration: Areas shall be tested according to ASTM E 1105 at a minimum **[uniform] [and] [cyclic]** static-air-pressure differential of **[0.67 times the static-air-pressure differential specified for laboratory testing in "Performance Requirements" Article, but not less than 6.24 lbf/sq. ft. (300 Pa)] <Insert pressure>**, and shall not evidence water penetration.
 - a. Test Area: **[One bay wide, but not less than 30 feet (9.1 m), by one story of glazed aluminum curtain wall] <Insert requirements>**.
 - b. Perform a minimum of **[two] [three] <Insert number>** tests in areas as directed by DEN Project Manager.
 - c. Perform tests in each test area as directed by DEN Project Manager. Perform at least three tests, prior to **[10, 35, and 70 percent completion] <Insert requirements>**.
 3. Water Spray Test: Before installation of interior finishes has begun, areas designated by DEN Project Manager shall be tested according to AAMA 501.2 and shall not evidence water penetration.
 - a. Test Area: **[A minimum area of 75 feet (23 m) by one story of glazed aluminum curtain wall] <Insert requirements>**.
- C. Glazed aluminum curtain walls will be considered defective if they do not pass tests and inspections.

- D. Prepare test and inspection reports.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 084413

SECTION 085113 - ALUMINUM WINDOWS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes aluminum windows for exterior locations.
- B. Related Requirements:
 - 1. Section 084113 "Aluminum-Framed Entrances and Storefronts" for coordinating finish among aluminum fenestration units.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager] <Insert location>**.
 - 1. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - 2. Review and discuss the finishing of aluminum windows that is required to be coordinated with the finishing of other aluminum work for color and finish matching.
 - 3. Review, discuss, and coordinate the interrelationship of aluminum windows with other exterior wall components. Include provisions for anchorage, flashing, sealing perimeters, and protecting finishes.
 - 4. Review and discuss the sequence of work required to construct a watertight and weathertight exterior building envelope.
 - 5. Inspect and discuss the condition of substrate and other preparatory work performed by other trades.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1. Include construction details, material descriptions, glazing and fabrication methods, dimensions of individual components and profiles, hardware, and finishes for aluminum windows.
 2. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: Include plans, elevations, sections, hardware, accessories, insect screens, operational clearances, and details of installation, including anchor, flashing, and sealant installation.
- C. Samples: For each exposed product and for each color specified, [**2 by 4 inches (50 by 100 mm)**] <Insert dimensions> in size.
- D. Samples for Initial Selection: For units with factory-applied color finishes.
1. Include similar Samples of hardware and accessories involving color selection.
- E. Samples for Verification: For aluminum windows and components required, showing full range of color variations for finishes, and prepared on Samples of size indicated below:
1. Exposed Finishes: [**2 by 4 inches (50 by 100 mm)**] <Insert dimensions>.
 2. Exposed Hardware: Full-size units.
- F. Product Schedule: For aluminum windows. Use same designations indicated on Drawings.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For manufacturer and Installer.
- B. Product Test Reports: For each type of aluminum window, for tests performed by a qualified testing agency.
- C. Field quality-control reports.
- D. Sample Warranties: For manufacturer's warranties.

1.6 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A manufacturer capable of fabricating aluminum windows that meet or exceed performance requirements indicated and of documenting this performance by test reports, and calculations.

- B. Installer Qualifications: An installer acceptable to aluminum window manufacturer for installation of units required for this Project.
 - 1. A firm that has specialized in installation of types of products required for Project for not less than five (5) years and which is acceptable to manufacturer(s) of primary materials.
- C. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Build mockup of typical wall area as shown on Drawings.
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.

1.8 WARRANTY

- A. Manufacturer's Warranty: Manufacturer agrees to repair or replace aluminum windows that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Failure to meet performance requirements.
 - b. Structural failures including excessive deflection, water leakage, condensation, and air infiltration.
 - c. Faulty operation of movable sash and hardware.
 - d. Deterioration of materials and finishes beyond normal weathering.
 - e. Failure of insulating glass.
 - 2. Warranty Period:
 - a. Window: Minimum **[ten (10)]** <Insert number> years from date of Substantial Completion.
 - b. Glazing Units: Minimum **[five (5)] [ten (10)] [twenty (20)]** <Insert number> years from date of Substantial Completion.
 - c. Aluminum Finish: Minimum **[ten (10)] [twenty (20)]** <Insert number> years from date of Substantial Completion.

B. CONSTRUCTION WASTE MANAGEMENT

- 1. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. All Seasons Window & Door Mfg., Inc.; All Seasons Commercial Division, Inc.
 2. Boyd Aluminum Manufacturing.
 3. [Custom Window Company](#).
 4. [DeSCo Architectural Inc.](#)
 5. [EFCO Corporation; a Pella company](#).
 6. [EXTECH Exterior Technologies, Inc.](#)
 7. [Fleetwood Windows & Doors](#).
 8. [Graham Architectural Products Corp.](#)
 9. [Kawneer North America; an Alcoa company](#).
 10. [Mannix Exterior Wall Systems, Inc.](#)
 11. [Peerless Products Inc.](#)
 12. [Quaker Windows Products Co. Thermal Windows, Inc.](#)
 13. [TRACO](#).
 14. [Wausau Window and Wall Systems](#).
 15. [Winco](#).
 16. [YKK AP America Inc.](#)
 17. <Insert manufacturer's name>.
 18. or approved equal.
- B. Source Limitations: Obtain aluminum windows from single source from single manufacturer.

2.2 WINDOW PERFORMANCE REQUIREMENTS

- A. Product Standard: Comply with AAMA/WDMA/CSA 101/I.S.2/A440 for definitions and minimum standards of performance, materials, components, accessories, and fabrication unless more stringent requirements are indicated.
1. Window Certification: AMMA certified with label attached to each window.
- B. Performance Class and Grade: AAMA/WDMA/CSA 101/I.S.2/A440 as follows:
1. Minimum Performance Class: **[CW] [AW] [As indicated on Drawings] <Insert class>**.
 2. Minimum Performance Grade: **[40] [45] [50] [As indicated on Drawings] <Insert grade>**.
- C. Thermal Transmittance: NFRC 100 maximum whole-window U-factor of **[0.30 Btu/sq. ft. x h x deg F (1.71 W/sq. m x K)] [0.32 Btu/sq. ft. x h x deg F (1.83 W/sq. m x K)] [0.35 Btu/sq. ft. x h x deg F (2.0 W/sq. m x K)] [0.60 Btu/sq. ft. x h x deg F (3.43 W/sq. m x K)] <Insert value>**.
- D. Solar Heat-Gain Coefficient (SHGC): NFRC 200 maximum whole-window SHGC of **[0.40] [0.30] [0.27] <Insert value>**.
- E. Condensation-Resistance Factor (CRF): Provide aluminum windows tested for thermal

performance according to AAMA 1503, showing a CRF of [45] [52] <Insert value>.

- F. Thermal Movements: Provide aluminum windows, including anchorage, that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
1. Temperature Change: [120 deg F (67 deg C), ambient; 180 deg F (100 deg C) material surfaces] <Insert temperature change>.
- G. Sound Transmission Class (STC): Rated for not less than [26] [30] <Insert rating> STC when tested for laboratory sound transmission loss according to ASTM E 90 and determined by ASTM E 413.
- H. Outside-Inside Transmission Class (OITC): Rated for not less than [22] [26] [30] <Insert rating> OITC when tested for laboratory sound transmission loss according to ASTM E 90 and determined by ASTM E 1332.
- I. Windborne-Debris Resistance: Capable of resisting impact from windborne debris based on testing glazed windows identical to those specified, according to [ASTM E 1886 and testing information in ASTM E 1996] <Insert test method> and requirements of authorities having jurisdiction.

2.3 ALUMINUM WINDOWS

- A. Operating Types: Provide the following operating types in locations indicated on Drawings:
1. Casement: Project [out] [in].
 2. Awning: Project out.
 3. Hopper: Project in.
 4. Single hung.
 5. Double hung.
 6. Horizontal sliding.
 7. Fixed.
- B. Frames and Sashes: Aluminum extrusions complying with AAMA/WDMA/CSA 101/I.S.2/A440.
1. Thermally Improved Construction: Fabricate frames, sashes, and muntins with an integral, concealed, low-conductance thermal barrier located between exterior materials and window members exposed on interior side in a manner that eliminates direct metal-to-metal contact.
- C. Glass: Clear annealed glass, ASTM C 1036, Type 1, Class 1, q3.
1. Kind: Fully tempered [where indicated on Drawings] <Insert requirements>.

- D. Insulating-Glass Units: ASTM E 2190[, **certified through IGCC as complying with requirements of IGCC**].
1. Glass: ASTM C 1036, Type 1, Class 1, q3.
 - a. Tint: **[Clear] [Gray] [Bronze] [Green] <Insert tint>**.
 - b. Kind: Fully tempered **[where indicated on Drawings] <Insert requirements>**.
 2. Lites: **[Two] [Three]**.
 3. Filling: Fill space between glass lites with **[air] [argon]**.
 4. Low-E Coating: **[Pyrolytic on second surface] [Sputtered on second surface] [Sputtered on third surface] [Sputtered on second or third surface] <Insert coating>**.
 5. Integral Louver Blinds: Glass manufacturer's standard, horizontal louver blinds with aluminum slats and polyester fiber cords, located in space between glass lites, and operated by hardware located on inside face of sash.
 - a. Operation: **[Tilt only] [Tilt, raising, and lowering]**.
 - b. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
- E. Glazing System: **[Manufacturer's standard factory-glazing system that produces weathertight seal] <Insert glazing requirements>**.
1. Dual Glazing:
 - a. Interior Lite: **[Glass] <Insert type>**.
 - b. Exterior Lite: **[Glass] [Insulating-glass unit] <Insert type>**.
- F. Hardware, General: Provide manufacturer's standard hardware fabricated from aluminum, stainless steel, carbon steel complying with AAMA 907, or other corrosion-resistant material compatible with adjacent materials; designed to smoothly operate, tightly close, and securely lock windows, and sized to accommodate sash weight and dimensions.
1. Exposed Hardware Color and Finish: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and finish>**.
- G. Projected Window Hardware:
1. Gear-Type Rotary Operators: Complying with AAMA 901 when tested according to ASTM E 405, Method A. Provide operators that function without requiring the removal of interior screens or using screen wickets.
 - a. Type and Style: **[Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range of types and styles] <Insert type and style>**.

2. Hinges: **[Non-friction type, not less than two per sash] <Insert requirements>**.
 3. Lock: **[Lift-type throw, cam-action lock with keeper] [Lever handle and cam-action lock with keeper] [Dual lever handles, tie rod, and cam-action lock with keepers] [Key-operated custodial lock with keeper and removable handle] [Concealed multipoint lock operated by single lever handle or lift-type throw] <Insert requirements>**.
 4. Limit Devices: **[Concealed friction adjustor, adjustable stay bar] [Concealed support arms with adjustable, limited, hold-open] <Insert type>** limit devices designed to restrict sash opening.
 - a. Limit clear opening to **[4 inches (100 mm)] [6 inches (150 mm)] <Insert dimension>** for ventilation; with custodial key release.
 5. Pole Operators: Tubular-shaped anodized aluminum; with rubber-capped lower end and standard push-pull hook at top to match hardware design; of sufficient length to operate window without reaching more than **60 inches (1500 mm)** above floor; one pole operator and pole hanger per room that has operable windows more than **72 inches (1800 mm)** above floor.
- H. Hung Window Hardware:
1. Counterbalancing Mechanism: Complying with AAMA 902, concealed, of size and capacity to hold sash stationary at any open position.
 2. Locks and Latches: Allow unobstructed movement of the sash across adjacent sash in direction indicated and operated from the inside only. **[Provide custodial locks.]**
 3. Tilt Latch: Releasing latch allows sash to pivot about horizontal axis to facilitate cleaning exterior surfaces from the interior.
- I. Horizontal-Sliding Window Hardware:
1. Sill Cap/Track: **[Extruded-aluminum track with natural anodized finish,] [Manufacturer's standard] <Insert track material and finish>** of dimensions and profile indicated; designed to comply with performance requirements indicated and to drain to the exterior.
 2. Locks and Latches: Allow unobstructed movement of the sash across adjacent sash in direction indicated and operated from the inside only. **[Provide custodial locks.]**
 3. Roller Assemblies: Low-friction design.
- J. Weather Stripping: Provide full-perimeter weather stripping for each operable sash unless otherwise indicated.
- K. Fasteners: Noncorrosive and compatible with window members, trim, hardware, anchors, and other components.
1. Exposed Fasteners: Do not use exposed fasteners to the greatest extent possible. For application of hardware, use fasteners that match finish hardware being fastened.

2.4 ACCESSORIES

- A. Integral Ventilating System/Device: Where indicated, provide weather-stripped, adjustable, horizontal fresh-air vent, with a free airflow slot, full width of window sash by approximately **[1 inch (25 mm)] [3 inches (75 mm)]** when open, complying with AAMA/WDMA/CSA 101/I.S.2/A440. Equip vent bar with an integral insect screen, removable for cleaning.
- B. Dividers (False Muntins): Provide extruded-aluminum divider grilles in designs indicated for each sash lite.
1. Type: **[Permanently located at exterior lite] [Permanently located between insulating-glass lites] <Insert type>**.
 2. Pattern: **[As indicated on Drawings] <Insert pattern>**.
 3. Profile: **[As selected by DEN Project Manager from manufacturer's full range] <Insert profile>**.
- C. Horizontal Louver Blinds: Provide manufacturer's standard, removable, horizontal louver blinds with aluminum slats and polyester fiber cords that are operated by hardware located on inside face of sash.
1. Operation: **[Tilt only] [Tilt, raising, and lowering]**.
 2. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
- D. Subsills: **[Thermally broken] [Nonthermal]**, extruded-aluminum subsills in configurations indicated on Drawings.
- E. Column Covers: Extruded-aluminum profiles in sizes and configurations indicated on Drawings.
- F. Interior Trim: Extruded-aluminum profiles in sizes and configurations indicated on Drawings.
- G. Panning Trim: Extruded-aluminum profiles in sizes and configurations indicated on Drawings.
- H. Receptor System: Two-piece, snap-together, thermally broken, extruded-aluminum receptor system that anchors windows in place.

2.5 INSECT SCREENS

- A. General: Fabricate insect screens to integrate with window frame. Provide screen for each operable exterior sash. Screen wickets are not permitted.
1. Type and Location: **[Full, inside for project-out] [Full, outside for project-in] [Full, outside for double-hung] [Half, outside for single-hung] [Full, outside for sliding] [Half, outside for sliding]** sashes.

- B. Aluminum Frames: Manufacturer's standard aluminum alloy complying with SMA 1004 or SMA 1201. Fabricate frames with mitered or coped joints or corner extrusions, concealed fasteners, and removable PVC spline/anchor concealing edge of frame.
 - 1. Tubular Framing Sections and Cross Braces: Roll formed from aluminum sheet.
- C. Glass-Fiber Mesh Fabric: [**18-by-14 (1.1-by-1.4-mm) or 18-by-16 (1.0-by-1.1-mm)**] [**20-by-20 (0.85-by-0.85-mm) or 20-by-30 (0.85-by-0.42-mm)**] <Insert type> mesh of PVC-coated, glass-fiber threads; woven and fused to form a fabric mesh resistant to corrosion, shrinkage, stretch, impact damage, and weather deterioration. Comply with ASTM D 3656.
 - 1. Mesh Color: [**Manufacturer's standard**] <Insert color>.
- D. Aluminum Wire Fabric: 18-by-16 (1.1-by-1.3-mm) mesh of **0.011-inch-** (0.28-mm-) diameter, coated aluminum wire.
 - 1. Wire-Fabric Finish: [**Natural bright**] [**Charcoal gray**] [**Black**] <Insert finish>.

2.6 FABRICATION

- A. Fabricate aluminum windows in sizes indicated. Include a complete system for assembling components and anchoring windows.
- B. Glaze aluminum windows in the factory.
- C. Weather strip each operable sash to provide weathertight installation.
- D. Weep Holes: Provide weep holes and internal passages to conduct infiltrating water to exterior.
- E. Provide water-shed members above side-hinged sashes and similar lines of natural water penetration.
- F. Mullions: Provide mullions and cover plates, matching window units, complete with anchors for support to structure and installation of window units. Allow for erection tolerances and provide for movement of window units due to thermal expansion and building deflections, as indicated. Provide mullions and cover plates capable of withstanding design wind loads of window units.
- G. [**Bow**] [**Bay**] Window Assemblies: Provide [**operating**] [**and**] [**fixed**] units in configuration indicated. Provide window frames, sashes, hardware, and other trim and components necessary for a complete, secure, and weathertight installation, including the following:
 - 1. Angled mullion posts with interior and exterior trim.
 - 2. Angled interior and exterior extension and trim.
 - 3. Exterior head and sill casings and trim.
- H. Complete fabrication, assembly, finishing, hardware application, and other work in the

factory to greatest extent possible. Disassemble components only as necessary for shipment and installation.

2.7 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual" for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.8 ALUMINUM FINISHES

- A. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
- B. Class II, Clear Anodic Finish: AA-M12C22A31 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class II, clear coating 0.010 mm or thicker) complying with AAMA 611.
- C. Class I, Clear Anodic Finish: AA-M12C22A41 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.
- D. Class II, Color Anodic Finish: AA-M12C22A32/A34 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class II, integrally colored or electrolytically deposited color coating 0.010 mm or thicker) complying with AAMA 611.
 - 1. Color: [**Light bronze**] [**Medium bronze**] [**Dark bronze**] [**Black**] <Insert color>.
 - 2. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry colors and color densities**] <Insert color>.
- E. Class I, Color Anodic Finish: AA-M12C22A42/A44 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, integrally colored or electrolytically deposited color coating 0.018 mm or thicker) complying with AAMA 611.
 - 1. Color: [**Light bronze**] [**Medium bronze**] [**Dark bronze**] [**Black**] <Insert color>.
 - 2. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry colors and color densities**] <Insert color>.

- F. Baked-Enamel Finish: AA-C12C42R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: acid-chromate-fluoride-phosphate conversion coating; Organic Coating: as specified below). Apply baked enamel complying with paint manufacturer's written instructions for cleaning, conversion coating, and painting.
1. Organic Coating: Thermosetting, modified-acrylic or polyester enamel primer/topcoat system complying with AAMA 2603[, **except with a minimum dry film thickness of 1.5 mils (0.04 mm)**], medium gloss.
 2. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry colors and color densities**] <Insert color>.
- G. High-Performance Organic Finish (Two-Coat Fluoropolymer): AA-C12C40R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: conversion coating; Organic Coating: manufacturer's standard two-coat, thermocured system consisting of specially formulated inhibitive primer and fluoropolymer color topcoat containing not less than [**50**] [**70**] percent polyvinylidene fluoride resin by weight). Prepare, pretreat, and apply coating to exposed metal surfaces to comply with [**AAMA 2604**] [**AAMA 2605**] and with coating and resin manufacturers' written instructions.
1. Color and Gloss: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry colors and color densities**] <Insert color and gloss>.
- H. High-Performance Organic Finish (Three-Coat Fluoropolymer): AA-C12C40R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: conversion coatings; Organic Coating: manufacturer's standard three-coat, thermocured system consisting of specially formulated inhibitive primer, fluoropolymer color coat, and clear fluoropolymer topcoat, with both color coat and clear topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight). Prepare, pretreat, and apply coating to exposed metal surfaces to comply with AAMA 2605 and with coating and resin manufacturers' written instructions.
1. Color and Gloss: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry colors and color densities**] <Insert color and gloss>.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine openings, substrates, structural support, anchorage, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Verify rough opening dimensions, levelness of sill plate, and operational clearances.
- C. Examine wall flashings, vapor retarders, water and weather barriers, and other built-in

components to ensure weathertight window installation.

- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Comply with manufacturer's written instructions for installing windows, hardware, accessories, and other components. For installation procedures and requirements not addressed in manufacturer's written instructions, comply with installation requirements in ASTM E 2112.
- B. Install windows level, plumb, square, true to line, without distortion or impeding thermal movement, anchored securely in place to structural support, and in proper relation to wall flashing and other adjacent construction to produce weathertight construction.
- C. Install windows and components to drain condensation, water penetrating joints, and moisture migrating within windows to the exterior.
- D. Separate aluminum and other corrodible surfaces from sources of corrosion or electrolytic action at points of contact with other materials.

3.3 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections.
 - 1. Testing and inspecting agency will interpret tests and state in each report whether tested work complies with or deviates from requirements.
- B. Testing Services: Testing and inspecting of installed windows shall take place as follows:
 - 1. Testing Methodology: Testing of windows for air infiltration and water resistance shall be performed according to AAMA 502.
 - 2. Air-Infiltration Testing:
 - a. Test Pressure: That required to determine compliance with AAMA/WDMA/CSA 101/I.S.2/A440 performance class indicated.
 - b. Allowable Air-Leakage Rate: **[1.5] <Insert number>** times the applicable AAMA/WDMA/CSA 101/I.S.2/A440 rate for product type and performance class rounded down to one decimal place.
 - 3. Water-Resistance Testing:
 - a. Test Pressure: **[Two-thirds] <Insert number>** times test pressure required to determine compliance with AAMA/WDMA/CSA 101/I.S.2/A440 performance grade indicated.
 - b. Allowable Water Infiltration: No water penetration.

4. Testing Extent: **[Three] [Three mockup] <Insert number or description>** windows of each type as selected by DEN Project Manager and a qualified independent testing and inspecting agency. Windows shall be tested after perimeter sealants have cured.
 5. Test Reports: Prepared according to AAMA 502.
- C. Remove and replace noncomplying windows and retest as specified above.
 - D. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
 - E. Prepare test and inspection reports.
- 3.4 ADJUSTING, CLEANING, AND PROTECTION
- A. Adjust operating sashes and hardware for a tight fit at contact points and weather stripping for smooth operation and weathertight closure.
 - B. Clean exposed surfaces immediately after installing windows. Avoid damaging protective coatings and finishes. Remove excess sealants, glazing materials, dirt, and other substances.
 1. Keep protective films and coverings in place until final cleaning.
 - C. Remove and replace glass that has been broken, chipped, cracked, abraded, or damaged during construction period.
 - D. Protect window surfaces from contact with contaminating substances resulting from construction operations. If contaminating substances do contact window surfaces, remove contaminants immediately according to manufacturer's written instructions.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 085113

SECTION 085653 - SECURITY WINDOWS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Vision security windows.
2. Fixed, transaction security windows.
3. Sliding, transaction security windows.

- B. Related Requirements:

1. Section 083463 "Detention Doors and Frames" for detention-grade hollow-metal windows, sidelights, and door transoms.
2. Section 085663 "Detention Windows" for windows where persons are forcibly detained.
3. Section 099113 "Exterior Painting" for field painting exterior security windows.
4. Section 099123 "Interior Painting" for field painting interior security windows.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 COORDINATION

- A. Coordinate installation of anchorages for security windows. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in adjacent construction. Deliver such items to Project site in time for installation.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]<Insert location>**.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for window units.
 2. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
- C. Shop Drawings: For security windows.
1. Include plans, elevations, sections, and attachments to other work.
 2. Full-size section details of framing members, including internal armoring, reinforcement, and stiffeners.
 3. Location of weep holes.
 4. Hardware for sliding window units.
 5. Glazing details.
 6. Details of **[deal tray] [transaction drawer] [transaction counter] [and] [speaking aperture]**.
- D. Samples for Initial Selection: For frame members with factory-applied color finishes.
- E. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below:
1. Framing: **12-inch-** (305-mm-) long sections of frame members.
 2. Transaction Drawer: **6 inches** (150 mm) square.
- F. Cutaway Sample: Corner of security window, made from **12-inch** (305-mm) lengths of full-size components, and showing details of the following:
1. Joinery.
 2. Anchorage.
 3. Glazing.
 4. Flashing and drainage.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified **[Installer] [and] [testing agency]**.
- B. Welding certificates.

- C. Product Test Reports: For each type of security window and accessory indicated as **[ballistics] [or] [forced-entry]** resistant, for tests performed by a qualified testing agency.
- D. Configuration Disclosure Drawing: For each type of forced-entry-resistant security window, complying with ASTM F 1233.
- E. Sample Warranty: For special warranty.
- F. Examination reports documenting inspections of substrates, areas, and conditions.
- G. Anchor inspection reports documenting inspections of built-in and cast-in anchors.
- H. Field quality-control reports documenting inspections of installed products.
 - 1. Field quality-control certification signed by Contractor[**and Detention Specialist**].

1.7 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 QUALITY ASSURANCE

- A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer for installation[**and maintenance**] of units required for this Project.
- B. Welding Qualifications: Qualify procedures and personnel according to the following:
 - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 - 2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
 - 3. AWS D1.3, "Structural Welding Code - Sheet Steel."
 - 4. AWS D1.6, "Structural Welding Code - Stainless Steel."

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Pack security windows in wood crates for shipment. Crate glazing separate from frames unless factory glazed.
- B. Label security window packaging with drawing designation.
- C. Store crated security windows on raised blocks to prevent moisture damage.

1.10 FIELD CONDITIONS

- A. Field Measurements: Verify actual dimensions of openings by field measurements before fabrication.

1.11 SEQUENCING

- A. Field Painting: Except where security windows have been preglazed before installation, complete field painting of security windows before glazing installation.

1.12 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace security windows that fail in materials or workmanship within specified warranty period.

- 1. Failures include, but are not limited to, the following:

- a. Structural failures including deflections exceeding **1/4 inch** (6 mm).
- b. Failure of welds.
- c. Excessive air leakage.
- d. Faulty operation of sliding window hardware.
- e. Faulty operation of transom drawers.
- f. Deterioration of metals, metal finishes, and other materials beyond normal weathering and use.
- g. **<Insert failure modes>**.

- 2. Warranty Period: Minimum [**three (3)**] **<Insert number>** years from date of Substantial Completion.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [**25**] **<Insert number>** percent.
- B. Attack Resistance: Provide units identical to those tested for compliance with requirements indicated, and as follows:

1. Ballistics Resistance: [**Listed and labeled as**] [**Level 1**] [**Level 2**] [**Level 3**] [**Level 4**] [**Level 5**] [**Level 6**] [**Level 7**] [**Level 8**] when tested according to UL 752.
 2. Ballistics Resistance: [**HG1**] [**HG2**] [**HG3**] [**HG4**] [**SMG**] [**R1**] [**R2**] [**R3**] [**R4-AP**] [**SH1**] [**SH2**] when tested according to ASTM F 1233.
 3. Ballistics Resistance: [**A**] [**B**] [**C**] [**D**] [**E**] when tested according to HPW-TP-0500.03.
 4. Ballistics Resistance: [**S**] [**R**] [**AP**] [**SH**] when tested according to SD-STD-01.01.
 5. Ballistics Resistance: [**Level I**] [**Level IIA**] [**Level II**] [**Level IIIA**] [**Level III**] [**Level IV**] when tested according to NIJ STD-0108.01.
 6. Forced-Entry Resistance: [**Level I**] [**Level II**] [**Level III**] [**Level IV**] [**Level V**] when tested according to HPW-TP-0500.03.
 7. Forced-Entry Resistance: [**Class I**] [**Class II**] [**Class III**] [**Class IV**] [**Class V**] when tested according to ASTM F 1233.
 8. Forced-Entry Resistance: [**Five**] [**15**] [**60**]-minute protection level when tested according to SD-STD-01.01.
- C. Structural Loads: Detention windows shall withstand the effects of wind loads, with no permanent deformation or breakage of components within window assembly when tested according to ASTM E 330.
1. Wind Loads: As indicated on Drawings.
- D. Air Infiltration: Provide windows with maximum air leakage through fixed glazing and framing areas of [**0.06 cfm/sq. ft.** (0.03 L/s per sq. m)] <Insert value> of fixed wall area when tested according to ASTM E 283 at a minimum static-air-pressure difference of [**1.57 lbf/sq. ft.** (75 Pa)] [**6.24 lbf/sq. ft.** (300 Pa)] <Insert value>.
- E. Water Penetration under Static Pressure: Provide windows that do not evidence water penetration through fixed glazing and framing areas when tested according to ASTM E 331 at a minimum static-air-pressure difference of 20 percent of positive wind-load design pressure, but not less than [**6.24 lbf/sq. ft.** (300 Pa)] <Insert value>.
- F. Energy Performance: Provide windows with performance properties specified, as indicated in manufacturer's published test data, based on procedures indicated below[**and certified and labeled in accordance with NFRC**]:
1. Thermal Transmittance (U-factor): Fixed glazing and framing areas shall have U-factor of not more than [**0.80 Btu/sq. ft. x h x deg F** (4.54 W/sq. m x K)] [**0.65 Btu/sq. ft. x h x deg F** (3.69 W/sq. m x K)] <Insert value> as determined according to NFRC 100.
 2. Solar Heat Gain Coefficient: Fixed glazing and framing areas shall have a solar heat gain coefficient of no greater than [**0.6**] [**0.7**] <Insert value> as determined according to NFRC 200.
- G. Windborne-Debris-Impact Resistance: Provide windows that pass missile-impact and cyclic-pressure tests when tested according to ASTM E 1886 and testing information in ASTM E 1996 for [**Wind Zone 1**] [**Wind Zone 2**] [**Wind Zone 3**] [**Wind Zone 4**].
1. Large-Missile Test: For glazed openings located within **30 feet** (9.1 m) of grade.

2. Small-Missile Test: For glazed openings located more than **30 feet** (9.1 m) above grade.

2.2 VISION SECURITY WINDOWS

- A. Provide fixed vision security windows with framing on four sides and no operable sash or ventilator.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Action Bullet Resistant Corp.
- b. American Vault Corporation.
- c. Armortex.
- d. Chicago Bullet Proof Systems.
- e. Collier Safe Company, Inc.
- f. Creative Industries, Inc.
- g. Diebold, Incorporated.
- h. Hamilton Safe.
- i. Laurence, C. R. Co. Inc.
- j. National Bullet Proof, Inc.
- k. Norshield Security Products; a division of Norment Security Group.
- l. Overly Door Company.
- m. Quikserv Corp.
- n. SABIC Innovative Plastics IP BV; Insulgard Security Products.
- o. United States Bullet Proofing, Inc.
- p. **<Insert manufacturer's name>**.
- q. or approved equal.

- B. Framing: Fabricate perimeter framing, mullions, and glazing stops from [**steel**] [**stainless steel**] [**aluminum**] as follows:

1. Profile: [**Manufacturer's standard**] [**Narrow**], with minimum face dimension indicated.
 - a. Minimum Face Dimension: [**2 inches** (50 mm)] [**1-1/4 inches** (32 mm)] [**As indicated on Drawings**] **<Insert dimension>**.
2. Depth: [**Manufacturer's standard**] [**Adjustable, two-piece clamp**] [**As indicated on Drawings**] **<Insert depth>**.
3. Glass Orientation: [**Vertical**] [**Incline subframe 5 degrees to vertical, with top of frame slanted away from secure side of window**].

- C. Glazing and Glazing Materials: Comply with requirements in Section 088853 "Security Glazing."

- D. Materials:

1. Mild Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.

2. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, CS (Commercial Steel), Type B; suitable for exposed applications.
3. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, CS (Commercial Steel), Type B; with **G60** (Z180) zinc (galvanized) or **A60** (ZF180) zinc-iron-alloy (galvannealed) coating designation.
4. Hot-Rolled Steel Sheet: ASTM A 1011/A 1011M, CS (Commercial Steel), Type B; free of scale, pitting, or surface defects; pickled and oiled.
5. Stainless-Steel Sheet, Strip, Plate, and Flat Bars: ASTM A 666 or ASTM A 240/A 240M, austenitic stainless steel, Type 304.
6. Aluminum Extrusions: **ASTM B 221** (ASTM B 221M). Provide alloy and temper recommended by manufacturer for strength, corrosion resistance, and application of required finish, but not less than **22,000-psi** (150-MPa) ultimate tensile strength.
7. Aluminum Sheet and Plate: **ASTM B 209** (ASTM B 209M).

2.3 FIXED, TRANSACTION SECURITY WINDOWS

- A. Provide fixed, framed transaction windows with operable sash or ventilator capable of allowing transfer of currency and documents.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Armortex.
 - b. Chicago Bullet Proof Systems.
 - c. Collier Safe Company, Inc.
 - d. Creative Industries, Inc.
 - e. Diebold, Incorporated.
 - f. Krieger Specialty Products Company.
 - g. Laurence, C. R. Co. Inc.
 - h. National Bullet Proof, Inc.
 - i. Norshield Security Products; a division of Norment Security Group.
 - j. Overly Door Company.
 - k. Protective Structures, Ltd.
 - l. Quikserv Corp.
 - m. Ready Access.
 - n. SABIC Innovative Plastics IP BV; Insulgard Security Products.
 - o. **<Insert manufacturer's name>**.
 - p. or approved equal.

- B. Configuration: [**One fixed-glazed panel**] [**Multiple fixed-glazed panels**] [**As indicated on Drawings**].

- C. Framing: Fabricate perimeter framing, mullions, and glazing stops from [**steel**] [**stainless steel**] [**aluminum**] as follows:

1. Profile: [**Manufacturer's standard**] [**Narrow**], with minimum face dimension indicated.

- a. Minimum Face Dimension: [2 inches (50 mm)] [1-1/4 inches (32 mm)] [**As indicated on Drawings**] <Insert dimension>.
 2. Depth: [**Manufacturer's standard**] [**Adjustable, two-piece clamp**] [**As indicated on Drawings**] <Insert depth>.
 3. Provide thermally improved construction for aluminum framing.
- D. Head and Jamb Framing: Designed for [sealant glazing] [gasket glazing] [voice communication by speech at normal volume].
- E. Channel-Frame Sill: Formed from stainless steel and designed for sealant glazing.
1. Transaction Counter: Stainless steel, [12 inches (305 mm)] [18 inches (457 mm)] deep by width of security window, with integral deal tray [**centered in opening**] [**as indicated on Drawings**].
 2. Transaction Counter: Stainless steel, 21 inches (533 mm) deep by width of security window, with operable deal tray [**centered in opening**] [**as indicated on Drawings**].
- F. Voice-Communication-Type Sill: Formed from stainless steel and designed to allow passage of speech at normal speaking volume without distortion.
1. Sill Depth: [12 inches (305 mm) deep] [18 inches (457 mm) deep with 6-inch (152-mm) deep projection on nonsecure side] [21 inches (533 mm) deep with 6-inch (152-mm) deep projection on both sides].
 2. Transaction Counter: Stainless steel, [12 inches (305 mm)] [18 inches (457 mm)] deep by width of security window, with integral deal tray [**centered in opening**] [**as indicated on Drawings**].
 3. Integral Transaction-Drawer Sill: Formed from [**stainless steel**] [**framing to match head and jamb framing**]; with transaction drawer integrated into framing and contained in a stainless-steel housing that forms a transaction counter on [**secure side**] [**nonsecure side**] [**both sides**] of opening. Drawer front shall be flush with housing when drawer is closed.
- G. Glazing and Glazing Materials: Comply with requirements in Section 088853 "Security Glazing."
- H. Materials:
1. Mild Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.
 2. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, CS (Commercial Steel), Type B; suitable for exposed applications.
 3. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, CS (Commercial Steel), Type B; with G60 (Z180) zinc (galvanized) or A60 (ZF180) zinc-iron-alloy (galvannealed) coating designation.
 4. Hot-Rolled Steel Sheet: ASTM A 1011/A 1011M, CS (Commercial Steel), Type B; free of scale, pitting, or surface defects; pickled and oiled.
 5. Stainless-Steel Sheet, Strip, Plate, and Flat Bars: ASTM A 666 or ASTM A 240/A 240M, austenitic stainless steel, Type 304.

6. Aluminum Extrusions: **ASTM B 221** (ASTM B 221M). Provide alloy and temper recommended by manufacturer for strength, corrosion resistance, and application of required finish, but not less than **22,000-psi** (150-MPa) ultimate tensile strength.
7. Aluminum Sheet and Plate: **ASTM B 209** (ASTM B 209M).

2.4 SLIDING, TRANSACTION SECURITY WINDOWS

- A. Provide horizontal-sliding, transaction security windows.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Action Bullet Resistant Corp.
 - b. Armortex.
 - c. Collier Safe Company, Inc.
 - d. Creative Industries, Inc.
 - e. Laurence, C. R. Co. Inc.
 - f. National Bullet Proof, Inc.
 - g. Protective Structures, Ltd.
 - h. Quikserv Corp.
 - i. Ready Access.
 - j. SABIC Innovative Plastics IP BV; Insulgard Security Products.
 - k. United States Bullet Proofing, Inc.
 - l. **<Insert manufacturer's name>**.
 - m. or approved equal.
- B. Configuration: [**One fixed-glazed panel and one horizontal-sliding glazed panel**] [**Two glazed panels that slide horizontally and meet at center of security window**] [**As indicated on Drawings**].
- C. Framing: Fabricate perimeter framing, mullions, and glazing stops from [**steel**] [**stainless steel**] [**aluminum**] as follows:
 1. Profile: [**Manufacturer's standard**] [**Narrow**], with minimum face dimension indicated.
 - a. Minimum Face Dimension: [**2 inches** (50 mm)] [**1-1/4 inches** (32 mm)] [**As indicated on Drawings**] **<Insert dimension>**.
 2. Depth: [**Manufacturer's standard**] [**Adjustable, two-piece clamp**] [**As indicated on Drawings**] **<Insert depth>**.
 3. Provide thermally improved construction for aluminum framing.
- D. Head and Jamb Framing: Designed for [**sealant**] [**gasket**] glazing.
- E. Glazing Meeting Edges: Polished glazing.
- F. Sill: Stainless-steel channel frame designed for [**sealant**] [**gasket**] glazing.

1. Shelf: Stainless steel, [12 inches (305 mm)] [18 inches (457 mm)] deep by width of security window, with integral deal tray.
- G. Sliding Window Hardware: Provide roller track designed for overhead support of two- or four-wheel carriage supporting horizontal-sliding glazed panel. Provide manufacturer's standard pull and lock with two keys for each horizontal-sliding glazed panel.
1. Provide weather stripping for exterior horizontal-sliding, transaction security windows.
- H. Glazing and Glazing Materials: Comply with requirements in Section 088853 "Security Glazing."
- I. Materials:
1. Mild Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.
 2. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, CS (Commercial Steel), Type B; suitable for exposed applications.
 3. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, CS (Commercial Steel), Type B; with G60 (Z180) zinc (galvanized) or A60 (ZF180) zinc-iron-alloy (galvannealed) coating designation.
 4. Hot-Rolled Steel Sheet: ASTM A 1011/A 1011M, CS (Commercial Steel), Type B; free of scale, pitting, or surface defects; pickled and oiled.
 5. Stainless-Steel Sheet, Strip, Plate, and Flat Bars: ASTM A 666 or ASTM A 240/A 240M, austenitic stainless steel, Type 304.
 6. Aluminum Extrusions: ASTM B 221 (ASTM B 221M). Provide alloy and temper recommended by manufacturer for strength, corrosion resistance, and application of required finish, but not less than 22,000-psi (150-MPa) ultimate tensile strength.
 7. Aluminum Sheet and Plate: ASTM B 209 (ASTM B 209M).

2.5 FABRICATION

- A. General: Fabricate security windows to provide a complete system for assembly of components and anchorage of window units.
1. Provide units that are reglazable from the secure side without dismantling the nonsecure side of framing.
 2. Prepare security windows for glazing unless preglazing at the factory is indicated.
- B. Provide weep holes and internal water passages for exterior security windows to conduct infiltrating water to the exterior.
- C. Framing: Miter or cope corners the full depth of framing; weld and dress smooth.
1. Fabricate framing with manufacturer's standard, internal opaque armoring in thicknesses required for security windows to comply with ballistics-resistance performance indicated.

- D. Glazing Stops: Finish glazing stops to match security window framing.
 - 1. Secure-Side (Exterior) Glazing Stops: Welded or integral to framing.
 - 2. Nonsecure-Side (Interior) Glazing Stops: Removable, coordinated with glazing indicated.
- E. Welding: Weld components to comply with referenced AWS standard. To greatest extent possible, weld before finishing and in concealed locations to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
- F. Metal Protection: Separate dissimilar metals to protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape recommended by manufacturer for this purpose.
- G. Factory-cut openings in glazing for speaking apertures.
- H. Preglazed Fabrication: Preglaze window units at factory, where required for applications indicated. Comply with requirements in Section 088853 "Security Glazing."
- I. Weather Stripping: Factory applied.

2.6 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM/NOMMA 500 for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.7 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.
- B. Color Anodic Finish: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or thicker.
 - 1. Color: [**Light bronze**] [**Medium bronze**] [**Dark bronze**] [**Black**] <Insert color>.
 - 2. Color: [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry colors and color densities**].
- C. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of **1.5 mils** (0.04 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

1. Color and Gloss: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and gloss>.**

D. High-Performance Organic Finish: Two-coat fluoropolymer finish complying with **[AAMA 2604] [AAMA 2605]** and containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

1. Color and Gloss: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and gloss>.**

2.8 STEEL FINISHES

A. Steel Prime Finish: Clean, pretreat, and apply manufacturer's standard primer.

B. Steel Factory Finish: Clean, pretreat, and apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat, with a minimum dry film thickness of **1 mil** (0.025 mm) for topcoat.

1. Color and Gloss: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and gloss>.**

2.9 STAINLESS-STEEL FINISHES

A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.

B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.

1. Run grain of directional finishes with long dimension of each piece.
2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
3. Directional Satin Finish: No. 4.

2.10 ACCESSORIES

A. Recessed Deal Trays: Formed from stainless steel **[with sliding stainless-steel cover]**; fabricated in curved shape with exposed flanges for recessed installation into horizontal surface.

1. Clear Opening Size: **[12 inches wide by 8 inches deep by 1-1/2 inches high (305 mm wide by 203 mm deep by 38 mm high)] [12 inches wide by 11 inches deep by 1-1/2 inches high (305 mm wide by 279 mm deep by 38 mm high)] [16 inches wide by 11 inches deep by 1-1/2 inches high (406 mm wide by 279 mm deep by 38 mm high)] <Insert dimensions>.**

- B. Recessed, Nonricochet Deal Trays: Formed from stainless steel; fabricated with recessed bullet trap to ricochet bullets away from secure side, with exposed flanges for recessed installation into horizontal surface[, **and with sliding stainless-steel cover**].
1. Clear Opening Size: [10 inches wide by 7 inches deep by 1-1/2 inches high (254 mm wide by 178 mm deep by 38 mm high)] [12 inches wide by 8 inches deep by 1-1/2 inches high (305 mm wide by 203 mm deep by 38 mm high)] [12 inches wide by 11 inches deep by 1-1/2 inches high (305 mm wide by 279 mm deep by 38 mm high)] [16 inches wide by 11 inches deep by 1-1/2 inches high (406 mm wide by 279 mm deep by 38 mm high)] <Insert dimensions>.
 2. Bullet Trap Location: [Secure side] [Both sides].
 3. Ballistics Resistance: [UL Level 1] [UL Level 3] [Same as security window] <Insert level>.
 4. Listed and labeled as bullet resisting according to UL 752.
- C. Rotating Deal Trays: Formed from stainless steel, with rotating recessed deal tray on each side of secure opening and with handle that rotates deal trays 180 degrees.
1. Mounting: [Drop in] [Countertop].
 2. Ballistics Resistance: [UL Level 1] [UL Level 3] [Same as security window] <Insert level>.
 3. Listed and labeled as bullet resisting according to UL 752.
- D. Transaction Drawers: Formed from [stainless steel] [steel] [bullet-resistant armoring]; with ball-bearing, telescoping sliding mechanism; with cover on secure side of top of drawer that automatically closes when drawer is extended to nonsecure side.
1. Inside Dimensions: [15-3/8 inches wide by 8-1/2 inches deep by 4-3/8 inches high (390 mm wide by 216 mm deep by 111 mm high)] [13 inches wide by 22 inches deep by 6-1/2 inches high (330 mm wide by 559 mm deep by 165 mm high)] <Insert dimensions>.
 2. Operation: Manual.
 3. Operation: Electric, with sliding handle for emergency manual operation during lack of power. Provide individual switches for power and drawer movement on secure side and call button on nonsecure side.
 4. Ballistics Resistance: [UL Level 1] [UL Level 3] [Same as security window] <Insert level>.
 5. Listed and labeled as bullet resisting according to UL 752.
- E. Speaking Apertures: Fabricate from [stainless steel] [security glazing], designed to allow passage of speech at normal speaking volume without distortion.
1. Shape: [Circular] [Square].
 2. Ballistics Resistance: [UL Level 1] [UL Level 3] [Same as security window] <Insert level>.
 3. Listed and labeled as bullet resisting according to UL 752.
- F. Concealed Bolts: ASTM A 307, Grade A unless otherwise indicated.

- G. Cast-in-Place Anchors in Concrete: Fabricated from corrosion-resistant materials capable of sustaining, without failure, a load equal to **[four]** <Insert number> times the load imposed, as determined by testing according to ASTM E 488, conducted by a qualified testing agency; of type indicated below.
1. Threaded or wedge type; galvanized ferrous castings, either ASTM A 27/A 27M cast steel or ASTM A 47/A 47M malleable iron. Provide bolts, washers, and shims as required; hot-dip galvanized according to ASTM A 153/A 153M or ASTM F 2329.
- H. Embedded Plate Anchors: Fabricated from mild steel shapes and plates, minimum **3/16 inch** (4.8 mm) thick; with minimum **1/2-inch-** (12.7-mm-) diameter, headed studs welded to back of plate.
- I. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.
- J. Compression-Type Glazing Strips and Weather Stripping: Unless otherwise indicated, provide compressible stripping for glazing and weather stripping, such as molded EPDM or neoprene gaskets complying with ASTM D 2000, Designations 2BC415 to 3BC620; molded PVC gaskets complying with ASTM D 2287; or molded, expanded EPDM or neoprene gaskets complying with ASTM C 509, Grade 4.
- K. Miscellaneous Glazing Materials: Provide material, size, and shape complying with requirements of glass manufacturers and with a proven record of compatibility with surfaces contacted in installation.
1. Cleaners, Primers, and Sealers: Type recommended by sealant or gasket manufacturer.
 2. Setting Blocks: Elastomeric material with a Type A Shore durometer hardness of 85, plus or minus 5.
 3. Spacers: Elastomeric blocks or continuous extrusions with a Type A Shore durometer hardness required by glass manufacturer to maintain glass lites in place for installation indicated.
 4. Edge Blocks: Elastomeric material of hardness needed to limit glass lateral movement (side walking).
- L. Anchors, Clips, and Window Accessories: Stainless steel; hot-dip, zinc-coated steel or iron, complying with ASTM B 633; provide sufficient strength to withstand design pressures indicated.
- M. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.
- N. Sealants: For sealants required within fabricated security windows, provide type recommended by manufacturer for joint size and movement. Sealant shall remain permanently elastic, nonshrinking, and nonmigrating.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of security windows.
- B. Examine roughing-in for embedded and built-in anchors to verify actual locations of security window connections before security window installation.
- C. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of security windows.
- D. Inspect built-in and cast-in anchor installations, before installing security windows, to verify that anchor installations comply with requirements. Prepare inspection reports.
 - 1. Remove and replace anchors where inspections indicate that they do not comply with specified requirements. Reinspect after repairs or replacements are made.
 - 2. Perform additional inspections to determine compliance of replaced or additional work. Prepare anchor inspection reports.
- E. For glazing materials whose orientation is critical for performance, verify installation orientation.
- F. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Coordination: Furnish layouts for cast-in-place anchors, clips, and other security window anchors whose installation is specified in other Sections.
 - 1. Furnish cast-in-place anchors and similar devices to other trades for installation well in advance of time needed for coordinating other work.

3.3 INSTALLATION

- A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing security windows to in-place construction. Include threaded fasteners for inserts, security fasteners, and other connectors.
 - 1. Install an attached or integral flange to secure side of security windows extending over rough-in opening gap so that gap has same **[forced-entry-resistance]** **[and]** **[ballistics-resistance]** performance as security window.
- B. Voice-Communication-Type Framing: Attach removable glass spacers to jambs and head of glazing, located not more than **6 inches** (152 mm) from each corner and spaced not more than **12 inches** (305 mm) o.c.

- C. Glazed Framing: Provide **[sealant] [gasket]**-glazed framing. Comply with installation requirements in Section 088853 "Security Glazing."
- D. Removable Glazing Stops and Trim: Fasten components with security fasteners.
- E. Fasteners: Install security windows using fasteners recommended by manufacturer with head style appropriate for installation requirements, strength, and finish of adjacent materials. **[Provide stainless-steel fasteners in stainless-steel materials.]**
- F. Sealants: Comply with requirements in Section 079200 "Joint Sealants" for installing sealants, fillers, and gaskets.
 - 1. Set continuous sill members and flashing in a full sealant bed to provide weathertight construction unless otherwise indicated.
 - 2. Seal frame perimeter with sealant to provide weathertight construction unless otherwise indicated.
- G. Metal Protection: Where dissimilar metals will contact each other, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape recommended in writing by manufacturer for this purpose. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.

3.4 FIELD QUALITY CONTROL

- A. Inspect installed products to verify compliance with requirements. Prepare inspection reports and indicate compliance with and deviations from the Contract Documents.
- B. Perform additional inspections to determine compliance of replaced or additional work. Prepare inspection reports.
- C. Prepare field quality-control certification **[endorsed by Detention Specialist]** that states installed products and their installation comply with requirements in the Contract Documents.

3.5 ADJUSTING

- A. Adjust horizontal-sliding, transaction security windows to provide a tight fit at contact points for smooth operation and a secure enclosure.
- B. Adjust transaction drawers to provide a tight fit at contact points **[and weather stripping]** for smooth operation and **[weathertight and]** secure enclosure.
- C. Remove and replace defective work, including security windows that are warped, bowed, or otherwise unacceptable.

3.6 CLEANING AND PROTECTION

- A. Clean surfaces promptly after installation of security windows. Take care to avoid damaging the finish. Remove excess glazing and sealant compounds, dirt, and other substances.
 - 1. Lubricate sliding security window hardware.
 - 2. Lubricate transaction drawer hardware.
- B. Clean glass of preglazed security windows promptly after installation. Comply with requirements in Section 088853 "Security Glazing" for cleaning and maintenance.
- C. Provide temporary protection to ensure that security windows are without damage at time of Substantial Completion.

3.7 DEMONSTRATION

- A. Train Owner's maintenance personnel to adjust, operate, and maintain [**operable security windows**] [**and**] [**security windows with transaction drawers**].
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 085653

SECTION 086300 - METAL-FRAMED SKYLIGHTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes skylights with metal framing.
- B. Related Sections:
 - 1. Section 084433 "Sloped Glazing Assemblies" for glazed curtain walls in which the glazed panels are primarily on a sloped plane.
 - 2. Section 084513 "Structured-Polycarbonate-Panel Assemblies" for translucent structured-polycarbonate-panel assemblies used as skylights.
 - 3. Section 084523 "Fiberglass-Sandwich-Panel Assemblies" for translucent fiberglass-sandwich-panel assemblies used as skylights.
 - 4. Section 086100 "Roof Windows" for operable and non-operable roof windows framed of wood, aluminum, or vinyl.
 - 5. Section 086200 "Unit Skylights" for skylights without framing except at the perimeter of the glazing.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for metal-framed skylights.
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Credit IEQ 4.1: For sealants used inside the weatherproofing system, documentation including printed statement of VOC content.
 - 2. Laboratory Test Reports for Credit IEQ 4: For sealants used inside the weatherproofing system, documentation indicating that they comply with the testing and product requirements of the California Department of Health Services'

"Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- C. Shop Drawings: For metal-framed skylights. Include plans, elevations, sections, details, and attachments to other work.
1. Include details of provisions for assembly expansion and contraction and for draining moisture within the assembly to the exterior.
 2. Include full-size isometric details of each vertical-to-horizontal intersection of assembly, showing the following:
 - a. Joinery including concealed welds.
 - b. Anchorage.
 - c. Expansion provisions.
 - d. Glazing.
 - e. Flashing and drainage.
 3. Include laboratory mockup Shop Drawings, prepared by a qualified preconstruction testing agency, showing details of laboratory mockup.
 - a. Resubmit Shop Drawings with changes made to details of mockup to successfully complete preconstruction testing.
- D. Samples for Initial Selection: For units with factory-applied color finishes.
- E. Samples for Verification: For each type of exposed finish required, in manufacturer's standard sizes.
- F. Fabrication Sample: Of each framing intersection of assemblies, made from 12-inch (305-mm) lengths of full-size components and showing details of the following:
 1. Joinery including concealed welds.
 2. Anchorage.
 3. Expansion provisions.
 4. Glazing.
 5. Flashing and drainage.
- G. Delegated-Design Submittal: For metal-framed skylights indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- 1.4 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For qualified **[Installer]** **[testing agency]**.
- B. Welding certificates.
- C. Preconstruction Test Reports: Prepared by a qualified preconstruction testing agency.

- D. Compatibility and Adhesion Test Reports: For structural-sealant-glazed skylights, test reports from sealant manufacturer indicating that joint sealants have been tested for each material that will come in contact with sealants.
- E. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for metal-framed skylights.
- F. Field quality-control reports.
- G. Warranties: Sample of special warranties.

1.5 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of metal-framed skylights required for this Project.
 - 1. A firm that has specialized in installation of types of products required for Project for not less than five (5) years and which is acceptable to manufacturer(s) of primary materials.
- B. Testing Agency Qualifications: Qualified according to ASTM E 699 for testing indicated.
- C. Product Options: Information on Drawings and in Specifications establishes requirements for skylights' aesthetic effects and performance characteristics. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction. Performance characteristics are indicated by criteria subject to verification by one or more methods including testing conducted by an independent testing agency and in-service performance.
 - 1. Do not modify intended aesthetic effects, as judged solely by DEN Project Manager, except with DEN Project Manager's approval. If modifications are proposed, submit comprehensive explanatory data to DEN Project Manager for review.
- D. Welding Qualifications: Qualify procedures and personnel according to AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
- E. Structural-Sealant Glazing: Comply with recommendations in ASTM C 1401, "Guide for Structural Sealant Glazing," for joint design and quality-control procedures.
 - 1. Joint designs are reviewed and approved by structural-sealant manufacturer.

2. Quality-control program development and reporting comply with ASTM C 1401 recommendations for material qualification procedures, preconstruction sealant-testing program, and procedures and intervals for fabrication and installation reviews and checks.
 3. Perform manufacturer's standard tests for compatibility and adhesion of sealants with each material that will come in contact with sealants.
- F. Provide metal-framed skylights that comply with test-performance requirements indicated, as evidenced by reports **[of tests performed on manufacturer's standard assemblies] [based on Project-specific preconstruction testing]** by a qualified independent testing agency.
1. Preconstruction Testing: **[Owner will engage] [Engage]** a qualified testing agency to perform preconstruction testing on laboratory mockups of assemblies.
 2. Build laboratory mockups at testing agency facility using personnel, materials, and methods of construction that will be used at Project site.
 3. Before performing testing on structural-sealant-glazed assemblies, remove at least one of every type of glazing lite from each laboratory mockup and replace them using reglazing procedures required for in-use skylight assembly.
 4. Notify DEN Project Manager seven (7) days in advance of the dates and times when laboratory mockups will be constructed.
 5. Preconstruction Testing Sequence: Test laboratory mockups according to AAMA 501, using the following sequence of tests:
 - a. Structural-performance preloading at one-half of the specified maximum test load (ASTM E 330).
 - b. Air infiltration (ASTM E 283).
 - c. Water penetration under static pressure (ASTM E 331).
 - d. Water penetration under dynamic pressure (AAMA 501.1).
 - e. Structural performance at design load (ASTM E 330).
 - f. Repeat air filtration (ASTM E 283).
 - g. Repeat water penetration under static pressure (ASTM E 331).
 - h. Structural performance at specified maximum test load (ASTM E 330).
- G. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
1. Build mockup of typical metal-framed skylights as shown on Drawings.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
 3. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- H. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]<Insert location>**.

1.7 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal-framed skylights that fail in materials or workmanship within specified warranty period.
1. Failures include, but are not limited to, the following:
 - a. Structural failures including, but not limited to, excessive deflection.
 - b. Noise or vibration caused by thermal movements.
 - c. Deterioration of metals[, **metal finishes**,] and other materials beyond normal weathering.
 - d. Adhesive or cohesive sealant failures.
 - e. Water leakage.
 2. Warranty Period: Minimum [**two (2)**] [**five (5)**] [**ten (10)**] <Insert number> years from date of Substantial Completion.
- B. Special Finish Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components on which finishes fail within specified warranty period. Warranty does not include normal weathering.
1. Failures include, but are not limited to, checking, crazing, peeling, chalking, and fading of finishes.
 2. Warranty Period: Minimum [**five (5)**] [**ten (10)**] [**twenty (20)**] <Insert number> years from date of Substantial Completion.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Acralight International Skylights.
 2. Architectural Glazing Technologies.
 3. Bristolite Skylights.
 4. CPI Daylighting, Inc.
 5. Exarc Skylights, Inc.
 6. Gammans Skylight Systems.
 7. GSI Glazed Structures, Inc.
 8. Kawneer North America; an Alcoa company.

9. LinEI Signature.
10. Major Industries, Inc.; Auburn Skylights Division.
11. Naturalite Skylight Systems; Vistawall Group.
12. O'Keeffe's Inc.
13. Schuco USA, LP.
14. Skyline Sky-Lites, LLC.
15. Sunglo Skylight Products.
16. Super Sky Products, Inc.
17. J. Sussman, Inc.
18. TRACO.
19. United Skys, Inc.
20. Wasco Products, Inc.
21. **<Insert manufacturer's name>**.
22. or approved equal.

2.2 PERFORMANCE REQUIREMENTS

- A. General: Metal-framed skylights shall withstand the effects of the following without failure due to defective manufacture, fabrication, installation, or other defects in construction:
1. Structural loads.
 2. Thermal movements.
 3. Movements of supporting structure.
 4. Dimensional tolerances of support system and other adjacent construction.
 5. Failure includes, but is not limited to, the following:
 - a. Deflection exceeding specified limits.
 - b. Thermal stresses transferring to building structure.
 - c. Framing members transferring stresses, including those caused by thermal and structural movements to glazing.
 - d. Glazing-to-glazing contact.
 - e. Noise or vibration created by wind and by thermal and structural movements.
 - f. Loosening or weakening of fasteners, attachments, and other components.
 - g. Sealant failure.
- B. Delegated Design: Design metal-framed skylights, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- C. Structural Loads:
1. Wind Loads: [**As indicated on Drawings.**]
 - a. Basic Wind Speed: [**115 mph (50 m/s)**] **<Insert value>**.
 - b. Importance Factor: 1.3 **<Insert factor>**.
 - c. Exposure Category: [**D**].

2. Seismic Loads: **[As indicated on Drawings] <Insert loads>**.
- D. Deflection of Framing Members: At design wind pressure, as follows:
1. Deflection Normal to Glazing Plane: Limited to **[edge of glass in a direction perpendicular to glass plane not exceeding L/175 of the glass edge length for each individual glazing lite] [1/175 of clear span for spans up to 13 feet 6 inches (4.1 m) and to 1/240 of clear span plus 1/4 inch (6.35 mm) for spans more than 13 feet 6 inches (4.1 m)] <Insert deflection limit>** or an amount that restricts edge deflection of individual glazing lites to **3/4 inch (19.1 mm)**, whichever is less.
 2. Deflection Parallel to Glazing Plane: Limited to **[L/360 of clear span or 1/8 inch (3.2 mm), whichever is smaller] [amount not exceeding that which reduces glazing bite to less than 75 percent of design dimension and that which reduces edge clearance between framing members and glazing or other fixed components to less than 1/8 inch (3.2 mm)] <Insert deflection limit>**.
- E. Lateral Bracing of Framing Members: Compression flanges of flexural members are laterally braced by cross members with minimum depth equal to 50 percent of flexural member that is braced. Glazing does not provide lateral support.
- F. Structural-Test Performance: Provide metal-framed skylights tested according to ASTM E 330, as follows:
1. When tested at positive and negative wind-load design pressures, assemblies do not evidence deflection exceeding specified limits.
 2. When tested at **[150] <Insert number>** percent of positive and negative wind-load design pressures, assemblies, including anchorage, do not evidence material failures, structural distress, and permanent deformation of main framing members exceeding **[0.2] <Insert number>** percent of span.
 3. Test Durations: As required by design wind velocity, but not less than **[10] <Insert number>** seconds.
- G. Windborne-Debris-Impact-Resistance Performance: Provide metal-framed skylights that pass missile-impact and cyclic-pressure tests when tested according to ASTM E 1886 and testing information in ASTM E 1996 for Wind **[Zone 1] [Zone 2] [Zone 3] [Zone 4]**.
1. Large-Missile Test: For glazed openings located within **30 feet (9.1 m)** of grade.
 2. Small-Missile Test: For glazed openings located more than **30 feet (9.1 m)** above grade.
- H. Air Infiltration: Provide metal-framed skylights with maximum air leakage through fixed glazing and framing areas of **[0.06 cfm/sq. ft. (0.03 L/s per sq. m)] <Insert value>** of fixed wall area when tested according to ASTM E 283 at a minimum static-air-pressure difference of **[1.57 lbf/sq. ft. (75 Pa)] [6.24 lbf/sq. ft. (300 Pa)] <Insert value>**.
- I. Water Penetration under Static Pressure: Provide metal-framed skylights that do not evidence water penetration through fixed glazing and framing areas when tested according to ASTM E 331 at a minimum static-air-pressure difference of 20 percent of

positive wind-load design pressure, but not less than [6.24 lbf/sq. ft. (300 Pa)] <Insert value>.

- J. Water Penetration under Dynamic Pressure: Provide metal-framed skylights that do not evidence water leakage through fixed glazing and framing areas when tested according to AAMA 501.1 under dynamic pressure equal to 20 percent of positive wind-load design pressure, but not less than [6.24 lbf/sq. ft. (300 Pa)] <Insert value>.
1. Maximum Water Leakage: [According to AAMA 501.1] [No uncontrolled water penetrating aluminum-framed systems or water appearing on systems' normally exposed interior surfaces from sources other than condensation]. Water leakage does not include water controlled by flashing and gutters that is drained to exterior and water that cannot damage adjacent materials or finishes.
- K. Thermal Movements: Provide metal-framed skylights that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures. Base engineering calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
1. Temperature Change (Range): [120 deg F (67 deg C), ambient; 180 deg F (100 deg C)] <Insert temperature range>, material surfaces.
- L. Condensation Resistance: Provide metal-framed skylights with fixed glazing and framing areas having condensation-resistance factor (CRF) of not less than [45] [53] <Insert number> when tested according to AAMA 1503.
- M. Structural Sealant: Capable of withstanding tensile and shear stresses imposed without failing adhesively or cohesively. When tested for preconstruction adhesion and compatibility, cohesive failure of sealant shall occur before adhesive failure.
- N. Energy Performance: Provide metal-framed skylights with performance properties specified, as indicated in manufacturer's published test data, based on procedures indicated below [and certified and labeled according to NFRC]:
1. Thermal Transmittance (U-Factor): Fixed glazing and framing areas shall have U-factor of not more than [0.80 Btu/sq. ft. x h x deg F (4.54 W/sq. m x K)] [0.65 Btu/sq. ft. x h x deg F (3.69 W/sq. m x K)] <Insert value> as determined according to NFRC 100.
 2. Solar Heat Gain Coefficient: Fixed glazing and framing areas shall have a solar heat gain coefficient of no greater than [0.6] [0.7] <Insert value> as determined according to NFRC 200.

2.3 FRAMING SYSTEMS

- A. Aluminum: Alloy and temper recommended in writing by manufacturer for type of use and finish indicated.
1. Sheet and Plate: ASTM B 209 (ASTM B 209M).
 2. Extruded Bars, Rods, Profiles, and Tubes: ASTM B 221 (ASTM B 221M).

3. Extruded Structural Pipe and Tubes: ASTM B 429/B 429M.
 4. Structural Profiles: ASTM B 308/B 308M.
 5. Welding Rods and Bare Electrodes: AWS A5.10/A5.10M.
- B. Pressure Caps: Manufacturer's standard aluminum components that mechanically retain glazing.
1. Include snap-on aluminum trim that conceals fasteners.
- C. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning skylight components.
- D. Fasteners and Accessories: Manufacturer's standard, corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.
1. At pressure caps, use ASTM A 193/A 193M stainless-steel screws.
 2. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
 3. Reinforce members as required to receive fastener threads.
 4. Use exposed fasteners with countersunk Phillips screw heads[, **finished to match framing system**] [, **fabricated from Series 300 stainless steel**].
- E. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts complying with ASTM A 123/A 123M or ASTM A 153/A 153M requirements.
- F. Anchor Bolts: **ASTM A 307, Grade A** (ASTM F 568M, Property Class 4.6), galvanized steel.
- G. Concealed Flashing: [**Manufacturer's standard, corrosion-resistant, nonstaining, nonbleeding flashing compatible with adjacent materials**] [**Dead-soft, 0.018-inch (0.457-mm-) thick stainless steel, ASTM A 240/A 240M of type recommended in writing by manufacturer**].
- H. Exposed Flashing and Closures: Manufacturer's standard aluminum components not less than [**0.030 inch (0.762 mm)**] [**0.040 inch (1.016 mm)**] [**0.060 inch (1.524 mm)**] **<Insert dimension>** thick.
- I. Framing Gaskets: [**Manufacturer's standard**] **<Insert requirements>**.
- J. Framing Sealants: As [**recommended in writing by manufacturer.**] [**specified in Section 079200 "Joint Sealants."**]
1. Sealants used inside the weatherproofing system shall have a VOC content of [**250**] **<Insert value>** g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 2. Sealants used inside the weatherproofing system shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- K. Corrosion-Resistant Coating: Cold-applied asphalt mastic, compounded for 15-mil (0.4-mm) dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

2.4 GLAZING

- A. Glazing: As specified in [Section 088000 "Glazing"] [Section 088400 "Plastic Glazing."]
- B. Spacers, Setting Blocks, and Gaskets: [Manufacturer's standard elastomeric types.] [As specified in Section 088000 "Glazing."] [As specified in Section 088400 "Plastic Glazing."]
- C. Bond-Breaker Tape: [Manufacturer's standard tetrafluoroethylene-fluorocarbon or polyethylene material to which sealants will not develop adhesion] <Insert requirements>.
- D. Glazing Sealants: As [recommended in writing by manufacturer.] [specified in Section 079200 "Joint Sealants."]
1. Sealants used inside the weatherproofing system shall have a VOC content as indicated when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 2. Sealants used inside the weatherproofing system shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
 3. Structural Sealant: ASTM C 1184, neutral-curing silicone formulation compatible with system components with which it comes in contact, specifically formulated and tested for use as structural sealant, and approved by structural-sealant manufacturer for use in metal-framed skylights indicated.
 - a. VOC Content: [100] <Insert value> g/L or less.
 - b. Color: [Black] [As selected by DEN Project Manager from manufacturer's full range].
 4. Weatherseal Sealant: ASTM C 920 for Type S, Grade NS, Class 25, Uses NT, G, A, and O; neutral-curing silicone formulation compatible with structural sealant and other components with which it comes in contact; and recommended in writing by structural- and weatherseal-sealant and metal-framed skylight manufacturers for this use.
 - a. VOC Content: [250] <Insert value> g/L or less.
 - b. Color: Matching structural sealant.

2.5 FABRICATION

- A. Where practical, fit and assemble metal-framed skylights in manufacturer's plant. To ensure proper assembly at Project site, clearly identify work that cannot be permanently factory assembled before shipment.

- B. Fabricate aluminum components before finishing.
- C. Fabricate aluminum components that, when assembled, have the following characteristics:
 - 1. Profiles that are sharp, straight, and free of defects or deformations.
 - 2. Accurately fitted joints with ends coped or mitered.
 - 3. Internal guttering systems or other means to drain water passing joints, condensation occurring within framing members, and moisture migrating within skylight to exterior.
 - 4. Physical and thermal isolation of glazing from framing members.
 - 5. Accommodations for thermal and mechanical movements of glazing and framing to maintain required glazing edge clearances.
- D. Fabricate aluminum sill closures with weep holes and for installation as continuous component.
- E. Reinforce aluminum components as required to receive fastener threads.
- F. Weld aluminum components in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
- G. Factory-Glazed, Metal-Framed Skylights:
 - 1. Factory install glazing to comply with requirements in [**Section 088000 "Glazing"**] [**Section 088400 "Plastic Glazing."**]
 - 2. Prepare surfaces that will contact structural sealant according to structural-sealant manufacturer's written instructions to ensure compatibility and adhesion. Preparation includes, but is not limited to, cleaning and priming surfaces.
- H. After fabrication, clearly mark components to identify their locations in Project according to Shop Drawings.

2.6 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, [**AA-M12C22A41, Class I, 0.018 mm**] [**AA-M12C22A31, Class II, 0.010 mm**] or thicker.
- B. Color Anodic Finish: AAMA 611, [**AA-M12C22A42/A44, Class I, 0.018 mm**] [**AA-M12C22A32/A34, Class II, 0.010 mm**] or thicker.
 - 1. Color: [**Light bronze**] [**Medium bronze**] [**Dark bronze**] [**Champagne**] [**Black**] <Insert color>.
 - 2. Color: [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry colors and color densities**].

- C. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of **1.5 mils** (0.04 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
1. Color and Gloss: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and gloss>**.
- D. High-Performance Organic Finish: Two-coat fluoropolymer finish complying with **[AAMA 2604] [AAMA 2605]** and containing not less than **[50] [70]** percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
1. Color and Gloss: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and gloss>**.
- E. High-Performance Organic Finish: **[Three] [Four]**-coat fluoropolymer finish complying with AAMA 2605 and containing not less than **[50] [70]** percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
1. Color and Gloss: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and gloss>**.

2.7 SOURCE QUALITY CONTROL

- A. Structural-Sealant Glazing: Perform quality-control procedures complying with ASTM C 1401 recommendations including, but not limited to, material qualification procedures, sealant testing, and fabrication reviews and checks.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General:
1. Comply with manufacturer's written instructions.
 2. Do not install damaged components.

3. Fit joints between aluminum components to produce hairline joints free of burrs and distortion.
 4. Rigidly secure nonmovement joints.
 5. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.
 6. Weld components in concealed locations to minimize distortion or discoloration of finish. Protect glazing surfaces from welding.
 7. Seal joints watertight unless otherwise indicated.
- B. Metal Protection: Where aluminum will contact dissimilar materials, protect against galvanic action by painting contact surfaces with protective coating or by installing nonconductive spacers as recommended in writing by manufacturer for this purpose.
- C. Install continuous aluminum sill closure with weatherproof expansion joints and locked and sealed or welded corners. Locate weep holes at rafters.
- D. Install components to drain water passing joints, condensation occurring within framing members, and moisture migrating within skylight to exterior.
- E. Install components plumb and true in alignment with established lines and elevations.
- F. Install glazing as specified in [**Section 088000 "Glazing"**] [**Section 088400 "Plastic Glazing."**]
1. Structural-Sealant Glazing:
 - a. Prepare surfaces that will contact structural sealant according to structural-sealant manufacturer's written instructions to ensure compatibility and adhesion. Preparation includes, but is not limited to, cleaning and priming surfaces.
 - b. Install weatherseal sealant according to Section 079200 "Joint Sealants" and according to weatherseal-sealant manufacturer's written instructions to produce weatherproof joints. Install joint filler behind weatherseal sealant as recommended in writing by weatherseal-sealant manufacturer.
- G. Erection Tolerances: Install metal-framed skylights to comply with the following maximum tolerances:
1. Alignment: Limit offset from true alignment to **1/32 inch** (0.8 mm) where surfaces abut in line, edge to edge, at corners, or where a reveal or protruding element separates aligned surfaces by less than **3 inches** (76 mm); otherwise, limit offset to **1/8 inch** (3.2 mm).
 2. Location and Plane: Limit variation from true location and plane to **1/8 inch in 12 feet** (3.2 mm in 3.7 m) but no greater than **1/2 inch** (13 mm) over total length.
- ### 3.3 FIELD QUALITY CONTROL
- A. Testing Agency: [**Owner will engage**] [**Engage**] a qualified testing agency to perform tests and inspections.

1. Water-Spray Test: Before installation of interior finishes has begun, skylights shall be tested according to AAMA 501.2 and shall not evidence water penetration.
 2. Water Penetration under Static Pressure: Before installation of interior finishes has begun, areas shall be tested according to ASTM E 1105.
 - a. Test Procedures: Test under [**uniform**] [**and**] [**cyclic**] static-air pressure.
 - b. Static-Air-Pressure Difference: <Insert pressure>.
 - c. Water Penetration: None.
 3. Structural-Sealant Compatibility and Adhesion: Structural sealant shall be tested according to recommendations in ASTM C 1401.
 - a. Destructive test method, Method A, Hand Pull Tab (Destructive) in ASTM C 1401, Appendix X2, shall be used.
 - 1) A minimum of [**one**] [**two**] <Insert number> area(s) on each skylight face shall be tested.
 - 2) Repair installation areas damaged by testing.
 4. Structural-Sealant Glazing Inspection: After installation of metal-framed skylights is complete, structural-sealant glazing shall be inspected and evaluated according to ASTM C 1401 recommendations for quality-control procedures.
- B. Repair or remove work where test results and inspections indicate that it does not comply with specified requirements.
- C. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
- D. Prepare test and inspection reports.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 086300

SECTION 087100 - DOOR HARDWARE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes:

1. Mechanical door hardware for the following:
 - a. Swinging doors.
 - b. Sliding doors.
 - c. Folding doors.
 - d. <Insert type>
2. Cylinders for door hardware specified in other Sections.
3. Electrified door hardware.

- B. Related Sections:

1. Section 064023 "Interior Architectural Woodwork" for cabinet door hardware provided as part of architectural woodwork.

 14. Section 133419 "Metal Building Systems" for door hardware, [except] [including] cylinders.
 15. Section 281300 "Access Control" for access control devices installed at door openings and provided as part of a security system.
 16. Section 281600 "Intrusion Detection" for detection devices installed at door openings and provided as part of an intrusion-detection system.
 17. Section 283100 "Intelligent Life Safety Fire Management System"

C. This section covers materials and installation of Architectural Hardware and Keying System.

1. Furnish all hardware required by the Contract Drawings and in accordance with these specifications.
 - a. The specified hardware shall be purchased by the Contractor from the Hardware Supplier.
 - b. The Contractor shall make all necessary arrangements for the purchase of the specified hardware with the Hardware Supplier, including scheduling, purchasing, delivery, training, and warranty. The Contractor shall bear all storage, handling, transportation, training, administration, and supervisory costs associated with the purchase of the specified hardware.
 - c. The Contractor's warranties for the hardware and its installation are contained in the General Conditions. The one-year warranty period set forth in the General Conditions shall be changed to two (2) years.
2. Installation of all hardware shall be by this Contractor. Coordinate with electrical, door, and security system installation.
3. The Contractor shall coordinate the purchase, supply, deliver, scheduling, training, storage, installation and required Submittals of all hardware with the Hardware Supplier. Coordination shall include coordination of approved manufacturer type and model number for each item of hardware. The Contractor shall coordinate with the Hardware Manufacturer as required. The Contractor assumes the risk of nonperformance by the Hardware Supplier or Manufacturer.

D. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DOOR HARDWARE ALLOWANCE

- A. Furnish door hardware as part of [**Door Hardware Allowance**] <Insert allowance>.

1.4 DESIGN REQUIREMENTS

- A. The drawings and schedules show the sizes and locations of plates and trim for door protection.
- B. Hardware shall comply with requirements of DHI, BHMA, and ANSI standards.
- C. Where required for handicap code hardware shall have a shape that is easy to grasp with one hand and does not require high grasping, tight pinching, or twisting of the wrist to operate, in compliance with ADA and applicable code standards. Lever type, push type mechanisms, and "U" shape handles are acceptable designs.
- D. Acceptable lockset manufacturer is the following:
 - 1. Best Access Systems. No Substitutions.

1.5 ACTION SUBMITTALS

- A. Product Data: Manufacturer's technical data for each product specified and required. Include construction and installation details, material descriptions, dimensions of individual components and profiles, and finishes.
 - 1. Include data substantiating that materials comply with requirements.
- B. The Hardware Supplier shall be required by the Contractor to submit templates with the Hardware Submittal. Furnish hardware templates to each fabricator of doors, frames and other work to be factory-prepared for the installation of hardware. The Contractor shall check shop drawings of such other work, to confirm that adequate provisions are made for proper location and installation of hardware.
 - 1. Type, fastener, finish, style, function, size, quantity required, location, door and frame size, each hardware item.
 - 2. Name of manufacturer of each item.
- C. Operation and maintenance data.
- D. Certification that materials are per contract requirements.
- E. Shop Drawings: Details of electrified door hardware, indicating the following:
 - 1. Wiring Diagrams: For power, signal, and control wiring and including the following:
 - a. Details of interface of electrified door hardware and building safety and security systems.
 - b. Schematic diagram of systems that interface with electrified door hardware.
 - c. Point-to-point wiring.
 - d. Risers.
 - e. Elevations doors controlled by electrified door hardware.

2. Operation Narrative: Describe the operation of doors controlled by electrified door hardware.
- F. Samples for Initial Selection: For plastic protective trim units in each finish, color, and texture required for each type of trim unit indicated.
- G. Samples for Verification: For exposed door hardware of each type required, in each finish specified, prepared on Samples of size indicated below. Tag Samples with full description for coordination with the door hardware schedule. Submit Samples before, or concurrent with, submission of door hardware schedule.
1. Sample Size: Full-size units or minimum **2-by-4-inch** (51-by-102-mm) Samples for sheet and **4-inch** (102-mm) long Samples for other products.
 - a. Full-size Samples will be returned to Contractor. Units that are acceptable and remain undamaged through submittal, review, and field comparison process may, after final check of operation, be incorporated into the Work, within limitations of keying requirements.
- H. Other Action Submittals:
1. Door Hardware Schedule: Prepared by or under the supervision of Installer, detailing fabrication and assembly of door hardware, as well as installation procedures and diagrams. Coordinate final door hardware schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of door hardware.
 - a. Submittal Sequence: Submit door hardware schedule **[after] [or] [concurrent with]** submissions of Product Data, Samples, and Shop Drawings. Coordinate submission of door hardware schedule with scheduling requirements of other work to facilitate the fabrication of other work that is critical in Project construction schedule.
 - b. Format: Comply with scheduling sequence and vertical format in DHI's "Sequence and Format for the Hardware Schedule." Double space entries, and number and date each page.
 - c. Format: Use same scheduling sequence and format **[and use same door numbers]** as in the Contract Documents.
 - d. Content: Include the following information:
 - 1) Identification number, location, hand, fire rating, size, and material of each door and frame.
 - 2) Locations of each door hardware set, cross-referenced to Drawings on floor plans and to door and frame schedule.
 - 3) Complete designations, including name and manufacturer, type, style, function, size, quantity, function, and finish of each door hardware product.
 - 4) Description of electrified door hardware sequences of operation and interfaces with other building control systems.
 - 5) Fastenings and other pertinent information.
 - 6) Explanation of abbreviations, symbols, and codes contained in

- schedule.
 - 7) Mounting locations for door hardware.
 - 8) List of related door devices specified in other Sections for each door and frame.
2. Keying Schedule: Prepared by or under the supervision of Installer, detailing Owner's final keying instructions for locks. Include schematic keying diagram and index each key set to unique door designations that are coordinated with the Contract Documents.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For **[Installer] [and] [Architectural Hardware Consultant]**.
- B. Product Certificates: For electrified door hardware, from the manufacturer.
 - 1. Certify that door hardware approved for use on types and sizes of labeled fire-rated doors complies with listed fire-rated door assemblies.
 - 2. Manufacturer shall submit a certificate evidencing not less than five (5) years' experience in the manufacturing and supplying of the types of products to that specified.
- C. Product Test Reports: For compliance with accessibility requirements, based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency, for door hardware on doors located in accessible routes.
- D. Warranty: Special warranty specified in this Section.

1.7 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For each type of door hardware to include in maintenance manuals. Include final **[hardware] [and] [keying]** schedule.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Door Hardware: **<Insert detailed descriptions and specific numbers of units>**.
 - 2. Electrical Parts: **<Insert detailed descriptions and specific numbers of units>**.

1.9 OCCUPANCY SUBMITTAL

- A. Following installer's Occupancy Adjustment of hardware [**three (3)**] [**six (6)**] <Insert number> months after date of Substantial Completion, prepare a written report of current and predictable problems in the performance of the hardware, and submit report to DEN Project Manager.

1.10 QUALITY ASSURANCE

- A. Installer Qualifications: Supplier of products and an employer of workers trained and approved by product manufacturers and an Architectural Hardware Consultant who is available during the course of the Work to consult with Contractor, Architect, and DEN Project Manager about door hardware and keying.
1. Warehousing Facilities: In Project's vicinity.
 2. Scheduling Responsibility: Preparation of door hardware and keying schedules.
 3. Engineering Responsibility: Preparation of data for electrified door hardware, including Shop Drawings, based on testing and engineering analysis of manufacturer's standard units in assemblies similar to those indicated for this Project.
- B. Architectural Hardware Consultant Qualifications: A person who is experienced in providing consulting services for door hardware installations that are comparable in material, design, and extent to that indicated for this Project and who is currently certified by DHI as follows:
1. For door hardware, an [**Architectural Hardware Consultant (AHC)**] [**Architectural Hardware Consultant (AHC) who is also an Electrified Hardware Consultant (EHC)**] [**Architectural Openings Consultant (AOC)**].
- C. Source Limitations: Obtain each type of door hardware from a single manufacturer.
1. Provide electrified door hardware from same manufacturer as mechanical door hardware, unless otherwise indicated. Manufacturers that perform electrical modifications and that are listed by a testing and inspecting agency acceptable to authorities having jurisdiction are acceptable.
- D. Fire-Rated Door Assemblies: Where fire-rated door assemblies are indicated, provide door hardware rated for use in assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure according to NFPA 252 or UL 10C, unless otherwise indicated.
- E. Smoke- and Draft-Control Door Assemblies: Where smoke- and draft-control door assemblies are required, provide door hardware that meet requirements of assemblies tested according to UL 1784 and installed in compliance with NFPA 105.
1. Air Leakage Rate: Maximum air leakage of **0.3 cfm/sq. ft.** (3 cu. m per minute/sq. m) at the tested pressure differential of **0.3-inch wg** (75 Pa) of water.

- F. Electrified Door Hardware: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction.
- G. Means of Egress Doors: Latches do not require more than **15 lbf** (67 N) to release the latch. Locks do not require use of a key, tool, or special knowledge for operation.
- H. Accessibility Requirements: For door hardware on doors in an accessible route, comply with **[the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines] [ICC/ANSI A117.1] [HUD's "Fair Housing Accessibility Guidelines"] [and] <Insert regulation>**.
1. Provide operating devices that do not require tight grasping, pinching, or twisting of the wrist and that operate with a force of not more than **5 lbf** (22.2 N).
 2. Comply with the following maximum opening-force requirements:
 - a. Interior, Non-Fire-Rated Hinged Doors: **5 lbf** (22.2 N) applied perpendicular to door.
 - b. Sliding or Folding Doors: **5 lbf** (22.2 N) applied parallel to door at latch.
 - c. Fire Doors: Minimum opening force allowable by authorities having jurisdiction.
 3. Bevel raised thresholds with a slope of not more than 1:2. Provide thresholds not more than **[1/2 inch (13 mm) high] [and] [3/4 inch (19 mm) high for exterior sliding doors]**.
 4. Adjust door closer sweep periods so that, from an open position of 70 degrees, the door will take at least 3 seconds to move to a point **3 inches** (75 mm) from the latch, measured to the leading edge of the door.
- I. Keying Conference: Conduct conference at Project site to comply with requirements in Section 013100 "Project Management and Coordination." In addition to Owner[, **Construction Manager,**] Contractor, and Architect, conference participants shall also include Installer's Architectural Hardware Consultant[**and Owner's security consultant**]. Incorporate keying conference decisions into final keying schedule after reviewing door hardware keying system including, but not limited to, the following:
1. Function of building, flow of traffic, purpose of each area, degree of security required, and plans for future expansion.
 2. Preliminary key system schematic diagram.
 3. Requirements for key control system.
 4. Requirements for access control.
 5. Address for delivery of keys.
 6. **<Insert requirements to suit Project>**.
- J. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager] <Insert location>**.
1. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 2. Inspect and discuss preparatory work performed by other trades.

3. Inspect and discuss electrical roughing-in for electrified door hardware.
 4. Review sequence of operation for each type of electrified door hardware.
 5. Review required testing, inspecting, and certifying procedures.
 6. **<Insert agenda items>.**
- K. Manufacturer shall submit a certificate evidencing not less than five (5) years' experience in the manufacturing and supplying of the types of products to that specified.
- L. Hardware supplier: Direct factory contract supplier who employs a certified architectural hardware consultant (AHC), available at reasonable times during course Work for project hardware consultation to Owner, Architect, and Contractor and is responsible for detailing, scheduling, and ordering of finish hardware.
- M. Hardware for fire rated openings to comply with NFPA Standards 80 and 101.
- N. Each type of hardware to be obtained from a single manufacturer.
- O. Reference standards as applicable: DBC BHMA UL ANSI NFPA DHI
- P. A warranty shall be required for a period of two years, by the Installer/Contractor.
- Q. Pre-Installation Conference: Prior to installation of hardware, this Contractor Installer to meet at the project site or other mutually agreed location with installers of related work, General Contractor, Hardware Supplier, Security System Installer, and Project Manager. Record discussion and provide copy to each participant.
- R. Coordinate power supply requirements for each electrically operated hardware device with Electrical/Security Contractor.
- S. Security door equipment installation requirements: Prior to the installation of the Electronic Security Equipment, the Installer of the door and door hardware shall confirm in writing the following:
1. The door has been adjusted.
 2. The door has been properly aligned on all sides.
 3. The latch is working properly.
 4. The closer is working properly. Submit copy to DEN Project Manager.
- T. The Electronic Equipment Installer shall inspect the door and door hardware installation and confirm in writing the door and hardware installation is acceptable for proper installation of the electronic equipment. 30 Days prior to installation, the Electronic Equipment supplier shall submit a current 'Access Control System' permit issued by the City and County of Denver Building Inspection Division.
- U. Should any adjustment be required for the approval of the Security door system, the modifications and or adjustments must be made concurrently by the Electronic Equipment Installer and the Door Hardware Installer.
- V. Coordinate all work with work of other trades.

1.11 DELIVERY, STORAGE, AND HANDLING

- A. Inventory door hardware on receipt and provide secure lock-up for door hardware delivered to Project site.
- B. Tag each item or package separately with identification coordinated with the final door hardware schedule, and include installation instructions, templates, and necessary fasteners with each item or package.
- C. Deliver keys to manufacturer of key control system for subsequent delivery to Owner.
- D. Deliver keys[**and permanent cores**] to Owner by registered mail or overnight package service.

1.12 COORDINATION

- A. Coordinate layout and installation of floor-recessed door hardware with floor construction. Cast anchoring inserts into concrete.
- B. Installation Templates: Distribute for doors, frames, and other work specified to be factory prepared. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing door hardware to comply with indicated requirements.
- C. Security: Coordinate installation of door hardware, keying, and access control with Owner's security consultant.
- D. Electrical System Roughing-In: Coordinate layout and installation of electrified door hardware with connections to power supplies and building safety and security systems.
- E. Existing Openings: Where hardware components are scheduled for application to existing construction or where modifications to existing door hardware are required, field verify existing conditions and coordinate installation of door hardware to suit opening conditions and to provide proper door operation.

1.13 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of door hardware that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures including excessive deflection, cracking, or breakage.
 - b. Faulty operation of doors and door hardware.
 - c. Deterioration of metals, metal finishes, and other materials beyond normal weathering and use.
 - 2. Warranty Period: Minimum [**three (3)**] <Insert number> years from date of

Substantial Completion, unless otherwise indicated.

- a. **[Electromagnetic] [and] [Delayed-Egress]** Locks: Minimum **[Five]** <Insert number> years from date of Substantial Completion.
- b. Exit Devices: Minimum **[two (2)]** <Insert number> years from date of Substantial Completion.
- c. Manual Closers: Minimum **[ten (10)]** <Insert number> years from date of Substantial Completion.
- d. Concealed Floor Closers: Minimum **[five (5)] [ten (10)] [twenty five) 25]** <Insert number> years from date of Substantial Completion.

1.14 MAINTENANCE SERVICE

- A. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions for Owner's continued adjustment, maintenance, and removal and replacement of door hardware.
- B. Maintenance Service: Beginning at Substantial Completion, provide **[six]** <Insert number> month's full maintenance by skilled employees of door hardware Installer. Include quarterly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper door and door hardware operation. Provide parts and supplies that are the same as those used in the manufacture and installation of original products.

1.15 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 SCHEDULED DOOR HARDWARE

- A. Provide door hardware for each door as scheduled **[in Part 3 "Door Hardware Schedule" Article]** **[on Drawings]** to comply with requirements in this Section.
 1. Door Hardware Sets: Provide quantity, item, size, finish or color indicated, and **[named manufacturers' products] [products equivalent in function and comparable in quality to named products] [products complying with BHMA designations referenced]**.
 2. Sequence of Operation: Provide electrified door hardware function, sequence of operation, and interface with other building control systems indicated.
- B. Designations: Requirements for design, grade, function, finish, size, and other distinctive qualities of each type of door hardware are indicated in Part 3 "Door Hardware Schedule" Article. Products are identified by using door hardware

designations, as follows:

1. Named Manufacturers' Products: Manufacturer and product designation are listed for each door hardware type required for the purpose of establishing minimum requirements. Manufacturers' names are abbreviated in Part 3 "Door Hardware Schedule" Article.
2. References to BHMA Designations: Provide products complying with these designations and requirements for description, quality, and function.

2.2 HINGES

A. Hinges: BHMA A156.1. [Provide template-produced hinges for hinges installed on hollow-metal doors and hollow-metal frames.]

1. Manufacturers: Subject to compliance with requirements, provide products by the following:
 - a. Hager Companies- No substitution.

B. Hinges shall conform to ANSI A156.1. Hinges used on metal doors and frames shall also conform to ANSI A156.7. Hinge size shall conform to the hinge manufacturer's printed recommendations and shall be indicated on the hardware schedule.

C. Hinges for reverse bevel doors with locks shall have pins non-removable by means such as a set screw in the barrel. Set screw shall be inaccessible when the door is closed.

D. Hinges with anti-friction bearings may be furnished in lieu of ball bearing hinges unless prohibited by building codes.

E. Butt hinges shall conform to the following types unless otherwise specified under hardware sets:

	Wrought Steel	Wrought Steel	Wrought Brass or Bronze	Wrought Brass or Bronze	Stainless Steel	Stainless Steel
	Grade	Grade	Grade	Grade	Grade	Grade
Classification	1	2	1	2	1	2
Full Mortise	A8111	A8112	A2111	A2112	A5111	A5112
Half Mortise	A8211	A8212	A2211	A2212	A5211	A5212
Full Mortise	A8311	A8312	A2311	A2312	A5311	A5312
Half Mortise	A8411	A8412	A2411	A2412	A5411	A5412

F. Grade 1 hinges shall be used for doors subject to very high frequency use (more than 60,000 cycles per year), unusually heavy doors including all lead lined doors, doors 42 inches wide or wider, exterior doors equipped with overhead holders, and doors subject to other unusual stress conditions.

- G. Grade 2 hinges shall be used for doors subject to high frequency use (10,000 to 60,000 cycles per year), outswinging exterior doors not equipped with overhead holders, and standard weight doors with closers.
- H. Number of hinges shall be three hinges for each door leaf up to 5' high, four hinges for doors from 5' to 7'6" in height, and one additional hinge for each additional 30" or fraction thereof in height.
- I. Height of hinge shall be 4-1/2" for doors up to and including 36" wide and 5" for doors 36" to 48".
- J. Exterior outswing doors shall be finished with nonferrous hinges.
- K. Refer to hardware schedule for specific requirements.

2.3 SELF-CLOSING HINGES AND PIVOTS

- A. Self-Closing Hinges and Pivots: BHMA A156.17.
- B. Pivots shall conform to ANSI A156.4. Pivots shall be Grade 1.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Hager Companies. No substitutions.

2.4 CENTER-HUNG AND OFFSET PIVOTS

- A. Center-Hung and Offset Pivots: BHMA A156.4.
- B. Pivots shall conform to ANSI A156.4. Pivots shall be Grade 1.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. DORMA Architectural Hardware; Member of The DORMA Group North America.
 - b. IVES Hardware; an Ingersoll-Rand company.
 - c. Rixson Specialty Door Controls; an ASSA ABLOY Group company.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.

2.5 CONTINUOUS HINGES

- A. Continuous Hinges: BHMA A156.26; minimum **0.120-inch-** (3.0-mm-) thick, hinge leaves with minimum overall width of **4 inches** (102 mm); fabricated to full height of door and frame and to template screw locations; with components finished after milling and drilling are complete.

- B. Continuous Hinges shall conform to ANSI A156.26.
- C. Continuous, Gear-Type Hinges: Extruded-aluminum, pinless, geared hinge leaves joined by a continuous extruded-aluminum channel cap; with concealed, self-lubricating thrust bearings.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by the following:
 - a. Hager Companies, ROTON Continuous Hinge. No substitutions.
- D. Door hanging system is to be manufactured of 6063-T6 anodized aluminum, non-handed and anodized as required by design. Hinges shall be manufactured of three interlocking components, two hinge leaves, and one cover channel. The door leaf and jamb leaf shall be geared together for the entire length of the hinge, and joined by a cover channel. The pinless assembly of three interlocking extrusions shall be applied to the full height of the door and frame without mortising. All exposed working metal surfaces shall be coated with a TFE dry lubricant. Vertical door loads shall be carried on Lubriloy™ RL bearings through a full 180° opening; no other substitute material will be accepted. Standard Duty Continuous Geared Hinges, up to 83", shall have 16 each bearings; Heavy Duty Hinges, up to 83" shall have 32 each bearings. Hinges of greater length will have proportionately greater number of bearings. Bearings are to be completely concealed in the cover channel. Hinge cover channel is to be monolithic in appearance and withstand 7000 foot pounds of pull apart pressure. Hinges with visible knuckle separations are not acceptable. Self-drilling (Tek's Point), hardened and plated steel fasteners 12-24 x 11/16", flat head undercut. Phillips head screws are to be furnished. All aluminum components are to be anodized in accordance with 202-R1 (AA-M12C22A21) Clear, as required by design. All fire rated hinges shall carry Underwriters Laboratory Inc. Certification, up to and including all 90-minute applications for wood doors, as well as 3-hour applications for all fire rated metal doors.

2.6 MECHANICAL LOCKS AND LATCHES

- A. Locks and Latches shall conform to ANSI A156.13.
- B. Locks, latches, and deadlocks shall be the products of a single manufacturer. Installed locksets shall provide the required degree of resistance to unauthorized entry. Type and Function shall be as specified under hardware sets. Series 1000, Grade 1 lever handles shall be either forged or solid cast and conform to ANSI A117. Series 1000 lock and latches shall have a latch with a minimum of 3/4 inches throw, and a deadbolt with a minimum of 1 inch throw.
- C. Lock Functions: As indicated in door hardware schedule.
- D. Lock Throw: Comply with testing requirements for length of bolts required for labeled fire doors, and as follows:
 - 1. Bored Locks: Minimum 1/2-inch (13-mm) latchbolt throw.

2. Mortise Locks: Minimum **3/4-inch** (19-mm) latchbolt throw.
 3. Deadbolts: Minimum [**1-inch** (25-mm)] [**1.25-inch** (32-mm)] **<Insert dimension>** bolt throw.
- E. Lock Backset: **2-3/4 inches** (70 mm), unless otherwise indicated.
- F. Lock Trim:
1. Description: **[As indicated on Drawings] <Insert description or manufacturer's design designation>**.
 2. Levers: [**Wrought**] [**Forged**] [**Cast**].
 - a. **<Insert model number and description>**.
 3. Knobs: [**Wrought**] [**Forged**] [**Cast**].
 4. Escutcheons (Roses): [**Wrought**] [**Forged**] [**Cast**].
 5. Dummy Trim: Match [**knob**] [**lever**] lock trim and escutcheons.
 6. Operating Device: [**Lever**] [**Knob**] with escutcheons (roses).
- G. Strikes: Provide manufacturer's standard strike for each lock bolt or latchbolt complying with requirements indicated for applicable lock or latch and with strike box and curved lip extended to protect frame; finished to match lock or latch.
1. Flat-Lip Strikes: For locks with three-piece antifriction latchbolts, as recommended by manufacturer.
 2. Extra-Long-Lip Strikes: For locks used on frames with applied wood casing trim.
 3. Aluminum-Frame Strike Box: Manufacturer's special strike box fabricated for aluminum framing.
 4. Rabbet Front and Strike: Provide on locksets for rabbeted meeting stiles.
- H. Bored Locks: BHMA A156.2; Grade [**1**] [**2**]; Series 4000.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Best Access Systems; Div. of Stanley Security Solutions, Inc. No substitutions.
- I. Mortise Locks: BHMA A156.13; [**Operational**] [**Security**] Grade [**1**] [**2**]; stamped steel case with steel or brass parts; Series 1000.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Best Access Systems; Div. of Stanley Security Solutions, Inc. No substitutions.
- J. Interconnected Locks: BHMA A156.12; Grade [**1**] [**2**]; Series 5000.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Best Access Systems; Div. of Stanley Security Solutions, Inc. No substitutions.
- K. Roller Latches: BHMA A156.16; Grade 1; rolling plunger that engages socket or catch, with adjustable roller projection.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Best Access Systems; Div. of Stanley Security Solutions, Inc. No substitutions.
- L. Push-Pull Latches: [**Bored, BHMA A156.2; Series 4000**] [**Mortise, BHMA A156.13**]; Grade [**1**] [**2**]; with paddle handles that retract latchbolt; capable of being mounted vertically or horizontally.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Best Access Systems; Div. of Stanley Security Solutions, Inc. No substitutions.

2.7 AUXILIARY LOCKS

- A. Bored Auxiliary Locks: BHMA A156.5: Grade [**1**] [**2**]; with strike that suits frame.
- B. Locks and Latches shall conform to ANSI A156.13. Locks, latches, and deadlocks shall be the products of a single manufacturer. Installed locksets shall provide the required degree of resistance to unauthorized entry. Type and Function shall be as specified under hardware sets. Series 1000, Grade 1 lever handles shall be either forged or solid cast and conform to ANSI A117. Series 1000 lock and latches shall have a latch with a minimum of 3/4 inches throw, and a deadbolt with a minimum of 1 inch throw.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by the following:
 - a. Best Access Systems; Div. of Stanley Security Solutions, Inc. No substitutions.
- C. Mortise Auxiliary Locks: BHMA A156.5; Grade [**1**] [**2**]; with strike that suits frame.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Best Access Systems; Div. of Stanley Security Solutions, Inc. No substitutions.
- D. Narrow Stile Auxiliary Locks: BHMA A156.5; Grade [**1**] [**2**]; with strike that suits frame.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Best Access Systems; Div. of Stanley Security Solutions, Inc. No substitutions.

2.8 SLIDING AND FOLDING DOOR HARDWARE:

- A. Sliding and Folding Door Hardware shall conform to ANSI A156.14. Sliding and Folding Hardware shall be specified with the appropriate Grade for the test door weights listed in ANSI A156.14.

2.9 KEYPAD LOCKSETS:

- A. Keypad locksets shall conform to ANSI A156.13. Locks shall have 12 position keypad design with audible and visual feedback. Locks shall include optional extended battery pack. Maximum of 50 users. All programming occurs through keypad.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Acceptable keypad lock manufacturer is Best Access Systems "EZ" Series. No Substitutions.

B. EXIT DEVICES:

- C. Exit devices shall conform to ANSI A156.3. Finish shall match that specified for lock trim. Exit devices shall be Grade 1. Type and Function shall be as specified under hardware sets. Exit devices to be Modern style, with touch pad in lieu of cross bar with lever arms, as called out in ANSI A156.3. Exit devices shall have a hydraulic sound damper to reduce noise of the operation of the device. All working parts must be made of stamped steel zincdichromate parts. No diecast, plastic, or cast brass parts shall be used. Only compression springs are acceptable in device mechanism. All surface strikes shall be roller type and come complete with a plate underneath to prevent movement. The latchbolt shall have a self-lubricating coating to reduce friction and wear. Plated latch bolts are unacceptable. Wherever possible all exit devices shall have deadlocking feature. If electric operation is required for use with security system, all rim, vertical rod, and mortise lock devices shall have the capability of electric latch retraction. Manufacturer shall have accessory products available including power supplies, monitoring switches, and controls to complete the system. All components shall be UL listed. Manufacturer shall have a minimum of two years experience with electrified products installed in similar facilities. Exit Devices shall have manufacturers standard warranty for a minimum of three (3) years. The use of vertical rod devices is discouraged.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Acceptable lockset manufacturer is Von Duprin. No Substitutions.

2.10 CLOSERS:

- A. Closers shall conform to ANSI A156.4. Closers shall be Grade 1. Type and closer options to be selected for appropriate applications as recommended by closer manufacturer. Overhead closers shall have manufacturers standard warranty for a minimum of ten (10) years. Floor closers shall have a warranty for a minimum of ten (10) years. All closers to be specified with hydraulic backcheck. Separate adjusting valves shall be provided for closing speed, latching speed, and backcheck. Closers shall have multi-size spring power adjustment to permit setting of spring from (BF) 1 through 4 or 2 through 6 with additional spring power available. Closer may be deleted off HARDWARE SETS when not appropriate or required by code. All closers shall be furnished with sex nuts and bolts. Place closers inside building, stairs, and rooms. Provide plates, brackets, and special templating when needed for interface with particular header, door and wall conditions, and neighboring hardware.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Acceptable closer manufacturer is Norton. No Substitutions. Use Norton 7500 at exterior doors and 7500BF at interior doors.

2.11 LOW-ENERGY POWER OPERATORS:

- A. Low-Energy power operators shall conform to ANSI A156.19. Furnish all labor, materials, equipment, and services necessary for the proper installation of Low-Energy power operator handicap door system. Low-Energy power operators shall be completely electromechanical with microprocessor control, requiring no microswitches on the operator. The electrical contractor shall provide 115V., 60Hz., one-phase 15-amp supply to the door header. Also conduit and electrical boxes, if switches are remote. Doors shall be equipped with decal(s) visible from either side, instructing the user to the operation and function of the door. In the handicap mode, one of the activating switches on either side of the door is actuated and the door opens slowly-to backcheck (80°) in 3 to 6 seconds and to fully open position in 4 to 7 seconds. The door will remain open for a period of 5 seconds (the minimum allowed by the ANSI standard) to 30 seconds as determined by the setting entered into the variable time delay on the control box. After the time delay, the door closes by the spring in the door operator from 90° to 10° in 3 to 6 seconds, and from 10° to fully closed in 1-1/2 to 2 seconds. The operator shall function as a manual door closer when not activated by activating switches.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Acceptable Low-energy power operator manufacturer is Dor-O-Matic Senior Swing. No Substitutions.

2.12 DOOR TRIM:

- A. Door trim shall conform to ANSI A156.6. Flat metal trim shall be a minimum of 0.050 inches (1.27mm) thick. Size and type Kick, Mop, and Armor plates are specified or shown on the drawings.

2.13 WEATHERSTRIP AND THRESHOLDS:

- A. Weatherstrip and Thresholds shall conform to ANSI A156.21 and ANSI A156.22. Type as scheduled.
- B. Furnish surface mount fire rated door sweeps at openings where undercut of door exceeds requirements as listed in NFPA 80, Table 1-11.4 Clearances Under the Bottoms of Doors.

2.14 AUXILIARY HARDWARE:

- A. Auxiliary hardware shall conform to ANSI A156.16. Type as scheduled.

2.15 WALL AND FLOOR STOPS:

- A. Wall shall conform to ANSI A156.16. Type as scheduled.
- B. At openings where wall stops are inappropriate, a "stop arm closer" at outswing doors or an overhead stop at inswing doors shall be used.

2.16 ELECTRO-MAGNETIC DOOR HOLDERS:

- A. Electro-Magnetic door holders shall conform to ANSI A156.15.
- B. Provide wall mounted Electro-Magnetic door holders having a holding power of 25-40 pounds.
- C. All electrical wiring shall be concealed. Provide units with the required clearance needed for trim projection.
- D. Provide units with triple voltage coils, 12VDC, 24VAC/DC, and 120VAC.
- E. Anchor the electromagnet firmly since the wall portion will function as a doorstop. Locate magnet approximately 6 inches in from lock edge of door. Wall magnets should be mounted approximately 2 to 4 feet above the floor for optimum performance.
- F. All armatures shall have quick release button to aid in eliminating residual magnetism.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Acceptable Electro-Magnetic door holder manufacturer is Rixson. No Substitutions.

2.17 OVERHEAD STOPS AND HOLDERS:

- A. Overhead stops and holders shall conform to ANSI A156.8.

2.18 ELECTRO-MECHANICAL AND SECURITY HARDWARE:

- A. Due to the high level of security required by the F.A.A. for international airports, selective hardware will be required to be electrically actuated, controlled, and/or monitored as required by the security consultants. Coordinate equipment and related devices associated with security system with all trades affected, refer to Section 281300 "Access Control." The Contractor shall install and test low voltage wiring between the electric hinge and the lockset. The Contractor shall assure that the templates provided by the Hardware supplier provides oversized openings in the hollow-metal jamb for wiring entrance of the electric hinge harness. The Contractor shall provide a plastic grommet in the wiring opening of the hollow-metal frame and door.
- B. Intellikey Access Control: Where indicated in schedule this contractor shall furnish Intellikey Access Control consisting of ACS4000 Intelligent Lock Controller that consists of a circuit board with a microprocessor and associated circuitry. The miniature computer reads access information from an Intelligent Key, compares this information with the information programmed into the controller's memory, and determines if the key should be granted access. Each controller can operate as an independent, stand-alone unit. The controller right at the point of access makes all access control decisions. The controller's memory shall retain programming and audit trail information, even without batteries, for up to 100 years. The electronic controller is designed to work with any Intellikey electronic cylinder. A typical installation consists of mounting the INTELLIKEY controller using an External slimline housing. The Intelligent Key carries the access control and personal identity data of the assigned keyholder. The Intelligent Key cannot be read or duplicated except by authorized personnel equipped with site-specific INTELLIKEY equipment. The Electronic Cylinder provides the link between the INTELLIKEY controller and key. INTELLIKEY controllers and keys communicate through an invisible, encrypted infrared link provided by the cylinder. INTELLIKEY cylinders are available as replacements for the standard cylinder types, including mortise and rim. The electronic cylinder may be configured for rotating operation. The Rotating Cylinder is used in conjunction with new or existing mechanical locking devices where rotation of the cylinder retracts or throws a latch bolt.
- C. Photoelectric Sensor: Where indicated on Security System drawings this contractor shall furnish 18mm threaded barrel photoelectric sensor. Acceptable photoelectric sensor manufacturer Banner S18SN6L. No Substitutions.
- D. Door Position Switch: Where indicated on Security System drawings this contractor shall furnish surface mount door position switch with 3' of stainless steel armored

cable.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Acceptable door position switch manufacturer Sentrol 2507A or Sentrol 2207A. No Substitutions.

2.19 KEY SYSTEMS:

- A. Locks: 3 keys for each lock
- B. All keys to be nickel silver.
- C. Cylinders shall be 7 pin interchangeable core. Facility locksmith shall determine keyway of cylinders.
- D. Construction cores shall be supplied for construction phase keying. Contractor shall provide one new core for each lock to the Owner 60 calendar days prior to scheduled initial punchlist date. Permanent master keyed cores are to be installed by the Owner to replace construction cores. The construction core shall be returned to the supplier.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Acceptable key system manufacturer is Best Access Systems. No Substitutions.

2.20 SURFACE BOLTS

- A. Surface Bolts: BHMA A156.16.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Burns Manufacturing Incorporated.
 - b. Don-Jo Mfg., Inc.
 - c. Door Controls International, Inc.
 - d. IVES Hardware; an Ingersoll-Rand company.
 - e. Trimco.
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.

2.21 MANUAL FLUSH BOLTS

- A. Manual Flush Bolts: BHMA A156.16; minimum **3/4-inch** (19-mm) throw; designed for mortising into door edge.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Adams Rite Manufacturing Co.; an ASSA ABLOY Group company.
 - b. Burns Manufacturing Incorporated.
 - c. Don-Jo Mfg., Inc.
 - d. Door Controls International, Inc.
 - e. Hiawatha, Inc.
 - f. IVES Hardware; an Ingersoll-Rand company.
 - g. Trimco.
 - h. **<Insert manufacturer's name>**.
 - i. or approved equal.

2.22 AUTOMATIC AND SELF-LATCHING FLUSH BOLTS

- A. Automatic and Self-Latching Flush Bolts: BHMA A156.16; minimum **3/4-inch** (19-mm) throw; designed for mortising into door edge.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Cal-Royal Products, Inc.
 - b. Door Controls International, Inc.
 - c. IVES Hardware; an Ingersoll-Rand company.
 - d. Trimco.
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.

2.23 KEYING

- A. Keying System: Factory registered, complying with guidelines in BHMA A156.28, Appendix A. Incorporate decisions made in keying conference.
 1. No Master Key System: Only change keys operate cylinder.
 2. Master Key System: Change keys and a master key operate cylinders.
 3. Grand Master Key System: Change keys, a master key, and a grand master key operate cylinders.
 4. Great-Grand Master Key System: Change keys, a master key, a grand master key, and a great-grand master key operate cylinders.
 5. Existing System:
 - a. Master key or grand master key locks to Owner's existing system.
 - b. Re-key Owner's existing master key system into new keying system.
 6. Keyed Alike: Key all cylinders to same change key.
 7. Stamping: Permanently inscribe each key with a visual key control number and include the following notation:
 - a. Notation: **["DO NOT DUPLICATE."] [Information to be furnished by**

Owner.]

8. Quantity: In addition to one extra key blank for each lock, provide the following:
 - a. Cylinder Change Keys: Three.
 - b. Master Keys: Five.
 - c. Grand Master Keys: Five.
 - d. Great-Grand Master Keys: Five.

2.24 DOOR GASKETING

- A. Door Gasketing: BHMA A156.22; air leakage not to exceed **0.50 cfm per foot** (0.000774 cu. m/s per m) of crack length for gasketing other than for smoke control, as tested according to ASTM E 283; with resilient or flexible seal strips that are easily replaceable and readily available from stocks maintained by manufacturer.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Hager Companies.
 - b. M-D Building Products, Inc.
 - c. National Guard Products.
 - d. Pemko Manufacturing Co.; an ASSA ABLOY Group company.
 - e. Reese Enterprises, Inc.
 - f. Sealeze; a unit of Jason Incorporated.
 - g. Zero International.
 - h. **<Insert manufacturer's name>**.
 - i. or approved equal.

2.25 METAL PROTECTIVE TRIM UNITS

- A. Metal Protective Trim Units: BHMA A156.6; fabricated from **0.050-inch-** (1.3-mm-) thick **[aluminum] [brass] [bronze] [stainless steel]**; with manufacturer's standard machine or self-tapping screw fasteners.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Baldwin Hardware Corporation.
 - b. Burns Manufacturing Incorporated.
 - c. Don-Jo Mfg., Inc.
 - d. Hiawatha, Inc.
 - e. IPC Door and Wall Protection Systems, Inc.; Div. of InPro Corporation.
 - f. IVES Hardware; an Ingersoll-Rand company.
 - g. Pawling Corporation.
 - h. Rockwood Manufacturing Company.
 - i. Trimco.
 - j. **<Insert manufacturer's name>**.

- k. or approved equal.

2.26 PLASTIC PROTECTION PLATES

- A. Plastic Protection Plates: BHMA A156.6; fabricated with four sides beveled; **[plastic laminate; 1/8 inch (3.2 mm) thick; NEMA LD 3, Grade HGS] [rigid plastic; 0.060-inch- (1.5-mm-) thick, PVC or acrylic-modified vinyl plastic] [acrylic; 1/8 inch (3.2 mm) thick].**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Floor Products Co., Inc.
 - b. Burns Manufacturing Incorporated.
 - c. Don-Jo Mfg., Inc.
 - d. Hiawatha, Inc.
 - e. IPC Door and Wall Protection Systems, Inc.; Div. of InPro Corporation.
 - f. Korogard Wall Protection Systems; Div. of RJF International Corporation.
 - g. Pawling Corporation.
 - h. Rockwood Manufacturing Company.
 - i. Tepromark International, Inc.
 - j. Trimco.
 - k. **<Insert manufacturer's name>**.
 - l. or approved equal.

2.27 AUXILIARY DOOR HARDWARE

- A. Auxiliary Hardware: BHMA A156.16.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Baldwin Hardware Corporation.
 - b. Cal-Royal Products, Inc.
 - c. Don-Jo Mfg., Inc.
 - d. Hager Companies.
 - e. Rockwood Manufacturing Company.
 - f. Stanley Commercial Hardware; Div. of The Stanley Works.
 - g. Trimco.
 - h. **<Insert manufacturer's name>**.
 - i. or approved equal.

2.28 FABRICATION

- A. Manufacturer's Nameplate: Do not provide products that have manufacturer's name or trade name displayed in a visible location except in conjunction with required fire-rated labels and as otherwise approved by DEN Project Manager.

1. Manufacturer's identification is permitted on rim of lock cylinders only.
- B. Base Metals: Produce door hardware units of base metal indicated, fabricated by forming method indicated, using manufacturer's standard metal alloy, composition, temper, and hardness. Furnish metals of a quality equal to or greater than that of specified door hardware units and BHMA A156.18.
- C. Fasteners: Provide door hardware manufactured to comply with published templates prepared for machine, wood, and sheet metal screws. Provide screws that comply with commercially recognized industry standards for application intended, except aluminum fasteners are not permitted. Provide Phillips flat-head screws with finished heads to match surface of door hardware, unless otherwise indicated.
 1. Concealed Fasteners: For door hardware units that are exposed when door is closed, except for units already specified with concealed fasteners. Do not use through bolts for installation where bolt head or nut on opposite face is exposed unless it is the only means of securely attaching the door hardware. Where through bolts are used on hollow door and frame construction, provide sleeves for each through bolt.
 2. Fire-Rated Applications:
 - a. Wood or Machine Screws: For the following:
 - 1) Hinges mortised to doors or frames[; **use threaded-to-the-head wood screws for wood doors and frames**].
 - 2) Strike plates to frames.
 - 3) Closers to doors and frames.
 - b. Steel Through Bolts: For the following unless door blocking is provided:
 - 1) Surface hinges to doors.
 - 2) Closers to doors and frames.
 - 3) Surface-mounted exit devices.
 3. Spacers or Sex Bolts: For through bolting of hollow-metal doors.
 4. Fasteners for Wood Doors: Comply with requirements in DHI WDHS.2, "Recommended Fasteners for Wood Doors."
 5. Gasketing Fasteners: Provide noncorrosive fasteners for exterior applications and elsewhere as indicated.

2.29 FINISHES

- A. Provide finishes complying with BHMA A156.18 as indicated in door hardware schedule.
- B. Finishes for hardware shall be as follows with listed ANSI A156.18 designations:
 1. Interior hinges: 652.
 2. Exterior hinges: 626 or 630.
 3. Locks and latchsets: 630.

4. Exit devices: US32D.
 5. Door trim: 630.
 6. Closers: 689.
 7. Thresholds and weather-stripping: Manufacturers standard clear aluminum finish.
 8. Use of other finishes shall not be accepted.
- C. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- D. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.30 PRODUCT HANDLING

- A. The Hardware Supplier shall tag each item or package of items with identification related to final hardware schedule, and include basic installation instructions with each item or package.
- B. Packaging of hardware is responsibility of supplier. As material is received by Hardware Supplier from various manufacturers, sort and repackage in containers clearly marked with appropriate hardware set number to match set numbers of approved hardware schedule. Two or more identical sets may be packed in same container.
- C. Inventory hardware jointly with representatives of Hardware Supplier and Hardware Installer until each is satisfied that count is correct.
- D. Deliver individually packaged hardware items at the proper times to the proper locations (shop or project site) for installation.
- E. This contractor to securely lock-up hardware delivered to the project, but not yet installed. Control handling and installation of hardware items that are not immediately replaceable, so that completion of the work will not be delayed by hardware losses, both before and after installation.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine doors and frames, with Installer present, for compliance with requirements for installation tolerances, labeled fire-rated door assembly construction, wall and floor construction, and other conditions affecting performance.
- B. Examine roughing-in for electrical power systems to verify actual locations of wiring connections before electrified door hardware installation.

- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Steel Doors and Frames: For surface applied door hardware, drill and tap doors, and frames according to ANSI/SDI A250.6.
- B. Wood Doors: Comply with DHI WDHS.5 "Recommended Hardware Reinforcement Locations for Mineral Core Wood Flush Doors."

3.3 INSTALLATION

- A. This Hardware Contractor to examine and approve in writing the substrate and conditions under which work is to be performed.
- B. Hardware Contractor shall have a representative of the hardware manufacturer check all hardware for adjustment and installation prior to the Contractor's request for final acceptance and notify in writing the DEN Project Manager for contractor correction.
- C. Set units level, plumb and true to line and location. Adjust and reinforce the attachment substrate as necessary for proper installation and operation.
- D. Drill and countersink units that are not factory-prepared for anchorage fasteners. Space fasteners and anchors in accordance with industry standards.
- E. Mounting Heights: Mount door hardware units at heights [**indicated on Drawings**] [**to comply with the following**] unless otherwise indicated or required to comply with governing regulations.
 - 1. Standard Steel Doors and Frames: ANSI/SDI A250.8.
 - 2. Custom Steel Doors and Frames: HMMA 831.
 - 3. Wood Doors: DHI WDHS.3, "Recommended Locations for Architectural Hardware for Wood Flush Doors, except as specifically indicated or required to comply with governing regulations, and except as may be otherwise directed by DEN Project Manager.
- F. Install each door hardware item to comply with manufacturer's written instructions and recommendations. Where cutting and fitting are required to install door hardware onto or into surfaces that are later to be painted or finished in another way, coordinate removal, storage, and reinstallation of surface protective trim units with finishing work specified in Division 9 sections. Do not install surface-mounted items until finishes have been completed on substrates involved.
 - 1. NOTE: NO POWER DRIVEN TOOLS SHALL BE USED FOR INSTALLATION OF LOCKSETS AND HARDWARE ON DOORS. ALL HOLES SHALL BE PRE-DRILLED THE APPROPRIATE SIZE FOR THE FASTENERS.
 - 2. Set units level, plumb, and true to line and location. Adjust and reinforce attachment substrates as necessary for proper installation and operation.
 - 3. Drill and countersink units that are not factory prepared for anchorage fasteners.

Space fasteners and anchors according to industry standards.

- G. Hinges: Install types and in quantities indicated in door hardware schedule but not fewer than the number recommended by manufacturer for application indicated or one hinge for every **30 inches** (750 mm) of door height, whichever is more stringent, unless other equivalent means of support for door, such as spring hinges or pivots, are provided.
 - H. Intermediate Offset Pivots: Where offset pivots are indicated, provide intermediate offset pivots in quantities indicated in door hardware schedule but not fewer than one intermediate offset pivot per door and one additional intermediate offset pivot for every **30 inches** (750 mm) of door height greater than **90 inches** (2286 mm).
 - I. Lock Cylinders: Install construction cores to secure building and areas during construction period.
 - 1. Replace construction cores with permanent cores as **[indicated in keying schedule] [directed by Owner]**.
 - 2. Furnish permanent cores to Owner for installation.
 - J. Key Control System: Tag keys and place them on markers and hooks in key control system cabinet, as determined by final keying schedule.
 - K. Boxed Power Supplies: Locate power supplies as indicated or, if not indicated, **[above accessible ceilings] [in equipment room]**. Verify location with DEN Project Manager.
 - 1. Configuration: Provide **[one power supply for each door opening] [least number of power supplies required to adequately serve doors]** with electrified door hardware.
 - L. Thresholds: Set thresholds for exterior doors and other doors indicated in full bed of grout. Seal with butyl-rubber or polyisobutylene mastic sealant complying with requirements specified in Section 079200 "Joint Sealants."
 - M. Stops: Provide floor stops for doors unless wall or other type stops are indicated in door hardware schedule. Do not mount floor stops where they will impede traffic.
 - N. Perimeter Gasketing: Apply to head and jamb, forming seal between door and frame.
 - O. Meeting Stile Gasketing: Fasten to meeting stiles, forming seal when doors are closed.
 - P. Door Bottoms: Apply to bottom of door, forming seal with threshold when door is closed.
- 3.4 FIELD QUALITY CONTROL
- A. Independent Architectural Hardware Consultant: Owner will engage a qualified independent Architectural Hardware Consultant to perform inspections and to prepare inspection reports.

1. Independent Architectural Hardware Consultant will inspect door hardware and state in each report whether installed work complies with or deviates from requirements, including whether door hardware is properly installed and adjusted.

3.5 ADJUSTING

- A. Initial Adjustment: Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements. Clean adjacent surfaces soiled by hardware installation.
 1. Spring Hinges: Adjust to achieve positive latching when door is allowed to close freely from an open position of 30 degrees.
 2. Electric Strikes: Adjust horizontal and vertical alignment of keeper to properly engage lock bolt.
 3. Door Closers: Adjust sweep period to comply with accessibility requirements and requirements of authorities having jurisdiction.
- B. Final Adjustment: Wherever hardware installation is made more than one month prior to acceptance or occupancy of a space or area, return to the work during the week prior to acceptance or occupancy, and make final check and adjustment of all hardware items in such space or area. Clean operating items as necessary to restore proper function and finish of hardware and doors. Adjust door control devices to compensate for final operation of heating and ventilating equipment.
- C. Occupancy Adjustment: Approximately [**three (3)**] [**six (6)**] <Insert number> months after date of Substantial Completion, Installer's Architectural Hardware Consultant, accompanied by the representative of the latch and lock manufacturer, shall examine and readjust each item of door hardware, including adjusting operating forces, as necessary to ensure function of doors, door hardware, and electrified door hardware.
 1. Consult with and instruct Owner's personnel in recommended additions to the maintenance procedures. Replace hardware items that have deteriorated or failed due to faulty design, materials, or installation of hardware units. Prepare a written report of current and predictable problems in the performance of the hardware, and submit report to DEN Project Manager.

3.6 CLEANING AND PROTECTION

- A. Clean adjacent surfaces soiled by door hardware installation.
- B. Clean operating items as necessary to restore proper function and finish.
- C. Provide final protection and maintain conditions that ensure that door hardware is without damage or deterioration at time of Substantial Completion.

3.7 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain door hardware and door hardware finishes. Refer to Section 017900 "Demonstration and Training."
1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

3.8 HARDWARE SCHEDULE LEGEND

- A. Hardware schedule legend:

	ITEM	MANUFACTURER	APPROVED SUBSTITUTES
1.	Hinges Electric Hinges	(HA) Hager Hinge	No substitution
2.	Locksets	(BE) Best Access Systems	No substitution
3.	Cylinders	(BE) Best Access Systems	No substitution
4.	Exit Devices	(VD) Von Duprin	No substitution
5.	Closers	(NO) Norton	No substitution
6.	Trim	(TR) Trimco	Ives, Hager
7.	Magnetic Locks	(LO) Locknetics	
8.	Thresholds, Weatherstripping	(PE) Pemko	Reese, National Guard, Hager
9.	Auto Flush Bolts	(DC) Door Controls	Trimco, Ives
10.	Photoelectric Sensors	(BA) Banner	No substitution
11.	Door Position Switches	(SE) Sentrol	No substitution
12.	Intellikey Access Control	(IL) Intellikey	No substitution

- B. Hardware Schedule Notes:

1. Hardware specified is for typical doors. Doors that do not meet the criteria contained within the schedule contact DEN Project Manager for additional hardware requirements.
2. Delayed Egress Doors to be supplied as follows:
 - a. All Hardware adjustments on the delayed egress doors are to be made by the Contractor, through a qualified technician. The final electrical connection to panic, magnetic lock, electric hinge, power supply/controller, reset switch, and horn will be by the Contractor in the presence of DEN Personnel. Coordinate with the electrical, security, and fire alarm representatives of DEN. Contractor to install all approved electrical wires,

- power supplies, low voltage wiring, conduit, and devices.
- b. System must be U. L. listed and be approved by Denver Code Department, specifically for this project.
- c. Power supply for system shall be U. L. approved as a power supply.
- d. System will not have manual reset at door. Reset is at Central Security.
- e. System shall conform to current building code section "Special Egress Control Devices."
- f. Doorframes shall be constructed to accept any special construction of the electric hinges, and electric eye recessed in the frame and magnetic holding device where applicable. Electric boxes or raceways need to be provided on or in the frame to accommodate these devices.

3.9 DOOR HARDWARE SCHEDULE

Door Hardware Set No. <Insert number>

Locations:<Insert type of door or door numbers>; each to have the following:

Qty.	Item	Manufacturer	Product	Finish
<#>	<Insert item>.	<Insert manufacturer>.	<Insert product>.	<Insert finish>.
<#>	<Insert item>.	<Insert manufacturer>.	<Insert product>.	<Insert finish>.
<#>	<Insert item>.	<Insert manufacturer>.	<Insert product>.	<Insert finish>.
<#>	<Insert item>.	<Insert manufacturer>.	<Insert product>.	<Insert finish>.
<#>	<Insert item>.	<Insert manufacturer>.	<Insert product>.	<Insert finish>.
<#>	<Insert item>.	<Insert manufacturer>.	<Insert product>.	<Insert finish>.
<#>	<Insert item>.	<Insert manufacturer>.	<Insert product>.	<Insert finish>.
<#>	<Insert item>.	<Insert manufacturer>.	<Insert product>.	<Insert finish>.
<#>	<Insert item>.	<Insert manufacturer>.	<Insert product>.	<Insert finish>.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 087100

SECTION 087113 - AUTOMATIC DOOR OPERATORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Power door operators for swinging doors.
2. Low-energy door operators for swinging doors.
3. Power-assist door operators for swinging doors.
4. Guide rails.

B. Related Requirements:

1. **[Section 033000 "Cast-in-Place Concrete"] [Section 033053 "Miscellaneous Cast-in-Place Concrete"]** for installing recessed metal frames for control mats in concrete.
2. Section 084229.33 "Swinging Automatic Entrances" for swinging doors and frames packaged with automatic door operators.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. AAADM: American Association of Automatic Door Manufacturers.
- B. Activation Device: A control that, when actuated, sends an electrical signal to the door operator to open the door.
- C. Double-Egress (Doors): A pair of doors that simultaneously swing with the two doors moving in opposite directions with no mullion between them.
- D. Double-Swing (Doors): A pair of doors that swing with the two doors moving in opposite directions with a mullion between them; each door functioning as a single-swing door.
- E. Safety Device: A control that, to avoid injury, prevents a door from opening or closing.

- F. For automatic door terminology, see [**BHMA A156.10**] [and] [**BHMA A156.19**] for definitions of terms.

1.4 COORDINATION

- A. Coordinate sizes and locations of recesses in concrete floors for recessed control mats that control automatic door operators. Concrete, reinforcement, and formwork requirements are specified elsewhere.
- B. Templates: Distribute for doors, frames, and other work specified to be factory prepared and reinforced for installing automatic door operators.
- C. Coordinate hardware for doors with operators to ensure proper size, thickness, hand, function, and finish.
- D. Electrical System Roughing-in: Coordinate layout and installation of automatic door operators with connections to power supplies[**and access-control system**].
- E. Pneumatic System Roughing-in: Coordinate layout and installation of automatic door operators and power units with compressed-air piping.

1.5 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at [**Project site**] [**location and time as determined by DEN Project Manager**]<Insert location>.

1.6 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for automatic door operators.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
 - 3. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For automatic door operators.
 - 1. Include plans, elevations, sections, hardware mounting heights, and attachment details.
 - 2. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Indicate locations of activation and safety devices.
 - 4. Include diagrams for power, signal, and control wiring.
 - 5. Include plans, elevations, sections, and attachment details for guide rails.
- C. Samples: For each exposed product and for each color and texture specified, [**manufacturer's standard size**] <Insert dimensions>.

1.7 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For [Installer] [Certified Inspector].
- B. Product Certificates: For each type of automatic door operator. [~~For each operator for fire-rated door assemblies, certify that operator is listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction for use on types and sizes of labeled fire doors required.~~]
- C. Field quality-control reports.
- D. Sample Warranties: For manufacturer's special warranties.

1.8 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For automatic door operators, safety devices, and control systems, to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.9 QUALITY ASSURANCE

- A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer for installation and maintenance of units required for this Project[**and who employs a Certified Inspector**].
 - 1. Maintenance Proximity: Not more than [**two (2)**] <Insert number> hours' normal travel time from Installer's place of business to Project site.
- B. Certified Inspector Qualifications: Certified by AAADM.

1.10 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of automatic door operators that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Faulty or sporadic operation of automatic door operator, including controls.
 - b. Deterioration of metals, metal finishes, and other materials beyond normal weathering or use.
 - 2. Warranty Period: Minimum [**two (2)**] <Insert number> years from date of Substantial Completion.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. [Besam Entrance Solutions](#); Subsidiary of ASSA ABLOY Entrance Systems.
2. [Door Motion Technologies, Inc.](#)
3. [DORMA Architectural Hardware; Div. of DORMA Group North America.](#)
4. [DORMA Automatics; Div. of DORMA Group North America.](#)
5. [Horton Automatics; a division of Overhead Door Corporation.](#)
6. [Hunter Automatics Inc.](#)
7. [LCN Closers; an Ingersoll-Rand company.](#)
8. [Nabco Entrances Inc.](#)
9. [record-usa.](#)
10. [SARGENT Manufacturing Company; an ASSA ABLOY Group company.](#)
11. [Stanley Access Technologies, LLC; Div. of Stanley Security Solutions.](#)
12. **<Insert manufacturer's name>.**
13. or approved equal.

- B. Source Limitations: Obtain automatic door operators, including activation and safety devices, from **[single source from single manufacturer.] [same manufacturer as for hardware in Section 087100 "Door Hardware."]** **[same manufacturer as for hardware in Section 087111 "Door Hardware (Descriptive Specification)."]**

2.2 AUTOMATIC DOOR OPERATORS, GENERAL

- A. General: Provide operators of size recommended by manufacturer for door size, weight, and movement; for condition of exposure; and for long-term, maintenance-free operation under normal traffic load for occupancy type indicated; and according to UL 325. Coordinate operator mechanisms with door operation, hinges, and activation and safety devices.

1. Emergency Breakaway: Where indicated for center-pivoted doors, provide emergency breakaway feature for reverse swing of doors. Equip system to discontinue power to automatic door operator when door is in emergency breakaway position, to return door to closed position after breakaway, and to automatically reset.

2. Fire-Rated Doors: Provide door operators for fire-rated door assemblies that comply with NFPA 80 for fire-rated door components and are listed and labeled by a qualified testing agency.
 3. Wind Load: Provide door operators on exterior doors that will open and close doors and maintain them in fully closed position when subjected to wind load of **<Insert wind load>**.
- B. Electromechanical Operating System: Self-contained unit powered by permanent-magnet dc motor; with closing speed controlled mechanically by gear train and dynamically by braking action of electric motor, connections for power and activation- and safety-device wiring, and manual operation including spring closing when power is off.
- C. Electrohydraulic Operating System: Self-contained, low-pressure unit; with separate cylinders for power and checking, connections for power and activation- and safety-device wiring, and manual operation including spring closing when power is off.
- D. Pneumatic Operating System: Pneumatic operator, air opened and spring closed; with checking in both cycles and manual operation when power is off.
1. Power Unit: Control box and compressor unit, complete with tank, compressor, air line to operator, motor, regulator, safety valve, pressure cutoff switch, and automatic air-line filter drain.
 2. Power Unit: Remote-control box powered by compressed-air system specified in Section 221513 "General-Service Compressed-Air Piping" and Section 221519 "General-Service Packaged Air Compressors and Receivers."
- E. Hinges: See [**Section 087100 "Door Hardware"**] [**Section 087111 "Door Hardware (Descriptive Specification)"**] for hinge type for each door that door operator shall accommodate.
- F. Housing for Overhead Concealed Operators: Fabricated from minimum **0.125-inch-** (3.2-mm-) thick, extruded or formed aluminum and extending full width of door opening including door jambs to conceal door operators and controls. Provide hinged or removable access panels for service and adjustment of door operators and controls. Secure panels to prevent unauthorized access.
- G. Cover for Surface-Mounted Operators: Fabricated from **0.125-inch-** (3.2-mm-) thick, extruded or formed aluminum[; **manufacturer's standard width**] [; **continuous over full width of operator-controlled door opening**] [; **continuous over full width of door opening including door jambs**]; with enclosed end caps, provision for maintenance access, and fasteners concealed when door is in closed position.
- H. Brackets and Reinforcements: Fabricated from aluminum with nonstaining, nonferrous shims for aligning system components.
- I. Fire-Door Package: Consisting of UL-listed latch mechanism, power-reset box, and caution signage for fire-rated doors. Latch mechanism shall allow door to swing free during automatic operation; when fire is detected, latch actuator shall cause exit hardware to latch when door closes. Provide latch actuators with fail-secure design.

- J. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.3 POWER DOOR OPERATORS

- A. Standard: BHMA A156.10.
- B. Performance Requirements:
1. Opening Force:
 - a. Power-Operated Doors: Not more than **50 lbf (222 N)** required to manually set door in motion if power fails; not more than **15 lbf (67 N)** required to open door to minimum required width.
 - b. Power-Operated Swinging Doors: Not more than **30 lbf (133 N)** required to manually open door if power fails.
 - c. Breakaway Device for Power-Operated Doors: Not more than **50 lbf (222 N)** required for breakaway door or panel to open.
 2. Entrapment-Prevention Force: Not more than **40 lbf (178 N)** required to prevent stopped door in the last 10 degrees of opening from moving in the direction of opening; not more than **30 lbf (133 N)** required to prevent stopped door from moving in direction of closing.
- C. Configuration: Operator to control [**single swinging door**] [**pair of swinging doors**].
1. Traffic Pattern: [**One way**] [**Two way**] [**Double swing**] [**Double egress**].
 2. Operator Mounting: [**Surface**] [**Overhead concealed**].
- D. Operation: Power opening and[**power-assisted**] spring closing. Provide time delay for door to remain open before initiating closing cycle as required by BHMA A156.10.
- E. Operating System: [**Electromechanical**] [**Electrohydraulic**] [**Pneumatic**].
- F. Microprocessor Control Unit: Solid-state controller.
- G. Features:
1. Adjustable [**opening**] [**and**] [**closing**] speed.
 2. Adjustable [**opening**] [**and**] [**closing**] force.
 3. Adjustable backcheck.
 4. Adjustable hold-open time from zero to 30 seconds.
 5. Adjustable time delay.
 6. Adjustable acceleration.
 7. Adjustable limit switch.
 8. Obstruction recycle.
 9. Automatic door re-open if stopped while closing.
 10. On-off/hold-open switch to control electric power to operator[; **key operated**].
 11. **<Insert feature>**.

- H. Controls: Activation and safety devices [**as indicated on Drawings and**] according to BHMA standards.
1. Activation Device: Motion sensor mounted on ingress side of door header to detect pedestrians in activating zone and to open door.
 2. Activation Device: Control mat installed on ingress side of door to detect pedestrians in activating zone and to open door.
 3. Activation Device: [**Push-plate switch**] [**Push-button switch**] [**Key switch**] [**on each side of door**] to activate door operator.
 4. Safety Device: Presence sensor mounted on [**door header**] [**horizontal door muntin**] [**guide rail**] to detect pedestrians in presence zone and to prevent door from closing.
 5. Safety Device: One photoelectric beam mounted in guide rails to detect pedestrians in presence zone and to prevent door from closing.
 6. Safety Device: Control mat(s) installed on egress side of door to detect pedestrians in presence and safety zones and to prevent door from closing.
- I. Exposed Finish: [**Class I, clear anodic finish**] [**Class II, clear anodic finish**] [**Class I, color anodic finish**] [**Class II, color anodic finish**] [**Baked-enamel or powder-coat finish**] [**Metal cladding**] [**Finish matching door and frame**] [**Finish matching door hardware**] <Insert finish>.
1. Color: [**Light bronze**] [**Medium bronze**] [**Dark bronze**] [**Black**] [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry colors and color densities**] <Insert color>.
 2. Metal Cladding: [**No. 4, directional-satin-finish stainless steel**] [**No. 8, mirrorlike-reflective, nondirectional-polish-finish stainless steel**] [**Satin brass**] [**Polished brass**] [**Satin bronze**] [**Polished bronze**] <Insert finish>.

2.4 LOW-ENERGY DOOR OPERATORS

- A. Standard: BHMA A156.19.
- B. Performance Requirements:
1. Opening Force if Power Fails: Not more than **15 lbf (67 N)** required to release latch if provided, not more than **30 lbf (133 N)** required to manually set door in motion, and not more than **15 lbf (67 N)** required to fully open door.
 2. Entrapment-Prevention Force: Not more than **15 lbf (67 N)** required to prevent stopped door from closing or opening.
- C. Configuration: Operator to control single swinging door.
1. Traffic Pattern: [**One**] [**Two**] way.
 2. Operator Mounting: [**Surface**] [**Overhead concealed**].
- D. Configuration: Operator to control pair of swinging doors.

1. Traffic Pattern: [**One way**] [**Two way**] [**Double egress**] [**Double swing**].
 2. Mounting: [**Surface**] [**Overhead concealed**].
- E. Operation: Power opening and[**power-assisted**] spring closing. Provide time delay for door to remain open before initiating closing cycle as required by BHMA A156.19. When not in automatic mode, door operator shall function as manual door closer, with or without electrical power.
- F. Operating System: [**Electromechanical**] [**Electrohydraulic**] [**Pneumatic**].
- G. Microprocessor Control Unit: Solid-state controller.
- H. Features:
1. Adjustable [**opening**] [**and**] [**closing**] speed.
 2. Adjustable [**opening**] [**and**] [**closing**] force.
 3. Adjustable backcheck.
 4. Adjustable hold-open time from zero to 30 seconds.
 5. Adjustable time delay.
 6. Adjustable acceleration.
 7. Obstruction recycle.
 8. On-off/hold-open switch to control electric power to operator[; **key operated**].
 9. <Insert feature>.
- I. Activation Device: [**Push-plate switch**] [**Push-button switch**] [**Key switch**] [**on each side of door**] to activate door operator.
- J. Exposed Finish: [**Class I, clear anodic finish**] [**Class II, clear anodic finish**] [**Class I, color anodic finish**] [**Class II, color anodic finish**] [**Baked-enamel or powder-coat finish**] [**Metal cladding**] [**Finish matching door and frame**] [**Finish matching door hardware**] <Insert finish>.
1. Color: [**Light bronze**] [**Medium bronze**] [**Dark bronze**] [**Black**] [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry colors and color densities**] <Insert color>.
 2. Metal Cladding: [**No. 4, directional-satin-finish stainless steel**] [**No. 8, mirrorlike-reflective, nondirectional-polish-finish stainless steel**] [**Satin brass**] [**Polished brass**] [**Satin bronze**] [**Polished bronze**] <Insert finish>.
- 2.5 POWER-ASSIST DOOR OPERATORS
- A. Standard: BHMA A156.19.
- B. Performance Requirements:
1. Opening Force:
 - a. Opening Force if Power Fails: Not more than **15 lbf (67 N)** required to release latch if provided, not more than **30 lbf (133 N)** required to manually

- set door in motion, and not more than 15 lbf (67 N) required to fully open door.
- b. Accessible Interior Doors: Not more than 5 lbf (22 N) to push or pull door to fully open position.
2. Entrapment-Prevention Force: Not more than 15 lbf (67 N) required to prevent stopped door from closing or opening.
- C. Configuration: Operator to control single swinging door.
1. Traffic Pattern: **[One]** **[Two]** way.
 2. Operator Mounting: **[Surface]** **[Overhead concealed]**.
- D. Configuration: Operator to control pair of swinging doors.
1. Traffic Pattern: **[One way]** **[Two way]** **[Double egress]** **[Double swing]**.
 2. Mounting: **[Surface]** **[Overhead concealed]**.
- E. Operation: Power-assisted opening that reduces the force to open door and **[power-assisted]** spring closing. Pushing or pulling on door activates operator. Provide time delay for door to remain open before initiating closing cycle as required by BHMA A156.19. When not in automatic mode, door operator shall function as manual door closer, with or without electrical power.
- F. Operating System: **[Electromechanical]** **[Electrohydraulic]** **[Pneumatic]**.
- G. Microprocessor Control Unit: Solid-state controller.
- H. Features:
1. Adjustable **[opening]** **[and]** **[closing]** speed.
 2. Adjustable **[opening]** **[and]** **[closing]** force.
 3. Adjustable backcheck.
 4. Adjustable hold-open time from zero to 30 seconds.
 5. Adjustable time delay.
 6. Adjustable acceleration.
 7. Obstruction recycle.
 8. On-off/hold-open switch to control electric power to operator[; **key operated**].
 9. **<Insert feature>**.
- I. Exposed Finish: **[Class I, clear anodic finish]** **[Class II, clear anodic finish]** **[Class I, color anodic finish]** **[Class II, color anodic finish]** **[Baked-enamel or powder-coat finish]** **[Metal cladding]** **[Finish matching door and frame]** **[Finish matching door hardware]** **<Insert finish>**.
1. Color: **[Light bronze]** **[Medium bronze]** **[Dark bronze]** **[Black]** **[As indicated by manufacturer's designations]** **[Match DEN Project Manager's sample]** **[As selected by DEN Project Manager from full range of industry colors and color densities]** **<Insert color>**.

2. Metal Cladding: **[No. 4, directional-satin-finish stainless steel] [No. 8, mirrorlike-reflective, nondirectional-polish-finish stainless steel] [Satin brass] [Polished brass] [Satin bronze] [Polished bronze] <Insert finish>**.

2.6 MATERIALS

- A. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
 1. Extrusions: **ASTM B 221** (ASTM B 221M).
 2. Sheet: **ASTM B 209** (ASTM B 209M).
- B. Stainless-Steel Sheet: ASTM A 240/A 240M or ASTM A 666, **[Type 304] <Insert alloy type>**, stretcher-leveled standard of flatness, in manufacturer's standard thickness.
- C. Brass Sheet: ASTM B 36/B 36M, Alloy UNS No. C26000 (cartridge brass, 70 percent copper), in manufacturer's standard thickness.
- D. Bronze Sheet: ASTM B 36/B 36M, Alloy UNS No. C28000 (muntz metal, 60 percent copper) or Alloy UNS No. C23000 (red brass, 85 percent copper), in manufacturer's standard thickness.
- E. Expanded Aluminum Mesh: **[Expanded] [Expanded and flattened]** aluminum sheet according to the geometry of ASTM F 1267.
- F. Polycarbonate Sheet: ASTM C 1349, Appendix X1, Type II, coated, mar-resistant, UV-stabilized polycarbonate with coating on both surfaces.
- G. Fasteners and Accessories: Corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.

2.7 CONTROLS

- A. General: Provide controls, including activation and safety devices, according to BHMA standards; for condition of exposure; and for long-term, maintenance-free operation under normal traffic load for occupancy type indicated. Coordinate activation and safety devices with door operation and door operator mechanisms.
- B. Motion Sensors: Self-contained, K-band-frequency, microwave-scanner units; fully enclosed in plastic housing; adjustable to provide detection field sizes and functions required by BHMA A156.10.
 1. Provide capability for switching between bidirectional and unidirectional detection.
 2. For one-way traffic, sensor on egress side shall not be active when doors are fully closed.

- C. Presence Sensors: Self-contained, active-infrared scanner units; adjustable to provide detection field sizes and functions required by BHMA A156.10. Sensors shall remain active at all times.
- D. Photoelectric Beams: Pulsed infrared, sender-receiver assembly for recessed mounting. Beams shall not be active when doors are fully closed.
- E. Control Mats: **1/2-inch- (13-mm-)** thick, synthetic-rubber or flexible-plastic mat in safety-ribbed surface pattern, with extruded-aluminum frame; with pressure switches for low-voltage control wiring; and according to performance requirements in BHMA A156.10.
1. Frame: [**Recessed to fit flush with floor, with concealed anchors**] [**Surface mounted, with tapered safety edge**].
 2. Size: As indicated, but not smaller than required by BHMA A156.10 including Appendix A.
 3. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project manager from full range of industry colors and color densities**] <Insert color>.
- F. Push-Plate Switch: Momentary-contact door control switch with flat push-plate actuator[**with contrasting-colored, engraved message**].
1. Configuration: [**Round**] [**Square**] push plate with **4-by-4-inch** (100-by-100-mm) junction box.
 - a. Mounting: [**As indicated on Drawings**] [**Recess mounted, semiflush in wall**] [**Surface mounted on wall**].
 2. Configuration: Rectangular push plate with **2-by-4-inch** (50-by-100-mm) junction box.
 - a. Mounting: [**As indicated on Drawings**] [**Recess mounted, semiflush in wall**] [**Recess mounted in doorjamb**] [**Surface mounted on wall**] [**Surface mounted on post**] [**Surface mounted on guide rail**].
 3. Push-Plate Material: [**Stainless steel**] [**Plastic**] as selected by DEN Project Manager from manufacturer's full range.
 4. Message: [**Plain face with no message.**] [**"Push to Open."**] [**International symbol of accessibility.**] [**International symbol of accessibility and "Push to Open."**]
- G. Push-Button Switch: Momentary-contact door control switch with one red-button actuator; enclosed in nominal [**2-by-4-inch** (50-by-100-mm)] [**4-by-4-inch** (100-by-100-mm)] junction box.
1. Provide faceplate engraved with "Press to Open" text[**and with international symbol of accessibility**] in contrasting color.
 2. Provide blue plastic cover engraved with "Press Button to Open" in white text and with international symbol of accessibility.

3. Mounting: **[As indicated on Drawings]** **[Surface mounted on wall]** **[Surface mounted on post]** **[Surface mounted on guide rail]** **[Recess mounted in wall]**.
 4. Faceplate Material: **[Stainless steel]** **[Painted metal]** as selected by DEN Project Manager from manufacturer's full range.
- H. Key Switch: Recess-mounted, door control switch with key-controlled actuator; enclosed in **2-by-4-inch (50-by-100-mm)** junction box. Provide faceplate engraved with text indicating switch functions.
1. Faceplate Material: **[Stainless steel]** **[Painted metal]** as selected by DEN Project Manager from manufacturer's full range.
 2. Functions: **[On-off, momentary contact]** **[On-off, maintained contact]** **[Two-way automatic, hold open, one-way exit, and off]** **[Two-way automatic, hold open, one-way exit, off, full open, and partial open]**.
 3. Mounting: **[As indicated on Drawings]** **[Recess mounted, semiflush in wall]** **[Recess mounted in door jamb]** **[Surface mounted on wall]** **[Surface mounted on post]**.
- I. Wireless or Remote Radio-Control Switch: Radio-control system consisting of header-mounted receiver and **[wall-mounted]** **[hand-held, battery-operated]** transmitter switch.
1. Wall-Mounted Transmitter Switch: One red-button, momentary-contact actuator enclosed in **4-by-4-inch (100-by-100-mm)** junction box. Provide blue plastic cover engraved with "Press Button to Open" in white text and with international symbol of accessibility.
- J. Electrical Interlocks: Unless units are equipped with self-protecting devices or circuits, provide electrical interlocks to prevent activation of operator when door is locked, latched, or bolted.

2.8 FABRICATION

- A. Factory fabricate automatic door operators to comply with indicated standards.
- B. Form aluminum shapes before finishing.
- C. Fabricate exterior components to drain condensation and water passing joints within operator enclosure to the exterior.
- D. Use concealed fasteners to greatest extent possible. Where exposed fasteners are required, use countersunk Phillips flat-head machine screws, finished to match operator.
- E. Provide metal cladding, completely covering visible surfaces before shipment to Project site. Fabricate cladding with concealed fasteners and connection devices, with accurately fitted joints with ends coped or mitered to produce hairline joints free of burrs and distortion, and with allowance for thermal expansion at exterior doors.

2.9 ACCESSORIES

- A. Signage: As required by cited BHMA standard for type of door and its operation.
1. Application Process: **[Decals] [Silk-screened] [Operator manufacturer's standard process] <Insert requirement>**.
 2. Provide sign materials with instructions for field application when operators are installed.
- B. Guide Rails: **[Anodized aluminum] [Baked-enamel or powder-coated aluminum] [Stainless steel]**, fabricated from **[bars] [or] [tubing]**, minimum **30 inches (762 mm)** high, and finished to match doors unless otherwise indicated; positioned and projecting from face of door jamb for distance as indicated, but not less than **[that required by BHMA A156.10 for type of door and direction of travel] <Insert requirement>**; with filler panel.
1. Filler Panel: **[Expanded aluminum mesh] [Clear polycarbonate sheet] [Colored polycarbonate sheet] <Insert material>**.
 - a. Orient expanded aluminum mesh with long dimension of diamonds **[parallel] [perpendicular]** to top rail.
 - b. Color: **[Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
 2. Provide intermediate guide rail suitable for supporting photoelectric beams.
 3. Mounting: **[As indicated on Drawings] [Jamb and floor] [Floor, freestanding]**.
 4. Aluminum Finish: **[Class I, clear anodic finish] [Class II, clear anodic finish] [Class I, color anodic finish] [Class II, color anodic finish] [Baked-enamel or powder-coat finish] [Finish matching door and frame] <Insert finish>**.
 - a. Color: **[Light bronze] [Medium bronze] [Dark bronze] [Black] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors and color densities] <Insert color>**.
 5. Stainless-Steel Finish: **[No. 4, directional-satin-finish stainless steel] [Finish matching door and frame] <Insert finish>**.
- C. Guide Rails: See **[Section 055213 "Pipe and Tube Railings."]** **[Section 057300 "Decorative Metal Railings."]**

2.10 GENERAL FINISH REQUIREMENTS

- A. Protect mechanical finishes on exposed surfaces from damage by applying strippable, temporary protective covering before shipping.
- B. Apply organic and anodic finishes to formed metal after fabrication unless otherwise indicated.

- C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within range of approved Samples and are assembled or installed to minimize contrast.

2.11 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, [**AA-M12C22A41, Class I, 0.018 mm**] [**AA-M12C22A31, Class II, 0.010 mm**] or thicker.
- B. Color Anodic Finish: AAMA 611, [**AA-M12C22A42/A44, Class I, 0.018 mm**] [**AA-M12C22A32/A34, Class II, 0.010 mm**] or thicker.
- C. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of **1.5 mils (0.04 mm)**. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances, door and frame preparation and reinforcements, and other conditions affecting performance of automatic door operators.
- B. Examine roughing-in for electrical systems to verify actual locations of power connections before automatic door operator installation.
- C. Examine roughing-in for compressed-air piping systems to verify actual locations of piping connections before automatic door operator installation.
- D. Verify that full-height finger guards are installed at each door with pivot hinges where door has a clearance at hinge side greater than **1/4 inch (6 mm)** and less than **3/4 inch (19 mm)** with door in any position.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install automatic door operators according to manufacturer's written instructions and cited BHMA standard for type of door operation and direction of pedestrian travel, including signage, controls, wiring, remote power units if any, and connection to building's power supply.
 - 1. Do not install damaged components. Fit joints to produce hairline joints free of burrs and distortion.
 - 2. Install operators true in alignment with established lines and door geometry without warp or rack. Anchor securely in place.

- B. Controls: Install activation and safety devices according to manufacturer's written instructions and cited BHMA standard for operator type and direction of pedestrian travel. Connect control wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- C. Access-Control System: Connect operators to access-control system as specified in Section 281300 "Access Control."
- D. Signage: Apply on both sides of each door as required by cited BHMA standard for type of door operator and direction of pedestrian travel.
- E. Guide Rails: Install according to BHMA A156.10, including Appendix A and manufacturer's written instructions unless otherwise indicated.

3.3 FIELD QUALITY CONTROL

- A. Certified Inspector: **[Owner will engage] [Engage]** a Certified Inspector to test and inspect components, assemblies, and installations, including connections.
- B. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:
 - 1. Test and inspect each automatic door operator installation, using AAADM inspection forms, to determine compliance of installed systems with applicable BHMA standards.
- C. Automatic door operators will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

3.4 ADJUSTING

- A. Adjust automatic door operators to function smoothly, and lubricate as recommended by manufacturer; comply with requirements of applicable BHMA standards.
 - 1. Adjust operators on exterior doors for weathertight closure.
- B. After completing installation of automatic door operators, inspect exposed finishes on doors and operators. Repair damaged finish to match original finish.
- C. Readjust automatic door operators and controls after repeated operation of completed installation equivalent to three days' use by normal traffic (100 to 300 cycles).
- D. Occupancy Adjustment: When requested within **[12] <Insert number>** months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to **[two] <Insert number>** visits to Project during other-than-normal occupancy hours for this purpose.

3.5 MAINTENANCE SERVICE

- A. Initial Maintenance Service: Beginning at Substantial Completion, maintenance service shall include [12] months' full maintenance by skilled employees of automatic door operator Installer. Include [monthly] [quarterly] preventive maintenance, repair, or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper door operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.
1. Engage a Certified Inspector to perform safety inspection after each adjustment or repair and at end of maintenance period. Furnish completed inspection reports to Owner.
 2. Perform maintenance, including emergency callback service, during normal working hours.
 3. Include 24-hour-per-day, 7-day-per-week, emergency callback service.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain automatic door operators.
1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 087113

SECTION 088000 - GLAZING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes glazing for the following products and applications, including those specified in other Sections where glazing requirements are specified by reference to this Section:
 - 1. Windows.
 - 2. Doors.
 - 3. Glazed curtain walls.
 - 4. Storefront framing.
 - 5. Glazed entrances.
 - 6. Sloped glazing.
 - 7. Skylights.
 - 8. Interior borrowed lites.
- B. Related Sections:
 - 1. Section 057300 "Decorative Metal Railings" for glass panels in railings.
 - 2. Section 084126 "All-Glass Entrances and Storefronts."
 - 3. Section 084229.13 "Folding Automatic Entrances."
 - 4. Section 084229.23 "Sliding Automatic Entrances."
 - 5. Section 084229.33 "Swinging Automatic Entrances."
 - 6. Section 084233 "Revolving Door Entrances."
 - 7. Section 084423 "Structural-Sealant-Glazed Curtain Walls" for glazing sealants.
 - 8. Section 088113 "Decorative Glass Glazing."
 - 9. Section 088300 "Mirrors."
 - 10. Section 088853 "Security Glazing" for glazing units resistant to **[ballistic attacks]** **[blunt- and sharp-tool attacks]** **[chemical threats]** **[windborne debris]** **[and]** **[airblasts]**.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Glass Manufacturers: Firms that produce primary glass, fabricated glass, or both, as defined in referenced glazing publications.
- B. Glass Thicknesses: Indicated by thickness designations in millimeters according to ASTM C 1036.
- C. Interspace: Space between lites of an insulating-glass unit.

1.4 PERFORMANCE REQUIREMENTS

- A. General: Installed glazing systems shall withstand normal thermal movement and wind and impact loads (where applicable) without failure, including loss or glass breakage attributable to the following: defective manufacture, fabrication, or installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.
- B. Delegated Design: Design glass, including comprehensive engineering analysis according to **[ASTM E 1300] [ICC's 2003 International Building Code]** by a qualified professional engineer, using the following design criteria:
 - 1. Design Wind Pressures: As indicated on Drawings.
 - 2. Design Wind Pressures: Determine design wind pressures applicable to Project according to ASCE/SEI 7, based on heights above grade indicated on Drawings.
 - a. Wind Design Data: As indicated on Drawings.
 - b. Basic Wind Speed: **115 mph (50 m/s)** **<Insert value>**.
 - c. Importance Factor: **1.3 <Insert factor>**.
 - d. Exposure Category: **[D]**.
 - 3. Design Snow Loads: **<Insert design snow load> [As indicated on Drawings]**.
 - 4. Vertical Glazing: For glass surfaces sloped 15 degrees or less from vertical, design glass to resist design wind pressure based on glass type factors for short-duration load.
 - 5. Sloped Glazing: For glass surfaces sloped more than 15 degrees from vertical, design glass to resist each of the following combinations of loads:
 - a. Outward design wind pressure minus the weight of the glass. Base design on glass type factors for short-duration load.
 - b. Inward design wind pressure plus the weight of the glass plus half of the design snow load. Base design on glass type factors for short-duration load.
 - c. Half of the inward design wind pressure plus the weight of the glass plus the design snow load. Base design on glass type factors for long-duration load.
 - 6. Glass Type Factors for Wired, Patterned, and Sandblasted Glass:
 - a. Short-Duration Glass Type Factor for Wired Glass: 0.5.

- b. Long-Duration Glass Type Factor for Wired Glass: 0.3.
 - c. Short-Duration Glass Type Factor for Patterned Glass: 1.0.
 - d. Long-Duration Glass Type Factor for Patterned Glass: 0.6.
 - e. Short-Duration Glass Type Factor for Sandblasted Glass: 0.5.
7. Thickness of Patterned Glass: Base design of patterned glass on thickness at thinnest part of the glass.
 8. Probability of Breakage for Sloped Glazing: For glass surfaces sloped more than 15 degrees from vertical, design glass for a probability of breakage not greater than 0.001.
 9. Maximum Lateral Deflection: For glass supported on all four edges, limit center-of-glass deflection at design wind pressure to not more than 1/50 times the short-side length or 1 inch (25 mm), whichever is less.
 10. Differential Shading: Design glass to resist thermal stresses induced by differential shading within individual glass lites.
- C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on glass framing members and glazing components.
1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

1.5 PRECONSTRUCTION TESTING

- A. Preconstruction Adhesion and Compatibility Testing: Test each glazing material type, tape sealant, gasket, glazing accessory, and glass-framing member for adhesion to and compatibility with elastomeric glazing sealants.
1. Testing will not be required if data are submitted based on previous testing of current sealant products and glazing materials matching those submitted.
 2. Use ASTM C 1087 to determine whether priming and other specific joint-preparation techniques are required to obtain rapid, optimum adhesion of glazing sealants to glass, tape sealants, gaskets, and glazing channel substrates.
 3. Test no fewer than [eight] <Insert number> Samples of each type of material, including joint substrates, shims, sealant backings, secondary seals, and miscellaneous materials.
 4. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
 5. For materials failing tests, submit sealant manufacturer's written instructions for corrective measures including the use of specially formulated primers.

1.6 ACTION SUBMITTALS

- A. Product Data: For each glass product and glazing material indicated.
1. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

1. Product Data for Credit IEQ 4.1: For glazing sealants used inside the weatherproofing system, documentation including printed statement of VOC content.
2. Laboratory Test Reports for Credit IEQ 4: For glazing sealants used inside the weatherproofing system, documentation indicating that they comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

C. Glass Samples: For each type of **[glass product other than clear monolithic vision glass] [the following products]**; **12 inches** (300 mm) square.

1. Tinted glass.
2. Patterned glass.
3. Coated glass.
4. Wired glass.
5. Fire-resistive glazing products.
6. Laminated glass with colored interlayer.
7. Insulating glass.

D. Glazing Accessory Samples: For **[gaskets] [sealants] [and] [colored spacers]**, in **12-inch** (300-mm) lengths. **[Install sealant Samples between two strips of material representative in color of the adjoining framing system.]**

E. Glazing Schedule: List glass types and thicknesses for each size opening and location. Use same designations indicated on Drawings.

F. Delegated-Design Submittal: For glass indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.7 INFORMATIONAL SUBMITTALS

A. Qualification Data: For **[installers] [manufacturers of insulating-glass units with sputter-coated, low-e coatings] [glass testing agency] [and] [sealant testing agency]**.

B. Product Certificates: For glass and glazing products, from manufacturer.

C. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for **[tinted glass] [coated glass] [insulating glass] [glazing sealants] [and] [glazing gaskets]**.

1. For glazing sealants, provide test reports based on testing current sealant formulations within previous 36-month period.

D. Preconstruction adhesion and compatibility test report.

- E. Warranties: Sample of special warranties.

1.8 QUALITY ASSURANCE

- A. Manufacturer Qualifications for Insulating-Glass Units with Sputter-Coated, Low-E Coatings: A qualified insulating-glass manufacturer who is approved[**and certified**] by coated-glass manufacturer.
- B. Installer Qualifications: A qualified installer who employs glass installers for this Project who are certified under the National Glass Association's Certified Glass Installer Program.
- C. Glass Testing Agency Qualifications: A qualified independent testing agency accredited according to the NFRC CAP 1 Certification Agency Program.
- D. Sealant Testing Agency Qualifications: An independent testing agency qualified according to ASTM C 1021 to conduct the testing indicated.
- E. Source Limitations for Glass: Obtain [**ultraclear float glass**] [**tinted float glass**] [**coated float glass**] [**laminated glass**] [**and**] [**insulating glass**] from single source from single manufacturer for each glass type.
- F. Source Limitations for Glazing Accessories: Obtain from single source from single manufacturer for each product and installation method.
- G. Glazing Publications: Comply with published recommendations of glass product manufacturers and organizations below, unless more stringent requirements are indicated. Refer to these publications for glazing terms not otherwise defined in this Section or in referenced standards.
1. GANA Publications: [**GANA's "Laminated Glazing Reference Manual" and**] GANA's "Glazing Manual."
 2. AAMA Publications: AAMA GDSG-1, "Glass Design for Sloped Glazing," and AAMA TIR-A7, "Sloped Glazing Guidelines."
 3. IGMA Publication for Sloped Glazing: IGMA TB-3001, "Guidelines for Sloped Glazing."
 4. IGMA Publication for Insulating Glass: SIGMA TM-3000, "North American Glazing Guidelines for Sealed Insulating Glass Units for Commercial and Residential Use."
- H. Safety Glazing Labeling: Where safety glazing labeling is indicated, permanently mark glazing with certification label of [**the SGCC**] [**the SGCC or another certification agency acceptable to authorities having jurisdiction**] [**or**] [**the manufacturer**]. Label shall indicate manufacturer's name, type of glass, thickness, and safety glazing standard with which glass complies.
- I. Fire-Protection-Rated Glazing Labeling: Permanently mark fire-protection-rated glazing with certification label of a testing agency acceptable to authorities having jurisdiction. Label shall indicate manufacturer's name, test standard, whether glazing is for use in

fire doors or other openings, whether or not glazing passes hose-stream test, whether or not glazing has a temperature rise rating of 450 deg F (250 deg C), and the fire-resistance rating in minutes.

- J. Insulating-Glass Certification Program: Permanently marked either on spacers or on at least one component lite of units with appropriate certification label of IGCC.
- K. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Install glazing in mockups specified in [**Section 084113 "Aluminum-Framed Entrances and Storefronts"**] [**Section 085113 "Aluminum Windows"**] [**Section 084413 "Glazed Aluminum Curtain Walls"**] <Insert Section number>-<Insert Section title> to match glazing systems required for Project, including glazing methods.
 - 2. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- L. Preinstallation Conference: Conduct conference at [**Project site**] [**location and time as determined by DEN Project Manager**]<Insert location>.
 - 1. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - 2. Review temporary protection requirements for glazing during and after installation.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Protect glazing materials according to manufacturer's written instructions. Prevent damage to glass and glazing materials from condensation, temperature changes, direct exposure to sun, or other causes.
- B. Comply with insulating-glass manufacturer's written recommendations for venting and sealing units to avoid hermetic seal ruptures due to altitude change.

1.10 PROJECT CONDITIONS

- A. Environmental Limitations: Do not proceed with glazing when ambient and substrate temperature conditions are outside limits permitted by glazing material manufacturers and when glazing channel substrates are wet from rain, frost, condensation, or other causes.
 - 1. Do not install glazing sealants when ambient and substrate temperature conditions are outside limits permitted by sealant manufacturer or below 40 deg F (4.4 deg C).

1.11 WARRANTY

A. Manufacturer's Special Warranty for Coated-Glass Products: Manufacturer's standard form in which coated-glass manufacturer agrees to replace coated-glass units that deteriorate within specified warranty period. Deterioration of coated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning coated glass contrary to manufacturer's written instructions. Defects include peeling, cracking, and other indications of deterioration in coating.

1. Warranty Period: Minimum [10] <Insert number> years from date of Substantial Completion.

B. Manufacturer's Special Warranty on Laminated Glass: Manufacturer's standard form in which laminated-glass manufacturer agrees to replace laminated-glass units that deteriorate within specified warranty period. Deterioration of laminated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.

1. Warranty Period: Minimum [Five] [10] <Insert number> years from date of Substantial Completion.

C. Manufacturer's Special Warranty on Insulating Glass: Manufacturer's standard form in which insulating-glass manufacturer agrees to replace insulating-glass units that deteriorate within specified warranty period. Deterioration of insulating glass is defined as failure of hermetic seal under normal use that is not attributed to glass breakage or to maintaining and cleaning insulating glass contrary to manufacturer's written instructions. Evidence of failure is the obstruction of vision by dust, moisture, or film on interior surfaces of glass.

1. Warranty Period: Minimum [10] <Insert number> years from date of Substantial Completion.

1.12 CONSTRUCTION WASTE MANAGEMENT

A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GLASS PRODUCTS, GENERAL

A. Thickness: Where glass thickness is indicated, it is a minimum. Provide glass lites in thicknesses as needed to comply with requirements indicated.

1. Minimum Glass Thickness for Exterior Lites: Not less than **[6.0] <Insert thickness designation>** mm.
 2. Thickness of Tinted Glass: Provide same thickness for each tint color indicated throughout Project.
- B. Strength: Where float glass is indicated, provide annealed float glass, Kind HS heat-treated float glass, or Kind FT heat-treated float glass[**as needed to comply with "Performance Requirements" Article**]. Where heat-strengthened glass is indicated, provide Kind HS heat-treated float glass or Kind FT heat-treated float glass[**as needed to comply with "Performance Requirements" Article**]. Where fully tempered glass is indicated, provide Kind FT heat-treated float glass.
- C. Windborne-Debris-Impact Resistance: Provide exterior glazing that passes **[basic] [enhanced]**-protection testing requirements in ASTM E 1996 for **[Wind Zone 1] [Wind Zone 2] [Wind Zone 3] [Wind Zone 4]** when tested according to ASTM E 1886. Test specimens shall be no smaller in width and length than glazing indicated for use on the Project and shall be installed in same manner as glazing indicated for use on the Project.
1. Large-Missile Test: For glazing located within **30 feet (9.1 m)** of grade.
 2. Small-Missile Test: For glazing located more than **30 feet (9.1 m)** above grade.
 3. Large-Missile Test: For all glazing, regardless of height above grade.
- D. Thermal and Optical Performance Properties: Provide glass with performance properties specified, as indicated in manufacturer's published test data, based on procedures indicated below:
1. For monolithic-glass lites, properties are based on units with lites **[6.0 mm thick] [of thickness indicated]**.
 2. For laminated-glass lites, properties are based on products of construction indicated.
 3. For insulating-glass units, properties are based on units of thickness indicated for overall unit and for each lite.
 4. U-Factors: Center-of-glazing values, according to NFRC 100 and based on LBL's WINDOW 5.2 computer program, expressed as **Btu/sq. ft. x h x deg F (W/sq. m x K)**.
 5. Solar Heat-Gain Coefficient and Visible Transmittance: Center-of-glazing values, according to NFRC 200 and based on LBL's WINDOW 5.2 computer program.
 6. Visible Reflectance: Center-of-glazing values, according to NFRC 300.

2.2 GLASS PRODUCTS

- A. Float Glass: ASTM C 1036, Type I, Quality-Q3, Class I (clear) unless otherwise indicated.
- B. Ultraclear Float Glass: ASTM C 1036, Type I, Quality-Q3, Class I, complying with other requirements specified and with visible light transmission not less than 91 percent[**and solar heat gain coefficient not less than 0.87**].

1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. [AFG Industries, Inc.](#); Krystal Klear.
 - b. [Guardian Industries Corp.](#); Ultrawhite.
 - c. [Pilkington North America](#); Optiwhite.
 - d. [PPG Industries, Inc.](#); Starphire.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.

- C. Heat-Treated Float Glass: ASTM C 1048; Type I; Quality-Q3; Class I (clear) unless otherwise indicated; of kind and condition indicated.
 1. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed unless otherwise indicated.
 2. For uncoated glass, comply with requirements for Condition A.
 3. For coated vision glass, comply with requirements for Condition C (other coated glass).

- D. Pyrolytic-Coated, Self-Cleaning, Low-Maintenance Glass: Clear float glass with a coating on first surface having both photocatalytic and hydrophilic properties that act to loosen dirt and to cause water to sheet evenly over the glass instead of beading.
 1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. [AFG Industries, Inc.: Spotless Ti.](#)
 - b. [Cardinal Glass Industries; LoE2 Plus.](#)
 - c. [Pilkington North America; Activ.](#)
 - d. [PPG Industries, Inc.; SunClean.](#)
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.

- E. Uncoated Tinted Float Glass: Class 2, complying with other requirements specified.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.
 - b. or approved equal.
 2. Tint Color: **[Blue] [Blue-green] [Bronze] [Green] [Gray] <Insert color>**.
 3. Visible Light Transmittance: **<Insert value>** percent minimum.

- F. Polished Wired Glass: ASTM C 1036, Type II, Class 1 (clear), Form 1, Quality-Q6, complying with ANSI Z97.1, Class C.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.
 - b. or approved equal.

2. Mesh: **[M1 (diamond)] [M2 (square)]**.
- G. Film-Faced Polished Wired Glass: ASTM C 1036, Type II, Class 1 (clear), Form 1, Quality-Q6 and complying with testing requirements in 16 CFR 1201 for Category II materials.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.
 - b. or approved equal.
 2. Mesh: **[M1 (diamond)] [M2 (square)]**.
- H. Patterned Glass: ASTM C 1036, Type II, Class 1 (clear), Form 3; Quality-Q6, **[Finish F1 (patterned one side)] [Finish F2 (patterned both sides)]**, **[Pattern P1 (linear)] [Pattern P2 (geometric)] [Pattern P3 (random)] [Pattern P4 (special)]**.
1. Products: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]**:
 - a. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.
- I. Tempered Patterned Glass: ASTM C 1048, Kind FT (fully tempered), Type II, Class 1 (clear), Form 3; Quality-Q6, **[Finish F1 (patterned one side)] [Finish F2 (patterned both sides)]**, **[Pattern P1 (linear)] [Pattern P2 (geometric)] [Pattern P3 (random)] [Pattern P4 (special)]**.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.
 - b. or approved equal.
- J. Patterned Wired Glass: ASTM C 1036, Type II, Class 1 (clear), Form 2, Quality-Q6, **[Finish F1 (patterned one side)] [Finish F2 (patterned both sides)]**, Mesh M1 (diamond), **[Pattern P1 (linear)] [Pattern P2 (geometric)] [Pattern P3 (random)] [Pattern P4 (special)]**.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.
 - b. or approved equal.
- K. Ceramic-Coated Vision Glass: Heat-treated float glass, Condition C; with ceramic enamel applied by silk-screened process; complying with Specification No. 95-1-31 in GANA's Tempering Division's "Engineering Standards Manual" and with other requirements specified.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
 - b. or approved equal.
 2. Glass: **[Clear float] [Ultraclear float] [Tinted float].**
 3. Tint Color: **[Blue] [Blue-green] [Bronze] [Green] [Gray] <Insert color>.**
 4. Ceramic Coating Color and Pattern: **[As selected by DEN Project Manager from manufacturer's full range] [Match] [Provide] <Insert one manufacturer's color and pattern designation if matching is required; otherwise, insert color and pattern designation for each product named above>.**
- L. Reflective-Coated Vision Glass: ASTM C 1376, coated by **[pyrolytic process] [vacuum deposition (sputter-coating) process]**, and complying with other requirements specified.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
 - b. or approved equal.
 2. Kind: Kind CV (coated vision glass)[, **except that Kind CO (coated overhead glass) may be used where the lower edge of the glass is more than 6 feet (1.8 m) above the adjacent floor level or cannot be approached closer than 10 feet (3.0 m).**]
 3. Coating Color: **[Gold] [Pewter] [Silver] <Insert color>.**
 4. Glass: **[Clear float] [Tinted float].**
 5. Tint Color: **[Blue] [Blue-green] [Bronze] [Green] [Gray] <Insert color>.**
 6. Visible Light Transmittance: **<Insert value>** percent minimum.
 7. Outdoor Visible Reflectance: **<Insert value>** percent maximum.
 8. Self-Cleaning, Low-Maintenance Coating: Pyrolytic coating on first surface.
- M. Ceramic-Coated Spandrel Glass: ASTM C 1048, Condition B, Type I, Quality-Q3, and complying with other requirements specified.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
 - b. or approved equal.
 2. Glass: **[Clear float] [Ultraclear float] [Tinted float].**
 3. Tint Color: **[Blue] [Blue-green] [Bronze] [Green] [Gray] <Insert color>.**
 4. Ceramic Coating Color: **[As selected by DEN Project Manager from manufacturer's full range] [Match] [Provide] <Insert one manufacturer's color designation if matching is required; otherwise, insert color designation for each product named above>.**

- N. Silicone-Coated Spandrel Glass: ASTM C 1048, Condition C, Type I, Quality-Q3, and complying with other requirements specified.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
 - b. or approved equal.
 2. Glass: **[Clear float] [Ultraclear float] [Tinted float].**
 3. Tint Color: **[Blue] [Blue-green] [Bronze] [Green] [Gray] <Insert color>.**
 4. Silicone Coating Color: **[As selected by DEN Project Manager from manufacturer's full range] [Match] [Provide] <Insert one manufacturer's color designation if matching is required; otherwise, insert color designation for each product named above>.**
- O. Reflective-Coated Spandrel Glass: ASTM C 1376, Kind CS; coated by **[pyrolytic process] [vacuum deposition (sputter-coating) process]**, and complying with other requirements specified.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
 - b. or approved equal.
 2. Coating Color: **[Gold] [Pewter] [Silver] <Insert color>.**
 3. Glass: **[Clear float] [Ultraclear float] [Tinted float].**
 4. Tint Color: **[Blue] [Blue-green] [Bronze] [Green] [Gray] <Insert color>.**
 5. Visible Light Transmittance: **<Insert value>** percent minimum.
 6. Outdoor Visible Reflectance: **<Insert value>** percent maximum.

2.3 LAMINATED GLASS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. **<Insert, in separate subparagraphs, manufacturer's name>.**
 2. or approved equal.
- B. Laminated Glass: ASTM C 1172, and complying with testing requirements in 16 CFR 1201 for Category II materials, and with other requirements specified. Use materials that have a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after fabrication and installation.
1. Construction: Laminate glass with **[polyvinyl butyral interlayer] [or] [cast-in-place and cured-transparent-resin interlayer]** to comply with interlayer manufacturer's written recommendations.
 2. Interlayer Thickness: Provide thickness not less than that indicated and as needed to comply with requirements.

3. Interlayer Color: Clear unless otherwise indicated.
- C. Windborne-Debris-Impact-Resistant Laminated Glass: ASTM C 1172, and complying with testing requirements in 16 CFR 1201 for Category II materials, with "Windborne-Debris-Impact Resistance" Paragraph in "Glass Products, General" Article, and with other requirements specified. Use materials that have a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after fabrication and installation.
1. Construction: Laminate glass with[**one of**] the following to comply with interlayer manufacturer's written recommendations:
 - a. Polyvinyl butyral interlayer.
 - b. Polyvinyl butyral interlayers reinforced with polyethylene terephthalate film.
 - c. Ionoplast interlayer.
 - d. Cast-in-place and cured-transparent-resin interlayer.
 - e. Cast-in-place and cured-transparent-resin interlayer reinforced with polyethylene terephthalate film.
 2. Interlayer Thickness: Provide thickness not less than that indicated and as needed to comply with requirements.
 3. Interlayer Color: Clear unless otherwise indicated.
- D. Glass: Comply with applicable requirements in "Glass Products" Article as indicated by designations in "Laminated-Glass Types" Article.

2.4 INSULATING GLASS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. **<Insert, in separate subparagraphs, manufacturer's name>.**
 2. or approved equal.
- B. Insulating-Glass Units: Factory-assembled units consisting of sealed lites of glass separated by a dehydrated interspace, qualified according to ASTM E 2190, and complying with other requirements specified.
1. Sealing System: Dual seal, with [**manufacturer's standard**] [**polyisobutylene and polysulfide**] [**polyisobutylene and silicone**] [**polyisobutylene and hot-melt butyl**] [**polyisobutylene and polyurethane**] primary and secondary.
 2. Spacer: [**Manufacturer's standard spacer material and construction**] [**Aluminum with mill or clear anodic finish**] [**Aluminum with black, color anodic finish**] [**Aluminum with bronze, color anodic finish**] [**Aluminum with powdered metal paint finish in color selected by DEN Project Manager**] [**Galvanized steel**] [**Stainless steel**] [**Polypropylene covered stainless steel in color selected by DEN Project Manager**] [**Thermally broken aluminum**] [**Nonmetallic laminate**] [**Nonmetallic tube**] **<Insert material>.**
 3. Desiccant: Molecular sieve or silica gel, or blend of both.

- C. Glass: Comply with applicable requirements in "Glass Products" Article[**and in "Laminated Glass" Article**] as indicated by designations in "Insulating-Glass Types" Article[**and in "Insulating-Laminated-Glass Types" Article**].

2.5 FIRE-PROTECTION-RATED GLAZING

- A. Fire-Protection-Rated Glazing, General: Listed and labeled by a testing agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on testing according to [NFPA 252 for door assemblies] [and] [NFPA 257 for window assemblies].

- B. Monolithic Ceramic Glazing: Clear, ceramic flat glass; 3/16-inch (5-mm) nominal thickness.

1. **Products:** Subject to compliance with requirements, provide one of the following:

- a. Nippon Electric Glass Co., Ltd. (distributed by Technical Glass Products); **[Obscure FireLite] [Premium FireLite] [Standard FireLite]**.
- b. Safti First; SuperLite C/P.
- c. Schott North America, Inc.; **[Pyran Star] [Pyran Crystal]**.
- d. Vetrotech Saint-Gobain; SGG Keralite FR-R.
- e. **<Insert manufacturer's name; product name or designation>**.
- f. or approved equal.

- C. Film-Faced Ceramic Glazing: Clear, ceramic flat glass; 3/16-inch (5-mm) nominal thickness; faced on one surface with a clear glazing film; complying with testing requirements in 16 CFR 1201 for Category II materials.

1. **Products:** Subject to compliance with requirements, provide one of the following:

- a. Nippon Electric Glass Co., Ltd. (distributed by Technical Glass Products); FireLite NT.
- b. Safti First; SuperLite C/SP.
- c. Schott North America, Inc.; [Filmed Pyran Star] [Filmed Pyran Crystal].
- d. Vetrotech Saint-Gobain; SGG Keralite FR-F.
- e. **<Insert manufacturer's name; product name or designation>**.
- f. or approved equal.

- D. Laminated Ceramic Glazing: Laminated glass made from 2 plies of clear, ceramic flat glass; 5/16-inch (8-mm) total nominal thickness; complying with testing requirements in 16 CFR 1201 for Category II materials.

1. **Products:** Subject to compliance with requirements, provide one of the following:

- a. Nippon Electric Glass Co., Ltd. (distributed by Technical Glass Products); FireLite Plus.
- b. Schott North America, Inc.; Laminated Pyran Crystal.
- c. Vetrotech Saint-Gobain; SGG Keralite FR-L.
- d. **<Insert manufacturer's name; product name or designation>**.

- e. or approved equal.
- E. Fire-Protection-Rated Tempered Glass: [1/4-inch- (6.4-mm-)] [3/8-inch- (9.5-mm-)] [1/2-inch- (12.7-mm-)] thick, fire-protection-rated tempered glass, complying with testing requirements in 16 CFR 1201 for Category II materials.
1. **Products:** Subject to compliance with requirements, provide one of the following:
- [InterEdge, Inc., a subsidiary of AFG Industries, Inc.; PyroEdge-20.](#)
 - [Safti First; SuperLite20.](#)
 - [Vetrotech Saint-Gobain; SSG Pyroswiss.](#)
 - <Insert manufacturer's name; product name or designation>.
 - or approved equal.
- F. Fire-Protection-Rated Laminated Glass: 5/16-inch- (8-mm-) thick, fire-protection-rated laminated glass, complying with testing requirements in 16 CFR 1201 for Category II materials.
1. **Products:** Subject to compliance with requirements, provide one of the following:
- [Oldcastle Glass, Inc.;](#) Pyroguard.
 - <Insert manufacturer's name; product name or designation>.
 - or approved equal.
- G. Laminated Glass with Intumescent Interlayers: Laminated glass made from multiple plies of uncoated, clear float glass; with intumescent interlayers; complying with testing requirements in 16 CFR 1201 for Category II materials.
1. **Products:** Subject to compliance with requirements, **provide one of the following:**
- [InterEdge, Inc., a subsidiary of AFG Industries, Inc.; Pyrobel.](#)
 - [Pilkington Group Limited \(distributed by Technical Glass Products\); PyroStop.](#)
 - [Vetrotech Saint-Gobain; \[SGG Contraflam N2\] \[SGG Swissflam N2\].](#)
 - <Insert manufacturer's name; product name or designation>.
 - or approved equal.
- H. Gel-Filled, Double Glazing Units: Double glazing units made from two lites of uncoated, clear, fully tempered float glass; with a perimeter metal spacer separating lites and dual-edge seal enclosing a cavity filled with clear, fully transparent, heat-absorbing gel; complying with testing requirements in 16 CFR 1201 for Category II materials.
1. **Products:** Subject to compliance with requirements, **provide one of the following:**
- [Safti First;](#) SuperLite II.
 - <Insert manufacturer's name; product name or designation>.
 - or approved equal.

2.6 GLAZING GASKETS

- A. Dense Compression Gaskets: Molded or extruded gaskets of profile and hardness required to maintain watertight seal, made from[**one of**] the following:
1. Neoprene complying with ASTM C 864.
 2. EPDM complying with ASTM C 864.
 3. Silicone complying with ASTM C 1115.
 4. Thermoplastic polyolefin rubber complying with ASTM C 1115.
- B. Soft Compression Gaskets: Extruded or molded, closed-cell, integral-skinned [**neoprene**] [**EPDM**] [**silicone**] [**or**] [**thermoplastic polyolefin rubber**] gaskets complying with ASTM C 509, Type II, black; of profile and hardness required to maintain watertight seal.
1. Application: Use where soft compression gaskets will be compressed by inserting dense compression gaskets on opposite side of glazing or pressure applied by means of pressure-glazing stops on opposite side of glazing.
- C. Lock-Strip Gaskets: Neoprene extrusions in size and shape indicated, fabricated into frames with molded corner units and zipper lock-strips, complying with ASTM C 542, black.

2.7 GLAZING SEALANTS

- A. General:
1. Compatibility: Provide glazing sealants that are compatible with one another and with other materials they will contact, including glass products, seals of insulating-glass units, and glazing channel substrates, under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.
 2. Suitability: Comply with sealant and glass manufacturers' written instructions for selecting glazing sealants suitable for applications indicated and for conditions existing at time of installation.
 3. Sealants used inside the weatherproofing system, shall have a VOC content of not more than 250 g/L when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 4. Sealants used inside the weatherproofing system shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
 5. Colors of Exposed Glazing Sealants: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**].
- B. Glazing Sealant: Neutral-curing silicone glazing sealant complying with ASTM C 920, Type S, Grade NS, Class 100/50, Use NT.

1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. Dow Corning Corporation; 790.
 - b. GE Advanced Materials - Silicones; SilPruf LM SCS2700.
 - c. May National Associates, Inc.; Bondaflex Sil 290.
 - d. Pecora Corporation; 890.
 - e. Sika Corporation, Construction Products Division; SikaSil-C990.
 - f. Tremco Incorporated; Spectrem 1.
 - g. **<Insert manufacturer's name; product name or designation>.**
 - h. or approved equal.

 2. Applications: **<Describe types of glazing applications where this sealant is required>.**
- C. Glazing Sealant: Neutral-curing silicone glazing sealant complying with ASTM C 920, Type S, Grade NS, Class 50, Use NT.
1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. BASF Building Systems; Omniseal 50.
 - b. Dow Corning Corporation; [756 SMS] [791] [795] [995].
 - c. GE Advanced Materials - Silicones; [SilGlaze II SCS2800] [SilPruf NB SCS9000] [SilPruf SCS2000] [UltraPruf II SCS2900].
 - d. May National Associates, Inc.; Bondaflex Sil 295.
 - e. Pecora Corporation; [864] [895] [898].
 - f. Polymeric Systems, Inc.; PSI-641.
 - g. Sika Corporation, Construction Products Division; SikaSil-C995.
 - h. Tremco Incorporated; [Spectrem 2] [Spectrem 3].
 - i. **<Insert manufacturer's name; product name or designation>.**
 - j. or approved equal.

 2. Applications: **<Describe types of glazing applications where this sealant is required>.**
- D. Glazing Sealant: Neutral-curing silicone glazing sealant complying with ASTM C 920, Type S, Grade NS, Class 25, Use NT.
1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. Dow Corning Corporation; 799.
 - b. GE Advanced Materials - Silicones; [UltraGlaze SSG4000] [UltraGlaze SSG4000AC].
 - c. May National Associates, Inc.; [Bondaflex Sil 200 GPN] [Bondaflex Sil 201 FC].
 - d. Polymeric Systems, Inc.; PSI-631.
 - e. Schnee-Morehead, Inc., an ITW company; SM5731 Poly-Glaze Plus.
 - f. Tremco Incorporated; [Proglaze SSG] [Tremsil 600].
 - g. **<Insert manufacturer's name; product name or designation>.**
 - h. or approved equal.

2. Applications: **<Describe types of glazing applications where this sealant is required>**.
- E. Glazing Sealant: Acid-curing silicone glazing sealant complying with ASTM C 920, Type S, Grade NS, Class 25, Use NT.
1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. BASF Building Systems; OmniPlus.
 - b. Bostik, Inc.; Chem-Calk 1200.
 - c. Dow Corning Corporation; 999-A.
 - d. GE Advanced Materials - Silicones; [Contractors SCS1000] [Construction SCS1200].
 - e. May National Associates, Inc.; [Sil 100 GC] [Sil 100 GP] [Sil 100 WF].
 - f. Pecora Corporation; 860.
 - g. Polymeric Systems, Inc.; PSI-601.
 - h. Schnee-Morehead, Inc., an ITW company; SM5732 Polyglaze.
 - i. Tremco Incorporated; [Proglaze] [Tremsil 200].
 - j. **<Insert manufacturer's name; product name or designation>**.
 - k. or approved equal.
 2. Applications: **<Describe types of glazing applications where this sealant is required>**.
- F. Glazing Sealants for Fire-Rated Glazing Products: Products that are approved by testing agencies that listed and labeled fire-resistant glazing products with which they are used for applications and fire-protection ratings indicated.

2.8 GLAZING TAPES

- A. Back-Bedding Mastic Glazing Tapes: Preformed, butyl-based, 100 percent solids elastomeric tape; nonstaining and nonmigrating in contact with nonporous surfaces; with or without spacer rod as recommended in writing by tape and glass manufacturers for application indicated; and complying with ASTM C 1281 and AAMA 800 for products indicated below:
1. AAMA 804.3 tape, where indicated.
 2. AAMA 806.3 tape, for glazing applications in which tape is subject to continuous pressure.
 3. AAMA 807.3 tape, for glazing applications in which tape is not subject to continuous pressure.
- B. Expanded Cellular Glazing Tapes: Closed-cell, PVC foam tapes; factory coated with adhesive on both surfaces; and complying with AAMA 800 for the following types:
1. AAMA 810.1, Type 1, for glazing applications in which tape acts as the primary sealant.
 2. AAMA 810.1, Type 2, for glazing applications in which tape is used in combination with a full bead of liquid sealant.

2.9 MISCELLANEOUS GLAZING MATERIALS

- A. General: Provide products of material, size, and shape complying with referenced glazing standard, requirements of manufacturers of glass and other glazing materials for application indicated, and with a proven record of compatibility with surfaces contacted in installation.
- B. Cleaners, Primers, and Sealers: Types recommended by sealant or gasket manufacturer.
- C. Setting Blocks: Elastomeric material with a Shore, Type A durometer hardness of 85, plus or minus 5.
- D. Spacers: Elastomeric blocks or continuous extrusions of hardness required by glass manufacturer to maintain glass lites in place for installation indicated.
- E. Edge Blocks: Elastomeric material of hardness needed to limit glass lateral movement (side walking).
- F. Cylindrical Glazing Sealant Backing: ASTM C 1330, Type O (open-cell material), of size and density to control glazing sealant depth and otherwise produce optimum glazing sealant performance.
- G. Perimeter Insulation for Fire-Resistive Glazing: Product that is approved by testing agency that listed and labeled fire-resistant glazing product with which it is used for application and fire-protection rating indicated.

2.10 FABRICATION OF GLAZING UNITS

- A. Fabricate glazing units in sizes required to fit openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.
- B. Clean-cut or flat-grind vertical edges of butt-glazed monolithic lites to produce square edges with slight chamfers at junctions of edges and faces.
- C. Grind smooth and polish exposed glass edges and corners.

2.11 MONOLITHIC-GLASS TYPES

- A. Glass Type [GL-<#>]: Clear [float glass] [heat-strengthened float glass] [fully tempered float glass].
 - 1. Thickness: [6.0 mm] <Insert thickness designation>.
 - 2. Provide safety glazing labeling.
- B. Glass Type [GL-<#>]: Ultraclear [float glass] [heat-strengthened float glass] [fully tempered float glass].

1. Thickness: **[6.0 mm]** <Insert thickness designation>.
 2. Provide safety glazing labeling.
- C. Glass Type **[GL-<#>]**: Pyrolytic-coated, self-cleaning, low-maintenance, clear **[float glass]** **[heat-strengthened float glass]** **[fully tempered float glass]**.
1. Thickness: **[6.0 mm]** <Insert thickness designation>.
 2. Provide safety glazing labeling.
- D. Glass Type **[GL-<#>]**: Tinted **[float glass]** **[heat-strengthened float glass]** **[fully tempered float glass]**.
1. Thickness: **[6.0 mm]** <Insert thickness designation>.
 2. Winter Nighttime U-Factor: <Insert value> maximum.
 3. Summer Daytime U-Factor: <Insert value> maximum.
 4. Solar Heat Gain Coefficient: <Insert value> maximum.
 5. Provide safety glazing labeling.
- E. Glass Type **[GL-<#>]**: Polished wired glass.
1. Thickness: 6.0 mm.
- F. Glass Type **[GL-<#>]**: Patterned glass.
1. Thickness: **[4.0]** **[5.0]** **[6.0]** mm.
- G. Glass Type **[GL-<#>]**: Tempered patterned glass.
1. Thickness: **[4.0]** **[5.0]** **[6.0]** mm.
 2. Provide safety glazing labeling.
- H. Glass Type **[GL-<#>]**: Patterned wired glass.
1. Thickness: 6.0 mm.
- I. Glass Type **[GL-<#>]**: Ceramic-coated vision glass, **[heat-strengthened float glass]** **[fully tempered float glass]**.
1. Thickness: **[6.0 mm]** <Insert thickness designation>.
 2. Coating Location: Second surface.
 3. Winter Nighttime U-Factor: <Insert value> maximum.
 4. Summer Daytime U-Factor: <Insert value> maximum.
 5. Solar Heat Gain Coefficient: <Insert value> maximum.
 6. Provide safety glazing labeling.
- J. Glass Type **[GL-<#>]**: Reflective-coated vision glass, **[float glass]** **[heat-strengthened float glass]** **[fully tempered float glass]**.
1. Thickness: **[6.0 mm]** <Insert thickness designation>.
 2. Coating Location: **[First]** **[Second]** surface.
 3. Winter Nighttime U-Factor: <Insert value> maximum.

4. Summer Daytime U-Factor: **<Insert value>** maximum.
5. Solar Heat Gain Coefficient: **<Insert value>** maximum.
6. Provide safety glazing labeling.

K. Glass Type [GL-#]: Ceramic-coated spandrel glass, **[heat-strengthened float glass] [fully tempered float glass]**.

1. Thickness: **[6.0 mm] <Insert thickness designation>**.
2. Coating Location: Second surface.
3. Winter Nighttime U-Factor: **<Insert value>** maximum.
4. Summer Daytime U-Factor: **<Insert value>** maximum.
5. Fallout Resistance: Passes fallout-resistance test in ASTM C 1048 for an assembly of glass and adhered reinforcing material.

L. Glass Type [GL-#]: Silicone-coated spandrel glass, **[heat-strengthened float glass] [fully tempered float glass]**.

1. Thickness: **[6.0 mm] <Insert thickness designation>**.
2. Coating Location: Second surface.
3. Winter Nighttime U-Factor: **<Insert value>** maximum.
4. Summer Daytime U-Factor: **<Insert value>** maximum.
5. Fallout Resistance: Passes fallout-resistance test in ASTM C 1048 for an assembly of glass and adhered reinforcing material.

M. Glass Type [GL-#]: Reflective-coated spandrel glass, **[heat-strengthened float glass] [fully tempered float glass]**.

1. Thickness: **[6.0 mm] <Insert thickness designation>**.
2. Coating Location: **[First] [Second]** surface.
3. Winter Nighttime U-Factor: **<Insert value>** maximum.
4. Summer Daytime U-Factor: **<Insert value>** maximum.
5. Fallout Resistance: Passes fallout-resistance test in ASTM C 1048 for an assembly of glass and adhered reinforcing material.
6. Factory apply manufacturer's standard opacifier of the following material to coated second surface of lites, with resulting products complying with Specification No. 89-1-6 in GANA's Tempering Division's "Engineering Standards Manual":
 - a. Manufacturer's standard opacifier material.
 - b. Polyester film laminated to glass with solvent-based adhesive.

2.12 LAMINATED-GLASS TYPES

A. Glass Type [GL-#]: Clear laminated glass with two plies of **[float glass] [heat-strengthened float glass] [fully tempered float glass] [ultraclear float glass] [ultraclear heat-strengthened float glass] [ultraclear fully tempered float glass]**.

1. Thickness of Each Glass Ply: **[3.0 mm] [4.0 mm] [5.0 mm] [6.0 mm] [As indicated] <Insert thickness designation>**.

2. Interlayer Thickness: [0.030 inch (0.76 mm)] [0.060 inch (1.52 mm)] [0.090 inch (2.29 mm)].
 3. Provide safety glazing labeling.
- B. Glass Type [GL-<#>]: Antireflective-coated clear laminated glass with two plies of [float glass] [heat-strengthened float glass] [fully tempered float glass] [ultraclear float glass] [ultraclear heat-strengthened float glass] [ultraclear fully tempered float glass].
1. Thickness of Each Glass Ply: [3.0 mm] [4.0 mm] [5.0 mm] [6.0 mm].
 2. Interlayer Thickness: [0.030 inch (0.76 mm)] [0.060 inch (1.52 mm)] [0.090 inch (2.29 mm)].
 3. Visible Reflectance: Less than 2 percent.
 4. Winter Nighttime U-Factor: <Insert value> maximum.
 5. Summer Daytime U-Factor: <Insert value> maximum.
 6. Solar Heat Gain Coefficient: <Insert value> maximum.
 7. Provide safety glazing labeling.
- C. Glass Type [GL-<#>]: Tinted laminated glass with two plies of [float glass] [heat-strengthened float glass] [fully tempered float glass] with outer ply Class 2 (tinted) and inner ply Class 1 (clear).
1. Thickness of Each Glass Ply: [3.0 mm] [4.0 mm] [5.0 mm] [6.0 mm] [As indicated] <Insert thickness designation>.
 2. Interlayer Thickness: [0.030 inch (0.76 mm)] [0.060 inch (1.52 mm)] [0.090 inch (2.29 mm)].
 3. Winter Nighttime U-Factor: <Insert value> maximum.
 4. Summer Daytime U-Factor: <Insert value> maximum.
 5. Solar Heat Gain Coefficient: <Insert value> maximum.
 6. Provide safety glazing labeling.
- D. Glass Type [GL-<#>]: Tinted laminated glass with two plies of clear [float glass] [heat-strengthened float glass] [fully tempered float glass] and tinted interlayer.
1. Thickness of Each Glass Ply: [3.0 mm] [4.0 mm] [5.0 mm] [6.0 mm] [As indicated] <Insert thickness designation>.
 2. Interlayer Thickness: [0.030 inch (0.76 mm)] [0.060 inch (1.52 mm)] [0.090 inch (2.29 mm)].
 3. Interlayer Color: [Blue-green] [Bronze light] [Gray] <Insert color>.
 4. Winter Nighttime U-Factor: <Insert value> maximum.
 5. Summer Daytime U-Factor: <Insert value> maximum.
 6. Solar Heat Gain Coefficient: <Insert value> maximum.
 7. Provide safety glazing labeling.
- E. Glass Type [GL-<#>]: Ceramic-coated, laminated vision glass with two plies of [heat-strengthened float glass] [fully tempered float glass].
1. Thickness of Each Glass Ply: [3.0 mm] [4.0 mm] [5.0 mm] [6.0 mm] [As indicated] <Insert thickness designation>.

2. Interlayer Thickness: [0.030 inch (0.76 mm)] [0.060 inch (1.52 mm)] [0.090 inch (2.29 mm)].
 3. Coating Location: [Second] [Third] [Fourth] surface.
 4. Winter Nighttime U-Factor: <Insert value> maximum.
 5. Summer Daytime U-Factor: <Insert value> maximum.
 6. Solar Heat Gain Coefficient: <Insert value> maximum.
 7. Provide safety glazing labeling.
- F. Glass Type [GL-<#>]: Reflective-coated, laminated vision glass with two plies of [heat-strengthened float glass] [fully tempered float glass] with inner ply Class 1 (clear).
1. Thickness of Each Glass Ply: [3.0 mm] [4.0 mm] [5.0 mm] [6.0 mm] [As indicated] <Insert thickness designation>.
 2. Interlayer Thickness: [0.030 inch (0.76 mm)] [0.060 inch (1.52 mm)] [0.090 inch (2.29 mm)].
 3. Coating Location: [First] [Second] [Third] surface.
 4. Winter Nighttime U-Factor: <Insert value> maximum.
 5. Summer Daytime U-Factor: <Insert value> maximum.
 6. Solar Heat Gain Coefficient: <Insert value> maximum.
 7. Provide safety glazing labeling.
- G. Glass Type [GL-<#>]: Low-e-coated, laminated vision glass with two plies of clear [float glass] [heat-strengthened float glass] [fully tempered float glass].
1. Thickness of Each Glass Ply: [3.0 mm] [4.0 mm] [5.0 mm] [6.0 mm] [As indicated] <Insert thickness designation>.
 2. Interlayer Thickness: [0.030 inch (0.76 mm)] [0.060 inch (1.52 mm)] [0.090 inch (2.29 mm)].
 3. Low-E Coating: [Pyrolytic on second] [Pyrolytic on third] [Sputtered on second] [Sputtered on third] [Pyrolytic or sputtered on second or third] surface.
 4. Visible Light Transmittance: <Insert value> percent minimum.
 5. Winter Nighttime U-Factor: <Insert value> maximum.
 6. Summer Daytime U-Factor: <Insert value> maximum.
 7. Solar Heat Gain Coefficient: <Insert value> maximum.
 8. Provide safety glazing labeling.
- H. Glass Type [GL-<#>]: Reflective-coated, laminated spandrel glass with two plies of [heat-strengthened float glass] [fully tempered float glass] with inner ply Class 1 (clear).
1. Thickness of Each Glass Ply: [3.0 mm] [4.0 mm] [5.0 mm] [6.0 mm] [As indicated] <Insert thickness designation>.
 2. Interlayer Thickness: [0.030 inch (0.76 mm)] [0.060 inch (1.52 mm)] [0.090 inch (2.29 mm)].
 3. Coating Location: [First] [Second] [Third] surface.
 4. Winter Nighttime U-Factor: <Insert value> maximum.
 5. Summer Daytime U-Factor: <Insert value> maximum.

2.13 INSULATING-GLASS TYPES

A. Glass Type [GL-<#>]: Clear insulating glass.

1. Overall Unit Thickness: [1 inch (25 mm)] [5/8 inch (16 mm)] <Insert dimension>.
2. Thickness of Each Glass Lite: [3.0 mm] [4.0 mm] [5.0 mm] [6.0 mm] <Insert thickness designation>.
3. Outdoor Lite: [Float glass] [Heat-strengthened float glass] [Fully tempered float glass].
4. Interspace Content: [Air] [Argon].
5. Indoor Lite: [Float glass] [Heat-strengthened float glass] [Fully tempered float glass].
6. Winter Nighttime U-Factor: <Insert value> maximum.
7. Summer Daytime U-Factor: <Insert value> maximum.
8. Provide safety glazing labeling.

B. Glass Type [GL-<#>]: Ultraclear insulating glass.

1. Overall Unit Thickness: [1 inch (25 mm)] [5/8 inch (16 mm)] <Insert dimension>.
2. Thickness of Each Glass Lite: [3.0 mm] [4.0 mm] [5.0 mm] [6.0 mm] <Insert thickness designation>.
3. Outdoor Lite: Ultraclear [float glass] [heat-strengthened float glass] [fully tempered float glass].
4. Interspace Content: [Air] [Argon].
5. Indoor Lite: Ultraclear [float glass] [heat-strengthened float glass] [fully tempered float glass].
6. Winter Nighttime U-Factor: <Insert value> maximum.
7. Summer Daytime U-Factor: <Insert value> maximum.
8. Provide safety glazing labeling.

C. Glass Type [GL-<#>]: Pyrolytic-coated, self-cleaning, low-maintenance, clear insulating glass.

1. Overall Unit Thickness: [1 inch (25 mm)] [5/8 inch (16 mm)] <Insert dimension>.
2. Thickness of Each Glass Lite: [3.0 mm] [4.0 mm] [5.0 mm] [6.0 mm] <Insert thickness designation>.
3. Outdoor Lite: Pyrolytic-coated, self-cleaning, low-maintenance, clear [float glass] [heat-strengthened float glass] [fully tempered float glass].
4. Interspace Content: [Air] [Argon].
5. Indoor Lite: [Float glass] [Heat-strengthened float glass] [Fully tempered float glass].
6. Winter Nighttime U-Factor: <Insert value> maximum.
7. Summer Daytime U-Factor: <Insert value> maximum.
8. Provide safety glazing labeling.

D. Glass Type [GL-<#>]: Low-e-coated, clear insulating glass.

1. Overall Unit Thickness: [1 inch (25 mm)] [5/8 inch (16 mm)] <Insert dimension>.
2. Thickness of Each Glass Lite: [3.0 mm] [4.0 mm] [5.0 mm] [6.0 mm] <Insert thickness designation>.

3. Outdoor Lite: [**Float glass**] [**Heat-strengthened float glass**] [**Fully tempered float glass**] [**Ultraclear float glass**] [**Ultraclear heat-strengthened float glass**] [**Ultraclear fully tempered float glass**].
 4. Interspace Content: [**Air**] [**Argon**].
 5. Indoor Lite: [**Float glass**] [**Heat-strengthened float glass**] [**Fully tempered float glass**] [**Ultraclear float glass**] [**Ultraclear heat-strengthened float glass**] [**Ultraclear fully tempered float glass**].
 6. Low-E Coating: [**Pyrolytic on second**] [**Pyrolytic on third**] [**Sputtered on second**] [**Sputtered on third**] [**Pyrolytic or sputtered on second or third**] surface.
 7. Visible Light Transmittance: <Insert value> percent minimum.
 8. Winter Nighttime U-Factor: <Insert value> maximum.
 9. Summer Daytime U-Factor: <Insert value> maximum.
 10. Solar Heat Gain Coefficient: <Insert value> maximum.
 11. Provide safety glazing labeling.
- E. Glass Type [**GL-#>**]: Tinted insulating glass.
1. Overall Unit Thickness: [**1 inch (25 mm)**] [**5/8 inch (16 mm)**] <Insert dimension>.
 2. Thickness of Each Glass Lite: [**3.0 mm**] [**4.0 mm**] [**5.0 mm**] [**6.0 mm**] <Insert thickness designation>.
 3. Outdoor Lite: Tinted [**float glass**] [**heat-strengthened float glass**] [**fully tempered float glass**].
 4. Interspace Content: [**Air**] [**Argon**].
 5. Indoor Lite: Clear [**float glass**] [**heat-strengthened float glass**] [**fully tempered float glass**].
 6. Winter Nighttime U-Factor: <Insert value> maximum.
 7. Summer Daytime U-Factor: <Insert value> maximum.
 8. Solar Heat Gain Coefficient: <Insert value> maximum.
 9. Provide safety glazing labeling.
- F. Glass Type [**GL-#>**]: Low-e-coated, tinted insulating glass.
1. Overall Unit Thickness: [**1 inch (25 mm)**] [**5/8 inch (16 mm)**] <Insert dimension>.
 2. Thickness of Each Glass Lite: [**3.0 mm**] [**4.0 mm**] [**5.0 mm**] [**6.0 mm**] <Insert thickness designation>.
 3. Outdoor Lite: Tinted [**float glass**] [**heat-strengthened float glass**] [**fully tempered float glass**].
 4. Interspace Content: [**Air**] [**Argon**].
 5. Indoor Lite: Clear [**float glass**] [**heat-strengthened float glass**] [**fully tempered float glass**].
 6. Low-E Coating: [**Pyrolytic on second**] [**Pyrolytic on third**] [**Sputtered on second**] [**Sputtered on third**] [**Pyrolytic or sputtered on second or third**] surface.
 7. Visible Light Transmittance: <Insert value> percent minimum.
 8. Winter Nighttime U-Factor: <Insert value> maximum.
 9. Summer Daytime U-Factor: <Insert value> maximum.
 10. Solar Heat Gain Coefficient: <Insert value> maximum.
 11. Provide safety glazing labeling.

- G. Glass Type [GL-<#>]: Ceramic-coated, insulating vision glass.
1. Overall Unit Thickness: [1 inch (25 mm)] [5/8 inch (16 mm)] <Insert dimension>.
 2. Thickness of Each Glass Lite: [3.0 mm] [4.0 mm] [5.0 mm] [6.0 mm] <Insert thickness designation>.
 3. Outdoor Lite: [Heat-strengthened float glass] [Fully tempered float glass] [Ultraclear heat-strengthened float glass] [Ultraclear fully tempered float glass].
 4. Interspace Content: [Air] [Argon].
 5. Indoor Lite: [Float glass] [Heat-strengthened float glass] [Fully tempered float glass] [Ultraclear float glass] [Ultraclear heat-strengthened float glass] [Ultraclear fully tempered float glass].
 6. Coating Location: [Second] [Third] [Fourth] surface.
 7. Winter Nighttime U-Factor: <Insert value> maximum.
 8. Summer Daytime U-Factor: <Insert value> maximum.
 9. Solar Heat Gain Coefficient: <Insert value> maximum.
 10. Provide safety glazing labeling.
- H. Glass Type [GL-<#>]: Reflective-coated, clear insulating glass.
1. Overall Unit Thickness: [1 inch (25 mm)] [5/8 inch (16 mm)] <Insert dimension>.
 2. Thickness of Each Glass Lite: [3.0 mm] [4.0 mm] [5.0 mm] [6.0 mm] <Insert thickness designation>.
 3. Outdoor Lite: Clear [float glass] [heat-strengthened float glass] [fully tempered float glass].
 4. Interspace Content: [Air] [Argon].
 5. Indoor Lite: Clear [float glass] [heat-strengthened float glass] [fully tempered float glass].
 6. Coating Location: [First] [Second] [Third] surface.
 7. Winter Nighttime U-Factor: <Insert value> maximum.
 8. Summer Daytime U-Factor: <Insert value> maximum.
 9. Solar Heat Gain Coefficient: <Insert value> maximum.
 10. Provide safety glazing labeling.
- I. Glass Type [GL-<#>]: Reflective-coated, tinted insulating glass.
1. Overall Unit Thickness: [1 inch (25 mm)] [5/8 inch (16 mm)] <Insert dimension>.
 2. Thickness of Each Glass Lite: [3.0 mm] [4.0 mm] [5.0 mm] [6.0 mm] <Insert thickness designation>.
 3. Outdoor Lite: Tinted [float glass] [heat-strengthened float glass] [fully tempered float glass].
 4. Interspace Content: [Air] [Argon].
 5. Indoor Lite: Clear [float glass] [heat-strengthened float glass] [fully tempered float glass].
 6. Coating Location: [First] [Second] [Third] surface.
 7. Winter Nighttime U-Factor: <Insert value> maximum.
 8. Summer Daytime U-Factor: <Insert value> maximum.
 9. Solar Heat Gain Coefficient: <Insert value> maximum.
 10. Provide safety glazing labeling.

- J. Glass Type [GL-<#>]: **[Ceramic-coated] [Silicone-coated]**, insulating spandrel glass.
1. Overall Unit Thickness: [1 inch (25 mm)] <Insert dimension>.
 2. Thickness of Each Glass Lite: [5.0 mm] [6.0 mm] <Insert thickness designation>.
 3. Outdoor Lite: **[Float glass] [Heat-strengthened float glass] [Fully tempered float glass] [Ultraclear float glass] [Ultraclear heat-strengthened float glass] [Ultraclear fully tempered float glass]**.
 4. Interspace Content: [Air] [Argon].
 5. Indoor Lite: **[Float glass] [Heat-strengthened float glass] [Fully tempered float glass] [Ultraclear float glass] [Ultraclear heat-strengthened float glass] [Ultraclear fully tempered float glass]**.
 6. Coating Location: Fourth surface.
 7. Winter Nighttime U-Factor: <Insert value> maximum.
 8. Summer Daytime U-Factor: <Insert value> maximum.
- K. Glass Type [GL-<#>]: **[Ceramic-coated] [Silicone-coated]**, low-e, insulating spandrel glass.
1. Overall Unit Thickness: [1 inch (25 mm)] <Insert dimension>.
 2. Thickness of Each Glass Lite: [5.0 mm] [6.0 mm] <Insert thickness designation>.
 3. Outdoor Lite: **[Float glass] [Heat-strengthened float glass] [Fully tempered float glass] [Ultraclear float glass] [Ultraclear heat-strengthened float glass] [Ultraclear fully tempered float glass]**.
 4. Interspace Content: [Air] [Argon].
 5. Indoor Lite: **[Float glass] [Heat-strengthened float glass] [Fully tempered float glass] [Ultraclear float glass] [Ultraclear heat-strengthened float glass] [Ultraclear fully tempered float glass]**.
 6. Low-E Coating: **[Pyrolytic on second] [Pyrolytic on third] [Sputtered on second] [Sputtered on third] [Pyrolytic or sputtered on second or third]** surface.
 7. Opaque Coating Location: Fourth surface.
 8. Winter Nighttime U-Factor: <Insert value> maximum.
 9. Summer Daytime U-Factor: <Insert value> maximum.
- L. Glass Type [GL-<#>]: **[Ceramic-coated] [Silicone-coated]**, tinted, insulating spandrel glass.
1. Overall Unit Thickness: [1 inch (25 mm)] <Insert dimension>.
 2. Thickness of Each Glass Lite: [5.0 mm] [6.0 mm] <Insert thickness designation>.
 3. Outdoor Lite: Tinted **[float glass] [heat-strengthened float glass] [fully tempered float glass]**.
 4. Interspace Content: [Air] [Argon].
 5. Indoor Lite: Clear **[float glass] [heat-strengthened float glass] [fully tempered float glass]**.
 6. Coating Location: Fourth surface.
 7. Winter Nighttime U-Factor: <Insert value> maximum.
 8. Summer Daytime U-Factor: <Insert value> maximum.

2.14 INSULATING-LAMINATED-GLASS TYPES

A. Glass Type [GL-<#>]: Clear insulating laminated glass.

1. Overall Unit Thickness: [1-3/16 inch (30 mm)] [1 inch (25 mm)] [3/4 inch (19 mm)] <insert dimension>.
2. Thickness of Outdoor Lite: [3.0 mm] [4.0 mm] [5.0 mm] [6.0 mm] <Insert thickness designation>.
3. Outdoor Lite: [Heat-strengthened float glass] [Fully tempered float glass].
4. Interspace Content: [Air] [Argon].
5. Indoor Lite: Clear laminated glass with two plies of [float glass] [heat-strengthened float glass] [fully tempered float glass].
 - a. Thickness of Each Glass Ply: [3.0 mm] [4.0 mm] [5.0 mm] [6.0 mm] [As indicated] <Insert thickness designation>.
 - b. Interlayer Thickness: [0.030 inch (0.76 mm)] [0.060 inch (1.52 mm)] [0.090 inch (2.29 mm)].
6. Winter Nighttime U-Factor: <Insert value> maximum.
7. Summer Daytime U-Factor: <Insert value> maximum.
8. Solar Heat Gain Coefficient: <Insert value> maximum.
9. Provide safety glazing labeling.

B. Glass Type [GL-<#>]: Low-e-coated, clear insulating laminated glass.

1. Overall Unit Thickness: [1-3/16 inch (30 mm)] [1 inch (25 mm)] [3/4 inch (19 mm)] <insert dimension>.
2. Thickness of Outdoor Lite: [3.0 mm] [4.0 mm] [5.0 mm] [6.0 mm] <Insert thickness designation>.
3. Outdoor Lite: [Heat-strengthened float glass] [Fully tempered float glass].
4. Interspace Content: [Air] [Argon].
5. Indoor Lite: Clear laminated glass with two plies of [float glass] [heat-strengthened float glass] [fully tempered float glass].
 - a. Thickness of Each Glass Ply: [3.0 mm] [4.0 mm] [5.0 mm] [6.0 mm] [As indicated] <Insert thickness designation>.
 - b. Interlayer Thickness: [0.030 inch (0.76 mm)] [0.060 inch (1.52 mm)] [0.090 inch (2.29 mm)].
6. Low-E Coating: [Pyrolytic on second] [Pyrolytic on third] [Sputtered on second] [Sputtered on third] [Pyrolytic or sputtered on second or third] surface.
7. Visible Light Transmittance: <Insert value> percent minimum.
8. Winter Nighttime U-Factor: <Insert value> maximum.
9. Summer Daytime U-Factor: <Insert value> maximum.
10. Solar Heat Gain Coefficient: <Insert value> maximum.
11. Provide safety glazing labeling.

C. Glass Type [GL-<#>]: Tinted, insulating laminated glass.

1. Overall Unit Thickness: [1-3/16 inch (30 mm)] [1 inch (25 mm)] [3/4 inch (19 mm)] **<insert dimension>**.
2. Thickness of Outdoor Lite: [3.0 mm] [4.0 mm] [5.0 mm] [6.0 mm] **<Insert thickness designation>**.
3. Outdoor Lite: Tinted [heat-strengthened float glass] [fully tempered float glass].
4. Interspace Content: [Air] [Argon].
5. Indoor Lite: Clear laminated glass with two plies of [float glass] [heat-strengthened float glass] [fully tempered float glass].
 - a. Thickness of Each Glass Ply: [3.0 mm] [4.0 mm] [5.0 mm] [6.0 mm] [As indicated] **<Insert thickness designation>**.
 - b. Interlayer Thickness: [0.030 inch (0.76 mm)] [0.060 inch (1.52 mm)] [0.090 inch (2.29 mm)].
6. Winter Nighttime U-Factor: **<Insert value>** maximum.
7. Summer Daytime U-Factor: **<Insert value>** maximum.
8. Solar Heat Gain Coefficient: **<Insert value>** maximum.
9. Provide safety glazing labeling.

D. Glass Type [GL-<#>]: Low-e-coated, tinted, insulating laminated glass.

1. Overall Unit Thickness: [1-3/16 inch (30 mm)] [1 inch (25 mm)] [3/4 inch (19 mm)] **<insert dimension>**.
2. Thickness of Outdoor Lite: [3.0 mm] [4.0 mm] [5.0 mm] [6.0 mm] **<Insert thickness designation>**.
3. Outdoor Lite: Tinted [heat-strengthened float glass] [fully tempered float glass].
4. Interspace Content: [Air] [Argon].
5. Indoor Lite: Clear laminated glass with two plies of [float glass] [heat-strengthened float glass] [fully tempered float glass].
 - a. Thickness of Each Glass Ply: [3.0 mm] [4.0 mm] [5.0 mm] [6.0 mm] [As indicated] **<Insert thickness designation>**.
 - b. Interlayer Thickness: [0.030 inch (0.76 mm)] [0.060 inch (1.52 mm)] [0.090 inch (2.29 mm)].
6. Low-E Coating: [Pyrolytic on second] [Pyrolytic on third] [Sputtered on second] [Sputtered on third] [Pyrolytic or sputtered on second or third] surface.
7. Visible Light Transmittance: **<Insert value>** percent minimum.
8. Winter Nighttime U-Factor: **<Insert value>** maximum.
9. Summer Daytime U-Factor: **<Insert value>** maximum.
10. Solar Heat Gain Coefficient: **<Insert value>** maximum.
11. Provide safety glazing labeling.

E. Glass Type [GL-<#>]: Reflective-coated, clear, insulating laminated glass.

1. Overall Unit Thickness: [1-3/16 inch (30 mm)] [1 inch (25 mm)] **<Insert dimension>**.

2. Thickness of Outdoor Lite: **[6.0 mm]** <Insert thickness designation>.
3. Outdoor Lite: Clear **[heat-strengthened float glass]** **[fully tempered float glass]**.
4. Interspace Content: **[Air]** **[Argon]**.
5. Indoor Lite: Clear laminated glass with two plies of **[float glass]** **[heat-strengthened float glass]** **[fully tempered float glass]**.
 - a. Thickness of Each Glass Ply: **[3.0 mm]** **[4.0 mm]** **[5.0 mm]** **[6.0 mm]** **[As indicated]** <Insert thickness designation>.
 - b. Interlayer Thickness: **[0.030 inch (0.76 mm)]** **[0.060 inch (1.52 mm)]** **[0.090 inch (2.29 mm)]**.
6. Coating Location: **[First]** **[Second]** **[Third]** surface.
7. Winter Nighttime U-Factor: <Insert value> maximum.
8. Summer Daytime U-Factor: <Insert value> maximum.
9. Solar Heat Gain Coefficient: <Insert value> maximum.
10. Provide safety glazing labeling.

F. Glass Type **[GL-<#>]**: Reflective-coated, tinted, insulating laminated glass.

1. Overall Unit Thickness: **[1-3/16 inch (30 mm)]** **[1 inch (25 mm)]** <Insert dimension>.
2. Thickness of Outdoor Lite: **[6.0 mm]** <Insert thickness designation>.
3. Outdoor Lite: Tinted **[heat-strengthened float glass]** **[fully tempered float glass]**.
4. Interspace Content: **[Air]** **[Argon]**.
5. Indoor Lite: Clear laminated glass with two plies of **[float glass]** **[heat-strengthened float glass]** **[fully tempered float glass]**.
 - a. Thickness of Each Glass Ply: **[3.0 mm]** **[4.0 mm]** **[5.0 mm]** **[6.0 mm]** **[As indicated]** <Insert thickness designation>.
 - b. Interlayer Thickness: **[0.030 inch (0.76 mm)]** **[0.060 inch (1.52 mm)]** **[0.090 inch (2.29 mm)]**.
6. Coating Location: **[First]** **[Second]** **[Third]** surface.
7. Winter Nighttime U-Factor: <Insert value> maximum.
8. Summer Daytime U-Factor: <Insert value> maximum.
9. Solar Heat Gain Coefficient: <Insert value> maximum.
10. Provide safety glazing labeling.

2.15 FIRE-PROTECTION-RATED GLAZING TYPES

A. Glass Type **[GL-<#>]**: 20-minute fire-rated glazing without hose-stream test; **[monolithic ceramic glazing]** **[film-faced ceramic glazing]** **[laminated ceramic glazing]** **[fire-protection-rated tempered glass]** **[fire-protection-rated laminated glass]** **[or]** **[gel-filled, double glazing units]**.

1. Provide safety glazing labeling.

- B. Glass Type [GL-<#>]: 20-minute fire-rated glazing with hose-stream test; **[monolithic ceramic glazing] [film-faced ceramic glazing] [laminated ceramic glazing] [or] [gel-filled, double glazing units]**.
1. Provide safety glazing labeling.
- C. Glass Type [GL-<#>]: **[45-minute] [60-minute] [90-minute] [120-minute]** fire-rated glazing; **[monolithic ceramic glazing] [film-faced ceramic glazing] [laminated ceramic glazing] [laminated glass with intumescent interlayers] [or] [gel-filled, double glazing units]**.
1. Provide safety glazing labeling.
- D. Glass Type [GL-<#>]: **[45-minute] [60-minute] [90-minute] [120-minute]** fire-rated glazing with **450 deg F (250 deg C)** temperature rise limitation; **[laminated glass with intumescent interlayers] [or] [gel-filled, double glazing units]**.
1. Provide safety glazing labeling.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine framing, glazing channels, and stops, with Installer present, for compliance with the following:
1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.
 2. Presence and functioning of weep systems.
 3. Minimum required face and edge clearances.
 4. Effective sealing between joints of glass-framing members.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean glazing channels and other framing members receiving glass immediately before glazing. Remove coatings not firmly bonded to substrates.
- B. Examine glazing units to locate exterior and interior surfaces. Label or mark units as needed so that exterior and interior surfaces are readily identifiable. Do not use materials that will leave visible marks in the completed work.

3.3 GLAZING, GENERAL

- A. Comply with combined written instructions of manufacturers of glass, sealants, gaskets, and other glazing materials, unless more stringent requirements are indicated, including those in referenced glazing publications.
- B. Adjust glazing channel dimensions as required by Project conditions during installation to provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances.
- C. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass is glass with edge damage or other imperfections that, when installed, could weaken glass and impair performance and appearance.
- D. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction testing.
- E. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications, unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.
- F. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.
- G. Provide spacers for glass lites where length plus width is larger than 50 inches (1270 mm).
 - 1. Locate spacers directly opposite each other on both inside and outside faces of glass. Install correct size and spacing to preserve required face clearances, unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances and to comply with system performance requirements.
 - 2. Provide 1/8-inch (3-mm) minimum bite of spacers on glass and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.
- H. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and according to requirements in referenced glazing publications.
- I. Set glass lites in each series with uniform pattern, draw, bow, and similar characteristics.
- J. Set glass lites with proper orientation so that coatings face exterior or interior as specified.
- K. Where wedge-shaped gaskets are driven into one side of channel to pressurize sealant or gasket on opposite side, provide adequate anchorage so gasket cannot walk out when installation is subjected to movement.

- L. Square cut wedge-shaped gaskets at corners and install gaskets in a manner recommended by gasket manufacturer to prevent corners from pulling away; seal corner joints and butt joints with sealant recommended by gasket manufacturer.

3.4 TAPE GLAZING

- A. Position tapes on fixed stops so that, when compressed by glass, their exposed edges are flush with or protrude slightly above sightline of stops.
- B. Install tapes continuously, but not necessarily in one continuous length. Do not stretch tapes to make them fit opening.
- C. Cover vertical framing joints by applying tapes to heads and sills first and then to jambs. Cover horizontal framing joints by applying tapes to jambs and then to heads and sills.
- D. Place joints in tapes at corners of opening with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible sealant approved by tape manufacturer.
- E. Do not remove release paper from tape until right before each glazing unit is installed.
- F. Apply heel bead of elastomeric sealant.
- G. Center glass lites in openings on setting blocks and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings.
- H. Apply cap bead of elastomeric sealant over exposed edge of tape.

3.5 GASKET GLAZING (DRY)

- A. Cut compression gaskets to lengths recommended by gasket manufacturer to fit openings exactly, with allowance for stretch during installation.
- B. Insert soft compression gasket between glass and frame or fixed stop so it is securely in place with joints miter cut and bonded together at corners.
- C. Installation with Drive-in Wedge Gaskets: Center glass lites in openings on setting blocks and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.
- D. Installation with Pressure-Glazing Stops: Center glass lites in openings on setting blocks and press firmly against soft compression gasket. Install dense compression gaskets and pressure-glazing stops, applying pressure uniformly to compression gaskets. Compress gaskets to produce a weathertight seal without developing bending

stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.

- E. Install gaskets so they protrude past face of glazing stops.

3.6 SEALANT GLAZING (WET)

- A. Install continuous spacers, or spacers combined with cylindrical sealant backing, between glass lites and glazing stops to maintain glass face clearances and to prevent sealant from extruding into glass channel and blocking weep systems until sealants cure. Secure spacers or spacers and backings in place and in position to control depth of installed sealant relative to edge clearance for optimum sealant performance.
- B. Force sealants into glazing channels to eliminate voids and to ensure complete wetting or bond of sealant to glass and channel surfaces.
- C. Tool exposed surfaces of sealants to provide a substantial wash away from glass.

3.7 LOCK-STRIP GASKET GLAZING

- A. Comply with ASTM C 716 and gasket manufacturer's written instructions. Provide supplementary wet seal and weep system unless otherwise indicated.

3.8 CLEANING AND PROTECTION

- A. Protect exterior glass from damage immediately after installation by attaching crossed streamers to framing held away from glass. Do not apply markers to glass surface. Remove nonpermanent labels and clean surfaces.
- B. Protect glass from contact with contaminating substances resulting from construction operations. If, despite such protection, contaminating substances do come into contact with glass, remove substances immediately as recommended in writing by glass manufacturer.
- C. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains; remove as recommended in writing by glass manufacturer.
- D. Remove and replace glass that is broken, chipped, cracked, or abraded or that is damaged from natural causes, accidents, and vandalism, during construction period.
- E. Wash glass on both exposed surfaces in each area of Project not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash glass as recommended in writing by glass manufacturer.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 088000

SECTION 088113 - DECORATIVE GLASS GLAZING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes the following decorative glass for interior applications:
 - 1. Patterned.
 - 2. Silk-screened.
 - 3. Acid etched.
 - 4. Sandblasted.
 - 5. Laminated.
 - 6. Glass with decorative film overlay.
 - 7. Glass with finished edges.
- B. Related Sections:
 - 1. Section 057300 "Decorative Metal Railings" for glass and plastic panels in metal railings and in glass- and plastic-supported railings.
 - 2. Section 088000 "Glazing" for standard glass products.
 - 3. Section 088300 "Mirrors" for mirror glass.
 - 4. Section 088400 "Plastic Glazing" for acrylic and polycarbonate glazing.
 - 5. Section 088853 "Security Glazing" for glazing intended to resist ballistic attacks, blunt- and sharp-tool attacks, thermal stress, chemical threats, or airblasts.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITION

- A. Glass Thickness: Indicated by thickness designations in millimeters according to ASTM C 1036.

1.4 PERFORMANCE REQUIREMENTS

- A. General Performance: Installed glazing systems shall withstand normal thermal movement and impact loads (where applicable) without failure, including loss or glass breakage attributable to the following: defective manufacture, fabrication, or

installation; deterioration of glazing materials; or other defects in construction.

- B. Delegated Design: Design glass installed adjacent to walking surfaces, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
1. Differential deflection of adjacent unsupported edges shall not exceed glass thickness when subjected to **50 lbf/ft.** (730 N/m) applied horizontally to one panel at any point up to **42 inches** (1067 mm) above the adjacent walking surface.
 2. Base design on thickness at thinnest part of the glass.

1.5 PRECONSTRUCTION TESTING

- A. Preconstruction Adhesion and Compatibility Testing: Test each glazing material type, tape sealant, gasket, glazing accessory, and glass-framing member for adhesion to and compatibility with elastomeric glazing sealants.
1. Use ASTM C 1087 to determine whether priming and other specific joint preparation techniques are required to obtain rapid, optimum adhesion of glazing sealants to glass, tape sealants, gaskets, and glazing channel substrates.
 2. Submit no fewer than **[eight (8)] <Insert number>** Samples of each type of material, including joint substrates, shims, joint-sealant backings, secondary seals, and miscellaneous materials.
 3. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
 4. For materials failing tests, obtain sealant manufacturer's written instructions for corrective measures including the use of specially formulated primers.
 5. Testing will not be required if data based on previous testing of current sealant products and glazing materials match those submitted.

1.6 ACTION SUBMITTALS

- A. Product Data: For each decorative-glass and glazing product indicated.
1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
1. Product Data for Credit IEQ 4.1: For glazing sealants used inside the weatherproofing system, documentation including printed statement of VOC content.
 2. Laboratory Test Reports for Credit IEQ 4: For glazing sealants used inside the weatherproofing system, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: For decorative glass. Show fabrication and installation details. Include the following:

1. Size and location of penetrations.
2. Glazing method.
3. Mounting method.
4. Attachments to other work.
5. Full-size details of edge-finished profiles.

D. Glass Samples: For the following products, **12 inches** (300 mm) square:

1. Each type of decorative glass.
2. Each edge treatment on type of decorative glass.
3. Each decorative film overlay on type of decorative glass.
4. Each applied coating on type of decorative glass.

E. Glazing Accessory Samples: For **[sealants] [and] [colored spacers]**, in **12-inch** (300-mm) lengths. **[Install sealant Samples between two strips of material representative of the glazed system.]**

F. Product Schedule: For decorative glass. **[Use same designations indicated on Drawings.]**

G. Delegated-Design Submittal: For glass indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.7 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified **[Installer] [fabricator] [and] [sealant testing agency]**.
- B. Product Certificates: For each type of decorative glass, from manufacturer.
- C. Preconstruction Adhesion and Compatibility Test Reports: Based on evaluation and comprehensive tests performed by a qualified testing agency, for **[laminated glass] [glass with decorative film overlay]**.
- D. Warranty: Sample of special warranty.

1.8 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For each type of decorative glass **[and each decorative film overlay] [and each applied coating]** to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.9 QUALITY ASSURANCE

- A. Installer Qualifications: A qualified installer who employs glass installers for this Project who are certified under NGA's Certified Glass Installer Program.
- B. Sealant Testing Agency Qualifications: An independent testing agency qualified according to ASTM C 1021 to conduct the testing indicated.
- C. Source Limitations for Glass: Obtain each type of decorative glass from single source from single manufacturer.
- D. Source Limitations for Glazing Accessories: Obtain from single source from single manufacturer, for each product and installation method.
- E. Glazing Publications: Comply with published recommendations in [**GANA's "Laminated Glazing Reference Manual" and]**GANA's "Glazing Manual" unless more stringent requirements are indicated. See these publications for glazing terms not otherwise defined in this Section or in referenced standards.
- F. Safety Glazing: Where safety glazing is indicated, comply with testing requirements in 16 CFR 1201 for Category II materials.
 - 1. Labeling: Permanently mark glazing with certification label of [**the SGCC] [or] [another certification agency acceptable to authorities having jurisdiction] [or] [manufacturer]**. Label shall indicate manufacturer's name, type of glass, thickness, and safety glazing standard that glass complies with.
- G. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
 - 1. Build mockups in the location and of the size indicated or, if not indicated, as directed by DEN Project Manager.
 - 2. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- H. Preinstallation Conference: Conduct conference at [**Project site] [location and time as determined by DEN Project Manager]**<Insert location>.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Protect decorative glass and glazing materials according to manufacturer's written instructions and as needed to prevent damage to surfaces and edges.
- B. Retain packaging and sequencing numbers for decorative-glass units.

1.11 PROJECT CONDITIONS

- A. Environmental Limitations: Do not deliver or install decorative glass until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and temporary

HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

- B. Field Measurements: Verify actual dimensions of openings and construction contiguous with decorative glass by field measurements before fabrication.

1.12 WARRANTY

- A. Special Warranty on Laminated Glass: Manufacturer's standard form in which laminated-glass manufacturer agrees to replace laminated-glass units that deteriorate within specified warranty period. Deterioration of laminated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.

1. Warranty Period: Minimum [five (5)] [ten (10)] <Insert number> years from date of Substantial Completion.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GLASS PRODUCTS, GENERAL

- A. Thickness: Where glass thickness is indicated, it is a minimum. Provide glass lites in thicknesses as needed to comply with requirements indicated.
- B. Strength: Where float glass is indicated, provide annealed float glass, Kind HS heat-treated float glass, or Kind FT heat-treated float glass as needed to comply with requirements indicated. Where heat-strengthened glass is indicated, provide Kind HS heat-treated float glass or Kind FT heat-treated float glass as needed to comply with requirements indicated. Where fully tempered glass is indicated, provide Kind FT heat-treated float glass.

2.2 MONOLITHIC-GLASS PRODUCTS

- A. Float Glass: ASTM C 1036, Type I, Quality-Q3, Class I (clear) unless otherwise indicated.

- B. Ultraclear Float Glass: ASTM C 1036, Type I, Quality-Q3, Class I, complying with other requirements specified and with visible light transmission not less than **[90] [91]** **<Insert number>** percent.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. AFG Industries, Inc.; Krystal Klear.
 - b. Bendheim Corporation; Low Iron + White.
 - c. Guardian Industries Corp.; UltraWhite.
 - d. Pilkington North America; Optiwhite.
 - e. PPG Industries, Inc.; Starphire.
 - f. SCHOTT Corporation; Amiran.
 - g. **<Insert manufacturer's name; product name or designation>**.
 - h. or approved equal.
- C. Heat-Treated Float Glass: ASTM C 1048; Type I; Quality-Q3; Class I (clear) unless otherwise indicated; of kind and condition indicated.
1. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed unless otherwise indicated.

2.3 DECORATIVE GLASS TYPES

- A. Decorative Glass[**Type GL-<#>**]: Patterned glass; **[annealed] [heat strengthened] [fully tempered]**, Type II, Form 3; Quality-Q**[5] [6]**, Finish F**[1 (patterned one side)] [2 (patterned both sides)]**.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.
 - b. or approved equal.
 2. Glass Thickness: **[4.0 mm] [5.0 mm] [6.0 mm] <Insert thickness designation>**.
 3. Pattern: **[P1 (linear)] [P2 (geometric)] [P3 (random)] [P4 (special)] [As indicated by manufacturer's designations] [Match DEN Project manager's samples] [As selected by DEN Project Manager from manufacturer's full range]**.
 4. Comply with requirements for safety glazing.
- B. Decorative Glass[**Type GL-<#>**]: Silk-screened glass with decorative **[ceramic frit applied and heat-fused to glass surface] [glass paint or ink applied to glass surface and cured]** according to manufacturer's standard process.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.
 - b. or approved equal.

2. Glass Type: Clear [**heat-strengthened**] [**fully tempered**] float glass.
 3. Glass Thickness: [**4.0 mm**] [**5.0 mm**] [**6.0 mm**] <Insert thickness designation>.
 4. Comply with requirements for safety glazing.
 5. Colors and Patterns: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**] [**As indicated**].
- C. Decorative Glass[**Type GL-<#>**]: Acid-etched glass with decorative pattern etched into glass with hydrofluoric and hydrochloric acids, evenly applied, according to manufacturer's standard process.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. <Insert, in separate subparagraphs, manufacturer's name; product name or designation>.
 - b. DEN Project Manager
 2. Glass Type: Clear [**fully tempered**] float glass.
 3. Glass Thickness: [**4.0 mm**] [**5.0 mm**] [**6.0 mm**] <Insert thickness designation>.
 4. Patterns: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**] [**As indicated**].
 5. Silicone Back Coating: [**Recommended by glass fabricator**] <Insert manufacturer's name; product name or designation> for shop application.
 - a. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**].
- D. Decorative Glass[**Type GL-<#>**]: Sandblasted glass with decorative pattern applied uniformly, with abrasive particles forced through a high-pressure air nozzle, according to manufacturer's standard process.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. <Insert, in separate subparagraphs, manufacturer's name; product name or designation>.
 - b. or approved equal.
 2. Glass Type: Clear [**fully tempered**] float glass.
 3. Glass Thickness: [**Not less than**] [**4.0 mm**] [**5.0 mm**] [**6.0 mm**] <Insert thickness designation>.
 4. Patterns: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**] [**As indicated**].
 5. Antifingerprint Coating: Protective coating [**recommended and provided by glass fabricator**] <Insert manufacturer's name; product name or designation>.

6. Acid-Etched Finish: Acid etch glass with hydrofluoric and hydrochloric acids, evenly applied and maintaining detail of sandblasted pattern, according to manufacturer's standard process.
- E. Decorative Glass[**Type GL-<#>**]: Laminated glass, ASTM C 1172. Use materials that have a proven record of not bubbling, discoloring, or losing physical and mechanical properties after fabrication and installation.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.
 - b. or approved equal.
 2. Construction: Two plies of [**ultraclear**] [**heat-strengthened**] [**fully tempered**] [**ultraclear heat-strengthened**] [**ultraclear fully tempered**] float glass.
 3. Thickness of Each Glass Ply: [**3.0 mm**] [**4.0 mm**] [**5.0 mm**] [**6.0 mm**] **<Insert thickness designation>**.
 4. Construction: Laminate glass with [**PVB interlayer**] [**or**] [**cast-in-place and cured-transparent-resin interlayer**] to comply with interlayer manufacturer's written recommendations.
 5. Interlayer Thickness: [**0.030 inch** (0.76 mm)] [**0.060 inch** (1.52 mm)] [**0.090 inch** (2.29 mm)].
 6. Comply with requirements for safety glazing.
 7. Interlayer Material Color and Pattern: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**].
 8. Visible Light Transmittance of Interlayer: **<Insert number>** percent minimum.
 9. Sound Transmission Requirements: Sound transmission loss performance is tested according to ASTM E 90, determined by ASTM E 413, and rated for Sound Transmission Class (STC) plus or minus 1 of [**35**] [**40**] **<Insert rating>**.
- F. Decorative Glass[**Type GL-<#>**]: Glass with decorative film overlay. Use translucent, dimensionally stable, cast PVC film, **2-mil-** (0.05-mm-) minimum thickness, with pressure-sensitive, clear adhesive back for adhering to glass and releasable protective backing.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Avery Dennison, Graphics; Etchmark A5861-S.
 - b. FDC Graphic Films, Inc.; Intermediate Frosted Crystal Vinyl Film Series 3804, [**Silver**] **<Insert color>**.
 - c. FDC Graphic Films, Inc.; Premium Frosted Etched Glass Vinyl Film Series 3500.
 - d. 3M; Scotchcal Dusted Crystal.
 - e. 3M; Scotchcal Frosted Crystal, [**Clear**] **<Insert color>**.
 - f. **<Insert manufacturer's name; product name or designation>**.
 2. Glass Type: Clear [**heat-strengthened**] [**fully tempered**] float glass.
 3. Glass Thickness: [**4.0 mm**] [**5.0 mm**] [**6.0 mm**] **<Insert thickness designation>**.

4. Comply with requirements for safety glazing.
5. Use: Suitable for exterior and interior applications.
6. Outdoor Durability: Not less than **[five]** **<Insert number>** years.
7. Patterns: **[As indicated by manufacturer's designations]** **[Match DEN Project Manager's samples]** **[As selected by DEN Project Manager from manufacturer's full range]** **[As indicated]**.

2.4 GLAZING MATERIALS

- A. Glazing Gaskets, Sealants, Tapes, and Miscellaneous Glazing Materials: As specified in Section 088000 "Glazing."
 1. Elastomeric Glazing Sealants: ASTM C 920, **<Insert sealant material>**.
 - a. Color: As selected by DEN Project Manager from manufacturer's full range.
- B. Joint Sealants: As specified in Section 079200 "Joint Sealants."

2.5 HARDWARE FOR GLASS INSTALLATION

- A. Hardware: **[Edge grips]** **[Glass panel to ceiling clamps/connectors]** **[Glass panel to floor clamps/connectors]** **[Glass panel to wall clamps/connectors]** **[Glass to glass panel clamp/connectors]** **[Panel support bars]** **[Stand-off display system with caps]** **[Swivel fittings]** **[Continuous top track]** **[Continuous floor track]** **<Insert hardware description>**.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. CHMI Custom Hardware Manufacturing, Inc.; **<Insert product name or designation>**.
 - b. Laurence, C. R. Co., Inc.; **<Insert product name or designation>**.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.
 2. Dimensions: **<Insert dimensions>**.
 3. Material and Finish: **<Insert manufacturer's material and finish name and designation>**.
- B. Fasteners: Fabricated of same basic metal and alloy as fastened metal and matching it in finished color and texture where fasteners are exposed.
- C. Gaskets and Wedges: Manufacturer's standard, compatible with decorative glass type indicated.
- D. Anchors and Inserts: Provide devices as required for hardware installation. Provide toothed or lead-shield expansion-bolt devices for drilled-in-place anchors. Provide **[galvanized]** **[stainless-steel]** anchors and inserts for applications on inside face of exterior walls and where indicated.

2.6 DECORATIVE-GLASS FABRICATION

- A. Fabricate decorative glass and provide other glazing products in sizes required to glaze openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written recommendations of product manufacturer and with referenced glazing standard.
- B. Edge Finishing: Fabricate finished edges to produce smooth, polished edges without chips, scratches, or warps.
 - 1. Finished Edge: **[Clean cut] [Chamfered/Seamed/Swiped] [Flat polished] [Rounded polished] [Beveled polished edge of width shown] [Clean cut or flat grind vertical edges of butt-glazed lites in a manner that produces square edges with slight kerfs] <Insert treatment>**.
 - 2. Edge-Finished Glass Adhesive: Clear, nonyellowing, as recommended by manufacturer.
- C. Lite Treatment: **[Drilled] [Notched] [Cut out] [Surface cut]** as indicated on Drawings with smooth, uniform edge.
- D. Decorative Film Overlay: Apply squarely aligned to glass edges, uniformly smooth, and free from tears, air bubbles, wrinkles, and rough edges, **[in single sheet completely overlaying] [in pattern indicated on Drawings to] [with graphic image as indicated on Drawings to]** the back face of clean glass, according to manufacturer's written instructions, including surface preparation and application temperature limitations.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine decorative-glass framing members, with Installer present, for compliance with the following:
 - 1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.
 - 2. Minimum required face or edge clearances.
 - 3. Effective sealing between joints of decorative-glass framing members.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean glazing channels and other framing members receiving glass immediately before glazing. Remove coatings not firmly bonded to substrates.

- B. Examine glazing units to locate orientation of outer surfaces[**as indicated on Drawings**]. Label or mark units as needed so that surface orientation is readily identifiable. Do not use materials that leave visible marks in the completed Work.

3.3 INSTALLATION

- A. Set decorative-glass units in each series true in line with uniform orientation, pattern, draw, bow, and similar characteristics.
- B. Set glass lites with proper orientation so that each outer surface faces the direction [**indicated on Drawings**] <Insert orientation>.
- C. Set decorative glass in locations indicated on Drawings. Install glass with hardware and accessories according to hardware manufacturer's written instructions. Attach hardware securely to mounting surfaces[**and building structure**].
- D. Set decorative glass in locations indicated on Drawings and as specified in <Insert Section number>-<Insert Section title>

3.4 GLAZING, GENERAL

- A. Decorative Glass: Install glazing as specified in Section 088000 "Glazing."
- B. Comply with combined written instructions of manufacturers of gaskets, glass, sealants, tapes, and other glazing materials unless more stringent requirements are indicated, including those in referenced glazing publications.
- C. Adjust glazing channel dimensions during installation as required by Project conditions to provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances.
- D. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass is glass with edge damage or other imperfections that, when installed, could weaken glass and impair performance and appearance.
- E. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction testing.
- F. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications, unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.
- G. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.
- H. Provide spacers for glass lites where length plus width is more than **50 inches** (1270 mm).

1. Locate spacers directly opposite each other on both inside and outside faces of glass. Install correct size and spacing to preserve required face clearances, unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances, and to comply with system performance requirements.
 2. Provide 1/8-inch (3-mm) minimum bite of spacers on glass and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.
- I. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and according to requirements in referenced glazing publications.

3.5 SEALANT GLAZING (WET)

- A. Install continuous spacers, or spacers combined with cylindrical sealant backing, between glass lites and glazing stops to maintain glass face clearances and to prevent sealant from extruding into glass channel and blocking weep systems until sealants cure. Secure spacers or spacers and backings in place and in position to control depth of installed sealant relative to edge clearance for optimum sealant performance.
- B. Force sealants into glazing channels[**and between glass-to-glass joints**] to eliminate voids and to ensure complete wetting or bond of sealant to glass and channel surfaces.
- C. Tool exposed surfaces of sealants smooth.

3.6 CLEANING AND PROTECTION

- A. Protect decorative glass from damage immediately after installation by attaching crossed streamers to framing and held away from glass. Do not apply markers to glass surface. Remove nonpermanent labels, and clean surfaces.
- B. Protect glass from contact with contaminating substances resulting from construction operations. If, despite such protection, contaminating substances do come into contact with glass, remove substances immediately as recommended in writing by glass manufacturer.
- C. Remove and replace glass that is broken, chipped, cracked, or abraded or that is damaged from natural causes, accidents, and vandalism, during construction period.
- D. Wash glass on both exposed surfaces in each area of Project not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash glass as recommended in writing by glass manufacturer.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 088113

SECTION 088300 - MIRRORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes the following types of silvered flat glass mirrors:
 - 1. Annealed monolithic glass mirrors.
 - 2. **[Film-backed] [Laminated] [Tempered]** glass mirrors qualifying as safety glazing.
- B. Related Sections:
 - 1. Section 088000 "Glazing" for glass with reflective coatings used for vision and spandrel lites.
 - 2. Section 102800 "Toilet, Bath, and Laundry Accessories" for metal-framed mirrors.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Include data substantiating that materials comply with requirements.
 - 2. Mirrors. Include description of materials and process used to produce each type of silvered flat glass mirror specified that indicates sources of glass, glass coating components, edge sealer, and quality-control provisions.
- B. LEED Submittals:
 - 1. Product Data for Credit IEQ 4.1: For adhesives, documentation including printed statement of VOC content.
 - 2. Laboratory Test Reports for Credit IEQ 4: For adhesives, documentation indicating that they comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of

Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- C. Shop Drawings: Include mirror elevations, edge details, mirror hardware, and attachments to other work.
- D. Samples: For each type of the following products:
 - 1. Mirrors: **12 inches** (300 mm) square, including edge treatment on two adjoining edges.
 - 2. Mirror Clips: Full size.
 - 3. Mirror Trim: **12 inches** (300 mm) long.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer.
- B. Product Certificates: For each type of mirror[**and mirror mastic**], from manufacturer.
- C. Preconstruction Test Reports: From mirror manufacturer indicating that mirror mastic was tested for compatibility and adhesion with mirror backing [**paint**] [**film**] and substrates on which mirrors are installed.
- D. Warranty: Sample of special warranty.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For mirrors to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: A qualified installer who employs glass installers for this Project who are certified under the National Glass Association's Certified Glass Installer Program.
- B. Source Limitations for Mirrors: Obtain mirrors from single source from single manufacturer.
- C. Source Limitations for Mirror Accessories: Obtain mirror glazing accessories from single source.
- D. Glazing Publications: Comply with the following published recommendations:
 - 1. GANA's "Glazing Manual" unless more stringent requirements are indicated.

Refer to this publication for definitions of glass and glazing terms not otherwise defined in this Section or in referenced standards.

2. GANA Mirror Division's "Mirrors, Handle with Extreme Care: Tips for the Professional on the Care and Handling of Mirrors."

- E. Safety Glazing Products: For **[film-backed]** **[laminated]** **[tempered]** mirrors, provide products complying with testing requirements in 16 CFR 1201 for Category II materials.
- F. Preconstruction Mirror Mastic Compatibility Test: Submit mirror mastic products to mirror manufacturer for testing to determine compatibility of mastic with mirror backing **[paint]** **[film]** and substrates on which mirrors are installed.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Protect mirrors according to mirror manufacturer's written instructions and as needed to prevent damage to mirrors from moisture, condensation, temperature changes, direct exposure to sun, or other causes.
- B. Comply with mirror manufacturer's written instructions for shipping, storing, and handling mirrors as needed to prevent deterioration of silvering, damage to edges, and abrasion of glass surfaces and applied coatings. Store indoors.

1.8 PROJECT CONDITIONS

- A. Environmental Limitations: Do not install mirrors until ambient temperature and humidity conditions are maintained at levels indicated for final occupancy.

1.9 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which mirror manufacturer agrees to replace mirrors that deteriorate within specified warranty period. Deterioration of mirrors is defined as defects developed from normal use that are not attributed to mirror breakage or to maintaining and cleaning mirrors contrary to manufacturer's written instructions. Defects include discoloration, black spots, and clouding of the silver film.

1. Warranty Period: Minimum **[five (5)]** <Insert number> years from date of **[Substantial Completion]** **[manufacture]**.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 SILVERED FLAT GLASS MIRRORS

A. Glass Mirrors, General: ASTM C 1503[; **manufactured using copper-free, low-lead mirror coating process**].

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Arch Aluminum & Glass Co., Inc.
- b. Avalon Glass and Mirror Company.
- c. Binswanger Mirror; a division of Vitro America, Inc.
- d. D & W Incorporated
- e. Donisi Mirror Company.
- f. Gardner Glass, Inc.
- g. Gilded Mirrors, Inc.
- h. Guardian Industries.
- i. Head West.
- j. Independent Mirror Industries, Inc.
- k. Lenoir Mirror Company.
- l. Maran-Wurzell Glass & Mirror.
- m. National Glass Industries.
- n. Stroupe Mirror Co., Inc.
- o. Sunshine Mirror; Westshore Glass Corp.
- p. Virginia Mirror Company, Inc.
- q. Walker Glass Co., Ltd.
- r. **<Insert manufacturer's name>**.
- s. or approved equal.

B. Clear Glass: Mirror [**Select**] [**Glazing**] Quality[; **ultraclear (low-iron) float glass with a minimum 91 percent visible light transmission**].

1. Nominal Thickness: [**3.0 mm**] [**4.0 mm**] [**5.0 mm**] [**6.0 mm**] [**As indicated**] **<Insert thickness>**.

C. Tinted Glass: Mirror Glazing Quality.

1. Nominal Thickness: [**3.0 mm**] [**4.0 mm**] [**5.0 mm**] [**6.0 mm**] [**As indicated**] **<Insert thickness>**.

2. Tint Color: [**Blue**] [**Black**] [**Bronze**] [**Gold**] [**Gray**] [**Green**] [**Peach**] [**Pink**] **<Insert color>**.

D. Tempered [**Clear**] [**Tinted**] Glass: Mirror Glazing Quality, for blemish requirements; and comply with ASTM C 1048 for Kind FT, Condition A, tempered float glass before silver coating is applied.

1. Nominal Thickness: [**3.0 mm**] [**4.0 mm**] [**5.0 mm**] [**6.0 mm**] [**As indicated**] **<Insert thickness>**.

2. Tint Color: **[Blue] [Black] [Bronze] [Gold] [Gray] [Green] [Peach] [Pink] <Insert color>**.

E. Laminated Mirrors: ASTM C 1172, Kind LM.

1. Clear Glass for Outer Lite: Mirror **[Select] [Glazing] Quality[; ultraclear (low-iron) float glass with a minimum 91 percent visible light transmission]**.
2. Tinted Glass for Outer Lite: Mirror Glazing Quality.
 - a. Tint Color: **[Blue] [Black] [Bronze] [Gold] [Gray] [Green] [Peach] [Pink] <Insert color>**.
3. Nominal Thickness for Outer Lite: **[3.0 mm] [4.0 mm] [5.0 mm] [6.0 mm] [As indicated] <Insert thickness>**.
4. Glass for Inner Lite: Annealed float glass; ASTM C 1036, Type I (transparent flat glass), Quality-Q3; Class 1 (clear).
5. Glass for Inner Lite: Heat-treated float glass; ASTM C 1048 Type I; Quality-Q3; Class I (clear) Kind HS, Condition A.
6. Glass for Inner Lite: Tempered float glass; ASTM C 1048 Type I; Quality-Q3; Class I (clear), Kind FT, Condition A.
7. Nominal Thickness: **[3.0 mm] [4.0 mm] [5.0 mm] [6.0 mm] [As indicated] <Insert thickness>**.
8. Interlayer: Mirror manufacturer's standard **0.030-inch-** (0.76-mm-) thick, clear polyvinyl-butylal interlayer with a proven record of showing no tendency to delaminate from, or cause damage to, silver coating.

2.2 MISCELLANEOUS MATERIALS

- A. Setting Blocks: Elastomeric material with a Shore, Type A durometer hardness of 85, plus or minus 5.
- B. Edge Sealer: Coating compatible with glass coating and approved by mirror manufacturer for use in protecting against silver deterioration at mirrored glass edges.
- C. Mirror Mastic: An adhesive setting compound, asbestos-free, produced specifically for setting mirrors and certified by both mirror manufacturer and mastic manufacturer as compatible with glass coating and substrates on which mirrors will be installed.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Franklin International; Titebond Division.
 - b. Laurence, C. R. Co., Inc.
 - c. Macco Adhesives; Liquid Nails Division.
 - d. OSI Sealants, Inc.
 - e. Palmer Products Corporation.
 - f. Pecora Corporation.
 - g. Royal Adhesives & Sealants; Gunther Mirror Mastics Division.
 - h. Sommer & Maca Industries, Inc.

- i. **<Insert manufacturer's name>**.
 - j. or approved equal.
2. Adhesive shall have a VOC content of not more than [70] **<Insert number>** g/L when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- D. Film Backing for Safety Mirrors: Film backing and pressure-sensitive adhesive; both compatible with mirror backing paint as certified by mirror manufacturer.

2.3 MIRROR HARDWARE

- A. Top and Bottom Aluminum J-Channels: Aluminum extrusions with a return deep enough to produce a glazing channel to accommodate mirrors of thickness indicated and in lengths required to cover bottom and top edges of each mirror in a single piece.
1. Bottom Trim: J-channels formed with front leg and back leg not less than **3/8 and 7/8 inch** (9.5 and 22 mm) in height, respectively, and a thickness of not less than **[0.04 inch** (1.0 mm)] **[0.05 inch** (1.3 mm)].
 - a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) Laurence, C. R. Co., Inc.; CRL Standard "J" Channel.
 - 2) Sommer & Maca Industries, Inc.; Aluminum Shallow Nose "J" Moulding Lower Bar.
 - 3) Sommer & Maca Industries, Inc.; Heavy Gauge Aluminum Shallow Nose "J" Moulding Lower Bar.
 - 4) **<Insert manufacturer's name; product name or designation>**.
 - 5) or approved equal.
 2. Top Trim: J-channels formed with front leg and back leg not less than **5/8 and 1 inch** (16 and 25 mm) in height, respectively, and a thickness of not less than **[0.04 inch** (1.0 mm)] **[0.062 inch** (1.57 mm)].
 - a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) Laurence, C. R. Co., Inc.; CRL Deep "J" Channel.
 - 2) Sommer & Maca Industries, Inc.; Aluminum Deep Nose "J" Moulding Upper Bar.
 - 3) Sommer & Maca Industries, Inc.; Heavy Gauge Aluminum Deep Nose "J" Moulding Lower Bar.
 - 4) **<Insert manufacturer's name; product name or designation>**.
 - 5) or approved equal.

3. Finish: **[Clear] [Gold]** bright anodized.
 - B. Top Channel/Cleat and Bottom Aluminum J-Channels: Aluminum extrusions with a return deep enough to produce a glazing channel to accommodate mirrors of thickness indicated and in lengths required to cover bottom and top edges of each mirror in a single piece.
 1. Bottom Trim: J-channels formed with front leg and back leg not less than **5/16 and 3/4 inch** (7.9 and 19 mm) in height, respectively.
 - a. Product: Subject to compliance with requirements, provide D638 FHA Type "J" Channel by Laurence, C. R. Co., Inc.
 2. Top Trim: Formed with front leg with a height of **5/16 inch** (7.9 mm) and back leg designed to fit into the pocket created by wall-mounted aluminum cleat.
 - a. Product: Subject to compliance with requirements, provide D 1638 Top Channel and D 1637M Mirror Mount System Cleat by Laurence, C. R. Co., Inc.
 3. Finish: **[Clear] [Gold]** bright anodized.
 - C. Mirror Bottom Clips: **[As indicated]** <Insert description or product designation, finish, and manufacturer's name>.
 - D. Mirror Top Clips: **[As indicated]** <Insert description or product designation, finish, and manufacturer's name>.
 - E. Plated Steel Hardware: Formed-steel shapes with plated finish indicated.
 1. Profile: As indicated.
 2. Finish: **<Insert manufacturer's finish designation and name>**.
 - F. Fasteners: Fabricated of same basic metal and alloy as fastened metal and matching it in finished color and texture where fasteners are exposed.
 - G. Anchors and Inserts: Provide devices as required for mirror hardware installation. Provide toothed or lead-shield expansion-bolt devices for drilled-in-place anchors. Provide galvanized anchors and inserts for applications on inside face of exterior walls and where indicated.
- 2.4 FABRICATION
- A. Mirror Sizes: To suit Project conditions, **[and before tempering]**, cut mirrors to final sizes and shapes.
 - B. Cutouts: Fabricate cutouts **[before tempering]** for notches and holes in mirrors without marring visible surfaces. Locate and size cutouts so they fit closely around penetrations in mirrors.

- C. Mirror Edge Treatment: **[Flat polished] [Rounded polished] [Flat high-polished] [Rounded high-polished] [Beveled polished edge of width shown]**.
1. Seal edges of mirrors with edge sealer after edge treatment to prevent chemical or atmospheric penetration of glass coating.
 2. Require mirror manufacturer to perform edge treatment and sealing in factory immediately after cutting to final sizes.
- D. Film-Backed Safety Mirrors: Apply film backing with adhesive coating over mirror backing paint as recommended in writing by film-backing manufacturer to produce a surface free of bubbles, blisters, and other imperfections.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, over which mirrors are to be mounted, with Installer present, for compliance with installation tolerances, substrate preparation, and other conditions affecting performance of the Work.
- B. Verify compatibility with and suitability of substrates, including compatibility of mirror mastic with existing finishes or primers.
- C. Proceed with installation only after unsatisfactory conditions have been corrected and surfaces are dry.

3.2 PREPARATION

- A. Comply with mastic manufacturer's written installation instructions for preparation of substrates, including coating substrates with mastic manufacturer's special bond coating where applicable.

3.3 INSTALLATION

- A. General: Install mirrors to comply with mirror manufacturer's written instructions and with referenced GANA publications. Mount mirrors accurately in place in a manner that avoids distorting reflected images.
- B. Provide a minimum air space of **1/8 inch (3 mm)** between back of mirrors and mounting surface for air circulation between back of mirrors and face of mounting surface.
- C. Wall-Mounted Mirrors: Install mirrors with **[mastic and]**mirror hardware. Attach mirror hardware securely to mounting surfaces with mechanical fasteners installed with anchors or inserts as applicable. Install fasteners so heads do not impose point loads on backs of mirrors.
- a. Top and Bottom Aluminum J-Channels: Provide setting blocks **1/8 inch (3**

- mm) thick by 4 inches (100 mm) long at quarter points. To prevent trapping water, provide, between setting blocks, two slotted weeps not less than 1/4 inch (6.4 mm) wide by 3/8 inch (9.5 mm) long at bottom channel.
2. Top Channel/Cleat and Bottom Aluminum J-Channels: Fasten J-channel directly to wall and attach top trim to continuous cleat fastened directly to wall.
 3. Mirror Clips: Place a felt or plastic pad between mirror and each clip to prevent spalling of mirror edges. Locate clips **[where indicated] [so they are symmetrically placed and evenly spaced]**.
 4. Install mastic as follows:
 - a. Apply barrier coat to mirror backing where approved in writing by manufacturers of mirrors and backing material.
 - b. Apply mastic to comply with mastic manufacturer's written instructions for coverage and to allow air circulation between back of mirrors and face of mounting surface.
 - c. After mastic is applied, align mirrors and press into place while maintaining a minimum air space of 1/8 inch (3 mm) between back of mirrors and mounting surface.

3.4 CLEANING AND PROTECTION

- A. Protect mirrors from breakage and contaminating substances resulting from construction operations.
- B. Do not permit edges of mirrors to be exposed to standing water.
- C. Maintain environmental conditions that will prevent mirrors from being exposed to moisture from condensation or other sources for continuous periods of time.
- D. Wash exposed surface of mirrors not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash mirrors as recommended in writing by mirror manufacturer.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 088300

SECTION 088853 - SECURITY GLAZING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes glazing for the following products and applications and of the following types:
 - 1. Products and applications specified in other Sections where glazing requirements are specified by reference to this Section:
 - a. **[Steel detention] [Steel]** doors.
 - b. Glazed entrances.
 - c. Storefront framing.
 - d. Interior borrowed lites.
 - e. Glazed curtain walls.
 - f. Sloped glazing.
 - g. **[Security] [Detention] [Aluminum] [Steel]** windows.
 - 2. Security Glazing Types:
 - a. Monolithic polycarbonate.
 - b. Laminated glass.
 - c. Laminated polycarbonate.
 - d. Glass-clad polycarbonate.
 - e. Laminated glass and polycarbonate.
 - f. Insulating security glazing.
 - g. Air-gap security glazing.
- B. Related Sections:
 - 1. Section 088000 "Glazing" for nonsecurity glazing in the form of monolithic glass, laminated glass, and insulating glass.
 - 2. Section 088400 "Plastic Glazing" for nonsecurity glazing in the form of monolithic and double-walled structured plastic sheets.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Glazing Manufacturers: Firms that produce primary glass, monolithic plastic glazing, or fabricated security glazing, as defined in referenced glazing publications.
- B. Interspace: Space between lites of air-gap security glazing or insulating security glazing.

1.4 PERFORMANCE REQUIREMENTS

- A. General:
 - 1. Installed security glazing shall withstand normal thermal movement and wind and impact loads (where applicable) without failure, including loss or breakage attributable to the following: defective manufacture, fabrication, or installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing; or other defects in construction.
 - 2. Installed security glazing shall withstand security-related loads and forces without damage to the glazing beyond that allowed by referenced standards.
- B. Delegated Design: Design security glazing, including comprehensive engineering analysis by a qualified professional engineer.
 - 1. Design Procedure for Glass: Design according to **[ASTM E 1300] [ICC's 2003 International Building Code]**.
 - 2. Design Wind Pressures: As indicated on Drawings.
 - 3. Design Wind Pressures: Determine design wind pressures applicable to Project according to ASCE/SEI 7, based on heights above grade indicated on Drawings.
 - a. Wind Design Data: As indicated on Drawings.
 - b. Basic Wind Speed: **115 mph (50 m/s) <Insert value>**.
 - c. Importance Factor: **1.3 <Insert factor>**.
 - d. Exposure Category: **D**.
 - 4. Design Snow Loads: **[As indicated on Drawings] <Insert design snow load>**.
 - 5. Vertical Glazing: For glass surfaces sloped 15 degrees or less from vertical, design glass to resist design wind pressure based on glass type factors for short-duration load.
 - 6. Sloped Glazing: For glass surfaces sloped more than 15 degrees from vertical, design glass to resist each of the following combinations of loads:
 - a. Outward design wind pressure minus the weight of the glass. Base design on glass type factors for short-duration load.
 - b. Inward design wind pressure plus the weight of the glass plus half of the design snow load. Base design on glass type factors for short-duration load.
 - c. Half of the inward design wind pressure plus the weight of the glass plus the design snow load. Base design on glass type factors for long-duration load.

7. Probability of Breakage for Sloped Glazing: For glass surfaces sloped more than 15 degrees from vertical, design glass for a probability of breakage not greater than 0.001.
8. Maximum Lateral Deflection: For glass supported on all four edges, limit center-of-glass deflection at design wind pressure to not more than 1/50 times the short-side length or 1 inch (25 mm), whichever is less.

C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on glazing framing members and glazing components.

1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

1.5 PRECONSTRUCTION TESTING

A. Preconstruction Adhesion and Compatibility Testing: Test each security glazing type, tape sealant, gasket, glazing accessory, and glazing-framing member for adhesion to and compatibility with elastomeric glazing sealants.

1. Testing will not be required if data are submitted based on previous testing of current sealant products and glazing materials matching those submitted.
2. Use ASTM C 1087 to determine whether priming and other specific joint-preparation techniques are required to obtain rapid, optimum adhesion of glazing sealants to security glazing, tape sealants, gaskets, and glazing channel substrates.
3. Test no fewer than [eight] <Insert number> Samples of each type of material, including joint substrates, shims, sealant backings, secondary seals, and miscellaneous materials.
4. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
5. For materials failing tests, submit sealant manufacturer's written instructions for corrective measures including the use of specially formulated primers.

1.6 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

1. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

1. Product Data for Credit IEQ 4.1: For sealants used inside the weatherproofing system, documentation including printed statement of VOC content.
2. Laboratory Test Reports for Credit IEQ 4: For sealants used inside the weatherproofing system, documentation indicating that they comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- C. Security Glazing Samples: For each type of security glazing; **12 inches** (300 mm) square.
- D. Glazing Accessory Samples: For **[gaskets] [sealants] [and] [colored spacers]**, in **12-inch** (300-mm) lengths. **[Install sealant Samples between two strips of material representative in color of the adjoining framing system.]**
- E. Security Glazing Schedule: List security glazing types and thicknesses for each size opening and location. Use same designations indicated on Drawings. Indicate coordinated dimensions of security glazing and construction that receives security glazing, including clearances and glazing channel dimensions.
- F. Delegated-Design Submittal: For security glazing indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.7 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For **[installers] [manufacturers of insulating security glazing with sputter-coated, low-e coatings] [glazing testing agency] [and] [sealant testing agency]**.
- B. Product Certificates: For each type of product indicated, from manufacturer.
- C. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for each type of **[security glazing] [glazing sealant] [and] [glazing gasket]**.
 - 1. For glazing sealants, provide test reports based on testing current sealant formulations within previous 36-month period.
- D. Preconstruction adhesion and compatibility test reports.
- E. Warranties: Sample of special warranties.

1.8 QUALITY ASSURANCE

- A. Manufacturer Qualifications for Insulating Security Glazing Units with Sputter-Coated, Low-E Coatings: A qualified insulating glazing manufacturer who is approved **[and certified]** by coated-glass manufacturer.
- B. Installer Qualifications: A qualified installer who employs glazing installers for this Project who are certified under the National Glass Association Glazier Certification Program.
- C. Sealant Testing Agency Qualifications: An independent testing agency qualified according to ASTM C 1021 to conduct the testing indicated.

- D. Source Limitations for Security Glazing: Obtain security glazing from single source from single manufacturer using the same type of lites, plies, interlayers, and spacers for each security glazing type indicated.
1. Source Limitations for Tinted Glass: Obtain tinted glass from single source from single primary glass manufacturer for each tint color indicated.
- E. Source Limitations for Glazing [**Sealants**] [**and**] [**Gaskets**]: Obtain from single source from single manufacturer for each product and installation method.
- F. Glazing Publications: Comply with published recommendations of security glazing and glazing material manufacturers and organizations below, unless more stringent requirements are indicated. Refer to these publications for glazing terms not otherwise defined in this Section or in referenced standards.
1. GANA Publications: [**GANA's "Laminated Glazing Reference Manual" and**] GANA's "Glazing Manual."
 2. AAMA Publications: AAMA GDSG-1, "Glass Design for Sloped Glazing," and AAMA TIR-A7, "Sloped Glazing Guidelines."
 3. IGMA Publication for Sloped Glazing: IGMA TB-3001, "Guidelines for Sloped Glazing."
 4. IGMA Publication for Insulating Glass: SIGMA TM-3000, "North American Glazing Guidelines for Sealed Insulating Glass Units for Commercial and Residential Use."
- G. Plastic Glazing Labeling: Identify plastic sheets with appropriate markings of applicable testing and inspecting agency, indicating compliance with required fire-test-response characteristics.
- H. Safety Glazing Labeling: Where safety glazing labeling is indicated, permanently mark glazing with certification label of [**the SGCC**] [**or another certification agency acceptable to authorities having jurisdiction**] [**or**] [**manufacturer**]. Label shall indicate manufacturer's name, type of glazing, thickness, and safety glazing standard with which glazing complies.
- I. Insulating Glazing Certification Program: Permanently marked either on spacers or on at least one component lite of units with appropriate certification label of IGCC.
- J. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
1. Install security glazing in mockups specified in [**Section 084113 "Aluminum-Framed Entrances and Storefronts"**] [**Section 084413 "Glazed Aluminum Curtain Walls"**] [**Section 085113 "Aluminum Windows"**] [**Section 085653 "Security Windows"**] [**Section 087163 "Detention Windows"**] <Insert Section number>-<Insert Section title> to match glazing systems required for Project, including glazing methods.
 2. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

K. Preinstallation Conference: Conduct conference at **[Project site]** <**[location and time as determined by DEN Project Manager]**Insert location>.

1. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
2. Review temporary protection requirements for security glazing during and after installation.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Protect security glazing and glazing materials according to manufacturer's written instructions. Prevent damage from condensation, temperature changes, direct exposure to sun, or other causes.
- B. Comply with insulating security glazing and with air-gap security glazing manufacturers' written recommendations for venting and sealing units to avoid hermetic seal ruptures due to altitude change.

1.10 PROJECT CONDITIONS

- A. Environmental Limitations: Do not proceed with glazing when ambient and substrate temperature conditions are outside limits permitted by glazing material manufacturers and when glazing channel substrates are wet from rain, frost, condensation, or other causes.
1. Do not install glazing sealants when ambient and substrate temperature conditions are outside limits permitted by sealant manufacturer or below 40 deg F (4.4 deg C).

1.11 COORDINATION

- A. Coordinate dimensions, including thickness, of security glazing with dimensions of construction that receives security glazing.

1.12 WARRANTY

- A. Manufacturer's Special Warranty for Coated Glass: Manufacturer's standard form in which coated-glass manufacturer agrees to replace coated glass that deteriorates within specified warranty period. Deterioration is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning coated glass contrary to manufacturer's written instructions. Defects include peeling, cracking, and other indications of deterioration in coating.
1. Warranty Period: Minimum **[ten (10)]** <Insert number> years from date of Substantial Completion.

- B. Manufacturer's Special Warranty on Laminated Glass: Manufacturer's standard form in which laminated-glass manufacturer agrees to replace laminated glass that deteriorates within specified warranty period. Deterioration is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.
1. Warranty Period: Minimum **[five (5)] [ten (10)] <Insert number>** years from date of Substantial Completion.
- C. Manufacturer's Special Warranty for Polycarbonate Sheet: Manufacturer's standard form in which glazing manufacturer agrees to replace polycarbonate sheet that deteriorates within specified warranty period. Deterioration is defined as defects developed from normal use that are not attributed to maintaining and cleaning polycarbonate sheet contrary to manufacturer's written instructions. Defects include yellowing and loss of light transmission.
1. Warranty Period: Minimum **[ten (10)] <Insert number>** years from date of Substantial Completion.
- D. Manufacturer's Special Warranty for Laminated Polycarbonate: Manufacturer's standard form in which laminated polycarbonate manufacturer agrees to replace laminated polycarbonate that deteriorates within specified warranty period. Deterioration is defined as defects developed from normal use that are not attributed to maintaining and cleaning laminated polycarbonate contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glazing, blemishes exceeding those allowed by referenced standard, yellowing, and loss of light transmission.
1. Warranty Period: Minimum **[five (5)] [ten (10)] <Insert number>** years from date of Substantial Completion.
- E. Manufacturer's Special Warranty for Glass-Clad Polycarbonate: Manufacturer's standard form in which glass-clad polycarbonate manufacturer agrees to replace glass-clad polycarbonate that deteriorates within specified warranty period. Deterioration is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning glass-clad polycarbonate contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glazing, blemishes exceeding those allowed by referenced glass-clad polycarbonate standard, yellowing, and loss of light transmission.
1. Warranty Period: Minimum **[five (5)] [ten (10)] <Insert number>** years from date of Substantial Completion.
- F. Manufacturer's Special Warranty for Laminated Glass and Polycarbonate: Manufacturer's standard form in which laminated-glass-and-polycarbonate manufacturer agrees to replace laminated glass and polycarbonate that deteriorates within specified warranty period. Deterioration is defined as defects developed from

normal use that are not attributed to glass breakage or to maintaining and cleaning laminated glass and polycarbonate contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glazing, blemishes exceeding those allowed by referenced glass-clad polycarbonate standard, yellowing, and loss of light transmission.

1. Warranty Period: Minimum **[five (5)] [ten (10)] <Insert number>** years from date of Substantial Completion.

G. Manufacturer's Special Warranty on Insulating Security Glazing: Manufacturer's standard form in which insulating security glazing manufacturer agrees to replace insulating security glazing that deteriorates within specified warranty period. Deterioration is defined as defects in individual lites developed from normal use or failure of hermetic seal under normal use. Deterioration does not include defects in individual lites or failure of hermetic seal that is attributed to glass breakage or to maintaining and cleaning insulating security glazing contrary to manufacturer's written instructions.

1. Defects in coated glass lites include peeling, cracking, and other indications of deterioration in coating.
2. Defects in laminated-glass lites include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.
3. Defects in glass-clad polycarbonate lites include edge separation, delamination materially obstructing vision through glazing, blemishes exceeding those allowed by referenced glass-clad polycarbonate standard, yellowing, and loss of light transmission.
4. Evidence of hermetic seal failure is the obstruction of vision by dust, moisture, or film on interior surfaces of glazing.
5. Warranty Period: Minimum **[five (5)] [ten (10)] <Insert number>** years from date of Substantial Completion.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 SECURITY GLAZING, GENERAL

- A. Thickness: Where thickness is indicated, it is a minimum. Provide security glazing in thicknesses as needed to comply with requirements indicated.
- B. Thickness of Tinted Glass: Provide same thickness for each tint color indicated throughout Project.

- C. Fire-Test-Response Characteristics of Plastic Sheets: As determined by testing plastic sheets identical to those used in security glazing products by a qualified testing agency acceptable to authorities having jurisdiction.
1. Self-ignition temperature of **650 deg F** (343 deg C) or more when tested per ASTM D 1929 on plastic sheets in thicknesses indicated for the Work.
 2. Smoke-developed index of 450 or less when tested according to ASTM E 84, or smoke density of 75 or less when tested per ASTM D 2843 on plastic sheets in thicknesses indicated for the Work.
 3. Burning [**extent of 1 inch** (25 mm)] [**rate of 2.5 in./min.** (1.06 mm/s)] or less when tested per ASTM D 635 at a nominal thickness of **0.060 inch** (1.52 mm) or thickness indicated for the Work.
- D. Windborne-Debris-Impact Resistance: Provide exterior security glazing that passes [**basic**] [**enhanced**]-protection testing requirements in ASTM E 1996 for [**Wind Zone 1**] [**Wind Zone 2**] [**Wind Zone 3**] [**Wind Zone 4**] when tested according to ASTM E 1886. Test specimens shall be no smaller in width and length than security glazing indicated for use on the Project and shall be installed in same manner as indicated for use on the Project.
1. Large-Missile Test: For security glazing located within **30 feet** (9.1 m) of grade.
 2. Small-Missile Test: For security glazing located more than **30 feet** (9.1 m) above grade.
 3. Large-Missile Test: For all security glazing, regardless of height above grade.
- E. Thermal and Optical Performance Properties: Provide security glazing with performance properties specified, as indicated in manufacturer's published test data, based on products of construction indicated and on procedures indicated below:
1. U-Factors: Center-of-glazing values, according to NFRC 100 and based on LBL's WINDOW 5.2 computer program, expressed as **Btu/sq. ft. x h x deg F** (W/sq. m x K).
 2. Solar-Heat-Gain Coefficient and Visible Transmittance: Center-of-glazing values, according to NFRC 200 and based on LBL's WINDOW 5.2 computer program.
 3. Visible Reflectance: Center-of-glazing values, according to NFRC 300.

2.2 GLASS PRODUCTS

- A. Float Glass: ASTM C 1036, Type I, Quality-Q3, Class I (clear) unless otherwise indicated.
- B. Heat-Treated Float Glass: ASTM C 1048; Type I; Quality-Q3; Class I (clear) unless otherwise indicated; of kind and condition indicated.
1. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed unless otherwise indicated.
 2. For heat-strengthened float glass, comply with requirements for Kind HS.
 3. For fully tempered float glass, comply with requirements for Kind FT.
 4. For uncoated glass, comply with requirements for Condition A.

5. For coated vision glass, comply with requirements for Condition C (other coated glass).
- C. Chemically Strengthened Glass: Annealed float glass chemically strengthened to comply with ASTM C 1422, Surface Compression [**Level 1**] [**Level 2**] [**Level 3**] [**Level 4**] [**Level 5**] and Case Depth [**Level A**] [**Level B**] [**Level C**] [**Level D**] [**Level E**] [**Level F**].
- D. Reflective-Coated Vision Glass: ASTM C 1376, Kind CV (coated vision glass), coated by [**pyrolytic process**] [**vacuum deposition (sputter-coating) process**], and complying with other requirements specified.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. **<Insert, in separate subparagraphs, manufacturer's name>**.
 - b. or approved equal.

2.3 LAMINATED GLASS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. **<Insert, in separate subparagraphs, manufacturer's name>**.
 2. or approved equal.
- B. Laminated Glass: ASTM C 1172, and complying with testing requirements in 16 CFR 1201 for Category II materials, and with other requirements specified. Use materials that have a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after fabrication and installation.
 1. Construction: Laminate glass with [**polyvinyl butyral interlayer**] [**or**] [**cast-in-place and cured-transparent-resin interlayer**] to comply with interlayer manufacturer's written recommendations.
 2. Interlayer Thickness: Provide thickness not less than that indicated and as needed to comply with requirements.
 3. Interlayer Color: Clear unless otherwise indicated.
- C. Windborne-Debris-Impact-Resistant Laminated Glass: ASTM C 1172, and complying with testing requirements in 16 CFR 1201 for Category II materials, with "Windborne-Debris-Impact Resistance" Paragraph, and with other requirements specified.
 1. Construction: Laminate glass with[**one of**] the following to comply with interlayer manufacturer's written recommendations:
 - a. Polyvinyl butyral interlayer.
 - b. Polyvinyl butyral interlayers reinforced with polyethylene terephthalate film.
 - c. Ionoplast interlayer.
 - d. Cast-in-place and cured-transparent-resin interlayer.

- e. Cast-in-place and cured-transparent-resin interlayer reinforced with polyethylene terephthalate film.
2. Interlayer Thickness: Provide thickness not less than that indicated and as needed to comply with requirements.
3. Interlayer Color: Clear unless otherwise indicated.

2.4 POLYCARBONATE SECURITY GLAZING

- A. Polycarbonate Sheet: ASTM C 1349, Appendix X1, Type II, coated, mar-resistant, UV-stabilized polycarbonate with coating on exposed surfaces and Type I, standard, UV-stabilized polycarbonate where no surfaces are exposed.
- B. Laminated Polycarbonate: Polycarbonate sheets laminated with clear urethane interlayer that complies with ASTM C 1349, Appendix X2, and has a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after fabrication and installation. Provide laminated units that comply with requirements of ASTM C 1349 for maximum allowable laminating process blemishes and haze.
- C. Glass-Clad Polycarbonate: ASTM C 1349, and other requirements specified.
 1. Provide glass-clad polycarbonate that complies with testing requirements in 16 CFR 1201 for Category II materials, and with other requirements specified.
- D. Laminated Glass and Polycarbonate: ASTM C 1349, and other requirements specified.
 1. Provide laminated glass and polycarbonate that complies with testing requirements in 16 CFR 1201 for Category II materials, and with other requirements specified.

2.5 SPALL-RESISTANT FILM

- A. Spall-Resistant Film: Composite of clear polyvinyl butyral film and clear abrasion-resistant polyester film.
 1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. DuPont Glass Laminating Solutions, DuPont Company; SpallShield.
 - b. **<Insert manufacturer's name; product name or designation>.**
 - c. or approved equal.
- B. Laminating Process: Laminate spall-resistant film to glazing assemblies in factory to produce laminated lites free of foreign substances, air, and glass pockets.

2.6 INSULATING SECURITY GLAZING

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. <Insert, in separate subparagraphs, manufacturer's name>.
2. or approved equal.

B. Insulating Security Glazing: Factory-assembled units consisting of sealed lites separated by a dehydrated interspace, qualified according to ASTM E 2190, and complying with other requirements specified.

1. Sealing System: Dual seal, with [manufacturer's standard] [polyisobutylene and polysulfide] [polyisobutylene and silicone] [polyisobutylene and hot-melt butyl] [polyisobutylene and polyurethane] primary and secondary.
2. Spacer: [Manufacturer's standard spacer material and construction] [Aluminum with mill or clear anodic finish] [Aluminum with black, color anodic finish] [Aluminum with bronze, color anodic finish] [Aluminum with powdered metal paint finish in color selected by DEN Project Manager] [Galvanized steel] [Stainless steel] [Polypropylene-covered stainless steel in color selected by DEN Project Manager] [Thermally broken aluminum] [Nonmetallic laminate] [Nonmetallic tube] <Insert material>.
3. Desiccant: Molecular sieve or silica gel, or blend of both.

2.7 AIR-GAP SECURITY GLAZING

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. <Insert, in separate subparagraphs, manufacturer's name>.
2. or approved equal.

B. Air-Gap Security Glazing: Factory-assembled units consisting of sealed lites separated by a dehydrated interspace and complying with other requirements specified.

1. Sealing System: Dual seal, with manufacturer's standard primary and secondary sealants.
2. Spacer Specifications: Manufacturer's standard[**rigid**] spacer material and construction.

2.8 GLAZING GASKETS

A. Dense Compression Gaskets: Molded or extruded gaskets of profile and hardness required to maintain watertight seal, made from[**one of**] the following:

1. Neoprene complying with ASTM C 864.
2. EPDM complying with ASTM C 864.
3. Silicone complying with ASTM C 1115.
4. Thermoplastic polyolefin rubber complying with ASTM C 1115.

B. Soft Compression Gaskets: Extruded or molded, closed-cell, integral-skinned [neoprene] [EPDM] [silicone] [or] [thermoplastic polyolefin rubber] gaskets complying with ASTM C 509, Type II, black; of profile and hardness required to maintain watertight seal.

1. Application: Use where soft compression gaskets will be compressed by inserting dense compression gaskets on opposite side of glazing or pressure applied by means of pressure-glazing stops on opposite side of glazing.

2.9 GLAZING SEALANTS

A. General:

1. Compatibility: Provide glazing sealants that are compatible with one another and with other materials they will contact, including security glazing, seals of insulating security glazing and air-gap security glazing, and glazing channel substrates, under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.
2. Suitability: Comply with sealant and security glazing manufacturers' written instructions for selecting glazing sealants suitable for applications indicated and for conditions existing at time of installation.
3. Sealants used inside the weatherproofing system shall have a VOC content of not more than 250 g/L when calculated according to 40 CFR 59, Subpart D.
4. Sealants used inside the weatherproofing system shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
5. Colors of Exposed Glazing Sealants: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**].

B. Glazing Sealant: Neutral-curing silicone glazing sealant complying with ASTM C 920, Type S, Grade NS, Class 100/50, Use NT.

1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. [Dow Corning Corporation; 790.](#)
 - b. [GE Advanced Materials - Silicones; SilPruf LM SCS2700.](#)
 - c. [May National Associates, Inc.; Bondaflex Sil 290.](#)
 - d. [Pecora Corporation; 890.](#)
 - e. [Sika Corporation, Construction Products Division; SikaSil-C990.](#)
 - f. [Tremco Incorporated; Spectrem 1.](#)
 - g. **<Insert manufacturer's name; product name or designation>.**
 - h. or approved equal.
2. Applications: **<Describe types of glazing applications where this sealant is required>.**

C. Glazing Sealant: Neutral-curing silicone glazing sealant complying with ASTM C 920, Type S, Grade NS, Class 50, Use NT.

1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. [BASF Construction Chemicals, LLC; Omniseal 50.](#)

- b. [Dow Corning Corporation](#); [756 SMS] [791] [795] [995].
 - c. [GE Advanced Materials - Silicones](#); [SilGlaze II SCS2800] [SilPruf NB SCS9000] [SilPruf SCS2000] [UltraPruf II SCS2900].
 - d. [May National Associates, Inc.; Bondaflex Sil 295](#).
 - e. [Pecora Corporation](#); [864] [895] [898].
 - f. [Polymeric Systems, Inc.; PSI-641](#).
 - g. [Sika Corporation, Construction Products Division; SikaSil-C995](#).
 - h. [Tremco Incorporated](#); [Spectrem 2] [Spectrem 3].
 - i. <Insert manufacturer's name; product name or designation>.
 - j. or approved equal.
2. Applications: <Describe types of glazing applications where this sealant is required>.
- D. Glazing Sealant: Neutral-curing silicone glazing sealant complying with ASTM C 920, Type S, Grade NS, Class 25, Use NT.
1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. [Dow Corning Corporation; 799](#).
 - b. [GE Advanced Materials - Silicones](#); [UltraGlaze SSG4000] [UltraGlaze SSG4000AC].
 - c. [May National Associates, Inc.](#); [Bondaflex Sil 200 GPN] [Bondaflex Sil 201 FC].
 - d. [Polymeric Systems, Inc.; PSI-631](#).
 - e. [Schnee-Morehead, Inc., an ITW company; SM5731 Poly-Glaze Plus](#).
 - f. [Tremco Incorporated](#); [Proglaze SSG] [Tremsil 600].
 - g. <Insert manufacturer's name; product name or designation>.
 - h. or approved equal.
 2. Applications: <Describe types of glazing applications where this sealant is required>.
- E. Glazing Sealant: Acid-curing silicone glazing sealant complying with ASTM C 920, Type S, Grade NS, Class 25, Use NT.
1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. [BASF Construction Chemicals, LLC; OmniPlus](#).
 - b. [Bostik, Inc.; Chem-Calk 1200](#).
 - c. [Dow Corning Corporation; 999-A](#).
 - d. [GE Advanced Materials - Silicones](#); [Contractors SCS1000] [Construction SCS1200].
 - e. [May National Associates, Inc.](#); [Sil 100 GC] [Sil 100 GP] [Sil 100 WF].
 - f. [Pecora Corporation; 860](#).
 - g. [Polymeric Systems, Inc.; PSI-601](#).
 - h. [Schnee-Morehead, Inc., an ITW company; SM5732 Polyglaze](#).
 - i. [Tremco Incorporated](#); [Proglaze] [Tremsil 200].
 - j. <Insert manufacturer's name; product name or designation>.
 - k. or approved equal.

2. Applications: **<Describe types of glazing applications where this sealant is required>**.

2.10 GLAZING TAPES

- A. Back-Bedding Mastic Glazing Tapes: Preformed, butyl-based, 100 percent solids elastomeric tape; nonstaining and nonmigrating in contact with nonporous surfaces; with or without spacer rod as recommended in writing by tape and security glazing manufacturers for application indicated; and complying with ASTM C 1281 and AAMA 800 for products indicated below:
 1. AAMA 806.3 tape, for glazing applications in which tape is subject to continuous pressure.
 2. AAMA 807.3 tape, for glazing applications in which tape is not subject to continuous pressure.
- B. Expanded Cellular Glazing Tapes: Closed-cell, PVC foam tapes; factory coated with adhesive on both surfaces; and complying with AAMA 800 for the following types:
 1. AAMA 810.1, Type 1, for glazing applications in which tape acts as the primary sealant.
 2. AAMA 810.1, Type 2, for glazing applications in which tape is used in combination with a full bead of liquid sealant.

2.11 MISCELLANEOUS GLAZING MATERIALS

- A. General: Provide products of material, size, and shape complying with referenced glazing standard, requirements of manufacturers of security glazing and other glazing materials for application indicated, and with a proven record of compatibility with surfaces contacted in installation.
- B. Cleaners, Primers, and Sealers: Types recommended by sealant or gasket manufacturer.
- C. Setting Blocks: Elastomeric material with a Shore, Type A durometer hardness of 85, plus or minus 5.
- D. Spacers: Elastomeric blocks or continuous extrusions of hardness required by security glazing manufacturer to maintain security glazing lites in place for installation indicated.
- E. Edge Blocks: Elastomeric material of hardness needed to limit security glazing lateral movement (side walking).
- F. Cylindrical Glazing Sealant Backing: ASTM C 1330, Type O (open-cell material), of size and density to control glazing sealant depth and otherwise produce optimum glazing sealant performance.

2.12 FABRICATION OF SECURITY GLAZING

- A. Fabricate security glazing in sizes required to fit openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.

2.13 LAMINATED-GLASS SECURITY GLAZING TYPES

- A. Security Glazing [**Type SG-<#>**]: [**Clear laminated glass**] [**Tinted laminated glass**] [**Clear reflective-coated laminated glass**] [**Tinted reflective-coated laminated glass**].
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.
 - b. or approved equal.
 2. Forced-Entry Resistance: [**Class I**] [**Class II**] [**Class III**] [**Class IV**] [**Class V**] per ASTM F 1233.
 3. Forced-Entry Resistance: [**Level I**] [**Level II**] [**Level III**] [**Level IV**] [**Level V**] per HPW-TP-0500.03.
 4. Ballistic Resistance: [**Class/Level HG1**] [**Class/Level HG2**] [**Class/Level HG3**] [**Class/Level HG4**] [**Class/Level SMG**] [**Class/Level R1**] [**Class/Level R2**] [**Class/Level R3**] [**Class/Level R4-AP**] [**Class/Level SH1**] [**Class/Level SH2**] per ASTM F 1233.
 5. Ballistic Resistance: [**Level 1**] [**Level 2**] [**Level 3**] [**Level 4**] [**Level 5**] [**Level 6**] [**Level 7**] [**Level 8**] [**Level 1-SG**] [**Level 2-SG**] [**Level 3-SG**] [**Level 4-SG**] [**Level 5-SG**] [**Level 6-SG**] [**Level 7-SG**] [**Level 8-SG**] per UL 752.
 6. Blast Resistance:
 - a. Hazard Rating: [**No hazard**] [**Minimal hazard**] [**Very low hazard**] [**Low hazard**] [**High hazard**] per ASTM F 1642.
 - b. Performance Condition: [**1**] [**2**] [**3a**] [**3b**] [**4**] [**5**] per GSA-TS01.
 - c. Peak Pressure: **<Insert requirement>**.
 - d. Positive Phase Impulse: **<Insert requirement>**.
 7. Number of Plies: [**Two**] [**Three**].
 8. Overall Unit Thickness: **<Insert dimension>**.
 9. Outer Ply: [**3-mm**] [**5-mm**] [**6-mm**] **<Insert dimension>** [**float glass**] [**heat-strengthened float glass**] [**fully tempered float glass**] [**chemically strengthened float glass**].
 10. Core Ply: [**3-mm**] [**5-mm**] [**6-mm**] **<Insert dimension>** [**float glass**] [**heat-strengthened float glass**] [**fully tempered float glass**] [**chemically strengthened float glass**].
 11. Inner Ply: [**3-mm**] [**5-mm**] [**6-mm**] **<Insert dimension>** [**float glass**] [**heat-strengthened float glass**] [**fully tempered float glass**] [**chemically strengthened float glass**].

12. Interlayer Thickness: [0.030 inch (0.76 mm)] [0.060 inch (1.52 mm)] [0.090 inch (2.3 mm)].
 13. Glass Tint Color: [Blue] [Blue-green] [Bronze] [Green] [Gray] <Insert color>.
 14. Tinted Glass Location: Outer ply.
 15. Coating Color: [Gold] [Pewter] [Silver] <Insert color>.
 16. Coating Location: [Second] [Third] [Fifth] surface.
 17. Overall Visible Light Transmittance: <Insert single percentage or range>.
 18. Outdoor Visible Reflectance: <Insert number> percent maximum.
 19. Winter Nighttime U-Factor: <Insert value> maximum.
 20. Summer Daytime U-Factor: <Insert value> maximum.
 21. Solar Heat-Gain Coefficient: <Insert value> maximum.
 22. Provide safety glazing labeling.
- B. Security Glazing [**Type SG-#>**]: Tinted[**reflective-coated**] laminated glass with clear glass and tinted interlayer.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. <Insert, in separate subparagraphs, manufacturer's name; product name or designation>.
 - b. or approved equal.
 2. Forced-Entry Resistance: [Class I] [Class II] [Class III] [Class IV] [Class V] per ASTM F 1233.
 3. Forced-Entry Resistance: [Level I] [Level II] [Level III] [Level IV] [Level V] per HPW-TP-0500.03.
 4. Ballistic Resistance: [Class/Level HG1] [Class/Level HG2] [Class/Level HG3] [Class/Level HG4] [Class/Level SMG] [Class/Level R1] [Class/Level R2] [Class/Level R3] [Class/Level R4-AP] [Class/Level SH1] [Class/Level SH2] per ASTM F 1233.
 5. Ballistic Resistance: [Level 1] [Level 2] [Level 3] [Level 4] [Level 5] [Level 6] [Level 7] [Level 8] [Level 1-SG] [Level 2-SG] [Level 3-SG] [Level 4-SG] [Level 5-SG] [Level 6-SG] [Level 7-SG] [Level 8-SG] per UL 752.
 6. Blast Resistance:
 - a. Hazard Rating: [No hazard] [Minimal hazard] [Very low hazard] [Low hazard] [High hazard] per ASTM F 1642.
 - b. Performance Condition: [1] [2] [3a] [3b] [4] [5] per GSA-TS01.
 - c. Peak Pressure: <Insert requirement>.
 - d. Positive Phase Impulse: <Insert requirement>.
 7. Number of Plies: [Two] [Three].
 8. Overall Unit Thickness: <Insert dimension>.
 9. Outer Ply: [3-mm] [5-mm] [6-mm] <Insert dimension> [float glass] [heat-strengthened float glass] [fully tempered float glass] [chemically strengthened float glass].
 10. Core Ply: [3-mm] [5-mm] [6-mm] <Insert dimension> [float glass] [heat-strengthened float glass] [fully tempered float glass] [chemically strengthened float glass].

11. Inner Ply: [3-mm] [5-mm] [6-mm] <Insert dimension> [float glass] [heat-strengthened float glass] [fully tempered float glass] [chemically strengthened float glass].
12. Interlayer Thickness: [0.030 inch (0.76 mm)] [0.060 inch (1.52 mm)] [0.090 inch (2.3 mm)].
13. Interlayer Color: [Clear] [Blue-green] [Bronze light] [Gray] <Insert color>.
14. Coating Color: [Gold] [Pewter] [Silver] <Insert color>.
15. Coating Location: [Second] [Third] [Fifth] surface.
16. Overall Visible Light Transmittance: <Insert single percentage or range>.
17. Outdoor Visible Reflectance: <Insert number> percent maximum.
18. Winter Nighttime U-Factor: <Insert value> maximum.
19. Summer Daytime U-Factor: <Insert value> maximum.
20. Solar Heat-Gain Coefficient: <Insert value> maximum.
21. Provide safety glazing labeling.

2.14 MONOLITHIC POLYCARBONATE SECURITY GLAZING TYPES

- A. Security Glazing [Type SG-<#>]: Monolithic polycarbonate with mar-resistant coating on both surfaces.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. <Insert, in separate subparagraphs, manufacturer's name; product name or designation>.
 - b. or approved equal.
 2. Detention Security Grade: Grade 4 per ASTM F 1915 [cold-temperature impact test] [warm-temperature impact test] [and] [torch and small blunt impactor test].
 3. Thickness: [3/8 inch (9.25 mm)] [1/2 inch (12.7 mm)] <Insert thickness>.

2.15 LAMINATED-POLYCARBONATE SECURITY GLAZING TYPES

- A. Security Glazing [Type SG-<#>]: Laminated polycarbonate.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. <Insert, in separate subparagraphs, manufacturer's name; product name or designation>.
 - b. or approved equal.
 2. Detention Security Grade: [Grade 1] [Grade 2] [Grade 3] [Grade 4] per ASTM F 1915 [cold-temperature impact test] [warm-temperature impact test] [and] [torch and small blunt impactor test].
 3. Forced-Entry Resistance: [Class I] [Class II] [Class III] [Class IV] [Class V] per ASTM F 1233.
 4. Forced-Entry Resistance: [Level I] [Level II] [Level III] [Level IV] [Level V] per HPW-TP-0500.03.

5. Blast Resistance:
 - a. Hazard Rating: **[No hazard] [Minimal hazard] [Very low hazard] [Low hazard] [High hazard]** per ASTM F 1642.
 - b. Performance Condition: **[1] [2] [3a] [3b] [4] [5]** per GSA-TS01.
 - c. Peak Pressure: **<Insert requirement>**.
 - d. Positive Phase Impulse: **<Insert requirement>**.
6. Number of Plies: **[Two] [Three] [Four]**.
7. Overall Unit Thickness: **<Insert dimension>**.
8. Outer and Inner Plies: **[0.118-inch (4.57-mm)] [0.177-inch (2.97-mm)] [0.236-inch (5.99-mm)]** polycarbonate.
9. **[Core Ply] [Core Plies]**: **[0.118-inch (4.57-mm)] [0.177-inch (2.97-mm)] [0.236-inch (5.99-mm)]** polycarbonate.
10. Interlayer Thicknesses: **[0.025 inch (0.635 mm)] <Insert dimension>**.

2.16 GLASS-CLAD POLYCARBONATE SECURITY GLAZING TYPES

- A. Security Glazing **[Type SG-<#>]**: **[Clear symmetrical glass-clad polycarbonate] [Tinted symmetrical glass-clad polycarbonate] [Clear reflective-coated symmetrical glass-clad polycarbonate] [Tinted reflective-coated symmetrical glass-clad polycarbonate]**.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.
 - b. or approved equal.
 2. Detention Security Grade: **[Grade 1] [Grade 2] [Grade 3] [Grade 4]** per ASTM F 1915 **[cold-temperature impact test] [warm-temperature impact test] [and] [torch and small blunt impactor test]**.
 3. Forced-Entry Resistance: **[Class I] [Class II] [Class III] [Class IV] [Class V]** per ASTM F 1233.
 4. Forced-Entry Resistance: **[Level I] [Level II] [Level III] [Level IV] [Level V]** per HPW-TP-0500.03.
 5. Ballistic Resistance: **[Class/Level HG1] [Class/Level HG2] [Class/Level HG3] [Class/Level HG4] [Class/Level SMG] [Class/Level R1] [Class/Level R2] [Class/Level R3] [Class/Level R4-AP] [Class/Level SH1] [Class/Level SH2]** per ASTM F 1233.
 6. Ballistic Resistance: **[Level 1] [Level 2] [Level 3] [Level 4] [Level 5] [Level 6] [Level 7] [Level 8] [Level 1-SG] [Level 2-SG] [Level 3-SG] [Level 4-SG] [Level 5-SG] [Level 6-SG] [Level 7-SG] [Level 8-SG]** per UL 752.
 7. Blast Resistance:
 - a. Hazard Rating: **[No hazard] [Minimal hazard] [Very low hazard] [Low hazard] [High hazard]** per ASTM F 1642.
 - b. Performance Condition: **[1] [2] [3a] [3b] [4] [5]** per GSA-TS01.
 - c. Peak Pressure: **<Insert requirement>**.

- d. Positive Phase Impulse: **<Insert requirement>**.
8. Overall Unit Thickness: **<Insert dimension>**.
9. Outer Ply: **[3-mm] [5-mm] [6-mm] <Insert dimension> [heat-strengthened] [chemically strengthened]** float glass.
10. Single Core: **[0.118-inch (4.57-mm)] [0.177-inch (2.97-mm)] [0.236-inch (5.99-mm)]** polycarbonate.
11. Multiple Core:
 - a. Outer Core Ply: **[0.118-inch (4.57-mm)] [0.177-inch (2.97-mm)] [0.236-inch (5.99-mm)]** polycarbonate.
 - b. **[Single Inner Core Ply] [Double Inner Core Plies]: [0.118-inch (4.57-mm)] [0.177-inch (2.97-mm)] [0.236-inch (5.99-mm)]** polycarbonate.
12. Inner Ply: **[3-mm] [5-mm] [6-mm] <Insert dimension> [heat-strengthened] [chemically strengthened]** float glass.
13. Interlayer Thickness: **[0.025 inch (0.635 mm)] [0.050 inch (0.127 mm)] <Insert dimension>**.
14. Glass Tint Color: **[Blue] [Blue-green] [Bronze] [Green] [Gray] <Insert color>**.
15. Tinted Glass Location: Outer ply.
16. Coating Color: **[Gold] [Pewter] [Silver] <Insert color>**.
17. Coating Location: **[Second] [Third] [Fifth]** surface.
18. Overall Visible Light Transmittance: **<Insert single percentage or range>**.
19. Outdoor Visible Reflectance: **<Insert number>** percent maximum.
20. Winter Nighttime U-Factor: **<Insert value>** maximum.
21. Summer Daytime U-Factor: **<Insert value>** maximum.
22. Solar Heat-Gain Coefficient: **<Insert value>** maximum.
23. Provide safety glazing labeling.

2.17 LAMINATED-GLASS-AND-POLYCARBONATE SECURITY GLAZING TYPES

- A. Security Glazing **[Type SG-<#>]**: Nonsymmetrical **[clear] [tinted] [reflective-coated]** laminated glass and polycarbonate with glass plies on the attack or threat side and polycarbonate plies on the witness side.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.
 - b. or approved equal.
 2. Detention Security Grade: **[Grade 1] [Grade 2] [Grade 3] [Grade 4]** per ASTM F 1915 **[cold-temperature impact test] [warm-temperature impact test] [and] [torch and small blunt impactor test]**.
 3. Forced-Entry Resistance: **[Class I] [Class II] [Class III] [Class IV] [Class V]** per ASTM F 1233.
 4. Forced-Entry Resistance: **[Level I] [Level II] [Level III] [Level IV] [Level V]** per HPW-TP-0500.03.

5. Ballistic Resistance: **[Class/Level HG1] [Class/Level HG2] [Class/Level HG3] [Class/Level HG4] [Class/Level SMG] [Class/Level R1] [Class/Level R2] [Class/Level R3] [Class/Level R4-AP] [Class/Level SH1] [Class/Level SH2]** per ASTM F 1233.
6. Ballistic Resistance: **[Level 1] [Level 2] [Level 3] [Level 4] [Level 5] [Level 6] [Level 7] [Level 8] [Level 1-SG] [Level 2-SG] [Level 3-SG] [Level 4-SG] [Level 5-SG] [Level 6-SG] [Level 7-SG] [Level 8-SG]** per UL 752.
7. Blast Resistance:
 - a. Hazard Rating: **[No hazard] [Minimal hazard] [Very low hazard] [Low hazard] [High hazard]** per ASTM F 1642.
 - b. Performance Condition: **[1] [2] [3a] [3b] [4] [5]** per GSA-TS01.
 - c. Peak Pressure: **<Insert requirement>**.
 - d. Positive Phase Impulse: **<Insert requirement>**.
8. Overall Unit Thickness: **<Insert dimension>**.
9. Makeup:
 - a. Outer Glass Ply: **[3-mm] <Insert dimension>** heat-strengthened float glass.
 - b. Interlayer Thickness: **[0.025 inch (0.635 mm)] [0.050 inch (0.127 mm)] <Insert dimension>**.
 - c. First Inner Glass Ply: **[12-mm] <Insert dimension>** float glass.
 - d. Interlayer Thickness: **[0.025 inch (0.635 mm)] [0.050 inch (0.127 mm)] <Insert dimension>**.
 - e. Second Inner Glass Ply: **[10-mm] <Insert dimension>** float glass.
 - f. Interlayer Thickness: **[0.025 inch (0.635 mm)] [0.050 inch (0.127 mm)] <Insert dimension>**.
 - g. Inner Polycarbonate Ply: **[0.118-inch (4.57-mm)] [0.177-inch (2.97-mm)] [0.236-inch (5.99-mm)]** Type I (standard, UV-stabilized) polycarbonate.
 - h. Interlayer Thickness: **[0.025 inch (0.635 mm)] [0.050 inch (0.127 mm)] <Insert dimension>**.
 - i. Outer Polycarbonate Ply: **[0.118-inch (4.57-mm)] [0.177-inch (2.97-mm)] [0.236-inch (5.99-mm)]** Type II (coated, mar-resistant, UV-stabilized) polycarbonate.
10. Glass Tint Color: **[Blue] [Blue-green] [Bronze] [Green] [Gray] <Insert color>**.
11. Tinted Glass Location: Outer glass ply.
12. Coating Color: **[Gold] [Pewter] [Silver] <Insert color>**.
13. Coating Location: **[Second] [Third] [Fifth]** surface.
14. Overall Visible Light Transmittance: **<Insert single percentage or range>**.
15. Outdoor Visible Reflectance: **<Insert number>** percent maximum.
16. Winter Nighttime U-Factor: **<Insert value>** maximum.
17. Summer Daytime U-Factor: **<Insert value>** maximum.
18. Solar Heat-Gain Coefficient: **<Insert value>** maximum.
19. Provide safety glazing labeling.

2.18 INSULATING SECURITY GLAZING TYPES

- A. Security Glazing [**Type SG-<#>**]: [**Clear insulating security glazing**] [**Tinted insulating security glazing**] [**Reflective-coated, clear insulating security glazing**] [**Reflective-coated, tinted insulating security glazing**]. Outdoor lite is monolithic glass and indoor lite is glass-clad polycarbonate.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.
 - b. or approved equal.
 2. Detention Security Grade: [**Grade 1**] [**Grade 2**] [**Grade 3**] [**Grade 4**] per ASTM F 1915 [**cold-temperature impact test**] [**warm-temperature impact test**] [**and torch and small blunt impactor test**].
 3. Overall Unit Thickness: **<Insert dimension>**.
 4. Outdoor Lite: [**Float glass**] [**Heat-strengthened float glass**] [**Fully tempered float glass**].
 5. Indoor Lite: Glass-clad polycarbonate.
 - a. Outer Ply: [**3-mm**] [**5-mm**] [**6-mm**] **<Insert dimension>** [**heat-strengthened**] [**chemically strengthened**] [**fully tempered**] float glass.
 - b. Single Core: [**0.118-inch (4.57-mm)**] [**0.177-inch (2.97-mm)**] [**0.236-inch (5.99-mm)**] polycarbonate.
 - c. Multiple Core:
 - 1) Outer Core Ply: [**0.118-inch (4.57-mm)**] [**0.177-inch (2.97-mm)**] [**0.236-inch (5.99-mm)**] polycarbonate.
 - 2) [**Single Inner Core Ply**] [**Double Inner Core Plies**]: [**0.118-inch (4.57-mm)**] [**0.177-inch (2.97-mm)**] [**0.236-inch (5.99-mm)**] polycarbonate.
 - d. Inner Ply: [**3-mm**] [**5-mm**] [**6-mm**] **<Insert dimension>** [**heat-strengthened**] [**chemically strengthened**] [**fully tempered**] float glass.
 6. Interspace Content: [**Air**] [**Argon**].
 7. Interspace Dimension: **<Insert dimension>**.
 8. Glass Tint Color: [**Blue**] [**Blue-green**] [**Bronze**] [**Green**] [**Gray**] **<Insert color>**.
 9. Tinted Glass Location: Outdoor lite.
 10. Coating Color: [**Gold**] [**Pewter**] [**Silver**] **<Insert color>**.
 11. Coating Location: [**Second**] [**Third**] [**Fifth**] surface.
 12. Overall Visible Light Transmittance: **<Insert number>** percent minimum.
 13. Outdoor Visible Reflectance: **<Insert value>** percent maximum.
 14. Winter Nighttime U-Factor: **<Insert value>** maximum.
 15. Summer Daytime U-Factor: **<Insert value>** maximum.
 16. Solar Heat-Gain Coefficient: **<Insert value>** maximum.
 17. Provide safety glazing labeling.

- B. Security Glazing [**Type SG- $\langle\#\rangle$**]: [**Low-e-coated, clear insulating security glazing**] [**Low-e-coated, tinted insulating security glazing**]. Outdoor lite is monolithic glass and indoor lite is glass-clad polycarbonate.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **\langle Insert, in separate subparagraphs, manufacturer's name; product name or designation \rangle .**
 - b. or approved equal.
 2. Detention Security Grade: [**Grade 1**] [**Grade 2**] [**Grade 3**] [**Grade 4**] per ASTM F 1915 [**cold-temperature impact test**] [**warm-temperature impact test**] [**and**] [**torch and small blunt impactor test**].
 3. Overall Unit Thickness: **\langle Insert dimension \rangle .**
 4. Outdoor Lite: [**Float glass**] [**Heat-strengthened float glass**] [**Fully tempered float glass**].
 5. Indoor Lite: Glass-clad polycarbonate.
 - a. Outer Ply: [**3-mm**] [**5-mm**] [**6-mm**] **\langle Insert dimension \rangle** [**heat-strengthened**] [**chemically strengthened**] [**fully tempered**] float glass.
 - b. Single Core: [**0.118-inch (4.57-mm)**] [**0.177-inch (2.97-mm)**] [**0.236-inch (5.99-mm)**] polycarbonate.
 - c. Multiple Core:
 - 1) Outer Core Ply: [**0.118-inch (4.57-mm)**] [**0.177-inch (2.97-mm)**] [**0.236-inch (5.99-mm)**] polycarbonate.
 - 2) [**Single Inner Core Ply**] [**Double Inner Core Plies**]: [**0.118-inch (4.57-mm)**] [**0.177-inch (2.97-mm)**] [**0.236-inch (5.99-mm)**] polycarbonate.
 - d. Inner Ply: [**3-mm**] [**5-mm**] [**6-mm**] **\langle Insert dimension \rangle** [**heat-strengthened**] [**chemically strengthened**] [**fully tempered**] float glass.
 6. Interspace Content: [**Air**] [**Argon**].
 7. Interspace Dimension: **\langle Insert dimension \rangle .**
 8. Glass Tint Color: [**Blue**] [**Blue-green**] [**Bronze**] [**Green**] [**Gray**] **\langle Insert color \rangle .**
 9. Tinted Glass Location: Outer lite.
 10. Low-E Coating: [**Pyrolytic on second surface**] [**Pyrolytic on third surface**] [**Sputtered on second surface**] [**Sputtered on third surface**].
 11. Overall Visible Light Transmittance: **\langle Insert number \rangle** percent minimum.
 12. Winter Nighttime U-Factor: **\langle Insert value \rangle** maximum.
 13. Summer Daytime U-Factor: **\langle Insert value \rangle** maximum.
 14. Solar Heat-Gain Coefficient: **\langle Insert value \rangle** maximum.
 15. Provide safety glazing labeling.
- C. Security Glazing [**Type SG- $\langle\#\rangle$**]: [**Clear insulating security glazing**] [**Tinted insulating security glazing**] [**Reflective-coated, clear insulating security glazing**]

[Reflective-coated, tinted insulating security glazing]. Outdoor lite is laminated glass and indoor lite is glass-clad polycarbonate with spall-resistant film on inside face.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.
 - b. or approved equal.
2. Detention Security Grade: **[Grade 1] [Grade 2] [Grade 3] [Grade 4]** per ASTM F 1915 **[cold-temperature impact test] [warm-temperature impact test] [and] [torch and small blunt impactor test]**.
3. Forced-Entry Resistance: **[Class I] [Class II] [Class III] [Class IV] [Class V]** per ASTM F 1233.
4. Forced-Entry Resistance: **[Level I] [Level II] [Level III] [Level IV] [Level V]** per HPW-TP-0500.03.
5. Ballistic Resistance: **[Class/Level HG1] [Class/Level HG2] [Class/Level HG3] [Class/Level HG4] [Class/Level SMG] [Class/Level R1] [Class/Level R2] [Class/Level R3] [Class/Level R4-AP] [Class/Level SH1] [Class/Level SH2]** per ASTM F 1233.
6. Ballistic Resistance: **[Level 1] [Level 2] [Level 3] [Level 4] [Level 5] [Level 6] [Level 7] [Level 8] [Level 1-SG] [Level 2-SG] [Level 3-SG] [Level 4-SG] [Level 5-SG] [Level 6-SG] [Level 7-SG] [Level 8-SG]** per UL 752.
7. Blast Resistance:
 - a. Hazard Rating: **[No hazard] [Minimal hazard] [Very low hazard] [Low hazard] [High hazard]** per ASTM F 1642.
 - b. Performance Condition: **[1] [2] [3a] [3b] [4] [5]** per GSA-TS01.
 - c. Peak Pressure: **<Insert requirement>**.
 - d. Positive Phase Impulse: **<Insert requirement>**.
8. Overall Unit Thickness: **<Insert dimension>**.
9. Outdoor Lite: Laminated glass with **[two plies of heat-strengthened float glass] [three plies of heat-strengthened float glass] [two outer plies of heat-strengthened float glass and two inner plies of annealed float glass]**.
 - a. Outer Ply Thickness: **[3 mm] [5 mm] [6 mm] <Insert dimension>**.
 - b. Core Ply Thickness: **[3 mm] [5 mm] [6 mm] <Insert dimension>**.
 - c. Inner Ply Thickness: **[3 mm] [5 mm] [6 mm] <Insert dimension>**.
 - d. Interlayer Thickness: **[0.030 inch (0.76 mm)] [0.060 inch (1.52 mm)] [0.090 inch (2.3 mm)]**.
10. Indoor Lite: Glass-clad polycarbonate faced with a **0.037-inch- (0.94-mm-)** thick, spall-resistant polyester film laminated to indoor face.
 - a. Outer Ply: **[3-mm] [5-mm] [6-mm] <Insert dimension> [heat-strengthened] [chemically strengthened]** float glass.
 - b. Single Core: **[0.118-inch (4.57-mm)] [0.177-inch (2.97-mm)] [0.236-inch (5.99-mm)]** polycarbonate.
 - c. Multiple Core:

- 1) Outer Core Ply: [0.118-inch (4.57-mm)] [0.177-inch (2.97-mm)] [0.236-inch (5.99-mm)] polycarbonate.
 - 2) [Single Inner Core Ply] [Double Inner Core Plies]: [0.118-inch (4.57-mm)] [0.177-inch (2.97-mm)] [0.236-inch (5.99-mm)] polycarbonate.
- d. Inner Ply: [3-mm] [5-mm] [6-mm] <Insert dimension> [heat-strengthened] [chemically strengthened] float glass.
11. Interspace Content: [Air] [Argon].
 12. Interspace Dimension: <Insert dimension>.
 13. Glass Tint Color: [Blue] [Blue-green] [Bronze] [Green] [Gray] <Insert color>.
 14. Tinted Glass Location: [Outer] [Inner] ply of outdoor lite.
 15. Coating Color: [Gold] [Pewter] [Silver] <Insert color>.
 16. Coating Location: [Second] [Third] [Fifth] surface.
 17. Overall Visible Light Transmittance: <Insert number> percent minimum.
 18. Outdoor Visible Reflectance: <Insert number> percent maximum.
 19. Winter Nighttime U-Factor: <Insert value> maximum.
 20. Summer Daytime U-Factor: <Insert value> maximum.
 21. Solar Heat-Gain Coefficient: <Insert value> maximum.
 22. Provide safety glazing labeling.

D. Security Glazing [Type SG-<#>]: [Low-e-coated, clear insulating security glazing] [Low-e-coated, tinted insulating security glazing]. Outdoor lite is laminated glass and indoor lite is glass-clad polycarbonate with spall-resistant film on inside face.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. <Insert, in separate subparagraphs, manufacturer's name; product name or designation>.
 - b. or approved equal.
2. Detention Security Grade: [Grade 1] [Grade 2] [Grade 3] [Grade 4] per ASTM F 1915 [cold-temperature impact test] [warm-temperature impact test] [and] [torch and small blunt impactor test].
3. Forced-Entry Resistance: [Class I] [Class II] [Class III] [Class IV] [Class V] per ASTM F 1233.
4. Forced-Entry Resistance: [Level I] [Level II] [Level III] [Level IV] [Level V] per HPW-TP-0500.03.
5. Ballistic Resistance: [Class/Level HG1] [Class/Level HG2] [Class/Level HG3] [Class/Level HG4] [Class/Level SMG] [Class/Level R1] [Class/Level R2] [Class/Level R3] [Class/Level R4-AP] [Class/Level SH1] [Class/Level SH2] per ASTM F 1233.
6. Ballistic Resistance: [Level 1] [Level 2] [Level 3] [Level 4] [Level 5] [Level 6] [Level 7] [Level 8] [Level 1-SG] [Level 2-SG] [Level 3-SG] [Level 4-SG] [Level 5-SG] [Level 6-SG] [Level 7-SG] [Level 8-SG] per UL 752.
7. Blast Resistance:
 - a. Hazard Rating: [No hazard] [Minimal hazard] [Very low hazard] [Low hazard] [High hazard] per ASTM F 1642.

- b. Performance Condition: [1] [2] [3a] [3b] [4] [5] per GSA-TS01.
 - c. Peak Pressure: <Insert requirement>.
 - d. Positive Phase Impulse: <Insert requirement>.
8. Overall Unit Thickness: <Insert dimension>.
9. Outdoor Lite: Laminated glass with [two plies of heat-strengthened float glass] [three plies of heat-strengthened float glass] [two outer plies of heat-strengthened float glass and two inner plies of annealed float glass].
 - a. Outer Ply Thickness: [3 mm] [5 mm] [6 mm] <Insert dimension>.
 - b. Core Ply Thickness: [3 mm] [5 mm] [6 mm] <Insert dimension>.
 - c. Inner Ply Thickness: [3 mm] [5 mm] [6 mm] <Insert dimension>.
 - d. Interlayer Thickness: [0.030 inch (0.76 mm)] [0.060 inch (1.52 mm)] [0.090 inch (2.3 mm)].
10. Indoor Lite: Glass-clad polycarbonate faced with a 0.037-inch- (0.94-mm-) thick, spall-resistant polyester film laminated to indoor face.
 - a. Outer Ply: [3-mm] [5-mm] [6-mm] <Insert dimension> [heat-strengthened] [chemically strengthened] float glass.
 - b. Inner Ply: [3-mm] [5-mm] [6-mm] <Insert dimension> [heat-strengthened] [chemically strengthened] float glass.
 - c. Single Core: [0.118-inch (4.57-mm)] [0.177-inch (2.97-mm)] [0.236-inch (5.99-mm)] polycarbonate.
 - d. Multiple Core:
 - 1) Outer Core Ply: [0.118-inch (4.57-mm)] [0.177-inch (2.97-mm)] [0.236-inch (5.99-mm)] polycarbonate.
 - 2) [Single Inner Core Ply] [Double Inner Core Plies]: [0.118-inch (4.57-mm)] [0.177-inch (2.97-mm)] [0.236-inch (5.99-mm)] polycarbonate.
 - e. Inner Ply: [3-mm] [5-mm] [6-mm] <Insert dimension> [heat-strengthened] [chemically strengthened] float glass.
11. Interspace Content: [Air] [Argon].
12. Interspace Dimension: <Insert dimension>.
13. Glass Tint Color: [Blue] [Blue-green] [Bronze] [Green] [Gray] <Insert color>.
14. Tinted Glass Location: Outer lite.
15. Low-E Coating: [Pyrolytic on second surface] [Pyrolytic on third surface] [Sputtered on second surface] [Sputtered on third surface].
16. Overall Visible Light Transmittance: <Insert number> percent minimum.
17. Winter Nighttime U-Factor: <Insert value> maximum.
18. Summer Daytime U-Factor: <Insert value> maximum.
19. Solar Heat-Gain Coefficient: <Insert value> maximum.
20. Provide safety glazing labeling.

2.19 AIR-GAP SECURITY GLAZING TYPES

- A. Security Glazing [**Type SG-<#>**]: [**Clear air-gap security glazing**] [**Tinted air-gap security glazing**] [**Clear reflective-coated air-gap security glazing**] [**Tinted reflective-coated air-gap security glazing**]. Outdoor lite is laminated glass and indoor lite is laminated polycarbonate.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.
 - b. or approved equal.
 2. Forced-Entry Resistance: [**Class I**] [**Class II**] [**Class III**] [**Class IV**] [**Class V**] per ASTM F 1233.
 3. Forced-Entry Resistance: [**Level I**] [**Level II**] [**Level III**] [**Level IV**] [**Level V**] per HPW-TP-0500.03.
 4. Ballistic Resistance: [**Class/Level HG1**] [**Class/Level HG2**] [**Class/Level HG3**] [**Class/Level HG4**] [**Class/Level SMG**] [**Class/Level R1**] [**Class/Level R2**] [**Class/Level R3**] [**Class/Level R4-AP**] [**Class/Level SH1**] [**Class/Level SH2**] per ASTM F 1233.
 5. Ballistic Resistance: [**Level 1**] [**Level 2**] [**Level 3**] [**Level 4**] [**Level 5**] [**Level 6**] [**Level 7**] [**Level 8**] [**Level 1-SG**] [**Level 2-SG**] [**Level 3-SG**] [**Level 4-SG**] [**Level 5-SG**] [**Level 6-SG**] [**Level 7-SG**] [**Level 8-SG**] per UL 752.
 6. Blast Resistance:
 - a. Hazard Rating: [**No hazard**] [**Minimal hazard**] [**Very low hazard**] [**Low hazard**] [**High hazard**] per ASTM F 1642.
 - b. Performance Condition: [**1**] [**2**] [**3a**] [**3b**] [**4**] [**5**] per GSA-TS01.
 - c. Peak Pressure: **<Insert requirement>**.
 - d. Positive Phase Impulse: **<Insert requirement>**.
 7. Overall Unit Thickness: **<Insert dimension>**.
 8. Outdoor Lite: Laminated glass with [**two**] [**three**] plies of [**float glass**] [**heat-strengthened float glass**] [**fully tempered float glass**] [**chemically strengthened float glass**].
 - a. Outer Ply Thickness: [**3 mm**] [**5 mm**] [**6 mm**] **<Insert dimension>**.
 - b. Core Ply Thickness: [**3 mm**] [**5 mm**] [**6 mm**] **<Insert dimension>**.
 - c. Inner Ply Thickness: [**3 mm**] [**5 mm**] [**6 mm**] **<Insert dimension>**.
 - d. Interlayer Thickness: [**0.030 inch (0.76 mm)**] [**0.060 inch (1.52 mm)**] [**0.090 inch (2.3 mm)**].
 9. Indoor Lite: Laminated polycarbonate with [**two**] [**three**] [**four**] polycarbonate plies.
 - a. Overall Unit Thickness: **<Insert dimension>**.
 - b. Outer and Inner Plies: [**0.118-inch (4.57-mm)**] [**0.177-inch (2.97-mm)**] [**0.236-inch (5.99-mm)**] polycarbonate.

- c. **[Core Ply] [Core Plies]:** [0.118-inch (4.57-mm)] [0.177-inch (2.97-mm)] [0.236-inch (5.99-mm)] polycarbonate.
 - d. Interlayer Thicknesses: [0.025 inch (0.635 mm)] **<Insert dimension>**.
 10. Air-Gap Dimension: **<Insert dimension>**.
 11. Glass Tint Color: **[Blue] [Blue-green] [Bronze] [Green] [Gray]** **<Insert color>**.
 12. Tinted Glass Location: **[Outer] [Inner]** ply of outdoor lite.
 13. Coating Color: **[Gold] [Pewter] [Silver]** **<Insert color>**.
 14. Coating Location: **[Second] [Third] [Fifth]** surface.
 15. Overall Visible Light Transmittance: **<Insert number>** percent minimum.
 16. Outdoor Visible Reflectance: **<Insert number>** percent maximum.
 17. Winter Nighttime U-Factor: **<Insert value>** maximum.
 18. Summer Daytime U-Factor: **<Insert value>** maximum.
 19. Solar Heat-Gain Coefficient: **<Insert value>** maximum.
 20. Provide safety glazing labeling.
- B. Security Glazing **[Type SG-<#>: [Low-e-coated, clear air-gap security glazing] [Low-e-coated, tinted air-gap security glazing].** Outdoor lite is laminated glass and indoor lite is laminated polycarbonate.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.
 - b. or approved equal.
 2. Forced-Entry Resistance: **[Class I] [Class II] [Class III] [Class IV] [Class V]** per ASTM F 1233.
 3. Forced-Entry Resistance: **[Level I] [Level II] [Level III] [Level IV] [Level V]** per HPW-TP-0500.03.
 4. Ballistic Resistance: **[Class/Level HG1] [Class/Level HG2] [Class/Level HG3] [Class/Level HG4] [Class/Level SMG] [Class/Level R1] [Class/Level R2] [Class/Level R3] [Class/Level R4-AP] [Class/Level SH1] [Class/Level SH2]** per ASTM F 1233.
 5. Ballistic Resistance: **[Level 1] [Level 2] [Level 3] [Level 4] [Level 5] [Level 6] [Level 7] [Level 8] [Level 1-SG] [Level 2-SG] [Level 3-SG] [Level 4-SG] [Level 5-SG] [Level 6-SG] [Level 7-SG] [Level 8-SG]** per UL 752.
 6. Blast Resistance:
 - a. Hazard Rating: **[No hazard] [Minimal hazard] [Very low hazard] [Low hazard] [High hazard]** per ASTM F 1642.
 - b. Performance Condition: **[1] [2] [3a] [3b] [4] [5]** per GSA-TS01.
 - c. Peak Pressure: **<Insert requirement>**.
 - d. Positive Phase Impulse: **<Insert requirement>**.
 7. Overall Unit Thickness: **<Insert dimension>**.
 8. Outdoor Lite: Laminated glass with **[two] [three]** plies of **[float glass] [heat-strengthened float glass] [fully tempered float glass] [chemically strengthened float glass]**.

- a. Outer Ply Thickness: **[3 mm] [5 mm] [6 mm] <Insert dimension>**.
 - b. Core Ply Thickness: **[3 mm] [5 mm] [6 mm] <Insert dimension>**.
 - c. Inner Ply Thickness: **[3 mm] [5 mm] [6 mm] <Insert dimension>**.
 - d. Interlayer Thickness: **[0.030 inch (0.76 mm)] [0.060 inch (1.52 mm)] [0.090 inch (2.3 mm)]**.
9. Indoor Lite: Laminated polycarbonate with **[two] [three] [four]** polycarbonate plies.
- a. Overall Unit Thickness: **<Insert dimension>**.
 - b. Outer and Inner Plies: **[0.118-inch (4.57-mm)] [0.177-inch (2.97-mm)] [0.236-inch (5.99-mm)]** polycarbonate.
 - c. **[Core Ply] [Core Plies]: [0.118-inch (4.57-mm)] [0.177-inch (2.97-mm)] [0.236-inch (5.99-mm)]** polycarbonate.
 - d. Interlayer Thicknesses: **[0.025 inch (0.635 mm)] <Insert dimension>**.
10. Air-Gap Dimension: **<Insert dimension>**.
11. Glass Tint Color: **[Blue] [Blue-green] [Bronze] [Green] [Gray] <Insert color>**.
12. Tinted Glass Location: **[Outer] [Inner]** ply of outdoor lite.
13. Low-E Coating: **[Pyrolytic on second surface] [Pyrolytic on third surface] [Sputtered on second surface] [Sputtered on third surface]**.
14. Overall Visible Light Transmittance: **<Insert number>** percent minimum.
15. Winter Nighttime U-Factor: **<Insert value>** maximum.
16. Summer Daytime U-Factor: **<Insert value>** maximum.
17. Solar Heat-Gain Coefficient: **<Insert value>** maximum.
18. Provide safety glazing labeling.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine framing for security glazing, with Installer present, for compliance with the following:
 1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.
 2. Presence and functioning of weep system.
 3. Minimum required face or edge clearances.
 4. Effective sealing between joints of framing members.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean glazing channels and other framing members receiving security glazing immediately before glazing. Remove coatings not firmly bonded to substrates.

3.3 GLAZING, GENERAL

- A. Comply with combined written instructions of manufacturers of security glazing, sealants, gaskets, and other glazing materials, unless more stringent requirements are indicated, including those in referenced glazing publications.
- B. Protect edges of security glazing from damage during handling and installation. Remove damaged security glazing from Project site and legally dispose of off Project site. Damaged security glazing includes units with edge or face damage or other imperfections that, when installed, could weaken security glazing, impair performance, or impair appearance.
- C. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction testing.
- D. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications unless otherwise required by glazing unit manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.
- E. Do not exceed edge pressures stipulated by security glazing manufacturers for installing lites.
- F. Provide spacers for security glazing lites where the length plus width is larger than 50 inches (1270 mm).
 - 1. Locate spacers directly opposite each other on both inside and outside faces of security glazing. Install correct size and spacing to preserve required face clearances unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances and to comply with performance requirements.
 - 2. Provide 1/8-inch (3-mm) minimum bite of spacers on glazing lites and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.
- G. Provide edge blocking where indicated or needed to prevent security glazing from moving sideways in glazing channel, as recommended in writing by security glazing manufacturer and according to requirements in referenced glazing publications.
- H. Set security glazing in each series with uniform pattern, draw, bow, and similar characteristics.
- I. Set coated security glazing with proper orientation so that coatings face exterior or interior as specified.
- J. Where wedge-shaped gaskets are driven into one side of channel to pressurize sealant or gasket on opposite side, provide adequate anchorage so gasket cannot walk out when installation is subjected to movement.

- K. Square cut wedge-shaped gaskets at corners and install gaskets in a manner recommended by gasket manufacturer to prevent corners from pulling away; seal corner joints and butt joints with sealant recommended by gasket manufacturer.

3.4 TAPE GLAZING

- A. Position tapes on fixed stops so that, when compressed by security glazing, their exposed edges are flush with or protrude slightly above sightline of stops.
- B. Install tapes continuously, but not necessarily in one continuous length. Do not stretch tapes to make them fit opening.
- C. Cover vertical framing joints by applying tapes to heads and sills first and then to jambs. Cover horizontal framing joints by applying tapes to jambs and then to heads and sills.
- D. Place joints in tapes at corners of opening with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible sealant approved by tape manufacturer.
- E. Do not remove release paper from tape until just before each glazing unit is installed.
- F. Apply heel bead of elastomeric sealant.
- G. Center security glazing in openings on setting blocks and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings.
- H. Apply cap bead of elastomeric sealant over exposed edge of tape.

3.5 GASKET GLAZING (DRY)

- A. Cut compression gaskets to lengths recommended by gasket manufacturer to fit openings exactly, with allowance for stretch during installation.
- B. Insert soft compression gasket securely in place between glazing unit and frame or fixed stop, with joints miter cut and bonded together at corners.
- C. Installation with Drive-in Wedge Gaskets: Center security glazing in openings on setting blocks and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings. Compress gaskets to produce a weathertight seal without developing bending stresses in security glazing. Seal gasket joints with sealant recommended by gasket manufacturer.
- D. Installation with Pressure-Glazing Stops: Center security glazing in openings on setting blocks and press firmly against soft compression gasket. Install dense compression gaskets and pressure-glazing stops, applying pressure uniformly to compression

gaskets. Compress gaskets to produce a weathertight seal without developing bending stresses in security glazing. Seal gasket joints with sealant recommended by gasket manufacturer.

- E. Install gaskets so they protrude past face of glazing stops.

3.6 SEALANT GLAZING (WET)

- A. Install continuous spacers, or spacers combined with cylindrical sealant backing, between security glazing and glazing stops to maintain face clearances and to prevent sealant from extruding into glazing channel and blocking weep systems. Secure spacers or spacers and backings in place and in position to control depth of installed sealant relative to edge clearance for optimum sealant performance.
- B. Force sealants into glazing channels to eliminate voids and to ensure complete wetting or bond of sealant to security glazing and channel surfaces.
- C. Tool exposed surfaces of sealants to provide a substantial wash away from security glazing.

3.7 PROTECTION AND CLEANING

- A. Protect exterior security glazing from damage immediately after installation by attaching crossed streamers to framing held away from glazing unit. Do not apply markers to security glazing surfaces. Remove nonpermanent labels, and clean surfaces.
- B. Protect security glazing from contact with contaminating substances resulting from construction operations, including weld splatter. If, despite such protection, contaminating substances do come into contact with security glazing, remove substances immediately as recommended in writing by security glazing manufacturer.
- C. Examine security glazing surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains; remove as recommended in writing by security glazing manufacturer.
- D. Remove and replace security glazing that is broken, chipped, cracked, or abraded or that is damaged from natural causes, accidents, or vandalism during construction period.
- E. Wash security glazing on exposed surfaces in each area of Project not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash security glazing as recommended in writing by security glazing manufacturer.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 088853

SECTION 089000 - LOUVERS AND VENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Fixed, **[extruded-aluminum]** **[and]** **[formed-metal]** louvers.
2. Adjustable, **[extruded-aluminum]** **[and]** **[formed-metal]** louvers.
3. Adjustable, **[extruded-aluminum]** **[and]** **[formed-metal]** insulated louvers.
4. Fixed, formed-metal acoustical louvers.
5. Wall vents (brick vents).

- B. Related Sections:

1. Section 042000 "Unit Masonry" for building wall vents (brick vents) into masonry.
2. Section 081113 "Hollow Metal Doors and Frames" for louvers in hollow-metal doors.
3. Section 081416 "Flush Wood Doors" for louvers in flush wood doors.
4. Section 099113 "Exterior Painting" for field painting louvers.
5. Section 221513 "General-Service Compressed-Air Piping" for connecting pneumatic-operated adjustable louvers.
6. Division 23 Sections for control systems for louvers and vents..

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Louver Terminology: Definitions of terms for metal louvers contained in AMCA 501 apply to this Section unless otherwise defined in this Section or in referenced standards.
- B. Horizontal Louver: Louver with horizontal blades; i.e., the axes of the blades are horizontal.
- C. Vertical Louver: Louver with vertical blades; i.e., the axes of the blades are vertical.

- D. Drainable-Blade Louver: Louver with blades having gutters that collect water and drain it to channels in jambs and mullions, which carry it to bottom of unit and away from opening.
- E. Storm-Resistant Louver: Louver that provides specified wind-driven rain performance, as determined by testing according to AMCA 500-L.

1.4 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design louvers, including comprehensive engineering analysis by a qualified professional engineer, using structural[**and seismic**] performance requirements and design criteria indicated.
- B. Structural Performance: Louvers shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated without permanent deformation of louver components, noise, or metal fatigue caused by louver blade rattle or flutter, or permanent damage to fasteners and anchors. Wind pressures shall be considered to act normal to the face of the building.
 - 1. Wind Loads: Determine loads based on pressures as indicated on Drawings.
 - 2. Wind Loads: Determine loads based on a uniform pressure of [20 lbf/sq. ft. (957 Pa)] [30 lbf/sq. ft. (1436 Pa)] **<Insert design wind pressure>**, acting inward or outward.
 - 3. Wind Loads: Determine loads based on pressures indicated below:
 - a. Corner Zone: Within **<Insert distance>** of building corners, uniform pressure of **<Insert design wind pressure>**, acting inward, and **<Insert design wind pressure>**, acting outward.
 - b. Other Than Corner Zone: Uniform pressure of **<Insert design wind pressure>**, acting inward, and **<Insert design wind pressure>**, acting outward.
- C. Seismic Performance: Louvers, including attachments to other construction, shall withstand the effects of earthquake motions determined according to [SEI/ASCE 7] **<Insert requirement>**.
 - 1. Design earthquake spectral response acceleration, short period (Sds) for Project is **<Insert value>**.
 - 2. Component Importance Factor is [1.5] [1.0].
- D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes, without buckling, opening of joints, overstressing of components, failure of connections, or other detrimental effects.
 - 1. Temperature Change (Range): [120 deg F (67 deg C), **ambient**; 180 deg F (100 deg C)] **<Insert temperature range>**, material surfaces.
- E. Louver Performance Ratings: Provide louvers complying with requirements specified, as demonstrated by testing manufacturer's stock units identical to those provided,

except for length and width according to AMCA 500-L.

- F. Acoustic Performance: Provide acoustical louvers complying with ratings specified, as demonstrated by testing manufacturer's stock units identical to those specified, except for length and width for **[airborne sound-transmission loss according to ASTM E 90] [outdoor-indoor sound-transmission loss according to ASTM E 966]**.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
1. For louvers specified to bear AMCA seal, include printed catalog pages showing specified models with appropriate AMCA Certified Ratings Seals.
 2. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For louvers and accessories. Include plans, elevations, sections, details, and attachments to other work. Show frame profiles and blade profiles, angles, and spacing.
1. Show weep paths, gaskets, flashing, sealant, and other means of preventing water intrusion.
 2. Show mullion profiles and locations.
 3. Wiring Diagrams: For power, signal, and control wiring for motorized adjustable louvers.
- C. Samples for Initial Selection: For units with factory-applied color finishes.
- D. Samples for Verification: For each type of metal finish required.
- E. Delegated-Design Submittal: For louvers indicated to comply with structural[**and seismic**] performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.6 INFORMATIONAL SUBMITTALS

- A. Product Test Reports: Based on evaluation of comprehensive tests performed according to AMCA 500-L by a qualified testing agency or by manufacturer and witnessed by a qualified testing agency, for each type of louver and showing compliance with performance requirements specified.

1.7 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 QUALITY ASSURANCE

- A. Source Limitations: Obtain louvers and vents from single source from a single manufacturer where indicated to be of same type, design, or factory-applied color finish.
- B. Welding: Qualify procedures and personnel according to the following:
 - 1. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
 - 2. AWS D1.3, "Structural Welding Code - Sheet Steel."
 - 3. AWS D1.6, "Structural Welding Code - Stainless Steel."
- C. SMACNA Standard: Comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" for fabrication, construction details, and installation procedures.
- D. UL and NEMA Compliance: Provide motors and related components for motor-operated louvers that are listed and labeled by UL and comply with applicable NEMA standards.

1.9 PROJECT CONDITIONS

- A. Field Measurements: Verify actual dimensions of openings by field measurements before fabrication.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Aluminum Extrusions: **ASTM B 221** (ASTM B 221M), Alloy 6063-T5, T-52, or T6.
- B. Aluminum Sheet: **ASTM B 209** (ASTM B 209M), Alloy 3003 or 5005 with temper as required for forming, or as otherwise recommended by metal producer for required finish.
- C. Aluminum Castings: ASTM B 26/B 26M, Alloy 319.
- D. Galvanized-Steel Sheet: ASTM A 653/A 653M, [**G60** (Z180)] [**G90** (Z275)] zinc coating, mill phosphatized.
- E. Stainless-Steel Sheet: ASTM A 240/A 240M, Type 304, [**No. 2B finish**] [**No. 2D finish**] [**No. 4 finish, with grain running parallel to length of blades and frame members**]

[No. 4 finish, with grain running perpendicular to length of blades and frame members] [No. 4 finish, with grain running perpendicular to length of blades and parallel to length of frame members] [No. 6 finish].

- F. Fasteners: Use types and sizes to suit unit installation conditions.
1. Use **[Phillips flat-head] [hex-head or Phillips pan-head] [tamper-resistant]** screws for exposed fasteners unless otherwise indicated.
 2. For fastening aluminum, use aluminum or 300 series stainless-steel fasteners.
 3. For fastening galvanized steel, use hot-dip-galvanized steel or 300 series stainless-steel fasteners.
 4. For fastening stainless steel, use 300 series stainless-steel fasteners.
 5. For color-finished louvers, use fasteners with heads that match color of louvers.
- G. Postinstalled Fasteners for Concrete and Masonry: Torque-controlled expansion anchors, made from stainless-steel components, with capability to sustain, without failure, a load equal to 4 times the loads imposed, for concrete, or 6 times the load imposed, for masonry, as determined by testing per ASTM E 488, conducted by a qualified independent testing agency.
- H. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

2.2 FABRICATION, GENERAL

- A. Assemble louvers in factory to minimize field splicing and assembly. Disassemble units as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.
- B. Vertical Assemblies: Where height of louver units exceeds fabrication and handling limitations, fabricate units to permit field-bolted assembly with close-fitting joints in jambs and mullions, reinforced with splice plates.
1. Continuous Vertical Assemblies: Fabricate units without interrupting blade-spacing pattern **[unless horizontal mullions are indicated] [where indicated]**.
 2. Horizontal Mullions: Provide horizontal mullions at joints **[unless continuous vertical assemblies are indicated] [where indicated]**.
- C. Maintain equal louver blade spacing[, **including separation between blades and frames at head and sill,**] to produce uniform appearance.
- D. Fabricate frames, including integral sills, to fit in openings of sizes indicated, with allowances made for fabrication and installation tolerances, adjoining material tolerances, and perimeter sealant joints.
1. Frame Type: **[Channel] [Exterior flange] [Interior flange]** unless otherwise indicated.
- E. Include supports, anchorages, and accessories required for complete assembly.

- F. Provide vertical mullions of type and at spacings indicated, but not more than recommended by manufacturer, or **72 inches** (1830 mm) o.c., whichever is less.
1. Fully Recessed Mullions: Where indicated, provide mullions fully recessed behind louver blades. Where length of louver exceeds fabrication and handling limitations, fabricate with close-fitting blade splices designed to permit expansion and contraction.
 2. Semirecessed Mullions: Where indicated, provide mullions partly recessed behind louver blades so louver blades appear continuous. Where length of louver exceeds fabrication and handling limitations, fabricate with interlocking split mullions and close-fitting blade splices designed to permit expansion and contraction.
 3. Exposed Mullions: Where indicated, provide units with exposed mullions of same width and depth as louver frame. Where length of louver exceeds fabrication and handling limitations, provide interlocking split mullions designed to permit expansion and contraction.
 4. Exterior Corners: Prefabricated corner units with mitered **[and welded blades]** **[blades with concealed close-fitting splices]** and with **[fully recessed]** **[semirecessed]** mullions at corners.
- G. Provide **[subsills made of same material as louvers]** **[or]** **[extended sills]** for recessed louvers.
- H. Join frame members to each other and to fixed louver blades with fillet **[welds concealed from view]** **[welds, threaded fasteners, or both, as standard with louver manufacturer]** unless otherwise indicated or size of louver assembly makes bolted connections between frame members necessary.

2.3 FIXED, EXTRUDED-ALUMINUM LOUVERS

- A. Horizontal Storm-Resistant Louver **<Insert drawing designation, e.g., LV-1>**:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Air Balance Inc.; a Mestek company.
 - b. Air Flow Company, Inc.
 - c. Airolite Company, LLC (The).
 - d. All-Lite Architectural Products.
 - e. American Warming and Ventilating, Inc.; a Mestek company.
 - f. Arrow United Industries; a division of Mestek, Inc.
 - g. Construction Specialties, Inc.
 - h. Greenheck Fan Corporation.
 - i. Industrial Louvers, Inc.
 - j. NCA Manufacturing, Inc.
 - k. Nystrom Building Products.
 - l. Reliable Products, Inc.
 - m. Ruskin Company; Tomkins PLC.
 - n. United Enertech Corp.

3. Frame and Blade Nominal Thickness: Not less than [0.080 inch (2.03 mm)] [0.060 inch (1.52 mm) **for blades and 0.080 inch (2.03 mm) for frames**].
 4. Louver Performance Ratings:
 - a. Free Area: Not less than [5.0 sq. ft. (0.46 sq. m)] [6.0 sq. ft. (0.56 sq. m)] [7.0 sq. ft. (0.65 sq. m)] **<Insert free area>** for 48-inch- (1220-mm-) wide by 48-inch- (1220-mm-) high louver.
 - b. Air Performance: Not more than [0.10-inch wg (25-Pa)] **<Insert pressure>** static pressure drop at [600-fpm (3.0-m/s)] [700-fpm (3.6-m/s)] [800-fpm (4.1-m/s)] **<Insert velocity>** free-area [exhaust] [intake] velocity.
 - c. Wind-Driven Rain Performance: Not less than 99 percent effectiveness when subjected to a rainfall rate of [3 inches (75 mm) **per hour and a wind speed of 29 mph (13 m/s)**] [8 inches (200 mm) **per hour and a wind speed of 50 mph (22.4 m/s)**] at a core-area intake velocity of [300 fpm (1.5 m/s)] [400 fpm (2.0 m/s)] [500 fpm (2.5 m/s)] **<Insert velocity>**.
 5. AMCA Seal: Mark units with AMCA Certified Ratings Seal.
- C. Horizontal, Drainable-Blade Louver **<Insert drawing designation, e.g., LV-1>**:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Air Balance Inc.; a Mestek company.
 - b. Air Flow Company, Inc.
 - c. Airolite Company, LLC (The)).
 - d. All-Lite Architectural Products.
 - e. American Warming and Ventilating, Inc.; a Mestek company.
 - f. Arrow United Industries; a division of Mestek, Inc.
 - g. Carnes Company, Inc.
 - h. Cesco Products; a division of Mestek, Inc.
 - i. Construction Specialties, Inc.
 - j. Dowco Products Group; Safe-Air of Illinois, Inc.
 - k. Greenheck Fan Corporation.
 - l. Industrial Louvers, Inc.
 - m. Louvers & Dampers, Inc.; a division of Mestek, Inc.
 - n. Metal Form Manufacturing Inc.
 - o. NCA Manufacturing, Inc.
 - p. Nystrom Building Products.
 - q. Reliable Products, Inc.
 - r. Ruskin Company; Tomkins PLC.
 - s. United Enertech Corp.
 - t. Vent Products Company, Inc.
 - u. **<Insert manufacturer's name>**.
 - v. or approved equal.
 2. Louver Depth: [4 inches (100 mm)] [6 inches (150 mm)] **<Insert depth>**.
 3. Frame and Blade Nominal Thickness: Not less than [0.080 inch (2.03 mm)] [0.060 inch (1.52 mm) **for blades and 0.080 inch (2.03 mm) for frames**].
 4. Mullion Type: Exposed.

5. Louver Performance Ratings:
 - a. Free Area: Not less than [7.0 sq. ft. (0.65 sq. m)] [7.5 sq. ft. (0.70 sq. m)] [8.0 sq. ft. (0.74 sq. m)] [8.5 sq. ft. (0.79 sq. m)] <Insert free area> for 48-inch- (1220-mm-) wide by 48-inch- (1220-mm-) high louver.
 - b. Point of Beginning Water Penetration: Not less than [900 fpm (4.6 m/s)] [950 fpm (4.8 m/s)] [1000 fpm (5.1 m/s)] [1050 fpm (5.3 m/s)] [1100 fpm (5.6 m/s)] <Insert velocity>.
 - c. Air Performance: Not more than [0.10-inch wg (25-Pa)] <Insert pressure> static pressure drop at [700-fpm (3.6-m/s)] [750-fpm (3.8-m/s)] [800-fpm (4.1-m/s)] [850-fpm (4.3-m/s)] <Insert velocity> free-area [exhaust] [intake] velocity.
 - d. Air Performance: Not more than [0.15-inch wg (37-Pa)] <Insert pressure> static pressure drop at [900-fpm (4.6-m/s)] [950-fpm (4.8-m/s)] [1000-fpm (5.1-m/s)] <Insert velocity> free-area [exhaust] [intake] velocity.
 6. AMCA Seal: Mark units with AMCA Certified Ratings Seal.
- D. Horizontal, Continuous-Line, Drainable-Blade Louver <Insert drawing designation, e.g., LV-1>: Drainable-blade louver with blade gutters (drains) in rear two-thirds of blades only and with semirecessed mullions capable of collecting and draining water from blades.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Airolite Company, LLC (The).
 - b. Arrow United Industries; a division of Mestek, Inc.
 - c. Construction Specialties, Inc.
 - d. Greenheck Fan Corporation.
 - e. Ruskin Company; Tomkins PLC.
 - f. <Insert manufacturer's name>.
 - g. or approved equal.
 2. Louver Depth: [6 inches (150 mm)] <Insert depth>.
 3. Frame and Blade Nominal Thickness: Not less than 0.080 inch (2.03 mm).
 4. Louver Performance Ratings:
 - a. Free Area: Not less than [7.8 sq. ft. (0.72 sq. m)] <Insert free area> for 48-inch- (1220-mm-) wide by 48-inch- (1220-mm-) high louver.
 - b. Point of Beginning Water Penetration: Not less than [850 fpm (4.3 m/s)] <Insert velocity>.
 - c. Air Performance: Not more than [0.10-inch wg (25-Pa)] <Insert pressure> static pressure drop at [800-fpm (4.1-m/s)] <Insert velocity> free-area [exhaust] [intake] velocity.
- E. Horizontal, Sightproof, Drainable-Blade Louver <Insert drawing designation, e.g., LV-1>:
1. Manufacturers: Subject to compliance with requirements, provide products by

one of the following:

- a. Air Balance Inc.; a Mestek company.
 - b. Air Flow Company, Inc.
 - c. Airolite Company, LLC (The).
 - d. All-Lite Architectural Products.
 - e. American Warming and Ventilating, Inc.; a Mestek company.
 - f. Arrow United Industries; a division of Mestek, Inc.
 - g. Construction Specialties, Inc.
 - h. Dowco Products Group; Safe-Air of Illinois, Inc.
 - i. Greenheck Fan Corporation.
 - j. Industrial Louvers, Inc.
 - k. Louvers & Dampers, Inc.; a division of Mestek, Inc.
 - l. NCA Manufacturing, Inc.
 - m. Nystrom Building Products.
 - n. Reliable Products, Inc.
 - o. Ruskin Company; Tomkins PLC.
 - p. United Enertech Corp.
 - q. **<Insert manufacturer's name>**.
 - r. or approved equal.
2. Louver Depth: [5 inches (125 mm)] **<Insert depth>**.
 3. Frame and Blade Nominal Thickness: Not less than [0.080 inch (2.03 mm)] [0.060 inch (1.52 mm) **for blades and 0.080 inch (2.03 mm) for frames**].
 4. Mullion Type: Exposed.
 5. Louver Performance Ratings:
 - a. Free Area: Not less than [8.3 sq. ft. (0.77 sq. m)] **<Insert free area>** for 48-inch- (1220-mm-) wide by 48-inch- (1220-mm-) high louver.
 - b. Point of Beginning Water Penetration: Not less than [750 fpm (3.8 m/s)] [950 fpm (4.8 m/s)] **<Insert velocity>**.
 - c. Air Performance: Not more than [0.10-inch wg (25-Pa)] **<Insert pressure>** static pressure drop at [550-fpm (2.8-m/s)] **<Insert velocity>** free-area [exhaust] [intake] velocity.

F. Horizontal, Nondrainable-Blade Louver **<Insert drawing designation, e.g., LV-1>**:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Air Balance Inc.; a Mestek company.
 - b. Air Flow Company, Inc.
 - c. Airolite Company, LLC (The).
 - d. All-Lite Architectural Products.
 - e. American Warming and Ventilating, Inc.; a Mestek company.
 - f. Arrow United Industries; a division of Mestek, Inc.
 - g. Carnes Company, Inc.
 - h. Cesco Products; a division of Mestek, Inc.
 - i. Construction Specialties, Inc.
 - j. Dowco Products Group; Safe-Air of Illinois, Inc.

- k. Greenheck Fan Corporation.
 - l. Louvers & Dampers, Inc.; a division of Mestek, Inc.
 - m. Metal Form Manufacturing Inc.
 - n. NCA Manufacturing, Inc.
 - o. Nystrom Building Products.
 - p. Reliable Products, Inc.
 - q. Ruskin Company; Tomkins PLC.
 - r. United Enertech Corp.
 - s. Vent Products Company, Inc.
 - t. **<Insert manufacturer's name>**.
 - u. or approved equal.
2. Louver Depth: [2 inches (50 mm)] [4 inches (100 mm)] [6 inches (150 mm)] **<Insert depth>**.
3. Blade Profile: [**Plain blade without**] [**Blade with**] center baffle.
4. Frame and Blade Nominal Thickness: Not less than [0.080 inch (2.03 mm)] [0.060 inch (1.52 mm) **for blades and 0.080 inch (2.03 mm) for frames**].
5. Mullion Type: [**Exposed**] [**Semirecessed**] [**Fully recessed**].
6. Louver Performance Ratings:
- a. Free Area: Not less than [7.5 sq. ft. (0.70 sq. m)] [8.0 sq. ft. (0.74 sq. m)] [8.5 sq. ft. (0.79 sq. m)] **<Insert free area>** for 48-inch- (1220-mm-) wide by 48-inch- (1220-mm-) high louver.
 - b. Point of Beginning Water Penetration: Not less than [700 fpm (3.6 m/s)] [750 fpm (3.8 m/s)] [800 fpm (4.1 m/s)] [850 fpm (4.3 m/s)] [900 fpm (4.6 m/s)] [950 fpm (4.8 m/s)] **<Insert velocity>**.
 - c. Air Performance: Not more than [0.10-inch wg (25-Pa)] **<Insert pressure>** static pressure drop at [650-fpm (3.3-m/s)] [700-fpm (3.6-m/s)] [750-fpm (3.8-m/s)] **<Insert velocity>** free-area [exhaust] [intake] velocity.
- G. Vertical, Sightproof, Louver **<Insert drawing designation, e.g., LV-1>**:
- a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - b. Air Balance Inc.; a Mestek company.
 - c. Air Flow Company, Inc.
 - d. Airolite Company, LLC (The).
 - e. American Warming and Ventilating, Inc.; a Mestek company.
 - f. Arrow United Industries; a division of Mestek, Inc.
 - g. Cesco Products; a division of Mestek, Inc.
 - h. Construction Specialties, Inc.
 - i. Dowco Products Group; Safe-Air of Illinois, Inc.
 - j. Greenheck Fan Corporation.
 - k. Industrial Louvers, Inc.
 - l. Ruskin Company; Tomkins PLC.
 - m. United Enertech Corp.
 - n. **<Insert manufacturer's name>**.
 - o. or approved equal.
2. Louver Depth: [4 inches (100 mm)] **<Insert depth>**.

3. Blade Profile: [**Chevron**] [**Y**] [**Labyrinth**]-shaped blade.
4. Frame and Blade Nominal Thickness: Not less than [**0.080 inch** (2.03 mm)] [**0.060 inch** (1.52 mm) **for blades and 0.080 inch** (2.03 mm) **for frames**].
5. Blade Spacing: [**2 inches** (50 mm)] [**4 inches** (100 mm)] **<Insert spacing>** o.c.
6. Mullion Type: [**Exposed**] [**Semirecessed**] [**Fully recessed**].

2.4 FIXED, FORMED-METAL LOUVERS

A. Horizontal, Drainable-Blade Louver **<Insert drawing designation, e.g., LV-1>**:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Air Balance Inc.; a Mestek company.
 - b. Air Flow Company, Inc.
 - c. Airolite Company, LLC (The).
 - d. American Warming and Ventilating, Inc.; a Mestek company.
 - e. Arrow United Industries; a division of Mestek, Inc.
 - f. Cesco Products; a division of Mestek, Inc.
 - g. Construction Specialties, Inc.
 - h. Dowco Products Group; Safe-Air of Illinois, Inc.
 - i. Greenheck Fan Corporation.
 - j. Industrial Louvers, Inc.
 - k. Metal Form Manufacturing Inc.
 - l. NCA Manufacturing, Inc.
 - m. Ruskin Company; Tomkins PLC.
 - n. United Enertech Corp.
 - o. Vent Products Company, Inc.
 - p. **<Insert manufacturer's name>**.
 - q. or approved equal.
2. Louver Depth: [**4 inches** (100 mm)] [**6 inches** (150 mm)] **<Insert depth>**.
3. Frame and Blade Material and Nominal Thickness: Galvanized-steel sheet, not less than [**0.052 inch** (1.32 mm) **for frames and 0.040 inch** (1.02 mm) **for blades**] [**0.052 inch** (1.32 mm)] [**0.064 inch** (1.63 mm)].
4. Frame and Blade Material and Nominal Thickness: Stainless-steel sheet, not less than [**0.050 inch** (1.27 mm)] [**0.062 inch** (1.59 mm)].
5. Mullion Type: Exposed.
6. Louver Performance Ratings:
 - a. Free Area: Not less than [**7.0 sq. ft.** (0.65 sq. m)] [**7.5 sq. ft.** (0.70 sq. m)] [**8.0 sq. ft.** (0.74 sq. m)] [**8.5 sq. ft.** (0.79 sq. m)] **<Insert free area>** for 48-inch- (1220-mm-) wide by 48-inch- (1220-mm-) high louver.
 - b. Point of Beginning Water Penetration: Not less than [**800 fpm** (4.1 m/s)] [**850 fpm** (4.3 m/s)] [**900 fpm** (4.6 m/s)] [**950 fpm** (4.8 m/s)] [**1000 fpm** (5.1 m/s)] **<Insert velocity>**.
 - c. Air Performance: Not more than [**0.10-inch wg** (25-Pa)] **<Insert pressure>** static pressure drop at [**700-fpm** (3.6-m/s)] [**750-fpm** (3.8-m/s)] [**800-fpm**

- (4.1-m/s)] [850-fpm (4.3-m/s)] <Insert velocity> free-area [exhaust] [intake] velocity.
- d. Air Performance: Not more than [0.15-inch wg (37-Pa)] <Insert pressure> static pressure drop at [900-fpm (4.6-m/s)] [950-fpm (4.8-m/s)] [1000-fpm (5.1-m/s)] <Insert velocity> free-area velocity.
7. AMCA Seal: Mark units with AMCA Certified Ratings Seal.
- B. Horizontal, Nondrainable-Blade Louver <Insert drawing designation, e.g., LV-1>:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- Air Balance Inc.; a Mestek company.
 - Air Flow Company, Inc.
 - Airolite Company, LLC (The).
 - American Warming and Ventilating, Inc.; a Mestek company.
 - Arrow United Industries; a division of Mestek, Inc.
 - Cesco Products; a division of Mestek, Inc.
 - Construction Specialties, Inc.
 - Dowco Products Group; Safe-Air of Illinois, Inc.
 - Greenheck Fan Corporation.
 - Industrial Louvers, Inc.
 - Metal Form Manufacturing Inc.
 - NCA Manufacturing, Inc.
 - Ruskin Company; Tomkins PLC.
 - United Enertech Corp.
 - Vent Products Company, Inc.
 - <Insert manufacturer's name>.
 - or approved equal.
2. Louver Depth: [4 inches (100 mm)] [6 inches (150 mm)] <Insert depth>.
3. Blade Profile: [Plain blade without] [Blade with] center baffle.
4. Frame and Blade Material and Nominal Thickness: Galvanized-steel sheet, not less than [0.052 inch (1.32 mm) for frames and 0.040 inch (1.02 mm) for blades] [0.052 inch (1.32 mm)] [0.064 inch (1.63 mm)].
5. Frame and Blade Material and Nominal Thickness: Stainless-steel sheet, not less than [0.050 inch (1.27 mm)] [0.062 inch (1.59 mm)].
6. Mullion Type: [Exposed] [Semirecessed] [Fully recessed].
7. Louver Performance Ratings:
- Free Area: Not less than [6.5 sq. ft. (0.60 sq. m)] [7.0 sq. ft. (0.65 sq. m)] [7.5 sq. ft. (0.70 sq. m)] [8.0 sq. ft. (0.74 sq. m)] <Insert free area> for 48-inch- (1220-mm-) wide by 48-inch- (1220-mm-) high louver.
 - Point of Beginning Water Penetration: Not less than [550 fpm (2.8 m/s)] [600 fpm (3.0 m/s)] [650 fpm (3.3 m/s)] [700 fpm (3.6 m/s)] <Insert velocity>.
 - Air Performance: Not more than [0.10-inch wg (25-Pa)] <Insert pressure> static pressure drop at [550-fpm (2.8-m/s)] [600-fpm (3.0-m/s)] [650-fpm (3.3-m/s)] [700-fpm (3.6-m/s)] <Insert velocity> free-area [exhaust] [intake] velocity.

2.5 ADJUSTABLE, EXTRUDED-ALUMINUM LOUVERS

- A. Louver Construction and Operation: Provide adjustable louvers with extruded-aluminum frames and blades not less than **0.080-inch** (2.03-mm) nominal thickness, and with operating mechanisms to suit louver sizes.
1. Hand operation with push bars.
 2. Crank operation with removable-crank operator in sill or jamb.
 3. Chain operation with tension spring, wall clip, pull chain, and **160 deg F** (71 deg C) fusible link.
 4. Motor operation with [**2-position, spring-return application (with power on, motor opens louver; with power off, spring closes louver); 110-V, 60-Hz motor and limit switch**] [**2-direction, 110-V, 60-Hz motor and limit switches**]; equipped with [**frame-mounted switch**] [**remote-mounted switch with indicator light**] [**terminals for controlling devices**].
 5. Pneumatic piston operation for use with **80- to 100-psi** (550- to 690-kPa) compressed air for [**2-position**] [**modulating**] operation; power open, power close[**with spring-return fail-safe**].
- B. Dual-Blade, Drainable-Blade, Adjustable Louver <**Insert drawing designation, e.g., LV-1**>: Fixed drainable blades and adjustable plain blades combined in single frame.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Air Balance Inc.; a Mestek company.
 - b. Air Flow Company, Inc.
 - c. Airolite Company, LLC (The).
 - d. All-Lite Architectural Products.
 - e. American Warming and Ventilating, Inc.; a Mestek company.
 - f. Arrow United Industries; a division of Mestek, Inc.
 - g. Carnes Company, Inc.
 - h. Cesco Products; a division of Mestek, Inc.
 - i. Construction Specialties, Inc.
 - j. Dowco Products Group; Safe-Air of Illinois, Inc.
 - k. Greenheck Fan Corporation.
 - l. Industrial Louvers, Inc.
 - m. Louvers & Dampers, Inc.; a division of Mestek, Inc.
 - n. NCA Manufacturing, Inc.
 - o. Metal Form Manufacturing Inc.
 - p. Reliable Products, Inc.
 - q. Ruskin Company; Tomkins PLC.
 - r. United Enertech Corp.
 - s. Vent Products Company, Inc.
 - t. <**Insert manufacturer's name**>.
 - u. or approved equal.
 2. Louver Depth: [**4 inches** (100 mm)] [**6 inches** (150 mm)] <**Insert depth**>, overall.
 3. Louver Performance Ratings:

- a. Free Area: Not less than [6.0 sq. ft. (0.56 sq. m)] [6.5 sq. ft. (0.60 sq. m)] [7.0 sq. ft. (0.65 sq. m)] [7.5 sq. ft. (0.70 sq. m)] [8.0 sq. ft. (0.74 sq. m)] **<Insert free area>** for 48-inch- (1220-mm-) wide by 48-inch- (1220-mm-) high louver.
 - b. Point of Beginning Water Penetration: Not less than [750 fpm (3.8 m/s)] [800 fpm (4.1 m/s)] [850 fpm (4.3 m/s)] [900 fpm (4.6 m/s)] [950 fpm (4.8 m/s)] [1000 fpm (5.1 m/s)] **<Insert velocity>**.
 - c. Air Performance: Not more than [0.10-inch wg (25-Pa)] **<Insert pressure>** static pressure drop at [750-fpm (3.8-m/s)] [800-fpm (4.1-m/s)] [850-fpm (4.3-m/s)] [900-fpm (4.6-m/s)] **<Insert velocity>** free-area [exhaust] [intake] velocity.
 - d. Air Leakage: Not more than [1.5 cfm/sq. ft. (7.6 L/s per sq. m)] **<Insert air-leakage rating>** of louver gross area at a differential static pressure of 0.15-inch wg (37 Pa) with adjustable louver blades closed.
4. AMCA Seal: Mark units with AMCA Certified Ratings Seal.
- C. Single-Blade, Adjustable Louver **<Insert drawing designation, e.g., LV-1>**:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Air Balance Inc.; a Mestek company.
 - b. Air Flow Company, Inc.
 - c. Airolite Company, LLC (The).
 - d. All-Lite Architectural Products.
 - e. American Warming and Ventilating, Inc.; a Mestek company.
 - f. Arrow United Industries; a division of Mestek, Inc.
 - g. Carnes Company, Inc.
 - h. Cesco Products; a division of Mestek, Inc.
 - i. Construction Specialties, Inc.
 - j. Dowco Products Group; Safe-Air of Illinois, Inc.
 - k. Greenheck Fan Corporation.
 - l. Industrial Louvers, Inc.
 - m. Louvers & Dampers, Inc.; a division of Mestek, Inc.
 - n. Metal Form Manufacturing Inc.
 - o. NCA Manufacturing, Inc.
 - p. Reliable Products, Inc.
 - q. Ruskin Company; Tomkins PLC.
 - r. United Enertech Corp.
 - s. Vent Products Company, Inc.
 - t. **<Insert manufacturer's name>**.
 - u. or approved equal.
 2. Louver Depth: [4 inches (100 mm)] [6 inches (150 mm)] **<Insert depth>**.
 3. Blade Type: [Drainable] [Plain].
 4. Accessories: Equip louvers as follows:
 - a. Vinyl blade-edge gaskets for each louver blade.
 - b. [Stainless-steel jamb seals] [or] [vinyl blade-end gaskets].

5. Louver Performance Ratings:
 - a. Free Area: Not less than [6.5 sq. ft. (0.60 sq. m)] [7.0 sq. ft. (0.65 sq. m)] [7.5 sq. ft. (0.70 sq. m)] [8.0 sq. ft. (0.74 sq. m)] **<Insert free area>** for 48-inch- (1220-mm-) wide by 48-inch- (1220-mm-) high louver.
 - b. Point of Beginning Water Penetration: Not less than [500 fpm (2.5 m/s)] [600 fpm (3.0 m/s)] [700 fpm (3.6 m/s)] [800 fpm (4.1 m/s)] [900 fpm (4.6 m/s)] [1000 fpm (5.1 m/s)] **<Insert velocity>**.
 - c. Air Performance: Not more than [0.10-inch wg (25-Pa)] **<Insert pressure>** static pressure drop at [500-fpm (2.5-m/s)] [600-fpm (3.0-m/s)] [700-fpm (3.6-m/s)] [800-fpm (4.1-m/s)] [900-fpm (4.6-m/s)] **<Insert velocity>** free-area [exhaust] [intake] velocity.
 - d. Air Leakage: Not more than [3.5 cfm/sq. ft. (17.8 L/s per sq. m)] **<Insert air-leakage rating>** of louver gross area at a differential static pressure of 0.15-inch wg (37 Pa) with adjustable louver blades closed.
6. AMCA Seal: Mark units with AMCA Certified Ratings Seal.

2.6 ADJUSTABLE, FORMED-METAL LOUVERS

- A. Louver Operation: Provide adjustable louvers with operating mechanisms to suit louver sizes.
 1. Hand operation with push bars.
 2. Crank operation with removable-crank operator in sill or jamb.
 3. Chain operation with tension spring, wall clip, pull chain, and 160 deg F (71 deg C) fusible link.
 4. Motor operation with [2-position, spring-return application (with power on, motor opens louver; with power off, spring closes louver); 110-V, 60-Hz motor and limit switch] [2-direction, 110-V, 60-Hz motor and limit switches]; equipped with [frame-mounted switch] [remote-mounted switch with indicator light] [terminals for controlling devices].
 5. Pneumatic piston operation for use with 80- to 100-psi (550- to 690-kPa) compressed air for [2-position] [modulating] operation; power open, power close [with spring-return fail-safe].
- B. Dual-Blade, Drainable-Blade, Adjustable Louver **<Insert drawing designation, e.g., LV-1>**: Fixed drainable blades and adjustable plain blades combined in single frame.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Dowco Products Group; Safe-Air of Illinois, Inc.
 - b. Metal Form Manufacturing Inc.
 - c. Ruskin Company; Tomkins PLC.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
 2. Louver Depth: [4 inches (100 mm)] [6 inches (150 mm)] **<Insert depth>**, overall.

3. Frame and Blade Material and Nominal Thickness: Galvanized-steel sheet, not less than [0.052 inch (1.32 mm) **for frames and 0.040 inch (1.02 mm) for blades**] [0.052 inch (1.32 mm)] [0.064 inch (1.63 mm)].
 4. Frame and Blade Material and Nominal Thickness: Stainless-steel sheet, not less than [0.050 inch (1.27 mm)] [0.062 inch (1.59 mm)].
 5. Louver Performance Ratings:
 - a. Free Area: Not less than <Insert free area> for 48-inch- (1220-mm-) wide by 48-inch- (1220-mm-) high louver.
 - b. Point of Beginning Water Penetration: Not less than <Insert velocity>.
 - c. Air Performance: Not more than <Insert pressure> static pressure drop at <Insert velocity> free-area [exhaust] [intake] velocity.
 - d. Air Leakage: Not more than [1.5 cfm/sq. ft. (7.6 L/s per sq. m)] <Insert air-leakage rating> of louver gross area at a differential static pressure of 0.15-inch wg (37 Pa) with adjustable louver blades closed.
 6. AMCA Seal: Mark units with AMCA Certified Ratings Seal.
- C. Single-Blade, Adjustable Louver <Insert drawing designation, e.g., LV-1>:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Air Balance Inc.; a Mestek company.
 - b. Air Flow Company, Inc.
 - c. Airolite Company, LLC (The).
 - d. American Warming and Ventilating, Inc.; a Mestek company.
 - e. Arrow United Industries; a division of Mestek, Inc.
 - f. Carnes Company, Inc.
 - g. Cesco Products; a division of Mestek, Inc.
 - h. Dowco Products Group; Safe-Air of Illinois, Inc.
 - i. Greenheck Fan Corporation.
 - j. Industrial Louvers, Inc.
 - k. Louvers & Dampers, Inc.; a division of Mestek, Inc.
 - l. Metal Form Manufacturing Inc.
 - m. NCA Manufacturing, Inc.
 - n. Ruskin Company; Tomkins PLC.
 - o. United Enertech Corp.
 - p. Vent Products Company, Inc.
 - q. <Insert manufacturer's name>.
 - r. or approved equal.
 2. Louver Depth: [4 inches (100 mm)] [6 inches (150 mm)] <Insert depth>.
 3. Blade Type: [Drainable] [Plain].
 4. Frame and Blade Material and Nominal Thickness: Galvanized-steel sheet, not less than [0.052 inch (1.32 mm) **for frames and 0.040 inch (1.02 mm) for blades**] [0.052 inch (1.32 mm)] [0.064 inch (1.63 mm)].
 5. Frame and Blade Material and Nominal Thickness: Stainless-steel sheet, not less than [0.050 inch (1.27 mm)] [0.062 inch (1.59 mm)].
 6. Accessories: Equip louvers as follows:

- a. Vinyl blade-edge gaskets for each louver blade.
 - b. **[Stainless-steel jamb seals] [or] [vinyl blade-end gaskets].**
7. Louver Performance Ratings:
- a. Free Area: Not less than **[6.5 sq. ft. (0.60 sq. m)] [7.0 sq. ft. (0.65 sq. m)] [7.5 sq. ft. (0.70 sq. m)] [8.0 sq. ft. (0.74 sq. m)] <Insert free area>** for **48-inch-** (1220-mm-) wide by **48-inch-** (1220-mm-) high louver.
 - b. Point of Beginning Water Penetration: Not less than **[500 fpm (2.5 m/s)] [600 fpm (3.0 m/s)] [700 fpm (3.6 m/s)] [800 fpm (4.1 m/s)] [900 fpm (4.6 m/s)] [1000 fpm (5.1 m/s)] <Insert velocity>**.
 - c. Air Performance: Not more than **[0.10-inch wg (25-Pa)] <Insert pressure>** static pressure drop at **[500-fpm (2.5-m/s)] [600-fpm (3.0-m/s)] [700-fpm (3.6-m/s)] [800-fpm (4.1-m/s)] [900-fpm (4.6-m/s)] <Insert velocity>** free-area **[exhaust] [intake]** velocity.
 - d. Air Leakage: Not more than **[3.5 cfm/sq. ft. (17.8 L/s per sq. m)] <Insert air-leakage rating>** of louver gross area at a differential static pressure of **0.15-inch wg (37 Pa)** with adjustable louver blades closed.
8. AMCA Seal: Mark units with AMCA Certified Ratings Seal.

2.7 ADJUSTABLE, INSULATED LOUVERS

- A. Louver Operation: Provide adjustable louvers with operating mechanisms to suit louver sizes.
1. Hand operation with push bars.
 2. Crank operation with removable-crank operator in sill or jamb.
 3. Chain operation with tension spring, wall clip, pull chain, and **160 deg F (71 deg C)** fusible link.
 4. Motor operation with **[2-position, spring-return application (with power on, motor opens louver; with power off, spring closes louver); 110-V, 60-Hz motor and limit switch] [2-direction, 110-V, 60-Hz motor and limit switches];** equipped with **[frame-mounted switch] [remote-mounted switch with indicator light] [terminals for controlling devices].**
 5. Pneumatic piston operation for use with **80- to 100-psi (550- to 690-kPa)** compressed air for **[2-position] [modulating]** operation; power open, power close **[with spring-return fail-safe].**
- B. Adjustable, Insulated, Extruded-Aluminum Louver **<Insert drawing designation, e.g., LV-1>**: Single-blade, adjustable louver with gasketed, insulated blades. Frames and blade frames have urethane thermal break. Frames are extruded aluminum, not less than **0.080-inch (2.03-mm)** nominal thickness. Blade facings are aluminum sheet, not less than **0.032-inch (0.81-mm)** nominal thickness.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Airolite Company, LLC (The).

- b. Construction Specialties, Inc.
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.
 2. Louver Depth: [6 inches (150 mm)] [9 inches (225 mm)]
 3. Insulation: [Extruded-polystyrene foam, 2 inches (50 mm) thick] [Foamed-in-place polyurethane].
- C. Adjustable, Insulated, Formed-Metal Louver **<Insert drawing designation, e.g., LV-1>**: Single-blade, adjustable louver with gasketed, insulated blades.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Arrow United Industries; a division of Mestek, Inc.
 - b. Carnes Company, Inc.
 - c. Dowco Products Group; Safe-Air of Illinois, Inc.
 - d. Vent Products Company, Inc.
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.
 2. Louver Depth: [6 inches (150 mm)] [8 inches (200 mm)] **<Insert depth>**.
 3. Frame Material and Nominal Thickness: Galvanized-steel sheet, not less than [0.052 inch (1.32 mm)] [0.064 inch (1.63 mm)].
 4. Frame Material and Nominal Thickness: Stainless-steel sheet, not less than [0.050 inch (1.27 mm)] [0.062 inch (1.59 mm)].
 5. Blade Material and Nominal Thickness: Galvanized-steel sheet, not less than [0.028 inch (0.71 mm)] [0.040 inch (1.02 mm)] [0.052 inch (1.32 mm)] [0.064 inch (1.63 mm)].
 6. Blade Material and Nominal Thickness: Stainless-steel sheet, not less than [0.025 inch (0.64 mm)] [0.038 inch (0.95 mm)] [0.050 inch (1.27 mm)] [0.062 inch (1.59 mm)].
 7. Insulation: [Extruded-polystyrene foam, 1 inch (25 mm) thick] [Rigid, glass-fiber-board insulation, 1 inch (25 mm) thick] [Foamed-in-place polyurethane, 1/2 inch (13 mm) thick] **<Insert insulation description and thickness>**.

2.8 FIXED, ACOUSTICAL LOUVERS

- A. Fixed, Formed-Metal Acoustical Louver **<Insert drawing designation, e.g., LV-1>**: Louver with formed-metal blades filled on interior with mineral-fiber, rigid-board, acoustical insulation retained by perforated metal sheet of same material and finish as blade.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Air Balance Inc.; a Mestek company.
 - b. Air Flow Company, Inc.

- c. Airolite Company, LLC (The).
 - d. All-Lite Architectural Products.
 - e. American Warming and Ventilating, Inc.; a Mestek company.
 - f. Arrow United Industries; a division of Mestek, Inc.
 - g. Construction Specialties, Inc.
 - h. Dowco Products Group; Safe-Air of Illinois, Inc.
 - i. Greenheck Fan Corporation.
 - j. Industrial Louvers, Inc.
 - k. Louvers & Dampers, Inc.; a division of Mestek, Inc.
 - l. Metal Form Manufacturing Inc.
 - m. NCA Manufacturing, Inc.
 - n. Reliable Products, Inc.
 - o. Ruskin Company; Tomkins PLC.
 - p. United Enertech Corp.
 - q. **<Insert manufacturer's name>**.
 - r. or approved equal.
2. Louver Depth: [6 inches (150 mm)] [8 inches (200 mm)] [12 inches (300 mm)] **<Insert depth>**.
 3. Frame Material: Extruded-aluminum or aluminum sheet, not less than 0.080-inch (2.03-mm) nominal thickness.
 4. Frame Material: Galvanized-steel sheet, not less than [0.052-inch (1.32-mm)] [0.064-inch (1.63-mm)] nominal thickness.
 5. Blade Material: Aluminum sheet, not less than [0.063-inch (1.60-mm)] [0.080-inch (2.03-mm)] nominal thickness.
 6. Blade Material: Galvanized-steel sheet, not less than [0.034-inch (0.86-mm)] [0.040-inch (1.02-mm)] [0.052-inch (1.32-mm)] nominal thickness.
 7. Blade Shape: [Straight] [Airfoil] [Chevron].
 8. Blade Angle: 45 degrees unless otherwise indicated.
 9. Blade Spacing: 6 inches (150 mm) o.c. for 6-inch- (150-mm-) deep louvers.
 10. Blade Spacing: [6 inches (150 mm)] [8 inches (200 mm)] o.c. for 8-inch- (200-mm-) deep louvers.
 11. Blade Spacing: [9 inches (225 mm)] [12 inches (300 mm)] o.c. for 12-inch- (300-mm-) deep louvers.
 12. Free Area: Not less than 4 sq. ft. (0.37 sq. m) for 48-inch- (1220-mm-) wide by 48-inch- (1220-mm-) high louver.
 13. Airborne Sound-Transmission Loss: STC [10] **<Insert value>** per ASTM E 413, determined by testing per ASTM E 90.
 14. Outdoor-Indoor Sound-Transmission Loss: OITC [10] **<Insert value>** per ASTM E 1332, determined by testing per ASTM E 966.

2.9 LOUVER SCREENS

- A. General: Provide screen at [each exterior louver] [louvers indicated].
 1. Screen Location for Fixed Louvers: Interior face.
 2. Screen Location for Adjustable Louvers: [Interior] [Exterior] face unless otherwise indicated.

3. Screening Type: **[Bird screening] [Bird screening except where insect screening is indicated] [Insect screening]**.
- B. Secure screen frames to louver frames with **[stainless-steel machine screws] [machine screws with heads finished to match louver]**, spaced a maximum of **6 inches** (150 mm) from each corner and at **12 inches** (300 mm) o.c.
- C. Louver Screen Frames: Fabricate with mitered corners to louver sizes indicated.
1. Metal: Same kind and form of metal as indicated for louver to which screens are attached.**[Reinforce extruded-aluminum screen frames at corners with clips.]**
 2. Finish: **[Same finish as louver frames to which louver screens are attached] [Mill finish unless otherwise indicated]**.
 3. Type: **[Rewirable frames with a driven spline or insert] [Non-rewirable, U-shaped frames]**.
- D. Louver Screening for Aluminum Louvers:
1. Bird Screening: Aluminum, **1/2-inch-** (13-mm-) square mesh, **0.063-inch** (1.60-mm) wire.
 2. Bird Screening: Stainless steel, **1/2-inch-** (13-mm-) square mesh, **0.047-inch** (1.19-mm) wire.
 3. Bird Screening: Flattened, expanded aluminum, **3/4 by 0.050 inch** (19 by 1.27 mm) thick.
 4. Insect Screening: Aluminum, **18-by-16** (1.4-by-1.6-mm) mesh, **0.012-inch** (0.30-mm) wire.
 5. Insect Screening: Stainless steel, **18-by-18** (1.4-by-1.4-mm) mesh, **0.009-inch** (0.23-mm) wire.
- E. Louver Screening for Galvanized-Steel Louvers:
1. Bird Screening: Galvanized steel, **1/2-inch-** (13-mm-) square mesh, **0.041-inch** (1.04-mm) wire.
 2. Bird Screening: Stainless steel, **1/2-inch-** (13-mm-) square mesh, **0.047-inch** (1.19-mm) wire.
 3. Insect Screening: Galvanized steel, **18-by-14** (1.4-by-1.8-mm) mesh, **0.011-inch** (0.28-mm) wire.
 4. Insect Screening: Stainless steel, **18-by-18** (1.4-by-1.4-mm) mesh, **0.009-inch** (0.23-mm) wire.
- F. Louver Screening for Stainless-Steel Louvers:
1. Bird Screening: Stainless steel, **1/2-inch-** (13-mm-) square mesh, **0.047-inch** (1.19-mm) wire.
 2. Insect Screening: Stainless steel, **18-by-18** (1.4-by-1.4-mm) mesh, **0.009-inch** (0.23-mm) wire.

2.10 BLANK-OFF PANELS

- A. Uninsulated, Blank-Off Panels: Metal sheet attached to back of louver.
1. Aluminum sheet for aluminum louvers, not less than **0.050-inch** (1.27-mm) nominal thickness.
 2. Galvanized-steel sheet for galvanized-steel louvers, not less than [**0.040-inch** (1.02-mm)] [**0.052-inch** (1.32-mm)] nominal thickness.
 3. Stainless-steel sheet for stainless-steel louvers, not less than [**0.038-inch** (0.95-mm)] [**0.050-inch** (1.27-mm)] nominal thickness, with grain running in same direction as grain of louver blades.
 4. Panel Finish: [**Same finish applied to louvers**] [**Same type of finish applied to louvers, but black color**].
 5. Attach blank-off panels with [**clips**] [**sheet metal screws**] <Insert method>.
- B. Insulated, Blank-Off Panels: Laminated panels consisting of insulating core surfaced on back and front with metal sheets and attached to back of louver.
1. Thickness: [**1 inch** (25 mm)] [**2 inches** (50 mm)].
 2. Metal Facing Sheets: Aluminum sheet, not less than **0.032-inch** (0.81-mm) nominal thickness.
 3. Metal Facing Sheets: Galvanized-steel sheet, not less than **0.028-inch** (0.71-mm) nominal thickness.
 4. Metal Facing Sheets: Stainless-steel sheet, not less than **0.031-inch** (0.79-mm) nominal thickness.
 5. Insulating Core: [**Rigid, glass-fiber-board insulation**] [**or**] [**extruded-polystyrene foam**] <Insert insulation material>.
 6. Edge Treatment: Trim perimeter edges of blank-off panels with louver manufacturer's standard [**extruded-aluminum-channel frames, not less than 0.080-inch** (2.03-mm) **nominal thickness**] [**channel frames**], with corners mitered and with same finish as panels.
 7. Seal perimeter joints between panel faces and louver frames with gaskets or sealant.
 8. Panel Finish: [**Same finish applied to louvers**] [**Same type of finish applied to louvers, but black color**].
 9. Attach blank-off panels with [**clips**] [**sheet metal screws**] <Insert method>.

2.11 WALL VENTS (BRICK VENTS)

- A. Extruded-Aluminum Wall Vents:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Air Flow Company, Inc.
 - b. Aiolite Company, LLC (The).
 - c. Arrow United Industries; a division of Mestek, Inc.
 - d. Construction Specialties, Inc.
 - e. Dowco Products Group; Safe-Air of Illinois, Inc.

- f. Greenheck Fan Corporation.
 - g. Hohmann & Barnard, Inc.
 - h. Industrial Louvers, Inc.
 - i. Louvers & Dampers, Inc.; a division of Mestek, Inc.
 - j. Metal Form Manufacturing Inc.
 - k. Nystrom Building Products.
 - l. Reliable Products, Inc.
 - m. Ruskin Company; Tomkins PLC.
 - n. Sunvent Industries; Division of Sylro Sales Corp.
 - o. United Enertech Corp.
 - p. **<Insert manufacturer's name>**.
 - q. or approved equal.
2. Extruded-aluminum louvers and frames, not less than **0.125-inch** (3.18-mm) nominal thickness, assembled by welding; with **18-by-14-** (1.4-by-1.8-mm-) mesh, aluminum insect screening on inside face; incorporating weep holes, continuous drip at sill, and integral waterstop on inside edge of sill; of load-bearing design and construction.
 3. Dampers: Aluminum blades and frames mounted on inside of wall vents; operated from exterior with Allen wrench in socket-head cap screw. Fabricate operating mechanism from Type 304 stainless-steel components.
 4. Finish: **[Mill finish]** **<Insert finish>**.

B. Cast-Aluminum Wall Vents:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Airolite Company, LLC (The).
 - b. Greenheck Fan Corporation.
 - c. Hohmann & Barnard, Inc.
 - d. Ruskin Company; Tomkins PLC.
 - e. Sunvent Industries; Division of Sylro Sales Corp.
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
2. One-piece, cast-aluminum louvers and frames; with **18-by-14-** (1.4-by-1.8-mm-) mesh, aluminum insect screening on inside face; incorporating integral waterstop on inside edge of sill; of load-bearing design and construction.
3. Dampers: Aluminum blades and frames mounted on inside of wall vents; operated from exterior with Allen wrench in socket-head cap screw. Fabricate operating mechanism from Type 304 stainless-steel components.
4. Finish: Mill finish.

2.12 FINISHES, GENERAL

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

2.13 ALUMINUM FINISHES

- A. Finish louvers after assembly.
- B. Clear Anodic Finish: AAMA 611, [**AA-M12C22A41, Class I, 0.018 mm**] [**AA-M12C22A31, Class II, 0.010 mm**] or thicker.
- C. Color Anodic Finish: AAMA 611, [**AA-M12C22A42/A44, Class I, 0.018 mm**] [**AA-M12C22A32/A34, Class II, 0.010 mm**] or thicker.
1. Color: [**Champagne**] [**Light bronze**] [**Medium bronze**] [**Dark bronze**] [**Black**] <Insert color>.
 2. Color: [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry colors and color densities**].
- D. Conversion-Coated Finish: AA-C12C42 (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: acid-chromate-fluoride-phosphate conversion coating).
- E. Conversion-Coated and Factory-Primed Finish: AA-C12C42R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: acid-chromate-fluoride-phosphate conversion coating; Organic Coating: as specified below).
1. Organic Coating: Air-dried primer of not less than **2-mil** (0.05-mm) dry film thickness.
- F. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of **1.5 mils** (0.04 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
1. Color and Gloss: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color and gloss>.
- G. High-Performance Organic Finish: 2-coat fluoropolymer finish complying with [**AAMA 2604**] [**AAMA 2605**] and containing not less than [**50**] [**70**] percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
1. Color and Gloss: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color and gloss>.
- H. High-Performance Organic Finish: [**3**] [**4**]-coat fluoropolymer finish complying with AAMA 2605 and containing not less than [**50**] [**70**] percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
1. Color and Gloss: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color and gloss>.

2.14 GALVANIZED-STEEL SHEET FINISHES

- A. Finish louvers after assembly.
- B. Surface Preparation: Clean surfaces with nonpetroleum solvent so surfaces are free of oil and other contaminants. After cleaning, apply a conversion coating suited to the organic coating to be applied over it. Clean welds, mechanical connections, and abraded areas and repair according to ASTM A 780.
- C. Baked-Enamel or Powder-Coat Finish: Immediately after cleaning and pretreating, apply manufacturer's standard 2-coat, baked-on finish consisting of prime coat and thermosetting topcoat, with a minimum dry film thickness of **1 mil** (0.025 mm) for topcoat. Comply with coating manufacturer's written instructions for applying and baking to achieve a minimum dry film thickness of **2 mils** (0.05 mm).
 - 1. Color and Gloss: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and gloss>.**

2.15 STAINLESS-STEEL SHEET FINISHES

- A. Repair sheet finish by grinding and polishing irregularities, weld spatter, scratches, and forming marks to match surrounding finish.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and openings, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Coordinate setting drawings, diagrams, templates, instructions, and directions for installation of anchorages that are to be embedded in concrete or masonry construction. Coordinate delivery of such items to Project site.

3.3 INSTALLATION

- A. Locate and place louvers and vents level, plumb, and at indicated alignment with adjacent work.

- B. Use concealed anchorages where possible. Provide brass or lead washers fitted to screws where required to protect metal surfaces and to make a weathertight connection.
- C. Form closely fitted joints with exposed connections accurately located and secured.
- D. Provide perimeter reveals and openings of uniform width for sealants and joint fillers, as indicated.
- E. Repair finishes damaged by cutting, welding, soldering, and grinding. Restore finishes so no evidence remains of corrective work. Return items that cannot be refinished in the field to the factory, make required alterations, and refinish entire unit or provide new units.
- F. Protect unpainted galvanized and nonferrous-metal surfaces that will be in contact with concrete, masonry, or dissimilar metals from corrosion and galvanic action by applying a heavy coating of bituminous paint or by separating surfaces with waterproof gaskets or nonmetallic flashing.
- G. Install concealed gaskets, flashings, joint fillers, and insulation as louver installation progresses, where weathertight louver joints are required. Comply with Section 079200 "Joint Sealants" for sealants applied during louver installation.

3.4 ADJUSTING AND CLEANING

- A. Test operation of adjustable louvers and adjust as needed to produce fully functioning units that comply with requirements.
- B. Clean exposed surfaces of louvers and vents that are not protected by temporary covering, to remove fingerprints and soil during construction period. Do not let soil accumulate during construction period.
- C. Before final inspection, clean exposed surfaces with water and a mild soap or detergent not harmful to finishes. Thoroughly rinse surfaces and dry.
- D. Restore louvers and vents damaged during installation and construction so no evidence remains of corrective work. If results of restoration are unsuccessful, as determined by DEN Project Manager, remove damaged units and replace with new units.
 - 1. Touch up minor abrasions in finishes with air-dried coating that matches color and gloss of, and is compatible with, factory-applied finish coating.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 089000

SECTION 092116.23 - GYPSUM BOARD SHAFT WALL ASSEMBLIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes: Gypsum board shaft wall assemblies.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each component of gypsum board shaft wall assembly.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: Submit shop drawings for special components and installations not fully dimensioned or detailed in manufacturer's product data.
- C. Include placing drawings for framing members showing size and gage designations, number, type, location and spacing. Indicate supplemental strapping, bracing, splices, bridging, accessories, and details required for proper installation, including stud head expansion.
- D. Samples: Submit one foot long sample of each type of stud, head and runner channels, expansion head track, fasteners, anchors.
- E. Certificate from manufacturer stating that all materials are per contract requirements and providing proof of minimum five (5) years experience manufacturing products required of similar size.
- F. Certificate from installer evidencing a minimum five (5) years successful experience installing this type of work on projects.
- G. Mock-up: Provide a mock-up of components of this section. Coordinate all work.
- H. LEED Submittals:
 - 1. Product Data for Credit MR 4: For products having recycled content,

- documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating distance to Project, cost for each regional material, and fraction by weight that is considered regional.
 3. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regionally manufactured[**and regionally extracted and manufactured**] materials. Include statement indicating cost for each regionally manufactured material.
 - a. Include statement indicating location of manufacturer and distance to Project for each regionally manufactured material.
 - b. Include statement indicating location of manufacturer and point of extraction, harvest, or recovery for each raw material used in regionally extracted and manufactured materials. Indicate distance to Project and fraction by weight of each regionally manufactured material that is regionally extracted.
 4. Laboratory Test Reports for Credit EQ 4: For gypsum board shaft wall systems, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- 1.4 INFORMATIONAL SUBMITTALS
- A. Evaluation Reports: For [**shaft wall assemblies**] [**firestop tracks**], from ICC-ES.
- 1.5 CLOSEOUT SUBMITTALS
- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
- 1.6 QUALITY ASSURANCE
- A. Fire Rated Assemblies: Where framing units are components of assemblies indicated for a fire resistance rating, including those required for compliance with governing regulations, provide units that have been approved by governing authorities having jurisdiction.
 - B. Pre-installation conference: Prior to installation of work, meet at the project site or other mutually agreed location with installer, contractor, DEN Project Manager and other job related contractors.

- C. Warranty: Installer to warrant system for two (2) years, including framing and finish.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Store materials inside under cover and keep them dry and protected against weather, condensation, direct sunlight, construction traffic, and other potential causes of damage. Stack panels flat and supported on risers on a flat platform to prevent sagging.

1.8 FIELD CONDITIONS

- A. Environmental Limitations: Comply with ASTM C 840 requirements or with gypsum board manufacturer's written recommendations, whichever are more stringent.
- B. Do not install interior products until installation areas are enclosed and conditioned.
- C. Do not install panels that are wet, moisture damaged, or mold damaged.
 - 1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, and irregular shape.
 - 2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

D. CONSTRUCTION WASTE MANAGEMENT

- 1. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Resistance-Rated Assemblies: For fire-resistance-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E 119 by an independent testing agency.
- B. STC-Rated Assemblies: Provide materials and construction identical to those of assemblies tested according to ASTM E 90 and classified according to ASTM E 413 by a testing and inspecting agency.
- C. Low-Emitting Materials: Gypsum shaft wall assemblies shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- 2.2 GYPSUM BOARD SHAFT WALL ASSEMBLIES <Insert drawing designation>
- A. Fire-Resistance Rating: [As indicated] [1 hour] [2 hours] [3 hours] [4 hours] <Insert rating>.
 - B. STC Rating: [As indicated] [51, minimum] <Insert rating>.
 - C. Studs: Manufacturer's standard profile for repetitive members, corner and end members, and fire-resistance-rated assembly indicated.
 - 1. Depth: [As indicated] [2-1/2 inches (64 mm)] [4 inches (102 mm)] [6 inches (152 mm)].
 - 2. Minimum Base-Metal Thickness: [As indicated] [0.033 inch (0.84 mm)] <Insert value>.
 - D. Runner Tracks: Manufacturer's standard J-profile track with manufacturer's standard long-leg length, but at least [2 inches (51 mm)] <Insert dimension> long and matching studs in depth.
 - 1. Minimum Base-Metal Thickness: [As indicated] [Matching steel studs] [0.021 inch (0.53 mm)] [0.033 inch (0.84 mm)] <Insert value>.
 - E. Firestop Tracks: Provide firestop track at head of shaft wall on each floor level.
 - F. Elevator Hoistway Entrances: Manufacturer's standard J-profile jamb strut with long-leg length of 3 inches (76 mm), matching studs in depth, and not less than [0.033 inch (0.84 mm)] <Insert dimension> thick.
 - G. Room-Side Finish: [As indicated] [Gypsum board] [Gypsum veneer plaster] [Cementitious backer units] <Insert finish>.
 - H. Shaft-Side Finish: [As indicated] [Gypsum shaftliner board, Type X] [Gypsum shaftliner board, moisture- and mold-resistant Type X] [As indicated by fire-resistance-rated assembly design designation] <Insert finish>.
 - I. Insulation: Sound attenuation blankets.
- 2.3 PANEL PRODUCTS
- A. Recycled Content of Gypsum Panel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than <Insert number> percent by weight.
 - B. Regional Materials: Gypsum panel products shall be manufactured within 500 miles (800 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 500 miles (800 km) of Project site.
 - C. Regional Materials: Gypsum panel products shall be manufactured within 500 miles (800 km) of Project site.

- D. Panel Size: Provide in maximum lengths and widths available that will minimize joints in each area and that correspond with support system indicated.
- E. Gypsum Shaftliner Board, Type X: ASTM C 1396/C 1396M; manufacturer's proprietary fire-resistive liner panels with paper faces.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. American Gypsum; Shaft Liner.
 - b. CertainTeed Corp.; ProRoc Shaftliner.
 - c. Georgia-Pacific Gypsum LLC, Subsidiary of Georgia Pacific; ToughRock Fireguard Shaftliner.
 - d. Lafarge North America, Inc.; Firecheck Type X Shaftliner.
 - e. National Gypsum Company; Gold Bond Brand Fire-Shield Shaftliner.
 - f. PABCO Gypsum; Pabcore Shaftliner Type X.
 - g. Temple-Inland Inc.; Fire-Rated SilentGuard Gypsum Shaftliner System.
 - h. USG Corporation; Sheetrock Brand Gypsum Liner Panel.
 - i. **<Insert manufacturer>**
 - j. or approved equal.
 2. Thickness: **1 inch** (25.4 mm).
 3. Long Edges: Double bevel.
- F. Gypsum Shaftliner Board, Moisture- and Mold-Resistant Type X: ASTM C 1396/C 1396M; manufacturer's proprietary fire-resistive liner panels with moisture- and mold-resistant core and surfaces.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. CertainTeed Corp.; ProRoc Moisture and Mold Resistant Shaftliner.
 - b. Georgia-Pacific Gypsum LLC, Subsidiary of Georgia Pacific; Dens-Glass Ultra Shaftliner.
 - c. Lafarge North America, Inc.; Firecheck Moldcheck Type X Shaftliner.
 - d. National Gypsum Company; Gold Bond Brand Fire-Shield Shaftliner XP.
 - e. PABCO Gypsum; Pabcore Mold Curb Shaftliner Type X.
 - f. Temple-Inland Inc.; Fire-Rated SilentGuard TS Mold-Resistant Gypsum Shaftliner System.
 - g. USG Corporation; Sheetrock Brand Mold Tough Gypsum Liner Panel.
 - h. **<Insert manufacturer>**
 - i. or approved equal.
 2. Thickness: **1 inch** (25.4 mm).
 3. Long Edges: Double bevel.
 4. Mold Resistance: ASTM D 3273, score of 10 as rated according to ASTM D 3274.
- G. Gypsum Board: As specified in Section 092900 "Gypsum Board."
- H. Gypsum Base for Gypsum Veneer Plaster: As specified in Section 092613 "Gypsum Veneer Plastering."

- I. Cementitious Backer Units: As specified in [**Section 092900 "Gypsum Board."**] [**Section 093000 "Tiling."**]

2.4 NON-LOAD-BEARING STEEL FRAMING

- A. Recycled Content of Steel: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [**25**] <Insert number> percent.
- B. Steel Framing Members: Comply with ASTM C 645 requirements for metal unless otherwise indicated.
 1. Protective Coating: [**Coating with equivalent corrosion resistance of ASTM A 653/A 653M, G40 (Z120)**] [**ASTM A 653/A 653M, G40 (Z120), hot-dip galvanized**] [**ASTM A 653/A 653M, G60 (Z180), hot-dip galvanized**] unless otherwise indicated.
- C. Firestop Tracks: Top runner manufactured to allow partition heads to expand and contract with movement of the structure while maintaining continuity of fire-resistance-rated assembly indicated; in thickness not less than indicated for studs and in width to accommodate depth of studs.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Fire Trak Corp.; Fire Trak System[**attached to studs with Fire Trak Posi Klip**].
 - b. Grace Construction Products; FlameSafe FlowTrak System.
 - c. Metal-Lite, Inc.; The System.
 - d. Steel Network Inc. (The); [**VertiClip SLD**] [**VertiTrack VTD**] Series.
 - e. <Insert manufacturer>
 - f. or approved equal.

2.5 AUXILIARY MATERIALS

- A. General: Provide auxiliary materials that comply with manufacturer's written recommendations.
- B. Trim Accessories: Cornerbead, edge trim, and control joints of material and shapes as specified in [**Section 092900 "Gypsum Board"**] [**Section 092613 "Gypsum Veneer Plastering"**] that comply with gypsum board shaft wall assembly manufacturer's written recommendations for application indicated.
- C. Steel Drill Screws: ASTM C 1002 unless otherwise indicated.
- D. Track Fasteners: Power-driven fasteners of size and material required to withstand loading conditions imposed on shaft wall assemblies without exceeding allowable design stress of track, fasteners, or structural substrates in which anchors are embedded.
 1. Expansion Anchors: Fabricated from corrosion-resistant materials, with capability

- to sustain, without failure, a load equal to 5 times design load, as determined by testing according to ASTM E 488 conducted by a qualified testing agency.
2. Powder-Actuated Anchors: Powder-actuated fasteners are not permitted and shall not be used.
- E. Sound Attenuation Blankets: As specified in [**Section 092900 "Gypsum Board."**] [**Section 092613 "Gypsum Veneer Plastering."**]
- F. Acoustical Sealant: As specified in [**Section 092900 "Gypsum Board."**] [**Section 092613 "Gypsum Veneer Plastering."**]

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates to which gypsum board shaft wall assemblies attach or abut, with Installer present, including hollow-metal frames, elevator hoistway doorframes, cast-in anchors, and structural framing. Examine for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Examine panels before installation. Reject panels that are wet, moisture damaged, or mold damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Sprayed Fire-Resistive Materials: Coordinate with gypsum board shaft wall assemblies so both elements of Work remain complete and undamaged. Patch or replace sprayed fire-resistive materials removed or damaged during installation of shaft wall assemblies to comply with requirements specified in Section 078100 "Applied Fireproofing."
- B. After sprayed fire-resistive materials are applied, remove only to extent necessary for installation of gypsum board shaft wall assemblies and without reducing the fire-resistive material thickness below that which is required to obtain fire-resistance rating indicated. Protect remaining fire-resistive materials from damage.

3.3 INSTALLATION

- A. General: Install gypsum board shaft wall assemblies to comply with requirements of fire-resistance-rated assemblies indicated, manufacturer's written installation instructions, and ASTM C 754 other than stud-spacing requirements.
- B. Do not bridge building expansion joints with shaft wall assemblies; frame both sides of expansion joints with furring and other support.

- C. Install supplementary framing in gypsum board shaft wall assemblies around openings and as required for blocking, bracing, and support of gravity and pullout loads of fixtures, equipment, services, heavy trim, furnishings, wall-mounted doorstops, and similar items that cannot be supported directly by shaft wall assembly framing.
1. Elevator Hoistway: At elevator hoistway-entrance doorframes, provide jamb struts on each side of doorframe.
 2. Reinforcing: Where handrails directly attach to gypsum board shaft wall assemblies, provide galvanized steel reinforcing strip with [0.033-inch (0.84-mm)] **<Insert dimension>** minimum thickness of base metal (uncoated), accurately positioned and secured behind at least one layer of face panel.
- D. Penetrations: At penetrations in shaft wall, maintain fire-resistance rating of shaft wall assembly by installing supplementary steel framing around perimeter of penetration and fire protection behind boxes containing wiring devices, elevator call buttons, elevator floor indicators, and similar items.
- E. Isolate perimeter of gypsum panels from building structure to prevent cracking of panels, while maintaining continuity of fire-rated construction.
- F. Firestop Tracks: Where indicated, install to maintain continuity of fire-resistance-rated assembly indicated.
- G. Control Joints: Install control joints [**at locations indicated on Drawings**] [**according to ASTM C 840 and in specific locations approved by DEN Project Manager**] while maintaining fire-resistance rating of gypsum board shaft wall assemblies.
- H. Sound-Rated Shaft Wall Assemblies: Seal gypsum board shaft walls with acoustical sealant at perimeter of each assembly where it abuts other work and at joints and penetrations within each assembly.
- I. Cant Panels: At projections into shaft [**exceeding 4 inches** (102 mm)] [**where indicated**], install 1/2- or 5/8-inch- (13- or 16-mm-) thick gypsum board cants covering tops of projections.
1. Slope cant panels at least 75 degrees from horizontal. Set base edge of panels in adhesive and secure top edges to shaft walls at **24 inches** (610 mm) o.c. with screws fastened to shaft wall framing.
 2. Where steel framing is required to support gypsum board cants, install framing at **24 inches** (610 mm) o.c. and extend studs from the projection to shaft wall framing.
- J. Installation Tolerance: Install each framing member so fastening surfaces vary not more than **1/8 inch** (3 mm) from the plane formed by faces of adjacent framing.

3.4 PROTECTION

- A. Protect installed products from damage from weather, condensation, direct sunlight, construction, and other causes during remainder of the construction period.

- B. Remove and replace panels that are wet, moisture damaged, or mold damaged.
 - 1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, and irregular shape.
 - 2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 092116.23

SECTION 092216 - NON-STRUCTURAL METAL FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

- 1. Non-load-bearing steel framing systems for interior gypsum board assemblies.
 - 2. Suspension systems for interior gypsum ceilings, soffits, and grid systems.

- B. Related Requirements:

- 1. Section 054000 "Cold-Formed Metal Framing" for exterior and interior load-bearing and exterior non-load-bearing wall studs; floor joists; roof rafters and ceiling joists; and roof trusses.
 - 2. Section 092116.23 "Gypsum Board Shaft Wall Assemblies" for fire-resistance-rated vertical shaft and horizontal enclosures, including metal framing.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.

- 1. Include data substantiating that materials comply with requirements.

- B. LEED Submittals:

- 1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating costs for each product having recycled content.

1.4 INFORMATION SUBMITTALS

- A. Evaluation Reports: For [**dimpled steel studs and runners**] [**firestop tracks**], from

ICC-ES.

1.5 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Mockups: Reference Section 092900 for mockups of gypsum board assemblies.
- B. Single-Source Responsibility for Steel Framing: Obtain steel framing members for gypsum board assemblies from a single manufacturer, whenever possible, unless otherwise indicated.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials in original packages, containers, or bundles bearing brand name and identification of manufacturer or supplier.
- B. Store materials inside under cover and keep them dry and protected against damage from weather, direct sunlight, surface contamination, corrosion, construction traffic, and other causes. Neatly stack materials to prevent damage.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 DESCRIPTION

- A. Fire-Test-Response Characteristics: For fire-resistance-rated assemblies that incorporate non-load-bearing steel framing, provide materials and construction identical to those tested in assembly indicated according to ASTM E 119 by an independent testing agency.
- B. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E 90 and classified according to ASTM E 413 by an independent testing agency.

- C. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [25] <Insert number> percent.

2.2 FRAMING SYSTEMS

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [25] <Insert number> percent.
- B. Framing Members, General: Comply with ASTM C 754 for conditions indicated.
1. Steel Sheet Components: Comply with ASTM C 645 requirements for metal unless otherwise indicated.
 2. Protective Coating: [ASTM A 653/A 653M, G40 (Z120)] [ASTM A 653/A 653M, G60 (Z180)] [Coating with equivalent corrosion resistance of ASTM A 653/A 653M, G40 (Z120)], hot-dip galvanized, unless otherwise indicated.
- C. Studs and Runners: ASTM C 645. [Use either steel studs and runners or dimpled steel studs and runners.]
1. Steel Studs and Runners:
 - a. Minimum Base-Metal Thickness: [As indicated on Drawings] [0.027 inch (0.68 mm)] [0.033 inch (0.84 mm)].
 - b. Depth: [As indicated on Drawings] [3-5/8 inches (92 mm)] [6 inches (152 mm)] [4 inches (102 mm)] [2-1/2 inches (64 mm)] [1-5/8 inches (41 mm)].
 2. Dimpled Steel Studs and Runners:
 - a. Minimum Base-Metal Thickness: [As indicated on Drawings] [0.025 inch (0.64 mm)].
 - b. Depth: [As indicated on Drawings] [3-5/8 inches (92 mm)] [6 inches (152 mm)] [4 inches (102 mm)] [2-1/2 inches (64 mm)] [1-5/8 inches (41 mm)].
- D. Slip-Type Head Joints: Where indicated, provide [one of] the following:
1. Single Long-Leg Runner System: ASTM C 645 top runner with 2-inch- (51-mm-) deep flanges in thickness not less than indicated for studs, installed with studs friction fit into top runner and with continuous bridging located within 12 inches (305 mm) of the top of studs to provide lateral bracing.
 2. Double-Runner System: ASTM C 645 top runners, inside runner with 2-inch- (51-mm-) deep flanges in thickness not less than indicated for studs and fastened to studs, and outer runner sized to friction fit inside runner.
 3. Deflection Track: Steel sheet top runner manufactured to prevent cracking of finishes applied to interior partition framing resulting from deflection of structure above; in thickness not less than indicated for studs and in width to accommodate depth of studs.
 - a. Products: Subject to compliance with requirements, provide one of the following:

- 1) Dietrich Metal Framing; SLP-TRK Slotted Deflection Track.
 - 2) MBA Building Supplies; [**FlatSteel Deflection Track**] [**Slotted Deflecto Track**].
 - 3) Steel Network Inc. (The); [**VertiClip SLD**] [**VertiTrack VTD**] Series.
 - 4) Superior Metal Trim; Superior Flex Track System (SFT).
 - 5) Telling Industries; [**Vertical Slip Track**] [**Vertical Slip Track II**].
 - 6) or approved equal.
- E. Firestop Tracks: Top runner manufactured to allow partition heads to expand and contract with movement of the structure while maintaining continuity of fire-resistance-rated assembly indicated; in thickness not less than indicated for studs and in width to accommodate depth of studs.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Fire Trak Corp.; Fire Trak System[**attached to studs with Fire Trak Posi Klip**].
 - b. Grace Construction Products; FlameSafe FlowTrak System.
 - c. Metal-Lite, Inc.; The System.
 - d. **<Insert manufacturer>**
 - e. or approved equal.
- F. Flat Strap and Backing Plate: Steel sheet for blocking and bracing in length and width indicated.
1. Minimum Base-Metal Thickness: [**As indicated on Drawings**] [**0.027 inch** (0.68 mm)] [**0.033 inch** (0.84 mm)] **<Insert thickness>**.
- G. Cold-Rolled Channel Bridging: Steel, **0.053-inch** (1.34-mm) minimum base-metal thickness, with minimum **1/2-inch-** (13-mm-) wide flanges.
1. Depth: [**As indicated on Drawings**] [**1-1/2 inches** (38 mm)] **<Insert depth>**.
 2. Clip Angle: Not less than **1-1/2 by 1-1/2 inches** (38 by 38 mm), **0.068-inch-** (1.72-mm-) thick, galvanized steel.
- H. Hat-Shaped, Rigid Furring Channels: ASTM C 645.
1. Minimum Base-Metal Thickness: [**As indicated on Drawings**] [**0.033 inch** (0.84 mm)] **<Insert thickness>**.
 2. Depth: [**As indicated on Drawings**] [**7/8 inch** (22.2 mm)] [**1-1/2 inches** (38.1 mm)].
- I. Resilient Furring Channels: **1/2-inch-** (13-mm-) deep, steel sheet members designed to reduce sound transmission.
1. Configuration: [**Asymmetrical**] [**or**] [**hat shaped**].
- J. Cold-Rolled Furring Channels: **0.053-inch** (1.34-mm) uncoated-steel thickness, with minimum **1/2-inch-** (13-mm-) wide flanges.
1. Depth: [**As indicated on Drawings**] [**3/4 inch** (19 mm)] **<Insert depth>**.

2. Furring Brackets: Adjustable, corrugated-edge type of steel sheet with minimum uncoated-steel thickness of **0.033 inch** (0.8 mm).
 3. Tie Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, **0.062-inch-** (1.59-mm-) diameter wire, or double strand of **0.048-inch-** (1.21-mm-) diameter wire.
- K. Z-Shaped Furring: With slotted or nonslotted web, face flange of **1-1/4 inches** (31.8 mm), wall attachment flange of **7/8 inch** (22 mm), minimum uncoated-metal thickness of **0.018 inch** (0.45 mm), and depth required to fit insulation thickness indicated.

2.3 SUSPENSION SYSTEMS

- A. Tie Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, **0.062-inch-** (1.59-mm-) diameter wire, or double strand of **0.048-inch-** (1.21-mm-) diameter wire.
- B. Hanger Attachments to Concrete:
1. Anchors: Fabricated from corrosion-resistant materials with holes or loops for attaching wire hangers and capable of sustaining, without failure, a load equal to **[5] <Insert number>** times that imposed by construction as determined by testing according to ASTM E 488 by an independent testing agency.
 - a. Type: [**Cast-in-place anchor, designed for attachment to concrete forms**] [**Postinstalled, chemical anchor**] [**Postinstalled, expansion anchor**].
 2. Powder-Actuated Fasteners: Suitable for application indicated, fabricated from corrosion-resistant materials with clips or other devices for attaching hangers of type indicated, and capable of sustaining, without failure, a load equal to **[10] <Insert number>** times that imposed by construction as determined by testing according to ASTM E 1190 by an independent testing agency.
 - a. Powder-actuated fasteners shall be used only where allowed in advance by DEN Operations.
- C. Wire Hangers: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, **0.16 inch** (4.12 mm) in diameter.
- D. Flat Hangers: Steel sheet, [**in size indicated on Drawings**] [**1 by 3/16 inch** (25 by 5 mm) **by length indicated**] **<Insert size>**.
- E. Carrying Channels: Cold-rolled, commercial-steel sheet with a base-metal thickness of **0.053 inch** (1.34 mm) and minimum **1/2-inch-** (13-mm-) wide flanges.
 1. Depth: [**As indicated on Drawings**] [**2-1/2 inches** (64 mm)] [**2 inches** (51 mm)] [**1-1/2 inches** (38 mm)].
- F. Furring Channels (Furring Members):
1. Cold-Rolled Channels: **0.053-inch** (1.34-mm) uncoated-steel thickness, with

2. minimum 1/2-inch- (13-mm-) wide flanges, 3/4 inch (19 mm) deep.
Steel Studs and Runners: ASTM C 645.
 - a. Minimum Base-Metal Thickness: [**As indicated on Drawings**] [0.027 inch (0.68 mm)] [0.033 inch (0.84 mm)].
 - b. Depth: [**As indicated on Drawings**] [3-5/8 inches (92 mm)] [6 inches (152 mm)] [4 inches (102 mm)] [2-1/2 inches (64 mm)] [1-5/8 inches (41 mm)].
 3. Dimpled Steel Studs and Runners: ASTM C 645.
 - a. Minimum Base-Metal Thickness: [**As indicated on Drawings**] [0.025 inch (0.64 mm)].
 - b. Depth: [**As indicated on Drawings**] [3-5/8 inches (92 mm)] [6 inches (152 mm)] [4 inches (102 mm)] [2-1/2 inches (64 mm)] [1-5/8 inches (41 mm)].
 4. Hat-Shaped, Rigid Furring Channels: ASTM C 645, 7/8 inch (22 mm) deep.
 - a. Minimum Base-Metal Thickness: [**As indicated on Drawings**] [0.033 inch (0.84 mm)] <Insert thickness>.
 5. Resilient Furring Channels: 1/2-inch- (13-mm-) deep members designed to reduce sound transmission.
 - a. Configuration: [**Asymmetrical**] [or] [**hat shaped**].
- G. Grid Suspension System for Gypsum Board Ceilings: ASTM C 645, direct-hung system composed of main beams and cross-furring members that interlock.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Armstrong World Industries, Inc.; Drywall Grid Systems.
 - b. Chicago Metallic Corporation; Drywall Grid System.
 - c. USG Corporation; Drywall Suspension System.
 - d. <Insert manufacturer>
 - e. or approved equal.

2.4 AUXILIARY MATERIALS

- A. General: Provide auxiliary materials that comply with referenced installation standards.
1. Fasteners for Metal Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten steel members to substrates.
- B. Isolation Strip at Exterior Walls: Provide[**one of**] the following:
1. Asphalt-Saturated Organic Felt: ASTM D 226, Type I (No. 15 asphalt felt), nonperforated.

2. Foam Gasket: Adhesive-backed, closed-cell vinyl foam strips that allow fastener penetration without foam displacement, **1/8 inch** (3.2 mm) thick, in width to suit steel stud size.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and substrates, with Installer present, and including welded hollow-metal frames, cast-in anchors, and structural framing, for compliance with requirements and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Suspended Assemblies: Coordinate installation of suspension systems with installation of overhead structure to ensure that inserts and other provisions for anchorages to building structure have been installed to receive hangers at spacing required to support the Work and that hangers will develop their full strength.
 1. Furnish concrete inserts and other devices indicated to other trades for installation in advance of time needed for coordination and construction.
- B. Coordination with Sprayed Fire-Resistive Materials:
 1. Before sprayed fire-resistive materials are applied, attach offset anchor plates or ceiling runners (tracks) to surfaces indicated to receive sprayed fire-resistive materials. Where offset anchor plates are required, provide continuous plates fastened to building structure not more than **24 inches** (610 mm) o.c.
 2. After sprayed fire-resistive materials are applied, remove them only to extent necessary for installation of non-load-bearing steel framing. Do not reduce thickness of fire-resistive materials below that required for fire-resistance ratings indicated. Protect adjacent fire-resistive materials from damage.

3.3 INSTALLATION, GENERAL

- A. Installation Standard: ASTM C 754, except comply with framing sizes and spacing indicated.
 1. Gypsum Plaster Assemblies: Also, comply with requirements in ASTM C 841 that apply to framing installation.
 2. Portland Cement Plaster Assemblies: Also comply with requirements in ASTM C 1063 that apply to framing installation.
 3. Gypsum Veneer Plaster Assemblies: Also, comply with requirements in ASTM C 844 that apply to framing installation.

4. Gypsum Board Assemblies: Also, comply with requirements in ASTM C 840 that apply to framing installation.
 - B. Install supplementary framing, blocking, and bracing at terminations in gypsum board assemblies to support fixtures, equipment services, heavy trim, grab bars, toilet accessories, furnishings, or similar construction. Comply with details indicated and with recommendations of gypsum board manufacturer or, if none available, with the most current edition of United States Gypsum Co. "Gypsum Construction Handbook."
 - C. Install bracing at terminations in assemblies.
 - D. Isolate steel framing from building structure at locations indicated to prevent transfer of loading imposed by structural movement. Comply with details shown on Drawings.
 - E. Where building structure abuts ceiling perimeter or penetrates ceiling.
 1. Where partition framing and wall furring abut structure, except at floor.
 2. Provide slip- or cushioned-type joints as detailed to attain lateral support and avoid axial loading.
 - F. Install deflection track top runner to attain lateral support and avoid axial loading.
 - G. Install deflection and firestop track top runner at fire-resistance-rated assemblies where indicated.
 - H. Attach jamb studs at openings to tracks using manufacturer's standard stud clip.
 - I. Do not bridge building control and expansion joints with non-load-bearing steel framing members. Frame both sides of joints independently.
- 3.4 INSTALLING FRAMED ASSEMBLIES
- A. Where studs are installed directly against exterior masonry walls or dissimilar metals at exterior walls, install isolation strip between studs and exterior wall.
 - B. Install studs so flanges within framing system point in same direction.
 1. Space studs as follows:
 - a. Single-Layer Application: [16 inches (406 mm)] [24 inches (610 mm)] [400 mm] [600 mm] o.c. unless otherwise indicated.
 - b. Multilayer Application: [16 inches (406 mm)] [24 inches (610 mm)] [400 mm] [600 mm] o.c. unless otherwise indicated.
 - c. Tile Backing Panels: [16 inches (406 mm)] [400 mm] o.c. unless otherwise indicated.
 - C. Install tracks (runners) at floors and overhead supports. Extend framing full height to structural supports or substrates above suspended ceilings, except where partitions are indicated to terminate at suspended ceilings. Continue framing around ducts penetrating partitions above ceiling.

1. Slip-Type Head Joints: Where framing extends to overhead structural supports, install to produce joints at tops of framing systems that prevent axial loading of finished assemblies.
 2. Door Openings: Screw vertical studs at jambs to jamb anchor clips on doorframes; install runner track section (for cripple studs) at head and secure to jamb studs.
 - a. Install two studs at each jamb unless otherwise indicated.
 - b. Install cripple studs at head adjacent to each jamb stud, with a minimum **1/2-inch** (13-mm) clearance from jamb stud to allow for installation of control joint in finished assembly.
 - c. Extend jamb studs through suspended ceilings and attach to underside of overhead structure.
 3. Other Framed Openings: Frame openings other than door openings the same as required for door openings unless otherwise indicated. Install framing below sills of openings to match framing required above door heads.
 4. Fire-Resistance-Rated Partitions: Install framing to comply with fire-resistance-rated assembly indicated and support closures and to make partitions continuous from floor to underside of solid structure.
 - a. Firestop Track: Where indicated, install to maintain continuity of fire-resistance-rated assembly indicated.
 5. Sound-Rated Partitions: Install framing to comply with sound-rated assembly indicated.
 6. Curved Partitions:
 - a. Bend track to uniform curve and locate straight lengths so they are tangent to arcs.
 - b. Begin and end each arc with a stud, and space intermediate studs equally along arcs. On straight lengths of no fewer than two studs at ends of arcs, place studs **6 inches** (150 mm) o.c.
- D. Direct Furring:
1. Screw to wood framing.
 2. Attach to concrete or masonry with stub nails, screws designed for masonry attachment, or powder-driven fasteners spaced **24 inches** (610 mm) o.c.
- E. Z-Furring Members:
1. Erect insulation (specified in Section 072100 "Thermal Insulation") vertically and hold in place with Z-furring members spaced [**24 inches** (610 mm)] [**600 mm**] o.c.
 2. Except at exterior corners, securely attach narrow flanges of furring members to wall with concrete stub nails, screws designed for masonry attachment, or powder-driven fasteners spaced **24 inches** (610 mm) o.c.
 3. At exterior corners, attach wide flange of furring members to wall with short flange extending beyond corner; on adjacent wall surface, screw-attach short flange of furring channel to web of attached channel. At interior corners, space

second member no more than **12 inches** (305 mm) from corner and cut insulation to fit.

- F. Installation Tolerance: Install each framing member so fastening surfaces vary not more than **1/8 inch** (3 mm) from the plane formed by faces of adjacent framing.

3.5 INSTALLING SUSPENSION SYSTEMS

- A. Install suspension system components in sizes and spacings indicated on Drawings, but not less than those required by referenced installation standards and seismic requirements for assembly types and other assembly components indicated.
- B. Isolate suspension systems from building structure where they abut or are penetrated by building structure to prevent transfer of loading imposed by structural movement.
- C. Suspend hangers from building structure as follows:
1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structural or suspension system.
 - a. Splay hangers only where required to miss obstructions and offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
 2. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with locations of hangers required to support standard suspension system members, install supplemental suspension members and hangers in the form of trapezes or equivalent devices.
 - a. Size supplemental suspension members and hangers to support ceiling loads within **[performance limits established by referenced installation standards]** <Insert deflection limit>.
 3. Wire Hangers: Secure by looping and wire tying, either directly to structures or to inserts, eye screws, or other devices and fasteners that are secure and appropriate for substrate, and in a manner that will not cause hangers to deteriorate or otherwise fail.
 - a. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards.
 4. Flat Hangers: Secure to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices and fasteners that are secure and appropriate for structure and hanger, and in a manner that will not cause hangers to deteriorate or otherwise fail.
 5. Do not attach hangers to steel roof deck.
 6. Do not attach hangers to permanent metal forms. Furnish cast-in-place hanger inserts that extend through forms.
 7. Do not attach hangers to rolled-in hanger tabs of composite steel floor deck.
 8. Do not connect or suspend steel framing from ducts, pipes, or conduit.

- D. Fire-Resistance-Rated Assemblies: Wire tie furring channels to supports.
- E. Seismic Bracing: Sway-brace suspension systems [**with hangers used for support**] **<Insert requirements>**.
- F. Grid Suspension Systems: Attach perimeter wall track or angle where grid suspension systems meet vertical surfaces. Mechanically join main beam and cross-furring members to each other and butt-cut to fit into wall track.
- G. Installation Tolerances: Install suspension systems that are level to within [**1/8 inch in 12 feet** (3 mm in 3.6 m)] **<Insert dimensions>** measured lengthwise on each member that will receive finishes and transversely between parallel members that will receive finishes.

3.6 FIELD QUALITY CONTROL

- A. Above-Ceiling Observation: DEN Project Manager will conduct an above-ceiling observation prior to installation of gypsum board ceilings and report any deficiencies in the Work observed. Do not proceed with installation of gypsum board to ceiling support framing until deficiencies have been corrected.
 - 1. Notify DEN Project Manager minimum [**seven (7)**] **<Insert number>** days in advance of the date and the time when the Project, or part of the Project, will be ready for an above-ceiling observation.
 - 2. Prior to notifying DEN Project Manager, complete the following in areas to receive gypsum board ceilings:
 - a. Installation of 80% of lighting fixtures, powered for operation.
 - b. Installation, insulation, and leak and pressure testing of water piping systems.
 - c. Installation of air duct systems.
 - d. Installation of air devices.
 - e. Installation of mechanical system control air tubing.
 - f. Installation of ceiling support framing.
 - g. **<Insert requirements.>**

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this section. The cost of the work described in this section shall be included in the applicable unit price item, work order or lump sum bid item.

END OF SECTION 092216

SECTION 092713 - GLASS-FIBER-REINFORCED PLASTER FABRICATIONS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes factory-molded, glass-fiber-reinforced plaster fabrications for interior applications.
- B. Related Requirements:
 - 1. **[Section 061000 "Rough Carpentry"] [Section 061053 "Miscellaneous Rough Carpentry"]** for blocking, nailers, shims, and carpentry supporting glass-fiber-reinforced plaster fabrications.
 - 2. **[Section 092216 "Non-Structural Metal Framing"] <Insert Section>** for steel framing, blocking, and bracing supporting glass-fiber-reinforced plaster fabrications.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include construction details, material descriptions, weights, dimensions of individual components and profiles, and finishes.
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Credit EQ 4.1: For adhesives, documentation including printed statement of VOC content.
 - 2. Laboratory Test Reports for Credit EQ 4: For adhesives, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings:

1. Include plans, elevations, sections, and attachment details.
2. Detail fabrication and assembly of glass-fiber-reinforced plaster fabrications.
3. Indicate requirements for joint treatment.

D. Samples: For each exposed product and for each color and texture specified.

1. Linear Moldings: **24-inch-** (610-mm-) long section with finished joint. Show complete pattern.
2. Nonlinear Shapes: [**Full-size unit**] <Insert requirements>.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Ceiling suspension assembly members.
2. Method of attaching hangers to glass-fiber-reinforced plaster fabrications and to building structure.
3. Ceiling-mounted items including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, moldings, and other fixtures.

1.5 CLOSEOUT SUBMITTALS

A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

A. Mockups: Build mockups to set quality standards for fabrication and installation.

1. Build mockup of each type of glass-fiber-reinforced plaster fabrication.
2. Paint mockups to match final decoration scheduled or indicated and to comply with requirements specified in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."
3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Comply with ASTM C 1467/C 1467M.

1.8 FIELD CONDITIONS

A. Environmental Conditions:

1. Comply with ASTM C 1467/C 1467M.
2. Do not deliver or install glass-fiber-reinforced plaster fabrications until building is enclosed, wet work is complete, and HVAC system is operating and continuously maintaining temperature and relative humidity at levels intended for building occupants.

B. Conditioning: Acclimatize glass-fiber-reinforced plaster fabrications to ambient temperature and humidity of spaces in which they will be installed. Remove packaging and move units into installation spaces not less than 48 hours before installing them.

C. Field Measurements: Where glass-fiber-reinforced plaster fabrications are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1.9 CONSTRUCTION WASTE MANAGEMENT

A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GLASS-FIBER-REINFORCED PLASTER FABRICATIONS

A. Fabrications: Molded, glass-fiber-reinforced plaster units complying with ASTM C 1381/C 1381M.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Architectural Reproductions Inc.
- b. Casting Designs, Inc.
- c. DEC Architectural Composites; Division of DEC Associates, Inc.
- d. Felber Ornamental Plastering Corporation.
- e. First Class Building Products, Inc.
- f. Formglas Inc.
- g. Melton Classics, Inc.
- h. Plastrglas, Incorporated.
- i. Stromberg Architectural Products, Inc.
- j. <Insert manufacturer's name>.
- k. or approved equal.

B. Embedments: [**Cold-rolled steel channels with ASTM 653/A 653M, G60** (Z180)]

hot-dip galvanized coating] [As standard with glass-fiber-reinforced plaster fabrication manufacturer and as required for reinforcement and for anchorage to substrates and framing] <Insert requirements>.

- C. Finish: [**Smooth for paint finish**] [**Smooth for gloss paint finish**] <Insert finish>.

2.2 AUXILIARY MATERIALS

- A. Adhesives: As recommended in glass-fiber-reinforced plaster fabrication manufacturer's written instructions[.] [**and as follows:**]

1. Adhesive shall have VOC content of [**50**] <Insert value> g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
2. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- B. Steel Drill Screws: Of sufficient length and size to securely fasten glass-fiber-reinforced plaster fabrications to framing members, and as follows:

1. Screws complying with ASTM C 1002 for fastening glass-fiber-reinforced plaster fabrications to steel members less than **0.033 inch** (0.84 mm) thick.
2. Screws complying with ASTM C 1002 for fastening glass-fiber-reinforced plaster fabrications to wood members.
3. Screws complying with ASTM C 954 for fastening glass-fiber-reinforced plaster fabrications to steel members from **0.033 to 0.112 inch** (0.84 to 2.84 mm) thick.

- C. Joint-Treatment Materials: ASTM C 475/C 475M.

- D. Control Joints: ASTM C 1047, one-piece control joint with V-shaped slot and removable strip covering the slot opening.

1. Material: [**Steel sheet zinc-coated by hot-dip process**] [**Rolled zinc**].

2.3 FABRICATION

- A. Fabricate glass-fiber-reinforced plaster units to comply with ASTM C 1381/C 1381M, with smooth-finished surfaces; repair hollows, voids, scratches, and other surface imperfections. Fabricate units in lengths and sizes that will minimize number of joints between abutting units.
- B. Embedments: Incorporate embedments into units to develop the full strength of glass-fiber-reinforced plaster fabrications. Cover embedments with not less than **3/16-inch** (5-mm) thickness of glass-fiber-reinforced plaster composite.
- C. Connection Hardware: Designed and fabricated to support and connect glass-fiber-reinforced plaster fabrications to hangers, support framing, and substrates.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 GLASS-FIBER-REINFORCED PLASTER INSTALLATION

- A. Comply with ASTM C 1467/C 1467M.
- B. Install glass-fiber-reinforced plaster fabrications level, plumb, true, and aligned with adjacent materials. Use concealed shims where required for alignment.
- C. Attach glass-fiber-reinforced plaster fabrications to framing and substrates with steel drill screws unless otherwise indicated. Do not use pneumatic staple guns. Countersink screw heads below adjoining finished surface.
 - 1. Predrill fastener holes in units. Clean fastener holes to remove dirt and oil.
 - 2. Locate fasteners not less than **5/16 inch** (7.9 mm) from edges or ends of units.
- D. Where glass-fiber-reinforced plaster fabrications are joined to form composite units, join fabrications with adhesive. Band or brace units together until adhesive cures.
- E. Install control joints between glass-fiber-reinforced plaster fabrications where indicated.
- F. Use joint-treatment materials to finish glass-fiber-reinforced plaster fabrications to produce surfaces ready to receive primers and paint finishes specified in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting." For Level 5 in first subparagraph below, ASTM C 840 requires an overall skim coat of joint compound, which may be inappropriate for textured or ornamented units. ASTM C 1467/C 1467M requires Level 5 finish where glass-fiber-reinforced plaster units are subject to critical lighting or where gloss or semigloss final decoration is scheduled.
 - 1. Finish joints between units, other than control joints, and countersunk fastener heads to comply with ASTM C 840 for **[Level 4] [Level 5]** and to match surface texture of units.
 - 2. Repair hollows, voids, scratches, and other surface imperfections on units.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 092713

SECTION 092900 - GYPSUM BOARD

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Interior gypsum board.
2. Exterior gypsum board for ceilings and soffits.
3. Tile backing panels.
4. Texture finishes.

- B. Related Requirements:

1. Section 061600 "Sheathing" for gypsum sheathing for exterior walls.
2. Section 092216 "Non-Structural Metal Framing" for non-structural framing and suspension systems that support gypsum board panels.
3. Section 092116.23 "Gypsum Board Shaft Wall Assemblies" for metal shaft-wall framing, gypsum shaft liners, and other components of shaft-wall assemblies.
4. Section 092613 "Gypsum Veneer Plastering" for gypsum base for veneer plaster and for other components of gypsum-veneer-plaster finishes.
5. Section 093000 "Tiling" for cementitious backer units installed as substrates for ceramic tile.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1. Include data substantiating that materials comply with requirements.

- B. LEED Submittals:

1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.

2. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating distance to Project, cost for each regional material, and fraction by weight that is considered regional.
 3. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regionally manufactured[**and regionally extracted and manufactured**] materials. Include statement indicating cost for each regionally manufactured material.
 - a. Include statement indicating location of manufacturer and distance to Project for each regionally manufactured material.
 - b. Include statement indicating location of manufacturer and point of extraction, harvest, or recovery for each raw material used in regionally extracted and manufactured materials. Indicate distance to Project and fraction by weight of each regionally manufactured material that is regionally extracted.
 4. Product Data for Credit IEQ 4.1: For adhesives used to laminate gypsum board panels to substrates, documentation including printed statement of VOC content.
 5. Laboratory Test Reports for Credit IEQ 4: For adhesives used to laminate gypsum board panels to substrates, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings showing locations, details, and installation of control and expansion joints including plans, elevations, sections, details of components, and attachments to other units of Work.
- D. Submit shop drawing showing locations, layout, and details of all metal trim.
- E. Samples: For the following products:
1. Trim Accessories: Full-size Sample in **12-inch-** (300-mm-) long length for each trim accessory indicated.
 2. Textured Finishes: [**Manufacturer's standard size**] **<Insert size>** for each textured finish indicated and on same backing indicated for Work.
- 1.4 CLOSEOUT SUBMITTALS
- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
- 1.5 QUALITY ASSURANCE
- A. Single-Source Responsibility for Panel Products: Obtain each type of gypsum board

and other panel products from a single manufacturer.

- B. Single-Source Responsibility for Finishing Materials: Obtain finishing materials either from the same manufacturer that supplies gypsum board and other panel products or from a manufacturer acceptable to gypsum board manufacturer.
- C. Fire-Test-Response Characteristics: Where fire-resistance-rated gypsum board assemblies are indicated, provide gypsum board assemblies that comply with the following requirements:
1. Fire-Resistance Ratings: As indicated by GA File Numbers in GA-600 "Fire Resistance Design Manual" or design designations in UL "Fire Resistance Directory" or in the listing of another testing and inspecting agency acceptable to authorities having jurisdiction.
 2. Gypsum board assemblies indicated are identical to assemblies tested for fire resistance according to ASTM E119 by an independent testing and inspecting agency acceptable to authorities having jurisdiction.
 3. Deflection and Firestop Track: Top runner provided in fire-resistance-rated assemblies indicated is labeled and listed by UL, Intertek Testing Services, or another testing and inspecting agency acceptable to authorities having jurisdiction.
- D. Mockups: Before beginning gypsum board installation, install mockups of at least 100 sq. ft. (9 sq. m) in surface area to demonstrate aesthetic effects and set quality standards for materials and execution.
1. Install mockups for the following:
 - a. Each level of gypsum board finish indicated for use in exposed locations.
 - b. Each texture finish indicated.
 2. Apply or install final decoration indicated, including painting and wallcoverings, on exposed surfaces for review of mockups.
 3. Simulate finished lighting conditions for review of mockups.
 4. Locate mockups on-site in the location and of the size indicated or, if not indicated, as directed by DEN Project Manager.
 5. Notify DEN Project Manager one (1) week in advance of the dates and times when mockups will be constructed.
 6. Retain and maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
 7. When directed, demolish and remove mockups from Project site.
 8. Subject to compliance with requirements and approval by DEN Project Manager, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Deliver materials in original packages, containers, or bundles bearing brand name and identification of manufacturer or supplier.

- B. Store materials inside under cover and keep them dry and protected against weather, condensation, direct sunlight, construction traffic, and other potential causes of damage. Stack panels flat and supported on risers on a flat platform to prevent sagging.

1.7 FIELD CONDITIONS

- A. Environmental Limitations: Comply with ASTM C 840 requirements or gypsum board manufacturer's written recommendations, whichever are more stringent.
- B. Do not install paper-faced gypsum panels until installation areas are fully enclosed and conditioned on a 24-hour basis.
- C. Required Room Temperatures for Gypsum Panel Work:
 - 1. For nonadhesive attachment of gypsum board to framing, maintain not less than 40 degrees F (4 degrees C).
 - 2. For adhesive attachment and finishing of gypsum board, maintain not less than 50 degrees F (10 degrees C) for 48 hours before application and continuously after until dry.
 - 3. Do not exceed 95 degrees F (35 degrees C) when using temporary heat sources.
- D. Ventilation: Ventilate building spaces as required to dry joint treatment materials. Avoid drafts during hot, dry weather to prevent finishing materials from drying too rapidly.
- E. Do not install panels that are wet, those that are moisture damaged, and those that are mold damaged.
 - 1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
 - 2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.
- F. Protect all installed panels from moisture damage. Replace all panels that become wet or damaged.
- G. CONSTRUCTION WASTE MANAGEMENT
 - 1. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Resistance-Rated Assemblies: For fire-resistance-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to

ASTM E 119 by an independent testing agency.

- B. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E 90 and classified according to ASTM E 413 by an independent testing agency.
- C. Low-Emitting Materials: For ceiling and wall assemblies, provide materials and construction identical to those tested in assembly and complying with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.2 GYPSUM BOARD, GENERAL

- A. Recycled Content of Gypsum Panel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert number>** percent.
- B. Regional Materials: Gypsum panel products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site.
- C. Regional Materials: Gypsum panel products shall be manufactured within **500 miles (800 km)** of Project site.
- D. Size: Provide maximum lengths and widths available that will minimize joints in each area and that correspond with support system indicated.

2.3 INTERIOR GYPSUM BOARD

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. American Gypsum.
 - 2. CertainTeed Corp.
 - 3. Georgia-Pacific Gypsum LLC.
 - 4. Lafarge North America Inc.
 - 5. National Gypsum Company.
 - 6. PABCO Gypsum.
 - 7. Temple-Inland.
 - 8. USG Corporation.
 - 9. **<Insert manufacturer>**
 - 10. or approved equal.
- B. Gypsum Wallboard: ASTM C 1396/C 1396M.
 - 1. Thickness: [5/8" (15.9 mm)], Type X, unless otherwise indicated.
 - 2. Long Edges: [**Tapered**] [**Tapered and featured (rounded or beveled) for prefilling**].

- C. Gypsum Board, Type X: ASTM C 1396/C 1396M.
1. Thickness: **5/8 inch** (15.9 mm).
 2. Long Edges: **[Tapered] [Tapered and featured (rounded or beveled) for prefilling]**.
- D. Flexible Gypsum Board: ASTM C 1396/C 1396M. Manufactured to bend to fit radii and to be more flexible than standard regular-type gypsum board of same thickness.
1. Thickness: **1/4 inch** (6.4 mm).
 2. Long Edges: Tapered.
- E. Antia-Sag Gypsum Ceiling Board: ASTM C 1396/C 1396M.
1. Thickness: **1/2 inch** (12.7 mm).
 2. Long Edges: Tapered.
 3. Type: Anti-sag.
- F. Foil-Backed Gypsum Board: ASTM C 1396/C 1396M.
1. Core: **[As indicated on Drawings] [3/8 inch** (9.5 mm), **regular type] [1/2 inch** (12.7 mm), **regular type] [5/8 inch** (15.9 mm), **Type X] [Type C as required by fire-resistance-rated assembly indicated on Drawings]**.
 2. Long Edges: **[Tapered] [Tapered and featured (rounded or beveled) for prefilling]**.
- G. Abuse-Resistant Gypsum Board: ASTM C 1629/C 1629M, **[Level 1] [Level 2] [Level 3]**.
1. Core: **[As indicated on Drawings] [1/2 inch** (12.7 mm), **regular type] [5/8 inch** (15.9 mm), **Type X]**.
 2. Long Edges: Tapered.
 3. Mold Resistance: ASTM D 3273, score of 10 as rated according to ASTM D 3274.
- H. Moisture- and Mold-Resistant Gypsum Board: ASTM C 1396/C 1396M. With moisture- and mold-resistant core and paper surfaces.
1. Core: **[As indicated] [1/2 inch** (12.7 mm), **regular type] [5/8 inch** (15.9 mm), **Type X]**.
 2. Long Edges: Tapered.
 3. Mold Resistance: ASTM D 3273, score of 10 as rated according to ASTM D 3274.

2.4 SPECIALTY GYPSUM BOARD

- A. Gypsum Board, Type C: ASTM C 1396/C 1396M. Manufactured to have increased fire-resistive capability. Brand and type of gypsum board to be comply with requirements of designated fire-rated assemblies.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. American Gypsum; Firebloc Type C.
 - b. CertainTeed Corp.; ProRoc Type C.
 - c. Georgia-Pacific Gypsum LLC; Fireguard C.
 - d. Lafarge North America Inc.; Firecheck Type C.
 - e. National Gypsum Company; Gold Bond Fire-Shield C.
 - f. PABCO Gypsum; Flame Curb Type Super C.
 - g. Temple-Inland; Type TG-C.
 - h. USG Corporation; Firecode C Core.
 - i. **<Insert manufacturer>**
 - j. or approved equal.
 2. Thickness: As required by fire-resistance-rated assembly indicated on Drawings.
 3. Long Edges: Tapered.
- B. Glass-Mat Interior Gypsum Board: ASTM C 1658/C 1658M. With fiberglass mat laminated to both sides. Specifically designed for interior use.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Georgia-Pacific Gypsum LLC; DensArmour Plus.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
 2. Core: **[As indicated]** [1/2 inch (12.7 mm), **regular type**] [1/2 inch (12.7 mm), **Type C**] [5/8 inch (15.9 mm), **Type X**] [5/8 inch (15.9 mm), **abuse resistant**].
 3. Long Edges: Tapered.
 4. Mold Resistance: ASTM D 3273, score of 10 as rated according to ASTM D 3274.
- C. Acoustically Enhanced Gypsum Board: ASTM C 1396/C 1396M. Multilayer products constructed of two layers of gypsum boards sandwiching a viscoelastic sound-absorbing polymer core.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. National Gypsum Company; Sound Break.
 - b. Quiet Solution, Quiet Rock.
 - c. **<Insert manufacturer>**
 - d. or approved equal
 2. Core: **[As indicated]** [1/2 inch (12.7 mm), **regular type**] [1/2 inch (12.7 mm), **Type X**] [5/8 inch (15.9 mm), **regular type**] [5/8 inch (15.9 mm), **Type X**] [1-3/8 inch (35 mm), **regular type**].
 3. Long Edges: Tapered.
- D. Skim-Coated Gypsum Board: ASTM C 1396/C 1396M. Manufactured with a factory-applied skim coat.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Lafarge North America Inc.; Rapid Deco L5.
 - b. or approved equal.
2. Core: **[As indicated]** [1/2 inch (12.7 mm), regular type] [5/8 inch (15.9 mm), Type X].
3. Long Edges: Tapered.

2.5 EXTERIOR GYPSUM BOARD FOR CEILINGS AND SOFFITS

- A. Exterior Gypsum Soffit Board: ASTM C 1396/C 1396M, with manufacturer's standard edges.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Gypsum.
 - b. CertainTeed Corp.
 - c. Georgia-Pacific Gypsum LLC.
 - d. Lafarge North America Inc.
 - e. National Gypsum Company.
 - f. PABCO Gypsum.
 - g. Temple-Inland.
 - h. USG Corporation.
 - i. **<Insert manufacturer>**
 - j. or approved equal.
 2. Core: **[As indicated]** [1/2 inch (12.7 mm), regular type] [5/8 inch (15.9 mm), Type X].
- B. Glass-Mat Gypsum Sheathing Board: ASTM C 1177/C 1177M, with fiberglass mat laminated to both sides and with manufacturer's standard edges.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. CertainTeed Corp.; GlasRoc Sheathing.
 - b. Georgia-Pacific Gypsum LLC; Dens-Glass Gold.
 - c. National Gypsum Company; Gold Bond, e(2)XP.
 - d. USG Corporation; Securock Glass Mat Sheathing.
 - e. **<Insert manufacturer>**
 - f. or approved equal.
 2. Core: **[As indicated]** [1/2 inch (12.7 mm), regular type] [5/8 inch (15.9 mm), Type X].
- C. Cellulose Fiber-Reinforced Gypsum Sheathing Board: ASTM C 1278/C 1278M, gypsum sheathing, with manufacturer's standard edges.
 1. Products: Subject to compliance with requirements, provide one of the following:

- a. USG Corporation; Fiberock Aqua-Tough.
 - b. <Insert manufacturer>
 - c. or approved equal.
2. Type and Thickness: [**Regular, 1/2 inch** (13 mm)] [**Type X, 5/8 inch** (15.9 mm)] thick.
 3. Size: [**48 by 96 inches** (1219 by 2438 mm)] [**48 by 108 inches** (1219 by 2743 mm)] [**48 by 120 inches** (1219 by 3048 mm)] [**1200 by 2400 mm**] [**1200 by 2750 mm**] [**1200 by 3050 mm**].

2.6 TILE BACKING PANELS

- A. Glass-Mat, Water-Resistant Backing Board: ASTM C 1178/C 1178M, with manufacturer's standard edges.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. CertainTeed Corp.; GlasRoc Tile Backer.
 - b. Georgia-Pacific Gypsum LLC; DensShield Tile Backer.
 - c. <Insert manufacturer>
 - d. or approved equal.
 2. Core: [**As indicated on Drawings**] [**1/2 inch** (12.7 mm), **regular type**] [**5/8 inch** (15.9 mm), **Type X**].
 3. Mold Resistance: ASTM D 3273, score of 10 as rated according to ASTM D 3274.
- B. Cementitious Backer Units: ANSI A118.9 and ASTM C 1288 or 1325, with manufacturer's standard edges.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. C-Cure; C-Cure Board 990.
 - b. CertainTeed Corp.; FiberCement [**Underlayment**] [**BackerBoard**].
 - c. FinPan, Inc.; [**Util-A-Crete Concrete Backer Board**] [**EZ Backer**] [**ProTEC**].
 - d. James Hardie Building Products, Inc.; [**Hardiebacker**] [**Hardiebacker 500**].
 - e. National Gypsum Company, Permabase Cement Board.
 - f. USG Corporation; DUROCK Cement Board.
 - g. <Insert manufacturer>
 - h. or approved equal.
 2. Thickness: [**1/2 inch** (12.7 mm)] [**5/8 inch** (15.9 mm)] [**As indicated**].
 3. Mold Resistance: ASTM D 3273, score of 10 as rated according to ASTM D 3274.
- C. Water-Resistant Gypsum Backing Board: ASTM C 1396/C 1396M, with manufacturer's standard edges.
 1. Manufacturers: Subject to compliance with requirements, provide products by

one of the following:

- a. American Gypsum.
 - b. CertainTeed Corp.
 - c. Georgia-Pacific Gypsum LLC.
 - d. Lafarge North America Inc.
 - e. PABCO Gypsum.
 - f. Temple-Inland.
 - g. USG Corporation.
 - h. **<Insert manufacturer>**
 - i. or approved equal.
2. Core: **[As indicated on Drawings] [1/2 inch (12.7 mm), regular type] [5/8 inch (15.9 mm), Type X] [Type C as required by fire-resistance-rated assembly indicated on Drawings].**

2.7 TRIM ACCESSORIES

A. Interior Trim: ASTM C 1047.

1. Material: **[Galvanized or aluminum-coated steel sheet, rolled zinc, plastic, or paper-faced galvanized steel sheet] [Galvanized or aluminum-coated steel sheet or rolled zinc] [Plastic] [Paper-faced galvanized steel sheet].**
2. Shapes:
 - a. Cornerbead.
 - b. Bullnose bead.
 - c. LC-Bead: J-shaped; exposed long flange receives joint compound.
 - d. L-Bead: L-shaped; exposed long flange receives joint compound.
 - e. U-Bead: U-bead with face and back flanges; face flange formed to be left without application of joint compound. Use where indicated.
 - f. Expansion (control) joint: One-piece control joint formed with V-shaped slot and removable strip covering slot opening.
 - g. Curved-Edge Cornerbead: With notched or flexible flanges.
 - h. As indicated or required to achieve design intent.

B. Exterior Trim: ASTM C 1047.

1. Material: Formed from steel sheet zinc coated by hot-dip process or rolled zinc complying with ASTM C1047, in shapes indicated below by reference to Fig. 1 designations in ASTM C1047.
2. Shapes:
 - a. Cornerbead.
 - b. LC-Bead: J-shaped; exposed long flange receives joint compound.
 - c. Expansion (Control) Joint: One-piece, rolled zinc with V-shaped slot and removable strip covering slot opening.
 - d. As indicated or required to achieve design intent.

- C. Aluminum Trim: Extruded accessories of profiles and dimensions indicated.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Fry Reglet Corp.
 - b. Gordon, Inc.
 - c. Pittcon Industries.
 - d. MM Systems, Inc.
 - e. **<Insert manufacturer>**
 - f. or approved equal.
 2. Aluminum: Alloy and temper with not less than the strength and durability properties of **ASTM B 221** (ASTM B 221M), Alloy 6063-T5.
 3. Finish:
 - a. Primed Finish: Manufacturer's standard corrosion-resistant primer compatible with joint compound and finish materials specified.
 - b. Class II, Clear Anodic Finish: AA-C12C22A31 (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class II, clear coating with a minimum thickness of 0.01 mm).
 - c. Class II, Color Anodic Finish: AA-C12C22A32/A34 (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class II, integrally colored or electrolytically deposited color and a minimum coating thickness of 0.01 mm).
 - d. Baked-Enamel Finish: AA-C12C42R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: acid chromate-fluoride-phosphate conversion coating; Organic Coating: as specified below). Apply baked enamel according to paint manufacturer's specifications for cleaning, conversion coating, and applying organic coating.
 - e. Organic Coating: Manufacturer's standard thermosetting coating system with a minimum dry film thickness of 0.8 to 1.2 mils (0.02 to 0.03 mm).
 - f. Color: **<As selected by DEN Project Manager from manufacturer's standard colors.> <Match color as provided by DEN Project Manager>**.

2.8 JOINT TREATMENT MATERIALS

- A. General: Comply with ASTM C 475/C 475M.
- B. Joint Tape:
1. Interior Gypsum Board: Paper.
 2. Exterior Gypsum Soffit Board: Paper.
 3. Glass-Mat Gypsum Sheathing Board: 10-by-10 glass mesh.
 4. Tile Backing Panels: As recommended by panel manufacturer.
- C. Joint Compound for Interior Gypsum Board: For each coat use formulation that is compatible with other compounds applied on previous or for successive coats.

1. Prefilling: At open joints[, **rounded or beveled panel edges,**] and damaged surface areas, use setting-type taping compound.
 2. Embedding and First Coat: For embedding tape and first coat on joints, fasteners, and trim flanges, use [**setting-type taping**] [**drying-type, all-purpose**] compound.
 - a. Use setting-type compound for installing paper-faced metal trim accessories.
 3. Fill Coat: For second coat, use [**setting-type, sandable topping**] [**drying-type, all-purpose**] compound.
 4. Finish Coat: For third coat, use [**setting-type, sandable topping**] [**drying-type, all-purpose**] compound.
 5. Skim Coat: For final coat of Level 5 finish, use [**setting-type, sandable topping compound**] [**drying-type, all-purpose compound**] [**high-build interior coating product designed for application by airless sprayer and to be used instead of skim coat to produce Level 5 finish**].
- D. Joint Compound for Exterior Applications:
1. Exterior Gypsum Soffit Board: Use setting-type taping compound and setting-type, sandable topping compound.
 2. Glass-Mat Gypsum Sheathing Board: As recommended by sheathing board manufacturer.
- E. Joint Compound for Tile Backing Panels:
1. Glass-Mat, Water-Resistant Backing Panel: As recommended by backing panel manufacturer.
 2. Cementitious Backer Units: As recommended by backer unit manufacturer.
 3. Water-Resistant Gypsum Backing Board: Use setting-type taping compound and setting-type, sandable topping compound.

2.9 AUXILIARY MATERIALS

- A. General: Provide auxiliary materials that comply with referenced installation standards and manufacturer's written recommendations.
- B. Laminating Adhesive: Adhesive or joint compound recommended for directly adhering gypsum panels to continuous substrate.
1. Laminating adhesive shall have a VOC content of [**50**] **<Insert value>** g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 2. Laminating adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Steel Drill Screws: ASTM C 1002, unless otherwise indicated.

1. Use screws complying with ASTM C 954 for fastening panels to steel members from **0.033 to 0.112 inch** (0.84 to 2.84 mm) thick.
 2. For fastening cementitious backer units, use screws of type and size recommended by panel manufacturer.
- D. Sound Attenuation Blankets: ASTM C 665, Type I (blankets without membrane facing) produced by combining thermosetting resins with mineral fibers manufactured from glass, slag wool, or rock wool.
1. Fire-Resistance-Rated Assemblies: Comply with mineral-fiber requirements of assembly.
 2. Recycled Content of Blankets: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert number>** percent.
- E. Acoustical Joint Sealant: Manufacturer's standard nonsag, nondrying, nonhardening, gunnable, paintable, nonstaining latex sealant complying with ASTM C 834. Product effectively reduces airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies according to ASTM E 90.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Accumetric LLC; BOSS 824 Acoustical Sound Sealant.
 - b. Grabber Construction Products; Acoustical Sealant GSC.
 - c. Pecora Corporation; [**AC-20 FTR**] [**AIS-919**].
 - d. Specified Technologies, Inc.; Smoke N Sound Acoustical Sealant.
 - e. USG Corporation; SHEETROCK Acoustical Sealant.
 - f. Tremco, Inc.; Tremco Acoustical Sealant.
 - g. Contech Brands; Chemrex, Inc.; PL Acoustical Sealant.
 - h. **<Insert manufacturer>**
 - i. or approved equal.
 2. Acoustical joint sealant shall have a VOC content of [**250**] **<Insert value>** g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 3. Acoustical joint sealant shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- F. Separation Between Steel Framing and Exterior Walls:
1. Asphalt-Saturated Organic Felt: ASTM D226, Type I (No. 15 asphalt felt), nonperforated.
 2. Foam Gaskets: Closed-cell vinyl foam adhesive-backed strips that allow fastener penetration without foam displacement, 1/8 inch (3.2 mm) thick, in width to suit metal stud size indicated.
- G. Thermal Insulation: As specified in Section 072100 "Thermal Insulation."
- H. Vapor Retarder: As specified in Section 072100 "Thermal Insulation."

2.10 TEXTURE FINISHES

- A. Primer: As recommended by textured finish manufacturer.
- B. Polystyrene Aggregate Ceiling Finish: Water-based, job-mixed, polystyrene aggregate finish with flame-spread and smoke-developed indexes of not more than 25 when tested according to ASTM E 84.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Georgia-Pacific Gypsum LLC; ToughRock Ceiling Textures/Polystyrene.
 - b. National Gypsum Company; ProForm Perfect Spray.
 - c. USG Corporation; SHEETROCK Ceiling Spray Texture, QT.
 - d. **<Insert manufacturer>**
 - e. or approved equal.
 2. Texture: **[Fine] [Medium] [Coarse]**.
- C. Aggregate Finish: Water-based, job-mixed, aggregated, drying-type texture finish for spray application.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. CertainTeed Corp.; ProRoc Wall and Ceiling Spray Texture.
 - b. Georgia-Pacific Gypsum LLC; ToughRock Ceiling Textures/Vermiculite.
 - c. USG Corporation; SHEETROCK Wall and Ceiling Spray Texture (Aggregated).
 - d. **<Insert manufacturer>**
 - e. or approved equal.
 2. Texture: **[Light spatter] [Spatter knock-down] <Insert texture>**.
- D. Non-Aggregate Finish: Pre-mixed, vinyl texture finish for spray application.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. CertainTeed Corp.; ProRoc Easi-Tex Spray Texture.
 - b. National Gypsum Company; Perfect Spray EM Texture.
 - c. USG Corporation; BEADEX FasTex Wall and Ceiling Spray Texture.
 - d. **<Insert manufacturer>**
 - e. or approved equal.
 2. Texture: **[Orange Peel] [Spatter] [Spatter knock-down] <Insert texture>**.
- E. Acoustical Finish: Water-based, chemical-setting or drying-type, job-mixed texture finish for spray application.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. International Cellulose Corp.; SonaSpray "fc."
 - b. USG Corporation; USG Acoustical Plaster Finish.

- c. **<Insert manufacturer>**
 - d. or approved equal.
2. Application Thickness: [1/2 inch (12.7 mm)] **<Insert thickness>**.
3. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - a. Flame-Spread Index: [25] **<Insert value>** or less.
 - b. Smoke-Developed Index: [50] [450] **<Insert value>** or less.
4. NRC: [0.55] **<Insert NRC>** according to ASTM C 423.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates to which gypsum board assemblies attach or abut, installed hollow metal frames, cast-in-anchors, and structural framing, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of assemblies specified in this Section.
- B. Examine panels before installation. Reject panels that are wet, moisture damaged, and mold damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected, and required environmental conditions have been achieved.

3.2 PREPARATION

- A. Ceiling Anchorages: Coordinate installation of ceiling suspension systems with installation of overhead structural assemblies to ensure that inserts and other provisions for anchorages to building structure have been installed to receive ceiling hangers that will develop their full strength and at spacing required to support ceilings.
- B. Furnish concrete inserts and other devices indicated to other trades for installation well in advance of time needed for coordination with other construction.
- C. Before sprayed-on fireproofing is applied, attach offset anchor plates or ceiling runners (tracks) to surfaces indicated to receive sprayed-on fireproofing. Where offset anchor plates are required, provide continuous units fastened to building structure not more than 24 inches (600 mm) o.c.
