- D. After sprayed-on fireproofing has been applied, remove only as much fireproofing as needed to complete installation of gypsum board assemblies without reducing thickness of fireproofing below that is required to obtain fire-resistance rating indicated. Protect remaining fireproofing from damage.

3.3 APPLYING AND FINISHING PANELS, GENERAL

- A. Comply with ASTM C 840.
- B. Install ceiling panels across framing to minimize the number of abutting end joints and to avoid abutting end joints in central area of each ceiling. Stagger abutting end joints of adjacent panels not less than one framing member.
- C. Install panels with face side out. Butt panels together for a light contact at edges and ends with not more than **1/16 inch** (1.5 mm) of open space between panels. Do not force into place.
- D. Locate edge and end joints over supports, except in ceiling applications where intermediate supports or gypsum board back-blocking is provided behind end joints. Do not place tapered edges against cut edges or ends. Stagger vertical joints on opposite sides of partitions. Do not make joints other than control joints at corners of framed openings.
- E. Form control and expansion joints with space between edges of adjoining gypsum panels.
- F. Cover both faces of support framing with gypsum panels in concealed spaces (above ceilings, etc.), except in chases braced internally.
 - 1. Unless concealed application is indicated or required for sound, fire, air, or smoke ratings, coverage may be accomplished with scraps of not less than **8 sq. ft.** (0.7 sq. m) in area.
 - 2. Fit gypsum panels around ducts, pipes, and conduits.
 - 3. Where partitions intersect structural members projecting below underside of floor/roof slabs and decks, cut gypsum panels to fit profile formed by structural members; allow **1/4- to 3/8-inch-** (6.4- to 9.5-mm-) wide joints to install sealant.
- G. Isolate perimeter of gypsum board applied to non-load-bearing partitions at structural abutments, except floors. Provide **1/4- to 1/2-inch-** (6.4- to 12.7-mm-) wide spaces at these locations and trim edges with edge trim where edges of panels are exposed. Seal joints between edges and abutting structural surfaces with acoustical sealant.
- H. Attachment to Steel Framing: Attach panels so leading edge or end of each panel is attached to open (unsupported) edges of stud flanges first.
- I. Wood Framing: Install gypsum panels over wood framing, with floating internal corner construction. Do not attach gypsum panels across the flat grain of wide-dimension lumber, including floor joists and headers. Float gypsum panels over these members or provide control joints to counteract wood shrinkage.
- J. STC-Rated Assemblies: Seal construction at perimeters, behind control joints, and at openings and penetrations with a continuous bead of acoustical sealant. Install acoustical sealant at both faces of partitions at perimeters and through penetrations. Comply with ASTM C 919 and with manufacturer's written recommendations for

locating edge trim and closing off sound-flanking paths around or through assemblies, including sealing partitions above acoustical ceilings.

- K. Cover both faces of steel stud partition framing with gypsum panels in concealed spaces (above ceilings, etc.), except in chases that are braced internally.
1. Except where concealed application is indicated or required for sound, fire, air, or smoke ratings, coverage may be accomplished with scraps of not less than 8 sq. ft. (0.7 sq. m) in area.
 2. Fit gypsum panels accurately around ducts, pipes, and conduits.
 3. Where partitions intersect open concrete coffers, concrete joists, and other structural members projecting below underside of floor/roof slabs and decks, cut gypsum panels to fit profile formed by coffers, joists, and other structural members; allow 1/4- to 3/8-inch- (6.4- to 9.5-mm-) wide joints to install sealant.
- L. Floating Construction: Where feasible, including where recommended by manufacturer, install gypsum panels over wood framing, with floating internal corner construction.
- M. Space fasteners in gypsum panels according to referenced gypsum board application and finishing standard and manufacturer's recommendations, applicable code requirements.
1. Space screws a maximum of 12 inches (304.8 mm) o.c. for vertical applications.
- N. Space fasteners in panels that are tile substrates a maximum of 8 inches (203.2 mm) o.c.
- O. Install sound attenuation blankets before installing gypsum panels unless blankets are readily installed after panels have been installed on one side.
- P. Spot grout hollow metal door frames for solid-core wood doors, hollow metal doors, and doors over 32 inches (813 mm) wide. Apply spot grout at each jamb anchor clip and immediately insert gypsum panels into frames.

3.4 APPLYING INTERIOR GYPSUM BOARD

- A. Install interior gypsum board in the following locations:
1. Wallboard Type: **[As indicated on Drawings] [Vertical surfaces unless otherwise indicated].**
 2. Type X: **[As indicated on Drawings] [Where required for fire-resistance-rated assembly] [Vertical surfaces unless otherwise indicated] <Insert requirements>.**
 3. Flexible Type: **[As indicated on Drawings] [Apply in double layer at curved assemblies].**
 4. Ceiling Type: **[As indicated on Drawings] [Ceiling surfaces].**
 5. Foil-Backed Type: **[As indicated on Drawings] <Insert requirements>.**
 6. Abuse-Resistant Type: **[As indicated on Drawings] <Insert requirements>.**

7. Moisture- and Mold-Resistant Type: **[As indicated on Drawings] <Insert requirements>**.
 8. Type C: **[As indicated on Drawings] [Where required for specific fire-resistance-rated assembly indicated]**.
 9. Glass-Mat Interior Type: **[As indicated on Drawings] <Insert requirements>**.
 10. Acoustically Enhanced Type: **[As indicated on Drawings] <Insert requirements>**.
 11. Skim-Coated Type: **[As indicated on Drawings] <Insert requirements>**.
- B. Single-Layer Application:
1. On ceilings, apply gypsum panels before wall/partition board application to greatest extent possible and at right angles to framing unless otherwise indicated.
 2. On partitions/walls, apply gypsum panels **[horizontally (perpendicular to framing)]** unless otherwise indicated or required by fire-resistance-rated assembly, and minimize end joints.
 - a. Stagger abutting end joints not less than one framing member in alternate courses of panels.
 - b. At stairwells and other high walls, install panels horizontally unless otherwise indicated or required by fire-resistance-rated assembly.
 3. On Z-furring members, apply gypsum panels vertically (parallel to framing) with no end joints. Locate edge joints over furring members.
 4. Fastening Methods: Apply gypsum panels to supports with steel drill screws.
- C. Multilayer Application:
1. On ceilings, apply gypsum board indicated for base layers before applying base layers on walls/partitions; apply face layers in same sequence. Apply base layers at right angles to framing members and offset face-layer joints one framing member, **16 inches** (400 mm) minimum, from parallel base-layer joints, unless otherwise indicated or required by fire-resistance-rated assembly.
 2. On partitions/walls, apply gypsum board indicated for base layers and face layers vertically (parallel to framing) with joints of base layers located over stud or furring member and face-layer joints offset at least one stud or furring member with base-layer joints, unless otherwise indicated or required by fire-resistance-rated assembly. Stagger joints on opposite sides of partitions.
 3. On Z-furring members, apply base layer vertically (parallel to framing) and face layer either vertically (parallel to framing) or horizontally (perpendicular to framing) with vertical joints offset at least one furring member. Locate edge joints of base layer over furring members.
 4. Fastening Methods: **[Fasten base layers and face layers separately to supports with screws] [Fasten base layers with screws; fasten face layers with adhesive and supplementary fasteners]**.
- D. Laminating to Substrate: Where gypsum panels are indicated as directly adhered to a substrate (other than studs, joists, furring members, or base layer of gypsum board), comply with gypsum board manufacturer's written recommendations and temporarily

brace or fasten gypsum panels until fastening adhesive has set.

E. Curved Surfaces:

1. Install panels horizontally (perpendicular to supports) and unbroken, to extent possible, across curved surface plus **12-inch-** (300-mm-) long straight sections at ends of curves and tangent to them.
2. For double-layer construction, fasten base layer to studs with screws **16 inches** (400 mm) o.c. Center gypsum board face layer over joints in base layer, and fasten to studs with screws spaced **12 inches** (300 mm) o.c.
3. Wet gypsum panels on surfaces that will become compressed when panels are installed over a curve and where curve radius prevents using dry panels. Comply with gypsum board manufacturer's recommendations relative to curve radii, wetting methods, stacking panels after wetting, and other preparations that precede installing wetted gypsum panels.
4. Apply gypsum panels horizontally with wrapped edges perpendicular to studs. On convex sides of partitions, begin installation at one end of curved surface and fasten gypsum panels to studs as they are wrapped around the curve. On concave side, start fastening panels to stud at center of curve and work outward to panel ends. Fasten panels to framing with screws spaced 12 inches (300 mm) o.c.
5. Allow wetted gypsum panels to dry completely before applying joint treatment

3.5 APPLYING EXTERIOR GYPSUM PANELS FOR CEILINGS AND SOFFITS

A. Apply panels perpendicular to supports, with end joints staggered and located over supports.

1. Install with **1/4-inch** (6.4-mm) open space where panels abut other construction or structural penetrations.
2. Fasten with corrosion-resistant screws.

3.6 APPLYING TILE BACKING PANELS

- A. Glass-Mat, Water-Resistant Backing Panels: Comply with manufacturer's written installation instructions and install at [**showers, tubs, and where indicated**] [**locations indicated to receive tile**]. Install with **1/4-inch** (6.4-mm) gap where panels abut other construction or penetrations.
- B. Cementitious Backer Units: ANSI A108.11, at [**showers, tubs, and where indicated**] [**locations indicated to receive tile**].
- C. Water-Resistant Backing Board: Install where indicated with **1/4-inch** (6.4-mm) gap where panels abut other construction or penetrations.
- D. Where tile backing panels abut other types of panels in same plane, shim surfaces to produce a uniform plane across panel surfaces.

3.7 INSTALLING TRIM ACCESSORIES

- A. General: For trim with back flanges intended for fasteners, attach to framing with same fasteners used for panels. Otherwise, attach trim according to manufacturer's written instructions.
- B. Control and Expansion Joints: Install control and expansion joints at locations indicated on Drawings, and in full accordance with ASTM C 840, and in specific locations approved by DEN Project Manager for visual effect.
1. Submit drawing showing locations and details of all control joints and expansion joints.
 2. If control joints are not fully indicated on Drawings, provide control joints and expansion joints in compliance with ASTM C 840, and indicate on shop drawing.
- C. Interior Trim: Install in the following locations:
1. Cornerbead: Use at outside corners[**unless otherwise indicated**].
 2. Bullnose Bead: Use [**at outside corners**] [**where indicated**] <Insert requirements>.
 3. LC-Bead: Use [**at exposed panel edges**] <Insert requirements>.
 4. L-Bead: Use [**where indicated**] <Insert requirements>.
 5. U-Bead: Use [**at exposed panel edges**] [**where indicated**] <Insert requirements>.
 6. Curved-Edge Cornerbead: Use at curved openings.
- D. Exterior Trim: Install in the following locations:
1. Cornerbead: Use at outside corners.
 2. LC-Bead: Use [**at exposed panel edges**] <Insert requirements>.
- E. Aluminum Trim: Install in locations [**indicated on Drawings**] <Insert requirements>.

3.8 FINISHING GYPSUM BOARD

- A. General: Treat gypsum board joints, interior angles, edge trim, control joints, penetrations, fastener heads, surface defects, and elsewhere as required to prepare gypsum board surfaces for decoration. Promptly remove residual joint compound from adjacent surfaces.
- B. Prefill open joints[, **rounded or beveled edges**,] and damaged surface areas.
- C. Apply joint tape over gypsum board joints, except for trim products specifically indicated as not intended to receive tape.
- D. Gypsum Board Finish Levels: Finish panels to levels indicated below and according to ASTM C 840:
1. Level 1: Ceiling plenum areas, concealed areas, and where indicated.

2. Level 2: **[Panels that are substrate for tile] [Panels that are substrate for acoustical tile] [Where indicated on Drawings] <Insert locations>**.
 3. Level 3: **[Where indicated on Drawings] <Insert locations>**.
 4. Level 4: **[At panel surfaces that will be exposed to view unless otherwise indicated] <Insert locations>**.
 - a. Primer and its application to surfaces are specified in other Section 099123 "Interior Painting." Level 5 is suitable for surfaces receiving gloss and semigloss enamels and other surfaces subject to severe lighting. It is considered a high-quality gypsum board finish.
 5. Level 5: **[Where indicated on Drawings] <Insert locations>**.
 - a. Primer and its application to surfaces are specified in other Section 099123 "Interior Painting."
- E. Glass-Mat Gypsum Sheathing Board: Finish according to manufacturer's written instructions for use as exposed soffit board.
- F. Glass-Mat Faced Panels: Finish according to manufacturer's written instructions.
- G. Cementitious Backer Units: Finish according to manufacturer's written instructions.

3.9 APPLYING TEXTURE FINISHES

- A. Surface Preparation and Primer: Prepare and apply primer to gypsum panels and other surfaces receiving texture finishes. Apply primer to surfaces that are clean, dry, and smooth.
- B. Texture Finish Application: Mix and apply finish using powered spray equipment, to produce a uniform texture **[matching approved mockup and]** free of starved spots or other evidence of thin application or of application patterns.
- C. Prevent texture finishes from coming into contact with surfaces not indicated to receive texture finish by covering them with masking agents, polyethylene film, or other means. If, despite these precautions, texture finishes contact these surfaces, immediately remove droppings and overspray to prevent damage according to texture-finish manufacturer's written recommendations.

3.10 FIELD QUALITY CONTROL

- A. Above-Ceiling Observation: DEN Project Manager will conduct an above-ceiling observation prior to installation of gypsum board ceilings and report any deficiencies in the Work observed. Do not proceed with installation of gypsum board to ceiling support framing until deficiencies have been corrected.
 1. Notify DEN Project Manager minimum **[seven (7)] <Insert number>** days in advance of the date and the time when the Project, or part of the Project, will be ready for an above-ceiling observation.

2. Prior to notifying DEN Project Engineer, complete the following in areas to receive gypsum board ceilings:
 - a. Installation of [80%] <Insert number> of lighting fixtures, powered for operation.
 - b. Installation, insulation, and leak and pressure testing of water piping systems.
 - c. Installation of air duct systems.
 - d. Installation of air devices.
 - e. Installation of mechanical system control air tubing.
 - f. Installation of ceiling support framing.
 - g. <Insert requirements.>

3.11 PROTECTION

- A. Protect adjacent surfaces from drywall compound and promptly remove from floors and other non-drywall surfaces. Repair surfaces stained, marred, or otherwise damaged during drywall application.
- B. Protect installed products from damage from weather, condensation, direct sunlight, construction, and other causes during remainder of the construction period.
- C. Remove and replace panels that are wet, moisture damaged, and mold damaged.
 1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
 2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this section. The cost of the work described in this section shall be included in the applicable unit price item, work order or lump sum bid item.

END OF SECTION 092900

SECTION 093000 - TILING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Ceramic tile.
2. Stone thresholds.
3. Waterproof membrane.
4. Crack isolation membrane.
5. Tile backing panels.
6. Metal edge strips.

- B. Related Sections:

1. **[Section 071326 "Self-Adhering Sheet Waterproofing"] [Section 071353 "Elastomeric Sheet Waterproofing"] [Section 071354 "Thermoplastic Sheet Waterproofing"] [Section 071413 "Hot Fluid-Applied Rubberized Asphalt Waterproofing"] [Section 071416 "Cold Fluid-Applied Waterproofing"]** for waterproofing under thickset mortar beds.
2. Section 079200 "Joint Sealants" for sealing of expansion, contraction, control, and isolation joints in tile surfaces.
3. Section 092400 "Portland Cement Plastering" for Portland cement scratch coat over metal lath on wall surfaces.
4. Section 092613 "Gypsum Veneer Plastering" for cementitious backer units.
5. Section 092900 "Gypsum Board" for **[cementitious backer units] [glass-mat, water-resistant backer board]**.
6. Section 093033 "Stone Tiling."
7. Section 096340 "Stone Flooring" for stone thresholds.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. General: Definitions in the ANSI A108 series of tile installation standards and in ANSI A137.1 apply to Work of this Section unless otherwise specified.

- B. ANSI A108 Series: ANSI A108.01, ANSI A108.02, ANSI A108.1A, ANSI A108.1B, ANSI A108.1C, ANSI A108.4, ANSI A108.5, ANSI A108.6, ANSI A108.8, ANSI A108.9, ANSI A108.10, ANSI A108.11, ANSI A108.12, ANSI A108.13, ANSI A108.14, ANSI A108.15, ANSI A108.16, and ANSI A108.17, which are contained in "American National Standard Specifications for Installation of Ceramic Tile."
- C. Module Size: Actual tile size plus joint width indicated.
- D. Face Size: Actual tile size, excluding spacer lugs.

1.4 PERFORMANCE REQUIREMENTS

- A. Static Coefficient of Friction: For tile installed on walkway surfaces, provide products with the following values as determined by testing identical products per ASTM C 1028:
 - 1. Level Surfaces: Minimum **<Insert required static coefficient of friction>**.
 - 2. Step Treads: Minimum **<Insert required static coefficient of friction>**.
 - 3. Ramp Surfaces: Minimum **<Insert required static coefficient of friction>**.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Credit IEQ 4.1: For **[adhesives] [and] [sealants]**, documentation including printed statement of VOC content.
 - 2. Product Data for Credit IEQ 4.3: For **[adhesives] [and] [grouts]**, documentation including printed statement of VOC content.
 - 3. Product Data for Credit IEQ 4.3: For tile floors, documentation from an independent testing agency indicating compliance with the FloorScore Standard.
 - 4. Laboratory Test Reports for Credit IEQ 4: For **[adhesives] [sealants] [and] [tile flooring systems]**, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: Show locations of each type of tile and tile pattern. Show widths, details, and locations of expansion, contraction, control, and isolation joints in tile substrates and finished tile surfaces.
- D. Samples for Initial Selection: For each type of tile and grout indicated. Include Samples of accessories involving color selection.
- E. Samples for Verification:

1. Full-size units of each type and composition of tile and for each color and finish required.[**For ceramic mosaic tile in color blend patterns, provide full sheets of each color blend.**]
2. Assembled samples mounted on a rigid panel, with grouted joints, for each type and composition of tile and for each color and finish required. Make samples at least [12 inches (300 mm) **square**] <Insert size>, but not fewer than 4 tiles. Use grout of type and in color or colors approved for completed Work.
3. Full-size units of each type of trim and accessory[**for each color and finish required**].
4. Stone thresholds in 6-inch (150-mm) lengths.
5. Metal edge strips in 6-inch (150-mm) lengths.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer.
- B. Master Grade Certificates: For each shipment, type, and composition of tile, signed by tile manufacturer and Installer.
- C. Product Certificates: For each type of product, signed by product manufacturer.
- D. Material Test Reports: For each tile-setting and -grouting product[**and special purpose tile**].

1.7 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match and are from same production runs as products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Tile and Trim Units:[**Furnish quantity of full-size units equal to 3 percent of amount installed for each type, composition, color, pattern, and size indicated.**]
 - a. <Insert, in separate subparagraphs, tile-type designation or description and quantity required for each category of tile for which extra material is required>.
 2. Grout: Furnish quantity of grout equal to 3 percent of amount installed for each type, composition, and color indicated.

1.9 QUALITY ASSURANCE

- A. Source Limitations for Tile: Obtain **[tile of each type and color or finish] [tile of each type] [tile of each color or finish] [tile]** from one source or producer.
1. Obtain tile of each type and color or finish from same production run and of consistent quality in appearance and physical properties for each contiguous area.
 2. A firm that has specialized in installation of types of products required for Project for not less than five (5) years and which is acceptable to manufacturer(s) of primary materials.
- B. Source Limitations for Setting and Grouting Materials: Obtain ingredients of a uniform quality for each mortar, adhesive, and grout component from one manufacturer and each aggregate from one source or producer.
- C. Source Limitations for Other Products: Obtain each of the following products specified in this Section from a single manufacturer for each product:
1. Stone thresholds.
 2. Waterproof membrane.
 3. Crack isolation membrane.
 4. Joint sealants.
 5. Cementitious backer units.
 6. Metal edge strips.
- D. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
1. Build mockup of **[each type of]** floor tile installation.
 2. Build mockup of **[each type of]** wall tile installation.
 3. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- E. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]<Insert location>**.
1. Review requirements in ANSI A108.01 for substrates and for preparation by other trades.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Deliver and store packaged materials in original containers with seals unbroken and labels intact until time of use. Comply with requirements in ANSI A137.1 for labeling tile packages.
- B. Store tile and cementitious materials on elevated platforms, under cover, and in a dry location.

- C. Store aggregates where grading and other required characteristics can be maintained and contamination can be avoided.
- D. Store liquid materials in unopened containers and protected from freezing.
- E. Handle tile that has temporary protective coating on exposed surfaces to prevent coated surfaces from contacting backs or edges of other units. If coating does contact bonding surfaces of tile, remove coating from bonding surfaces before setting tile.

1.11 PROJECT CONDITIONS

- A. Environmental Limitations: Do not install tile until construction in spaces is complete and ambient temperature and humidity conditions are maintained at the levels indicated in referenced standards and manufacturer's written instructions.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PRODUCTS, GENERAL

- A. ANSI Ceramic Tile Standard: Provide tile that complies with ANSI A137.1 for types, compositions, and other characteristics indicated.
 - 1. Provide tile complying with Standard grade requirements unless otherwise indicated.
- B. ANSI Standards for Tile Installation Materials: Provide materials complying with ANSI A108.02, ANSI standards referenced in other Part 2 articles, ANSI standards referenced by TCA installation methods specified in tile installation schedules, and other requirements specified.
- C. FloorScore Compliance: Tile for floors shall comply with requirements of FloorScore Standard.
- D. Low-Emitting Materials: Tile flooring systems shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- E. Factory Blending: For tile exhibiting color variations within ranges, blend tile in factory and package so tile units taken from one package show same range in colors as those taken from other packages and match approved Samples.

- F. Mounting: For factory-mounted tile, provide back- or edge-mounted tile assemblies as standard with manufacturer unless otherwise indicated.
1. Where tile is indicated for installation [**in swimming pools**] [**on exteriors**] [**or**] [**in wet areas**], do not use back- or edge-mounted tile assemblies unless tile manufacturer specifies in writing that this type of mounting is suitable for installation indicated and has a record of successful in-service performance.
- G. Factory-Applied Temporary Protective Coating: Where indicated under tile type, protect exposed surfaces of tile against adherence of mortar and grout by precoating with continuous film of petroleum paraffin wax, applied hot. Do not coat unexposed tile surfaces.

2.2 TILE PRODUCTS

- A. Tile Type [**CT-#**]: Factory-mounted [**unglazed**] [**glazed**] ceramic mosaic tile.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Olean; Division of Dal-Tile International Inc.
 - b. Crossville, Inc.
 - c. Daltile; Division of Dal-Tile International Inc.
 - d. Deutsche Steinzeug America, Inc.
 - e. Interceramic.
 - f. Lone Star Ceramics Company.
 - g. Grupo Porcelanite.
 - h. Portobello America, Inc.
 - i. Seneca Tiles, Inc.
 - j. <Insert manufacturer's name>.
 - k. or approved equal.
 2. Composition: [**Porcelain**] [**Impervious natural clay or porcelain**] [**Vitreous or impervious natural clay or porcelain**].
 3. Module Size: [**1 by 1 inch** (25.4 by 25.4 mm)] [**1 by 2 inches** (25.4 by 50.8 mm)] [**2 by 2 inches** (50.8 by 50.8 mm)] <Insert size>.
 4. Thickness: **1/4 inch** (6.35 mm).
 5. Face: [**Plain**] [**Pattern of design indicated**,] with cushion edges.
 6. Surface: [**Smooth, without**] [**Slip-resistant, with**] abrasive admixture.
 7. Finish: [**Bright, opaque**] [**Bright, clear**] [**Mat, opaque**] [**Mat, clear**] [**Semimat, opaque**] [**Semimat, clear**] [**Vellum, opaque**] [**Vellum, clear**] [**Crystalline**] <Insert description> glaze.
 8. Tile Color and Pattern: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color and pattern>.
 9. Grout Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.

10. Trim Units: Coordinated with sizes and coursing of adjoining flat tile where applicable[**and matching characteristics of adjoining flat tile**]. Provide shapes as follows, selected from manufacturer's standard shapes:
- a. Base Cove: Cove, module size [1 by 1 inch (25.4 by 25.4 mm)] [2 by 1 inch (50.8 by 25.4 mm)] **<Insert size>**.
 - b. Base Cap for Portland Cement Mortar Installations: Bead (bullnose), module size [1 by 1 inch (25.4 by 25.4 mm)] [2 by 1 inch (50.8 by 25.4 mm)] **<Insert size>**.
 - c. Base Cap for Thin-Set Mortar Installations: Surface bullnose, module size [1 by 1 inch (25.4 by 25.4 mm)] [2 by 1 inch (50.8 by 25.4 mm)] [2 by 2 inches (50.8 by 50.8 mm)] **<Insert size>**.
 - d. Wainscot Cap for Portland Cement Mortar Installations: Bead (bullnose), module size [1 by 1 inch (25.4 by 25.4 mm)] [2 by 1 inch (50.8 by 25.4 mm)] **<Insert size>**.
 - e. Wainscot Cap for Thin-Set Mortar Installations: Surface bullnose, module size [1 by 1 inch (25.4 by 25.4 mm)] [2 by 1 inch (50.8 by 25.4 mm)] [2 by 2 inches (50.8 by 50.8 mm)] **<Insert size>**.
 - f. Wainscot Cap for Flush Conditions: Regular flat tile for conditions where tile wainscot is shown flush with wall surface above it, same size as adjoining flat tile.
 - g. External Corners for Portland Cement Mortar Installations: Bead (bullnose), module size [1 by 1 inch (25.4 by 25.4 mm)] [2 by 1 inch (50.8 by 25.4 mm)] **<Insert size>**.
 - h. External Corners for Thin-Set Mortar Installations: Surface bullnose, module size [1 by 1 inch (25.4 by 25.4 mm)] [2 by 1 inch (50.8 by 25.4 mm)] [2 by 2 inches (50.8 by 50.8 mm)] **<Insert size>**.
 - i. Internal Corners: Cove, module size [1 by 1 inch (25.4 by 25.4 mm)] [2 by 1 inch (50.8 by 25.4 mm)] **<Insert size>**.
 - j. Internal Corners: Field-buttet square corners. For coved base and cap, use angle pieces designed to fit with stretcher shapes.
 - k. Tapered Transition Tile: Shape designed to effect transition between thickness of tile floor and adjoining floor finishes of different thickness, tapered to provide reduction in thickness from 1/2 to 1/4 inch (12.7 to 6.35 mm) across nominal 4-inch (100-mm) dimension.

B. Tile Type [CT-<#>]: [Unglazed] [Glazed] square-edged quarry tile.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- a. American Olean; Division of Dal-Tile International Inc.
 - b. Atlas Minerals & Chemicals, Inc.
 - c. Daltile; Division of Dal-Tile International Inc.
 - d. Deutsche Steinzeug America, Inc.
 - e. Endicott Tile Ltd.; Endicott Clay Products Co.
 - f. Florida Brick & Clay Company Inc.
 - g. Florida Tile Industries, Inc.
 - h. Interceramic.
 - i. Metropolitan Ceramics.

- j. Portobello America, Inc.
 - k. Quarry Tile Co.
 - l. Seneca Tiles, Inc.
 - m. Summitville Tiles, Inc.
 - n. United States Ceramic Tile Company.
 - o. **<Insert manufacturer's name>**.
 - p. or approved equal.
2. Face Size: [3 by 3 inches (76 by 76 mm)] [4 by 4 inches (102 by 102 mm)] [6 by 3 inches (152 by 76 mm)] [6 by 6 inches (152 by 152 mm)] [8 by 3-7/8 inches (203 by 98 mm)] [8 by 8 inches (203 by 203 mm)] **<Insert size>**.
 3. Thickness: [3/8 inch (9.5 mm)] [1/2 inch (12.7 mm)] [3/4 inch (19 mm)].
 4. Wearing Surface: [Nonabrasive, smooth] [Abrasive aggregate embedded in surface] **<Insert description>**.
 5. Finish: [Bright, opaque] [Bright, clear] [Mat, opaque] [Mat, clear] [Semimat, opaque] [Semimat, clear] [Vellum, opaque] [Vellum, clear] [Crystalline] **<Insert description>** glaze.
 6. Tile Color and Pattern: [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] **<Insert color and pattern>**.
 7. Grout Color: [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] **<Insert color>**.
 8. For furan-grouted quarry tile, precoat with temporary protective coating.
 9. Trim Units: Coordinated with sizes and coursing of adjoining flat tile where applicable[**and matching characteristics of adjoining flat tile**]. Provide shapes as follows, selected from manufacturer's standard shapes:
 - a. Base: Coved[**with surface bullnose top edge**], face size [6 by 6 inches (152 by 152 mm)] [8 by 3-7/8 inches (203 by 98 mm)] **<Insert size>**.
 - b. Wainscot Cap: Surface bullnose, face size [6 by 6 inches (152 by 152 mm)] [8 by 3-7/8 inches (203 by 98 mm)] **<Insert size>**.
 - c. Wainscot Cap for Flush Conditions: Regular flat tile for conditions where tile wainscot is shown flush with wall surface above it, same size as adjoining flat tile.
- C. Tile Type [CT-<#>]: [Unglazed] [Glazed] paver tile.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Marazzi Tile, Inc.
 - b. American Olean; Division of Dal-Tile International Inc.
 - c. Crossville, Inc.
 - d. Daltile; Division of Dal-Tile International Inc.
 - e. Deutsche Steinzeug America, Inc.
 - f. Florida Tile Industries, Inc.
 - g. Florim USA.
 - h. GranitiFiandre; c/o Trans Ceramica, Ltd.
 - i. Interceramic.

- j. Laufen.
 - k. Lone Star Ceramics Company.
 - l. Grupo Porcelanite.
 - m. Portobello America, Inc.
 - n. Seneca Tiles, Inc.
 - o. United States Ceramic Tile Company.
 - p. <Insert manufacturer's name>.
 - q. or approved equal.
2. Composition: [**Porcelain**] [**Impervious natural clay or porcelain**] [**Vitreous or impervious natural clay or porcelain**] [**Natural clay or porcelain**].
 3. Face Size: [**3 by 3 inches** (76 by 76 mm)] [**4 by 4 inches** (102 by 102 mm)] [**6 by 6 inches** (152 by 152 mm)] [**7-3/4 by 3-7/8 inches** (197 by 98 mm)] [**7-7/8 by 7-7/8 inches** (200 by 200 mm)] [**11-13/16 by 11-13/16 inches** (300 by 300 mm)] [**165 by 333 mm**] [**200 by 250 mm**] [**250 by 250 mm**] [**165 by 333 mm**] [**333 by 333 mm**] [**400 by 400 mm**] <Insert size>.
 4. Thickness: [**1/4 inch** (6.35 mm)] [**3/8 inch** (9.5 mm)] [**1/2 inch** (12.7 mm)].
 5. Face: [**Plain with square or cushion edges**] [**Plain with square edges**] [**Plain with cushion edges**] [**Pattern of design indicated, with square or cushion edges**] [**As indicated**].
 6. Finish: [**Bright, opaque**] [**Bright, clear**] [**Mat, opaque**] [**Mat, clear**] [**Semimat, opaque**] [**Semimat, clear**] [**Vellum, opaque**] [**Vellum, clear**] [**Crystalline**] <Insert description> glaze.
 7. Tile Color and Pattern: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color and pattern>.
 8. Grout Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
 9. Trim Units: Coordinated with sizes and coursing of adjoining flat tile where applicable[**and matching characteristics of adjoining flat tile**]. Provide shapes as follows, selected from manufacturer's standard shapes:
 - a. Base Cove: Cove, module size [**same as adjoining flat tile**] <Insert size>.
 - b. Base Cap for Portland Cement Mortar Installations: Bead (bullnose), module size [**same as adjoining flat tile**] <Insert size>.
 - c. Base Cap for Thin-Set Mortar Installations: Surface bullnose, module size [**same as adjoining flat tile**] <Insert size>.
 - d. Wainscot Cap for Portland Cement Mortar Installations: Bead (bullnose), module size [**same as adjoining flat tile**] <Insert size>.
 - e. Wainscot Cap for Thin-Set Mortar Installations: Surface bullnose, module size [**same as adjoining flat tile**] <Insert size>.
 - f. Wainscot Cap for Flush Conditions: Regular flat tile for conditions where tile wainscot is shown flush with wall surface above it, same size as adjoining flat tile.
 - g. External Corners for Portland Cement Mortar Installations: Bead (bullnose), module size [**same as adjoining flat tile**] <Insert size>.
 - h. External Corners for Thin-Set Mortar Installations: Surface bullnose, module size [**same as adjoining flat tile**] <Insert size>.

- i. Internal Corners: Cove, module size [**same as adjoining flat tile**] <Insert **size**>.
- j. Internal Corners: Field-buttet square corners. For coved base and cap, use angle pieces designed to fit with stretcher shapes.
- k. Tapered Transition Tile: Shape designed to effect transition between thickness of tile floor and adjoining floor finishes of different thickness, tapered to provide reduction in thickness from **1/2 to 1/4 inch** (12.7 to 6.35 mm) across nominal **4-inch** (100-mm) dimension.

D. Tile Type [**CT-<#>**]: [**Glazed wall tile**] [**Decorative thin wall tile**].

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Marazzi Tile, Inc.
 - b. American Olean; Division of Dal-Tile International Inc.
 - c. Daltile; Division of Dal-Tile International Inc.
 - d. Deutsche Steinzeug America, Inc.
 - e. Florida Tile Industries, Inc.
 - f. Florim USA.
 - g. Laufen.
 - h. Grupo Porcelanite.
 - i. Portobello America, Inc.
 - j. Seneca Tiles, Inc.
 - k. United States Ceramic Tile Company.
 - l. <Insert **manufacturer's name**>.
 - m. or approved equal.
2. Module Size: [**4-1/4 by 4-1/4 inches** (108 by 108 mm)] [**6 by 4-1/4 inches** (152 by 108 mm)] [**6 by 6 inches** (152 by 152 mm)] [**200 by 200 mm**] [**250 by 250 mm**] [**200 by 300 mm**] <Insert **size**>.
3. Thickness: **5/16 inch** (8 mm).
4. Face: [**Plain with modified square edges or cushion edges**] [**Plain with modified square edges**] [**Plain with cushion edges**] [**Pattern of design indicated, with manufacturer's standard edges**].
5. Finish: [**Bright, opaque**] [**Bright, clear**] [**Mat, opaque**] [**Mat, clear**] [**Semimat, opaque**] [**Semimat, clear**] [**Vellum, opaque**] [**Vellum, clear**] [**Crystalline**] <Insert **description**> glaze.
6. Tile Color and Pattern: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert **color and pattern**>.
7. Grout Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert **color**>.
8. Mounting: Factory, back mounted.
9. Mounting: Pregouted sheets of tiles factory assembled and grouted with manufacturer's standard white silicone rubber.
10. Trim Units: Coordinated with sizes and coursing of adjoining flat tile where applicable[**and matching characteristics of adjoining flat tile**]. Provide shapes as follows, selected from manufacturer's standard shapes:

- a. Base for Portland Cement Mortar Installations: Coved, module size [4-1/4 by 4-1/4 inches (108 by 108 mm)] [6 by 6 inches (152 by 152 mm)] [6 by 3-3/4 inches (152 by 95 mm)] <Insert size>.
 - b. Base for Thin-Set Mortar Installations: Straight, module size [4-1/4 by 4-1/4 inches (108 by 108 mm)] [6 by 6 inches (152 by 152 mm)] [6 by 2 inches (152 by 51 mm)] <Insert size>.
 - c. Wainscot Cap for Portland Cement Mortar Installations: Bullnose cap, module size [4-1/4 by 4-1/4 inches (108 by 108 mm)] [6 by 6 inches (152 by 152 mm)] [6 by 2 inches (152 by 51 mm)] <Insert size>.
 - d. Wainscot Cap for Thin-Set Mortar Installations: Surface bullnose, module size [4-1/4 by 4-1/4 inches (108 by 108 mm)] [6 by 6 inches (152 by 152 mm)] [6 by 2 inches (152 by 51 mm)] <Insert size>.
 - e. Wainscot Cap for Flush Conditions: Regular flat tile for conditions where tile wainscot is shown flush with wall surface above it, same size as adjoining flat tile.
 - f. External Corners for Portland Cement Mortar Installations: Bullnose shape with radius of at least 3/4 inch (19 mm) unless otherwise indicated.
 - g. External Corners for Thin-Set Mortar Installations: Surface bullnose, same size as adjoining flat tile.
 - h. Internal Corners: Field-buttet square corners. For coved base and cap use angle pieces designed to fit with stretcher shapes.
- E. Accessories: Provide vitreous china accessories of type and size indicated, suitable for installing by same method as adjoining wall tile.
1. One soap holder[**with grab handle**] for each shower and tub indicated.
 2. One paper holder at each water closet.
 3. Color and Finish: [**Match adjoining glazed wall tile**] [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] [**White, bright glaze**] <Insert color and finish>.

2.3 THRESHOLDS

- A. General: Fabricate to sizes and profiles indicated or required to provide transition between adjacent floor finishes.
1. Bevel edges at 1:2 slope, with lower edge of bevel aligned with or up to 1/16 inch (1.5 mm) above adjacent floor surface. Finish bevel to match top surface of threshold. Limit height of threshold to 1/2 inch (12.7 mm) or less above adjacent floor surface.
- B. Granite Thresholds: ASTM C 615, with [**polished**] [**honed**] <Insert finish> finish.
1. Description: Uniform, [**fine**] [**medium**]-grained, [**white**] [**gray**] [**black**] <Insert color> stone without veining.
 2. Description: Match DEN Project Manager's sample.
 3. Description: Provide[**one of**] the following:

- a. **<Insert, in separate subparagraphs, name of variety and producer, distributor, or importer>.**
- C. Marble Thresholds: ASTM C 503, with a minimum abrasion resistance of [10] [12] per ASTM C 1353 or ASTM C 241 and with honed finish.
1. Description: Uniform, fine- to medium-grained white stone with gray veining.
 2. Description: Match DEN Project Manager's sample.
 3. Description: Provide[**one of**] the following:
 - a. **<Insert, in separate subparagraphs, name of variety and producer, distributor, or importer>.**
- D. Slate Thresholds: ASTM C 629, Classification [I Exterior] [II Interior], with fine, even grain and honed finish.
1. Description: Uniform, [black] [blue-black] [gray] [blue-gray] [green] **<Insert color>** stone[**and unfading**].
 2. Description: Match DEN Project Manager's sample.
 3. Description: Provide[**one of**] the following:
 - a. **<Insert, in separate subparagraphs, name of variety and producer, distributor, or importer>.**

2.4 TILE BACKING PANELS

- A. Cementitious Backer Units: ANSI A118.9 or ASTM C 1325, in maximum lengths available to minimize end-to-end butt joints.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. C-Cure; C-Cure Board 990.
 - b. Custom Building Products; Wonderboard.
 - c. FinPan, Inc.; Util-A-Crete Concrete Backer Board.
 - d. USG Corporation; DUROCK Cement Board.
 - e. **<Insert manufacturer's name; product name or designation>.**
 - f. or approved equal.
 2. Thickness: [1/4 inch (6.4 mm)] [1/2 inch (12.7 mm)] [5/8 inch (15.9 mm)] [**As indicated**].
- B. Fiber-Cement Underlayment: ASTM C 1288, in maximum lengths available to minimize end-to-end butt joints.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. CertainTeed Corp.; FiberCement [**Underlayment**] [**BackerBoard**].
 - b. James Hardie; [**Hardiebacker**] [**Hardiebacker 500**].
 - c. **<Insert manufacturer's name; product name or designation>.**
 - d. or approved equal.

2. Thickness: [1/4 inch (6.4 mm)] [1/2 inch (12.7 mm)] [**As indicated**].

2.5 WATERPROOF MEMBRANE

- A. General: Manufacturer's standard product[, **selected from the following**,] that complies with ANSI A118.10 and is recommended by the manufacturer for the application indicated. Include reinforcement and accessories recommended by manufacturer.
- B. Chlorinated Polyethylene Sheet: Nonplasticized, chlorinated polyethylene faced on both sides with nonwoven polyester fabric; 0.030-inch (0.76-mm) nominal thickness.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Noble Company (The); Nobleseal TS.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
- C. PVC Sheet: Two layers of PVC sheet heat-fused together and to facings of nonwoven polyester; 0.040-inch (1.01-mm) nominal thickness.
 1. Compotite Corporation; Composeal Gold.
 2. **<Insert manufacturer's name; product name or designation>**.
 3. or approved equal.
- D. Polyethylene Sheet: Polyethylene faced on both sides with fleece webbing; 0.008-inch (0.203-mm) nominal thickness.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Schluter Systems L.P.; KERDI.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
- E. Fabric-Reinforced, Modified-Bituminous Sheet: Self-adhering, SBS-modified-bituminous sheet with woven reinforcement facing; 0.040-inch (1.01-mm) nominal thickness.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. National Applied Construction Products, Inc.; Strataflex.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
- F. Fabric-Reinforced, Fluid-Applied Membrane: System consisting of liquid-latex rubber or elastomeric polymer and continuous fabric reinforcement.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Boiardi Products; a QEP company; Elastiment 344 Reinforced

- b. Waterproofing and Anti-Fracture/Crack Suppression Membrane.
 - b. Bonsal American; an Oldcastle company; B 6000 Waterproof Membrane with Glass Fabric.
 - c. Bostik, Inc.; Hydroment Blacktop 90210.
 - d. Custom Building Products; 9240 Waterproofing and Anti-Fracture Membrane.
 - e. Laticrete International, Inc.; Laticrete 9235 Waterproof Membrane.
 - f. MAPEI Corporation; [**Mapelastic L (PRP M19)**] [**Mapelastic HPG with MAPEI Fiberglass Mesh**].
 - g. Mer-Kote Products, Inc.; Hydro-Guard 2000.
 - h. Summitville Tiles, Inc.; S-9000.
 - i. **<Insert manufacturer's name; product name or designation>**.
 - j. or approved equal.

- G. Fluid-Applied Membrane: Liquid-latex rubber or elastomeric polymer.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Boiardi Products; a QEP company; Elastiment 644 Membrane Waterproofing System.
 - b. Bonsal American; an Oldcastle company; B 6000 Waterproof Membrane.
 - c. Bostik, Inc.; [**Durabond D-222 Duraguard Membrane**] [**Hydroment Gold**].
 - d. C-Cure; Pro-Red Waterproofing Membrane 63.
 - e. Custom Building Products; Redgard Waterproofing and Crack Prevention Membrane.
 - f. Jamo Inc.; Waterproof.
 - g. Laticrete International, Inc.; [**Latapoxy 24hr HydroProofing**] [**Laticrete Watertight Floor N' Wall Waterproofing**].
 - h. MAPEI Corporation; Mapelastic HPG.
 - i. Southern Grouts & Mortars, Inc.; Southcrete 1100 Crack Suppression and Waterproofing.
 - j. TEC; a subsidiary of H. B. Fuller Company; HydraFlex - Waterproofing Crack Isolation Membrane.
 - k. **<Insert manufacturer's name; product name or designation>**.
 - l. or approved equal.

- H. Latex-Portland Cement: Flexible mortar consisting of cement-based mix and latex additive.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Boiardi Products; a QEP company; Elastiment 323 Cement Based Waterproofing, Anti-Fracture/Crack Suppression Membrane.
 - b. C-Cure; UltraCure 971.
 - c. MAPEI Corporation; Mapelastic (PRP 315).
 - d. Southern Grouts & Mortars, Inc.; Southcrete 1100.
 - e. TEC; a subsidiary of H. B. Fuller Company; Triple Flex Waterproofing, Crack Isolation Membrane & Mortar.
 - f. **<Insert manufacturer's name; product name or designation>**.
 - g. or approved equal.

- I. Urethane Waterproofing and Tile-Setting Adhesive: One-part, liquid-applied urethane[, **with a VOC content of 65 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24),**], [that complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers,"] in a consistency suitable for trowel application and intended for use as both waterproofing and tile-setting adhesive in a two-step process.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Bostik, Inc.; [Durabond D-200] [Hydroment Ultra-Set] [Hydroment Ultra-Set Advanced].
 - b. <Insert manufacturer's name; product name or designation>.
 - c. or approved equal.

2.6 CRACK ISOLATION MEMBRANE

- A. General: Manufacturer's standard product[, **selected from the following,**] that complies with ANSI A118.12 for [standard] [high] performance and is recommended by the manufacturer for the application indicated. Include reinforcement and accessories recommended by manufacturer.
- B. Chlorinated Polyethylene Sheet: Nonplasticized, chlorinated polyethylene faced on both sides with nonwoven polyester fabric; 0.030-inch (0.76-mm) nominal thickness.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Noble Company (The); Nobleseal CIS.
 - b. <Insert manufacturer's name; product name or designation>.
 - c. or approved equal.
- C. PVC Sheet: Two layers of PVC sheet heat-fused together and to facings of nonwoven polyester; 0.040-inch (1.01-mm) nominal thickness.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Composit Corporation; Composeal Gold.
 - b. <Insert manufacturer's name; product name or designation>.
 - c. or approved equal.
- D. Polyethylene Sheet: Polyethylene faced on both sides with fleece webbing; 0.008-inch (0.203-mm) nominal thickness.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Schluter Systems L.P.; KERDI.
 - b. <Insert manufacturer's name; product name or designation>.
 - c. or approved equal.

- E. Corrugated Polyethylene: Corrugated polyethylene with dovetail-shaped corrugations and with anchoring webbing on the underside; **3/16-inch** (4-mm) nominal thickness.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Schluter Systems L.P.; DITRA.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.
- F. Fabric-Reinforced, Modified-Bituminous Sheet: Self-adhering, modified-bituminous sheet with fabric reinforcement facing; **0.040-inch** (1.01-mm) nominal thickness.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. MAPEI Corporation; Mapelastic SM.
 - b. National Applied Construction Products, Inc.; Strataflex.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.
- G. Fabric-Reinforced, Fluid-Applied Membrane: System consisting of liquid-latex rubber or elastomeric polymer and fabric reinforcement.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Boiardi Products; a QEP company; Elastiment 344 Reinforced Waterproofing and Anti-Fracture/Crack Suppression Membrane.
 - b. Bonsal American; an Oldcastle company; B 6000 Waterproof Membrane with Glass Fabric.
 - c. Bostik, Inc.; Hydroment Blacktop 90210.
 - d. Custom Building Products; 9240 Waterproofing and Anti-Fracture Membrane.
 - e. Laticrete International, Inc.; Laticrete [**Blue 92 Anti-Fracture Membrane**] [**9235 Waterproof Membrane**].
 - f. MAPEI Corporation; [**Mapelastic L (PRP M19)**] [**Mapelastic HPG with MAPEI Fiberglass Mesh**].
 - g. Mer-Kote Products, Inc.; Hydro-Guard 2000.
 - h. Summitville Tiles, Inc.; S-9000.
 - i. **<Insert manufacturer's name; product name or designation>**.
 - j. or approved equal.
- H. Fluid-Applied Membrane: Liquid-latex rubber or elastomeric polymer.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Bostik, Inc.; [**Durabond D-222 Duraguard Membrane**] [**Hydroment Gold**].
 - b. C-Cure; [**CureLastic 949**] [**Pro-Red Waterproofing Membrane 963**].
 - c. Custom Building Products; [**Redgard Waterproofing and Crack Prevention Membrane**] [**FractureFree Crack Prevention Membrane**] [**Semco Crack Prevention Membrane**].
 - d. Jamo Inc.; Waterproof.

- e. Mer-Kote Products, Inc.; Fracture-Guard 5000.
 - f. Southern Grouts & Mortars, Inc.; Southcrete 1100 Crack Suppression and Waterproofing.
 - g. TEC; a subsidiary of H. B. Fuller Company; HydraFlex - Waterproofing Crack Isolation Membrane.
 - h. <Insert manufacturer's name; product name or designation>.
 - i. or approved equal.
- I. Latex-Portland Cement: Flexible mortar consisting of cement-based mix and latex additive.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. C-Cure; UltraCure 971.
 - b. MAPEI Corporation; Mapelastic (PRP 315).
 - c. TEC; a subsidiary of H. B. Fuller Company; Triple Flex Waterproofing, Crack Isolation Membrane & Mortar.
 - d. <Insert manufacturer's name; product name or designation>.
 - e. or approved equal.
- J. Urethane Crack Isolation Membrane and Tile-Setting Adhesive: One-part, liquid-applied urethane[, with a VOC content of 65 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24),][, that complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers,"] in a consistency suitable for trowel application and intended for use as both waterproofing and tile-setting adhesive in a two-step process.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Bostik, Inc.; [Durabond D-200] [Hydroment Ultra-Set] [Hydroment Ultra-Set Advanced].
 - b. <Insert manufacturer's name; product name or designation>.
 - c. or approved equal.

2.7 SETTING MATERIALS

- A. Portland Cement Mortar (Thickset) Installation Materials: ANSI A108.02.
1. Cleavage Membrane: Asphalt felt, ASTM D 226, Type I (No. 15); or polyethylene sheeting, ASTM D 4397, 4.0 mils (0.1 mm) thick.
 2. Reinforcing Wire Fabric: Galvanized, welded wire fabric, 2 by 2 inches (50.8 by 50.8 mm) by 0.062-inch (1.57-mm) diameter; comply with ASTM A 185 and ASTM A 82 except for minimum wire size.
 3. Expanded Metal Lath: Diamond-mesh lath complying with ASTM C 847.
 - a. Base Metal and Finish for Interior Applications: Uncoated or zinc-coated (galvanized) steel sheet, with uncoated steel sheet painted after fabrication

- into lath.
 - b. Base Metal and Finish for Exterior Applications: Zinc-coated (galvanized) steel sheet.
 - c. Configuration over Studs and Furring: Flat.
 - d. Configuration over Solid Surfaces: Self furring.
 - e. Weight: [2.5 lb/sq. yd. (1.4 kg/sq. m)] [3.4 lb/sq. yd. (1.8 kg/sq. m)].
4. Latex Additive: **[Manufacturer's standard] [acrylic resin] [or] [styrene-butadiene-rubber]** water emulsion, serving as replacement for part or all of gaging water, of type specifically recommended by latex-additive manufacturer for use with field-mixed Portland cement and aggregate mortar bed.
- B. Dry-Set Portland Cement Mortar (Thin Set): ANSI A118.1.
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Boiardi Products; a QEP company.
 - b. Bonsal American; an Oldcastle company.
 - c. Bostik, Inc.
 - d. C-Cure.
 - e. Custom Building Products.
 - f. Jamo Inc.
 - g. Laticrete International, Inc.
 - h. MAPEI Corporation.
 - i. Southern Grouts & Mortars, Inc.
 - j. Summitville Tiles, Inc.
 - k. TEC; a subsidiary of H. B. Fuller Company.
 - l. **<Insert manufacturer's name>**.
 - m. or approved equal.
 - 2. For wall applications, provide mortar that complies with requirements for nonsagging mortar in addition to the other requirements in ANSI A118.1.
- C. Latex-Portland Cement Mortar (Thin Set): ANSI A118.4.
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Boiardi Products; a QEP company.
 - b. Bonsal American; an Oldcastle company.
 - c. Bostik, Inc.
 - d. C-Cure.
 - e. Custom Building Products.
 - f. Jamo Inc.
 - g. Laticrete International, Inc.
 - h. MAPEI Corporation.
 - i. Mer-Kote Products, Inc.
 - j. Southern Grouts & Mortars, Inc.

- k. Summitville Tiles, Inc.
 - l. TEC; a subsidiary of H. B. Fuller Company.
 - m. **<Insert manufacturer's name>**.
 - n. or approved equal.
 2. Provide prepackaged, dry-mortar mix containing dry, redispersible, vinyl acetate or acrylic additive to which only water must be added at Project site.
 3. Provide prepackaged, dry-mortar mix combined with **[acrylic resin] [or] [styrene-butadiene-rubber]** liquid-latex additive at Project site.
 4. For wall applications, provide mortar that complies with requirements for nonsagging mortar in addition to the other requirements in ANSI A118.4.
- D. Medium-Bed, Latex-Portland Cement Mortar: Comply with requirements in ANSI A118.4. Provide product that is approved by manufacturer for application thickness of **[5/8 inch (16 mm)] <Insert thickness>**.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Bonsal American; an Oldcastle company.
 - b. Bostik, Inc.
 - c. C-Cure.
 - d. Custom Building Products.
 - e. Jamo Inc.
 - f. Laticrete International, Inc.
 - g. MAPEI Corporation.
 - h. Mer-Kote Products, Inc.
 - i. Southern Grouts & Mortars, Inc.
 - j. Summitville Tiles, Inc.
 - k. TEC; a subsidiary of H. B. Fuller Company.
 - l. **<Insert manufacturer's name>**.
 - m. or approved equal.
 2. Provide prepackaged, dry-mortar mix containing dry, redispersible, vinyl acetate or acrylic additive to which only water must be added at Project site.
 3. Provide prepackaged, dry-mortar mix combined with **[acrylic resin] [or] [styrene-butadiene-rubber]** liquid-latex additive at Project site.
- E. EGP (Exterior Glue Plywood) Latex-Portland Cement Mortar (Thin Set): ANSI A118.11.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Bonsal American; an Oldcastle company.
 - b. Bostik, Inc.
 - c. C-Cure.
 - d. Custom Building Products.
 - e. Jamo Inc.
 - f. Laticrete International, Inc.

- g. MAPEI Corporation.
 - h. Southern Grouts & Mortars, Inc.
 - i. Summitville Tiles, Inc.
 - j. TEC; a subsidiary of H. B. Fuller Company.
 - k. <Insert manufacturer's name>.
 - l. or approved equal.
 2. Provide prepackaged, dry-mortar mix containing dry, redispersible, vinyl acetate or acrylic additive to which only water must be added at Project site.
 3. Provide prepackaged, dry-mortar mix combined with [acrylic resin] [or] [styrene-butadiene-rubber] liquid-latex additive at Project site.
- F. Water-Cleanable, Tile-Setting Epoxy: ANSI A118.3[.], **with a VOC content of 65 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).**[, that complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."]
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Atlas Minerals & Chemicals, Inc.
 - b. Bonsal American; an Oldcastle company.
 - c. Bostik, Inc.
 - d. C-Cure.
 - e. Custom Building Products.
 - f. Jamo Inc.
 - g. Laticrete International, Inc.
 - h. MAPEI Corporation.
 - i. Mer-Kote Products, Inc.
 - j. Southern Grouts & Mortars, Inc.
 - k. Summitville Tiles, Inc.
 - l. TEC; a subsidiary of H. B. Fuller Company.
 - m. <Insert manufacturer's name>.
 - n. or approved equal.
 2. Provide product capable of withstanding continuous and intermittent exposure to temperatures of up to 140 deg F (60 deg C) and 212 deg F (100 deg C), respectively, and certified by manufacturer for intended use.
- G. Chemical-Resistant Furan Mortar: ANSI A118.5, with [carbon] <Insert material> filler.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Atlas Minerals & Chemicals, Inc.
 - b. <Insert manufacturer's name>.
 - c. or approved equal.

- H. Organic Adhesive: ANSI A136.1, Type I.[.], **with a VOC content of 65 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).**[.], **that complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."**]
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Bonsal American; an Oldcastle company.
 - b. Bostik, Inc.
 - c. C-Cure.
 - d. Custom Building Products.
 - e. DAP Inc.
 - f. Jamo Inc.
 - g. Laticrete International, Inc.
 - h. MAPEI Corporation.
 - i. Southern Grouts & Mortars, Inc.
 - j. Summitville Tiles, Inc.
 - k. TEC; a subsidiary of H. B. Fuller Company.
 - l. **<Insert manufacturer's name>**.
 - m. or approved equal.

2.8 GROUT MATERIALS

- A. Sand-Portland Cement Grout: ANSI A108.10, composed of white or gray cement and white or colored aggregate as required to produce color indicated.
- B. Standard Cement Grout: ANSI A118.6.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Boiardi Products; a QEP company.
 - b. Bonsal American; an Oldcastle company.
 - c. Bostik, Inc.
 - d. C-Cure.
 - e. Custom Building Products.
 - f. Jamo Inc.
 - g. Laticrete International, Inc.
 - h. MAPEI Corporation.
 - i. Southern Grouts & Mortars, Inc.
 - j. Summitville Tiles, Inc.
 - k. TEC; a subsidiary of H. B. Fuller Company.
 - l. **<Insert manufacturer's name>**.
 - m. or approved equal.
- C. Polymer-Modified Tile Grout: ANSI A118.7.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Boiardi Products; a QEP company.
 - b. Bonsal American; an Oldcastle company.
 - c. Bostik, Inc.
 - d. C-Cure.
 - e. Custom Building Products.
 - f. Jamo Inc.
 - g. Laticrete International, Inc.
 - h. MAPEI Corporation.
 - i. Southern Grouts & Mortars, Inc.
 - j. Summitville Tiles, Inc.
 - k. TEC; a subsidiary of H. B. Fuller Company.
 - l. **<Insert manufacturer's name>**.
 - m. or approved equal.
 2. Polymer Type: Ethylene vinyl acetate or acrylic additive, in dry, redispersible form, prepackaged with other dry ingredients.
 3. Polymer Type: [**Acrylic resin**] [**or**] [**styrene-butadiene rubber**] in liquid-latex form for addition to prepackaged dry-grout mix.
- D. Water-Cleanable Epoxy Grout: ANSI A118.3[, **with a VOC content of 65 g/L or less when calculated according to 40 CFR 59, Subpart D**].
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Atlas Minerals & Chemicals, Inc.
 - b. Boiardi Products; a QEP company.
 - c. Bonsal American; an Oldcastle company.
 - d. Bostik, Inc.
 - e. C-Cure.
 - f. Custom Building Products.
 - g. Jamo Inc.
 - h. Laticrete International, Inc.
 - i. MAPEI Corporation.
 - j. Mer-Kote Products, Inc.
 - k. Southern Grouts & Mortars, Inc.
 - l. Summitville Tiles, Inc.
 - m. TEC; a subsidiary of H. B. Fuller Company.
 - n. **<Insert manufacturer's name>**.
 - o. or approved equal.
 2. Provide product capable of withstanding continuous and intermittent exposure to temperatures of up to **140 deg F** (60 deg C) and **212 deg F** (100 deg C), respectively, and certified by manufacturer for intended use.
- E. Chemical-Resistant Furan Grout: ANSI A118.5, with carbon filler[, **with a VOC content of 65 g/L or less when calculated according to 40 CFR 59, Subpart D**].

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Atlas Minerals & Chemicals, Inc.
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.

F. Grout for PregROUTed Tile Sheets: Same product used in factory to pregROUT tile sheets.

2.9 ELASTOMERIC SEALANTS

A. General: Provide sealants, primers, backer rods, and other sealant accessories that comply with the following requirements and with the applicable requirements in Section 079200 "Joint Sealants."

B. Retain first subparagraph below if required for LEED-NC, or LEED-CI, or LEED-CS Credit IEQ 4.1.

1. Sealants shall have a VOC content of **[250] <Insert value>** g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
2. Sealants shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
3. Use primers, backer rods, and sealant accessories recommended by sealant manufacturer.

C. Colors: Provide colors of exposed sealants to match colors of grout in tile adjoining sealed joints unless otherwise indicated.

D. One-Part, Mildew-Resistant Silicone Sealant: ASTM C 920; Type S; Grade NS; Class 25; Uses NT, G, A, and, as applicable to nonporous joint substrates indicated, O; formulated with fungicide, intended for sealing interior ceramic tile joints and other nonporous substrates that are subject to in-service exposures of high humidity and extreme temperatures.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. DAP Inc.; **[Titanium Enriched Kitchen and Bath Sealant] [100 percent Silicone Kitchen and Bath Sealant]**.
 - b. Dow Corning Corporation; Dow Corning 786.
 - c. GE Silicones; a division of GE Specialty Materials; Sanitary 1700.
 - d. Laticrete International, Inc.; Latasil Tile & Stone Sealant.
 - e. Pecora Corporation; Pecora 898 Sanitary Silicone Sealant.
 - f. Tremco Incorporated; Tremsil 600 White.
 - g. **<Insert manufacturer's name; product name or designation>**.
 - h. or approved equal.

E. Multipart, Pourable Urethane Sealant for Use T: ASTM C 920; Type M; Grade P; Class

25; Uses T, M, A, and, as applicable to joint substrates indicated, O.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Bostik, Inc.; Chem-Calk 550.
 - b. Degussa Building Systems; Sonneborn Sonolastic SL 2.
 - c. Pecora Corporation; [**Dynatrol II-SG**] [**NR-200 Urexpan**].
 - d. Sika Corporation; Sikaflex-2c SL.
 - e. Tremco Incorporated.; [**THC-900**] [**THC-901**] [**Vulkem 245**].
 - f. **<Insert manufacturer's name; product name or designation>**.
 - g. or approved equal.

F. Chemical-Resistant Sealants: For chemical-resistant floors, provide chemical-resistant elastomeric sealant of type recommended and produced by chemical-resistant mortar and grout manufacturer for type of application indicated, with proven service record and compatibility with tile and other setting materials, and with chemical resistance equivalent to mortar/grout.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Atlas Minerals & Chemicals, Inc.
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.

2.10 MISCELLANEOUS MATERIALS

- A. Trowelable Underlayments and Patching Compounds: Latex-modified, Portland cement-based formulation provided or approved by manufacturer of tile-setting materials for installations indicated.
- B. Metal Edge Strips: Angle or L-shape, height to match tile and setting-bed thickness, metallic or combination of metal and PVC or neoprene base, designed specifically for flooring applications; [**half-hard brass**] [**white zinc alloy**] [**nickel silver**] [**stainless-steel, ASTM A 666, 300 Series**] exposed-edge material.
- C. Temporary Protective Coating: [**Either product**] [**Product**] indicated below that is formulated to protect exposed surfaces of tile against adherence of mortar and grout; compatible with tile, mortar, and grout products; and easily removable after grouting is completed without damaging grout or tile.
 1. Petroleum paraffin wax, fully refined and odorless, containing at least 0.5 percent oil with a melting point of **120 to 140 deg F** (49 to 60 deg C) per ASTM D 87.
 2. Grout release in form of manufacturer's standard proprietary liquid coating that is specially formulated and recommended for use as temporary protective coating for tile.
- D. Tile Cleaner: A neutral cleaner capable of removing soil and residue without harming tile and grout surfaces, specifically approved for materials and installations indicated

by tile and grout manufacturers.

- E. Grout Sealer: Manufacturer's standard[**silicone**] product for sealing grout joints and that does not change color or appearance of grout.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Bonsal American; an Oldcastle company; Grout Sealer.
 - b. Bostik, Inc.; CeramaSeal [**Grout & Tile Sealer**] [**Magic Seal**] [**Silox 8**] [**Siloxane 220**].
 - c. C-Cure; Penetrating Sealer 978.
 - d. Custom Building Products; [**Surfaceguard**] [**Grout and Tile**] [**Grout**] Sealer.
 - e. Jamo Inc.; [**Matte Finish**] [**Penetrating**] Sealer.
 - f. MAPEI Corporation; KER [**003, Silicone Spray Sealer for Cementitious Tile Grout**] [**004, Keraseal Penetrating Sealer for Unglazed Grout and Tile**].
 - g. Southern Grouts & Mortars, Inc.; Silicone Grout Sealer.
 - h. Summitville Tiles, Inc.; SL-15, Invisible Seal Penetrating Grout and Tile Sealer.
 - i. TEC; a subsidiary of H. B. Fuller Company; [**TA-256 Penetrating Silicone**] [**TA-257 Silicone**] Grout Sealer.
 - j. or approved equal.

2.11 MIXING MORTARS AND GROUT

- A. Mix mortars and grouts to comply with referenced standards and mortar and grout manufacturers' written instructions.
- B. Add materials, water, and additives in accurate proportions.
- C. Obtain and use type of mixing equipment, mixer speeds, mixing containers, mixing time, and other procedures to produce mortars and grouts of uniform quality with optimum performance characteristics for installations indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions where tile will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of installed tile.
 1. Verify that substrates for setting tile are firm, dry, clean, free of coatings that are incompatible with tile-setting materials including curing compounds and other substances that contain soap, wax, oil, or silicone; and comply with flatness tolerances required by ANSI A108.01 for installations indicated.

2. Verify that concrete substrates for tile floors installed with **[adhesives] [bonded mortar bed] [or] [thin-set mortar]** comply with surface finish requirements in ANSI A108.01 for installations indicated.
 - a. Verify that surfaces that received a steel trowel finish have been mechanically scarified.
 - b. Verify that protrusions, bumps, and ridges have been removed by sanding or grinding.
 3. Verify that installation of grounds, anchors, recessed frames, electrical and mechanical units of work, and similar items located in or behind tile has been completed.
 4. Verify that joints and cracks in tile substrates are coordinated with tile joint locations; if not coordinated, adjust joint locations in consultation with DEN Project Manager.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Fill cracks, holes, and depressions in concrete substrates for tile floors installed with **[adhesives] [or] [thin-set mortar]** with trowelable leveling and patching compound specifically recommended by tile-setting material manufacturer.
- B. Where indicated, prepare substrates to receive waterproofing by applying a reinforced mortar bed that complies with ANSI A108.1A and is sloped **1/4 inch per foot (1:50)** toward drains.
- C. Blending: For tile exhibiting color variations, verify that tile has been factory blended and packaged so tile units taken from one package show same range of colors as those taken from other packages and match approved Samples. If not factory blended, either return to manufacturer or blend tiles at Project site before installing.
- D. Field-Applied Temporary Protective Coating: If indicated under tile type or needed to prevent grout from staining or adhering to exposed tile surfaces, precoat them with continuous film of temporary protective coating, taking care not to coat unexposed tile surfaces.

3.3 TILE INSTALLATION

- A. Comply with TCA's "Handbook for Ceramic Tile Installation" for TCA installation methods specified in tile installation schedules. Comply with parts of the ANSI A108 Series "Specifications for Installation of Ceramic Tile" that are referenced in TCA installation methods, specified in tile installation schedules, and apply to types of setting and grouting materials used.
 1. For the following installations, follow procedures in the ANSI A108 Series of tile installation standards for providing 95 percent mortar coverage:

- a. Exterior tile floors.
 - b. Tile floors in wet areas.
 - c. Tile swimming pool decks.
 - d. Tile floors in laundries.
 - e. Tile floors composed of tiles **8 by 8 inches** (200 by 200 mm) or larger.
 - f. Tile floors composed of rib-backed tiles.
- B. Extend tile work into recesses and under or behind equipment and fixtures to form complete covering without interruptions unless otherwise indicated. Terminate work neatly at obstructions, edges, and corners without disrupting pattern or joint alignments.
- C. Accurately form intersections and returns. Perform cutting and drilling of tile without marring visible surfaces. Carefully grind cut edges of tile abutting trim, finish, or built-in items for straight aligned joints. Fit tile closely to electrical outlets, piping, fixtures, and other penetrations so plates, collars, or covers overlap tile.
- D. Provide manufacturer's standard trim shapes where necessary to eliminate exposed tile edges.
- E. Jointing Pattern: Lay tile in grid pattern unless otherwise indicated. Lay out tile work and center tile fields in both directions in each space or on each wall area. Lay out tile work to minimize the use of pieces that are less than half of a tile. Provide uniform joint widths unless otherwise indicated.
1. For tile mounted in sheets, make joints between tile sheets same width as joints within tile sheets so joints between sheets are not apparent in finished work.
 2. Where adjoining tiles on floor, base, walls, or trim are specified or indicated to be same size, align joints.
 3. Where tiles are specified or indicated to be whole integer multiples of adjoining tiles on floor, base, walls, or trim, align joints unless otherwise indicated.
- F. Joint Widths: Unless otherwise indicated, install tile with the following joint widths:
1. Ceramic Mosaic Tile: **1/16 inch** (1.6 mm).
 2. Quarry Tile: [**1/4 inch** (6.35 mm)] [**3/8 inch** (9.5 mm)].
 3. Paver Tile: [**1/4 inch** (6.35 mm)] [**3/8 inch** (9.5 mm)].
 4. Glazed Wall Tile: **1/16 inch** (1.6 mm).
 5. Decorative Thin Wall Tile: **1/16 inch** (1.6 mm).
- G. Lay out tile wainscots to dimensions indicated or to next full tile beyond dimensions indicated.
- H. Expansion Joints: Provide expansion joints and other sealant-filled joints, including control, contraction, and isolation joints, where indicated. Form joints during installation of setting materials, mortar beds, and tile. Do not saw-cut joints after installing tiles.
1. Where joints occur in concrete substrates, locate joints in tile surfaces directly above them.

- I. Stone Thresholds: Install stone thresholds in same type of setting bed as adjacent floor unless otherwise indicated.
 - 1. At locations where mortar bed (thickset) would otherwise be exposed above adjacent floor finishes, set thresholds in latex-Portland cement mortar (thin set).
 - 2. Do not extend **[cleavage membrane] [waterproofing] [or] [crack isolation membrane]** under thresholds set in **[dry-set Portland cement] [or] [latex-Portland cement]** mortar. Fill joints between such thresholds and adjoining tile set on **[cleavage membrane] [waterproofing] [or] [crack isolation membrane]** with elastomeric sealant.
- J. Metal Edge Strips: Install **[at locations indicated] [where exposed edge of tile flooring meets carpet, wood, or other flooring that finishes flush with top of tile] [where exposed edge of tile flooring meets carpet, wood, or other flooring that finishes flush with or below top of tile and no threshold is indicated]**.
- K. Grout Sealer: Apply grout sealer to **[cementitious]** grout joints **[in tile floors]** according to grout-sealer manufacturer's written instructions. As soon as grout sealer has penetrated grout joints, remove excess sealer and sealer from tile faces by wiping with soft cloth.

3.4 TILE BACKING PANEL INSTALLATION

- A. Install **[cementitious backer units] [and] [fiber-cement underlayment]** and treat joints according to ANSI A108.11 and manufacturer's written instructions for type of application indicated. **[Use latex-Portland cement mortar for bonding material unless otherwise directed in manufacturer's written instructions.]**

3.5 WATERPROOFING INSTALLATION

- A. Install waterproofing to comply with ANSI A108.13 and manufacturer's written instructions to produce waterproof membrane of uniform thickness and bonded securely to substrate.
- B. Do not install tile or setting materials over waterproofing until waterproofing has cured and been tested to determine that it is watertight.

3.6 CRACK ISOLATION MEMBRANE INSTALLATION

- A. Install crack isolation membrane to comply with ANSI A108.17 and manufacturer's written instructions to produce membrane of uniform thickness and bonded securely to substrate.
- B. Do not install tile or setting materials over crack isolation membrane until membrane has cured.

3.7 CLEANING AND PROTECTING

- A. Cleaning: On completion of placement and grouting, clean all ceramic tile surfaces so they are free of foreign matter.
1. Remove [**epoxy**] [**and**] [**latex-Portland cement**] grout residue from tile as soon as possible.
 2. Clean grout smears and haze from tile according to tile and grout manufacturer's written instructions but no sooner than 10 days after installation. Use only cleaners recommended by tile and grout manufacturers and only after determining that cleaners are safe to use by testing on samples of tile and other surfaces to be cleaned. Protect metal surfaces and plumbing fixtures from effects of cleaning. Flush surfaces with clean water before and after cleaning.
 3. Remove temporary protective coating by method recommended by coating manufacturer and that is acceptable to tile and grout manufacturer. Trap and remove coating to prevent drain clogging.
- B. Protect installed tile work with kraft paper or other heavy covering during construction period to prevent staining, damage, and wear. If recommended by tile manufacturer, apply coat of neutral protective cleaner to completed tile walls and floors.
- C. Prohibit foot and wheel traffic from tiled floors for at least seven days after grouting is completed.
- D. Before final inspection, remove protective coverings and rinse neutral protective cleaner from tile surfaces.

3.8 EXTERIOR TILE INSTALLATION SCHEDULE

- A. Exterior Floor Installations:
1. Tile Installation F101: Cement mortar bed (thickset) [**bonded to concrete**] [**over waterproof membrane on concrete**] [**over waterproof membrane on concrete where indicated and bonded to concrete where membrane is not indicated**]; TCA F101 and [**ANSI A108.1A**] [**ANSI A108.1B**] [**ANSI A108.1C**].
 - a. Tile Type: <Insert tile-type designation>.
 - b. Thin-Set Mortar for Cured-Bed Method: [**Dry-set**] [**Latex-**] [**Medium-bed, latex-**] Portland cement mortar.
 - c. Grout: [**Sand-Portland cement**] [**Standard sanded cement**] [**Standard unsanded cement**] [**Polymer-modified sanded**] [**Polymer-modified unsanded**] grout.
 2. Tile Installation F102: Thin-set mortar [**on concrete**] [**over waterproof membrane on concrete**] [**over waterproof membrane on concrete where indicated and on concrete where membrane is not indicated**]; TCA F102.
 - a. Tile Type: <Insert tile-type designation>.

- b. Thin-Set Mortar: **[Dry-set] [Latex-] [Medium-bed, latex-]** Portland cement mortar.
- c. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded]** grout.

B. Exterior Wall Installations, Masonry or Concrete:

- 1. Tile Installation W201: Cement mortar bed (thickset) on metal lath over waterproof membrane; TCA W201 and **[ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C]**.
 - a. Tile Type: **<Insert tile-type designation>**.
 - b. Bond Coat Mortar for Wet-Set Method: **[Dry-set] [Latex-]** Portland cement mortar.
 - c. Thin-Set Mortar for Cured-Bed Method: **[Dry-set] [Latex-]** Portland cement mortar.
 - d. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded]** grout.
- 2. Tile Installation W202: Thin-set mortar; TCA W202.
 - a. Tile Type: **<Insert tile-type designation>**.
 - b. Thin-Set Mortar: **[Dry-set] [Latex-] [Medium-bed, latex-]** Portland cement mortar.
 - c. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded]** grout.

3.9 INTERIOR TILE INSTALLATION SCHEDULE

A. Interior Floor Installations, Concrete Subfloor:

- 1. Tile Installation F111: Cement mortar bed (thickset) with cleavage membrane; TCA F111 and **[ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C]**.
 - a. Tile Type: **<Insert tile-type designation>**.
 - b. Thin-Set Mortar for Cured-Bed Method: **[Dry-set] [Latex-] [Medium-bed, latex-]** Portland cement mortar.
 - c. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded]** grout.
- 2. Tile Installation F112: Cement mortar bed (thickset) bonded to concrete; TCA F112 and **[ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C]**.
 - a. Tile Type: **<Insert tile-type designation>**.

- b. Thin-Set Mortar for Cured-Bed Method: **[Dry-set] [Latex-] [Medium-bed, latex-]** Portland cement mortar.
 - c. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded]** grout.
 3. Tile Installation F113: Thin-set mortar; TCA F113.
 - a. Tile Type: **<Insert tile-type designation>**.
 - b. Thin-Set Mortar: **[Dry-set] [Latex-] [Medium-bed, latex-]** Portland cement mortar.
 - c. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] [Water-cleanable epoxy]** grout.
 4. Tile Installation F114: Cement mortar bed (thickset) with cleavage membrane; **[epoxy] [furan]** grout; TCA F114 and ANSI A108.1B.
 - a. Tile Type: **<Insert tile-type designation>**.
 - b. Thin-Set Mortar for Cured-Bed Method: **[Dry-set] [Latex-] [Medium-bed, latex-]** Portland cement mortar.
 - c. Grout: **[Water-cleanable epoxy] [Chemical-resistant furan]** grout.
 5. Tile Installation F115: Thin-set mortar; **[epoxy] [furan]** grout; TCA F115.
 - a. Tile Type: **<Insert tile-type designation>**.
 - b. Thin-Set Mortar: **[Dry-set] [Latex-] [Medium-bed, latex-]** Portland cement mortar.
 - c. Grout: **[Water-cleanable epoxy] [Chemical-resistant furan]** grout.
 6. Tile Installation F116: **[Organic adhesive] [Water-cleanable, tile-setting epoxy]**; TCA F116.
 - a. Tile Type: **<Insert tile-type designation>**.
 - b. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] [Water-cleanable epoxy]** grout.
 7. Tile Installation F121: Cement mortar bed (thickset) on waterproof membrane; TCA F121 and **[ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C]**.
 - a. Tile Type: **<Insert tile-type designation>**.
 - b. Thin-Set Mortar for Cured-Bed Method: **[Dry-set] [Latex-] [Medium-bed, latex-]** Portland cement mortar.
 - c. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded]** grout.
 8. Tile Installation F122: Thin-set mortar on waterproof membrane; TCA F122.

- a. Tile Type: <Insert tile-type designation>.
 - b. Thin-Set Mortar: [Latex-] [Medium-bed, latex-] Portland cement mortar.
 - c. Grout: Polymer-modified [sanded] [unsanded] grout.
9. Tile Installation F125A: Thin-set mortar on crack isolation membrane; TCA F125A.
- a. Tile Type: <Insert tile-type designation>.
 - b. Thin-Set Mortar: [Latex-] [Medium-bed, latex-] Portland cement mortar.
 - c. Grout: [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] [Water-cleanable epoxy] grout.
10. Tile Installation F131: Water-cleanable, tile-setting epoxy; epoxy grout; TCA F131.
- a. Tile Type: <Insert tile-type designation>.
 - b. Grout: Water-cleanable epoxy grout.
11. Tile Installation F132: Water-cleanable, tile-setting epoxy on cured cement mortar bed [bonded to concrete subfloor] [installed over cleavage membrane]; epoxy grout; TCA F132.
- a. Tile Type: <Insert tile-type designation>.
 - b. Grout: Water-cleanable epoxy grout.
12. Tile Installation F133: [Chemical-resistant furan mortar] [Water-cleanable, tile-setting epoxy]; furan grout. TCA F133[except use water-cleanable, tile-setting epoxy instead of chemical-resistant furan mortar for setting tile].
- a. Tile Type: <Insert tile-type designation>.
 - b. Grout: Chemical-resistant furan grout.
- B. Interior Floor Installations, Wood Subfloor:
1. Tile Installation F121: Cement mortar bed (thickset) on waterproof membrane; TCA F121 and [ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C].
 - a. Tile Type: <Insert tile-type designation>.
 - b. Thin-Set Mortar for Cured-Bed Method: [Dry-set] [Latex-] [Medium-bed, latex-] Portland cement mortar.
 - c. Grout: [Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] [Water-cleanable epoxy] grout.
 2. Tile Installation F141: Cement mortar bed (thickset) with cleavage membrane; TCA F141 and [ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C].
 - a. Tile Type: <Insert tile-type designation>.
 - b. Thin-Set Mortar for Cured-Bed Method: [Dry-set] [Latex-] [Medium-bed, latex-] Portland cement mortar.

- c. Grout: [**Sand-Portland cement**] [**Standard sanded cement**] [**Standard unsanded cement**] [**Polymer-modified sanded**] [**Polymer-modified unsanded**] [**Water-cleanable epoxy**] grout.
 3. Tile Installation F142: Organic adhesive; TCA F142.
 - a. Tile Type: <**Insert tile-type designation**>.
 - b. Grout: [**Sand-Portland cement**] [**Standard sanded cement**] [**Standard unsanded cement**] [**Polymer-modified sanded**] [**Polymer-modified unsanded**] [**Water-cleanable epoxy**] grout.
 4. Tile Installation F143: Water-cleanable, tile-setting epoxy; epoxy grout; TCA F143.
 - a. Tile Type: <**Insert tile-type designation**>.
 - b. Grout: Water-cleanable epoxy grout.
 5. Tile Installation F144: Thin-set mortar on cementitious backer units or fiber cement underlayment; TCA F144.
 - a. Tile Type: <**Insert tile-type designation**>.
 - b. Thin-Set Mortar: [**Dry-set**] [**Latex-**] [**Medium-bed, latex-**] Portland cement mortar.
 - c. Grout: [**Sand-Portland cement**] [**Standard sanded cement**] [**Standard unsanded cement**] [**Polymer-modified sanded**] [**Polymer-modified unsanded**] [**Water-cleanable epoxy**] grout.
 6. Tile Installation F150/160: Thin-set mortar on exterior-glue plywood; TCA F150 or TCA F160.
 - a. Tile Type: <**Insert tile-type designation**>.
 - b. Thin-Set Mortar: EGP latex-Portland cement mortar.
 - c. Grout: [**Sand-Portland cement**] [**Standard sanded cement**] [**Standard unsanded cement**] [**Polymer-modified sanded**] [**Polymer-modified unsanded**] [**Water-cleanable epoxy**] grout.
- C. Interior Radiant Heat Floor Installations, Concrete Subfloor:
 1. Tile Installation RH110: Thin-set mortar on crack isolation membrane; hydronic piping installed in concrete; TCA RH110.
 - a. Tile Type: <**Insert tile-type designation**>.
 - b. Thin-Set Mortar: [**Latex-**] [**Medium-bed, latex-**] Portland cement mortar.
 - c. Grout: [**Sand-Portland cement**] [**Standard sanded cement**] [**Standard unsanded cement**] [**Polymer-modified sanded**] [**Polymer-modified unsanded**] [**Water-cleanable epoxy**] grout.
 2. Tile Installation RH115: Thin-set mortar; electric radiant system encapsulated in thin-set mortar; TCA RH115.
 - a. Tile Type: <**Insert tile-type designation**>.

- b. Thin-Set Mortar: [**Latex-**] [**Medium-bed, latex-**] Portland cement mortar.
 - c. Grout: [**Sand-Portland cement**] [**Standard sanded cement**] [**Standard unsanded cement**] [**Polymer-modified sanded**] [**Polymer-modified unsanded**] [**Water-cleanable epoxy**] grout.
 3. Tile Installation RH116: Thin-set mortar on crack isolation membrane; electric radiant system encapsulated in cementitious self-leveling underlayment; TCA RH116.
 - a. Tile Type: <**Insert tile-type designation**>.
 - b. Cementitious Self-Leveling Underlayment: Specified in Section 035416 "Hydraulic Cement Underlayment."
 - c. Thin-Set Mortar: [**Latex-**] [**Medium-bed, latex-**] Portland cement mortar.
 - d. Grout: [**Sand-Portland cement**] [**Standard sanded cement**] [**Standard unsanded cement**] [**Polymer-modified sanded**] [**Polymer-modified unsanded**] [**Water-cleanable epoxy**] grout.
- D. Interior Radiant Heat Floor Installations, Wood Subfloor:
 1. Tile Installation RH130: Thin-set mortar on exterior-glue plywood; electric radiant system encapsulated in thin-set mortar; TCA RH130.
 - a. Tile Type: <**Insert tile-type designation**>.
 - b. Thin-Set Mortar: EGP latex-Portland cement mortar.
 - c. Grout: [**Sand-Portland cement**] [**Standard sanded cement**] [**Standard unsanded cement**] [**Polymer-modified sanded**] [**Polymer-modified unsanded**] [**Water-cleanable epoxy**] grout.
 2. Tile Installation RH135: Thin-set mortar on cementitious backer units or fiber cement underlayment; electric radiant system encapsulated in thin-set mortar; TCA RH135.
 - a. Tile Type: <**Insert tile-type designation**>.
 - b. Thin-Set Mortar: [**Latex-**] [**Medium-bed, latex-**] Portland cement mortar.
 - c. Grout: [**Sand-Portland cement**] [**Standard sanded cement**] [**Standard unsanded cement**] [**Polymer-modified sanded**] [**Polymer-modified unsanded**] [**Water-cleanable epoxy**] grout.
 3. Tile Installation RH140: Thin-set mortar on crack isolation membrane; electric radiant system encapsulated in cementitious self-leveling underlayment; TCA RH140.
 - a. Tile Type: <**Insert tile-type designation**>.
 - b. Cementitious Self-Leveling Underlayment: Specified in Section 035416 "Hydraulic Cement Underlayment."
 - c. Thin-Set Mortar: [**Latex-**] [**Medium-bed, latex-**] Portland cement mortar.
 - d. Grout: [**Sand-Portland cement**] [**Standard sanded cement**] [**Standard unsanded cement**] [**Polymer-modified sanded**] [**Polymer-modified unsanded**] [**Water-cleanable epoxy**] grout.

- E. Interior Wall Installations, Masonry or Concrete:
1. Tile Installation W202: Thin-set mortar; TCA W202.
 - a. Tile Type: <Insert tile-type designation>.
 - b. Thin-Set Mortar: [Dry-set] [Latex-] [Medium-bed, latex-] Portland cement mortar.
 - c. Grout: [Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] [Water-cleanable epoxy] grout.
 2. Tile Installation W211: Cement mortar bed (thickset) bonded to substrate; TCA W211 and [ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C].
 - a. Tile Type: <Insert tile-type designation>.
 - b. Bond Coat Mortar for Wet-Set Method: [Dry-set] [Latex-] Portland cement mortar.
 - c. Thin-Set Mortar for Cured-Bed Method: [Dry-set] [Latex-] Portland cement mortar.
 - d. Grout: [Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] [Water-cleanable epoxy] grout.
 3. Tile Installation W221: Cement mortar bed (thickset) on metal lath[**over waterproof membrane**]; TCA W221 and [ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C].
 - a. Tile Type: <Insert tile-type designation>.
 - b. Bond Coat Mortar for Wet-Set Method: [Dry-set] [Latex-] Portland cement mortar.
 - c. Thin-Set Mortar for Cured-Bed Method: [Dry-set] [Latex-] Portland cement mortar.
 - d. Grout: [Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] [Water-cleanable epoxy] grout.
 4. Tile Installation W222: One-coat cement mortar bed (thickset) on metal lath[**over waterproof membrane**]; TCA W222 and [ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C].
 - a. Tile Type: <Insert tile-type designation>.
 - b. Bond Coat Mortar for Wet-Set Method: [Dry-set] [Latex-] Portland cement mortar.
 - c. Thin-Set Mortar for Cured-Bed Method: [Dry-set] [Latex-] Portland cement mortar.
 - d. Grout: [Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] grout.
 5. Tile Installation W223: Organic adhesive; TCA W223.

- a. Tile Type: <Insert tile-type designation>.
- b. Grout: [Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] grout.

F. Interior Wall Installations, Wood Studs or Furring:

1. Tile Installation W221: Cement mortar bed (thickset)[**over waterproof membrane**] on solid backing; TCA W221 and [ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C].
 - a. Tile Type: <Insert tile-type designation>.
 - b. Bond Coat Mortar for Wet-Set Method: [Dry-set] [Latex-] Portland cement mortar.
 - c. Thin-Set Mortar for Cured-Bed Method: [Dry-set] [Latex-] Portland cement mortar.
 - d. Grout: [Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] [Water-cleanable epoxy] grout.
2. Tile Installation W222: One-coat cement mortar bed (thickset)[**over waterproof membrane**] on solid backing; TCA W222 and [ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C].
 - a. Tile Type: <Insert tile-type designation>.
 - b. Bond Coat Mortar for Wet-Set Method: [Dry-set] [Latex-] Portland cement mortar.
 - c. Thin-Set Mortar for Cured-Bed Method: [Dry-set] [Latex-] Portland cement mortar.
 - d. Grout: [Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] [Water-cleanable epoxy] grout.
3. Tile Installation W223: Organic adhesive on solid backing; TCA W223.
 - a. Tile Type: <Insert tile-type designation>.
 - b. Grout: [Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] grout.
4. Tile Installation W231: Cement mortar bed (thickset); TCA W231 and [ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C].
 - a. Tile Type: <Insert tile-type designation>.
 - b. Bond Coat Mortar for Wet-Set Method: [Dry-set] [Latex-] Portland cement mortar.
 - c. Thin-Set Mortar for Cured-Bed Method: [Dry-set] [Latex-] Portland cement mortar.

- d. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded]** grout.
 5. Tile Installation W243: Thin-set mortar on gypsum board; TCA W243.
 - a. Tile Type: **<Insert tile-type designation>**.
 - b. Thin-Set Mortar: **[Dry-set] [Latex-]** Portland cement mortar.
 - c. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded]** grout.
 6. Tile Installation W244: Thin-set mortar on cementitious backer units or fiber cement underlayment **[over cleavage membrane]**; TCA W244.
 - a. Tile Type: **<Insert tile-type designation>**.
 - b. Thin-Set Mortar: **[Dry-set] [Latex-]** Portland cement mortar.
 - c. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] [Water-cleanable epoxy]** grout.
 7. Tile Installation W245: **[Thin-set mortar] [Organic adhesive]** on coated glass-mat, water-resistant gypsum backer board; TCA W245.
 - a. Tile Type: **<Insert tile-type designation>**.
 - b. Thin-Set Mortar: **[Dry-set] [Latex-]** Portland cement mortar.
 - c. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] [Water-cleanable epoxy]** grout.
- G. Interior Wall Installations, Metal Studs or Furring:
1. Tile Installation W221: Cement mortar bed (thickset) **[over waterproof membrane]** on solid backing; TCA W221 and **[ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C]**.
 - a. Tile Type: **<Insert tile-type designation>**.
 - b. Bond Coat Mortar for Wet-Set Method: **[Dry-set] [Latex-]** Portland cement mortar.
 - c. Thin-Set Mortar for Cured-Bed Method: **[Dry-set] [Latex-]** Portland cement mortar.
 - d. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] [Water-cleanable epoxy]** grout.
 2. Tile Installation W222: One-coat cement mortar bed (thickset) **[over waterproof membrane]** on solid backing; TCA W222 and **[ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C]**.
 - a. Tile Type: **<Insert tile-type designation>**.

- b. Bond Coat Mortar for Wet-Set Method: [**Dry-set**] [**Latex-**] Portland cement mortar.
 - c. Thin-Set Mortar for Cured-Bed Method: [**Dry-set**] [**Latex-**] Portland cement mortar.
 - d. Grout: [**Sand-Portland cement**] [**Standard sanded cement**] [**Standard unsanded cement**] [**Polymer-modified sanded**] [**Polymer-modified unsanded**] [**Water-cleanable epoxy**] grout.
3. Tile Installation W223: Organic adhesive on solid backing; TCA W223.
 - a. Tile Type: <**Insert tile-type designation**>.
 - b. Grout: [**Sand-Portland cement**] [**Standard sanded cement**] [**Standard unsanded cement**] [**Polymer-modified sanded**] [**Polymer-modified unsanded**] grout.
4. Tile Installation W241: Cement mortar bed (thickset); TCA W241 and ANSI A108.1B.
 - a. Tile Type: <**Insert tile-type designation**>.
 - b. Thin-Set Mortar for Cured-Bed Method: [**Dry-set**] [**Latex-**] Portland cement mortar.
 - c. Grout: [**Sand-Portland cement**] [**Standard sanded cement**] [**Standard unsanded cement**] [**Polymer-modified sanded**] [**Polymer-modified unsanded**] grout.
5. Tile Installation W242: Organic adhesive on gypsum board; TCA W242.
 - a. Tile Type: <**Insert tile-type designation**>.
 - b. Grout: [**Polymer-modified sanded**] [**Polymer-modified unsanded**] grout.
6. Tile Installation W243: Thin-set mortar on gypsum board; TCA W243.
 - a. Tile Type: <**Insert tile-type designation**>.
 - b. Thin-Set Mortar: [**Dry-set**] [**Latex-**] Portland cement mortar.
 - c. Grout: [**Sand-Portland cement**] [**Standard sanded cement**] [**Standard unsanded cement**] [**Polymer-modified sanded**] [**Polymer-modified unsanded**] grout.
7. Tile Installation W244: Thin-set mortar on cementitious backer units or fiber cement underlayment[**over cleavage membrane**]; TCA W244.
 - a. Tile Type: <**Insert tile-type designation**>.
 - b. Thin-Set Mortar: [**Dry-set**] [**Latex-**] Portland cement mortar.
 - c. Grout: [**Sand-Portland cement**] [**Standard sanded cement**] [**Standard unsanded cement**] [**Polymer-modified sanded**] [**Polymer-modified unsanded**] [**Water-cleanable epoxy**] grout.
8. Tile Installation W245: [**Thin-set mortar**] [**Organic adhesive**] on coated glass-mat, water-resistant gypsum backer board; TCA W245.

- a. Tile Type: <Insert tile-type designation>.
 - b. Thin-Set Mortar: [Dry-set] [Latex-] Portland cement mortar.
 - c. Grout: [Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] [Water-cleanable epoxy] grout.
- H. Bathtub Wall Installations, [Wood] [Metal] Studs or Furring:
1. Tile Installation B413: [Thin-set mortar] [Organic adhesive] on water-resistant gypsum board; TCA B413.
 - a. Tile Type: <Insert tile-type designation>.
 - b. Thin-Set Mortar: [Dry-set] [Latex-] Portland cement mortar.
 - c. Grout: [Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] grout.
- I. Bathtub/Shower Wall Installations, [Wood] [Metal] Studs or Furring:
1. Tile Installation B411: Cement mortar bed (thickset); TCA B411 and ANSI A108.1A.
 - a. Tile Type: <Insert tile-type designation>.
 - b. Bond Coat Mortar for Wet-Set Method: [Dry-set] [Latex-] Portland cement mortar.
 - c. Grout: [Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] grout.
 2. Tile Installation B412: Thin-set mortar on cementitious backer units or fiber cement underlayment; TCA B412.
 - a. Tile Type: <Insert tile-type designation>.
 - b. Thin-Set Mortar: [Dry-set] [Latex-] Portland cement mortar.
 - c. Grout: [Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] [Water-cleanable epoxy] grout.
 3. Tile Installation B419: [Thin-set mortar] [Organic adhesive] on coated glass-mat, water-resistant backer board; TCA B419.
 - a. Tile Type: <Insert tile-type designation>.
 - b. Thin-Set Mortar: [Dry-set] [Latex-] Portland cement mortar.
 - c. Grout: [Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] [Water-cleanable epoxy] grout.
- J. Shower Receptor and Wall Installations, Concrete or Masonry:
1. Tile Installation B414: Cement mortar bed (thickset); TCA B414 and [ANSI

A108.1A] [ANSI A108.1B] [ANSI A108.1C].

- a. Tile Type: <Insert tile-type designation>.
 - b. Bond Coat Mortar for Wet-Set Method: [**Dry-set**] [**Latex-**] Portland cement mortar.
 - c. Thin-Set Mortar for Cured-Bed Method: [**Dry-set**] [**Latex-**] Portland cement mortar.
 - d. Grout: [**Sand-Portland cement**] [**Standard sanded cement**] [**Standard unsanded cement**] [**Polymer-modified sanded**] [**Polymer-modified unsanded**] grout.
2. Tile Installation B421: Thin-set mortar on waterproof membrane; TCA B421.
- a. Tile Type: <Insert tile-type designation>.
 - b. Thin-Set Mortar: Latex-Portland cement mortar.
 - c. Grout: [**Sand-Portland cement**] [**Standard sanded cement**] [**Standard unsanded cement**] [**Polymer-modified sanded**] [**Polymer-modified unsanded**] grout.
3. Tile Installation B422: Thin-set mortar on waterproof membrane with integrated bonding flange for bonded membranes; TCA B422.
- a. Tile Type: <Insert tile-type designation>.
 - b. Thin-Set Mortar: [**Dry-set**] [**Latex-**] Portland cement mortar.
 - c. Grout: [**Sand-Portland cement**] [**Standard sanded cement**] [**Standard unsanded cement**] [**Polymer-modified sanded**] [**Polymer-modified unsanded**] grout.
- K. Shower Receptor and Wall Installations, [**Wood**] [**Metal**] Studs or Furring:
1. Tile Installation B414: Cement mortar bed (thickset); TCA B414 and [**ANSI A108.1A**] [**ANSI A108.1B**] [**ANSI A108.1C**].
 - a. Tile Type: <Insert tile-type designation>.
 - b. Bond Coat Mortar for Wet-Set Method: [**Dry-set**] [**Latex-**] Portland cement mortar.
 - c. Thin-Set Mortar for Cured-Bed Method: [**Dry-set**] [**Latex-**] Portland cement mortar.
 - d. Grout: [**Sand-Portland cement**] [**Standard sanded cement**] [**Standard unsanded cement**] [**Polymer-modified sanded**] [**Polymer-modified unsanded**] grout.
 2. Tile Installation B415: Thin-set mortar on cementitious backer units or fiber cement underlayment; TCA B415.
 - a. Tile Type: <Insert tile-type designation>.
 - b. Thin-Set Mortar: [**Dry-set**] [**Latex-**] Portland cement mortar.
 - c. Grout: [**Sand-Portland cement**] [**Standard sanded cement**] [**Standard unsanded cement**] [**Polymer-modified sanded**] [**Polymer-modified unsanded**] grout.

3. Tile Installation B420: Thin-set mortar on coated glass-mat, water-resistant backer board; TCA B420.
 - a. Tile Type: **<Insert tile-type designation>**.
 - b. Thin-Set Mortar: **[Dry-set]** **[Latex-]** Portland cement mortar.
 - c. Grout: **[Sand-Portland cement]** **[Standard sanded cement]** **[Standard unsanded cement]** **[Polymer-modified sanded]** **[Polymer-modified unsanded]** grout.

4. Tile Installation B421: Thin-set mortar on waterproof membrane over cementitious backer units or fiber cement underlayment; TCA B421.
 - a. Tile Type: **<Insert tile-type designation>**.
 - b. Thin-Set Mortar: Latex-Portland cement mortar.
 - c. Grout: **[Sand-Portland cement]** **[Standard sanded cement]** **[Standard unsanded cement]** **[Polymer-modified sanded]** **[Polymer-modified unsanded]** grout.

5. Tile Installation B422: Thin-set mortar on waterproof membrane over cementitious backer units or fiber cement underlayment with integrated bonding flange for bonded membranes; TCA B422.
 - a. Tile Type: **<Insert tile-type designation>**.
 - b. Thin-Set Mortar: Latex-Portland cement mortar.
 - c. Grout: **[Sand-Portland cement]** **[Standard sanded cement]** **[Standard unsanded cement]** **[Polymer-modified sanded]** **[Polymer-modified unsanded]** grout.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 093000

SECTION 093033 - STONE TILING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Dimension stone tile and related setting materials applied to **[floors] [and] [walls]**.
2. Stone thresholds.
3. Waterproof membrane.
4. Crack isolation membrane.
5. Tile backing panels.
6. Metal edge strips.

B. Related Sections:

1. Section 033000 "Cast-in-Place Concrete" for monolithic slab finishes specified for tile substrates.
2. **[Section 071326 "Self-Adhering Sheet Waterproofing"] [Section 071353 "Elastomeric Sheet Waterproofing"] [Section 071354 "Thermoplastic Sheet Waterproofing"] [Section 071413 "Hot Fluid-Applied Rubberized Asphalt Waterproofing"] [Section 071416 "Cold Fluid-Applied Waterproofing"]** for waterproofing under thickset mortar beds.
3. Section 092400 "Portland Cement Plastering" for Portland cement scratch coat over metal lath on wall surfaces.
4. Section 092613 "Gypsum Veneer Plastering" for cementitious backer units.
5. Section 092900 "Gypsum Board" for **[cementitious backer units] [glass-mat, water-resistant backer board]**.
6. Section 096340 "Stone Flooring" for stone paving and flooring other than dimension stone tile.
7. Section 097516 "Stone Base" for stone base in the form of running trim rather than tile.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Dimension Stone Tile: Modular stone units less than **3/4 inch (19 mm)** thick.
- B. Module Size: Actual tile size plus joint width.
- C. Polished Finish: Smooth surface that produces sharp, mirrorlike reflections. Reflected images of overhead fluorescent tubes have straight lines without visible distortion when viewed at arm's length.
- D. Honed Finish: Smooth, nonreflective surface similar to that produced by grinding with a 400- to 1200-grit abrasive; with a gap not exceeding **0.005 inch (0.13 mm)** when faces are tested for flatness with a **24-inch (600-mm)** straightedge.
- E. Sand-Rubbed Finish: Uniform, fine-textured surface similar to that produced by grinding with a 40-grit abrasive; with a gap not exceeding **1/32 inch (0.8 mm)** when faces are tested for flatness with a **24-inch (600-mm)** straightedge.
- F. Thermal Finish: Uniform, coarse-textured surface produced by thermal shock; with a gap not exceeding [**3/16 inch (5 mm)**] **<Insert gap>** when faces are tested for flatness with a **24-inch (600-mm)** straightedge.
- G. Natural-Cleft Finish: Uneven surface produced by splitting stone along a natural cleavage plane; without visible tool marks and with a gap not exceeding [**3/16 inch (5 mm)**] **<Insert gap>** when faces are tested for flatness with a **24-inch (600-mm)** straightedge.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
 - 2. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regionally manufactured[**and regionally extracted and manufactured**] materials. Include statement indicating cost for each regionally manufactured material.
 - a. Include statement indicating location and distance from manufacturer to Project for each regionally manufactured material.
 - b. Include statement indicating location of and distance from Project to point of extraction, harvest, or recovery for each raw material used in regionally

extracted and manufactured materials and fraction by weight of each regionally manufactured material that is regionally extracted.

3. Product Data for Credit IEQ 4.1: For **[adhesives] [and] [sealants]**, documentation including printed statement of VOC content.
 4. Product Data for Credit IEQ 4.3: For **[adhesives] [and] [grouts]**, documentation including printed statement of VOC content.
 5. Product Data for Credit IEQ 4.3: For stone tile floors, documentation from an independent testing agency indicating compliance with the FloorScore Standard.
 6. Laboratory Test Reports for Credit IEQ 4: For **[adhesives] [sealants] [and] [stone tile flooring systems]**, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: Show locations of each type of stone tile and tile pattern. Show widths, details, and locations of expansion, contraction, control, and isolation joints in substrates and finished stone tile surfaces. **[Show stone thresholds.]**
- D. Samples for Initial Selection: For each type of grout indicated and accessories involving color selection.
- E. Samples for Verification:
1. Full-size units of each type of stone tile **[in each finish required]**.
 2. Assembled Samples with grouted joints for each type of stone tile **[and for each finish required]**, at least **[36 inches (900 mm) square]** **<Insert size>** and mounted on a rigid panel. Use grout of type and in color(s) approved for completed Work.
 3. Range Samples consisting of at least **[two] [three] [four] [five]** **<Insert number>** full-size units of each type of stone tile, exhibiting extremes of the full range of color and other visual characteristics expected. Range Samples establish the standard by which individual stone tiles **[and thresholds]** will be judged.
 4. Stone thresholds in **6-inch (150-mm)** lengths.
 5. Metal edge strips in **6-inch (150-mm)** lengths.
- 1.5 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For Installer.
- 1.6 CLOSEOUT SUBMITTALS
- A. Maintenance Data: For dimension stone tile to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match and are from same production runs as products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Dimension Stone Tile: **[Furnish quantity of full-size units equal to 3 percent of amount installed, for each type, composition, color, pattern, and size indicated.]**
 - a. **<Insert, in separate subparagraphs, stone tile-type designation or description and quantity required for each category of stone tile for which extra material is required>.**
 2. Grout: Furnish quantity of grout equal to 3 percent of amount installed for each type, composition, and color indicated.

1.8 QUALITY ASSURANCE

- A. Supplier Qualifications: A firm experienced in supplying products similar to those indicated for the Project and with a record of successful in-service performance.
- B. Source Limitations for Stone Tile[**and Thresholds**]: Obtain each stone product type through single source from single producer.
1. For each stone product type, provide one stone variety.
 2. Where two or more stone product types are identical except for size or finish, provide same variety for each type.
 3. Where threshold types are identical to stone tile types except for size or finish, provide same variety.
 4. Obtain each variety of stone from same location in a single quarry with resources to provide materials of consistent quality in appearance and physical properties.
- C. Source Limitations for Setting and Grouting Materials: Obtain ingredients of a uniform quality for each mortar, adhesive, and grout component from single manufacturer and each aggregate from single source or producer.
- D. Source Limitations for Other Products: Obtain each of the following products specified in this Section from a single manufacturer for each product:
1. Waterproof membrane.
 2. Crack isolation membrane.
 3. Joint sealants.
 4. Cementitious backer units.
 5. Metal edge strips.
- E. Installer Qualifications: A firm that has specialized in installation of types of products required for Project for not less than five (5) years and which is acceptable to manufacturer(s) of primary materials.

- F. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Build mockup of[**each type of**] stone floor tile installation.
 - 2. Build mockup of[**each type of**] stone wall tile installation.
 - 3. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

- G. Dry-Laid Mockups: Lay out tiles in dry-laid mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Lay out mockup of[**each type of**] stone floor tile installation.
 - 2. Lay out mockup of[**each type of**] stone wall tile installation.
 - 3. Maintain dry-laid mockups in an undisturbed condition until equivalent areas of the completed Work are approved to serve as mockups.

- H. Preinstallation Conference: Conduct conference at [**Project site**] [**location and time as determined by DEN Project Manager**] <Insert location>.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver and store packaged materials in original containers with seals unbroken and labels intact until time of use.

- B. Store stone tile and cementitious materials on elevated platforms, under cover, and in a dry location.

- C. Store aggregates where grading and other required characteristics can be maintained and contamination can be avoided.

- D. Store liquid materials in unopened containers and protected from freezing.

1.10 PROJECT CONDITIONS

- A. Environmental Limitations: Do not install stone tile until construction in spaces is complete and ambient temperature and humidity conditions are maintained at the levels indicated in referenced standards and manufacturer's written instructions.

1.11 SEQUENCING AND SCHEDULING

- A. Sequence stone tile installation with other work to minimize possibility of damage and soiling during remainder of construction period.

- B. Install stone tile and accessories only after other finishing operations, including painting, have been completed.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 STONE PRODUCTS

- A. Varieties and Sources: Subject to compliance with requirements, **[provide those indicated] [provide one of those indicated] [stone products that may be incorporated into the Work include, but are not limited to, those indicated]**.
- B. Regional Materials: Provide stone tiles **[and thresholds]** that have been manufactured within **500 miles (800 km)** of Project site from stone that has been extracted within **500 miles (800 km)** of Project site.
- C. Regionally Manufactured Materials: Provide stone tiles **[and thresholds]** that have been manufactured within **500 miles (800 km)** of Project site.
- D. Regionally Extracted and Manufactured Materials: Provide stone tiles **[and thresholds]** that have been manufactured within **500 miles (800 km)** of Project site from stone that has been extracted within **500 miles (800 km)** of Project site.
- E. FloorScore Compliance: Stone tile for floors shall comply with requirements of FloorScore Standard.
- F. Low-Emitting Materials: Stone tile flooring systems shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- G. Abrasion Resistance of Stone Tile for Floors: Provide stone with a value of not less than **[8] [10] [12] [25] <Insert value>**, as determined per ASTM C 1353 or ASTM C 241.
- H. Static Coefficient of Friction of Stone Tile for Floors: Provide products with the following values as determined by testing identical products per ASTM C 1028:
 - 1. Level Surfaces: Minimum **<Insert required static coefficient of friction>**.
 - 2. Step Treads: Minimum **<Insert required static coefficient of friction>**.
 - 3. Ramp Surfaces: Minimum **<Insert required static coefficient of friction>**.
- I. Provide stone products that are free of defects impairing their function for use indicated, including cracks, seams, and starts.

- J. Pattern Orientation: For stone varieties with a directional pattern, provide tile with pattern **[oriented parallel to one side of tile] [randomly oriented at various angles to sides of tiles]**.
1. For stone varieties that exhibit a directional pattern, provide thresholds with pattern **[oriented parallel to] [oriented at an angle of 45 degrees or less to] [randomly oriented at various angles to]** long edges of thresholds.
- K. Stone Tile Type[**ST-<#>**]:
1. Stone Type: Granite, complying with ASTM C 615.
 2. Stone Type: Limestone, complying with ASTM C 568, Classification **[II (Medium Density)] [III (High Density)]**.
 3. Stone Type: Marble, complying with ASTM C 503, Classification **[I, Calcite] [II, Dolomite]**.
 4. Stone Type: Quartz-based stone, complying with ASTM C 616, Classification **[II, Quartzitic Sandstone] [III, Quartzite]**.
 5. Stone Type: Serpentine, complying with ASTM C 1526, Classification **[I, Exterior] [II, Interior]**.
 6. Stone Type: Slate, complying with ASTM C 629, Classification **[I, Exterior] [II, Interior]**.
 7. Stone Type: Travertine, complying with ASTM C 1527, Classification **[I, Exterior] [II, Interior]**.
 8. Varieties and Sources:
 - a. **<Insert name of variety and producer, distributor, or importer>**.
 9. Cut: **[Vein] [Fleuri]**.
 10. Finish: **[Polished] [Honed] [Sand rubbed] [Thermal] [Natural cleft] [As indicated] [Match DEN Project Manager's sample]**.
 11. Edges: **[Square] [Beveled] [Eased]**.
 12. Module Size: **[6 by 6 inches (152 by 152 mm)] [6 by 12 inches (152 by 305)] [12 by 12 inches (305 by 305 mm)] [300 by 300 mm] [18 by 18 inches (457 by 457 mm)] [500 by 500 mm] [As indicated]**.
 13. Nominal Tile Thickness: **[1/4 inch (6 mm)] [3/8 inch (10 mm)] [1/2 inch (13 mm)] [5/8 inch (16 mm)]**.
 14. Joint Width: **[Hand tight] [1/16 inch (1.5 mm)] [1/8 inch (3 mm)] [1/4 inch (6 mm)] [3/8 inch (10 mm)] [1/2 inch (13 mm)]**.
- L. Stone Threshold Type[**TH-<#>**]:
1. Stone Type: Granite, complying with ASTM C 615.
 2. Stone Type: Limestone, complying with ASTM C 568, Classification **[II (Medium Density)] [III (High Density)]**.
 3. Stone Type: Marble, complying with ASTM C 503, Classification **[I, Calcite] [II, Dolomite]**.
 4. Stone Type: Quartz-based stone, complying with ASTM C 616, Classification **[II, Quartzitic Sandstone] [III, Quartzite]**.
 5. Stone Type: Serpentine, complying with ASTM C 1526, Classification **[I, Exterior] [II, Interior]**.

6. Stone Type: Slate, complying with ASTM C 629, Classification [**I, Exterior**] [**II, Interior**].
7. Stone Type: Travertine, complying with ASTM C 1527, Classification [**I, Exterior**] [**II, Interior**].
8. Varieties and Sources:
 - a. <Insert name of variety and producer, distributor, or importer>.
9. Cut: [**Vein**] [**Fleuri**].
10. Finish: [**Polished**] [**Honed**] [**Sand rubbed**] [**Thermal**] [**Natural cleft**] [**As indicated**] [**Match DEN Project Manager's sample**].
11. Edges: [**Square**] [**Beveled**] [**Eased**] [**As indicated**].
12. Nominal Threshold Thickness: [**1/4 inch (6 mm)**] [**3/8 inch (10 mm)**] [**1/2 inch (13 mm)**] [**5/8 inch (16 mm)**] [**3/4 inch (19 mm)**].

2.2 TILE BACKING PANELS

- A. Cementitious Backer Units: ANSI A118.9 or ASTM C 1325, in maximum lengths available to minimize end-to-end butt joints.
 1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. C-Cure; C-Cure Board 990.
 - b. Custom Building Products; Wonderboard.
 - c. FinPan, Inc.; Util-A-Crete Concrete Backer Board.
 - d. USG Corporation; DUROCK Cement Board.
 - e. <Insert manufacturer's name; product name or designation>.
 - f. or approved equal.
 2. Thickness: [**1/4 inch (6.4 mm)**] [**1/2 inch (12.7 mm)**] [**5/8 inch (15.9 mm)**] [**As indicated**].
- B. Fiber-Cement Underlayment: ASTM C 1288, in maximum lengths available to minimize end-to-end butt joints.
 1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. CertainTeed Corp.; FiberCement [Underlayment] [BackerBoard].
 - b. James Hardie; [Hardiebacker] [Hardiebacker 500].
 - c. <Insert manufacturer's name; product name or designation>.
 - d. or approved equal.
 2. Thickness: [**1/4 inch (6.4 mm)**] [**1/2 inch (12.7 mm)**] [**As indicated**].

2.3 WATERPROOF MEMBRANES

- A. General: Manufacturer's standard product[, **selected from the following,**] that complies with ANSI A118.10 and is recommended by the manufacturer for the

application indicated. Include reinforcement and accessories recommended by manufacturer.

- B. Chlorinated Polyethylene Sheet: Nonplasticized, chlorinated polyethylene faced on both sides with nonwoven polyester fabric; **0.030-inch** (0.76-mm) nominal thickness.
- Products:** Subject to compliance with requirements, provide one of the following:
 - Noble Company (The);** Nobleseal TS.
 - <Insert manufacturer's name; product name or designation>.**
 - or approved equal.
- C. PVC Sheet: Two layers of PVC sheet heat-fused together and to facings of nonwoven polyester; **0.040-inch** (1.01-mm) nominal thickness.
- Products:** Subject to compliance with requirements, provide one of the following:
 - Compotite Corporation;** Composeal Gold.
 - <Insert manufacturer's name; product name or designation>.**
 - or approved equal.
- D. Polyethylene Sheet: Polyethylene faced on both sides with fleece webbing; **0.008-inch** (0.203-mm) nominal thickness.
- Products:** Subject to compliance with requirements, provide one of the following:
 - Schluter Systems L.P.;** KERDI.
 - <Insert manufacturer's name; product name or designation>.**
 - or approved equal.
- E. Fabric-Reinforced, Modified-Bituminous Sheet: Self-adhering, SBS-modified-bituminous sheet with woven reinforcement facing; **0.040-inch** (1.01-mm) nominal thickness.
- Products:** Subject to compliance with requirements, provide one of the following:
 - National Applied Construction Products, Inc.;** Strataflex.
 - <Insert manufacturer's name; product name or designation>.**
 - or approved equal.
- F. Fabric-Reinforced, Fluid-Applied Membrane: System consisting of liquid-latex rubber or elastomeric polymer and continuous fabric reinforcement.
- Products:** Subject to compliance with requirements, provide one of the following:
 - Boiardi Products, a QEP company; Elastiment 344 Reinforced Waterproofing and Anti-Fracture/Crack Suppression Membrane.**
 - Bonsal American, an Oldcastle company; B 6000 Waterproof Membrane with Glass Fabric.**
 - Bostik, Inc.; Hydroment Blacktop 90210.**

- d. [Custom Building Products; 9240 Waterproofing and Anti-Fracture Membrane.](#)
 - e. [Laticrete International, Inc.; Laticrete 9235 Waterproof Membrane.](#)
 - f. [MAPEI Corporation; \[Mapelastic L \(PRP M19\)\] \[Mapelastic HPG with MAPEI Fiberglass Mesh\].](#)
 - g. [Mer-Kote Products, Inc.; Hydro-Guard 2000.](#)
 - h. [Summitville Tiles, Inc.; S-9000.](#)
 - i. **<Insert manufacturer's name; product name or designation>.**
 - j. or approved equal.
- G. Fluid-Applied Membrane: Liquid-latex rubber or elastomeric polymer.
1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. [Boiardi Products, a QEP company; Elastiment 644 Membrane Waterproofing System.](#)
 - b. [Bonsal American, an Oldcastle company; B 6000 Waterproof Membrane.](#)
 - c. [Bostik, Inc.; \[Durabond D-222 Duraguard Membrane\] \[Hydroment Gold\].](#)
 - d. [C-Cure; Pro-Red Waterproofing Membrane 63.](#)
 - e. [Custom Building Products; Redgard Waterproofing and Crack Prevention Membrane.](#)
 - f. [Jamo Inc.; Waterproof.](#)
 - g. [Laticrete International, Inc.; \[Latapoxy 24hr HydroProofing\] \[Laticrete Watertight Floor N' Wall Waterproofing\].](#)
 - h. [MAPEI Corporation; Mapelastic HPG.](#)
 - i. [Southern Grouts & Mortars, Inc.; Southcrete 1100 Crack Suppression and Waterproofing.](#)
 - j. [TEC, a subsidiary of H. B. Fuller Company; HydraFlex - Waterproofing Crack Isolation Membrane.](#)
 - k. **<Insert manufacturer's name; product name or designation>.**
 - l. or approved equal.
- H. Latex-Portland Cement: Flexible mortar consisting of cement-based mix and latex additive.
1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. [Boiardi Products, a QEP company; Elastiment 323 Cement Based Waterproofing, Anti-Fracture/Crack Suppression Membrane.](#)
 - b. [C-Cure; UltraCure 971.](#)
 - c. [MAPEI Corporation; Mapelastic \(PRP 315\).](#)
 - d. [Southern Grouts & Mortars, Inc.; Southcrete 1100.](#)
 - e. [TEC, a subsidiary of H. B. Fuller Company; Triple Flex Waterproofing, Crack Isolation Membrane & Mortar.](#)
 - f. **<Insert manufacturer's name; product name or designation>.**
 - g. or approved equal.
- I. Urethane Waterproofing and Tile-Setting Adhesive: One-part, liquid-applied urethane[, with a VOC content of 65 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24)],[, that complies with the testing and product

requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers,") in a consistency suitable for trowel application and intended for use as both waterproofing and tile-setting adhesive in a two-step process.

1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. **Bostik, Inc.;** [Durabond D-200] [Hydroment Ultra-Set] [Hydroment Ultra-Set Advanced].
 - b. <Insert manufacturer's name; product name or designation>.
 - c. or approved equal.

2.4 CRACK ISOLATION MEMBRANES

A. General: Manufacturer's standard product[, **selected from the following,**] that complies with ANSI A118.12 for [**standard**] [**high**] performance and is recommended by the manufacturer for the application indicated. Include reinforcement and accessories recommended by manufacturer.

B. Chlorinated Polyethylene Sheet: Nonplasticized, chlorinated polyethylene faced on both sides with nonwoven polyester fabric; **0.030-inch** (0.76-mm) nominal thickness.

1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. **Noble Company (The);** Nobleseal CIS.
 - b. <Insert manufacturer's name; product name or designation>.
 - c. or approved equal.

C. PVC Sheet: Two layers of PVC sheet heat-fused together and to facings of nonwoven polyester; **0.040-inch** (1.01-mm) nominal thickness.

1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. **Compotite Corporation;** Composeal Gold.
 - b. <Insert manufacturer's name; product name or designation>.
 - c. or approved equal.

D. Polyethylene Sheet: Polyethylene faced on both sides with fleece webbing; **0.008-inch** (0.203-mm) nominal thickness.

1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. **Schluter Systems L.P.;** KERDI.
 - b. <Insert manufacturer's name; product name or designation>.
 - c. or approved equal.

E. Corrugated Polyethylene: Corrugated polyethylene with dovetail-shaped corrugations and with anchoring webbing on the underside; **1/8-inch** (3-mm) nominal thickness.

1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. Schluter Systems L.P.; DITRA.
 - b. **<Insert manufacturer's name; product name or designation>**.
 - c. or approved equal.

- F. Fabric-Reinforced, Modified-Bituminous Sheet: Self-adhering, modified-bituminous sheet with fabric reinforcement facing; 0.040-inch (1.01-mm) nominal thickness.
 1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. MAPEI Corporation: Mapelastic SM.
 - b. National Applied Construction Products, Inc.: Strataflex.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.

- G. Fabric-Reinforced, Fluid-Applied Membrane: System consisting of liquid-latex rubber or elastomeric polymer and fabric reinforcement.
 1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. Boiardi Products, a QEP company; Elastiment 344 Reinforced Waterproofing and Anti-Fracture/Crack Suppression Membrane.
 - b. Bonsal American, an Oldcastle company; B 6000 Waterproof Membrane with Glass Fabric.
 - c. Bostik, Inc.; Hydroment Blacktop 90210.
 - d. Custom Building Products; 9240 Waterproofing and Anti-Fracture Membrane.
 - e. Laticrete International, Inc.; Laticrete [**Blue 92 Anti-Fracture Membrane**] [**9235 Waterproof Membrane**].
 - f. MAPEI Corporation; [**Mapelastic L (PRP M19)**] [**Mapelastic HPG with MAPEI Fiberglass Mesh**].
 - g. Mer-Kote Products, Inc.; Hydro-Guard 2000.
 - h. Summitville Tiles, Inc.; S-9000.
 - i. **<Insert manufacturer's name; product name or designation>**.
 - j. or approved equal.

- H. Fluid-Applied Membrane: Liquid-latex rubber or elastomeric polymer.
 1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. Bostik, Inc.; [**Durabond D-222 Duraguard Membrane**] [**Hydroment Gold**].
 - b. C-Cure; [**CureLastic 949**] [**Pro-Red Waterproofing Membrane 963**].
 - c. Custom Building Products; [**Redgard Waterproofing and Crack Prevention Membrane**] [**FractureFree Crack Prevention Membrane**] [**Semco Crack Prevention Membrane**].
 - d. Jamo Inc.; Waterproof.
 - e. Mer-Kote Products, Inc.; Fracture-Guard 5000.
 - f. Southern Grouts & Mortars, Inc.; Southcrete 1100 Crack Suppression and Waterproofing.

- c. Configuration over Studs and Furring: Flat.
 - d. Configuration over Solid Surfaces: Self furring.
 - e. Weight: [2.5 lb/sq. yd. (1.4 kg/sq. m)] [3.4 lb/sq. yd. (1.8 kg/sq. m)].
 4. Latex Additive: **[Manufacturer's standard] [acrylic resin] [or] [styrene-butadiene-rubber]** water emulsion, serving as replacement for part or all of gaging water, of type specifically recommended by latex-additive manufacturer for use with field-mixed Portland cement and aggregate mortar bed.
- B. Dry-Set Portland Cement Mortar (Thin Set): ANSI A118.1.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Boiardi Products; a QEP company.](#)
 - b. [Bonsal American; an Oldcastle company.](#)
 - c. [Bostik, Inc.](#)
 - d. [C-Cure.](#)
 - e. [Custom Building Products.](#)
 - f. [Jamo Inc.](#)
 - g. [Laticrete International, Inc.](#)
 - h. [MAPEI Corporation.](#)
 - i. [Southern Grouts & Mortars, Inc.](#)
 - j. [Summitville Tiles, Inc.](#)
 - k. [TEC; a subsidiary of H. B. Fuller Company.](#)
 - l. **<Insert manufacturer's name>.**
 - m. or approved equal.
 2. For wall applications, provide mortar that complies with requirements for nonsagging mortar in addition to the other requirements in ANSI A118.1.
- C. Latex-Portland Cement Mortar (Thin Set): ANSI A118.4.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Boiardi Products; a QEP company.](#)
 - b. [Bonsal American; an Oldcastle company.](#)
 - c. [Bostik, Inc.](#)
 - d. [C-Cure.](#)
 - e. [Custom Building Products.](#)
 - f. [Jamo Inc.](#)
 - g. [Laticrete International, Inc.](#)
 - h. [MAPEI Corporation.](#)
 - i. [Mer-Kote Products, Inc.](#)
 - j. [Southern Grouts & Mortars, Inc.](#)
 - k. [Summitville Tiles, Inc.](#)
 - l. [TEC; a subsidiary of H. B. Fuller Company.](#)
 - m. **<Insert manufacturer's name>.**

- n. or approved equal.
 2. Provide prepackaged, dry-mortar mix containing dry, redispersible, vinyl acetate or acrylic additive to which only water must be added at Project site.
 3. Provide prepackaged, dry-mortar mix combined with [**acrylic resin**] [**or**] [**styrene-butadiene-rubber**] liquid-latex additive at Project site.
 4. For wall applications, provide mortar that complies with requirements for nonsagging mortar in addition to the other requirements in ANSI A118.4.
- D. Medium-Bed, Latex-Portland Cement Mortar: Comply with requirements in ANSI A118.4. Provide product that is approved by manufacturer for application thickness of [**5/8 inch** (16 mm)] **<Insert thickness>**.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Bonsal American; an Oldcastle company.](#)
 - b. [Bostik, Inc.](#)
 - c. [C-Cure.](#)
 - d. [Custom Building Products.](#)
 - e. [Jamo Inc.](#)
 - f. [Laticrete International, Inc.](#)
 - g. [MAPEI Corporation.](#)
 - h. [Mer-Kote Products, Inc.](#)
 - i. [Southern Grouts & Mortars, Inc.](#)
 - j. [Summitville Tiles, Inc.](#)
 - k. [TEC; a subsidiary of H. B. Fuller Company.](#)
 - l. **<Insert manufacturer's name>**.
 - m. or approved equal.
 2. Provide prepackaged, dry-mortar mix containing dry, redispersible, vinyl acetate or acrylic additive to which only water must be added at Project site.
 3. Provide prepackaged, dry-mortar mix combined with [**acrylic resin**] [**or**] [**styrene-butadiene-rubber**] liquid-latex additive at Project site.
- E. EGP (Exterior Glue Plywood) Latex-Portland Cement Mortar (Thin Set): ANSI A118.11.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Bonsal American; an Oldcastle company.](#)
 - b. [Bostik, Inc.](#)
 - c. [C-Cure.](#)
 - d. [Custom Building Products.](#)
 - e. [Jamo Inc.](#)
 - f. [Laticrete International, Inc.](#)
 - g. [MAPEI Corporation.](#)
 - h. [Southern Grouts & Mortars, Inc.](#)
 - i. [Summitville Tiles, Inc.](#)

- j. [TEC; a subsidiary of H. B. Fuller Company.](#)
 - k. <Insert manufacturer's name>.
 - l. or approved equal.
 2. Provide prepackaged, dry-mortar mix containing dry, redispersible, vinyl acetate or acrylic additive to which only water must be added at Project site.
 3. Provide prepackaged, dry-mortar mix combined with [acrylic resin] [or] [styrene-butadiene-rubber] liquid-latex additive at Project site.
- F. Water-Cleanable, Tile-Setting Epoxy: ANSI A118.3[.], with a VOC content of 65 g/L or less when calculated according to 40 CFR 59, Subpart D.], that complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."]
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Atlas Minerals & Chemicals, Inc.](#)
 - b. [Bonsal American; an Oldcastle company.](#)
 - c. [Bostik, Inc.](#)
 - d. [C-Cure.](#)
 - e. [Custom Building Products.](#)
 - f. [Jamo Inc.](#)
 - g. [Laticrete International, Inc.](#)
 - h. [MAPEI Corporation.](#)
 - i. [Mer-Kote Products, Inc.](#)
 - j. [Southern Grouts & Mortars, Inc.](#)
 - k. [Summitville Tiles, Inc.](#)
 - l. [TEC; a subsidiary of H. B. Fuller Company.](#)
 - m. <Insert manufacturer's name>.
 - n. or approved equal.
- G. Organic Adhesive: ANSI A136.1, Type I[.], with a VOC content of 65 g/L or less when calculated according to 40 CFR 59, Subpart D.], that complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."]
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Bonsal American; an Oldcastle company.](#)
 - b. [Bostik, Inc.](#)
 - c. [C-Cure.](#)
 - d. [Custom Building Products.](#)
 - e. [DAP Inc.](#)
 - f. [Jamo Inc.](#)
 - g. [Laticrete International, Inc.](#)
 - h. [MAPEI Corporation.](#)

- i. [Southern Grouts & Mortars, Inc.](#)
- j. [Summitville Tiles, Inc.](#)
- k. [TEC; a subsidiary of H. B. Fuller Company.](#)
- l. **<Insert manufacturer's name>.**
- m. or approved equal

2.6 GROUT MATERIALS

A. Sand-Portland Cement Grout: ANSI A108.10, composed of white or gray cement and white or colored aggregate as required to produce color indicated.

B. Standard Cement Grout: ANSI A118.6.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [Boiardi Products; a QEP company.](#)
- b. [Bonsal American; an Oldcastle company.](#)
- c. [Bostik, Inc.](#)
- d. [C-Cure.](#)
- e. [Custom Building Products.](#)
- f. [Jamo Inc.](#)
- g. [Laticrete International, Inc.](#)
- h. [MAPEI Corporation.](#)
- i. [Southern Grouts & Mortars, Inc.](#)
- j. [Summitville Tiles, Inc.](#)
- k. [TEC; a subsidiary of H. B. Fuller Company.](#)
- l. **<Insert manufacturer's name>.**
- m. or approved equal.

C. Polymer-Modified Tile Grout: ANSI A118.7.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [Boiardi Products; a QEP company.](#)
- b. [Bonsal American; an Oldcastle company.](#)
- c. [Bostik, Inc.](#)
- d. [C-Cure.](#)
- e. [Custom Building Products.](#)
- f. [Jamo Inc.](#)
- g. [Laticrete International, Inc.](#)
- h. [MAPEI Corporation.](#)
- i. [Southern Grouts & Mortars, Inc.](#)
- j. [Summitville Tiles, Inc.](#)
- k. [TEC; a subsidiary of H. B. Fuller Company.](#)
- l. **<Insert manufacturer's name>.**
- m. or approved equal.

2. Polymer Type: Ethylene vinyl acetate or acrylic additive, in dry, redispersible form, prepackaged with other dry ingredients.
 3. Polymer Type: [**Acrylic resin**] [or] [**styrene-butadiene rubber**] in liquid-latex form for addition to prepackaged dry-grout mix.
- D. Water-Cleanable Epoxy Grout: ANSI A118.3[, **with a VOC content of 65 g/L or less when calculated according to 40 CFR 59, Subpart D**].
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Atlas Minerals & Chemicals, Inc.](#)
 - b. [Boiardi Products; a QEP company.](#)
 - c. [Bonsal American; an Oldcastle company.](#)
 - d. [Bostik, Inc.](#)
 - e. [C-Cure.](#)
 - f. [Custom Building Products.](#)
 - g. [Jamo Inc.](#)
 - h. [Laticrete International, Inc.](#)
 - i. [MAPEI Corporation.](#)
 - j. [Mer-Kote Products, Inc.](#)
 - k. [Southern Grouts & Mortars, Inc.](#)
 - l. [Summitville Tiles, Inc.](#)
 - m. [TEC; a subsidiary of H. B. Fuller Company.](#)
 - n. **<Insert manufacturer's name>**.
 - o. or approved equal.

2.7 ELASTOMERIC SEALANTS

- A. Sealants shall have a VOC content of [**250**] **<Insert value>** g/L or less when calculated according to 40 CFR 59, Subpart D.
- B. Sealants shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Use primers, backer rods, and sealant accessories recommended by sealant manufacturer.
- D. Colors: Provide colors of exposed sealants to match colors of grout in stone tile adjoining sealed joints unless otherwise indicated.
- E. One-Part, Mildew-Resistant Silicone Sealant: ASTM C 920; Type S; Grade NS; Class 25; Uses NT, G, A, and, as applicable to nonporous joint substrates indicated, O; formulated with fungicide, intended for sealing interior stone tile joints and other nonporous substrates that are subject to in-service exposures of high humidity and extreme temperatures.
 1. [Products](#): Subject to compliance with requirements, provide one of the following:

- a. [DAP Inc.](#); **[Titanium Enriched Kitchen and Bath Sealant] [100 percent Silicone Kitchen and Bath Sealant]**.
 - b. [Dow Corning Corporation; Dow Corning 786.](#)
 - c. [GE Silicones, a division of GE Specialty Materials; Sanitary 1700.](#)
 - d. [Laticrete International, Inc.; Latacil Tile & Stone Sealant.](#)
 - e. [Pecora Corporation; Pecora 898 Sanitary Silicone Sealant.](#)
 - f. [Tremco Incorporated; Tremsil 600 White.](#)
 - g. **<Insert manufacturer's name; product name or designation>**.
 - h. or approved equal.
- F. Multipart, Pourable Urethane Sealant for Use T: ASTM C 920; Type M; Grade P; Class 25; Uses T, M, A, and, as applicable to joint substrates indicated, O.
1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. [Bostik, Inc.; Chem-Calk 550.](#)
 - b. [Degussa Building Systems; Sonneborn Sonolastic SL 2.](#)
 - c. [Pecora Corporation; \[Dynatrol II-SG\] \[NR-200 Urexpan\].](#)
 - d. [Sika Corporation; Sikaflex-2c SL.](#)
 - e. [Tremco Incorporated.; \[THC-900\] \[THC-901\] \[Vulkem 245\].](#)
 - f. **<Insert manufacturer's name; product name or designation>**.
 - g. or approved equal.

2.8 MISCELLANEOUS MATERIALS

- A. Trowelable Patching Compounds: Latex-modified, Portland cement-based formulation provided or approved by manufacturer of tile-setting materials for installations indicated.
- B. Metal Edge Strips: Angle or L-shaped, height to match stone tile and setting-bed thickness, metallic or combination of metal and PVC or neoprene base, designed specifically for flooring applications; **[half-hard brass] [white zinc alloy] [nickel silver] [stainless-steel, ASTM A 666, 300 Series]** exposed-edge material.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Blanke Corporation.](#)
 - b. [Ceramic Tool Company, Inc.](#)
 - c. [Schluter Systems L.P.](#)
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
- C. Protective Coating: Liquid grout-release coating that is formulated to protect exposed surfaces of stone tile against adherence of mortar and grout; compatible with stone, mortar, and grout products; easily removable after grouting is completed without damaging grout or stone tile; and recommended for use as temporary protective coating for stone tile.

1. Floor sealer complying with "Floor Sealer" Paragraph below may be used provided it is recommended by manufacturer for use as a grout release.
- D. Cleaner: A neutral cleaner capable of removing soil and residue without harming stone tile and grout surfaces, specifically approved for materials and installations indicated by stone tile producers and grout manufacturers.
- E. Floor Sealer: Colorless, stain- and slip-resistant sealer, not affecting color or physical properties of stone surfaces as recommended by stone tile producers for application indicated.
 1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Bostik, Inc.](#)
 - b. [Custom Building Products.](#)
 - c. [Hillyard, Inc.](#)
 - d. [HMK Stone Care System.](#)
 - e. [Summitville Tiles, Inc.](#)
 - f. <Insert manufacturer's name>.
 - g. or approved equal.

2.9 FABRICATION

- A. Facial Dimensions of Stone Tiles with [**Polished**] [**or**] [**Honed**] Faces: Do not vary facial dimensions from specified dimensions by more than plus or minus **1/64 inch** (0.4 mm).
- B. Facial Dimensions of Stone Tiles with [**Sand-Rubbed**] [**Natural-Cleft**] [**or**] [**Thermal-Finished**] Faces: Do not vary facial dimensions from specified dimensions by more than plus or minus **1/32 inch** (0.8 mm).
- C. Thickness of Stone Tiles with [**Polished**] [**Honed**] [**or**] [**Sand-Rubbed**] Finish: Do not vary from specified thickness by more than plus or minus **1/32 inch** (0.8 mm).
- D. Thickness of Stone Tiles with [**Natural-Cleft**] [**or**] [**Thermal**] Finish: Do not vary average thickness of each stone tile from specified thickness by more than plus or minus [**1/32 inch** (0.8 mm)] [**1/16 inch** (1.6 mm)].
- E. Joint Surfaces: Except for specified beveled or eased edges if any, dress joint surfaces square for full depth of stone tile.
- F. Backs of Pieces: Gage units by dressing backs of pieces smooth and flat. When tested with a **24-inch** (600-mm) straightedge, gap shall not exceed **1/32 inch** (0.8 mm).
 1. Natural-cleft stone need not be gaged if gap does not exceed **1/16 inch** (1.6 mm) when tested with a **24-inch** (600-mm) straightedge on backs of units.
- G. Thresholds: Fabricate to size and profile as indicated or required to provide transition between adjacent floor finishes.

1. Bevel edges of thresholds at 1:2 slope, aligning lower edge of bevel with adjacent floor finish. Limit height of bevel to **1/2 inch (13 mm)** or less, and finish bevel to match face of threshold.

2.10 MIXING MORTARS AND GROUT

- A. Mix mortars and grouts to comply with referenced standards and with mortar and grout manufacturers' written instructions.
- B. Add materials, water, and additives in accurate proportions.
- C. Use type of mixing equipment, mixer speeds, mixing containers, mixing time, and other procedures to produce mortars and grouts of uniform quality with optimum performance characteristics for installations indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions where stone tile will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of installed stone tile.
 1. Verify that substrates for setting stone tile are firm, dry, clean, and free of coatings that are incompatible with tile-setting materials including curing compounds and other substances that contain soap, wax, oil, or silicone, and that they comply with flatness tolerances required by ANSI A108.01 for installations indicated.
 2. Verify that concrete substrates for stone tile floors installed with **[adhesives]** **[bonded mortar bed]** **[or]** **[thin-set mortar]** comply with surface finish requirements in ANSI A108.01 for installations indicated.
 - a. Verify that surfaces that received a steel trowel finish have been mechanically scarified.
 - b. Verify that protrusions, bumps, and ridges have been removed by sanding or grinding.
 3. Verify that installation of grounds, anchors, recessed frames, electrical and mechanical units of work, and similar items located in or behind stone tile has been completed.
 4. Verify that joints and cracks in stone tile substrates are coordinated with stone tile joint locations; if not coordinated, adjust joint locations in consultation with DEN Project Manager.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Fill cracks, holes, and depressions in concrete substrates for stone tile floors installed with **[adhesives]** **[or]** **[thin-set mortar]** with trowelable patching compound specifically recommended by tile-setting material manufacturer.
- B. Where indicated, prepare substrates to receive waterproofing by applying a reinforced mortar bed that complies with ANSI A108.1A and is sloped **1/4 inch per foot (1:50)** toward drains.
- C. Lay out stone tile patterns by marking joint lines on substrates to verify joint placement at edges, corners, doors, and other critical elements.
 - 1. Notify DEN Project Manager seven days in advance of dates and times when layout will be done.
 - 2. Obtain DEN Project Manager's approval of layout before starting stone tile installation.
- D. Lay out stone tiles on substrates or on an adjacent surface to establish placement of individual stone tiles for balance of color and pattern variations.
 - 1. Notify DEN Project Manager seven days in advance of dates and times when layout will be done.
 - 2. DEN Project Manager may relocate specific stone tiles with other stone tiles of same type and will determine final location of each stone tile within indicated patterns.
 - 3. Identify each stone tile with a temporary number marked on face of stone tile that corresponds with an identical number marked on a layout drawing, and obtain DEN Project Manager's approval before starting stone tile installation.
- E. Field-Applied Temporary Protective Coating: If indicated under stone tile type or needed to prevent grout from staining or adhering to exposed stone tile surfaces, precoat them with continuous film of temporary protective coating, taking care not to coat unexposed stone tile surfaces.

3.3 STONE TILE INSTALLATION

- A. Comply with TCA's "Handbook for Ceramic Tile Installation" for TCA installation methods specified in stone tile installation schedules. Comply with parts of the ANSI A108 Series "Specifications for Installation of Ceramic Tile" that are referenced in TCA installation methods specified in stone tile installation schedules, and apply to types of setting and grouting materials used.
 - 1. For the following installations, follow procedures in the ANSI A108 Series of tile installation standards for providing 95 percent mortar coverage:
 - a. Exterior stone tile floors.
 - b. Stone tile floors in wet areas.

- c. Stone tile floors composed of stone tiles **8 by 8 inches** (200 by 200 mm) or larger.
- B. Wipe backs of stone tiles with a damp cloth to remove dirt and dust before units are installed.
- C. Extend stone tile work into recesses and under or behind equipment and fixtures to form complete covering without interruptions unless otherwise indicated. Terminate work neatly at obstructions, edges, and corners without disrupting pattern or joint alignments.
- D. Accurately form intersections and returns. Perform cutting and drilling of stone tile without marring visible surfaces. Carefully grind cut edges of stone tile abutting trim, finish, or built-in items for straight aligned joints. Fit stone tile closely to electrical outlets, piping, fixtures, and other penetrations so plates, collars, or covers overlap stone tile.
- E. Finish cut stone tile edges that will not be concealed by other construction by grinding and honing cut surfaces [**and beveling edges**] [**and easing edges**] to match factory-fabricated edges[**unless otherwise indicated**].
- F. Jointing Pattern: Lay stone tile in grid pattern unless otherwise indicated. Lay out stone tile work and center stone tile fields in both directions in each space or on each wall area. Lay out stone tile work to minimize the use of pieces that are less than half of a tile. Provide uniform joint widths unless otherwise indicated.
 - 1. Where adjoining stone tiles on floor, base, walls, or trim are specified or indicated to be same size, align joints.
- G. Lay out stone tile wainscots to dimensions indicated or to next full tile beyond dimensions indicated.
- H. Match stone tiles within each space by selecting tiles to achieve uniformity of color and pattern. Reject or relocate stone tiles that do not match color and pattern of adjacent tiles.
- I. Mix stone tiles to achieve a uniformly random distribution of color shadings and patterns.
- J. Pattern Orientation: For stone varieties with directional pattern, orient pattern as [**indicated**] [**directed by DEN Project Manager**].
- K. Expansion Joints: Provide expansion joints and other sealant-filled joints, including control, contraction, and isolation joints, where indicated. Form joints during installation of setting materials, mortar beds, and stone tile. Do not saw-cut joints after installing stone tiles.
 - 1. Where joints occur in concrete substrates, locate joints in stone tile surfaces directly above them.

2. Prepare joints and apply sealants to comply with requirements in Section 079200 "Joint Sealants."
- L. Stone Thresholds: Install stone thresholds in same type of setting bed as adjacent floor unless otherwise indicated.
1. At locations where mortar bed (thickset) would otherwise be exposed above adjacent floor finishes, set thresholds in latex-Portland cement mortar (thin set).
 2. Do not extend **[cleavage membrane] [waterproofing] [or] [crack isolation membrane]** under thresholds set in **[dry-set Portland cement] [or] [latex-Portland cement]** mortar. Fill joints between such thresholds and adjoining stone tile set on **[cleavage membrane] [waterproofing] [or] [crack isolation membrane]** with elastomeric sealant.
- M. Metal Edge Strips: Install **[at locations indicated] [where exposed edge of stone tile flooring meets carpet, wood, or other flooring that finishes flush with top of stone tile] [where exposed edge of stone tile flooring meets carpet, wood, or other flooring that finishes flush with or below top of stone tile and no threshold is indicated].**

3.4 TILE BACKING PANEL INSTALLATION

- A. Install **[cementitious backer units] [or] [fiber-cement underlayment]** at **[showers] [tubs]** and where indicated.
- B. Install panels and treat joints according to ANSI A108.11 and manufacturer's written instructions for type of application indicated. **[Use latex-Portland cement mortar for bonding material unless otherwise directed in manufacturer's written instructions.]**

3.5 WATERPROOFING INSTALLATION

- A. Install waterproofing to comply with ANSI A108.13 and manufacturer's written instructions to produce waterproof membrane of uniform thickness and bonded securely to substrate.
- B. Do not install tile or setting materials over waterproofing until waterproofing has cured and been tested to determine that it is watertight.

3.6 CRACK ISOLATION MEMBRANE INSTALLATION

- A. Install crack isolation membrane to comply with ANSI A108.17 and manufacturer's written instructions to produce membrane of uniform thickness and bonded securely to substrate.
- B. Do not install tile or setting materials over crack isolation membrane until membrane has cured.

3.7 INSTALLATION TOLERANCES

- A. Variation from Plumb: For vertical joints, external corners, and other conspicuous lines, do not exceed **1/8 inch in 8 feet** (3 mm in 2.4 m).
- B. Variation in Level: For horizontal joints and other conspicuous lines, do not exceed **1/8 inch in 10 feet** (3 mm in 3 m), or **1/2 inch** (12 mm) maximum.
- C. Variation in Surface Plane of Flooring: Do not exceed **1/8 inch in 10 feet** (3 mm in 3 m) from level or slope indicated when tested with a **10-foot** (3-m) straightedge.
- D. Variation in Plane between Adjacent Units (Lipping): Do not exceed the following differences between faces of adjacent units as measured from a straightedge parallel to stone tiled surface:
 - 1. Units with Polished Faces: **1/64 inch** (0.4 mm).
 - 2. Units with Honed Faces: [**1/64 inch** (0.4 mm)] [**1/32 inch** (0.8 mm)].
 - 3. Units with Sand-Rubbed Faces: **1/32 inch** (0.8 mm).
 - 4. Units with Thermal-Finished Faces: Depth of thermal finish or **3/16 inch** (5 mm), whichever is less.
 - 5. Units with Natural-Cleft Faces: Depth of natural-cleft finish or **3/16 inch** (5 mm), whichever is less.
- E. Variation in Joint Width: Do not vary joint thickness more than **1/16 inch** (1.6 mm) or one-fourth of nominal joint width, whichever is less.
- F. Hand-Tight Joints: Do not exceed [**1/64 inch** (0.4 mm)] [**1/32 inch** (0.8 mm)].

3.8 ADJUSTING AND CLEANING

- A. Remove and replace material that is stained or otherwise damaged or that does not match adjoining stone tile. Provide new matching units, installed as specified and in a manner to eliminate evidence of replacement.
- B. Cleaning: On completion of placement and grouting, clean stone tile surfaces so they are free of foreign matter.
 - 1. Remove [**epoxy**] [**and**] [**latex-Portland cement**] grout residue from stone tile as soon as possible.
 - 2. Clean grout smears and haze from stone tile according to stone tile and grout manufacturer's written instructions but no sooner than 10 days after installation. Use only cleaners recommended by stone tile and grout manufacturers and only after determining that cleaners are safe to use by testing on samples of stone tile and other surfaces to be cleaned. Protect metal surfaces and plumbing fixtures from effects of cleaning. Flush surfaces with clean water before and after cleaning.
 - 3. Remove temporary protective coating by method recommended by coating manufacturer and acceptable to stone tile and grout manufacturer. Trap and

remove coating to prevent drain clogging.[**Do not remove floor sealer if used as protective coating.**]

- C. Apply sealer to cleaned stone tile flooring according to sealer manufacturer's written instructions.

3.9 PROTECTION

- A. Protect installed stone tile floors with kraft paper or other heavy covering during construction period to prevent staining, damage, and wear. If recommended by stone tile manufacturer, apply coat of neutral protective cleaner to completed stone tile walls and floors.
- B. Prohibit foot and wheel traffic from stone tiled floors for at least seven days after grouting is completed.
- C. Before final inspection, remove protective coverings and rinse neutral protective cleaner from stone tile surfaces.

3.10 EXTERIOR STONE TILE INSTALLATION SCHEDULE

- A. Exterior Floor Installations:

- 1. Stone Tile Installation F101: Cement mortar bed (thickset) [**bonded to concrete**] [**over waterproof membrane on concrete**] [**over waterproof membrane on concrete where indicated and bonded to concrete where membrane is not indicated**]; TCA F101 and [**ANSI A108.1A**] [**ANSI A108.1B**] [**ANSI A108.1C**].
 - a. Stone Tile Type: <**Insert stone tile-type designation**>.
 - b. Bond Coat (Thin-Set Mortar) for Cured-Bed Method: [**Dry-set**] [**Latex-**] [**Medium-bed, latex-**] Portland cement mortar.
 - c. Grout: [**Sand-Portland cement**] [**Standard sanded cement**] [**Standard unsanded cement**] [**Polymer-modified sanded**] [**Polymer-modified unsanded**] grout.
- 2. Stone Tile Installation F102: Thin-set mortar [**on concrete**] [**over waterproof membrane on concrete**] [**over waterproof membrane on concrete where indicated and on concrete where membrane is not indicated**]; TCA F102.
 - a. Stone Tile Type: <**Insert stone tile-type designation**>.
 - b. Thin-Set Mortar: [**Dry-set**] [**Latex-**] [**Medium-bed, latex-**] Portland cement mortar.
 - c. Grout: [**Sand-Portland cement**] [**Standard sanded cement**] [**Standard unsanded cement**] [**Polymer-modified sanded**] [**Polymer-modified unsanded**] grout.

- B. Exterior Wall Installations, Masonry or Concrete:

1. Stone Tile Installation W201: Cement mortar bed (thickset) on metal lath over waterproof membrane; TCA W201 and **[ANSI A108.1A]** **[ANSI A108.1B]** **[ANSI A108.1C]**.
 - a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Bond Coat for Wet-Set Method: **[Dry-set]** **[Latex-]** Portland cement mortar.
 - c. Bond Coat (Thin-Set Mortar) for Cured-Bed Method: **[Dry-set]** **[Latex-]** Portland cement mortar.
 - d. Grout: **[Sand-Portland cement]** **[Standard sanded cement]** **[Standard unsanded cement]** **[Polymer-modified sanded]** **[Polymer-modified unsanded]** grout.

2. Stone Tile Installation W202: Thin-set mortar; TCA W202.
 - a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Thin-Set Mortar: **[Dry-set]** **[Latex-]** **[Medium-bed, latex-]** Portland cement mortar.
 - c. Grout: **[Sand-Portland cement]** **[Standard sanded cement]** **[Standard unsanded cement]** **[Polymer-modified sanded]** **[Polymer-modified unsanded]** grout.

3.11 INTERIOR STONE TILE INSTALLATION SCHEDULE

A. Interior Floor Installations, Concrete Subfloor:

1. Stone Tile Installation F111: Cement mortar bed (thickset) with cleavage membrane; TCA F111 and **[ANSI A108.1A]** **[ANSI A108.1B]** **[ANSI A108.1C]**.
 - a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Bond Coat (Thin-Set Mortar) for Cured-Bed Method: **[Dry-set]** **[Latex-]** **[Medium-bed, latex-]** Portland cement mortar.
 - c. Grout: **[Sand-Portland cement]** **[Standard sanded cement]** **[Standard unsanded cement]** **[Polymer-modified sanded]** **[Polymer-modified unsanded]** grout.

2. Stone Tile Installation F112: Cement mortar bed (thickset) bonded to concrete; TCA F112 and **[ANSI A108.1A]** **[ANSI A108.1B]** **[ANSI A108.1C]**.
 - a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Bond Coat (Thin-Set Mortar) for Cured-Bed Method: **[Dry-set]** **[Latex-]** **[Medium-bed, latex-]** Portland cement mortar.
 - c. Grout: **[Sand-Portland cement]** **[Standard sanded cement]** **[Standard unsanded cement]** **[Polymer-modified sanded]** **[Polymer-modified unsanded]** grout.

3. Stone Tile Installation F113: Thin-set mortar; TCA F113.
 - a. Stone Tile Type: **<Insert stone tile-type designation>**.

- b. Thin-Set Mortar: **[Dry-set] [Latex-] [Medium-bed, latex-]** Portland cement mortar.
 - c. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] [Water-cleanable epoxy]** grout.
4. Stone Tile Installation F114: Cement mortar bed (thickset) with cleavage membrane; epoxy grout; TCA F114 and ANSI A108.1B.
 - a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Bond Coat (Thin-Set Mortar) for Cured-Bed Method: **[Dry-set] [Latex-] [Medium-bed, latex-]** Portland cement mortar.
 - c. Grout: Water-cleanable epoxy grout.
5. Stone Tile Installation F116: **[Organic adhesive] [Water-cleanable, tile-setting epoxy]**; TCA F116.
 - a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] [Water-cleanable epoxy]** grout.
6. Stone Tile Installation F121: Cement mortar bed (thickset) on waterproof membrane; TCA F121 and **[ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C]**.
 - a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Bond Coat (Thin-Set Mortar) for Cured-Bed Method: **[Dry-set] [Latex-] [Medium-bed, latex-]** Portland cement mortar.
 - c. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded]** grout.
7. Stone Tile Installation F122: Thin-set mortar on waterproof membrane; TCA F122.
 - a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Thin-Set Mortar: **[Latex-] [Medium-bed, latex-]** Portland cement mortar.
 - c. Grout: Polymer-modified **[sanded] [unsanded]** grout.
8. Stone Tile Installation F125A: Thin-set mortar on crack isolation membrane; TCA F125A.
 - a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Thin-Set Mortar: **[Latex-] [Medium-bed, latex-]** Portland cement mortar.
 - c. Grout: **[Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] [Water-cleanable epoxy]** grout.
9. Stone Tile Installation F131: Water-cleanable, tile-setting epoxy; epoxy grout; TCA F131.

- a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Grout: Water-cleanable epoxy grout.
10. Stone Tile Installation F132: Water-cleanable, tile-setting epoxy on cured cement mortar bed [**bonded to concrete subfloor**] [**installed over cleavage membrane**]; epoxy grout; TCA F132.
 - a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Grout: Water-cleanable epoxy grout.
- B. Interior Floor Installations, Wood Subfloor:
 1. Stone Tile Installation F121: Cement mortar bed (thickset) on waterproof membrane; TCA F121 and [**ANSI A108.1A**] [**ANSI A108.1B**] [**ANSI A108.1C**].
 - a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Bond Coat (Thin-Set Mortar) for Cured-Bed Method: [**Dry-set**] [**Latex-**] [**Medium-bed, latex-**] Portland cement mortar.
 - c. Grout: [**Sand-Portland cement**] [**Standard sanded cement**] [**Standard unsanded cement**] [**Polymer-modified sanded**] [**Polymer-modified unsanded**] [**Water-cleanable epoxy**] grout.
 2. Stone Tile Installation F141: Cement mortar bed (thickset) with cleavage membrane; TCA F141 and [**ANSI A108.1A**] [**ANSI A108.1B**] [**ANSI A108.1C**].
 - a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Bond Coat (Thin-Set Mortar) for Cured-Bed Method: [**Dry-set**] [**Latex-**] [**Medium-bed, latex-**] Portland cement mortar.
 - c. Grout: [**Sand-Portland cement**] [**Standard sanded cement**] [**Standard unsanded cement**] [**Polymer-modified sanded**] [**Polymer-modified unsanded**] [**Water-cleanable epoxy**] grout.
 3. Stone Tile Installation F142: Organic adhesive; TCA F142.
 - a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Grout: [**Sand-Portland cement**] [**Standard sanded cement**] [**Standard unsanded cement**] [**Polymer-modified sanded**] [**Polymer-modified unsanded**] [**Water-cleanable epoxy**] grout.
 4. Stone Tile Installation F143: Water-cleanable, tile-setting epoxy; epoxy grout; TCA F143.
 - a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Grout: Water-cleanable epoxy grout.
 5. Stone Tile Installation F144: Thin-set mortar on cementitious backer units or fiber-cement underlayment; TCA F144.
 - a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Thin-Set Mortar: [**Dry-set**] [**Latex-**] [**Medium-bed, latex-**] Portland cement mortar.

- c. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] [Water-cleanable epoxy]** grout.
 6. Stone Tile Installation F150/160: Thin-set mortar on exterior-glue plywood; TCA F150 or TCA F160.
 - a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Thin-Set Mortar: EGP latex-Portland cement mortar.
 - c. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] [Water-cleanable epoxy]** grout.
- C. Interior Radiant-Heat Floor Installations, Concrete Subfloor:
1. Stone Tile Installation RH110: Thin-set mortar on crack isolation membrane; hydronic piping installed in concrete; TCA RH110.
 - a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Thin-Set Mortar: **[Latex-] [Medium-bed, latex-]** Portland cement mortar.
 - c. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] [Water-cleanable epoxy]** grout.
 2. Stone Tile Installation RH115: Thin-set mortar; electric radiant-heat system encapsulated in thin-set mortar; TCA RH115.
 - a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Thin-Set Mortar: **[Latex-] [Medium-bed, latex-]** Portland cement mortar.
 - c. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] [Water-cleanable epoxy]** grout.
 3. Stone Tile Installation RH116: Thin-set mortar on crack isolation membrane; electric radiant-heat system encapsulated in cementitious self-leveling underlayment; TCA RH116.
 - a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Cementitious Self-Leveling Underlayment: Specified in Section 035416 "Hydraulic Cement Underlayment."
 - c. Thin-Set Mortar: **[Latex-] [Medium-bed, latex-]** Portland cement mortar.
 - d. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] [Water-cleanable epoxy]** grout.
- D. Interior Radiant-Heat Floor Installations, Wood Subfloor:
1. Stone Tile Installation RH130: Thin-set mortar on exterior-glue plywood; electric radiant-heat system encapsulated in thin-set mortar; TCA RH130.

- a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Thin-Set Mortar: EGP latex-Portland cement mortar.
 - c. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] [Water-cleanable epoxy]** grout.
2. Stone Tile Installation RH135: Thin-set mortar on cementitious backer units or fiber-cement underlayment; electric radiant-heat system encapsulated in thin-set mortar; TCA RH135.
- a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Thin-Set Mortar: **[Latex-] [Medium-bed, latex-]** Portland cement mortar.
 - c. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] [Water-cleanable epoxy]** grout.
3. Stone Tile Installation RH140: Thin-set mortar on crack isolation membrane; electric radiant-heat system encapsulated in cementitious self-leveling underlayment; TCA RH140.
- a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Cementitious Self-Leveling Underlayment: Specified in Section 035416 "Hydraulic Cement Underlayment."
 - c. Thin-Set Mortar: **[Latex-] [Medium-bed, latex-]** Portland cement mortar.
 - d. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] [Water-cleanable epoxy]** grout.
- E. Interior Wall Installations, Masonry or Concrete:
1. Stone Tile Installation W202: Thin-set mortar; TCA W202.
 - a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Thin-Set Mortar: **[Dry-set] [Latex-] [Medium-bed, latex-]** Portland cement mortar.
 - c. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] [Water-cleanable epoxy]** grout.
 2. Stone Tile Installation W211: Cement mortar bed (thickset) bonded to substrate; TCA W211 and **[ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C]**.
 - a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Bond Coat for Wet-Set Method: **[Dry-set] [Latex-]** Portland cement mortar.
 - c. Bond Coat (Thin-Set Mortar) for Cured-Bed Method: **[Dry-set] [Latex-]** Portland cement mortar.
 - d. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] [Water-cleanable epoxy]** grout.

3. Stone Tile Installation W221: Cement mortar bed (thickset) on metal lath[**over waterproof membrane**]; TCA W221 and [**ANSI A108.1A**] [**ANSI A108.1B**] [**ANSI A108.1C**].
 - a. Stone Tile Type: <**Insert stone tile-type designation**>.
 - b. Bond Coat for Wet-Set Method: [**Dry-set**] [**Latex-**] Portland cement mortar.
 - c. Bond Coat (Thin-Set Mortar) for Cured-Bed Method: [**Dry-set**] [**Latex-**] Portland cement mortar.
 - d. Grout: [**Sand-Portland cement**] [**Standard sanded cement**] [**Standard unsanded cement**] [**Polymer-modified sanded**] [**Polymer-modified unsanded**] [**Water-cleanable epoxy**] grout.
 4. Stone Tile Installation W222: One-coat cement mortar bed (thickset) on metal lath[**over waterproof membrane**]; TCA W222 and [**ANSI A108.1A**] [**ANSI A108.1B**] [**ANSI A108.1C**].
 - a. Stone Tile Type: <**Insert stone tile-type designation**>.
 - b. Bond Coat for Wet-Set Method: [**Dry-set**] [**Latex-**] Portland cement mortar.
 - c. Bond Coat (Thin-Set Mortar) for Cured-Bed Method: [**Dry-set**] [**Latex-**] Portland cement mortar.
 - d. Grout: [**Sand-Portland cement**] [**Standard sanded cement**] [**Standard unsanded cement**] [**Polymer-modified sanded**] [**Polymer-modified unsanded**] grout.
 5. Stone Tile Installation W223: Organic adhesive; TCA W223.
 - a. Stone Tile Type: <**Insert stone tile-type designation**>.
 - b. Grout: [**Sand-Portland cement**] [**Standard sanded cement**] [**Standard unsanded cement**] [**Polymer-modified sanded**] [**Polymer-modified unsanded**] grout.
- F. Interior Wall Installations, Wood Studs or Furring:
1. Stone Tile Installation W221: Cement mortar bed (thickset)[**over waterproof membrane**] on solid backing; TCA W221 and [**ANSI A108.1A**] [**ANSI A108.1B**] [**ANSI A108.1C**].
 - a. Stone Tile Type: <**Insert stone tile-type designation**>.
 - b. Bond Coat for Wet-Set Method: [**Dry-set**] [**Latex-**] Portland cement mortar.
 - c. Bond Coat (Thin-Set Mortar) for Cured-Bed Method: [**Dry-set**] [**Latex-**] Portland cement mortar.
 - d. Grout: [**Sand-Portland cement**] [**Standard sanded cement**] [**Standard unsanded cement**] [**Polymer-modified sanded**] [**Polymer-modified unsanded**] [**Water-cleanable epoxy**] grout.
 2. Stone Tile Installation W222: One-coat cement mortar bed (thickset)[**over waterproof membrane**] on solid backing; TCA W222 and [**ANSI A108.1A**] [**ANSI A108.1B**] [**ANSI A108.1C**].
 - a. Stone Tile Type: <**Insert stone tile-type designation**>.

- b. Bond Coat for Wet-Set Method: **[Dry-set] [Latex-]** Portland cement mortar.
 - c. Bond Coat (Thin-Set Mortar) for Cured-Bed Method: **[Dry-set] [Latex-]** Portland cement mortar.
 - d. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] [Water-cleanable epoxy]** grout.
3. Stone Tile Installation W223: Organic adhesive on solid backing; TCA W223.
 - a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded]** grout.
4. Stone Tile Installation W231: Cement mortar bed (thickset); TCA W231 and **[ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C]**.
 - a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Bond Coat for Wet-Set Method: **[Dry-set] [Latex-]** Portland cement mortar.
 - c. Bond Coat (Thin-Set Mortar) for Cured-Bed Method: **[Dry-set] [Latex-]** Portland cement mortar.
 - d. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded]** grout.
5. Stone Tile Installation W243: Thin-set mortar on gypsum board; TCA W243.
 - a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Thin-Set Mortar: **[Dry-set] [Latex-]** Portland cement mortar.
 - c. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded]** grout.
6. Stone Tile Installation W244: Thin-set mortar on cementitious backer units or fiber-cement underlayment **[over cleavage membrane]**; TCA W244.
 - a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Thin-Set Mortar: **[Dry-set] [Latex-]** Portland cement mortar.
 - c. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] [Water-cleanable epoxy]** grout.
7. Stone Tile Installation W245: **[Thin-set mortar] [Organic adhesive]** on coated glass-mat, water-resistant gypsum backer board; TCA W245.
 - a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Thin-Set Mortar: **[Dry-set] [Latex-]** Portland cement mortar.
 - c. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] [Water-cleanable epoxy]** grout.

G. Interior Wall Installations, Metal Studs or Furring:

1. Stone Tile Installation W221: Cement mortar bed (thickset) [**over waterproof membrane**] on solid backing; TCA W221 and [**ANSI A108.1A**] [**ANSI A108.1B**] [**ANSI A108.1C**].
 - a. Stone Tile Type: <**Insert stone tile-type designation**>.
 - b. Bond Coat for Wet-Set Method: [**Dry-set**] [**Latex-**] Portland cement mortar.
 - c. Bond Coat (Thin-Set Mortar) for Cured-Bed Method: [**Dry-set**] [**Latex-**] Portland cement mortar.
 - d. Grout: [**Sand-Portland cement**] [**Standard sanded cement**] [**Standard unsanded cement**] [**Polymer-modified sanded**] [**Polymer-modified unsanded**] [**Water-cleanable epoxy**] grout.
2. Stone Tile Installation W222: One-coat cement mortar bed (thickset) [**over waterproof membrane**] on solid backing; TCA W222 and [**ANSI A108.1A**] [**ANSI A108.1B**] [**ANSI A108.1C**].
 - a. Stone Tile Type: <**Insert stone tile-type designation**>.
 - b. Bond Coat for Wet-Set Method: [**Dry-set**] [**Latex-**] Portland cement mortar.
 - c. Bond Coat (Thin-Set Mortar) for Cured-Bed Method: [**Dry-set**] [**Latex-**] Portland cement mortar.
 - d. Grout: [**Sand-Portland cement**] [**Standard sanded cement**] [**Standard unsanded cement**] [**Polymer-modified sanded**] [**Polymer-modified unsanded**] [**Water-cleanable epoxy**] grout.
3. Stone Tile Installation W223: Organic adhesive on solid backing; TCA W223.
 - a. Stone Tile Type: <**Insert stone tile-type designation**>.
 - b. Grout: [**Sand-Portland cement**] [**Standard sanded cement**] [**Standard unsanded cement**] [**Polymer-modified sanded**] [**Polymer-modified unsanded**] grout.
4. Stone Tile Installation W241: Cement mortar bed (thickset); TCA W241 and ANSI A108.1B.
 - a. Stone Tile Type: <**Insert stone tile-type designation**>.
 - b. Bond Coat (Thin-Set Mortar) for Cured-Bed Method: [**Dry-set**] [**Latex-**] Portland cement mortar.
 - c. Grout: [**Sand-Portland cement**] [**Standard sanded cement**] [**Standard unsanded cement**] [**Polymer-modified sanded**] [**Polymer-modified unsanded**] grout.
5. Stone Tile Installation W242: Organic adhesive on gypsum board; TCA W242.
 - a. Stone Tile Type: <**Insert stone tile-type designation**>.
 - b. Grout: [**Polymer-modified sanded**] [**Polymer-modified unsanded**] grout.
6. Stone Tile Installation W243: Thin-set mortar on gypsum board; TCA W243.

- a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Thin-Set Mortar: **[Dry-set] [Latex-]** Portland cement mortar.
 - c. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded]** grout.
7. Stone Tile Installation W244: Thin-set mortar on cementitious backer units or fiber-cement underlayment[**over cleavage membrane**]; TCA W244.
- a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Thin-Set Mortar: **[Dry-set] [Latex-]** Portland cement mortar.
 - c. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] [Water-cleanable epoxy]** grout.
8. Stone Tile Installation W245: **[Thin-set mortar] [Organic adhesive]** on coated glass-mat, water-resistant gypsum backer board; TCA W245.
- a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Thin-Set Mortar: **[Dry-set] [Latex-]** Portland cement mortar.
 - c. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] [Water-cleanable epoxy]** grout.
- H. Bathtub Wall Installations, **[Wood] [Metal]** Studs or Furring:
1. Stone Tile Installation B413: **[Thin-set mortar] [Organic adhesive]** on water-resistant gypsum board; TCA B413.
 - a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Thin-Set Mortar: **[Dry-set] [Latex-]** Portland cement mortar.
 - c. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded]** grout.
- I. Bathtub/Shower Wall Installations, **[Wood] [Metal]** Studs or Furring:
1. Stone Tile Installation B411: Cement mortar bed (thickset); TCA B411 and ANSI A108.1A.
 - a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Bond Coat for Wet-Set Method: **[Dry-set] [Latex-]** Portland cement mortar.
 - c. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded]** grout.
 2. Stone Tile Installation B412: Thin-set mortar on cementitious backer units or fiber-cement underlayment; TCA B412.
 - a. Stone Tile Type: **<Insert stone tile-type designation>**.

- b. Thin-Set Mortar: **[Dry-set] [Latex-]** Portland cement mortar.
 - c. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] [Water-cleanable epoxy]** grout.
 3. Stone Tile Installation B419: **[Thin-set mortar] [Organic adhesive]** on coated glass-mat, water-resistant backer board; TCA B419.
 - a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Thin-Set Mortar: **[Dry-set] [Latex-]** Portland cement mortar.
 - c. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded] [Water-cleanable epoxy]** grout.
- J. Shower Receptor and Wall Installations, Concrete or Masonry:
 1. Stone Tile Installation B414: Cement mortar bed (thickset); TCA B414 and **[ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C]**.
 - a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Bond Coat for Wet-Set Method: **[Dry-set] [Latex-]** Portland cement mortar.
 - c. Bond Coat (Thin-Set Mortar) for Cured-Bed Method: **[Dry-set] [Latex-]** Portland cement mortar.
 - d. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded]** grout.
 2. Stone Tile Installation B421: Thin-set mortar on waterproof membrane; TCA B421.
 - a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Thin-Set Mortar: Latex-Portland cement mortar.
 - c. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded]** grout.
 3. Stone Tile Installation B422: Thin-set mortar on waterproof membrane with integrated bonding flange for bonded membranes; TCA B422.
 - a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Thin-Set Mortar: **[Dry-set] [Latex-]** Portland cement mortar.
 - c. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded]** grout.
- K. Shower Receptor and Wall Installations, **[Wood] [Metal]** Studs or Furring:
 1. Stone Tile Installation B414: Cement mortar bed (thickset); TCA B414 and **[ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C]**.

- a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Bond Coat for Wet-Set Method: **[Dry-set] [Latex-]** Portland cement mortar.
 - c. Bond Coat (Thin-Set Mortar) for Cured-Bed Method: **[Dry-set] [Latex-]** Portland cement mortar.
 - d. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded]** grout.
2. Stone Tile Installation B415: Thin-set mortar on cementitious backer units or fiber-cement underlayment; TCA B415.
- a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Thin-Set Mortar: **[Dry-set] [Latex-]** Portland cement mortar.
 - c. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded]** grout.
3. Stone Tile Installation B420: Thin-set mortar on coated glass-mat, water-resistant backer board; TCA B420.
- a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Thin-Set Mortar: **[Dry-set] [Latex-]** Portland cement mortar.
 - c. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded]** grout.
4. Stone Tile Installation B421: Thin-set mortar on waterproof membrane over cementitious backer units or fiber-cement underlayment; TCA B421.
- a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Thin-Set Mortar: Latex-Portland cement mortar.
 - c. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded]** grout.
5. Stone Tile Installation B422: Thin-set mortar on waterproof membrane over cementitious backer units or fiber-cement underlayment with integrated bonding flange for bonded membranes; TCA B422.
- a. Stone Tile Type: **<Insert stone tile-type designation>**.
 - b. Thin-Set Mortar: Latex-Portland cement mortar.
 - c. Grout: **[Sand-Portland cement] [Standard sanded cement] [Standard unsanded cement] [Polymer-modified sanded] [Polymer-modified unsanded]** grout.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 093033

SECTION 095113 - ACOUSTICAL PANEL CEILINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes acoustical panels and exposed suspension systems for ceilings.
- B. Related Requirements:
 - 1. Section 095123 "Acoustical Tile Ceilings" for ceilings consisting of mineral-base acoustical tiles used with concealed suspension systems, stapling, or adhesive bonding.
 - 2. Section 095133 "Acoustical Metal Pan Ceilings."
- C. Products furnished, but not installed under this Section, include anchors, clips, and other ceiling attachment devices to be cast in concrete.
- D. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[location and time as determined by DEN Project Manager] [Project site] <Insert location>**.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating costs for each product having recycled content.

2. Product Data for Credit EQ 4.1: For sealants, documentation including printed statement of VOC content.
 3. Laboratory Test Reports for Credit EQ 4: For **[ceiling systems] [and] [sealants]**, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Samples: For each exposed product and for each color and texture specified, **6 inches** (150 mm) in size.
- D. Samples for Initial Selection: For components with factory-applied color finishes.
- E. Samples for Verification: For each component indicated and for each exposed finish required, prepared on Samples of size indicated below.
1. Acoustical Panel: Set of **[full-size] [6-inch- (150-mm-) square]** Samples of each type, color, pattern, and texture.
 2. Exposed Suspension-System Members, Moldings, and Trim: Set of **6-inch- (150-mm-) long** Samples of each type, finish, and color.

1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Suspended ceiling components.
 2. Structural members to which suspension systems will be attached.
 3. Size and location of initial access modules for acoustical panels.
 4. Items penetrating finished ceiling including the following:
 - a. Lighting fixtures.
 - b. Air outlets and inlets.
 - c. Speakers.
 - d. Sprinklers.
 - e. Access panels.
 - f. Fire alarm system devices.
 - g. Security devices.
 - h. **<Insert item>**.
 5. Perimeter moldings.
- B. Qualification Data: For testing agency.
- C. Product Test Reports: For each acoustical panel ceiling, for tests performed by **[manufacturer and witnessed by a qualified testing agency] [a qualified testing agency]**.

- D. Evaluation Reports: For each acoustical panel ceiling suspension system[**and anchor and fastener type**], from ICC-ES.
- E. Field quality-control reports.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For finishes to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Acoustical Ceiling Panels: Full-size panels equal to [2] <Insert number> percent of quantity installed.
 - 2. Suspension-System Components: Quantity of each exposed component equal to [2] <Insert number> percent of quantity installed.
 - 3. Hold-Down Clips: Equal to [2] <Insert number> percent of quantity installed.
 - 4. Impact Clips: Equal to [2] <Insert number> percent of quantity installed.

1.8 QUALITY ASSURANCE

- A. Testing Agency Qualifications: Qualified according to NVLAP for testing indicated.
- B. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Build mockup of typical ceiling area as shown on Drawings.
 - 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver acoustical panels, suspension-system components, and accessories to Project site in original, unopened packages and store them in a fully enclosed, conditioned space where they will be protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.
- B. Before installing acoustical panels, permit them to reach room temperature and a stabilized moisture content.

- C. Handle acoustical panels carefully to avoid chipping edges or damaging units in any way.

1.10 FIELD CONDITIONS

- A. Environmental Limitations: Do not install acoustical panel ceilings until spaces are enclosed and weatherproof, wet work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.
 - 1. Pressurized Plenums: Operate ventilation system for not less than 48 hours before beginning acoustical panel ceiling installation.

- B. CONSTRUCTION WASTE MANAGEMENT

- C. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Acoustical ceiling shall withstand the effects of earthquake motions determined according to [ASCE/SEI 7] <Insert requirement>.
- B. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Flame-Spread Index: Comply with ASTM E 1264 for [Class A] materials.
 - 2. Smoke-Developed Index: [50] <Insert value> or less.
- C. Fire-Resistance Ratings: Comply with ASTM E 119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.

2.2 ACOUSTICAL PANELS, GENERAL

- A. Low-Emitting Materials: Acoustical panel ceilings shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- B. Source Limitations:

1. Acoustical Ceiling Panel: Obtain each type from single source from single manufacturer.
 2. Suspension System: Obtain each type from single source from single manufacturer.
- C. Source Limitations: Obtain each type of acoustical ceiling panel and supporting suspension system from single source from single manufacturer.
- D. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert number>** percent.
- E. Glass-Fiber-Based Panels: Made with binder containing no urea formaldehyde.
- F. Acoustical Panel Standard: Provide manufacturer's standard panels of configuration indicated that comply with ASTM E 1264 classifications as designated by types, patterns, acoustical ratings, and light reflectances unless otherwise indicated.
1. Mounting Method for Measuring NRC: Type E-400; plenum mounting in which face of test specimen is **15-3/4 inches** (400 mm) away from test surface according to ASTM E 795.
- G. Acoustical Panel Colors and Patterns: Match appearance characteristics indicated for each product type.
1. Where appearance characteristics of acoustical panels are indicated by referencing pattern designations in ASTM E 1264 and not manufacturers' proprietary product designations, provide products selected by DEN Project Manager from each manufacturer's full range that comply with requirements indicated for type, pattern, color, light reflectance, acoustical performance, edge detail, and size.
- H. Antimicrobial Fungicide Treatment: Provide acoustical panels with face and back surfaces coated with antimicrobial treatment consisting of manufacturer's standard formulation with fungicide added to inhibit growth of mold and mildew and showing no mold or mildew growth when tested according to ASTM D3273 and evaluated according to ASTM D3274 or ASTM G21.
- 2.3 ACOUSTICAL PANELS **<Insert drawing designation>**
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Armstrong World Industries, Inc.
 2. CertainTeed Corp.
 3. Chicago Metallic Corporation.
 4. USG Interiors, Inc.; Subsidiary of USG Corporation.
 5. **<Insert manufacturer's name>**
 6. or approved equal.
- B. Classification: Provide[**fire-resistance-rated**] panels complying with ASTM E 1264 for

type, form, and pattern as follows:

1. Type and Form: Type III, mineral base with painted finish; [**Form 1, nodular**] [**Form 2, water felted**] [**Form 4, cast or molded**].
 2. Type and Form: Type IV, mineral base with membrane-faced overlay; Form 1, nodular; with [**glass-fiber cloth**] [**washable vinyl-film**] overlay.
 3. Type and Form: Type IV, mineral base with membrane-faced overlay; Form 2, water felted; with [**vinyl overlay on face**] [**vinyl overlay on face and back**] [**vinyl overlay on face, back, and sealed edges**] [**fiberglass-fabric overlay on face**].
 4. Type and Form: Type XII, glass-fiber base with membrane-faced overlay; [**Form 1, plastic**] [**Form 2, cloth**] [**Form 3, other**].
 5. Type and Form: Type XX, other types; described as high-density, ceramic- and mineral-base panels with scrubbable finish, resistant to heat, moisture, and corrosive fumes.
 6. Type and Form: <Insert type and form>.
 7. Pattern: [**C (perforated, small holes)**] [**CD (perforated, small holes and fissured)**] [**CE (perforated, small holes and lightly textured)**] [**D (fissured)**] [**E (lightly textured)**] [**F (heavily textured)**] [**G (smooth)**] [**GH (smooth and printed)**] [**I (embossed)**] [**J (embossed-in-register)**] [**K (surface scored)**] [**Z (other patterns as described)**] [**As indicated by manufacturer's designation**] <Insert pattern>.
- C. Color: [**White**] [**As selected from manufacturer's full range**] [**Match DEN Project Manager's sample**] [**As indicated by manufacturer's designation**] [**As indicated on Drawings**] [**As indicated in a schedule**] <Insert color>.
- D. LR: Not less than [**0.65**] [**0.70**] [**0.75**] [**0.80**] [**0.85**] [**0.90**] <Insert LR>.
- E. NRC: Not less than [**0.10**] [**0.35**] [**0.40**] [**0.50**] [**0.55**] [**0.60**] [**0.65**] [**0.70**] [**0.75**] [**0.80**] [**0.85**] [**0.90**] [**0.95**] [**1.00**] <Insert NRC>.
- F. CAC: Not less than [**20**] [**25**] [**30**] [**35**] [**40**] <Insert CAC>.
- G. AC: Not less than [**170**] [**180**] [**190**] [**200**] [**210**] <Insert AC>.
- H. Edge/Joint Detail: [**Square**] [**Reveal sized to fit flange of exposed suspension-system members**] [**Flush reveal sized to fit flange of exposed suspension-system members**] [**Beveled, kerfed and rabbeted long edges and square, butt-on short edges**] <Insert manufacturer's special proprietary edge detail>.
- I. Thickness: [**5/8 inch (15 mm)**] [**3/4 inch (19 mm)**] [**7/8 inch (22 mm)**] [**As indicated on Drawings**] [**As indicated in a schedule**] <Insert thickness>.
- J. Thickness: [**1/8 inch (3 mm)**] [**7/16 inch (12 mm)**] [**9/16 inch (15 mm)**] [**5/8 inch (15 mm)**] [**3/4 inch (19 mm)**] [**7/8 inch (22 mm)**] [**1 inch (25 mm)**] [**1-1/2 inches (38 mm)**] [**2 inches (51 mm)**] [**3 inches (76 mm)**] [**As indicated on Drawings**] [**As indicated in a schedule**] <Insert dimension>.

- K. Modular Size: [24 by 24 inches (610 by 610 mm)] [24 by 48 inches (610 by 1220 mm)] [600 by 600 mm] [600 by 1200 mm] [As indicated on Drawings] [As indicated in a schedule] <Insert size>.
- L. Broad Spectrum Antimicrobial Fungicide and Bactericide Treatment: Provide acoustical panels treated with manufacturer's standard antimicrobial formulation that inhibits fungus, mold, mildew, and gram-positive and gram-negative bacteria and showing no mold, mildew, or bacterial growth when tested according to ASTM D 3273 and evaluated according to ASTM D 3274 or ASTM G 21.

2.4 METAL SUSPENSION SYSTEMS, GENERAL

- A. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [25] <Insert number> percent.
- B. Metal Suspension-System Standard: Provide manufacturer's standard direct-hung metal suspension systems of types, structural classifications, and finishes indicated that comply with applicable requirements in ASTM C 635/C 635M.
 - 1. High-Humidity Finish: Comply with ASTM C 635/C 635M requirements for "Coating Classification for Severe Environment Performance" where high-humidity finishes are indicated.
- C. Attachment Devices: Size for five times the design load indicated in ASTM C 635/C 635M, Table 1, "Direct Hung," unless otherwise indicated. Comply with seismic design requirements.
 - 1. Anchors in Concrete: Anchors of type and material indicated below, with holes or loops for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to [five] <Insert safety factor> times that imposed by ceiling construction, as determined by testing according to ASTM E 488 or ASTM E 1512 as applicable, conducted by a qualified testing and inspecting agency.
 - a. Type: [Cast-in-place] [Postinstalled expansion] [Postinstalled bonded] anchors.
 - b. Corrosion Protection: Carbon-steel components zinc plated to comply with ASTM B 633, Class Fe/Zn 5 (0.005 mm) for Class SC 1 service condition.
 - c. Corrosion Protection: Stainless-steel components complying with ASTM F 593 and ASTM F 594, Group 1 Alloy 304 or 316 for bolts; Alloy 304 or 316 for anchor.
 - d. Corrosion Protection: Components fabricated from nickel-copper-alloy rods complying with ASTM B 164 for UNS No. N04400 alloy.
 - 2. Power-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to [10] <Insert safety factor> times that imposed by ceiling construction, as determined by testing according to

ASTM E 1190, conducted by a qualified testing and inspecting agency.

- D. Wire Hangers, Braces, and Ties: Provide wires complying with the following requirements:
1. Zinc-Coated, Carbon-Steel Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper.
 2. Stainless-Steel Wire: ASTM A 580/A 580M, Type 304, nonmagnetic.
 3. Nickel-Copper-Alloy Wire: ASTM B 164, nickel-copper-alloy UNS No. N04400.
 4. Size: Select wire diameter so its stress at three times hanger design load (ASTM C 635/C 635M, Table 1, "Direct Hung") will be less than yield stress of wire, but provide not less than [0.106-inch- (2.69-mm-)] [0.135-inch- (3.5-mm-)] **<Insert dimension>** diameter wire.
- E. **[Hanger Rods] [Flat Hangers]**: Mild steel, zinc coated or protected with rust-inhibitive paint.
- F. Angle Hangers: Angles with legs not less than **7/8 inch** (22 mm) wide; formed with **0.04-inch-** (1-mm-) thick, galvanized-steel sheet complying with ASTM A 653/A 653M, **G90** (Z275) coating designation; with bolted connections and **5/16-inch-** (8-mm-) diameter bolts.
- G. Seismic Stabilizer Bars: Manufacturer's standard perimeter stabilizers designed to accommodate seismic forces.
- H. Seismic Struts: Manufacturer's standard compression struts designed to accommodate seismic forces.
- I. Seismic Clips: Manufacturer's standard seismic clips designed and spaced to secure acoustical panels in place.
- J. Hold-Down Clips: Where indicated, provide manufacturer's standard hold-down clips spaced **24 inches** (610 mm) o.c. on all cross tees.
- K. Impact Clips: Where indicated, provide manufacturer's standard impact-clip system designed to absorb impact forces against acoustical panels.
- L. Clean-Room Gasket System: Where indicated, provide manufacturer's standard system, including **[manufacturer's standard] [closed-cell PVC] [neoprene] [antimicrobial]** gasket and related adhesives, tapes, seals, and retention clips, designed to seal out foreign material from and maintain positive pressure in clean room.

2.5 METAL SUSPENSION SYSTEM **<Insert drawing designation>**

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Armstrong World Industries, Inc.
 2. CertainTeed Corp.

3. Chicago Metallic Corporation.
 4. USG Interiors, Inc.; Subsidiary of USG Corporation.
 5. **<Insert manufacturer's name>**
 6. or approved equal.
- B. Wide-Face, Capped, Double-Web,[**Fire-Rated**,] Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet; prepainted, electrolytically zinc coated, or hot-dip galvanized according to ASTM A 653/A 653M, not less than **G30 (Z90)** coating designation; with prefinished **15/16-inch-** (24-mm-) wide metal caps on flanges.
1. Structural Classification: [**Intermediate**] [**Heavy**]-duty system.
 2. End Condition of Cross Runners: [**Override (stepped)**] [**or**] [**butt-edge**] type.
 3. Face Design: Flat, flush.
 4. Cap Material: [**Steel**] [**or**] [**aluminum**] cold-rolled sheet.
 5. Cap Finish: [**Painted white**] [**Painted in color as selected from manufacturer's full range**] [**Painted to match color indicated by manufacturer's designation**] [**Painted to match color of acoustical unit**] [**Plated with metallic finish as selected from manufacturer's full range**] [**Plated with metallic finish indicated by manufacturer's designation**] [**Natural finish for aluminum**].
- C. Narrow-Face, Capped, Double-Web, Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet; prepainted, electrolytically zinc coated, or hot-dip galvanized according to ASTM A 653/A 653M, not less than **G30 (Z90)** coating designation; with prefinished **9/16-inch-** (15-mm-) wide metal caps on flanges.
1. Structural Classification: [**Intermediate**] [**Heavy**]-duty system.
 2. End Condition of Cross Runners: [**Override (stepped)**] [**or**] [**butt-edge**] type.
 3. Face Design: [**Flat, flush**] [**Flanges formed with an integral center reveal**].
 4. Cap Material: [**Steel**] [**or**] [**aluminum**] cold-rolled sheet.
 5. Cap Finish: [**Painted white**] [**Painted in color as selected from manufacturer's full range**] [**Painted to match color indicated by manufacturer's designation**] [**Painted to match color of acoustical unit**] [**Plated with metallic finish as selected from manufacturer's full range**] [**Plated with metallic finish indicated by manufacturer's designation**] [**Natural finish for aluminum**].
- D. Narrow-Face, Steel-Capped, Double-Web, Fire-Rated Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet; prepainted, electrolytically zinc coated, or hot-dip galvanized according to ASTM A 653/A 653M, not less than **G30 (Z90)** coating designation; with prefinished, cold-rolled, **9/16-inch-** (15-mm-) wide metal caps on flanges.
1. Structural Classification: Intermediate-duty system.
 2. Face Design: Flat, flush.
 3. Cap Finish: [**Painted white**] [**Painted in color as selected from manufacturer's full range**] [**Painted to match color indicated by manufacturer's designation**] [**Painted to match color of acoustical unit**] [**Plated with metallic finish as selected from manufacturer's full range**]

**[Plated with metallic finish indicated by manufacturer's designation]
[Natural finish for aluminum].**

- E. Narrow-Face, Uncapped, Double-Web, Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet; prepainted, electrolytically zinc coated, or hot-dip galvanized; to produce structural members with **9/16-inch-** (15-mm-) wide faces.
1. Structural Classification: **[Intermediate] [Heavy]**-duty system.
 2. Face Design: **[With 1/8-inch-** (3.2-mm-) **wide, slotted, box-shaped flange] [With 1/4-inch-** (6.35-mm-) **wide, slotted, box-shaped flange] [Flanges formed in stepped design with a center protrusion projecting 19/64 inch** (7.54 mm) **below flange surfaces supporting panel faces and forming 3/16-inch-** (4.76-mm-) **wide reveals between edges of protrusion and those of panels].**
 3. Face Finish: Painted **[white] [in color as selected from manufacturer's full range] [to match color indicated by manufacturer's designation] [to match color of acoustical unit].**
 4. Reveal Finish: Painted **[to match flange color] [white] [black] [in color other than flange color as selected from manufacturer's full range of contrasting reveal colors].**
- F. Wide-Face, Capped, Double-Web, **[Fire-Rated,]** Hot-Dip Galvanized, **G60** (Z180), Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet; hot-dip galvanized according to ASTM A 653/A 653M, **G60** (Z180) coating designation; with prefinished, cold-rolled, **15/16-inch-** (24-mm-) wide aluminum caps on flanges.
1. Structural Classification: **[Intermediate] [Heavy]**-duty system.
 2. Face Design: Flat, flush.
 3. Face Finish: **[Painted white] [Painted to match color indicated by manufacturer's designation] [Painted to match color of acoustical unit] [Natural finish].**
- G. Wide-Face, Single-Web, Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet electrolytically zinc coated, with prefinished flanges of width indicated.
1. Structural Classification: Heavy-duty system.
 2. Face Finish: Painted **[white] [black].**
- H. Wide-Face, Capped, Double-Web, Stainless-Steel Suspension System: Main and cross runners roll formed from Type 304 or 316, stainless-steel sheet, with prefinished **15/16-inch-** (24-mm-) wide stainless-steel caps on flanges.
1. Structural Classification: Intermediate-duty system.
 2. Face Design: Flat, flush.
- I. Narrow-Face, Single-Web, Extruded-Aluminum Suspension System: Main and cross runners formed from extruded aluminum to produce structural members with **9/16-inch-** (15-mm-) wide faces.

1. Structural Classification: **[Intermediate] [Heavy]**-duty system.
 2. Face Design: Screw-slot profile.
 3. Face Finish: **[Painted white] [Satin anodized according to AAMA 611, AA-M12C22A31]**.
 4. Reveal Finish: **[Match face finish] [Painted white] [Painted black]**.
- J. Extra-Wide-Face, **[Double] [Single]**-Web, Metal Suspension System: Main and cross runners formed from **[extruded aluminum] [aluminum-capped steel] [steel-capped steel]** <Insert description> to produce structural members with **[1-1/2-inch- (38-mm-)] [2-inch- (50-mm-)]** wide flanges.
1. Structural Classification: **[Intermediate] [Heavy]**-duty system.
 2. Face Design: Flat, flush.
 3. Face Finish: **[Painted white] [Satin anodized according to AAMA 611, AA-M12C22A31]**.
 4. Gasket System: Clean-room type.

2.6 METAL EDGE MOLDINGS AND TRIM <Insert drawing designation>

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Armstrong World Industries, Inc.
 2. CertainTeed Corp.
 3. Chicago Metallic Corporation.
 4. Fry Reglet Corporation.
 5. Gordon, Inc.
 6. USG Interiors, Inc.; Subsidiary of USG Corporation.
 7. **<Insert manufacturer's name>**
 8. or approved equal.
- B. Roll-Formed, Sheet-Metal Edge Moldings and Trim: Type and profile indicated or, if not indicated, manufacturer's standard moldings for edges and penetrations that comply with seismic design requirements; formed from sheet metal of same material, finish, and color as that used for exposed flanges of suspension-system runners.
1. Provide manufacturer's standard edge moldings that fit acoustical panel edge details and suspension systems indicated and that match width and configuration of exposed runners unless otherwise indicated.
 2. For lay-in panels with reveal edge details, provide **[stepped edge molding that forms reveal of same depth and width as that formed between edge of panel and flange at exposed suspension member] <Insert description>**.
 3. For circular penetrations of ceiling, provide edge moldings fabricated to diameter required to fit penetration exactly.
- C. Extruded-Aluminum Edge Moldings and Trim: Where indicated, provide manufacturer's extruded-aluminum edge moldings and trim of profile indicated or referenced by manufacturer's designations, including splice plates, corner pieces, and attachment and other clips, complying with seismic design requirements and the following:

1. Aluminum Alloy: Alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with not less than the strength and durability properties of aluminum extrusions complying with [ASTM B 221](#) (ASTM B 221M) for Alloy and Temper 6063-T5.
2. Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.
3. Baked-Enamel or Powder-Coat Finish: Minimum dry film thickness of **1.5 mils** (0.04 mm). Comply with ASTM C 635/C 635M and coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

2.7 ACOUSTICAL SEALANT

A. Products: Subject to compliance with requirements, provide one of the following:

1. Acoustical Sealant for Exposed and Concealed Joints:
 - a. Pecora Corporation; AC-20 FTR Acoustical and Insulation Sealant.
 - b. USG Corporation; SHEETROCK Acoustical Sealant.
 - c. **<Insert manufacturer's name>**
 - d. or approved equal.
2. Acoustical Sealant for Concealed Joints:
 - a. Henkel Corporation; OSI Pro-Series SC-175 Acoustical Sound Sealant.
 - b. Pecora Corporation; AIS-919.
 - c. Tremco, Inc.; Tremco Acoustical Sealant.
 - d. **<Insert manufacturer's name>**
 - e. or approved equal.

B. Acoustical Sealant: Manufacturer's standard sealant complying with ASTM C 834 and effective in reducing airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies according to ASTM E 90.

1. Exposed and Concealed Joints: Nonsag, paintable, nonstaining latex sealant.
2. Concealed Joints: Nondrying, nonhardening, nonskinning, nonstaining, gunnable, synthetic-rubber sealant.
3. Acoustical sealant shall **[have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).] [comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."]**

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, including structural framing to which

acoustical panel ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of acoustical panel ceilings.

- B. Examine acoustical panels before installation. Reject acoustical panels that are wet, moisture damaged, or mold damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Measure each ceiling area and establish layout of acoustical panels to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width panels at borders, and comply with layout shown on reflected ceiling plans.

3.3 INSTALLATION

- A. General: Install acoustical panel ceilings to comply with ASTM C 636/C 636M and seismic design requirements indicated, according to manufacturer's written instructions and CISCA's "Ceiling Systems Handbook."
 - 1. Fire-Rated Assembly: Install fire-rated ceiling systems according to tested fire-rated design.
- B. Suspend ceiling hangers from building's structural members and as follows:
 - 1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
 - 2. Splay hangers only where required[**and, if permitted with fire-resistance-rated ceilings,**] to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
 - 3. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension-system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.
 - 4. Secure wire hangers to ceiling-suspension members and to supports above with a minimum of three tight turns. Connect hangers directly either to structures or to inserts, eye screws, or other devices that are secure and appropriate for substrate and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.
 - 5. Secure flat, angle, channel, and rod hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for both the structure to which hangers are attached and the type of hanger involved. Install hangers in a manner that will not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.

6. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, postinstalled mechanical or adhesive anchors, or power-actuated fasteners that extend through forms into concrete.
 7. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.
 8. Do not attach hangers to steel deck tabs.
 9. Do not attach hangers to steel roof deck. Attach hangers to structural members.
 10. Space hangers not more than **48 inches** (1200 mm) o.c. along each member supported directly from hangers unless otherwise indicated; provide hangers not more than **8 inches** (200 mm) from ends of each member.
 11. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards and publications.
- C. Secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns. Suspend bracing from building's structural members as required for hangers, without attaching to permanent metal forms, steel deck, or steel deck tabs. Fasten bracing wires into concrete with cast-in-place or postinstalled anchors.
- D. Install edge moldings and trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical panels.
1. Apply acoustical sealant in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.
 2. Screw attach moldings to substrate at intervals not more than **16 inches** (400 mm) o.c. and not more than **3 inches** (75 mm) from ends, leveling with ceiling suspension system to a tolerance of **1/8 inch in 12 feet** (3.2 mm in 3.6 m). Miter corners accurately and connect securely.
 3. Do not use exposed fasteners, including pop rivets, on moldings and trim.
- E. Install suspension-system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.
- F. Install acoustical panels with undamaged edges and fit accurately into suspension-system runners and edge moldings. Scribe and cut panels at borders and penetrations to provide a neat, precise fit.
1. Arrange directionally patterned acoustical panels as follows:
 - a. As indicated on reflected ceiling plans.
 - b. Install panels with pattern running in one direction parallel to **[long]** **[short]** axis of space.
 - c. Install panels in a basket-weave pattern.
 2. For square-edged panels, install panels with edges fully hidden from view by flanges of suspension-system runners and moldings.
 3. For reveal-edged panels on suspension-system runners, install panels with bottom of reveal in firm contact with top surface of runner flanges.

4. For reveal-edged panels on suspension-system members with box-shaped flanges, install panels with reveal surfaces in firm contact with suspension-system surfaces and panel faces flush with bottom face of runners.
5. Paint cut edges of panel remaining exposed after installation; match color of exposed panel surfaces using coating recommended in writing for this purpose by acoustical panel manufacturer.
6. Install [**hold-down**] [**impact**] clips in areas indicated, in areas required by authorities having jurisdiction, and for fire-resistance ratings; space as recommended by panel manufacturer's written instructions unless otherwise indicated.
7. Install clean-room gasket system in areas indicated, sealing each panel and fixture as recommended by panel manufacturer's written instructions.
8. Protect lighting fixtures and air ducts to comply with requirements indicated for fire-resistance-rated assembly.

3.4 FIELD QUALITY CONTROL

- A. Special Inspections: [**Owner will engage**] [**Engage**] a qualified special inspector to perform the following special inspections:
 1. Compliance of seismic design.
- B. Testing Agency: [**Owner will engage**] [**Engage**] a qualified testing agency to perform tests and inspections and prepare test reports.
- C. Perform the following tests and inspections of completed installations of acoustical panel ceiling hangers and anchors and fasteners in successive stages. Do not proceed with installations of acoustical panel ceiling hangers for the next area until test results for previously completed installations show compliance with requirements.
 1. Extent of Each Test Area: When installation of ceiling suspension systems on each floor has reached 20 percent completion but no panels have been installed.
 - a. Within each test area, testing agency will select one of every 10 power-actuated fasteners and postinstalled anchors used to attach hangers to concrete and will test them for 200 lbf (890 N) of tension; it will also select one of every two postinstalled anchors used to attach bracing wires to concrete and will test them for 440 lbf (1957 N) of tension.
 - b. When testing discovers fasteners and anchors that do not comply with requirements, testing agency will test those anchors not previously tested until 20 pass consecutively and then will resume initial testing frequency.
- D. Acoustical panel ceiling hangers and anchors and fasteners will be considered defective if they do not pass tests and inspections.
- E. Prepare test and inspection reports.

3.5 CLEANING

- A. Clean exposed surfaces of acoustical panel ceilings, including trim, edge moldings, and suspension-system members. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 095113

SECTION 095133 - ACOUSTICAL METAL PAN CEILINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes acoustical metal pans and associated suspension system for interior ceilings.
- B. Related Requirements:
 - 1. Section 095113 "Acoustical Panel Ceilings" for ceilings consisting of mineral-base and glass-fiber-base acoustical panels and exposed suspension systems.
 - 2. Section 095123 "Acoustical Tile Ceilings" for ceilings consisting of mineral-base acoustical tiles used with concealed suspension systems, stapling, or adhesive bonding.
 - 3. Section 095423 "Linear Metal Ceilings."
 - 4. Section 095436 "Suspended Decorative Grids."
- C. Products furnished, but not installed, under this Section include anchors, clips, and other ceiling attachment devices to be cast in concrete.
- D. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager] <Insert location>**.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:

1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
 2. Product Data for Credit IEQ 4.1: For sealants[**and adhesives**], documentation including printed statement of VOC content.
 3. Laboratory Test Reports for Credit IEQ 4.1: For [**ceiling systems**] [**and sealants**], documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Samples: For each exposed product and for each color and texture specified, **6 inches (150 mm)** in size.
- D. Samples for Initial Selection: For units with factory-applied finishes.
- E. Samples for Verification: For each component indicated and for each exposed finish required, prepared on Samples of size indicated below:
1. Metal Pans: Set of [**full-size**] [**6-inch- (150-mm-) square**] Samples of each type, finish, color, pattern, and texture. Show pan edge profile.
 2. Exposed Suspension-System Members, Moldings, and Trim: Set of **6-inch- (150-mm-)** long Samples of each type, finish, and color.
 3. Sound Absorber: Sample of each type matching size of Sample metal pan.
- F. Delegated-Design Submittal: For design of [**seismic restraints and**] attachment devices.

1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Suspended ceiling components.
 2. Structural members to which suspension systems will be attached.
 3. Size and location of access modules for acoustical panels.
 4. Items penetrating finished ceiling including the following:
 - a. Lighting fixtures.
 - b. Air outlets and inlets.
 - c. Speakers.
 - d. Sprinklers.
 - e. Access panels.
 - f. **<Insert item>**.
 5. Perimeter moldings.

- B. Qualification Data: For testing agency.
- C. Product Test Reports: For each acoustical metal pan ceiling, for tests performed by **[manufacturer and witnessed by a qualified testing agency] [a qualified testing agency]**.
- D. Evaluation Reports: For each acoustical metal pan ceiling suspension system[**and anchor and fastener type**].
- E. Field quality-control reports.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For finishes to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Acoustical Metal Pans: Full-size units equal to **[2] <Insert number>** percent of quantity installed.
 - 2. Suspension-System Components: Quantity of each grid, exposed molding, and trim equal to **[2] <Insert number>** percent of quantity installed.
 - 3. Hold-Down Clips: **[Equal to 2 percent of quantity installed] <Insert number>**.

1.8 QUALITY ASSURANCE

- A. Testing Agency Qualifications: Qualified according to NVLAP for testing indicated.
- B. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Build mockup of typical ceiling area as shown on Drawings.
 - 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver acoustical metal pans, suspension-system components, and accessories to Project site in original, unopened packages and store them in a fully enclosed, conditioned space where they are protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.

- B. Handle acoustical metal pans, suspension-system components, and accessories carefully to avoid damaging units and finishes in any way.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design **[seismic restraints and]**attachment devices.
- B. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Flame-Spread Index: Comply with ASTM E 1264 for **[Class A] [Class B] [Class C]** materials.
 - 2. Smoke-Developed Index: **[50] [450] <Insert value>** or less.

2.2 ACOUSTICAL METAL PANS, GENERAL

- A. Source Limitations: Obtain each type of acoustical metal ceiling pan and supporting suspension system from single source from single manufacturer.
- B. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25] <Insert number>** percent for metal pans and not less than **<Insert number>** percent for sound-absorbent insulation.
- C. Glass-Fiber Insulation: Made with binder containing no urea formaldehyde.
- D. Acoustical Panel Standard: Provide manufacturer's standard pans of configuration indicated that comply with ASTM E 1264 classifications as designated by types, patterns, acoustical ratings, and light reflectances unless otherwise indicated.
 - 1. Mounting Method for Measuring NRC: Type E-400; plenum mounting in which face of test specimen is **15-3/4 inches (400 mm)** away from test surface according to ASTM E 795.
- E. Sheet Metal Characteristics: For metal components exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, roughness, stains, or discolorations.

1. Aluminum Sheet: Rolled aluminum sheet, complying with **ASTM B 209** (ASTM B 209M); alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
 2. Steel Sheet: Commercial-quality, cold-rolled, carbon-steel sheet; stretcher leveled; with protective coating complying with ASTM C 635/C 635M.
 - a. Painted Finishes: Electrolytic zinc-coated steel complying with ASTM A 879/A 879M, **13Z** (40G) coating, surface treatment as recommended by finish manufacturer for type of use and finish indicated.
 - b. Chemical/Mechanical Finishes: Uncoated steel sheet complying with ASTM A 1008/A 1008M with luster or bright finish as required by finisher for applying electroplating or other metallic-finishing processes.
 3. Stainless-Steel Sheet: Complying with ASTM A 240/A 240M, [**Type 304**] [**Type 430**] <Insert type>.
- F. Sound-Absorbent Fabric Layer: Provide fabric layer, sized to fit concealed surface of pan, and consisting of black, nonwoven, nonflammable, sound-absorbent material with surface-burning characteristics for flame-spread index of 25 or less and smoke-developed index of 50 or less, as determined by testing according to ASTM E 84.
1. Bond fabric layer to panels in the factory with manufacturer's standard nonflammable adhesive.
- G. Sound-Absorbent Pads: Provide width and length to completely fill concealed surface of pan, with surface-burning characteristics for flame-spread index of 25 or less and smoke-developed index of 50 or less, as determined by testing according to ASTM E 84, and to comply with the following requirements:
1. Plastic Sheet-Wrapped, Mineral-Fiber Insulation: Pads consisting of nonrigid, PVC plastic sheet encapsulating unfaced mineral-fiber insulation complying with ASTM C 553, Type I, Type II, or Type III, and as follows:
 - a. Mineral-Fiber Type and Thickness: Glass fiber; [**1 inch** (25 mm)] [**1-1/2 inches** (38 mm)] [**3 inches** (76 mm)] <Insert dimension>.
 - b. Mineral-Fiber Density: [**3/4 lb/cu. ft.** (12 kg/cu. m)] [**1 lb/cu. ft.** (16 kg/cu. m)] [**1-1/2 lb/cu. ft.** (24 kg/cu. m)] <Insert value>.
 - c. Plastic Sheet Thickness and Color: Not less than **0.003 inch** (0.076 mm); [**clear**] [**flat black**] [**white**].
 2. Unwrapped, Glass-Fiber Insulation: Black coated, unfaced, complying with ASTM C 553, Type I, Type II, or Type III; not less than **1-lb/cu. ft.** (16-kg/cu. m) density; treated to be nondusting; [**1 inch** (25 mm)] [**1-1/2 inches** (38 mm)] <Insert dimension> thick.
 3. Spacer Grids: Provide manufacturer's standard [**aluminum**] [**galvanized-steel**] grid units that provide an air cushion between metal pans and insulation pads and that act to improve sound absorption.

- H. Sound Attenuation Panels: Provide manufacturer's standard **[aluminum]** **[galvanized-steel]** unperforated metal backing unit that acts as a sound attenuation pan to reduce the travel of sound through ceiling plenum into adjoining rooms.
1. Sound-Absorbent Pads: Provide secondary sound-absorbent pads, **[same as specified for primary sound-absorbent pads]** **<Insert requirements>**, for placement over sound attenuation pan to reduce plenum sound.
- I. Adhesive: Manufacturer's standard nonflammable adhesive for sound-absorbent **[fabric]** **[and]** **[pads]**.
1. Adhesive shall have a VOC content of **[50]** **<Insert number>** g/L or less.
 2. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- 2.3 ALUMINUM PANS FOR ACOUSTICAL METAL PAN CEILING **<Insert drawing designation>**
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [American Decorative Ceilings](#); **<Insert product name or designation>**.
 2. [Armstrong World Industries, Inc.](#); **<Insert product name or designation>**.
 3. [Ceilings Plus](#); **<Insert product name or designation>**.
 4. [Chicago Metallic Corporation](#); **<Insert product name or designation>**.
 5. [Gage Corporation International \(The\)](#); **<Insert product name or designation>**.
 6. [Hunter Douglas Architectural Products, Inc.](#); **<Insert product name or designation>**.
 7. [Simplex Ceilings, a division of Intalite Inc.](#); **<Insert product name or designation>**.
 8. [Steel Ceilings Inc.](#); **<Insert product name or designation>**.
 9. [USG Interiors, Inc.](#); **<Insert product name or designation>**.
 10. **<Insert manufacturer>**
 11. or approved equal.
- B. Classification: Units complying with ASTM E 1264 for **[Type VII, perforated aluminum facing (pan) with mineral- or glass-fiber-base backing]** **[Type XX, other types described as perforated aluminum facing (pan) units with sound-absorbent fabric backing]** **[Type XX, other types described as unperforated aluminum facing (pan) units]** **<Insert Type XX description>**.
1. Pattern: Pattern A (perforated, regularly spaced large holes), arranged in **[diagonal]** **[parallel]** alignment to pan edge with uniform perforations of dimension, holes per square foot or inch, and percent open area as **[indicated by product designation]** **[selected from manufacturer's full range]**.
 2. Pattern: Pattern C (perforated, small holes) regularly spaced, with uniform perforations of dimension, holes per square foot or inch, and percent open area

- as [specified by product designation] [selected from manufacturer's full range].
3. Pattern: <Insert pattern designation for perforated pans and any requirements for perforation alignment, hole shape and size, holes per square foot or inch, percent open area, and border requirements>.
- C. Pan Fabrication: Manufacturer's standard units of size, profile, and edge treatment indicated, formed from metal indicated and finished to comply with requirements indicated.
1. Lay-in Pans: Formed to set in exposed suspension grid.
 2. Clip-in Pans: Designed to clip in and be securely retained in exposed suspension grid by formed edges or accessory clips provided by manufacturer.
 3. Snap-in Pans: Designed with dimples or continuous beads on flanges for snap-in, secure engagement with concealed suspension system.
 4. Torsion-Spring-Hinged Pans: Designed to be securely retained in preslotted, exposed suspension grid by torsion springs provided by manufacturer.
 5. <Insert type and description>.
- D. Pan Thickness: Not less than [0.019 inch (0.5 mm)] [0.025 inch (0.6 mm)] [0.032 inch (0.8 mm)] [0.040 inch (1.0 mm)] <Insert dimension>.
- E. Pan Edge Detail: [Square] [Beveled] [Reveal] [Manufacturer's standard edge detail].
- F. Pan Joint Detail: [Butt] [Wide reveal, not less than 15/16 inch (24 mm) wide] [Narrow reveal, not greater than 9/16 inch (15 mm) wide] [Flush narrow reveal, not greater than 9/16 inch (15 mm) wide] <Insert description>.
- G. Pan Size: [12 by 12 inches (305 by 305 mm)] [12 by 24 inches (305 by 610 mm)] [12 by 36 inches (305 by 915 mm)] [24 by 24 inches (610 by 610 mm)] [24 by 48 inches (610 by 1220 mm)] [24 by 60 inches (610 by 1525 mm)] [30 by 30 inches (760 by 760 mm)] [30 by 60 inches (760 by 1525 mm)] [As indicated on Drawings] <Insert dimensions>.
- H. Scoring: Score pans at intervals to appear as [12-by-12-inch (305-by-305-mm)] <Insert dimensions> ceiling units.
- I. Pan Face Finish: [Mill] [Lacquered mill] [Clear anodized] [Clear mirror anodized] [Painted white] [Painted to match color indicated by product designation] [Painted to match DEN Project Manager's sample] [Painted in color selected from manufacturer's full range] [Bright-reflective metallic finish selected from manufacturer's full range] <Insert finish>.
- J. LR: Not less than [0.70] [0.75] <Insert number>.
- K. NRC: Not less than [0.60] [0.65] [0.70] [0.75] [0.80] [0.85] [0.90] [0.95] <Insert number>.
- L. CAC: Not less than [35] [40] [45] <Insert number>.

- 2.4 STEEL PANS FOR ACOUSTICAL METAL PAN CEILING <Insert drawing designation>
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [American Decorative Ceilings](#); <Insert product name or designation>.
 2. [Armstrong World Industries, Inc.](#); <Insert product name or designation>.
 3. [CertainTeed Corp.](#)
 4. [Ceilings Plus](#); <Insert product name or designation>.
 5. [Chicago Metallic Corporation](#); <Insert product name or designation>.
 6. [Hunter Douglas Architectural Products, Inc.](#); <Insert product name or designation>.
 7. [Simplex Ceilings, a division of Intalite Inc.](#); <Insert product name or designation>.
 8. [Steel Ceilings Inc.](#); <Insert product name or designation>.
 9. [USG Interiors, Inc.](#); <Insert product name or designation>.
 10. <Insert manufacturer's name>.
 11. or approved equal.
- B. Classification: Units complying with ASTM E 1264 for [Type V, perforated steel facing (pan) with mineral- or glass-fiber-base backing] [Type XX, other types described as perforated steel facing (pan) units with sound-absorbent fabric backing] [Type XX, other types described as unperforated steel facing (pan) units] <Insert Type XX description>.
1. Pattern: Pattern A (perforated, regularly spaced large holes), arranged in [diagonal] [parallel] alignment to pan edge with uniform perforations of dimension, holes per square foot or inch, and percent open area as [indicated by product designation] [selected from manufacturer's full range].
 2. Pattern: Pattern C (perforated, small holes) regularly spaced, with uniform perforations of dimension, holes per square foot or inch, and percent open area as [specified by product designation] [selected from manufacturer's full range].
 3. Pattern: <Insert pattern designation for perforated pans and any requirements for perforation alignment, hole shape and size, holes per square foot or inch, and percent open area>.
- C. Pan Fabrication: Manufacturer's standard units of size, profile, and edge treatment indicated, formed from metal indicated and finished to comply with requirements indicated.
1. Lay-in Pans: Formed to set in exposed suspension grid.
 2. Clip-in Pans: Designed to clip in and be securely retained in exposed suspension grid by formed edges or accessory clips provided by manufacturer.
 3. Snap-in Pans: Designed with dimples or continuous beads on flanges for snap-in, secure engagement with concealed suspension system.
 4. Torsion-Spring-Hinged Pans: Designed to be securely retained in preslotted, exposed suspension grid by torsion springs provided by manufacturer.
 5. <Insert type and description>.

- D. Pan Thickness: Not less than [0.010 inch (0.25 mm)] [0.019 inch (0.5 mm)] [0.025 inch (0.6 mm)] [0.030 inch (0.75 mm)] [0.036 inch (0.9 mm)] <Insert dimension>.
- E. Pan Edge Detail: [Square] [Beveled] [Reveal] [Manufacturer's standard edge detail].
- F. Pan Joint Detail: [Butt] [Wide reveal, not less than 15/16 inch (24 mm) wide] [Narrow reveal, not greater than 9/16 inch (15 mm) wide] [Flush narrow reveal, not greater than 9/16 inch (15 mm) wide] <Insert description>.
- G. Pan Size: [12 by 12 inches (305 by 305 mm)] [12 by 24 inches (305 by 610 mm)] [12 by 36 inches (305 by 915 mm)] [24 by 24 inches (610 by 610 mm)] [24 by 48 inches (610 by 1220 mm)] [24 by 60 inches (610 by 1525 mm)] [30 by 30 inches (760 by 760 mm)] [30 by 60 inches (760 by 1525 mm)] [As indicated on Drawings] <Insert dimensions>.
- H. Scoring: Score pans at intervals to appear as [12-by-12-inch (305-by-305-mm)] <Insert dimensions> ceiling units.
- I. Pan Face Finish: [Painted white] [Painted to match color indicated by product designation] [Painted to match DEN Project Manager's sample] [Painted in color selected from manufacturer's full range] [Plated with metallic finish, as selected from manufacturer's full range] [Bright-reflective metallic finish selected from manufacturer's full range] <Insert finish>.
- J. LR: Not less than [0.70] [0.75] <Insert number>.
- K. NRC: Not less than [0.60] [0.65] [0.70] [0.75] [0.80] [0.85] [0.90] [0.95] <Insert number>.
- L. CAC: Not less than [35] [40] [45] <Insert number>.
- 2.5 STAINLESS-STEEL PANS FOR ACOUSTICAL METAL PAN CEILING <Insert drawing designation>
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [Ceilings Plus.](#)
 2. [Chicago Metallic Corporation.](#)
 3. [Hunter Douglas.](#)
 4. [Simplex Ceilings; a division of Intalite Inc.](#)
 5. [Steel Ceilings Inc.](#)
 6. <Insert manufacturer's name>.
 7. or approved equal.
- B. Classification: Units complying with ASTM E 1264 for [Type VI, perforated stainless-steel facing (pan) with mineral- or glass-fiber-base backing] [Type XX, other types described as perforated stainless-steel facing (pan) units with

sound-absorbent fabric backing] [Type XX, other types described as **unperforated stainless-steel facing (pan) units**] <Insert Type XX description>.

1. Pattern: Pattern A (perforated, regularly spaced large holes), arranged in parallel alignment to pan edge with uniform perforations of **0.109-inch (2.8-mm)** diameter, 1800 holes/sq. ft. or inch, and 11.8 percent open area.
 2. Pattern: <Insert pattern designation for perforated pans and any requirements for perforation alignment, hole shape and size, holes per square foot or inch, and percent open area>.
- C. Pan Fabrication: Manufacturer's standard units of size, profile, and edge treatment indicated, formed from metal indicated and finished to comply with requirements indicated.
1. Lay-in Pans: Formed to set in exposed suspension grid.
 2. Clip-in Pans: Designed to clip in and be securely retained in exposed suspension grid by formed edges or accessory clips provided by manufacturer.
 3. Snap-in Pans: Designed with dimples or continuous beads on flanges for snap-in, secure engagement with concealed suspension system.
 4. Torsion-Spring-Hinged Pans: Designed to be securely retained in preslotted, exposed suspension grid by torsion springs provided by manufacturer.
 5. <Insert type and description>.
- D. Pan Thickness: Not less than [**0.019 inch (0.5 mm)**] [**0.025 inch (0.6 mm)**] [**0.030 inch (0.76 mm)**] <Insert dimension>.
- E. Pan Edge Detail: [**Square**] [**Beveled**] [**Reveal**] [**Manufacturer's standard edge detail**].
- F. Pan Joint Detail: [**Butt**] [**Wide reveal, not less than 15/16 inch (24 mm) wide**] [**Narrow reveal, not greater than 9/16 inch (15 mm) wide**] [**Flush narrow reveal, not greater than 9/16 inch (15 mm) wide**] <Insert description>.
- G. Pan Size: [**12 by 12 inches (305 by 305 mm)**] [**12 by 24 inches (305 by 610 mm)**] [**12 by 36 inches (305 by 915 mm)**] [**24 by 24 inches (610 by 610 mm)**] [**24 by 48 inches (610 by 1220 mm)**] [**30 by 30 inches (760 by 760 mm)**] [**As indicated on Drawings**] <Insert dimensions>.
- H. Scoring: Score pans at intervals to appear as [**12-by-12-inch (305-by-305-mm)**] <Insert dimensions> ceiling units.
- I. Pan Face Finish: [**Directional Satin Finish: No. 4**] [**Dull Satin Finish: No. 6**] [**Mirrorlike Reflective, Nondirectional Polish: No. 8**] <Insert finish>.
- J. NRC: Not less than [**0.60**] [**0.65**] [**0.70**] [**0.75**] [**0.80**] [**0.85**] [**0.90**] [**0.95**] <Insert number>.
- K. CAC: Not less than [**35**] [**40**] [**45**] <Insert number>.

2.6 METAL SUSPENSION SYSTEMS, GENERAL

- A. Recycled Content of Metal Suspension System: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert number>** percent.
- B. Metal Suspension System Standard: Provide manufacturer's standard metal suspension systems of types, structural classifications, and finishes indicated that comply with applicable ASTM C 635/C 635M requirements.
- C. Suspension Systems: Provide systems complete with carriers, runners, splice sections, connector clips, alignment clips, leveling clips, hangers, molding, trim, retention clips, load-resisting struts, and other suspension components required to support ceiling units and other ceiling-supported construction.
- D. Attachment Devices: Size for 5 times the design load indicated in ASTM C 635/C 635M, Table 1, Direct Hung, unless otherwise indicated. Comply with seismic design requirements.
 - 1. Anchors in Concrete: Anchors of type and material indicated below, with holes or loops for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to **[5]** **<Insert number>** times that imposed by ceiling construction, as determined by testing according to ASTM E 488 or ASTM E 1512 as applicable, conducted by a qualified testing and inspecting agency.
 - a. Type: **[Cast-in-place]** **[Postinstalled expansion]** **[Postinstalled bonded]** anchors.
 - b. Corrosion Protection: Carbon-steel components zinc plated to comply with ASTM B 633, Class Fe/Zn 5 (0.005 mm) for Class SC 1 service condition.
 - c. Corrosion Protection: Stainless-steel components complying with ASTM F 593 and ASTM F 594, Group 1 Alloy 304 or 316 for bolts; Alloy 304 or 316 for anchor.
 - d. Corrosion Protection: Components fabricated from nickel-copper-alloy rods complying with ASTM B 164 for UNS No. N04400 alloy.
 - 2. Power-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hangers of type indicated, and with capability to sustain, without failure, a load equal to **[10]** **<Insert number>** times that imposed by ceiling construction, as determined by testing according to ASTM E 1190, conducted by a qualified testing and inspecting agency.
- E. Wire Hangers, Braces, and Ties: Provide wires complying with the following requirements:
 - 1. Zinc-Coated, Carbon-Steel Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper.
 - 2. Stainless-Steel Wire: ASTM A 580/A 580M, Type 304, nonmagnetic.
 - 3. Nickel-Copper-Alloy Wire: ASTM B 164, nickel copper alloy for UNS No. N04400 alloy.

4. Size: Select wire diameter so its stress at 3 times the hanger design load indicated in ASTM C 635/C 635M, Table 1, Direct Hung, is less than yield stress of wire, but provide not less than [0.106-inch- (2.69-mm-)] [0.135-inch- (3.5-mm-)] <Insert dimension> diameter wire.
- F. [**Hanger Rods**] [**Flat Hangers**]: Mild steel, zinc coated or protected with rust-inhibitive paint.
 - G. Angle Hangers: Angles with legs not less than 7/8 inch (22 mm) wide; formed with 0.04-inch- (1.0-mm-) thick, galvanized-steel sheet complying with ASTM A 653/A 653M, G90 (Z275) coating designation; with bolted connections and 5/16-inch- (8-mm-) diameter bolts.
 - H. Seismic Stabilizer Bars: Manufacturer's standard perimeter stabilizers designed to accommodate seismic forces.
 - I. Seismic Struts: Manufacturer's standard compression struts designed to accommodate seismic forces.
 - J. Seismic Clips: Manufacturer's standard seismic clips designed and spaced to secure acoustical metal pans in place.
 - K. Hold-Down Clips: Manufacturer's standard hold-down clips spaced to secure acoustical metal pans in place [**to molding and trim at perimeter**] [**at each pan**] <Insert requirements>.
 - L. Exposed Metal Edge Moldings and Trim: Provide exposed members as indicated or as required to comply with seismic requirements of authorities having jurisdiction, to conceal edges of and penetrations through ceiling, to conceal edges of pans and runners, for fixture trim and adapters, for fasciae at changes in ceiling height, and for other conditions; of metal and finish matching acoustical metal pan ceiling units unless otherwise indicated.
 1. For Circular Penetrations of Ceiling: Fabricate edge moldings to diameter required to fit penetration exactly.
- 2.7 DIRECT-HUNG, STANDARD-GRID, METAL SUSPENSION SYSTEM FOR ACOUSTICAL METAL PAN CEILING <Insert drawing designation>
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. [Armstrong World Industries, Inc.](#)
 2. [CertainTeed Corp.](#)
 3. [Chicago Metallic Corporation.](#)
 4. [USG Interiors, Inc.; Subsidiary of USG Corporation.](#)
 5. <Insert manufacturer's name>.
 6. or approved equal.

- B. Suspension System: For **[clip-in]** **[lay-in]** **[torsion-spring-hinged]** **<Insert type>** pans.
- C. Wide-Face, Capped, Double-Web, Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet, prepainted, electrolytic zinc-coated or hot-dip galvanized according to ASTM A 653/A 653M, **G30 (Z90)** coating designation, with prefinished, cold-rolled, **15/16-inch-** (24-mm-) wide sheet metal caps on flanges.
1. Structural Classification: **[Intermediate]** **[Heavy]**-duty system.
 2. End Condition of Cross Runners: **[Override (stepped)]** **[or]** **[butt-edge]** type.
 3. Face Design: Flat, flush.
 4. Cap Material: **[Steel]** **[or]** **[aluminum]** cold-rolled sheet.
 5. Cap Finish: **[Painted white]** **[Painted in color as selected from manufacturer's full range]** **[Painted to match color indicated by manufacturer's designation]** **[Painted to match color of metal pan]** **[Plated with metallic finish, as selected from manufacturer's full range]** **[Plated with metallic finish indicated by manufacturer's designation]** **[Natural finish for aluminum]**.
- D. Narrow-Face, Capped, Double-Web, Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet, prepainted, electrolytic zinc-coated or hot-dip galvanized according to ASTM A 653/653M, **G30 (Z90)** coating designation, with prefinished, cold-rolled, **9/16-inch-** (15-mm-) wide sheet metal caps on flanges.
1. Structural Classification: **[Intermediate]** **[Heavy]**-duty system.
 2. End Condition of Cross Runners: **[Override (stepped)]** **[or]** **[butt-edge]** type.
 3. Face Design: **[Flat, flush]** **[Flanges formed with an integral center reveal]**.
 4. Cap Material: **[Steel]** **[or]** **[aluminum]** cold-rolled sheet.
 5. Cap Finish: **[Painted white]** **[Painted in color as selected from manufacturer's full range]** **[Painted to match color indicated by manufacturer's designation]** **[Painted to match color of metal pan]** **[Plated with metallic finish, as selected from manufacturer's full range]** **[Plated with metallic finish indicated by manufacturer's designation]** **[Natural finish for aluminum]**.
- E. Narrow-Face, Uncapped, Double-Web, Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet, prepainted, electrolytic zinc-coated or hot-dip galvanized, to produce structural members with **9/16-inch-** (15-mm-) wide faces.
1. Structural Classification: **[Intermediate]** **[Heavy]**-duty system.
 2. Face Design: With **[1/8-inch-** (3.2-mm-)] **[1/4-inch-** (6.35-mm-)] wide, slotted, box-shaped flange.
 3. Face Finish: Painted **[white]** **[in color as selected from manufacturer's full range]** **[to match color indicated by manufacturer's designation]** **[to match color of metal pan]**.
- F. Wide-Face, Capped, Double-Web, Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet, hot-dip galvanized according to ASTM A 653/A 653M, **G60 (Z180)** coating designation, with prefinished, cold-rolled, **15/16-inch-** (24-mm-) wide aluminum caps on flanges.

1. Structural Classification: **[Intermediate] [Heavy]**-duty system.
 2. Face Design: Flat, flush.
 3. Face Finish: **[Painted white] [Painted to match color indicated by manufacturer's designation] [Painted to match color of acoustical unit] [Natural finish]**.
- G. Wide-Face, Capped, Double-Web, Stainless-Steel Suspension System: Main and cross runners roll formed from and capped with Type 304 or Type 316 stainless-steel sheet, with prefinished, cold-rolled, **15/16-inch-** (24-mm-) wide stainless-steel caps on flanges.
1. Structural Classification: Intermediate-duty system.
 2. Face Design: Flat, flush.
 3. Finish: **[Directional Satin Finish: No. 4] [Dull Satin Finish: No. 6] [Mirrorlike Reflective, Nondirectional Polish: No. 8] <Insert finish>**.
- H. Suspension System for Torsion-Spring-Hinged Metal Pans: Provide runners with factory-cut slots fabricated to accept torsion-spring-hinged attachment.
- 2.8 METAL SUSPENSION SYSTEM FOR ACOUSTICAL SNAP-IN METAL PAN CEILING
<Insert drawing designation>
- A. Manufacturers: Subject to compliance with requirements, provide products by snap-in metal pan ceiling manufacturer.
- B. Indirect-Hung, Snap-**[Tee] [Bar]** System: Designed to support metal pans that snap into main runners, consisting of main runners connected to carrying channels that are attached by hangers to building structure, and complying with the following requirements:
1. Main Runners: Formed from the following metal:
 - a. Aluminum Sheet: Alloy and temper recommended by aluminum producer and finisher for type of use indicated and manufacturer's standard finish, complying with **ASTM B 209** (ASTM B 209M).
 - b. Electrolytic Zinc-Coated Steel Sheet: ASTM A 879/A 879M, with not less than **[08Z (24G)] <Insert coating designation>** zinc coating.
 - c. Hot-Dip Galvanized Steel: ASTM A 653/A 653M, with not less than **[G60 (Z180)] <Insert coating designation>** zinc coating.
 - d. Stainless-Steel Sheet: ASTM A 666, Type 302 or Type 304, stretcher leveled, with cold-rolled mill finish.
 - e. Metal Sheet: Metal as standard with ceiling system manufacturer, with factory-applied protective finish complying with ASTM C 635/C 635M.
 2. Carrying Channels: Same member and metal as indicated for main runners.
 3. Carrying Channels: Cold-rolled steel, not less than **0.060-inch** (1.5-mm) nominal thickness of base (uncoated) metal and **7/16-inch-** (11-mm-) wide flanges, **[protected with rust-inhibitive paint] [hot-dip galvanized according to ASTM A 653/A 653M, G60 (Z180) coating designation]**, and as follows:

- a. Depth and Weight: [1-1/2 inches and 475 lb/1000 feet (38 mm and 215 kg/305 m)] [2 inches and 590 lb/1000 feet (51 mm and 268 kg/305 m)].
4. Exterior Bracing Channels and Angles: Cold-rolled steel, hot-dip galvanized to comply with ASTM A 653/A 653M, G60 (Z180) coating designation; size and profile as required to withstand wind load.
- C. Direct-Hung, Snap-[Tee] [Bar] System: Designed to support metal pans that snap into main runners, consisting of main runners supported by hangers attached directly to building structure, and complying with the following requirements:
 1. Hangers: Angles or channels, as standard with ceiling system manufacturer, formed from same metal as main runners.
 2. Main Runners: Rolled aluminum sheet; alloy and temper recommended by aluminum producer and finisher for type of use indicated and manufacturer's standard finish, complying with ASTM B 209 (ASTM B 209M).
- D. Access Panels: For access at locations indicated, provide acoustical snap-in metal pan ceiling units, accessible by [key or tool] [two access knobs; place one access knob at each end of panel near corners].
 1. Access Key or Tool: Provide manufacturer's standard key or tool for opening access panels; [one] [two] <Insert number>.

2.9 ACOUSTICAL SEALANT

- A. Products: Subject to compliance with requirements, provide one of the following:
 1. Acoustical Sealant for Exposed and Concealed Joints:
 - a. Pecora Corporation; AC-20 FTR Acoustical and Insulation Sealant.
 - b. USG Corporation; SHEETROCK Acoustical Sealant.
 - c. <Insert manufacturer's name; product name or designation>.
 - d. or approved equal.
 2. Acoustical Sealant for Concealed Joints:
 - a. Henkel Corporation; OSI Pro-Series SC-175 Acoustical Sound Sealant.
 - b. Pecora Corporation; AIS-919.
 - c. Tremco, Inc.; Tremco Acoustical Sealant.
 - d. <Insert manufacturer's name; product name or designation>.
 - e. or approved equal.
- B. Acoustical Sealant: Manufacturer's standard sealant complying with ASTM C 834 and effective in reducing airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies according to ASTM E 90.
 1. Exposed and Concealed Joints: Nonsag, paintable, nonstaining latex sealant.

2. Concealed Joints: Nondrying, nonhardening, nonskinning, nonstaining, gunnable, synthetic-rubber sealant.
3. Acoustical sealant shall have a VOC content of [250] <Insert number> g/L or less.
4. Acoustical sealant shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.10 GENERAL FINISH REQUIREMENTS

- A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- C. High-Humidity Finish: Comply with ASTM C 635/C 635M requirements for "Coating Classification for Severe Environment Performance" where high-humidity finishes are indicated.

2.11 ALUMINUM FINISHES

- A. Mill Finish: AA-M10C10 (Mechanical Finish: as fabricated, unspecified; Chemical Finish: chemically cleaned).
- B. Lacquered Mill Finish: AA-M10C10R1x (Mechanical Finish: as fabricated, unspecified; Chemical Finish: chemically cleaned; Organic Coating: as specified below).
 1. Organic Coating: Manufacturer's standard clear organic coating.
- C. Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.
- D. Clear Mirror Anodic Finish: AA-M21C12A212, 0.005 mm or thicker.
- E. Color-Coated Finish: Manufacturer's standard [**powder-coat**] baked paint complying with coating manufacturer's written instructions for surface preparation, pretreatment, application, baking, and minimum dry film thickness.
- F. Bright-Reflective Finish: Manufacturer's standard chemical/mechanical bright-reflective metallic finish complying with finish manufacturer's written instructions for surface preparation, pretreatment, process, protective coating, and minimum thickness to produce a finish uniform in appearance and free of blisters, pits, roughness, nodules, burning, cracks, unfinished areas, and other visible defects.

2.12 METALLIC-COATED STEEL SHEET FINISHES

- A. Color-Coated Finish: Manufacturer's standard[**powder-coat**] baked paint complying with coating manufacturer's written instructions for surface preparation, pretreatment, application, baking, and minimum dry film thickness.

2.13 STEEL SHEET FINISHES

- A. Electroplated Finish: Electroplating process complying with finish manufacturer's written instructions for surface preparation, pretreatment, process, and minimum thickness to produce a coating uniform in appearance and free of blisters, pits, roughness, nodules, burning, cracks, unplated areas, and other visible defects.
- B. Bright-Reflective Finish: Manufacturer's standard chemical/mechanical bright-reflective metallic finish complying with finish manufacturer's written instructions for surface preparation, pretreatment, process, protective coating, and minimum thickness to produce a finish uniform in appearance and free of blisters, pits, roughness, nodules, burning, cracks, unfinished areas, and other visible defects.

2.14 STAINLESS-STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 1. Run grain of directional finishes with long dimension of each piece.
 - 2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, including structural framing to which acoustical metal pan ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of acoustical metal pan ceilings.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Measure each ceiling area and establish layout of acoustical metal pans to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width pans

at borders, and comply with layout shown on reflected ceiling plans and coordination drawings.

3.3 INSTALLATION

- A. General: Install acoustical metal pan ceilings to comply with ASTM C 636/C 636M and seismic design requirements indicated, according to manufacturer's written instructions and CISCA's "Ceiling Systems Handbook."
- B. Suspend ceiling hangers from building's structural members and as follows:
1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
 2. Splay hangers only where required to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
 3. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension-system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.
 4. Secure wire hangers to ceiling suspension members and to supports above with a minimum of three tight turns. Connect hangers directly either to structures or to inserts, eye screws, or other devices that are secure and appropriate for substrate and that do not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.
 5. Secure flat, angle, channel, and rod hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for both structure to which hangers are attached and hanger type involved. Install hangers in a manner that does not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.
 6. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, postinstalled mechanical or adhesive anchors, or power-actuated fasteners that extend through forms into concrete.
 7. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.
 8. Do not attach hangers to steel deck tabs.
 9. Do not attach hangers to steel roof deck. Attach hangers to structural members.
 10. Space hangers not more than **48 inches (1200 mm)** o.c. along each member supported directly from hangers unless otherwise indicated; provide hangers not more than **8 inches (200 mm)** from ends of each member.
 11. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards and publications.
- C. Secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns. Suspend bracing from building's structural members as required for hangers, without attaching to permanent metal forms, steel deck, or steel deck tabs. Fasten bracing wires into concrete with cast-in-place or postinstalled anchors.

- D. Install edge moldings and trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical metal pans.
1. Apply acoustical sealant in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.
 2. Screw attach moldings to substrate at intervals not more than **16 inches (400 mm)** o.c. and not more than **3 inches (75 mm)** from ends, leveling with ceiling suspension system to a tolerance of **1/8 inch in 12 feet (3.2 mm in 3.6 m)**. Miter corners accurately and connect securely.
 3. Do not use exposed fasteners, including pop rivets, on moldings and trim.
- E. Install suspension-system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.
- F. Cut acoustical metal pan units for accurate fit at borders and at interruptions and penetrations by other work through ceilings. Stiffen edges of cut units as required to eliminate evidence of buckling or variations in flatness exceeding referenced standards for stretcher-leveled metal sheet.
- G. Install acoustical metal pans in coordination with suspension system and exposed moldings and trim. Comply with installation tolerances according to Cisca's "Metal Ceilings Technical Guidelines."
1. For lay-in, square-edge pans, install pans with edges fully hidden from view by flanges of suspension-system runners and moldings.
 2. For lay-in, reveal-edge pans on suspension-system runners, install pans with bottom of reveal in firm contact with top surface of runner flanges.
 3. For lay-in, reveal-edge pans on suspension-system members with box-shaped flanges, install pans with reveal surfaces in firm contact with suspension-system surfaces and panel faces flush with bottom face of runners.
 4. For **[clip-in] [torsion-spring-hinged]** pans, position pans according to manufacturer's written instructions.
 5. For snap-in pans, fit adjoining units to form flush, tight joints.
 6. Align joints in adjacent courses to form uniform, straight joints parallel to room axis in both directions unless otherwise indicated.
 7. Fit adjoining units to form flush, tight joints.
 8. Install directionally patterned or textured metal pans in directions indicated.
 9. Install sound-absorbent fabric layers in, and bond to, perforated metal pans.
 10. Install sound-absorbent pads in perforated metal pans[**over metal spacer grids**].
- H. Install sound attenuation panels in areas indicated by reflected ceiling plans or room finish schedules. Lay panels directly on ceiling system and close major openings to form complete coverage in required areas. Lay second sound-absorbent pads on sound attenuation panels.
- I. Install hold-down clips where indicated.

3.4 FIELD QUALITY CONTROL

- A. Special Inspections: **[Owner will engage] [Engage]** a qualified special inspector to perform the following special inspections:
 - 1. Seismic design compliance.
- B. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections.
- C. Perform the following tests and inspections of completed installations of acoustical metal panel ceiling hangers, anchors, and fasteners in successive stages. Do not proceed with installations of acoustical metal panel ceiling hangers for the next area until test results for previously completed installations show compliance with requirements.
 - 1. Extent of Each Test Area: When installation of ceiling suspension systems on each floor has reached 20 percent completion but no panels have been installed.
 - a. Within each test area, testing agency selects one of every 10 power-actuated fasteners and postinstalled anchors used to attach hangers to concrete and tests them for **200 lbf (890 N)** of tension; it also selects one of every two postinstalled anchors used to attach bracing wires to concrete and tests them for **440 lbf (1957 N)** of tension.
 - b. When tested fasteners and anchors do not comply with requirements, testing agency tests those fasteners and anchors not previously tested until 20 pass consecutively and then resumes initial testing frequency.
- D. Acoustical metal panel ceiling hangers, anchors, and fasteners will be considered defective if they do not pass tests and inspections.
- E. Prepare test and inspection reports.

3.5 CLEANING

- A. Clean exposed surfaces of acoustical metal pan ceilings, including trim and edge moldings, after removing strippable, temporary protective covering, if any. Comply with manufacturer's written instructions for stripping of temporary protective covering, cleaning, and touchup of minor finish damage. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage, including dented and bent units.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 095133

SECTION 095423 - LINEAR METAL CEILINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes strip linear metal pans and suspension systems for ceilings.
- B. Related Sections:
 - 1. Section 095113 "Acoustical Panel Ceilings" for ceilings consisting of mineral-base and glass-fiber-base acoustical panels and exposed suspension systems.
 - 2. Section 095123 "Acoustical Tile Ceilings" for ceilings consisting of mineral-base acoustical tiles used with concealed suspension systems, stapling, or adhesive bonding.
 - 3. Section 095133 "Acoustical Metal Pan Ceilings" for clip-in, lay-in, snap-in, and torsion-spring-hinged metal pan ceilings with exposed suspension systems.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. LR: Light Reflectance coefficient.
- B. NRC: Noise Reduction Coefficient.

1.4 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Exterior linear metal ceilings shall withstand exterior exposure and the effects of gravity loads and the following loads and stresses without showing permanent deformation of ceiling system components including pans and suspension system; noise or metal fatigue caused by vibration, deflection, and displacement of ceiling units; or permanent damage to fasteners and anchors.
 - 1. Wind Load: Uniform pressure [~~of 20 lbf/sq. ft. (960 Pa)~~] [~~of 30 lbf/sq. ft. (1436 Pa)~~] **[as indicated on Drawings]** <Insert pressure>, acting inward or outward.

- B. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 - 1. Temperature Change (Range): [120 deg F (67 deg C), **ambient**; 180 deg F (100 deg C)] <Insert temperature range>, material surfaces.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Include data substantiating that materials comply with requirements.
- B. Performance Data: For installed products indicated to comply with design loads and other criteria, include structural analysis and other analytical data signed and sealed by the qualified professional engineer responsible for their preparation.
- C. Samples for Initial Selection: For components with factory-applied color and other decorative finishes.
- D. Samples for Verification: For each component indicated and for each exposed finish required, prepared on Samples of size indicated below:
 - 1. Linear Metal Pan: Set of 12-inch- (300-mm-) long Samples of each type and color and a 12-inch- (300-mm-) long spliced section.
 - 2. Suspension System Members: 12-inch- (300-mm-) long Sample of each type.
 - 3. Exposed Molding and Trim: Set of 12-inch- (300-mm-) long Samples of each type, finish, and color.
 - 4. Filler Strips: Set of 12-inch- (300-mm-) long Samples of each type, finish, and color.
 - 5. Sound Absorber: 12 inches (300 mm) long.
 - 6. End Cap: Full size.

1.6 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 - 1. Linear pattern.
 - 2. Joint pattern.
 - 3. Ceiling suspension members.
 - 4. Method of attaching hangers to building structure.
 - a. Furnish layouts for cast-in-place anchors, clips, and other ceiling attachment devices whose installation is specified in other Sections.
 - 5. Ceiling-mounted items including light fixtures, diffusers, grilles, speakers, sprinklers, and access panels.

6. Ceiling perimeter and penetrations through ceiling; trim and moldings.
7. Minimum Drawing Scale: [1/4 inch = 1 foot (1:48)] [1/8 inch = 1 foot (1:96)] [1:50] [1:100] <Insert scale>.

- B. Qualification Data: For [**professional engineer and**] testing agency.
- C. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for each linear metal ceiling.
- D. Evaluation Reports: For linear metal ceiling and components [**and anchor type**].
- E. Field quality-control reports.

1.7 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For finishes to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Linear Metal Ceiling Components: Quantity of each pan, carrier, accessory, and exposed molding and trim equal to [2] <Insert number> percent of quantity installed.

1.9 QUALITY ASSURANCE

- A. Acoustical Testing Agency Qualifications: An independent testing laboratory or an NVLAP-accredited laboratory with the experience and capability to conduct the testing indicated. NVLAP-accredited laboratories must document accreditation, based on a "Certificate of Accreditation" and a "Scope of Accreditation" listing the test methods specified.
- B. Source Limitations: Obtain each set of linear metal pans and suspension systems from one source with resources to provide products of consistent quality in appearance, physical properties, and performance.
- C. Surface-Burning Characteristics: Complying with ASTM E 1264 for [**Class A**] <Insert class> materials, as determined by testing identical products according to ASTM E 84 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.

- D. Seismic Standard: Provide linear metal ceilings designed and installed to withstand the effects of earthquake motions according to the following:
1. Standard for Ceiling Suspension Systems Requiring Seismic Restraint: Comply with ASTM E 580.
 2. Cisca's Recommendations for Acoustical Ceilings: Comply with Cisca's "Recommendations for Direct-Hung Acoustical Tile and Lay-in Panel Ceilings - Seismic Zones 0-2."
 3. Cisca's Guidelines for Systems Requiring Seismic Restraint: Comply with Cisca's "Guidelines for Seismic Restraint of Direct-Hung Suspended Ceiling Assemblies - Seismic Zones 3 & 4."
 4. UBC Standard 25-2, "Metal Suspension Systems for Acoustical Tile and for Lay-in Panel Ceilings."
 5. SEI/ASCE 7, "Minimum Design Loads for Buildings and Other Structures": Section 9, "Earthquake Loads."
 6. **<Insert requirement of authorities having jurisdiction>.**
- E. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
1. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- F. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]<Insert location>**.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Deliver linear metal pans, suspension system components, and accessories to Project site in original, unopened packages and store them in a fully enclosed, conditioned space where they will be protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.
- B. Handle linear metal pans, suspension system components, and accessories carefully to avoid damaging units and finishes in any way.

1.11 PROJECT CONDITIONS

- A. Environmental Limitations: Do not install linear metal ceilings until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

1.12 COORDINATION

- A. Coordinate layout and installation of linear metal pans and suspension system with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 LINEAR METAL CEILING PANS

- A. Acoustical Metal Pan Standard: Provide manufacturer's standard linear metal pans of configuration indicated that comply with ASTM E 1264 classifications as designated by types, acoustical ratings, and light reflectances unless otherwise indicated.
1. Mounting Method for Measuring NRC: Type E-400; plenum mounting in which face of test specimen is **15-3/4 inches** (400 mm) away from test surface per ASTM E 795.
- B. Sheet Metal Characteristics: For metal components exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, roughness, stains, or discolorations.
1. Aluminum Sheet: Roll-formed aluminum sheet, complying with **ASTM B 209** (ASTM B 209M); alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
 2. Steel Sheet: Commercial-quality, cold-rolled, carbon-steel sheet; stretcher leveled; with protective coating complying with ASTM C 635.
 - a. Painted Finishes: Electrolytic zinc-coated steel complying with ASTM A 591/A 591M, **40Z** (12G) coating; surface treatment as recommended by finish manufacturer for type of use and finish indicated.
 - b. Chemical/Mechanical Finishes: Uncoated steel sheet complying with ASTM A 1008/A 1008M with luster or bright finish as required by finisher for applying electroplating or other metallic-finishing processes.
 3. Stainless-Steel Sheet: Complying with ASTM A 240/A 240M, [**Type 304**] [**Type 430**].
- C. Pan Fabrication: Manufacturer's standard units of size, profile, and edge treatment indicated, formed from metal indicated to snap on and be securely retained on carriers without separate fasteners, and finished to comply with requirements indicated.
- D. Pan Splices: Construction same as pans, in lengths **8 to 12 inches** (200 to 300 mm); with manufacturer's standard finish.
- E. End Caps: [**Metal matching pans**] [**Plastic**] [**Manufacturer's standard material**]; fabricated to fit and conceal exposed ends of pans.

- F. Filler Strips: **[Metal matching pans] [Plastic] [Manufacturer's standard material]**; fabricated to uninterrupted close voids between pans.
- G. Moldings and Trim: Provide manufacturer's standard moldings and trim for exposed members, and as indicated or required, for edges and penetrations of ceiling, around fixtures, at changes in ceiling height, and for other conditions; of same metal and finish as linear metal ceiling pans.
- H. Sound-Absorbent Fabric Layer: Provide fabric layer, sized to fit concealed surface of pan, and consisting of black, nonwoven, nonflammable, sound-absorbent material with surface-burning characteristics for flame-spread index of 25 or less and smoke-developed index of 50 or less, as determined by testing per ASTM E 84.
1. Bond fabric layer to pan in the factory with manufacturer's standard nonflammable adhesive.
- I. Sound-Absorbent Pads: Provide width and length to completely fill between carriers, joined at center of panel, with surface-burning characteristics for flame-spread index of 25 or less and smoke-developed index of 50 or less, as determined by testing per ASTM E 84, and to comply with the following requirements:
1. Plastic Sheet-Wrapped Mineral-Fiber Insulation: Pads consisting of nonrigid, PVC plastic sheet encapsulating unfaced mineral-fiber insulation complying with ASTM C 553, Type I, II, or III, and as follows:
 - a. Mineral-Fiber Type and Thickness: Glass fiber; [1 inch (25 mm)] [1-1/2 inches (38 mm)] [3 inches (76 mm)] **<Insert thickness>**.
 - b. Mineral-Fiber Density: [3/4 lb/cu. ft. (12 kg/cu. m)] [1 lb/cu. ft. (16 kg/cu. m)] [1-1/2 lb/cu. ft. (24 kg/cu. m)] **<Insert density>**.
 - c. Plastic Sheet Thickness and Color: Not less than 0.003 inch (0.076 mm); [clear] [flat black] [white].
 - d. Plastic Sheet Thickness and Color: **<Insert requirements>**.
 2. Unwrapped, Glass-Fiber Insulation: Black-coated, unfaced, glass-fiber insulation complying with ASTM C 553, Type I, II, or III, not less than 1-lb/cu. ft. (16-kg/cu. m) density, treated to be nondusting, and as follows:
 - a. Thickness: [1 inch (25 mm)] [1-1/2 inches (38 mm)] **<Insert thickness>**.

2.2 METAL SUSPENSION SYSTEMS

- A. Metal Suspension Systems Standard: Provide ceiling manufacturer's standard metal suspension systems of types and finishes indicated that comply with applicable ASTM C 635 requirements.
- B. Suspension Systems: Provide systems complete with carriers, splice sections, connector clips, alignment clips, leveling clips, hangers, molding, trim, retention clips, load-resisting struts, fixture adapters, and other suspension components required to support ceiling units and other ceiling-supported construction.

- C. Attachment Devices: Size for five times the design load indicated in ASTM C 635, Table 1, Direct Hung, unless otherwise indicated.
1. Cast-in-Place and Postinstalled Anchors in Concrete: Anchors of type and material indicated below, with holes or loops for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to **[five]** **<Insert safety factor>** times that imposed by ceiling construction, as determined by testing per ASTM E 488 or ASTM E 1512 as applicable, conducted by a qualified testing and inspecting agency.
 - a. Type: **[Cast-in-place]** **[Postinstalled expansion]** **[Postinstalled bonded]** anchors.
 - b. Corrosion Protection: Carbon-steel components zinc plated to comply with ASTM B 633, Class Fe/Zn 5 (0.005 mm) for Class SC service condition (mild).
 - c. Corrosion Protection: Stainless-steel components complying with ASTM F 593 and ASTM F 594, Group 1 Alloy 304 or 316 for bolts; Alloy 304 or 316 for anchors.
 - d. Corrosion Protection: Components fabricated from nickel-copper-alloy rods complying with ASTM B 164 for UNS No. N04400 alloy.
 2. Power-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hangers of type indicated, and with capability to sustain, without failure, a load equal to **[10]** **<Insert safety factor>** times that imposed by ceiling construction, as determined by testing per ASTM E 1190, conducted by a qualified testing and inspecting agency.
- D. Wire Hangers, Braces, and Ties: Provide wire complying with the following requirements:
1. Zinc-Coated, Carbon-Steel Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper.
 2. Stainless-Steel Wire: ASTM A 580/A 580M, Type 304, nonmagnetic.
 3. Nickel-Copper-Alloy Wire: ASTM B 164, nickel-copper-alloy UNS No. N04400.
 4. Size: Select wire diameter so its stress at 3 times the hanger design load indicated in ASTM C 635, Table 1, Direct Hung will be less than yield stress of wire, but provide not less than **[0.106-inch-** (2.69-mm-)] **[0.135-inch-** (3.5-mm-)] **<Insert dimension>** diameter wire.
- E. **[Hanger Rods]** **[Flat Hangers]**: Mild steel, zinc coated or protected with rust-inhibitive paint.
- F. Angle Hangers: Angles with legs not less than **7/8 inch** (22 mm) wide; formed from **0.04-inch-** (1.0-mm-) thick, galvanized-steel sheet complying with ASTM A 653/A 653M, **G90** (Z275) coating designation; with bolted connections and **5/16-inch-** (8-mm-) diameter bolts.
- G. Carriers: Factory finished **[with matte-black baked finish]** **<Insert finish description>**.

1. Main Carriers: Aluminum, not less than **0.240-inch** (6.0-mm) rolled sheet, alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, complying with **ASTM B 209** (ASTM B 209M).
 2. Main Carriers: Steel, not less than **0.0209-inch** (0.53-mm) nominal thickness, cold-rolled sheet, with factory-applied protective coating, complying with ASTM C 635.
 - a. Electrolytic Zinc-Coated Steel: ASTM A 591/A 591M, not less than [**80Z** (24G)] **<Insert coating designation>** zinc coating.
 - b. Hot-Dip Galvanized Steel: ASTM A 653/A 653M, not less than [**G60** (Z180)] **<Insert coating designation>** zinc coating.
 3. Adaptable Carriers: Manufacturer's standard carriers for direct attachment to existing suspended tees.
 4. Flexible Radial Carriers: Manufacturer's standard radial carriers.
 5. Expansion Carriers: Manufacturer's standard carriers allowing for irregularities or other unusual space conditions.
- H. Carrier Splices: Same metal, profile, and finish as indicated for carriers.
- I. Stabilizer Channels, Tees, and Bars: Manufacturer's standard components for stabilizing main carriers at regular intervals and at light fixtures, air-distribution equipment, access doors, and other equipment; spaced as standard with manufacturer for use indicated; and factory finished with matte-black baked finish.
- J. Seismic Struts: Manufacturer's standard compression struts designed to accommodate seismic forces.
- K. Exterior Bracing Channels and Angles: Cold-rolled steel, hot-dip galvanized to comply with ASTM A 653/A 653M, **G60** (Z180) coating designation; size and profile as required to withstand wind load.
- L. Hold-Down Clips: Manufacturer's standard hold-down clips spaced as standard with manufacturer.
- M. Edge Moldings and Trim: Provide exposed members as indicated or required to comply with seismic requirements of authorities having jurisdiction, to conceal edges of penetrations through ceiling, to conceal ends of pans and carriers, for fixture trim and adapters, for fasciae at changes in ceiling height, and for other conditions; of metal and finish matching linear metal pans or extruded plastic unless otherwise indicated.
 1. For Circular Penetrations of Ceiling: Fabricate edge moldings to diameter required to fit penetration exactly.
 2. **<Insert requirements>**.
- 2.3 ALUMINUM PANS AND SUSPENSION SYSTEM FOR LINEAR METAL CEILING
<Insert drawing designation>
- A. Aluminum Pans and Suspension System:

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. American Decorative Ceilings; **<Insert product name or designation>**.
 - b. Ceilings Plus; **<Insert product name or designation>**.
 - c. Chicago Metallic Corporation; **<Insert product name or designation>**.
 - d. Hunter Douglas Architectural Products, Inc.; **<Insert product name or designation>**.
 - e. Simplex Ceilings, a division of Intalite Inc.; **<Insert product name or designation>**.
 - f. USG Interiors, Inc.; **<Insert product name or designation>**.
 - g. **<Insert manufacturer's name; product name or designation>**.
 - h. or approved equal.

- B. Classification: Units complying with ASTM E 1264 for **[Type XIII, aluminum strips with mineral- or glass-fiber-base backing; Form 1, perforated] [Type XIII, aluminum strips with mineral- or glass-fiber-base backing; Form 2, unperforated] [Type XX, other types described as perforated aluminum strips with sound-absorbent fabric backing] <Insert Type XX description>**.
 1. Pattern: **<Insert pattern designation for perforated pans and any requirements for perforation alignment, hole shape and size, holes per square foot or inch, and percent open area>**.

- C. Pan Thickness: Not less than **[0.018 inch (0.46 mm)] [0.022 inch (0.56 mm)] [0.024 inch (0.6 mm)] [0.025 inch (0.65 mm)] [0.027 inch (0.7 mm)] [0.032 inch (0.8 mm)] [0.040 inch (1.0 mm)] <Insert thickness>**.

- D. Pan Edge Detail: **[Beveled] [Square] [Round] [Manufacturer's standard edge detail]**.

- E. Linear Module Width and Pan Face Width: **[2-inch (51-mm) module width and 1-1/4-inch (32-mm) face width] [4-inch (102-mm) module width and 3-1/4-inch (83-mm) face width] [6-inch (152-mm) module width and 5-1/4-inch (133-mm) face width] [8-inch (203-mm) module width and 7-1/4-inch (184-mm) face width] [100-mm module width and 80-mm face width] [200-mm module width and 180-mm face width] [300-mm module width and 280-mm face width] [As indicated on Drawings] <Insert dimensions>**.

- F. Pan Depth: **[5/8 inch (16 mm) deep] [3/4 inch (19 mm) deep] [Not less than 1 to 1-1/2 inches (25 to 38 mm) deep] [15 mm deep] [As indicated] <Insert depth>**.

- G. Pan Face Finish: **[Mill] [Lacquered mill] [Clear anodized] [Clear mirror-anodized] [Painted white] [Painted to match color indicated by product designation] [Painted to match DEN Project Manager's sample] [Painted in color selected from manufacturer's full range] [High-performance organic coating in color selected from manufacturer's full range] [Bright-reflective finish selected from manufacturer's full range] <Insert finish>**.

- H. End Cap, Finish of Exposed Portions: **[Matte black] [To match pan] [Manufacturer's standard finish]**.

- I. Filler Strip Design: **[Recessed] [Flush] [An integral extension of pan profile] [Expansion, for use with expansion carriers] [Slotted, for air diffusion].**
 - J. Filler Strip, Finish of Exposed Portions: **[Matte black] [To match pan].**
 - K. LR: Not less than **[0.70] [0.75] <Insert LR>.**
 - L. NRC: Not less than **[0.65] [0.75] [0.95] <Insert NRC>.**
 - M. Suspension-System Main-Carrier Material: **[Aluminum] [Electrolytic zinc-coated steel] [Hot-dip galvanized steel] [Manufacturer's standard material and protective finish].**
- 2.4 STEEL PANS AND SUSPENSION SYSTEM FOR LINEAR METAL CEILING **<Insert drawing designation>**
- A. Steel Pans and Suspension System:
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Ceilings Plus; **<Insert product name or designation>.**
 - b. Chicago Metallic Corporation; **<Insert product name or designation>.**
 - c. Hunter Douglas Architectural Products, Inc.; **<Insert product name or designation>.**
 - d. USG Interiors, Inc.; **<Insert product name or designation>.**
 - e. **<Insert manufacturer's name; product name or designation>.**
 - f. or approved equal.
 - B. Classification: Units complying with ASTM E 1264 for **[Type XIII, steel strips with mineral- or glass-fiber-base backing; Form 1, perforated] [Type XIII, steel strips with mineral- or glass-fiber-base backing; Form 2, unperforated] [Type XX, other types described as perforated steel strips with sound-absorbent fabric backing] <Insert Type XX description>.**
 - 1. Pattern: **<Insert pattern designation for perforated pans and any requirements for perforation alignment, hole shape and size, holes per square foot or inch, and percent open area>.**
 - C. Pan Thickness: Not less than **[0.015 inch (0.4 mm)] [0.020 inch (0.5 mm)] [0.024 inch (0.6 mm)] [0.030 inch (0.75 mm)] <Insert thickness>.**
 - D. Pan Edge Detail: **[Beveled] [Square] [Round] [Manufacturer's standard edge detail].**
 - E. Linear Module Width and Pan Face Width: **[2-inch (51-mm) module width and 1-1/4-inch (32-mm) face width] [4-inch (102-mm) module width and 3-1/4-inch (83-mm) face width] [6-inch (152-mm) module width and 5-1/4-inch (133-mm) face width] [8-inch (203-mm) module width and 7-1/4-inch (184-mm) face width] [As indicated on Drawings] <Insert dimensions>.**

- F. Pan Depth: **[5/8 inch (16 mm) deep] [3/4 inch (19 mm) deep] [Not less than 1 to 1-1/2 inches (25 to 38 mm) deep] [15 mm deep] [As indicated] <Insert depth>**.
- G. Pan Face Finish: **[Painted white] [Painted to match color indicated by product designation] [Painted to match DEN Project Manager's sample] [Painted in color selected from manufacturer's full range] [Electroplated finish selected from manufacturer's full range] <Insert finish>**.
- H. End Cap, Finish of Exposed Portions: **[Matte black] [To match pan] [Manufacturer's standard finish]**.
- I. Filler Strip Design: **[Recessed] [Flush] [An integral extension of pan profile] [Expansion, for use with expansion carriers] [Slotted, for air diffusion]**.
- J. Filler Strip, Finish of Exposed Portions: **[Matte black] [To match pan]**.
- K. LR: Not less than **[0.70] [0.75] <Insert LR>**.
- L. NRC: Not less than **[0.65] [0.75] [0.95] <Insert NRC>**.
- M. Suspension-System Main-Carrier Material: **[Aluminum] [Electrolytic zinc-coated steel] [Hot-dip galvanized steel] [Manufacturer's standard material and protective finish]**.
- 2.5 STAINLESS-STEEL PANS AND SUSPENSION SYSTEM FOR LINEAR METAL CEILING **<Insert drawing designation>**
- A. Stainless-Steel Pans and Suspension System:
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. American Decorative Ceilings; **<Insert product name or designation>**.
 - b. Ceilings Plus; **<Insert product name or designation>**.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.
- B. Classification: Units complying with ASTM E 1264 for **[Type XIII, stainless-steel strips with mineral- or glass-fiber-base backing; Form 1, perforated] [Type XIII, stainless-steel strips with mineral- or glass-fiber-base backing; Form 2, unperforated] [Type XX, other types described as perforated stainless-steel strips with sound-absorbent fabric backing] <Insert Type XX description>**.
1. Pattern: **<Insert pattern designation for perforated pans and any requirements for perforation alignment, hole shape and size, holes per square foot, and percent open area>**.
- C. Pan Thickness: Not less than **[0.016 inch (0.396 mm)] [0.019 inch (0.475 mm)] <Insert thickness>**.
- D. Pan Edge Detail: **[Manufacturer's standard edge detail] <Insert edge detail>**.

- E. Linear Module Width and Pan Face Width: **[2-inch (51-mm) module width and 1-1/4-inch (32-mm) face width] [4-inch (102-mm) module width and 3-1/4-inch (83-mm) face width] [6-inch (152-mm) module width and 5-1/4-inch (133-mm) face width] [8-inch (203-mm) module width and 7-1/4-inch (184-mm) face width] [As indicated on Drawings] <Insert dimensions>.**
- F. Pan Depth: **[5/8 inch (16 mm) deep] [As indicated] <Insert depth>.**
- G. Pan Face Finish: **[Brushed, directional polish] [Satin, directional polish] [Mirrorlike reflective, nondirectional polish] <Insert finish>.**
- H. End Cap, Finish of Exposed Portions: **[Matte black] [To match pan] [Manufacturer's standard finish].**
- I. Filler Strip Design: **[Recessed] [Flush] [An integral extension of pan profile] [Expansion, for use with expansion carriers] [Slotted, for air diffusion].**
- J. Filler Strip, Finish of Exposed Portions: **[Matte black] [To match pan].**
- K. NRC: Not less than **[0.65] [0.75] [0.95] <Insert NRC>.**
- L. Suspension-System Main-Carrier Material: **[Aluminum] [Electrolytic zinc-coated steel] [Hot-dip galvanized steel] [Manufacturer's standard material and protective finish].**

2.6 ACCESSORIES

- A. Access Panels: For access at locations indicated, provide door hinge assembly, retainer clip, and retainer bar, assembled with ceiling panels and carrier sections into access doors of required size, permitting upward or downward opening.

2.7 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.8 ALUMINUM FINISHES

- A. Mill Finish: AA-M10C10.

- B. Lacquered Mill Finish: AA-M10C10R1x with manufacturer's standard clear, organic coating.
- C. Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.
- D. Clear Mirror Anodic Finish: AA-M21C12A212, 0.005 mm or thicker.
- E. Color-Coated Finish: Manufacturer's standard[**powder-coat**] baked paint finish complying with coating manufacturer's written instructions for surface preparation, pretreatment, application, baking, and minimum dry film thickness.
- F. High-Performance Organic Finish: 2-coat fluoropolymer finish complying with [**AAMA 2604**] [**AAMA 2605**] and containing not less than [**50**] [**70**] percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
- G. Bright-Reflective Finish: Manufacturer's standard chemical/mechanical bright-reflective metallic finish complying with finish manufacturer's written instructions for surface preparation, pretreatment, process, protective coating, and minimum thickness to produce a finish uniform in appearance and free of blisters, pits, roughness, nodules, burning, cracks, unfinished areas, and other visible defects.

2.9 GALVANIZED-STEEL SHEET FINISHES

- A. Color-Coated Finish: Manufacturer's standard[**powder-coat**] baked paint finish complying with coating manufacturer's written instructions for surface preparation, pretreatment, application, baking, and minimum dry film thickness.

2.10 STEEL SHEET FINISHES

- A. Electroplated Finish: Electroplating process complying with finish manufacturer's written instructions for surface preparation, pretreatment, process, and minimum thickness to produce a coating uniform in appearance and free of blisters, pits, roughness, nodules, burning, cracks, unplated areas, and other visible defects.
- B. Bright-Reflective Finish: Manufacturer's standard chemical/mechanical bright-reflective metallic finish complying with finish manufacturer's written instructions for surface preparation, pretreatment, process, protective coating, and minimum thickness to produce a finish uniform in appearance and free of blisters, pits, roughness, nodules, burning, cracks, unfinished areas, and other visible defects.

2.11 STAINLESS-STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.

1. Run grain of directional finishes with long dimension of each piece.
2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, including structural framing and substrates to which linear metal ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of linear metal ceilings.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Measure each ceiling area and establish layout of linear metal pans to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width or -length pans at borders, and comply with layout shown on reflected ceiling plans and Coordination Drawings.

3.3 INSTALLATION

- A. Comply with **[ASTM C 636]** **[UBC Standard 25-2]** and seismic requirement indicated, per manufacturer's written instructions and CISCA's "Ceiling Systems Handbook."
- B. Suspend ceiling hangers from building's structural members and as follows:
 1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
 2. Splay hangers only where required to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
 3. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.
 4. Secure wire hangers to ceiling suspension members and to supports above with a minimum of three tight turns. Connect hangers directly either to structures or to inserts, eye screws, or other devices that are secure and appropriate for substrate to which hangers are attached and for type of hanger involved.
 5. Secure flat, angle, channel, and rod hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for both structure to which hangers are attached and type

- of hanger involved. Install hangers in a manner that will not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.
6. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, postinstalled mechanical or adhesive anchors, or power-actuated fasteners that extend through forms into concrete.
 7. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.
 8. Do not attach hangers to steel deck tabs.
 9. Do not attach hangers to steel roof deck. Attach hangers to structural members.
 10. Space hangers not more than **48 inches** (1200 mm) o.c. along each member supported directly from hangers unless otherwise indicated; provide hangers not more than **8 inches** (200 mm) from ends of each member.
 11. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards and publications.
- C. Secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns. Suspend bracing from building's structural members as required for hangers but without attaching to permanent metal forms, steel deck, or steel deck tabs. Fasten bracing wires into concrete with cast-in-place or postinstalled anchors.
- D. Install edge moldings and trim of type indicated at perimeter of linear metal ceiling area and where necessary to conceal edges and ends of linear metal pans.
1. Screw attach moldings to substrate at intervals not more than **16 inches** (400 mm) o.c. and not more than **3 inches** (75 mm) from ends, leveling with ceiling suspension system to a tolerance of **1/8 inch in 12 feet** (3.2 mm in 3.6 m). Miter corners accurately and connect securely.
 2. Do not use exposed fasteners, including pop rivets, on moldings and trim.
- E. Install suspension system carriers so they are aligned and securely interlocked with one another. Remove and replace dented, bent, or kinked members.
- F. Cut linear metal pans for accurate fit at borders and at interruptions and penetrations by other work through ceilings. Stiffen edges of cut units as required to eliminate evidence of buckling or variations in flatness exceeding referenced standards for stretcher-leveled metal sheet.
- G. Install linear metal pans in coordination with suspension system and exposed moldings and trim.
1. Align joints in adjacent courses to form uniform, straight joints parallel to room axis in both directions unless otherwise indicated.
 2. Fit adjoining units to form flush, tight joints. Scribe and cut units for accurate fit at borders and around construction penetrating ceiling.
 3. Install pans with butt joints using internal pan splices and in the following joint configuration:
 - a. Aligned.
 - b. Aligned, every other pan length.

- c. Staggered a minimum of **12 inches** (300 mm).
 - d. Random.
 - e. As indicated.
- 4. Install directionally textured metal pans in directions indicated.
 - 5. Where metal pan ends are visible, install end caps unless trim is indicated.
 - 6. Install filler strips where indicated.
 - 7. Install sound-absorbent fabric layers in perforated metal pans.
 - 8. Install sound-absorbent pads at right angle to perforated metal pans so pads do not hang unsupported.
- H. Install hold-down clips where indicated.

3.4 FIELD QUALITY CONTROL

- A. Special Inspections: **[Owner will engage]** a qualified special inspector to perform the following special inspections:
- 1. Suspended ceiling system.
 - 2. Hangers, anchors, and fasteners.
 - 3. **<Insert special inspections>**.
- B. Testing Agency: **[Owner will engage]** a qualified testing agency to perform tests and inspections.
- C. Tests and Inspections: Testing and inspecting of completed installations of acoustical panel ceiling hangers and anchors and fasteners shall take place in successive stages, in areas of extent and using methods as follows. Do not proceed with installations of acoustical panel ceiling hangers for the next area until test results for previously completed installations of acoustical panel ceiling hangers show compliance with requirements.
- 1. Extent of Each Test Area: When installation of ceiling suspension systems on each floor has reached 20 percent completion but no panels have been installed.
 - a. Within each test area, testing agency will select 1 of every 10 power-actuated fasteners and postinstalled anchors used to attach hangers to concrete and will test them for **200 lbf** (890 N) of tension; it will also select one of every 2 postinstalled anchors used to attach bracing wires to concrete and will test them for **440 lbf** (1957 N) of tension.
 - b. When testing discovers fasteners and anchors that do not comply with requirements, testing agency will test those anchors not previously tested until 20 pass consecutively and then will resume initial testing frequency.
- D. Acoustical panel ceiling hangers and anchors and fasteners will be considered defective if they do not pass tests and inspections.
- E. Prepare test and inspection reports.

3.5 CLEANING

- A. Clean exposed surfaces of linear metal ceilings, including trim and edge moldings after removing strippable, temporary protective covering if any. Comply with manufacturer's written instructions for stripping of temporary protective covering, cleaning, and touchup of minor finish damage. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage, including dented and bent units.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 095423

SECTION 095436 - SUSPENDED DECORATIVE GRIDS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes rigid, open-frame, suspended grids, and suspension systems for ceilings.
- B. Related Requirements:
 - 1. Section 095113 "Acoustical Panel Ceilings" for ceilings consisting of mineral-base and glass-fiber-base acoustical panels and exposed suspension systems.
 - 2. Section 095123 "Acoustical Tile Ceilings" for ceilings consisting of mineral-base acoustical tiles used with concealed suspension systems, stapling, or adhesive bonding.
 - 3. Section 095133 "Acoustical Metal Pan Ceilings."
 - 4. Section 095423 "Linear Metal Ceilings."
- C. Products furnished, but not installed, under this Section include anchors, clips, and other ceiling attachment devices to be cast in concrete.
- D. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]<Insert location>**.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:

1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
- C. Samples: For each exposed product and for each color and texture specified, **6 inches (150 mm)** in size.
- D. Samples for Initial Selection: For units with factory-applied finishes.
- E. Samples for Verification: For each component indicated and for each exposed finish required, prepared on Samples of sizes indicated below:
 1. Cell Grids: Set of **[full-size] [12-inch- (300-mm-) square] <Insert size>** module Samples of each type, finish, and color.
 2. Beam Grids: Set of **12-inch- (300-mm-)** long Samples of each type, finish, and color; a **12-inch- (300-mm-)** long spliced section; and a **6-inch- (150-mm-)** long per leg corner section.
- F. Delegated-Design Submittal: For design of **[seismic restraints and]**attachment devices.

1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 1. Lighting fixtures.
 2. Air outlets and inlets.
 3. Speakers.
 4. Sprinklers.
- B. Field quality-control reports.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For finishes to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Suspended Decorative Grids: Quantity of each suspended decorative grid component, exposed molding, and trim equal to [2] <Insert number> percent of quantity installed.

1.8 QUALITY ASSURANCE

- A. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 1. Build mockup of typical ceiling area as shown on Drawings.
 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver suspended decorative grid components to Project site in original, unopened packages and store them in a fully enclosed, conditioned space where they are protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.
- B. Handle suspended decorative grids and accessories carefully to avoid damaging units and finishes in any way.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design [seismic restraints and]attachment devices.
- B. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 1. Flame-Spread Index: 25 or less.
 2. Smoke-Developed Index: 450 or less.

2.2 SUSPENDED DECORATIVE GRIDS, GENERAL

- A. Recycled Content of Suspended Decorative Grid Ceiling: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25] <Insert number>** percent.
- B. Sheet Metal Characteristics: Provide sheet metal selected for surface flatness, smoothness, and freedom from surface blemishes where exposed to view in finished unit. Do not use materials whose exposed surfaces exhibit pitting, seam marks, roller marks, variations in flatness exceeding those permitted by referenced standards for stretcher-leveled metal sheet, stains, discolorations, or other imperfections.
1. Aluminum Sheet: Roll-formed aluminum sheet, complying with [ASTM B 209 \(ASTM B 209M\)](#); alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
 2. Steel Sheet: Commercial-quality, cold-rolled, carbon-steel sheet; stretcher leveled; with protective coating complying with ASTM C 635/C 635M.
 - a. Painted Finishes: Electrolytic zinc-coated steel complying with ASTM A 879/A 879M, [13Z \(40G\)](#) coating, surface treatment as recommended by finish manufacturer for type of use and finish indicated.
 - b. Chemical/Mechanical Finishes: Uncoated steel sheet complying with ASTM A 1008/A 1008M with luster or bright finish as required by finisher for applying electroplating or other metallic-finishing processes.
- C. Grid Fabrication: Components are formed from metal indicated. Manufacturer's standard units of size, shape, and profile indicated; finished to comply with requirements indicated. **[Provide cells factory assembled into modular panel.]**
- D. Cover Profiles and Trim: Provide manufacturer's standard cover profiles and trim for exposed members, and as indicated or required, for edges of grids, at changes in ceiling height, and for other conditions, of same metal and finish as suspended decorative grids.
- E. Metal Suspension-System Standard: Provide ceiling manufacturer's standard metal suspension systems of types and finishes indicated that comply with applicable ASTM C 635/C 635M requirements. Provide systems complete with runners or beams, splice sections, connector clips, alignment clips, leveling clips, hangers, molding, trim, web covers, load-resisting struts, fixture filler pans, clips and adapters, and other suspension components required to support ceiling units and other ceiling-supported construction.
- F. Attachment Devices: Size for 5 times the design load indicated in ASTM C 635/C 635M, Table 1, Direct Hung, unless otherwise indicated.
1. Cast-in-Place and Postinstalled Anchors in Concrete: Anchors of type and material indicated below, with holes or loops for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to **[5] <Insert number>** times that imposed by ceiling construction, as determined by testing

according to ASTM E 488 or ASTM E 1512 as applicable, conducted by a qualified testing and inspecting agency.

- a. Type: **[Cast-in-place] [Postinstalled expansion] [Postinstalled bonded]** anchors.
 - b. Corrosion Protection: Carbon-steel components zinc plated to comply with ASTM B 633, Class Fe/Zn 5 (0.005 mm) for Class SC service condition (mild).
2. Power-Actuated Fasteners in Concrete (If Approved by DEN Project Manager): Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hangers of type indicated, and with capability to sustain, without failure, a load equal to **[10] <Insert number>** times that imposed by ceiling construction, as determined by testing according to ASTM E 1190, conducted by a qualified testing agency.
- G. Wire Hangers, Braces, and Ties: Provide wires complying with the following requirements:
1. Zinc-Coated, Carbon-Steel Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper.
 2. Size: Select wire diameter so its stress at 3 times hanger design load indicated in ASTM C 635/C 635M, Table 1, Direct Hung, is less than yield stress of wire, but provide not less than **[0.106-inch- (2.69-mm-)] [0.135-inch- (3.5-mm-)]** diameter wire.
- H. **[Hanger Rods] [Flat Hangers]**: Mild steel, zinc coated or protected with rust-inhibitive paint.
- I. Angle Hangers: Angles with legs not less than **7/8 inch (22 mm)** wide; formed with **0.04-inch- (1.0-mm-)** thick, galvanized-steel sheet complying with ASTM A 653/A 653M, **G90 (Z275)** coating designation; with bolted connections and **5/16-inch- (8-mm-)** diameter bolts.
- J. Seismic Struts: Manufacturer's standard compression struts designed to accommodate seismic forces.
- K. Exposed Metal Edge Moldings, Covers, Trim, and Fixture Filler Panels: Provide exposed members as indicated or required to conceal edges of and penetrations through ceiling, to conceal edges of beams, to cover runner webs, for fixture trim and adapters, for fasciae at changes in ceiling height, and for other conditions; of metal and finish matching suspended decorative grids unless otherwise indicated.
1. For Circular Penetrations of Ceiling: Fabricate edge moldings to diameter required to fit penetration exactly.

- 2.3 ALUMINUM GRID UNITS FOR SUSPENDED DECORATIVE GRIDS <Insert drawing designation>
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [American Decorative Ceilings.](#)
 2. [Ceilings Plus.](#)
 3. [Chicago Metallic Corporation.](#)
 4. [Gordon, Inc..](#)
 5. [Hunter Douglas Architectural Products, Inc..](#)
 6. [Simplex Ceilings, a division of Intalite Inc..](#)
 7. [Steel Ceilings Inc..](#)
 8. <Insert manufacturer's name>.
 9. or approved equal.
- B. Sheet Metal Thickness: Not less than [0.016 inch (0.41 mm)] [0.018 inch (0.46 mm)] [0.020 inch (0.5 mm)] [0.024 inch (0.6 mm)] [0.032 inch (0.8 mm)] <Insert dimension>.
- C. Beam Grid Module: [8 inches (200 mm) square] [12 inches (300 mm) square] [18 inches (460 mm) square] [24 inches (600 mm) square] [30 inches (760 mm) square] [36 inches (900 mm) square] [48 inches (1200 mm) square] [24 by 48 inches (600 by 1200 mm)] [As indicated on Drawings] <Insert dimensions>.
- D. Beam Width by Height: [2 by 2 inches (50 by 50 mm)] [2 by 4 inches (50 by 100 mm)] [3 by 3 inches (75 by 75 mm)] [4 by 4 inches (100 by 100 mm)] [As indicated on Drawings] <Insert dimensions>.
- E. Cell Panel Module: [24 inches (600 mm) square] [24 by 48 inches (600 by 1200 mm)] [As indicated on Drawings] [Manufacturer's standard].
- F. Cell Module: [2 inches (50 mm) square] [3 inches (75 mm) square] [4 inches (100 mm) square] [6 inches (150 mm) square] [8 inches (200 mm) square] [12 inches (300 mm) square] [As indicated on Drawings] <Insert dimension>.
- G. Cell Profile, Width by Height: [3/8 by 2 inches (9.5 by 50 mm)] [3/8 by 4 inches (9.5 by 100 mm)] [9/16 by 2 inches (14 by 50 mm)] [As indicated on Drawings] <Insert dimensions>.
- H. Finish: [Lacquered mill] [Clear anodized] [Clear mirror anodized] [Painted to match color indicated by product designation] [Painted to match DEN Project Manager's sample] [Painted in color selected from manufacturer's full range] [Bright-reflective metallic finish selected from manufacturer's full range] <Insert finish>.

- 2.4 STEEL GRID UNITS FOR SUSPENDED DECORATIVE GRIDS <Insert drawing designation>
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. [American Decorative Ceilings.](#)
 2. [Chicago Metallic Corporation.](#)
 3. [Hunter Douglas Architectural Products, Inc..](#)
 4. [Simplex Ceilings, a division of Intalite Inc..](#)
 5. [USG Interiors, Inc..](#)
 6. <Insert manufacturer's name>.
 7. or approved equal.
- B. Sheet Metal Thickness: Not less than [0.020 inch (0.5 mm)] [0.024 inch (0.6 mm)] <Insert dimension>.
- C. Beam Grid Module: [8 inches (200 mm) square] [12 inches (300 mm) square] [18 inches (460 mm) square] [24 inches (600 mm) square] [30 inches (760 mm) square] [36 inches (900 mm) square] [48 inches (1200 mm) square] [24 by 48 inches (600 by 1200 mm)] [As indicated on Drawings] <Insert dimensions>.
- D. Beam Width by Height: [2 by 2 inches (50 by 50 mm)] [2 by 4 inches (50 by 100 mm)] [3 by 3 inches (75 by 75 mm)] [4 by 4 inches (100 by 100 mm)] [As indicated on Drawings] <Insert dimensions>.
- E. Cell Panel Module: [24 inches (600 mm) square] [24 by 48 inches (600 by 1200 mm)] [As indicated on Drawings] [Manufacturer's standard].
- F. Cell Module: [1 inch (25 mm) square] [2 inches (50 mm) square] [3 inches (75 mm) square] [4 inches (100 mm) square] [6 inches (150 mm) square] [8 inches (200 mm) square] [12 inches (300 mm) square] [24 inches (600 mm) square] [As indicated on Drawings] <Insert dimension>.
- G. Cell Profile, Width by Height: [3/8 by 2 inches (9.5 by 50 mm)] [9/16 by 2 inches (14 by 50 mm)] [As indicated on Drawings] <Insert dimensions>.
- H. Finish: [Painted to match color indicated by product designation] [Painted to match DEN Project Manager's sample] [Painted in color selected from manufacturer's full range] [Plated with metallic finish, as selected from manufacturer's full range] [Bright-reflective metallic finish selected from manufacturer's full range] <Insert finish>.
- 2.5 GENERAL FINISH REQUIREMENTS
- A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.6 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.
- B. Clear Mirror Anodic Finish: AA-M21C12A212, Class II, 0.005 mm or thicker.
- C. Color-Coated Finish: Manufacturer's standard[**powder-coat**] baked paint complying with coating manufacturer's written instructions for surface preparation, pretreatment, application, baking, and minimum dry film thickness.
- D. Bright-Reflective Finish: Manufacturer's standard chemical/mechanical bright-reflective metallic finish complying with finish manufacturer's written instructions for surface preparation, pretreatment, process, protective coating, and minimum thickness to produce a finish uniform in appearance and free of blisters, pits, roughness, nodules, burning, cracks, unfinished areas, and other visible defects.

2.7 METALLIC-COATED STEEL SHEET FINISHES

- A. Color-Coated Finish: Manufacturer's standard[**powder-coat**] baked paint complying with coating manufacturer's written instructions for surface preparation, pretreatment, application, baking, and minimum dry film thickness.

2.8 STEEL SHEET FINISHES

- A. Electroplated Finish: Electroplating process complying with finish manufacturer's written instructions for surface preparation, pretreatment, process, and minimum thickness to produce a coating uniform in appearance and free of blisters, pits, roughness, nodules, burning, cracks, unplated areas, and other visible defects.
- B. Bright-Reflective Finish: Manufacturer's standard chemical/mechanical bright-reflective metallic finish complying with finish manufacturer's written instructions for surface preparation, pretreatment, process, protective coating, and minimum thickness to produce a finish uniform in appearance and free of blisters, pits, roughness, nodules, burning, cracks, unfinished areas, and other visible defects.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, including structural framing and substrates to which suspended decorative grids attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling

installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of suspended decorative grids.

- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Measure each ceiling area and establish layout of suspended decorative grids to balance border widths at opposite edges of each space. Comply with layout shown on reflected ceiling plans.

3.3 INSTALLATION

- A. General: Install suspended decorative grids to comply with ASTM C 636/C 636M and seismic design requirements indicated, according to manufacturer's written instructions and Cisca's "Ceiling Systems Handbook."
- B. Suspend ceiling hangers from building's structural members and as follows:
 - 1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
 - 2. Splay hangers only where required to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
 - 3. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension-system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.
 - 4. Secure hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for structure to which hangers are attached and for hanger type involved.
 - 5. Do not support grids directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, postinstalled mechanical or adhesive anchors, or power-actuated fasteners that extend through forms into concrete.
 - 6. Do not attach hangers to steel deck tabs.
- C. Secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns. Suspend bracing from building's structural members as required for hangers, without attaching to permanent metal forms, steel deck, or steel deck tabs. Fasten bracing wires into concrete with cast-in-place or postinstalled anchors.
- D. Install edge moldings and trim of type indicated at perimeter of each suspended decorative grid and where necessary to conceal edges of grids.
 - 1. Screw attach moldings to substrate at intervals not more than **16 inches (400 mm)** o.c. and not more than **3 inches (75 mm)** from ends, level with ceiling system to a tolerance of **1/8 inch in 12 feet (3 mm in 3.6 m)**. Miter corners accurately and connect securely.

2. Do not use exposed fasteners, including pop rivets, on moldings and trim.
- E. Install suspended decorative grids in coordination with suspension system and exposed moldings and trim. Comply with installation tolerances according to CISCA's "Metal Ceilings Technical Guidelines."
1. Align joints in adjacent courses to form uniform, straight joints parallel to room axis in both directions unless otherwise indicated.
 2. Fit adjoining units to form flush, tight joints.
 3. Where grid edges are visible, install cover profiles unless other trim is indicated.

3.4 FIELD QUALITY CONTROL

- A. Special Inspections: **[Owner will engage] [Engage]** a qualified special inspector to perform the following special inspections:
1. Seismic design compliance.
- B. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections.
- C. Perform the following tests and inspections of completed installations of grid hangers, anchors, and fasteners in successive stages. Do not proceed with installations of grid hangers for the next area until test results for previously completed installations show compliance with requirements.
1. Extent of Each Test Area: When installation of grid systems on each floor has reached 20 percent completion but no panels have been installed.
 - a. Within each test area, testing agency selects one of every 10 power-actuated fasteners and postinstalled anchors used to attach hangers to concrete and tests them for **200 lbf (890 N)** of tension; it also selects one of every two postinstalled anchors used to attach bracing wires to concrete and tests them for **440 lbf (1957 N)** of tension.
 - b. When tested fasteners and anchors do not comply with requirements, testing agency tests those fasteners and anchors not previously tested until 20 pass consecutively and then resumes initial testing frequency.
- D. Suspended decorative grid hangers, anchors, and fasteners will be considered defective if they do not pass tests and inspections.
- E. Prepare tests and inspection reports.

3.5 CLEANING

- A. Clean exposed surfaces of suspended decorative grids, including trim and edge moldings, after removing strippable, temporary protective covering if any. Comply with manufacturer's written instructions for stripping of temporary protective covering, cleaning, and touchup of minor finish damage. Remove and replace grid components

that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage, including dented and deformed grids.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 095436

SECTION 095753 - SECURITY CEILING ASSEMBLIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Downward-locking-panel security ceiling assemblies.
 - 2. Security-plank security ceiling assemblies.
- B. Related Requirements:
 - 1. Section 013513.16 "Special Project Procedures for Detention Facilities" for additional requirements for detention facilities.
 - 2. Section 099113 "Exterior Painting" and Section 099123 "Interior Painting" for field painting security-plank security ceiling assemblies.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 COORDINATION

- A. Coordinate layout and installation of security ceiling assemblies with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]<Insert location>**.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include data substantiating that materials comply with requirements.

- B. LEED Submittals:
1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
 2. Product Data for Credit IEQ 4.1: For sealants, documentation including printed statement of VOC content.
- C. Samples for Verification: For the following products, of size indicated below:
1. Security Ceiling Panel Units: Full cross section by **12 inches** (305 mm) long for each type of panel.
 2. Perimeter Supports, Closures, and Exposed Molding: **12 inches** (305 mm) long for each type.
 3. Suspension System: **12 inches** (305 mm) long.

1.6 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Reflected ceiling plans drawn, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Layout of panels, joint pattern, transitions.
 2. Suspension system members.
 3. Method of attaching hangers to building structure.
 4. Size and location of access panels.
 5. Ceiling-mounted items including light fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.
- B. Qualification Data: For Installer.
- C. Welding certificates.
- D. Product Test Reports: For each security ceiling assembly, for tests performed by a qualified testing agency.
- E. Attachment Device Test Reports: Indicating capability to sustain, without failure, load indicated without pulling out from substrate.
- F. Evaluation Reports: For security ceiling assembly, from **<Insert applicable model code organization>**.
- G. Field quality-control reports.
- H. Examination reports documenting inspection of substrates, areas, and conditions.
- I. Anchor inspection reports documenting inspections of built-in and cast-in anchors.
- J. Field quality-control certification signed by Contractor[**and Detention Specialist**].

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Security Ceiling Panels: Full-size units equal to **[2.0] <Insert number>** percent of amount installed.
 2. Suspension System Components: Quantity of each grid and exposed component equal to **[2.0] <Insert number>** percent of amount installed.
 3. Security Fasteners: Furnish not less than 1 box for each 50 boxes or fraction thereof, of each type and size of security fastener installed.
 4. Tools: Provide **[two] <Insert number>** sets of tools for installing and removing security fasteners, packaged for easy handling and storage.

1.8 QUALITY ASSURANCE

- A. Installer Qualifications: An employer of workers trained and approved by manufacturer.
- B. Welding Qualifications: Qualify procedures and personnel according to the following:
1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
 3. AWS D1.3, "Structural Welding Code - Sheet Steel."
 4. AWS D1.6, "Structural Welding Code - Stainless Steel."
- C. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate security performance and aesthetic effects and set quality standards for materials and execution.
1. Build mockup **[48 by 48 inches (1220 by 1220 mm) square] [of size equal to one cell] <Insert size>** of each type of security ceiling assembly. Include ceiling panels, suspension system, perimeter support, **[lighting unit,] [duct penetration,] [access panel,]** and accessories.
 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver acoustical metal panels, suspension system components, and accessories to Project site in original, unopened packages and store them in a fully enclosed, conditioned space where they will be protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.
- B. Handle acoustical metal panels, suspension system components, and accessories carefully to avoid damaging units and finishes in any way.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. General Performance: Security ceiling assemblies shall withstand normal thermal movement and structural loads without failure, including permanent deformation of security ceiling assembly components including pans and suspension system; noise or metal fatigue caused by vibration, deflection, and displacement of security ceiling units; and permanent damage to fasteners and anchors.
- B. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25] <Insert number>** percent.
- C. Acoustical Performance: Provide security ceiling assemblies with acoustical ratings indicated, as determined according to ASTM E 1264 and the following:
1. Noise Reduction Coefficient: ASTM C 423 and ASTM E 795 in Type E-400 mounting.
 2. Ceiling Attenuation Class: ASTM E 1414.
- D. Structural Performance: Security ceiling assemblies shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
1. Vertical Load for Security Ceiling Assemblies: **<Insert load>**, acting upward or downward.
 2. Live Load for Security Ceiling Assemblies: Panel dead weight plus a uniform load of **<Insert load>**, acting upward or downward, with a deflection not more than L/360.
- E. Seismic Standard: Provide ceilings designed and installed to withstand the effects of earthquake motions according to **[ASCE/SEI 7] <Insert requirement of authorities having jurisdiction>**.

2.2 DOWNWARD-LOCKING-PANEL SECURITY CEILING ASSEMBLY

- A. Provide a complete, integrated assembly, including security ceiling panels, exposed suspension system, perimeter supports, and accessories.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Chicago Metallic Corporation; MetaLine Security Metal Ceiling System.

- b. Gordon, Inc., Gordon Corrections Division; Lockdown Suspended Metal Panel Ceiling System.
 - c. Steel Ceilings Inc.; Defender Security Panels.
 - d. <Insert manufacturer's name; product name or designation>.
 - e. or approved equal.
- B. Panels: Fabricated from a single sheet of metal, with formed upturned edges on all four sides designed to continuously engage with and lock under rectangular bulb of suspension system.
 1. Steel Panels: [**Cold-rolled**] [**Electrolytic zinc-coated**] [**Metallic-coated**] steel with minimum uncoated sheet thickness of [0.043 inch (1.09 mm)] [0.033 inch (0.84 mm)] [0.021 inch (0.53 mm)].
 2. Aluminum Panels: Nominal sheet thickness of 0.040 inch (1.0 mm).
 3. Stainless-Steel Panels: Nominal sheet thickness of [0.050 inch (1.27 mm)] [0.025 inch (0.65 mm)].
 4. Panel Size: [12 by 24 inches (305 by 610 mm)] [12 by 48 inches (305 by 1220 mm)] [24 by 24 inches (610 by 610 mm)] [24 by 48 inches (610 by 1220 mm)].
 5. Perforation Pattern: [**Manufacturer's standard**] [**Unperforated**] <Insert pattern>.
 6. Noise Reduction Coefficient (NRC): [0.70] [0.80] [0.85] [0.90] [0.95] [1.00].
- C. Sound-Absorptive Pads: Provide sound-absorptive pads for placement over ceiling panels.
 1. Spacer Grids: [**Metallic-coated-steel**] [**Aluminum**] grid units that provide an air cushion between security ceiling panels and sound-absorptive pads and that act to improve sound absorption.
 2. Support Clips: Metal clips designed to hold sound-absorptive pads above bottom face sheet.
- D. Backer Plates: Unperforated units formed from [**metallic-coated steel**] [**aluminum**] sheet that reduces travel of sound through panel and that makes panel assembly comply with the following performance:
 1. Ceiling Attenuation Class (CAC): [40] [45] <Insert CAC rating>.
 2. Sound-Absorptive Pads: Provide secondary sound-absorptive pads, same as specified for primary pads, for placement over backer plates to reduce plenum sound.
- E. Access Panels: Material, perforation pattern, and finish same as security ceiling panels; designed for installation by [**continuously welding access panel frame to security ceiling panel**] [**security fasteners screwed through suspension system**]. Provide panels at [**locations indicated on Drawings**] <Insert location>.
 1. Size: [24 by 24 inches (610 by 610 mm)] [24 by 48 inches (610 by 1220 mm)] [**As indicated on Drawings**].
 2. Lock Preparation: Prepare door panel to accept cylinder specified in [**Section 087100 "Door Hardware"**] [**Section 087111 "Door Hardware (Descriptive Specification)"**] [**Section 087163 "Detention Door Hardware."**]

- F. Suspension System: ASTM C 635/C 635M, heavy-duty exposed system consisting of snap-in main runners supported by hangers attached to building structure.
1. Provide system complete with main runners, splice plates, connector and alignment clips, hangers, trim, seismic- and wind-load clips and struts, and other suspension components required to support security ceiling units and other security ceiling-supported construction.
 2. Main Runners and Cross Tees: Formed from metal sheet, **1-1/2 inches** (38 mm) high, with **15/16-inch** (23.8-mm) flange width and with oversized rectangular bulb for engaging panels.
 - a. Material: **[Galvanized steel, G90 (Z275) zinc coating] [Electrolytic zinc-coated steel, 40Z (12G) zinc coating] [Aluminum] [Stainless steel]**.
 3. Wire Hangers, Braces, and Ties: Zinc-coated, carbon-steel wire, ASTM A 641/A 641M, Class 1 zinc coating, soft temper.
 - a. Size: Select wire diameter so its stress at **[3] <Insert safety factor>** times the hanger design load (ASTM C 635/C 635M, Table 1, Direct Hung) will be less than yield stress of wire, but provide not less than **0.106-inch-** (2.69-mm-) diameter wire.
 4. Hanger Rods: Mild steel, zinc coated or protected with rust-inhibitive paint.
 5. Flat Hangers: Mild steel, zinc coated or protected with rust-inhibitive paint.
 6. Angle Hangers: Angles with legs not less than **7/8 inch** (22 mm) wide, formed with **0.04-inch-** (1.0-mm-) thick, galvanized-steel sheet, **G90 (Z275)** zinc coating, with bolted connections and **5/16-inch-** (8-mm-) diameter bolts.
 7. Compression Struts: Fabricated from **3/4-inch-** (19-mm-) diameter steel tubing, designed to fit over rectangular bulb of suspension system.
 8. Security Clips: Steel wire, designed to slip over suspension system and through holes in flanges of panel to prevent panel removal.
- G. Perimeter Supports: Wall-mounted channel moldings and wall angles; fabricated from **[0.042-inch-** (1.06-mm-) **thick galvanized steel] [0.016-inch-** (0.4-mm-) **thick galvanized steel] [0.040-inch-** (1.0-mm-) **thick aluminum]**; finished to match suspension system.
- H. Exposed Edge Moldings and Trim: Provide exposed members as indicated or required for edges of security ceiling, fixture trim, beams, fasciae at changes in security ceiling height, and other conditions; of metal and finish matching security ceiling panels.
- I. Materials:
1. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, CS (Commercial Steel), Type B; **[uncoated] [or] [electrolytic zinc coated]** suitable for exposed applications.
 2. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, CS (Commercial Steel), Type B; with **G60 (Z180)** zinc (galvanized) or **A60 (ZF180)** zinc-iron-alloy (galvannealed) coating designation.
 3. Steel Tubing: ASTM A 513, Type B.

4. Stainless-Steel Sheet, Strip, Plate, and Flat Bars: ASTM A 666 or ASTM A 240/A 240M, austenitic stainless steel, Type 304.
5. Aluminum Extrusions: [ASTM B 221](#) (ASTM B 221M). Provide alloy and temper recommended by manufacturer for strength, corrosion resistance, and application of required finish, but not less than **22,000-psi** (150-MPa) ultimate tensile strength.
6. Aluminum Sheet and Plate: [ASTM B 209](#) (ASTM B 209M).

2.3 SECURITY-PLANK SECURITY CEILING ASSEMBLY

- A. Single-Configuration Panels: Fabricated from a single sheet of metal, with a self-locking male/female lap joint for joining panels.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Chicago Metallic Corporation; SecurLine Security Plank Ceiling System.
 - b. DDS Group, Detention Products Division; 7900 Security Ceiling System.
 - c. Eckel Industries Inc.; Eckoustic Security Ceiling.
 - d. Gordon, Inc., Gordon Corrections Division; Celline Suspended Metal Security Plank Ceiling System.
 - e. Steel Ceilings Inc.; Metal Plank Security Ceiling System.
 - f. Trussbilt; BarrierDek.
 - g. **<Insert manufacturer's name; product name or designation>**.
 - h. or approved equal.
 2. Steel Panels: [**Cold-rolled**] [**Electrolytic zinc-coated**] [**Metallic-coated**] steel with minimum uncoated sheet thickness of [**0.097 inch** (2.45 mm)] [**0.068 inch** (1.72 mm)] [**0.053 inch** (1.34 mm)] [**0.043 inch** (1.09 mm)] [**0.033 inch** (0.84 mm)].
 3. Aluminum Panels: Nominal sheet thickness of [**0.125 inch** (3.2 mm)] [**0.100 inch** (2.5 mm)] [**0.080 inch** (2.0 mm)] [**0.063 inch** (1.6 mm)] [**0.050 inch** (1.2 mm)] [**0.040 inch** (1.0 mm)].
 4. Stainless-Steel Panels: Nominal sheet thickness of [**0.109 inch** (2.78 mm)] [**0.078 inch** (1.98 mm)] [**0.062 inch** (1.59 mm)] [**0.050 inch** (1.27 mm)].
 5. Panel Width: [**12 inches** (305 mm)] [**18 inches** (457 mm)] [**24 inches** (610 mm)].
 6. Panel Length: [**Minimum 8 feet** (2.4 m)] [**Minimum 10 feet** (3.0 m)] [**Minimum 12 feet** (3.7 m)] [**Custom lengths to fit areas indicated**].
 7. Perforation Pattern: [**Manufacturer's standard**] [**Unperforated**] **<Insert pattern>**.
 8. Noise Reduction Coefficient: [**0.70**] [**0.80**] [**0.85**] [**0.90**] [**0.95**] [**1.00**].
- B. Double-Configuration Panels: Factory-assembled units with cold-rolled steel top face sheet and metallic-coated steel bottom face sheet, welded to a truss core. Fabricate panels with a self-locking male/female lap joint for joining panels.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Habersham Metal Products Co.; Detention Security Ceiling Panels.
 - b. Trussbilt; TrussDek.
 - c. **<Insert manufacturer's name; product name or designation>**.

- d. or approved equal.
2. Panel Width: [12 inches (305 mm)] [18 inches (457 mm)] [24 inches (610 mm)] wide by length indicated.
 3. Panel Length: **[Custom lengths to fit areas indicated]** <Insert length>.
 4. Overall Panel Thickness: As **[required by indicated spans]** **[indicated on Drawings]**.
 5. Minimum Uncoated Top Face Sheet Thickness: [0.068 inch (1.72 mm)] [0.053 inch (1.34 mm)] [0.043 inch (1.09 mm)] [0.033 inch (0.84 mm)].
 6. Minimum Uncoated Bottom Face Sheet Thickness: [0.068 inch (1.72 mm)] [0.053 inch (1.34 mm)] [0.043 inch (1.09 mm)] [0.033 inch (0.84 mm)].
 7. Truss Core: Fabricated from 0.015-inch- (0.38-mm-) thick, cold-rolled steel sheet bent into corrugated shape; welded to top and bottom face sheets at even spacings across and along length of panel.
 8. Perforation Pattern for Bottom Face Sheet: **[Manufacturer's standard]** **[Unperforated]** <Insert pattern>.
 9. Noise Reduction Coefficient: **[0.65]** **[0.90]** **[1.00]**.
- C. Sound-Absorptive Pads: Provide sound-absorptive pads for placement over ceiling planks.
1. Spacer Grids: **[Metallic-coated-steel]** **[Aluminum]** grid units that provide an air cushion between security ceiling panels and sound-absorptive pads and that act to improve sound absorption.
 2. Support Clips: Metal clips designed to hold sound-absorptive pads above bottom face sheet.
- D. Backer Plates: Unperforated units formed from **[metallic-coated steel]** **[aluminum]** sheet that reduces travel of sound through panel and that makes panel assembly comply with the following performance:
1. Ceiling Attenuation Class: **[40]** **[45]** <Insert CAC rating>.
 2. Sound-Absorptive Pads: Provide secondary sound-absorptive pads, same as specified for primary pads, for placement over backer plates to reduce plenum sound.
- E. Access Panels: Material, perforation pattern, and finish same as security ceiling panels; designed for installation by **[continuously welding access panel frame to security ceiling panel]** **[security fasteners screwed through suspension system]**. Provide at **[locations indicated on Drawings]** <Insert location>.
1. Size: [24 by 24 inches (610 by 610 mm)] [24 by 48 inches (610 by 1220 mm)] **[As indicated]**.
 2. Lock Preparation: Prepare door panel to accept cylinder specified in **[Section 087100 "Door Hardware"]** **[Section 087111 "Door Hardware (Descriptive Specification)"]** **[Section 087163 "Detention Door Hardware."]**
- F. Closures: Fabricated from minimum 0.053-inch- (1.34-mm-) thick steel sheet, finished to match security ceiling panels. Fasten with security fasteners or by welding.

- G. Suspension System: Heavy-duty exposed system consisting of intermediate carriers supported by secondary support system attached to building structure.
1. Intermediate Carriers: Formed from tees with a nominal **4-inch-** (102-mm-) wide exposed face or built up from back-to-back angles or channels each with a nominal **2-inch-** (51-mm-) wide exposed face; fabricated from [**0.068-inch-** (1.72-mm-)] [**0.053-inch-** (1.34-mm-)] thick, cold-rolled steel sheet.
 - a. Finish: Match security ceiling panels.
 2. Secondary Support System:
 - a. Hanger Rods: Mild steel, zinc coated or protected with rust-inhibitive paint.
 - b. Angle Hangers: **1-1/2-by-1-1/2-inch** (38-by-38-mm) galvanized-steel angles, **G90 (Z275)** zinc coating, bolted to intermediate carriers, and building structure.
- H. Perimeter Supports: Wall-mounted angles, tees, and bearing plates; fabricated from minimum **0.068-inch-** (1.72-mm-) thick, cold-rolled steel sheet; finished to match security ceiling panels.
- I. Exposed Edge Moldings and Trim: Provide exposed members as indicated or required for edges of security ceiling, fixture trim, beams, fasciae at changes in security ceiling height, and other conditions, of metal and finish matching security ceiling panels.
- J. Materials:
1. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, CS (Commercial Steel), Type B; [**uncoated**] [**or**] [**electrolytic zinc coated**] suitable for exposed applications.
 2. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, CS (Commercial Steel), Type B; with **G60 (Z180)** zinc (galvanized) or **A60 (ZF180)** zinc-iron-alloy (galvannealed) coating designation.
 3. Steel Tubing: ASTM A 513, Type B.
 4. Stainless-Steel Sheet, Strip, Plate, and Flat Bars: ASTM A 666 or ASTM A 240/A 240M, austenitic stainless steel, Type 304.
 5. Aluminum Extrusions: **ASTM B 221** (ASTM B 221M). Provide alloy and temper recommended by manufacturer for strength, corrosion resistance, and application of required finish, but not less than **22,000-psi** (150-MPa) ultimate tensile strength.
 6. Aluminum Sheet and Plate: **ASTM B 209** (ASTM B 209M).

2.4 SOUND-ABSORPTIVE PADS

- A. Plastic-Sheet-Wrapped, Mineral-Fiber Insulation: Pads consisting of nonrigid, vinyl chloride plastic sheet encapsulating unfaced mineral-fiber insulation.
1. Plastic Sheet: Not less than **0.003 inch** (0.076 mm) thick; flat black.
 2. Mineral Fiber: Glass fiber or fiber made from slag (mineral wool), complying with ASTM C 553, Type I, II, or III.

- a. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert number>** percent by weight.
 - b. Thickness: [1 inch (25 mm)] [1-1/2 inches (38 mm)] [2 inches (51 mm)] [4 inches (102 mm)] [**As required to meet NRC rating**].
3. Mineral-Fiber Density: [1.0 lb/cu. ft. (16 kg/cu. m)] [1.5 lb/cu. ft. (24 kg/cu. m)] [**As required to meet NRC rating**].
 4. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - a. Flame-Spread Index: [25] **<Insert value>** or less.
 - b. Smoke-Developed Index: [50] [450] **<Insert value>** or less.

2.5 FABRICATION

- A. Panels: Form metal panels from sheet metals selected for their surface flatness, smoothness, and freedom from surface blemishes where exposed to view in finished unit. Do not use materials whose exposed surfaces exhibit pitting, seam marks, roller marks, or variations in flatness exceeding those permitted by referenced standards for stretcher-leveled metal sheet.
 1. Security Planks: Factory fabricate double-configuration security planks and join top and bottom face sheets by welding.

2.6 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM/NOMMA 500 for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.7 ALUMINUM FINISHES

- A. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils (0.04 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
 1. Color and Gloss: [Manufacturer's standard white] **<Insert color and gloss>**.

2.8 STEEL FINISHES

- A. Surface Preparation: Remove mill scale and rust, if present, from uncoated steel, complying with **[SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning"]** [or] **[SSPC-SP 8, "Pickling"]** <Insert surface preparation method>.[**After cleaning, apply a conversion coating suited to the organic coating to be applied over it.**]
- B. Factory Prime Finish: After surface preparation and pretreatment, apply manufacturer's standard, fast-curing, lead- and chromate-free, universal primer.
- C. Baked-Enamel or Powder-Coat Finish: After cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for applying and baking to achieve a minimum dry film thickness of **2 mils** (0.05 mm).
 - 1. Color and Gloss: **[Manufacturer's standard white]** <Insert color and gloss>.

2.9 STAINLESS-STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 1. Run grain of directional finishes with long dimension of each piece.
 - 2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
 - 3. Directional Satin Finish: No. 4.
- C. Bright, Cold-Rolled, Unpolished Finish: No. 2B.

2.10 SECURITY FASTENERS

- A. Operable only by tools produced by fastener manufacturer or other licensed fabricator for use on specific type of fastener. Drive-system type, head style, material, and protective coating as required for assembly, installation, and strength, and as follows:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Acument Global Technologies North America.
 - b. Bryce Fastener.
 - c. Safety Socket LLC.
 - d. Tamperproof Screw Co., Inc.
 - e. Tamper-Pruf Screwsk.
 - f. <Insert manufacturer's name>.
 - g. or approved equal.
 - 2. Drive-System Type: **[Pinned Torx-Plus]** **[Pinned Torx]** <Insert system>.

3. Fastener Strength: **120,000 psi** (827 MPa).
4. Socket Button Head Fasteners:
 - a. Heat-treated alloy steel, **ASTM F 835** (ASTM F 835M).
 - b. Stainless steel, **ASTM F 879** (ASTM F 879M), Group 1 CW.
5. Socket Flat Countersunk Head Fasteners:
 - a. Heat-treated alloy steel, **ASTM F 835** (ASTM F 835M).
 - b. Stainless steel, **ASTM F 879** (ASTM F 879M), Group 1 CW.
6. Socket Head Cap Fasteners:
 - a. Heat-treated alloy steel, **ASTM A 574** (ASTM A 574M).
 - b. Stainless steel, **ASTM F 837** (ASTM F 837M), Group 1 CW.
7. Protective Coatings for Heat-Treated Alloy Steel:
 - a. Zinc and clear trivalent chromium where indicated.
 - b. Zinc phosphate with oil, ASTM F 1137, Grade I, or black oxide unless otherwise indicated.

2.11 SECURITY SEALANTS

- A. Polyurethane Security Sealants: Manufacturer's standard, nonsag, tamper-resistant sealant for joints with low movement.
 1. Security sealants shall **[have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).] [comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."]**
 2. Products: Subject to compliance with requirements, provide one of the following:
 - a. BASF Construction Chemicals, LLC, Building Systems; Sonolastic Ultra.
 - b. Pecora Corporation; DynaFlex.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.
- B. Epoxy Security Sealants: Manufacturer's standard, nonsag, tamper-resistant sealant for joints with no movement.
 1. Security sealants shall **[have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).] [comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."]**
 2. Products: Subject to compliance with requirements, provide one of the following:

- a. BASF Construction Chemicals, LLC, Building Systems; Epolith-G.
 - b. Euclid Chemical Company (The), an RPM company; Euco Model No. 452-P.
 - c. Pecora Corporation; DynaPoxy EP-1200.
 - d. **<Insert manufacturer's name; product name or designation>**.
 - e. or approved equal.
- C. Acoustical Sealant: Manufacturer's standard, nonsag, paintable, nonstaining latex sealant complying with ASTM C 834. Product effectively reduces airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies according to ASTM E 90.
1. Security sealants shall **[have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).] [comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."]**
 2. Products: Subject to compliance with requirements, provide one of the following:
 - a. Pecora Corporation; **[AC-20 FTR] [AIS-919]**.
 - b. USG Corporation; SHEETROCK Acoustical Sealant.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.

2.12 ACCESSORIES

- A. Concealed Bolts: ASTM A 307, Grade A unless otherwise indicated.
- B. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welding.
- C. Attachment Devices: Size for **[five] <Insert safety factor>** times the design load indicated in ASTM C 635/C 635M, Table 1, Direct Hung, unless otherwise indicated.
 1. Cast-in-Place and Postinstalled Expansion Anchors in Concrete: Anchors of type and material indicated below, with holes or loops for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to **[five] <Insert safety factor>** times the load imposed by security ceiling construction, as determined by testing according to ASTM E 488, conducted by a qualified testing agency.
 - a. Type: **[Cast-in-place] [Postinstalled expansion] [Chemical]** anchors.
 - b. Corrosion Protection: Carbon-steel components zinc plated to comply with ASTM B 633, Class Fe/Zn 5 (0.005 mm) for Class SC service condition (mild).
 - c. Corrosion Protection: Stainless-steel components complying with **ASTM F 593 and ASTM F 594, Alloy Group 1 or 2** (ASTM F 738M and ASTM F 836M,

- Alloy Group 1 or 4) for bolts and nuts; ASTM A 666 or ASTM A 276, Type 304 or 316, for anchors.
- d. Corrosion Protection: Components fabricated from nickel-copper-alloy rods complying with ASTM B 164 for UNS No. N04400 alloy.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of security ceiling assemblies.
- B. Examine roughing-in for embedded and built-in anchors to verify actual locations of security ceiling assembly connections before security ceiling assembly installation.
- C. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of security ceiling assemblies.
- D. Inspect built-in and cast-in anchor installations before installing security ceiling assemblies to verify that anchor installations comply with requirements. Prepare inspection reports.
1. Repair, or remove and replace, anchors where inspections indicate noncompliance with specified requirements. Reinspect after repair or replacement.
 2. Perform additional inspections to determine compliance of replaced or additional work. Prepare inspection reports.
- E. Verify locations and layouts of security ceiling assemblies with those indicated on reflected ceiling plans and coordination drawings.
- F. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Coordination: Furnish layouts for cast-in-place anchors, clips, and other security ceiling anchors whose installation is specified in other Sections.
1. Furnish cast-in-place anchors and similar devices to other trades for installation well in advance of time needed for coordinating other work.
- B. Measure each security ceiling area and establish layout of security ceiling panels to balance border widths at opposite edges of each security ceiling. Avoid using less-than-half-width panels at borders and comply with layout shown on reflected ceiling plans and Coordination Drawings.

3.3 GENERAL INSTALLATION

- A. Comply with CISCA's "Ceiling Systems Handbook" for installation of security ceiling assemblies.
- B. Install perimeter supports around perimeter of security ceiling area.
1. Sealant: Apply [**polyurethane security**] [**epoxy security**] [**acoustical**] sealant in a continuous ribbon concealed on back of vertical legs of supports before they are installed.
 2. Attach supports with anchor bolts or expansion anchors spaced not more than **12 inches** (305 mm) o.c. and not more than **3 inches** (76 mm) from ends. Miter corners accurately.
 - a. Level perimeter supports with suspension system to a tolerance of **1/8 inch in 12 feet** (3 mm in 3.7 m).
 3. Do not use exposed fasteners, including pop rivets, on moldings and trim. If exposed fasteners are unavoidable, obtain approval from DEN Project Manager for their use and use security fasteners.
- C. Install accessories where indicated and as required to comply with performance requirements.
1. Sound-Absorptive Pads: For security ceiling panels indicated, provide sound-absorptive pads of width and length to completely fill inside of each security ceiling panel.
 - a. Install sound-absorptive pads [**over metal spacer grids**] [**with support clips**].
 2. Backer Plates: Install plates in areas indicated on reflected ceiling plans or in room finish schedules. Lay backer plates directly on security ceiling assembly in manner indicated and close major openings to form complete coverage in required areas.[**Lay second sound-absorptive pad on backer plate.**]
- D. Seismic Installation: Comply with seismic standard indicated, manufacturer's written instructions, and CISCA's "Ceiling Systems Handbook."

3.4 DOWNWARD-LOCKING-PANEL SECURITY CEILING ASSEMBLY INSTALLATION

- A. Ceiling Hangers: Suspend from building's structural members and as follows:
1. Install hangers plumb and free from contact with insulation or other objects within security ceiling plenum that are not part of supporting structure or of security ceiling suspension system.
 2. Splay hangers only where required to avoid obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
 3. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to

- support standard suspension system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.
4. Secure wire hangers to security ceiling suspension members and to supports above with a minimum of three tight turns. Connect hangers directly either to structures or to inserts, eye screws, or other devices that are secure and appropriate for substrate and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.
 5. Secure flat, angle, channel, and rod hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for both structure to which hangers are attached and type of hanger involved. Install hangers in a manner that will not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.
 6. Do not support security ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts or postinstalled mechanical or adhesive anchors.
 7. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.
 8. Do not attach hangers to steel deck tabs.
 9. Do not attach hangers to steel roof deck. Attach hangers to structural members.
 10. Space hangers not more than **48 inches** (1220 mm) o.c. along each member supported directly from hangers, unless otherwise indicated; provide hangers not more than **8 inches** (200 mm) from ends of each member.
 11. Install suspension system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.
 12. Install compression struts extending from main runners to structure above and spaced at **48 inches** (1220 mm) o.c.
- B. Install suspension system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.
- C. Panel Installation: Install panels to continuously engage with and lock under rectangular bulb of suspension system. Attach panels to perimeter supports with security fasteners not more than **3 inches** (76 mm) from edges of panel. Fasten through exposed face of supports into panel.
1. Align joints in adjacent courses to form uniform, straight joints parallel to room axis in both directions unless otherwise indicated.
 2. Fit adjoining units to form flush, tight joints. Scribe and cut units for accurate fit at borders and around construction penetrating security ceiling.
 3. Install directionally patterned panels in directions indicated.
 4. Scribe and cut security ceiling panels for accurate fit at borders and at interruptions and penetrations by other work through security ceilings. Stiffen edges of cut panels as required to eliminate evidence of buckling or variations in flatness.
- D. Access Panels: Install each access panel only where indicated and within one security ceiling panel.

3.5 SECURITY-PLANK SECURITY CEILING ASSEMBLY INSTALLATION

- A. Install security planks with long edges continuously interlocked. Adjust security planks to final position before permanently fastening. Provide minimum **1-1/2-inch** (38-mm) end bearing.
1. Attach adjacent security planks to each other with security fasteners spaced not more than **12 inches** (305 mm) o.c. and not more than **6 inches** (152 mm) from ends.
 2. Continuously weld ends of security planks to perimeter supports. Remove exposed projecting burrs, edges, and rough spots resulting from welding operations by grinding smooth.
 3. Attach ends of security planks to perimeter supports with security fasteners not more than **3 inches** (76 mm) from edges of security plank. Fasten through exposed face of supports into security planks.
 4. Provide intermediate carriers for ends of security planks that are not supported by perimeter supports. To attach security planks to intermediate carriers, use same method as that used for attaching security planks to perimeter supports.
 - a. Support intermediate carriers from structure above by secondary support system spaced at **48 inches** (1220 mm) o.c. and bolted to carriers.
- B. Access Panels: Install each access panel only where indicated and within one security plank.
- C. Provide steel angle reinforcement on each side of openings that exceed **12 inches** (305 mm) in any direction.

3.6 FIELD QUALITY CONTROL

- A. Inspect installed products to verify compliance with requirements. Prepare inspection reports and indicate compliance with and deviations from the Contract Documents.
- B. Remove and replace security ceiling assemblies where inspections indicate that work does not comply with specified requirements.
- C. Perform additional inspections to determine compliance of replaced or additional work. Prepare inspection reports.
- D. Prepare field quality-control certification[**endorsed by Detention Specialist**] that states installed products and their installation comply with requirements in the Contract Documents.
- E. Field Quality-Control Testing: [**Owner will engage**] [**Engage**] a qualified independent testing agency to perform field quality-control testing.
- F. Extent and Testing Frequency: Testing will take place in successive stages in areas described below. Proceed with installation of security ceiling assemblies only after test results for previously installed hangers comply with requirements.

1. Extent of Each Test Area: When installation of security ceiling suspension systems on each floor has reached 20 percent completion but no security panel units have been installed.
 2. Within each test area, testing agency will select one of every ten anchors used to attach hangers to concrete and will test them for **200 lbf** (890 N) of tension; it will also select one of every two postinstalled anchors used to attach bracing wires to concrete and will test them for **440 lbf** (1957 N) of tension.
 3. When testing discovers fasteners and anchors that do not comply with requirements, testing agency will test those fasteners and anchors not previously tested until 20 consecutively pass and then will resume initial testing frequency.
- G. Fasteners and anchors will be considered defective if they do not pass tests and inspections.
- H. Prepare test and inspection reports.
- I. Additional Testing: Where fasteners and anchors are removed and replaced, additional testing will be performed to determine compliance with specified requirements.

3.7 CLEANING

- A. Remove and replace work that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage, including dented and bent units.
- B. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with same material as that used for shop painting; comply with SSPC-PA 1 for touching up shop-painted surfaces.
1. Apply by brush or spray to provide a minimum dry film thickness of **2 mils** (0.05 mm).
- C. Touchup Painting: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."
- D. Metallic-Coated Steel Surfaces: Clean field welds, bolted connections, and abraded areas and repair zinc or zinc-iron coating to comply with ASTM A 780.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 095753

SECTION 096400 - WOOD FLOORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Factory-finished wood flooring.
 - 2. Field-finished wood flooring.
 - 3. Sound control underlayment.
- B. Related Sections:
 - 1. Section 096466 "Wood Athletic Flooring" for resilient systems used in sports-activity areas.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Include data substantiating that materials comply with requirements.
- B. Moisture Tests: Submit test results for moisture tests of concrete substrates.
- C. LEED Submittals:
 - 1. Product Data for Credit MR 4: For recycled-rubber underlayment, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
 - 2. Certificates for **[Credit MR 6]** **[Credit MR 7]**: Chain-of-custody certificates certifying that products specified to be made from certified wood comply with forest certification requirements. Include evidence that mill is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.

3. Product Data for Credit IEQ 4.1: For wood flooring installation adhesives, documentation including printed statement of VOC content.
4. Product Data for Credit IEQ 4.2: For field-applied finishes for wood flooring, documentation including printed statement of VOC content.
5. Product Data for Credit IEQ 4.3: For **[wood flooring installation adhesives] [and] [field-applied finishes for wood flooring]**, documentation including printed statement of VOC content.
6. Product Data for Credit IEQ 4.3: For wood flooring, documentation from an independent testing agency indicating compliance with the FloorScore Standard.
7. Product Data for Credit IEQ 4.4: For composite wood products, documentation indicating that the bonding agent contains no urea formaldehyde.
8. Laboratory Test Reports for Credit IEQ 4: For **[adhesives] [field-applied finishes] [flooring system elements] [composite wood products] [and] [wood flooring systems]**, documentation indicating that products comply with California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- D. Shop Drawings: For each type of floor assembly and accessory. Include plans, elevations, sections, details, and attachments to other work. Include expansion provisions and trim details.
- E. Samples for Initial Selection: Manufacturer's color charts showing the full range of colors and finishes available for wood flooring.
- F. Samples for Verification: For each type of wood flooring and accessory, with stain color and finish required, approximately **12 inches** (300 mm) long and of same thickness and material indicated for the Work and showing the full range of normal color and texture variations expected.

1.4 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials described below, before installation begins, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Wood Flooring: Equal to **[1] <Insert number>** percent of amount installed for each type of wood flooring indicated.

1.5 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A qualified manufacturer that is certified for chain of custody by an FSC-accredited certification body.
- B. Hardwood Flooring: Comply with NOFMA's "Official Flooring Grading Rules" for species, grade, and cut.

1. Certification: Provide flooring that carries NOFMA grade stamp on each bundle or piece.
- C. Maple Flooring: Comply with applicable MFMA grading rules for species, grade, and cut.
 1. Certification: Provide flooring that carries MFMA mark on each bundle or piece.
- D. Softwood Flooring: Comply with WCLIB No. 17 grading rules for species, grade, and cut.
- E. Build mockup of typical flooring area as shown on Drawings [**including base and shoe moldings**].
 1. To set quality standards for sanding and application of field finishes, prepare finish mockup of floor area as shown on Drawings.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
 3. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver wood flooring materials in unopened cartons or bundles.
- B. Protect wood flooring from exposure to moisture. Do not deliver wood flooring until after concrete, masonry, plaster, ceramic tile, and similar wet work is complete and dry.
- C. Store wood flooring materials in a dry, warm, ventilated, weathertight location.

1.7 PROJECT CONDITIONS

- A. Conditioning period begins not less than seven days before wood flooring installation, is continuous through installation, and continues not less than seven days after wood flooring installation.
 1. Environmental Conditioning: Maintain an ambient temperature between **65 and 75 deg F** (18 and 24 deg C) and relative humidity planned for building occupants in spaces to receive wood flooring during the conditioning period.
 2. Wood Flooring Conditioning: Move wood flooring into spaces where it will be installed, no later than the beginning of the conditioning period.
 - a. Do not install flooring until it adjusts to relative humidity of, and is at same temperature as, space where it is to be installed.
 - b. Open sealed packages to allow wood flooring to acclimatize immediately on moving flooring into spaces in which it will be installed.

- B. After conditioning period, maintain relative humidity and ambient temperature planned for building occupants.
- C. Install factory-finished wood flooring after other finishing operations, including painting, have been completed.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. FloorScore Compliance: Wood floors shall comply with requirements of FloorScore Standard.
- B. Low-Emitting Materials: Wood flooring systems shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.2 FIELD-FINISHED WOOD FLOORING

- A. Certified Wood: Provide wood flooring produced from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."
- B. Solid-Wood Flooring: Kiln dried to 6 to 9 percent maximum moisture content, tongue and groove and end matched, and with backs channeled.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Aacer Flooring, LLC.
 - b. Carlisle Wide Plank Floors.
 - c. EcoTimber.
 - d. International Hardwood Flooring, Inc.
 - e. Kentucky Wood Floors.
 - f. Miller and Company, Inc.
 - g. Oregon Lumber Company.
 - h. Sandy Pond Hardwoods, Inc.
 - i. WD Flooring, LLC.
 - j. Yesteryear Floorworks Company.
 - k. <Insert manufacturer's name>.

- I. or approved equal.
 2. Species and Grade: [**Select red oak**] [**No. 1 Common red oak**] [**No. 2 Common red oak**] [**MFMA-RL First Grade hard maple**] [**MFMA-RL Second and Better Grade hard maple**] [**C & BTR - Flooring Douglas fir**] [**D - Flooring Douglas fir**] <Insert species and grade>.
 3. Cut: [**Plain sawn**] [**Quarter/rift sawn**] [**Edge grain**] [**Vertical grain**] <Insert description>.
 4. Thickness: [**25/32 inch (20 mm)**] [**3/4 inch (19 mm)**] <Insert dimension>.
 5. Face Width: [**2-1/4 inches (57 mm)**] [**3-1/8 inches (79 mm)**] [**5-1/8 inches (130 mm)**] <Insert dimension>.
 6. Lengths: [**Manufacturer's standard**] [**Random-length strips complying with applicable grading rules**] [**Lengths required to form pattern indicated**] <Insert requirements>.
 7. Simulated Wood Pegs: Contrasting wood pegs at ends of flooring pieces.
- C. Solid-Wood Parquet Flooring: Kiln dried to 6 to 9 percent maximum moisture content.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Carlisle Wide Plank Floors.
 - b. Kentucky Wood Floors.
 - c. <Insert manufacturer's name>.
 - d. or approved equal.
 2. Species: [**Red oak**] [**White oak**] [**Ash**] [**Maple**] [**Black cherry**] <Insert species>.
 3. Grade: <Insert grade>.
 4. Thickness: [**5/16 inch (8 mm)**] [**11/16 inch (17 mm)**] [**1/4 inch (6 mm)**] <Insert dimension>.
 5. Pattern: <Insert description>.
 6. Size: <Insert dimension>.
- D. Engineered-Wood Flooring: HPVA EF[.][, **except bonding agent contains no urea formaldehyde.**][, **that complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."**]
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Armstrong World Industries, Inc.
 - b. Kentucky Wood Floors.
 - c. Mannington Mills, Inc.
 - d. Oregon Lumber Company.
 - e. <Insert manufacturer's name>.
 - f. or approved equal.

2. Species: **[Red oak] [White oak] [Ash] [Beech] [Maple] [Black cherry]** <Insert species>.
 3. Grade: <Insert grade>.
 4. Thickness: **[1/2 inch (13 mm)] [3/8 inch (9.5 mm)]** <Insert dimension>.
 5. Construction: **[Five] [Three]** ply.
 6. Face Width: **[2-1/4 inches (57 mm)] [3 inches (76 mm)]** <Insert dimension>.
 7. Length: Manufacturer's standard.
- E. Urethane Finish System: Complete **[solvent-based, oil-modified] [water-based]** system of compatible components that is recommended by finish manufacturer for application indicated.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Basic Coatings, Inc.
 - b. BonaKemi USA Inc.
 - c. Dura Seal, Sherwin-Williams Company (The).
 - d. Hillyard, Inc.
 - e. Polo-Plaz Coatings; National Coatings Company.
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
 2. VOC Content: When calculated according to 40 CFR 59, Subpart D (EPA Method 24), as follows:
 - a. Finish Coats and Floor Sealers: Not more than 350 g/L.
 - b. Stains: Not more than 250 g/L.
 3. Finish system materials shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
 4. Stain: Penetrating and nonfading type.
 - a. Color: **[Match sample] [As selected by DEN Project Manager from manufacturer's full range]** <Insert color>.
 5. Floor Sealer: Pliable, penetrating type.
 6. Finish Coats: Formulated for multicoat application on wood flooring.
- F. Wood Filler: Compatible with finish system components and recommended by filler and finish manufacturers for use indicated. If required to match approved Samples, provide pigmented filler.

2.3 FACTORY-FINISHED WOOD FLOORING

- A. Certified Wood: Provide wood flooring produced from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."
- B. Solid-Wood Flooring: Kiln dried to 6 to 9 percent maximum moisture content; tongue and groove and end matched; and with backs channeled.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Aacer Flooring, LLC.
 - b. Anderson Hardwood Floors.
 - c. Armstrong World Industries, Inc.
 - d. Bellawood.
 - e. Carlisle Wide Plank FloorsKentucky Wood Floors.
 - f. WD Flooring, LLC.
 - g. **<Insert manufacturer's name>**.
 - h. or approved equal.
 2. Species: **[Red oak] [White oak] [Ash] [Birch] [Maple] [Black cherry] [Hickory] [Walnut] <Insert species>**.
 3. Grade: **<Insert grade>**.
 4. Cut: **[Plain sawn] [Quarter/rift sawn] [Edge grain] [Vertical grain] <Insert description>**.
 5. Thickness: **[3/4 inch (19 mm)] [25/32 inch (20 mm)] <Insert dimension>**.
 6. Face Width: **[2-1/4 inches (57 mm)] [3-1/8 inches (79 mm)] [5-1/8 inches (130 mm)] <Insert dimension>**.
 7. Lengths: **[Random-length strips complying with applicable grading rules] [Lengths required to form pattern indicated] <Insert requirements>**.
 8. Edge Style: **[Square] [Beveled (eased)] <Insert style>**.
 9. Finish: UV urethane.
 - a. Color: **[As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
- C. Solid-Wood Parquet Flooring: Kiln dried to 6 to 9 percent maximum moisture content.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Armstrong World Industries, Inc.
 - b. Carlisle Wide Plank Floors.
 - c. Kentucky Wood Floors.
 - d. **<Insert manufacturer's name; product name or designation>**.
 - e. or approved equal.
 2. Species: **[Red oak] <Insert species>**.
 3. Grade: **<Insert grade>**.

4. Thickness: [5/16 inch (8 mm)] [11/16 inch (17 mm)] [1/4 inch (6 mm)] **<Insert dimension>**.
 5. Edge Style: **<Insert style>**.
 6. Pattern: **<Insert description>**.
 7. Size: **<Insert dimension>**.
 8. Finish: [UV urethane] [Acrylic impregnated].
 - a. Color: [As selected by DEN Project Manager from manufacturer's full range] **<Insert color>**.
- D. Engineered-Wood Flooring: HPVA EF[.][, **except bonding agent contains no urea formaldehyde.**][, **that complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."**]
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anderson Hardwood Floors.
 - b. Armstrong World Industries, Inc.
 - c. Boen Hardwood Flooring Inc.
 - d. EcoTimber.
 - e. Gammapar.
 - f. Mannington Mills, Inc.
 - g. Oregon Lumber Company.
 - h. Tarkett.
 - i. Wood Flooring International.
 - j. WD Flooring, LLC.
 - k. **<Insert manufacturer's name>**.
 - l. or approved equal.
 2. Species: [Red oak] [White oak] [Ash] [Beech] [Birch] [Maple] [Black cherry] [Hickory] [Walnut] **<Insert species>**.
 3. Grade: **<Insert grade>**.
 4. Thickness: [1/2 inch (13 mm)] [3/8 inch (9.5 mm)] **<Insert dimension>**.
 5. Construction: [Five] [Three] ply.
 6. Face Width: [2-1/4 inches (57 mm)] [3 inches (76 mm)] **<Insert dimension>**.
 7. Length: Manufacturer's standard.
 8. Edge Style: [Square] [Beveled (eased)] **<Insert style>**.
 9. Finish: [UV urethane] [Acrylic impregnated].
 - a. Color: [As selected by DEN Project Manager in manufacturer's full range] **<Insert color>**.
- E. Engineered-Wood Parquet Flooring: HPVA EF[.][, **except bonding agent contains no urea formaldehyde.**][, **that complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."**]

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Boen Hardwood Flooring Inc.
 - b. Tarkett.
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.
2. Species: **[Red oak] [Ash] [Beech] [Maple] [Walnut] <Insert species>**.
3. Grade: **<Insert grade>**.
4. Thickness: **[3/8 inch (9.5 mm)] [1/2 inch (13 mm)] <Insert dimension>**.
5. Construction: **[Five] [Three] ply**.
6. Edge Style: **<Insert style>**.
7. Pattern: **<Insert description>**.
8. Size: **<Insert dimension>**.
9. Finish: UV urethane.
 - a. Color: **[As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.

2.4 SOUND CONTROL UNDERLAYMENT

- A. Sound Control Underlayment: Sound reducing underlayment consisting of impact-absorbing materials. Minimum Impact Insulation Class (IIC) of **[50] [55] <Insert value>** when tested according to ASTM E 492.
 1. Material: **[Recycled rubber.] [Polyurethane foam.] [Wood fiber.] [Wood fiber made with binder containing no urea formaldehyde.] [Wood fiber that complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."]** **<Insert material.>**
 2. Thickness: **[3/4 inch (19 mm)] [1/2 inch (13 mm)] [3/8 inch (9 mm)] [1/4 inch (6 mm)] [5/32 inch (4 mm)] <Insert dimension>**.

2.5 ACCESSORY MATERIALS

- A. Wood Underlayment: **[As specified in Section 061000 "Rough Carpentry."]** **<Insert requirements>**.
- B. Vapor Retarder: ASTM D 4397, polyethylene sheet not less than **[6.0 mils (0.15 mm)] [8.0 mils (0.2 mm)]** thick.
- C. Asphalt-Saturated Felt: ASTM D 4869, Type II.
- D. Wood Flooring Adhesive: Mastic recommended by flooring and adhesive manufacturers for application indicated.

1. Adhesive shall have a VOC content of not more than [100] <Insert value> g/L when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 2. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- E. Trowelable Leveling and Patching Compound: Latex-modified, hydraulic-cement-based formulation approved by wood flooring manufacturer.
- F. Fasteners: As recommended by manufacturer, but not less than that recommended in [NWFA's "Installation Guidelines: Wood Flooring."] <Insert standard or publication>.
- G. Thresholds and Saddles: To match wood flooring. Tapered on each side.
- H. Reducer Strips: To match wood flooring. [2 inches (51 mm)] <Insert dimension> wide, tapered, and in thickness required to match height of flooring.
- I. Cork Expansion Strip: Composition cork strip.
- J. Feature Strips: [2-inch- (51-mm-) wide, square-edged walnut strips] <Insert description>, furnished in lengths as long as practical and in thickness to match wood flooring.
- K. Metal Feature Strips: [1/8-by-1/8-inch (3-by-3-mm) solid-brass strips] <Insert description>, designed for inlaying into routed reveal in wood flooring surface.
- L. Wood Air Vents and Grilles: To match wood flooring and in sizes and design indicated on Drawings.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas and conditions, with Installer present, for compliance with requirements for maximum moisture content, installation tolerances, and other conditions affecting performance of wood flooring.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.
- C. Concrete Slabs: Verify that concrete substrates are dry and moisture-vapor emissions are within acceptable levels according to manufacturer's written instructions.
1. Moisture Testing: Perform tests so that each test area does not exceed [200 sq. ft. (18.6 sq. m)] <Insert area>, and perform no fewer than two tests in each installation area and with test areas evenly spaced in installation areas.
 - a. Perform anhydrous calcium chloride test per ASTM F 1869, as follows:

- 1) Proceed with installation only after substrates have maximum moisture-vapor-emission rate of [3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m)] [4.5 lb of water/1000 sq. ft. (2.04 kg of water/92.9 sq. m)] <Insert emission> in 24 hours.
- b. Perform tests recommended by manufacturer. Submit test results to DEN Project Manager for review.
- c. Proceed with installation only after substrates pass testing and are approved by flooring manufacturer for installation.

3.2 PREPARATION

- A. Concrete Slabs: Grind high spots and fill low spots to produce a maximum 1/8-inch (3-mm) deviation in any direction when checked with a 10-foot (3-m) straight edge.
 1. Use trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, and depressions in substrates.
- B. Remove coatings, including curing compounds, and other substances on substrates that are incompatible with installation adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by manufacturer. Do not use solvents.
- C. Broom or vacuum clean substrates to be covered immediately before product installation. After cleaning, examine substrates for moisture, alkaline salts, carbonation, or dust. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

- A. Comply with flooring manufacturer's written installation instructions, but not less than applicable recommendations in [NWFA's "Installation Guidelines: Wood Flooring."] <Insert standard or publication>.
- B. Wood Sleepers and Subfloor: [Install according to requirements in Section 061000 "Rough Carpentry."] <Insert requirements>.
- C. Wood Underlayment: [Install according to requirements in Section 061000 "Rough Carpentry."] <Insert requirements>.
- D. Provide expansion space at walls and other obstructions and terminations of flooring [as indicated on Drawings] [of not less than 3/4 inch (19 mm)] <Insert requirements>.
- E. Vapor Retarder: Comply with NOFMA's "Installing Hardwood Flooring" for vapor retarder installation and the following:

1. Wood Flooring Nailed to Wood Subfloor: Install flooring over a layer of asphalt-saturated felt.
 2. Wood Flooring Nailed to Sleepers over Concrete: Install flooring over a layer of polyethylene sheet with edges overlapped over sleepers and turned up behind baseboards.
 3. Wood Flooring Installed Directly on Concrete: Install a layer of polyethylene sheet according to flooring manufacturer's written instructions.
- F. Sound Control Underlayment: Install over vapor retarder in accordance with manufacturer's written instructions.
- G. Solid-Wood Flooring: Blind nail or staple flooring to substrate.
1. For flooring of face width more than **3 inches** (75 mm):
 - a. Install countersunk screws at each end of each piece in addition to blind nailing. Cover screw heads with wood plugs glued flush with flooring.
 - b. Install no fewer than two countersunk nails at each end of each piece, spaced not more than **16 inches** (406 mm) along length of each piece, in addition to blind nailing. Fill holes with matching wood filler.
- H. Solid-Wood Parquet Flooring: Set in adhesive in pattern indicated on Drawings.
- I. Engineered-Wood Flooring: **[Set in adhesive] [Nail or staple] [Install floating floor]**.

3.4 FIELD FINISHING

- A. Machine-sand flooring to remove offsets, ridges, cups, and sanding-machine marks that would be noticeable after finishing. Vacuum and tack with a clean cloth immediately before applying finish.
1. Comply with applicable recommendations in **[NWFA's "Installation Guidelines: Wood Flooring."]** <Insert standard or publication>.
- B. Fill **[open-grained hardwood]** <Insert description of wood to be filled>.
- C. Fill and repair wood flooring seams and defects.
- D. Apply floor-finish materials in number of coats recommended by finish manufacturer for application indicated, but not less than one coat of floor sealer and **[three]** <Insert number> finish coats.
1. Apply stains to achieve an even color distribution matching approved Samples.
 2. For water-based finishes, use finishing methods recommended by finish manufacturer to minimize grain raise.
- E. Cover wood flooring before finishing.
- F. Do not cover wood flooring after finishing until finish reaches full cure, and not before seven days after applying last finish coat.

3.5 PROTECTION

- A. Protect installed wood flooring during remainder of construction period with covering of heavy kraft paper or other suitable material. Do not use plastic sheet or film that might cause condensation.
 - 1. Do not move heavy and sharp objects directly over kraft-paper-covered wood flooring. Protect flooring with plywood or hardboard panels to prevent damage from storing or moving objects over flooring.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 096400

SECTION 096513 - RESILIENT BASE AND ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Resilient base.
2. Resilient stair accessories.
3. Resilient molding accessories.

- B. Related Sections:

1. Section 096516 "Resilient Sheet Flooring" for resilient sheet floor coverings.
2. Section 096516.13 "Linoleum Flooring" for linoleum floor coverings.
3. Section 096519 "Resilient Tile Flooring" for resilient floor tile.
4. Section 096536 "Static-Control Resilient Flooring" for resilient floor coverings designed to control electrostatic discharge.
5. Section 096566 "Resilient Athletic Flooring" for resilient floor coverings for use in athletic-activity or support areas.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

1. Include data substantiating that materials comply with requirements.

- B. LEED Submittals:

1. Product Data for Credit IEQ 4.1: For adhesives, documentation including printed statement of VOC content.
2. Laboratory Test Reports for Credit IEQ 4: For adhesives, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- C. Samples for Initial Selection: For each type of product indicated.
- D. Samples for Verification: For each type of product indicated, in manufacturer's standard-size Samples but not less than **12 inches** (300 mm) long, of each resilient product color, texture, and pattern required.
- E. Product Schedule: For resilient products.[**Use same designations indicated on Drawings.**]

1.4 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Furnish not less than [**10 linear feet** (3 linear m)] **<Insert length>** for every [**500 linear feet** (150 linear m)] **<Insert length>** or fraction thereof, of each type, color, pattern, and size of resilient product installed.

1.6 QUALITY ASSURANCE

- A. Fire-Test-Response Characteristics: As determined by testing identical products according to ASTM E 648 or NFPA 253 by a qualified testing agency.
 - 1. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.
- B. Mockups: Provide resilient products with mockups specified in other Sections.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Store resilient products and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than **50 deg F** (10 deg C) or more than **90 deg F** (32 deg C).

1.8 PROJECT CONDITIONS

- A. Maintain ambient temperatures within range recommended by manufacturer, but not less than [**70 deg F** (21 deg C)] **<Insert temperature>** or more than [**95 deg F** (35 deg C)] **<Insert temperature>**, in spaces to receive resilient products during the following time periods:

1. 48 hours before installation.
 2. During installation.
 3. 48 hours after installation.
- B. Until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer, but not less than [55 deg F (13 deg C)] <Insert temperature> or more than [95 deg F (35 deg C)] <Insert temperature>.
- C. Install resilient products after other finishing operations, including painting, have been completed.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 RESILIENT BASE <Insert drawing designation>

- A. Resilient Base:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Allstate Rubber Corp.; Stoler Industries.
 - b. Armstrong World Industries, Inc.
 - c. Burke Mercer Flooring Products; Division of Burke Industries, Inc.
 - d. Endura Rubber Flooring; Division of Burke Industries, Inc.
 - e. Estrie Products International; American Biltrite (Canada) Ltd.
 - f. Flexco, Inc.
 - g. Johnsonite.
 - h. Mondo Rubber International, Inc.
 - i. Musson, R. C. Rubber Co.
 - j. Nora Rubber Flooring; Freudenberg Building Systems, Inc.
 - k. PRF USA, Inc.
 - l. Roppe Corporation, USA.
 - m. VPI, LLC; Floor Products Division.
 - n. <Insert manufacturer's name>.
 - o. or approved equal.
- B. Resilient Base Standard: ASTM F 1861.
1. Material Requirement: [Type TV (vinyl, thermoplastic)] [Type TS (rubber, vulcanized thermoset)] [Type TP (rubber, thermoplastic)] [Type TS (rubber, vulcanized thermoset) or Type TP (rubber, thermoplastic)].

2. Manufacturing Method: [**Group I (solid, homogeneous)**] [**Group II (layered)**] [**Group I (solid, homogeneous) or Group II (layered)**].
 3. Style: [**Cove (base with toe)**] [**Straight (flat or toeless)**] [**Butt to (fit-to-floor)**] **<Insert special style>**.
- C. Minimum Thickness: [**0.125 inch (3.2 mm)**] [**0.080 inch (2.0 mm)**] **<Insert thickness>**.
- D. Height: [**2-1/2 inches (64 mm)**] [**4 inches (102 mm)**] [**6 inches (152 mm)**] [**As indicated on Drawings**].
- E. Lengths: [**Cut lengths, 48 inches (1219 mm) long**] [**Coils in manufacturer's standard length**] [**Cut lengths 48 inches (1219 mm) long or coils in manufacturer's standard length**].
- F. Outside Corners: [**Job formed**] [**Preformed**] [**Job formed or preformed**].
- G. Inside Corners: [**Job formed**] [**Preformed**] [**Job formed or preformed**].
- H. Finish: [**Satin**] [**Matte**] [**Low luster**] [**As selected by DEN Project Manager from manufacturer's full range**].
- I. Colors and Patterns: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry colors**].

2.2 RESILIENT STAIR ACCESSORIES **<Insert drawing designation>**

- A. Resilient Stair Treads:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Burke Mercer Flooring Products; Division of Burke Industries, Inc.
 - b. Endura Rubber Flooring; Division of Burke Industries, Inc.
 - c. Estrie Products International; American Biltrite (Canada) Ltd.
 - d. Flexco, Inc.
 - e. Johnsonite.
 - f. Mondo Rubber International, Inc.
 - g. Musson, R. C. Rubber Co.
 - h. Nora Rubber Flooring; Freudenberg Building Systems, Inc.
 - i. PRF USA, Inc.
 - j. R.C.A. Rubber Company (The).
 - k. Roppe Corporation, USA.
 - l. VPI, LLC; Floor Products Division.
 - m. **<Insert manufacturer's name>**.
 - n. or approved equal.
- B. Resilient Stair Treads Standard: ASTM F 2169.

1. Material Requirement: **[Type TV (vinyl, thermoplastic)] [Type TS (rubber, vulcanized thermoset)] [Type TP (rubber, thermoplastic)] [Type TS (rubber, vulcanized thermoset) or Type TP (rubber, thermoplastic)].**
 2. Surface Design:
 - a. Class 1, Smooth (flat).
 - b. Class 2, Pattern: **[Raised-disc design] [Raised-square design] [Raised-chevron design] [Raised-diamond design] [Raised-rib design] [Raised-rib design with abrasive strips] <Insert pattern>.**
 3. Manufacturing Method: **[Group 1, tread with embedded abrasive strips] [Group 2, tread with contrasting color for the visually impaired].**
- C. Nosing Style: **[Square, adjustable to cover angles between 60 and 90 degrees] [Square] [Round].**
- D. Nosing Height: **[1-1/2 inches (38 mm)] [2 inches (51 mm)] [2-3/16 inches (56 mm)] <Insert dimension>.**
- E. Thickness: **[1/4 inch (6 mm) and tapered to back edge] <Insert thickness>.**
- F. Size: Lengths and depths to fit each stair tread in **[one piece] [one piece or, for treads exceeding maximum lengths manufactured, in equal-length units].**
- G. Risers: Smooth, flat, **[coved-toe, 7 inches (178 mm) high by length matching treads] [toeless, height and length to cover risers];** produced by same manufacturer as treads and recommended by manufacturer for installation with treads.
1. Thickness: **[0.125 inch (3.2 mm)] [0.080 inch (2.0 mm)] <Insert thickness>.**
- H. Stringers: Of same thickness as risers, height and length after cutting to fit risers and treads and to cover stair stringers; produced by same manufacturer as treads and recommended by manufacturer for installation with treads.
- I. Colors and Patterns: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager** from full range of industry colors].
- 2.3 RESILIENT MOLDING ACCESSORY **<Insert drawing designation>**
- A. Resilient Molding Accessory:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Burke Mercer Flooring Products; Division of Burke Industries, Inc.
 - b. Flexco, Inc.
 - c. Johnsonite.
 - d. R.C.A. Rubber Company (The).
 - e. Roppe Corporation, USA.

- f. VPI, LLC; Floor Products Division.
 - g. **<Insert manufacturer's name>**.
 - h. or approved equal.
- B. Description: [**Cap for cove carpet**] [**Cap for cove resilient floor covering**] [**Carpet bar for tackless installations**] [**Carpet edge for glue-down applications**] [**Nosing for carpet**] [**Nosing for resilient floor covering**] [**Reducer strip for resilient floor covering**] [**Joiner for tile and carpet**] [**Transition strips**] **<Insert description>**.
- C. Material: [**Vinyl**] [**Rubber**].
- D. Profile and Dimensions: [**As indicated**] **<Insert profile and dimensions>**.
- E. Colors and Patterns: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager** from full range of industry colors].

2.4 INSTALLATION MATERIALS

- A. Trowelable Leveling and Patching Compounds: Latex-modified, Portland cement based or blended hydraulic-cement-based formulation provided or approved by manufacturer for applications indicated.
- B. Adhesives: Water-resistant type recommended by manufacturer to suit resilient products and substrate conditions indicated.
- 1. Adhesives shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24)[, **except that adhesive for rubber stair treads shall have a VOC content of 60 g/L or less**].
 - 2. Adhesives shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Stair-Tread-Nose Filler: Two-part epoxy compound recommended by resilient tread manufacturer to fill nosing substrates that do not conform to tread contours.
- D. Metal Edge Strips: Extruded aluminum with mill finish of width shown, of height required to protect exposed edges of tiles, and in maximum available lengths to minimize running joints.
- E. Floor Polish: Provide protective liquid floor polish products as recommended by resilient stair tread manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
- B. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resilient products.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Prepare substrates according to manufacturer's written instructions to ensure adhesion of resilient products.
- B. Concrete Substrates for Resilient Stair Treads and Accessories: Prepare according to ASTM F 710.
 - 1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
 - 2. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by manufacturer. Do not use solvents.
 - 3. Alkalinity and Adhesion Testing: Perform tests recommended by manufacturer.
 - 4. Moisture Testing: Perform tests recommended by manufacturer[**and as follows**]. Proceed with installation only after substrates pass testing.
 - a. Perform anhydrous calcium chloride test, ASTM F 1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of [3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m)] **<Insert emission>** in 24 hours.
 - b. Perform relative humidity test using in situ probes, ASTM F 2170. Proceed with installation only after substrates have maximum [75 percent] **<Insert acceptable percentage>** relative humidity level measurement.
- C. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound and remove bumps and ridges to produce a uniform and smooth substrate.
- D. Do not install resilient products until they are same temperature as the space where they are to be installed.
 - 1. Move resilient products and installation materials into spaces where they will be installed at least 48 hours in advance of installation.
- E. Sweep and vacuum clean substrates to be covered by resilient products immediately before installation.

3.3 RESILIENT BASE INSTALLATION

- A. Comply with manufacturer's written instructions for installing resilient base.
- B. Apply resilient base to walls, columns, pilasters, casework and cabinets in toe spaces, and other permanent fixtures in rooms and areas where base is required.
- C. Install resilient base in lengths as long as practicable without gaps at seams and with tops of adjacent pieces aligned.
- D. Tightly adhere resilient base to substrate throughout length of each piece, with base in continuous contact with horizontal and vertical substrates.
- E. Do not stretch resilient base during installation.
- F. On masonry surfaces or other similar irregular substrates, fill voids along top edge of resilient base with manufacturer's recommended adhesive filler material.
- G. Preformed Corners: Install preformed corners before installing straight pieces.
- H. Job-Formed Corners:
 - 1. Outside Corners: Use straight pieces of maximum lengths possible. Form without producing discoloration (whitening) at bends.
 - 2. Inside Corners: Use straight pieces of maximum lengths possible.

3.4 RESILIENT ACCESSORY INSTALLATION

- A. Comply with manufacturer's written instructions for installing resilient accessories.
- B. Resilient Stair Accessories:
 - 1. Use stair-tread-nose filler to fill nosing substrates that do not conform to tread contours.
 - 2. Tightly adhere to substrates throughout length of each piece.
 - 3. For treads installed as separate, equal-length units, install to produce a flush joint between units.
- C. Resilient Molding Accessories: Butt to adjacent materials and tightly adhere to substrates throughout length of each piece. Install reducer strips at edges of [**carpet**] [**resilient floor covering**] that would otherwise be exposed.

3.5 CLEANING AND PROTECTION

- A. Comply with manufacturer's written instructions for cleaning and protection of resilient products.
- B. Perform the following operations immediately after completing resilient product installation:

1. Remove adhesive and other blemishes from exposed surfaces.
 2. Sweep and vacuum surfaces thoroughly.
 3. Damp-mop surfaces to remove marks and soil.
- C. Protect resilient products from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.
- D. Floor Polish: Remove soil, visible adhesive, and surface blemishes from resilient stair treads before applying liquid floor polish.
1. Apply [two] [three] <Insert requirement> coat(s).
- E. Cover resilient products until Substantial Completion.

PART 4 - MEASUREMENT

A. METHOD OF MEASUREMENT

1. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

A. METHOD OF PAYMENT

1. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 096513

SECTION 096516 - RESILIENT SHEET FLOORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Vinyl sheet floor covering, [**with**] [**and**] [**without**] backing.
2. Rubber sheet floor covering, [**with**] [**and**] [**without**] backing.

B. Related Sections:

1. Section 096513 "Resilient Base and Accessories" for resilient base, reducer strips, and other accessories installed with resilient floor coverings.
2. Section 096516.13 "Linoleum Flooring" for linoleum sheet floor coverings.
3. Section 096519 "Resilient Tile Flooring" for resilient floor tile.
4. Section 096536 "Static-Control Resilient Flooring" for resilient floor coverings designed to control electrostatic discharge.
5. Section 096566 "Resilient Athletic Flooring" for resilient floor coverings for use in athletic-activity or support areas.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

1. Include data substantiating that materials comply with requirements.

B. Moisture Tests: Submit test results for moisture tests of concrete substrates.

C. LEED Submittals:

1. Product Data for Credit IEQ 4.1: For [**adhesives**] [**and**] [**chemical-bonding compounds**], documentation including printed statement of VOC content.
2. Product Data for Credit IEQ 4.3: For adhesives [**and chemical-bonding compounds**], documentation including printed statement of VOC content.

3. Product Data for Credit IEQ 4.3: For resilient sheet flooring, documentation from an independent testing agency indicating compliance with the FloorScore Standard.
 4. Laboratory Test Reports for Credit IEQ 4: For adhesives **[flooring system]** **[and]** **[chemical-bonding compounds]**, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- D. Shop Drawings: For each type of floor covering. Include floor covering layouts, locations of seams, edges, columns, doorways, enclosing partitions, built-in furniture, cabinets, and cutouts.
1. Show details of special patterns.
- E. Samples for Initial Selection: For each type of floor covering indicated.
- F. Samples for Verification: In manufacturer's standard size, but not less than **[6-by-9-inch (150-by-230-mm)]** **<Insert size>** sections of each different color and pattern of floor covering required.
1. For heat-welding bead, manufacturer's standard-size Samples, but not less than **[9 inches (230 mm)]** **<Insert dimension>** long, of each color required.
- G. Seam Samples: For seamless-installation technique indicated and for each floor covering product, color, and pattern required; with seam running lengthwise and in center of **[6-by-9-inch (150-by-230-mm)]** **<Insert size>** Sample applied to a rigid backing and prepared by Installer for this Project.
- H. Product Schedule: For floor coverings. **[Use same designations indicated on Drawings.]**
- 1.4 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For qualified Installer.
- 1.5 CLOSEOUT SUBMITTALS
- A. Maintenance Data: For each type of floor covering to include in maintenance manuals.
 - B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
- 1.6 MAINTENANCE MATERIAL SUBMITTALS
- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Floor Covering: Furnish quantity not less than [10 linear feet (3 linear m)] <Insert length> for every [500 linear feet (150 linear m)] <Insert length> or fraction thereof, in roll form and in full roll width for each color, pattern, and type of floor covering installed.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: A qualified installer who employs workers for this Project who are competent in techniques required by manufacturer for floor covering installation [and seaming method] indicated.
 1. Engage an installer who employs workers for this Project who are trained or certified by floor covering manufacturer for installation techniques required.
- B. Fire-Test-Response Characteristics: As determined by testing identical products according to ASTM E 648 or NFPA 253 by a qualified testing agency.
 1. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.
- C. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 1. Build mockups for floor coverings including [resilient base and] accessories.
 - a. Size: Minimum 100 sq. ft. (9.3 sq. m) for each type, color and pattern [in locations indicated] [in locations directed by DEN Project Manager] <Insert location requirements>.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Store floor coverings and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 50 deg F (10 deg C) or more than 90 deg F (32 deg C). Store rolls upright.

1.9 PROJECT CONDITIONS

- A. Maintain ambient temperatures within range recommended by manufacturer, but not less than [70 deg F (21 deg C)] <Insert temperature> or more than [85 deg F (29 deg C)] <Insert temperature>, in spaces to receive floor coverings during the following time periods:
 1. 48 hours before installation.
 2. During installation.
 3. 48 hours after installation.

- B. Until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer, but not less than [55 deg F (13 deg C)] <Insert temperature> or more than [95 deg F (35 deg C)] <Insert temperature>.
- C. Close spaces to traffic during floor covering installation.
- D. Close spaces to traffic for 48 hours after floor covering installation.
- E. Install floor coverings after other finishing operations, including painting, have been completed.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. FloorScore Compliance: Resilient sheet flooring shall comply with requirements of FloorScore Standard.
- B. Low-Emitting Materials: Flooring system shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.2 VINYL SHEET FLOOR COVERING <Insert drawing designation>

- A. Products: Subject to compliance with requirements, provide one of the following:
 1. Altro Group; <Insert product name or designation>.
 2. Armstrong World Industries, Inc.; <Insert product name or designation>.
 3. Congoleum Corporation; <Insert product name or designation>.
 4. DzynSpec, Division of Matsinc.; <Insert product name or designation>.
 5. Forbo Flooring, Inc.; <Insert product name or designation>.
 6. Gerflor, Architectural Floor Systems, Inc.; <Insert product name or designation>.
 7. Lonseal, Inc.; <Insert product name or designation>.
 8. Mannington Mills, Inc.; <Insert product name or designation>.
 9. Polyflor, Ltd., Distributed by Gerbert Limited; <Insert product name or designation>.
 10. Tarkett, Inc.; <Insert product name or designation>.
 11. TOLI International; <Insert product name or designation>.
 12. <Insert manufacturer's name; product name or designation>.

13. or approved equal.
- B. Unbacked Vinyl Sheet Floor Covering: ASTM F 1913, [0.080 inch (2.0 mm)] **<Insert dimension>** thick.
- C. Vinyl Sheet Floor Covering with Backing: ASTM F 1303.
1. Type (Binder Content): [**Type I, minimum binder content of 90 percent**] [**Type II, minimum binder content of 34 percent**].
 2. Wear-Layer Thickness: Grade 1.
 3. Overall Thickness: [**As standard with manufacturer**] **<Insert thickness>**.
 4. Interlayer Material: [**Foamed plastic**] [**None**].
 5. Backing Class: [**Class A (fibrous)**] [**Class B (nonfoamed plastic)**] [**Class C (foamed plastic)**].
- D. Wearing Surface: [**Smooth**] [**Embossed**] [**Smooth with embedded abrasives**] [**Embossed with embedded abrasives**].
- E. Sheet Width: [**As standard with manufacturer**] [**4.9 feet (1.5 m)**] [**6 feet (1.8 m)**] [**6.5 feet (1.98 m)**] [**6.6 feet (2.0 m)**] [**9 feet (2.7 m)**] [**12 feet (3.6 m)**].
- F. Seaming Method: [**Heat welded**] [**Chemically bonded**] [**Standard**] **<Insert requirements>**.
- G. Colors and Patterns: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry colors**].

2.3 RUBBER SHEET FLOOR COVERING **<Insert drawing designation>**

- A. Products: Subject to compliance with requirements, provide one of the following:
1. Estrie Products International, American Biltrite (Canada) Ltd.; **<Insert product name or designation>**.
 2. Flexco; **<Insert product name or designation>**.
 3. Johnsonite; **<Insert product name or designation>**.
 4. Mondo Rubber International, Inc.; **<Insert product name or designation>**.
 5. Nora Rubber Flooring, Freudenberg Building Systems, Inc.; **<Insert product name or designation>**.
 6. PRF USA Inc.; **<Insert product name or designation>**.
 7. R.C.A. Rubber Company (The); **<Insert product name or designation>**.
 8. **<Insert manufacturer's name; product name or designation>**.
 9. or approved equal.
- B. Unbacked Rubber Sheet Floor Covering: ASTM F 1859.
1. Type: [**Type I (homogeneous rubber sheet)**] [**Type II (layered rubber sheet)**].
 2. Thickness: [**As standard with manufacturer**] **<Insert thickness>**.
- C. Rubber Sheet Floor Covering with Backing: ASTM F 1860.

1. Type: **[Type I, homogeneous rubber sheet with backing] [Type II, layered rubber sheet with backing]**.
 2. Wear-Layer Thickness: **[As standard with manufacturer] <Insert thickness>**.
 3. Overall Thickness: **[As standard with manufacturer] <Insert thickness>**.
 4. Interlayer Material: **[As standard with manufacturer] [None]**.
 5. Backing Type: **[Fibrous)] [Foamed rubber]**.
- D. Hardness: **[Not less than required by ASTM F 1859] [Not less than required by ASTM F 1860] [Manufacturer's standard hardness, measured using Shore, Type A durometer per ASTM D 2240]**.
- E. Wearing Surface: **[Smooth] [Textured] [Molded pattern]**.
1. Molded-Pattern Figure: **[Raised discs] [Raised squares] <Insert pattern>**.
- F. Sheet Width: **[As standard with manufacturer] [4.9 feet (1.5 m)] [6 feet (1.8 m)] [6.5 feet (1.98 m)] [6.6 feet (2.0 m)] [9 feet (2.7 m)] [12 feet (3.6 m)]**.
- G. Seaming Method: **[Heat welded] [Chemically bonded] [Standard] <Insert requirements>**.
- H. Colors and Patterns: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors]**.

2.4 INSTALLATION MATERIALS

- A. Trowelable Leveling and Patching Compounds: Latex-modified, Portland cement based or blended hydraulic-cement-based formulation provided or approved by manufacturer for applications indicated.
- B. Adhesives: Water-resistant type recommended by manufacturer to suit floor covering and substrate conditions indicated.
1. Adhesives shall have a VOC content of not more than **[50] [60] <Insert value>** g/L when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 2. Adhesives shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Seamless-Installation Accessories:
1. Heat-Welding Bead: Manufacturer's solid-strand product for heat welding seams.
 - a. Color: **[As selected by DEN Project Manager from manufacturer's full range to contrast with floor covering] [Match floor covering] <Insert color>**.

2. Chemical-Bonding Compound: Manufacturer's product for chemically bonding seams.
 - a. VOC Content: Not more than 510 g/L. when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - b. Bonding compound shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- D. Integral-Flash-Cove-Base Accessories:
 1. Cove Strip: 1-inch (25-mm) radius provided or approved by manufacturer.
 2. Cap Strip: [**Square metal, vinyl, or rubber cap**] [**Tapered vinyl cap**] <Insert requirements> provided or approved by manufacturer.
 3. Corners: Metal inside and outside corners and end stops provided or approved by manufacturer.
- E. Floor Polish: Provide protective liquid floor polish products as recommended by manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
- B. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of floor coverings.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Prepare substrates according to manufacturer's written instructions to ensure adhesion of floor coverings.
- B. Concrete Substrates: Prepare according to ASTM F 710.
 1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
 2. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by manufacturer. Do not use solvents.
 3. Alkalinity and Adhesion Testing: Perform tests recommended by manufacturer. Proceed with installation only after substrates pass testing.

4. Moisture Testing: Perform tests recommended by manufacturer[**and as follows**]. Proceed with installation only after substrates pass testing.
 - a. Perform anhydrous calcium chloride test, ASTM F 1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of [3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m)] **<Insert emission>** in 24 hours.
 - b. Perform relative humidity test using in situ probes, ASTM F 2170. Proceed with installation only after substrates have a maximum **[75 percent]** **<Insert acceptable percentage>** relative humidity level measurement.
 - c. Submit test results to DEN Project Manager.
- C. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound and remove bumps and ridges to produce a uniform and smooth substrate.
- D. Do not install floor coverings until they are same temperature as space where they are to be installed.
 1. Move floor coverings and installation materials into spaces where they will be installed at least 48 hours in advance of installation.
- E. Sweep and vacuum clean substrates to be covered by floor coverings immediately before installation.

3.3 FLOOR COVERING INSTALLATION

- A. Comply with manufacturer's written instructions for installing floor coverings.
- B. Unroll floor coverings and allow them to stabilize before cutting and fitting.
- C. Lay out floor coverings as follows:
 1. Maintain uniformity of floor covering direction.
 2. Minimize number of seams; place seams in inconspicuous and low-traffic areas, at least **6 inches** (152 mm) away from parallel joints in floor covering substrates.
 3. Match edges of floor coverings for color shading at seams.
 4. Avoid cross seams.
- D. Scribe and cut floor coverings to butt neatly and tightly to vertical surfaces, permanent fixtures, and built-in furniture including cabinets, pipes, outlets, and doorframes.
- E. Extend floor coverings into toe spaces, door reveals, closets, and similar openings.
- F. Maintain reference markers, holes, or openings that are in place or marked for future cutting by repeating on floor coverings as marked on substrates. Use chalk or other nonpermanent marking device.
- G. Install floor coverings on covers for telephone and electrical ducts and similar items in installation areas. Maintain overall continuity of color and pattern between pieces of

floor coverings installed on covers and adjoining floor covering. Tightly adhere floor covering edges to substrates that abut covers and to cover perimeters.

- H. Adhere floor coverings to substrates using a full spread of adhesive applied to substrate to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.
- I. Seamless Installation:
 - 1. Heat-Welded Seams: Comply with ASTM F 1516. Rout joints and use welding bead to permanently fuse sections into a seamless floor covering. Prepare, weld, and finish seams to produce surfaces flush with adjoining floor covering surfaces.
 - 2. Chemically-Bonded Seams: Bond seams with chemical-bonding compound to permanently fuse sections into a seamless floor covering. Prepare seams and apply compound to produce tightly-fitted seams without gaps, overlays, or excess bonding compound on floor covering surfaces.
- J. Integral-Flash-Cove Base: Cove floor coverings [6 inches (152 mm)] [dimension indicated] <Insert dimension> up vertical surfaces. Support floor coverings at horizontal and vertical junction by cove strip. Butt at top against cap strip.
 - 1. Install metal corners at inside and outside corners.

3.4 CLEANING AND PROTECTION

- A. Comply with manufacturer's written instructions for cleaning and protection of floor coverings.
- B. Perform the following operations immediately after completing floor covering installation:
 - 1. Remove adhesive and other blemishes from floor covering surfaces.
 - 2. Sweep and vacuum floor coverings thoroughly.
 - 3. Damp-mop floor coverings to remove marks and soil.
- C. Protect floor coverings from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.
- D. Floor Polish: Remove soil, visible adhesive, and surface blemishes from floor covering before applying liquid floor polish.
 - 1. Apply [one] [two] [three] <Insert requirement> coat(s).
- E. Cover floor coverings until Substantial Completion.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 096516

SECTION 096516.13 - LINOLEUM FLOORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Linoleum [**floor tile**] [**sheet flooring**] [**floor tile and sheet flooring**].
- B. Related Sections:
 - 1. Section 096513 "Resilient Base and Accessories" for resilient base, reducer strips, and other accessories installed with linoleum floor covering.
 - 2. Section 096536 "Static-Control Resilient Flooring" for resilient floor coverings designed to control electrostatic discharge.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Include data substantiating that materials comply with requirements.
- B. Moisture Tests: Submit test results for moisture tests of concrete substrates.
- C. LEED Submittals:
 - 1. Product Data for Credit IEQ 4.1: For adhesives, documentation including printed statement of VOC contents.
 - 2. Product Data for Credit IEQ 4.3: For adhesives, documentation including printed statement of VOC contents.
 - 3. Product Data for Credit IEQ 4.3: For linoleum, documentation from an independent testing agency indicating compliance with the FloorScore Standard.
 - 4. Laboratory Test Reports for Credit IEQ 4: For [**flooring system**] [**and**] [**adhesives**], documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard

Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- D. Shop Drawings: For each type of floor covering. Include floor covering layouts, locations of seams, edges, columns, doorways, enclosing partitions, built-in furniture, cabinets, and cutouts.
 - 1. Show details of special patterns.
- E. Samples for Initial Selection: For each type of floor covering indicated.
 - 1. Include similar Samples of installation accessories involving color selection.
- F. Samples for Verification: In manufacturer's standard size, but not less than [6-by-9-inch (152-by-230-mm)] <Insert size> sections of each color and pattern of floor covering required.
 - 1. Heat-Welding Bead: Include manufacturer's standard-size Samples, but not less than [9 inches (230 mm)] <Insert dimension> long, of each color required.
- G. Heat-Welded Seam Samples: For each floor covering product and welding bead color and pattern combination required; with seam running lengthwise and in center of [6-by-9-inch (152-by-230-mm)] <Insert size> Sample applied to rigid backing and prepared by Installer for this Project.
- H. Product Schedule: For floor covering.[**Use same designations indicated on Drawings.**]

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For each type of floor covering to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Floor Tile: Furnish 1 box for every [50] <Insert number> boxes or fraction thereof, of each type, color, and pattern of floor tile installed.

2. Sheet Flooring: Furnish not less than [10 linear feet (3 linear m)] **<Insert length>** for every [500 linear feet (150 linear m)] **<Insert length>** or fraction thereof, in roll form and in full roll width for each color, pattern, and type of sheet flooring installed.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: A qualified installer who employs workers for this Project who are competent in techniques required by manufacturer for floor covering installation.
 1. Engage an installer who employs workers for this Project who are trained or certified by manufacturer for installation techniques required.
- B. Fire-Test-Response Characteristics: As determined by testing identical products according to ASTM E 648 or NFPA 253 by a qualified testing agency.
 1. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.
- C. Delete paragraph (and subparagraphs below) if mockups not required. If retaining, indicate location, size, and other details of mockups on drawings or with inserts. Verify mockup requirements with DEN Project Manager. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 1. Build mockups for floor coverings including[**integral-flash-cove-base and**] [**resilient base and**] accessories.
 - a. Size: Minimum 100 sq. ft. (9.2 sq. m) for each type, color, and pattern [in locations indicated] [in locations directed by DEN Project Manager] **<Insert location requirements>**.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Store floor coverings and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 65 deg F (18 deg C) or more than 90 deg F (32 deg C).
 1. Floor Tile: Store on flat surfaces.
 2. Sheet Flooring: Store rolls upright.

1.9 PROJECT CONDITIONS

- A. Maintain ambient temperatures within range recommended by manufacturer, but not less than [70 deg F (21 deg C)] **<Insert temperature>** or more than [95 deg F (35 deg C)] **<Insert temperature>**, in spaces to receive floor coverings during the following time periods:
 1. 72 hours before installation.

2. During installation.
 3. 72 hours after installation.
- B. Until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer, but not less than [55 deg F (13 deg C)] <Insert temperature> or more than [95 deg F (35 deg C)] <Insert temperature>.
- C. Close spaces to traffic during floor covering installation.
- D. Close spaces to traffic for 72 hours after floor covering installation.
- E. Install floor coverings after other finishing operations, including painting, have been completed.
- 1.10 CONSTRUCTION WASTE MANAGEMENT
- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Products: Subject to compliance with requirements, provide one of the following:
1. Armstrong World Industries, Inc.; <Insert product name or designation>.
 2. Forbo Flooring, Inc.; <Insert product name or designation>.
 3. Tarkett Inc.; <Insert product name or designation>.
 4. <Insert manufacturer's name; product name or designation>.
 5. or approved equal.

2.2 PERFORMANCE REQUIREMENTS

- A. FloorScore Compliance: Linoleum shall comply with requirements of FloorScore Standard.
- B. Low-Emitting Materials: Flooring system shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.3 LINOLEUM FLOOR COVERING <Insert drawing designation>

- A. Floor Tile: ASTM F 2195, [**Type I, linoleum floor tile with fibrous backing**] [**Type II, linoleum floor tile with special backing**] [**Type III, linoleum floor tile without backing**].
- Nominal Floor Tile Size: [**Manufacturer's standard**] [**12 by 12 inches** (300 by 300 mm)] [**18 by 18 inches** (460 by 460 mm)] [**20 by 20 inches** (500 by 500 mm)] [**24 by 24 inches** (600 by 600 mm)] <Insert size>.
- B. Sheet Flooring: ASTM F 2034, [**Type I, linoleum sheet with backing**] [**Type III, linoleum sheet with special backing**].
- Roll Size: In manufacturer's standard length by not less than **78 inches** (1980 mm) wide.
- C. Seaming Method: [**Standard**] [**Heat welded**].
- D. Thickness: [**0.08 inch** (2.0 mm)] [**0.10 inch** (2.5 mm)] [**0.13 inch** (3.2 mm)] [**0.16 inch** (4.0 mm)] [**0.18 inch** (4.5 mm)] <Insert thickness>.
- E. Colors and Patterns: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry colors**].

2.4 INSTALLATION MATERIALS

- A. Trowelable Leveling and Patching Compounds: Latex-modified, portland cement based or blended hydraulic-cement-based formulation provided or approved by manufacturer for applications indicated.
- B. Adhesives: Water-resistant type recommended by manufacturer to suit products and substrate conditions indicated.
- Adhesives shall have a VOC content of not more than [**50**] <Insert value> g/L when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - Adhesives shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Heat-Welding Bead: Solid-strand product of linoleum floor covering manufacturer.
- [**As selected by DEN Project Manager from manufacturer's full range to contrast with linoleum floor covering**] [**Match linoleum floor covering**] <Insert color>.
- D. Integral-Flash-Cove-Base Accessories:
- Cove Strip: **1-inch** (25.4-mm) radius provided or approved by manufacturer.

2. Cove-Base Cap Strip: **[Square metal, vinyl, or rubber cap] <Insert requirements>** provided or approved by manufacturer.
- E. Floor Polish: Provide protective liquid floor polish products as recommended by manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
- B. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of floor coverings.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Prepare substrates according to manufacturer's written instructions to ensure adhesion of floor coverings.
- B. Concrete Substrates: Prepare according to ASTM F 710.
 1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
 2. Remove substrate coatings and other substances that are incompatible with floor covering adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by manufacturer. Do not use solvents.
 3. Alkalinity and Adhesion Testing: Perform tests recommended by manufacturer. Proceed with installation only after substrates pass testing.
 4. Moisture Testing: Perform tests recommended by manufacturer **[and as follows]**. Proceed with installation only after substrates pass testing.
 - a. Perform anhydrous calcium chloride test, ASTM F 1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of **[3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m)] <Insert emission>** in 24 hours.
 - b. Perform relative humidity test using in situ probes, ASTM F 2170. Proceed with installation only after substrates have maximum **[75 percent] <Insert acceptable percentage>** relative humidity level measurement.
 - c. Submit test results to DEN Project Manager.
- C. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound and remove bumps and ridges to produce a uniform and smooth substrate.

- D. Do not install floor coverings until they are same temperature as space where they are to be installed.
 - 1. Move floor coverings and installation materials into spaces where they will be installed at least 72 hours in advance of installation.
- E. Sweep and vacuum clean substrates to be covered by floor coverings immediately before installation.

3.3 INSTALLATION, GENERAL

- A. Comply with manufacturer's written instructions for installing floor coverings.
- B. Scribe and cut floor coverings to butt neatly and tightly to vertical surfaces, permanent fixtures, and built-in furniture including cabinets, pipes, outlets, edgings, thresholds, and nosings.
- C. Extend floor coverings into toe spaces, door reveals, closets, and similar openings.
- D. Maintain reference markers, holes, or openings that are in place or marked for future cutting by repeating on floor coverings as marked on subfloor. Use chalk or other nonpermanent marking device.
- E. Install floor coverings on covers for telephone and electrical ducts and similar items in finished floor areas. Maintain overall continuity of color and pattern between pieces of floor covering installed on covers and adjoining floor covering. Tightly adhere floor covering edges to substrates that abut covers and to cover perimeters.
- F. Adhere floor coverings to substrates using a full spread of adhesive applied to substrate to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.
- G. Heat-Welded Seams: Comply with ASTM F 1516. Rout joints and use welding bead to permanently fuse sections into a seamless floor covering. Prepare, weld, and finish seams to produce surfaces flush with adjoining floor covering surfaces.

3.4 LINOLEUM FLOOR TILE INSTALLATION

- A. Lay out floor tiles from center marks established with principal walls, discounting minor offsets, so floor tiles at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths that equal less than one-half tile at perimeter.
 - 1. Lay floor tiles [**square with room axis**] [**at a 45-degree angle with room axis**] [**in pattern indicated**] <Insert requirements>.
- B. Match floor tiles for color and pattern by selecting tiles from cartons in same sequence as manufactured and packaged, if so numbered. Discard broken, cracked, chipped, or deformed floor tiles.

1. Lay floor tiles [**with grain running in one direction**] [**with grain direction alternating in adjacent floor tiles (basket-weave pattern)**] [**in pattern of colors and sizes indicated**] <Insert requirements>.

3.5 LINOLEUM SHEET FLOORING INSTALLATION

- A. Unroll sheet floorings and allow them to stabilize before cutting and fitting.
- B. Lay out sheet floorings as follows:
 1. Maintain uniformity of floor covering direction.
 2. Minimize number of seams; place seams in inconspicuous and low-traffic areas, at least **6 inches** (152 mm) away from parallel joints in floor covering substrates.
 3. Match edges of floor coverings for color shading at seams.
 4. Avoid cross seams.
 5. Eliminate deformations that result from hanging method used during drying process (stove bar marks).
- C. Integral-Flash-Cove Base: Cove linoleum floor covering [**6 inches** (152 mm)] [**dimension indicated**] <Insert dimension> up vertical surfaces. Support floor covering at horizontal and vertical junction with cove strip. Butt at top against cap strip.

3.6 CLEANING AND PROTECTION

- A. Comply with manufacturer's written instructions for cleaning and protection of floor coverings.
- B. Perform the following operations immediately after completing floor covering installation:
 1. Remove adhesive and other blemishes from exposed surfaces.
 2. Sweep and vacuum surfaces thoroughly.
 3. Damp-mop surfaces to remove marks and soil.
- C. Protect floor coverings from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.
- D. Floor Polish: Remove soil, visible adhesive, and surface blemishes from floor coverings before applying liquid floor polish.
 1. Apply [**two**] [**three**] <Insert requirement> coat(s).
- E. After allowing drying room film (yellow film caused by linseed oil oxidation) to disappear, cover floor coverings until Substantial Completion.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 096516.13

SECTION 096519 - RESILIENT TILE FLOORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Solid vinyl floor tile.
2. Rubber floor tile.
3. Vinyl composition floor tile.
4. Resilient terrazzo floor tile.

- B. Related Sections:

1. Section 096513 "Resilient Base and Accessories" for resilient base, reducer strips, and other accessories installed with resilient floor coverings.
2. Section 096516 "Resilient Sheet Flooring" for resilient sheet floor coverings.
3. Section 096516.13 "Linoleum Flooring" for linoleum floor coverings.
4. Section 096536 "Static-Control Resilient Flooring" for resilient floor coverings designed to control electrostatic discharge.
5. Section 096566 "Resilient Athletic Flooring" for resilient floor coverings for use in athletic-activity or support areas.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

1. Include data substantiating that materials comply with requirements.

- B. LEED Submittals:

1. Product Data for Credit IEQ 4.1: For **[adhesives] [sealants] [and] [chemical-bonding compounds]**, documentation including printed statement of VOC content.
2. Product Data for Credit IEQ 4.3: For adhesives **[and chemical-bonding compounds]**, documentation including printed statement of VOC content.

3. Product Data for Credit IEQ 4.3: For resilient tile flooring, documentation from an independent testing agency indicating compliance with the FloorScore Standard.
 4. Laboratory Test Reports for Credit IEQ 4: For **[flooring system] [adhesives] [sealants] [and] [chemical-bonding compounds]**, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: For each type of floor tile. Include floor tile layouts, edges, columns, doorways, enclosing partitions, built-in furniture, cabinets, and cutouts.
1. Show details of special patterns.
- D. Samples for Initial Selection: For each type of floor tile indicated.
- E. Samples for Verification: Full-size units of each color and pattern of floor tile required.
1. For heat-welding bead, manufacturer's standard-size Samples, but not less than **[9 inches (230 mm)] <Insert dimension>** long, of each color required.
- F. Seam Samples: For seamless-installation technique indicated and for each flooring product, color, and pattern required; with seam running lengthwise and in center of **[6-by-9-inch (150-by-230-mm)] <Insert size>** Sample applied to a rigid backing and prepared by Installer for this Project.
- G. Product Schedule: For floor tile. **[Use same designations indicated on Drawings.]**
- 1.4 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For qualified Installer.
- 1.5 CLOSEOUT SUBMITTALS
- A. Maintenance Data: For each type of floor tile to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
- 1.6 MATERIALS MAINTENANCE SUBMITTALS
- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Floor Tile: Furnish 1 box for every **[50] <Insert number>** boxes or fraction thereof, of each type, color, and pattern of floor tile installed.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: A qualified installer who employs workers for this Project who are competent in techniques required by manufacturer for floor tile installation[**and seaming method**] indicated.
1. Engage an installer who employs workers for this Project who are trained or certified by manufacturer for installation techniques required.
- B. Fire-Test-Response Characteristics: As determined by testing identical products according to ASTM E 648 or NFPA 253 by a qualified testing agency.
1. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.
- C. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
1. Build mockups for floor tile including[**resilient base and**] accessories.
 - a. Size: Minimum **100 sq. ft.** (9.3 sq. m) for each type, color, and pattern [in locations indicated] [in locations directed by DEN Project Manager] <Insert location requirements>.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Store floor tile and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than **50 deg F** (10 deg C) or more than **90 deg F** (32 deg C). Store floor tiles on flat surfaces.

1.9 PROJECT CONDITIONS

- A. Maintain ambient temperatures within range recommended by manufacturer, but not less than [**70 deg F** (21 deg C)] <Insert temperature> or more than [**95 deg F** (35 deg C)] <Insert temperature>, in spaces to receive floor tile during the following time periods:
1. 48 hours before installation.
 2. During installation.
 3. 48 hours after installation.
- B. Until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer, but not less than [**55 deg F** (13 deg C)] <Insert temperature> or more than [**95 deg F** (35 deg C)] <Insert temperature>.
- C. Close spaces to traffic during floor tile installation.
- D. Close spaces to traffic for 48 hours after floor tile installation.

- E. Install floor tile after other finishing operations, including painting, have been completed.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. FloorScore Compliance: Resilient tile flooring shall comply with requirements of FloorScore Standard.
- B. Low-Emitting Materials: Flooring system shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.2 SOLID VINYL FLOOR TILE <Insert drawing designation>

- A. Products: Subject to compliance with requirements, provide one of the following:
 1. Altro Group; <Insert product name or designation>.
 2. Amtico Studio (The), Amtico International Inc.; <Insert product name or designation>.
 3. Armstrong World Industries, Inc.; <Insert product name or designation>.
 4. Burke Mercer Flooring Products, Division of Burke Industries Inc.; <Insert product name or designation>.
 5. Estrie Products International, American Biltrite (Canada) Ltd.; <Insert product name or designation>.
 6. Flexco; <Insert product name or designation>.
 7. Gemtec Inc.; <Insert product name or designation>.
 8. Gerflor, Architectural Floor Systems, Inc.; <Insert product name or designation>.
 9. Johnsonite; <Insert product name or designation>.
 10. Polyflor, Ltd., Distributed by Gerbert Limited; <Insert product name or designation>.
 11. Roppe Corporation, USA; <Insert product name or designation>.
 12. Tarkett, Inc.; <Insert product name or designation>.
 13. TOLI International; <Insert product name or designation>.
 14. VPI, LLC, Floor Products Division; <Insert product name or designation>.
 15. <Insert manufacturer's name; product name or designation>.
 16. or approved equal.

- B. Tile Standard: ASTM F 1700.
1. Class: **[As indicated by product designations]** **[Class I, monolithic vinyl tile]** **[Class II, surface-decorated vinyl tile]** **[Class III, printed film vinyl tile]**.
 2. Type: **[Type A, smooth surface]** **[Type B, embossed surface]**.
- C. Thickness: **[0.080 inch (2.0 mm)] [0.100 inch (2.5 mm)] [0.120 inch (3.0 mm)] [0.125 inch (3.2 mm)]** **<Insert thickness>**.
- D. Size: **[12 by 12 inches (305 by 305 mm)] [18 by 18 inches (457 by 457 mm)] [24 by 24 inches (610 by 610 mm)] [36 by 36 inches (914 by 914 mm)] [3 by 36 inches (76 by 914 mm)]** **<Insert size>**.
- E. Seaming Method: **[Heat welded]** **[Chemically bonded]** **[Standard]** **<Insert requirements>**.
- F. Colors and Patterns: **[As indicated by manufacturer's designations]** **[Match DEN Project Manager's sample]** **[As selected by DEN Project Manager from full range of industry colors]**.

2.3 RUBBER FLOOR TILE **<Insert drawing designation>**

- A. Products: Subject to compliance with requirements, provide one of the following:
1. Burke Mercer Flooring Products, Division of Burke Industries Inc.; **<Insert product name or designation>**.
 2. Endura Rubber Flooring, a division of Burke Industries Inc.; **<Insert product name or designation>**.
 3. Estrie Products International, American Biltrite (Canada) Ltd.; **<Insert product name or designation>**.
 4. Flexco; **<Insert product name or designation>**.
 5. Johnsonite; **<Insert product name or designation>**.
 6. Mondo Rubber International, Inc.; **<Insert product name or designation>**.
 7. Nora Rubber Flooring, Freudenberg Building Systems, Inc.; **<Insert product name or designation>**.
 8. PRF USA Inc.; **<Insert product name or designation>**.
 9. R.C.A. Rubber Company (The); **<Insert product name or designation>**.
 10. Roppe Corporation, USA; **<Insert product name or designation>**.
 11. **<Insert manufacturer's name; product name or designation>**.
 12. or approved equal.
- B. Tile Standard: ASTM F 1344, **[Class I-A, homogeneous rubber tile, solid color]** **[Class I-B, homogeneous rubber tile, through mottled]** **[Class II-A, laminated rubber tile, solid-color wear layer]** **[Class II-B, laminated rubber tile, mottled wear layer]**.
- C. Hardness: **[Not less than 85 as required by ASTM F 1344, measured using Shore, Type A durometer per ASTM D 2240]** **[Manufacturer's standard hardness]**.

- D. Wearing Surface: **[Smooth]** **[Textured]** **[Molded pattern]**.
 - 1. Molded-Pattern Figure: **[Raised discs]** **[Raised squares]** **<Insert pattern>**.
- E. Thickness: **[0.125 inch (3.2 mm)]** **<Insert thickness>**.
- F. Size: **[12 by 12 inches (305 by 305 mm)]** **[24 by 24 inches (610 by 610 mm)]** **<Insert size>**.
- G. Seaming Method: **[Heat welded]** **[Chemically bonded]** **[Standard]** **<Insert requirements>**.
- H. Colors and Patterns: **[As indicated by manufacturer's designations]** **[Match DEN Project Manager's sample]** **[As selected by DEN Project Manager from full range of industry colors]**.

2.4 VINYL COMPOSITION FLOOR TILE **<Insert drawing designation>**

- A. Products: Subject to compliance with requirements, provide one of the following:
 - 1. AB ColorPlus, American Biltrite (Canada) Ltd.; **<Insert product name or designation>**.
 - 2. Armstrong World Industries, Inc.; **<Insert product name or designation>**.
 - 3. Congoleum Corporation; **<Insert product name or designation>**.
 - 4. Mannington Mills, Inc.; **<Insert product name or designation>**.
 - 5. Tarkett, Inc.; **<Insert product name or designation>**.
 - 6. Vinylasa Tile, Distributed by American Tile Inc.; **<Insert product name or designation>**.
 - 7. **<Insert manufacturer's name; product name or designation>**.
 - 8. or approved equal.
- B. Tile Standard: ASTM F 1066, **[Class 1, solid-color tile]** **[Class 2, through-pattern tile]** **[Class 3, surface-pattern tile]**.
- C. Wearing Surface: **[Smooth]** **[Embossed]**.
- D. Thickness: **[0.125 inch (3.2 mm)]** **<Insert thickness>**.
- E. Size: **12 by 12 inches (305 by 305 mm)**.
- F. Colors and Patterns: **[As indicated by manufacturer's designations]** **[Match DEN Project Manager's sample]** **[As selected by DEN Project Manager from full range of industry colors]**.

2.5 RESILIENT TERRAZZO FLOOR TILE **<Insert drawing designation>**

- A. Resilient Terrazzo Floor Tile: Marble or granite chips embedded in flexible, thermoset-polyester-resin matrix; electrically nonconductive and chemical, oil, and

corrosion resistive, with smooth wearing surface and manufacturer's standard factory-applied, protective urethane coating.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Fritz Industries; <Insert product name or designation>.
 - b. <Insert manufacturer's name; product name or designation>.
 - c. or approved equal.

B. Thickness: [1/8 inch (3.0 mm)] [3/16 inch (4.8 mm)].

C. Size: 12 by 12 inches (305 by 305 mm).

D. Performance Characteristics:

1. Compressive Strength: 2900 to 5000 psi (20 to 34.5 MPa), ASTM C 109/C 109M or ASTM D 695.
2. Abrasion Resistance: Maximum 0.0196 cubic centimeters volume loss, ASTM F 510, Taber abrader, S-39 wheels, at 500 cycles with 1000-gram load.
3. Static Load Limit: 0.0007-inch (0.0177-mm) maximum indentation, ASTM F 970 at 125 lb (57 kg).
4. Resin Matrix Hardness: Not less than 78, as measured using Shore, Type D durometer per ASTM D 2240.

E. Colors and Patterns: [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors].

2.6 INSTALLATION MATERIALS

A. Trowelable Leveling and Patching Compounds: Latex-modified, portland cement based or blended hydraulic-cement-based formulation provided or approved by manufacturer for applications indicated.

B. Adhesives: Water-resistant type recommended by manufacturer to suit floor tile and substrate conditions indicated.

1. Adhesives shall comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
 - a. VCT and Asphalt Tile Adhesives: Not more than 50 g/L.
 - b. Rubber Floor Adhesives: Not more than 60 g/L.
 - c. Terrazzo Floor Tile Adhesives: Not more than [65] <Insert value> g/L.
2. Adhesives shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

C. Seamless-Installation Accessories:

1. Heat-Welding Bead: Manufacturer's solid-strand product for heat welding seams.
 - a. Color: **[As selected by DEN Project Manager from manufacturer's full range to contrast with floor tile] [Match floor tile] <Insert color>**.
2. Chemical-Bonding Compound: Manufacturer's product for chemically bonding seams.
 - a. Chemical-bonding compound shall have a VOC content of **[350] [510] <Insert value>** g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - b. Chemical-bonding compound shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- D. Floor Polish: Provide protective liquid floor polish products as recommended by manufacturer.
- E. Joint Sealant for Resilient Terrazzo Floor Tile: Silicone sealant of type and grade as recommended in writing by manufacturer to suit resilient terrazzo floor tile.
 1. Sealant shall have a VOC content of not more than 250 g/L when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 2. Sealant shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
 3. Joint-Sealant Color: **[White] [As selected by DEN Project Manager from manufacturer's full range to match floor tile] [Match floor tile] <Insert color>**.
- F. Sealers and Finish Coats for Resilient Terrazzo Floor Tile: Premium-type products as recommended by manufacturer for resilient terrazzo floor tile.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
- B. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of floor tile.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Prepare substrates according to manufacturer's written instructions to ensure adhesion of resilient products.
- B. Concrete Substrates: Prepare according to ASTM F 710.
 - 1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
 - 2. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by manufacturer. Do not use solvents.
 - 3. Alkalinity and Adhesion Testing: Perform tests recommended by manufacturer. Proceed with installation only after substrates pass testing.
 - 4. Moisture Testing: Perform tests recommended by manufacturer[**and as follows**]. Proceed with installation only after substrates pass testing.
 - a. Perform anhydrous calcium chloride test, ASTM F 1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of [3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m)] **<Insert emission>** in 24 hours.
 - b. Perform relative humidity test using in situ probes, ASTM F 2170. Proceed with installation only after substrates have a maximum [75%] **<Insert acceptable percentage>** relative humidity level measurement.
- C. Access Flooring Panels: Remove protective film of oil or other coating using method recommended by access flooring manufacturer.
- D. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound and remove bumps and ridges to produce a uniform and smooth substrate.
- E. Do not install floor tiles until they are same temperature as space where they are to be installed.
 - 1. Move resilient products and installation materials into spaces where they will be installed at least 48 hours in advance of installation.
- F. Sweep and vacuum clean substrates to be covered by resilient products immediately before installation.

3.3 FLOOR TILE INSTALLATION

- A. Comply with manufacturer's written instructions for installing floor tile.
- B. Lay out floor tiles from center marks established with principal walls, discounting minor offsets, so tiles at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths that equal less than one-half tile at perimeter.
 - 1. Lay tiles [**square with room axis**] [**at a 45-degree angle with room axis**] [**in pattern indicated**] **<Insert requirements>**.

- C. Match floor tiles for color and pattern by selecting tiles from cartons in the same sequence as manufactured and packaged, if so numbered. Discard broken, cracked, chipped, or deformed tiles.
 - 1. Lay tiles [**with grain running in one direction**] [**with grain direction alternating in adjacent tiles (basket-weave pattern)**] [**in pattern of colors and sizes indicated**].
- D. Scribe, cut, and fit floor tiles to butt neatly and tightly to vertical surfaces and permanent fixtures including built-in furniture, cabinets, pipes, outlets, and doorframes.
- E. Extend floor tiles into toe spaces, door reveals, closets, and similar openings. Extend floor tiles to center of door openings.
- F. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on floor tiles as marked on substrates. Use chalk or other nonpermanent, nonstaining marking device.
- G. Install floor tiles on covers for telephone and electrical ducts, building expansion-joint covers, and similar items in finished floor areas. Maintain overall continuity of color and pattern between pieces of tile installed on covers and adjoining tiles. Tightly adhere tile edges to substrates that abut covers and to cover perimeters.
- H. Adhere floor tiles to flooring substrates using a full spread of adhesive applied to substrate to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.
- I. Seamless Installation:
 - 1. Heat-Welded Seams: Comply with ASTM F 1516. Rout joints and heat weld with welding bead to permanently fuse sections into a seamless floor covering. Prepare, weld, and finish seams to produce surfaces flush with adjoining floor covering surfaces.
 - 2. Chemically Bonded Seams: Bond seams with chemical-bonding compound to permanently fuse sections into a seamless floor covering. Prepare seams and apply compound to produce tightly fitted seams without gaps, overlays, or excess bonding compound on floor covering surfaces.

3.4 CLEANING AND PROTECTION

- A. Comply with manufacturer's written instructions for cleaning and protection of floor tile.
- B. Perform the following operations immediately after completing floor tile installation:
 - 1. Remove adhesive and other blemishes from exposed surfaces.
 - 2. Sweep and vacuum surfaces thoroughly.
 - 3. Damp-mop surfaces to remove marks and soil.

- C. Protect floor tile products from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.
- D. Floor Polish: Remove soil, visible adhesive and surface blemishes from floor tile surfaces before applying liquid floor polish.
 - 1. Apply [**one**] [**two**] [**three**] <Insert requirements> coat(s).
- E. Joint Sealant: Apply sealant to resilient terrazzo floor tile perimeter and around columns, at doorframes, and at other joints and penetrations.
- F. Sealers and Finish Coats: Remove soil, visible adhesive, and surface blemishes from resilient terrazzo floor tile surfaces before applying liquid cleaners, sealers, and finish products.
 - 1. Sealer: Apply two base coats of liquid sealer.
 - 2. Finish: Apply [**two**] [**three**] <Insert requirements> coats of liquid floor finish.
- G. Cover floor tile until Substantial Completion.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 096519

SECTION 096566 - RESILIENT ATHLETIC FLOORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Interlocking, rubber floor tile.
2. Interlocking, suspended, polymer floor tile.
3. Interlocking, open-grid, vinyl floor tile.
4. Rubber mats.
5. Rubber floor tile.
6. Rubber-strip floor tile.
7. Rubber sheet flooring.
8. Sheet vinyl flooring.

- B. Related Sections:

1. Section 096466 "Wood Athletic Flooring" for resilient wood flooring.
2. Section 096513 "Resilient Base and Accessories" for wall base and accessories installed with flooring.
3. Section 096766 "Fluid-Applied Athletic Flooring" for liquid polyurethane flooring applied directly to substrates or pads.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

1. Include data substantiating that materials comply with requirements.

- B. LEED Submittals:

1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.

2. Product Data for Credit IEQ 4.1: For adhesives, documentation including printed statement of VOC content.
 3. Product Data for Credit IEQ 4.2: For game-line and marker paints, documentation including printed statement of VOC content.
 4. Product Data for Credit IEQ 4.3: For adhesives [**and game-line and marker paints**], documentation including printed statement of VOC content.
 5. Product Data for Credit IEQ 4.3: For resilient athletic flooring, documentation from an independent testing agency indicating compliance with the FloorScore Standard.
 6. Laboratory Test Reports for Credit IEQ 4: For [**adhesives**] [**game-line and marker paints**] [**and**] [**flooring system**], documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: Show installation details and locations of the following:
1. Border tiles.
 2. Floor patterns.
 3. Layout, colors, widths, and dimensions of game lines and markers.
 4. Locations of floor inserts for athletic equipment installed through flooring.
 5. Seam locations for sheet flooring.
- D. Samples for Initial Selection: For each type of flooring indicated.
1. Game-Line and Marker Paint: Include charts showing available colors and glosses.
- E. Samples for Verification: For each type, color, and pattern of flooring indicated, [6-inch- (150-mm-)] <Insert dimension> square Samples of same thickness and material indicated for the Work.
1. Game-Line- and Marker-Paint Samples: Include Sample sets showing game-line- and marker-paint colors applied to flooring.
 2. Seam Samples: For each vinyl sheet flooring color and pattern required; with seam running lengthwise and in center of [6-by-9-inch (150-by-230-mm)] <Insert dimensions> Sample applied to a rigid backing and prepared by Installer for this Project.
- 1.4 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For qualified sheet vinyl flooring Installer.
- 1.5 CLOSEOUT SUBMITTALS
- A. Maintenance Data: For flooring to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300

"Submittal Procedures".

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials, before installation begins, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Floor Tile: Furnish no fewer than [**1 box for each 50 boxes**] <Insert quantity> or fraction thereof, of each type, color, pattern, and size of floor tile installed.
 2. Sheet Flooring: Furnish full-width rolls of not less than [**10 linear feet** (3 linear m) **for each 500 linear feet** (150 linear m)] <Insert quantity> or fraction thereof, of each type, color, and pattern of flooring installed.

1.7 QUALITY ASSURANCE

- A. Sheet Vinyl Flooring Installer Qualifications: An experienced Installer who has completed sheet vinyl flooring installations using seaming methods indicated for this Project and similar in material, design, and extent to that indicated for this Project; who is acceptable to manufacturer; and whose work has resulted in installations with a record of successful in-service performance.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials in original packages and containers, with seals unbroken, bearing manufacturer's labels indicating brand name and directions for storing.
- B. Store materials to prevent deterioration. Store [**tiles on flat surfaces**] [**and**] [**rolls upright**].

1.9 FIELD CONDITIONS

- A. Adhesively Applied Products:
1. Maintain temperatures during installation within range recommended in writing by manufacturer, but not less than [**70 deg F** (21 deg C)] <Insert temperature> or more than [**95 deg F** (35 deg C)] <Insert temperature>, in spaces to receive flooring 48 hours before installation, during installation, and 48 hours after installation unless longer period is recommended in writing by manufacturer.
 2. After postinstallation period, maintain temperatures within range recommended in writing by manufacturer, but not less than [**55 deg F** (13 deg C)] <Insert temperature> or more than [**95 deg F** (35 deg C)] <Insert temperature>.
 3. Close spaces to traffic during flooring installation.
 4. Close spaces to traffic for 48 hours after flooring installation unless manufacturer recommends longer period in writing.
- B. Install flooring after other finishing operations, including painting, have been

completed.

1.10 COORDINATION

- A. Coordinate layout and installation of flooring with floor inserts for gymnasium equipment.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. FloorScore Compliance: Resilient athletic flooring shall comply with requirements of FloorScore Standard.
- B. Low-Emitting Materials: Flooring system shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.2 INTERLOCKING, RUBBER FLOOR TILE <Insert drawing designation>

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Action Floor Systems, LLC.
 - 2. Amarco Products.
 - 3. American Floor Products Company, Inc.
 - 4. E CORE International.
 - 5. Flexco.
 - 6. Horner Flooring Company, Inc.
 - 7. Johnsonite; a Tarkett company.
 - 8. Mondo America Inc.
 - 9. Musson Rubber Co.
 - 10. Pawling Corporation; Architectural Products Division.
 - 11. <Insert manufacturer's name>.
 - 12. or approved equal.
- B. Description: Athletic flooring consisting of modular rubber tiles with precision cut, interlocking edges, for free-lay installation.

- C. Material: **[Rubber] [Recycled-rubber compound]**.
- D. Tile Interlock: **[Visible] [Hidden]**.
- E. Traffic-Surface Texture: **[Smooth] [Nondirectional, stipple texture] [Textured]**
<Insert texture>.
1. Provide reversible tiles (with traffic-surface texture on both sides).
- F. Size: **[Manufacturer's standard-size square tile] [24 inches (610 mm) square]**
<Insert dimension>.
- G. Thickness: **[3/8 inch (9.5 mm)] [7/16 inch (11.1 mm)] [1/2 inch (13 mm)] [9/16 inch (14.3 mm)] [3/4 inch (19 mm)] <Insert dimension>**.
- H. Weight: Not less than **<Insert weight>** per tile.
- I. Color and Pattern: **[As selected by DEN Project Manager from manufacturer's full range] [As indicated by manufacturer's designations] <Insert color and pattern>**.
- J. Border: Interlocking, beveled-edge tiles, of same material as floor tile; with bevels that transition from thickness of floor tile to surface below it; with straight outside edges; and for use where flooring corners and edges do not abut vertical surfaces.
1. Border Color and Pattern: **[Matching floor tile] [As selected by DEN Project Manager from manufacturer's full range to contrast with floor tile] [As indicated by manufacturer's designations] <Insert color and pattern>**.
- 2.3 INTERLOCKING, SUSPENDED, POLYMER FLOOR TILE **<Insert drawing designation>**
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Amarco Products.
 2. Mateflex.
 3. Sport Court; Subsidiary of Connor Sport Court International.
 4. Surface America Incorporated.
 5. **<Insert manufacturer's name>**.
 6. or approved equal.
- B. Description: Athletic flooring consisting of modular, polymer tiles raised above substrate on gusseted ribs or posts; with hidden, interlocking connectors; for free-lay installation **[over adhered rubber sheet underlayment]**.
- C. Material: **[Solid polypropylene] [Polypropylene supports with vinyl insert] <Insert material>**.
- D. Tile Interlock: Manufacturer's standard.

- E. Traffic-Surface Texture: [**Solid**] [**Raised disc**] <Insert texture>.
 - F. Size: [**Manufacturer's standard-size square tile**] [**12 inches** (305 mm) **square**] [**9.8 inches** (250 mm) **square**] <Insert dimension>.
 - G. Thickness: [**1/2 inch** (13 mm)] <Insert dimension>.
 - H. Weight: Not less than <Insert weight> per tile.
 - I. Color and Pattern: [**As selected by DEN Project Manager from manufacturer's full range**] [**As indicated by manufacturer's designations**] <Insert color and pattern>.
 - J. Underlayment:
 - 1. Material: [**Manufacturer's standard rubber sheet**] [**Recycled-rubber sheet**].
 - a. Thickness: [**0.08 inch** (2 mm)] [**0.12 inch** (3 mm)] <Insert dimension>.
 - K. Border: Interlocking, beveled-edge tiles, of same material as floor tile; with bevels that transition from thickness of floor tile to surface below it; with straight outside edges; and for use where flooring corners and edges do not abut vertical surfaces.
 - 1. Border Color and Pattern: [**Matching floor tile**] [**As selected by DEN Project Manager from manufacturer's full range to contrast with floor tile**] [**As indicated by manufacturer's designations**] <Insert color and pattern>.
- 2.4 INTERLOCKING, OPEN-GRID, VINYL FLOOR TILE <Insert drawing designation>
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Amarco Products.
 - 2. American Floor Products Company, Inc.
 - 3. Mateflex.
 - 4. Musson Rubber Co.
 - 5. Surface America Incorporated.
 - 6. <Insert manufacturer's name>.
 - 7. or approved equal.
 - B. Description: Athletic flooring consisting of modular, polymer tiles with openings to permit free drainage of water; with hidden, interlocking connectors; for free-lay installation.
 - C. Material: [**Vinyl**] [**Recycled-vinyl compound**] <Insert description>.
 - D. Tile Interlock: Manufacturer's standard.
 - E. Size: **12 inches** (305 mm) square.

- F. Thickness: [1/4 inch (6.4 mm)] [3/8 inch (9.5 mm)] [7/16 inch (11.1 mm)] [3/4 inch (19 mm)] <Insert dimension>.
- G. Color and Pattern: [As selected by DEN Project Manager from manufacturer's full range] [As indicated by manufacturer's designations] <Insert color and pattern>.
- H. Border: Interlocking, beveled-edge tiles, of same material as floor tile; with bevels that transition from thickness of floor tile to surface below it; with straight outside edges; and for use where flooring corners and edges do not abut vertical surfaces.
 - 1. Border Color and Pattern: [Matching floor tile] [As selected by DEN Project Manager from manufacturer's full range to contrast with floor tile] [As indicated by manufacturer's designations] <Insert color and pattern>.

2.5 RUBBER MATS <Insert drawing designation>

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Amarco Products.
 - 2. American Floor Products Company, Inc.
 - 3. Musson Rubber Co.
 - 4. Pawling Corporation; Architectural Products Division.
 - 5. Surface America Incorporated.
 - 6. Tuflex Rubber Flooring; a division of Tuflex Rubber Products, Inc.
 - 7. <Insert manufacturer's name>.
 - 8. or approved equal.
- B. Description: Individual rubber mats specifically designed for free-lay athletic flooring applications.
- C. Material: Recycled-rubber compound.
- D. Traffic-Surface Texture: Smooth.
- E. Size: [48 by 72 inches (1219 by 1829 mm)] <Insert dimensions>.
- F. Thickness: [3/8 inch (9.5 mm)] [1/2 inch (13 mm)] <Insert dimension>.
- G. Color: [As selected by DEN Project Manager from manufacturer's full range] [As indicated by manufacturer's designations] <Insert color and pattern>.

2.6 RUBBER FLOOR TILE <Insert drawing designation>

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Acer Flooring, LLC.
 - 2. Action Floor Systems, LLC.

3. Amarco Products.
 4. American Floor Products Company, Inc.
 5. E CORE International.
 6. Flexco.
 7. Horner Flooring Company, Inc.
 8. Johnsonite; a Tarkett company.
 9. Mondo America Inc.
 10. Musson Rubber Co.
 11. nora systems, Inc.
 12. Robbins Sports Surfaces.
 13. Roppe Corporation.
 14. Sport Court; Subsidiary of Connor Sport Court International.
 15. Surface America Incorporated.
 16. Tuflex Rubber Flooring; a division of Tuflex Rubber Products, Inc.
 17. **<Insert manufacturer's name>**.
 18. or approved equal.
- B. Description: Athletic flooring consisting of modular rubber tiles with smooth edges for adhered application.
- C. Material: **[Rubber] [Recycled-rubber compound] [Rubber wear layer and rubber shock-absorbent layer, vulcanized together] <Insert description>**.
- D. Traffic-Surface Texture: **[Smooth] [Nondirectional, stipple texture] [Textured] <Insert description>**.
- E. Size: **[Manufacturer's standard-size square tile] [18 inches (457 mm) square] [24 inches (610 mm) square] [36 inches (914 mm) square] <Insert dimension>**.
- F. Thickness: **[5/32 inch (4 mm)] [1/4 inch (6.4 mm)] [3/8 inch (9.5 mm)] [1/2 inch (13 mm)] <Insert dimension>**.
- G. Weight: Not less than **<Insert weight>** per tile.
- H. Color and Pattern: **[As selected by DEN Project Manager from manufacturer's full range] [As indicated by manufacturer's designations] <Insert color and pattern>**.
- I. Border: Interlocking, beveled-edge tiles, of same material as floor tile; with bevels that transition from thickness of floor tile to surface below it; with straight outside edges; and for use where flooring corners and edges do not abut vertical surfaces.
1. Border Color and Pattern: **[Matching floor tile] [As selected by DEN Project Manager from manufacturer's full range to contrast with floor tile] [As indicated by manufacturer's designations] <Insert color and pattern>**.
- 2.7 RUBBER-STRIP FLOOR TILE **<Insert drawing designation>**
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Amarco Products.
 2. American Floor Products Company, Inc.
 3. Flexco.
 4. Johnsonite; a Tarkett company.
 5. Musson Rubber Co.
 6. Roppe Corporation.
 7. **<Insert manufacturer's name>**.
 8. or approved equal.
- B. Description: Modular, close-nap, carpetlike tiles of rubber-fabric strips; made from recycled tires; bonded to a backing; for adhered installation.
- C. Materials: Recycled rubber.
- D. Fire-Test-Response Characteristics: Passing 16 CFR 1630 (DOC FF-1-70).
- E. Size: **12 inches** (305 mm) square.
- F. Thickness: **3/8 inch** (9.5 mm).
- G. Color and Pattern: **[As selected by DEN Project Manager from manufacturer's full range] [As indicated by manufacturer's designations] <Insert color and pattern>**.

2.8 RUBBER SHEET FLOORING **<Insert drawing designation>**

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Acer Flooring, LLC.
 2. Action Floor Systems, LLC.
 3. Amarco Products.
 4. American Floor Products Company, Inc.
 5. E CORE International.
 6. Flexco.
 7. Horner Flooring Company, Inc.
 8. Johnsonite; a Tarkett company.
 9. Mondo America Inc.
 10. nora systems, Inc.
 11. Robbins Sports Surfaces.
 12. Roppe Corporation.
 13. Sport Court; Subsidiary of Connor Sport Court International.
 14. Surface America Incorporated.
 15. **<Insert manufacturer's name>**.
 16. or approved equal.
- B. Description: Rubber athletic flooring provided as rolled goods for adhered installation.
- C. Material: **[Recycled-rubber compound] [Rubber wear layer and rubber shock-absorbent layer, vulcanized together] <Insert description>**.

- D. Traffic-Surface Texture: [**Smooth**] <Insert description>.
- E. Roll Size: [**Not less than 48 inches** (1219 mm)] <Insert dimension> wide by longest length that is practical to minimize splicing during installation.
 - 1. Thickness: [**1/4 inch** (6.4 mm)] [**3/8 inch** (9.5 mm)] <Insert dimension>.
- F. Color and Pattern: [**As selected by DEN Project Manager from manufacturer's full range**] [**As indicated by manufacturer's designations**] <Insert color and pattern>.
- G. Border: Interlocking, beveled-edge tiles, of same material as floor tile; with bevels that transition from thickness of floor tile to surface below it; with straight outside edges; and for use where flooring corners and edges do not abut vertical surfaces.
 - 1. Border Color and Pattern: [**Matching floor tile**] [**As selected by DEN Project Manager from manufacturer's full range to contrast with floor tile**] [**As indicated by manufacturer's designations**] <Insert color and pattern>.

2.9 SHEET VINYL FLOORING <Insert drawing designation>

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Amarco Products.
 - 2. Gerflor/Taraflex Sports Flooring.
 - 3. Johnsonite; a Tarkett company.
 - 4. Lonseal, Inc.
 - 5. Robbins Sports Surfaces.
 - 6. Sport Court; Subsidiary of Connor Sport Court International.
 - 7. <Insert manufacturer's name>.
 - 8. or approved equal.
- B. Description: Sheet vinyl flooring specifically designed for adhered athletic flooring applications.
- C. Unbacked Sheet Vinyl Flooring: ASTM F 1913, [**0.08 inch** (2 mm)] <Insert dimension> thick.
 - 1. Separate underlayment pad of bonded recycled rubber and polyurethane particles.
- D. Sheet Vinyl Flooring with Backing: ASTM F 1303.
 - 1. Type (Binder Content): [**Type I, minimum binder content of 90 percent**] [**Type II, minimum binder content of 34 percent**].
 - 2. Wear-Layer Thickness: Grade 1.
 - 3. Overall Thickness: <Insert dimension>.
 - 4. Interlayer Material: [**Foamed plastic**] [**None**].
 - 5. Backing Class: [**Class B (nonfoamed plastic)**] [**Class C (foamed plastic)**].

- E. Seaming Method: **[Heat welded] [Chemically bonded]**.
- F. Traffic-Surface Texture: **[Smooth] [Embossed] <Insert description>**.
- G. Applied Finish: **[Factory-applied UV urethane] [Field-applied polyurethane] <Insert description>**.
- H. Roll Size: **[Not less than 48 inches (1219 mm)] <Insert dimension>** wide by longest length that is practical to minimize splicing during installation.
- I. Color and Pattern: **[As selected by DEN Project Manager from manufacturer's full range] [As indicated by manufacturer's designations] <Insert color and pattern>**.

2.10 ACCESSORIES

- A. Trowelable Leveling and Patching Compound: Latex-modified, hydraulic-cement-based formulation approved by flooring manufacturer.
- B. Adhesives: Water-resistant type recommended in writing by manufacturer for substrate and conditions indicated.
 - 1. Adhesives shall have a VOC content of **[50] [60] <Insert value>** g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - 2. Adhesives shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Game-Line and Marker Paint: Complete system including primer, if any, compatible with flooring and recommended in writing by flooring and paint manufacturers for use indicated.
 - 1. VOC Content: Not more than 150 g/L when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - 2. Paint shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, with Installer present, for compliance with requirements for installation tolerances, moisture content, and other conditions affecting performance of the Work.
 - 1. Verify that finishes of substrates comply with tolerances and other requirements

specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resilient products.

- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Prepare substrates according to manufacturer's written recommendations to ensure adhesion of flooring.
- B. Concrete Substrates: Prepare according to ASTM F 710.
 - 1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
 - 2. Alkalinity Testing: Perform pH testing according to ASTM F 710. Proceed with installation only if pH readings are not less than 7.0 and not greater than 8.5.
 - 3. Moisture Testing:
 - a. Perform anhydrous calcium chloride test, ASTM F 1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of [3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m)] <Insert rate> in 24 hours.
 - 1) Perform tests so that each test area does not exceed [200 sq. ft. (18.6 sq. m)] <Insert area>, and perform no fewer than two tests in each installation area and with test areas evenly spaced in installation areas.
 - b. Perform relative humidity test using in-situ probes, ASTM F 2170. Proceed with installation only after substrates have a maximum [75] <Insert number> percent relative humidity level measurement.
- C. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended in writing by manufacturer. Do not use solvents.
- D. Use trowelable leveling and patching compound to fill cracks, holes, and depressions in substrates.
- E. Move flooring and installation materials into spaces where they will be installed at least 48 hours in advance of installation unless manufacturer recommends a longer period in writing.
 - 1. Do not install flooring until they are same temperature as space where they are to be installed.
- F. Sweep and vacuum clean substrates to be covered by flooring immediately before installation. After cleaning, examine substrates for moisture, alkaline salts, carbonation, and dust.

- G. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 FLOORING INSTALLATION, GENERAL

- A. Comply with manufacturer's written installation instructions.
- B. Scribe, cut, and fit flooring to butt neatly and tightly to vertical surfaces, equipment anchors, floor outlets, and other interruptions of floor surface.
- C. Extend flooring into toe spaces, door reveals, closets, and similar openings unless otherwise indicated.
- D. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating subfloor markings on flooring. Use nonpermanent, nonstaining marking device.

3.4 FLOOR TILE INSTALLATION

- A. Lay out tiles from center marks established with principal walls, discounting minor offsets, so tiles at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths that equal less than one-half tile at perimeter.
 - 1. Lay tiles [**square with room axis**] [**at a 45-degree angle with room axis**] [**in pattern indicated**] <Insert requirements>.
- B. Discard broken, cracked, chipped, or deformed tiles.
- C. Match tiles for color and pattern by selecting tiles from cartons in same sequence as manufactured and packaged if so numbered.
 - 1. Lay tiles [**with grain running in one direction**] [**with grain direction alternating in adjacent tiles (basket-weave pattern)**] [**in pattern of colors and sizes indicated**].
- D. Adhered Flooring: Adhere products to substrates using a full spread of adhesive applied to substrate to comply with adhesive and flooring manufacturers' written instructions, including those for trowel notching, adhesive mixing, and adhesive open and working times.
 - 1. Provide completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.
- E. Free-Lay Flooring: Place flooring at locations indicated with all units securely interconnected and fully seated on substrate to form a smooth, level surface.

3.5 SHEET FLOORING INSTALLATION

- A. Unroll sheet flooring and allow it to stabilize before cutting and fitting.
- B. Lay out sheet flooring as follows:
 - 1. Maintain uniformity of flooring direction.
 - 2. Minimize number of seams; place seams in inconspicuous and low-traffic areas, at least **6 inches** (150 mm) away from parallel joints in flooring substrates.
 - 3. Match edges of flooring for color shading at seams.
 - 4. Locate seams per approved Shop Drawings.
- C. Adhered Flooring: Adhere products to substrates using a full spread of adhesive applied to substrate to comply with adhesive and flooring manufacturers' written instructions, including those for trowel notching, adhesive mixing, and adhesive open and working times.
 - 1. Provide completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.
- D. Vinyl Sheet Flooring Seams: Prepare and finish seams to produce surfaces flush with adjoining flooring surfaces.
 - 1. Heat-Welded Seams: Comply with ASTM F 1516. Rout joints and use welding bead to permanently fuse sections into a seamless flooring.
 - 2. Chemically Bonded Seams: Comply with ASTM F 693. Seal seams to prevent openings from forming between cut edges and to prevent penetration of dirt, liquids, and other substances into seams.

3.6 GAME LINES AND MARKERS

- A. Mask flooring at game lines and markers, and apply paint to produce sharp edges. Where crossing, break minor game line at intersection; do not overlap lines.
- B. Lay out game lines and markers to comply with rules and diagrams published by **[National Collegiate Athletic Association (NCAA)] [National Federation of State High School Associations]** <Insert organization> for athletic activities indicated.

3.7 FIELD-APPLIED FINISHES

- A. Apply finish after game-line and marker paint is fully cured.
- B. Apply finish according to manufacturer's written instructions to produce a sealed surface that is ready for use.
- C. Do not cover flooring after finishing until finish reaches full cure.

3.8 CLEANING AND PROTECTING

- A. Perform the following operations immediately after completing flooring installation:
1. Remove adhesive and other blemishes from flooring surfaces.
 2. Sweep and vacuum flooring thoroughly.
 3. Damp-mop flooring to remove marks and soil after time period recommended in writing by manufacturer.
- B. Protect flooring from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period. Use protection methods recommended in writing by manufacturer.
1. Do not move heavy and sharp objects directly over flooring. Protect flooring with plywood or hardboard panels to prevent damage from storing or moving objects over flooring.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 096566

SECTION 096613 - PORTLAND CEMENT TERRAZZO FLOORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Poured-in-place Portland cement terrazzo flooring[**and base**].
2. Poured-in-place rustic terrazzo flooring.
3. Precast terrazzo units.

- B. Related Requirements:

1. Section 079200 "Joint Sealants" for sealants installed with terrazzo.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Aggregate: Marble chips[**or other types of aggregate**].

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager] <Insert location>**.
 1. Review methods and procedures related to terrazzo including, but not limited to, the following:
 - a. Inspect and discuss condition of substrate and other preparatory work performed by other trades.
 - b. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - c. Review special terrazzo designs and patterns.
 - d. Review procedures for coping with unfavorable forecasted weather conditions.

e. <Insert agenda items>.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
 2. Product Data for Credit IEQ 4.1: For adhesives, documentation including printed statement of VOC content.
 3. Product Data for Credit IEQ 4.3: For sealers, documentation including printed statement of VOC content.
 4. Product Data for Credit IEQ 4.3: For terrazzo flooring, documentation from an independent testing agency indicating compliance with the FloorScore Standard.
 5. Laboratory Test Reports for Credit IEQ 4: For **[adhesives] [and] [flooring system]**, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: Include terrazzo installation requirements. Include plans, elevations, sections, component details, and attachments to other work. Show layout of the following:
1. Divider strips.
 2. Control-joint strips.
 3. Expansion-joint strips.
 4. Accessory strips.
 5. Abrasive strips.
 6. Stair treads, risers, and landings.
 7. Precast terrazzo jointing and edge configurations.
 8. Terrazzo patterns.
 9. **<Insert requirements>**.
- D. Samples: For each exposed product and for each color and texture specified, **[6 inches (150 mm)] <Insert dimension>** in size.
- E. Samples for Initial Selection: NTMA color plates showing the full range of colors and patterns available for each terrazzo type.
- F. Samples for Verification: For each type, material, color, and pattern of terrazzo and accessory required showing the full range of color, texture, and pattern variations expected. Label each terrazzo sample to identify manufacturer's matrix color and

aggregate types, sizes, and proportions. Prepare Samples of same thickness and from same material to be used for the Work, in size indicated below:

1. Terrazzo: [6-inch- (150-mm-)] <Insert dimension> square Samples.
2. Precast Terrazzo: [6-inch- (150-mm-)] <Insert dimension> square Samples.
3. Accessories: [6-inch- (150-mm-)] <Insert dimension> long Samples of each exposed strip item required.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Material Certificates: For each type of terrazzo material or product, from manufacturer.

1.7 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For terrazzo to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 QUALITY ASSURANCE

- A. Installer Qualifications: An installer who is a contractor member of NTMA.
- B. Source Limitations for Aggregates: Obtain each color, grade, type, and variety of granular materials from single source with resources to provide materials of consistent quality in appearance and physical properties.
- C. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 1. Build mockups for terrazzo including accessories.
 - a. Size: Minimum **100 sq. ft.** (9 sq. m) of typical poured-in-place flooring condition for each color and pattern [**in locations indicated**] [**in locations directed by DEN Project Manager**] <Insert location requirements>.
 - b. Include [**base**] [**first three stair treads**] <Insert item>.
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials to Project site in supplier's original wrappings and containers, labeled with sources or manufacturer's name, material or product brand name, and lot number if any.
- B. Store materials in their original, undamaged packages and containers, inside a well-ventilated area protected from weather, moisture, soiling, extreme temperatures, and humidity.

1.10 FIELD CONDITIONS

- A. Environmental Limitations: Maintain temperature above 50 deg F (10 deg C) for 48 hours before and during terrazzo installation.
- B. Weather Limitations: Proceed with rustic terrazzo installation only when forecasted weather conditions permit work to be performed according to NTMA's written recommendations and temperatures remain above 45 deg F (7.2 deg C).
- C. Field Measurements: Verify actual dimensions of construction contiguous with precast terrazzo by field measurements before fabrication.
- D. Provide permanent lighting or, if permanent lighting is not in place, simulate permanent lighting conditions during terrazzo installation.
- E. Close spaces to traffic during terrazzo application and for not less than 24 hours after application unless manufacturer recommends a longer period.
- F. Control and collect water and dust produced by grinding operations. Protect adjacent construction from detrimental effects of grinding operations.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. NTMA Standards: Comply with NTMA's "Terrazzo Specifications and Design Guide" and with written recommendations for terrazzo type indicated unless more stringent requirements are specified.
- B. FloorScore Compliance: Terrazzo floors shall comply with requirements of FloorScore Standard.

- C. Low-Emitting Materials: Flooring system shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.2 PORTLAND CEMENT TERRAZZO

- A. Portland Cement Terrazzo System **<Insert designation>**: [**Sand cushion**] [**Bonded**] [**Monolithic**].

1. Underbed: Comply with NTMA's "Terrazzo Specifications and Design Guide" for terrazzo system indicated for component proportions and mixing.
2. Topping: Comply with NTMA's "Terrazzo Specifications and Design Guide" for terrazzo system indicated for matrix and aggregate proportions and mixing.
 - a. Terrazzo Topping Thickness: [**As indicated**] **<Insert dimension>**.
 - b. Formulated Mix Color and Pattern: [**As selected by DEN Project Manager from NTMA standard-terrazzo plates**] [**As selected by DEN Project Manager from NTMA Venetian-terrazzo plates**] **<Insert NTMA color plate designation>**.
 - c. Custom Mix Color and Pattern: [**Match DEN Project Manager's sample**] [**Match existing**] **<Insert custom design-mix attributes>**.

- B. Materials:

1. Portland Cement: ASTM C 150, Type 1.
 - a. Color for Exposed Matrix: [**As required by mix indicated**] [**White**] [**Gray**] **<Insert requirements>**.
2. Water: Potable.
3. Sand: ASTM C 33/C 33M.
4. Aggregates: Comply with NTMA gradation standards for mix indicated and contain no deleterious or foreign matter.
 - a. Abrasion and Impact Resistance: Less than 40 percent loss per ASTM C 131[**and ASTM C 535**].
 - b. 24-Hour Absorption Rate: Less than 0.75 percent.
 - c. Dust Content: Less than 1.0 percent by weight.
 - d. Recycled Content of Portland Cement Terrazzo Flooring: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert number>** percent.
5. Matrix Pigments: Pure mineral or synthetic pigments, alkali resistant, durable under exposure to sunlight, and compatible with terrazzo matrix.
6. Bonding Agent: Neat Portland cement, or epoxy or acrylic bonding agents formulated for use with topping indicated.

7. Underbed Reinforcement: Galvanized welded-wire reinforcement, wire **2 by 2 inches** (51 by 51 mm) by **0.062 inch** (1.57 mm) in diameter, complying with ASTM A 185/A 185M and ASTM A 82/A 82M, except for minimum wire size.
8. Isolation Membrane: Polyethylene sheeting, ASTM D 2103, Type 13300, **4 mils** (0.1 mm) thick; or unperforated asphalt felt, ASTM D 226, Type I (No. 15).

2.3 RUSTIC TERRAZZO

A. Rustic Terrazzo System <Insert designation>: **[Bonded] [Monolithic]**.

1. Underbed: Comply with NTMA's "Terrazzo Specifications and Design Guide" for terrazzo system indicated for component proportions and mixing.
2. Terrazzo Topping: Comply with NTMA's "Terrazzo Specifications and Design Guide" for terrazzo system indicated for matrix and aggregate proportions and mixing.
 - a. Terrazzo Topping Thickness: **[As indicated] <Insert dimension>**.
 - b. Formulated Mix Color and Pattern: **[As selected by DEN Project Manager from NTMA rustic-terrazzo plates] <Insert NTMA color plate designation>**.
 - c. Custom Mix Color and Pattern: **[Match DEN Project Manager's sample] [Match existing] <Insert custom design-mix attributes>**.

B. Materials:

1. Portland Cement: ASTM C 150, Type 1.
 - a. Color for Exposed Matrix: **[As required by mix indicated] <Insert requirements>**.
2. Water: Potable.
3. Sand: ASTM C 33/C 33M.
4. Aggregates: As required for mix indicated, sizes comply with NTMA gradation standards and a 0.25 percent maximum 24-hour absorption rate, and aggregates contain no deleterious or foreign matter.
 - a. Recycled Content of Rustic Terrazzo Flooring: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert number>** percent.
5. Matrix Pigments: Pure mineral or synthetic pigments, alkali resistant, durable under exposure to sunlight and weather, and compatible with matrix binder.
6. Air-Entraining Agent: Complies with NTMA's written recommendations and supplier recommendations for intended use.
7. Underbed Bonding Agent: Neat Portland cement.
8. Topping Bonding Agent: Neat Portland cement, or epoxy or acrylic bonding agents formulated for use with topping indicated.

2.4 PRECAST TERRAZZO

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Precast Terrazzo Enterprises, Inc.
 2. Romoco Precast Terrazzo Products.
 3. Wausau Tile, Inc.; Terra Paving Products Division.
 4. **<Insert manufacturer's name>**.
 5. or approved equal.
- B. Precast Terrazzo Base **<Insert designation>**: Minimum **3/4-inch-** (19-mm-) thick, reinforced, Portland cement terrazzo units cast in maximum lengths possible, but not less than **36 inches** (900 mm). Comply with NTMA's written recommendations for fabricating precast terrazzo base units in sizes and profiles indicated.
1. Type: **[As indicated] [Coved with minimum 3/4-inch (19-mm) radius] [Straight] [Splayed] <Insert requirements>**.
 2. Top Edge: **[Straight, unfinished] [Beveled with polished top surface] [Radius edge with polished top surface] <Insert requirements>**.
 3. Metal Toe Strip: **[Zinc] [Brass]**.
 4. Outside Corner Units: With finished returned edges at outside corner.
 5. Color, Pattern, and Finish: **[As selected by DEN Project Manager from full range of industry colors] [Match DEN Project Manager's sample] [Match adjacent poured-in-place terrazzo flooring] <Insert requirements>**.
- C. Precast Terrazzo Units **<Insert designation>**: Minimum **[3/4-inch- (19-mm-)] <Insert dimension>** thick, reinforced, Portland cement terrazzo units. Comply with NTMA's written recommendations for fabricating precast terrazzo units in sizes and profiles indicated. Reinforce units as required by unit sizes, profiles, and thicknesses and as recommended by manufacturer. Finish exposed-to-view edges and reveals to match face finish. Ease exposed edges to **1/8-inch** (3.2-mm) radius.
1. Tiles.
 2. Planks.
 3. Stair treads[**and landings**].
 4. Thresholds.
 5. Sills.
 6. Benches.
 7. Planters.
 8. Countertops.
 9. Shower bases.
 10. **<Insert item>**.
 11. Color, Pattern, and Finish: **[As selected by DEN Project Manager from full range of industry colors] [Match DEN Project Manager's sample] [Match adjacent poured-in-place terrazzo flooring] <Insert requirements>**.

2.5 STRIP MATERIALS

- A. Standard Divider Strips: One-piece, flat-type strips for grouting into sawed joints prepared in substrate.
1. Material: **[As indicated]** **[White-zinc alloy]** **[Brass]** **<Insert requirements>**.
 2. Depth: **[As indicated]** **[3/4 inch (19 mm)]** **[1-1/4 inches (32 mm)]** **[2 inches (51 mm)]** **<Insert dimension>**.
 3. Width: **[As indicated]** **[0.05 inch (1.27 mm)]** **[1/8 inch (3.2 mm)]** **[1/4 inch (6.4 mm)]** **<Insert dimension>**.
- B. Heavy-Top Divider Strips: One-piece, flat-type strips for grouting into sawed joints prepared in substrate.
1. Base-Section Material: **[As indicated]** **[White-zinc alloy]** **[Galvanized steel]** **<Insert requirements>**.
 2. Top-Section Material: **[As indicated]** **[White-zinc alloy]** **[Brass]** **[Plastic, in color selected from full range of industry colors]** **<Insert requirements>**.
 3. Depth: **[As indicated]** **[3/4 inch (19 mm)]** **[1-1/4 inches (32 mm)]** **[2 inches (51 mm)]** **<Insert dimension>**.
 4. Top-Section Width: **[As indicated]** **[1/8 inch (3.2 mm)]** **[1/4 inch (6.4 mm)]** **[1/2 inch (12.7 mm)]** **<Insert dimension>**.
- C. Heavy-Top Angle Divider Strips: One-piece, L-type angle strips with anchoring device and in depth required for topping thickness indicated.
1. Material: **[As indicated]** **[White-zinc alloy]** **[Brass]** **[Plastic, in color selected from full range of industry colors]** **<Insert requirements>**.
 2. Top-Section Width: **[As indicated]** **[1/8 inch (3.2 mm)]** **[1/4 inch (6.4 mm)]** **[3/8 inch (9.5 mm)]** **[1/2 inch (12.7 mm)]** **<Insert dimension>**.
- D. Control-Joint Strips: Separate, double L-type angles, positioned back to back, that match material and color of divider strips and in depth required for topping thickness indicated.
- E. Expansion-Joint Strips: **[Brass]** **[Plastic strips in color selected from full range of industry colors]**, with removable zip-strip top for installing sealant; **[in width indicated]** **[minimum 1/2 inch (12.7 mm) wide]** **<Insert width>**.
- F. Accessory Strips: Match divider-strip width, material, and color unless otherwise indicated. Use the following types of accessory strips as required to provide a complete installation:
1. Base-bead strips for exposed top edge of terrazzo base.
 2. Edge-bead strips for exposed edges of terrazzo.
 3. Nosings for terrazzo stair treads and landings.
 4. **<Insert requirements>**.

- G. Abrasive Strips: **[Three-line] [Two-line] [One-line] [Abrasive nosing strip and two-line] <Insert requirements>** abrasive inserts at nosings. Silicon carbide or aluminum oxide, or combination of both, in epoxy-resin binder and set in channel.
1. Width: **[1/2 inch (12.7 mm)] <Insert dimension>**.
 2. Depth: As required by terrazzo thickness.
 3. Length: **[4 inches (100 mm) less than stair width] [As indicated] <Insert dimension>**.
 4. Color: **[As selected by DEN Project Manager from full range of industry colors] <Insert requirements>**.

2.6 MISCELLANEOUS ACCESSORIES

- A. Strip Adhesive: Recommended by manufacturer for this use.
1. Adhesives shall have a VOC content of 70 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 2. Adhesives shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- B. Anchoring Devices:
1. Strips: Provide mechanical anchoring devices or adhesives for strip materials as recommended by manufacturer and as required for secure attachment to substrate.
 2. Precast Terrazzo: Provide mechanical anchoring devices as recommended by fabricator for proper anchorage and support of units for conditions of installation and support.
- C. Isolation and Expansion-Joint Material: Closed-cell polyethylene foam, nonabsorbent to liquid water and gas, and non-outgassing in unruptured state; butyl rubber; rubber; or cork; **[in width indicated] [minimum 1/2 inch (12.7 mm) wide] <Insert dimension>**.
- D. Portland Cement Terrazzo Cleaner: Chemically neutral cleaner with pH factor between 7 and 10 that is biodegradable, phosphate free, and recommended by cleaner manufacturer for use on terrazzo type indicated.
- E. Rustic Terrazzo Cleaner: Solution of muriatic acid and water for use on terrazzo type indicated.
- F. Sealer: Slip- and stain-resistant, penetrating-type sealer that is chemically neutral; does not affect terrazzo color or physical properties; is recommended by sealer manufacturer; and complies with NTMA's "Terrazzo Specifications and Design Guide" for terrazzo type indicated.
1. Surface Friction: Not less than 0.6 according to ASTM D 2047.
 2. Acid-Base Properties: With pH factor between 7 and 10.

3. Sealers shall have a VOC content of 200 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
4. Rustic Terrazzo: Use solvent acrylic-type sealer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions, including levelness tolerances, have been corrected.

3.2 PREPARATION

- A. Clean substrates of substances, including oil, grease, and curing compounds, that might impair terrazzo bond. Provide clean, dry, and neutral substrate for terrazzo application.
 1. Roughen concrete substrates before installing terrazzo system according to NTMA's written recommendations.
- B. Verify that concrete substrates are dry and moisture-vapor emissions are within acceptable levels according to manufacturer's written instructions.
 1. Moisture Testing: Perform tests indicated below.
 - a. Calcium Chloride Test: Perform anhydrous calcium chloride test per ASTM F 1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of [3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m)] <Insert rate> in 24 hours.
 - 1) Perform tests so that each test area does not exceed [200 sq. ft. (18.6 sq. m)] <Insert area>, and perform not less than two tests in each installation area and with test areas evenly spaced in installation areas.
 - b. In-Situ Probe Test: Perform relative-humidity test using in-situ probes per ASTM F 2170. Proceed with installation only after substrates have a maximum [75] <Insert number> percent relative-humidity-level measurement.
 - c. Test Method: Test for moisture content by [method recommended in writing by terrazzo manufacturer] <Insert test method>. Proceed with installation only after substrates pass testing.

- C. Protect other work from water and dust generated by grinding operations. Control water and dust to comply with environmental protection regulations.
 - 1. Erect and maintain temporary enclosures and other suitable methods to limit water damage and dust migration and to ensure adequate ambient temperatures and ventilation conditions during installation.

3.3 INSTALLATION, GENERAL

- A. Comply with NTMA's written recommendations for terrazzo and accessory installation.
- B. Installation Tolerance: Limit variation in terrazzo surface from level to [1/4 inch in 10 feet (6.4 mm in 3 m)] **<Insert dimensions>**; noncumulative.
- C. Rustic Terrazzo: Install isolation and expansion material where abutting adjacent construction and directly above substrate expansion joints.
- D. Underbed:
 - 1. Comply with NTMA's "Terrazzo Specifications and Design Guide" for underbed installation.
 - 2. Cover entire surface to receive terrazzo with dusting of sand.
 - 3. Install isolation membrane over sand, overlapping ends and edges a minimum of **3 inches** (75 mm).
 - 4. Install welded-wire reinforcement, overlapping at edges and ends at least two squares. [**Stop mesh a minimum of 1 inch** (25 mm) **short of expansion joints.**]
 - 5. Place underbed and screed to elevation indicated below finished floor elevation.
- E. Strip Materials:
 - 1. Divider and Control-Joint Strips:
 - a. Locate divider strips [**over each edge of steel beams and girders**] [**centered over steel beams and joists**] [**directly over control joints, breaks, and saw cuts in concrete slabs**] [**in locations indicated**] **<Insert requirements>**.
 - b. Install control-joint strips [**back to back and directly above concrete-slab control joints**] [**in locations indicated**] **<Insert requirements>**.
 - c. Install control-joint strips with [1/4-inch (6.4-mm)] **<Insert dimension>** gap between strips, and install sealant in gap.
 - d. Install strips in adhesive setting bed without voids below strips, or mechanically anchor strips as required to attach strips to substrate, as recommended by strip manufacturer.
 - 2. Expansion-Joint Strips: Form expansion joints using divider strips and install directly above concrete-slab expansion joints.
 - 3. Accessory Strips: Install as required to provide a complete installation.
 - 4. Abrasive Strips: Install with surface of abrasive strip positioned [1/16 inch (1.6 mm)] **<Insert dimension>** higher than terrazzo surface.

3.4 POURED-IN-PLACE TERRAZZO INSTALLATION

- A. Pour in place and seed additional aggregates in matrix to uniformly distribute granular material and produce a surface with a minimum of 70 percent aggregate exposure. Cure and finish Portland cement terrazzo according to NTMA's "Terrazzo Specifications and Design Guide" for terrazzo type indicated.
- B. Grinding: Delay fine grinding until heavy trade work is complete and construction traffic through area is restricted.

3.5 PRECAST TERRAZZO INSTALLATION

- A. Install precast terrazzo units using method recommended by NTMA and manufacturer unless otherwise indicated.
- B. Do not install units that are chipped, cracked, discolored, or improperly finished.
- C. Seal joints between units with **[cement grout matching precast terrazzo matrix]** **[joint sealant]** <Insert requirements>.

3.6 REPAIR

- A. Cut out and replace terrazzo areas that evidence lack of bond with substrate or underbed, including areas that emit a "hollow" sound if tapped. Cut out terrazzo areas in panels defined by strips and replace to match adjacent terrazzo, or repair panels according to NTMA's written recommendations, as approved by DEN Project Manager.

3.7 CLEANING AND PROTECTION

- A. Terrazzo Cleaning:
 - 1. Remove grinding dust from installation and adjacent areas.
 - 2. Wash surfaces with cleaner immediately after final cleaning of terrazzo flooring according to NTMA's written recommendations and manufacturer's written instructions; rinse surfaces with water and allow them to dry thoroughly.
- B. Rustic Terrazzo Cleaning: Clean surfaces with 1:10 solution of muriatic acid in water. Legally contain and dispose of runoff from cleaning operations. Rinse surfaces with water and allow them to dry thoroughly.
- C. Sealing:
 - 1. Seal surfaces according to NTMA's written recommendations.
 - 2. Apply sealer according to sealer manufacturer's written instructions.
- D. Protection: Provide final protection and maintain conditions, in a manner acceptable to Installer, that ensure that terrazzo is without damage or deterioration at time of Substantial Completion.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 096613

SECTION 096623 - RESINOUS MATRIX TERRAZZO FLOORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

- 1. Thin-set, epoxy-resin terrazzo flooring[**and base**].
- 2. Precast epoxy-resin terrazzo units.

- B. Related Requirements:

- 1. Section 079200 "Joint Sealants" for sealants installed with terrazzo.
- 2. Section 096723 "Resinous Flooring" for decorative resinous flooring systems applied as self-leveling slurries or as troweled or screeded mortars.
- 3. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Aggregate: Marble chips[**or other types of aggregate**].

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]<Insert location>**.
 - 1. Review methods and procedures related to terrazzo including, but not limited to, the following:
 - a. Inspect and discuss condition of substrate and other preparatory work performed by other trades.
 - b. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - c. Review special terrazzo designs and patterns.
 - d. **<Insert agenda items>**.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
 2. Product Data for Credit IEQ 4.1: For adhesives, documentation including printed statement of VOC content.
 3. Product Data for Credit IEQ 4.3: For sealers, documentation including printed statement of VOC content.
 4. Product Data for Credit IEQ 4.3: For terrazzo flooring, documentation from an independent testing agency indicating compliance with the FloorScore Standard.
 5. Laboratory Test Reports for Credit IEQ 4: For **[adhesives] [and] [flooring system]**, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: Include terrazzo installation requirements. Include plans, elevations, sections, component details, and attachments to other work. Show layout of the following:
1. Divider strips.
 2. Control-joint strips.
 3. Accessory strips.
 4. Abrasive strips.
 5. Stair treads, risers, and landings.
 6. Precast terrazzo jointing and edge configurations.
 7. Terrazzo patterns.
 8. **<Insert requirements>**.
- D. Samples: For each exposed product and for each color and texture specified, **[6 inches (150 mm)] <Insert dimension>** in size.
- E. Samples for Initial Selection: NTMA color plates showing the full range of colors and patterns available for each terrazzo type.
- F. Samples for Verification: For each type, material, color, and pattern of terrazzo and accessory required showing the full range of color, texture, and pattern variations expected. Label each terrazzo sample to identify manufacturer's matrix color and aggregate types, sizes, and proportions. Prepare Samples of same thickness and from same material to be used for the Work, in size indicated below:
1. Terrazzo: **[6-inch- (150-mm-)] <Insert dimension>** square Samples.

2. Precast Terrazzo: [6-inch- (150-mm-)] <Insert dimension> square Samples.
3. Accessories: [6-inch- (150-mm-)] <Insert dimension> long Samples of each exposed strip item required.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Material Certificates: For each type of terrazzo material or product, from manufacturer.
- C. Installer Certificates: Signed by manufacturers certifying that installers comply with requirements.

1.7 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For terrazzo to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 QUALITY ASSURANCE

- A. Installer Qualifications:
 1. Engage an installer who is a contractor member of NTMA.
 2. Engage an installer who is certified in writing by terrazzo manufacturer as qualified to install manufacturer's products.
- B. Source Limitations: Obtain primary terrazzo materials from single source from single manufacturer. Provide secondary materials including patching and fill material, joint sealant, and repair materials of type and from source recommended by manufacturer of primary materials.
- C. Source Limitations for Aggregates: Obtain each color, grade, type, and variety of granular materials from single source with resources to provide materials of consistent quality in appearance and physical properties.
- D. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 1. Build mockups for terrazzo including accessories.
 - a. Size: Minimum 100 sq. ft. (9 sq. m) of typical poured-in-place flooring[and base] condition for each color and pattern [in locations indicated] [in locations directed by DEN Project Manager] <Insert location requirements>.
 - b. Include [base] [first three stair treads] <Insert item>.

2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials to Project site in supplier's original wrappings and containers, labeled with sources or manufacturer's name, material or product brand name, and lot number if any.
- B. Store materials in their original, undamaged packages and containers, inside a well-ventilated area protected from weather, moisture, soiling, extreme temperatures, and humidity.

1.10 FIELD CONDITIONS

- A. Environmental Limitations: Comply with manufacturer's written instructions for substrate temperature, ambient temperature, moisture, ventilation, and other conditions affecting terrazzo installation.
- B. Field Measurements: Verify actual dimensions of construction contiguous with precast terrazzo by field measurements before fabrication.
- C. Provide permanent lighting or, if permanent lighting is not in place, simulate permanent lighting conditions during terrazzo installation.
- D. Close spaces to traffic during terrazzo application and for not less than 24 hours after application unless manufacturer recommends a longer period.
- E. Control and collect water and dust produced by grinding operations. Protect adjacent construction from detrimental effects of grinding operations.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. NTMA Standards: Comply with NTMA's "Terrazzo Specifications and Design Guide" and with written recommendations for terrazzo type indicated unless more stringent requirements are specified.

- B. FloorScore Compliance: Terrazzo floors shall comply with requirements of FloorScore Standard.
- C. Low-Emitting Materials: Flooring system shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.2 EPOXY-RESIN TERRAZZO

- A. Epoxy-Resin Terrazzo **<Insert designation>**: Comply with NTMA's "Terrazzo Specifications and Design Guide" and manufacturer's written instructions for matrix and aggregate proportions and mixing.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Crossfield Products Corp., Dex-O-Tex Division; [**Cheminert**] [**Spectrum**] Terrazzo.
 - b. General Polymers Corporation; Terrazzo 1100.
 - c. Key Resin Company; Key Epoxy Terrazzo.
 - d. Master Terrazzo Technologies LLC; Morricite.
 - e. Quadrant Chemical Corporation; Quadset Epoxy Terrazzo.
 - f. TEC Specialty Construction Brands, Inc.; Tuff-Lite Epoxy Terrazzo.
 - g. Terrazzo & Marble Supply Companies; Terroxy Resin Systems.
 - h. **<Insert manufacturer's name; product name or designation>**.
 - i. or approved equal.
 - 2. Thickness: [**1/4 inch** (6.4 mm)] [**3/8 inch** (9.5 mm)] [**As indicated**] **<Insert dimension>** nominal.
 - 3. Formulated Mix Color and Pattern: [**As selected by DEN Project Manager from full range of industry colors**] [**As selected by DEN Project Manager from NTMA standard-terrazzo plates**] [**As selected by DEN Project Manager from NTMA thin-set terrazzo plates**] **<Insert manufacturer's or NTMA's color plate designation>**.
 - 4. Custom Mix Color and Pattern: [**Match DEN Project Manager's sample**] [**Match existing**] **<Insert custom design-mix attributes>**.
- B. Materials:
 - 1. Flexible Reinforcing Membrane: Manufacturer's resinous membrane for substrate-crack preparation and reflective-crack reduction.
 - a. Reinforcement: Fiberglass scrim.
 - 2. Primer: [**Manufacturer's product recommended for substrate and use indicated**] **<Insert requirements>**.
 - 3. Epoxy-Resin Matrix: [**Manufacturer's standard recommended for use indicated**] **<Insert requirements>** and in color required for mix indicated.

- a. Physical Properties without Aggregates:
 - 1) Hardness: 60 to 85 per ASTM D 2240, Shore D.
 - 2) Minimum Tensile Strength: **3000 psi** (20.7 MPa) per ASTM D 638 for a **2-inch** (51-mm) specimen made using a "C" die per ASTM D 412.
 - 3) Minimum Compressive Strength: **10,000 psi** (6.9 MPa) per ASTM D 695, Specimen B cylinder.
 - 4) Chemical Resistance: No deleterious effects by contaminants listed below after seven-day immersion at room temperature per ASTM D 1308.
 - a) Distilled water.
 - b) Mineral water.
 - c) Isopropanol.
 - d) Ethanol.
 - e) 0.025 percent detergent solution.
 - f) 1.0 percent soap solution.
 - g) 10 percent sodium hydroxide.
 - h) 10 percent hydrochloric acid.
 - i) 30 percent sulfuric acid.
 - j) 5 percent acetic acid.
 - b. Physical Properties with Aggregates: For resin blended with Georgia white marble, ground, grouted, and cured per requirements in NTMA's "Terrazzo Specifications and Design Guide"; comply with the following:
 - 1) Flammability: Self-extinguishing, maximum extent of burning **1/4 inch** (6.35 mm) per ASTM D 635.
 - 2) Thermal Coefficient of Linear Expansion: **0.0025 inch/inch per deg F** (0.0025 mm/mm per 0.5556 deg C) for temperature range of **minus 12 to plus 140 deg F** (minus 24 to plus 60 deg C) per ASTM D 696.
4. Aggregates: Comply with NTMA gradation standards for mix indicated and contain no deleterious or foreign matter.
 - a. Abrasion and Impact Resistance: Less than 40 percent loss per ASTM C 131.
 - b. 24-Hour Absorption Rate: Less than 0.75 percent.
 - c. Dust Content: Less than 1.0 percent by weight.
 - d. Recycled Content of Epoxy-Resin Terrazzo: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert number>** percent.
 5. Finishing Grout: Resin based.

2.3 PRECAST EPOXY-RESIN TERRAZZO

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Precast Terrazzo Enterprises, Inc.
 2. Romoco Precast Terrazzo Products.
 3. Wausau Tile, Inc.; Terra Paving Products Division.
 4. **<Insert manufacturer's name>**.
 5. or approved equal.
- B. Precast Terrazzo Base **<Insert designation>**: Minimum **3/4-inch-** (19-mm-) thick, reinforced portland cement terrazzo units cast in maximum lengths possible, but not less than **36 inches** (900 mm). Comply with NTMA's written recommendations for fabricating precast terrazzo base units in sizes and profiles indicated.
1. Type: **[As indicated] [Coved with minimum 3/4-inch (19-mm) radius] [Straight] [Splayed] <Insert requirements>**.
 2. Top Edge: **[Straight, unfinished] [Beveled with polished top surface] [Radius edge with polished top surface] <Insert requirements>**.
 3. Metal Toe Strip: **[Zinc] [Brass]**.
 4. Outside Corner Units: With finished returned edges at outside corner.
 5. Color, Pattern, and Finish: **[As selected by DEN Project Manager from full range of industry colors] [Match DEN Project Manager's sample] [Match adjacent poured-in-place terrazzo flooring] <Insert requirements>**.
- C. Precast Terrazzo Units **<Insert designation>**: Comply with NTMA's written recommendations for fabricating precast terrazzo units in sizes and profiles indicated. Reinforce units as required by unit sizes, profiles, and thicknesses and as recommended by manufacturer. Finish exposed-to-view edges and reveals to match face finish. Ease exposed edges to **1/8-inch** (3.2-mm) radius.
1. Tiles.
 2. Planks.
 3. Stair treads[**and landings**].
 4. Thresholds.
 5. Sills.
 6. Benches.
 7. Planters.
 8. Countertops.
 9. Shower bases.
 10. **<Insert item>**.
 11. Color, Pattern, and Finish: **[As selected by DEN Project Manager from full range of industry colors] [Match DEN Project Manager's sample] [Match adjacent poured-in-place terrazzo flooring] <Insert requirements>**.

2.4 STRIP MATERIALS

- A. Thin-Set Divider Strips: L-type angle, **1/4 inch** (6.4 mm) deep.
1. Material: **[As indicated] [White-zinc alloy] [Brass] [Aluminum] [Plastic, in color selected from full range of industry colors] <Insert requirements>**.
 2. Top Width: **[As indicated] [1/8 inch (3.2 mm)] [1/4 inch (6.4 mm)] <Insert dimension>**.

- B. Heavy-Top Divider Strips: L-type angle in depth required for topping thickness indicated.
1. Bottom-Section Material: **[As indicated] [Galvanized steel] [Matching top-section material]** <Insert requirements>.
 2. Top-Section Material: **[As indicated] [White-zinc alloy] [Brass] [Aluminum] [Plastic, in color selected from full range of industry colors]** <Insert requirements>.
 3. Top-Section Width: **[As indicated] [1/8 inch (3.2 mm)] [1/4 inch (6.4 mm)] [3/8 inch (9.5 mm)] [1/2 inch (12.7 mm)]** <Insert dimension>.
- C. Control-Joint Strips: Separate, double L-type angles, positioned back to back, that match material and color of divider strips and in depth required for topping thickness indicated.
- D. Accessory Strips: Match divider-strip width, material, and color unless otherwise indicated. Use the following types of accessory strips as required to provide a complete installation:
1. Base-bead strips for exposed top edge of terrazzo base.
 2. Edge-bead strips for exposed edges of terrazzo.
 3. Nosings for terrazzo stair treads and landings.
 4. **<Insert requirements>**.
- E. Abrasive Strips: **[Three-line] [Two-line] [One-line] [Abrasive nosing strip and two-line]** <Insert requirements> abrasive inserts at nosings. Silicon carbide or aluminum oxide, or combination of both, in epoxy-resin binder and set in channel.
1. Width: **[1/2 inch (12.7 mm)]** <Insert dimension>.
 2. Depth: As required by terrazzo thickness.
 3. Length: **[4 inches (100 mm) less than stair width] [As indicated]** <Insert dimension>.
 4. Color: **[As selected by DEN Project Manager from full range of industry colors]** <Insert requirements>.

2.5 MISCELLANEOUS ACCESSORIES

- A. Strip Adhesive: Epoxy-resin adhesive recommended by adhesive manufacturer for this use.
1. Adhesives shall have a VOC content of 70 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 2. Adhesives shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- B. Anchoring Devices:

1. Strips: Provide mechanical anchoring devices or adhesives for strip materials as recommended by manufacturer and required for secure attachment to substrate.
 2. Precast Terrazzo: Provide mechanical anchoring devices as recommended by fabricator for proper anchorage and support of units for conditions of installation and support.
- C. Patching and Fill Material: Terrazzo manufacturer's resinous product approved and recommended by manufacturer for application indicated.
- D. Joint Compound: Terrazzo manufacturer's resinous product approved and recommended by manufacturer for application indicated.
- E. Resinous Matrix Terrazzo Cleaner: Chemically neutral cleaner with pH factor between 7 and 10 that is biodegradable, phosphate free, and recommended by sealer manufacturer for use on terrazzo type indicated.
- F. Sealer: **[Slip- and stain-resistant, penetrating-type sealer that is chemically neutral; does not affect terrazzo color or physical properties; is recommended by sealer manufacturer; and complies with NTMA's "Terrazzo Specifications and Design Guide" for terrazzo type indicated] [Acrylic] [Urethane] [Chemical-resistant epoxy] <Insert requirements>.**
1. Surface Friction: Not less than 0.6 according to ASTM D 2047.
 2. Acid-Base Properties: With pH factor between 7 and 10.
 3. Sealers shall have a VOC content of 200 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions, including levelness tolerances, have been corrected.

3.2 PREPARATION

- A. Clean substrates of substances, including oil, grease, and curing compounds, that might impair terrazzo bond. Provide clean, dry, and neutral substrate for terrazzo application.
- B. Concrete Slabs:
 1. Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants

incompatible with terrazzo.

- a. Shot-blast surfaces with an apparatus that abrades the concrete surface, contains the dispensed shot within the apparatus, and recirculates the shot by vacuum pickup.
- b. Repair damaged and deteriorated concrete according to terrazzo manufacturer's written recommendations.
- c. Use patching and fill material to fill holes and depressions in substrates according to terrazzo manufacturer's written instructions.

C. Verify that concrete substrates are dry and moisture-vapor emissions are within acceptable levels according to manufacturer's written instructions.

1. Moisture Testing: Perform tests indicated below.

- a. Calcium Chloride Test: Perform anhydrous calcium chloride test per ASTM F 1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of [3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m)] <Insert rate> in 24 hours.
 - 1) Perform tests so that each test area does not exceed [200 sq. ft. (18.6 sq. m)] <Insert area>, and perform not less than two tests in each installation area and with test areas evenly spaced in installation areas.
- b. In-Situ Probe Test: Perform relative-humidity test using in-situ probes per ASTM F 2170. Proceed with installation only after substrates have a maximum [75] <Insert number> percent relative-humidity-level measurement.
- c. Test Method: Test for moisture content by [method recommended in writing by terrazzo manufacturer] <Insert test method>. Proceed with installation only after substrates pass testing.

D. Protect other work from water and dust generated by grinding operations. Control water and dust to comply with environmental protection regulations.

1. Erect and maintain temporary enclosures and other suitable methods to limit water damage and dust migration and to ensure adequate ambient temperatures and ventilation conditions during installation.

3.3 EPOXY-RESIN TERRAZZO INSTALLATION

- A. Comply with NTMA's written recommendations for terrazzo and accessory installation.
- B. Place, rough grind, grout, cure grout, fine grind, and finish terrazzo according to manufacturer's written instructions and NTMA's "Terrazzo Specifications and Design Guide."
- C. Installation Tolerance: Limit variation in terrazzo surface from level to [1/4 inch in 10 feet (6.4 mm in 3 m)] <Insert dimensions>; noncumulative.

- D. Ensure that matrix components and fluids from grinding operations do not stain terrazzo by reacting with divider and control-joint strips.
- E. Delay fine grinding until heavy trade work is complete and construction traffic through area is restricted.
- F. Flexible Reinforcing Membrane:
 - 1. Prepare and prefill substrate cracks with membrane material.
 - 2. Install membrane **[at substrate cracks] [to produce full substrate coverage]** in areas to receive terrazzo.
 - 3. Reinforce membrane with fiberglass scrim.
 - 4. Prepare membrane according to manufacturer's written instructions before applying substrate primer.
- G. Primer: Apply to terrazzo substrates according to manufacturer's written instructions.
- H. Strip Materials:
 - 1. Divider and Control-Joint Strips:
 - a. Locate divider strips **[in locations indicated]** **<Insert requirements>**.
 - b. Install control-joint strips **[back to back directly above concrete-slab control joints] [in locations indicated]** **<Insert requirements>**.
 - c. Install control-joint strips with **[1/4-inch (6.4-mm)]** **<Insert dimension>** gap between strips, and install sealant in gap.
 - d. Install strips in adhesive setting bed without voids below strips, or mechanically anchor strips as required to attach strips to substrate, as recommended by strip manufacturer.
 - 2. Accessory Strips: Install **[as required to provide a complete installation] [in locations indicated]** **<Insert requirements>**.
 - 3. Abrasive Strips: Install with surface of abrasive strip positioned **[1/16 inch (1.6 mm)]** **<Insert dimension>** higher than terrazzo surface.

3.4 PRECAST TERRAZZO INSTALLATION

- A. Install precast terrazzo units using method recommended by NTMA and manufacturer unless otherwise indicated.
- B. Do not install units that are chipped, cracked, discolored, or not properly finished.
- C. Seal joints between units with **[joint compound matching precast terrazzo matrix] [joint sealant]** **<Insert requirements>**.

3.5 REPAIR

- A. Cut out and replace terrazzo areas that evidence lack of bond with substrate. Cut out terrazzo areas in panels defined by strips and replace to match adjacent terrazzo, or

repair panels according to NTMA's written recommendations, as approved by DEN Project Manager.

3.6 CLEANING AND PROTECTION

A. Cleaning:

1. Remove grinding dust from installation and adjacent areas.
2. Wash surfaces with cleaner according to NTMA's written recommendations and manufacturer's written instructions; rinse surfaces with water and allow them to dry thoroughly.

B. Sealing:

1. Seal surfaces according to NTMA's written recommendations.
2. Apply sealer according to sealer manufacturer's written instructions.

C. Protection: Provide final protection and maintain conditions, in a manner acceptable to Installer, that ensure that terrazzo is without damage or deterioration at time of Substantial Completion.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 096623

SECTION 096723 - RESINOUS FLOORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

- 1. Decorative resinous flooring systems.
- 2. Industrial resinous flooring systems.
- 3. High-performance resinous flooring systems.

- B. Related Sections:

- 1. Section 079200 "Joint Sealants" for sealants installed at joints in resinous flooring systems.
- 2. Section 096623 "Resinous Matrix Terrazzo Flooring" for thin-set, resinous matrix terrazzo.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include manufacturer's technical data, application instructions, and recommendations for each resinous flooring component required.

- 1. Include data substantiating that materials comply with requirements.

- B. LEED Submittals:

- 1. Product Data for Credit IEQ 4.2: For liquid-applied flooring components, documentation including printed statement of VOC content.
- 2. Laboratory Test Reports for Credit IEQ 4: For flooring systems, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- C. Samples for Initial Selection: For each type of exposed finish required.
- D. Samples for Verification: For each resinous flooring system required, **6 inches** (150 mm) square, applied to a rigid backing by Installer for this Project.
- E. Product Schedule: For resinous flooring.[**Use same designations indicated on Drawings.**]

1.4 INFORMATIONAL SUBMITTALS

- A. Installer Certificates: Signed by manufacturer certifying that installers comply with specified requirements.
- B. Material Certificates: For each resinous flooring component, from manufacturer.
- C. Material Test Reports: For each resinous flooring system.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For resinous flooring to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of flooring systems required for this Project.
 - 1. Engage an installer who is certified in writing by resinous flooring manufacturer as qualified to apply resinous flooring systems indicated.
- B. Source Limitations: Obtain primary resinous flooring materials, including primers, resins, hardening agents, grouting coats, and topcoats, from single source from single manufacturer. Provide secondary materials, including patching and fill material, joint sealant, and repair materials, of type and from source recommended by manufacturer of primary materials.
- C. Mockups: Apply mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Apply full-thickness mockups on **48-inch-** (1200-mm-) square floor area selected by DEN Project Manager.
 - a. Include **48-inch** (1200-mm) length of integral cove base with inside[**and outside**] corner.

2. Simulate finished lighting conditions for DEN Project Manager's review of mockups.
 3. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- D. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]<Insert location>**.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials in original packages and containers, with seals unbroken, bearing manufacturer's labels indicating brand name and directions for storage and mixing with other components.

1.8 PROJECT CONDITIONS

- A. Environmental Limitations: Comply with resinous flooring manufacturer's written instructions for substrate temperature, ambient temperature, moisture, ventilation, and other conditions affecting resinous flooring application.
- B. Lighting: Provide permanent lighting or, if permanent lighting is not in place, simulate permanent lighting conditions during resinous flooring application.
- C. Close spaces to traffic during resinous flooring application and for not less than 24 hours after application unless manufacturer recommends a longer period.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. American Hi-Tech Flooring Company.
 2. Arizona Polymer Flooring, Inc.
 3. Atlas Minerals & Chemicals, Inc.; Polymer Flooring Division.
 4. BASF Construction Chemicals, Inc.; BASF Building Systems.
 5. ChemMasters.
 6. CornerStone Flooring & Linings.
 7. Crawford Laboratories Inc.; Florock.

8. Crossfield Products Corp.; Dex-O-Tex.
9. Crown Polymers, LLC.
10. Delta Polymers, Inc.
11. DUDICK Inc.
12. Dur-A-Flex, Inc.
13. Epoxy Systems, Inc.
14. ICS Garland Inc.
15. International Coatings Inc.
16. ITW Resin Technologies.
17. Key Resin Company.
18. Marbelite International Corp.
19. Micor Company, Inc.
20. NEOGARD; Division of JONES-BLAIR.
21. Northern Industries, Inc.
22. Nox-Crete Products Group.
23. Pacific Polymers, Inc.
24. Palma, Inc.
25. POLY-CARB, Inc.
26. Polymerica, Incorporated.
27. PolySpec.
28. PPG Industries, Inc.
29. Protective Floorings & Linings, Inc.; a division of Chesterton.
30. RBC Industries, Inc.
31. ROCK-TRED Corporation.
32. Rust-Oleum Corporation.
33. Sauereisen.
34. Sherwin-Williams Company; General Polymers.
35. Specifier Products Inc.; Stonecarpet.
36. Stonhard, Inc.
37. Tamms Industries, Inc.; a division of The Euclid Chemical Company.
38. Tnemec Company, Inc.
39. Tufco International Inc.
40. Valspar Flooring.
41. **<Insert manufacturer's name>**.
42. or approved equal.

2.2 MATERIALS

- A. VOC Content of Liquid-Applied Flooring Components: Not more than 100 g/L when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
- B. Low-Emitting Materials: Flooring system shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.3 DECORATIVE RESINOUS FLOORING[<RF-#>]

- A. Resinous Flooring: Abrasion-, impact- and chemical-resistant, decorative-aggregate-filled, epoxy-resin-based, monolithic floor surfacing designed to produce a seamless floor[**and integral cove base**].
- B. System Characteristics:
1. Color and Pattern: [**As selected by DEN Project Manager from manufacturer's full range**] [**As indicated by product designation listed above**] [**Match DEN Project Manager's sample**] <Insert description>.
 2. Wearing Surface: [**Textured for slip resistance**] [**Orange-peel texture**] [**Smooth**] [**Manufacturer's standard wearing surface**] <Insert description>.
 3. Overall System Thickness: [**1/16 inch** (1.6 mm)] [**1/8 inch** (3.2 mm)] [**3/16 inch** (4.8 mm)] [**1/4 inch** (6.4 mm)] <Insert thickness>.
 4. Federal Agency Approvals: [**USDA**] [**FDA**] approved for food-processing environments.
- C. Body Coats:
1. Resin: [**Epoxy**] <Insert resin>.
 2. Formulation Description: [**100 percent solids**] [**High solids**] [**Water based**] <Insert requirements>.
 3. Application Method: [**Self-leveling slurry with broadcast aggregates**] [**Self-leveling slurry**] [**Troweled or screeded**].
 - a. Thickness of Coats: [**1/16 inch** (1.6 mm)] [**1/8 inch** (3.2 mm)] [**3/16 inch** (4.8 mm)] [**1/4 inch** (6.4 mm)] <Insert thickness>.
 - b. Number of Coats: [**One**] [**Two**] <Insert number>.
 4. Aggregates: [**Manufacturer's standard**] [**Colored quartz (ceramic-coated silica)**] [**Vinyl flakes**] [**Granite**] [**Natural silica**] <Insert requirements>.
- D. Topcoat: Sealing or finish coats.
1. Resin: [**Epoxy**] [**Urethane**] [**Vinyl ester**] <Insert resin>.
 2. Formulation Description: [**100 percent solids**] [**High solids**] [**Water based**] <Insert requirements>.
 3. Type: [**Clear**] [**Pigmented**] <Insert description>.
 4. Finish: [**Matte**] [**Gloss**].
 5. Number of Coats: [**One**] [**Two**] <Insert number>.
- E. System Physical Properties: Provide resinous flooring system with the following minimum physical property requirements when tested according to test methods indicated:
1. Compressive Strength: <Insert value> per ASTM C 579.
 2. Tensile Strength: <Insert value> per ASTM C 307.
 3. Flexural Modulus of Elasticity: <Insert value> per ASTM C 580.
 4. Water Absorption: <Insert value> per ASTM C 413.

5. Coefficient of Thermal Expansion: **<Insert value>** per ASTM C 531.
 6. Indentation: **<Insert number>** percent maximum per MIL-D-3134.
 7. Impact Resistance: No chipping, cracking, or delamination and not more than **1/16-inch** (1.6-mm) permanent indentation per MIL-D-3134.
 8. Resistance to Elevated Temperature: No slip or flow of more than **1/16 inch** (1.6 mm) per MIL-D-3134.
 9. Abrasion Resistance: **<Insert value>** maximum weight loss per ASTM D 4060.
 10. Flammability: Self-extinguishing per ASTM D 635.
 11. Critical Radiant Flux: **[0.45 W/sq. cm] [0.22 W/sq. cm]** or greater per NFPA 253.
 12. Hardness: **<Insert value>**, Shore D per ASTM D 2240.
 13. Bond Strength: **<Insert value>**, 100 percent concrete failure per ACI 503R.
- F. System Chemical Resistance: Test specimens of cured resinous flooring system are unaffected when tested according to **[ASTM D 1308 for 50 percent immersion] [ASTM D 543, Procedure A, for immersion] [ASTM C 267 for immersion] <Insert testing requirements>** in the following reagents for no fewer than seven days:
1. **<Insert list of reagents that Owner has determined are likely to contact resinous flooring during in-service use>**.

2.4 INDUSTRIAL RESINOUS FLOORING[**<RF-#>**]

- A. Resinous Flooring: Abrasion-, impact- and chemical-resistant, industrial-aggregate-filled, resin-based, monolithic floor surfacing designed to produce a seamless floor[**and integral cove base**].
- B. System Characteristics:
1. Color and Pattern: **[As selected by DEN Project Manager from manufacturer's full range] [As indicated by product designation listed above] [Match DEN Project Manager's sample] <Insert description>**.
 2. Wearing Surface: **[Textured for slip resistance] [Orange-peel texture] [Smooth] [Manufacturer's standard wearing surface] <Insert description>**.
 3. Overall System Thickness: **[1/16 inch (1.6 mm)] [1/8 inch (3.2 mm)] [3/16 inch (4.8 mm)] [1/4 inch (6.4 mm)] <Insert thickness>**.
 4. Federal Agency Approvals: **[USDA] [FDA]** approved for food-processing environments.
- C. Body Coats:
1. Resin: **[Epoxy] [Urethane] [Vinyl ester] <Insert resin>**.
 2. Formulation Description: **[100 percent solids] [High solids] [Water based] <Insert requirements>**.
 3. Application Method: **[Self-leveling slurry with broadcast aggregates] [Self-leveling slurry] [Troweled or screeded]**.
 - a. Thickness of Coats: **[1/16 inch (1.6 mm)] [1/8 inch (3.2 mm)] [3/16 inch (4.8 mm)] [1/4 inch (6.4 mm)] <Insert thickness>**.
 - b. Number of Coats: **[One] [Two] <Insert number>**.

4. Aggregates: **[Manufacturer's standard] [Colored quartz (ceramic-coated silica)] [Vinyl flakes] [Granite] [Natural silica] <Insert requirements>**.

D. Topcoat: Sealing or finish coats.

1. Resin: **[Epoxy] [Urethane] [Vinyl ester] <Insert resin>**.
2. Formulation Description: **[100 percent solids] [High solids] [Water based] <Insert requirements>**.
3. Type: **[Clear] [Pigmented] <Insert description>**.
4. Finish: **[Matte] [Gloss]**.
5. Number of Coats: **[One] [Two] <Insert number>**.

E. System Physical Properties: Provide resinous flooring system with the following minimum physical property requirements when tested according to test methods indicated:

1. Compressive Strength: **<Insert value>** per ASTM C 579.
2. Tensile Strength: **<Insert value>** per ASTM C 307.
3. Flexural Modulus of Elasticity: **<Insert value>** per ASTM C 580.
4. Water Absorption: **<Insert value>** per ASTM C 413.
5. Coefficient of Thermal Expansion: **<Insert value>** per ASTM C 531.
6. Indentation: **<Insert number>** percent maximum per MIL-D-3134.
7. Impact Resistance: No chipping, cracking, or delamination and not more than **1/16-inch (1.6-mm)** permanent indentation per MIL-D-3134.
8. Resistance to Elevated Temperature: No slip or flow of more than **1/16 inch (1.6 mm)** per MIL-D-3134.
9. Abrasion Resistance: **<Insert value>** maximum weight loss per ASTM D 4060.
10. Flammability: Self-extinguishing per ASTM D 635.
11. Critical Radiant Flux: **[0.45 W/sq. cm] [0.22 W/sq. cm]** or greater per NFPA 253.
12. Hardness: **<Insert value>**, Shore D per ASTM D 2240.
13. Bond Strength: **<Insert value>**, 100 percent concrete failure per ACI 503R.

F. System Chemical Resistance: Test specimens of cured resinous flooring system are unaffected when tested according to **[ASTM D 1308 for 50 percent immersion] [ASTM D 543, Procedure A, for immersion] [ASTM C 267 for immersion] <Insert testing requirements>** in the following reagents for no fewer than seven days:

1. **<Insert list of reagents that Owner has determined are likely to contact resinous flooring during in-service use>**.

2.5 HIGH-PERFORMANCE RESINOUS FLOORING[**<RF-#>**]

A. Resinous Flooring: Abrasion-, impact- and chemical-resistant, high-performance-aggregate-filled, resin-based, monolithic floor surfacing designed to produce a seamless floor[**and integral cove base**].

B. System Characteristics:

1. Color and Pattern: **[As selected by DEN Project Manager from**

- manufacturer's full range** [As indicated by product designation listed above] [Match DEN Project Manager's sample] <Insert description>.
2. Wearing Surface: [Textured for slip resistance] [Orange-peel texture] [Smooth] [Manufacturer's standard wearing surface] <Insert description>.
 3. Overall System Thickness: [1/16 inch (1.6 mm)] [1/8 inch (3.2 mm)] [3/16 inch (4.8 mm)] [1/4 inch (6.4 mm)] <Insert thickness>.
 4. Federal Agency Approvals: [USDA] [FDA] approved for food-processing environments.

C. Body Coats:

1. Resin: [Epoxy] [Epoxy novolac] [Urethane] [Vinyl ester] [Methyl methacrylate] <Insert resin>.
2. Formulation Description: [100 percent solids] [High solids] [Water based] <Insert requirements>.
3. Application Method: [Self-leveling slurry with broadcast aggregates] [Self-leveling slurry] [Troweled or screeded].
 - a. Thickness of Coats: [1/16 inch (1.6 mm)] [1/8 inch (3.2 mm)] [3/16 inch (4.8 mm)] [1/4 inch (6.4 mm)] <Insert thickness>.
 - b. Number of Coats: [One] [Two] <Insert number>.
4. Aggregates: [Manufacturer's standard] [Colored quartz (ceramic-coated silica)] [Vinyl flakes] [Granite] [Natural silica] <Insert requirements>.

D. Topcoat: Sealing or finish coats.

1. Resin: [Epoxy] [Epoxy novolac] [Urethane] [Vinyl ester] [Methyl methacrylate] <Insert resin>.
2. Formulation Description: [100 percent solids] [High solids] [Water based] <Insert requirements>.
3. Type: [Clear] [Pigmented] <Insert description>.
4. Finish: [Matte] [Gloss].
5. Number of Coats: [One] [Two] <Insert number>.

E. System Physical Properties: Provide resinous flooring system with the following minimum physical property requirements when tested according to test methods indicated:

1. Compressive Strength: <Insert value> per ASTM C 579.
2. Tensile Strength: <Insert value> per ASTM C 307.
3. Flexural Modulus of Elasticity: <Insert value> per ASTM C 580.
4. Water Absorption: <Insert value> per ASTM C 413.
5. Coefficient of Thermal Expansion: <Insert value> per ASTM C 531.
6. Indentation: <Insert number> percent maximum per MIL-D-3134.
7. Impact Resistance: No chipping, cracking, or delamination and not more than 1/16-inch (1.6-mm) permanent indentation per MIL-D-3134.
8. Resistance to Elevated Temperature: No slip or flow of more than 1/16 inch (1.6 mm) per MIL-D-3134.
9. Abrasion Resistance: <Insert value> maximum weight loss per ASTM D 4060.

10. Flammability: Self-extinguishing per ASTM D 635.
11. Critical Radiant Flux: **[0.45 W/sq. cm] [0.22 W/sq. cm]** or greater per NFPA 253.
12. Hardness: **<Insert value>**, Shore D per ASTM D 2240.
13. Bond Strength: **<Insert value>**, 100 percent concrete failure per ACI 503R.

F. System Chemical Resistance: Test specimens of cured resinous flooring system are unaffected when tested according to **[ASTM D 1308 for 50 percent immersion] [ASTM D 543, Procedure A, for immersion] [ASTM C 267 for immersion] <Insert testing requirements>** in the following reagents for no fewer than seven days:

1. **<Insert list of reagents that Owner has determined are likely to contact resinous flooring during in-service use>**.

2.6 ACCESSORIES

A. Primer: Type recommended by manufacturer for substrate and body coats indicated.

1. Formulation Description: **[100 percent solids] [High solids] [Water based] <Insert requirements>**.

B. Waterproofing Membrane: Type recommended by manufacturer for substrate and primer and body coats indicated.

1. Formulation Description: **[100 percent solids] [High solids] <Insert requirements>**.

C. Reinforcing Membrane: Flexible resin formulation that is recommended by manufacturer for substrate and primer and body coats indicated and that prevents substrate cracks from reflecting through resinous flooring.

1. Formulation Description: **[100 percent solids] [High solids] <Insert requirements>**.

- a. Provide fiberglass scrim embedded in reinforcing membrane.

D. Patching and Fill Material: Resinous product of or approved by resinous flooring manufacturer and recommended by manufacturer for application indicated.

PART 3 - EXECUTION

3.1 PREPARATION

A. General: Prepare and clean substrates according to resinous flooring manufacturer's written instructions for substrate indicated. Provide clean, dry substrate for resinous flooring application.

- B. Concrete Substrates: Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants incompatible with resinous flooring.
1. Roughen concrete substrates as follows:
 - a. Shot-blast surfaces with an apparatus that abrades the concrete surface, contains the dispensed shot within the apparatus, and recirculates the shot by vacuum pickup.
 - b. Comply with ASTM C 811 requirements unless manufacturer's written instructions are more stringent.
 2. Repair damaged and deteriorated concrete according to resinous flooring manufacturer's written instructions.
 3. Verify that concrete substrates are dry and moisture-vapor emissions are within acceptable levels according to manufacturer's written instructions.
 - a. Perform anhydrous calcium chloride test, ASTM F 1869. Proceed with application of resinous flooring only after substrates have maximum moisture-vapor-emission rate of [3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m)] **<Insert emission rate>** of slab area in 24 hours.
 - b. Perform plastic sheet test, ASTM D 4263. Proceed with application only after testing indicates absence of moisture in substrates.
 - c. Perform relative humidity test using in situ probes, ASTM F 2170. Proceed with installation only after substrates have a maximum [75] **<Insert number>** percent relative humidity level measurement.
 4. Alkalinity and Adhesion Testing: Verify that concrete substrates have pH within acceptable range. Perform tests recommended by manufacturer. Proceed with application only after substrates pass testing.
- C. Resinous Materials: Mix components and prepare materials according to resinous flooring manufacturer's written instructions.
- D. Use patching and fill material to fill holes and depressions in substrates according to manufacturer's written instructions.
- E. Treat control joints and other nonmoving substrate cracks to prevent cracks from reflecting through resinous flooring according to manufacturer's written instructions.

3.2 APPLICATION

- A. General: Apply components of resinous flooring system according to manufacturer's written instructions to produce a uniform, monolithic wearing surface of thickness indicated.
1. Coordinate application of components to provide optimum adhesion of resinous flooring system to substrate, and optimum intercoat adhesion.

2. Cure resinous flooring components according to manufacturer's written instructions. Prevent contamination during application and curing processes.
 3. At substrate expansion and isolation joints, comply with resinous flooring manufacturer's written instructions.
- B. Apply primer over prepared substrate at manufacturer's recommended spreading rate.
- C. Apply waterproofing membrane, where indicated, in manufacturer's recommended thickness.
1. Apply waterproofing membrane to integral cove base substrates.
- D. Apply reinforcing membrane to **[substrate cracks]** **[entire substrate surface]**.
- E. Integral Cove Base: Apply cove base mix to wall surfaces before applying flooring. Apply according to manufacturer's written instructions and details including those for taping, mixing, priming, troweling, sanding, and topcoating of cove base. Round internal and external corners.
1. Integral Cove Base: **[4 inches (100 mm)]** **<Insert dimension>** high.
- F. Apply self-leveling slurry body coats in thickness indicated for flooring system.
1. Broadcast aggregates at rate recommended by manufacturer and, after resin is cured, remove excess aggregates to provide surface texture indicated.
- G. Apply troweled or screeded body coats in thickness indicated for flooring system. Hand or power trowel and grout to fill voids. When cured, remove trowel marks and roughness using method recommended by manufacturer.
- H. Apply grout coat, of type recommended by resinous flooring manufacturer, to fill voids in surface of final body coat and to produce wearing surface indicated.
- I. Apply topcoats in number indicated for flooring system and at spreading rates recommended in writing by manufacturer.

3.3 FIELD QUALITY CONTROL

- A. Core Sampling: At the direction of Owner and at locations designated by Owner, take one core sample per **1000 sq. ft. (92.9 sq. m)** of resinous flooring, or portion of, to verify thickness. For each sample that fails to comply with requirements, take two additional samples. Repair damage caused by coring and correct deficiencies.
- B. Material Sampling: Owner may at any time and any number of times during resinous flooring application require material samples for testing for compliance with requirements.
1. Owner will engage an independent testing agency to take samples of materials being used. Material samples will be taken, identified, sealed, and certified in presence of Contractor.

2. Testing agency will test samples for compliance with requirements, using applicable referenced testing procedures or, if not referenced, using testing procedures listed in manufacturer's product data.
3. If test results show applied materials do not comply with specified requirements, pay for testing, remove noncomplying materials, prepare surfaces coated with unacceptable materials, and reapply flooring materials to comply with requirements.

3.4 PROTECTION

- A. Protect resinous flooring from damage and wear during the remainder of construction period. Use protective methods and materials, including temporary covering, recommended in writing by resinous flooring manufacturer.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 096723

SECTION 096813 - TILE CARPETING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes modular, [**fusion-bonded**] [**tufted**] <Insert construction> carpet tile.
- B. Related Requirements:
 - 1. Section 024119 "Selective Structure Demolition" for removing existing floor coverings.
 - 2. [**Section 096513 "Resilient Base and Accessories"**] [**Section 096519 "Resilient Tile Flooring"**] for resilient wall base and accessories installed with carpet tile.
 - 3. Section 096816 "Sheet Carpeting."
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at [**Project site**] [**location and time as determined by DEN Project Manager**]<Insert location>.
 - 1. Review methods and procedures related to carpet tile installation including, but not limited to, the following:
 - a. Review delivery, storage, and handling procedures.
 - b. Review ambient conditions and ventilation procedures.
 - c. Review subfloor preparation procedures.
 - d. <Insert agenda items>.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include manufacturer's written data on all physical characteristics, durability, static performance, fire-test response characteristics, static performance, and

- fade resistance, and fire-test response characteristics.
- 2. Include installation recommendations for each type of substrate.
- 3. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

- 1. Product Data for Credit EQ 4.3:
 - a. For carpet tile, documentation indicating compliance with testing and product requirements of CRI's "Green Label Plus" program.
 - b. For installation adhesive, documentation including printed statement of VOC content.
- 2. LEED Requirements:
 - a. Products supplied under this section shall meet the requirements of LEED for:
 - b. Low Emitting Materials Carpet.
 - c. Low Emitting Adhesives, Sealants, and Primers.
 - d. Rapidly Renewable Materials.
 - e. Regional Materials.
 - f. Recycled Content.
 - g. Construction Waste Management.

C. Shop Drawings: Show the following:

- 1. Existing flooring materials to be removed.
- 2. Existing flooring materials to remain.
- 3. Columns, doorways, enclosing walls, or partitions, built-in cabinets, and locations where cutouts are required in carpet tiles.
- 4. Carpet tile type, color, and dye lot.
- 5. Type of subfloor.
- 6. Type of installation.
- 7. Pattern of installation.
- 8. Pattern type, location, direction, and starting point.
- 9. Pile direction.
- 10. Seam locations, types, and methods.
- 11. Type of cushion.
- 12. Type, color, and location of insets and borders.
- 13. Type, color, and location of edge, transition, and other accessory strips.
- 14. Transition details to other flooring materials.

D. Samples: For each of the following products and for each color and texture required. Prepare Samples from the same material to be used for the Work. Label each Sample with manufacturer's name, material description, color, pattern, and designation indicated on Drawings and in schedules.

- 1. Carpet Tile: Full-size Sample.
- 2. Exposed Edge, Transition, and Other Accessory Stripping: 12-inch- (300-mm-) long Samples.

- E. Product Schedule: For carpet tile. Use same designations indicated on Drawings.
- F. Sustainability: Provide the Statement of the Achievement Level the carpet has attained for **[Bronze, 28 to 36]** **[Silver, 37 to 51]** **[Gold, 52 to 70]** points, based on specific Sustainable Attribute Performance for all product stages according to ANSI/NSF 140.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Product Test Reports: For carpet tile, for tests performed by a qualified testing agency.
- C. Sample Warranty: For special warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For carpet tiles to include in maintenance manuals. Include the following:
 - 1. Methods for maintaining carpet tile, including cleaning and stain-removal products and procedures and manufacturer's recommended maintenance schedule.
 - 2. Precautions for cleaning materials and methods that could be detrimental to carpet tile.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Carpet Tile: Full-size units equal to **[five (5)]** **<Insert number>** percent of amount installed for each type indicated, but not less than **10 sq. yd.** (8.3 sq. m).

1.8 QUALITY ASSURANCE

- A. Installer Qualifications: An experienced installer who is certified by the International Certified Floorcovering Installers Association at the **[Commercial II]** **[Master II]** **<Insert description>** certification level.
- B. Single-Source Responsibility: Obtain each type of carpet from one source and by a single manufacturer.

- C. Fire-Test-Response Ratings: Where indicated, provide carpet tile identical to those of assemblies tested for fire response according to NFPA 253 by a qualified testing agency.
- D. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
 - 1. Build mockups at locations and in sizes shown on Drawings, and if not indicated, as directed by DEN Project Manager.
 - 2. Notify DEN Project Manager one (1) week in advance of the dates and times when mockups will be constructed.
 - 3. Demonstrate the proposed range of aesthetic effects and workmanship.
 - 4. Obtain DEN Project Manager's approval of mockups before start of final unit of Work.
 - 5. Retain and maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
 - 6. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Comply with CRI 104.
- B. Deliver materials to Project site in original factory wrappings and containers, labeled with identification of manufacturer, brand name, and lot number.
- C. Store materials on-site in original undamaged packages, inside well-ventilated area protected from weather, moisture, soilage, extreme temperatures, and humidity. Lay flat, with continuous blocking off ground.

1.10 FIELD CONDITIONS

- A. Comply with CRI 104 for temperature, humidity, and ventilation limitations.
- B. Environmental Limitations: Do not deliver or install carpet tiles until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at occupancy levels during the remainder of the construction period.
- C. Do not install carpet tiles over concrete slabs until slabs have cured and are sufficiently dry to bond with adhesive and concrete slabs have pH range recommended by carpet tile manufacturer, and not less than the following requirements:
 - 1. Subfloor Moisture Conditions: Moisture emission rate of not more than 3 lb/1000 sq. ft./24 hours (14.6 kg/1000 sq. m/24 hours) when tested by calcium chloride moisture test in compliance with CRI 104, 6.2.1, with subfloor temperatures not less than 55oF (12.7oC).
 - 2. Subfloor Alkalinity Conditions: A pH range of 5 to 9 when subfloor is wetted with potable water and phydron paper is applied.

- D. Where demountable partitions or other items are indicated for installation on top of carpet tiles, install carpet tiles before installing these items.

1.11 WARRANTY

- A. Special Warranty for Carpet Tiles: Manufacturer agrees to repair or replace components of carpet tile installation that fail in materials or workmanship within specified warranty period.
1. Warranty does not include deterioration or failure of carpet tile due to unusual traffic, failure of substrate, vandalism, or abuse.
 2. Failures include, but are not limited to, more than 10 percent edge raveling, snags, runs, **[dimensional stability,] [excess static discharge,] [loss of tuft bind strength,]** loss of face fiber, **<Insert failure characteristic>** and delamination.
 3. Warranty Period: Minimum **[ten (10)] <Insert number>** years from date of Substantial Completion.
- B. CONSTRUCTION WASTE MANAGEMENT
1. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 CARPET TILE **<Insert drawing designation>**

- A. Products: Subject to compliance with requirements, provide one of the following:
1. **<Insert manufacturer's name; product name or designation>**.
 2. or approved equal.
- B. Color: **[Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
- C. Pattern: **[Match DEN Project Manager's samples] <Insert pattern>**.
- D. Fiber Content: **[100 percent nylon 6, 6] [100 percent nylon 6] [100 percent polypropylene] [100 percent wool] [80 percent wool; 20 percent nylon 6, 6] [80 percent wool; 20 percent nylon 6] <Insert percentage>**.
- E. Fiber Type: **<Insert proprietary fiber type>**.
- F. Pile Characteristic: **[Level-loop] [Cut] [Cut-and-loop] <Insert construction>** pile.
- G. Yarn Twist: **<Insert TPI (TPCM)>**.

- H. Yarn Count: <Insert count>.
- I. Density: <Insert oz./cu. yd. (g/cu. cm)>.
- J. Pile Thickness: <Insert inches (mm)> for finished carpet tile[according to ASTM D 6859].
- K. Stitches: <Insert stitches per inch (mm)>.
- L. Gage: <Insert ends per inch (mm)>.
- M. Surface Pile Weight: <Insert oz./sq. yd. (g/sq. m)>.
- N. Total Weight: <Insert oz./sq. yd. (g/sq. m)> for finished carpet tile.
- O. Primary Backing/Backcoating: [Manufacturer's standard composite materials] [PVC] [Fiberglass-reinforced PVC] [Fiberglass-reinforced amorphous resin] [Reinforced polyurethane composite cushion] [Reinforced polyurethane composite] [Reinforced thermoplastic copolymer] <Insert specific primary backing materials; consult manufacturers>.
- P. Secondary Backing: [Manufacturer's standard material] <Insert specific secondary backing material>.
- Q. Backing System: <Insert proprietary name>.
- R. Size: [18 by 18 inches (457 by 457 mm)] [24 by 24 inches (610 by 610 mm)] [18 by 36 inches (457 by 914 mm)] [36 by 36 inches (914 by 914 mm)] <Insert dimensions>.
- S. Applied Soil-Resistance Treatment: [Manufacturer's standard material] <Insert treatment>.
- T. Antimicrobial Treatment: [Manufacturer's standard material] <Insert treatment>.
- U. Performance Characteristics: As follows:
1. Appearance Retention Rating: [Moderate traffic, 2.5] [Heavy traffic, 3.0] [Severe traffic, 3.5] <Insert number> minimum according to ASTM D 7330.
 2. Critical Radiant Flux Classification: Not less than [0.45 W/sq. cm] [0.22 W/sq. cm].
 3. Dry Breaking Strength: Not less than 100 lbf (445 N) according to ASTM D 2646.
 4. Tuft Bind: Not less than [3 lbf (13 N)] [5 lbf (22 N)] [6.2 lbf (28 N)] [8 lbf (36 N)] [10 lbf (45 N)] <Insert value> according to ASTM D 1335.
 5. Delamination: Not less than [3.5 lbf/in. (15 N/mm)] [4 lbf/in. (18 N/mm)] <Insert value> according to ASTM D 3936.
 6. Dimensional Tolerance: Within 1/32 inch (0.8 mm) of specified size dimensions, as determined by physical measurement.
 7. Dimensional Stability: 0.2 percent or less according to ISO 2551 (Aachen Test).
 8. Resistance to Insects: Comply with AATCC 24.
 9. Noise Reduction Coefficient (NRC): <Insert NRC> according to ASTM C 423.
 10. Colorfastness to Crocking: Not less than 4, wet and dry, according to AATCC

165.

11. Colorfastness to Light: Not less than 4 after [40] [60] <Insert number> AFU (AATCC fading units) according to AATCC 16, Option E.
12. Antimicrobial Activity: Not less than 2-mm halo of inhibition for gram-positive bacteria, not less than 1-mm halo of inhibition for gram-negative bacteria, and no fungal growth, according to AATCC 174.
13. Electrostatic Propensity: Less than [3.5] [2] <Insert number> kV according to AATCC 134.
14. Emissions: Provide carpet tile that complies with testing and product requirements of CRI's "Green Label Plus" program.
15. Emissions: Provide carpet tile that complies with the product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.2 INSTALLATION ACCESSORIES

- A. Concrete-Slab Primer: Nonstaining type as recommended by [**Carpet manufacturer**] [**Carpet cushion manufacturer.**]
- B. Trowelable Leveling and Patching Compounds: Latex-modified, hydraulic-cement-based formulation provided or recommended by carpet tile manufacturer.
- C. Adhesives: Water-resistant, mildew-resistant, nonstaining, pressure-sensitive type to suit products and subfloor conditions indicated, that complies with flammability requirements for installed carpet tile and is recommended by carpet tile manufacturer for releasable installation.
 1. Adhesives shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 2. Adhesives shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- D. Metal Edge/Transition Strips: Extruded aluminum with [mill] <Insert finish> finish of profile and width shown, of height required to protect exposed edge of carpet, and of maximum lengths to minimize running joints.
- E. Extruded or molded vinyl or rubber, colors selected by DEN Project Manager from standard colors available within the industry.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with

requirements for maximum moisture content, alkalinity range, installation tolerances, and other conditions affecting carpet tile performance. Examine carpet tile for type, color, pattern, and potential defects.

- B. Verify that subfloors and conditions are satisfactory for carpet installation and comply with requirements specified in this Section and those of the carpet manufacturer.
- C. Concrete Subfloors: Verify that concrete slabs comply with ASTM F 710 and the following:
 - 1. Slab substrates are dry and free of curing compounds, sealers, hardeners, and other materials that may interfere with adhesive bond. Determine adhesion and dryness characteristics by performing bond and moisture tests recommended by carpet tile manufacturer.
 - 2. Subfloor finishes comply with requirements specified in Section 033000 "Cast-in-Place Concrete" for slabs receiving carpet tile.
 - 3. Subfloors are free of cracks, ridges, depressions, scale, and foreign deposits.
- D. For wood subfloors, verify the following:
 - 1. Underlayment over subfloor complies with requirements specified in Section 061000 "Rough Carpentry."
 - 2. Underlayment surface is free of irregularities and substances that may interfere with adhesive bond or show through surface.
- E. For metal subfloors, verify the following:
 - 1. Underlayment surface is free of irregularities and substances that may interfere with adhesive bond or show through surface.
- F. For painted subfloors, verify the following:
 - 1. Perform bond test recommended in writing by adhesive manufacturer.
- G. For raised access flooring systems, verify the following:
 - 1. Access floor substrate is compatible with carpet tile and adhesive if any.
 - 2. Underlayment surface is flat, smooth, evenly planed, tightly jointed, and free of irregularities, gaps greater than [1/8 inch (3 mm)] **<Insert dimension>**, protrusions more than 1/32 inch (0.8 mm), and substances that may interfere with adhesive bond or show through surface.
- H. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Comply with carpet manufacturer's installation recommendations to prepare substrates indicated to receive carpet installation.
- B. Examine surfaces to receive carpeting for holes, debris, or other defects that will

- adversely affect the execution and quality of Work. Do not proceed until conditions are satisfactory.
- C. Allow concrete surfaces to cure a minimum of 30 days.
 - D. Do not install carpeting until masonry **[and drywall] [and plastering] [is] [are]** complete.
 - E. Install carpeting prior to installation of demountable or movable partitions, fixtures, or telephone and electrical pedestal floor outlets.
 - F. Install carpet within allowable temperature range stated by manufacturer.
 - G. Level subfloor within 1/4 inch in 10 feet (6 mm in 3 m), noncumulative, in all directions. Sand or grind protrusions, bumps, and ridges. Patch and repair cracks and rough areas. Fill depressions.
 - H. Use leveling and patching compounds to fill cracks, holes, and depressions in subfloor as recommended by the carpet manufacturer.
 - I. Remove subfloor coatings, including curing compounds, and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone.
 - J. Broom or vacuum clean subfloors to be covered with carpet. Following cleaning, examine subfloors for moisture, alkaline salts, carbonation, or dust.
 - K. Concrete-Subfloor Preparation: Apply concrete-slab primer, according to manufacturer's directions, where recommended by carpet manufacturer.
 - L. Resilient-Flooring Substrate Preparation: Replace missing pieces of existing resilient flooring or patch to level. Cut out peaked seams and fill with latex underlayment as recommended by manufacturer. Repair depressions with material recommended by carpet manufacturer..
 - M. General: Comply with CRI 104, Section 6.2, "Site Conditions; Floor Preparation," and with carpet tile manufacturer's written installation instructions for preparing substrates indicated to receive carpet tile installation.
 - N. Use trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, depressions, and protrusions in substrates. Fill or level cracks, holes and depressions **1/8 inch (3 mm)** wide or wider and protrusions more than **1/32 inch (0.8 mm)** unless more stringent requirements are required by manufacturer's written instructions.
 - O. Remove coatings, including curing compounds, and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, without using solvents. Use mechanical methods recommended in writing by carpet tile manufacturer.
 - P. Clean metal substrates of grease, oil, soil and rust, and prime if directed by adhesive manufacturer. Rough sand painted metal surfaces and remove loose paint. Sand

aluminum surfaces, to remove metal oxides, immediately before applying adhesive.

- Q. Broom and vacuum clean substrates to be covered immediately before installing carpet tile.

3.3 INSTALLATION

- A. General: Comply with CRI 104, Section 14, "Carpet Modules," and with carpet tile manufacturer's written installation instructions.
- B. Installation Method: **[As recommended in writing by carpet tile manufacturer] [Glue down; install every tile with full-spread, releasable, pressure-sensitive adhesive] [Partial glue down; install periodic tiles with releasable, pressure-sensitive adhesive] [Free lay; install carpet tiles without adhesive].**
- C. Maintain dye lot integrity. Do not mix dye lots in same area.
- D. Cut and fit carpet tile to butt tightly to vertical surfaces, permanent fixtures, and built-in furniture including cabinets, pipes, outlets, edgings, thresholds, and nosings. Bind or seal cut edges as recommended by carpet tile manufacturer.
- E. Where demountable partitions or other items are indicated for installation on top of finished carpet floor, install carpet before installation of these items.
- F. Extend carpet tile into toe spaces, door reveals, closets, open-bottomed obstructions, removable flanges, alcoves, and similar openings.
- G. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on finish flooring as marked on subfloor. Use nonpermanent, nonstaining marking device.
- H. Install pattern parallel to walls and borders.
- I. Stagger joints of carpet tiles so carpet tile grid is offset from access flooring panel grid. Do not fill seams of access flooring panels with carpet adhesive; keep seams free of adhesive.

3.4 CLEANING AND PROTECTION

- A. Perform the following operations immediately after installing carpet tile:
1. Remove excess adhesive, seam sealer, and other surface blemishes using cleaner recommended by carpet tile manufacturer.
 2. Remove yarns that protrude from carpet tile surface.
 3. Vacuum carpet tile using commercial machine with face-beater element.
 4. Vacuum carpet, and clean if necessary, just prior to acceptance by Owner.
- B. Protect installed carpet tile to comply with CRI 104, Section 16, "Protecting Indoor Installations."

- C. Protect carpet tile against damage from construction operations and placement of equipment and fixtures during the remainder of construction period. Use protection methods indicated or recommended in writing by carpet tile manufacturer.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 096813

SECTION 096816 - SHEET CARPETING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Tufted carpet.
2. Woven carpet.
3. Carpet cushion.
4. **<Insert type>**

- B. Related Requirements:

1. Section 024119 "Selective Structure Demolition" for removing existing floor coverings.
2. **[Section 096519 "Resilient Tile Flooring"] [Section 096513 "Resilient Base and Accessories"]** for resilient wall base and accessories installed with carpet.
3. Section 096813 "Tile Carpeting."

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]<Insert location>**.

1. Review methods and procedures related to carpet installation including, but not limited to, the following:
 - a. Review delivery, storage, and handling procedures.
 - b. Review ambient conditions and ventilation procedures.
 - c. Review subfloor preparation procedures.
 - d. **<Insert agenda items>**.

1.4 ACTION SUBMITTALS

- A. Product Data: For the following, including installation recommendations for each type of substrate:
1. Carpet: For each type indicated. Include manufacturer's written data on physical characteristics, durability, fire-test response characteristics, static performance, and fade resistance.
 2. Carpet Cushion: For each type indicated. Include manufacturer's written data on physical characteristics and durability.
 3. Submit methods of installation for each type of substrate.
 4. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
1. Product Data for Credit EQ 4.3:
 - a. For carpet, documentation indicating compliance with testing and product requirements of CRI's "Green Label Plus" program.
 - b. For carpet cushion, documentation indicating compliance with testing and product requirements of CRI's "Green Label" program.
 - c. For installation adhesive, including printed statement of VOC content.
 2. LEED Requirements:
 - a. Products supplied under this section shall meet the requirements of LEED for:
 - b. Low Emitting Materials Carpet.
 - c. Low Emitting Adhesives, Sealants, and Primers.
 - d. Rapidly Renewable Materials.
 - e. Regional Materials.
 - f. Recycled Content.
 - g. Construction Waste Management.
- C. Shop Drawings: Show the following:
1. Existing flooring materials to be removed.
 2. Existing flooring materials to remain.
 3. Columns, doorways, enclosing walls, or partitions, built-in cabinets, and locations where cutouts are required in carpet.
 4. Carpet type, color, and dye lot.
 5. Type of cushion.
 6. Locations where dye lot changes occur.
 7. Seam locations, types, and methods.
 8. Type of subfloor.
 9. Type of installation.
 10. Pattern type, repeat size, location, direction, and starting point.
 11. Pile direction.
 12. Type, color, and location of insets and borders.
 13. Type, color, and location of edge, transition, and other accessory strips.

14. Transition details to other flooring materials.
15. Type of carpet cushion.

- D. Samples: For each of the following products and for each color and texture required. Prepare Samples from the same material to be used for the Work. Label each Sample with manufacturer's name, material description, color, pattern, and designation indicated on Drawings and in schedules.
1. Carpet: **12-inch-** (300-mm-) square Sample.
 2. Exposed Edge, Transition, and Other Accessory Stripping: **12-inch-** (300-mm-) long Samples.
 3. Carpet Cushion: **6-inch-** (150-mm-) square Sample.
 4. Carpet Seam: **6-inch** (150-mm) Sample.
 5. Mitered Carpet Border Seam: **12-inch-** (300-mm-) square Sample. Show carpet pattern alignment.
- E. Product Schedule: For carpet[**and carpet cushion**]. Use same designations indicated on Drawings.
- F. Sustainability: Provide the Statement of the Achievement Level the carpet has attained for [**Bronze, 28 to 36**] [**Silver, 37 to 51**] [**Gold, 52 to 70**] points, based on specific Sustainable Attribute Performance for all product stages according to ANSI/NSF 140.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer.
- B. Product Test Reports: For carpet[**and carpet cushion**], for tests performed by a qualified testing agency.
- C. Sample Warranties: For special warranties.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For carpet to include in maintenance manuals. Include the following:
 1. Methods for maintaining carpet, including cleaning and stain-removal products and procedures and manufacturer's recommended maintenance schedule.
 2. Precautions for cleaning materials and methods that could be detrimental to carpet[**and carpet cushion**].
 3. Methods for maintaining carpet cushion, including manufacturer's recommended frequency for maintaining carpet.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Carpet: Full-width rolls equal to **[five (5)] <Insert number>** percent of amount installed for each type indicated, but not less than **10 sq. yd.** (8.3 sq. m).
 2. Deliver usable scraps of carpet to Owner's designated storage space, properly packaged and identified. Usable scraps are defined to include roll ends of less than 9'0" length, and pieces of more than 3 square foot area and more than 8 inches wide. Dispose of smaller pieces as "construction waste."

1.8 QUALITY ASSURANCE

- A. Installer Qualifications: An experienced Installer who is certified by the International Certified Floorcovering Installers Association at the **[Commercial II] [Master II] <Insert description>** certification level.
- B. Single-Source Responsibility: Obtain each type of carpet from one source and by a single manufacturer.
- C. Fire-Test-Response Ratings: Where indicated, provide carpet[**and carpet cushion**] identical to those of assemblies tested for fire response per NFPA 253 by a qualified testing agency.
1. Provide carpet with the following fire-test-response characteristics as determined by testing identical products per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify carpet with appropriate markings of applicable testing and inspecting agency.
 - a. Surface Flammability: Passes CPSC 16 CFR, Part 1630.
 - b. Flame Spread: 25 or less per ASTM E84.
 - c. Smoke Developed: 450 or less per ASTM E84.
 2. Carpet Cushion Fire-Test-Response Characteristics: Provide carpet cushion with the following fire-test-response characteristics as determined by testing identical products per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify carpet cushion with appropriate markings of applicable testing and inspecting agency.
 - a. Surface Flammability: Passes CPSC 16 CFR, Part 1630.
 - b. Flame Spread: 25 or less per ASTM E84.
 - c. Smoke Developed: 450 or less per ASTM E84.
- D. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.

1. Build mockups at locations and in sizes shown on Drawings, and if not indicated, as directed by DEN Project Manager.
2. Notify DEN Project Manager one (1) week in advance of the dates and times when mockups will be constructed.
3. Demonstrate the proposed range of aesthetic effects and workmanship.
4. Obtain DEN Project Manager's approval of mockups before start of final unit of Work.
5. Retain and maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
6. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Comply with CRI 104.
- B. Deliver materials to Project site in original factory wrappings and containers, labeled with identification of manufacturer, brand name, and lot number.
- C. Store materials on-site in original undamaged packages, inside well-ventilated area protected from weather, moisture, soilage, extreme temperatures, and humidity. Lay flat, with continuous blocking off ground.

1.10 FIELD CONDITIONS

- A. Comply with CRI 104 for temperature, humidity, and ventilation limitations.
- B. Environmental Limitations: Do not deliver or install carpet[**and carpet cushion**] until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at occupancy levels during the remainder of the construction period.
- C. Do not install carpet[**and carpet cushion**] over concrete slabs until slabs have cured, are sufficiently dry to bond with adhesive, and have pH range recommended by carpet manufacturer, and not less than the following requirements:
 1. Subfloor Moisture Conditions: Moisture emission rate of not more than 3 lb/1000 sq. ft./24 hours (14.6 kg/1000 sq. m/24 hours) when tested by calcium chloride moisture test in compliance with CRI 104, 6.2.1, with subfloor temperatures not less than 55 deg F (12.7 deg C).
 2. Subfloor Alkalinity Conditions: A pH range of 5 to 9 when subfloor is wetted with potable water and phydron paper is applied.

- D. Where demountable partitions or other items are indicated for installation on top of carpet, install carpet before installing these items.

1.11 WARRANTY

- A. Special Warranty for Carpet: Manufacturer agrees to repair or replace components of carpet installation that fail in materials or workmanship within specified warranty period.

1. Warranty does not include deterioration or failure of carpet due to unusual traffic, failure of substrate, vandalism, or abuse.
2. Failures include, but are not limited to, more than 10 percent loss of face fiber, edge raveling, snags, runs, **[loss of tuft bind strength,] [excess static discharge,] <Insert failure characteristic>** and delamination.
3. Warranty Period: Minimum **[ten (10)] <Insert number>** years from date of Substantial Completion.

- B. Special Warranty for Carpet Cushion: Manufacturer agrees to repair or replace components of carpet cushion installation that fail in materials or workmanship within specified warranty period.

1. Warranty includes consequent removal and replacement of carpet and accessories.
2. Warranty does not include deterioration or failure of carpet cushion due to unusual traffic, failure of substrate, vandalism, or abuse.
3. Failure includes, but is not limited to, permanent indentation or compression.
4. Warranty Period: Minimum **[ten (10)] <Insert number>** years from date of Substantial Completion.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 TUFTED CARPET <Insert designation>

- A. Products: Subject to compliance with requirements, provide one of the following:

1. **<Insert manufacturer's name; product name or designation>**.
2. or approved equal.

- B. Color: **[Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.

- C. Pattern: **[Match DEN Project Manager's samples]** <Insert pattern>.
- D. Fiber Content: **[100 percent nylon 6, 6]** **[100 percent nylon 6]** **[100 percent polypropylene]** <Insert fiber and content by percentage>.
- E. Fiber Type: <Insert proprietary fiber type>.
- F. Pile Characteristic: **[Level-loop]** **[Cut]** **[Cut-and-loop]** **[Multilevel-loop]** **[Level tip shear]** **[Random shear]** **[Frieze]** **[Sculptured]** <Insert characteristic> pile.
- G. Yarn Twist: <Insert twist in TPI (TPCM)>.
- H. Yarn Count: <Insert yarn count>.
- I. Density: <Insert oz./cu. yd. (g/cu. cm)>.
- J. Pile Thickness: <Insert inches (mm)> for finished carpet **[per ASTM D 6859]**.
- K. Stitches: <Insert stitches per inch (mm)>.
- L. Gage: <Insert gage in ends per inch (mm)>.
- M. Face Weight: <Insert oz./sq. yd. (g/sq. m)>.
- N. Total Weight: <Insert oz./sq. yd. (g/sq. m)> for finished carpet.
- O. Primary Backing: **[Manufacturer's standard material]** **[Woven polypropylene]** **[Nonwoven, polypropylene or polyester]** <Insert specific primary backing material>.
- P. Secondary Backing: **[Manufacturer's standard material]** **[Woven polypropylene]** **[Nonwoven, polypropylene or polyester]** **[Woven jute]** **[Fiberglass]** <Insert specific secondary backing material>.
- Q. Backcoating: **[Manufacturer's standard material]** **[SBR latex]** **[PVC]** **[Thermoplastic copolymer]** <Insert backcoating; consult manufacturers>.
- R. Backing System: <Insert proprietary name>.
- S. Width: **[12 feet (3.7 m)]** **[6 feet (1.8 m)]** **[13.5 feet (4.1 m)]** **[15 feet (4.6 m)]** <Insert dimension>.
- T. Applied Soil-Resistance Treatment: **[Manufacturer's standard material]** <Insert treatment>.
- U. Antimicrobial Treatment: **[Manufacturer's standard material]** <Insert treatment>.
- V. Performance Characteristics: As follows:
1. Appearance Retention Rating: **[Moderate traffic, 2.5]** **[Heavy traffic, 3.0]** **[Severe traffic, 3.5]** <Insert number> minimum per ASTM D 7330.

2. Critical Radiant Flux Classification: Not less than **[0.45 W/sq. cm]** **[0.22 W/sq. cm]**.
3. Dry Breaking Strength: Not less than **100 lbf** (445 N) per ASTM D 2646.
4. Tuft Bind: Not less than **[3 lbf (13 N)] [5 lbf (22 N)] [6.2 lbf (28 N)] [8 lbf (36 N)] [10 lbf (45 N)]** **<Insert value>** per ASTM D 1335.
5. Delamination: Not less than **[2.5 lbf/in. (12 N/mm)] [3.5 lbf/in. (15 N/mm)] [4 lbf/in. (18 N/mm)]** **<Insert value>** per ASTM D 3936.
6. Resistance to Insects: Comply with AATCC 24.
7. Noise Reduction Coefficient (NRC): **<Insert NRC>** per ASTM C 423.
8. Colorfastness to Crocking: Not less than 4, wet and dry, per AATCC 165.
9. Colorfastness to Light: Not less than 4 after **[40] [60]** **<Insert number>** AFU (AATCC fading units) per AATCC 16, Option E.
10. Antimicrobial Activity: Not less than 2-mm halo of inhibition for gram-positive bacteria; not less than 1-mm halo of inhibition for gram-negative bacteria; no fungal growth; per AATCC 174.
11. Electrostatic Propensity: Less than **[3.5] [2]** **<Insert number>** kV per AATCC 134.
12. Emissions: Provide carpet that complies with testing and product requirements of CRI's "Green Label Plus" program.
13. Emissions: Provide carpet that complies with the product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.2 WOVEN CARPET **<Insert designation>**

- A. Products: Subject to compliance with requirements, provide one of the following:
 1. **<Insert manufacturer's name; product name or designation>**.
 2. or approved equal.
- B. Color: **[Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range]** **<Insert color>**.
- C. Pattern: **[Match DEN Project Manager's samples]** **<Insert pattern>**.
- D. Fiber Content: **[100 percent wool] [80 percent wool; 20 percent nylon 6, 6] [80 percent wool; 20 percent nylon 6]** **<Insert fiber and content by percentage>**.
 1. Document that **[5 to 20] [85 to 100]** **<Insert number>** percent of the material feedstock for carpet is composed of biobased or recycled materials according to ANSI/NSF 140.
- E. Face Construction: **[Axminster] [Wilton] [Velvet]** **<Insert construction>**.
- F. Pile Characteristic: **[Level-loop] [Cut] [Cut-and-loop]** pile.
- G. Yarn Twist: **<Insert twist in TPI (TPCM)>**.

- H. Yarn Count: <Insert yarn count>.
- I. Density: <Insert oz./cu. yd. (g/cu. cm)>.
- J. Pile Thickness: <Insert inches (mm)> for finished carpet[per ASTM D 6859].
- K. Rows: <Insert number of lengthwise tufts per inch (mm)>.
- L. Pitch: <Insert number of rows in 27 inches (686 mm)>.
- M. Face Weight: <Insert oz./sq. yd. (g/sq. m)>.
- N. Total Weight: <Insert oz./sq. yd. (g/sq. m)> for finished carpet.
- O. Backing: [Manufacturer's standard.] [As follows:]
1. Chain Warp: <Insert material>.
 2. Stuffer Warp: <Insert material>.
 3. Shot or Fill Weft: <Insert material>.
 4. Backcoating: <Insert backcoating>.
- P. Applied Soil-Resistance Treatment: [Manufacturer's standard material] <Insert treatment>.
- Q. Antimicrobial Treatment: [Manufacturer's standard material] <Insert treatment>.
- R. Performance Characteristics: As follows:
1. Appearance Retention Rating: [Moderate traffic, 2.5] [Heavy traffic, 3.0] [Severe traffic, 3.5] <Insert number> minimum per ASTM D 7330.
 2. Critical Radiant Flux Classification: Not less than [0.45 W/sq. cm] [0.22 W/sq. cm].
 3. Dry Breaking Strength: Not less than 100 lbf (445 N) per ASTM D 2646.
 4. Resistance to Insects: Comply with AATCC 24.
 5. Noise Reduction Coefficient (NRC): <Insert NRC> per ASTM C 423.
 6. Colorfastness to Crocking: Not less than 4, wet and dry, per AATCC 165.
 7. Colorfastness to Light: Not less than 4 after [40] [60] <Insert number> AFU (AATCC fading units) per AATCC 16, Option E.
 8. Electrostatic Propensity: Less than [3.5] [2] <Insert number> kV per AATCC 134.
 9. Emissions: Provide carpet that complies with testing and product requirements of CRI's "Green Label Plus" program.
 10. Emissions: Provide carpet that complies with the product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.3 CARPET CUSHION <Insert designation>

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. <Insert manufacturers' names>.
2. or approved equal.

B. Traffic Classification: CCC [**Class I, moderate**] [**Class II, heavy**] [**Class III, extra-heavy**] traffic.

C. Fiber Cushion: [**Rubberized hair, mothproofed and sterilized**] [**Rubberized jute, mothproofed and sterilized**] [**Synthetic**] [**Resinated, recycled textile**].

1. Weight: <Insert oz./sq. yd. (g/sq. m)>.
2. Thickness: <Insert inches (mm)> plus 5 percent maximum.
3. Density: <Insert lb/cu. ft. (kg/cu. m)>.

D. Rubber Cushion: [**Flat**] [**Rippled waffle**] [**Textured flat**] [**Reinforced**].

1. Weight: <Insert oz./sq. yd. (g/sq. m)>.
2. Thickness: <Insert inches (mm)> plus 5 percent maximum.
3. Compression Resistance: <Insert lb/sq. in. (kg/sq. mm)> at [**25**] [**65**] percent per ASTM D 3676.
4. Density: <Insert lb/cu. ft. (kg/cu. m)>.

E. Polyurethane-Foam Cushion: [**Grafted prime**] [**Densified**] [**Bonded**] [**Mechanically frothed**].

1. Compression Force Deflection at 65 Percent: <Insert lb/sq. in. (kg/sq. mm) of **polymer density**> per ASTM D 3574.
2. Thickness: <Insert inches (mm)>.
3. Density: <Insert lb/cu. ft. (kg/cu. m)>.

F. Performance Characteristics: As follows:

1. Critical Radiant Flux Classification: Not less than [**0.45 W/sq. cm**] [**0.22 W/sq. cm**].
2. Noise Reduction Coefficient (NRC): <Insert **NRC**> per ASTM C 423.
3. Emissions: Provide carpet cushion that complies with testing and product requirements of CRI's "Green Label" program.
4. Emissions: Provide carpet cushion that complies with the product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.4 INSTALLATION ACCESSORIES

A. Concrete-Slab Primer: Nonstaining type as recommended by [**Carpet manufacturer**] [**Carpet cushion manufacturer**].

- B. Trowelable Leveling and Patching Compounds: Latex-modified, hydraulic-cement-based formulation provided or recommended by carpet[**cushion**] manufacturer.
- C. Adhesives: Water-resistant, mildew-resistant, nonstaining type to suit products and subfloor conditions indicated, that complies with flammability requirements for installed carpet and is recommended or provided by [**carpet manufacturer**] [**carpet and carpet cushion manufacturers**].
 - 1. Use adhesives with VOC content not more than 50 g/L when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - 2. Use adhesives that comply with the product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- D. Tackless Carpet Stripping: Water-resistant plywood, in strips as required to match cushion thickness and that comply with CRI 104, Section 12.2.
- E. Seam Adhesive: Hot-melt adhesive tape or similar product recommended by carpet manufacturer for sealing and taping seams and butting cut edges at backing to form secure seams and to prevent pile loss at seams.
- F. Metal Edge/Transition Strips: Extruded aluminum with [**mill**] <**Insert finish**> finish of profile and width shown, of height required to protect exposed edge of carpet, and of maximum lengths to minimize running joints.
- G. Extruded or molded vinyl or rubber, colors selected by DEN Project Manager from standard colors available within the industry.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for maximum moisture content, alkalinity range, installation tolerances, and other conditions affecting carpet performance. Examine carpet for type, color, pattern, and potential defects.
- B. Verify that subfloors and conditions are satisfactory for carpet installation and comply with requirements specified in this Section and those of the [**Carpet manufacturer**] [**Carpet cushion manufacturer**].
- C. Concrete Subfloors: Verify that concrete slabs comply with ASTM F 710 and the following:
 - 1. Slab substrates are dry and free of curing compounds, sealers, hardeners, and other materials that may interfere with adhesive bond. Determine adhesion and

- dryness characteristics by performing bond and moisture tests recommended by carpet[**cushion**] manufacturer.
2. Subfloor finishes comply with requirements specified in Section 033000 "Cast-in-Place Concrete" for slabs receiving carpet.
 3. Subfloors are free of cracks, ridges, depressions, scale, and foreign deposits.
- D. For wood subfloors, verify the following:
1. Underlayment over subfloor complies with requirements specified in Section 061000 "Rough Carpentry."
 2. Underlayment surface is free of irregularities and substances that may interfere with adhesive bond or show through surface.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Comply with carpet manufacturer's installation recommendations to prepare substrates indicated to receive carpet installation.
- B. Examine surfaces to receive carpeting for holes, debris, or other defects that will adversely affect the execution and quality of Work. Do not proceed until conditions are satisfactory.
- C. Allow concrete surfaces to cure a minimum of 30 days.
- D. Do not install carpeting until masonry [**and drywall**] [**and plastering**] [**is**] [**are**] complete.
- E. Install carpeting prior to installation of demountable or movable partitions, fixtures, or telephone and electrical pedestal floor outlets.
- F. Install carpet within allowable temperature range stated by manufacturer.
- G. Level subfloor within 1/4 inch in 10 feet (6 mm in 3 m), noncumulative, in all directions. Sand or grind protrusions, bumps, and ridges. Patch and repair cracks and rough areas. Fill depressions.
- H. Use leveling and patching compounds to fill cracks, holes, and depressions in subfloor as recommended by the following:
 1. [**Carpet manufacturer.**] [**Carpet cushion manufacturer.**]
- I. Remove subfloor coatings, including curing compounds, and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone.
- J. Broom or vacuum clean subfloors to be covered with carpet. Following cleaning, examine subfloors for moisture, alkaline salts, carbonation, or dust.
- K. Concrete-Subfloor Preparation: Apply concrete-slab primer, according to

manufacturer's directions, where recommended by [**Carpet manufacturer**] [**Carpet cushion manufacturer**].

- L. Resilient-Flooring Substrate Preparation: Replace missing pieces of existing resilient flooring or patch to level. Cut out peaked seams and fill with latex underlayment as recommended by manufacturer. Repair depressions with material recommended by [**Carpet manufacturer**] [**Carpet cushion manufacturer**].
- M. General: Comply with CRI 104, Section 7.3, "Site Conditions; Floor Preparation," and with carpet manufacturer's written installation instructions for preparing substrates.
- N. Use trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, depressions, and protrusions in substrates. Fill or level cracks, holes and depressions **1/8 inch** (3 mm) wide or wider, and protrusions more than **1/32 inch** (0.8 mm), unless more stringent requirements are required by manufacturer's written instructions.
- O. Remove coatings, including curing compounds, and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, without using solvents. Use mechanical methods recommended in writing by carpet [**cushion**] manufacturer.
- P. Broom and vacuum clean substrates to be covered immediately before installing carpet.

3.3 INSTALLATION

- A. Comply with CRI 104 and [**carpet manufacturer's**] [**carpet and carpet cushion manufacturers**] written installation instructions for the following:
 - 1. Direct-Glue-Down Installation: Comply with CRI 104, Section 9, "Direct Glue-Down Installation."
 - 2. Double-Glue-Down Installation: Comply with CRI 104, Section 10, "Double-Glue-Down Installation."
 - 3. Carpet with Attached-Cushion Installation: Comply with CRI 104, Section 11, "Attached-Cushion Installations."
 - 4. Preapplied Adhesive Installation: Comply with CRI 104, Section 11.4, "Pre-Applied Adhesive Systems (Peel and Stick)."
 - 5. Hook-and-Loop Installation: Comply with CRI 104, Section 11.5, "Hook and Loop Technology."
 - 6. Stretch-in Installation: Comply with CRI 104, Section 12, "Stretch-in Installations."
 - 7. Stair Installation: Comply with CRI 104, Section 13, "Carpet on Stairs" for [**stretch-in**] [**glue-down**] installation.
- B. Comply with carpet manufacturer's written recommendations and Shop Drawings for seam locations and direction of carpet; maintain uniformity of carpet direction and lay of pile. At doorways, center seams under the door in closed position.
- C. Do not bridge building expansion joints with carpet.

- D. Cut and fit carpet to butt tightly to vertical surfaces, permanent fixtures, and built-in furniture including cabinets, pipes, outlets, edgings, thresholds, and nosings. Bind or seal cut edges as recommended by carpet manufacturer.
- E. Where demountable partitions or other items are indicated for installation on top of finished carpet floor, install carpet before installation of these items.
- F. Extend carpet into toe spaces, door reveals, closet, open-bottomed obstructions, removable flanges, alcoves, and similar openings.
- G. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on finish flooring as marked on subfloor. Use nonpermanent, nonstaining marking device.
- H. Install pattern parallel to walls and borders to comply with CRI 104, Section 15, "Patterned Carpet Installations" and with carpet manufacturer's written recommendations.
- I. Comply with carpet cushion manufacturer's written recommendations. [**Install carpet cushion seams at 90-degree angle with carpet seams.**]

3.4 CLEANING AND PROTECTING

- A. Perform the following operations immediately after installing carpet:
 - 1. Remove excess adhesive, seam sealer, and other surface blemishes using cleaner recommended by carpet manufacturer.
 - 2. Remove yarns that protrude from carpet surface.
 - 3. Vacuum carpet using commercial machine with face-beater element.
 - 4. Vacuum carpet, and clean if necessary, just prior to acceptance by Owner.
- B. Protect installed carpet to comply with CRI 104, Section 16, "Protecting Indoor Installations."
- C. Protect carpet against damage from construction operations and placement of equipment and fixtures during the remainder of construction period. Use protection methods indicated or recommended in writing by carpet manufacturer [**and carpet cushion manufacturer**] [**and carpet adhesive manufacturer**] [**and carpet cushion and adhesive manufacturers**].

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 096816

SECTION 096900 - ACCESS FLOORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Access-flooring panels.
 - 2. Understructure.
 - 3. Floor panel coverings.
- B. Related Requirements:
 - 1. Section 233600 "Air Terminal Units" for variable-air-volume diffusers.
 - 2. Section 260526 "Grounding and Bonding for Electrical Systems" for connection to ground of access-flooring understructure.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ALLOWANCES

- A. Cutouts in floor panels are part of **<Insert name of allowance>**.
- B. Service outlets are part of **<Insert name of allowance>**.

1.4 UNIT PRICES

- A. Work of this Section is affected by **[cutouts in floor panels] [and] [service outlets]**.

1.5 COORDINATION

- A. Coordinate location of mechanical and electrical work in underfloor cavity to prevent interference with access-flooring pedestals.
- B. Mark pedestal locations on subfloor using a grid to enable mechanical and electrical work to proceed without interfering with access-flooring pedestals.

1.6 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]<Insert location>**.
1. Review connection with mechanical and electrical systems.
 2. Review requirements related to sealing the plenum.
 3. Review procedures for keeping underfloor space clean.

1.7 ACTION SUBMITTALS

- A. Product Data: For each type of product.
1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
1. Product Data for Credit IEQ 4.1: For pedestal-installation adhesives, documentation including printed statement of VOC content.
 2. Product Data for Credit IEQ 4.3: For pedestal-installation adhesives, documentation including printed statement of VOC content.
 3. Product Data for Credit IEQ 4.3: For floor panel coverings, documentation from an independent testing agency indicating compliance with the FloorScore Standard.
 4. Product Data for Credit IEQ 4.4: For particleboard used in steel-encapsulated, wood-core panels, documentation indicating that product contains no urea formaldehyde.
 5. Laboratory Test Reports for Credit IEQ 4: For **[access-flooring system with integral finishes] [pedestal-installation adhesives] [and] [particleboard used in steel-encapsulated, wood-core panels]**, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: Include layout of access-flooring system and relationship to adjoining Work based on field-verified dimensions.
1. Details and sections with descriptive notes indicating materials, finishes, fasteners, typical and special edge conditions, accessories, and understructures.
- D. Samples:
1. Floor Covering: Full-size units for each color and texture specified.
 2. Exposed Metal Accessories: Approximately **10 inches** (250 mm) in length.
 3. One complete full-size floor panel, pedestal, and understructure unit for each type of access-flooring system required.
- E. Samples for Initial Selection: For each type of product and exposed finish.

- F. Samples for Verification: For the following products:
1. Floor Covering: Full-size units.
 2. Exposed Metal Accessories: Approximately **10 inches** (250 mm) in length.
 3. One complete full-size floor panel, pedestal, and understructure unit for each type of access-flooring system required.

1.8 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Product Certificates: For each type of access-flooring system.
- C. Product Test Reports: For each type of flooring material and exposed finish, for tests performed by a qualified testing agency.
- D. Seismic Design Calculations: For seismic design of access-flooring systems, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- E. Preconstruction Test Reports: For preconstruction adhesive field test.

1.9 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.10 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Flooring Panels: **<Insert number>**.
 2. Pedestals: **<Insert number>**.
 3. Stringers: **<Insert number>**.

1.11 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
- B. Mockups: Build mockups to verify selections made under Sample submittals to demonstrate aesthetic effects and to set quality standards for materials and execution.

1. Build mockup of typical access-flooring assembly as shown on Drawings. Size to be an area no fewer than **[five]** <Insert number> floor panels in length by **[five]** <Insert number> floor panels in width.
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.12 PRECONSTRUCTION TESTING

- A. Preconstruction Testing Service: **[Owner will engage]** a qualified testing agency to perform preconstruction testing on field mockups.

1. <Insert sizes and configurations of assemblies>.
2. Use personnel, materials, and methods of construction that will be used at Project site.
3. Notify DEN Project Manager **[seven]** <Insert number> days in advance of the dates and times when laboratory mockups will be tested.

- B. Preconstruction Adhesive Field Test: Before installing pedestals, field test their adhesion to subfloor surfaces by doing the following:

1. In areas representative of each subfloor surface, set typical pedestal assemblies in same adhesive and use methods required for the completed Work.
2. Allow test installation to cure for manufacturer's recommended cure time, with a pressure of **25 lbf** (111 N) applied vertically to pedestals during this period.
3. After curing, apply lateral load against a straight steel bar inserted **2 inches** (51 mm) into pedestal stems. Measure the force needed to cause adhesive failure of pedestal base.
4. Remove and discard failed pedestals, and clean pedestals of adhered residue.
5. Proceed with installation only after tests show compliance with performance requirement specified for pedestals' capability to resist overturning moment.

1.13 FIELD CONDITIONS

- A. Environmental Limitations: Do not install access flooring until spaces are enclosed, **[subfloor has been sealed,]** ambient temperature is between **50 and 90 deg F** (10 and 32 deg C), and relative humidity is not less than 20 and not more than 70 percent.

1.14 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Access flooring shall withstand the effects of earthquake motions determined according to **[ASCE/SEI 7]** **<Insert requirement>**.
- B. Structural Performance: Provide access-flooring systems capable of complying with the following performance requirements according to testing procedures in Cisca's "Recommended Test Procedures for Access Floors":
1. Concentrated Loads: **[900 lbf (4003 N)] [1000 lbf (4448 N)] [1250 lbf (5560 N)] [1500 lbf (6672 N)] [2000 lbf (8896 N)] <Insert value>** with the following deflection and permanent set:
 - a. Top-Surface Deflection: **[0.10 inch (2.54 mm)] <Insert dimension>**.
 - b. Permanent Set: **[0.010 inch (0.25 mm)] <Insert dimension>**.
 2. Ultimate Loads: **[1800 lbf (8006 N)] [2000 lbf (8896 N)] [2500 lbf (11 121 N)] [3000 lbf (13 345 N)] [4000 lbf (17 793 N)] <Insert value>**.
 3. Rolling Loads: With local or overall deformation not to exceed **0.040 inch (1.02 mm)**.
 - a. Cisca Wheel 1: 10 passes at **[400 lbf (1779 N)] [500 lbf (2224 N)] [600 lbf (2669 N)] [800 lbf (3559 N)] [1000 lbf (4448 N)] [1200 lbf (5338 N)] [1250 lbf (5560 N)] [2000 lbf (8896 N)] <Insert value>**.
 - b. Cisca Wheel 2: 10,000 passes at **[400 lbf (1779 N)] [500 lbf (2224 N)] [600 lbf (2669 N)] [800 lbf (3559 N)] [1000 lbf (4448 N)] [1250 lbf (5560 N)] [1750 lbf (7784 N)] [2000 lbf (8896 N)] <Insert value>**.
 4. Stringer Load Test: **[75 lbf (334 N)] [225 lbf (1001 N)] [350 lbf (1557 N)] [450 lbf (2002 N)] <Insert value>** at center of span with a permanent set not to exceed **0.010 inch (0.25 mm)**.
 5. Pedestal Axial Load Test: **[5000 lbf (22 240 N)] [6000 lbf (26 690 N)] <Insert value>**.
 6. Pedestal Overturning Moment Test: **[1000 lbf x inches (113 N x meters)] <Insert values>**.
 7. Uniform Load Test: **[200 lbf/sq. ft. (9.6 kPa)] [250 lbf/sq. ft. (12.0 kPa)] [300 lbf/sq. ft. (14.4 kPa)] [400 lbf/sq. ft. (19.2 kPa)] [500 lbf/sq. ft. (23.9 kPa)] <Insert value>** with a maximum top-surface deflection not to exceed **0.040 inch (1.02 mm)** and a permanent set not to exceed **0.010 inch (0.25 mm)**.
 8. Drop Impact Load Test: **[75 lb (34.0 kg)] [100 lb (45.5 kg)] [125 lb (56.7 kg)] [150 lb (68.0 kg)] [175 lb (79.4 kg)] <Insert value>**.
- C. Fire Performance:
1. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

- a. Flame-Spread Index: **[25]** <Insert value> or less.
 - b. Smoke-Developed Index: **[50]** **[450]** <Insert value> or less.
2. Combustion Characteristics: ASTM E 136.
- D. Low-Emitting Materials: Flooring system shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.2 MANUFACTURERS

- A. Source Limitations: Obtain access-flooring system from single source from single manufacturer.

2.3 FLOOR PANELS

- A. Floor Panels, General: Provide modular panels interchangeable with other field panels without disturbing adjacent panels or understructure.

1. Size: Nominal **[24 by 24 inches]** (610 by 610 mm) <Insert dimensions>.
2. Attachment to Understructure: **[Bolted]** **[By gravity]**.
3. One-to-One Carpet Tile: Fabricate panels to accept one-to-one carpet tile.

- B. Cementitious-Core Steel Panels: Fabricated from cold-rolled steel sheet, with the die-cut flat top sheet and die-formed and stiffened bottom pan welded together, and with metal surfaces protected against corrosion by manufacturer's standard factory-applied finish. Fully grout internal spaces of completed units with manufacturer's standard cementitious fill.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. ASM Modular Systems, Inc.
- b. Bergvik North America, Inc.
- c. Camino Modular Systems, Inc.
- d. Computer Environments, Inc.
- e. Haworth, Inc.
- f. Tate Access Floors, Inc.
- g. <Insert manufacturer's name>.
- h. or approved equal.

- C. Wood-Core Steel Panels: Fabricated with **1-inch-** (25-mm-) thick particleboard core[, **made without urea formaldehyde**], **that complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers,"**] laminated to top and bottom steel face sheets, with metal surfaces protected against corrosion by manufacturer's standard factory-applied finish, and with a flame-spread index of 25 or less according

to ASTM E 84. Provide core edges enclosed with upturned, die-formed, bottom-sheet edge or with perimeter steel channel welded to top sheet and welded or bonded to bottom sheet.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ASM Modular Systems, Inc.
 - b. Bergvik North America, Inc.
 - c. Camino Modular Systems, Inc.
 - d. Computer Environments, Inc.
 - e. Tate Access Floors, Inc.
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.

- D. Unfilled Steel Panels: Fabricated from cold-rolled steel sheet, with the die-cut flat top sheet and die-formed and stiffened bottom pan welded together, and with metal surfaces protected against corrosion by manufacturer's standard factory-applied finish.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ASM Modular Systems, Inc.
 - b. Camino Modular Systems, Inc.
 - c. Computer Environments, Inc.
 - d. Haworth, Inc.
 - e. Tate Access Floors, Inc.
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.

 2. Solid Panels: Flat, solid top surface.
 3. Perforated Panels: Perforated top surface with **[holes] [slots]** of number, spacing, and size standard with manufacturer to produce a nominal open area of **[23] [24] [25] <Insert number>** percent.**[Provide mechanical dampers with each panel unit.]**
 - a. Quantity: **[As shown on Drawings] <Insert number>**.
 - b. Finish: **[Manufacturer's standard] [To match solid panels] <Insert finish>**.

 4. Grates: Grating ribs arranged in manufacturer's standard pattern to produce a nominal open area of **[45] [50] [56] <Insert number>** percent.**[Provide mechanical dampers with each panel unit.]**
 - a. Quantity: **[As shown on Drawings] <Insert number>**.
 - b. Finish: **[Manufacturer's standard] [To match solid panels] <Insert finish>**.

- E. Exposed-Concrete-Surface Panels: Fabricated with bottom pan that is die formed from metallic-coated steel sheet and filled with lightweight concrete that is reinforced and bonded to pan by shear ties.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Haworth, Inc.
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.
- F. Aluminum Panels: Fabricated from manufacturer's standard aluminum alloy with equivalent strength and corrosion resistance of Alloy UNS No. A03830 or UNS No. A03840 according to ASTM B 85.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ASM Modular Systems, Inc.
 - b. Computer Environments, Inc.
 - c. Tate Access Floors, Inc.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
 2. Solid Panels: Flat, solid surface on top and symmetrical crossing ribs on bottom; edge machined after casting to specified tolerances.
 3. Perforated Panels: Perforated top surface with **[holes] [slots]** of number, spacing, and size standard with manufacturer to produce a nominal open area of **[16.5] <Insert number>** percent.[**Provide mechanical dampers with each panel unit.**]
 - a. Quantity: **[As shown on Drawings] <Insert number>**.
 - b. Finish: **[Manufacturer's standard] [To match solid panels] <Insert finish>**.
 4. Grates: Grating ribs arranged in manufacturer's standard pattern to produce a nominal open area of **[55] <Insert number>** percent.[**Provide mechanical dampers with each panel unit.**]
 - a. Quantity: **[As shown on Drawings] <Insert number>**.
 - b. Finish: **[Manufacturer's standard] [To match solid panels] <Insert finish>**.
 5. Epoxy Finish: **[Conductive]** epoxy powder coating with a minimum average thickness of **2.5 mils** (0.064 mm) and in color selected from manufacturer's full range.
 6. Plated Finish: Nickel-chrome electrodeposited plating, **0.000005-inch** (0.000127-mm) chrome over **0.0008-inch** (0.02-mm) nickel, without copper or brass strike, to produce complete coverage over significant surfaces with a matte metallic appearance.

2.4 UNDERSTRUCTURE

- A. Pedestals: Assembly consisting of base, column with provisions for height adjustment, and head (cap); made of **[steel]** **[aluminum]**.
1. Provide pedestals designed for use in seismic applications.
 2. Base: Square or circular base with not less than **[16 sq. in. (103 sq. cm)]** **<Insert dimension>** of bearing area.
 3. Column: Of height required to bring finished floor to elevations indicated. Weld to base plate.
 4. Provide vibration-proof leveling mechanism for making and holding fine adjustments in height over a range of not less than **[2 inches (51 mm)]** **<Insert dimension>** and for locking at a selected height, so deliberate action is required to change height setting and prevent vibratory displacement.
 5. Head: Designed to support the panel system indicated.
 - a. Provide sound-deadening pads or gaskets at contact points between heads and panels.
 - b. Bolted Assemblies: Provide head with four holes aligned with holes in floor panels for bolting of panels to pedestals.
- B. Stringer Systems: Modular **[steel]** **[aluminum]** stringer systems designed to bolt to pedestal heads and form a grid pattern. Protect steel components with manufacturer's standard galvanized or corrosion-resistant paint finish.
1. Continuous Gaskets: At contact surfaces between panel and stringers to deaden sound, seal off the underfloor cavity from above, and maintain panel alignment and position.

2.5 FLOOR PANEL COVERINGS

- A. FloorScore Compliance: Floor panel coverings shall comply with requirements of FloorScore Standard.
- B. High-Pressure Plastic Laminate: Factory applied, NEMA LD 3, High-Wear type, **[Grade HDH]** **[Grade HDM]**; fabricated in one piece to cover each panel face with **[integral trim]** **[applied perimeter plastic]** edging.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Formica Corporation.
 - b. Panolam Industries.
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.
 2. Electrical Resistance: Average no less than 1 megohm and no more than 20,000 megohms when installed floor coverings are surface-to-ground tested according to NFPA 99.

3. Colors, Textures, and Patterns: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert colors, textures, and patterns>**.
- C. Conductive High-Pressure Plastic Laminate: Factory applied, NEMA LD 3, High-Wear type, **[Grade HDH] [Grade HDM]**; fabricated in one piece to cover each panel face with **[integral trim] [applied perimeter plastic]** edging.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Panolam Industries.
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.
 2. Electrical Resistance: Average no less than 25,000 ohms and no more than 1 megohm when installed floor coverings are surface-to-ground tested according to ASTM F 150 with 100-V applied voltage.
 3. Colors, Textures, and Patterns: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert colors, textures, and patterns>**.
- D. Static-Dissipative Vinyl Tile: Factory applied, ASTM F 1700, Class I (Monolithic Vinyl Tile), Type A (Smooth Surface), fabricated in one piece to cover panel face with **[monolithic] [applied perimeter plastic]** edging.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Flexco, Inc.
 - b. VPI Corporation.
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.
 2. Electrical Resistance: Average no less than 1 megohm and no more than 1000 megohms when installed floor coverings are surface-to-ground tested according to ASTM F 150 with 100-V applied voltage.
 3. Colors, Textures, and Patterns: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert colors, textures, and patterns>**.
- E. Conductive Vinyl Tile: Factory applied, ASTM F 1700, Class I (Monolithic Vinyl Tile), Type A (Smooth Surface), fabricated in one piece to cover panel face with **[monolithic] [applied perimeter plastic]** edging.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Flexco, Inc.
 - b. VPI Corporation.
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.
2. Electrical Resistance: Average no less than 25,000 ohms and no more than 1 megohm when installed floor coverings are surface-to-ground tested according to ASTM F 150 with 100-V applied voltage.
 3. Colors, Textures, and Patterns: **[As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert colors, textures, and patterns>**.

2.6 FABRICATION

A. Fabrication Tolerances:

1. Size: Plus or minus **0.020 inch** (0.50 mm) of required size.
2. Squareness: Plus or minus **0.015 inch** (0.38 mm) between diagonal measurements across top of panel.
3. Flatness: Plus or minus **0.035 inch** (0.89 mm), measured on a diagonal on top of panel.

B. Panel Markings: Clearly and permanently mark floor panels on their underside with panel type and concentrated-load rating.

C. Bolted Panels: Provide panels with holes drilled in corners to align precisely with threaded holes in pedestal heads and to accept countersunk screws with heads flush with top of panel.

1. Captive Fasteners: Provide fasteners held captive to panels.

D. Cutouts: Fabricate cutouts in floor panels for cable penetrations and service outlets. Provide reinforcement or additional support, if needed, to make panels with cutouts comply with structural performance requirements.

1. Number, Size, Shape, and Location: **[As indicated.] [As specified in Section 012100 "Allowances" and Section 012200 "Unit Prices."]**
2. Grommets: Where indicated, fit cutouts with manufacturer's standard grommets; or, if size of cutouts exceeds maximum grommet size available, trim edge of cutouts with manufacturer's standard plastic molding with tapered top flange.**[Furnish removable covers for grommets.]**
3. Provide foam-rubber pads for sealing annular space formed in cutouts by cables.

2.7 ACCESSORIES

A. Adhesives: Manufacturer's standard adhesive for bonding pedestal bases to subfloor.

1. Adhesive shall have a VOC content of 70 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 2. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- B. Post-Installed Anchors: For anchoring pedestal bases to subfloor, provide **[two] [four]** post-installed **[expansion anchors] [threaded concrete screws]** made from carbon-steel components, zinc plated to comply with ASTM B 633, Class Fe/Zn 5 (5 microns) for Class SC 1 (Mild), with the capability to sustain, without failure, a load equal to **[1.5] <Insert number>** times the loads imposed by pedestal overturning moment on fasteners, as determined by testing according to ASTM E 488, conducted by a qualified independent testing agency.
- C. Service Outlets: Standard UL-listed and -labeled assemblies, for recessed mounting flush with top of floor panels; for power, communication, and signal services; and complying with the following requirements:
1. Structural Performance: Cover capable of supporting a **[300-lbf (1334-N)] [800-lbf (3559-N)] [1000-lbf (4448-N)]** concentrated load.
 2. Cover and Box Type: **[Hinged polycarbonate cover with opening for passage of cables when cover is closed and including frame and steel box or formed-steel plate for mounting electrical receptacles] [Grommet with twist-close cover and including steel junction box for electrical receptacle with provision for telephone connectors and signal cables] <Insert type>**.
 3. Location: In center of panel quadrant unless otherwise indicated.
 4. Receptacles and Wiring: Electrical receptacles and wiring for service outlets are specified elsewhere.
 5. Receptacles and Wiring: Equip each service outlet with power receptacles to comply with the following requirements:
 - a. Type of Receptacle: Heavy-duty duplex, two-pole, three-wire grounding, 20 A, 125 V, NEMA WD 6, Configuration 5-20R unless otherwise indicated.
 - b. Number of Receptacles for Outlet: **[One] [Two] [Four] <Insert number>**.
 - c. Wiring Method: Factory wired for hardwiring in field with armored cable, containing three insulated No. 12 AWG solid-copper conductors, terminated with a **[6-inch- (152-mm-)] <Insert dimension>** long pigtail.
 - d. Wiring Method: Power-in connectors, built into outlet housing, of type to fit power-in and power-out connectors of branch-circuit cables supplied with building electrical system.
- D. Occupant Adjustable Diffusers: Manufacturer's standard round diffusers, **[4 inches (102 mm)] [8 inches (203 mm)] <Insert dimension>** in diameter, formed from **[aluminum] [polycarbonate plastic]** to produce a removable one-piece unit complete with diffuser, manually adjustable flow regulator, dirt and dust receptacle, trim ring, and underfloor compression mounting ring; precisely fitted in factory-prepared openings of standard field panels and complying with the following requirements:

1. Air-Distribution Characteristics: [100 cfm (47 L/s)] <Insert value> at [0.096-inch (24-Pa)] <Insert value> static pressure and a maximum noise criterion rating of [15] <Insert number>.
 2. Structural Performance: Capable of supporting a [600-lbf (2669-N)] <Insert value> concentrated load.
 3. Fire-Test-Response Characteristics: Classified 94V-0 according to UL 94.
- E. Floor Grilles: Standard load-bearing grilles formed from [aluminum] [polycarbonate plastic] to produce removable one-piece unit precisely fitted in factory-prepared openings of standard field panels, [with adjustable/removable] [without] dampers and complying with the following requirements:
1. Air-Distribution Characteristics: 468 cfm at 0.10-inch wg (221 L/s at 25-Pa) static pressure.
 2. Structural Performance: Capable of supporting a 1000-lbf (4448-N) concentrated load.
 3. Fire-Test-Response Characteristics: Classified 94V-0 according to UL 94.
- F. Plenum-Wall Brush Grommets: Self-sealing cable brush grommet with [4-by-13-inch (102-by-330-mm) rectangular] [3-inch (76-mm) round] [5-inch (127-mm) round] <Insert dimension(s)> usable area for passage of power and signal cables through plenum walls. Frame of [ABS plastic] [aluminum] with passageway consists of intermediate layer of flexible EPDM rubber and interwoven nylon filaments.[Provide units with plastic cable tray for support of cables and protection of wallboard.]
- G. Cavity Dividers: Provide manufacturer's standard metal dividers located where indicated to divide underfloor cavities.
- H. Closures: Where underfloor cavity is not enclosed by abutting walls or other construction, provide metal-closure plates with [manufacturer's standard finish] <Insert finish>.
- I. Ramps: Manufacturer's standard ramp construction of width and slope indicated, but not steeper than 1:12, with raised-disc or textured rubber or vinyl-tile floor coverings, and of same materials, performance, and construction requirements as access flooring.
- J. Steps: Provide steps of size and arrangement indicated with floor coverings to match access flooring. Apply nonslip aluminum nosings to treads unless otherwise indicated.
- K. Railings: Standard extruded-aluminum railings at ramps and open-sided perimeter of access flooring where indicated. Include handrail, intermediate rails, posts, brackets, end caps, wall returns, wall and floor flanges, plates, and anchorages where required.
1. Provide railings that comply with structural performance requirements specified in [Section 055213 "Pipe and Tube Railings"] [Section 057300 "Decorative Metal Railings."]
- L. Panel Lifting Device: Panel manufacturer's standard portable lifting device for each type of panel required[for each computer room].

- M. Perimeter Support: Where indicated, provide manufacturer's standard method for supporting panel edge and forming transition between access flooring and adjoining floor coverings at same level as access flooring.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, with Installer and manufacturer's representative present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
 - 1. Verify that substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, foreign deposits, and debris that might interfere with attachment of pedestals.
 - 2. Verify that concrete floor sealer and finish have been applied and cured.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Lay out floor panel installation to keep the number of cut panels at floor perimeter to a minimum. Avoid using panels cut to less than **6 inches** (152 mm).
- B. Locate each pedestal, complete any necessary subfloor preparation, and vacuum subfloor to remove dust, dirt, and construction debris before beginning installation.

3.3 INSTALLATION

- A. Install access-flooring system and accessories under supervision of access-flooring manufacturer's authorized representative to produce a rigid, firm installation that complies with performance requirements and is free of instability, rocking, rattles, and squeaks.
- B. Adhesive Attachment of Pedestals: Set pedestals in adhesive, according to access-flooring manufacturer's written instructions, to provide full bearing of pedestal base on subfloor.
- C. Mechanical Attachment of Pedestals: Attach pedestals to subfloor with post-installed mechanical anchors.
- D. Adjust pedestals to permit top of installed panels to be set flat, level, and to proper height.
- E. Stringer Systems: Secure stringers to pedestal heads according to access-flooring manufacturer's written instructions.

- F. Install flooring panels securely in place, properly seated with panel edges flush. Do not force panels into place.
 - G. Scribe perimeter panels to provide a close fit with adjoining construction with no voids greater than **1/8 inch** (3 mm) where panels abut vertical surfaces.
 - 1. To prevent dusting, seal cut edges of steel-encapsulated, wood-core panels with sealer recommended in writing by panel manufacturer.
 - H. Cut and trim access flooring and perform other dirt-or-debris-producing activities at a remote location or as required to prevent contamination of subfloor under already-installed access flooring.
 - I. Grounded Flooring Access Panel Systems: Ground flooring system as recommended by manufacturer and as needed to comply with performance requirements for electrical resistance of floor coverings.
 - 1. Panel-to-Understructure Resistance: Not more than 10 ohms as measured without floor coverings.
 - J. Underfloor Dividers: Scribe and install underfloor-cavity dividers to closely fit against subfloor surfaces, and seal with mastic.
 - K. Closures: Scribe closures to closely fit against subfloor and adjacent finished-floor surfaces. Set in mastic and seal to maintain plenum effect within underfloor cavity.
 - L. Clean dust, dirt, and construction debris caused by floor installation, and vacuum subfloor area as installation of floor panels proceeds.
 - M. Seal underfloor air cavities at construction seams, penetrations, and perimeter to control air leakage, according to manufacturer's written instructions.
 - N. Install access flooring without change in elevation between adjacent panels and within the following tolerances:
 - 1. Plus or minus [**1/16 inch** (1.5 mm)] [**1/8 inch** (3 mm)] **<Insert dimension>** in any **10-foot** (3-m) distance.
 - 2. Plus or minus [**1/8 inch** (3 mm)] [**1/4 inch** (6.5 mm)] **<Insert dimension>** from a level plane over entire access-flooring area.
- 3.4 PROTECTION
- A. Prohibit traffic on access flooring for 24 hours and removal of floor panels for [**72**] **<Insert number>** hours after installation to allow pedestal adhesive to set.
 - B. After completing installation, vacuum access flooring and cover with continuous sheets of reinforced paper or plastic. Maintain protective covering until time of Substantial Completion.

- C. Replace access-flooring panels that are stained, scratched, or otherwise damaged or that do not comply with specified requirements.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 096900

SECTION 097200 - WALL COVERINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Vinyl wall covering.
2. Woven glass-fiber wall covering.
3. Textile wall covering.
4. Heavy-duty synthetic textile wall covering.
5. Wood-veneer wall covering.
6. Wallpaper.

- B. Owner-Furnished Materials: **<Insert wall-covering materials>**.

- C. Related Sections:

1. **[Section 099113 "Interior Painting"]** Section **<Insert Section number>** "**<Insert Section title>**" for **[priming wall surfaces] [primers, coatings, and paint for woven glass-fiber wall coverings]**.
2. Section 099300 "Staining and Transparent Finishing" for field-applied finishes for wood-veneer wall coverings.

- D. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include data on physical characteristics, durability, fade resistance, and flame-resistance characteristics.

1. Include data substantiating that materials comply with requirements.

- B. LEED Submittals:

1. Certificates for **[Credit MR 6] [Credit MR 7]**: Chain-of-custody certificates indicating that wood-veneer wall coverings comply with forest certification requirements. Include documentation that manufacturer is certified for chain of

2. Product Data for Credit IEQ 4.1: For adhesives, documentation including printed statement of VOC content.
 3. Product Data for Credit IEQ 4.2: For paints and coatings, documentation including printed statement of VOC content.
 4. Laboratory Test Reports for Credit IEQ 4: For **[wall covering systems] [adhesives] [and] [paints and coatings]**, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: Show location and extent of each wall-covering type. Indicate **[pattern placement,] [veneer matching,]** seams and termination points.
- D. Samples for Initial Selection: For each type of wall covering indicated.
- E. Samples for Verification: Full width by **[36-inch- (914-mm-)] <Insert dimension>** long section of wall covering.
1. Sample from same print run or dye lot to be used for the Work, with specified **[treatments] [paint]** applied. **[Show complete pattern repeat.]** Mark top and face of fabric.
 2. Sample from same flitch to be used for the Work, with specified finish applied.
- F. Product Schedule: For wall coverings. **[Use same designations indicated on Drawings.]**

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified testing agency.
- B. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for wall covering.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For wall coverings to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Wall-Covering Materials: For each type, full-size units equal to **[5]** **<Insert number>** percent of amount installed.

1.7 QUALITY ASSURANCE

- A. Fire-Test-Response Characteristics: As determined by testing identical wall coverings applied with identical adhesives to substrates according to test method indicated below by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 1. Surface-Burning Characteristics: As follows, per ASTM E 84:
 - a. Flame-Spread Index: **[25]** **<Insert value>** or less.
 - b. Smoke-Developed Index: **[50]** **[450]** **<Insert value>** or less.
 2. Fire-Growth Contribution: Textile wall coverings complying with acceptance criteria of UBC Standard 8-2.
 3. Fire-Growth Contribution: Textile wall coverings tested according to **[NFPA 265]** **[NFPA 286]** and complying with test protocol and criteria in the 2003 IBC.
- B. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
 1. Build mockups for each type of wall covering on each substrate required. Comply with requirements in ASTM F 1141.
 2. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion and approved by DEN Project Manager.

1.8 PROJECT CONDITIONS

- A. Environmental Limitations: Do not deliver or install wall coverings until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above ceilings is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
 1. Wood-Veneer Wall Coverings: Condition spaces for not less than 48 hours before installation.
- B. Lighting: Do not install wall covering until **[a permanent level of lighting]** **<Insert requirement>** is provided on the surfaces to receive wall covering.
- C. Ventilation: Provide continuous ventilation during installation and for not less than the time recommended by wall-covering manufacturer for full drying or curing.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419

"Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Low-Emitting Materials: Wall covering system shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.2 WALL COVERINGS

- A. General: Provide rolls of each type of wall covering from same print run or dye lot.

2.3 VINYL WALL COVERING <Insert drawing designation>

- A. Vinyl Wall-Covering Standards: Provide[**mildew-resistant**] products complying with the following:
1. **[FS CCC-W-408D and]CFFA-W-101-D** for **[Type I, Light] [Type II, Medium] [Type III, Heavy]**-Duty products.
 2. ASTM F 793 for **[peelable] [strippable]** wall coverings that qualify as **[Category I, Decorative Only] [Category II, Decorative with Medium Serviceability] [Category III, Decorative with High Serviceability] [Category IV, Type I, Commercial Serviceability] [Category V, Type II, Commercial Serviceability] [Category VI, Type III, Commercial Serviceability]** products.
 3. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert manufacturer's name; product name or designation>**.
 - b. or approved equal.
- B. Total Weight Excluding Coatings: **<Insert weight>**.
- C. Width: **[27 inches (686 mm)] [54 inches (1372 mm)] <Insert width>**.
- D. Backing: **[Scrim] [Osna burg] [Drill] [Nonwoven]** fabric.
1. Fiber Content: **[Cotton] [Polyester] [Polycotton] [Polyester cellulose] <Insert fiber content>**.
- E. Repeat: **[Random] <Insert horizontal and vertical dimensions of repeat>**.
- F. Stain-Resistant Coating: **<Insert coating manufacturer's name; product name or designation>**.

- G. Colors, Textures, and Patterns: **[Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range].**

2.4 WOVEN GLASS-FIBER WALL COVERING <Insert drawing designation>

A. General:

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. <Insert manufacturer's name; product name or designation>.
 - b. or approved equal.

B. Total Weight: <Insert weight>.

1. Width: [39 inches (991 m)] <Insert width>.

- C. Colors, Textures, and Patterns: **[Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range].**

2.5 TEXTILE WALL COVERING <Insert drawing designation>

- A. Wall-Covering Standard: Provide **[mildew-resistant] [peelable] [strippable]** wall coverings that comply with ASTM F 793 for **[Category IV, Type I, Commercial Serviceability] [Category V, Type II, Commercial Serviceability] [Category VI, Type III, Commercial Serviceability]** products.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. <Insert manufacturer's name; product name or designation>.
 - b. or approved equal.

B. Test Responses:

1. Colorfastness to Wet and Dry Crocking: Passes AATCC 8, Grade 3, minimum.
2. Colorfastness to Light: Passes AATCC 16, Option 1 or 3, Grade 4, minimum, at 40 hours.

C. Total Weight Excluding Coatings: <Insert weight>.

D. Width: <Insert width>.

E. Repeat: **[Random] <Insert horizontal and vertical dimensions of repeat>.**

F. Applied Backing Material: **[Acrylic] [Paper].**

- G. Stain-Resistant Coating: <Insert coating manufacturer's name; product name or designation>.

- H. Colors, Textures, and Patterns: [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**].

2.6 HEAVY-DUTY SYNTHETIC TEXTILE WALL COVERING <Insert drawing designation>

- A. Wall-Covering Standard: Provide[**mildew-resistant**] wall coverings that comply with ASTM F 793 for [**Category IV, Type I, Commercial Serviceability**] [**Category V, Type II, Commercial Serviceability**] [**Category VI, Type III, Commercial Serviceability**] products.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. <Insert manufacturer's name; product name or designation>.
 - b. or approved equal.

- B. Test Responses:

1. Colorfastness to Wet and Dry Crocking: Passes AATCC 8, Class 3, minimum.
2. Colorfastness to Light: Passes AATCC 16A or AATCC 16E, Class 4, minimum, at 40 hours.

- C. Total Weight: <Insert weight>.

- D. Width: [**54 inches** (1372 mm)] [**60 inches** (1524 mm)] <Insert width>.

- E. Colors, Textures, and Patterns: [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**].

2.7 WOOD-VENEER WALL COVERING <Insert drawing designation>

- A. General:

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. <Insert manufacturer's name; product name or designation>.
 - b. or approved equal.

- B. Forest Certification: Fabricate products with wood veneer produced from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."

- C. Sheet Size: [**24 by 96 inches** (610 by 2440 mm)] [**48 by 96 inches** (1220 by 2440 mm)] [**48 by 120 inches** (1220 by 3050 mm)] <Insert dimensions>.

- D. Veneer Construction: [**Single ply veneer**] [**Two veneer plies assembled perpendicular to one another**] <Insert construction>.

- E. Wood Species: [**Red oak**] [**Maple**] [**Cherry**] <Insert species>.

- F. Cut and Figure: **<Insert cut and figure>**.
- G. Veneer Match: **[Book] [Slip] <Insert matching>**.
- H. Sheet Match: **[Running] [Balance] [Center] [Sequence, as indicated] [Blueprint, as indicated]**.
- I. Applied Backing Material: **[Fabric] <Insert material>**.
- J. Finish: **[Factory] [Field]** applied using wall-covering manufacturer's standard **[stain and polyurethane] <Insert type>** system.
 - 1. Colors: **[Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range]**.

2.8 WALLPAPER **<Insert drawing designation>**

- A. Wall-Covering Standard: Provide **[mildew-resistant] [peelable] [strippable]** wallpaper that complies with ASTM F 793 for **[Category II, Decorative with Medium Serviceability] [Category III, Decorative with High Serviceability]** products.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert manufacturer's name; product name or designation>**.
 - b. or approved equal.
- B. Total Weight: **<Insert weight>**.
- C. Width: **[20-1/2 inches (520.7 mm)] [28 inches (711.2 mm)] <Insert width>**.
- D. Repeat: **[Random] <Insert horizontal and vertical dimensions of repeat>**.
- E. Colors, Textures, and Patterns: **[Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range]**.

2.9 ACCESSORIES

- A. Adhesive: Mildew-resistant, nonstaining[, **strippable**] adhesive, for use with specific wall covering and substrate application; as recommended in writing by wall-covering manufacturer.
 - 1. Adhesive shall have VOC content of **[50] <Insert value>** g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - 2. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- B. Primer/Sealer: Mildew resistant, complying with requirements in **[Section 099123]**

"Interior Painting"] Section <Insert Section number> "<Insert Section title>" and recommended in writing by wall-covering manufacturer for intended substrate.

- C. Wall Liner: Nonwoven, synthetic underlayment and adhesive as recommended by wall-covering manufacturer.
- D. Seam Tape: As recommended in writing by wall-covering manufacturer.
- E. Metal Primer: Interior ferrous metal primer complying with [**Section 099123 "Interior Painting"]** Section <Insert Section number> "<Insert Section title>."

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for levelness, wall plumbness, maximum moisture content, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Comply with manufacturer's written instructions for surface preparation.
- B. Clean substrates of substances that could impair bond of wall covering, including dirt, oil, grease, mold, mildew, and incompatible primers.
- C. Prepare substrates to achieve a smooth, dry, clean, structurally sound surface free of flaking, unsound coatings, cracks, and defects.
 - 1. Moisture Content: Maximum of 5 percent on new plaster, concrete, and concrete masonry units when tested with an electronic moisture meter.
 - 2. Plaster: Allow new plaster to cure. Neutralize areas of high alkalinity. Prime with primer as recommended in writing by primer/sealer manufacturer and wall-covering manufacturer.
 - 3. Metals: If not factory primed, clean and apply metal as recommended in writing by primer/sealer manufacturer and wall-covering manufacturer.
 - 4. Gypsum Board: Prime with primer as recommended in writing by primer/sealer manufacturer and wall-covering manufacturer.
 - 5. Painted Surfaces: Treat areas susceptible to pigment bleeding.
- D. Check painted surfaces for pigment bleeding. Sand gloss, semigloss, and eggshell finish with fine sandpaper.
- E. Remove hardware and hardware accessories, electrical plates and covers, light fixture trims, and similar items.

- F. Acclimatize wall-covering materials by removing them from packaging in the installation areas not less than 24 hours before installation.
- G. Install wall liner, with no gaps or overlaps, where required by wall-covering manufacturer. Form smooth wrinkle-free surface for finished installation. Do not begin wall-covering installation until wall liner has dried.

3.3 INSTALLATION

- A. General: Comply with wall-covering manufacturers' written installation instructions applicable to products and applications indicated except where more stringent requirements apply.
- B. Cut wall-covering strips in roll number sequence. Change roll numbers at partition breaks and corners.
- C. Install strips in same order as cut from roll.
- D. Install reversing every other strip.
- E. Install wall covering with no gaps or overlaps, no lifted or curling edges, and no visible shrinkage.
- F. Match pattern **72 inches** (1830 mm) above the finish floor.
- G. Install seams vertical and plumb at least **6 inches** (150 mm) from outside corners and [**3 inches** (75 mm)] [**6 inches** (150 mm)] from inside corners unless a change of pattern or color exists at corner. No horizontal seams are permitted.
- H. Fully bond wall covering to substrate. Remove air bubbles, wrinkles, blisters, and other defects.
- I. Trim edges and seams for color uniformity, pattern match, and tight closure. Butt seams without any overlay or spacing between strips.

3.4 FIELD FINISHING OF WOOD-VENEER WALL COVERINGS

- A. Apply [**wall-covering manufacturer's standard stain and polyurethane**] <Insert **type**> system according to coating manufacturer's written instructions to produce finish that is consistent in color and gloss and matches approved Samples.
- B. Apply no fewer than [**two**] [**three**] finish coats.

3.5 CLEANING

- A. Remove excess adhesive at finished seams, perimeter edges, and adjacent surfaces.
- B. Use cleaning methods recommended in writing by wall-covering manufacturer.

- C. Replace strips that cannot be cleaned.
- D. Reinstall hardware and hardware accessories, electrical plates and covers, light fixture trims, and similar items.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 097200

SECTION 097513 - STONE PANELING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes anchored stone paneling for the following interior applications:
 - 1. Wall paneling.
 - 2. Column facing.
 - 3. Units with carving or inscriptions.
- B. Related Requirements:
 - 1. Section 033000 "Cast-in-Place Concrete" for installing concrete inserts for anchoring stone paneling.
 - 2. Section 042000 "Unit Masonry" for installing masonry inserts for anchoring stone paneling.
 - 3. Section 079200 "Joint Sealants" for sealing expansion joints in stone paneling.
 - 4. Section 093033 "Stone Tiling" for stone wall tile.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]<Insert location>**.

1.4 ACTION SUBMITTALS

- A. Product Data: For each[**variety of stone,**] stone accessory, and manufactured product.
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:

1. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating distance to Project, cost for each regional material, and fraction by weight that is considered regional.
 2. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regionally manufactured[**and regionally extracted and manufactured**] materials. Include statement indicating cost for each regionally manufactured material.
 - a. Include statement indicating location of manufacturer and distance to Project for each regionally manufactured material.
 - b. Include statement indicating location of manufacturer and point of extraction, harvest, or recovery for each raw material used in regionally extracted and manufactured materials. Indicate distance to Project and fraction by weight of each regionally manufactured material that is regionally extracted.
 3. Product Data for Credit IEQ 4.1: For sealants, documentation including printed statement of VOC content.
- C. Laboratory Test Reports for Credit IEQ 4.1: For sealants, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- D. Shop Drawings: Show fabrication and installation details for stone paneling system, including dimensions and profiles of stone units.
1. Show locations and details of joints both within stone paneling system and between stone paneling system and other finish materials.
 2. Show locations and details of anchors, including locations of supporting construction.
 3. Show direction of veining, grain, or other directional pattern.
 4. Include large-scale shaded drawings of [**decorative surfaces**] [**and**] [**inscriptions**].
- E. Samples for Initial Selection: For joint materials involving color selection.
- F. Samples for Verification:
1. For each stone type indicated, in sets of Samples not less than **12 inches** (300 mm) square. Include [**two**] [**three**] [**four**] [**five**] <Insert number> or more Samples in each set and show the full range of variations in appearance characteristics in completed Work.
 2. For each color of [**grout**] [**pointing mortar**] [**and**] [**sealant**] required.
 3. For [**carving**] [**and**] [**inscriptions**].
- G. Delegated-Design Submittal: For stone paneling assembly.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For **[Installer]** **[fabricator]** **[professional engineer]**.
- B. Material Test Reports:
 - 1. Stone Test Reports: For **[each]** stone variety proposed for use on Project, by a qualified testing agency, indicating compliance with required physical properties, other than abrasion resistance, according to referenced ASTM standards. Base reports on testing done within previous **[three]** **[five]**<Insert number> years.
 - 2. Sealant Compatibility and Adhesion Test Report: From sealant manufacturer indicating that sealants will not stain or damage stone. Include interpretation of test results and recommendations for primers and substrate preparation needed for adhesion.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For stone paneling to include in maintenance manuals. Include product data for stone-care products used or recommended by Installer and names, addresses, and telephone numbers of local sources for products.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Fabricator Qualifications: Shop that employs skilled workers who custom fabricate stone paneling similar to that required for this Project, and whose products have a record of successful in-service performance.
- B. Installer Qualifications: Fabricator of stone paneling.
- C. Installer Qualifications: A firm or individual experienced in installing stone paneling similar in material, design, and extent to that indicated for this Project, whose work has a record of successful in-service performance.
- D. Mockups: Build mockups to demonstrate aesthetic effects and to set quality standards for fabrication and installation.
 - 1. Build mockup of typical wall area as shown on Drawings.
 - 2. Build mockups for the following kinds of stone paneling:
 - a. Typical stone wall paneling, not less than **72 inches** (1800 mm) long by **96 inches** (2400 mm) high.
 - b. Typical stone wainscot paneling, not less than **72 inches** (1800 mm) long by full wainscot height.
 - c. Typical column facing, one complete column.
 - d. Grouting or pointing of joints.

3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 PRECONSTRUCTION TESTING

- A. Preconstruction Sealant Adhesion and Compatibility Testing: Submit to joint-sealant manufacturers, for compatibility and adhesion testing according to sealant manufacturer's standard testing methods and Section 079200 "Joint Sealants," Samples of materials that will contact or affect joint sealants.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Store and handle stone and related materials to prevent deterioration or damage due to moisture, temperature changes, contaminants, corrosion, breaking, chipping, and other causes.
 1. Lift stone with wide-belt slings; do not use wire rope or ropes that might cause staining. Move stone, if required, using dollies with cushioned wood supports.
 2. Store stone on wood A-frames or pallets with nonstaining, waterproof covers. Arrange to distribute weight evenly and to prevent damage to stone. Ventilate under covers to prevent condensation.
- B. Mark stone units, on surface that will be concealed after installation, with designations used on Shop Drawings to identify individual stone units. Orient markings on vertical panels so that they are right side up when units are installed.
- C. Deliver sealants to Project site in original unopened containers labeled with manufacturer's name, product name and designation, color, expiration period, pot life, curing time, and mixing instructions for multicomponent materials.
- D. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.

1.10 FIELD CONDITIONS

- A. Maintain air and material temperatures to comply with requirements of installation material manufacturers, but not less than 50 deg F (10 deg C) during installation and for seven days after completion.
- B. Field Measurements: Verify dimensions of construction to receive stone paneling by field measurements before fabrication and indicate measurements on Shop Drawings.

1.11 COORDINATION

- A. Coordinate installation of inserts that are to be embedded in concrete or masonry and similar items to be used by stone paneling Installer for anchoring and supporting stone paneling. Furnish setting drawings, templates, and directions for installing such items and deliver to Project site in time for installation.
- B. Time delivery and installation of stone paneling to avoid extended on-site storage and to coordinate with work adjacent to stone paneling.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations for Stone: Obtain[**each variety of**] stone, [**regardless of finish,**] from a single quarry[, **whether specified in this Section or in another Section of the Specifications,**] with resources to provide materials of consistent quality in appearance and physical properties.
 - 1. For stone types that include same list of varieties and sources, provide same variety from same source for each.
 - 2. Make quarried blocks available for examination by DEN Project Manager.
 - 3. Make stone slabs available for examination by DEN Project Manager.
 - a. DEN Project Manager will select aesthetically acceptable slabs[**and will indicate aesthetically unacceptable portions of slabs**].
 - b. Segregate slabs selected for use on Project and mark backs indicating approval.
 - c. Mark and photograph aesthetically unacceptable portions of slabs as directed by DEN Project Manager.
- B. Varieties and Sources: Subject to compliance with requirements, provide stone of varieties and from sources complying with Section 044200 "Exterior Stone Cladding."

2.2 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design stone paneling system.
- B. General: Design stone anchors and anchoring systems according to ASTM C 1242.

C. Seismic Performance: Stone paneling system shall withstand the effects of earthquake motions determined according to **[ASCE/SEI 7]** **<Insert requirement>**.

1. Component Importance Factor: **[1.5]** **[1.0]**.

2.3 GRANITE **<Insert drawing designation>**

A. Material Standard: Comply with ASTM C 615.

B. Regional Materials: Granite shall be fabricated within **500 miles** (800 km) of Project site from stone that has been extracted within **500 miles** (800 km) of Project site.

C. Regional Materials: Granite shall be fabricated within **500 miles** (800 km) of Project site.

D. Description: Uniform, **[fine]** **[medium]**-grained, **[white]** **[pink]** **[gray]** **[black]** **<Insert color>** stone **[without veining]**.

E. Varieties and Sources: Subject to compliance with requirements, provide one of the following:

1. **<Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>**.
2. or approved equal.

F. Cut: **[Vein]** **[Fleuri]**.

1. Orientation of Veining: **[Horizontal]** **[Vertical]** **[As indicated]**.

G. Cut stone from one block or contiguous, matched blocks in which natural markings occur.

H. Finish: **[Polished]** **[Honed]** **[Thermal]** **[As indicated]** **[Match DEN Project Manager's sample]** **<Insert finish>**.

I. Match DEN Project Manager's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.4 LIMESTONE **<Insert drawing designation>**

A. Material Standard: Comply with ASTM C 568.

1. Classification: **[I Low]** **[II Medium]** **[III High]** Density.

B. Regional Materials: Limestone shall be fabricated within **500 miles** (800 km) of Project site from stone that has been extracted within **500 miles** (800 km) of Project site.

C. Regional Materials: Limestone shall be fabricated within **500 miles** (800 km) of Project site.

- D. Description: [**Dolomitic**] [**Oolitic**] [**Shell**] limestone.
- E. Varieties and Sources: Subject to compliance with requirements, provide one of the following:
1. **<Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>.**
 2. or approved equal.
- F. Varieties and Sources: Indiana oolitic limestone quarried in Lawrence, Monroe, or Owen Counties, Indiana.
1. Indiana Oolitic Limestone Grade and Color: [**Select, buff**] [**Select, gray**] [**Standard, buff**] [**Standard, gray**] [**Rustic, buff**] [**Rustic, gray**] [**Variegated**], according to grade and color classification established by ILI.
- G. Cut: [**Vein**] [**Fleuri**].
1. Orientation of Veining: [**Horizontal**] [**Vertical**] [**As indicated**].
- H. Cut stone from one block or contiguous, matched blocks in which natural markings occur.
- I. Finish: [**Smooth**] [**Sand rubbed**] [**Machine tooled, four bats per 1 inch (25 mm)**] [**Machine tooled, six bats per 1 inch (25 mm)**] [**Machine tooled, eight bats per 1 inch (25 mm)**] [**As indicated**] [**Match DEN Project Manager's sample**] **<Insert finish>** [, **matching standard ILI finish**].
- J. Match DEN Project Manager's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.5 MARBLE <Insert drawing designation>

- A. Material Standard: Comply with ASTM C 503[, **Classification I Calcite**] [, **Classification II Dolomite**] [, **Group A**] [, **Group B**] [, **Group C**] [, **Group D**].
- B. Regional Materials: Marble shall be fabricated within **500 miles (800 km)** of Project site from stone that has been extracted within **500 miles (800 km)** of Project site.
- C. Regional Materials: Marble shall be fabricated within **500 miles (800 km)** of Project site.
- D. Description: Uniform, fine- to medium-grained, [**white**] **<Insert color>** stone with only slight veining.
- E. Varieties and Sources: Subject to compliance with requirements, provide one of the following:
1. **<Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>.**
 2. or approved equal.

- F. Cut: **[Vein] [Fleuri]**.
 - 1. Orientation of Veining: **[Horizontal] [Vertical] [As indicated]**.
- G. Cut stone from one block or contiguous, matched blocks in which natural markings occur.
- H. Finish: **[Polished] [Honed] [As indicated] [Match DEN Project Manager's sample] <Insert finish>**.
- I. Match DEN Project Manager's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.6 QUARTZ-BASED STONE <Insert drawing designation>

- A. Material Standard: Comply with ASTM C 616, **[Classification I Sandstone] [Classification II Quartzitic Sandstone] [Classification III Quartzite] [, except for minimum free silica content]**.
- B. Regional Materials: Quartz-based stone shall be fabricated within **500 miles** (800 km) of Project site from stone that has been extracted within **500 miles** (800 km) of Project site.
- C. Regional Materials: Quartz-based stone shall be fabricated within **500 miles** (800 km) of Project site.
- D. Varieties and Sources: Subject to compliance with requirements, provide one of the following:
 - 1. **<Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>**.
 - 2. or approved equal.
- E. Finish: **[Sand rubbed] [Natural cleft] [Thermal] [As indicated] [Match DEN Project Manager's sample] <Insert finish>**.
- F. Match DEN Project Manager's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.7 SERPENTINE <Insert drawing designation>

- A. Material Standard: Comply with ASTM C 1526, **[Classification I Exterior] [Classification II Interior]**.
- B. Regional Materials: Serpentine shall be fabricated within **500 miles** (800 km) of Project site from stone that has been extracted within **500 miles** (800 km) of Project site.
- C. Regional Materials: Serpentine shall be fabricated within **500 miles** (800 km) of Project site.

- D. Varieties and Sources: Subject to compliance with requirements, provide one of the following:
 - 1. **<Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>.**
 - 2. or approved equal.
- E. Cut stone from one block or contiguous, matched blocks in which natural markings occur.
- F. Finish: [**Polished**] [**Honed**] [**As indicated**] [**Match DEN Project Manager's sample**] **<Insert finish>.**
- G. Match DEN Project Manager's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.8 SLATE <Insert drawing designation>

- A. Material Standard: Comply with ASTM C 629, [**Classification I Exterior**] [**Classification II Interior**].
- B. Regional Materials: Slate shall be fabricated within **500 miles (800 km)** of Project site from stone that has been extracted within **500 miles (800 km)** of Project site.
- C. Regional Materials: Slate shall be fabricated within **500 miles (800 km)** of Project site.
- D. Description: [**Black**] [**Blue-black**] [**Gray**] [**Blue-gray**] [**Green**] [**Purple**] [**Mottled purple and green**] [**Red**] slate with a fine, even grain[**and unfading color,**] from clear, sound stock.
- E. Varieties and Sources: Subject to compliance with requirements, provide one of the following:
 - 1. **<Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>.**
 - 2. or approved equal.
- F. Finish: [**Honed**] [**Sand rubbed**] [**Natural cleft**] [**As indicated**] [**Match DEN Project Manager's sample**] **<Insert finish>.**
- G. Match DEN Project Manager's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.9 TRAVERTINE <Insert drawing designation>

- A. Material Standard: Comply with ASTM C 1527, [**Classification I Exterior**] [**Classification II Interior**].

- B. Regional Materials: Travertine shall be fabricated within **500 miles (800 km)** of Project site from stone that has been extracted within **500 miles (800 km)** of Project site.
 - C. Regional Materials: Travertine shall be fabricated within **500 miles (800 km)** of Project site.
 - D. Varieties and Sources: Subject to compliance with requirements, provide one of the following:
 - 1. **<Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>.**
 - 2. or approved equal.
 - E. Cut: [**Vein**] [**Fleuri**].
 - 1. Orientation of Veining: [**Horizontal**] [**Vertical**] [**As indicated**].
 - F. Cut stone from one block or contiguous, matched blocks in which natural markings occur.
 - G. Filling: Fill pores on faces of stone with cementitious filler of color [**selected by DEN Project Manager**] [**matching DEN Project Manager's sample**].
 - H. Finish: [**Polished**] [**Honed**] [**As indicated**] [**Match DEN Project Manager's sample**] **<Insert finish>.**
 - I. Match DEN Project Manager's samples for color, finish, and other stone characteristics relating to aesthetic effects.
- 2.10 OTHER STONE <Insert drawing designation>
- A. Material Standards:
 - 1. Maximum Absorption per ASTM C 97/C 97M: **<Insert required value>.**
 - 2. Minimum Compressive Strength per ASTM C 170/C 170M: **<Insert required value>.**
 - 3. Minimum Flexural Strength per ASTM C 880/C 880M: **<Insert required value>.**
 - B. Regional Materials: Stone shall be fabricated within **500 miles (800 km)** of Project site from stone that has been extracted within **500 miles (800 km)** of Project site.
 - C. Regional Materials: Stone shall be fabricated within **500 miles (800 km)** of Project site.
 - D. Varieties and Sources: Subject to compliance with requirements, provide one of the following:
 - 1. **<Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>.**
 - 2. or approved equal.

- E. Finish: [**Polished**] [**Honed**] [**Sand rubbed**] [**Natural cleft**] [**As indicated**] [**Match DEN Project Manager's sample**] <Insert finish>.
- F. Match DEN Project Manager's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.11 SETTING MATERIALS

- A. Molding Plaster: ASTM C 59/C 59M.
- B. Portland Cement: ASTM C 150, Type I or Type II.
 - 1. Low-Alkali Cement: Not more than 0.60 percent total alkali when tested according to ASTM C 114.
- C. Hydrated Lime: ASTM C 207, Type S.
- D. Aggregate: ASTM C 144.
- E. Water: Potable.

2.12 GROUT

- A. Grout Colors: [**Match stone**] [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**].
- B. Sand-Portland Cement Grout: ANSI A108.10, composed of white or gray cement and white or colored aggregate to produce required color.
- C. Standard Cement Grout: ANSI A118.6, packaged.
 - 1. Grout Type: [**Sanded**] [**Unsanded**].
- D. Polymer-Modified Tile Grout: ANSI A118.7, packaged.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Bostik, Inc.
 - b. C-Cure.
 - c. Custom Building Products.
 - d. DAP Inc.
 - e. Jamo Inc.
 - f. Laticrete International, Inc.
 - g. MAPEI Corporation.
 - h. Mer-Krete Systems; ParexLahabra, Inc.
 - i. Prospec; Bonsal American; a division of Oldcastle Architectural Products Group.

- j. [Southern Grouts & Mortars, Inc.](#)
 - k. [Summitville Tiles, Inc.](#)
 - l. [TEC, Specialty Construction Brands, Inc.; an H. B. Fuller company.](#)
 - m. **<Insert manufacturer's name>**.
 - n. or approved equal.
2. Polymer Type: **[Acrylic resin] [or] [ethylene vinyl acetate]**, in dry, redispersible form, packaged with other dry ingredients.
3. Polymer Type: **[Acrylic resin] [or] [styrene-butadiene rubber]** in liquid-latex form for addition to packaged dry-grout mix.
4. Grout Type: **[Sanded] [Unsanded]**.
- E. Water-Cleanable Epoxy Grout: ANSI A118.3, packaged, chemical-resistant, water-cleanable, tile-setting and -grouting epoxy.
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
- a. [Boiardi Products; a QEP company.](#)
 - b. [Bostik, Inc.](#)
 - c. [C-Cure.](#)
 - d. [Custom Building Products.](#)
 - e. [Jamo Inc.](#)
 - f. [Laticrete International, Inc.](#)
 - g. [MAPEI Corporation.](#)
 - h. [Mer-Krete Systems; ParexLahabra, Inc.](#)
 - i. [Prospec; Bonsal American; a division of Oldcastle Architectural Products Group.](#)
 - j. [Summitville Tiles, Inc.](#)
 - k. [TEC, Specialty Construction Brands, Inc.; an H. B. Fuller company.](#)
 - l. **<Insert manufacturer's name>**.
 - m. or approved equal.

2.13 POINTING MORTAR MATERIALS

- A. Portland Cement: ASTM C 150, Type I or Type II. Provide natural color or white cement as required to produce mortar color indicated.
1. Low-Alkali Cement: Not more than 0.60 percent total alkali when tested according to ASTM C 114.
- B. Hydrated Lime: ASTM C 207, Type S.
- C. Mortar Pigments: Natural and synthetic iron oxides and chromium oxides, compounded for use in mortar mixes and complying with ASTM C 979. Pigments shall have a record of satisfactory performance in mortar.
1. **Products:** Subject to compliance with requirements, provide one of the following:

- a. Davis Colors; True Tone Mortar Colors.
 - b. Lanxess Corporation; Bayferrox Iron Oxide Pigments.
 - c. Solomon Colors; SGS Mortar Colors.
 - d. **<Insert manufacturer's name; product name or designation>.**
 - e. or approved equal.
- D. Portland Cement-Lime Mix: Packaged blend of Portland cement and hydrated lime.
- E. Colored Portland Cement-Lime Mix: Packaged blend of Portland cement, hydrated lime, and mortar pigments. Use a mix of formulation required to produce color indicated or, if not indicated, as selected from manufacturer's standard formulations. Pigments shall not exceed 10 percent of Portland cement by weight.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Holcim (US) Inc.; Rainbow Mortamix Custom Color Cement/Lime.
 - b. Lafarge North America Inc.; Eaglebond.
 - c. Lehigh Cement Company; Lehigh Custom Color Portland/Lime Cement.
 - d. **<Insert manufacturer's name; product name or designation>.**
 - e. or approved equal.
- F. Aggregate: ASTM C 144, except with 100 percent passing **No. 16 (1.18-mm)** sieve.
1. White Aggregates: Natural white sand or ground white stone.
 2. Colored Aggregates: Natural-colored sand or ground marble, granite, or other durable stone; of color necessary to produce required mortar color.
- G. Water: Potable.

2.14 SEALANTS

- A. Joint Sealants: Manufacturer's standard sealants of characteristics indicated below that comply with applicable requirements in Section 079200 "Joint Sealants" and will not stain the stone they are applied to.
1. Use mildew-resistant joint sealant at plumbing fixtures and for control and expansion joints in toilet rooms[**and other wet locations**].
 2. Mildew-Resistant Joint Sealant: [**Mildew resistant, single component, nonsag, neutral curing, silicone**] [**Single component, nonsag, mildew resistant, acid curing, silicone**] **<Insert joint sealant>.**
 3. Joint Sealant: [**Latex**] [**Acrylic based**] [**Butyl rubber based**] [**Single component, nonsag, neutral curing, silicone; Class 25**] **<Insert joint sealant>.**
 4. VOC Content: [**250**] **<Insert value>** g/L.
 5. Sealants shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

6. Colors: Provide colors of exposed sealants to match other joints in stone adjoining sealed joints unless otherwise indicated.

B. Sealant for Filling Kerfs: [**Same sealant used for joints in dimension stone**] [**Single-component, nonsag, urethane sealant; Class 25, Use T (traffic), and Use M (masonry) that complies with applicable requirements in Section 079200 "Joint Sealants" and that does not stain stone**] [**Single-component, nonsag, neutral-curing, medium- to high-modulus silicone sealant; Class 25, Use NT (nontraffic), and Use M (masonry) that complies with applicable requirements in Section 079200 "Joint Sealants" and that does not stain stone**].

1. Products: Subject to compliance with requirements, provide one of the following:

- a. BASF Building Systems; Sonolastic NP.
- b. BASF Building Systems; Sonolastic Ultra.
- c. Sika Corporation; Sikaflex - 1a.
- d. Tremco Incorporated; Vulkem 116.
- e. BASF Building Systems; Omniseal 50.
- f. Dow Corning Corporation; Spectrem 2.
- g. **<Insert manufacturer's name; product name or designation>**.
- h. or approved equal.

2. VOC Content: **[250]** **<Insert value>** g/L.

3. Sealants shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.15 STONE ANCHORS AND ATTACHMENTS

A. Fabricate anchors from stainless steel, ASTM A 240/A 240M or ASTM A 666, Type 304.

1. Fasteners for Stainless-Steel Anchors: Annealed stainless-steel bolts, nuts, and washers; **ASTM F 593** (ASTM F 738M) for bolts and **ASTM F 594** (ASTM F 836M) for nuts, Alloy Group **1** (A1).

B. Fabricate dowels from stainless steel, ASTM A 276, Type 304.

C. Fabricate anchors from extruded aluminum, **ASTM B 221** (ASTM B 221M), Alloy 6063-T6.

1. Fasteners for Extruded-Aluminum Anchors: Annealed stainless-steel bolts, nuts, and washers; **ASTM F 593** (ASTM F 738M) for bolts and **ASTM F 594** (ASTM F 836M) for nuts, Alloy Group **1** (A1).

D. Anchor Support Grids: Roll-formed steel channels, of size and shape required for application indicated, formed from galvanized-steel sheet not less than **0.108 inch** (2.8 mm) thick and complying with ASTM A 653/A 653M, **G90** (Z275).

1. Fittings and Fasteners: System manufacturer's standard components of design, size, and material required to securely attach grids to building structure and stone anchors to grids. Fabricate components in contact with stone from same material specified for anchors.
- E. Wire Tiebacks: **[No. 9 AWG copper or copper-alloy] [or] [0.120-inch- (3.0-mm-) diameter, stainless-steel]** wire.
- F. Dovetail Slots: Furnish dovetail slots with filler strips of slot size required to receive anchors provided, fabricated from **0.034-inch- (0.86-mm-)** thick, galvanized-steel sheet complying with ASTM A 653/A 653M, **G90 (Z275)**.
- G. Direct-Mount Anchoring Systems: Stainless-steel[**or aluminum**] stone anchors designed to be applied directly to wall surfaces[**or to metal grids**]. System is secured to wall framing, furring, or sheet-metal reinforcing strips built into wall with[**stainless-steel**] self-drilling screws. Anchors fit into kerfs or holes in edges of stone panels[**and do not need setting spots**].
 1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. Halfen Anchoring Systems; Meadow Burke.
 - b. Heckmann Building Products Inc.
 - c. Hohmann & Barnard, Inc.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.

2.16 STONE ACCESSORIES

- A. Temporary Setting Shims: Rigid plastic shims, nonstaining to stone, sized to suit joint thickness.
- B. Setting Shims for Direct-Mount Anchoring Systems: Strips of resilient plastic or neoprene, nonstaining to stone, of thickness needed to prevent point loading of stone on anchors and of depths to suit anchors without intruding into required depths of pointing materials.
- C. Cleaner: Stone cleaner specifically formulated for stone types, finishes, and applications indicated, as recommended by stone producer. Do not use cleaning compounds containing acids, caustics, harsh fillers, or abrasives.
- D. Stone Sealer: Colorless, stain-resistant sealer that does not affect color or physical properties of stone surfaces, as recommended by stone producer for application indicated.
 1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. Bostik, Inc.
 - b. Custom Building Products.
 - c. Hillyard, Inc.

- d. [HMK Stone Care; ACI International.](#)
- e. [Miracle Sealants Company.](#)
- f. [Stone Care International.](#)
- g. [Summitville Tiles, Inc.](#)
- h. **<Insert manufacturer's name>.**
- i. or approved equal.

2.17 STONE FABRICATION, GENERAL

- A. Select stone for intended use to prevent fabricated units from containing cracks, seams, and starts that could impair structural integrity or function.
 - 1. Repairs that are characteristic of the varieties specified are acceptable provided they do not impair structural integrity or function and are not aesthetically unpleasing, as judged by DEN Project Manager.
- B. Fabricate stone paneling in sizes and shapes required to comply with requirements indicated.
 - 1. For granite, comply with recommendations in NBGQA's "Specifications for Architectural Granite."
 - 2. For marble, comply with recommendations in MIA's "Dimension Stone - Design Manual VII."
 - 3. For limestone, comply with recommendations in ILI's "Indiana Limestone Handbook."
- C. Cut stone to produce pieces of thickness, size, and shape indicated and to comply with fabrication and construction tolerances recommended by applicable stone association.
 - 1. Where items are installed with adhesive or where stone edges are visible in the finished work, make items uniform in thickness and of identical thickness for each type of item; gage back of stone if necessary.
 - 2. Clean sawed backs of stones to remove rust stains and iron particles.
 - 3. Dress joints straight and at right angle to face unless otherwise indicated.
 - 4. Cut and drill sinkages and holes in stone for anchors, supports, and lifting devices as indicated or needed to set stone securely in place; shape beds to fit supports.
 - 5. Provide openings, reveals, and similar features as needed to accommodate adjacent work.
- D. Finish exposed faces and edges of stone to comply with requirements indicated for finish of each stone type required and to match approved Samples and mockups.
- E. Carefully inspect finished stone units at fabrication plant for compliance with requirements for appearance, material, and fabrication. Replace defective units.
 - 1. Grade and mark stone for overall uniform appearance when assembled in place. Natural variations in appearance are acceptable if installed stone units match

range of colors and other appearance characteristics represented in approved Samples[**and mockups**].

2.18 STONE WALL PANELING

- A. Arrange panels in shop or other suitable space in proposed orientation and sequence for examination by DEN Project Manager. Mark units with temporary sequence numbers to indicate position in proposed layout.
1. Lay out one elevation at a time if approved by DEN Project Manager.
 2. Notify DEN Project Manager seven (7) days in advance of date and time when layout will be available for viewing.
 3. Provide lighting of similar type and level as that of final installation for viewing layout unless otherwise approved by DEN Project Manager.
 4. Rearrange panels as directed by DEN Project Manager until layout is approved.
 5. Do not trim nonmodular-size units to less than modular size until after DEN Project Manager's approval of layout, unless otherwise approved by DEN Project Manager.
 6. Mark backs of units and Shop Drawings with sequence numbers based on approved layout. Mark backs of units to indicate orientation of units in completed Work.
- B. Nominal Thickness: [3/4 inch (20 mm)] [7/8 inch (22 mm)] [1 inch (25 mm)] [1-1/4 inches (32 mm)] [2 inches (50 mm)] unless otherwise indicated.
- C. Control depth of stone to maintain minimum clearances of [3/4 inch (20 mm)] [1 inch (25 mm)] between backs of panels and structural members, fireproofing if any, backup walls, and other work behind stone. Do not back check stone less than 1 inch (25 mm) thick.
- D. Cut stone to produce uniform joints [1/16 inch (1.5 mm)] [1/8 inch (3 mm)] [1/4 inch (6 mm)] [3/8 inch (10 mm)] <Insert dimension> wide and in locations indicated.
- E. Quirk-miter corners unless otherwise indicated. Fabricate for anchorage in top and bottom bed joints of corner units.
- F. Carve and cut [**inscriptions**] [**and**] [**decorative surfaces**]. Use skilled stone carvers experienced in the successful performance of work similar to that indicated.
- G. Abrasively etch [**inscriptions**] [**and**] [**decorative surfaces**].
- H. Laser etch [**inscriptions**] [**and**] [**decorative surfaces**].
- I. Pattern Arrangement: Fabricate and arrange panels with veining and other natural markings to comply with the following requirements:
1. Arrange panels with veining horizontal.
 2. Arrange panels with veining vertical.
 3. Arrange panels with veining as indicated on Drawings.
 4. Arrange panels in blend pattern.

5. Book match units, single-course height.
6. Book match units, both vertically and horizontally.
7. Book match units in each course. No matching is required between successive courses.
8. Slip match units, single-course height.
9. Slip match units, both vertically and horizontally.
10. Slip match units in each course. No matching is required between successive courses.

2.19 STONE COLUMN FACING

- A. Nominal Thickness: [3/4 inch (20 mm)] [7/8 inch (22 mm)] [1 inch (25 mm)] [1-1/4 inches (32 mm)] [2 inches (50 mm)] unless otherwise indicated.
- B. Joints: [1/16-inch- (1.5-mm-) wide grouted] [1/8-inch- (3-mm-) wide grouted] [1/8-inch- (3-mm-) wide, sealant-filled] [1/4-inch- (6-mm-) wide, mortar-pointed] [1/4-inch- (6-mm-) wide, sealant-filled] [3/8-inch- (10-mm-) wide, mortar-pointed] [3/8-inch- (10-mm-) wide, sealant-filled] <Insert dimension and description> joints.
- C. Quirk-miter corners unless otherwise indicated. Install anchorage in top and bottom bed joints of corner units.
- D. Pattern Arrangement: Fabricate and arrange panels with veining and other natural markings to comply with the following requirements:
 1. Arrange panels with veining horizontal.
 2. Arrange panels with veining vertical.
 3. Arrange panels with veining as indicated on Drawings.

2.20 MIXES

- A. Spotting Plaster: Stiff mix of molding plaster and water.
- B. Mortar, General: Comply with referenced standards and with manufacturers' written instructions for mix proportions, mixing equipment, mixer speeds, mixing containers, mixing time, and other procedures needed to produce mortar of uniform quality and with optimum performance characteristics.
 1. Do not use admixtures, including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, antifreeze compounds, or other admixtures unless otherwise indicated. Do not use calcium chloride.
 2. Combine and thoroughly mix cementitious materials, water, and aggregates in a mechanical batch mixer unless otherwise indicated. Discard mortar when it has reached initial set.
- C. Setting Mortar: Comply with ASTM C 270, Proportion Specification.
 1. Type: [N] [O].

2. Mix Proportions: 1 part Portland cement and 2-1/2 to 4 parts lime with aggregate ratio of 2-1/4 to 3 times the volume of cement and lime.
- D. Pointing Mortar: Comply with ASTM C 270, Proportion Specification, for mortar types indicated. Provide pointing mortar mixed to match DEN Project Manager's sample and complying with the following:
1. Pigmented Pointing Mortar: Select and proportion pigments with other ingredients to produce color required. Do not exceed pigment-to-cement ratio of 1:10, by weight.
 2. Packaged Portland Cement-Lime Mix Mortar: Use Portland cement-lime mix of selected color.
 3. Colored-Aggregate Pointing Mortar: Produce color required by combining colored aggregates with Portland cement of selected color.
 4. Type: **[N]** **[O]**.
 5. Mix Proportions: 1 part Portland cement and 2-1/2 to 4 parts lime with aggregate ratio of 2-1/4 to 3 times the volume of cement and lime.
- E. Grout: Comply with mixing requirements of referenced ANSI standards and with manufacturer's written instructions.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine surfaces to receive stone paneling and conditions under which stone paneling will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of stone paneling.
- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of stone paneling.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SETTING STONE, GENERAL

- A. Before setting stone, clean surfaces that are dirty or stained by removing soil, stains, and foreign materials. Clean stone by thoroughly scrubbing with fiber brushes and then drenching with clear water. Use only mild cleaning compounds that contain no caustic or harsh materials or abrasives.
- B. Do necessary field cutting as stone is set. Use power saws with diamond blades to cut stone. Cut lines straight and true, with edges eased slightly to prevent snipping.
- C. Contiguous Work: Provide reveals and openings as required to accommodate contiguous work.

- D. Set stone to comply with requirements indicated. Install anchors, supports, fasteners, and other attachments indicated or necessary to secure stone in place. Shim and adjust anchors, supports, and accessories to set stone accurately in locations indicated, with edges and faces aligned according to established relationships and indicated tolerances.
- E. Erect stone units level, plumb, and true with uniform joint widths. Use temporary shims to maintain joint width.
- F. Provide expansion, control, and pressure-relieving joints of widths and at locations indicated.
 - 1. Sealing of expansion and other joints is specified in Section 079200 "Joint Sealants."
 - 2. Keep expansion joints free of plaster, mortar, grout, and other rigid materials.

3.3 CONSTRUCTION TOLERANCES

- A. Variation from Plumb: For vertical lines and surfaces, do not exceed **1/8 inch in 96 inches** (3 mm in 2400 mm), **1/4 inch** (6 mm) maximum.
- B. Variation from Level: For lintels, sills, chair rails, horizontal bands, horizontal grooves, and other conspicuous lines, do not exceed **1/8 inch in 10 feet** (3 mm in 3 m), **1/4 inch in 20 feet** (6 mm in 6 m), **3/8 inch** (10 mm) maximum.
- C. Variation of Linear Building Line: For position shown in plan and related portion of walls and partitions, do not exceed **1/8 inch in 10 feet** (3 mm in 3 m), **1/4 inch in 20 feet** (6 mm in 6 m), **3/8 inch** (10 mm) maximum.
- D. Variation in Cross-Sectional Dimensions: For thickness of walls from dimensions indicated, do not exceed plus or minus **1/8 inch** (3 mm).
- E. Variation in Joint Width: Do not vary from average joint width more than plus or minus **1/16 inch** (1.5 mm) or one-fourth of nominal joint width, whichever is less.
- F. Variation in Plane between Adjacent Stone Units (Lipping): Do not exceed **1/32-inch** (0.8-mm) difference between planes of adjacent units.

3.4 INSTALLATION OF STONE PANELING

- A. Set units firmly against setting spots. Locate setting spots at anchors and spaced not more than **18 inches** (450 mm) apart across back of unit, but provide no fewer than one setting spot per **2 sq. ft.** (0.18 sq. m) unless otherwise indicated.
 - 1. **Moisture Exposure:** Use Portland cement mortar for setting spots where stone is applied to inside face of exterior walls and **[where indicated] <Insert wet locations>**.

- B. Set units on direct-mount anchoring system with anchors securely attached to stone and to backup surfaces. Comply with anchoring recommendations in ASTM C 1242.
 - 1. Provide compressible filler in ends of dowel holes and bottoms of kerfs to prevent end bearing of dowels and anchor tabs on stone. Fill remainder of anchor holes and kerfs with sealant for filling kerfs.
 - 2. Set stone supported on clips or continuous angles on resilient setting shims. Use material of thickness required to maintain uniform joint widths and to prevent point loading of stone on anchors. Hold shims back from face of stone a distance at least equal to width of joint.
- C. Minimum Anchors: Provide anchors at a maximum of **24 inches (600 mm)** o.c. around perimeter of stone panels with a minimum of four anchors per panel.
- D. Minimum Anchors: Provide a minimum of four anchors per panel up to **12 sq. ft. (1.1 sq. m)** in face area, plus a minimum of two additional anchors for each additional **8 sq. ft. (0.7 sq. m)**.
- E. **[Grout] [Point]** joints after setting stone.
- F. Fill **[indicated]** joints with sealant after setting **[and grouting] [and pointing]** stone.

3.5 GROUTING JOINTS

- A. Grout stone to comply with ANSI A108.10.
 - 1. Use sanded grout mixture for joints wider than **1/8 inch (3 mm)**.
 - 2. Use unsanded grout mixture for joints **1/8 inch (3 mm)** and narrower.
- B. Remove temporary shims before grouting.
- C. Tool joints uniformly and smoothly with plastic tool.

3.6 POINTING JOINTS WITH MORTAR

- A. Prepare stone-joint surfaces for pointing with mortar by removing temporary shims, dust, and mortar particles. Where setting spots occur at joints, rake out excess setting mortar or plaster to a depth of not less than **1/2 inch (13 mm)**.
- B. Point stone joints by placing pointing mortar in layers of not more than **3/8 inch (10 mm)**. Compact each layer thoroughly and allow it to become thumbprint hard before applying next layer. Apply mortar first to areas where depths are greater than surrounding areas until a uniform depth is formed.
- C. Tool joints when pointing mortar is thumbprint hard. Use a round jointer having a diameter **1/8 inch (3 mm)** larger than width of joint.

3.7 JOINT-SEALANT INSTALLATION

- A. Prepare joints and apply sealants of type and at locations indicated to comply with applicable requirements in Section 079200 "Joint Sealants." Remove temporary shims before applying sealants.

3.8 ADJUSTING AND CLEANING

- A. In-Progress Cleaning: Clean stone paneling as work progresses. Remove adhesive, grout, mortar, and sealant smears immediately.
- B. Remove and replace stone paneling of the following description:
 - 1. Broken, chipped, stained, or otherwise damaged stone. Stone may be repaired if methods and results are approved by DEN Project Manager.
 - 2. Defective stone paneling.
 - 3. Defective joints, including misaligned joints.
 - 4. Stone paneling and joints not matching approved Samples and mockups.
 - 5. Stone paneling not complying with other requirements indicated.
- C. Replace in a manner that results in stone paneling that matches approved Samples and mockups, complies with other requirements, and shows no evidence of replacement.
- D. Clean stone paneling no fewer than six days after completion of grouting and pointing, using clean water and soft rags or stiff-bristle fiber brushes. Do not use wire brushes, acid-type cleaning agents, cleaning compounds with caustic or harsh fillers, or other materials or methods that could damage stone.
- E. Sealer Application: Apply stone sealer to comply with stone producer's and sealer manufacturer's written instructions and recommendations.

3.9 PROTECTION

- A. Protect stone surfaces, edges, and corners from construction damage. Use securely fastened untreated wood, plywood, or heavy cardboard to prevent damage.
- B. Before inspection for Substantial Completion, remove protective coverings and clean surfaces.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 097513

SECTION 097516 - STONE BASE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes stone base.
- B. Related Requirements:
 - 1. Section 079200 "Joint Sealants" for sealing expansion joints in stone base.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each[**variety of stone,**] stone accessory, and manufactured product.
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating distance to Project, cost for each regional material, and fraction by weight that is considered regional.
 - 2. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regionally manufactured[**and regionally extracted and manufactured**] materials. Include statement indicating cost for each regionally manufactured material.
 - a. Include statement indicating location of manufacturer and distance to Project for each regionally manufactured material.
 - b. Include statement indicating location of manufacturer and point of extraction, harvest, or recovery for each raw material used in regionally extracted and manufactured materials. Indicate distance to Project and

fraction by weight of each regionally manufactured material that is regionally extracted.

3. Product Data for Credit IEQ 4.1: For **[adhesives] [and] [sealants]**, documentation including printed statement of VOC content.
 4. Laboratory Test Reports for Credit IEQ 4.1: For **[adhesives] [and] [sealants]**, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: Show fabrication and installation details for stone base, including dimensions and profiles of stone units.
1. Show locations and details of joints.
 2. Show locations and details of anchors, including locations of supporting construction.
- D. Samples for Initial Selection: For joint materials involving color selection.
- E. Samples for Verification:
1. For each stone type indicated, in sets of Samples not less than **12 inches** (300 mm) square. Include **[two] [three] [four] [five] <Insert number>** or more Samples in each set and show the full range of variations in appearance characteristics in completed Work.
 2. For each color of **[grout] [pointing mortar] [and] [sealant]** required.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For **[Installer] [fabricator]**.
- B. Material Test Reports:
1. Stone Test Reports: For **[each]** stone variety proposed for use on Project, by a qualified testing agency, indicating compliance with required physical properties, other than abrasion resistance, according to referenced ASTM standards. Base reports on testing done within previous **[three] [five] <Insert number>** years.
 2. Sealant Compatibility and Adhesion Test Report: From sealant manufacturer indicating that sealants will not stain or damage stone. Include interpretation of test results and recommendations for primers and substrate preparation needed for adhesion.

1.5 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Fabricator Qualifications: Shop that employs skilled workers who custom fabricate stone similar to that required for this Project, and whose products have a record of successful in-service performance.
- B. Installer Qualifications: Fabricator of stone base.
- C. Installer Qualifications: A firm or individual experienced in installing stone base similar in material, design, and extent to that indicated for this Project, whose work has a record of successful in-service performance.
- D. Mockups: Build mockups to demonstrate aesthetic effects and to set quality standards for fabrication and installation.
 - 1. Build mockup of typical wall area as shown on Drawings.
 - 2. Build mockup for stone base, not less than **72 inches** (1800 mm) long.
 - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 PRECONSTRUCTION TESTING

- A. Preconstruction Sealant Adhesion and Compatibility Testing: Submit to joint-sealant manufacturers, for compatibility and adhesion testing according to sealant manufacturer's standard testing methods and Section 079200 "Joint Sealants," Samples of materials that will contact or affect joint sealants.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Store and handle stone and related materials to prevent deterioration or damage due to moisture, temperature changes, contaminants, corrosion, breaking, chipping, and other causes.
- B. Mark stone units, on surface that will be concealed after installation, with designations used on Shop Drawings to identify individual stone units.
- C. Deliver sealants to Project site in original unopened containers labeled with manufacturer's name, product name and designation, color, expiration period, pot life, curing time, and mixing instructions for multicomponent materials.
- D. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.

1.9 FIELD CONDITIONS

- A. Maintain air and material temperatures to comply with requirements of installation material manufacturers, but not less than **50 deg F** (10 deg C) during installation and for seven days after completion.

- B. Field Measurements: Verify dimensions of construction to receive stone base by field measurements before fabrication and indicate measurements on Shop Drawings.

1.10 COORDINATION

- A. Time delivery and installation of stone base to avoid extended on-site storage and to coordinate with work adjacent to stone base.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations for Stone: Obtain[**each variety of**] stone, [**regardless of finish,**] from a single quarry[, **whether specified in this Section or in another Section of the Specifications,**] with resources to provide materials of consistent quality in appearance and physical properties.
 - 1. For stone types that include same list of varieties and sources, provide same variety from same source for each.
- B. Varieties and Sources: Subject to compliance with requirements, provide stone of varieties and from sources complying with Section 044200 "Exterior Stone Cladding."

2.2 GRANITE <Insert drawing designation>

- A. Material Standard: Comply with ASTM C 615.
- B. Regional Materials: Granite shall be fabricated within **500 miles (800 km)** of Project site from stone that has been extracted within **500 miles (800 km)** of Project site.
- C. Regional Materials: Granite shall be fabricated within **500 miles (800 km)** of Project site.
- D. Description: Uniform, [**fine**] [**medium**]-grained, [**white**] [**pink**] [**gray**] [**black**] <Insert color> stone[**without veining**].
- E. Varieties and Sources: Subject to compliance with requirements, provide one of the following:
 - 1. **<Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>.**

2. or approved equal.

F. Cut: **[Vein] [Fleuri]**.

1. Orientation of Veining: **[Horizontal] [Vertical] [As indicated]**.

G. Cut stone from one block or contiguous, matched blocks in which natural markings occur.

H. Finish: **[Polished] [Honed] [Thermal] [As indicated] [Match DEN Project Manager's sample] <Insert finish>**.

I. Match DEN Project Manager's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.3 LIMESTONE <Insert drawing designation>

A. Material Standard: Comply with ASTM C 568.

1. Classification: **[I Low] [II Medium] [III High]** Density.

B. Regional Materials: Limestone shall be fabricated within **500 miles (800 km)** of Project site from stone that has been extracted within **500 miles (800 km)** of Project site.

C. Regional Materials: Limestone shall be fabricated within **500 miles (800 km)** of Project site.

D. Description: **[Dolomitic] [Oolitic] [Shell]** limestone.

E. Varieties and Sources: Subject to compliance with requirements, provide one of the following:

1. **<Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>**.

2. or approved equal.

F. Varieties and Sources: Indiana oolitic limestone quarried in Lawrence, Monroe, or Owen Counties, Indiana.

1. Indiana Oolitic Limestone Grade and Color: **[Select, buff] [Select, gray] [Standard, buff] [Standard, gray] [Rustic, buff] [Rustic, gray] [Variegated]**, according to grade and color classification established by ILI.

G. Cut: **[Vein] [Fleuri]**.

1. Orientation of Veining: **[Horizontal] [Vertical] [As indicated]**.

H. Cut stone from one block or contiguous, matched blocks in which natural markings occur.

- I. Finish: [**Smooth**] [**Sand rubbed**] [**Machine tooled, four bats per 1 inch (25 mm)**] [**Machine tooled, six bats per 1 inch (25 mm)**] [**Machine tooled, eight bats per 1 inch (25 mm)**] [**As indicated**] [**Match DEN Project Manager's sample**] <Insert finish> [, **matching standard ILI finish**].
- J. Match DEN Project Manager's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.4 MARBLE <Insert drawing designation>

- A. Material Standard: Comply with ASTM C 503[, **Classification I Calcite**] [, **Classification II Dolomite**] [, **Group A**] [, **Group B**] [, **Group C**] [, **Group D**].
- B. Regional Materials: Marble shall be fabricated within **500 miles (800 km)** of Project site from stone that has been extracted within **500 miles (800 km)** of Project site.
- C. Regional Materials: Marble shall be fabricated within **500 miles (800 km)** of Project site.
- D. Description: Uniform, fine- to medium-grained, [**white**] <Insert color> stone with only slight veining.
- E. Varieties and Sources: Subject to compliance with requirements, provide one of the following:
 - 1. <Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>.
 - 2. or approved equal.
- F. Cut: [**Vein**] [**Fleuri**].
 - 1. Orientation of Veining: [**Horizontal**] [**Vertical**] [**As indicated**].
- G. Cut stone from one block or contiguous, matched blocks in which natural markings occur.
- H. Finish: [**Polished**] [**Honed**] [**As indicated**] [**Match DEN Project Manager's sample**] <Insert finish>.
- I. Match DEN Project Manager's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.5 QUARTZ-BASED STONE <Insert drawing designation>

- A. Material Standard: Comply with ASTM C 616, [**Classification I Sandstone**] [**Classification II Quartzitic Sandstone**] [**Classification III Quartzite**] [, **except for minimum free silica content**].

- B. Regional Materials: Quartz-based stone shall be fabricated within **500 miles** (800 km) of Project site from stone that has been extracted within **500 miles** (800 km) of Project site.
- C. Regional Materials: Quartz-based stone shall be fabricated within **500 miles** (800 km) of Project site.
- D. Varieties and Sources: Subject to compliance with requirements, provide one of the following:
 - 1. **<Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>.**
 - 2. or approved equal.
- E. Finish: [**Sand rubbed**] [**Natural cleft**] [**Thermal**] [**As indicated**] [**Match DEN Project Manager's sample**] **<Insert finish>.**
- F. Match DEN Project Manager's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.6 SERPENTINE <Insert drawing designation>

- A. Material Standard: Comply with ASTM C 1526, [**Classification I Exterior**] [**Classification II Interior**].
- B. Regional Materials: Serpentine shall be fabricated within **500 miles** (800 km) of Project site from stone that has been extracted within **500 miles** (800 km) of Project site.
- C. Regional Materials: Serpentine shall be fabricated within **500 miles** (800 km) of Project site.
- D. Varieties and Sources: Subject to compliance with requirements, provide one of the following:
 - 1. **<Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>.**
 - 2. or approved equal.
- E. Cut stone from one block or contiguous, matched blocks in which natural markings occur.
- F. Finish: [**Polished**] [**Honed**] [**As indicated**] [**Match DEN Project Manager's sample**] **<Insert finish>.**
- G. Match DEN Project Manager's samples for color, finish, and other stone characteristics relating to aesthetic effects.

- 2.7 SLATE <Insert drawing designation>
- A. Material Standard: Comply with ASTM C 629, [**Classification I Exterior**] [**Classification II Interior**].
 - B. Regional Materials: Slate shall be fabricated within **500 miles** (800 km) of Project site from stone that has been extracted within **500 miles** (800 km) of Project site.
 - C. Regional Materials: Slate shall be fabricated within **500 miles** (800 km) of Project site.
 - D. Description: [**Black**] [**Blue-black**] [**Gray**] [**Blue-gray**] [**Green**] [**Purple**] [**Mottled purple and green**] [**Red**] slate with a fine, even grain[**and unfading color,**] from clear, sound stock.
 - E. Varieties and Sources: Subject to compliance with requirements, provide one of the following:
 - 1. **<Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>**.
 - 2. or approved equal.
 - F. Finish: [**Honed**] [**Sand rubbed**] [**Natural cleft**] [**As indicated**] [**Match DEN Project Manager's sample**] <Insert finish>.
 - G. Match DEN Project Manager's samples for color, finish, and other stone characteristics relating to aesthetic effects.
- 2.8 TRAVERTINE <Insert drawing designation>
- A. Material Standard: Comply with ASTM C 1527, [**Classification I Exterior**] [**Classification II Interior**].
 - B. Regional Materials: Travertine shall be fabricated within **500 miles** (800 km) of Project site from stone that has been extracted within **500 miles** (800 km) of Project site.
 - C. Regional Materials: Travertine shall be fabricated within **500 miles** (800 km) of Project site.
 - D. Varieties and Sources: Subject to compliance with requirements, provide one of the following:
 - 1. **<Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>**.
 - 2. or approved equal.
 - E. Cut: [**Vein**] [**Fleuri**].
 - 1. Orientation of Veining: [**Horizontal**] [**Vertical**] [**As indicated**].

- F. Cut stone from one block or contiguous, matched blocks in which natural markings occur.
- G. Filling: Fill pores on faces of stone with cementitious filler of color [**selected by DEN Project Manager**] [**matching DEN Project Manager's sample**].
- H. Finish: [**Polished**] [**Honed**] [**As indicated**] [**Match DEN Project Manager's sample**] <Insert finish>.
- I. Match DEN Project Manager's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.9 OTHER STONE <Insert drawing designation>

- A. Material Standards:
 - 1. Maximum Absorption per ASTM C 97/C 97M: <Insert required value>.
 - 2. Minimum Compressive Strength per ASTM C 170/C 170M: <Insert required value>.
 - 3. Minimum Flexural Strength per ASTM C 880/C 880M: <Insert required value>.
- B. Regional Materials: Stone shall be fabricated within **500 miles (800 km)** of Project site from stone that has been extracted within **500 miles (800 km)** of Project site.
- C. Regional Materials: Stone shall be fabricated within **500 miles (800 km)** of Project site.
- D. Varieties and Sources: Subject to compliance with requirements, provide one of the following:
 - 1. <Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>.
 - 2. or approved equal.
- E. Finish: [**Polished**] [**Honed**] [**Sand rubbed**] [**Natural cleft**] [**As indicated**] [**Match DEN Project Manager's sample**] <Insert finish>.
- F. Match DEN Project Manager's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.10 SETTING MATERIALS

- A. Molding Plaster: ASTM C 59/C 59M.
- B. Portland Cement: ASTM C 150, Type I or Type II.
 - 1. Low-Alkali Cement: Not more than 0.60 percent total alkali when tested according to ASTM C 114.
- C. Hydrated Lime: ASTM C 207, Type S.

- D. Aggregate: ASTM C 144.
- E. Water: Potable.
- F. Adhesives, General: Use only adhesives formulated for stone and ceramic tile and recommended by their manufacturer for the application indicated.
- G. Organic Adhesive: ANSI A136.1, Type I[.], with a VOC content of 65 g/L or less.], that complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."]
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Boiardi Products; a QEP company.](#)
 - b. [Bostik, Inc.](#)
 - c. [C-Cure.](#)
 - d. [Custom Building Products.](#)
 - e. [DAP Inc.](#)
 - f. [Jamo Inc.](#)
 - g. [Laticrete International, Inc.](#)
 - h. [MAPEI Corporation.](#)
 - i. [Mer-Krete Systems; ParexLahabra, Inc.](#)
 - j. [Prospec; Bonsal American; a division of Oldcastle Architectural Products Group.](#)
 - k. [Southern Grouts & Mortars, Inc.](#)
 - l. [TEC, Specialty Construction Brands, Inc.; an H. B. Fuller company.](#)
 - m. **<Insert manufacturer's name>.**
 - n. or approved equal.
- H. Water-Cleanable Epoxy Adhesive: ANSI A118.3[.], with a VOC content of 65 g/L or less.], that complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."]
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Boiardi Products; a QEP company.](#)
 - b. [Bonstone Materials Corporation.](#)
 - c. [Bostik, Inc.](#)
 - d. [C-Cure.](#)
 - e. [Custom Building Products.](#)
 - f. [Jamo Inc.](#)
 - g. [Laticrete International, Inc.](#)
 - h. [MAPEI Corporation.](#)
 - i. [Mer-Krete Systems; ParexLahabra, Inc.](#)

- j. [Prospec; Bonsal American; a division of Oldcastle Architectural Products Group.](#)
 - k. [Summitville Tiles, Inc.](#)
 - l. [TEC, Specialty Construction Brands, Inc.; an H. B. Fuller company.](#)
 - m. <Insert manufacturer's name>.
 - n. or approved equal.
- I. Stone Adhesive: Two-part, [epoxy-resin] [or] [polyester-resin] stone adhesive with an initial set time of not more than two hours at 70 deg F (21 deg C)[.], **and with a VOC content of 65 g/L or less.**[, that complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."]
- 1. Color: [Clear] [Match stone].
 - 2. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. Epoxy Adhesive: [Akemi North America](#); Akepox.
 - b. Epoxy Adhesive: [Axson North America, Inc.](#), Wood & Stone Company; Akabond Epoxy.
 - c. Epoxy Adhesive: [Bonstone Materials Corporation](#); Touchstone Last Patch.
 - d. Epoxy Adhesive: [Bonstone Materials Corporation](#); Touchstone Ratio Pac Clear Gel Epoxy.
 - e. Epoxy Adhesive: <Insert manufacturer's name; product name or designation>.
 - f. Polyester Adhesive: [Akemi North America](#); Platinum Clear Polyester Adhesive.
 - g. Polyester Adhesive: [Axson North America, Inc.](#), Wood & Stone Company; Wood & Stone Polyester.
 - h. Polyester Adhesive: [Bonstone Materials Corporation](#); Gripstone L-200KG.
 - i. Polyester Adhesive: <Insert manufacturer's name; product name or designation>.
 - j. or approved equal.

2.11 GROUT

- A. Grout Colors: [Match stone] [As indicated by manufacturer's designations] [Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range].
- B. Sand-Portland Cement Grout: ANSI A108.10, composed of white or gray cement and white or colored aggregate to produce required color.
- C. Standard Cement Grout: ANSI A118.6, packaged.
 - 1. Grout Type: [Sanded] [Unsanded].
- D. Polymer-Modified Tile Grout: ANSI A118.7, packaged.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. Bostik, Inc.
 - b. C-Cure.
 - c. Custom Building Products.
 - d. DAP Inc.
 - e. Jamo Inc.
 - f. Laticrete International, Inc.
 - g. MAPEI Corporation.
 - h. Mer-Krete Systems; ParexLahabra, Inc.
 - i. Prospec; Bonsal American; a division of Oldcastle Architectural Products Group.
 - j. Southern Grouts & Mortars, Inc.
 - k. Summitville Tiles, Inc.
 - l. TEC, Specialty Construction Brands, Inc.; an H. B. Fuller company.
 - m. **<Insert manufacturer's name>**.
 - n. or approved equal.
 2. Polymer Type: **[Acrylic resin] [or] [ethylene vinyl acetate]**, in dry, redispersible form, packaged with other dry ingredients.
 3. Polymer Type: **[Acrylic resin] [or] [styrene-butadiene rubber]** in liquid-latex form for addition to packaged dry-grout mix.
 4. Grout Type: **[Sanded] [Unsanded]**.
- E. Water-Cleanable Epoxy Grout: ANSI A118.3, packaged, chemical-resistant, water-cleanable, tile-setting and -grouting epoxy.
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. Boiardi Products; a QEP company.
 - b. Bostik, Inc.
 - c. C-Cure.
 - d. Custom Building Products.
 - e. Jamo Inc.
 - f. Laticrete International, Inc.
 - g. MAPEI Corporation.
 - h. Mer-Krete Systems; ParexLahabra, Inc.
 - i. Prospec; Bonsal American; a division of Oldcastle Architectural Products Group.
 - j. Summitville Tiles, Inc.
 - k. TEC, Specialty Construction Brands, Inc.; an H. B. Fuller company.
 - l. **<Insert manufacturer's name>**.
 - m. or approved equal.

2.12 POINTING MORTAR MATERIALS

- A. Portland Cement: ASTM C 150, Type I or Type II. Provide natural color or white cement as required to produce mortar color indicated.
1. Low-Alkali Cement: Not more than 0.60 percent total alkali when tested according to ASTM C 114.
- B. Hydrated Lime: ASTM C 207, Type S.
- C. Mortar Pigments: Natural and synthetic iron oxides and chromium oxides, compounded for use in mortar mixes and complying with ASTM C 979. Pigments shall have a record of satisfactory performance in mortar.
1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. **Davis Colors;** True Tone Mortar Colors.
 - b. **Lanxess Corporation;** Bayferrox Iron Oxide Pigments.
 - c. **Solomon Colors;** SGS Mortar Colors.
 - d. **<Insert manufacturer's name; product name or designation>.**
 - e. or approved equal.
- D. Portland Cement-Lime Mix: Packaged blend of Portland cement and hydrated lime.
- E. Colored Portland Cement-Lime Mix: Packaged blend of Portland cement, hydrated lime, and mortar pigments. Use a mix of formulation required to produce color indicated or, if not indicated, as selected from manufacturer's standard formulations. Pigments shall not exceed 10 percent of Portland cement by weight.
1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. **Holcim (US) Inc.;** Rainbow Mortamix Custom Color Cement/Lime.
 - b. **Lafarge North America Inc.;** Eaglebond.
 - c. **Lehigh Cement Company;** Lehigh Custom Color Portland/Lime Cement.
 - d. **<Insert manufacturer's name; product name or designation>.**
 - e. or approved equal.
- F. Aggregate: ASTM C 144, except with 100 percent passing **No. 16 (1.18-mm)** sieve.
1. White Aggregates: Natural white sand or ground white stone.
 2. Colored Aggregates: Natural-colored sand or ground marble, granite, or other durable stone; of color necessary to produce required mortar color.
- G. Water: Potable.

2.13 SEALANTS

- A. Joint Sealants: Manufacturer's standard sealants of characteristics indicated below that comply with applicable requirements in Section 079200 "Joint Sealants" and will not stain the stone they are applied to.

1. Mildew-Resistant Joint Sealant: [**Mildew resistant, single component, nonsag, neutral curing, silicone**] [**Single component, nonsag, mildew resistant, acid curing, silicone**] <Insert joint sealant>.
2. Joint Sealant: [**Latex**] [**Acrylic based**] [**Butyl rubber based**] [**Single component, nonsag, neutral curing, silicone; Class 25**] <Insert joint sealant>.
3. VOC Content: [**250**] <Insert value> g/L or less.
4. Sealants shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
5. Colors: Provide colors of exposed sealants to match other joints in stone adjoining sealed joints unless otherwise indicated.

2.14 STONE ANCHORS AND ATTACHMENTS

- A. Wire Tiebacks: [**No. 9 AWG copper or copper-alloy**] [or] [**0.120-inch- (3.0-mm-) diameter, stainless-steel**] wire.

2.15 STONE ACCESSORIES

- A. Temporary Setting Shims: Rigid plastic shims, nonstaining to stone, sized to suit joint thickness.
- B. Cleaner: Stone cleaner specifically formulated for stone types, finishes, and applications indicated, as recommended by stone producer. Do not use cleaning compounds containing acids, caustics, harsh fillers, or abrasives.
- C. Stone Sealer: Colorless, stain-resistant sealer that does not affect color or physical properties of stone surfaces, as recommended by stone producer for application indicated.
 1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Bostik, Inc.](#)
 - b. [Custom Building Products.](#)
 - c. [Hillyard, Inc.](#)
 - d. [HMK Stone Care; ACI International.](#)
 - e. [Miracle Sealants Company.](#)
 - f. [Stone Care International.](#)
 - g. [Summitville Tiles, Inc.](#)
 - h. <Insert manufacturer's name>.
 - i. or approved equal.

2.16 STONE FABRICATION, GENERAL

- A. Select stone for intended use to prevent fabricated units from containing cracks, seams, and starts that could impair structural integrity or function.
- Repairs that are characteristic of the varieties specified are acceptable provided they do not impair structural integrity or function and are not aesthetically unpleasing, as judged by DEN Project Manager.
- B. Fabricate stone base in sizes and shapes required to comply with requirements indicated.
- For granite, comply with recommendations in NBGQA's "Specifications for Architectural Granite."
 - For marble, comply with recommendations in MIA's "Dimension Stone - Design Manual VII."
 - For limestone, comply with recommendations in ILI's "Indiana Limestone Handbook."
- C. Cut stone to produce pieces of thickness, size, and shape indicated and to comply with fabrication and construction tolerances recommended by applicable stone association.
- Where items are installed with adhesive or where stone edges are visible in the finished work, make items uniform in thickness and of identical thickness for each type of item; gage back of stone if necessary.
 - Clean sawed backs of stones to remove rust stains and iron particles.
 - Dress joints straight and at right angle to face unless otherwise indicated.
- D. Fabricate molded work to produce stone shapes with a uniform profile throughout entire unit length and with precisely formed arris slightly eased to prevent snipping, and matched at joints between units.
- Produce moldings with machines having abrasive shaping wheels made to reverse contour of molding shape; do not sculpt moldings.
- E. Finish exposed faces and edges of stone to comply with requirements indicated for finish of each stone type required and to match approved Samples and mockups.
- F. Carefully inspect finished stone units at fabrication plant for compliance with requirements for appearance, material, and fabrication. Replace defective units.
- Grade and mark stone for overall uniform appearance when assembled in place. Natural variations in appearance are acceptable if installed stone units match range of colors and other appearance characteristics represented in approved Samples[**and mockups**].

2.17 STONE BASE

- A. Nominal Thickness: [3/4 inch (20 mm)] [7/8 inch (22 mm)] [1-1/4 inches (32 mm)] unless otherwise indicated.

- B. Top-Edge Detail: [**Straight, slightly eased at corner**] [**3/8-inch (10-mm) bevel**] [**3/4-inch (20-mm) radius**] [**3/8-inch (10-mm) radius**] [**As indicated**].
- C. Ends: [**Butt ends into casings**] [**Butt ends into opening frames**] [**Return ends to depth of adjacent finish with edge detail same as top edge**] unless otherwise indicated.
- D. Joints: [**1/16-inch- (1.5-mm-) wide grouted joints**] [**1/8-inch- (3-mm-) wide grouted joints**] [**1/8-inch- (3-mm-) wide, sealant-filled joints**] [**Bonded joints, 1/32 inch (0.8 mm) or less in width**].
 - 1. Locate joints at midpoints between adjacent paneling joints unless otherwise indicated.

2.18 MIXES

- A. Spotting Plaster: Stiff mix of molding plaster and water.
- B. Mortar, General: Comply with referenced standards and with manufacturers' written instructions for mix proportions, mixing equipment, mixer speeds, mixing containers, mixing time, and other procedures needed to produce mortar of uniform quality and with optimum performance characteristics.
 - 1. Do not use admixtures, including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, antifreeze compounds, or other admixtures unless otherwise indicated. Do not use calcium chloride.
 - 2. Combine and thoroughly mix cementitious materials, water, and aggregates in a mechanical batch mixer unless otherwise indicated. Discard mortar when it has reached initial set.
- C. Setting Mortar: Comply with ASTM C 270, Proportion Specification.
 - 1. Type: [**N**] [**O**].
 - 2. Mix Proportions: 1 part Portland cement and 2-1/2 to 4 parts lime with aggregate ratio of 2-1/4 to 3 times the volume of cement and lime.
- D. Pointing Mortar: Comply with ASTM C 270, Proportion Specification, for mortar types indicated. Provide pointing mortar mixed to match DEN Project Manager's sample and complying with the following:
 - 1. Pigmented Pointing Mortar: Select and proportion pigments with other ingredients to produce color required. Do not exceed pigment-to-cement ratio of 1:10, by weight.
 - 2. Packaged Portland Cement-Lime Mix Mortar: Use Portland cement-lime mix of selected color.
 - 3. Colored-Aggregate Pointing Mortar: Produce color required by combining colored aggregates with Portland cement of selected color.
 - 4. Type: [**N**] [**O**].

5. Mix Proportions: 1 part Portland cement and 2-1/2 to 4 parts lime with aggregate ratio of 2-1/4 to 3 times the volume of cement and lime.
- E. Grout: Comply with mixing requirements of referenced ANSI standards and with manufacturer's written instructions.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine surfaces to receive stone base and conditions under which stone base will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of stone base.
- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of stone base.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SETTING STONE, GENERAL

- A. Before setting stone, clean surfaces that are dirty or stained by removing soil, stains, and foreign materials. Clean stone by thoroughly scrubbing with fiber brushes and then drenching with clear water. Use only mild cleaning compounds that contain no caustic or harsh materials or abrasives.
- B. Do necessary field cutting as stone is set. Use power saws with diamond blades to cut stone. Cut lines straight and true, with edges eased slightly to prevent snipping.
- C. Set stone to comply with requirements indicated. Install anchors, supports, fasteners, and other attachments indicated or necessary to secure stone in place. Shim and adjust anchors, supports, and accessories to set stone accurately in locations indicated, with edges and faces aligned according to established relationships and indicated tolerances.
- D. Erect stone units level, plumb, and true with uniform joint widths. Use temporary shims to maintain joint width.
- E. Provide expansion, control, and pressure-relieving joints of widths and at locations indicated.
 1. Sealing of expansion and other joints is specified in Section 079200 "Joint Sealants."
 2. Keep expansion joints free of plaster, mortar, grout, and other rigid materials.

3.3 CONSTRUCTION TOLERANCES

- A. Variation from Level: For lintels, sills, chair rails, horizontal bands, horizontal grooves, and other conspicuous lines, do not exceed **1/8 inch in 10 feet** (3 mm in 3 m), **1/4 inch in 20 feet** (6 mm in 6 m), **3/8 inch** (10 mm) maximum.
- B. Variation in Joint Width: Do not vary from average joint width more than plus or minus **1/16 inch** (1.5 mm) or one-fourth of nominal joint width, whichever is less.
- C. Variation in Plane between Adjacent Stone Units (Lipping): Do not exceed **1/32-inch** (0.8-mm) difference between planes of adjacent units.

3.4 INSTALLATION OF STONE BASE

- A. Stone Base: At locations with stone paneling, set units by adhering to stone paneling with water-cleanable epoxy adhesive. Hold adhesive back from exposed edges of joints to allow for grouting.
- B. Stone Base: At locations with stone paneling, set units firmly against setting spots. Locate setting spots at anchors and spaced not more than **18 inches** (450 mm) apart unless otherwise indicated. Provide no fewer than two anchors per piece for stone base up to **48 inches** (1200 mm) in length, plus one additional anchor for each additional **24 inches** (600 mm) of length.
- C. Stone Base: At locations without stone paneling, adhere units to plywood backing with full spread of water-cleanable epoxy adhesive. Hold adhesive back from exposed edges of joints to allow for grouting.
- D. Stone Base: At locations without stone paneling, adhere units to gypsum board with full spread of **[organic] [water-cleanable epoxy]** adhesive. Hold adhesive back from exposed edges of joints to allow for grouting.
- E. Assemble indicated multiple-piece stone base by bonding joints with stone adhesive as units are set. Mask areas adjacent to joints to prevent adhesive smears. Clamp units in place to ensure that surfaces are properly aligned and joints are minimum width.
- F. **[Grout] [Point]** joints after setting stone.
- G. Fill **[indicated]** joints with sealant after setting **[and grouting] [and pointing]** stone.

3.5 GROUTING JOINTS

- A. Grout stone to comply with ANSI A108.10.
 - 1. Use sanded grout mixture for joints wider than **1/8 inch** (3 mm).
 - 2. Use unsanded grout mixture for joints **1/8 inch** (3 mm) and narrower.
- B. Remove temporary shims before grouting.

- C. Tool joints uniformly and smoothly with plastic tool.

3.6 POINTING JOINTS WITH MORTAR

- A. Prepare stone-joint surfaces for pointing with mortar by removing temporary shims, dust, and mortar particles. Where setting spots occur at joints, rake out excess setting mortar or plaster to a depth of not less than **1/2 inch (13 mm)**.
- B. Point stone joints by placing pointing mortar in layers of not more than **3/8 inch (10 mm)**. Compact each layer thoroughly and allow it to become thumbprint hard before applying next layer. Apply mortar first to areas where depths are greater than surrounding areas until a uniform depth is formed.
- C. Tool joints when pointing mortar is thumbprint hard. Use a round jointer having a diameter **1/8 inch (3 mm)** larger than width of joint.

3.7 JOINT-SEALANT INSTALLATION

- A. Prepare joints and apply sealants of type and at locations indicated to comply with applicable requirements in Section 079200 "Joint Sealants." Remove temporary shims before applying sealants.

3.8 ADJUSTING AND CLEANING

- A. In-Progress Cleaning: Clean stone base as work progresses. Remove adhesive, grout, mortar, and sealant smears immediately.
- B. Remove and replace stone base of the following description:
 - 1. Broken, chipped, stained, or otherwise damaged stone. Stone may be repaired if methods and results are approved by DEN Project Manager.
 - 2. Defective stone base.
 - 3. Defective joints, including misaligned joints.
 - 4. Stone base and joints not matching approved Samples and mockups.
 - 5. Stone base not complying with other requirements indicated.
- C. Replace in a manner that results in stone base that matches approved Samples and mockups, complies with other requirements, and shows no evidence of replacement.
- D. Clean stone base no fewer than six days after completion of grouting and pointing, using clean water and soft rags or stiff-bristle fiber brushes. Do not use wire brushes, acid-type cleaning agents, cleaning compounds with caustic or harsh fillers, or other materials or methods that could damage stone.
- E. Sealer Application: Apply stone sealer to comply with stone producer's and sealer manufacturer's written instructions and recommendations.

3.9 PROTECTION

- A. Protect stone surfaces, edges, and corners from construction damage. Use securely fastened untreated wood, plywood, or heavy cardboard to prevent damage.
- B. Before inspection for Substantial Completion, remove protective coverings and clean surfaces.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 097516

SECTION 097519 - STONE TRIM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes interior stone trim.
- B. Related Requirements:
 - 1. Section 079200 "Joint Sealants" for sealing expansion joints in interior stone trim.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]<Insert location>**.

1.4 ACTION SUBMITTALS

- A. Product Data: For each[**variety of stone,**] stone accessory, and manufactured product.
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating distance to Project, cost for each regional material, and fraction by weight that is considered regional.
 - 2. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regionally manufactured[**and regionally extracted and manufactured**] materials. Include statement indicating cost for each regionally manufactured material.

- a. Include statement indicating location of manufacturer and distance to Project for each regionally manufactured material.
 - b. Include statement indicating location of manufacturer and point of extraction, harvest, or recovery for each raw material used in regionally extracted and manufactured materials. Indicate distance to Project and fraction by weight of each regionally manufactured material that is regionally extracted.
3. Product Data for Credit IEQ 4.1: For **[adhesives] [and] [sealants]**, documentation including printed statement of VOC content.
 4. Laboratory Test Reports for Credit IEQ 4.1: For **[adhesives] [and] [sealants]**, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: Show fabrication and installation details for stone trim, including dimensions and profiles of stone units.
1. Show locations and details of joints.
 2. Show locations and details of anchors, including locations of supporting construction.
- D. Samples for Initial Selection: For joint materials involving color selection.
- E. Samples for Verification:
1. For each stone type indicated, in sets of Samples not less than **12 inches** (300 mm) square. Include **[two] [three] [four] [five]** **<Insert number>** or more Samples in each set and show the full range of variations in appearance characteristics in completed Work.
 2. For each color of **[grout] [pointing mortar] [and] [sealant]** required.
- 1.5 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For **[Installer] [fabricator]**.
- B. Material Test Reports:
1. Stone Test Reports: For **[each]** stone variety proposed for use on Project, by a qualified testing agency, indicating compliance with required physical properties, other than abrasion resistance, according to referenced ASTM standards. Base reports on testing done within previous **[three] [five]** **<Insert number>** years.
 2. Sealant Compatibility and Adhesion Test Report: From sealant manufacturer indicating that sealants will not stain or damage stone. Include interpretation of test results and recommendations for primers and substrate preparation needed for adhesion.

1.6 CLOSEOUT SUBMITTALS

- A. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Fabricator Qualifications: Shop that employs skilled workers who custom fabricate stone similar to that required for this Project, and whose products have a record of successful in-service performance.
- B. Installer Qualifications: Fabricator of interior stone trim.
- C. Installer Qualifications: A firm or individual experienced in installing interior stone trim similar in material, design, and extent to that indicated for this Project, whose work has a record of successful in-service performance.
- D. Mockups: Build mockups to demonstrate aesthetic effects and to set quality standards for fabrication and installation.
 - 1. Build mockup of typical wall area as shown on Drawings.
 - 2. Build mockups for typical interior stone trim as shown on Drawings.
 - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 PRECONSTRUCTION TESTING

- A. Preconstruction Sealant Adhesion and Compatibility Testing: Submit to joint-sealant manufacturers, for compatibility and adhesion testing according to sealant manufacturer's standard testing methods and Section 079200 "Joint Sealants," Samples of materials that will contact or affect joint sealants.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Store and handle stone and related materials to prevent deterioration or damage due to moisture, temperature changes, contaminants, corrosion, breaking, chipping, and other causes.
- B. Mark stone units, on surface that will be concealed after installation, with designations used on Shop Drawings to identify individual stone units. Orient markings on vertical units so that they are right side up when units are installed.
- C. Deliver sealants to Project site in original unopened containers labeled with manufacturer's name, product name and designation, color, expiration period, pot life, curing time, and mixing instructions for multicomponent materials.

- D. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.

1.10 FIELD CONDITIONS

- A. Maintain air and material temperatures to comply with requirements of installation material manufacturers, but not less than 50 deg F (10 deg C) during installation and for seven days after completion.
- B. Field Measurements: Verify dimensions of construction to receive interior stone trim by field measurements before fabrication and indicate measurements on Shop Drawings.

1.11 COORDINATION

- A. Time delivery and installation of interior stone trim to avoid extended on-site storage and to coordinate with work adjacent to interior stone trim.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations for Stone: Obtain[**each variety of**] stone, [**regardless of finish,**] from a single quarry[, **whether specified in this Section or in another Section of the Specifications,**] with resources to provide materials of consistent quality in appearance and physical properties.
 - 1. For stone types that include same list of varieties and sources, provide same variety from same source for each.
- B. Varieties and Sources: Subject to compliance with requirements, provide stone of varieties and from sources complying with Section 044200 "Exterior Stone Cladding."

2.2 GRANITE <Insert drawing designation>

- A. Material Standard: Comply with ASTM C 615.
- B. Regional Materials: Granite shall be fabricated within 500 miles (800 km) of Project site from stone that has been extracted within 500 miles (800 km) of Project site.

- C. Regional Materials: Granite shall be fabricated within 500 miles (800 km) of Project site.
- D. Description: Uniform, [fine] [medium]-grained, [white] [pink] [gray] [black] <Insert color> stone[without veining].
- E. Varieties and Sources: Subject to compliance with requirements, provide one of the following:
 - 1. <Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>.
 - 2. or approved equal.
- F. Cut: [Vein] [Fleuri].
 - 1. Orientation of Veining: [Horizontal] [Vertical] [As indicated].
- G. Cut stone from one block or contiguous, matched blocks in which natural markings occur.
- H. Finish: [Polished] [Honed] [Thermal] [As indicated] [Match DEN Project Manager's sample] <Insert finish>.
- I. Match DEN Project Manager's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.3 LIMESTONE <Insert drawing designation>

- A. Material Standard: Comply with ASTM C 568.
 - 1. Classification: [I Low] [II Medium] [III High] Density.
- B. Regional Materials: Limestone shall be fabricated within 500 miles (800 km) of Project site from stone that has been extracted within 500 miles (800 km) of Project site.
- C. Regional Materials: Limestone shall be fabricated within 500 miles (800 km) of Project site.
- D. Description: [Dolomitic] [Oolitic] [Shell] limestone.
- E. Varieties and Sources: Subject to compliance with requirements, provide one of the following:
 - 1. <Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>.
 - 2. or approved equal.
- F. Varieties and Sources: Indiana oolitic limestone quarried in Lawrence, Monroe, or Owen Counties, Indiana.

1. Indiana Oolitic Limestone Grade and Color: [**Select, buff**] [**Select, gray**] [**Standard, buff**] [**Standard, gray**] [**Rustic, buff**] [**Rustic, gray**] [**Variegated**], according to grade and color classification established by ILI.
 - G. Cut: [**Vein**] [**Fleuri**].
 1. Orientation of Veining: [**Horizontal**] [**Vertical**] [**As indicated**].
 - H. Cut stone from one block or contiguous, matched blocks in which natural markings occur.
 - I. Finish: [**Smooth**] [**Sand rubbed**] [**Machine tooled, four bats per 1 inch (25 mm)**] [**Machine tooled, six bats per 1 inch (25 mm)**] [**Machine tooled, eight bats per 1 inch (25 mm)**] [**As indicated**] [**Match DEN Project Manager's sample**] <Insert finish> [, **matching standard ILI finish**].
 - J. Match DEN Project Manager's samples for color, finish, and other stone characteristics relating to aesthetic effects.
- 2.4 MARBLE <Insert drawing designation>
- A. Material Standard: Comply with ASTM C 503[, **Classification I Calcite**] [, **Classification II Dolomite**] [, **Group A**] [, **Group B**] [, **Group C**] [, **Group D**].
 - B. Regional Materials: Marble shall be fabricated within 500 miles (800 km) of Project site from stone that has been extracted within 500 miles (800 km) of Project site.
 - C. Regional Materials: Marble shall be fabricated within 500 miles (800 km) of Project site.
 - D. Description: Uniform, fine- to medium-grained, [**white**] <Insert color> stone with only slight veining.
 - E. Varieties and Sources: Subject to compliance with requirements, provide one of the following:
 1. <Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>.
 2. or approved equal.
 - F. Cut: [**Vein**] [**Fleuri**].
 1. Orientation of Veining: [**Horizontal**] [**Vertical**] [**As indicated**].
 - G. Cut stone from one block or contiguous, matched blocks in which natural markings occur.
 - H. Finish: [**Polished**] [**Honed**] [**As indicated**] [**Match DEN Project Manager's sample**] <Insert finish>.

- I. Match DEN Project Manager's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.5 SERPENTINE <Insert drawing designation>

- A. Material Standard: Comply with ASTM C 1526, [**Classification I Exterior**] [**Classification II Interior**].
- B. Regional Materials: Serpentine shall be fabricated within 500 miles (800 km) of Project site from stone that has been extracted within 500 miles (800 km) of Project site.
- C. Regional Materials: Serpentine shall be fabricated within 500 miles (800 km) of Project site.
- D. Varieties and Sources: Subject to compliance with requirements, provide one of the following:
 - 1. <Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>.
 - 2. or approved equal.
- E. Cut stone from one block or contiguous, matched blocks in which natural markings occur.
- F. Finish: [**Polished**] [**Honed**] [**As indicated**] [**Match DEN Project Manager's sample**] <Insert finish>.
- G. Match DEN Project Manager's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.6 TRAVERTINE <Insert drawing designation>

- A. Material Standard: Comply with ASTM C 1527, [**Classification I Exterior**] [**Classification II Interior**].
- B. Regional Materials: Travertine shall be fabricated within 500 miles (800 km) of Project site from stone that has been extracted within 500 miles (800 km) of Project site.
- C. Regional Materials: Travertine shall be fabricated within 500 miles (800 km) of Project site.
- D. Varieties and Sources: Subject to compliance with requirements, provide one of the following:
 - 1. <Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>.
 - 2. or approved equal.
- E. Cut: [**Vein**] [**Fleuri**].

1. Orientation of Veining: [**Horizontal**] [**Vertical**] [**As indicated**].
 - F. Cut stone from one block or contiguous, matched blocks in which natural markings occur.
 - G. Filling: Fill pores on faces of stone with cementitious filler of color [**selected by DEN Project Manager**] [**matching DEN Project Manager's sample**].
 - H. Finish: [**Polished**] [**Honed**] [**As indicated**] [**Match DEN Project Manager's sample**] <Insert finish>.
 - I. Match DEN Project Manager's samples for color, finish, and other stone characteristics relating to aesthetic effects.
- 2.7 OTHER STONE <Insert drawing designation>
- A. Material Standards:
 1. Maximum Absorption per ASTM C 97/C 97M: <Insert required value>.
 2. Minimum Compressive Strength per ASTM C 170/C 170M: <Insert required value>.
 3. Minimum Flexural Strength per ASTM C 880/C 880M: <Insert required value>.
 - B. Regional Materials: Stone shall be fabricated within **500 miles** (800 km) of Project site from stone that has been extracted within **500 miles** (800 km) of Project site.
 - C. Regional Materials: Stone shall be fabricated within **500 miles** (800 km) of Project site.
 - D. Varieties and Sources: Subject to compliance with requirements, provide one of the following:
 1. <Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>.
 2. or approved equal.
 - E. Finish: [**Polished**] [**Honed**] [**Sand rubbed**] [**Natural cleft**] [**As indicated**] [**Match DEN Project Manager's sample**] <Insert finish>.
 - F. Match DEN Project Manager's samples for color, finish, and other stone characteristics relating to aesthetic effects.
- 2.8 SETTING MATERIALS
- A. Molding Plaster: ASTM C 59/C 59M.
 - B. Portland Cement: ASTM C 150, Type I or Type II.
 1. Low-Alkali Cement: Not more than 0.60 percent total alkali when tested according to ASTM C 114.

- C. Hydrated Lime: ASTM C 207, Type S.
- D. Aggregate: ASTM C 144.
- E. Water: Potable.
- F. Adhesives, General: Use only adhesives formulated for stone and ceramic tile and recommended by their manufacturer for the application indicated.
- G. Organic Adhesive: ANSI A136.1, Type I[.], **with a VOC content of 65 g/L.], that complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."]**

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

- a. [Boiardi Products; a QEP company.](#)
- b. [Bostik, Inc.](#)
- c. [C-Cure.](#)
- d. [Custom Building Products.](#)
- e. [DAP Inc.](#)
- f. [Jamo Inc.](#)
- g. [Laticrete International, Inc.](#)
- h. [MAPEI Corporation.](#)
- i. [Mer-Krete Systems; ParexLahabra, Inc.](#)
- j. [Prospec; Bonsal American; a division of Oldcastle Architectural Products Group.](#)
- k. [Southern Grouts & Mortars, Inc.](#)
- l. [TEC, Specialty Construction Brands, Inc.; an H. B. Fuller company.](#)
- m. **<Insert manufacturer's name>.**
- n. or approved equal.

- H. Water-Cleanable Epoxy Adhesive: ANSI A118.3[.], **with a VOC content of 65 g/L or less.], that complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."]**

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:

- a. [Boiardi Products; a QEP company.](#)
- b. [Bonstone Materials Corporation.](#)
- c. [Bostik, Inc.](#)
- d. [C-Cure.](#)
- e. [Custom Building Products.](#)
- f. [Jamo Inc.](#)
- g. [Laticrete International, Inc.](#)
- h. [MAPEI Corporation.](#)

- i. [Mer-Krete Systems; ParexLahabra, Inc.](#)
 - j. [Prospec; Bonsal American; a division of Oldcastle Architectural Products Group.](#)
 - k. [Summitville Tiles, Inc.](#)
 - l. [TEC, Specialty Construction Brands, Inc.; an H. B. Fuller company.](#)
 - m. <Insert manufacturer's name>.
 - n. or approved equal.
- I. Stone Adhesive: Two-part, [**epoxy-resin**] [or] [**polyester-resin**] stone adhesive with an initial set time of not more than two hours at 70 deg F (21 deg C)[.], and with a **VOC content of 65 g/L or less.**], that complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."]
- 1. Color: [**Clear**] [**Match stone**].
 - 2. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. Epoxy Adhesive: [Akemi North America](#); Akepox.
 - b. Epoxy Adhesive: [Axson North America, Inc.](#), Wood & Stone Company; Akabond Epoxy.
 - c. Epoxy Adhesive: [Bonstone Materials Corporation](#); Touchstone Last Patch.
 - d. Epoxy Adhesive: [Bonstone Materials Corporation](#); Touchstone Ratio Pac Clear Gel Epoxy.
 - e. Epoxy Adhesive: <Insert manufacturer's name; product name or designation>.
 - f. Polyester Adhesive: [Akemi North America](#); Platinum Clear Polyester Adhesive.
 - g. Polyester Adhesive: [Axson North America, Inc.](#), Wood & Stone Company; Wood & Stone Polyester.
 - h. Polyester Adhesive: [Bonstone Materials Corporation](#); Gripstone L-200KG.
 - i. Polyester Adhesive: <Insert manufacturer's name; product name or designation>.
 - j. or approved equal.

2.9 GROUT

- A. Grout Colors: [**Match stone**] [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**].
- B. Sand-Portland Cement Grout: ANSI A108.10, composed of white or gray cement and white or colored aggregate to produce required color.
- C. Standard Cement Grout: ANSI A118.6, packaged.
 - 1. Grout Type: [**Sanded**] [**Unsanded**].
- D. Polymer-Modified Tile Grout: ANSI A118.7, packaged.

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. Bostik, Inc.
 - b. C-Cure.
 - c. Custom Building Products.
 - d. DAP Inc.
 - e. Jamo Inc.
 - f. Laticrete International, Inc.
 - g. MAPEI Corporation.
 - h. Mer-Krete Systems; ParexLahabra, Inc.
 - i. Prospec; Bonsal American; a division of Oldcastle Architectural Products Group.
 - j. Southern Grouts & Mortars, Inc.
 - k. Summitville Tiles, Inc.
 - l. TEC, Specialty Construction Brands, Inc.; an H. B. Fuller company.
 - m. **<Insert manufacturer's name>**.
 - n. or approved equal.
 2. Polymer Type: **[Acrylic resin] [or] [ethylene vinyl acetate]**, in dry, redispersible form, packaged with other dry ingredients.
 3. Polymer Type: **[Acrylic resin] [or] [styrene-butadiene rubber]** in liquid-latex form for addition to packaged dry-grout mix.
 4. Grout Type: **[Sanded] [Unsanded]**.
- E. Water-Cleanable Epoxy Grout: ANSI A118.3, packaged, chemical-resistant, water-cleanable, tile-setting and -grouting epoxy.
1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. Boiardi Products; a QEP company.
 - b. Bostik, Inc.
 - c. C-Cure.
 - d. Custom Building Products.
 - e. Jamo Inc.
 - f. Laticrete International, Inc.
 - g. MAPEI Corporation.
 - h. Mer-Krete Systems; ParexLahabra, Inc.
 - i. Prospec; Bonsal American; a division of Oldcastle Architectural Products Group.
 - j. Summitville Tiles, Inc.
 - k. TEC, Specialty Construction Brands, Inc.; an H. B. Fuller company.
 - l. **<Insert manufacturer's name>**.
 - m. or approved equal.

2.10 POINTING MORTAR MATERIALS

- A. Portland Cement: ASTM C 150, Type I or Type II. Provide natural color or white cement as required to produce mortar color indicated.
1. Low-Alkali Cement: Not more than 0.60 percent total alkali when tested according to ASTM C 114.
- B. Hydrated Lime: ASTM C 207, Type S.
- C. Mortar Pigments: Natural and synthetic iron oxides and chromium oxides, compounded for use in mortar mixes and complying with ASTM C 979. Pigments shall have a record of satisfactory performance in mortar.
1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. **Davis Colors;** True Tone Mortar Colors.
 - b. **Lanxess Corporation;** Bayferrox Iron Oxide Pigments.
 - c. **Solomon Colors;** SGS Mortar Colors.
 - d. **<Insert manufacturer's name; product name or designation>.**
 - e. or approved equal.
- D. Portland Cement-Lime Mix: Packaged blend of Portland cement and hydrated lime.
- E. Colored Portland Cement-Lime Mix: Packaged blend of Portland cement, hydrated lime, and mortar pigments. Use a mix of formulation required to produce color indicated or, if not indicated, as selected from manufacturer's standard formulations. Pigments shall not exceed 10 percent of Portland cement by weight.
1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. **Holcim (US) Inc.;** Rainbow Mortamix Custom Color Cement/Lime.
 - b. **Lafarge North America Inc.;** Eaglebond.
 - c. **Lehigh Cement Company;** Lehigh Custom Color Portland/Lime Cement.
 - d. **<Insert manufacturer's name; product name or designation>.**
 - e. or approved equal.
- F. Aggregate: ASTM C 144, except with 100 percent passing **No. 16 (1.18-mm)** sieve.
1. White Aggregates: Natural white sand or ground white stone.
 2. Colored Aggregates: Natural-colored sand or ground marble, granite, or other durable stone; of color necessary to produce required mortar color.
- G. Water: Potable.

2.11 SEALANTS

- A. Joint Sealants: Manufacturer's standard sealants of characteristics indicated below that comply with applicable requirements in Section 079200 "Joint Sealants" and will not stain the stone they are applied to.

1. Mildew-Resistant Joint Sealant: **[Mildew resistant, single component, nonsag, neutral curing, silicone] [Single component, nonsag, mildew resistant, acid curing, silicone] <Insert joint sealant>**.
 2. Joint Sealant: **[Latex] [Acrylic based] [Butyl rubber based] [Single component, nonsag, neutral curing, silicone; Class 25] <Insert joint sealant>**.
 3. VOC Content: **[250] <Insert value>** g/L or less.
 4. Sealants shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
 5. Colors: Provide colors of exposed sealants to match other joints in stone adjoining sealed joints unless otherwise indicated.
- B. Sealant for Filling Kerfs: **[Same sealant used for joints in dimension stone] [Single-component, nonsag, urethane sealant; Class 25, Use T (traffic), and Use M (masonry) that complies with applicable requirements in Section 079200 "Joint Sealants" and that does not stain stone] [Single-component, nonsag, neutral-curing, medium- to high-modulus silicone sealant; Class 25, Use NT (nontraffic), and Use M (masonry) that complies with applicable requirements in Section 079200 "Joint Sealants" and that does not stain stone]**.
1. **Products:** Subject to compliance with requirements, provide one of the following:
 - a. **BASF Building Systems**; Sonolastic NP 1.
 - b. **BASF Building Systems**; Sonolastic Ultra.
 - c. **Sika Corporation**; Sikaflex - 1a.
 - d. **Tremco Incorporated**; Vulkem 116.
 - e. **BASF Building Systems**; Omniseal 50.
 - f. Dow Corning Corporation; 756 SMS.
 - g. **General Electric Company**; GE Advanced Materials - Silicones; SilPruf NB SCS9000.
 - h. **Tremco Incorporated**; Spectrem 2.
 - i. **<Insert manufacturer's name; product name or designation>**.
 - j. or approved equal.
 2. VOC Content: **[250] <Insert value>** g/L or less.
 3. Sealants shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- 2.12 STONE ANCHORS AND ATTACHMENTS
- A. Fabricate anchors from stainless steel, ASTM A 240/A 240M or ASTM A 666, Type 304.

1. Fasteners for Stainless-Steel Anchors: Annealed stainless-steel bolts, nuts, and washers; [ASTM F 593](#) (ASTM F 738M) for bolts and [ASTM F 594](#) (ASTM F 836M) for nuts, Alloy Group 1 (A1).
- B. Fabricate dowels from stainless steel, ASTM A 276, Type 304.
- C. Fabricate anchors from extruded aluminum, [ASTM B 221](#) (ASTM B 221M), Alloy 6063-T6.
 1. Fasteners for Extruded-Aluminum Anchors: Annealed stainless-steel bolts, nuts, and washers; [ASTM F 593](#) (ASTM F 738M) for bolts and [ASTM F 594](#) (ASTM F 836M) for nuts, Alloy Group 1 (A1).
- D. Wire Tiebacks: [**No. 9 AWG copper or copper-alloy**] [or] [**0.120-inch- (3.0-mm-) diameter, stainless-steel**] wire.

2.13 STONE ACCESSORIES

- A. Temporary Setting Shims: Rigid plastic shims, nonstaining to stone, sized to suit joint thickness.
- B. Cleaner: Stone cleaner specifically formulated for stone types, finishes, and applications indicated, as recommended by stone producer. Do not use cleaning compounds containing acids, caustics, harsh fillers, or abrasives.
- C. Stone Sealer: Colorless, stain-resistant sealer that does not affect color or physical properties of stone surfaces, as recommended by stone producer for application indicated.
 1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
 - a. [Bostik, Inc.](#)
 - b. [Custom Building Products.](#)
 - c. [Hillyard, Inc.](#)
 - d. [HMK Stone Care; ACI International.](#)
 - e. [Miracle Sealants Company.](#)
 - f. [Stone Care International.](#)
 - g. [Summitville Tiles, Inc.](#)
 - h. **<Insert manufacturer's name>**.
 - i. or approved equal.

2.14 STONE FABRICATION, GENERAL

- A. Select stone for intended use to prevent fabricated units from containing cracks, seams, and starts that could impair structural integrity or function.

1. Repairs that are characteristic of the varieties specified are acceptable provided they do not impair structural integrity or function and are not aesthetically unpleasing, as judged by DEN Project Manager.
- B. Fabricate stone trim in sizes and shapes required to comply with requirements indicated.
1. For granite, comply with recommendations in NBGQA's "Specifications for Architectural Granite."
 2. For marble, comply with recommendations in MIA's "Dimension Stone - Design Manual VII."
 3. For limestone, comply with recommendations in ILI's "Indiana Limestone Handbook."
- C. Cut stone to produce pieces of thickness, size, and shape indicated and to comply with fabrication and construction tolerances recommended by applicable stone association.
1. Where items are installed with adhesive or where stone edges are visible in the finished work, make items uniform in thickness and of identical thickness for each type of item; gage back of stone if necessary.
 2. Clean sawed backs of stones to remove rust stains and iron particles.
 3. Dress joints straight and at right angle to face unless otherwise indicated.
 4. Cut and drill sinkages and holes in stone for anchors, supports, and lifting devices as indicated or needed to set stone securely in place; shape beds to fit supports.
- D. Fabricate molded work to produce stone shapes with a uniform profile throughout entire unit length and with precisely formed arris slightly eased to prevent snipping, and matched at joints between units.
1. Produce moldings with machines having abrasive shaping wheels made to reverse contour of molding shape; do not sculpt moldings.
 2. Miter moldings at corners, unless otherwise indicated, with edges of miters slightly eased at outside corners.
- E. Finish exposed faces and edges of stone to comply with requirements indicated for finish of each stone type required and to match approved Samples and mockups.
- F. Carefully inspect finished stone units at fabrication plant for compliance with requirements for appearance, material, and fabrication. Replace defective units.
1. Grade and mark stone for overall uniform appearance when assembled in place. Natural variations in appearance are acceptable if installed stone units match range of colors and other appearance characteristics represented in approved Samples[**and mockups**].

2.15 STONE TRIM

- A. Flat Trim:

1. Nominal Thickness: [**3/4 inch (20 mm)**] [**7/8 inch (22 mm)**] [**1-1/4 inches (32 mm)**] [**1-1/2 inches (40 mm)**] unless otherwise indicated.
2. Edge Detail: [**Straight, slightly eased at corners**] [**3/8-inch (10-mm) bevels**] [**3/4-inch (20-mm) radii**] [**3/8-inch (10-mm) radii**] [**As indicated**].
3. Joints: [**1/16-inch- (1.5-mm-) wide grouted joints**] [**1/8-inch- (3-mm-) wide grouted joints**] [**1/8-inch- (3-mm-) wide, sealant-filled joints**] [**Bonded joints, 1/32 inch (0.8 mm) or less in width**].

B. Molded Trim:

1. Profile: Match [**profiles indicated on Drawings**] [**existing**].
2. Joints: [**1/16-inch- (1.5-mm-) wide grouted joints**] [**1/8-inch- (3-mm-) wide grouted joints**] [**1/8-inch- (3-mm-) wide, sealant-filled joints**] [**Bonded joints, 1/32 inch (0.8 mm) or less in width**].

2.16 MIXES

A. Spotting Plaster: Stiff mix of molding plaster and water.

B. Mortar, General: Comply with referenced standards and with manufacturers' written instructions for mix proportions, mixing equipment, mixer speeds, mixing containers, mixing time, and other procedures needed to produce mortar of uniform quality and with optimum performance characteristics.

1. Do not use admixtures, including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, antifreeze compounds, or other admixtures unless otherwise indicated. Do not use calcium chloride.
2. Combine and thoroughly mix cementitious materials, water, and aggregates in a mechanical batch mixer unless otherwise indicated. Discard mortar when it has reached initial set.

C. Setting Mortar: Comply with ASTM C 270, Proportion Specification.

1. Type: [**N**] [**O**].
2. Mix Proportions: 1 part Portland cement and 2-1/2 to 4 parts lime with aggregate ratio of 2-1/4 to 3 times the volume of cement and lime.

D. Pointing Mortar: Comply with ASTM C 270, Proportion Specification, for mortar types indicated. Provide pointing mortar mixed to match DEN Project Manager's sample and complying with the following:

1. Pigmented Pointing Mortar: Select and proportion pigments with other ingredients to produce color required. Do not exceed pigment-to-cement ratio of 1:10, by weight.
2. Packaged Portland Cement-Lime Mix Mortar: Use Portland cement-lime mix of selected color.
3. Colored-Aggregate Pointing Mortar: Produce color required by combining colored aggregates with Portland cement of selected color.
4. Type: [**N**] [**O**].

5. Mix Proportions: 1 part Portland cement and 2-1/2 to 4 parts lime with aggregate ratio of 2-1/4 to 3 times the volume of cement and lime.
- E. Grout: Comply with mixing requirements of referenced ANSI standards and with manufacturer's written instructions.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine surfaces to receive stone trim and conditions under which stone trim will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of stone trim.
- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of stone trim.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SETTING STONE, GENERAL

- A. Before setting stone, clean surfaces that are dirty or stained by removing soil, stains, and foreign materials. Clean stone by thoroughly scrubbing with fiber brushes and then drenching with clear water. Use only mild cleaning compounds that contain no caustic or harsh materials or abrasives.
- B. Do necessary field cutting as stone is set. Use power saws with diamond blades to cut stone. Cut lines straight and true, with edges eased slightly to prevent snipping.
- C. Contiguous Work: Provide reveals and openings as required to accommodate contiguous work.
- D. Set stone to comply with requirements indicated. Install anchors, supports, fasteners, and other attachments indicated or necessary to secure stone in place. Shim and adjust anchors, supports, and accessories to set stone accurately in locations indicated, with edges and faces aligned according to established relationships and indicated tolerances.
- E. Erect stone units level, plumb, and true with uniform joint widths. Use temporary shims to maintain joint width.
- F. Provide expansion, control, and pressure-relieving joints of widths and at locations indicated.
 1. Sealing of expansion and other joints is specified in Section 079200 "Joint Sealants."
 2. Keep expansion joints free of plaster, mortar, grout, and other rigid materials.

3.3 CONSTRUCTION TOLERANCES

- A. Variation from Plumb: For vertical lines and surfaces, do not exceed **1/8 inch in 96 inches** (3 mm in 2400 mm), **1/4 inch** (6 mm) maximum.
- B. Variation from Level: For lintels, sills, chair rails, horizontal bands, horizontal grooves, and other conspicuous lines, do not exceed **1/8 inch in 10 feet** (3 mm in 3 m), **1/4 inch in 20 feet** (6 mm in 6 m), **3/8 inch** (10 mm) maximum.
- C. Variation of Linear Building Line: For position shown in plan and related portion of walls and partitions, do not exceed **1/8 inch in 10 feet** (3 mm in 3 m), **1/4 inch in 20 feet** (6 mm in 6 m), **3/8 inch** (10 mm) maximum.
- D. Variation in Cross-Sectional Dimensions: For thickness of walls from dimensions indicated, do not exceed plus or minus **1/8 inch** (3 mm).
- E. Variation in Joint Width: Do not vary from average joint width more than plus or minus **1/16 inch** (1.5 mm) or one-fourth of nominal joint width, whichever is less.
- F. Variation in Plane between Adjacent Stone Units (Lipping): Do not exceed **1/32-inch** (0.8-mm) difference between planes of adjacent units.

3.4 INSTALLATION

- A. Stone Trim: At locations with stone paneling, set units by adhering to stone paneling with water-cleanable epoxy adhesive. Hold adhesive back from exposed edges of joints to allow for grouting.
- B. Stone Trim: At locations with stone paneling, set units firmly against setting spots. Locate setting spots at anchors and spaced not more than **18 inches** (450 mm) apart unless otherwise indicated. Provide no fewer than two anchors per piece for stone trim up to **48 inches** (1200 mm) in length, plus one additional anchor for each additional **24 inches** (600 mm) of length.
- C. Stone Trim: At locations without stone paneling, adhere units to plywood backing with full spread of water-cleanable epoxy adhesive. Hold adhesive back from exposed edges of joints to allow for grouting.
- D. Stone Trim: At locations without stone paneling, adhere units to gypsum board with full spread of **[organic] [water-cleanable epoxy]** adhesive. Hold adhesive back from exposed edges of joints to allow for grouting.
- E. Assemble indicated multiple-piece stone trim by bonding joints with stone adhesive as units are set. Mask areas adjacent to joints to prevent adhesive smears. Clamp units in place to ensure that surfaces are properly aligned and joints are minimum width.
- F. **[Grout] [Point]** joints after setting stone.
- G. Fill **[indicated]** joints with sealant after setting **[and grouting] [and pointing]** stone.

3.5 GROUTING JOINTS

- A. Grout stone to comply with ANSI A108.10.
 - 1. Use sanded grout mixture for joints wider than **1/8 inch (3 mm)**.
 - 2. Use unsanded grout mixture for joints **1/8 inch (3 mm)** and narrower.
- B. Remove temporary shims before grouting.
- C. Tool joints uniformly and smoothly with plastic tool.

3.6 POINTING JOINTS WITH MORTAR

- A. Prepare stone-joint surfaces for pointing with mortar by removing temporary shims, dust, and mortar particles. Where setting spots occur at joints, rake out excess setting mortar or plaster to a depth of not less than **1/2 inch (13 mm)**.
- B. Point stone joints by placing pointing mortar in layers of not more than **3/8 inch (10 mm)**. Compact each layer thoroughly and allow it to become thumbprint hard before applying next layer. Apply mortar first to areas where depths are greater than surrounding areas until a uniform depth is formed.
- C. Tool joints when pointing mortar is thumbprint hard. Use a round jointer having a diameter **1/8 inch (3 mm)** larger than width of joint.

3.7 JOINT-SEALANT INSTALLATION

- A. Prepare joints and apply sealants of type and at locations indicated to comply with applicable requirements in Section 079200 "Joint Sealants." Remove temporary shims before applying sealants.

3.8 ADJUSTING AND CLEANING

- A. In-Progress Cleaning: Clean interior stone trim as work progresses. Remove adhesive, grout, mortar, and sealant smears immediately.
- B. Remove and replace interior stone trim of the following description:
 - 1. Broken, chipped, stained, or otherwise damaged stone. Stone may be repaired if methods and results are approved by DEN Project Manager.
 - 2. Defective stone trim.
 - 3. Defective joints, including misaligned joints.
 - 4. Interior stone trim and joints not matching approved Samples and mockups.
 - 5. Interior stone trim not complying with other requirements indicated.
- C. Replace in a manner that results in interior stone trim that matches approved Samples and mockups, complies with other requirements, and shows no evidence of replacement.

- D. Clean interior stone trim no fewer than six days after completion of grouting and pointing, using clean water and soft rags or stiff-bristle fiber brushes. Do not use wire brushes, acid-type cleaning agents, cleaning compounds with caustic or harsh fillers, or other materials or methods that could damage stone.
- E. Sealer Application: Apply stone sealer to comply with stone producer's and sealer manufacturer's written instructions and recommendations.

3.9 PROTECTION

- A. Protect stone surfaces, edges, and corners from construction damage. Use securely fastened untreated wood, plywood, or heavy cardboard to prevent damage.
- B. Before inspection for Substantial Completion, remove protective coverings and clean surfaces.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 097519

SECTION 098433 - SOUND-ABSORBING WALL UNITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes shop-fabricated, fabric-wrapped panel units tested for acoustical performance, including:
 - 1. Sound-absorbing wall panels.
 - 2. Sound-diffusing wall panels.
 - 3. Sound-reflecting wall panels.
- B. Related Sections:
 - 1. Section 097200 "Wall Coverings" for adhesively applied textile wall coverings[**and for coordinating requirements for fabric**].
 - 2. Section 097713 "Stretched-Fabric Wall Systems" for site-upholstered systems for walls[**and for coordinating requirements for fabric**].
 - 3. Section 097723 "Fabric-Wrapped Panels" for fabric-wrapped wall panels that are not required to be tested for acoustical performance[**and for coordinating requirements for fabric**].
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. NRC: Noise Reduction Coefficient.
- B. SAA: Sound Absorption Average.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of [**fabric facing**,] panel edge, core material, and mounting indicated.
 - 1. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Certificates for Credit MR 5.1: For products and materials required to comply with requirements for regionally manufactured materials. Include statement indicating cost, location of manufacturer, and distance to Project for each regionally manufactured material.
3. Certificates for **[Credit MR 6] [Credit MR 7]**: Chain-of-custody certificates indicating that wood-based products used in sound-absorbing wall units comply with forest certification requirements. Include statement indicating cost for each certified wood product.
4. Product Data for Credit IEQ 4.1: For installation adhesives, documentation including printed statement of VOC content and chemical components.
5. Product Data for Credit IEQ 4.4: For composite wood products used in sound-absorbing wall units, documentation indicating that product contains no urea formaldehyde.
6. Laboratory Test Reports for Credit IEQ 4: For **[installation adhesives] [composite wood products] [and] [sound-absorbing wall units]**, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

C. Shop Drawings: For sound-absorbing wall units. Include mounting devices and details; details at panel head, base, joints, and corners; and details at ceiling, floor base, and wall intersections. Indicate panel edge and core materials.

1. Include elevations showing panel sizes and direction of fabric weave and pattern matching.

D. Samples for Initial Selection: For each type of fabric facing from sound-absorbing wall unit manufacturer's full range.

E. Samples for Verification: For the following products, prepared on Samples of size indicated below:

1. Fabric: Full-width by approximately **[36-inch- (900-mm-)] <Insert dimension>** long Sample, but not smaller than required to show complete pattern repeat, from dye lot to be used for the Work, and with specified treatments applied. Mark top and face of fabric.
2. Panel Edge: **12-inch- (300-mm-)** long Sample(s) showing each edge profile, corner, and finish.
3. Core Material: **12-inch- (300-mm-)** square Sample at corner.
4. Mounting Devices: Full-size Samples.
5. Assembled Panels: Approximately **36 by 36 inches (900 by 900 mm)**, including joints and mounting methods.

1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Elevations and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Electrical outlets, switches, and thermostats.
 2. Items penetrating or covered by sound-absorbing wall units including the following:
 - a. Lighting fixtures.
 - b. Air outlets and inlets.
 - c. Speakers.
 - d. Alarms.
 - e. Sprinklers.
 - f. Access panels.
 - g. **<Insert item>**.
 3. Show operation of hinged and sliding components covered by or adjacent to sound-absorbing wall units.
- B. Product Certificates: For each type of sound-absorbing wall unit, from manufacturer.
- C. Warranty: Sample of special warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For sound-absorbing wall units to include in maintenance manuals. Include fabric manufacturers' written cleaning and stain-removal recommendations.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials from same production run that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Fabric: For each fabric, color, and pattern installed, provide length equal to **[10] <Insert number>** percent of amount installed, but no fewer than **[10 yards (9 m)] <Insert quantity>**.
 2. Mounting Devices: Full-size units equal to **[5] <Insert number>** percent of amount installed, but no fewer than **[five] <Insert number>** devices, including unopened adhesives.

1.8 QUALITY ASSURANCE

- A. Source Limitations: Obtain sound-absorbing wall units from single source from single manufacturer.
- B. Fire-Test-Response Characteristics: Provide sound-absorbing wall units meeting the following as determined by testing identical products by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:
 - 1. Surface-Burning Characteristics: As determined by testing per ASTM E 84.
 - a. Flame-Spread Index: **[25] <Insert value>** or less.
 - b. Smoke-Developed Index: **[450] <Insert value>** or less.
 - 2. Fire Growth Contribution: Meeting acceptance criteria of local code and authorities having jurisdiction when tested according to **[NFPA 265] [NFPA 286]**.
- C. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials, fabrication, and installation.
 - 1. Build mockup of typical wall area **[as shown on Drawings] [as directed by DEN Project Manager] <Insert requirement>.[Include intersection of wall and ceiling, corners, and perimeters.]**
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
- D. Preinstallation Conference: Conduct conference at **[Project site] <[location and time as determined by DEN Project Manager] Insert location>**.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Comply with fabric and sound-absorbing wall unit manufacturers' written instructions for minimum and maximum temperature and humidity requirements for shipment, storage, and handling.
- B. Deliver materials and units in unopened bundles and store in a temperature-controlled dry place with adequate air circulation.

1.10 PROJECT CONDITIONS

- A. Environmental Limitations: Do not install sound-absorbing wall units until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work at and above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

- B. Lighting: Do not install sound-absorbing wall units until [**a permanent level of lighting**] [**a lighting level of not less than 50 fc (538 lux)**] <Insert requirement> is provided on surfaces to receive the units.
- C. Field Measurements: Verify locations of sound-absorbing wall units and actual dimensions of openings and penetrations by field measurements before fabrication.

1.11 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of sound-absorbing wall units that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to the following:
 - a. Acoustical performance.
 - b. Fabric sagging, distorting, or releasing from panel edge.
 - c. Warping of core.
 - 2. Warranty Period: Minimum [**two (2)**] <Insert number> years from date of Substantial Completion.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of this Section.

PART 2 - PRODUCTS

2.1 SOUND-ABSORBING WALL UNITS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Acoustical Panel Systems (APS, Inc.).
 - 2. Acoustical Solutions, Inc.
 - 3. Armstrong World Industries.
 - 4. AVL Systems, Inc.
 - 5. Benton Brothers Solutions, Inc.
 - 6. Conwed Designscape; an Owens Corning company.
 - 7. Decoustics Limited; a CertainTeed Ceilings company.
 - 8. Essi Acoustical Products.
 - 9. Golterman & Sabo.
 - 10. Kinetics Noise Control, Inc.
 - 11. Lamvin, Inc.
 - 12. MBI Products Company, Inc.

13. Panel Solutions, Inc.
 14. Perdue Acoustics.
 15. Pinta Acoustic, Inc.
 16. Proudfoot Company, Inc. (The).
 17. Sound Concepts Canada, Inc.
 18. Sound Management Group LLC.
 19. Tectum Inc.
 20. Wall Technology, Inc.; an Owens Corning company.
 21. Working Walls, Inc.
 22. **<Insert manufacturer's name>**.
 23. or approved equal.
- B. General Requirements for Sound-Absorbing Wall Units: Units shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Sound-Absorbing Wall Panel **<Insert drawing designation>**: Manufacturer's standard panel construction consisting of facing material **[laminated to front face, edges, and back edge border of core] [stretched over front face of edge-framed core and bonded or attached to edges and back of frame] <Insert description>**.
1. Mounting: Edge mounted with splines secured to substrate.
 - a. Finish Color at Exposed Edges: **[White] [Black] [Match color of facing material] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert requirement>**.
 2. Mounting: Back mounted with manufacturer's standard **[adhesive] [adhesive tape strips] [hook-and-loop strips] [impaling clips] [magnetic devices] [metal clips or bar hangers]**, secured to substrate.
 3. Core: **[Manufacturer's standard] [glass-fiber board] [mineral-fiber board] [or] [cementitious-fiber board] <Insert requirement>**. **[Provide wood or plywood nailing strips in core where indicated.]**
 - a. Core-Face Layer: Manufacturer's standard **[tackable, impact-resistant, high-density board] [impact-resistant, acoustically transparent, copolymer sheet] <Insert requirement>**.
 4. Edge Construction: Manufacturer's standard **[chemically hardened core with no frame] [extruded-aluminum or zinc-coated, rolled-steel frame] [extruded PVC frame] [wood frame, rabbeted, and splined with glued joints and machined corners] <Insert requirement>**.
 5. Edge Profile: **[Long edges kerfed and rabbeted to receive splines] [Chamfered (beveled)] [Eased (small radius)] [Mitered (beveled to a point)] [Radiused (bullnosed)] [Square] [Custom profile as indicated on Drawings] <Insert profile>**.
 6. Corner Detail in Elevation: **[Square] [Round, radius as indicated on Drawings] [Custom as indicated on Drawings] <Insert description>** with continuous edge profile indicated.

7. Reveals between Panels: [**Recessed**] [**Flush**] [**Projecting**] reveals [**as selected by DEN Project Manager from manufacturer's full range**] [**as indicated on Drawings**] <Insert requirement>.
 8. Facing Material: [**Owner-furnished material**] [**As indicated on Drawings**] <Insert drawing designation>.
 9. Acoustical Performance: Sound absorption [**NRC**] [**or**] [**SAA**] of [**0.50 to 0.90**] [**0.60 to 0.70**] [**0.65 to 0.75**] [**not less than 0.65**] <Insert range or single value> according to ASTM C 423 for [**Type A**] <Insert Type> mounting according to ASTM E 795.
 10. Nominal [**Core**] [**Overall Panel**] Thickness: [**3/4 inch** (19 mm)] [**1 inch** (25 mm)] [**1-1/2 inches** (38 mm)] [**2 inches** (51 mm)] [**As indicated on Drawings**] <Insert dimension>.
 11. Panel Width: [**24 inches** (610 mm)] [**30 inches** (762 mm)] [**48 inches** (1220 mm)] [**As indicated on Drawings**] <Insert dimension>.
 12. Panel Height: [**72 inches** (1829 mm)] [**96 inches** (2438 mm)] [**108 inches** (2743 mm)] [**120 inches** (3048 mm)] [**As indicated on Drawings**] <Insert dimension>.
- D. Sound-~~[Diffusing]~~ [**Reflecting**] Wall Panel <Insert drawing designation>:
Manufacturer's standard panel construction consisting of facing material [**laminated to front face, edges, and back edge border of core**] <Insert description>.
1. Panel Shape: [**Barrel**] [**Pyramidal**] [**Radially curved flat panel**] [**As indicated on Drawings**] <Insert shape>.
 2. Mounting: Back mounted with manufacturer's standard [**adhesive**] [**adhesive tape strips**] [**hook-and-loop strips**] [**impaling clips**] [**magnetic devices**] [**metal clips or bar hangers**], secured to substrate.
 3. Core: [**Manufacturer's standard**] [**glass-fiber board with a reflective component**] [**mineral-fiber board with a reflective component**] [**cementitious-fiber board with a reflective component**] [**fire-retardant formed plastic**] [**medium-density fiberboard**] [**or**] [**particleboard**] <Insert requirement>, prepared for required acoustical performance.
 4. Edge Construction: Manufacturer's standard [**chemically hardened core with no frame**] <Insert requirement>.
 5. Reveals between Panels: [**Recessed**] [**Flush**] [**Projecting**] reveals [**as selected by DEN Project Manager from manufacturer's full range**] [**as indicated on Drawings**] <Insert requirement>.
 6. Facing Material: [**Owner-furnished material**] [**As indicated on Drawings**] <Insert drawing designation>.
 7. Acoustical Performance: Sound absorption [**NRC**] [**or**] [**SAA**] of [**0.05 to 0.10**] [**0.15 to 0.25**] [**0.30 to 0.40**] [**not more than 0.35**] <Insert range or single value> according to ASTM C 423 for [**Type A**] <Insert Type> mounting according to ASTM E 795.
 8. Panel Width: [**24 inches** (610 mm)] [**30 inches** (762 mm)] [**48 inches** (1220 mm)] [**As indicated on Drawings**] <Insert dimension>.
 9. Panel Height: [**72 inches** (1829 mm)] [**96 inches** (2438 mm)] [**108 inches** (2743 mm)] [**120 inches** (3048 mm)] [**As indicated on Drawings**] <Insert dimension>.

2.2 MATERIALS

A. General:

1. Minimum Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert number>** percent by weight.
2. Regional Materials: Sound-absorbing wall units shall be manufactured within **500 miles** (800 km) of Project site.
3. Certified Wood: Fabricate products with wood-based components produced from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."

B. Core Materials:[**Manufacturer's standard.**]

1. Glass-Fiber Board: ASTM C 612, Type standard with manufacturer; nominal density of [6 to 7 lb/cu. ft. (96 to 112 kg/cu. m)] **<Insert value>**, unfaced, and dimensionally stable, molded rigid board; and with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively.
2. Mineral-Fiber Board: Maximum flame-spread and smoke-developed indexes of 25 and 10, respectively; minimum density of [13 lb/cu. ft. (208 kg/cu. m)] [20 lb/cu. ft. (320 kg/cu. m)], and with perforated surface.
3. Cementitious-Fiber Board: Density of not less than [20 lb/cu. ft. (320 kg/cu. m)] **<Insert value>**.
4. Fire-Retardant Formed Plastic: Manufacturer's standard formed plastic with flame-spread index of 25 or less and smoke-developed index of 25 or less according to ASTM E 84.
5. Medium-Density Fiberboard: Panels complying with ANSI A208.2, Grade M-2.
 - a. Made with binder containing no urea formaldehyde.
 - b. Panels shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
 - c. Fire-retardant panels made from softwood fibers, synthetic resins, and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 200 or less per ASTM E 84.
6. Particleboard: Panels complying with ANSI A208.1, Grade M-2.
 - a. Made with binder containing no urea formaldehyde.
 - b. Panels shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
 - c. Fire-retardant panels made from softwood particles and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 25 or less per ASTM E 84.
7. Tackable, Impact-Resistant, High-Density Board for Face Layer: **1/8-inch-** (3.2-mm-) thick layer of compressed molded glass-fiber board with a nominal density of **16 to 18 lb/cu. ft.** (256 to 288 kg/cu. m) laminated to face of core.

8. Impact-Resistant, Acoustically Transparent, Copolymer Sheet for Face Layer: **1/16- to 1/8-inch-** (1.6- to 3.2-mm-) thick layer of perforated, noncombustible, copolymer sheet laminated to face of core.
 9. Wood and Plywood: Manufacturer's standard plywood or clear, vertical grain, straight, kiln-dried hardwood.
 - a. Plywood shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
 - b. Fire-retardant treated by pressure process with a flame-spread index of 25 or less when tested according to ASTM E 84, and with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than **10.5 feet** (3.2 m) beyond the centerline of the burners at any time during the test.
 - 1) Treated material shall have a moisture content of 28 percent or less when tested according to ASTM D 3201 at 92 percent relative humidity.
 - 2) Kiln-dry material after treatment to 7 to 13 percent or less for lumber and 15 percent or less for plywood.
- C. Facing Material **<Insert drawing designation>**: Fabric from same dye lot; color and pattern **[as indicated by manufacturer's designations] [matching DEN Project Manager's samples] [as selected by DEN Project Manager from manufacturer's full range] [as indicated on Drawings] <Insert requirement>**.
1. Manufacturer: **<Insert manufacturer's name>**.
 2. Product Line/Pattern: **<Insert product name or designation>**.
 3. Pattern Repeat: **<Insert requirement>**.
 4. Style Number: **<Insert number>**.
 5. Color: **<Insert name or number, or both>**.
 6. Fiber Content: **[100] <Insert number>** percent **[woven polyester] [nonwoven polyester] [polyolefin] [acoustically transparent vinyl] <Insert fiber requirement>**.
 7. Width: **[54 inches (1371 mm)] [66 inches (1676 mm)] <Insert dimension>**.
 8. Source: **<Insert fabric-vendor's name>**.
 9. Applied Treatments: **[Stain resistance] <Insert treatment>**.
- D. Mounting Devices: Concealed on back of unit, recommended by manufacturer to support weight of unit, and as follows:
1. Splines: Manufacturer's standard concealed metal or plastic splines that engage the kerfed edges of the unit, with other moldings and trim for interior corners, exterior corners, and exposed edges, with factory-applied finish on exposed items.
 2. Adhesives: As recommended by sound-absorbing wall unit manufacturer and with a VOC content of **[70] <Insert value>** g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

3. Adhesives: As recommended by sound-absorbing wall unit manufacturer and that comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
4. Adhesive Tape Strips: **[Manufacturer's standard 1/16-inch- (1.6-mm-) thick, double-sided foam tape]** <Insert requirement>.
5. Hook-and-Loop Strips: **[Manufacturer's standard]** <Insert requirement>.
6. Impaling Clips: **[Manufacturer's standard]** <Insert requirement>.
7. Magnetic Strip or Devices: **[Manufacturer's standard]** <Insert requirement>.
8. Metal Clips or Bar Hangers: Manufacturer's standard two-part metal "Z" clips, with one part of each clip mechanically attached to back of unit and the other part to substrate, designed to permit unit removal.

2.3 FABRICATION

- A. General: Use manufacturer's standard construction except as otherwise indicated; with facing material applied to face, edges, and back border of dimensionally stable core; and with rigid edges to reinforce panel perimeter against warpage and damage.
 1. **[Glass-Fiber Board] [and] [Mineral-Fiber Board]** Cores: Chemically harden core edges and areas of core where mounting devices are attached.
- B. Core-Face Layer: Evenly stretched over core face and edges and securely attached to core; free from puckers, ripples, wrinkles, or sags.
- C. Facing Material: Apply fabric facing fully covering visible surfaces of unit; with material stretched straight, on the grain, tight, square, and free from puckers, ripples, wrinkles, sags, blisters, seams, adhesive, or other visible distortions or foreign matter.
 1. Square Corners: Tailor corners. **[Heat seal vinyl fabric seams at corners.]**
 2. Radius and Other Nonsquare Corners: Attach facing material so there are no seams or gathering of material.
 3. Fabrics with Directional or Repeating Patterns or Directional Weave: Mark fabric top and attach fabric in same direction so pattern or weave matches in adjacent units.
- D. Dimensional Tolerances of Finished Units: Plus or minus **1/16 inch** (1.6 mm) for the following:
 1. Thickness.
 2. Edge straightness.
 3. Overall length and width.
 4. Squareness from corner to corner.
 5. Chords, radii, and diameters.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine fabric, fabricated units, substrates, areas, and conditions, for compliance with requirements, installation tolerances, and other conditions affecting performance of sound-absorbing wall units.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install sound-absorbing wall units in locations indicated with vertical surfaces and edges plumb, top edges level and in alignment with other units, faces flush, and scribed to fit adjoining work accurately at borders and at penetrations.
- B. Comply with sound-absorbing wall unit manufacturer's written instructions for installation of units using type of mounting devices indicated. Mount units securely to supporting substrate.
- C. Align and level fabric pattern and grain among adjacent units.

3.3 INSTALLATION TOLERANCES

- A. Variation from Plumb and Level: Plus or minus [1/16 inch (1.6 mm)] **<Insert dimension>**.
- B. Variation of Panel Joints from Hairline: Not more than [1/16 inch (1.6 mm)] [1/32 inch (0.79 mm)] **<Insert dimension>** wide.

3.4 CLEANING

- A. Clip loose threads; remove pills and extraneous materials.
- B. Clean panels on completion of installation to remove dust and other foreign materials according to manufacturer's written instructions.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 098433

SECTION 098436 - SOUND-ABSORBING CEILING UNITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes shop-fabricated, fabric-wrapped panel units tested for acoustical performance, including:
 - 1. Sound-absorbing panels.
 - 2. Sound-diffusing panels.
 - 3. Sound-reflecting panels.
 - 4. Sound-absorbing baffle panels.
- B. Related Requirements:
 - 1. Section 097200 "Wall Coverings" for adhesively applied textile wall coverings[**and for coordinated requirements for fabric**].
 - 2. Section 095443 "Stretched-Fabric Ceiling Systems" for site-upholstered systems for ceilings[**and for coordinated requirements for fabric**].
 - 3. Section 095446 "Fabric-Wrapped Ceiling Panels" for shop-fabricated, fabric-wrapped ceiling panels that are not required to be tested for acoustical performance[**and for coordinated requirements for fabric**].
 - 4. Section 098433 "Sound-Absorbing Wall Units" for shop-fabricated fabric-wrapped wall panels tested for acoustical performance[**and for coordinated requirements for fabric**].
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. NRC: Noise reduction coefficient.
- B. SAA: Sound absorption average.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager] <Insert location>**.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1. Include construction details, mounting, material descriptions, dimensions of individual components and profiles, and finishes for sound-absorbing ceiling units.
2. Include furnished specialties and accessories.
3. Include data substantiating that materials comply with requirements.

- B. LEED Submittals:

1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Certificates for Credit MR 5, Option 1: For products and materials required to comply with requirements for regionally manufactured materials. Include statement indicating cost, location of manufacturer, and distance to Project for each regionally manufactured material.
3. Certificates for **[Credit MR 6] [Credit MR 7]**: Chain-of-custody certificates indicating that wood-based products used in sound-absorbing ceiling units comply with forest certification requirements. Include statement indicating cost for each certified wood product.
4. Product Data for Credit IEQ 4.4: For composite wood products used in sound-absorbing ceiling units, documentation indicating that product contains no urea formaldehyde.
5. Laboratory Test Reports for Credit IEQ 4: For **[composite wood products] [and] [sound-absorbing ceiling units]**, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- C. Shop Drawings: For sound-absorbing ceiling units.

1. Include plans, elevations, sections, and mounting devices and details.
2. Include details at joints and corners; and details at ceiling intersections and intersections with walls. Indicate panel edge and core materials.
3. Include reflected ceiling plans showing panel sizes and direction of fabric weave and pattern matching.

- D. Samples for Initial Selection: For each type of fabric facing from sound-absorbing ceiling unit manufacturer's full range.

- E. Samples for Verification: For the following products:
1. Fabric: Full-width by approximately [36-inch- (900-mm-)] <Insert dimension> long Sample, but not smaller than required to show complete pattern repeat, from dye lot to be used for the Work, and with specified treatments applied. Mark top and face of fabric.
 2. Panel Edge: 12-inch- (300-mm-) long Sample(s) showing each edge profile, corner, and finish.
 3. Core Material: 12-inch- (300-mm-) square Sample at corner.
 4. Mounting Devices: Full-size Samples.
 5. Assembled Panels: Approximately 36 by 36 inches (900 by 900 mm), including joints and mounting methods.

1.6 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Reflected ceiling plans and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Electrical outlets, switches, and thermostats.
 2. Suspended ceiling components above sound-absorbing ceiling units.
 3. Structural members to which suspension devices will be attached.
 4. Items penetrating or covered by sound-absorbing ceiling units including the following:
 - a. Lighting fixtures.
 - b. Air outlets and inlets.
 - c. Speakers.
 - d. Alarms.
 - e. Sprinklers.
 - f. Access panels.
 - g. <Insert item>.
 5. Show operation of hinged and sliding components covered by or adjacent to sound-absorbing ceiling units.
- B. Product Certificates: For each type of sound-absorbing ceiling unit.
- C. Sample Warranty: For special warranty.

1.7 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For sound-absorbing ceiling units to include in maintenance manuals. Include fabric manufacturer's written cleaning and stain-removal recommendations.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Fabric: For each fabric, color, and pattern installed, furnish length equal to **[10 <Insert number>** percent of amount installed, but no fewer than **[10 yards (9 m)] <Insert quantity>**.
 2. Mounting Devices: Full-size units equal to **[5] <Insert number>** percent of amount installed, but no fewer than **[five] <Insert number>** devices.

1.9 QUALITY ASSURANCE

- A. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials, fabrication, and installation.
1. Build mockup of typical ceiling area **[as shown on Drawings] [as directed by DEN Project Manager] <Insert requirement>**. **[Include intersection of wall and ceiling, corners, and perimeters.]**
 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Comply with fabric and sound-absorbing ceiling unit manufacturers' written instructions for minimum and maximum temperature and humidity requirements for shipment, storage, and handling.
- B. Deliver materials and units in unopened bundles and store in a temperature-controlled dry place with adequate air circulation.

1.11 FIELD CONDITIONS

- A. Environmental Limitations: Do not install sound-absorbing ceiling units until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work at and above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.
- B. Lighting: Do not install sound-absorbing ceiling units until **[a permanent level of lighting] [a lighting level of not less than 50 fc (538 lux)] <Insert requirement>** is provided on surfaces to receive the units.
- C. Air-Quality Limitations: Protect sound-absorbing ceiling units from exposure to airborne odors, such as tobacco smoke, and install units under conditions free from odor contamination of ambient air.

- D. Field Measurements: Verify locations of sound-absorbing ceiling units and actual dimensions of openings and penetrations by field measurements before fabrication.

1.12 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of sound-absorbing ceiling units that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
 - a. Acoustical performance.
 - b. Fabric sagging, distorting, or releasing from panel edge.
 - c. Warping of core.
2. Warranty Period: Minimum **[two (2)] <Insert number>** years from date of Substantial Completion.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Acoustical Panel Systems (APS, Inc.).
 2. Acoustical Solutions, Inc.
 3. AVL Systems, Inc.
 4. Benton Brothers Solutions, Inc.
 5. Conwed Designscape; an Owens Corning company.
 6. Decoustics Limited; a CertainTeed Ceilings company.
 7. Essi Acoustical Products.
 8. Golterman & Sabo.
 9. Kinetics Noise Control, Inc.
 10. Lamvin, Inc.
 11. MBI Products Company, Inc.
 12. Panel Solutions, Inc.
 13. Perdue Acoustics.
 14. Proudfoot Company, Inc. (The).
 15. Sound Concepts Canada, Inc.
 16. Sound Management Group LLC.

17. Wall Technology, Inc.; an Owens Corning company.
18. Working Walls, Inc.
19. **<Insert manufacturer's name>**.
20. or approved equal.

- B. Source Limitations: Obtain sound-absorbing ceiling units from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. General Requirements for Sound-Absorbing Ceiling Units: Provide **[sound-absorbing]** **[sound-diffusing]** **[sound-reflecting]** **[and]** **[sound-absorbing baffle]** panels that comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- B. Fire-Test-Response Characteristics: Provide sound-absorbing ceiling units meeting the following requirements as determined by testing identical products by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:
1. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - a. Flame-Spread Index: **[25]** **<Insert value>** or less.
 - b. Smoke-Developed Index: **[450]** **<Insert value>** or less.
 2. Fire Growth Contribution: Comply with acceptance criteria of local code and authorities having jurisdiction when tested according to **[NFPA 265]** **[NFPA 286]**.

2.3 SOUND-ABSORBING CEILING UNITS

- A. Sound-Absorbing Ceiling Panel **<Insert drawing designation>**: Manufacturer's standard panel construction consisting of facing material **[laminated to front face, edges, and back edge border of core]** **[stretched over front face of edge-framed core and bonded or attached to edges and back of frame]** **<Insert description>**.
1. Mounting: Back mounted with manufacturer's standard **[metal clips]** **[suspension system]** **[suspension system with stiffening, back-support angles]** **<Insert requirement>**, secured to substrate.
 2. Core: **[Manufacturer's standard]** **[Glass-fiber board]** **[Glass-fiber blanket]** **[Mineral-fiber board]** **[Cementitious-fiber board]** **<Insert requirement>**.
 3. Edge Construction: Manufacturer's standard **[chemically hardened core with no frame]** **[extruded-aluminum or zinc-coated, rolled-steel frame]** **[extruded PVC frame]** **[wood frame, rabbeted, and splined with glued joints and machined corners]** **<Insert requirement>**.
 4. Edge Profile: **[Chamfered (beveled)]** **[Eased (small radius)]** **[Mitered (beveled to a point)]** **[Radiused (bullnosed)]** **[Square]** **[Custom profile as indicated on Drawings]** **<Insert profile>**.

5. Corner Detail in Elevation: [**Square**] [**Round, radius as indicated on Drawings**] [**Custom as indicated on Drawings**] <Insert description> with continuous edge profile indicated.
 6. Reveals between Panels: [**Recessed**] [**Flush**] [**Projecting**] reveals [**as selected by DEN Project Manager from manufacturer's full range**] [**as indicated on Drawings**] <Insert requirement>.
 7. Facing Material: [**Owner-furnished material**] [**As indicated on Drawings**] <Insert drawing designation>.
 8. Acoustical Performance: Sound absorption [**NRC**] [**or**] [**SAA**] of [**0.50 to 0.90**] [**0.60 to 0.70**] [**0.65 to 0.75**] [**not less than 0.65**] <Insert range or single value> according to ASTM C 423 for [**Type A**] [**Type J**] <Insert mounting> mounting according to ASTM E 795.
 9. Nominal [**Core**] [**Overall Panel**] Thickness: [**3/4 inch (19 mm)**] [**1 inch (25 mm)**] [**1-1/2 inches (38 mm)**] [**2 inches (51 mm)**] [**As indicated on Drawings**] <Insert dimension>.
 10. Panel Width: [**24 inches (610 mm)**] [**30 inches (762 mm)**] [**48 inches (1220 mm)**] [**As indicated on Drawings**] <Insert dimension>.
 11. Panel Height: [**72 inches (1829 mm)**] [**96 inches (2438 mm)**] [**108 inches (2743 mm)**] [**120 inches (3048 mm)**] [**As indicated on Drawings**] <Insert dimension>.
- B. Sound-~~[Diffusing]~~ [**Reflecting**] Ceiling Panel <Insert drawing designation>:
Manufacturer's standard panel construction consisting of facing material [**laminated to front face, edges, and back edge border of core**] <Insert description>.
1. Basis-of-Design Product: [**Indicated on Drawings**] <Insert manufacturer's name; product name or designation>.
 2. Panel Shape: [**Barrel**] [**Pyramidal**] [**Radially curved flat panel**] [**As indicated on Drawings**] <Insert shape>.
 3. Mounting: Back mounted with manufacturer's standard [**metal clips**] [**suspension system**] [**suspension system with stiffening, back-support angles**] <Insert requirement>, secured to substrate.
 4. Core: [**Manufacturer's standard**] [**Glass-fiber board with a reflective component**] [**Mineral-fiber board with a reflective component**] [**Cementitious-fiber board with a reflective component**] [**Fire-retardant formed plastic**] [**Medium-density fiberboard**] [**Particleboard**] <Insert requirement>, prepared for required acoustical performance.
 5. Edge Construction: Manufacturer's standard [**chemically hardened core with no frame**] <Insert requirement>.
 6. Reveals between Panels: [**Recessed**] [**Flush**] [**Projecting**] reveals [**as selected by DEN Project Manager from manufacturer's full range**] [**as indicated on Drawings**] <Insert requirement>.
 7. Facing Material: [**Owner-furnished material**] [**As indicated on Drawings**] <Insert drawing designation>.
 8. Acoustical Performance: Sound absorption [**NRC**] [**or**] [**SAA**] of [**0.05 to 0.10**] [**0.15 to 0.25**] [**0.30 to 0.40**] [**not more than 0.35**] <Insert range or single value> according to ASTM C 423 for [**Type A**] [**Type J**] <Insert mounting> mounting according to ASTM E 795.
 9. Panel Width: [**24 inches (610 mm)**] [**30 inches (762 mm)**] [**48 inches (1220 mm)**] [**As indicated on Drawings**] <Insert dimension>.

10. Panel Height: [72 inches (1829 mm)] [96 inches (2438 mm)] [108 inches (2743 mm)] [120 inches (3048 mm)] [As indicated on Drawings] <Insert dimension>.

- C. Sound-Absorbing Baffle Panel <Insert drawing designation>: Manufacturer's standard panel construction consisting of facing material [laminated to front face, edges, and back edge border of core] [stretched over front face of edge-framed core and bonded or attached to edges and back of frame] <Insert description>.
1. Mounting: Back mounted with manufacturer's standard [metal clips] [suspension system] [suspension system with stiffening top-support angle] <Insert requirement>, secured to substrate.
 2. Core: [Manufacturer's standard] [Glass-fiber board] [Mineral-fiber board] [Cementitious-fiber board] <Insert requirement>.
 3. Edge Construction: Manufacturer's standard [chemically hardened core with no frame] [extruded-aluminum or zinc-coated, rolled-steel frame] [extruded PVC frame] [wood frame, rabbeted, and splined with glued joints and machined corners] <Insert requirement>.
 4. Edge Profile: [Chamfered (beveled)] [Eased (small radius)] [Mitered (beveled to a point)] [Radiused (bullnosed)] [Square] [Custom profile as indicated on Drawings] <Insert profile>.
 5. Corner Detail in Elevation: [Square] [Round, radius as indicated on Drawings] [Custom as indicated on Drawings] <Insert description> with continuous edge profile indicated.
 6. Facing Material: [Owner-furnished material] [As indicated on Drawings] <Insert drawing designation>.
 7. Acoustical Performance: Sound absorption [NRC] [or] [SAA] of [0.50 to 0.90] [0.60 to 0.70] [0.65 to 0.75] [not less than 0.65] <Insert range or single value> according to ASTM C 423 for [Type A] [Type J] <Insert mounting> mounting according to ASTM E 795.
 8. Nominal [Core] [Overall Panel] Thickness: [3/4 inch (19 mm)] [1 inch (25 mm)] [1-1/2 inches (38 mm)] [2 inches (51 mm)] [As indicated on Drawings] <Insert dimension>.
 9. Panel Width: [24 inches (610 mm)] [30 inches (762 mm)] [48 inches (1220 mm)] [As indicated on Drawings] <Insert dimension>.
 10. Panel Height: [72 inches (1829 mm)] [96 inches (2438 mm)] [108 inches (2743 mm)] [120 inches (3048 mm)] [As indicated on Drawings] <Insert dimension>.

2.4 MATERIALS

A. General:

1. Recycled Content of Sound-Absorbing Ceiling Units: Postconsumer recycled content plus one-half of preconsumer recycled content not less than <Insert number> percent.
2. Regional Materials: Sound-absorbing ceiling units shall be manufactured within 500 miles (800 km) of Project site.
3. Certified Wood: Sound-absorbing ceiling units fabricated with wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."

B. Core Materials: **[Manufacturer's standard.]**

1. Glass-Fiber Board: ASTM C 612, Type standard with manufacturer; nominal density of [6 to 7 lb/cu. ft. (96 to 112 kg/cu. m)] **<Insert value>**, unfaced, and dimensionally stable, molded rigid board; and with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively.
2. Glass-Fiber Blanket: ASTM C 612, ASTM C 553, or ASTM C 665; Type standard with manufacturer; nominal density of [3 to 4 lb/cu. ft. (48 to 64 kg/cu. m)] **<Insert value>**; flexible; and with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively.
3. Mineral-Fiber Board: Maximum flame-spread and smoke-developed indexes of 25 and 10, respectively; minimum density of [13 lb/cu. ft. (208 kg/cu. m)] [20 lb/cu. ft. (320 kg/cu. m)], and with perforated surface.
4. Cementitious-Fiber Board: Density of not less than [20 lb/cu. ft. (320 kg/cu. m)] **<Insert value>**.
5. Fire-Retardant Formed Plastic: Manufacturer's standard formed plastic with flame-spread index of 25 or less and smoke-developed index of 25 or less according to ASTM E 84.
6. Medium-Density Fiberboard: Panels complying with ANSI A208.2, Grade M-2.
 - a. Made with binder containing no urea formaldehyde.
 - b. Use panels that meet the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
 - c. Fire-retardant panels made from softwood fibers, synthetic resins, and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 200 or less when tested according to ASTM E 84.
7. Particleboard: Panels complying with ANSI A208.1, Grade M-2.
 - a. Made with binder containing no urea formaldehyde.
 - b. Use panels that meet the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
 - c. Fire-retardant panels made from softwood particles and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 25 or less when tested according to ASTM E 84.
8. Wood and Plywood: Manufacturer's standard plywood or clear, vertical grain, straight, kiln-dried hardwood.
 - a. Use plywood that meets the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- b. Fire-retardant treated by pressure process with a flame spread index of 25 or less when tested according to ASTM E 84, and with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than **10.5 feet** (3.2 m) beyond the centerline of the burners at any time during the test.
 - 1) Treated material shall have a moisture content of 28 percent or less when tested according to ASTM D 3201 at 92 percent relative humidity.
 - 2) Kiln-dry material after treatment to 7 to 13 percent or less for lumber and 15 percent or less for plywood.
- C. Facing Material **<Insert drawing designation>**: Fabric from same dye lot; color and pattern **[as indicated by manufacturer's designations] [matching DEN Project Manager's samples] [as selected by DEN Project Manager from manufacturer's full range] [as indicated on Drawings] <Insert requirement>**.
 1. Manufacturer: **<Insert manufacturer's name>**.
 2. Product Line/Pattern: **<Insert product name or designation>**.
 3. Pattern Repeat: **<Insert requirement>**.
 4. Style Number: **<Insert number>**.
 5. Color: **<Insert name or number, or both>**.
 6. Fiber Content: **[100] <Insert number>** percent **[woven polyester] [nonwoven polyester] [polyolefin] [acoustically transparent vinyl] <Insert fiber requirement>**.
 7. Width: **[54 inches (1371 mm)] [66 inches (1676 mm)] <Insert dimension>**.
 8. Source: **<Insert fabric-vendor's name>**.
 9. Applied Treatments: **[Stain resistance] <Insert treatment>**.
 10. Light Reflectance: Average value not less than **[0.75] <Insert value>** when tested according to ASTM E 1477.
- D. Mounting Devices: Concealed on back of unit, recommended by manufacturer to support weight of unit.

2.5 FABRICATION

- A. General: Use manufacturer's standard construction except as otherwise indicated, with facing material applied to face, edges, and back border of dimensionally stable core and with rigid edges to reinforce panel perimeter against warpage and damage.
- B. Measure each area and establish layout of panels and joints of **[uniform size with balanced borders at opposite edges] [sizes indicated on Drawings]** within a given area.
- C. **[Glass-Fiber Board] [and] [Mineral-Fiber Board]** Cores: Chemically harden core edges and areas of core where mounting devices are attached.

- D. Facing Material: Apply fabric facing fully covering visible surfaces of unit; with material stretched straight, on the grain, tight, square, and free from puckers, ripples, wrinkles, sags, blisters, seams, adhesive, or other visible distortions or foreign matter.
1. Square Corners: Tailor corners.[**Heat seal vinyl fabric seams at corners.**]
 2. Radius and Other Nonsquare Corners: Attach facing material so there are no seams or gathering of material.
 3. Fabrics with Directional or Repeating Patterns or Directional Weave: Mark fabric top and attach fabric in same direction so pattern or weave matches adjacent units.
- E. Dimensional Tolerances of Finished Units: Plus or minus **1/16 inch** (1.6 mm) for the following:
1. Thickness.
 2. Edge straightness.
 3. Overall length and width.
 4. Squareness from corner to corner.
 5. Chords, radii, and diameters.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine fabric, fabricated units, substrates, areas, and conditions for compliance with requirements, installation tolerances, and other conditions affecting performance of sound-absorbing ceiling units.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install sound-absorbing ceiling units in locations indicated with edges in alignment with walls and other units, faces flush, and scribed to fit adjoining work accurately at borders and at penetrations.
- B. Comply with sound-absorbing ceiling unit manufacturer's written instructions for installation of units using type of mounting devices indicated. Mount units securely to supporting substrate.
- C. Align fabric pattern and grain with adjacent units.

3.3 INSTALLATION TOLERANCES

- A. Variation from Alignment with Surfaces: Plus or minus [**1/16 inch** (1.6 mm)] **<Insert dimension>**.

- B. Variation from Level or Slope: Plus or minus [1/16 inch (1.6 mm)] [1/8 inch (3.2 mm)] <Insert dimension>.
- C. Variation of Panel Joints from Hairline: Not more than [1/16 inch (1.6 mm)] [1/32 inch (0.79 mm)] <Insert dimension> wide.

3.4 CLEANING

- A. Clip loose threads; remove pills and extraneous materials.
- B. Clean panels on completion of installation to remove dust and other foreign materials according to manufacturer's written instructions.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 098436

SECTION 099113 - EXTERIOR PAINTING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

B. SUMMARY

1. This Section includes surface preparation and field painting of exposed exterior items and surfaces.
 - a. Surface preparation, priming, and finish coats specified in this Section are in addition to shop priming and surface treatment specified in other Sections.
2. Paint exposed surfaces, except where these Specifications indicate that the surface or material is not to be painted or is to remain natural. If an item or a surface is not specifically mentioned, paint the item or surface the same as similar adjacent materials or surfaces. If a color of finish is not indicated, Architect will select from standard colors and finishes available.
 - a. Painting includes field painting of exposed bare and covered pipes and ducts (including color coding), hangers, exposed steel and iron supports, and surfaces of mechanical and electrical equipment that do not have a factory-applied final finish.
3. Do not paint prefinished items, concealed surfaces, finished metal surfaces, operating parts, and labels.
 - a. Prefinished items include the following factory-finished components:
 - 1) Architectural woodwork.
 - 2) Acoustical wall panels.
 - 3) Metal toilet enclosures.
 - 4) Metal lockers.
 - 5) Unit kitchens.
 - 6) Elevator entrance doors and frames.
 - 7) Elevator equipment.
 - 8) Finished mechanical and electrical equipment.
 - 9) Light fixtures.
 - 10) **<Insert other prefinished items if required.>**
 - b. Concealed surfaces include walls or ceilings in the following

generally inaccessible spaces:

- 1) Foundation spaces.
- 2) Furred areas.
- 3) Ceiling plenums.
- 4) Utility tunnels.
- 5) Pipe spaces.
- 6) Duct shafts.
- 7) Elevator shafts.
- 8) **<Insert other concealed surfaces if required.>**

c. Finished metal surfaces include the following:

- 1) Anodized aluminum.
- 2) Stainless steel.
- 3) Chromium plate.
- 4) Copper and copper alloys.
- 5) Bronze and brass.
- 6) **<Insert other finished metal surfaces if required.>**

d. Operating parts include moving parts of operating equipment and the following:

- 1) Valve and damper operators.
- 2) Linkages.
- 3) Sensing devices.
- 4) Motor and fan shafts.
- 5) **<Insert other operating parts if required.>**

e. Labels: Do not paint over UL, FMG, or other code-required labels or equipment name, identification, performance rating, or nomenclature plates.

4. Related Sections include the following:

- a. Division 2 Section "Hot-Mix Asphalt Paving" for traffic-marking paint.
- b. Division 2 Section "Cement Concrete Pavement" for traffic-marking paint.
- c. Division 5 Section "Structural Steel" for shop priming structural steel.
- d. Division 5 Section "Metal Fabrications" for shop priming ferrous metal.
- e. Division 6 Section "Exterior Architectural Woodwork" for shop priming exterior architectural woodwork.
- f. Division 8 Section "Steel Doors and Frames" for factory priming steel doors and frames.
- g. Division 8 Section "Custom Steel Doors and Frames" for factory priming steel doors and frames.
- h. Division 8 Section "Wood Windows" for shop priming unclad wood windows.
- i. Division 9 Section "Gypsum Board Assemblies" for surface

- preparation of gypsum board.
 - j. Division 9 Section "Exterior Wood Stain."
 - k. Division 9 Section "Wall Coverings" for substrate sealer under wall coverings.
 - l. Division 9 Section "High-Performance Coatings" for industrial paints and maintenance and for special coatings.
5. Alternates: Refer to Division 1 Section "Alternates" for description of Work in this Section affected by alternates.

C. DEFINITIONS

1. General: Standard coating terms defined in ASTM D 16 apply to this Section.
- a. Flat refers to a lusterless or matte finish with a gloss range below 15 when measured at an 85-degree meter.
 - b. Eggshell refers to low-sheen finish with a gloss range between 20 and 35 when measured at a 60-degree meter.
 - c. Semigloss refers to medium-sheen finish with a gloss range between 35 and 70 when measured at a 60-degree meter.
 - d. Full gloss refers to high-sheen finish with a gloss range more than 70 when measured at a 60-degree meter.

D. SUBMITTALS

1. Product Data: For each paint system indicated. Include block fillers and primers.
- a. Material List: An inclusive list of required coating materials. Indicate each material and cross-reference specific coating, finish system, and application. Identify each material by manufacturer's catalog number and general classification.
 - b. Manufacturer's Information: Manufacturer's technical information, including label analysis and instructions for handling, storing, and applying each coating material.
2. Samples for Initial Selection: For each type of finish-coat material indicated.
- a. After color selection, Architect will furnish color chips for surfaces to be coated.
3. Samples for Verification: For each color and material to be applied, with texture to simulate actual conditions, on representative Samples of the actual substrate.
- a. Provide stepped Samples, defining each separate coat, including block fillers and primers. Use representative colors when preparing Samples for review. Resubmit until required sheen, color, and texture are achieved.

- b. Provide a list of materials and applications for each coat of each Sample. Label each Sample for location and application.
- c. Submit **<Insert number>** Samples on the following substrates for Architect's review of color and texture only:
 - 1) Concrete: **[4-inch- square] [4-by-6-inch] <Insert size and shape>** Samples for each color and finish.
 - 2) Concrete Unit Masonry: **[4-by-8-inch] [6-by-10-inch] <Insert size>** Samples of masonry, with mortar joint in the center, for each finish and color.
 - 3) Painted Wood: **[8-inch-] [12-inch-] <Insert size>** square Samples for each color and material on hardboard.
 - 4) Stained or Natural Wood: **[4-by-8-inch] [6-by-10-inch] <Insert size>** Samples of natural- or stained-wood finish on representative **<Insert species of wood to be used>** surfaces.
 - 5) Ferrous Metal: **[3-inch-] [4-inch-] <Insert size>** square Samples of flat metal and **[6-inch-] [8-inch-] <Insert size>** long Samples of solid metal for each color and finish.

4. Qualification Data: For Applicator.

E. QUALITY ASSURANCE

- 1. Applicator Qualifications: A firm or individual experienced in applying paints and coatings similar in material, design, and extent to those indicated for this Project, whose work has resulted in applications with a record of successful in-service performance.
- 2. Source Limitations: Obtain **[block fillers] [and] [primers]** for each coating system from the same manufacturer as the finish coats.
- 3. Benchmark Samples (Mockups): Provide a full-coat benchmark finish sample for each type of coating and substrate required. Comply with procedures specified in PDCA P5. Duplicate finish of approved sample Submittals.
 - a. Architect will select one room or surface to represent surfaces and conditions for application of each type of coating and substrate.
 - 1) Wall Surfaces: Provide samples on at least **[100 sq. ft.] <Insert size>**.
 - 2) Small Areas and Items: Architect will designate items or areas required.
 - b. Apply benchmark samples, according to requirements for the completed Work, after permanent lighting and other environmental services have been activated. Provide required sheen, color, and texture on each surface.
 - 1) After finishes are accepted, Architect will use the room or surface to evaluate coating systems of a similar nature.

- c. Final approval of colors will be from benchmark samples.

F. DELIVERY, STORAGE, AND HANDLING

1. Deliver materials to Project site in manufacturer's original, unopened packages and containers bearing manufacturer's name and label and the following information:
 - a. Product name or title of material.
 - b. Product description (generic classification or binder type).
 - c. Manufacturer's stock number and date of manufacture.
 - d. Contents by volume, for pigment and vehicle constituents.
 - e. Thinning instructions.
 - f. Application instructions.
 - g. Color name and number.
 - h. VOC content.
2. Store materials not in use in tightly covered containers in a well-ventilated area at a minimum ambient temperature of 45 deg F. Maintain storage containers in a clean condition, free of foreign materials and residue.
 - a. Protect from freezing. Keep storage area neat and orderly. Remove oily rags and waste daily.

G. PROJECT CONDITIONS

1. Apply waterborne paints only when temperatures of surfaces to be painted and surrounding air are between 50 and 90 deg F.
2. Apply solvent-thinned paints only when temperatures of surfaces to be painted and surrounding air are between 45 and 95 deg F.
3. Do not apply paint in snow, rain, fog, or mist; or when relative humidity exceeds 85 percent; or at temperatures less than 5 deg F above the dew point; or to damp or wet surfaces.
 - a. Painting may continue during inclement weather if surfaces and areas to be painted are enclosed and heated within temperature limits specified by manufacturer during application and drying periods.

H. EXTRA MATERIALS

1. Furnish extra paint materials from the same production run as the materials applied and in the quantities described below. Package with protective covering for storage and identify with labels describing contents. Deliver extra materials to Owner.
 - a. Quantity: Furnish Owner with extra paint materials in quantities indicated below:
 - 1) Exterior, Flat Acrylic Paint: **[1 gal.] [2 gal.] [One case]**
[<Insert other number> cases] of each color applied.

- 2) Exterior, Low-Luster Acrylic Finish: [1 gal.] [2 gal.] [One case] [<Insert other number> cases] of each color applied.
 - 3) Exterior, Semigloss Acrylic Enamel: [1 gal.] [2 gal.] [One case] [<Insert other number> cases] of each color applied.
 - 4) Exterior, Full-Gloss Alkyd Enamel: [1 gal.] [2 gal.] [One case] [<Insert other number> cases] of each color applied.
- b. Quantity: Furnish Owner with an additional [3] [5] [7] <Insert percent> percent, but not less than 1 gal. or 1 case, as appropriate, of each material and color applied.

PART 2 - PRODUCTS

A. MANUFACTURERS

1. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, products listed in other Part 2 articles.
2. Products: Subject to compliance with requirements, provide one of the products listed in other Part 2 articles.
3. Manufacturers' Names: Shortened versions (shown in parentheses) of the following manufacturers' names are used in other Part 2 articles:
 - a. Benjamin Moore & Co. (Benjamin Moore).
 - b. Coronado Paint Company (Coronado).
 - c. ICI Dulux Paint Centers (ICI Dulux Paints).
 - d. Kelly-Moore Paint Co. (Kelly-Moore).
 - e. M. A. Bruder & Sons, Inc. (M. A. B. Paint).
 - f. PPG Industries, Inc. (Pittsburgh Paints).
 - g. Sherwin-Williams Co. (Sherwin-Williams).
 - h. <Insert manufacturer's name.>

B. PAINT MATERIALS, GENERAL

1. Material Compatibility: Provide block fillers, primers, and finish-coat materials that are compatible with one another and with the substrates indicated under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.
2. Material Quality: Provide manufacturer's best-quality paint material of the various coating types specified that are factory formulated and recommended by manufacturer for application indicated. Paint-material containers not displaying manufacturer's product identification will not be acceptable.
 - a. Proprietary Names: Use of manufacturer's proprietary product names to designate colors or materials is not intended to imply that products named are required to be used to the exclusion of equivalent products of other manufacturers. Furnish manufacturer's material data and certificates of performance for proposed substitutions.

3. Colors: **[Match Architect's samples] [As indicated by manufacturer's designations] [As selected by Architect from manufacturer's full range].**

C. CONCRETE UNIT MASONRY BLOCK FILLERS

1. Concrete Unit Masonry Block Filler: Factory-formulated high-performance latex block fillers.
 - a. Benjamin Moore; Moorcraft Super Craft Latex Block Filler No. 285: Applied at a dry film thickness of not less than 8.1 mils.
 - b. Benjamin Moore; Moore's IMC Latex Block Filler No. M88: Applied at a dry film thickness of not less than 8.1 mils.
 - c. Coronado; 946-11 Super Kote 5000 Commercial Latex Block Filler: Applied at a dry film thickness of not less than 8.4 mils.
 - d. ICI Dulux Paints; Bloxfil 4000-1000 Interior/Exterior Heavy Duty Acrylic Block Filler: Applied at a dry film thickness of not less than 7.0 to 14.5 mils.
 - e. Kelly-Moore; 521 Fill and Prime Acrylic Block Filler: Applied at a dry film thickness of not less than 10.0 mils.
 - f. M. A. B. Paint; Block Kote No. 1000 Acrylic Latex Block Filler 064-145: Applied at a dry film thickness of not less than 12.0 mils.
 - g. Pittsburgh Paints; 6-7 SpeedHide Interior/Exterior Masonry Latex Block Filler: Applied at a dry film thickness of not less than 6.0 to 12.5 mils.
 - h. Sherwin-Williams; PrepRite Interior/Exterior Block Filler B25W25: Applied at a dry film thickness of not less than 8.0 mils.
 - i. **<Insert manufacturer's block filler.>**

D. EXTERIOR PRIMERS

1. Exterior Concrete and Masonry Primer: Factory-formulated alkali-resistant acrylic-latex primer for exterior application.
 - a. Benjamin Moore; Moore's Acrylic Masonry Sealer No. 066: Applied at a dry film thickness of not less than 0.7 mils.
 - b. Benjamin Moore; Moore's Alkyd Masonry Sealer No. 077: Applied at a dry film thickness of not less than 2.7 mils.
 - c. Coronado; 48-11 Elast-O-Meric Acrylic Masonry Sealer: Applied at a dry film thickness of not less than 1.2 mils.
 - d. ICI Dulux Paints; 2000-1200 Dulux Professional Exterior 100 Percent Acrylic Latex Primer: Applied at a dry film thickness of not less than 1.6 mils.
 - e. Kelly-Moore; 247 Chem-Guard Acrylic Masonry Primer: Applied at a dry film thickness of not less than 1.9 mils.
 - f. M. A. B. Paint; Lok Tite Latex Masonry Primer 056-125: Applied at a dry film thickness of not less than 1.5 mils.
 - g. Pittsburgh Paints; 6-603 SpeedHide Interior/Exterior Acrylic Latex Alkali Resistant Primer: Applied at a dry film thickness of not less than 1.5 mils.
 - h. Sherwin-Williams; Loxon Exterior Masonry Acrylic Primer A24W300:

- Applied at a dry film thickness of not less than 3.0 mils.
 - i. Sherwin-Williams; A-100 Latex Exterior Wood Primer B42W41: Applied at a dry film thickness of not less than 1.4 mils.
 - j. **<Insert manufacturer's exterior primer.>**
- 2. Exterior Gypsum Soffit Board Primer: Factory-formulated alkyd- or alkali-resistant acrylic-latex primer for exterior application.
 - a. Benjamin Moore; Moorcraft Super Spec Alkyd Exterior Primer No. 176: Applied at a dry film thickness of not less than 1.8 mils.
 - b. Coronado; 8-11 Supreme Acrylic Bonding Primer: Applied at a dry film thickness of not less than 1.4 mils.
 - c. ICI Dulux Paints; 2000-1200 Dulux Professional Exterior 100 Percent Acrylic Latex Primer: Applied at a dry film thickness of not less than 1.6 mils.
 - d. Kelly-Moore; 250 Color Shield Exterior Acrylic Primer: Applied at a dry film thickness of not less than 1.7 mils.
 - e. M. A. B. Paint; Lok Tite Latex Masonry Primer 056-125: Applied at a dry film thickness of not less than 1.5 mils.
 - f. Pittsburgh Paints; 6-603 SpeedHide Interior/Exterior Acrylic Latex Alkali Resistant Primer: Applied at a dry film thickness of not less than 1.5 mils.
 - g. Sherwin-Williams; A-100 Exterior Latex Wood Primer B42W41: Applied at a dry film thickness of not less than 1.4 mils.
 - h. **<Insert manufacturer's exterior primer.>**
- 3. Exterior Wood Primer for Acrylic Enamels: Factory-formulated alkyd or latex wood primer for exterior application.
 - a. Benjamin Moore; Moorcraft Super Spec Alkyd Exterior Primer No. 176: Applied at a dry film thickness of not less than 1.8 mils.
 - b. Coronado; 8-11 Supreme Acrylic Bonding Primer: Applied at a dry film thickness of not less than 2.0 mils.
 - c. ICI Dulux Paints; 2000-1200 Dulux Professional Exterior 100 Percent Acrylic Latex Primer: Applied at a dry film thickness of not less than 1.6 mils.
 - d. Kelly-Moore; 255 Stain--Lock II Stain Resistant Acrylic Primer: Applied at a dry film thickness of not less than 2.0 mils.
 - e. M. A. B. Paint; Sea Shore/Four Seasons Latex Primer Coat 056-958: Applied at a dry film thickness of not less than 1.6 mils.
 - f. Pittsburgh Paints; 6-609 SpeedHide Exterior House & Trim Wood Primer 100 Percent Acrylic Latex: Applied at a dry film thickness of not less than 1.6 mils.
 - g. Sherwin-Williams; A-100 Exterior Latex Wood Primer B42W41: Applied at a dry film thickness of not less than 1.4 mils.
 - h. **<Insert manufacturer's exterior primer.>**
- 4. Exterior Wood Primer for Alkyd Enamels: Factory-formulated alkyd or latex wood primer for exterior application.
 - a. Benjamin Moore; Moorcraft Super Spec Alkyd Exterior Primer No.

- 176: Applied at a dry film thickness of not less than 1.8 mils.
 - b. Coronado; 5-11 Supreme Collection Oil House Paint Primer: Applied at a dry film thickness of not less than 2.2 mils.
 - c. ICI Dulux Paints; 2110-1200 Ultra-Hide Durus Exterior Alkyd Primecoat: Applied at a dry film thickness of not less than 1.9 mils.
 - d. Kelly-Moore; 220 Weather Shield Exterior Alkyd Primer: Applied at a dry film thickness of not less than 2.3 mils.
 - e. M. A. B. Paint; Sea Shore/Four Seasons Latex Primer Coat 056-958: Applied at a dry film thickness of not less than 1.5 mils.
 - f. Pittsburgh Paints; 6-609 SpeedHide Exterior House & Trim Wood Primer 100 Percent Acrylic Latex: Applied at a dry film thickness of not less than 1.6 mils.
 - g. Sherwin-Williams; A-100 Exterior Latex Wood Primer B42W42: Applied at a dry film thickness of not less than 1.4 mils.
 - h. **<Insert manufacturer's exterior primer.>**
5. Exterior Ferrous-Metal Primer: Factory-formulated rust-inhibitive metal primer for exterior application.
- a. Benjamin Moore; Moore's IMC Alkyd Metal Primer No. M06: Applied at a dry film thickness of not less than 2.0 mils.
 - b. Coronado; 35-147 Rust Scat Alkyd Metal Primer: Applied at a dry film thickness of not less than 2.0 mils.
 - c. ICI Dulux Paints; 4160-XXXX Devguard Multi-Purpose Tank & Structural Primer. Applied at a dry film thickness of not less than 2.0 mils.
 - d. Kelly-Moore; 1711 Kel-Guard Alkyd White Rust Inhibitive Primer: Applied at a dry film thickness of not less than 2.0 mils.
 - e. Kelly-Moore; 5725 DTM-Acrylic Metal Primer: Applied at a dry film thickness of not less than 1.8 mils.
 - f. M. A. B. Paint; Rust-O-Lastic Anti-Corrosive Primer 073-132: Applied at a dry film thickness of not less than 2.0 mils.
 - g. Pittsburgh Paints; 90-712 Pitt-Tech One Pack Interior/Exterior Primer Finish DTM Industrial Enamel: Applied at a dry film thickness of not less than 3.0 mils.
 - h. Sherwin-Williams; Kem Kromik Universal Metal Primer B50NZ6/B50WZ1: Applied at a dry film thickness of not less than 3.0 mils.
 - i. **<Insert manufacturer's exterior primer.>**
6. Exterior Galvanized Metal Primer: Factory-formulated galvanized metal primer for exterior application.
- a. Benjamin Moore; Moore's IMC Acrylic Metal Primer No. M04: Applied at a dry film thickness of not less than 2.0 mils.
 - b. Coronado; 36-11 Rust Scat Latex Metal Primer: Applied at a dry film thickness of not less than 1.4 mils.
 - c. ICI Dulux Paints; 4020-XXXX Devflex DTM Flat Interior/Exterior Waterborne Primer & Finish: Applied at a dry film thickness of not less than 2.2 mils.
 - d. ICI Dulux Paints; 4160-XXXX Devguard Multi-Purpose Tank &

- Structural Primer: Applied at a dry film thickness of not less than 2.0 mils.
- e. Kelly-Moore; 1722 Kel-Guard Acrylic Galvanized Iron Primer: Applied at a dry film thickness of not less than 1.8 mils.
 - f. Kelly-Moore; 5725 DTM-Acrylic Metal Primer: Applied at a dry film thickness of not less than 1.8 mils.
 - g. M. A. B. Paint; Rust-O-Lastic Hydro-Prime II Acrylic (DTM) Maintenance Primer 073-189: Applied at a dry film thickness of not less than 2.0 mils.
 - h. Pittsburgh Paints; 90-709 Pitt-Tech One Pack Interior/Exterior Primer/Finish DTM Industrial Enamel: Applied at a dry film thickness of not less than 3.0 mils.
 - i. Sherwin-Williams; primer not required over this substrate.
 - j. Sherwin-Williams; Galvite HS Paint B50WZ3: Applied at a dry film thickness of not less than 2.0 mils.
 - k. **<Insert manufacturer's exterior primer.>**
7. Exterior Aluminum Primer under Acrylic Finishes: Factory-formulated acrylic-based metal primer for exterior application.
- a. Benjamin Moore; Moore's IMC Acrylic Metal Primer No. M04: Applied at a dry film thickness of not less than 2.0 mils.
 - b. Coronado; 36-11 Rust Scat Latex Metal Primer: Applied at a dry film thickness of not less than 2.0 mils.
 - c. ICI Dulux Paints; 4020-XXXX Devflex DTM Flat Interior/Exterior Waterborne Primer & Finish: Applied at a dry film thickness of not less than 2.2 mils.
 - d. ICI Dulux Paints; 4160-XXXX Devguard Multi-Purpose Tank & Structural Primer: Applied at a dry film thickness of not less than 2.0 mils.
 - e. Kelly-Moore; 1722 Kel-Guard Acrylic Galvanized Iron Primer: Applied at a dry film thickness of not less than 1.8 mils.
 - f. Kelly-Moore; 5725 DTM-Acrylic Metal Primer: Applied at a dry film thickness of not less than 1.8 mils.
 - g. M. A. B. Paint; Rust-O-Lastic Hydro-Prime II Acrylic (DTM) Maintenance Primer 073-189: Applied at a dry film thickness of not less than 2.0 mils.
 - h. Pittsburgh Paints; 90-709 Pitt-Tech One Pack Interior/Exterior Primer/Finish DTM Industrial Enamel: Applied at a dry film thickness of not less than 3.0 mils.
 - i. Sherwin-Williams; primer not required over this substrate.
 - j. Sherwin-Williams; DTM Acrylic Primer/Finish B66W1: Applied at a dry film thickness of not less than 2.5 mils.
 - k. **<Insert manufacturer's exterior primer.>**
8. Exterior Aluminum Primer under Alkyd Finishes: Factory-formulated acrylic-based metal primer for exterior application.
- a. Benjamin Moore; Moore's IMC Acrylic Metal Primer No. M04: Applied at a dry film thickness of not less than 2.0 mils.
 - b. Coronado; 180-11 High Performance Acrylic Metal Primer: Applied

- at a dry film thickness of not less than 2.0 mils.
- c. ICI Dulux Paints; 4020-XXXX Devflex DTM Flat Interior/Exterior Waterborne Primer & Finish: Applied at a dry film thickness of not less than 2.2 mils.
 - d. Kelly-Moore; 1722 Kel-Guard Acrylic Galvanized Iron Primer: Applied at a dry film thickness of not less than 1.8 mils.
 - e. M. A. B. Paint; Rust-O-Lastic Hydro-Prime II Acrylic (DTM) Maintenance Primer 073-189: Applied at a dry film thickness of not less than 2.0 mils.
 - f. Pittsburgh Paints; 90-709 Pitt-Tech One Pack Interior/Exterior Primer/Finish DTM Industrial Enamel: Applied at a dry film thickness of not less than 3.0 mils.
 - g. Sherwin-Williams; DTM Wash Primer B71Y1: Applied at a dry film thickness of not less than 2.5 mils.
 - h. **<Insert manufacturer's exterior primer.>**

E. EXTERIOR FINISH COATS

- 1. Exterior Flat Acrylic Paint: Factory-formulated flat acrylic-emulsion latex paint for exterior application.
 - a. Benjamin Moore; Moorcraft Super Spec Flat Latex House Paint No. 171: Applied at a dry film thickness of not less than 1.2 mils.
 - b. Coronado; 8-Line Supreme Acrylic Latex Flat: Applied at a dry film thickness of not less than 1.3 mils.
 - c. ICI Dulux Paints; 2200-XXXX Dulux Professional Exterior 100 Percent Acrylic Flat Finish: Applied at a dry film thickness of not less than 1.4 mils.
 - d. Kelly-Moore; 1205 Color Shield Exterior Flat Acrylic House Paint: Applied at a dry film thickness of not less than 1.9 mils.
 - e. M. A. B. Paint; Fresh Kote Latex House Paint 409 Line: Applied at a dry film thickness of not less than 1.7 mils.
 - f. Pittsburgh Paints; 6-600 Series SpeedHide Exterior House Paint Flat Latex: Applied at a dry film thickness of not less than 1.3 mils.
 - g. Sherwin-Williams; A-100 Exterior Latex Flat House & Trim Paint A6 Series: Applied at a dry film thickness of not less than 1.3 mils.
 - h. **<Insert manufacturer's comparable exterior finish-coat material.>**
- 2. Exterior Low-Luster Acrylic Paint: Factory-formulated low-sheen (eggshell) acrylic-latex paint for exterior application.
 - a. Benjamin Moore; Moorcraft Super Spec Low Lustre Latex House Paint No. 185: Applied at a dry film thickness of not less than 1.0 mil.
 - b. Coronado; 408-Line Supreme Acrylic Satin Exterior: Applied at a dry film thickness of not less than 1.3 mils.
 - c. ICI Dulux Paints; 2402-XXXX Dulux Professional Exterior 100 Percent Acrylic Satin Finish: Applied at a dry film thickness of not less than 1.4 mils.
 - d. Kelly-Moore; 1245 Acry-Velvet Exterior Low Sheen Acrylic Finish:

- Applied at a dry film thickness of not less than 1.8 mils.
 - e. M. A. B. Paint; Fresh Kote Latex Eggshell 405 Line: Applied at a dry film thickness of not less than 1.5 mils.
 - f. Pittsburgh Paints; 6-2000 Series SpeedHide Exterior House & Trim Satin--Acrylic Latex: Applied at a dry film thickness of not less than 1.0 mil.
 - g. Pittsburgh Paints; 90-400 Series Pitt-Tech One Pack High Performance Waterborne Satin DTM Industrial Enamels: Applied at a dry film thickness of not less than 3.0 mils.
 - h. Sherwin-Williams; A-100 Exterior Latex Satin House & Trim Paint A82 Series: Applied at a dry film thickness of not less than 1.5 mils.
 - i. **<Insert manufacturer's comparable exterior finish-coat material.>**
- 3. Exterior Semigloss Acrylic Enamel: Factory-formulated semigloss waterborne acrylic-latex enamel for exterior application.
 - a. Benjamin Moore; Moorcraft Super Spec Latex House & Trim Paint No. 170: Applied at a dry film thickness of not less than 1.1 mils.
 - b. Coronado; 12-Line Supreme Acrylic Semi-Gloss: Applied at a dry film thickness of not less than 1.5 mils.
 - c. ICI Dulux Paints; 2406-XXXX Dulux Professional Exterior 100 Percent Acrylic Semi-Gloss Finish: Applied at a dry film thickness of not less than 1.3 mils.
 - d. Kelly-Moore; 1250 Acry-Lustre Exterior Semi-Gloss Acrylic Finish: Applied at a dry film thickness of not less than 1.6 mils.
 - e. M. A. B. Paint; Sea Shore/Four Seasons Acrylic Latex Trim Enamel 024 Line: Applied at a dry film thickness of not less than 1.5 mils.
 - f. Pittsburgh Paints; 6-900 Series SpeedHide Exterior House & Trim Semi-Gloss Acrylic Latex Paint: Applied at a dry film thickness of not less than 1.5 mils.
 - g. Sherwin-Williams; A-100 Latex Gloss A8 Series: Applied at a dry film thickness of not less than 1.3 mils.
 - h. **<Insert manufacturer's comparable exterior finish-coat material.>**
- 4. Exterior Full-Gloss Acrylic Enamel for Concrete, Masonry, and Wood: Factory-formulated full-gloss waterborne acrylic-latex enamel for exterior application.
 - a. Benjamin Moore; Moore's IMC Acrylic Gloss Enamel M28: Applied at a dry film thickness of not less than 2.0 mils.
 - b. Coronado; 414 Super Kote 5000 Acrylic Gloss Enamel: Applied at a dry film thickness of not less than 1.5 mils.
 - c. ICI Dulux Paints; 3028-XXXX Dulux Interior/Exterior Acrylic Gloss Finish: Applied at a dry film thickness of not less than 1.6 mils.
 - d. Kelly-Moore; 1780 Kel-Guard Acrylic Gloss Enamel: Applied at a dry film thickness of not less than 1.5 mils.
 - e. M. A. B. Paint; Rust-O-Lastic Gloss Acrylic (DTM) Maintenance Finish 043 Line: Applied at a dry film thickness of not less than 1.6 mils.

- f. Pittsburgh Paints; 90 Line Pitt-Tech One Pack Interior/Exterior High Performance Waterborne High Gloss DTM Industrial Enamels: Applied at a dry film thickness of not less than 3.0 mils.
 - g. Sherwin-Williams; DTM Acrylic Coating Gloss (Waterborne) B66W100 Series: Applied at a dry film thickness of not less than 2.4 mils.
 - h. Sherwin-Williams; SuperPaint Exterior High Gloss Latex Enamel A85 Series: Applied at a dry film thickness of not less than 1.2 mils.
 - i. **<Insert manufacturer's comparable exterior finish-coat material.>**
5. Exterior Full-Gloss Acrylic Enamel for Ferrous and Other Metals: Factory-formulated full-gloss waterborne acrylic-latex enamel for exterior application.
- a. Benjamin Moore; Moore's IMC Acrylic Gloss Enamel M28: Applied at a dry film thickness of not less than 2.0 mils.
 - b. Coronado; 80 Line Rust Scat Acrylic Latex High Gloss Enamel: Applied at a dry film thickness of not less than 1.4 mils.
 - c. ICI Dulux Paints; 3028-XXXX Dulux Interior/Exterior Acrylic Gloss Finish: Applied at a dry film thickness of not less than 1.6 mils.
 - d. Kelly-Moore; 5780 DTM Acrylic Gloss Enamel: Applied at a dry film thickness of not less than 1.7 mils.
 - e. M. A. B. Paint; Rust-O-Lastic Gloss Acrylic (DTM) Maintenance Finish 043 Line: Applied at a dry film thickness of not less than 3.0 mils.
 - f. Pittsburgh Paints; 90-300 Series Pitt-Tech One Pack Interior/Exterior High Performance Waterborne High Gloss DTM Industrial Enamels: Applied at a dry film thickness of not less than 3.0 mils.
 - g. Sherwin-Williams; DTM Acrylic Coating Gloss (Waterborne) B66W100 Series: Applied at a dry film thickness of not less than 2.4 mils.
 - h. **<Insert manufacturer's comparable exterior finish-coat material.>**
6. Exterior Full-Gloss Alkyd Enamel: Factory-formulated full-gloss alkyd enamel for exterior application.
- a. Benjamin Moore; Moore's IMC Urethane Alkyd Enamel M22: Applied at a dry film thickness of not less than 2.0 mils.
 - b. Coronado; 1223 Line Super Kote 5000 High Gloss Alkyd Enamel: Applied at a dry film thickness of not less than 1.5 mils.
 - c. ICI Dulux Paints; 4308-XXXX Devguard Alkyd Industrial Gloss Enamel: Applied at a dry film thickness of not less than 2.0 mils.
 - d. Kelly-Moore; 1700 Kel-Guard Gloss Alkyd Rust Inhibitive Enamel: Applied at a dry film thickness of not less than 2.0 mils.
 - e. M. A. B. Paint; Rust-O-Lastic Finish Coating 074 Line: Applied at a dry film thickness of not less than 2.0 mils.
 - f. Pittsburgh Paints; 7-814 Pittsburgh Paints Industrial Gloss-Oil Interior/Exterior Enamel: Applied at a dry film thickness of not less

- than 1.5 mils.
- g. Sherwin-Williams; Industrial Enamel B-54 Series: Applied at a dry film thickness of not less than 2.0 mils.
- h. **<Insert manufacturer's comparable exterior finish-coat material.>**

PART 3 - EXECUTION

A. EXAMINATION

1. Examine substrates, areas, and conditions, with Applicator present, for compliance with requirements for paint application. Comply with procedures specified in PDCA P4.
 - a. Proceed with paint application only after unsatisfactory conditions have been corrected and surfaces receiving paint are thoroughly dry.
 - b. Start of painting will be construed as Applicator's acceptance of surfaces and conditions within a particular area.
2. Coordination of Work: Review other Sections in which primers are provided to ensure compatibility of the total system for various substrates. On request, furnish information on characteristics of finish materials to ensure use of compatible primers.
 - a. Notify Architect about anticipated problems when using the materials specified over substrates primed by others.

B. PREPARATION

1. General: Remove hardware and hardware accessories, plates, machined surfaces, lighting fixtures, and similar items already installed that are not to be painted. If removal is impractical or impossible because of size or weight of the item, provide surface-applied protection before surface preparation and painting.
 - a. After completing painting operations in each space or area, reinstall items removed using workers skilled in the trades involved.
2. Cleaning: Before applying paint or other surface treatments, clean substrates of substances that could impair bond of the various coatings. Remove oil and grease before cleaning.
 - a. Schedule cleaning and painting so dust and other contaminants from the cleaning process will not fall on wet, newly painted surfaces.
3. Surface Preparation: Clean and prepare surfaces to be painted according to manufacturer's written instructions for each particular substrate condition and as specified.

- a. Provide barrier coats over incompatible primers or remove and reprime.
- b. Cementitious Materials: Prepare concrete, concrete unit masonry, cement plaster, and mineral-fiber-reinforced cement panel surfaces to be painted. Remove efflorescence, chalk, dust, dirt, grease, oils, and release agents. Roughen as required to remove glaze. If hardeners or sealers have been used to improve curing, use mechanical methods of surface preparation.
 - 1) Use abrasive blast-cleaning methods if recommended by paint manufacturer.
 - 2) Determine alkalinity and moisture content of surfaces by performing appropriate tests. If surfaces are sufficiently alkaline to cause the finish paint to blister and burn, correct this condition before application. Do not paint surfaces if moisture content exceeds that permitted in manufacturer's written instructions.
 - 3) Clean concrete floors to be painted with a 5 percent solution of muriatic acid or other etching cleaner. Flush the floor with clean water to remove acid, neutralize with ammonia, rinse, allow to dry, and vacuum before painting.
- c. Wood: Clean surfaces of dirt, oil, and other foreign substances with scrapers, mineral spirits, and sandpaper, as required. Sand surfaces exposed to view smooth and dust off.
 - 1) Scrape and clean small, dry, seasoned knots, and apply a thin coat of white shellac or other recommended knot sealer before applying primer. After priming, fill holes and imperfections in finish surfaces with putty or plastic wood filler. Sand smooth when dried.
 - 2) Prime, stain, or seal wood to be painted immediately on delivery. Prime edges, ends, faces, undersides, and back sides of wood, including cabinets, counters, cases, and paneling.
 - 3) If transparent finish is required, backprime with spar varnish.
 - 4) Backprime paneling on interior partitions where masonry, plaster, or other wet wall construction occurs on back side.
 - 5) Seal tops, bottoms, and cutouts of unprimed wood doors with a heavy coat of varnish or sealer immediately on delivery.
- d. Ferrous Metals: Clean ungalvanized ferrous-metal surfaces that have not been shop coated; remove oil, grease, dirt, loose mill scale, and other foreign substances. Use solvent or mechanical cleaning methods that comply with SSPC's recommendations.
 - 1) Blast steel surfaces clean as recommended by paint system manufacturer and according to **[SSPC-SP 6/NACE No. 3]** **[SSPC-SP 10/NACE No. 2]**.
 - 2) Treat bare and sandblasted or pickled clean metal with a metal treatment wash coat before priming.

- 3) Touch up bare areas and shop-applied prime coats that have been damaged. Wire-brush, clean with solvents recommended by paint manufacturer, and touch up with same primer as the shop coat.
 - e. Galvanized Surfaces: Clean galvanized surfaces with nonpetroleum-based solvents so surface is free of oil and surface contaminants. Remove pretreatment from galvanized sheet metal fabricated from coil stock by mechanical methods.
 4. Material Preparation: Mix and prepare paint materials according to manufacturer's written instructions.
 - a. Maintain containers used in mixing and applying paint in a clean condition, free of foreign materials and residue.
 - b. Stir material before application to produce a mixture of uniform density. Stir as required during application. Do not stir surface film into material. If necessary, remove surface film and strain material before using.
 - c. Use only thinners approved by paint manufacturer and only within recommended limits.
 5. Tinting: Tint each undercoat a lighter shade to simplify identification of each coat when multiple coats of same material are applied. Tint undercoats to match the color of the finish coat, but provide sufficient differences in shade of undercoats to distinguish each separate coat.

C. APPLICATION

1. General: Apply paint according to manufacturer's written instructions. Use applicators and techniques best suited for substrate and type of material being applied.
 - a. Paint colors, surface treatments, and finishes are indicated in the paint schedules.
 - b. Do not paint over dirt, rust, scale, grease, moisture, scuffed surfaces, or conditions detrimental to formation of a durable paint film.
 - c. Provide finish coats that are compatible with primers used.
 - d. The term "exposed surfaces" includes areas visible when permanent or built-in fixtures, grilles, convactor covers, covers for finned-tube radiation, and similar components are in place. Extend coatings in these areas, as required, to maintain system integrity and provide desired protection.
 - e. Paint surfaces behind movable equipment and furniture the same as similar exposed surfaces. Before final installation of equipment, paint surfaces behind permanently fixed equipment or furniture with prime coat only.
 - f. Paint interior surfaces of ducts with a flat, nonspecular black paint where visible through registers or grilles.
 - g. Paint back sides of access panels and removable or hinged covers

- to match exposed surfaces.
 - h. Finish exterior doors on tops, bottoms, and side edges the same as exterior faces.
 - i. Finish interior of wall and base cabinets and similar field-finished casework to match exterior.
 - j. Sand lightly between each succeeding enamel or varnish coat.
- 2. Scheduling Painting: Apply first coat to surfaces that have been cleaned, pretreated, or otherwise prepared for painting as soon as practicable after preparation and before subsequent surface deterioration.
 - a. The number of coats and film thickness required are the same regardless of application method. Do not apply succeeding coats until previous coat has cured as recommended by manufacturer. If sanding is required to produce a smooth, even surface according to manufacturer's written instructions, sand between applications.
 - b. Omit primer over metal surfaces that have been shop primed and touchup painted.
 - c. If undercoats, stains, or other conditions show through final coat of paint, apply additional coats until paint film is of uniform finish, color, and appearance. Give special attention to ensure that edges, corners, crevices, welds, and exposed fasteners receive a dry film thickness equivalent to that of flat surfaces.
 - d. Allow sufficient time between successive coats to permit proper drying. Do not recoat surfaces until paint has dried to where it feels firm, and does not deform or feel sticky under moderate thumb pressure, and until application of another coat of paint does not cause undercoat to lift or lose adhesion.
- 3. Application Procedures: Apply paints and coatings by brush, roller, spray, or other applicators according to manufacturer's written instructions.
 - a. Brushes: Use brushes best suited for type of material applied. Use brush of appropriate size for surface or item being painted.
 - b. Rollers: Use rollers of carpet, velvet-back, or high-pile sheep's wool as recommended by manufacturer for material and texture required.
 - c. Spray Equipment: Use airless spray equipment with orifice size as recommended by manufacturer for material and texture required.
- 4. Minimum Coating Thickness: Apply paint materials no thinner than manufacturer's recommended spreading rate to achieve dry film thickness indicated. Provide total dry film thickness of the entire system as recommended by manufacturer.
- 5. Mechanical and Electrical Work: Painting of mechanical and electrical work is limited to items exposed in equipment rooms and occupied spaces.
- 6. Mechanical items to be painted include, but are not limited to, the following:
 - a. Uninsulated metal piping.
 - b. Uninsulated plastic piping.

- c. Pipe hangers and supports.
 - d. Tanks that do not have factory-applied final finishes.
 - e. Visible portions of internal surfaces of metal ducts, without liner, behind air inlets and outlets.
 - f. Duct, equipment, and pipe insulation having "all-service jacket" or other paintable jacket material.
 - g. Mechanical equipment that is indicated to have a factory-primed finish for field painting.
 - h. **<Insert mechanical items to be painted.>**
7. Electrical items to be painted include, but are not limited to, the following:
- a. Switchgear.
 - b. Panelboards.
 - c. Electrical equipment that is indicated to have a factory-primed finish for field painting.
 - d. **<Insert electrical items to be painted.>**
8. Block Fillers: Apply block fillers to concrete masonry block at a rate to ensure complete coverage with pores filled.
9. Prime Coats: Before applying finish coats, apply a prime coat, as recommended by manufacturer, to material that is required to be painted or finished and that has not been prime coated by others. Recoat primed and sealed surfaces where evidence of suction spots or unsealed areas in first coat appears, to ensure a finish coat with no burn-through or other defects due to insufficient sealing.
10. Pigmented (Opaque) Finishes: Completely cover surfaces as necessary to provide a smooth, opaque surface of uniform finish, color, appearance, and coverage. Cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropiness, or other surface imperfections will not be acceptable.
11. Transparent (Clear) Finishes: Use multiple coats to produce a glass-smooth surface film of even luster. Provide a finish free of laps, runs, cloudiness, color irregularity, brush marks, orange peel, nail holes, or other surface imperfections.
- a. Provide satin finish for final coats.
12. Stipple Enamel Finish: Roll and redistribute paint to an even and fine texture. Leave no evidence of rolling, such as laps, irregularity in texture, skid marks, or other surface imperfections.
13. Completed Work: Match approved samples for color, texture, and coverage. Remove, refinish, or repaint work not complying with requirements.

D. FIELD QUALITY CONTROL

1. Owner reserves the right to invoke the following test procedure at any time and as often as Owner deems necessary during the period when paint is being applied:
- a. Owner will engage a qualified independent testing agency to sample

paint material being used. Samples of material delivered to Project will be taken, identified, sealed, and certified in the presence of Contractor.

- b. Testing agency will perform appropriate tests for the following characteristics as required by Owner:
 - 1) **<Insert salient characteristics.>**
- c. Owner may direct Contractor to stop painting if test results show material being used does not comply with specified requirements. Contractor shall remove noncomplying paint from Project site, pay for testing, and repaint surfaces previously coated with the noncomplying paint. If necessary, Contractor may be required to remove noncomplying paint from previously painted surfaces if, on repainting with specified paint, the two coatings are incompatible.

E. CLEANING

1. Cleanup: At the end of each workday, remove empty cans, rags, rubbish, and other discarded paint materials from Project site.
 - a. After completing painting, clean glass and paint-spattered surfaces. Remove spattered paint by washing and scraping without scratching or damaging adjacent finished surfaces.

F. PROTECTION

1. Protect work of other trades, whether being painted or not, against damage from painting. Correct damage by cleaning, repairing or replacing, and repainting, as approved by Architect.
2. Provide "Wet Paint" signs to protect newly painted finishes. After completing painting operations, remove temporary protective wrappings provided by others to protect their work.
 - a. After work of other trades is complete, touch up and restore damaged or defaced painted surfaces. Comply with procedures specified in PDCA P1.

G. EXTERIOR PAINT SCHEDULE

1. Concrete, Stucco, and Masonry (Other Than Concrete Unit Masonry): Provide the following finish systems over exterior concrete, stucco, and brick masonry substrates:
 - a. Flat Acrylic Finish: [**One finish coat**] [**Two finish coats**] [**<Insert number> finish coats**] over a primer.
 - 1) Primer: Exterior concrete and masonry primer.
 - 2) Finish Coats: Exterior flat acrylic paint.
 - b. Low-Luster Acrylic Finish: [**One finish coat**] [**Two finish coats**]

- [<Insert number> finish coats] over a primer.
- 1) Primer: Exterior concrete and masonry primer.
 - 2) Finish Coats: Exterior low-luster acrylic paint.
- c. Semigloss Acrylic-Enamel Finish: **[One finish coat] [Two finish coats] [<Insert number> finish coats]** over a primer.
- 1) Primer: Exterior concrete and masonry primer.
 - 2) Finish Coats: Exterior semigloss acrylic enamel.
- d. Full-Gloss Acrylic-Enamel Finish: **[One finish coat] [Two finish coats] [<Insert number> finish coats]** over a primer.
- 1) Primer: Exterior concrete and masonry primer.
 - 2) Finish Coats: Exterior full-gloss acrylic enamel for concrete, masonry, and wood.
2. Concrete Unit Masonry: Provide the following finish systems over exterior concrete unit masonry:
- a. Flat Acrylic Finish: **[One finish coat] [Two finish coats] [<Insert number> finish coats]** over a block filler.
 - 1) Block Filler: Concrete unit masonry block filler.
 - 2) Finish Coats: Exterior flat acrylic paint. - b. Low-Luster Acrylic Finish: **[One finish coat] [Two finish coats] [<Insert number> finish coats]** over a block filler.
 - 1) Block Filler: Concrete unit masonry block filler.
 - 2) Finish Coats: Exterior low-luster acrylic paint. - c. Semigloss Acrylic-Enamel Finish: **[One finish coat] [Two finish coats] [<Insert number> finish coats]** over a block filler.
 - 1) Block Filler: Concrete unit masonry block filler.
 - 2) Finish Coats: Exterior semigloss acrylic enamel. - d. Full-Gloss Acrylic-Enamel Finish: **[One finish coat] [Two finish coats] [<Insert number> finish coats]** over a block filler.
 - 1) Block Filler: Concrete unit masonry block filler.
 - 2) Finish Coats: Exterior full-gloss acrylic enamel for concrete, masonry, and wood.
3. Mineral-Fiber-Reinforced Cement Panels: Provide the following finish systems over exterior, mineral-fiber-reinforced cement panels:
- a. Flat Acrylic Finish: **[One finish coat] [Two finish coats] [<Insert number> finish coats]** over a primer.

- 1) Primer: Exterior concrete and masonry primer.
 - 2) Finish Coats: Exterior flat acrylic paint.
4. Exterior Gypsum Soffit Board: Provide the following finish systems over exterior gypsum soffit board:
- a. Flat Acrylic Finish: [**One finish coat**] [**Two finish coats**] [**<Insert number> finish coats**] over an exterior alkyd- or alkali-resistant primer.
 - 1) Primer: Exterior gypsum soffit board primer.
 - 2) Finish Coats: Exterior flat acrylic paint.
 - b. Low-Luster Acrylic Finish: [**One finish coat**] [**Two finish coats**] [**<Insert number> finish coats**] over a primer.
 - 1) Primer: Exterior gypsum soffit board primer.
 - 2) Finish Coats: Exterior low-luster acrylic paint.
 - c. Semigloss Acrylic-Enamel Finish: [**One finish coat**] [**Two finish coats**] [**<Insert number> finish coats**] over a primer.
 - 1) Primer: Exterior gypsum soffit board primer.
 - 2) Finish Coats: Exterior semigloss acrylic enamel.
 - d. Full-Gloss Acrylic-Enamel Finish: [**One finish coat**] [**Two finish coats**] [**<Insert number> finish coats**] over a primer.
 - 1) Primer: Exterior gypsum soffit board primer.
 - 2) Finish Coats: Exterior full-gloss acrylic enamel for concrete, masonry, and wood.
5. Smooth Wood: Provide the following finish systems over smooth wood siding, wood trim, and other smooth exterior wood surfaces:
- a. Flat Acrylic Finish: [**One finish coat**] [**Two finish coats**] [**<Insert number> finish coats**] over a primer.
 - 1) Primer: Exterior wood primer for acrylic enamels.
 - 2) Finish Coats: Exterior flat acrylic paint.
 - b. Low-Luster Acrylic Finish: [**One finish coat**] [**Two finish coats**] [**<Insert number> finish coats**] over a primer.
 - 1) Primer: Exterior wood primer for acrylic enamels.
 - 2) Finish Coats: Exterior low-luster acrylic paint.
 - c. Semigloss Acrylic-Enamel Finish: [**One finish coat**] [**Two finish coats**] [**<Insert number> finish coats**] over a primer.
 - 1) Primer: Exterior wood primer for acrylic enamels.
 - 2) Finish Coats: Exterior semigloss acrylic enamel.

- d. Full-Gloss Acrylic-Enamel Finish: **[One finish coat] [Two finish coats] [<Insert number> finish coats]** over a primer.
 - 1) Primer: Exterior wood primer for acrylic enamels.
 - 2) Finish Coats: Exterior full-gloss acrylic enamel for concrete, masonry, and wood.
 - e. Full-Gloss Alkyd-Enamel Finish: **[One finish coat] [Two finish coats] [<Insert number> finish coats]** over a primer.
 - 1) Primer: Exterior wood primer for alkyd enamels.
 - 2) Finish Coats: Exterior full-gloss alkyd enamel.
6. Wood Trim: Provide the following finish systems over exterior wood trim:
- a. Semigloss Acrylic-Enamel Finish: **[One finish coat] [Two finish coats] [<Insert number> finish coats]** over a primer.
 - 1) Primer: Exterior wood primer for acrylic enamels.
 - 2) Finish Coats: Exterior semigloss acrylic enamel.
 - b. Full-Gloss Acrylic-Enamel Finish: **[One finish coat] [Two finish coats] [<Insert number> finish coats]** over a primer.
 - 1) Primer: Exterior wood primer for acrylic enamels.
 - 2) Finish Coats: Exterior full-gloss acrylic enamel for concrete, masonry, and wood.
 - c. Full-Gloss Alkyd-Enamel Finish: **[One finish coat] [Two finish coats] [<Insert number> finish coats]** over a primer.
 - 1) Primer: Exterior wood trim primer for full-gloss alkyd enamels.
 - 2) Finish Coats: Exterior full-gloss alkyd enamel.
7. Plywood: Provide the following finish systems over exterior plywood:
- a. Flat Acrylic Finish: **[One finish coat] [Two finish coats] [<Insert number> finish coats]** over a primer.
 - 1) Primer: Exterior wood primer for acrylic enamels.
 - 2) Finish Coats: Exterior flat acrylic paint.
 - b. Low-Luster Finish: **[One finish coat] [Two finish coats] [<Insert number> finish coats]** over a primer.
 - 1) Primer: Exterior wood primer for acrylic enamels.
 - 2) Finish Coats: Exterior low-luster acrylic paint.
8. Ferrous Metal: Provide the following finish systems over exterior ferrous metal. Primer is not required on shop-primed items.
- a. Low-Luster Acrylic Finish: **[One finish coat] [Two finish coats]**

- [<Insert number> finish coats] over a rust-inhibitive primer.
- 1) Primer: Exterior ferrous-metal primer.
 - 2) Finish Coat: Exterior low-luster acrylic paint.
- b. Semigloss Acrylic-Enamel Finish: **[One finish coat] [Two finish coats] [<Insert number> finish coats]** over a rust-inhibitive primer.
- 1) Primer: Exterior ferrous-metal primer.
 - 2) Finish Coats: Exterior semigloss acrylic enamel.
- c. Full-Gloss Acrylic-Enamel Finish: **[One finish coat] [Two finish coats] [<Insert number> finish coats]** over a rust-inhibitive primer.
- 1) Primer: Exterior ferrous-metal primer.
 - 2) Finish Coats: Exterior full-gloss acrylic enamel for ferrous and other metals.
- d. Full-Gloss Alkyd-Enamel Finish: **[One finish coat] [Two finish coats] [<Insert number> finish coats]** over a rust-inhibitive primer.
- 1) Primer: Exterior ferrous-metal primer.
 - 2) Finish Coats: Exterior full-gloss alkyd enamel.
9. Zinc-Coated Metal: Provide the following finish systems over exterior zinc-coated metal surfaces:
- a. Low-Luster Finish: **[One finish coat] [Two finish coats] [<Insert number> finish coats]** over a galvanized metal primer.
 - 1) Primer: Exterior galvanized metal primer.
 - 2) Finish Coat: Exterior low-luster acrylic paint. - b. Semigloss Acrylic-Enamel Finish: **[One finish coat] [Two finish coats] [<Insert number> finish coats]** over a galvanized metal primer.
 - 1) Primer: Exterior galvanized metal primer.
 - 2) Finish Coats: Exterior semigloss acrylic enamel. - c. Full-Gloss Acrylic-Enamel Finish: **[One finish coat] [Two finish coats] [<Insert number> finish coats]** over a galvanized metal primer.
 - 1) Primer: Exterior galvanized metal primer.
 - 2) Finish Coats: Exterior full-gloss acrylic enamel for ferrous and other metals. - d. Full-Gloss Alkyd-Enamel Finish: **[One finish coat] [Two finish coats] [<Insert number> finish coats]** over a galvanized metal primer.

- 1) Primer: Exterior galvanized metal primer.
 - 2) Finish Coats: Exterior full-gloss alkyd enamel.
10. Aluminum: Provide the following finish systems over exterior aluminum surfaces:
- a. Semigloss Acrylic-Enamel Finish: **[One finish coat] [Two finish coats] [<Insert number> finish coats]** over a primer.
 - 1) Primer: Exterior aluminum primer under acrylic finishes.
 - 2) Finish Coats: Exterior semigloss acrylic enamel.
 - b. Full-Gloss Acrylic-Enamel Finish: **[One finish coat] [Two finish coats] [<Insert number> finish coats]** over a primer.
 - 1) Primer: Exterior aluminum primer under acrylic finishes.
 - 2) Finish Coats: Exterior full-gloss acrylic enamel for ferrous and other metals.
 - c. Full-Gloss Alkyd-Enamel Finish: **[One finish coat] [Two finish coats] [<Insert number> finish coats]** over a primer.
 - 1) Primer: Exterior aluminum primer under alkyd finishes.
 - 2) Finish Coats: Exterior full-gloss alkyd enamel.

PART 4 - MEASUREMENT

A. METHOD OF MEASUREMENT

1. No separate measurement will be made for work under this Section.

PART 5 - PAYMENT

A. METHOD OF PAYMENT

1. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the lump sum contract price.

END OF SECTION 09912

SECTION 099123 - INTERIOR PAINTING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes surface preparation and the application of paint systems on **[interior substrates.] [the following interior substrates:]**

1. Concrete.
2. Clay masonry.
3. Concrete masonry units (CMU).
4. Steel.
5. Cast iron.
6. Galvanized metal.
7. Aluminum (not anodized or otherwise coated).
8. Wood.
9. Gypsum board.
10. Plaster.
11. Spray-textured ceilings.
12. Cotton or canvas insulation covering.
13. ASJ insulation covering.

- B. Related Requirements:

1. Section 051200 "Structural Steel Framing" for shop priming of metal substrates with primers specified in this Section.
2. Section 099600 "High-Performance Coatings" for high-performance and special-use coatings.
3. Section 099113 "Exterior Painting" for surface preparation and the application of paint systems on exterior substrates.
4. Section 099300 "Staining and Transparent Finishing" for surface preparation and the application of wood stains and transparent finishes on interior wood substrates.
5. Section 099419 "Multicolor Interior Finishing" for speckled finishes on interior surfaces.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by alternates.

1.3 DEFINITIONS

- A. Gloss Level 1: Not more than 5 units at 60 degrees and 10 units at 85 degrees, according to ASTM D 523.
- B. Gloss Level 2: Not more than 10 units at 60 degrees and 10 to 35 units at 85 degrees, according to ASTM D 523.
- C. Gloss Level 3: 10 to 25 units at 60 degrees and 10 to 35 units at 85 degrees, according to ASTM D 523.
- D. Gloss Level 4: 20 to 35 units at 60 degrees and not less than 35 units at 85 degrees, according to ASTM D 523.
- E. Gloss Level 5: 35 to 70 units at 60 degrees, according to ASTM D 523.
- F. Gloss Level 6: 70 to 85 units at 60 degrees, according to ASTM D 523.
- G. Gloss Level 7: More than 85 units at 60 degrees, according to ASTM D 523.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include preparation requirements and application instructions.
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Credit EQ 4.2: For paints and coatings, including printed statement of VOC content.
 - a. Material List: An inclusive list of required coating materials. Indicate each material and cross-reference specific coating, finish system, and application. Identify each material by manufacturer's catalog number and general classification.
 - b. Manufacturer's Information: Manufacturer's technical information, including label analysis and instructions for handling, storing, and applying each coating material.
 - 2. Laboratory Test Reports for Credit EQ 4: For paints and coatings, documentation indicating that they meet the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
 - 3. Interior Paints: Manufacturer's product data and material safety data sheets (MSDS) for paints and coatings used on the interior of the building including printed statement of VOC content in g/L.
- C. Samples for Initial Selection: For each type of topcoat product.

- D. Samples for Verification: For each type of paint system and in each color and gloss of topcoat.
1. Submit Samples on rigid backing, **8 inches** (200 mm) square.
 2. Step coats on Samples to show each coat required for system.
 3. Label each coat of each Sample.
 4. Label each Sample for location and application area.
 5. Provide a list of materials and applications for each coat of each Sample. Label each Sample for location and application.
 6. Resubmit until required sheen, color, and texture are achieved.
 7. Submit **<Insert number>** samples on the following substrates for DEN Project Manager's review of color and texture only:
 - a. Concrete: **[4-inch- square] [4-by-6-inch] <Insert size and shape>** Samples for each color and finish.
 - b. Concrete Unit Masonry: **[4-by-8-inch] [6-by-10-inch] <Insert size>** Samples of masonry, with mortar joint in the center, for each finish and color.
 - c. Painted Wood: **[8-inch-] [12-inch-] <Insert size>** square Samples for each color and material on hardboard.
 - d. Ferrous Metal: **[3-inch-] [4-inch-] <Insert size>** square Samples of flat metal and **[6-inch-] [8-inch-] <Insert size>** long Samples of solid metal for each color and finish.
- E. Product List: For each product indicated, include the following:
1. Cross-reference to paint system and locations of application areas. Use same designations indicated on Drawings and in schedules.
 2. Printout of current "MPI Approved Products List" for each product category specified in Part 2, with the proposed product highlighted.
 3. VOC content.

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials[, **from the same product run,**] that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Paint: **[5] <Insert number>** percent, but not less than **[1 gal. (3.8 L)] <Insert number>** of each material and color applied.

1.6 QUALITY ASSURANCE

- A. Mockups: Apply mockups of each paint system indicated and each color and finish selected to verify preliminary selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
1. DEN Project Manager will select one surface to represent surfaces and

conditions for application of each paint system specified in Part 3.

- a. Vertical and Horizontal Surfaces: Provide samples of at least 100 sq. ft. (9 sq. m).
 - b. Other Items: DEN Project Manager will designate items or areas required.
2. Final approval of color selections will be based on mockups.
- a. If preliminary color selections are not approved, apply additional mockups of additional colors selected by DEN Project Manager at no added cost to Owner.
3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials to Project site in manufacturer's original, unopened packages and containers bearing manufacturer's name and label and the following information:
1. Product name or title of material.
 2. Product description (generic classification or binder type).
 3. Manufacturer's stock number and date of manufacture.
 4. Contents by volume, for pigment and vehicle constituents.
 5. Thinning instructions.
 6. Application instructions.
 7. Color name and number.
 8. VOC content.
- B. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 deg F (7 deg C).
1. Maintain containers in clean condition, free of foreign materials and residue.
 2. Remove rags and waste from storage areas daily.

1.8 FIELD CONDITIONS

- A. Apply paints only when temperature of surfaces to be painted and ambient air temperatures are between 50 and 90 deg F (10 and 33 deg C).
- B. Do not apply paints when relative humidity exceeds 85 percent; at temperatures less than 5 deg F (3 deg C) above the dew point; or to damp or wet surfaces.
1. Painting may continue during inclement weather if surfaces and areas to be painted are enclosed and heated within temperature limits specified by manufacturer during application and drying periods.

1.9 EXTRA MATERIALS

- A. Furnish extra paint materials from the same production run as the materials applied and in the quantities described below. Package with protective covering for storage and identify with labels describing contents. Deliver extra materials to Owner, and store in location as determined by DEN Project Manager.
1. Quantity: Furnish Owner with extra paint materials in quantities indicated below:
 - a. Interior, Flat Acrylic Paint: [1 gal.] [2 gal.] [5 gal.] <Insert other number> of each color applied.
 - b. Interior, Low-Luster Acrylic Finish: [1 gal.] [2 gal.] [5 gal.] <Insert other number> of each color applied.
 - c. Interior, Semigloss Acrylic Enamel: [1 gal.] [2 gal.] [5 gal.] <Insert other number> of each color applied.
 - d. Interior, Full-Gloss Alkyd Enamel: [1 gal.] [2 gal.] [5 gal.] <Insert other number> of each color required.
 - e. <Insert other type and quantity>.
 2. Quantity: Furnish Owner with an additional [3] [5] [7] <Insert percent> percent, but not less than [1] <Insert number> gal., as appropriate, of each material and color applied.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following
1. Benjamin Moore & Co.
 2. ICI Dulux Paints.
 3. Kelly-Moore Paints.
 4. M.A.B. Paints.
 5. PPG Architectural Finishes, Inc.
 6. Sherwin-Williams Company (The).
 7. Sico, Inc.
 8. <Insert manufacturer's name>.
 9. or approved equal.
- B. Products: Subject to compliance with requirements, provide one of the products listed in other Part 2 articles for the paint category indicated, or equal approved by DEN

Project Manager.

2.2 PAINT, GENERAL

- A. MPI Standards: Provide products that comply with MPI standards indicated and that are listed in its "MPI Approved Products List."
- B. Material Compatibility:
1. Provide materials for use within each paint system that are compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
 2. For each coat in a paint system, provide products recommended in writing by manufacturers of topcoat for use in paint system and on substrate indicated.
- C. VOC Content: Products shall comply with VOC limits of authorities having jurisdiction[**and, for interior paints and coatings applied at Project site, the following VOC limits, exclusive of colorants added to a tint base, when calculated according to 40 CFR 59, Subpart D (EPA Method 24)**].
1. Flat Paints and Coatings: 50 g/L.
 2. Nonflat Paints and Coatings: 150 g/L.
 3. Dry-Fog Coatings: 400 g/L.
 4. Primers, Sealers, and Undercoaters: 200 g/L.
 5. Anticorrosive and Antirust Paints Applied to Ferrous Metals: 250 g/L.
 6. Zinc-Rich Industrial Maintenance Primers: 340 g/L.
 7. Pretreatment Wash Primers: 420 g/L.
 8. Floor Coatings: 100 g/L.
 9. Shellacs, Clear: 730 g/L.
 10. Shellacs, Pigmented: 550 g/L.
- D. Low-Emitting Materials: Interior paints and coatings shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- E. Colors: [**As selected by DEN Project Manager from manufacturer's full range**] [**Match DEN Project Manager's samples**] [**As indicated in a color schedule**] <Insert requirements>.
1. [**10**] [**20**] [**30**] <Insert number> percent of surface area will be painted with deep tones.

2.3 BLOCK FILLERS

- A. Block Filler, Latex, Interior/Exterior:[**MPI #4.**]
1. Benjamin Moore; Moorcraft Super Craft Latex Block Filler No. 285: Applied at a dry film thickness of not less than 8.1 mils.

2. Benjamin Moore; Moore's IMC Latex Block Filler No. M88: Applied at a dry film thickness of not less than 8.1 mils.
3. ICI Dulux Paints; Bloxfil 4000-1000 Interior/Exterior Heavy Duty Acrylic Block Filler: Applied at a dry film thickness of not less than 7.0 to 14.5 mils.
4. Kelly-Moore; 521 Fill and Prime Acrylic Block Filler: Applied at a dry film thickness of not less than 10.0 mils.
5. M. A. B. Paint; Block Kote No. 1000 Acrylic Latex Block Filler 064-145: Applied at a dry film thickness of not less than 12.0 mils.
6. Pittsburgh Paints; 6-7 SpeedHide Interior/Exterior Masonry Latex Block Filler: Applied at a dry film thickness of not less than 6.0 to 12.5 mils.
7. Sherwin-Williams; PrepRite Interior/Exterior Block Filler B25W25: Applied at a dry film thickness of not less than 8.0 mils.
8. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
9. or approved equal.

2.4 PRIMERS/SEALERS

A. Primer Sealer, Latex, Interior:[**MPI #50.**]

1. Benjamin Moore; Moorcraft Super Spec Latex Enamel Undercoater & Primer Sealer No. 253: Applied at a dry film thickness of not less than 1.2 mils.
2. ICI Dulux Paints; 1000-1200 Dulux Ultra Basecoat Interior Latex Wall Primer: Applied at a dry film thickness of not less than 1.2 mils.
3. ICI Dulux Paints; 1030-1200 Ultra-Hide PVA Interior Primer Sealer General Purpose Wall Primer: Applied at a dry film thickness of not less than 1.9 mils.
4. Kelly-Moore; 971 Acry-Prime Interior Latex Primer/Sealer: Applied at a dry film thickness of not less than 1.6 mils.
5. M. A. B. Paint; Fresh Kote Vinyl Primer 037-100: Applied at a dry film thickness of not less than 1.5 mils.
6. Pittsburgh Paints; 6-2 SpeedHide Interior Quick-Drying Latex Sealer: Applied at a dry film thickness of not less than 1.0 mil.
7. Sherwin-Williams; PrepRite 200 Latex Wall Primer B28W200 Series: Applied at a dry film thickness of not less than 1.6 mils.
8. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
9. or approved equal.

B. Primer, Alkali Resistant, Water Based, for Concrete and Masonry:[**MPI #3.**]

1. Benjamin Moore; Moorcraft Super Spec Latex Enamel Undercoater & Primer Sealer No. 253: Applied at a dry film thickness of not less than 1.2 mils.
2. ICI Dulux Paints; 3030-1200 Bond-Prep Interior/Exterior Waterborne Pigmented Bonding Primer: Applied at a dry film thickness of not less than 1.8 mils.
3. Kelly-Moore; 971 Acry-Prime Interior Latex Primer/Sealer: Applied at a dry film thickness of not less than 1.6 mils.
4. M. A. B. Paint; Fresh Kote Vinyl Primer 037-100: Applied at a dry film thickness of not less than 1.5 mils.
5. Pittsburgh Paints; 6-2 SpeedHide Interior Quick-Drying Latex Sealer: Applied at a

- dry film thickness of not less than 1.0 mil.
6. Sherwin-Williams; PrepRite Masonry Primer B28W300: Applied at a dry film thickness of not less than 3.0 mils.
 7. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.
 8. or approved equal.
- C. Primer Sealer, Interior, Institutional Low Odor/VOC:[**MPI #149.**]
1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.
- D. Primer, Latex, for Interior Wood:[**MPI #39.**]
1. Benjamin Moore; Moorcraft Super Spec Alkyd Enamel Underbody and Primer Sealer No. 245: Applied at a dry film thickness of not less than 1.5 mils.
 2. ICI Dulux Paints; 3210-1200 Ultra-Hide Aquacrylic GRIPPER Stain Killer Primer Sealer: Applied at a dry film thickness of not less than 1.8 mils.
 3. Kelly-Moore; 975 Acry Plex Interior Latex Enamel Undercoat: Applied at a dry film thickness of not less than 1.6 mils.
 4. M. A. B. Paint; Rich Lux Latex Undercoat 037-154: Applied at a dry film thickness of not less than 1.5 mils.
 5. Pittsburgh Paints; 6-855 SpeedHide Latex Enamel Undercoater: Applied at a dry film thickness of not less than 1.0 mil.
 6. Sherwin-Williams; PrepRite Wall and Wood Primer B49W200 Series: Applied at a dry film thickness of not less than 1.6 mils.
 7. Sherwin-Williams; PrepRite Classic Interior Primer B28W101 Series: Applied at a dry film thickness of not less than 1.6 mils.
 8. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.
 9. or approved equal.
- E. Primer Sealer, Alkyd, Interior:[**MPI #45.**]
1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.
- F. Primer, Bonding, Water Based:[**MPI #17.**]
1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.
- G. Primer, Bonding, Solvent Based:[**MPI #69.**]
1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.
- H. Wood-Knot Sealer: Sealer recommended in writing by topcoat manufacturer for use in paint systems indicated.

1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**

2.5 METAL PRIMERS

A. Primer, Rust-Inhibitive, Water Based:[**MPI #107.**]

1. Benjamin Moore; Moore's IMC Alkyd Metal Primer No. M06: Applied at a dry film thickness of not less than 2.0 mils.
2. ICI Dulux Paints; 4130-6130 Devshield Rust Penetrating Metal Primer: Applied at a dry film thickness of not less than 2.2 mils.
3. ICI Dulux Paints; 4160-6130 Devguard Multi-Purpose Tank & Structural Primer: Applied at a dry film thickness of not less than 2.0 mils.
4. Kelly-Moore; 1711 Kel-Guard Alkyd White Rust Inhibitive Primer: Applied at a dry film thickness of not less than 2.0 mils.
5. M. A. B. Paint; Rust-O-Lastic Anti-Corrosive Primer 073-132: Applied at a dry film thickness of not less than 2.0 mils.
6. Pittsburgh Paints; 90-709 Pitt-Tech One Pack Interior/Exterior Primer/Finish DTM Industrial Enamel: Applied at a dry film thickness of not less than 1.5 mils.
7. Sherwin-Williams; Kem Kromik Universal Metal Primer B50NZ6/B50WZ1: Applied at a dry film thickness of not less than 3.0 mils.
8. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
9. or approved equal.

B. Primer, Alkyd, Anti-Corrosive, for Metal:[**MPI #79.**]

1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**

C. Primer, Alkyd, Quick Dry, for Metal:[**MPI #76.**]

1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**

D. Primer, Galvanized, Water Based:[**MPI #134.**]

1. Benjamin Moore; Moore's IMC Acrylic Metal Primer No. M04: Applied at a dry film thickness of not less than 2.0 mils.
2. ICI Dulux Paints; 4160-6130 Devguard Multi-Purpose Tank & Structural Primer: Applied at a dry film thickness of not less than 2.0 mils.
3. Kelly-Moore; 1722 Kel-Guard Acrylic Galvanized Iron Primer: Applied at a dry film thickness of not less than 1.8 mils.
4. M. A. B. Paint; Rust-O-Lastic Hydro-Prime II Acrylic (DTM) Maintenance Primer 073-189: Applied at a dry film thickness of not less than 2.0 mils.
5. Pittsburgh Paints; 90-709 Pitt-Tech One Pack Interior/Exterior Primer/Finish DTM Industrial Enamel: Applied at a dry film thickness of not less than 3.0 mils.
6. Sherwin-Williams; primer not required over this substrate.
7. Sherwin-Williams; Galvite HS B50WZ30: Applied at a dry film thickness of not

- less than 3.0 mils.
8. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
 9. or approved equal.

E. Primer, Vinyl Wash:[**MPI #80.**]

1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**

F. Primer, Quick Dry, for Aluminum:[**MPI #95.**]

1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**

2.6 WATER-BASED PAINTS

A. Latex, Interior, Flat, (Gloss Level 1):[**MPI #53.**]

1. Benjamin Moore; Moorecraft Super Spec Latex Flat No. 275: Applied at a dry film thickness of not less than 1.2 mils.
2. ICI Dulux Paints; 1200-XXXX Dulux Professional Velvet Matte Interior Flat Latex Wall & Trim Finish: Applied at a dry film thickness of not less than 1.4 mils.
3. Kelly-Moore; 450 Pro-Wall Interior Flat Latex Wall Paint: Applied at a dry film thick-ness of not less than 1.8 mils.
4. M. A. B. Paint; Fresh Kote Latex Flat 402 Line: Applied at a dry film thickness of not less than 1.5 mils.
5. Pittsburgh Paints; 6-70 Line SpeedHide Interior Wall Flat-Latex Paint: Applied at a dry film thickness of not less than 1.0 mil.
6. Sherwin-Williams; ProMar 200 Interior Latex Flat Wall Paint B30W200 Series: Applied at a dry film thickness of not less than 1.4 mils.
7. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
8. or approved equal.

B. Latex, Interior, Eggshell, (Gloss Level 2):[**MPI #44.**]

1. Benjamin Moore; Moorcraft Super Spec Latex Eggshell Enamel No. 274: Applied at a dry film thickness of not less than 1.3 mils.
2. ICI Dulux Paints; 1402-XXXX Dulux Professional Acrylic Eggshell Interior Wall & Trim Enamel: Applied at a dry film thickness of not less than 1.4 mils.
3. Kelly-Moore; 1610 Sat-N-Sheen Interior Latex Low Sheen Wall and Trim Finish: Ap-plied at a dry film thickness of not less than 1.6 mils.
4. Kelly-Moore; 1686 Dura-Poxy Eggshell Acrylic Enamel: Applied at a dry film thick-ness of not less than 1.6 mils.
5. M. A. B. Paint; Fresh Kote Latex Satin Eggshell Enamel 405 Line: Applied at a dry film thickness of not less than 1.5 mils.
6. Pittsburgh Paints; 6-400 Series SpeedHide Eggshell Acrylic Latex Enamel: Applied at a dry film thickness of not less than 1.25 mils.

7. Sherwin-Williams; ProMar 200 Interior Latex Egg-Shell Enamel B20W200 Series: Applied at a dry film thickness of not less than 1.6 mils.
 8. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
 9. or approved equal.
- C. Latex, Interior, (Gloss Level 3):[**MPI #52.**]
1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
- D. Latex, Interior, (Gloss Level 4):[**MPI #43.**]
1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
- E. Latex, Interior, Semi-Gloss, (Gloss Level 5):[**MPI #54.**]
1. Benjamin Moore; Moorcraft Super Spec Latex Semi-Gloss Enamel No. 276: Applied at a dry film thickness of not less than 1.2 mils.
 2. ICI Dulux Paints; 1406-XXXX Dulux Professional Acrylic Semi-Gloss Interior Wall & Trim Enamel: Applied at a dry film thickness of not less than 1.5 mils.
 3. Kelly-Moore; 1649 Acrylic-Latex Semi-Gloss Enamel: Applied at a dry film thickness of not less than 1.7 mils.
 4. Kelly-Moore; 1685 Dura-Poxy Semi-Gloss Acrylic Enamel: Applied at a dry film thick-ness of not less than 1.5 mils.
 5. M. A. B. Paint; Fresh Kote Latex Semi-Gloss 410 Line: Applied at a dry film thickness of not less than 1.5 mils.
 6. Pittsburgh Paints; 6-500 Series SpeedHide Interior Semi-Gloss Latex: Applied at a dry film thickness of not less than 1.0 mil.
 7. Sherwin-Williams; ProMar 200 Interior Latex Semi-Gloss Enamel B31W200 Series: Applied at a dry film thickness of not less than 1.3 mils.
 8. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
 9. or approved equal.
- F. Latex, Interior, Gloss, (Gloss Level 6, except minimum gloss of 65 units at 60 degrees):[**MPI #114.**]
1. Benjamin Moore; Moore's IMC Acrylic Gloss Enamel No. M28: Applied at a dry film thickness of not less than 2.0 mils.
 2. ICI Dulux Paints; 3028-XXXX Dulux Interior/Exterior Acrylic Gloss Finish: Applied at a dry film thickness of not less than 1.6 mils.
 3. Kelly-Moore; 1680 Dura-Poxy Gloss Acrylic Enamel: Applied at a dry film thickness of not less than 1.6 mils.
 4. M. A. B. Paint; Rich Lux Architectural High Gloss Latex Enamel 022-127 Line: Applied at a dry film thickness of not less than 1.5 mils.
 5. Pittsburgh Paints; 6-8534 SpeedHide Interior Latex 100 Percent Acrylic Gloss Enamels: Applied at a dry film thickness of not less than 1.0 mil.
 6. Pittsburgh Paints; 90-374 Pitt-Tech One Pack Interior/Exterior High Performance

- Waterborne High Gloss DTM Industrial Enamel (recommended for ferrous and zinc-coated metal): Applied at a dry film thickness of not less than 3.0 mils.
7. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
 8. or approved equal.
- G. Latex, Interior, Institutional Low Odor/VOC, Flat (Gloss Level 1):[**MPI #143.**]
1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
- H. Latex, Interior, Institutional Low Odor/VOC, (Gloss Level 2):[**MPI #144.**]
1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
- I. Latex, Interior, Institutional Low Odor/VOC, (Gloss Level 3):[**MPI #145.**]
1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
- J. Latex, Interior, Institutional Low Odor/VOC, Semi-Gloss (Gloss Level 5):[**MPI #147.**]
1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
- K. Latex, Interior, High Performance Architectural, (Gloss Level 2):[**MPI #138.**]
1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
- L. Latex, Interior, High Performance Architectural, (Gloss Level 3):[**MPI #139.**]
1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
- M. Latex, Interior, High Performance Architectural, (Gloss Level 4):[**MPI #140.**]
1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
- N. Latex, Interior, High Performance Architectural, Semi-Gloss (Gloss Level 5):[**MPI #141.**]
1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
- O. Light Industrial Coating, Interior, Water Based (Gloss Level 3):[**MPI #151.**]
1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**

P. Light Industrial Coating, Interior, Water Based, Semi-Gloss (Gloss Level 5):[**MPI #153.**]

1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**

Q. Light Industrial Coating, Interior, Water Based, Gloss (Gloss Level 6):[**MPI #154.**]

1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**

2.7 SOLVENT-BASED PAINTS

A. Alkyd, Interior, Flat (Gloss Level 1):[**MPI #49.**]

1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**

B. Alkyd, Interior, (Gloss Level 3):[**MPI #51.**]

1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**

C. Alkyd, Interior, Semi-Gloss (Gloss Level 5):[**MPI #47.**]

1. Benjamin Moore; Moorcraft Super Spec Alkyd Semi-Gloss Enamel No. 271: Applied at a dry film thickness of not less than 1.4 mils.
2. ICI Dulux Paints; 1516-XXXX Ultra-Hide Alkyd Semi-Gloss Interior Wall & Trim Enamel: Applied at a dry film thickness of not less than 1.7 mils.
3. Kelly-Moore; 1630--Kel-Cote Interior Alkyd Semi-Gloss Enamel: Applied at a dry film thickness of not less than 2.2 mils.
4. M. A. B. Paint; Fresh Kote Semi-Gloss 403 Line: Applied at a dry film thickness of not less than 2.0 mils.
5. Pittsburgh Paints; 6-1110 Series SpeedHide Interior Enamel Wall & Trim Semi-Gloss Oil: Applied at a dry film thickness of not less than 1.4 mils.
6. Sherwin-Williams; ProMar 200 Interior Alkyd Semi-Gloss Enamel B34W200 Series: Applied at a dry film thickness of not less than 1.7 mils.
7. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
8. or approved equal.

D. Alkyd, Interior, Gloss (Gloss Level 6):[**MPI #48.**]

1. Benjamin Moore; Moore's IMC Urethane Alkyd Enamel No. M22: Applied at a dry film thickness of not less than 2.0 mils.
2. ICI Dulux Paints; 4308-XXXX Devguard Alkyd Industrial Gloss Enamel: Applied at a dry film thickness of not less than 2.0 mils.
3. Kelly-Moore; 1700 Kel-Guard Gloss Alkyd Rust Inhibitive Enamel: Applied at a dry film thickness of not less than 2.0 mils.
4. M. A. B. Paint; Rich Lux Architectural Bright White Enamel 026-127 Line: Applied

- at a dry film thickness of not less than 1.9 mils.
5. Pittsburgh Paints; 7-814 Series Pittsburgh Paints Industrial Gloss-Oil Interior/Exterior Enamel: Applied at a dry film thickness of not less than 1.5 mils.
 6. Sherwin-Williams; ProMar 200 Alkyd Gloss Enamel B35W200 Series: Applied at a dry film thickness of not less than 1.6 mils.
 7. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
 8. or approved equal.

E. Alkyd, Quick Dry, Semi-Gloss (Gloss Level 5):[**MPI #81.**]

1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**

F. Alkyd, Quick Dry, Gloss (Gloss Level 7):[**MPI #96.**]

1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**

2.8 TEXTURED COATING

A. Primer for Textured Coating, Latex, Flat: As recommended in writing by topcoat manufacturer.

1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**

B. Intermediate Coat for Textured Coating, Latex, Flat: As recommended in writing by topcoat manufacturer.

1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**

C. Textured Coating, Latex, Flat:[**MPI #42.**]

1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**

2.9 DRY FOG/FALL COATINGS

A. Dry Fall, Latex, Flat:[**MPI #118.**]

1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**

B. Dry Fall, Water Based, for Galvanized Steel, Flat (Gloss Level 1):[**MPI #133.**]

1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**

C. Dry Fall, Alkyd, Flat:[**MPI #55.**]

1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**

2.10 ALUMINUM PAINT

A. Aluminum Paint:[**MPI #1.**]

1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**

2.11 FLOOR COATINGS

A. Stain, Interior, for Concrete Floors:[**MPI #58.**]

1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**

B. Sealer, Water Based, for Concrete Floors:[**MPI #99.**]

1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**

C. Sealer, Solvent Based, for Concrete Floors:[**MPI #104.**]

1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**

D. Floor Paint, Latex, Low Gloss (Maximum Gloss Level 3):[**MPI #60.**]

1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**

E. Floor Enamel, Alkyd, Gloss (Gloss Level 6):[**MPI #27.**]

1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**

2.12 SOURCE QUALITY CONTROL

A. Testing of Paint Materials: Owner reserves the right to invoke the following procedure:

1. Owner will engage the services of a qualified testing agency to sample paint materials. Contractor will be notified in advance and may be present when samples are taken. If paint materials have already been delivered to Project site, samples may be taken at Project site. Samples will be identified, sealed, and certified by testing agency.

2. Testing agency will perform tests for compliance with product requirements.
3. Owner may direct Contractor to stop applying coatings if test results show materials being used do not comply with product requirements.
4. Contractor shall remove noncomplying paint materials from Project site, pay for testing, and repaint surfaces painted with rejected materials.
5. Contractor will be required to remove rejected materials from previously painted surfaces if, on repainting with complying materials, the two paints are incompatible.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
 1. Proceed with paint application only after unsatisfactory conditions have been corrected and surfaces receiving paint are thoroughly dry.
 2. Start of painting will be construed as Contractor's acceptance of surfaces and conditions within a particular area.
- B. Maximum Moisture Content of Substrates: When measured with an electronic moisture meter as follows:
 1. Concrete: 12 percent.
 2. Masonry (Clay and CMU): 12 percent.
 3. Wood: 15 percent.
 4. Gypsum Board: 12 percent.
 5. Plaster: 12 percent.
- C. Gypsum Board Substrates: Verify that finishing compound is sanded smooth.
- D. Plaster Substrates: Verify that plaster is fully cured.
- E. Spray-Textured Ceiling Substrates: Verify that surfaces are dry.
- F. Verify suitability of substrates, including surface conditions and compatibility with existing finishes and primers.
- G. Proceed with coating application only after unsatisfactory conditions have been corrected.
 1. Application of coating indicates acceptance of surfaces and conditions.

3.2 PREPARATION

- A. Comply with manufacturer's written instructions and recommendations in "MPI Manual"

applicable to substrates indicated.

- B. Remove hardware, covers, plates, and similar items already in place that are removable and are not to be painted. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and painting.
1. After completing painting operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection if any.
- C. Clean substrates of substances that could impair bond of paints, including dust, dirt, oil, grease, and incompatible paints and encapsulants.
1. Remove incompatible primers and reprime substrate with compatible primers or apply tie coat as required to produce paint systems indicated.
- D. Cementitious Materials: Prepare concrete, concrete unit masonry, cement plaster, and mineral-fiber-reinforced cement panel surfaces to be painted. Remove efflorescence, chalk, dust, dirt, grease, oils, and release agents. Roughen as required to remove glaze. If hardeners or sealers have been used to improve curing, use mechanical methods of surface preparation.
1. Use abrasive blast-cleaning methods if recommended by paint manufacturer.
 2. Determine alkalinity and moisture content of surfaces by performing appropriate tests. If surfaces are sufficiently alkaline to cause the finish paint to blister and burn, correct this condition before application. Do not paint surfaces if moisture content exceeds that permitted in manufacturer's written instructions.
 3. Clean concrete floors to be painted with a 5 percent solution of muriatic acid or other etching cleaner. Flush the floor with clean water to remove acid, neutralize with ammonia, rinse, allow to dry, and vacuum before painting.
- E. Steel Substrates: Remove rust, loose mill scale, and shop primer, if any. Clean using methods recommended in writing by paint manufacturer[.] [**but not less than the following:**]
1. SSPC-SP 2, "Hand Tool Cleaning."
 2. SSPC-SP 3, "Power Tool Cleaning."
 3. SSPC-SP 7/NACE No. 4, "Brush-off Blast Cleaning."
 4. SSPC-SP 11, "Power Tool Cleaning to Bare Metal."
- F. Shop-Primed Steel Substrates: Clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material as used for shop priming to comply with SSPC-PA 1 for touching up shop-primed surfaces.
- G. Galvanized-Metal Substrates: Remove grease and oil residue from galvanized sheet metal fabricated from coil stock by mechanical methods to produce clean, lightly etched surfaces that promote adhesion of subsequently applied paints.
- H. Aluminum Substrates: Remove loose surface oxidation.

- I. Wood Substrates:
 - 1. Scrape and clean knots, and apply coat of knot sealer before applying primer.
 - 2. Sand surfaces that will be exposed to view, and dust off.
 - 3. Prime edges, ends, faces, undersides, and backsides of wood.
 - 4. After priming, fill holes and imperfections in the finish surfaces with putty or plastic wood filler. Sand smooth when dried.
 - 5. Seal tops, bottoms, and cutouts of unprimed wood doors with a heavy coat of varnish or sealer immediately on delivery.
 - 6. Seal tops, bottoms, and cutouts of pre-finished wood doors that are undercut or cut in the field.

- J. Cotton or Canvas Insulation Covering Substrates: Remove dust, dirt, and other foreign material that might impair bond of paints to substrates.

- K. Material Preparation: Mix and prepare paint materials according to manufacturer's written instructions.
 - 1. Maintain containers used in mixing and applying paint in a clean condition, free of foreign materials and residue.
 - 2. Stir material before application to produce a mixture of uniform density. Stir as required during application. Do not stir surface film into material. If necessary, remove surface film and strain material before using.
 - 3. Use only thinners approved by paint manufacturer and only within recommended limits.

3.3 APPLICATION

- A. Apply paints according to manufacturer's written instructions and to recommendations in "MPI Manual."
 - 1. Use applicators and techniques suited for paint and substrate indicated.
 - a. Brushes: Use brushes best suited for type of material applied. Use brush of appropriate size for surface or item being painted.
 - b. Rollers: Use rollers of carpet, velvet-back, or high-pile sheep's wool as recommended by manufacturer for material and texture required.
 - c. Spray Equipment: Use airless spray equipment with orifice size as recommended by manufacturer for material and texture required.
 - 2. Paint surfaces behind movable equipment and furniture same as similar exposed surfaces. Before final installation, paint surfaces behind permanently fixed equipment or furniture with prime coat only.
 - 3. Paint front and backsides of access panels, removable or hinged covers, and similar hinged items to match exposed surfaces.
 - 4. Do not paint over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.
 - 5. Primers specified in painting schedules may be omitted on items that are factory primed or factory finished if acceptable to topcoat manufacturers.

6. The term "exposed surfaces" includes areas visible when permanent or built-in fixtures, grilles, convector covers, covers for finned-tube radiation, and similar components are in place. Extend coatings in these areas, as required, to maintain system integrity and provide desired protection.
 7. Paint surfaces behind movable equipment and furniture the same as similar exposed surfaces. Before final installation of equipment, paint surfaces behind permanently fixed equipment or furniture with prime coat only.
 8. Paint interior surfaces of ducts with a flat, nonspecular black paint where visible through registers or grilles.
 9. Paint backsides of access panels and removable or hinged covers to match exposed surfaces.
- B. Scheduling Painting: Apply first coat to surfaces that have been cleaned, pretreated, or otherwise prepared for painting as soon as practicable after preparation and before subsequent surface deterioration.
1. The number of coats and film thickness required are the same regardless of application method. Do not apply succeeding coats until previous coat has cured as recommended by manufacturer. If sanding is required to produce a smooth, even surface according to manufacturer's written instructions, sand between applications.
 2. Omit primer over metal surfaces that have been shop primed and touchup painted.
 3. If undercoats, stains, or other conditions show through final coat of paint, apply additional coats until paint film is of uniform finish, color, and appearance. Give special attention to ensure that edges, corners, crevices, welds, and exposed fasteners receive a dry film thickness equivalent to that of flat surfaces.
- C. Tint each undercoat a lighter shade to facilitate identification of each coat if multiple coats of same material are to be applied. Tint undercoats to match color of topcoat, but provide sufficient difference in shade of undercoats to distinguish each separate coat.
- D. If undercoats or other conditions show through topcoat, apply additional coats until cured film has a uniform paint finish, color, and appearance.
- E. Apply paints to produce surface films without cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness, or other surface imperfections. Cut in sharp lines and color breaks.
- F. Painting Fire Suppression, Plumbing, HVAC, Electrical, Communication, and Electronic Safety and Security Work:
1. Paint the following work where exposed in equipment rooms:
 - a. Equipment, including panelboards[**and switch gear**].
 - b. Uninsulated metal piping.
 - c. Uninsulated plastic piping.
 - d. Pipe hangers and supports.
 - e. Metal conduit.
 - f. Plastic conduit.

- g. Tanks that do not have factory-applied final finishes.
 - h. Duct, equipment, and pipe insulation having cotton or canvas insulation covering or other paintable jacket material.
 - i. **<Insert mechanical items to be painted>**.
 2. Paint the following work where exposed in occupied spaces:
 - a. Equipment, including panelboards.
 - b. Uninsulated metal piping.
 - c. Uninsulated plastic piping.
 - d. Pipe hangers and supports.
 - e. Metal conduit.
 - f. Plastic conduit.
 - g. Duct, equipment, and pipe insulation having cotton or canvas insulation covering or other paintable jacket material.
 - h. Other items as directed by DEN Project Manager.
 - i. **<Insert mechanical items to be painted>**.
 3. Paint portions of internal surfaces of metal ducts, without liner, behind air inlets and outlets that are visible from occupied spaces.

3.4 FIELD QUALITY CONTROL

- A. Dry Film Thickness Testing: Owner may engage the services of a qualified testing and inspecting agency to inspect and test paint for dry film thickness. Samples of material delivered to Project will be taken, identified, sealed, and certified in the presence of Contractor.
 1. Contractor shall touch up and restore painted surfaces damaged by testing.
 2. If test results show that dry film thickness of applied paint does not comply with paint manufacturer's written recommendations, Contractor shall pay for testing, and apply additional coats as needed to provide dry film thickness that complies with paint manufacturer's written recommendations.
 3. If necessary, Contractor may be required to remove noncomplying paint from previously painted surfaces if, on repainting with specified paint, the two coatings are incompatible.

3.5 CLEANING AND PROTECTION

- A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.
- B. After completing paint application, clean spattered surfaces. Remove spattered paints by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.

- C. Protect work of other trades against damage from paint application. Correct damage to work of other trades by cleaning, repairing, replacing, and refinishing, as approved by DEN Project Manager, and leave in an undamaged condition.
- D. At completion of construction activities of other trades, touch up and restore damaged or defaced painted surfaces.
- E. Provide "Wet Paint" signs, warning tape and any other measures required to protect newly painted finishes and prevent the public from encountering freshly painted surfaces.. After completing painting operations, remove temporary protective wrappings provided by others to protect their work.
 - 1. After work of other trades is complete, touch up and restore damaged or defaced painted surfaces. Comply with procedures specified in PDCA P1.

3.6 INTERIOR PAINTING SCHEDULE

A. Concrete Substrates, Nontraffic Surfaces:

1. Latex System:

- a. Prime Coat: Primer sealer, latex, interior[, **MPI #50**].
- b. Prime Coat: Latex, interior, matching topcoat.
- c. Intermediate Coat: Latex, interior, matching topcoat.
- d. Topcoat: Latex, interior, flat, (Gloss Level 1)[, **MPI #53**].
- e. Topcoat: Latex, interior, (Gloss Level 2)[, **MPI #44**].
- f. Topcoat: Latex, interior, (Gloss Level 3)[, **MPI #52**].
- g. Topcoat: Latex, interior, (Gloss Level 4)[, **MPI #43**].
- h. Topcoat: Latex, interior, semi-gloss, (Gloss Level 5)[, **MPI #54**].
- i. Topcoat: Latex, interior, gloss, (Gloss Level 6, except minimum gloss of 65 units at 60 degrees)[, **MPI #114**].

2. Latex over Latex Aggregate System:

- a. Prime Coat: Textured coating, latex, flat[, **MPI #42**].
- b. Intermediate Coat: Latex, interior, matching topcoat.
- c. Topcoat: Latex, interior, flat, (Gloss Level 1)[, **MPI #53**].
- d. Topcoat: Latex, interior, (Gloss Level 2)[, **MPI #44**].
- e. Topcoat: Latex, interior, (Gloss Level 3)[, **MPI #52**].
- f. Topcoat: Latex, interior, (Gloss Level 4)[, **MPI #43**].
- g. Topcoat: Latex, interior, semi-gloss, (Gloss Level 5)[, **MPI #54**].
- h. Topcoat: Latex, interior, gloss, (Gloss Level 6, except minimum gloss of 65 units at 60 degrees)[, **MPI #114**].

3. Institutional Low-Odor/VOC Latex System:

- a. Prime Coat: Primer sealer, interior, institutional low odor/VOC[, **MPI #149**].
- b. Intermediate Coat: Latex, interior, institutional low odor/VOC, matching topcoat.

- c. Topcoat: Latex, interior, institutional low odor/VOC, flat (Gloss Level 1)[, **MPI #143**].
 - d. Topcoat: Latex, interior, institutional low odor/VOC, (Gloss Level 2)[, **MPI #144**].
 - e. Topcoat: Latex, interior, institutional low odor/VOC, (Gloss Level 3)[, **MPI #145**].
 - f. Topcoat: Latex, interior, institutional low odor/VOC, semi-gloss (Gloss Level 5)[, **MPI #147**].
4. High-Performance Architectural Latex System:
- a. Prime Coat: Primer, alkali resistant, water based[, **MPI #3**].
 - b. Intermediate Coat: Latex, interior, high performance architectural, matching topcoat.
 - c. Topcoat: Latex, interior, high performance architectural, (Gloss Level 2)[, **MPI #138**].
 - d. Topcoat: Latex, interior, high performance architectural, (Gloss Level 3)[, **MPI #139**].
 - e. Topcoat: Latex, interior, high performance architectural, (Gloss Level 4)[, **MPI #140**].
 - f. Topcoat: Latex, interior, high performance architectural, semi-gloss (Gloss Level 5)[, **MPI #141**].
5. Water-Based Light Industrial Coating System:
- a. Prime Coat: Primer, alkali resistant, water based[, **MPI #3**].
 - b. Intermediate Coat: Light industrial coating, interior, water based, matching topcoat.
 - c. Topcoat: Light industrial coating, interior, water based (Gloss Level 3)[, **MPI #151**].
 - d. Topcoat: Light industrial coating, interior, water based, semi-gloss (Gloss Level 5)[, **MPI #153**].
 - e. Topcoat: Light industrial coating, interior, water based, gloss (Gloss Level 6)[, **MPI #154**].
6. Alkyd System:
- a. Prime Coat: Primer, alkali resistant, water based[, **MPI #3**].
 - b. Intermediate Coat: Alkyd, interior, matching topcoat.
 - c. Topcoat: Alkyd, interior, flat (Gloss Level 1)[, **MPI #49**].
 - d. Topcoat: Alkyd, interior, (Gloss Level 3)[, **MPI #51**].
 - e. Topcoat: Alkyd, interior, semi-gloss (Gloss Level 5)[, **MPI #47**].
 - f. Topcoat: Alkyd, interior, gloss (Gloss Level 6)[, **MPI #48**].
- B. Concrete Substrates, Traffic Surfaces:
1. Latex Floor Enamel System:
 - a. Prime Coat: Floor paint, latex, low gloss (maximum Gloss Level 3)[, **MPI #60**].

- b. Intermediate Coat: Floor paint, latex, low gloss (maximum Gloss Level 3)[, **MPI #60**].
 - c. Topcoat: Floor paint, latex, low gloss (maximum Gloss Level 3)[, **MPI #60**].
 2. Alkyd Floor Enamel System:
 - a. Prime Coat: Floor enamel, alkyd, gloss (Gloss Level 6)[, **MPI #27**].
 - b. Intermediate Coat: Floor enamel, alkyd, gloss (Gloss Level 6)[, **MPI #27**].
 - c. Topcoat: Floor enamel, alkyd, gloss (Gloss Level 6)[, **MPI #27**].
 3. Concrete Stain System:
 - a. First Coat: Stain, interior, for concrete floors[, **MPI #58**].
 - b. Topcoat: Stain, interior, for concrete floors[, **MPI #58**].
 4. Water-Based Clear Sealer System:
 - a. First Coat: Sealer, water based, for concrete floors[, **MPI #99**].
 - b. Topcoat: Sealer, water based, for concrete floors[, **MPI #99**].
 5. Solvent-Based Clear Sealer System:
 - a. First Coat: Sealer, solvent based, for concrete floors[, **MPI #104**].
 - b. Topcoat: Sealer, solvent based, for concrete floors[, **MPI #104**].
- C. Clay-Masonry Substrates:
 1. Latex System:
 - a. Prime Coat: Latex, interior, matching topcoat.
 - b. Intermediate Coat: Latex, interior, matching topcoat.
 - c. Topcoat: Latex, interior, flat, (Gloss Level 1)[, **MPI #53**].
 - d. Topcoat: Latex, interior, (Gloss Level 2)[, **MPI #44**].
 - e. Topcoat: Latex, interior, (Gloss Level 3)[, **MPI #52**].
 - f. Topcoat: Latex, interior, (Gloss Level 4)[, **MPI #43**].
 - g. Topcoat: Latex, interior, semi-gloss, (Gloss Level 5)[, **MPI #54**].
 - h. Topcoat: Latex, interior, gloss, (Gloss Level 6, except minimum gloss of 65 units at 60 degrees)[, **MPI #114**].
 2. Latex Aggregate System:
 - a. Prime Coat: Primer for textured coating, latex, flat[, **as recommended in writing by topcoat manufacturer**].
 - b. Intermediate Coat: Intermediate coat for textured coating, latex, flat[, **as recommended in writing by topcoat manufacturer**].
 - c. Topcoat: Textured coating, latex, flat[, **MPI #42**].
 3. Institutional Low-Odor/VOC Latex System:
 - a. Prime Coat: Primer sealer, interior, institutional low odor/VOC[, **MPI #149**].

- b. Intermediate Coat: Latex, interior, institutional low odor/VOC, matching topcoat.
 - c. Topcoat: Latex, interior, institutional low odor/VOC, flat (Gloss Level 1)[, **MPI #143**].
 - d. Topcoat: Latex, interior, institutional low odor/VOC, (Gloss Level 2)[, **MPI #144**].
 - e. Topcoat: Latex, interior, institutional low odor/VOC, (Gloss Level 3)[, **MPI #145**].
 - f. Topcoat: Latex, interior, institutional low odor/VOC, semi-gloss (Gloss Level 5)[, **MPI #147**].
4. High-Performance Architectural Latex System:
- a. Prime Coat: Primer, alkali resistant, water based[, **MPI #3**].
 - b. Intermediate Coat: Latex, interior, high performance architectural, matching topcoat.
 - c. Topcoat: Latex, interior, high performance architectural, (Gloss Level 2)[, **MPI #138**].
 - d. Topcoat: Latex, interior, high performance architectural, (Gloss Level 3)[, **MPI #139**].
 - e. Topcoat: Latex, interior, high performance architectural, (Gloss Level 4)[, **MPI #140**].
 - f. Topcoat: Latex, interior, high performance architectural, semi-gloss (Gloss Level 5)[, **MPI #141**].
5. Water-Based Light Industrial Coating System:
- a. Prime Coat: Primer, alkali resistant, water based[, **MPI #3**].
 - b. Intermediate Coat: Light industrial coating, interior, water based, matching topcoat.
 - c. Topcoat: Light industrial coating, interior, water based (Gloss Level 3)[, **MPI #151**].
 - d. Topcoat: Light industrial coating, interior, water based, semi-gloss (Gloss Level 5)[, **MPI #153**].
 - e. Topcoat: Light industrial coating, interior, water based, gloss (Gloss Level 6)[, **MPI #154**].
6. Alkyd System:
- a. Prime Coat: Primer sealer, latex, interior[, **MPI #50**].
 - b. Intermediate Coat: Alkyd, interior, matching topcoat.
 - c. Topcoat: Alkyd, interior, flat (Gloss Level 1)[, **MPI #49**].
 - d. Topcoat: Alkyd, interior, (Gloss Level 3)[, **MPI #51**].
 - e. Topcoat: Alkyd, interior, semi-gloss (Gloss Level 5)[, **MPI #47**].
 - f. Topcoat: Alkyd, interior, gloss (Gloss Level 6)[, **MPI #48**].
- D. CMU Substrates:
- 1. Latex System:

- a. Block Filler: Block filler, latex, interior/exterior[, **MPI #4**].
 - b. Intermediate Coat: Latex, interior, matching topcoat.
 - c. Topcoat: Latex, interior, flat, (Gloss Level 1)[, **MPI #53**].
 - d. Topcoat: Latex, interior, (Gloss Level 2)[, **MPI #44**].
 - e. Topcoat: Latex, interior, (Gloss Level 3)[, **MPI #52**].
 - f. Topcoat: Latex, interior, (Gloss Level 4)[, **MPI #43**].
 - g. Topcoat: Latex, interior, semi-gloss, (Gloss Level 5)[, **MPI #54**].
 - h. Topcoat: Latex, interior, gloss, (Gloss Level 6, except minimum gloss of 65 units at 60 degrees)[, **MPI #114**].
2. Institutional Low-Odor/VOC Latex System:
- a. Block Filler: Block filler, latex, interior/exterior[, **MPI #4**].
 - b. Intermediate Coat: Latex, interior, institutional low odor/VOC, matching topcoat.
 - c. Topcoat: Latex, interior, institutional low odor/VOC, flat (Gloss Level 1)[, **MPI #143**].
 - d. Topcoat: Latex, interior, institutional low odor/VOC, (Gloss Level 2)[, **MPI #144**].
 - e. Topcoat: Latex, interior, institutional low odor/VOC, (Gloss Level 3)[, **MPI #145**].
 - f. Topcoat: Latex, interior, institutional low odor/VOC, semi-gloss (Gloss Level 5)[, **MPI #147**].
3. High-Performance Architectural Latex System:
- a. Block Filler: Block filler, latex, interior/exterior[, **MPI #4**].
 - b. Intermediate Coat: Latex, interior, high performance architectural, matching topcoat.
 - c. Topcoat: Latex, interior, high performance architectural, (Gloss Level 2)[, **MPI #138**].
 - d. Topcoat: Latex, interior, high performance architectural, (Gloss Level 3)[, **MPI #139**].
 - e. Topcoat: Latex, interior, high performance architectural, (Gloss Level 4)[, **MPI #140**].
 - f. Topcoat: Latex, interior, high performance architectural, semi-gloss (Gloss Level 5)[, **MPI #141**].
4. Water-Based Light Industrial Coating System:
- a. Block Filler: Block filler, latex, interior/exterior[, **MPI #4**].
 - b. Intermediate Coat: Light industrial coating, interior, water based, matching topcoat.
 - c. Topcoat: Light industrial coating, interior, water based (Gloss Level 3)[, **MPI #151**].
 - d. Topcoat: Light industrial coating, interior, water based, semi-gloss (Gloss Level 5)[, **MPI #153**].
 - e. Topcoat: Light industrial coating, interior, water based, gloss (Gloss Level 6)[, **MPI #154**].

5. Alkyd System:

- a. Block Filler: Block filler, latex, interior/exterior[, **MPI #4**].
- b. Sealer Coat: Primer sealer, latex, interior[, **MPI #50**].
- c. Intermediate Coat: Alkyd, interior, matching topcoat.
- d. Topcoat: Alkyd, interior, flat (Gloss Level 1)[, **MPI #49**].
- e. Topcoat: Alkyd, interior, (Gloss Level 3)[, **MPI #51**].
- f. Topcoat: Alkyd, interior, semi-gloss (Gloss Level 5)[, **MPI #47**].
- g. Topcoat: Alkyd, interior, gloss (Gloss Level 6)[, **MPI #48**].

E. Steel Substrates:

1. Latex over Alkyd Primer System:

- a. Prime Coat: Primer, alkyd, anti-corrosive, for metal[, **MPI #79**].
- b. Prime Coat: Primer, alkyd, quick dry, for metal[, **MPI #76**].
- c. Prime Coat: Primer, alkyd, anti-corrosive, for metal[, **MPI #79**] or primer, alkyd, quick dry, for metal[, **MPI #76**].
- d. Prime Coat: Shop primer specified in Section 051200 "Structural Steel Framing" where substrate is specified.
- e. Intermediate Coat: Latex, interior, matching topcoat.
- f. Topcoat: Latex, interior, flat, (Gloss Level 1)[, **MPI #53**].
- g. Topcoat: Latex, interior, (Gloss Level 2)[, **MPI #44**].
- h. Topcoat: Latex, interior, (Gloss Level 3)[, **MPI #52**].
- i. Topcoat: Latex, interior, (Gloss Level 4)[, **MPI #43**].
- j. Topcoat: Latex, interior, semi-gloss, (Gloss Level 5)[, **MPI #54**].
- k. Topcoat: Latex, interior, gloss, (Gloss Level 6, except minimum gloss of 65 units at 60 degrees)[, **MPI #114**].

2. Water-Based Dry-Fall System:

- a. Prime Coat: Primer, alkyd, anti-corrosive, for metal[, **MPI #79**].
- b. Prime Coat: Primer, alkyd, quick dry, for metal[, **MPI #76**].
- c. Prime Coat: Primer, alkyd, anti-corrosive, for metal[, **MPI #79**] or primer, alkyd, quick dry, for metal[, **MPI #76**].
- d. Prime Coat: Shop primer specified in Section 051200 "Structural Steel Framing" where substrate is specified.
- e. Topcoat: Dry fall, latex, flat[, **MPI #118**].
- f. Topcoat: Dry fall, water based, for galvanized steel, flat (Gloss Level 1)[, **MPI #133**].

3. Institutional Low-Odor/VOC Latex System:

- a. Prime Coat: Primer, rust-inhibitive, water based[**MPI #107**].
- b. Intermediate Coat: Latex, interior, institutional low odor/VOC, matching topcoat.
- c. Topcoat: Latex, interior, institutional low odor/VOC, flat (Gloss Level 1)[, **MPI #143**].
- d. Topcoat: Latex, interior, institutional low odor/VOC, (Gloss Level 2)[, **MPI #144**].

- e. Topcoat: Latex, interior, institutional low odor/VOC, (Gloss Level 3)[, **MPI #145**].
 - f. Topcoat: Latex, interior, institutional low odor/VOC, semi-gloss (Gloss Level 5)[, **MPI #147**].
4. High-Performance Architectural Latex System:
- a. Prime Coat: Primer, alkyd, anti-corrosive, for metal[, **MPI #79**].
 - b. Prime Coat: Primer, alkyd, quick dry, for metal[, **MPI #76**].
 - c. Prime Coat: Primer, alkyd, anti-corrosive, for metal[, **MPI #79**] or primer, alkyd, quick dry, for metal[, **MPI #76**].
 - d. Prime Coat: Shop primer specified in Section 051200 "Structural Steel Framing" where substrate is specified.
 - e. Intermediate Coat: Latex, interior, high performance architectural, matching topcoat.
 - f. Topcoat: Latex, interior, high performance architectural, (Gloss Level 2)[, **MPI #138**].
 - g. Topcoat: Latex, interior, high performance architectural, (Gloss Level 3)[, **MPI #139**].
 - h. Topcoat: Latex, interior, high performance architectural, (Gloss Level 4)[, **MPI #140**].
 - i. Topcoat: Latex, interior, high performance architectural, semi-gloss (Gloss Level 5)[, **MPI #141**].
5. Water-Based Light Industrial Coating System:
- a. Prime Coat: Primer, rust-inhibitive, water based[**MPI #107**].
 - b. Intermediate Coat: Light industrial coating, interior, water based, matching topcoat.
 - c. Topcoat: Light industrial coating, interior, water based (Gloss Level 3)[, **MPI #151**].
 - d. Topcoat: Light industrial coating, interior, water based, semi-gloss (Gloss Level 5)[, **MPI #153**].
 - e. Topcoat: Light industrial coating, interior, water based, gloss (Gloss Level 6)[, **MPI #154**].
6. Alkyd System:
- a. Prime Coat: Primer, alkyd, anti-corrosive, for metal[, **MPI #79**].
 - b. Prime Coat: Primer, alkyd, quick dry, for metal[, **MPI #76**].
 - c. Prime Coat: Primer, alkyd, anti-corrosive, for metal[, **MPI #79**] or primer, alkyd, quick dry, for metal[, **MPI #76**].
 - d. Prime Coat: Shop primer specified in Section 051200 "Structural Steel Framing" where substrate is specified.
 - e. Intermediate Coat: Alkyd, interior, matching topcoat.
 - f. Topcoat: Alkyd, interior, flat (Gloss Level 1)[, **MPI #49**].
 - g. Topcoat: Alkyd, interior, (Gloss Level 3)[, **MPI #51**].
 - h. Topcoat: Alkyd, interior, semi-gloss (Gloss Level 5)[, **MPI #47**].
 - i. Topcoat: Alkyd, interior, gloss (Gloss Level 6)[, **MPI #48**].

7. Quick-Drying Enamel System:
 - a. Prime Coat: Primer, alkyd, quick dry, for metal[, **MPI #76**].
 - b. Intermediate Coat: Alkyd, quick dry, matching topcoat.
 - c. Topcoat: Alkyd, quick dry, semi-gloss (Gloss Level 5)[, **MPI #81**].
 - d. Topcoat: Alkyd, quick dry, gloss (Gloss Level 7)[, **MPI #96**].

 8. Alkyd Dry-Fall System:
 - a. Prime Coat: Primer, alkyd, anti-corrosive, for metal[, **MPI #79**].
 - b. Prime Coat: Primer, alkyd, quick dry, for metal[, **MPI #76**].
 - c. Prime Coat: Primer, alkyd, anti-corrosive, for metal[, **MPI #79**] or primer, alkyd, quick dry, for metal[, **MPI #76**].
 - d. Prime Coat: Shop primer specified in Section 051200 "Structural Steel Framing" where substrate is specified.
 - e. Topcoat: Dry fall, alkyd, flat[, **MPI #55**].

 9. Aluminum Paint System:
 - a. Prime Coat: Primer, alkyd, anti-corrosive, for metal[, **MPI #79**].
 - b. Prime Coat: Primer, alkyd, quick dry, for metal[, **MPI #76**].
 - c. Prime Coat: Primer, alkyd, anti-corrosive, for metal[, **MPI #79**] or primer, alkyd, quick dry, for metal[, **MPI #76**].
 - d. Prime Coat: Shop primer specified in Section 051200 "Structural Steel Framing" where substrate is specified.
 - e. Intermediate Coat: Aluminum paint[, **MPI #1**].
 - f. Topcoat: Aluminum paint[, **MPI #1**].
- F. Galvanized-Metal Substrates:
1. Latex over Waterborne Primer System:
 - a. Prime Coat: Primer, galvanized, water based[, **MPI #134**].
 - b. Intermediate Coat: Latex, interior, matching topcoat.
 - c. Topcoat: Latex, interior, flat, (Gloss Level 1)[, **MPI #53**].
 - d. Topcoat: Latex, interior, (Gloss Level 2)[, **MPI #44**].
 - e. Topcoat: Latex, interior, (Gloss Level 3)[, **MPI #52**].
 - f. Topcoat: Latex, interior, (Gloss Level 4)[, **MPI #43**].
 - g. Topcoat: Latex, interior, semi-gloss, (Gloss Level 5)[, **MPI #54**].
 - h. Topcoat: Latex, interior, gloss, (Gloss Level 6, except minimum gloss of 65 units at 60 degrees)[, **MPI #114**].

 2. Water-Based Dry-Fall System:
 - a. Prime Coat: Dry fall, water based, for galvanized steel, flat (Gloss Level 1)[, **MPI #133**].
 - b. Topcoat: Dry fall, water based, for galvanized steel, flat (Gloss Level 1)[, **MPI #133**].

 3. Institutional Low-Odor/VOC Latex System:

- a. Prime Coat: Primer, galvanized, water based[, **MPI #134**].
 - b. Intermediate Coat: Latex, interior, institutional low odor/VOC, matching topcoat.
 - c. Topcoat: Latex, interior, institutional low odor/VOC, flat (Gloss Level 1)[, **MPI #143**].
 - d. Topcoat: Latex, interior, institutional low odor/VOC, (Gloss Level 2)[, **MPI #144**].
 - e. Topcoat: Latex, interior, institutional low odor/VOC, (Gloss Level 3)[, **MPI #145**].
 - f. Topcoat: Latex, interior, institutional low odor/VOC, semi-gloss (Gloss Level 5)[, **MPI #147**].
4. High-Performance Architectural Latex System:
- a. Prime Coat: Primer, galvanized, water based[, **MPI #134**].
 - b. Intermediate Coat: Latex, interior, high performance architectural, matching topcoat.
 - c. Topcoat: Latex, interior, high performance architectural, (Gloss Level 2)[, **MPI #138**].
 - d. Topcoat: Latex, interior, high performance architectural, (Gloss Level 3)[, **MPI #139**].
 - e. Topcoat: Latex, interior, high performance architectural, (Gloss Level 4)[, **MPI #140**].
 - f. Topcoat: Latex, interior, high performance architectural, semi-gloss (Gloss Level 5)[, **MPI #141**].
5. Water-Based Light Industrial Coating Over Waterborne Primer System:
- a. Prime Coat: Primer, galvanized, water based[, **MPI #134**].
 - b. Intermediate Coat: Light industrial coating, interior, water based, matching topcoat.
 - c. Topcoat: Light industrial coating, interior, water based (Gloss Level 3)[, **MPI #151**].
 - d. Topcoat: Light industrial coating, interior, water based, semi-gloss (Gloss Level 5)[, **MPI #153**].
 - e. Topcoat: Light industrial coating, interior, water based, gloss (Gloss Level 6)[, **MPI #154**].
6. Aluminum Paint System:
- a. Prime Coat: Primer, galvanized metal, as recommended in writing by topcoat manufacturer for use on galvanized-metal substrates with topcoat indicated.
 - b. Intermediate Coat: Aluminum paint[, **MPI #1**].
 - c. Topcoat: Aluminum paint[, **MPI #1**].
- G. Aluminum (Not Anodized or Otherwise Coated) Substrates:
1. Latex System:

- a. Prime Coat: Primer, quick dry, for aluminum[, **MPI #95**].
 - b. Intermediate Coat: Latex, interior, matching topcoat.
 - c. Topcoat: Latex, interior, flat, (Gloss Level 1)[, **MPI #53**].
 - d. Topcoat: Latex, interior, (Gloss Level 2)[, **MPI #44**].
 - e. Topcoat: Latex, interior, (Gloss Level 3)[, **MPI #52**].
 - f. Topcoat: Latex, interior, (Gloss Level 4)[, **MPI #43**].
 - g. Topcoat: Latex, interior, semi-gloss, (Gloss Level 5)[, **MPI #54**].
 - h. Topcoat: Latex, interior, gloss, (Gloss Level 6, except minimum gloss of 65 units at 60 degrees)[, **MPI #114**].
2. Institutional Low-Odor/VOC Latex System:
- a. Prime Coat: Primer, quick dry, for aluminum[, **MPI #95**].
 - b. Intermediate Coat: Latex, interior, institutional low odor/VOC, matching topcoat.
 - c. Topcoat: Latex, interior, institutional low odor/VOC, flat (Gloss Level 1)[, **MPI #143**].
 - d. Topcoat: Latex, interior, institutional low odor/VOC, (Gloss Level 2)[, **MPI #144**].
 - e. Topcoat: Latex, interior, institutional low odor/VOC, (Gloss Level 3)[, **MPI #145**].
 - f. Topcoat: Latex, interior, institutional low odor/VOC, semi-gloss (Gloss Level 5)[, **MPI #147**].
3. High-Performance Architectural Latex System:
- a. Prime Coat: Primer, quick dry, for aluminum[, **MPI #95**].
 - b. Intermediate Coat: Latex, interior, high performance architectural, matching topcoat.
 - c. Topcoat: Latex, interior, high performance architectural, (Gloss Level 2)[, **MPI #138**].
 - d. Topcoat: Latex, interior, high performance architectural, (Gloss Level 3)[, **MPI #139**].
 - e. Topcoat: Latex, interior, high performance architectural, (Gloss Level 4)[, **MPI #140**].
 - f. Topcoat: Latex, interior, high performance architectural, semi-gloss (Gloss Level 5)[, **MPI #141**].
4. Water-Based Light Industrial Coating System:
- a. Prime Coat: Primer, quick dry, for aluminum[, **MPI #95**].
 - b. Intermediate Coat: Light industrial coating, interior, water based, matching topcoat.
 - c. Topcoat: Light industrial coating, interior, water based (Gloss Level 3)[, **MPI #151**].
 - d. Topcoat: Light industrial coating, interior, water based, semi-gloss (Gloss Level 5)[, **MPI #153**].
 - e. Topcoat: Light industrial coating, interior, water based, gloss (Gloss Level 6)[, **MPI #154**].

5. Alkyd System:
 - a. Prime Coat: Primer, vinyl wash[, **MPI #80**].
 - b. Prime Coat: Primer, quick dry, for aluminum[, **MPI #95**].
 - c. Intermediate Coat: Alkyd, interior, matching topcoat.
 - d. Topcoat: Alkyd, interior, flat (Gloss Level 1)[, **MPI #49**].
 - e. Topcoat: Alkyd, interior, (Gloss Level 3)[, **MPI #51**].
 - f. Topcoat: Alkyd, interior, semi-gloss (Gloss Level 5)[, **MPI #47**].
 - g. Topcoat: Alkyd, interior, gloss (Gloss Level 6)[, **MPI #48**].

6. Aluminum Paint System:
 - a. Prime Coat: Primer, vinyl wash[, **MPI #80**].
 - b. Intermediate Coat: Aluminum paint[, **MPI #1**].
 - c. Topcoat: Aluminum paint[, **MPI #1**].

- H. Wood Substrates: Including [**wood trim**] [**architectural woodwork**] [**doors**] [**windows**] [**wood-based panel products**] [**glued-laminated construction**] [**exposed joists**] [**exposed beams**] <Insert description>.
 1. Latex System:
 - a. Prime Coat: Primer, latex, for interior wood[, **MPI #39**].
 - b. Intermediate Coat: Latex, interior, matching topcoat.
 - c. Topcoat: Latex, interior, flat, (Gloss Level 1)[, **MPI #53**].
 - d. Topcoat: Latex, interior, (Gloss Level 2)[, **MPI #44**].
 - e. Topcoat: Latex, interior, (Gloss Level 3)[, **MPI #52**].
 - f. Topcoat: Latex, interior, (Gloss Level 4)[, **MPI #43**].
 - g. Topcoat: Latex, interior, semi-gloss, (Gloss Level 5)[, **MPI #54**].
 - h. Topcoat: Latex, interior, gloss, (Gloss Level 6, except minimum gloss of 65 units at 60 degrees)[, **MPI #114**].

 2. Latex over Alkyd Primer System:
 - a. Prime Coat: Primer sealer, alkyd, interior[, **MPI #45**].
 - b. Intermediate Coat: Latex, interior, matching topcoat.
 - c. Topcoat: Latex, interior, flat, (Gloss Level 1)[, **MPI #53**].
 - d. Topcoat: Latex, interior, (Gloss Level 2)[, **MPI #44**].
 - e. Topcoat: Latex, interior, (Gloss Level 3)[, **MPI #52**].
 - f. Topcoat: Latex, interior, (Gloss Level 4)[, **MPI #43**].
 - g. Topcoat: Latex, interior, semi-gloss, (Gloss Level 5)[, **MPI #54**].
 - h. Topcoat: Latex, interior, gloss, (Gloss Level 6, except minimum gloss of 65 units at 60 degrees)[, **MPI #114**].

 3. Institutional Low-Odor/VOC Latex System:
 - a. Prime Coat: Primer, latex, for interior wood[, **MPI #39**].
 - b. Intermediate Coat: Latex, interior, institutional low odor/VOC, matching topcoat.

- c. Topcoat: Latex, interior, institutional low odor/VOC, flat (Gloss Level 1)[, **MPI #143**].
 - d. Topcoat: Latex, interior, institutional low odor/VOC, (Gloss Level 2)[, **MPI #144**].
 - e. Topcoat: Latex, interior, institutional low odor/VOC, (Gloss Level 3)[, **MPI #145**].
 - f. Topcoat: Latex, interior, institutional low odor/VOC, semi-gloss (Gloss Level 5)[, **MPI #147**].
4. High-Performance Architectural Latex System:
- a. Prime Coat: Primer, latex, for interior wood[, **MPI #39**].
 - b. Intermediate Coat: Latex, interior, high performance architectural, matching topcoat.
 - c. Topcoat: Latex, interior, high performance architectural, (Gloss Level 2)[, **MPI #138**].
 - d. Topcoat: Latex, interior, high performance architectural, (Gloss Level 3)[, **MPI #139**].
 - e. Topcoat: Latex, interior, high performance architectural, (Gloss Level 4)[, **MPI #140**].
 - f. Topcoat: Latex, interior, high performance architectural, semi-gloss (Gloss Level 5)[, **MPI #141**].
5. Alkyd System:
- a. Prime Coat: Primer sealer, alkyd, interior[, **MPI #45**].
 - b. Intermediate Coat: Alkyd, interior, matching topcoat.
 - c. Topcoat: Alkyd, interior, flat (Gloss Level 1)[, **MPI #49**].
 - d. Topcoat: Alkyd, interior, (Gloss Level 3)[, **MPI #51**].
 - e. Topcoat: Alkyd, interior, semi-gloss (Gloss Level 5)[, **MPI #47**].
 - f. Topcoat: Alkyd, interior, gloss (Gloss Level 6)[, **MPI #48**].
- I. Wood Substrates, Traffic Surfaces:
- 1) Latex Floor Paint System:
 - b. Prime Coat: Primer sealer, alkyd, interior[, **MPI #45**].
 - c. Intermediate Coat: Floor paint, latex, low gloss (maximum Gloss Level 3)[, **MPI #60**].
 - d. Topcoat: Floor paint, latex, low gloss (maximum Gloss Level 3)[, **MPI #60**].
 2. Alkyd Floor Enamel System:
 - a. Prime Coat: Floor enamel, alkyd, gloss (Gloss Level 6)[, **MPI #27**].
 - b. Intermediate Coat: Floor enamel, alkyd, gloss (Gloss Level 6)[, **MPI #27**].
 - c. Topcoat: Floor enamel, alkyd, gloss (Gloss Level 6)[, **MPI #27**].
- J. Fiberglass and Plastic Substrates:
1. Latex System:

- a. Prime Coat: Primer, bonding, water based[, **MPI #17**].
 - b. Prime Coat: Primer, bonding, solvent based[, **MPI #69**].
 - c. Intermediate Coat: Latex, interior, matching topcoat.
 - d. Topcoat: Latex, interior, flat, (Gloss Level 1)[, **MPI #53**].
 - e. Topcoat: Latex, interior, (Gloss Level 2)[, **MPI #44**].
 - f. Topcoat: Latex, interior, (Gloss Level 3)[, **MPI #52**].
 - g. Topcoat: Latex, interior, (Gloss Level 4)[, **MPI #43**].
 - h. Topcoat: Latex, interior, semi-gloss, (Gloss Level 5)[, **MPI #54**].
 - i. Topcoat: Latex, interior, gloss, (Gloss Level 6, except minimum gloss of 65 units at 60 degrees)[, **MPI #114**].
2. Institutional Low-Odor/VOC Latex System:
- a. Prime Coat: Primer, bonding, water based[, **MPI #17**].
 - b. Prime Coat: Primer, bonding, solvent based[, **MPI #69**].
 - c. Intermediate Coat: Latex, interior, institutional low odor/VOC, matching topcoat.
 - d. Topcoat: Latex, interior, institutional low odor/VOC, flat (Gloss Level 1)[, **MPI #143**].
 - e. Topcoat: Latex, interior, institutional low odor/VOC, (Gloss Level 2)[, **MPI #144**].
 - f. Topcoat: Latex, interior, institutional low odor/VOC, (Gloss Level 3)[, **MPI #145**].
 - g. Topcoat: Latex, interior, institutional low odor/VOC, semi-gloss (Gloss Level 5)[, **MPI #147**].
3. High-Performance Architectural Latex System:
- a. Prime Coat: Primer, bonding, water based[, **MPI #17**].
 - b. Prime Coat: Primer, bonding, solvent based[, **MPI #69**].
 - c. Intermediate Coat: Latex, interior, high performance architectural, matching topcoat.
 - d. Topcoat: Latex, interior, high performance architectural, (Gloss Level 2)[, **MPI #138**].
 - e. Topcoat: Latex, interior, high performance architectural, (Gloss Level 3)[, **MPI #139**].
 - f. Topcoat: Latex, interior, high performance architectural, (Gloss Level 4)[, **MPI #140**].
 - g. Topcoat: Latex, interior, high performance architectural, semi-gloss (Gloss Level 5)[, **MPI #141**].
4. Water-Based Light Industrial Coating System:
- a. Prime Coat: Primer, bonding, water based[, **MPI #17**].
 - b. Prime Coat: Primer, bonding, solvent based[, **MPI #69**].
 - c. Intermediate Coat: Light industrial coating, interior, water based, matching topcoat.
 - d. Topcoat: Light industrial coating, interior, water based (Gloss Level 3)[, **MPI #151**].

- e. Topcoat: Light industrial coating, interior, water based, semi-gloss (Gloss Level 5)[, **MPI #153**].
 - f. Topcoat: Light industrial coating, interior, water based, gloss (Gloss Level 6)[, **MPI #154**].
5. Alkyd System:
- a. Prime Coat: Primer, bonding, water based[, **MPI #17**].
 - b. Prime Coat: Primer, bonding, solvent based[, **MPI #69**].
 - c. Intermediate Coat: Alkyd, interior, matching topcoat.
 - d. Topcoat: Alkyd, interior, flat (Gloss Level 1)[, **MPI #49**].
 - e. Topcoat: Alkyd, interior, (Gloss Level 3)[, **MPI #51**].
 - f. Topcoat: Alkyd, interior, semi-gloss (Gloss Level 5)[, **MPI #47**].
 - g. Topcoat: Alkyd, interior, gloss (Gloss Level 6)[, **MPI #48**].
- K. **[Gypsum Board] [Plaster] Substrates:**
1. Latex System:
- a. Prime Coat: Primer sealer, latex, interior[, **MPI #50**].
 - b. Prime Coat: Latex, interior, matching topcoat.
 - c. Intermediate Coat: Latex, interior, matching topcoat.
 - d. Topcoat: Latex, interior, flat, (Gloss Level 1)[, **MPI #53**].
 - e. Topcoat: Latex, interior, (Gloss Level 2)[, **MPI #44**].
 - f. Topcoat: Latex, interior, (Gloss Level 3)[, **MPI #52**].
 - g. Topcoat: Latex, interior, (Gloss Level 4)[, **MPI #43**].
 - h. Topcoat: Latex, interior, semi-gloss, (Gloss Level 5)[, **MPI #54**].
 - i. Topcoat: Latex, interior, gloss, (Gloss Level 6, except minimum gloss of 65 units at 60 degrees)[, **MPI #114**].
2. Institutional Low-Odor/VOC Latex System:
- a. Prime Coat: Primer sealer, interior, institutional low odor/VOC[, **MPI #149**].
 - b. Intermediate Coat: Latex, interior, institutional low odor/VOC, matching topcoat.
 - c. Topcoat: Latex, interior, institutional low odor/VOC, flat (Gloss Level 1)[, **MPI #143**].
 - d. Topcoat: Latex, interior, institutional low odor/VOC, (Gloss Level 2)[, **MPI #144**].
 - e. Topcoat: Latex, interior, institutional low odor/VOC, (Gloss Level 3)[, **MPI #145**].
 - f. Topcoat: Latex, interior, institutional low odor/VOC, semi-gloss (Gloss Level 5)[, **MPI #147**].
3. High-Performance Architectural Latex System:
- a. Prime Coat: Primer sealer, latex, interior[, **MPI #50**].
 - b. Intermediate Coat: Latex, interior, high performance architectural, matching topcoat.

- c. Topcoat: Latex, interior, high performance architectural, (Gloss Level 2)[, **MPI #138**].
 - d. Topcoat: Latex, interior, high performance architectural, (Gloss Level 3)[, **MPI #139**].
 - e. Topcoat: Latex, interior, high performance architectural, (Gloss Level 4)[, **MPI #140**].
 - f. Topcoat: Latex, interior, high performance architectural, semi-gloss (Gloss Level 5)[, **MPI #141**].
4. Water-Based Light Industrial Coating System:
- a. Prime Coat: Primer sealer, latex, interior[, **MPI #50**].
 - b. Intermediate Coat: Light industrial coating, interior, water based, matching topcoat.
 - c. Topcoat: Light industrial coating, interior, water based (Gloss Level 3)[, **MPI #151**].
 - d. Topcoat: Light industrial coating, interior, water based, semi-gloss (Gloss Level 5)[, **MPI #153**].
 - e. Topcoat: Light industrial coating, interior, water based, gloss (Gloss Level 6)[, **MPI #154**].
5. Alkyd over Latex Primer System:
- a. Prime Coat: Primer sealer, latex, interior[, **MPI #50**].
 - b. Intermediate Coat: Alkyd, interior, matching topcoat.
 - c. Topcoat: Alkyd, interior, flat (Gloss Level 1)[, **MPI #49**].
 - d. Topcoat: Alkyd, interior, (Gloss Level 3)[, **MPI #51**].
 - e. Topcoat: Alkyd, interior, semi-gloss (Gloss Level 5)[, **MPI #47**].
 - f. Topcoat: Alkyd, interior, gloss (Gloss Level 6)[, **MPI #48**].
- L. Spray-Textured Ceiling Substrates:
- 1. Latex (Flat) System: Spray applied.
 - a. Prime Coat: Latex, interior, flat, (Gloss Level 1)[, **MPI #53**].
 - b. Topcoat: Latex, interior, flat, (Gloss Level 1)[, **MPI #53**].
 - 2. Latex System: Spray applied.
 - a. Prime Coat: Latex, interior, matching topcoat.
 - b. Intermediate Coat: Latex, interior, matching topcoat.
 - c. Topcoat: Latex, interior, flat, (Gloss Level 1)[, **MPI #53**].
 - d. Topcoat: Latex, interior, (Gloss Level 2)[, **MPI #44**].
 - e. Topcoat: Latex, interior, (Gloss Level 3)[, **MPI #52**].
 - f. Topcoat: Latex, interior, (Gloss Level 4)[, **MPI #43**].
 - g. Topcoat: Latex, interior, semi-gloss, (Gloss Level 5)[, **MPI #54**].
 - h. Topcoat: Latex, interior, gloss, (Gloss Level 6, except minimum gloss of 65 units at 60 degrees)[, **MPI #114**].
 - 3. Latex over Alkyd Primer System:

- a. Prime Coat: Primer sealer, alkyd, interior[, **MPI #45**].
 - b. Topcoat: Latex, interior, flat, (Gloss Level 1)[, **MPI #53**].
 - c. Topcoat: Latex, interior, (Gloss Level 2)[, **MPI #44**].
 - d. Topcoat: Latex, interior, (Gloss Level 3)[, **MPI #52**].
 - e. Topcoat: Latex, interior, (Gloss Level 4)[, **MPI #43**].
 - f. Topcoat: Latex, interior, semi-gloss, (Gloss Level 5)[, **MPI #54**].
 - g. Topcoat: Latex, interior, gloss, (Gloss Level 6, except minimum gloss of 65 units at 60 degrees)[, **MPI #114**].
4. Alkyd (Flat) System:
- a. Prime Coat: Alkyd, interior, flat (Gloss Level 1)[, **MPI #49**].
 - b. Topcoat: Alkyd, interior, flat (Gloss Level 1)[, **MPI #49**].
5. Alkyd System:
- a. Prime Coat: Primer sealer, alkyd, interior[, **MPI #45**].
 - b. Intermediate Coat: Alkyd, interior, matching topcoat.
 - c. Topcoat: Alkyd, interior, flat (Gloss Level 1)[, **MPI #49**].
 - d. Topcoat: Alkyd, interior, (Gloss Level 3)[, **MPI #51**].
 - e. Topcoat: Alkyd, interior, semi-gloss (Gloss Level 5)[, **MPI #47**].
 - f. Topcoat: Alkyd, interior, gloss (Gloss Level 6)[, **MPI #48**].
- M. **[Cotton or Canvas] [and] [ASJ] Insulation-Covering Substrates: Including [pipe and duct coverings] <Insert description>**.
1. Latex System:
 - a. Prime Coat: Primer sealer, latex, interior[, **MPI #50**].
 - b. Intermediate Coat: Latex, interior, matching topcoat.
 - c. Topcoat: Latex, interior, flat, (Gloss Level 1)[, **MPI #53**].
 - d. Topcoat: Latex, interior, (Gloss Level 2)[, **MPI #44**].
 - e. Topcoat: Latex, interior, (Gloss Level 3)[, **MPI #52**].
 - f. Topcoat: Latex, interior, (Gloss Level 4)[, **MPI #43**].
 - g. Topcoat: Latex, interior, semi-gloss, (Gloss Level 5)[, **MPI #54**].
 - h. Topcoat: Latex, interior, gloss, (Gloss Level 6, except minimum gloss of 65 units at 60 degrees)[, **MPI #114**].
 2. Institutional Low-Odor/VOC Latex System:
 - a. Prime Coat: Primer sealer, latex, interior[, **MPI #50**].
 - b. Intermediate Coat: Latex, interior, institutional low odor/VOC, matching topcoat.
 - c. Topcoat: Latex, interior, institutional low odor/VOC, flat (Gloss Level 1)[, **MPI #143**].
 - d. Topcoat: Latex, interior, institutional low odor/VOC, (Gloss Level 2)[, **MPI #144**].
 - e. Topcoat: Latex, interior, institutional low odor/VOC, (Gloss Level 3)[, **MPI #145**].

- f. Topcoat: Latex, interior, institutional low odor/VOC, semi-gloss (Gloss Level 5)[, **MPI #147**].
3. Alkyd over Latex Primer System:
 - a. Prime Coat: Primer sealer, latex, interior[, **MPI #50**].
 - b. Intermediate Coat: Alkyd, interior, matching topcoat.
 - c. Topcoat: Alkyd, interior, flat (Gloss Level 1)[, **MPI #49**].
 - d. Topcoat: Alkyd, interior, (Gloss Level 3)[, **MPI #51**].
 - e. Topcoat: Alkyd, interior, semi-gloss (Gloss Level 5)[, **MPI #47**].
 - f. Topcoat: Alkyd, interior, gloss (Gloss Level 6)[, **MPI #48**].
 4. Aluminum Paint System:
 - a. Prime Coat: Primer sealer, latex, interior[, **MPI #50**].
 - b. Intermediate Coat: Aluminum paint[, **MPI #1**].
 - c. Topcoat: Aluminum paint[, **MPI #1**].

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 099123

SECTION 099419 - MULTICOLOR INTERIOR FINISHING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes surface preparation and field application of multicolor interior coating systems[.] [**applied on the following substrates:**]

1. Vertical concrete.
2. Cementitious composition board.
3. Clay masonry units.
4. Concrete masonry units (CMU).
5. Wood.
6. Fiberglass moldings and trim.
7. Plastic moldings and trim.
8. Plaster.
9. Gypsum veneer plaster.
10. Gypsum board.

- B. Related Requirements:

1. Section 099123 "Interior Painting" for special-use coatings and general field painting.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1. Include data substantiating that materials comply with requirements.

- B. Installer's Qualifications: Provide evidence of installer's qualifications to apply multicolor paint products, with minimum five (5) years experience.

- C. LEED Submittals:

1. Product Data for Credit EQ 4.2: For coatings systems, documentation including printed statement of VOC content.
2. Laboratory Test Reports for Credit EQ 4: For coating systems, documentation indicating that products comply with the testing and product requirements of the

California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- D. Samples: For each exposed product and for each color and texture specified, **8 inches** (200 mm) square in size.
- E. Samples for Initial Selection: For each multicolor coating system indicated.
- F. Samples for Verification: For each multicolor coating system and in each color, pattern, and pigment density indicated.
 - 1. Submit Samples on rigid backing, **8 inches** (200 mm) square.
 - 2. Label each Sample for location and application area.
- G. Product Schedule: For multicolor coating systems. [**Use same designations indicated on Drawings.**]

1.4 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials[, **from the same product run,**] that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Paint: [**5**] **<Insert number>** percent, but not less than [**1 gal.** (3.8 L)] **<Insert number>** of each material and color application.

1.5 QUALITY ASSURANCE

- A. Mockups: Apply mockup of each coating system indicated to verify preliminary selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
 - 1. DEN Project Manager will select one surface to represent surfaces and conditions for application of each coating system and type of substrate.
 - a. Wall Surfaces: Provide samples of at least **100 sq. ft.** (9 sq. m).
 - b. Other Items: DEN Project Manager will designate items or areas required.
 - 2. Apply mockup after permanent lighting and other environmental services have been activated.
 - 3. Final approval of color and pattern selections will be based on mockup.
 - a. If preliminary color and pattern selections are not approved, apply additional mockups of colors and patterns selected by DEN Project Manager at no added cost to Owner.
 - 4. Repair Mockup: After approval of color and pattern selections, apply representative repairs to **100 sq. in.** (65 sq. cm) of mockup to establish quality

- standards for coating system repairs.
5. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
 6. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Store materials in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 deg F (7 deg C).
 1. Maintain containers in clean condition, free of foreign materials and residue.
 2. Remove rags and waste from storage areas daily.

1.7 FIELD CONDITIONS

- A. Environmental Limitations: Do not apply coatings until spaces are enclosed and weatherproof, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

PART 2 - PRODUCTS

2.1 MULTICOLOR COATING SYSTEMS, GENERAL

- A. Master Painters Institute (MPI) Standards: Comply with recommendations in "MPI Architectural Painting Specification Manual" applicable to products and coating systems indicated.
- B. Material Compatibility: Provide materials for use within each coating system that are compatible with one another and substrates indicated under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.
- C. VOC Content: Provide materials that comply with VOC limits of authorities having jurisdiction[**and, for interior paints and coatings applied at Project site, the following VOC limits, exclusive of colorants added to a tint base, when calculated according to 40 CFR 59, Subpart D (EPA Method 24)**].
 1. Flat Paints and Coatings: VOC content of not more than 50 g/L.
 2. Nonflat Paints and Coatings: VOC content of not more than 150 g/L.
 3. Primers, Sealers, and Undercoaters: VOC content of not more than 200 g/L.
 4. Clear Wood Finishes and Varnishes: VOC content of not more than 350 g/L.
- D. Low-Emitting Materials: Provide multicolored coating products that comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources

Using Small-Scale Environmental Chambers."

- E. Colors and Patterns: **[Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] [As indicated in finish schedule] <Insert requirements>**.

2.2 FILLERS AND PRIMERS

- A. General: Undercoatings recommended in writing for use in coating systems by manufacturer of multicolor interior coating on substrates and under conditions indicated.
- B. Latex Block Filler: Waterborne, high-solids, emulsion-type, pigmented coating product recommended in writing for use in coating system indicated by manufacturer of multicolor interior coating, with bridging and filling properties, and formulated for filling surfaces of CMU for subsequent applications of finish coatings.
- C. Wood Filler Paste: Solvent-based, high-solids, clear paste product recommended in writing for use in coating system indicated by manufacturer of multicolor interior coating, for use on open-grained or damaged woods. The paste fills hardwood pores with minimal surface residues and without showing cracking or shrinkage. When dry, sanding filler produces a smooth surface without clogging or gumming sandpaper.
- D. Wood-Knot Sealer: White shellac or other sealer recommended in writing for this purpose by manufacturer of multicolor interior coating.
- E. Primer/Sealer for Multicolor Systems: Acrylic or acrylic/polyvinyl acetate (PVA) co-polymer emulsion-type, pigmented primer/sealer product recommended in writing for use in coating system indicated by manufacturer of multicolor interior coating.
- F. Interior Alkyd Primer/Sealer: Solvent-based, pigmented primer/sealer.
- G. Water-Based Bonding Primer: Water-based, emulsion-type, pigmented primer product recommended in writing for use in coating system indicated by manufacturer of multicolor interior coating, and formulated to promote adhesion of subsequent coatings.
- H. Solvent-Based Bonding Primer: Solvent-based, pigmented product recommended in writing for use in coating system indicated by manufacturer of multicolor interior coating, and formulated to promote adhesion of subsequent coatings to substrate.

2.3 MULTICOLOR COATINGS

- A. Multicolor Coating: Water- or solvent-based coat that provides a decorative polychromatic finish. **[Complying with MPI #112 and listed in "MPI Approved Products List."]**
 - 1. Products: Subject to compliance with requirements, provide one of the following:

- a. Crafton Coatings, Bollen International, Inc.; **[Crafton] [Crafton Plus] [Ferroxtone]**.
 - b. Duron, Inc.; Vara-Flic, Int. Waterborne Multicolor Finish.
 - c. Multicolor Specialties, Inc.; Multispec **[Colorspec] [Duraspec] [WaterColors] [Fine Fleck]**.
 - d. Seagrave Coatings Corp.; Plextone.
 - e. Zolatone Interior Finishes, Master Coating Technologies; **[Luminations] [Polomyx] [Polomyx Airless]**.
 - f. **<Insert manufacturer's name; product name or designation>**.
 - g. or approved equal.
- B. Clear Topcoat: Product recommended by multicolor coating manufacturer for use in multicolor coating system indicated to add surface abrasion and detergent resistance; water-based, clear acrylic co-polymer emulsion or solvent-based, clear acrylic solution binder. **[Complying with MPI #121 and listed in "MPI Approved Products List."]**
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Benjamin Moore; Benwood, Stays Clear Acrylic Polyurethane Low Lustre.
 - b. Columbia Paint & Coatings; Multi-Spec, Clear.
 - c. Coronado Paint; Aqua-Plastic Waterborne Urethane.
 - d. PPG Architectural Finishes, Inc.; **[Olympic, Premium Interior Water Based Polyurethane Clear] [Rez, Interior Acrylic Polyurethane Gloss]**.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Applicator present, for compliance with requirements and conditions affecting performance of coatings.
1. Maximum Moisture Content of Substrates: When measured with an electronic moisture meter as follows:
 - a. Concrete: 12 percent.
 - b. Masonry (Clay and CMU): 12 percent.
 - c. Wood: 15 percent.
 - d. Plaster: 12 percent.
 - e. Gypsum Veneer Plaster: 12 percent.
 - f. Gypsum Board: 12 percent.
 2. Gypsum Board Substrates: Verify that finishing compound is sanded smooth.
 3. Plaster Substrates: Verify that plaster is fully cured.
 4. Verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.

5. Begin coating application only after unsatisfactory conditions have been corrected.
6. Beginning coating application indicates acceptance of surfaces and conditions.

3.2 PREPARATION

- A. Comply with manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual" applicable to substrates indicated.
- B. Remove hardware, covers, plates, and similar items already in place that are removable and are not to be coated. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and coating.
 1. After completing coating operations, reinstall items that were removed; use workers skilled in the trades involved.
- C. Clean substrates of substances that could impair bond of coatings, including dust, dirt, oil, grease, and incompatible primers, paints, and encapsulants.
- D. Concrete Substrates: Remove release agents, curing compounds, efflorescence, and chalk. Do not coat surfaces if moisture content or alkalinity of surfaces to be coated exceeds that permitted in manufacturer's written instructions.
- E. Masonry Substrates: Remove efflorescence and chalk. Do not coat surfaces if moisture content or alkalinity of surfaces or if alkalinity of mortar joints exceeds that permitted in manufacturer's written instructions.
- F. Wood Substrates:
 1. Scrape and clean small, dry, seasoned knots, and apply a thin coat of knot sealer before applying primer.
 2. Sand surfaces that will be exposed to view; remove sanding dust from surfaces to be coated.
 3. Prime edges, ends, faces, undersides, and backsides of wood.
 4. After priming, fill holes and imperfections in the finish surfaces with putty or plastic wood filler. Sand smooth when dried and remove sanding dust.

3.3 APPLICATION

- A. Apply coatings according to manufacturer's written instructions using applicators and techniques suited for coating and substrate indicated.
- B. Coat surfaces behind movable equipment and furniture the same as similar exposed surfaces. Before final installation, coat surfaces behind permanently fixed equipment or furniture with prime coat only.
- C. Coat backsides of access panels, removable or hinged covers, and similar hinged items to match exposed surfaces.

- D. Apply coating systems to produce uniformly textured, colored, and patterned finished-surface films without substrates, undercoats, marks, or stains showing through. Produce sharp, even glass lines and color breaks.

3.4 CLEANING AND PROTECTION

- A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.
- B. After completing coating application, clean spattered surfaces. Remove spattered coatings by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.
- C. Protect work of other trades against damage from coating operation. Correct damage by cleaning, repairing, replacing, and recoating, as approved by DEN Project Manager, and leave in an undamaged condition.
- D. At completion of construction activities of other trades, touch up and restore damaged or defaced coated surfaces.

3.5 DEMONSTRATION

- A. Train Owner's maintenance personnel in proper applicators and techniques for repairing multicolored interior coating systems on substrates indicated.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

3.6 MULTICOLOR INTERIOR COATING SCHEDULE

- A. Vertical Concrete Substrates:
 - 1. Prime Coat: Primer/sealer for multicolor systems.
 - 2. Multicolor Base Coat: Multicolor coating.
 - 3. Multicolor Pattern Coat: Multicolor coating.
 - 4. Topcoat: Clear topcoat.
- B. Cementitious Composition Board Substrates:
 - 1. Prime Coat: Primer/sealer for multicolor systems.
 - 2. Multicolor Base Coat: Multicolor coating.
 - 3. Multicolor Pattern Coat: Multicolor coating.
 - 4. Topcoat: Clear topcoat.
- C. Clay Masonry Unit Substrates:
 - 1. Prime Coat: Primer/sealer for multicolor systems tinted to match multicolor basecoat.

2. Multicolor Base Coat: Multicolor coating.
3. Multicolor Pattern Coat: Multicolor coating.
4. Topcoat: Clear topcoat.

D. CMU Substrates:

1. Block Filler: Latex block filler.
2. Prime Coat: Primer/sealer for multicolor systems.
3. Multicolor Base Coat: Multicolor coating.
4. Multicolor Pattern Coat: Multicolor coating.
5. Topcoat: Clear topcoat.

E. Wood Substrates:

1. Fill Coat: Wood filler paste.
2. Prime Coat: Interior alkyd primer/sealer [**tinted to match multicolor base coat**].
3. Multicolor Base Coat: Multicolor coating.
4. Multicolor Pattern Coat: Multicolor coating.
5. Topcoat: Clear topcoat.

F. Fiberglass Molding and Trim Substrates:

1. Prime Coat: [**Water**] [**Solvent**]-based bonding primer.
2. Multicolor Base Coat: Multicolor coating.
3. Multicolor Pattern Coat: Multicolor coating.
4. Topcoat: Clear topcoat.

G. Plastic Molding and Trim Substrates:

1. Prime Coat: Solvent-based bonding primer.
2. Multicolor Base Coat: Multicolor coating.
3. Multicolor Pattern Coat: Multicolor coating.
4. Topcoat: Clear topcoat.

H. [**Plaster**] [**Gypsum Veneer Plaster**] [**Gypsum Board**] Substrates:

1. Prime Coat: Primer/sealer for multicolor systems.
2. Multicolor Base Coat: Multicolor coating.
3. Multicolor Pattern Coat: Multicolor coating.
4. Topcoat: Clear topcoat.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 099419

SECTION 099600 - HIGH-PERFORMANCE COATINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes surface preparation and application of high-performance coating systems[.][**on the following substrates:**]

- 1. Exterior Substrates:

- a. Concrete, **[vertical] [and] [horizontal]** surfaces.
- b. Clay masonry.
- c. Concrete masonry units (CMU).
- d. Steel.
- e. Galvanized metal.
- f. Aluminum (not anodized or otherwise coated).
- g. Wood.

- 2. Interior Substrates:

- a. Concrete, **[vertical] [and] [horizontal]** surfaces.
- b. Clay masonry.
- c. Concrete masonry units (CMU).
- d. Steel.
- e. Galvanized metal.
- f. Aluminum (not anodized or otherwise coated).
- g. Wood.
- h. Gypsum board.

- B. Related Requirements:

- 1. Section 051200 "Structural Steel Framing" for shop priming of metal substrates with primers specified in this Section.
- 2. Section 099113 "Exterior Painting" for special-use coatings and general field painting.
- 3. Section 099123 "Interior Painting" for special-use coatings and general field painting.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Semi-Gloss: 30 to 65 units at 60 degrees, according to ASTM D16.
- B. Gloss Level 6: 70 to 85 units at 60 degrees, according to ASTM D 523.
- C. Gloss Level 7: More than 85 units at 60 degrees, according to ASTM D 523.
- D. Environments: The following terms are used in Part 2 of this Section to distinguish between different corrosive exposures:
 - 1. "Severe environments" are highly corrosive industrial atmospheres with sustained exposure to high humidity and condensation and with frequent cleaning using strong chemicals. Environments with heavy concentrations of strong chemical fumes and frequent splashing and spilling of harsh chemical products are severe environments.
 - 2. "Moderate environments" are corrosive industrial atmospheres with intermittent exposure to high humidity and condensation, occasional mold and mildew development, and regular cleaning with strong chemicals. Environments with exposure to heavy concentrations of chemical fumes and occasional splashing and spilling of chemical products are moderate environments.
 - 3. "Mild environments" are industrial atmospheres with normal exposure to moderate humidity and condensation, occasional mold and mildew development, and infrequent cleaning with strong chemicals. Environments with low levels of mild chemical fumes and occasional splashing and spilling of chemical products are mild environments. Normal outdoor weathering is also considered a mild environment.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include preparation requirements and application instructions.
 - 1. Material List: An inclusive list of required coating materials. Indicate each material and cross-reference the specific coating, finish system, and application. Identify each material by manufacturer's catalog number and general classification.
 - 2. Manufacturer's Information: Manufacturer's technical information, including label analysis and instructions for handling, storing, and applying each material specified.
 - 3. Certification by manufacturer that products supplied comply with requirements indicated that limit the amount of VOCs in coating products.
 - 4. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Credit EQ 4.2: For interior coatings, documentation including printed statement of VOC content.

2. Laboratory Test Reports for Credit EQ 4: For interior coatings, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Samples for Initial Selection: For each type of topcoat product indicated. Manufacturer's color charts showing the full range of colors available for each type of finish-coat material indicated.
- D. Samples for Verification: For each type of coating system and in each color and gloss of topcoat indicated, with texture to simulate actual conditions, on representative samples of the actual substrate.
1. Provide stepped Samples defining each separate coat, including block fillers and primers. Use representative colors when preparing Samples for review. Resubmit until required sheen, color, and texture are achieved.
 2. List of material and application for each coat of each sample. Label each sample for location and application.
 3. Submit Samples on rigid backing, **8 inches** (200 mm) square, unless otherwise noted.
 4. Label each coat of each Sample.
 5. Label each Sample for location and application area.
 6. Submit samples on the following substrates for DEN Project Manager's review of color and texture:
 - a. Concrete: Provide two 4-inch- square samples for each color and finish.
 - b. Concrete Masonry: Provide two 8-inch- square samples of masonry, with mortar joint in the center, for each finish and color.
 - c. Wood: Provide two 12-inch- square samples of each color and material on hardboard.
 - d. Ferrous and Nonferrous Metal: Provide two 4-inch- square samples of flat metal and two 8-inch- long samples of solid metal for each color and finish.
- E. Product List: For each product indicated, include the following:
1. Cross-reference to paint system and locations of application areas. Use same designations indicated on Drawings and in schedules.
 2. Printout of current "MPI Approved Products List" for each product category specified in Part 2, with the proposed product highlighted.
 3. VOC content.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials[, **from the same product run,**] that match products installed and that are packaged with protective covering for storage and identified with labels describing contents. Package coating materials in unopened, factory-sealed containers for storage and identify with labels describing contents.
1. Coatings: [**Five (5)**] <Insert number> percent, but not less than [1 gal. (3.8 L)] <Insert number> of each material and color applied.
 2. Quantity: Furnish extra coating materials in quantities indicated below:
 - a. High-Gloss, Aliphatic Polyurethane Enamel: One (1) case of each color applied.
 - b. Semigloss, Aliphatic Polyurethane Enamel: Two (2) gal. of each color applied.
 - c. High-Gloss, Waterborne, Acrylic Enamel: One (1) case of each color applied.
 - d. Semigloss, Waterborne, Acrylic Enamel: One (1) gal. of each color applied.
 - e. High-Gloss, Polyamide Epoxy Coatings: One (1) case of each color applied.
 - f. Semigloss, Polyamide Epoxy Coatings: One (1) case of each color applied.

1.7 QUALITY ASSURANCE

- A. Applicator Qualifications: Engage an experienced applicator who has completed high-performance coating system applications similar in material and extent to those indicated for Project and whose work has a record of successful in-service performance.
- B. Source Limitations: Obtain primers and undercoat materials for each coating system from the same manufacturer as the finish coats.
- C. Mockups: Apply mockups of each coating system indicated to verify preliminary selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution. Duplicate finish of approved sample Submittals.
1. DEN Project Manager will select one surface to represent surfaces and conditions for application of each coating system specified in Part 3.
 - a. Wall and Ceiling Surfaces: Provide samples of at least 100 sq. ft. (9 sq. m).
 - b. Other Items: DEN Project Manager will designate items or areas required.
 2. After permanent lighting and other environmental services have been activated, apply coatings in this room or to each surface as specified. Provide the required sheen, color, and texture of each surface.
 - a. After finishes are accepted, DEN Project Manager will use the room or surface to evaluate coating systems of a similar nature.

3. Final approval of color selections will be based on mockups.
 - a. If preliminary color selections are not approved, apply additional mockups of additional colors selected by DEN Project Manager at no added cost to Owner.
4. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
5. Subject to compliance with requirements, and if approved by DEN Project Manager, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials to Project site in manufacturer's original, unopened packages and containers bearing manufacturer's name and label with the following information:
 1. Name or title of material.
 2. Product description (generic classification or binder type).
 3. Manufacturer's stock number and date of manufacture.
 4. Contents by volume, for pigment and vehicle constituents.
 5. Thinning instructions.
 6. Application instructions.
 7. Color name and number.
 8. Handling instructions and precautions.
- B. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 deg F (7 deg C).
 1. Maintain containers in clean condition, free of foreign materials and residue.
 2. Remove rags and waste from storage areas daily.
 3. Protect materials from freezing. Keep storage area neat and orderly.
 4. Take necessary measures to ensure that workers and work areas are protected from fire and health hazards resulting from handling, mixing, and applying coatings.
 5. All storage methods to comply with requirements of governing authorities.

1.9 FIELD CONDITIONS

- A. Apply coatings only when temperature of surfaces to be coated and surrounding air temperatures are between 50 and 95 deg F (10 and 35 deg C).
- B. Do not apply coatings or when relative humidity exceeds 85 percent; at temperatures less than 5 deg F (3 deg C) above the dew point; or to damp or wet surfaces.
- C. Do not apply exterior coatings in snow, rain, fog, or mist.
- D. Allow wet surfaces to dry thoroughly and attain temperature and conditions specified before proceeding with or continuing coating operation.

- E. Work may continue during inclement weather only if areas and surfaces to be coated are enclosed and temperature within the area can be maintained within limits specified by manufacturer during application and drying periods.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Behr Process Corporation.
 2. Benjamin Moore & Co.
 3. Bennette Paint Mfg. Co., Inc.
 4. Betonel Ltd.
 5. BLP Mobile Paint Manufacturing Company, Inc.
 6. Carboline Company.
 7. Cloverdale Paint.
 8. Color Wheel Paints & Coatings.
 9. Columbia Paint & Coatings.
 10. Conco Paints.
 11. Coronado Paint.
 12. Diamond Vogel Paints.
 13. Dunn-Edwards Corporation.
 14. DuPont Company.
 15. Duron, Inc.
 16. Euclid Chemical Company.
 17. Farrell-Calhoun.
 18. Frazee Paint.
 19. General Paint.
 20. Hirshfield's, Inc.
 21. ICI Paints.
 22. ICI Paints (Canada).
 23. Insl-x.
 24. International Protective Coatings; Courtaulds Coatings (International).
 25. Kelly-Moore Paints.
 26. Kwal Paint.
 27. M.A.B. Paints.
 28. Microblend Technologies Inc.
 29. Miller Paint.
 30. Mills Paint.

31. Moore: Benjamin Moore & Co.
32. PARA Paints.
33. Parex LaHabra Inc.
34. Parker Paint Mfg. Co. Inc.
35. PPG Architectural Finishes, Inc.
36. Pratt & Lambert.
37. Rodda Paint Co.
38. Rust-Oleum Corporation.
39. Scott Paint.
40. Sherwin-Williams Company (The).
41. Sico, Inc.
42. Tnemec Company, Inc.
43. Vista Paint.
44. Zinsser.
45. **<Insert manufacturer's name>**.
46. or approved equal.

- B. Products: Subject to compliance with requirements, provide one of the products listed in other Part 2 articles for the paint category indicated.

2.2 HIGH-PERFORMANCE COATINGS, GENERAL

- A. MPI Standards: Provide products that comply with MPI standards indicated and are listed in "MPI Approved Products List."

- B. Material Quality: Provide manufacturer's highest grade of the various high-performance coatings specified. Materials not displaying manufacturer's product identification are not acceptable.

1. Proprietary Names: Use of manufacturer's proprietary product names to designate colors or materials is not intended to imply that products named are required to be used to the exclusion of equivalent products of other manufacturers. Furnish manufacturer's material data and certificates of performance for proposed substitutions.

- C. Material Compatibility:

1. Provide materials for use within each coating system that are compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
2. For each coat in a coating system, provide products recommended in writing by manufacturers of topcoat for use in coating system and on substrate indicated.
3. Provide products of same manufacturer for each coat in a coating system.

- D. VOC Content: Products shall comply with VOC limits of authorities having jurisdiction[**and, for interior coatings applied at project site, the following VOC limits, exclusive of colorants added to a tint base, when calculated according to 40 CFR 59, Subpart D (EPA Method 24)**].

1. Flat Paints and Coatings: 50 g/L.
2. Nonflat Paints and Coatings: 150 g/L.
3. Primers, Sealers, and Undercoaters: 200 g/L.
4. Anti-Corrosive and Anti-Rust Paints Applied to Ferrous Metals: 250 g/L.
5. Zinc-Rich Industrial Maintenance Primers: 340 g/L.
6. Pre-Treatment Wash Primers: 420 g/L.
7. Floor Coatings: 100 g/L.
8. Shellacs, Clear: 730 g/L.
9. Shellacs, Pigmented: 550 g/L.

E. Low-Emitting Materials: Interior coatings shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

F. Colors: **[As selected by DEN Project Manager from manufacturer's full range] [Match DEN Project Manager's samples] [As indicated in color schedule] <Insert requirements>**.

2.3 BLOCK FILLERS

A. Block Filler, Latex, Interior/Exterior: **[MPI #4.]**

1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.

B. Block Filler, Epoxy: **[MPI #116.]**

1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.

2.4 INTERIOR PRIMERS/SEALERS

A. Primer Sealer, Latex, Interior: **[MPI #50.]**

1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.

B. Wood-Knot Sealer: White shellac or other sealer recommended in writing by manufacturer for this purpose.

1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>**.

2.5 METAL PRIMERS

A. Primer, Zinc-Rich, Inorganic: **[MPI #19.]**

1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
 - B. Primer, Zinc-Rich, Epoxy:[**MPI #20.**]
 1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
 - C. Primer, Rust-Inhibitive, Water Based:[**MPI #107.**]
 1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
 - D. Primer, Epoxy, Anti-Corrosive, for Metal:[**MPI #101.**]
 1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
 - E. Primer, Vinyl Wash:[**MPI #80.**]
 1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
- 2.6 EPOXY COATINGS
- A. Epoxy, Gloss:[**MPI #77.**]
 1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
 - B. Epoxy-Modified Latex, Interior, Gloss (Gloss Level 6):[**MPI #115.**]
 1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
 - C. Epoxy, High-Build, Low Gloss:[**MPI #108.**]
 1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
 - D. Epoxy Deck Coating (Slip-Resistant):[**MPI #82.**]
 1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**
- 2.7 POLYURETHANE COATINGS
- A. Polyurethane, Two-Component, Pigmented, Gloss (Gloss Level 6):[**MPI #72.**]

1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**

B. Varnish, Aliphatic Polyurethane, Two-Component (Gloss Level 6 or 7):[**MPI #78.**]

1. **<Insert, in separate subparagraphs, manufacturer's name; product name or designation>.**

2.8 SOURCE QUALITY CONTROL

A. Testing of Coating Materials: Owner reserves the right to invoke the following procedure:

1. Owner will engage the services of a qualified testing agency to sample coating materials. Contractor will be notified in advance and may be present when samples are taken. If coating materials have already been delivered to Project site, samples may be taken at Project site. Samples will be identified, sealed, and certified by testing agency.
2. Testing agency will perform tests for compliance with product requirements.
3. Owner may direct Contractor to stop applying paints if test results show materials being used do not comply with product requirements. Contractor shall remove noncomplying coating materials from Project site, pay for testing, and recoat surfaces coated with rejected materials. Contractor will be required to remove rejected materials from previously coated surfaces if, on recoating with complying materials, the two coatings are incompatible.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.

1. Maximum Moisture Content of Substrates: When measured with an electronic moisture meter as follows:

- a. Concrete: 12 percent.
- b. Masonry (Clay and CMU): 12 percent.
- c. Wood: 15 percent.
- d. Gypsum Board: 12 percent.

B. Gypsum Board Substrates: Verify that finishing compound is sanded smooth.

C. Plaster Substrates: Verify that plaster is fully cured.

D. Verify suitability of substrates, including surface conditions and compatibility with existing finishes and primers.

- E. Proceed with coating application only after unsatisfactory conditions have been corrected.
 - 1. Beginning coating application constitutes Contractor's acceptance of substrates and conditions.

- F. Coordination of Work: Review other Sections in which primers or other coatings are provided to ensure compatibility of total systems for various substrates. On request, furnish information on characteristics of specified finish materials to ensure compatible primers.
 - 1. If a potential incompatibility of primers applied by others exists, obtain the following from the primer Applicator before proceeding:
 - a. Confirmation of primer's suitability for expected service conditions.
 - b. Confirmation of primer's ability to be top coated with materials specified.
 - 2. Notify DEN Project Manager about anticipated problems before using the coatings specified over substrates primed by others.

3.2 PREPARATION

- A. Comply with manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual" applicable to substrates indicated.

- B. Remove hardware, covers, plates, and similar items already in place that are removable and are not to be painted. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and painting.
 - 1. After completing painting operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection.

- C. Clean substrates of substances that could impair bond of coatings, including dust, dirt, oil, grease, and incompatible paints and encapsulants.
 - 1. Remove incompatible primers and reprime substrate with compatible primers or apply tie coat as required to produce coating systems indicated.

- D. Concrete Substrates: Remove release agents, curing compounds, efflorescence, and chalk. Do not coat surfaces if moisture content or alkalinity of surfaces to be coated exceeds that permitted in manufacturer's written instructions. Roughen as required to remove glaze. If hardeners or sealers have been used to improve curing, use mechanical methods to prepare surfaces.
 - 1. Use abrasive blast-cleaning methods if recommended by coating manufacturer.
 - 2. Determine alkalinity and moisture content of surfaces by performing appropriate tests. If surfaces are sufficiently alkaline to cause the finish paint to blister and burn, correct this condition before application. Do not coat surfaces if moisture content exceeds that permitted in manufacturer's written instructions.

3. Clean surfaces with pressurized water. Use pressure range of [1500 to 4000 psi (10 350 to 27 580 kPa)] [4000 to 10,000 psi (27 580 to 68 950 kPa)] at 6 to 12 inches (150 to 300 mm).
 4. Abrasive blast clean surfaces to comply with SSPC-SP 7/NACE No. 4, "Brush-Off Blast Cleaning."
- E. Masonry Substrates: Remove efflorescence and chalk. Do not coat surfaces if moisture content or alkalinity of surfaces or if alkalinity of mortar joints exceed that permitted in manufacturer's written instructions.
1. Determine alkalinity and moisture content of surfaces by performing appropriate tests. If surfaces are sufficiently alkaline to cause the finish paint to blister and burn, correct this condition before application. Do not coat surfaces if moisture content exceeds that permitted in manufacturer's written instructions.
 2. Clean surfaces with pressurized water. Use pressure range of [100 to 600 psi (690 to 4140 kPa)] [1500 to 4000 psi (10 350 to 27 580 kPa)] at 6 to 12 inches (150 to 300 mm).
- F. Steel Substrates: Remove rust, loose mill scale, and shop primer if any. Clean using methods recommended in writing by paint manufacturer[.][**but not less than the following:**]
1. SSPC-SP 7/NACE No. 4, "Brush-Off Blast Cleaning."
 2. SSPC-SP 11, "Power Tool Cleaning to Bare Metal."
 3. SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 4. SSPC-SP 10/NACE No. 2, "Near-White Blast Cleaning."
 5. SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning."
- G. Shop-Primed Steel Substrates: Clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material as used for shop priming to comply with SSPC-PA 1 for touching up shop-primed surfaces.
- H. Galvanized-Metal Substrates: Remove grease and oil residue from galvanized sheet metal by mechanical methods to produce clean, lightly etched surfaces that promote adhesion of subsequently applied coatings.
- I. Aluminum Substrates: Remove loose surface oxidation.
- J. Wood Substrates:
1. Scrape and clean knots. Before applying primer apply coat of knot sealer recommended in writing by topcoat manufacturer for coating system indicated.
 2. Sand surfaces that will be exposed to view and dust off.
 3. Prime edges, ends, faces, undersides, and back sides of wood.
 4. After priming, fill holes and imperfections in the finish surfaces with putty or plastic wood filler. Sand smooth when dried.
- K. Material Preparation: Carefully mix and prepare coating materials in strict accordance to manufacturer's written instructions.

1. Maintain containers used in mixing and applying coatings in a clean condition, free of foreign materials and residue.
 2. Stir materials before applying to produce a mixture of uniform density. Stir as required during application. Do not stir surface film into the material. Remove film and, if necessary, strain coating material before using.
 3. Use only the type of thinners approved by manufacturer and only within recommended limits.
- L. Tint each undercoat a lighter shade to facilitate identification of each coat if multiple coats of the same material are to be applied. Tint undercoats to match color of finish coat, but provide sufficient difference in shade of undercoats to distinguish each separate coat.

3.3 APPLICATION

- A. Apply high-performance coatings according to manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual."
1. Use applicators and techniques suited for coating and substrate indicated.
 2. Coating colors, surface treatments, and finishes are indicated in the coating system descriptions.
 3. Provide finish coats compatible with primers used.
 4. The term "exposed surfaces" includes areas visible when permanent or built-in fixtures, convector covers, grilles, covers for finned-tube radiation, and similar components are in place. Extend coatings in these areas, as required, to maintain system integrity and provide desired protection.
 5. Coat surfaces behind movable equipment and furniture same as similar exposed surfaces. Before final installation, coat surfaces behind permanently fixed equipment or furniture with prime coat only.
 6. Coat back sides of access panels, removable or hinged covers, and similar hinged items to match exposed surfaces.
 7. Do not apply coatings over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.
- B. Application Procedures: Apply coatings by brush, roller, spray, or other applicators according to manufacturer's written instructions.
1. Brush Application: Use brushes best suited for material applied and of appropriate size for the surface or item being coated.
 - a. Apply primers and first coats by brush unless manufacturer's written instructions permit using roller or mechanical applicators.
 - b. Brush out and work brush coats into surfaces in an even film.
 - c. Eliminate cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropiness, or other surface imperfections. Neatly draw glass lines and color breaks.
 2. Rollers: Use rollers of carpet, velvet back, or high-pile sheep's wool as recommended by manufacturer for the material and texture required.

3. Spray Equipment: Use mechanical methods to apply coating if permitted by manufacturer's written instructions and governing regulations.
 - a. Use spray equipment with orifice size recommended by manufacturer for material and texture required.
 - b. Apply each coat to provide the equivalent hiding of brush-applied coats.
 - c. Do not double back with spray equipment building-up film thickness of two coats in one pass, unless recommended by manufacturer.
 4. Minimum Coating Thickness: Apply each material no thinner than manufacturer's recommended spreading rate. Provide total dry film thickness of the entire system as recommended by manufacturer.
 5. Block Fillers: Apply block fillers to concrete masonry block at a rate to ensure complete coverage with pores filled.
 6. Prime Coats: Before applying finish coats, apply a prime coat of material, as recommended by manufacturer, to material required to be coated or finished that has not been prime coated by others.
 - a. Recoat primed and sealed substrates if there is evidence of suction spots or unsealed areas in first coat, to ensure a finish coat with no burn-through or other defects caused by insufficient sealing.
- C. Completed Work: Match approved Samples for color, texture, and coverage. Remove, re-finish, or recoat work that does not comply with specified requirements.
- D. Tint each undercoat a lighter shade to facilitate identification of each coat if multiple coats of the same material are to be applied. Tint undercoats to match color of finish coat, but provide sufficient difference in shade of undercoats to distinguish each separate coat.
- E. If undercoats or other conditions show through final coat, apply additional coats until cured film has a uniform coating finish, color, and appearance.
- F. Apply coatings to produce surface films without cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropiness, or other surface imperfections. Produce sharp glass lines and color breaks.
- 3.4 FIELD QUALITY CONTROL
- A. Dry Film Thickness Testing: Owner will engage the services of a qualified testing and inspecting agency to inspect and test coatings for dry film thickness.
 1. Contractor shall touch up and restore coated surfaces damaged by testing.
 2. If test results show that dry film thickness of applied coating does not comply with coating manufacturer's written recommendations, Contractor shall pay for testing and apply additional coats as needed to provide dry film thickness that complies with coating manufacturer's written recommendations.
- B. Owner reserves the right to invoke the following procedure at any time and as often as

Owner deems necessary during the period when coatings are being applied:

1. Owner will engage the services of a qualified testing agency to sample coating material being used. Samples of material delivered to Project site will be taken, identified, sealed, and certified in presence of Contractor.
2. Testing agency will perform appropriate tests for the following characteristics as required by Owner:
 - a. Quantitative materials analysis.
 - b. Absorption.
 - c. Accelerated weathering.
 - d. Accelerated yellowness.
 - e. Color retention.
 - f. Alkali and mildew resistance.
 - g. Abrasion resistance.
 - h. Apparent reflectivity.
 - i. Washability.
 - j. Dry opacity.
 - k. Recoating.
 - l. Skinning.
3. Owner may direct Contractor to stop applying coatings if test results show materials being used do not comply with specified requirements. Contractor shall remove non-complying coating materials from Project site, pay for testing, and recoat surfaces coated with rejected materials. If necessary, Contractor may be required to remove rejected materials from previously coated surfaces if, on recoating with specified materials, the two coatings are not compatible.

3.5 CLEANING AND PROTECTION

- A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.
- B. After completing coating application, clean spattered surfaces. Remove spattered coatings by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.
- C. Protect work of other trades against damage from coating operation. Correct damage by cleaning, repairing, replacing, and recoating, as approved by DEN Project Manager, and leave in an undamaged condition.
 1. Provide "Wet Paint" signs to protect newly coated finishes. After completing coating operations, remove temporary protective wrappings provided by others to protect their work.
- D. At completion of construction activities of other trades, touch up and restore damaged or defaced coated surfaces.
 1. Comply with procedures specified in PDCA P1.

3.6 EXTERIOR HIGH-PERFORMANCE COATING SCHEDULE

A. Concrete Substrates, Vertical Surfaces:

1. Epoxy System:

- a. Prime Coat: Epoxy, gloss[, **MPI #77**].
- b. Intermediate Coat: Epoxy, gloss[, **MPI #77**].
- c. Topcoat: Epoxy, gloss[, **MPI #77**].

B. Concrete Substrates, Horizontal Surfaces:

1. Epoxy Slip-Resistant Deck Coating System:

- a. Topcoat: Epoxy deck coating (slip-resistant)[, **MPI #82**].

C. Clay-Masonry Substrates:

1. Epoxy System:

- a. Prime Coat: Epoxy, gloss[, **MPI #77**].
- b. Intermediate Coat: Epoxy, gloss[, **MPI #77**].
- c. Topcoat: Epoxy, gloss[, **MPI #77**].

2. Pigmented Polyurethane over Epoxy System:

- a. Prime Coat: Epoxy, gloss[, **MPI #77**].
- b. Intermediate Coat: Epoxy, gloss[, **MPI #77**].
- c. Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].

3. Pigmented Polyurethane System:

- a. Prime Coat: As recommended in writing by topcoat manufacturer.
- b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
- c. Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].

D. CMU Substrates:

1. Epoxy System:

- a. Block Filler: Block filler, epoxy[, **MPI #116**].
- b. Intermediate Coat: Epoxy, gloss[, **MPI #77**].
- c. Topcoat: Epoxy, gloss[, **MPI #77**].

2. Pigmented Polyurethane over High-Build Epoxy System:

- a. Block Filler: Block filler, epoxy[, **MPI #116**].
- b. Intermediate Coat: Epoxy, high-build, low gloss[, **MPI #108**].

- c. Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].

E. Steel Substrates:

1. High-Build Epoxy System:

- a. Prime Coat: Primer, epoxy, anti-corrosive, for metal[, **MPI #101**].
- b. Intermediate Coat: Epoxy, high-build, low gloss[, **MPI #108**].
- c. Topcoat: Epoxy, gloss[, **MPI #77**].

2. High-Build Epoxy System:

- a. Prime Coat: Primer, epoxy, as recommended in writing by topcoat manufacturer.
- b. Intermediate Coat: Epoxy, high-build, low gloss[, **MPI #108**].
- c. Topcoat: Epoxy, gloss[, **MPI #77**].

3. Pigmented Polyurethane over Epoxy System:

- a. Prime Coat: Primer, epoxy, anti-corrosive, for metal[, **MPI #101**].
- b. Intermediate Coat: Epoxy, gloss[, **MPI #77**].
- c. First Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].
- d. Second Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].

4. Pigmented Polyurethane over Epoxy System:

- a. Prime Coat: Primer, epoxy, as recommended in writing by topcoat manufacturer.
- b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
- c. First Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].

5. Pigmented Polyurethane over Epoxy Zinc-Rich Primer System:

- a. Prime Coat: Primer, zinc-rich, epoxy[, **MPI #20**].
- b. Intermediate Coat: Epoxy, gloss[, **MPI #77**].
- c. First Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].

6. Pigmented Polyurethane over Epoxy Zinc-Rich Primer System:

- a. Prime Coat: Primer, zinc-rich, epoxy[, **MPI #20**].
- b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
- c. First Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].

7. Pigmented Polyurethane over High-Build Epoxy System:

- a. Prime Coat: Primer, epoxy, anti-corrosive, for metal[, **MPI #101**].
 - b. Intermediate Coat: Epoxy, high-build, low gloss[, **MPI #108**].
 - c. Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].
8. Pigmented Polyurethane over High-Build Epoxy System:
- a. Prime Coat: Primer, epoxy, as recommended in writing by topcoat manufacturer.
 - b. Intermediate Coat: Epoxy, high-build, low gloss[, **MPI #108**].
 - c. Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].
9. Pigmented Polyurethane over Epoxy Zinc-Rich Primer and High-Build Epoxy System:
- a. Prime Coat: Primer, zinc-rich, epoxy[, **MPI #20**].
 - b. Intermediate Coat: Epoxy, high-build, low gloss[, **MPI #108**].
 - c. First Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].
 - d. Second Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].
10. Pigmented Polyurethane over Inorganic Zinc-Rich Primer and High-Build Epoxy System:
- a. Prime Coat: Primer, zinc-rich, inorganic[, **MPI #19**].
 - b. Intermediate Coat: Epoxy, high-build, low gloss[, **MPI #108**].
 - c. Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].
- F. Galvanized-Metal Substrates:
1. Epoxy System:
 - a. Prime Coat: Primer, epoxy, anti-corrosive, for metal[, **MPI #101**].
 - b. Intermediate Coat: Epoxy, gloss[, **MPI #77**].
 - c. Topcoat: Epoxy, gloss[, **MPI #77**].
 2. Epoxy System:
 - a. Prime Coat: Primer, epoxy, as recommended in writing by topcoat manufacturer.
 - b. Intermediate Coat: Epoxy, gloss[, **MPI #77**].
 - c. Topcoat: Epoxy, gloss[, **MPI #77**].
 3. Pigmented Polyurethane System:
 - a. Prime Coat: Primer, epoxy, anti-corrosive, for metal[, **MPI #101**].
 - b. Intermediate Coat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].

- c. Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].
 4. Pigmented Polyurethane System:
 - a. Prime Coat: Primer, epoxy, as recommended in writing by topcoat manufacturer.
 - b. Intermediate Coat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].
 - c. Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].
 5. Pigmented Polyurethane over Vinyl Wash and Epoxy Primer System:
 - a. Prime Coat: Primer, vinyl wash[, **MPI #80**].
 - b. Intermediate Coat: Primer, epoxy, anti-corrosive, for metal[, **MPI #101**].
 - c. First Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].
 - d. Second Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].
 6. Pigmented Polyurethane over Vinyl Wash and Epoxy Primer System:
 - a. Prime Coat: Primer, vinyl wash[, **MPI #80**].
 - b. Intermediate Coat: Primer, epoxy, as recommended in writing by topcoat manufacturer.
 - c. First Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].
 - d. Second Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].
- G. Aluminum (Not Anodized or Otherwise Coated) Substrates:
 1. Epoxy System:
 - a. Prime Coat: Primer, vinyl wash[, **MPI #80**].
 - b. Intermediate Coat: Epoxy, gloss[, **MPI #77**].
 - c. Topcoat: Epoxy, gloss[, **MPI #77**].
 2. Pigmented Polyurethane System:
 - a. Prime Coat: Primer, vinyl wash[, **MPI #80**].
 - b. Intermediate Coat: Primer, epoxy, anti-corrosive, for metal[, **MPI #101**].
 - c. First Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].
 - d. Second Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].
 3. Pigmented Polyurethane System:
 - a. Prime Coat: Primer, vinyl wash[, **MPI #80**].

- b. Intermediate Coat: Primer, epoxy, as recommended in writing by topcoat manufacturer.
- c. First Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].
- d. Second Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].

H. Wood Substrates:

1. Pigmented Polyurethane System:

- a. Prime Coat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].
- b. Intermediate Coat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].
- c. Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].

3.7 INTERIOR HIGH-PERFORMANCE COATING SCHEDULE

A. Concrete Substrates, Vertical Surfaces:

1. Epoxy System:

- a. Prime Coat: Epoxy, gloss[, **MPI #77**].
- b. Intermediate Coat: Epoxy, gloss[, **MPI #77**].
- c. Topcoat: Epoxy, gloss[, **MPI #77**].

2. Epoxy-Modified Latex System:

- a. Prime Coat: Epoxy-modified latex, interior, gloss (Gloss Level 6)[, **MPI #115**].
- b. Intermediate Coat: Epoxy-modified latex, interior, gloss (Gloss Level 6)[, **MPI #115**].
- c. Topcoat: Epoxy-modified latex, interior, gloss (Gloss Level 6)[, **MPI #115**].

B. Concrete Substrates, Horizontal Surfaces.

1. Epoxy System:

- a. Prime Coat: Epoxy, gloss[, **MPI #77**].
- b. Intermediate Coat: Epoxy, gloss[, **MPI #77**].
- c. Topcoat: Epoxy, gloss[, **MPI #77**].

2. Pigmented Polyurethane System:

- a. Prime Coat: Epoxy, gloss[, **MPI #77**].
- b. Intermediate Coat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].

- c. Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].
 3. Pigmented Polyurethane System:
 - a. Prime Coat: Epoxy, as recommended in writing by topcoat manufacturer.
 - b. Intermediate Coat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].
 - c. Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].
 4. Clear Two-Component Polyurethane System:
 - a. Prime Coat: Varnish, aliphatic polyurethane, two-component (Gloss Level 6 or 7)[, **MPI #78**].
 - b. Intermediate Coat: Varnish, aliphatic polyurethane, two-component (Gloss Level 6 or 7)[, **MPI #78**].
 - c. Topcoat: Varnish, aliphatic polyurethane, two-component (Gloss Level 6 or 7)[, **MPI #78**].
- C. Clay-Masonry Substrates:
 1. Epoxy System:
 - a. Prime Coat: Epoxy, gloss[, **MPI #77**].
 - b. Intermediate Coat: Epoxy, gloss[, **MPI #77**].
 - c. Topcoat: Epoxy, gloss[, **MPI #77**].
 2. Epoxy-Modified Latex System:
 - a. Prime Coat: Epoxy-modified latex, interior, gloss (Gloss Level 6)[, **MPI #115**].
 - b. Intermediate Coat: Epoxy-modified latex, interior, gloss (Gloss Level 6)[, **MPI #115**].
 - c. Topcoat: Epoxy-modified latex, interior, gloss (Gloss Level 6)[, **MPI #115**].
 3. Clear Two-Component Polyurethane System:
 - a. Prime Coat: Varnish, aliphatic polyurethane, two-component (Gloss Level 6 or 7)[, **MPI #78**].
 - b. Intermediate Coat: Varnish, aliphatic polyurethane, two-component (Gloss Level 6 or 7)[, **MPI #78**].
 - c. Topcoat: Varnish, aliphatic polyurethane, two-component (Gloss Level 6 or 7)[, **MPI #78**].
- D. CMU Substrates:
 1. Epoxy System:
 - a. Block Filler: Block filler, latex, interior/exterior[, **MPI #4**].
 - b. Block Filler: Block filler, epoxy[, **MPI #116**].

- c. Intermediate Coat: Epoxy, gloss[, **MPI #77**].
 - d. Topcoat: Epoxy, gloss[, **MPI #77**].
 2. Epoxy-Modified Latex System:
 - a. Block Filler: Block filler, latex, interior/exterior[, **MPI #4**].
 - b. Intermediate Coat: Epoxy-modified latex, interior, gloss (Gloss Level 6)[, **MPI #115**].
 - c. Topcoat: Epoxy-modified latex, interior, gloss (Gloss Level 6)[, **MPI #115**].
- E. Steel Substrates:
1. High-Build Epoxy System:
 - a. Prime Coat: Primer, zinc-rich, epoxy[, **MPI #20**].
 - b. Intermediate Coat: Epoxy, high-build, low gloss[, **MPI #108**].
 - c. Topcoat: Epoxy, gloss[, **MPI #77**].
 - d. Topcoat: Epoxy, high-build, low gloss[, **MPI #108**].
 2. Epoxy System:
 - a. Prime Coat: Primer, epoxy, anti-corrosive, for metal[, **MPI #101**].
 - b. Intermediate Coat: Epoxy, gloss[, **MPI #77**].
 - c. Topcoat: Epoxy, gloss[, **MPI #77**].
 3. Epoxy System:
 - a. Prime Coat: Primer, epoxy, as recommended in writing by topcoat manufacturer.
 - b. Intermediate Coat: Epoxy, gloss[, **MPI #77**].
 - c. Topcoat: Epoxy, gloss[, **MPI #77**].
 4. Epoxy-Modified Latex System:
 - a. Prime Coat: Primer, rust-inhibitive, water based[, **MPI #107**].
 - b. Intermediate Coat: Epoxy-modified latex, interior, gloss (Gloss Level 6)[, **MPI #115**].
 - c. Topcoat: Epoxy-modified latex, interior, gloss (Gloss Level 6)[, **MPI #115**].
 5. Epoxy-Modified Latex System:
 - a. Prime Coat: Primer, rust-inhibitive, as recommended in writing by topcoat manufacturer.
 - b. Intermediate Coat: Epoxy-modified latex, interior, gloss (Gloss Level 6)[, **MPI #115**].
 - c. Topcoat: Epoxy-modified latex, interior, gloss (Gloss Level 6)[, **MPI #115**].
 6. Pigmented Polyurethane System:
 - a. Prime Coat: Primer, epoxy, anti-corrosive, for metal[, **MPI #101**].

- b. Intermediate Coat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].
 - c. Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].
7. Pigmented Polyurethane System:
 - a. Prime Coat: Primer, epoxy, as recommended in writing by topcoat manufacturer.
 - b. Intermediate Coat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].
 - c. Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].
8. Pigmented Polyurethane over Inorganic Zinc-Rich Primer System:
 - a. Prime Coat: Primer, zinc-rich, inorganic[, **MPI #19**].
 - b. Intermediate Coat: Epoxy, gloss[, **MPI #77**].
 - c. Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].
9. Pigmented Polyurethane over Inorganic Zinc-Rich Primer System:
 - a. Prime Coat: Primer, zinc-rich, inorganic[, **MPI #19**].
 - b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
 - c. Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].
10. Pigmented Polyurethane over Epoxy Zinc-Rich Primer System:
 - a. Prime Coat: Primer, zinc-rich, epoxy[, **MPI #20**].
 - b. Intermediate Coat: Epoxy, gloss[, **MPI #77**].
 - c. Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].
11. Pigmented Polyurethane over Epoxy Zinc-Rich Primer System:
 - a. Prime Coat: Primer, zinc-rich, epoxy[, **MPI #20**].
 - b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
 - c. Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].
12. Pigmented Polyurethane over High-Build Epoxy System:
 - a. Prime Coat: Primer, epoxy, anti-corrosive, for metal[, **MPI #101**].
 - b. Intermediate Coat: Epoxy, high-build, low gloss[, **MPI #108**].
 - c. Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].
13. Pigmented Polyurethane over High-Build Epoxy System:

- a. Prime Coat: Primer, epoxy, as recommended in writing by topcoat manufacturer.
- b. Intermediate Coat: Epoxy, high-build, low gloss[, **MPI #108**].
- c. Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].

F. Galvanized-Metal Substrates:

1. Epoxy System:

- a. Prime Coat: Primer, epoxy, anti-corrosive, for metal[, **MPI #101**].
- b. Intermediate Coat: Epoxy, gloss[, **MPI #77**].
- c. Topcoat: Epoxy, gloss[, **MPI #77**].

2. Epoxy System:

- a. Prime Coat: Primer, epoxy, as recommended in writing by topcoat manufacturer.
- b. Intermediate Coat: Epoxy, gloss[, **MPI #77**].
- c. Topcoat: Epoxy, gloss[, **MPI #77**].

3. Pigmented Polyurethane System:

- a. Prime Coat: Primer, epoxy, as recommended in writing by topcoat manufacturer.
- b. Intermediate Coat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].
- c. Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].

G. Aluminum (Not Anodized or Otherwise Coated) Substrates:

1. Epoxy System:

- a. Prime Coat: Primer, vinyl wash[, **MPI #80**].
- b. Intermediate Coat: Epoxy, gloss[, **MPI #77**].
- c. Topcoat: Epoxy, gloss[, **MPI #77**].

2. Pigmented Polyurethane System:

- a. Prime Coat: Primer, vinyl wash[, **MPI #80**].
- b. Intermediate Coat: Epoxy, gloss[, **MPI #77**].
- c. Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].

3. Pigmented Polyurethane System:

- a. Prime Coat: As recommended in writing by topcoat manufacture.
- b. Intermediate Coat: As recommended in writing by topcoat manufacture.
- c. Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].

- H. Wood Substrates:
1. Epoxy System:
 - a. Prime Coat: Epoxy, gloss[, **MPI #77**].
 - b. Intermediate Coat: Epoxy, gloss[, **MPI #77**].
 - c. Topcoat: Epoxy, gloss[, **MPI #77**].
 2. Pigmented Polyurethane System:
 - a. Prime Coat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].
 - b. Intermediate Coat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].
 - c. Topcoat: Polyurethane, two-component, pigmented, gloss (Gloss Level 6)[, **MPI #72**].
- I. **[Gypsum Board] [Plaster]** Substrates:
1. Epoxy System:
 - a. Prime Coat: Primer sealer, latex, interior[, **MPI #50**].
 - b. Intermediate Coat: Epoxy, gloss[, **MPI #77**].
 - c. Topcoat: Epoxy, gloss[, **MPI #77**].
 2. Epoxy-Modified Latex System:
 - a. Prime Coat: Primer sealer, latex, interior[, **MPI #50**].
 - b. Intermediate Coat: Epoxy-modified latex, interior, gloss (Gloss Level 6)[, **MPI #115**].
 - c. Topcoat: Epoxy-modified latex, interior, gloss (Gloss Level 6)[, **MPI #115**].

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 099600

SECTION 099633 - HIGH-TEMPERATURE-RESISTANT COATINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes surface preparation and application of high-temperature-resistant coating systems on steel substrates.
- B. Related Requirements:
 - 1. Section 051200 "Structural Steel Framing" for shop priming of metal substrates with primers specified in this Section.
 - 2. Section 099113 "Exterior Painting" for special-use coatings and general field painting.
 - 3. Section 099123 "Interior Painting" for special-use coatings and general field painting.
 - 4. Section 099600 "High-Performance Coatings" for special-use coatings and general field painting.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Gloss Level 5: 35 to 70 units at 60 degrees, according to ASTM D 523.
- B. Gloss Level 6: 70 to 85 units at 60 degrees, according to ASTM D 523.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include preparation requirements and application instructions.
 - 1. Material List: An inclusive list of required coating materials. Indicate each material and cross-reference the specific coating, finish system, and application. Identify each material by the manufacturer's catalog number and general classification.
 - 2. Manufacturer's Information: Manufacturer's technical information, including label

analysis and instructions for handling, storing, and applying each material proposed for use.

3. Certification by the manufacturer that products supplied comply with local regulations controlling the use of VOCs.
4. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

1. Product Data for Credit EQ 4.2: For interior coatings, documentation including printed statement of VOC content.
2. Laboratory Test Reports for Credit EQ 4: For interior coatings, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

C. Samples for Initial Selection: For each type of topcoat product indicated. Manufacturer's color charts showing the full range of colors available for each type of finish-coat material indicated.

D. Samples for Verification: For each type of coating system and in each color and gloss of topcoat indicated.

1. Submit Samples on rigid backing, 8 inches (200 mm) square.
2. Step coats on Samples to show each coat required for system, including primers. Use representative colors when preparing Samples for review. Resubmit until the required sheen, color, and texture are achieved and approved by DEN Project Manager.
3. Label each coat of each Sample.
4. Label each Sample for location and application area.
5. Submit two (2) 4-inch- square Samples of flat metal for the DEN Project Manager's review of color and texture.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

1.6 QUALITY ASSURANCE

A. Applicator Qualifications: An experienced applicator who has completed high-temperature-resistant coating system applications similar in material and extent to that indicated for the Project and with a record of successful in-service performance.

B. Source Limitations: Obtain primers and undercoat materials for each coating system from the same manufacturer as finish coats.

- C. Mockups: Apply mockups of each coating system indicated to verify preliminary selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution. Duplicate finish of approved sample Submittals.
1. DEN Project Manager will select one surface to represent surfaces and conditions for application of each coating system specified in Part 3.
 - a. Surfaces Greater Than 200 Sq. Ft. (18.5 Sq. M): Provide mockups of at least 100 sq. ft. (9 sq. m).
 - b. Other Surfaces: DEN Project Manager will designate items or areas required.
 2. After permanent lighting and other environmental services have been activated, apply high-temperature-resistant coatings to each surface according to the Coating Schedule or as specified. Provide required sheen, color, and texture on each surface.
 3. After finishes are accepted, the DEN Project Manager will use the surface to evaluate coating systems of a similar nature.
 4. Final approval of color selections will be based on mockups.
 - a. If preliminary color selections are not approved, apply additional mockups of additional colors selected by DEN Project Manager at no added cost to Owner.
 5. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless DEN Project Manager specifically approves such deviations in writing.
 6. Subject to compliance with requirements, and if approved by DEN Project Manager, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials to Project site in manufacturer's original, unopened packages and containers bearing manufacturer's name and label with the following information:
1. Name or title of material.
 2. Product description (generic classification or binder type).
 3. Manufacturer's stock number and date of manufacture.
 4. Contents by volume, for pigment and vehicle constituents.
 5. Thinning instructions.
 6. Application instructions.
 7. Color name and number.
 8. Handling instructions and precautions.
- B. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 deg F (7 deg C).

1. Maintain containers in clean condition, free of foreign materials and residue.
2. Remove rags and waste from storage areas daily.
3. Protect materials from freezing. Keep storage area neat and orderly.
4. Take necessary measures to ensure that workers and work areas are protected from fire and health hazards resulting from handling, mixing, and applying coatings.
5. All storage methods to comply with requirements of governing authorities.

1.8 FIELD CONDITIONS

- A. Manufacturer's Written Recommendations: Comply with manufacturer's written recommendations for optimum temperature and humidity conditions for applying and curing high-temperature-resistant coatings. Do not apply coatings until these conditions have been attained and stabilized.
- B. Apply coatings only when temperature of surfaces to be coated and surrounding air temperatures are between **50 and 104 deg F** (10 and 40 deg C).
- C. Do not apply coatings when relative humidity exceeds 85 percent; at temperatures less than **5 deg F** (3 deg C) above the dew point; or to damp or wet surfaces.
- D. Do not apply exterior coatings in snow, rain, fog, or mist.
 1. Allow wet surfaces to dry thoroughly and attain temperature and conditions specified before proceeding with coating operation.
 2. Coating application may continue during inclement weather only if surfaces to be coated are enclosed and heated within temperature limits specified by the manufacturer during application and curing periods.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Benjamin Moore & Co.
 2. BLP Mobile Paint Manufacturing Company, Inc.
 3. Carboline Company.
 4. Cloverdale Paint.
 5. Columbia Paint & Coatings.

6. Coronado Paint.
7. Devoe Coatings Company.
8. Diamond Vogel Paints.
9. Frazee Paint.
10. General Paint.
11. Glidden Co., The.
12. ICI Paints.
13. ICI Paints (Canada).
14. Insl-x.
15. Kwal Paint.
16. M.A.B. Paints.
17. Mills Paint.
18. PARA Paints.
19. Parker Paint Mfg. Co. Inc.
20. Porter International.
21. PPG Architectural Finishes, Inc.
22. Rodda Paint Co.
23. Rust-Oleum Corporation.
24. Sherwin-Williams Company (The).
25. Sico, Inc.
26. Tnemec Company, Inc.
27. **<Insert manufacturer's name>**.
28. or approved equal.

- B. Products: Subject to compliance with requirements, provide one of the products listed in other Part 2 articles for the category indicated.

2.2 HIGH-TEMPERATURE-RESISTANT COATINGS, GENERAL

- A. MPI Standards: Provide products that comply with MPI standards indicated and are listed in "MPI Approved Products List."
- B. Material Quality: Provide manufacturer's highest grade of the various high-performance coatings specified. Materials not displaying manufacturer's product identification are not acceptable.

1. Proprietary Names: Use of manufacturer's proprietary product names to designate colors or materials is not intended to imply that products named are required to be used to the exclusion of equivalent products of other manufacturers. Furnish manufacturer's material data and certificates of performance for proposed substitutions.

- C. Material Compatibility:

1. Provide materials for use within each coating system that are compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
2. For each coat in a coating system, provide products recommended in writing by manufacturers of topcoat for use in coating system and on substrate indicated.

3. Provide products of same manufacturer for each coat in a coating system.
- D. VOC Content: Products shall comply with VOC limits of authorities having jurisdiction[**and, for interior coatings applied at project site, the following VOC limits, exclusive of colorants added to a tint base, when calculated according to 40 CFR 59, Subpart D (EPA Method 24)**].
1. Anti-Corrosive and Anti-Rust Paints Applied to Ferrous Metals: 250 g/L.
 2. Zinc-Rich Industrial Maintenance Primers: 340 g/L.
 3. High Temperature Industrial Maintenance Coatings: 420 g/L.
- E. Low-Emitting Materials: Interior coatings shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- F. Colors: [As selected by DEN Project Manager from manufacturer's full range] [Match DEN Project Manager's samples] [As indicated in color schedule] <Insert requirements>.
- 2.3 HIGH-TEMPERATURE-RESISTANT COATINGS
- A. Primer, Zinc-Rich, Inorganic:[**MPI #19.**]
1. <Insert, in separate subparagraphs, manufacturer's name; product name or designation>.
- B. Heat Resistant Enamel (Gloss Level 5 or 6):[**MPI #21.**]
1. <Insert, in separate subparagraphs, manufacturer's name; product name or designation>.
- C. Aluminum Paint, Heat-Resistant:[**MPI #2.**]
1. <Insert, in separate subparagraphs, manufacturer's name; product name or designation>.
- D. Aluminum Paint, High Heat:[**MPI #22.**]
1. <Insert, in separate subparagraphs, manufacturer's name; product name or designation>.
- 2.4 SOURCE QUALITY CONTROL
- A. Testing of Coating Materials: Owner reserves the right to invoke the following procedure:
1. Owner will engage the services of a qualified testing agency to sample coating materials. Contractor will be notified in advance and may be present when

samples are taken. If coating materials have already been delivered to Project site, samples may be taken at Project site. Samples will be identified, sealed, and certified by testing agency.

2. Testing agency will perform tests for compliance with product requirements.
3. Owner may direct Contractor to stop applying paints if test results show materials being used do not comply with product requirements. Contractor shall remove noncomplying coating materials from Project site, pay for testing, and recoat surfaces coated with rejected materials. Contractor will be required to remove rejected materials from previously coated surfaces if, on recoating with complying materials, the two coatings are incompatible.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Applicator present, for compliance with requirements and other conditions affecting performance of the Work.
- B. Verify suitability of substrates, including surface conditions and compatibility with existing finishes and primers.
- C. Proceed with coating application only after unsatisfactory conditions have been corrected.
 1. Beginning coating application constitutes Contractor's acceptance of substrates and conditions.
- D. Coordination of Work: Review other Sections in which primers or other coatings are provided to ensure compatibility of total systems for various substrates. On request, furnish information on characteristics of specified finish materials to ensure compatible primers.
 1. Where a potential incompatibility of primers applied by others exists, obtain the following from the applicator of the primer before proceeding:
 - a. Confirmation of the suitability of the primer for the expected service temperature.
 - b. Confirmation of the primer's ability to be topcoated with materials specified.
 2. Notify the DEN Project Manager about anticipated problems using the coatings specified over substrates primed by others.

3.2 PREPARATION

- A. Comply with manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual" applicable to substrates indicated.

- B. Remove hardware, covers, plates, and similar items already in place that are removable and are not to be painted. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and painting.
1. After completing painting operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection.
- C. Clean substrates of substances that could impair bond of coatings, including dust, dirt, oil, grease, and incompatible paints and encapsulants.
1. Remove incompatible primers and reprime substrate with compatible primers or apply tie coat as required to produce coating systems indicated.
- D. Steel Substrates: Remove rust, loose mill scale, and shop primer if any. Clean using methods recommended in writing by paint manufacturer[.][**but not less than the following:**]
1. SSPC-SP 11, "Power Tool Cleaning to Bare Metal."
 2. SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 3. SSPC-SP 10/NACE No. 2, "Near-White Blast Cleaning."
 4. SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning."
- E. Shop-Primed Steel Substrates: Clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material as used for shop priming to comply with SSPC-PA 1 for touching up shop-primed surfaces.
- F. Material Preparation: Mix and prepare materials according to coating manufacturer's written instructions.
1. Maintain containers used for mixing and applying coatings in a clean condition, free of foreign materials and residue.
 2. Stir materials before application to produce a mixture of uniform density. Stir as required during application. Do not stir surface film into material. If necessary, remove surface film and strain coating material before using.
 3. Use only the type of thinners approved by manufacturer and only within recommended limits.

3.3 APPLICATION

- A. Apply high-temperature-resistant coating systems according to manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual."
1. Use applicators and techniques suited for coating and substrate indicated.
 2. Do not apply coatings over dirt, rust, scale, grease, moisture, scuffed surfaces, or conditions detrimental to forming a durable coating film.
 3. Coating colors, surface treatments, and finishes are indicated in the schedules.
 4. Provide finish coats compatible with primers used.

5. The term "exposed surfaces" includes areas visible when permanent or built-in fixtures, convector covers, grilles, covers for finned-tube radiation, and similar components are in place. Extend coatings in these areas, as required, to maintain system integrity and provide desired protection.
 6. Coat surfaces behind movable items same as similar exposed surfaces. Before final installation, coat surfaces behind permanently fixed items with prime coat only.
 7. Coat back sides of access panels, removable or hinged covers, and similar hinged items to match exposed surfaces.
 8. Do not apply coatings over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.
- B. Scheduling Coating: Apply first coat to surfaces that have been cleaned, pretreated, or otherwise prepared for coating as soon as practicable after preparation and before subsequent surface deterioration.
1. Number of coats and film thickness required is the same regardless of application method employed. Do not apply succeeding coats until previous coat has cured, as recommended by the manufacturer.
 2. When undercoats or other conditions show through final coat, apply additional coats until cured film has a uniform coating finish, color, and appearance. Give special attention to edges, corners, crevices, welds, exposed fasteners, and similar surfaces to ensure they receive a dry film thickness equivalent to that of flat surfaces.
 3. Allow sufficient drying time between successive coats to permit proper curing. Do not recoat until coating has dried so it feels firm and does not deform or feel sticky under moderate thumb pressure, and where applying another coat does not cause undercoat to lift or lose adhesion.
- C. Application Procedures: Apply coatings by brush, roller, or spray according to the manufacturer's written instructions.
1. Brushes: Use brushes best suited for material applied. Use brush of appropriate size for surface or item being coated.
 2. Rollers: Use rollers of carpet, velvet back, or high-pile sheep's wool as recommended by the manufacturer for material and texture required.
 3. Spray Equipment: Use spray equipment with orifice size as recommended by the manufacturer for material and texture required.
- D. Minimum Coating Thickness: Apply each material no thinner than the manufacturer's recommended spreading rate. Provide total dry film thickness of entire system as recommended by the manufacturer.
- E. Prime Coats: Before applying finish coats, apply a prime coat of material, as recommended by the manufacturer, to substrate to be coated that has not been prime coated by others. Recoat primed and sealed substrates where there is evidence of suction spots or unsealed areas in first coat to ensure a finish coat with no burn through or other defects caused by insufficient sealing.
- F. Brush Application: Brush-out and work brush coats into surfaces in an even film.

Eliminate cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropiness, or other surface imperfections. Neatly draw color breaks.

1. Apply primers and first coats by brush, unless the manufacturer's written instructions permit using mechanical applicators.
- G. Mechanical Applications: Use mechanical methods to apply coating when permitted by the manufacturer's written recommendations and governing regulations.
1. Where using spray application, apply each coat to provide equivalent hiding of brush-applied coats. Do not double back with spray equipment, building up film thickness of two coats in one pass, unless recommended by manufacturer.
- H. Completed Work: Match approved Samples for color, texture, and coverage. Remove, re-finish, or recoat work not complying with requirements.
- I. If undercoats or other conditions show through final coat, apply additional coats until cured film has a uniform coating finish, color, and appearance.
- J. Apply coatings to produce surface films without cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropiness, or other surface imperfections.

3.4 FIELD QUALITY CONTROL

- A. Dry Film Thickness Testing: Owner will engage the services of a qualified testing and inspecting agency to inspect and test coatings for dry film thickness.
1. Contractor shall touch up and restore coated surfaces damaged by testing.
 2. If test results show that dry film thickness of applied coating does not comply with coating manufacturer's written recommendations, Contractor shall pay for testing and apply additional coats as needed to provide dry film thickness that complies with coating manufacturer's written recommendations.
- B. Owner reserves the right to invoke the following procedure at any time and as often as Owner deems necessary during the period when coatings are being applied:
1. Owner will engage the services of a qualified testing agency to sample coating material being used. Samples of material delivered to Project site will be taken, identified, sealed, and certified in presence of Contractor.
 2. Testing agency will perform appropriate tests for the following characteristics as required by Owner:
 - a. Quantitative materials analysis.
 - b. Absorption.
 - c. Accelerated weathering.
 - d. Accelerated yellowness.
 - e. Color retention.
 - f. Alkali and mildew resistance.
 - g. Abrasion resistance.
 - h. Apparent reflectivity.

- i. Washability.
 - j. Dry opacity.
 - k. Recoating.
 - l. Skinning.
3. Owner may direct Contractor to stop applying coatings if test results show materials being used do not comply with specified requirements. Contractor shall remove non-complying coating materials from Project site, pay for testing, and recoat surfaces coated with rejected materials. If necessary, Contractor may be required to remove rejected materials from previously coated surfaces if, on recoating with specified materials, the two coatings are not compatible.

3.5 CLEANING AND PROTECTION

- A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.
- B. After completing coating application, clean spattered surfaces. Remove spattered coatings by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.
- C. Protect work of other trades against damage from coating operation. Correct damage by cleaning, repairing, replacing, and recoating, as approved by DEN Project Manager, and leave in an undamaged condition.
 1. Provide "Wet Paint" signs to protect newly coated finishes. After completing coating operations, remove temporary protective wrappings provided by others to protect their work.
- D. At completion of construction activities of other trades, touch up and restore damaged or defaced coated surfaces.
 1. Comply with procedures specified in PDCA P1.

3.6 HIGH-TEMPERATURE-RESISTANT COATING SCHEDULE

- A. Heat-Resistant Enamel System:
 1. Prime Coat: Primer recommended in writing for use in coating system and under conditions indicated by manufacturer of topcoat.
 2. Top Coat(s): Heat resistant enamel (Gloss Level 5 or 6)[, **MPI #21**]. Provide number of topcoats recommended in writing for use in coating system and under conditions indicated by manufacturer[**but not less than two**].
- B. Inorganic Zinc-Rich Coating System:
 1. Prime Coat: Primer, zinc-rich, inorganic[, **MPI #19**].

2. Top Coat(s): Primer, zinc-rich, inorganic[, **MPI #19**]. Provide number of topcoats recommended in writing for use in coating system and under conditions indicated by manufacturer[**but not less than two**].
- C. Aluminum Heat-Resistant Paint System:
1. Prime Coat: Primer recommended in writing for use in coating system and under conditions indicated by manufacturer of topcoat.
 2. Top Coat(s): Aluminum paint, heat-resistant[, **MPI #2**]. Provide number of topcoats recommended in writing for use in coating system and under conditions indicated by manufacturer[**but not less than two**].
- D. High-Heat-Resistant Coating System:
1. Prime Coat: Primer recommended in writing for use in coating system and under conditions indicated by manufacturer of topcoat.
 2. Top Coat(s): Aluminum paint, high heat[, **MPI #22**]. Provide number of topcoats recommended in writing for use in coating system and under conditions indicated by manufacturer[**but not less than two**].

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 099633

SECTION 099646 - INTUMESCENT PAINTING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes surface preparation and application of fire-retardant intumescent paint to [**interior**] [**and**] [**exterior**] items and surfaces.
- B. Related Sections:
 - 1. Section 078100 "Applied Fireproofing" for fire-resistance-rated intumescent mastic materials.
 - 2. Section 099113 "Exterior Painting" for primers, finish coats, and wood stains that may be used with intumescent paint finishes.
 - 3. Section 099123 "Interior Painting" for primers, finish coats, and wood stains that may be used with intumescent paint finishes.
 - 4. Section 099300 "Staining and Transparent Finishing" for primers, finish coats, and wood stains that may be used with intumescent paint finishes.
 - 5. Section 099633 "High-Temperature-Resistant Coatings" for special coatings designed to protect steel from extremely high temperatures.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Product List: Cross-reference to coating system and locations of application areas. Use same designations indicated on Drawings and in schedules. Include manufacturer's recommended spreading rate for each separate coat for each type of substrate indicated.
 - 2. Printout of current "MPI Approved Products List" for each product category specified in Part 2 that specifies coatings approved by MPI, with the proposed product highlighted.
 - 3. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:

1. Product Data for Credit IEQ 4.2: For interior paints and coatings, documentation including printed statement of VOC content.
 2. Laboratory Test Reports for Credit IEQ 4: For interior paints and coatings, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Samples for Initial Selection: For each intumescent paint finish indicated.
- D. Samples for Verification: For each type of coating system and each color and gloss of intumescent paint finish indicated.
1. Submit Samples on [**rigid backing**] [**actual substrate**], not less than [**8 inches (200 mm) square**] <Insert dimension>.
 2. Step coats on Samples to show each coat required for system.
 3. Label each coat of each Sample.
 4. Label each Sample for location and application area.

1.4 INFORMATIONAL SUBMITTALS

- A. Material Test Reports: For each intumescent paint.

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that are from same production run (batch mix) as materials applied and that are packaged with protective covering for storage and identified with labels describing contents.
1. Quantity: Furnish an additional [**5**] <Insert number> percent of each color applied, but not less than [**1 gal. (3.8 L)**] <Insert value> of each material and color applied.

1.6 QUALITY ASSURANCE

- A. Source Limitations: Obtain each paint system from single source from single manufacturer or provide a system approved in writing by intumescent paint manufacturer.
- B. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
1. Flame-Spread Index: 25 or less..
 2. Smoke-Developed Index: [**450 or less**] <Insert requirements>.
- C. MPI Standards: Comply with indicated requirements for the following:

1. Products: MPI standards indicated and listed in "MPI Approved Products List."
 2. Preparation and Workmanship: "MPI Architectural Painting Specification Manual" for products and paint systems indicated.
- D. Mockups: Apply benchmark Samples of paint system indicated and of each color and finish selected to verify preliminary selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
1. DEN Project Manager will select one [**actual substrate of each type**] <Insert requirements> to represent surfaces and conditions for application of coating.
 - a. Wall Surfaces: Prepare Samples of at least [100 sq. ft. (9.3 sq. m)] <Insert dimension>.
 2. Apply benchmark Samples after permanent lighting and other environmental services have been activated.
 3. Final approval of color selections will be based on benchmark Samples.
 - a. If preliminary color selections are not approved, apply benchmark Samples of additional colors selected by DEN Project Manager at no added cost to Owner.
- E. Preinstallation Conference: Conduct conference at [**Project site**] [**location and time as determined by DEN Project Manager**] <Insert location>.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 deg F (7 deg C).
1. Maintain containers in clean condition, free of foreign materials and residue.
 2. Remove rags and waste from storage areas daily.

1.8 PROJECT CONDITIONS

- A. Apply waterborne intumescent paints only when temperatures of surfaces to be painted and ambient air temperatures are between 50 and 90 deg F (10 and 32 deg C).
- B. Apply solvent-thinned intumescent paints only when temperatures of surfaces to be painted and ambient air temperatures are between 45 and 95 deg F (7 and 35 deg C).
- C. Do not apply intumescent paints in snow, rain, fog, or mist; when relative humidity exceeds 85 percent; at temperatures less than 5 deg F (3 deg C) above the dew point; or to damp or wet surfaces.
- D. Allow wet surfaces to dry thoroughly and to attain temperature and conditions specified before starting or continuing coating operation.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 INTUMESCENT PAINT MATERIALS, GENERAL

A. Material Compatibility:

1. Provide materials for use within each paint system that are compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
2. For each material or coat, provide products and spreading rates recommended in writing by intumescent paint manufacturer for use on substrate indicated. Comply with requirements for fire-retardant coating classification and surface-burning characteristics indicated.

- B. VOC Content: Products shall comply with VOC limits of authorities having jurisdiction[**and, for interior paints and coatings applied at Project site, the following VOC limits, exclusive of colorants added to a tint base, when calculated according to 40 CFR 59, Subpart D (EPA Method 24)**].

1. Flat Paints and Coatings: 50 g/L.
2. Nonflat Paints and Coatings: 150 g/L.
3. Primers, Sealers, and Undercoaters: VOC not more than 200 g/L.
4. Anticorrosive and Antirust Paints Applied to Ferrous Metals: 250 g/L.
5. Clear Wood Finishes, Varnishes: VOC not more than 350 g/L.
6. Shellacs, Clear: 730 g/L.
7. Shellacs, Pigmented: 550 g/L.

- C. Low-Emitting Materials: Interior paints and coatings shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- D. Colors and Gloss: [**As selected by DEN Project Manager from manufacturer's full range**] [**Match DEN Project Manager's samples**] [**As indicated in a color schedule**] <Insert requirements>.

2.2 EXTERIOR, PIGMENTED, INTUMESCENT PAINT SYSTEM

- A. Primer: Intumescent paint manufacturer's recommended primer, if required, compatible with substrate and other materials indicated.

1. VOC Content: <Insert number>.

- B. Fire-Retardant Intumescent Paint and Overcoat: Fire-retardant paint for exterior wood surfaces and fire-inert, weather-resistant, protective overcoat that will not affect fire-retardant class of intumescent coating.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Flame Control Coatings, LLC; No. 149; flat finish[**and No. 400; semigloss finish**].
 - b. Magna Coatings Technology Inc.; SafeCoat Exterior Intumescent and SafeCoat 725 Sealer/Overcoat; [**satin**] [**semigloss**] [**gloss**] finish.
 - c. Albi Manufacturing, a division of StanChem, Inc.; Albi-Cote 107A and Albi 144 Fire Inert Semigloss Overcoat.
 - d. Fire Research Laboratories/Ocean Fire Retardants Inc.; FireCoat 320 and [**TopCoat A, clear**] [**TopCoat X, pigmented**] **<Insert gloss>**.
 - e. NoFire Technologies, Inc.; A-18; flat finish[/**manufacturer-approved topcoat**] **<Insert topcoat>**.
 - f. **<Insert manufacturer's name; product name or designation>**.
 - g. or approved equal.
 2. VOC Content: **<Insert number>**.

2.3 INTERIOR, PIGMENTED, INTUMESCENT PAINT SYSTEM

- A. Primer: Intumescent paint manufacturer's recommended primer compatible with substrate and other materials indicated.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Albi Manufacturing, a division of StanChem, Inc.; [**no coating required**] [**primer approved by Albi**] [**Albi 490W**].
 - b. Benjamin Moore & Co.; Fresh Start 217 Alkyd Enamel Underbody or Super Spec C245 Alkyd Enamel Undercoater/Primer Sealer.
 - c. Fire Research Laboratories/Ocean Fire Retardants Inc.; latex primer approved by manufacturer.
 - d. Flame Control Coatings, LLC; [**no coating required**] [**No. 3001 Primer**].
 - e. International Fire Resistant Systems, Inc.; primer approved by manufacturer.
 - f. Magna Coatings Technology Inc.; [**no coating required**] [**SafeCoat 725 Sealer/Overcoat**].
 - g. Muralo Company (The); [**no coating required**] [**Cedar Solution #2201**].
 - h. NoFire Technologies, Inc.; [**no coating required**] [**primer approved by manufacturer**].
 - i. PPG Industries, Inc.; Speed Hide 6-6 interior quick-drying enamel undercoater.
 - j. **<Insert manufacturer's name; product name or designation>**.
 - k. or approved equal.
 2. VOC Content: **<Insert number>**.

- B. Fire-Retardant Intumescent Paint: Solvent-based, modified-alkyd-type, fire-retardant paint for interior wood and other combustible surfaces[; **MPI #63**].
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Flame Control Coatings, LLC; [**No. 10-10**] [**No. 10-10A**]; flat finish.
 - b. Albi Manufacturing; a division of StanChem, Inc.; Albi-Cote 107A; flat finish.
 - c. **<Insert manufacturer's name; product name or designation>**.
 - d. or approved equal.
 2. VOC Content: E Range of [**E1**] [**E2**] [**E3**].
 3. VOC Content: **<Insert number>**.
- C. Fire-Retardant Intumescent Paint: Water-based, latex-type, fire-retardant paint for interior wood and other combustible surfaces[; **MPI #64**].
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Benjamin Moore & Co.; M59 220.
 - b. Flame Control Coatings, LLC; No. 20-20; flat finish.
 - c. Magna Coatings Technology Inc.; SafeCoat 451.
 - d. Muralo Company (The); 1500; flat finish.
 - e. NoFire Technologies, Inc.; A-18; flat finish.
 - f. PPG Industries, Inc.; Speed Hide 42-7; flat finish.
 - g. **<Insert manufacturer's name; product name or designation>**.
 - h. Albi Manufacturing, a division of StanChem, Inc.; Albi-Cote FRL; flat finish.
 - i. Fire Research Laboratories/Ocean Fire Retardants Inc.; FireCoat 320; flat finish.
 - j. Flame Control Coatings, LLC; No. 320A.
 - k. International Fire Resistant Systems, Inc.; Firefree88; flat finish.
 - l. **<Insert manufacturer's name; product name or designation>**.
 - m. or approved equal.
 2. VOC Content: E Range of [**E1**] [**E2**] [**E3**].
 3. VOC Content: **<Insert number>**.
- D. Topcoat/Overcoat: Solvent-based, alkyd-type, pigmented, fire-inert, protective-finish coating that will not affect fire-retardant class of intumescent coating.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Albi Manufacturing, a division of StanChem, Inc.; Albi 144 semigloss fire-inert alkyd coating.
 - b. Fire Research Laboratories/Ocean Fire Retardants Inc.; [**no coating required**] [**TopCoat A, clear**] [**TopCoat X, pigmented**].
 - c. Flame Control Coatings, LLC; [**no coating required**] [**No. 30-30; semigloss finish**] [**No. 666A; semigloss finish**].
 - d. International Fire Resistant Systems, Inc.; [**no coating required**] [**coating approved by International Fire Resistant Systems**].
 - e. **<Insert manufacturer's name; product name or designation>**.

- f. or approved equal.
 2. VOC Content: **<Insert number>**.
- E. Topcoat/Overcoat: Water-based, latex-type, pigmented, fire-inert, protective-finish coating that will not affect fire-retardant class of intumescent coating[; **MPI #67**].
1. Products: Subject to compliance with requirements, provide one of the following:
 2. Product in second option in first subparagraph below complies with MPI #67. It can be used as an overcoat for No. 10-10 or No. 20-20. MPI lists the distributor of this product, rather than the manufacturer, as the listing manufacturer. Retain subparagraph if retaining only MPI-approved products. Other manufacturers do not recommend an overcoat but their intumescent product may be listed in MPI #67.
 - a. Flame Control Coatings, LLC; **[no coating required] [No. 40-40; low gloss finish]**.
 - b. Benjamin Moore & Co.; no coating permitted.
 - c. Magna Coatings Technology Inc.; no coating recommended.
 - d. Muralo Company (The); no coating required.
 - e. NoFire Technologies, Inc.; latex-based coating approved by NoFire.
 - f. PPG Industries, Inc.; no coating recommended.
 - g. Albi Manufacturing; a division of StanChem, Inc.; **[no coating required] [Albi-Cote TC Latex Semi Gloss]**.
 - h. **<Insert manufacturer's name; product name or designation>**.
 - i. or approved equal.
 3. VOC Content: E Range of **[E1] [E2] [E3]**.
 4. VOC Content: **<Insert number>**.

2.4 INTERIOR, CLEAR, INTUMESCENT PAINT SYSTEM

- A. Stain Coat: Factory-formulated, nonbleeding, solvent-based, alkyd-type penetrating wood stain.
1. Stain approved by intumescent paint manufacturer.
- B. Clear Sanding Sealer: Solvent-based, modified-alkyd type for interior wood surfaces[; **MPI #65**];
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Flame Control Coatings, LLC; No. 6 Clear Wood Sealer.
 - b. Fire Research Laboratories/Ocean Fire Retardants Inc.; sealer approved by Fire Research Laboratories.
 - c. Flame Control Coatings, LLC; No. 66 Clear Wood Sealer, Low VOC.
 - d. Magna Coatings Technology Inc.; SafeCoat 725 Sealer/Overcoat.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.

2. VOC Content: E Range of [E1] [E2] [E3].
 3. VOC Content: <Insert number>.
- C. Fire-Retardant Intumescent Paint: Solvent- or water-based, fire-retardant paint for interior wood and other combustible surfaces[; **MPI #62**].
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Flame Control Coatings, LLC; No. 166; satin finish.
 - b. Magna Coatings Technology Inc.; SafeCoat 747 Clear Fire-Retardant Coating; satin finish.
 - c. Fire Research Laboratories/Ocean Fire Retardants Inc.; ClearCoat II; [flat] [satin] finish.
 - d. <Insert manufacturer's name; product name or designation>.
 - e. or approved equal.
 2. VOC Content: E Range of [E1] [E2] [E3].
 3. VOC Content: <Insert number>.
- D. Topcoat/Overcoat: Protective fire-inert clear coating that will not affect fire-test-response characteristics of intumescent coating[; **MPI #66**].
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Flame Control Coatings, LLC; No. 167; [low gloss] [semigloss] [gloss] finish.
 - b. Fire Research Laboratories/Ocean Fire Retardants Inc.; TopCoat A; [flat] [satin] [semigloss] [gloss] finish.
 - c. Magna Coatings Technology Inc.; SafeCoat 725 Sealer/Overcoat; [satin] [semigloss] [gloss] finish.
 - d. <Insert manufacturer's name; product name or designation>.
 - e. or approved equal.
 2. VOC Content: E Range of [E1] [E2] [E3].
 3. VOC Content: <Insert number>.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Applicator present, for compliance with manufacturer's requirements for surface treatments, shop-primed surfaces, maximum moisture content, and other conditions affecting performance of the Work.
- B. Begin coating only when moisture content of wood substrate is 15 percent or less when measured with an electronic moisture meter.
- C. Begin coating no sooner than [28] <Insert number> days after substrate is constructed and is visually dry on both sides.

- D. Verify suitability of substrates, including surface conditions, and compatibility with existing finishes and primers.
- E. Begin coating application only after unsatisfactory conditions have been corrected and surfaces are dry.

3.2 PREPARATION

- A. Comply with manufacturer's written instructions[**and recommendations in the "MPI Architectural Painting Specification Manual"**] applicable to substrates and coating systems indicated.
- B. Remove hardware and hardware accessories, plates, machined surfaces, light fixtures, and similar items already installed that are not to be coated. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and coating.
 - 1. After completing coating operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection if any.
- C. Clean substrates of substances, including dirt, oil, grease, and incompatible paints and encapsulants, that could impair bond of coatings. Do not coat surfaces if surface moisture content or alkalinity exceeds that permitted in manufacturer's written instructions.
 - 1. Remove incompatible primers, and reprime substrate with compatible primers as required to produce coating systems indicated.
 - 2. Perform cleaning and coating application so dust and other contaminants from cleaning process will not fall on wet, newly coated surfaces.

3.3 APPLICATION

- A. General: Apply intumescent paints according to manufacturer's written instructions and to comply with requirements for fire-retardant coating classification.
 - 1. Use equipment and techniques best suited for substrate and type of material being applied.
 - 2. Coat surfaces behind movable items the same as similar exposed surfaces.
 - 3. Apply each coat separately according to manufacturer's written instructions.
 - 4. Finish doors on faces with intumescent finish. Paint tops, bottoms, and side edges with fire-inert finish.
- B. Apply coatings to prepared surfaces as soon as practical after preparation and before subsequent surface soiling or deterioration.
- C. Apply coatings to produce surface films without cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness, or other surface imperfections. Cut in sharp lines and color breaks.

1. Pigmented Finishes: If undercoats or other conditions show through pigmented topcoat/overcoat, apply additional coats until cured film has a uniform paint finish, color, and appearance.
2. Clear Finishes: Produce a smooth surface film of even sheen[**using multiple coats**].

3.4 CLEANING AND PROTECTION

- A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.
- B. After completing coating application, clean spattered surfaces. Remove spattered coatings by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.
- C. Protect work of other trades against damage from coating application. Correct damage to work of other trades by cleaning, repairing, replacing, and refinishing, as approved by DEN Project Manager, and leave in an undamaged condition.
- D. At completion of construction activities, touch up and restore damaged or defaced coated surfaces.

3.5 PAINT SYSTEM SCHEDULE

- A. Prime Coat: If required and approved by intumescent paint manufacturer.
- B. Fire-Retardant Intumescent Coating: Minimum [**two coats**] [**one coat**] to comply with requirements for fire-retardant coating classification and surface-burning characteristics indicated.
- C. Topcoat/Overcoat: Apply if required or recommended and approved by intumescent paint manufacturer.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 099646

SECTION 099653 - ELASTOMERIC COATINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes surface preparation and application of elastomeric coatings to the following exterior substrates:
 - 1. Concrete.
 - 2. Concrete unit masonry.
 - 3. Clay masonry.
 - 4. Stucco.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Include data substantiating that materials comply with requirements.
 - 2. Samples for Initial Selection: For each type of elastomeric coating indicated.
- B. Samples for Verification: For each type of elastomeric coating indicated and in each color and gloss.
 - 1. Submit Samples on same type of substrate as that to receive application, **8 inches** (200-mm) square.
 - 2. Step coats on Samples to show each separate coat, including primers and block fillers as applicable.
 - 3. Label each coat of each Sample.
 - 4. Label each Sample for location and application area.
- C. Product List: For each product indicated, including the following:
 - 1. Cross-reference to coating system and locations of application areas. Use same designations indicated on Drawings and in schedules.
 - 2. Manufacturer's recommended spreading rate for each separate coat, including primers and block fillers for each type of substrate as applicable.

3. Printout of current "MPI Approved Products List" for each product category specified in Part 2 that specifies coatings approved by MPI, with the proposed product highlighted.

1.4 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that are from same production run (batch mix) as materials applied and that are packaged for storage in unopened, factory-sealed containers and identified with labels describing contents.

1. Quantity: Furnish an additional [5] <Insert number> percent but not less than [1 gal. (3.8 L)] <Insert quantity> of each material, color, and texture applied.

1.5 QUALITY ASSURANCE

- A. MPI Standards: Comply with MPI standards indicated and provide elastomeric coatings listed in the "MPI Approved Products List."

1. Preparation and Workmanship: Comply with requirements in the "MPI Architectural Painting Specification Manual" for products and coating systems indicated.

- B. Mockups: Prepare [two] <Insert number> mockups of each coating system indicated and each color and finish selected to verify preliminary selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. DEN Project Manager will select [two] <Insert number> wall surfaces of at least [100 sq. ft. (9.3 sq. m)] <Insert size> to represent surfaces and conditions for application of each type and texture of elastomeric coating.
2. Final approval of color and texture selections will be based on mockups.
 - a. If preliminary color selections are not approved, prepare additional mockups of additional color and textures selected by DEN Project Manager at no added cost to Owner.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 deg F (7 deg C).

1. Maintain containers in clean condition, free of foreign materials and residue.
2. Remove rags and waste from storage areas daily.

1.7 PROJECT CONDITIONS

- A. Apply coatings only when temperature of surfaces to be coated and ambient air

temperatures are between **50 and 90 deg F** (10 and 32 deg C) unless otherwise permitted by manufacturer's written instructions.

- B. Do not apply coatings in snow, rain, fog, or mist; when relative humidity exceeds 85 percent; at temperatures less than **5 deg F** (3 deg C) above the dew point; or to damp or wet surfaces.
- C. Allow wet surfaces to dry thoroughly and attain temperature and conditions specified before starting or continuing coating operation.

1.8 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace elastomeric coatings that fail within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Water penetration through the coating.
 - b. Deterioration of coating beyond normal weathering.
 - c. **<Insert failure modes>**.
 - 2. Warranty Period: Minimum [**five (5)**] [**ten (10)**] **<Insert number>** years from date of Substantial Completion.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

- A. Material Compatibility:
 - 1. Provide elastomeric finish coatings and crack fillers, primers, and block fillers as applicable for use within elastomeric finish coatings that are compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
 - 2. For each material or coat, provide products and spreading rates recommended in writing by elastomeric coating manufacturer for use on substrate indicated.

2.2 ELASTOMERIC FINISH COATINGS

- A. Exterior Non-Flat Waterborne, Pigmented Elastomeric Coating[: **MPI #38**].

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. BASF Building Systems; Thoro Thorolastic.
 - b. Benjamin Moore & Co.; Moorlastic.
 - c. Envirocoat Technologies Inc.; [**Envirocoat, Ceramic Insulcoat - Wall**] [**Liquid Ceramic Exterior Wall Coat**].
 - d. Euclid Tamms; Tamms Tammolastic.
 - e. Flex Bon Paints; Ext. 100% Acrylic Elastomeric Waterproof.
 - f. Frazee Paint & Wallcovering; EMC Elasto-Wall, Smooth Elastomeric Finish.
 - g. Kryton Canada Corporation; Kryton Wall Gard.
 - h. Modco Technology Ltd.; General Paint, Elastocoat.
 - i. Parker Paint Mfg. Co. Inc., a subsidiary of PPI; Ext. Acrylic Elastomeric.
 - j. L & L Coatings Corporation; 300 Mastic (Brush, Roller, and Airless Spray Grade).
 - k. <Insert manufacturer's name; product name or designation>.
 - l. or approved equal.
2. Surface Profile: [**Smooth**] [**Fine**] <Insert profile> texture.
3. VOC Content: [**100 g/L or less**] [**Less than 51 g/L**] <Insert limit>.
4. Moisture-Vapor Transmission: Minimum <Insert perms (metric perms)>, based on testing according to ASTM D 1653.

B. Exterior Flat Waterborne, Pigmented Elastomeric Coating[: **MPI #113**].

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Cloverdale Paint; [**Towerthon Elastomeric Coating**] [**Towerthon Plus Elastomeric Coating**].
 - b. Columbia Paint & Coatings; Hi Performance [**Flex Pro Elastomeric Coating**] [**Elastech 100% Acry. Elastomeric Coating**].
 - c. Coronado Paint Company; Elast-O-Meric Acrylic Membrane - 20 mil.
 - d. Diamond Vogel Paints; Permafex Elastomeric Latex Coating.
 - e. ICI Paints; Decra-Flex Elastomeric Coating.
 - f. Kelly-Moore Paints; Kel-Seal Terpolymer 100% Acrylic Elastomeric.
 - g. Kwal Paint; Kwal Accu-Pro Elasto Wall.
 - h. Miller Paint Co.; Milastic Elastomeric Coating.
 - i. Mills Paint; Weather Flex Elastomeric Coating.
 - j. Modco Technology Ltd.; Elastocoat Acrylic Elastomeric Paint.
 - k. Parker Paint Mfg. Co. Inc., a subsidiary of PPI; EMC Elastomeric Coating.
 - l. PPG Industries; Pitt-Flex Elastomeric Coating.
 - m. Pratt & Lambert; Pro-Hide Gold Ext. Elastomeric Coating.
 - n. Rodda Paint Co.; Super Roflex Acrylic Elastomeric Coating.
 - o. Sherwin-Williams Company (The); Sherlastic Elastomeric Coating.
 - p. Spectra-Tone Paint Corporation; Elasto-Coat High Build Waterproofing Coating.
 - q. Teifs; Professional Coatings, TeifsLastic.
 - r. Vista Paint; Solotex.
 - s. BASF Building Systems; Sonneborn Colorflex.
 - t. Fox Industries, Inc.; FX-501 Elastomeric Coating.

- u. L & L Coatings Corporation; 300 Mastic (Brush, Roller, and Airless Spray Grade).
 - v. M.A.B. Paints; [**Acra-Lastic Series**] [**Motite Elastomeric Coating**].
 - w. Neogard, a division of Jones-Blair Company; Neoflex.
 - x. Pacific Polymers International, Inc.; [**Elasto-Tex Wallcoating**] [**Elasto-Tex Wallcoating H.S.**].
 - y. Sto Corp.; Stochastic.
 - z. Tnemec Company, Inc.; Enviro-Crete Series.
 - aa. <Insert manufacturer's name; product name or designation>.
 - bb. or approved equal.
- 2. Surface Profile: [**Smooth**] [**Fine**] <Insert profile> texture.
 - 3. VOC Content: [**100 g/L or less**] [**Less than 51 g/L**] <Insert limit>.
 - 4. Moisture-Vapor Transmission: Minimum <Insert perms (metric perms)>, based on testing according to ASTM D 1653.

2.3 OTHER MATERIALS

- A. Crack Fillers: Elastomeric coating manufacturer's recommended, factory-formulated crack fillers or sealants, including crack filler primers, compatible with substrate and other materials indicated; VOC content complying with limits of authorities having jurisdiction.
- B. Primer: Elastomeric coating manufacturer's recommended, factory-formulated, alkali-resistant primer compatible with substrate and other materials indicated.
 - 1. VOC Content: [**650 g/L or less**] [**450 g/L or less**] [**Less than 351 g/L**] [**200 g/L or less when thinned to manufacturer's maximum recommendation**] [**100 g/L or less**] <Insert limit>.
- C. Concrete Unit Masonry Block Filler: Elastomeric coating manufacturer's recommended, factory-formulated, high-performance latex block filler compatible with substrate and other materials indicated.
 - 1. VOC Content: [**200 g/L or less**] [**100 g/L or less**] [**Less than 51 g/L**] <Insert limit>.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Applicator present, for compliance with manufacturer's requirements for maximum moisture content, alkalinity, and other conditions affecting performance of work.
- B. Begin coating only when moisture content of substrate is 12 percent or less when measured with an electronic moisture meter.

- C. Begin coating no sooner than [28] <Insert number> days after substrate is constructed and is visually dry on both sides.
- D. Verify that substrate is within the range of alkalinity recommended by manufacturer.
- E. Verify suitability of substrates including surface conditions and compatibility with existing finishes and primers.
- F. Begin coating application only after unsatisfactory conditions have been corrected and surfaces are dry.

3.2 PREPARATION

- A. Comply with manufacturer's written instructions[**and recommendations in the "MPI Architectural Painting Specification Manual"**] applicable to substrates and coating systems indicated.
- B. Remove hardware and hardware accessories, plates, machined surfaces, light fixtures, and similar items already installed that are not to be coated. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and coating.
 - 1. After completing coating operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection if any.
- C. Clean substrates of substances that could impair bond of coatings, including dirt, oil, grease, and incompatible paints and encapsulants. Do not coat surfaces if moisture content or alkalinity of surfaces to be coated exceeds that permitted in manufacturer's written instructions.
 - 1. Remove incompatible primers and reprime substrate with compatible primers as required to produce coating systems indicated.
 - 2. Perform cleaning and coating application so dust and other contaminants from cleaning process will not fall on wet, newly coated surfaces.
- D. Crack Repair: Fill cracks according to manufacturer's written instructions before coating surfaces.

3.3 APPLICATION

- A. Apply elastomeric coatings according to manufacturer's written instructions.
 - 1. Use equipment and techniques best suited for substrate and type of material being applied.
 - 2. Coat surfaces behind movable items the same as similar exposed surfaces.
 - 3. Apply each coat separately according to manufacturer's written instructions.
- B. Primers: Apply at a rate to ensure complete coverage.

- C. Block Fillers: Apply at a rate to ensure complete coverage with pores filled.
- D. Tint each undercoat a lighter shade to facilitate identification of each coat if multiple coats of same material are to be applied. Tint undercoats similar to color of topcoat, but provide sufficient difference in shade of undercoats to distinguish each separate coat.
- E. If undercoats or other conditions show through topcoat, apply additional coats until cured film has a uniform finish, color, and appearance.
- F. Apply coatings to produce surface films without cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness, or other surface imperfections. Cut in sharp lines and color breaks.
- G. Apply coatings to prepared surfaces as soon as practicable after preparation and before subsequent surface soiling or deterioration.
- H. Spray Application: Use spray equipment for application only when permitted by authorities having jurisdiction. Wherever spray application is used, do not double back with spray equipment to build up film thickness of two coats in one pass.

3.4 FIELD QUALITY CONTROL

- A. Testing of Paint Materials: Owner reserves the right to invoke the following testing procedures:
 - 1. Owner will engage the services of a qualified testing agency to sample materials being used. Samples of material delivered to Project site will be taken, identified, sealed, and certified in presence of Contractor.
 - 2. Testing agency will perform tests for compliance of materials with product requirements.
 - 3. Owner may direct Contractor to stop coating application if test results show materials being used do not comply with requirements. Remove noncomplying materials from Project site, pay for testing, and recoat surfaces that were coated with rejected materials. Remove rejected materials from previously coated surfaces if, on recoating with complying materials, the two coatings are incompatible.
- B. Field Testing and Inspection: Owner reserves the right to engage the services of a qualified testing agency to verify installed thickness of elastomeric coatings.

3.5 CLEANING AND PROTECTION

- A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.
- B. After completing coating application, clean spattered surfaces. Remove spattered coatings by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.

- C. Protect work of other trades against damage from coating application. Correct damage to work of other trades by cleaning, repairing, replacing, and refinishing, as approved by DEN Project Manager, and leave in an undamaged condition.
- D. At completion of construction activities, touch up and restore damaged or defaced coated surfaces.

3.6 COATING SCHEDULE

A. Concrete Substrates:

- 1. Primer: Concrete primer[**if required by manufacturer**].
- 2. Elastomeric Finish Coat(s): [**Minimum two coats with a total dry film thickness of 16 to 18 mils** (0.41 to 0.45 mm)] [**Minimum one coat with a total dry film thickness of 7 to 10 mils** (0.18 to 0.25 mm)] [**Manufacturer's recommended number of coats and total dry film thickness for condition of substrate**] <Insert requirement>.
- 3. Finish-Coat Color: [**As selected by DEN Project Manager from manufacturer's full range**] [**Match DEN Project Manager's samples**] [**As indicated in a color schedule**] <Insert requirement>.

B. Concrete Unit Masonry Substrates:

- 1. Primer: Concrete unit masonry primer[**if required by manufacturer**].
- 2. Block Filler: Concrete unit masonry block filler[**if required by manufacturer**].
- 3. Elastomeric Finish Coat(s): [**Minimum two coats with a total dry film thickness of 16 to 18 mils** (0.41 to 0.45 mm)] [**Minimum one coat with a total dry film thickness of 7 to 10 mils** (0.18 to 0.25 mm)] [**Manufacturer's recommended number of coats and total dry film thickness for condition of substrate**] <Insert requirement>.
- 4. Finish-Coat Color: [**As selected by DEN Project Manager from manufacturer's full range**] [**Match DEN Project Manager's samples**] [**As indicated in a color schedule**] <Insert requirement>.

C. Clay Masonry Substrates:

- 1. Primer: Clay masonry primer[**if required by manufacturer**].
- 2. Elastomeric Finish Coat(s): [**Minimum two coats with a total dry film thickness of 16 to 18 mils** (0.41 to 0.45 mm)] [**Minimum one coat with a total dry film thickness of 7 to 10 mils** (0.18 to 0.25 mm)] [**Manufacturer's recommended number of coats and total dry film thickness for condition of substrate**] <Insert requirement>.
- 3. Finish-Coat Color: [**As selected by DEN Project Manager from manufacturer's full range**] [**Match DEN Project Manager's samples**] [**As indicated in a color schedule**] <Insert requirement>.

D. Stucco Substrates:

- 1. Primer: Stucco primer[**if required by manufacturer**].

2. Elastomeric Finish Coat(s): **[Minimum two coats with a total dry film thickness of 16 to 18 mils (0.41 to 0.45 mm)] [Minimum one coat with a total dry film thickness of 7 to 10 mils (0.18 to 0.25 mm)] [Manufacturer's recommended number of coats and total dry film thickness for condition of substrate] <Insert requirement>.**
3. Finish-Coat Color: **[As selected by DEN Project Manager from manufacturer's full range] [Match DEN Project Manager's samples] [As indicated in a color schedule] <Insert requirement>.**

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 099653

SECTION 101100 - VISUAL DISPLAY SURFACES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Chalkboards.
2. Markerboards.
3. Tackboards.
4. Visual display rails.
5. Visual display wall panels.
6. Support systems for visual display boards.
7. Sliding visual display units.
8. Visual display conference units.
9. Visual display wall coverings.
10. Electronic markerboards.

B. Related Sections:

1. Section 097723 "Fabric-Wrapped Panels" for tackable, fabric-covered wall surfaces.
2. Section 101200 "Display Cases" for [**individually framed and enclosed, wall-mounted bulletin boards**] [**and for**] [**bulletin boards in built-in trophy and display cases**].
3. Section 101300 "Directories" for bulletin boards within built-in directories.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Tackboard: Framed or unframed, tackable, visual display board assembly.
- B. Visual Display Board Assembly: Visual display surface that is factory fabricated into composite panel form, either with or without a perimeter frame; includes chalkboards, markerboards, and tackboards.

- C. Visual Display Surface: Surfaces that are used to convey information visually, including surfaces of chalkboards, markerboards, tackboards, and surfacing materials that are not fabricated into composite panel form but are applied directly to walls.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. [**Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for visual display surfaces.**]
1. Include [**rated capacities, operating characteristics, electrical characteristics and**] individual panel weights for sliding visual display units.
 2. Include computer system requirements for electronic markerboards.
 3. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
1. Product Data for Credit IEQ 4.1: For adhesives, documentation including printed statement of VOC content.
 2. Product Data for Credit IEQ 4.4: For composite wood products, documentation indicating that the product contains no urea formaldehyde.
 3. Laboratory Test Reports for Credit IEQ 4: For [**adhesives**] [**and**] [**composite wood products**], documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: For visual display surfaces. Include plans, elevations, sections, details, and attachments to other work.
1. Show locations of panel joints.
 2. Show locations of special-purpose graphics for visual display surfaces.
 3. Include sections of typical trim members.
 4. Wiring Diagrams: For power, signal, and control wiring.
- D. Samples for Initial Selection: For each type of visual display surface indicated, for units with factory-applied color finishes, and as follows:
1. Actual sections of [**porcelain-enamel face sheet**] [**painted-finish chalkboard**] [**melamine visual display surface**] [**high-pressure-laminate visual display surface**] [**tackboard assembly**] [**visual display wall panel**] [**display rail**] [**visual display wall covering**].
 2. Fabric swatches of [**vinyl-**] [**and**] [**polyester-**] fabric-faced tack assemblies.
 3. Include accessory Samples to verify color selected.
- E. Samples for Verification: For each type of visual display surface indicated.

1. Visual Display Surface: Not less than **8-1/2 by 11 inches** (215 by 280 mm), mounted on substrate indicated for final Work. Include one panel for each type, color, and texture required.
2. Trim: **6-inch-** (152-mm-) long sections of each trim profile.
3. Display Rail: **6-inch-** (152-mm-) long sections.
4. **[Rail] [Modular] Support System:** **6-inch-** (152-mm-) long sections.
5. Accessories: Full-size Sample of each type of accessory.

F. Product Schedule: For visual display surfaces. **[Use same designations indicated on Drawings.]**

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer.
- B. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for surface-burning characteristics of fabrics.
- C. Warranties: Sample of special warranties.

1.6 CLOSEOUT SUBMITTALS

- A. **[Operation and]Maintenance Data:** For visual display surfaces **[and power-operated units]** to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of motor-operated, sliding visual display units required for this Project.
- B. Source Limitations: Obtain visual display surfaces from single source from single manufacturer.
- C. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 1. Flame-Spread Index: **[25] <Insert value>** or less.
 2. Smoke-Developed Index: **[50] [450] <Insert value>** or less.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

- E. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate appearance and aesthetic effects and set quality standards for installation.
 - 1. Build mockup of typical [**wall area**] <Insert description> as shown on Drawings. Include accessories.
 - 2. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- F. Preinstallation Conference: Conduct conference at [**Project site**] [**location and time as determined by DEN Project Manager**] <Insert location>.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver factory-built visual display surfaces[, **including factory-applied trim where indicated,**] completely assembled in one piece without joints, where possible. If dimensions exceed maximum manufactured panel size, provide two or more pieces of equal length as acceptable to DEN Project Manager. When overall dimensions require delivery in separate units, prefit components at the factory, disassemble for delivery, and make final joints at the site.
- B. Store visual display surfaces vertically with packing materials between each unit.

1.9 PROJECT CONDITIONS

- A. Environmental Limitations: Do not deliver or install visual display surfaces until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above ceilings is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
- B. Field Measurements: Verify actual dimensions of construction contiguous with visual display surfaces by field measurements before fabrication.
 - 1. Allow for trimming and fitting where taking field measurements before fabrication might delay the Work.

1.10 WARRANTY

- A. Special Warranty for Porcelain-Enamel Face Sheets: Manufacturer's standard form in which manufacturer agrees to repair or replace porcelain-enamel face sheets that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Surfaces lose original writing and erasing qualities.
 - b. Surfaces exhibit crazing, cracking, or flaking.

2. Warranty Period: Minimum **[50]** <Insert number> years from date of Substantial Completion.
3. Warranty Period: Life of the building.

B. Special Warranty for Electronic Markerboards: Manufacturer's standard form in which manufacturer agrees to repair or replace electronic markerboards that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Minimum **[two (2)]** <Insert number> years from date of Substantial Completion.

1.11 CONSTRUCTION WASTE MANAGEMENT

A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

A. Porcelain-Enamel Face Sheet: ASTM A 424, enameling-grade steel, uncoated thickness indicated; with exposed face and edges coated with primer, **1.7-to-2.5-mil-** (0.043-to-0.064-mm-) thick ground coat, and color cover coat; and with concealed face coated with primer and **1.7-to-2.5-mil-** (0.043-to-0.064-mm-) thick ground coat.

1. Matte-Finish Cover Coat: Low reflective; chalk wipes clean with dry cloth or standard eraser. Minimum **2.0-to-2.5-mil-** (0.051-to-0.064-mm-) thick cover coat. Cover and ground coats shall be fused to steel at manufacturer's standard firing temperatures but not less than **1250 deg F** (677 deg C).

a. Products: Subject to compliance with requirements, provide the following] [provide one of the following.

- 1) PolyVision Corporation, a Steelcase company; P³ ceramicsteel Chalkboard.
- 2) <Insert manufacturer's name; product name or designation>.
- 3) or approved equal.

2. Gloss-Finish Cover Coat: Gloss as indicated; dry-erase markers wipe clean with dry cloth or standard eraser. Minimum **3.0-to-4.0-mil-** (0.076-to-0.102-mm-) thick cover coat. Cover and ground coats shall be fused to steel at manufacturer's standard firing temperatures but not less than **1475 deg F** (802 deg C).

a. Products: Subject to compliance with requirements, provide one of the following.

- 1) PolyVision Corporation, a Steelcase company; P³ ceramicsteel Markerboard.
 - 2) **<Insert manufacturer's name; product name or designation>**.
 - 3) or approved equal.
- B. Porcelain-Enamel Face Sheet: Porcelain-enamel-clad, ASTM A 463/A 463M, Type 1, stretcher-leveled aluminized steel, with **0.024-inch** (0.60-mm) uncoated thickness; with porcelain-enamel coating fused to steel at approximately **1000 deg F** (538 deg C).
1. Matte Finish: Low reflective; chalk wipes clean with dry cloth or standard eraser.
 - a. Products: Subject to compliance with requirements, provide one of the following.
 - 1) Claridge Products and Equipment, Inc.; Vitracite Chalkboard.
 - 2) **<Insert manufacturer's name; product name or designation>**.
 - 3) or approved equal.
 2. Gloss Finish: Low gloss; dry-erase markers wipe clean with dry cloth or standard eraser. Suitable for use as projection screen.
 - a. Products: Subject to compliance with requirements, provide one of the following.
 - 1) Claridge Products and Equipment, Inc.; LCS Markerboard.
 - 2) **<Insert manufacturer's name; product name or designation>**.
 - 3) or approved equal.
- C. Porcelain-Enamel Face Sheet: Manufacturer's standard steel sheet with porcelain-enamel coating fused to steel; uncoated thickness indicated.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Claridge Products and Equipment, Inc.
 - b. PolyVision Corporation; a Steelcase company.
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.
 2. Matte Finish: Low reflective; chalk wipes clean with dry cloth or standard eraser.
 3. Gloss Finish: Gloss as indicated; dry-erase markers wipe clean with dry cloth or standard eraser.
- D. Melamine: Thermally fused, melamine-impregnated decorative paper complying with LMA SAT-1.
- E. High-Pressure Plastic Laminate: NEMA LD 3.
- F. Natural Cork Sheet: Seamless, single-layer, compressed fine-grain cork sheet; bulletin board quality; face sanded for natural finish[**with surface-burning characteristics indicated**].

- G. Plastic-Impregnated Cork Sheet: Seamless, homogeneous, self-sealing sheet consisting of granulated cork, linseed oil, resin binders, and dry pigments that are mixed and calendared onto fabric backing; with washable vinyl finish and integral color throughout[**with surface-burning characteristics indicated**].
- H. Vinyl Fabric: Mildew resistant, washable, complying with FS CCC-W-408D, Type II, **[burlap weave] <insert texture or pattern>**; weighing not less than **13 oz./sq. yd.** (440 g/sq. m); with surface-burning characteristics indicated.
- I. Polyester Fabric: Nondirectional weave, 100 percent polyester; weighing not less than **15 oz./sq. yd.** (508 g/sq. m); with surface-burning characteristics indicated.
- J. Hardboard: ANSI A135.4, tempered.
- K. Particleboard: ANSI A208.1, Grade M-1[.], **made with binder containing no urea formaldehyde.], that complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."**
- L. Fiberboard: ASTM C 208.
- M. Extruded Aluminum: **ASTM B 221** (ASTM B 221M), Alloy 6063.
- N. Adhesives: Manufacturer's standard product that complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.2 CHALKBOARD ASSEMBLIES

- A. Porcelain-Enamel Chalkboards: Balanced, high-pressure, factory-laminated chalkboard assembly of three-ply construction consisting of backing sheet, core material, and **[0.021-inch- (0.53-mm-) thick,] [0.013-inch- (0.33-mm-) thick,]** porcelain-enamel face sheet with matte finish.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. A-1 Visual Systems.
 - b. AARCO Products, Inc.
 - c. ADP Lemco, Inc.
 - d. Aywon.
 - e. Bangor Cork Company, Inc.
 - f. Best-Rite Manufacturing.
 - g. Claridge Products and Equipment, Inc.
 - h. Ghent Manufacturing, Inc.
 - i. Marsh Industries, Inc.; Visual Products Group.
 - j. Platinum Visual Systems; a division of ABC School Equipment, Inc.

- k. PolyVision Corporation; a Steelcase company.
 - l. Tri-Best Visual Display Products.
 - m. **<Insert manufacturer's name>**.
 - n. or approved equal.
 2. Hardboard Core: **1/4 inch** (6 mm) thick; with **[0.005-inch-** (0.127-mm-) **thick, aluminum foil] [0.015-inch-** (0.38-mm-) **thick, aluminum sheet] [0.0129-inch-** (0.35-mm-) **thick, galvanized-steel sheet]** backing.
 3. Particleboard Core: **3/8 inch** (9.5 mm) thick; with **[0.005-inch-** (0.127-mm-) **thick, aluminum foil] [0.015-inch-** (0.38-mm-) **thick, aluminum sheet] [0.0129-inch-** (0.35-mm-) **thick, galvanized-steel sheet]** backing.
 4. Fiberboard Core: **[3/8 inch** (9.5 mm)] **[1/2 inch** (13 mm)] thick; with **[0.001-inch-** (0.025-mm-) **thick, aluminum foil] [0.015-inch-** (0.38-mm-) **thick, aluminum sheet] [0.0129-inch-** (0.35-mm-) **thick, galvanized-steel sheet]** backing.
 5. Manufacturer's Standard Core: Minimum **1/4 inch** (6 mm) thick, with manufacturer's standard moisture-barrier backing.
 6. Laminating Adhesive: Manufacturer's standard, moisture-resistant thermoplastic type.
- B. High-Pressure-Laminate Chalkboards: Balanced, high-pressure, factory-laminated chalkboard assembly of two-ply construction consisting of fiberboard core material and high-pressure-laminate writing surface.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Best-Rite Manufacturing.
 - b. Ghent Manufacturing, Inc.
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.
- C. Melamine Chalkboards: Fabricated from **1/4-inch-** (6-mm-) thick, sealed and primed hardboard panels permanently bonded with melamine writing surface.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Best-Rite Manufacturing.
 - b. Marsh Industries, Inc.; Visual Products Group.
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.
- D. Painted-Finish Chalkboards: Fabricated from **[two plies of] 1/4-inch-** (6-mm-) thick, treated, tempered hardboard panels permanently surfaced with manufacturer's standard, heat-cured organic coating formulated for chalk-receptive matte finish.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AARCO Products, Inc.

- b. Marsh Industries, Inc.; Visual Products Group.
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.
- E. Natural-Slate Chalkboards: Select grade, resurfaced, natural slate; free from ribbons and other natural marks that impair their functional use and durability as a writing surface.
1. Writing surface shall be free of tooling marks, pits, chipping, scratches, and surface spalls in excess of those that can be easily corrected; and shall be free of surface-applied stain, dye, or other artificial coloring.
 2. Thickness: Not less than **1/4 inch** (6 mm) or more than **3/8 inch** (9.5 mm) thick with maximum deviation of **1/16 inch** (1.6 mm) when an average thickness of at least **1/4 inch** (6 mm) is maintained.
 3. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. **<Insert manufacturer's name>**.
 - b. or approved equal.

2.3 MARKERBOARD ASSEMBLIES

- A. Porcelain-Enamel Markerboards: Balanced, high-pressure, factory-laminated markerboard assembly of three-ply construction consisting of backing sheet, core material, and **[0.021-inch- (0.53-mm-) thick,] [0.013-inch- (0.33-mm-) thick,]** porcelain-enamel face sheet with **[high] [low]**-gloss finish.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AARCO Products, Inc.
 - b. ADP Lemco, Inc.
 - c. Aywon.
 - d. Bangor Cork Company, Inc.
 - e. Best-Rite Manufacturing.
 - f. Claridge Products and Equipment, Inc.
 - g. Egan Visual Inc.
 - h. Ghent Manufacturing, Inc.
 - i. Marsh Industries, Inc.; Visual Products Group.
 - j. Platinum Visual Systems; a division of ABC School Equipment, Inc.
 - k. PolyVision Corporation; a Steelcase company.
 - l. Tri-Best Visual Display Products.
 - m. **<Insert manufacturer's name>**.
 - n. or approved equal.
 2. Hardboard Core: **1/4 inch** (6 mm) thick; with **[0.005-inch- (0.127-mm-) thick, aluminum foil] [0.015-inch- (0.38-mm-) thick, aluminum sheet] [0.013-inch- (0.35-mm-) thick, galvanized-steel sheet]** backing.

3. Particleboard Core: [3/8 inch (9.5 mm)] [1/2 inch (13 mm)] thick; with [0.005-inch- (0.127-mm-) **thick, aluminum foil**] [0.015-inch- (0.38-mm-) **thick, aluminum sheet**] [0.013-inch- (0.35-mm-) **thick, galvanized-steel sheet**] backing.
 4. Fiberboard Core: [3/8 inch (9.5 mm)] [1/2 inch (13 mm)] thick; with [0.001-inch- (0.025-mm-) **thick, aluminum foil**] [0.015-inch- (0.38-mm-) **thick, aluminum sheet**] [0.013-inch- (0.35-mm-) **thick, galvanized-steel sheet**] backing.
 5. Manufacturer's Standard Core: Minimum 1/4 inch (6 mm) thick, with manufacturer's standard moisture-barrier backing.
 6. Laminating Adhesive: Manufacturer's standard, moisture-resistant thermoplastic type.
- B. Melamine Markerboards: Fabricated from 1/4-inch- (6-mm-) thick, sealed and primed hardboard panels permanently bonded with melamine or another high-pressure-laminate writing surface.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AARCO Products, Inc.
 - b. Ghent Manufacturing, Inc.
 - c. Marsh Industries, Inc.; Visual Products Group.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
- C. High-Pressure-Laminate Markerboard Assembly: Balanced, high-pressure, factory-laminated chalkboard assembly of three-ply construction consisting of backing sheet, fiberboard core material, and high-pressure-laminate writing surface.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Best-Rite Manufacturing.
 - b. EverProducts by Glenroy Inc.
 - c. Marsh Industries, Inc.; Visual Products Group.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
- ## 2.4 TACKBOARD ASSEMBLIES
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. A-1 Visual Systems.
 2. AARCO Products, Inc.
 3. ADP Lemco, Inc.
 4. Aywon.
 5. Bangor Cork Company, Inc.
 6. Best-Rite Manufacturing.
 7. Claridge Products and Equipment, Inc.

8. Egan Visual Inc.
 9. EverProducts by Glenroy Inc.
 10. Ghent Manufacturing, Inc.
 11. Marsh Industries, Inc.; Visual Products Group.
 12. Platinum Visual Systems; a division of ABC School Equipment, Inc.
 13. PolyVision Corporation; a Steelcase company.
 14. Tri-Best Visual Display Products.
 15. **<Insert manufacturer's name>**.
 16. or approved equal.
- B. Natural-Cork Tackboard **<Insert designation>**: **1/16-inch-** (1.6-mm-) thick, natural cork sheet factory laminated to **3/8-inch-** (9.5-mm-) [**7/16-inch-** (11-mm-)] thick fiberboard backing.
- C. Natural-Cork Tackboard **<Insert designation>**: **1/8-inch-** (3-mm-) thick, natural cork sheet factory laminated to **3/8-inch-** (9.5-mm-) thick fiberboard backing.
- D. Natural-Cork Tackboard **<Insert designation>**: **1/4-inch-** (6-mm-) thick, natural cork sheet factory laminated to **1/4-inch-** (6-mm-) thick [**hardboard**] [**particleboard**] backing.
- E. Plastic-Impregnated-Cork Tackboard **<Insert designation>**: **1/8-inch-** (3-mm-) thick, plastic-impregnated cork sheet factory laminated to **3/8-inch-** (9.5-mm-) thick fiberboard backing.
- F. Plastic-Impregnated-Cork Tackboard **<Insert designation>**: **1/4-inch-** (6-mm-) thick, plastic-impregnated cork sheet factory laminated to **1/4-inch-** (6-mm-) thick [**hardboard**] [**particleboard**] backing.
- G. Vinyl-Fabric-Faced Tackboard **<Insert designation>**: Vinyl fabric factory laminated to [**3/8-inch-** (9.5-mm-)] [**7/16-inch-** (11-mm-)] [**1/2-inch-** (13-mm-)] thick fiberboard backing.
- H. Vinyl-Fabric-Faced Tackboard **<Insert designation>**: **1/16-inch-** (1.6-mm-) thick, vinyl-fabric-faced cork sheet factory laminated to **3/8-inch-** (9.5-mm-) thick fiberboard backing.
- I. Vinyl-Fabric-Faced Tackboard **<Insert designation>**: **1/8-inch-** (3-mm-) thick, vinyl-fabric-faced cork sheet factory laminated to **3/8-inch-** (9.5-mm-) thick fiberboard backing.
- J. Vinyl-Fabric-Faced Tackboard **<Insert designation>**: **1/4-inch-** (6-mm-) thick, vinyl-fabric-faced cork sheet factory laminated to **1/4-inch-** (6-mm-) thick [**hardboard**] [**particleboard**] backing.
- K. Polyester-Fabric-Faced Tackboard **<Insert designation>**: Polyester fabric factory laminated to [**3/8-inch-** (9.5-mm-)] [**1/2-inch-** (13-mm-)] thick fiberboard backing.
- L. Polyester-Fabric-Faced Tackboard **<Insert designation>**: **1/16-inch-** (1.6-mm-) thick, polyester-fabric-faced cork sheet factory laminated to **3/8-inch-** (9.5-mm-) thick fiberboard backing.

- M. Polyester-Fabric-Faced Tackboard <Insert designation>: 1/8-inch- (3-mm-) thick, polyester-fabric-faced cork sheet factory laminated to 3/8-inch- (9.5-mm-) thick fiberboard backing.
- N. Polyester-Fabric-Faced Tackboard <Insert designation>: 1/4-inch- (6-mm-) thick, polyester-fabric-faced cork sheet factory laminated to 1/4-inch- (6-mm-) thick [hardboard] [particleboard] backing.
- O. <Insert tackboard>.

2.5 VISUAL DISPLAY RAILS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. AARCO Products, Inc.
 - 2. Bangor Cork Company, Inc.
 - 3. Best-Rite Manufacturing.
 - 4. Claridge Products and Equipment, Inc.
 - 5. Ghent Manufacturing, Inc.
 - 6. Marsh Industries, Inc.; Visual Products Group.
 - 7. Platinum Visual Systems; a division of ABC School Equipment, Inc.
 - 8. PolyVision Corporation; a Steelcase company.
 - 9. Tri-Best Visual Display Products.
 - 10. <Insert manufacturer's name>.
 - 11. or approved equal.
- B. General: Manufacturer's standard, aluminum-framed, tackable [cork] [fabric] visual display surface fabricated into narrow rail shape and designed for displaying material.

2.6 VISUAL DISPLAY WALL PANELS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. A-1 Visual Systems.
 - 2. ADP Lemco, Inc.
 - 3. Best-Rite Manufacturing.
 - 4. Claridge Products and Equipment, Inc.
 - 5. Egan Visual Inc.
 - 6. Marsh Industries, Inc.; Visual Products Group.
 - 7. Platinum Visual Systems; a division of ABC School Equipment, Inc.
 - 8. PolyVision Corporation; a Steelcase company.
 - 9. Tri-Best Visual Display Products.
 - 10. <Insert manufacturer's name>.
 - 11. or approved equal.

- B. Marker Wall Sheets: Fabricated from[**0.021-inch** (0.53-mm) **uncoated thickness,**] porcelain-enamel face sheets; for direct application to wall surface.
- C. Marker Wall Panels: Fabricated from markerboard assembly indicated.
- D. Tack Wall Panels: With tackable surface.
 - 1. Fabricated from tackboard assembly indicated.
 - 2. Natural Cork: [**1/8-inch-** (3-mm-)] [**1/4-inch-** (6-mm-)] thick, natural cork sheet for direct application to wall surface.
 - 3. Plastic-Impregnated Cork: [**1/8-inch-** (3-mm-)] [**1/4-inch-** (6-mm-)] thick, plastic-impregnated cork sheet for direct application to wall surface.
 - 4. Vinyl Fabric-Faced Cork: **1/4-inch-** (6-mm-) thick, vinyl-fabric-faced cork sheet for direct application to wall surface.
 - 5. Polyester-Fabric-Faced Cork: **1/4-inch-** (6-mm-) thick, polyester-fabric-faced cork sheet for direct application to wall surface.
- E. Joint Accessories: Manufacturer's standard, [**exposed trim**] [**concealed aluminum or steel spline**] at butt joints.
- F. Adhesive: Mildew-resistant, nonstaining adhesive, for use with specific tack wall panels and substrate application, as recommended in writing by visual display surface manufacturer.
 - 1. Adhesive shall have a VOC content of [**50**] **<Insert value>** g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - 2. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- G. Primer/Sealer: Mildew-resistant primer/sealer complying with requirements in [**Section 099113 "Interior Painting"**] **<Insert Section number>-<Insert Section title>** and recommended in writing by visual display surface manufacturer for intended substrate.

2.7 RAIL SUPPORT SYSTEM FOR VISUAL DISPLAY BOARDS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Best-Rite Manufacturing.
 - 2. Egan Visual Inc.
 - 3. KOH Design, Inc.
 - 4. Peter Pepper Products, Inc.
 - 5. PolyVision Corporation; a Steelcase company.
 - 6. **<Insert manufacturer's name>**.
 - 7. or approved equal.

- B. Support Rails: Horizontal, wall-mounted, extruded-aluminum rails designed to receive hanger clip and to support visual display boards[; **capable of gripping and suspending paper directly from rail**].
1. Finish: **[Clear anodic] [Color anodic] [Baked enamel] [Powder coat]**.
 2. Color and Gloss: **[Light bronze] [Medium bronze] [Dark bronze] [Black] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and gloss>**.
- C. Hanger Clips: Extruded aluminum with finish to match rails; designed to support independent visual display boards by engaging support rail and top trim of board.
- D. Visual Display Panels: Fabricated from not less than **3/8-inch-** (9.5-mm-) thick, kraft-paper honeycomb core; designed to be rigid and to resist warpage, and with aluminum trim designed to engage hanger clips.

2.8 MODULAR SUPPORT SYSTEM FOR VISUAL DISPLAY BOARDS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. AARCO Products, Inc.
 2. Best-Rite Manufacturing.
 3. Claridge Products and Equipment, Inc.
 4. Platinum Visual Systems; a division of ABC School Equipment, Inc.
 5. PolyVision Corporation; a Steelcase company.
 6. **<Insert manufacturer's name>**.
 7. or approved equal.
- B. Standards: **72-inch-** (1829-mm-) long, extruded-aluminum slotted standards designed for supporting visual display boards on panel clips. Standards shall be punched at not less than **[4 inches** (100 mm)] **<Insert dimension>** o.c.
1. Finish: **[Clear anodic] [Color anodic] [Baked enamel] [Powder coat]**.
 2. Color and Gloss: **[Light bronze] [Medium bronze] [Dark bronze] [Black] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and gloss>**.
- C. Panel Clips: Extruded aluminum or steel with finish to match standards.

2.9 SLIDING VISUAL DISPLAY UNITS

- A. Horizontal-Sliding Visual Display Units: Factory-fabricated units consisting of extruded-aluminum tubular frame, fixed-rear visual display panel, aluminum-framed horizontal-sliding panels, and extruded-aluminum fascia that conceals overhead sliding track; designed for recessed mounting. Provide panels that operate smoothly without vibration or chatter.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. A-1 Visual Systems.
 - b. AARCO Products, Inc.
 - c. ADP Lemco, Inc.
 - d. Aywon.
 - e. Best-Rite Manufacturing.
 - f. Claridge Products and Equipment, Inc.
 - g. Ghent Manufacturing, Inc.
 - h. Platinum Visual Systems; a division of ABC School Equipment, Inc.
 - i. PolyVision Corporation; a Steelcase company.
 - j. Tri-Best Visual Display Products.
 - k. **<Insert manufacturer's name>**.
 - l. or approved equal.
 2. Two-Track Units: Fabricate unit with fixed rear panel covering entire rear surface. Provide two sliding panels, each equal to not less than one-half of overall length of unit.
 3. Three-Track Units: Fabricate unit with fixed rear panel covering entire rear surface. Provide three sliding panels, each equal to not less than **[one-third]** **[one-half]** of overall length of unit.
 4. Four-Track Units: Fabricate unit with fixed rear panel centered in and covering not less than one-half of rear surface, and fixed front panel on each side of unit equal to not less than one-quarter of overall length of unit. Provide four sliding panels, each equal to not less than one-quarter of overall length of unit.
 - a. Swinging Doors: Fabricated from same construction as sliding panels and supported on full-height continuous hinges. Provide visual display surface on both sides of each door.
 5. Sliding Panels: Fabricated from not less than **[3/8-inch- (9.5-mm-)]** **<Insert dimension>** thick, kraft-paper honeycomb core; designed to be rigid and to resist warpage.
 - a. Fabricate sliding panels with **0.021-inch (0.53-mm)** uncoated thickness, porcelain-enamel face sheets.
 6. Hardware: Manufacturer's standard, extruded-aluminum overhead track and channel-shaped bottom guides; with two nylon ball-bearing carriers and two nylon rollers for each sliding panel.
- B. Vertical-Sliding Visual Display Units: Factory-fabricated units consisting of extruded-aluminum tubular frame, fixed-rear visual display panel, and aluminum-framed vertical-sliding panels; designed for recessed mounting. Provide panels that operate smoothly without vibration or chatter.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. AARCO Products, Inc.
 - b. ADP Lemco, Inc.
 - c. Aywon.
 - d. Claridge Products and Equipment, Inc.
 - e. Platinum Visual Systems; a division of ABC School Equipment, Inc.
 - f. PolyVision Corporation; a Steelcase company.
 - g. Tri-Best Visual Display Products.
 - h. **<Insert manufacturer's name>**.
 - i. or approved equal.
2. Type: Tubular frame on **[four sides] [top and two sides, with sides extending to floor; with kick panel to conceal sliding panels]**. Unit shall be designed to support panels independent of wall.
 3. Two-Track Units: Fabricate unit with fixed rear panel covering entire rear surface. Provide two sliding panels, each equal to not less than one-half of overall height of unit.
 4. Three-Track Units: Fabricate unit with fixed rear panel covering entire rear surface. Provide three sliding panels, each equal to not less than one-half of overall height of unit.
 5. Four-Track Units: Fabricate unit with fixed rear panel centered in and covering not less than one-half of rear surface. Provide four sliding panels, each equal to not less than one-half of overall height of unit.
 6. Sliding Panels: Fabricated from not less than **[3/8-inch- (9.5-mm-)] <Insert dimension>** thick, kraft-paper honeycomb core; designed to be rigid and to resist warpage.
 - a. Fabricate sliding panels with **0.021-inch (0.53-mm)** uncoated thickness, porcelain-enamel face sheets.
 7. Hardware: Manufacturer's standard, neoprene ball-bearing end rollers, four on each side of each sliding panel. Counterbalance each sliding panel with lead counterweights supported by steel aircraft cable over ball-bearing sheaves; with removable cover plate for access to counterweights. Provide rubber bumpers at top and bottom for each sliding panel.
 8. Motorized Operation: Provide not less than one motor with gearhead reducers for each sliding panel, mounted above visual display unit and connected to sliding panels with steel aircraft cable. Provide removable cover plate for access to motor. Equip motors with limit switches to automatically stop motor at each end of travel.
 - a. Electric Motors: UL approved or recognized, totally enclosed, complying with NEMA MG 1, with thermal-overload protection; 1/15 hp, single phase, **[110] [220] V**, 60 Hz.
 - b. Control Station: Three-position, **[maintained] [momentary]**-contact, switch-operated control station with open, close, and off functions; with NEMA ICS 6, Type 1 enclosure. Provide **[one] <Insert number>** control station(s) for each sliding panel unit.
 - c. Key Switch: Provide supplementary key switch for each control station. Furnish two keys for each control station, keyed alike.

2.10 VISUAL DISPLAY CONFERENCE UNITS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. A-1 Visual Systems.
 2. AARCO Products, Inc.
 3. ADP Lemco, Inc.
 4. Best-Rite Manufacturing.
 5. Claridge Products and Equipment, Inc.
 6. Egan Visual Inc.
 7. Ghent Manufacturing, Inc.
 8. Marsh Industries, Inc.; Visual Products Group.
 9. Peter Pepper Products, Inc.
 10. Platinum Visual Systems; a division of ABC School Equipment, Inc.
 11. PolyVision Corporation; a Steelcase company.
 12. **<Insert manufacturer's name>**.
 13. or approved equal.
- B. Visual Display Conference Units: Factory-fabricated units consisting of hinged-door wood cabinet with perimeter face frame, sides, and back; not less than **3-inch** (75-mm) interior depth and designed for surface wall mounting. Fabricate inside of cabinet and cabinet doors with fixed visual display surfaces.
1. Wood Cabinets: Fabricated from solid wood with integral, solid-wood markertray. Fabricate hinged door panels with solid wood frame and wood-veneer exterior surface.
 2. Plastic-Laminate Cabinets: Cabinet and hinged door panels fabricated from manufacturer's standard, high-pressure, plastic-laminate-finished panels; with integral markertray.
 3. Hardware: Manufacturer's standard, full-height continuous hinges[, **wire door pulls,**] and door bumpers.
 4. Projection Screens: Manufacturer's standard, pull-down, matte, white projection screen, not less than **8 inches** (200 mm) smaller in each direction than overall cabinet size, and mounted above rear visual display surface.
 5. Fluorescent Light: Manufacturer's standard, not less than **24 inches** (610 mm) long, and mounted above rear visual display surface.

2.11 VISUAL DISPLAY WALL COVERINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Best-Rite Manufacturing.
 2. Egan Visual Inc.
 3. Marsh Industries, Inc.; Visual Products Group.
 4. Omnova Solutions Inc.; Decorative Products; Commercial Wallcovering.
 5. walltalkers; a division of RJF International Corporation.
 6. **<Insert manufacturer's name>**.

7. or approved equal.

B. Visual Display Wall Covering: Intended for use with dry-erase markers[**and as a projection surface**] and consisting of [**low**] [**moderate**] [**high**]-gloss, plastic film bonded to fabric backing; not less than [**0.012-mil** (0.0003-mm)] [**0.020-mil** (0.0005-mm)] total thickness.

1. Surface Graphics: **2-inch-** (50-mm-) square grid.
2. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.

C. Magnetic Visual Display Wall Covering: Intended for use with dry-erase markers and magnetic aids and consisting of moderate-gloss plastic film bonded to ferrous-powdered fabric backing; not less than **0.025-mil** (0.0006-mm) total thickness.

1. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.

D. Adhesive: Mildew-resistant, nonstaining[, **strippable**] adhesive, for use with specific wall covering and substrate application, as recommended in writing by wall covering manufacturer.

1. Adhesive shall have a VOC content of [**50**] <Insert value> g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
2. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

E. Primer/Sealer: Mildew-resistant primer/sealer complying with requirements in [**Section 099113 "Interior Painting"**] <Insert Section number>-<Insert Section title> and recommended in writing by wall covering manufacturer for intended substrate.

2.12 ELECTRONIC MARKERBOARDS

A. General: Provide manufacturer's standard electronic markerboard that consists of touch-sensitive writing surface connected to microcomputer via RS-232 serial cable and that electronically records writing with standard dry-erase markers. Equip unit with cables, software, pens, erasers, mounting hardware, and accessories required for a complete installation.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Claridge Products and Equipment, Inc.
 - b. Egan Visual Inc.
 - c. Ghent Manufacturing, Inc.

- d. PolyVision Corporation; a Steelcase company.
 - e. SMART Technologies Inc.
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
- B. Software: Capable of real-time recording, saving, and printing of everything that is written and drawn on electronic markerboard; with **[Windows]** **[Macintosh]** operating system.
- 1. File Export Formats: BMP, WMF, HTML, and vector-based formats.
 - 2. Compatibility: Compatible with Microsoft NetMeeting or other T.120-compliant software.
 - 3. Features: Capable of the following:
 - a. Saving directly from screen.
 - b. Erasing portions of screen.
 - c. Printing directly from screen.
 - d. Saving individual screens as separate pages.
 - e. Showing onscreen **[toolbar]** **[keyboard]**.
 - f. Recognizing not less than four pen colors.
 - g. Recognizing finger touch control for presentations.
 - h. Connecting multiple electronic markerboards to a single computer.
 - i. Showing online help and tutorial.
- C. Overall Size: Approximately **[48 inches high by 60 inches wide]** (1219 mm high by 1524 mm wide) **<Insert dimensions>**.
- D. Mounting: **[Wall mounted]** **[Supported by rail support system]** **<Insert requirements>**.
- 2.13 **[CHALKBOARD]** **[MARKERBOARD]** **[AND]** **[TACKBOARD]** ACCESSORIES
- A. Aluminum Frames **[and Trim]**: Fabricated from not less than **0.062-inch-** (1.57-mm-) thick, extruded aluminum; **[standard size and shape]** **[slim size and standard shape]** **[of size and shape indicated on Drawings]** **<Insert size and shape>**.
- 1. Field-Applied Trim: Manufacturer's standard, **[snap-on trim with no visible screws or exposed joints]** **[slip-on trim]** **[screw-on trim with Phillips flat-head screws]**.
 - 2. Factory-Applied Trim: Manufacturer's standard.
- B. Factory-Applied Wood Trim: **[Red oak]** **[Walnut]** **[Manufacturer's standard species]** **<Insert species>**, not less than **1/2 inch** (13 mm) thick; **[standard size and shape]** **[of size and shape indicated on Drawings]** **<Insert size and shape>**.
- C. Field-Applied Wood Trim: Comply with requirements specified in **[Section 062000 "Finish Carpentry"]** **[Section 064023 "Interior Architectural Woodwork."]**
- D. chalk tray: Manufacturer's standard, continuous.

1. Box Type: Extruded aluminum with slanted front, grooved tray, and cast-aluminum end closures.
 2. Solid Type: Extruded aluminum with ribbed section and smoothly curved exposed ends.
- E. Map Rail: Provide the following accessories:
1. Display Rail: Continuous and integral with map rail; fabricated from cork approximately **1 to 2 inches** (25 to 50 mm) wide.
 2. End Stops: Located at each end of map rail.
 3. Map Hooks: [**Two**] **<Insert number>** map hooks for every [**48 inches** (1219 mm)] [**1200 mm**] **<Insert dimension>** of map rail or fraction thereof.
 4. Map Hooks and Clips: [**Two**] **<Insert number>** map hooks with flexible metal clips for every [**48 inches** (1219 mm)] [**1200 mm**] **<Insert dimension>** of map rail or fraction thereof.
 5. Flag Holder: [**One**] **<Insert number>** for each room.
 6. Paper Holder: Extruded aluminum; designed to hold paper by clamping action.
- F. Special-Purpose Graphics: Fuse or paint the following graphics into surface of porcelain-enamel visual display unit:
1. Semivisible writing guidelines.
 2. Penmanship lines.
 3. Music staff lines.
 4. Grid, **1 inch** (25 mm) square.
 5. Graph coordinates, rectangular.
 6. Horizontal lines, **2 inches** (50 mm) o.c.
 7. Polar coordinates.
 8. USA map.
 9. World map.
 10. Soccer field.
 11. Football field.
 12. Basketball court.
 13. **<Insert description of special-purpose graphics>**.

2.14 FABRICATION

- A. Porcelain-Enamel Visual Display Assemblies: Laminate porcelain-enamel face sheet and backing sheet to core material under heat and pressure with manufacturer's standard flexible, waterproof adhesive.
- B. Natural-Slate Chalkboards: Surface slate panels to a natural plane. Grind and hone to smooth, uniform finish equivalent to that obtained by minimum 180 grit and maximum 220 grit.
1. Cut joints straight and true. Space joints symmetrically. Fit and match panels before shipment to provide continuous, uniform writing surface.
 2. Length: Furnish panels approximately equal in length with permissible variation not more than **3 inches** (75 mm) in either direction of equal spacing. Allow

1/4-inch (6-mm) clearance at trim in length and width for fitting. Provide lengths of panels in each space as follows:

- a. Up to 5 feet (1.5 m); one panel.
- b. More than 5 feet (1.5 m) but less than 9 feet (2.7 m); two panels.
- c. More than 9 feet (2.7 m) but less than 13.5 feet (4.1 m); three panels.
- d. More than 13.5 feet (4.1 m) but less than 18 feet (5.5 m); four panels.
- e. More than 18 feet (5.5 m) but less than 22.5 feet (6.9 m); five panels.
- f. More than 22.5 feet (6.9 m) but less than 27 feet (8.2 m); six panels.

C. Visual Display Boards: **[Factory]** **[Field]** assemble visual display boards unless otherwise indicated.

1. Where factory-applied trim is indicated, trim shall be assembled and attached to visual display boards at manufacturer's factory before shipment.

D. Factory-Assembled Visual Display Units: Coordinate factory-assembled units with trim and accessories indicated. Join parts with a neat, precision fit.

1. Make joints only where total length exceeds maximum manufactured length. Fabricate with minimum number of joints, **[balanced around center of board, as acceptable to DEN Project Manager]** **[as indicated on approved Shop Drawings]**.
2. Provide manufacturer's standard vertical-joint **[spline]** **[H-trim]** system between abutting sections of **[chalkboards]** **[markerboards]**.
3. Provide manufacturer's standard mullion trim at joints between **[chalkboards]** **[markerboards]** **[and]** **[tackboards]** of combination units.
4. Where size of visual display boards or other conditions require support in addition to normal trim, provide structural supports, or modify trim as indicated or as selected by DEN Project Manager from manufacturer's standard structural support accessories to suit conditions indicated.

E. Modular Visual Display Boards: Fabricated with integral panel clips attached to core material.

F. Aluminum Frames **[and Trim]**: Fabricate units straight and of single lengths, keeping joints to a minimum. Miter corners to a neat, hairline closure.

1. Where factory-applied trim is indicated, trim shall be assembled and attached to visual display units at manufacturer's factory before shipment.

2.15 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

- C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.16 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.
- B. Color Anodic Finish: AAMA 611, AA-M12C22A32/A34, Class II, 0.010 mm or thicker.
- C. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of **1.5 mils** (0.04 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

2.17 VISUAL DISPLAY SURFACE SCHEDULE

- A. Visual Display Board <Insert drawing designation>: **[Factory]** **[Field]** assembled.
 - 1. Chalkboard: **[Porcelain-enamel]** **[High-pressure laminate]** **[Melamine]** **[Painted-finish]** **[Natural-slate]** chalkboard assembly.
 - a. Color: **[Green]** **[Blue]** **[Brown]** **[Black]** **[As indicated by manufacturer's designations]** **[Match DEN Project Manager's sample]** **[As selected by DEN Project Manager from full range of industry colors]**.
 - 2. Markerboard: **[Porcelain-enamel]** **[Melamine]** **[High-pressure-laminate]** markerboard assembly.
 - a. Color: **[White]** **[Beige]** **[Tan]** **[As indicated by manufacturer's designations]** **[Match DEN Project Manager's sample]** **[As selected by DEN Project Manager from full range of industry colors]**.
 - 3. Corners: **[Square]** **[Rounded]**.
 - 4. Width: **[As indicated on Drawings]** <Insert dimension>.
 - 5. Height: **[As indicated on Drawings]** <Insert dimension>.
 - 6. Mounting: **[Wall]** **[Rail support system]**.
 - 7. Mounting Height: **[As indicated on Drawings]** <Insert dimension>.
 - 8. **[Factory]** **[Field]**-Applied Aluminum Trim: **[Manufacturer's standard]** <Insert description> with **[clear anodic]** **[color anodic]** **[baked-enamel]** **[powder-coat]** finish.
 - a. Color: **[Light bronze]** **[Medium bronze]** **[Dark bronze]** **[Black]** **[As indicated by manufacturer's designations]** **[Match DEN Project Manager's sample]** **[As selected by DEN Project Manager from full range of industry colors and color densities]**.
 - 9. **[Factory]** **[Field]**-Applied Wood Trim: <Insert species> with **[opaque]** **[transparent]** finish.

10. Factory-Applied Vinyl Trim: **[Dark brown] [Black] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors]**.
 11. Accessories:
 - a. chalk tray: **[Box] [Solid]** type.
 - b. Map rail with **[display rail] [end stops] [map hooks] [map hooks and clips] [and] [flag holder]**.
- B. Tackboard **<Insert drawing designation>**: **[Factory] [Field]** assembled.
1. Tack Surface: Natural-cork tackboard assembly **<Insert designation>**.
 2. Tack Surface: Plastic-impregnated-cork tackboard assembly **<Insert designation>**.
 3. Tack Surface: Vinyl-fabric-faced tackboard assembly **<Insert designation>**.
 4. Tack Surface: Polyester-fabric-faced tackboard assembly **<Insert designation>**.
 - a. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors]**.
 5. Corners: **[Square] [Rounded]**.
 6. Width: **[As indicated on Drawings] <Insert dimension>**.
 7. Height: **[As indicated on Drawings] <Insert dimension>**.
 8. Mounting: **[Wall] [Rail support system]**.
 9. Mounting Height: **[As indicated on Drawings] <Insert dimension>**.
 10. Edges: **[Concealed by trim] [Wrapped with fabric]**.
 - a. **[Factory] [Field]**-Applied Aluminum Trim: **[Manufacturer's standard] <Insert description>** style, with **[clear anodic] [color anodic] [baked-enamel] [powder-coat]** finish.
 - 1) Color: **[Light bronze] [Medium bronze] [Dark bronze] [Black] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors and color densities]**.
 - b. **[Factory] [Field]**-Applied Wood Trim: **<Insert species>** with **[opaque] [transparent]** finish.
- C. Visual Display Rail **<Insert drawing designation>**: **[Factory] [Field]** assembled.
1. Tack Surface: Natural-cork tackboard assembly **<Insert designation>**.
 2. Tack Surface: Plastic-impregnated-cork tackboard assembly **<Insert designation>**.
 3. Tack Surface: Vinyl-fabric-faced tackboard assembly **<Insert designation>**.
 4. Tack Surface: Polyester-fabric-faced tackboard assembly **<Insert designation>**.

- a. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors].**
 5. Size: **[1 inch (25 mm)] [2 inches (50 mm)] [3 inches (75 mm)]** high by length indicated on Drawings.
 6. Edges: **[Extruded-aluminum trim] [Wrapped with fabric].**
 7. Ends: **[Aluminum] [Not required].**
 8. Aluminum Finish: **[Clear anodic] <Insert description>** finish.
- D. Visual Display Wall Panels **<Insert drawing designation>**: Consisting of the following visual display surface:
1. Marker Wall Sheet: Porcelain-enamel face sheet with high-gloss cover coat.
 - a. Color: **[White] [Beige] [Tan] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors].**
 2. Marker Wall Panel: **[Porcelain-enamel] [High-pressure-laminate]** markerboard assembly.
 - a. Color: **[White] [Beige] [Tan] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors].**
 3. Tack Wall Panel: Natural-cork tack**[board]** assembly **<Insert designation>**.
 4. Tack Wall Panel: Plastic-impregnated-cork tack**[board]** assembly **<Insert designation>**.
 5. Tack Wall Panel: Vinyl-fabric-faced tack**[board]** assembly **<Insert designation>**.
 6. Tack Wall Panel: Polyester-fabric-faced tack**[board]** assembly **<Insert designation>**.
 - a. Panel-Joint Edges: **[Wrapped with fabric] [Concealed by fabric-covered trim].**
 - b. Top-of-Wall Edges: **[Wrapped with fabric] [Concealed by fabric-covered trim].**
 - c. Bottom-of-Wall Edges: **[Wrapped with fabric] [Concealed by fabric-covered trim].**
 - d. Corners: **[Wrapped with fabric] [Concealed by fabric-covered trim].**
 - e. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors].**
 7. Width: **[Full width of wall] [As indicated on Drawings] <Insert dimension>**.
 8. Height: **[Full height of wall] [Full height of wall above base] [As indicated on Drawings] <Insert dimension>**.
- E. Sliding Visual Display Unit **<Insert drawing designation>**:

1. Horizontal-Sliding Type: **[Two-track unit] [Three-track unit] [Four-track unit] [Four-track unit with two swinging doors]**.
2. Vertical-Sliding Type: **[Two] [Three] [Four]-track unit with tubular frame on [four sides] [top and two sides with kick panel]**.
 - a. Fixed Rear Panel: **[Porcelain-enamel] [Painted-finish] [High-pressure-laminate]** chalkboard assembly.
 - 1) Color: **[Green] [Blue] [Brown] [Black] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors]**.
 - b. Fixed Rear Panel: **[Porcelain-enamel] [High-pressure-laminate]** markerboard assembly.
 - 1) Color: **[White] [Beige] [Tan] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors]**.
 - c. Fixed Rear Panel: Natural-cork tackboard assembly **<Insert designation>**.
 - d. Fixed Rear Panel: Plastic-impregnated-cork tackboard assembly **<Insert designation>**.
 - e. Fixed Rear Panel: Vinyl-fabric-faced tackboard assembly **<Insert designation>**.
 - f. Fixed Rear Panel: Polyester-fabric-faced tackboard assembly **<Insert designation>**.
 - 1) Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors]**.
 - g. Sliding Panels: **[Porcelain-enamel] [Painted-finish] [High-pressure-laminate]** chalkboard assembly.
 - 1) Color: **[Green] [Blue] [Brown] [Black] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors]**.
 - h. Sliding Panels: **[Porcelain-enamel] [High-pressure-laminate]** markerboard assembly.
 - 1) Color: **[White] [Beige] [Tan] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors]**.
 - i. Sliding Panels: Natural-cork tackboard assembly **<Insert designation>**.

- j. Sliding Panels: Plastic-impregnated-cork tackboard assembly <Insert designation>.
- k. Sliding Panels: Vinyl-fabric-faced tackboard assembly <Insert designation>.
- l. Sliding Panels: Polyester-fabric-faced tackboard assembly <Insert designation>.
 - 1) Color: [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors].
- 3. Overall Width: [As indicated on Drawings] <Insert dimension>.
- 4. Overall Height: [As indicated on Drawings] <Insert dimension>.
- 5. Mounting Height: [As indicated on Drawings] <Insert dimension>.
- 6. [Factory] [Field]-Applied Aluminum Trim: [Manufacturer's standard] <Insert description>.
 - a. Finish: [Clear anodic] <Insert description>.
- 7. Accessories:
 - a. Chalk tray.
 - b. Map rail with [display rail] [end stops] [map hooks] [map hooks and clips] [and] [flag holder].
 - c. Locks.
 - d. Easel pad clamps.
- F. Visual Display Conference Unit <Insert drawing designation>:
 - 1. Cabinet Material: Solid [red oak] [walnut] [mahogany] <Insert species> with [natural lacquered] [oiled] [stained] finish.
 - 2. Cabinet Material: High-pressure plastic laminate.
 - a. Color: [Match DEN Project Manager's sample] [As indicated by referencing manufacturer's designations] [As selected by DEN Project Manager from full range of industry colors].
 - 3. Fixed Rear Panel: [Porcelain-enamel] [High-pressure-laminate] markerboard assembly.
 - a. Color: [White] [Beige] [Tan] [Match DEN Project Manager's sample] [As indicated by referencing manufacturer's designations] [As selected by DEN Project Manager from full range of industry colors].
 - 4. Inside Surface of Doors: Natural-cork tackboard assembly <Insert designation>.
 - 5. Inside Surface of Doors: Plastic-impregnated-cork tackboard assembly <Insert designation>.
 - 6. Inside Surface of Doors: Vinyl-fabric-faced tackboard assembly <Insert designation>.

7. Inside Surface of Doors: Polyester-fabric-faced tackboard assembly **<Insert designation>**.
 - a. Color: **[Match DEN Project Manager's sample] [As indicated by referencing manufacturer's designations] [As selected by DEN Project Manager from full range of industry colors]**.
8. Inside Surface of Doors: **[Porcelain-enamel] [High-pressure-laminate]** markerboard assembly, color to match fixed rear panel.
9. Corners: **[Square] [Rounded]**.
10. Width: **[48 inches (1219 mm)] [As indicated on Drawings] <Insert dimension>**.
11. Height: **[36 inches (914 mm)] [48 inches (1219 mm)] [72 inches (1829 mm)] [As indicated on Drawings] <Insert dimension>**.
12. Mounting Height: **[As indicated on Drawings] <Insert dimension>**.
13. Accessories:
 - a. Flip-chart pad clamp.
 - b. Cylinder lock.
 - c. Pull-down projection screen.
 - d. Fluorescent light.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances, surface conditions of wall, and other conditions affecting performance of the Work.
- B. Examine roughing-in for electrical power systems to verify actual locations of connections before installation of motor-operated, sliding visual display units.
- C. Examine walls and partitions for proper preparation and backing for visual display surfaces.
- D. Examine walls and partitions for suitable framing depth where sliding visual display units will be installed.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Comply with manufacturer's written instructions for surface preparation.
- B. Clean substrates of substances that could impair the performance of and affect the smooth, finished surfaces of visual display boards, including dirt, mold, and mildew.

- C. Prepare surfaces to achieve a smooth, dry, clean surface free of flaking, unsound coatings, cracks, defects, projections, depressions, and substances that will impair bond between visual display surfaces and wall surfaces.
1. Prime wall surfaces indicated to receive [**direct-applied, visual display tack wall panels**] [**visual display wall coverings**] and as recommended in writing by primer/sealer manufacturer and wall covering manufacturer.
 2. Prepare surfaces to receive visual display wall coverings and test for moisture according to requirements specified in Section 097200 "Wall Coverings."
 3. Prepare substrates indicated to receive visual display wall covering as required by manufacturer's written instructions to achieve a smooth, dry, clean, structurally sound surface that is uniform in color.
 - a. Moisture Content: Maximum of [4] <Insert number> percent when tested with an electronic moisture meter.
 - b. Plaster: Allow new plaster to cure. Neutralize areas of high alkalinity. Prime with primer as recommended in writing by primer/sealer manufacturer and wall covering manufacturer.
 - c. Metals: If not factory primed, clean and apply metal as recommended in writing by primer/sealer manufacturer and wall covering manufacturer.
 - d. Gypsum Board: Prime with primer as recommended in writing by primer/sealer manufacturer and wall covering manufacturer.
 - e. Painted Surfaces: Treat areas susceptible to pigment bleeding.
- D. Prepare recesses for sliding visual display units as required by type and size of unit.

3.3 INSTALLATION, GENERAL

- A. General: Install visual display surfaces in locations and at mounting heights indicated on Drawings, or if not indicated, at heights indicated below. Keep perimeter lines straight, level, and plumb. Provide grounds, clips, backing materials, adhesives, brackets, anchors, trim, and accessories necessary for complete installation.
1. Mounting Height [**for Grades K through 3**] <Insert description>: [24 inches (610 mm)] <Insert dimension> above finished floor to top of chalk tray.
 2. Mounting Height [**for Grades 4 through 6**] <Insert description>: [28 inches (711 mm)] <Insert dimension> above finished floor to top of chalk tray.
 3. Mounting Height [**for Grades 7 and Higher**] <Insert description>: [36 inches (914 mm)] <Insert dimension> above finished floor to top of chalk tray.

3.4 INSTALLATION OF FIELD-FABRICATED VISUAL DISPLAY BOARDS AND ASSEMBLIES

- A. Field-Assembled Visual Display Units: Coordinate field-assembled units with grounds, trim, and accessories indicated. Join parts with a neat, precision fit.
1. Make joints only where total length exceeds maximum manufactured length. Fabricate with minimum number of joints, [**balanced around center of board**,

as acceptable to DEN Project Manager] [as indicated on approved Shop Drawings].

2. Provide manufacturer's standard vertical-joint [**spline**] [**H-trim**] system between abutting sections of [**chalkboards**] [**markerboards**].
3. Provide manufacturer's standard mullion trim at joints between [**chalkboards**] [**markerboards**] [**and**] [**tackboards**] of combination units.
4. Where size of visual display boards or other conditions require support in addition to normal trim, provide structural supports, or modify trim as indicated or as selected by DEN Project Manager from manufacturer's standard structural support accessories to suit conditions indicated.

- B. Natural-Slate Chalkboards: Align and level joints between adjoining panels and apply manufacturer's recommended joint-filler compound. Hone and finish joints to continuous even plane.

3.5 INSTALLATION OF FACTORY-FABRICATED VISUAL DISPLAY BOARDS AND ASSEMBLIES

- A. Visual Display Boards: Attach visual display boards to wall surfaces with [**egg-size**] <Insert coverage> adhesive gobs at **16 inches** (400 mm) o.c., horizontally and vertically.
- B. Visual Display Boards: Attach concealed clips, hangers, and grounds to wall surfaces and to visual display boards with fasteners at not more than **16 inches** (400 mm) o.c. Secure both top and bottom of boards to walls.
1. Field-Applied Aluminum Trim: Attach trim over edges of visual display boards and conceal grounds and clips. Attach trim to boards with fasteners at not more than **24 inches** (610 mm) o.c.
 - a. Attach chalk trays to boards with fasteners at not more than **12 inches** (300 mm) o.c.
 2. Field-Applied Wood Trim: Install trim according to requirements in [**Section 062000 "Finish Carpentry"**] [**Section 064023 "Interior Architectural Woodwork."**]

3.6 INSTALLATION OF VISUAL DISPLAY RAILS

- A. Display Rails: Install rails in locations and at mounting heights indicated on Drawings, or if not indicated, at height indicated below. Attach to wall surface with fasteners at not more than **16 inches** (400 mm) o.c.
1. Mounting Height: [**48 inches** (1219 mm)] [**60 inches** (1524 mm)] <Insert dimension> above finished floor to top of rail.

3.7 INSTALLATION OF VISUAL DISPLAY WALL PANELS

- A. Marker Wall Sheets: Attach wall sheets to wall surface with thin layer of adhesive over entire wall surface. Butt join adjacent panels[**and cover joint with matching joint strip installed with double-stick tape**].
- B. Marker Wall Panels: Attach panels to wall surface with egg-size adhesive gobs at **16 inches** (400 mm) o.c., horizontally and vertically.
 - 1. Join adjacent wall panels with concealed steel splines for smooth alignment.
 - 2. Join adjacent wall panels with exposed, H-shaped aluminum trim painted to match wall panel.
- C. Tack Wall Panels: Attach panels to wall surface with egg-size adhesive gobs at **16 inches** (400 mm) o.c. horizontally and vertically.
 - 1. Install wrapped-edge wall panels with butt joints between adjacent wall panels.
 - 2. Join adjacent wall panels with exposed, H-shaped aluminum trim covered with same fabric as wall panels.

3.8 INSTALLATION OF [RAIL] [MODULAR] SUPPORT SYSTEM

- A. Rail Support System: Install horizontal support rail in locations and at mounting heights indicated on Drawings, or if not indicated, at height indicated below. Attach to wall surface with fasteners at **12 inches** (300 mm) o.c.
 - 1. Mounting Height: [**72 inches** (1829 mm)] **<Insert dimension>** above finished floor to top of rail.
 - 2. Hang visual display units on rail support system.
- B. Modular Support System: Install adjustable standards in locations and at mounting heights indicated on Drawings, or if not indicated, at height indicated below. Install standards at **48 inches** (1219 mm) o.c., vertically aligned and plumb, and attached to wall surface with fasteners at **12 inches** (300 mm) o.c.
 - 1. Mounting Height: [**12 inches** (300 mm)] **<Insert dimension>** above finished floor to bottom of standard.
 - 2. Install single-slotted standard at each end of each run of standards and double-slotted standards at intermediate locations.
 - 3. Provide locking screw at top corner of visual display board at each standard.
 - 4. Hang visual display units on modular support system.

3.9 INSTALLATION OF FACTORY-FABRICATED VISUAL DISPLAY UNITS

- A. Sliding Visual Display Units: Install units in recessed locations and at mounting heights indicated. Attach to wall framing with fasteners at not more than **16 inches** (400 mm) o.c.

1. Adjust panels to operate smoothly without warp or bind. Lubricate operating hardware as recommended by manufacturer.

B. Visual Display Conference Units: Install units in locations and at mounting heights indicated on Drawings, or if not indicated, at height indicated below. Attach to wall surface with **[fasteners through back of cabinet]** **[concealed brackets screwed to wall]** **[concealed wood cleats screwed to wall]**.

1. Mounting Height: **[72 inches (1829 mm)]** **<Insert dimension>** above finished floor to top of cabinet.

3.10 INSTALLATION OF VISUAL DISPLAY WALL COVERING

A. Install visual display wall covering according to requirements specified in Section 097200 "Wall Coverings."

B. General: Comply with visual display wall covering manufacturers' written installation instructions.

C. Install seams horizontal and level, with lowest seam **[24 inches (610 mm)]** **<Insert dimension>** above finished floor. Railroad fabric (reverse roll direction) to ensure color matching.

D. Double cut seams, with no gaps or overlaps. Remove air bubbles, wrinkles, blisters, and other defects.

E. After installation, clean visual display wall covering according to manufacturer's written instructions. Remove excess adhesive at finished seams, perimeter edges, and adjacent surfaces.

3.11 INSTALLATION OF VISUAL ELECTRONIC MARKERBOARDS

A. Electronic Markerboards: Install units in locations and at mounting heights indicated on Drawings, or if not indicated, at height indicated below. Attach to **[wall]** **[cubicle]** surface with manufacturer's standard mounting hardware.

1. Mounting Height: **[72 inches (1829 mm)]** **<Insert dimension>** above finished floor to top of markerboard.

3.12 CLEANING AND PROTECTION

A. Clean visual display surfaces according to manufacturer's written instructions. Attach one cleaning label to visual display surface in each room.

B. Touch up factory-applied finishes to restore damaged or soiled areas.

C. Cover and protect visual display surfaces after installation and cleaning.

3.13 DEMONSTRATION

- A. **[Engage a factory-authorized service representative to train] [Train]** Owner's maintenance personnel to adjust, operate, and maintain motor-operated, sliding visual display units.
1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 101100

SECTION 101200 - DISPLAY CASES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

- 1. **[Illuminated] [Nonilluminated]** bulletin boards.
- 2. **[Illuminated] [Nonilluminated]** display cases.

- B. Related Sections:

- 1. Section 057000 "Decorative Metal" for custom enclosures for **[bulletin boards] [and] [display cases]**.
- 2. **[Section 062000 "Finish Carpentry"] [Section 064023 "Interior Architectural Woodwork"]** for custom cabinets for **[bulletin boards] [and] [display cases]**.
- 3. Section 097723 "Fabric-Wrapped Panels" for tackable, fabric-covered wall panels.
- 4. Section 101100 "Visual Display Surfaces" for tackboards.
- 5. Section 101300 "Directories" for boards with changeable messages or changeable letters.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Bulletin Board: Tackable visual display surface or tackboard enclosed in a display case.
- B. Display Case: Glazed cabinet with **[adjustable shelves] [visual display surface background and adjustable shelves]**.

1.4 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Display cases shall withstand the effects of earthquake motions according to **[ASCE/SEI 7] <Insert requirement>**.

1. Component Importance Factor is 1.0.
- B. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
1. Temperature Change (Range): [120 deg F (67 deg C), **ambient**; 180 deg F (100 deg C)] <Insert temperature range>, material surfaces.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for display cases.
1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
1. Product Data for Credit IEQ 4.4: For composite wood products used in display cases, documentation indicating that product contains no urea formaldehyde.
 2. Laboratory Test Reports for Credit IEQ 4: For [**adhesives**] [**and**] [**composite wood products**], documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: For display cases. Include plans, elevations, sections, details, and attachments to other work.
1. Show location of seams and joints in visual display surfaces.
 2. Include sections of typical trim members.
 3. Wiring Diagrams: For power, signal, and control wiring.
- D. Samples for Initial Selection: For units with factory-applied color finishes, and as follows:
1. Actual sections of visual display surfaces.
 2. Section of header panel for color selection.
- E. Samples for Verification: For each type of product indicated.
1. Visual Display Surface: Not less than **8-1/2 by 11 inches** (215 by 280 mm), mounted on substrate indicated for final Work. Include one panel for each type, color, and texture required.
 2. Trim: **6-inch-** (152-mm-) long sections of each trim profile[**including corner section**].

- F. Delegated-Design Submittal: For display cases indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified professional engineer.
- B. Seismic Qualification Certificates: For **<Insert equipment,>** accessories, and components, from manufacturer.
 - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- C. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for surface-burning characteristics of fabrics.

1.7 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For visual display surfaces, operating hardware[, **and illuminated units**] to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 QUALITY ASSURANCE

- A. Source Limitations: Obtain display cases from single source from single manufacturer.
- B. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Flame-Spread Index: **[25] <Insert value>** or less.
 - 2. Smoke-Developed Index: **[50] [450] <Insert value>** or less.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager] <Insert location>**.

1.9 PROJECT CONDITIONS

- A. Environmental Limitations: Do not deliver or install display cases until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above ceilings is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
- B. Field Measurements: Verify actual dimensions of openings for display cases by field measurements before fabrication.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Hardboard: ANSI A135.4, tempered.
- B. Particleboard: ANSI A208.1, Grade M-1[.], **made with binder containing no urea formaldehyde.], that complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."**
- C. Fiberboard: ASTM C 208.
- D. Hardwood Plywood: HPVA HP-1[.], **made with adhesive containing no urea formaldehyde.], that complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."**
- E. Natural Cork Sheet: Seamless, single-layer, compressed fine-grain cork sheet; bulletin board quality; face sanded for natural finish.
- F. Plastic-Impregnated Cork Sheet: Seamless, homogeneous, self-sealing sheet consisting of granulated cork, linseed oil, resin binders, and dry pigments that are mixed and calendared onto burlap backing; with washable vinyl finish and integral color throughout.
- G. Vinyl Fabric: FS CCC-W-408D, Type II, **[burlap weave] <Insert texture and pattern>**; weighing not less than **13 oz./sq. yd.** (440 g/sq. m); with flame-spread index of 25 or less when tested according to ASTM E 84.

- H. Polyester Fabric: Nondirectional weave, 100 percent polyester; weighing not less than **15 oz./sq. yd.** (508 g/sq. m); with flame-spread index of 25 or less when tested according to ASTM E 84.
- I. Extruded-Aluminum Bars and Shapes: **ASTM B 221** (ASTM B 221M), Alloy 6063.
- J. Aluminum Tubing: ASTM B 429, Alloy 6063.
- K. Clear Tempered Glass: ASTM C 1048, Kind FT, Condition A, Type I, Class 1, Quality Q3, with exposed edges seamed before tempering, and 6 mm thick unless otherwise indicated.
- L. Transparent Acrylic Sheet: ASTM D 4802, Category A-1 (cell-cast sheet), with Finish 1 (smooth or polished), colorless sheet with visible light transmittance of 92 percent measured per ASTM D 1003.
- M. Opaque Acrylic Sheet: ASTM D 4802, Category A-1 (cell-cast sheet).
- N. Translucent Acrylic Sheet: ASTM D 4802, Category A-1 (cell-cast sheet), with Finish 1 (smooth or polished). Provide white-colored sheet unless otherwise indicated, of density required to produce uniform brightness and minimum halation effects.
- O. High-Pressure Plastic Laminate: NEMA LD 3.
- P. Fasteners: Provide screws, bolts, and other fastening devices made from same material as items being fastened, except provide hot-dip galvanized, stainless-steel, or aluminum fasteners for exterior applications. Provide types, sizes, and lengths to suit installation conditions. Use security fasteners where exposed to view.
- Q. Adhesives: Manufacturer's standard product that complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.2 TACKBOARD ASSEMBLIES

- A. Natural-Cork Tackboard **<Insert designation>**: **1/16-inch-** (1.6-mm-) thick, natural cork sheet factory laminated to **3/8-inch-** (9.5-mm-) [**7/16-inch-** (11-mm-)] thick fiberboard backing.
- B. Natural-Cork Tackboard **<Insert designation>**: **1/8-inch-** (3-mm-) thick, natural cork sheet factory laminated to **3/8-inch-** (9.5-mm-) thick fiberboard backing.
- C. Natural-Cork Tackboard **<Insert designation>**: **1/4-inch-** (6-mm-) thick, natural cork sheet factory laminated to **1/4-inch-** (6-mm-) thick [**hardboard**] [**particleboard**] backing.
- D. Plastic-Impregnated-Cork Tackboard **<Insert designation>**: **1/8-inch-** (3-mm-) thick, plastic-impregnated cork sheet factory laminated to **3/8-inch-** (9.5-mm-) thick fiberboard backing.

- E. Plastic-Impregnated-Cork Tackboard <Insert designation>: 1/4-inch- (6-mm-) thick, plastic-impregnated cork sheet factory laminated to 1/4-inch- (6-mm-) thick [hardboard] [particleboard] backing.
- F. Vinyl-Fabric-Faced Tackboard <Insert designation>: Vinyl fabric factory laminated to [3/8-inch- (9.5-mm-)] [7/16-inch- (11-mm-)] [1/2-inch- (13-mm-)] thick fiberboard backing.
- G. Vinyl-Fabric-Faced Tackboard <Insert designation>: 1/16-inch- (1.6-mm-) thick, vinyl-fabric-faced cork sheet factory laminated to 3/8-inch- (9.5-mm-) thick fiberboard backing.
- H. Vinyl-Fabric-Faced Tackboard <Insert designation>: 1/8-inch- (3-mm-) thick, vinyl-fabric-faced cork sheet factory laminated to 3/8-inch- (9.5-mm-) thick fiberboard backing.
- I. Vinyl-Fabric-Faced Tackboard <Insert designation>: 1/4-inch- (6-mm-) thick, vinyl-fabric-faced cork sheet factory laminated to 1/4-inch- (6-mm-) thick [hardboard] [particleboard] backing.
- J. Polyester-Fabric-Faced Tackboard <Insert designation>: Polyester fabric factory laminated to [3/8-inch- (9.5-mm-)] [1/2-inch- (13-mm-)] thick fiberboard backing.
- K. Polyester-Fabric-Faced Tackboard <Insert designation>: 1/16-inch- (1.6-mm-) thick, polyester-fabric-faced cork sheet factory laminated to 3/8-inch- (9.5-mm-) thick fiberboard backing.
- L. Polyester-Fabric-Faced Tackboard <Insert designation>: 1/8-inch- (3-mm-) thick, polyester-fabric-faced cork sheet factory laminated to 3/8-inch- (9.5-mm-) thick fiberboard backing.
- M. Polyester-Fabric-Faced Tackboard <Insert designation>: 1/4-inch- (6-mm-) thick, polyester-fabric-faced cork sheet factory laminated to 1/4-inch- (6-mm-) thick [hardboard] [particleboard] backing.

2.3 BULLETIN BOARD <Insert drawing designation>

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Nonilluminated Bulletin Boards:
 - a. A-1 Visual Systems.
 - b. AARCO Products, Inc.
 - c. ADP Lemco, Inc.
 - d. APCO Graphics, Inc.
 - e. Aywon.
 - f. Best-Rite Manufacturing.
 - g. Claridge Products and Equipment, Inc.
 - h. Ghent Manufacturing, Inc.
 - i. Marsh Industries, Inc.; Visual Products Group.

- j. Nelson-Harkins Industries.
 - k. Peter Pepper Products, Inc.
 - l. Platinum Visual Systems; a division of ABC School Equipment, Inc.
 - m. Poblocki Sign Company.
 - n. PolyVision Corporation; a Steelcase company.
 - o. Tablet & Ticket Co. (The).
 - p. Tri-Best Visual Display Products.
 - q. **<Insert manufacturer's name>**.
 - r. or approved equal.
2. Illuminated Bulletin Boards:
- a. A-1 Visual Systems.
 - b. AARCO Products, Inc.
 - c. ADP Lemco Inc.
 - d. APCO Graphics, Inc.
 - e. Claridge Products and Equipment, Inc.
 - f. Nelson-Harkins Industries.
 - g. Poblocki Sign Company.
 - h. Tablet & Ticket Co. (The).
 - i. Tri-Best Visual Display Products.
 - j. **<Insert manufacturer's name>**.
 - k. or approved equal.
- B. General: Factory-fabricated [**weather-resistant**] unit consisting of manufacturer's standard wall-mounted cabinet with tackboard assembly on back inside surface and operable glazed doors at front.
- C. Aluminum-Framed Cabinet: Extruded aluminum[, **with weather-resistant backing for exterior use**]; with [**clear anodic**] [**color anodic**] [**baked-enamel**] [**powder-coat**] finish.
- 1. Color and Gloss: [**Light bronze**] [**Medium bronze**] [**Dark bronze**] [**Black**] [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] **<Insert color and gloss>**.
- D. Wood-Framed Cabinet: [**Red oak**] [**Walnut**] [**Manufacturer's standard species**] **<Insert species>** with [**natural lacquered**] [**oiled**] [**stained**] finish.
- E. Cabinet Corners: [**Square**] [**Rounded**].
- F. Glazed Sliding Doors: [**Tempered glass**] [**Clear acrylic sheet**] **<Insert glazing>**; unframed; with extruded-aluminum top and bottom track; supported on nylon or ball-bearing rollers; with plastic top guide and rubber bumpers. Equip each door with ground finger pull and adjustable cylinder lock with two keys.
- 1. Thickness: Not less than [**6 mm**] **<Insert dimension>** thick.
 - 2. Number of Doors: [**One**] [**Two**] [**Three**] [**As indicated on Drawings**] **<Insert number>**.

- G. Glazed Hinged Doors: **[Tempered glass] [Clear acrylic sheet] <Insert glazing>**; set in frame matching cabinet material and finish. Equip each door with full-height continuous hinge and cylinder lock with two keys. **[Provide factory-applied weather stripping on doors for exterior use.]**
1. Thickness: Not less than **[6 mm] <Insert dimension>** thick.
 2. Number of Doors: **[One] [Two] [Three] [As indicated on Drawings] <Insert number>**.
- H. Header Panel: **[Nonilluminated; with opaque,] [Illuminated; with translucent,]** acrylic sheet panel set within overall cabinet frame; with matching frame that separates header panel from bulletin board.
1. Graphic Content and Style: Provide header panel copy that complies with requirements indicated on **[Drawings] [artwork supplied on electronic media by DEN Project Manager]** for size, style, spacing, content, height, location, material, and colors of graphics.
 2. Color: **[Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors].**
- I. Illumination System: Concealed top-lighting system consisting of fluorescent-strip fixtures. Include lamps and internal wiring with single, concealed electrical connection to building system. Coordinate electrical characteristics with power supply provided.
1. Ballasts: Low-temperature, high-power-factor, low-energy, fluorescent lamp ballasts that comply with Certified Ballast Manufacturers Association standards and carry its label. **[Provide exterior ballasts for exterior bulletin boards.]**
- J. Tack Surface: Natural-cork tackboard assembly **<Insert designation>**.
- K. Tack Surface: Plastic-impregnated-cork tackboard assembly **<Insert designation>**.
- L. Tack Surface: Vinyl-fabric-faced tackboard assembly **<Insert designation>**.
- M. Tack Surface: Polyester-fabric-faced tackboard assembly **<Insert designation>**.
1. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors].**
- N. Width: **[48 inches (1219 mm)] [As indicated on Drawings] <Insert dimension>**.
- O. Height: **[36 inches (914 mm)] [As indicated on Drawings] <Insert dimension>**.
- P. Depth: **[2 inches (51 mm)] [3 inches (76 mm)] [4 inches (102 mm)] [As indicated on Drawings] <Insert dimension>**.
- Q. Mounting Height: **[As indicated on Drawings] <Insert dimension>**.
- R. Mounting: **[Surface mounted] [Recessed].**

2.4 DISPLAY CASE <Insert drawing designation>

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. A-1 Visual Systems.
2. AARCO Products, Inc.
3. ADP Lemco, Inc.
4. Best-Rite Manufacturing.
5. Claridge Products and Equipment, Inc.
6. Ghent Manufacturing, Inc.
7. Nelson-Harkins Industries.
8. Platinum Visual Systems; a division of ABC School Equipment, Inc.
9. Poblocki Sign Company.
10. PolyVision Corporation; a Steelcase company.
11. Tablet & Ticket Co. (The).
12. <Insert manufacturer's name>.
13. or approved equal.

B. Recessed Cabinet: Factory-fabricated cabinet; with tackboard assembly on back inside surface, operable glazed doors at front, and trim on face to cover edge of recessed opening.

1. Cabinet Box: [Extruded aluminum] [Hardwood veneer plywood].
2. Cabinet Frame and Trim: Aluminum.
3. Cabinet Frame and Trim: [Birch] [Red oak] [Walnut] [Manufacturer's standard hardwood species] <Insert species> with transparent finish.
4. Veneer Species: [Birch] [Red oak] [Walnut] [Manufacturer's standard species] <Insert species> with transparent finish.
5. Aluminum Finish: [Clear anodic] [Color anodic] [Baked enamel] [Powder coat].
 - a. Color and Gloss: [Light bronze] [Medium bronze] [Dark bronze] [Black] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and gloss>.

C. Surface-Mounted Cabinet: Factory-fabricated cabinet; with tack assembly on back inside surface, and glazed doors at front.

1. Cabinet Box: Hardwood-veneer-plywood [top and]bottom panels with transparent finish; [top and]glazed side panels.
2. Cabinet Box: Extruded aluminum top, bottom, and side panels.
3. Cabinet Box: Glazed top, bottom, and side panels.
4. Cabinet Box: <Insert construction>.
5. Cabinet Frame: Aluminum.
6. Cabinet Frame: [Maple] [Red oak] [Walnut] [Manufacturer's standard hardwood species] <Insert species> with transparent finish.
7. Aluminum Finish: [Clear anodic] [Color anodic] [Baked enamel] [Powder coat].

- a. Color and Gloss: **[Light bronze] [Medium bronze] [Dark bronze] [Black] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and gloss>.**
- D. Glazed Sliding Doors: Tempered glass; unframed; with extruded-aluminum top and bottom track; supported on nylon or ball-bearing rollers; with plastic top guide and rubber bumpers. Equip each door with ground finger pull and adjustable cylinder lock with two keys.
1. Thickness: Not less than **[6 mm] <Insert dimension>** thick.
 2. Number of Doors: **[Two] [Three] [As indicated on Drawings] <Insert number>.**
- E. Glazed Hinged Doors: Tempered glass; set in frame matching cabinet material and finish. Equip each door with full-height continuous hinge and cylinder lock with two keys.
1. Thickness: Not less than **[6 mm] <Insert dimension>** thick.
 2. Number of Doors: **[One] [Two] [Three] [As indicated on Drawings] <Insert number>.**
- F. Shelves: 6-mm-thick tempered glass; supported on adjustable shelf standards and supports.
1. Shelf Width: **[6 inches (150 mm)] [8 inches (200 mm)] [10 inches (250 mm)] [12 inches (300 mm)].**
 2. Number of Shelves: **[Three] [As indicated on Drawings] <Insert number>.**
- G. Adjustable Shelf Standards and Supports: **[BHMA A156.9, B04102; with shelf brackets, B04112; recess mounted in rear surface] [BHMA A156.9, B04071; with shelf rests, B04081; mounted on sides].** Provide standards full height of display case.
- H. Tack Surface: Natural-cork tackboard assembly **<Insert designation>.**
- I. Tack Surface: Plastic-impregnated-cork tackboard assembly **<Insert designation>.**
- J. Tack Surface: Vinyl-fabric-faced tackboard assembly **<Insert designation>.**
- K. Tack Surface: Polyester-fabric-faced tackboard assembly **<Insert designation>.**
1. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and gloss>.**
- L. Illumination System: Concealed top-lighting system consisting of fluorescent-strip fixtures. Include lamps and internal wiring with single concealed electrical connection to building system. Coordinate electrical characteristics with power supply provided.

1. Ballasts: Low-temperature, high-power-factor, low-energy, fluorescent lamp ballasts that comply with Certified Ballast Manufacturers Association standards and carry its label.

M. Width: [48 inches (1219 mm)] [As indicated on Drawings] <Insert dimension>.

N. Height: [60 inches (1524 mm)] [As indicated on Drawings] <Insert dimension>.

O. Depth: [8 inches (200 mm)] [16 inches (400 mm)] [24 inches (600 mm)] [As indicated on Drawings] <Insert dimension>.

2.5 FABRICATION

- A. Fabricate [bulletin boards] [and] [display cases] to requirements indicated for dimensions, design, and thickness and finish of materials.
- B. Use metals and shapes of thickness and reinforcing to produce flat surfaces, free of oil-canning, and to impart strength for size, design, and application indicated.
- C. Fabricate cabinets and doorframes with reinforced corners, mitered to a hairline fit, with no exposed fasteners.
- D. Fabricate exterior units with vents to permit evaporation of moisture trapped inside.
- E. Fabricate shelf standards plumb and at heights to align shelf brackets for level shelves.

2.6 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.7 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.
- B. Color Anodic Finish: AAMA 611, AA-M12C22A32/A34, Class II, 0.010 mm or thicker.
- C. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils (0.04 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine walls, with Installer present, for compliance with requirements for installation tolerances, surface conditions of wall, and other conditions affecting performance of the Work.
- B. Examine roughing-in for electrical power system to verify actual locations of connections before installation of illuminated units.
- C. Examine walls and partitions for proper backing for **[bulletin boards] [and] [display cases]**.
- D. Examine walls and partitions for suitable framing depth if recessed units will be installed.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Prepare recesses for display cases as required by type and size of unit.

3.3 INSTALLATION

- A. General: Install units in locations and at mounting heights indicated on Drawings, or if not indicated, at heights indicated below. Keep perimeter lines straight, level, and plumb. Provide grounds, clips, backing materials, adhesives, brackets, anchors, trim, and accessories necessary for complete installation.
 - 1. Mounting Height: **[72 inches (1829 mm)] <Insert dimension>** above finished floor to top of cabinet.
- B. Bulletin Boards: Attach units to wall surfaces with **[concealed fasteners through back of cabinet] [concealed brackets screwed to wall] [concealed wood cleats screwed to wall] [manufacturer's standard concealed hardware]**.
- C. Recessed Display Cases: Attach units to wall framing with fasteners at not more than **16 inches (400 mm)** o.c. Attach aluminum trim over edges of recessed display cases and conceal grounds and clips. Attach trim with fasteners at not more than **24 inches (600 mm)** o.c.
- D. Surface-Mounted Display Cases: Attach units to wall surfaces with concealed clips, hangers, or grounds fastened at not more than **16 inches (400 mm)** o.c. Secure both top and bottom of display cases to walls.
- E. Comply with requirements specified elsewhere for connecting illuminated **[bulletin boards] [and] [display cases]**.

1. After installation is complete, install new fluorescent lamps.

F. Install display case shelving level and straight.

3.4 ADJUSTING AND CLEANING

A. Adjust doors to operate smoothly without warp or bind and so contact points meet accurately. Lubricate operating hardware as recommended by manufacturer.

B. Touch up factory-applied finishes to restore damaged or soiled areas.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 101200

SECTION 101300 - DIRECTORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. **[Nonilluminated] [Illuminated]**, message-strip directories.
2. **[Nonilluminated] [Illuminated]**, changeable-letter directories.

- B. Related Sections:

1. Section 057000 "Decorative Metal" for custom enclosures for directories.
2. Section 064023 "Interior Architectural Woodwork" for custom enclosures for directories.
3. Section 101100 "Visual Display Surfaces" for tackboards.
4. Section 101200 "Display Cases" for bulletin boards and display cases with tackable surfaces.
5. Section 101400 "Signage" for **[panel-sign-type directories] [dimensional letters] [and] [plaques]**.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Directories shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated according to **[ASCE/SEI 7] <Insert requirement>**.

1. Seismic Loads: **<Insert loads>**.

- B. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change (Range): **[120 deg F (67 deg C), ambient; 180 deg F (100 deg C)] <Insert temperature range>**, material surfaces.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for directories.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For directories. Include plans, elevations, sections, details, and attachments to other work.
 - 1. Include sections of typical trim members.
 - 2. Wiring Diagrams: For power, signal, and control wiring.
- C. Samples for Initial Selection: For units with factory-applied color finishes, as follows:
 - 1. Fabric swatches for letterboards.
 - 2. Section of header panel for color selection.
- D. Samples for Verification: For each type of directory indicated, as follows:
 - 1. Letterboards: Not less than **8-1/2 by 11 inches** (215 by 280 mm), mounted on substrate indicated for final Work. Include one panel for each type, color, and texture required.
 - 2. Trim: **6-inch-** (150-mm-) long sections of each trim profile[**including corner section**].
 - 3. Message Strips: Full-size Samples of message strips in color selected with sample of specified typography.
 - 4. Letters: Full-size Samples of changeable letters of each size specified.
- E. Other Action Submittal:
 - 1. Message-Strip Schedule: Layout of each directory and each message strip showing letter size, font, spacing, indents, text copy, and graphics.
- F. Delegated-Design Submittal: For directories indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified professional engineer.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For illuminated directories to include in maintenance manuals.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Message Strips: Full-size, blank strips equal to [10] <Insert number> percent of amount installed for each size indicated, but no fewer than [20] <Insert number> strips.

1.8 QUALITY ASSURANCE

- A. Source Limitations: Obtain directories from single source from single manufacturer.
- B. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Flame-Spread Index: [25] <Insert value> or less.
 - 2. Smoke-Developed Index: [50] [450] <Insert value> or less.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Preinstallation Conference: Conduct conference at [Project site] [location and time as determined by DEN Project Manager] <Insert location>.

1.9 PROJECT CONDITIONS

- A. Environmental Limitations: Do not deliver or install directories until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above ceilings is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
- B. Field Measurements: Verify actual dimensions of openings by field measurements before fabrication.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Aluminum: Alloy and temper recommended by aluminum producer and manufacturer for type of use and finish indicated, and as follows:
1. Sheet: [ASTM B 209](#) (ASTM B 209M).
 2. Extruded Shapes: [ASTM B 221](#) (ASTM B 221M), Alloy 6063.
- B. Stainless-Steel Sheet: ASTM A 666, Type 304.
- C. Copper-Alloy Brass Sheet: ASTM B 36/B 36M, Alloy UNS No. C26000 (cartridge brass, 70 percent copper).
- D. Copper-Alloy Bronze Sheet: ASTM B 36/B 36M, Alloy UNS No. C28000 (muntz metal, 60 percent copper).
- E. Clear Float Glass: ASTM C 1036, Type I, Class 1, Quality q3, and 6 mm thick unless otherwise indicated.
- F. Gray-Tinted Float Glass: ASTM C 1036; Type I (transparent glass, flat); Class 2 (tinted, heat absorbing, and light reducing); Quality q3 (glazing select); 6-mm-thick, gray-tinted monolithic glass with a maximum luminous transmittance of 14 percent.
- G. Bronze-Tinted Float Glass: ASTM C 1036; Type I (transparent glass, flat); Class 2 (tinted, heat absorbing, and light reducing); Quality q3 (glazing select); 6-mm-thick, bronze-tinted monolithic glass with a maximum luminous transmittance of 44 percent.
- H. Clear Tempered Glass: ASTM C 1048, Kind FT, Condition A, Type I, Class 1 (clear), Quality q3, with exposed edges seamed before tempering, and 6 mm thick unless otherwise indicated.
- I. Tinted Tempered Glass: ASTM C 1048, Kind FT, Condition A, Type I, Class 2 (tinted), tint as indicated, Quality q3, with exposed edges seamed before tempering, and 6 mm thick unless otherwise indicated.
- J. Clear Acrylic Sheet: ASTM D 4802, Category A-1 (cell-cast sheet), with Finish 1 (smooth or polished), and 6 mm thick unless otherwise indicated; colorless sheet with visible light transmittance of 92 percent measured per ASTM D 1003.
- K. Bronze-Tinted Acrylic Sheet: ASTM D 4802, Category A-1 (cell-cast sheet), with Finish 1 (smooth or polished), and 6 mm thick unless otherwise indicated.
- L. Translucent Acrylic Sheet: ASTM D 4802, Category A-1 (cell-cast sheet), with Finish 1 (smooth or polished), and 6 mm thick unless otherwise indicated; white colored sheet of density required to produce uniform brightness and minimum halation effects.
- M. Opaque Acrylic Sheet: ASTM D 4802, Category A-1 (cell-cast sheet), with Finish 1 (smooth or polished), and 6 mm thick unless otherwise indicated; colors as indicated.

- N. Fasteners: Provide screws, bolts, and other fastening devices made from same material as items being fastened, except provide hot-dip galvanized, stainless-steel, or aluminum fasteners for exterior applications. Provide types, sizes, and lengths to suit installation conditions. Use security fasteners where exposed to view.

2.2 MESSAGE-STRIP DIRECTORIES

- A. Nonilluminated, Message-Strip Directory **<Insert drawing designation>**: Factory-fabricated[, **weather-resistant**] unit consisting of changeable message strips held in place by retainer frame enclosed in manufacturer's standard [1-1/2-to-2-inch- (38-to-50-mm-)] **<Insert dimension>** deep perimeter frame; with aluminum-sheet rear cover panel and glazed cover.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Allenite Signs; division of Allen Marking Products, Inc.
 - b. APCO Graphics, Inc.
 - c. ASI-Modulex.
 - d. Best Sign Systems, Inc.
 - e. Desk & Door Nameplate Co.
 - f. Nelson-Harkins Industries.
 - g. Poblocki Sign Company.
 - h. Tablet & Ticket Co. (The).
 - i. Visiontron Corp.
 - j. Vomar Products, Inc.
 - k. **<Insert manufacturer's name>**.
 - l. or approved equal.
 2. Profiled Frame: Removable, clear acrylic sheet held in place by perimeter frame; with [4-inch- (100-mm-)] **<Insert dimension>** high, molded-opaque-acrylic or molded-fiberglass profiled frame at top and bottom.
 - a. Profiled-Frame Shape: [**Square**] [**Radiused**] [**Beveled**] **<Insert shape>**.
 - b. Profiled-Frame Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry colors**] **<Insert color>**.
 - c. Header Panel: Provide copy on top profiled frame that complies with requirements indicated on [**Drawings**] [**artwork supplied on electronic media by DEN Project Manager**] for size, style, spacing, content, height, location, material, and colors of graphics.
 - d. Divider Color: [**Same as message strips**] [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry colors**] **<Insert color>**.
 3. Reveal Frame and Nonsectional Cover: Glazing held in cover frame mounted on full-length, concealed continuous hinge to form reveal between outer edge of cover frame and inner edge of perimeter frame. Provide nonsectional, one-piece

- cover for access to message strips[**and header panel**], equipped with cylinder lock.
- a. Perimeter Frame: [**Extruded aluminum**] [**Brass**] [**Bronze**].
 - b. Perimeter Frame Profile: [**Square**] [**Quarter round**] [**Beveled**] <Insert shape>.
 - c. Perimeter Frame Corners: [**Square**] [**Radius**].
 - d. Cover Frame: Same material and finish as perimeter frame.
 - 1) Hinge Location: [**Side**] [**Top**].
 - e. Glazing: [**Clear float glass**] [**Clear tempered glass**] [**Bronze-tinted tempered glass**] [**Gray-tinted tempered glass**] [**Clear acrylic sheet**].
 - f. Header Panel: Provide copy that complies with requirements indicated on [**Drawings**] [**artwork supplied on electronic media by DEN Project Manager**] for size, style, spacing, content, height, location, material, and colors of graphics.
 - g. Divider Color: [**Same as message strips**] [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry colors**] <Insert color>.
4. Sectional Frame and Cover: Individual, glazed section covers, each in its own frame, containing single column of message strips. Provide perimeter frame for entire unit[**and separate divider frame between header panel and message-strip columns**]. Mount section covers with concealed pivot hinges or continuous hinges and equip with concealed lock.
- a. Perimeter Frame: [**Extruded aluminum**] [**Brass**] [**Bronze**].
 - b. Perimeter Frame Profile: [**Square**] [**Quarter round**] [**Beveled**].
 - c. Perimeter Frame Corners: [**Square**] [**Radius**].
 - d. Cover Frame: Same material and finish as perimeter frame.
 - e. Glazing: [**Clear float glass**] [**Clear tempered glass**] [**Bronze-tinted tempered glass**] [**Gray-tinted tempered glass**] [**Clear acrylic sheet**].
 - f. Header Panel: Provide copy that complies with requirements indicated on [**Drawings**] [**artwork supplied on electronic media by DEN Project Manager**] for size, style, spacing, content, height, location, material, and colors of graphics.
5. Modular Frame and Cover: Individual modular units containing single column of message strips. Provide each modular unit with its own perimeter frame and lift-off glazed cover that snaps into place, and equipped with concealed lock.
- a. Perimeter Frame: [**Extruded aluminum**] [**Brass**] [**Bronze**].
 - b. Perimeter Frame Profile: [**Square**] [**Quarter round**] [**Beveled**] <Insert shape>.
 - c. Perimeter Frame Corners: [**Square**] [**Radius**].
 - d. Cover Frame: Same material and finish as perimeter frame.
 - e. Glazing: [**Clear float glass**] [**Clear tempered glass**] [**Bronze-tinted tempered glass**] [**Gray-tinted tempered glass**] [**Clear acrylic sheet**].

- f. Header Panel: **[At top of each message-strip column] [Separate modular unit for entire directory]**.
- 1) Provide copy that complies with requirements indicated on **[Drawings] [artwork supplied on electronic media by DEN Project Manager]** for size, style, spacing, content, height, location, material, and colors of graphics.
6. Aluminum Finish: **[Clear anodic] [Color anodic] [Baked enamel] [Powder coat]**.
- a. Color and Gloss: **[Light bronze] [Medium bronze] [Dark bronze] [Black] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors]** <Insert color and gloss>.
7. Brass Finish: **[Buffed] [Medium satin] [Fine matte] [Statuary conversion coating]**.
8. Bronze Finish: **[Buffed] [Medium satin] [Fine matte] [Statuary conversion coating]**.
9. Applied-Copy Changeable Message Strips: Screen-printed copy or vinyl copy applied to **[7-inch- (175-mm-)] [14-inch- (350-mm-)]** <Insert dimension> long, opaque acrylic strips.
10. Engraved Changeable Message Strips: Machine- or laser-engraved copy in **[7-inch- (175-mm-)] [14-inch- (350-mm-)]** <Insert dimension> long, interchangeable, interlocking, acrylic or high-pressure plastic-laminate strips with contrasting core.
11. Magnetic Changeable Message Strips: Screen-printed copy or vinyl copy laminated to **[7-inch- (175-mm-)] [14-inch- (350-mm-)]** <Insert dimension> long, flexible magnetic tape.
12. Film-Insert Changeable Message Strips: Removable message strips fabricated from plastic film with **[vinyl] [screen-printed]** lettering, held in **[7-inch- (175-mm-)] [14-inch- (350-mm-)]** <Insert dimension> long, interchangeable, interlocking plastic carriers.
- a. Message-Strip Color: **[Black] [Gray] [Brown] [White] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range]** <Insert color>.
- b. Message-Strip Height: **[1/2 inch (13 mm)] [1 inch (25 mm)]** [As indicated on Drawings] <Insert dimension>.
- c. Letter Height: **[3/16 inch (5 mm)] [1/4 inch (6 mm)] [3/8 inch (9.5 mm)]** <Insert dimension>.
- d. Letter Style: **[Helvetica Medium] [Clarendon Medium] [Optima Bold] [As selected by DEN Project Manager]** <Insert style>.
- e. Letter Color: **[White] [Black] [Gray] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range]** <Insert color>.
- f. Letter Case: **[All capitals] [Initial capitals] [Capitals and lowercase] [As typed]**.

13. Graphics Panel: Screen-printed graphics or vinyl graphics laminated to opaque acrylic sheet; held in place by interchangeable, interlocking plastic carrier. Provide graphics that comply with requirements indicated on **[Drawings]** **[artwork supplied on electronic media by DEN Project Manager]** for size, style, spacing, content, height, location, material, and colors.
 14. Width: **[24 inches (610 mm)]** **[As indicated on Drawings]** **<Insert dimension>**.
 15. Height: **[36 inches (914 mm)]** **[As indicated on Drawings]** **<Insert dimension>**.
 16. Mounting: **[Recessed]** **[Semirecessed]** **[Surface mounted]** **[As indicated on Drawings]**.
 17. Mounting Height: **[As indicated on Drawings]** **<Insert dimension>**.
- B. Rear-Illuminated, Message-Strip Directory **<Insert drawing designation>**:
Factory-fabricated **[weather-resistant]** unit consisting of changeable message strips held in place by retainer frame enclosed in manufacturer's standard **[4-to-6-inch- (100-to-150-mm-)]** **<Insert dimension>** deep perimeter frame; with glazed cover, aluminum-sheet rear cover panel, and concealed illumination system.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. APCO Graphics, Inc.
 - b. ASI-Modulex, Inc.
 - c. Nelson-Harkins Industries.
 - d. Poblocki Sign Company.
 - e. Tablet & Ticket Co. (The).
 - f. Vomar Products, Inc.
 - g. **<Insert manufacturer's name>**.
 - h. or approved equal.
 2. Reveal Frame and Nonsectional Cover: Glazing held in cover frame mounted on full-length, concealed continuous hinge to form reveal between outer edge of cover frame and inner edge of perimeter frame. Provide nonsectional, one-piece cover for access to message strips **[and header panel]**, equipped with concealed lock.
 - a. Perimeter Frame: **[Extruded aluminum]** **[Brass]** **[Bronze]** **[Stainless steel]**.
 - b. Perimeter Frame Profile: **[Square]** **[Quarter round]** **[Beveled]** **<Insert shape>**.
 - c. Perimeter Frame Corners: **[Square]** **[Radius]**.
 - d. Cover Frame: Same material and finish as perimeter frame.
 - 1) Hinge Location: **[Side]** **[Top]**.
 - e. Glazing: **[Gray-tinted float glass]** **[Gray-tinted tempered glass]** **[Bronze-tinted acrylic sheet]**.
 - f. Header Panel: Provide copy that complies with requirements indicated on **[Drawings]** **[artwork supplied on electronic media by DEN Project Manager]** for size, style, spacing, content, height, location, material, and colors of graphics.

- g. Divider Color: Same as message strips.
3. Floating-Glass Cover: Unframed glazing mounted on full-length, concealed continuous hinge **[to form reveal between outer edge of glazing and inner edge]** **[so glazing conceals front]** of perimeter frame. Provide nonsectional, one-piece cover for access to message strips **[and header panel]**, equipped with concealed lock.
 - a. Perimeter Frame: **[Extruded aluminum]** **[Brass]** **[Bronze]** **[Stainless steel]** with square profile and corners.
 - b. Glazing: **[Gray-tinted float glass]** **[Gray-tinted tempered glass]** **[Bronze-tinted acrylic sheet]**.
 - c. Hinge Location: **[Side]** **[Top]**.
 - d. Header Panel: Provide copy that complies with requirements indicated on **[Drawings]** **[artwork supplied on electronic media by DEN Project Manager]** for size, style, spacing, content, height, location, material, and colors of graphics.
 - e. Divider Color: Same as message strips.
4. Aluminum Finish: **[Clear anodic]** **[Color anodic]** **[Plated]** **<Insert finish>**.
 - a. Color and Gloss: **[Light bronze]** **[Medium bronze]** **[Dark bronze]** **[Black]** **[Gold]** **[As indicated by manufacturer's designations]** **[Match DEN Project Manager's sample]** **[As selected by DEN Project Manager from manufacturer's full range]** **<Insert color and gloss>**.
 - b. Plating: **[Satin bronze]** **[Mirror bronze]** **[Bright chrome]** **[As indicated by manufacturer's designations]** **[Match DEN Project Manager's sample]** **[As selected by DEN Project Manager from manufacturer's full range]** **<Insert finish>**.
5. Brass Finish: **[Buffed]** **[Medium satin]** **[Fine matte]** **[Statuary conversion coating]**.
6. Bronze Finish: **[Buffed]** **[Medium satin]** **[Fine matte]** **[Statuary conversion coating]**.
7. Stainless-Steel Finish: **[No. 4]** **[No. 8]**.
8. Film-Insert Message Strips: Removable, black, negative-film message strips in **[7-inch- (175-mm-)]** **[14-inch- (350-mm-)]** **<Insert dimension>** long, interchangeable, interlocking plastic carriers.
9. Engraved Changeable Message Strips: Machine- or laser-engraved copy in **[7-inch- (175-mm-)]** **[14-inch- (350-mm-)]** **<Insert dimension>** long, interchangeable, interlocking, black, acrylic strips with transparent core.
 - a. Message-Strip Height: **[3/8 inch (9.5 mm)]** **[1/2 inch (13 mm)]** **[5/8 inch (16 mm)]** **[3/4 inch (19 mm)]** **[1 inch (25 mm)]** **[As indicated on Drawings]** **<Insert dimension>**.
 - b. Letter Height: **[3/16 inch (5 mm)]** **[1/4 inch (6 mm)]** **[3/8 inch (9.5 mm)]** **[1/2 inch (13 mm)]** **[5/8 inch (16 mm)]** **<Insert dimension>**.
 - c. Letter Style: **[Helvetica Medium]** **[Clarendon Medium]** **[Optima Bold]** **[As selected by DEN Project Manager]** **<Insert style>**.

- d. Letter Case: **[All capitals] [Initial capitals] [Capitals and lowercase] [As typed]**.
10. Graphics Panel: Same material and color as changeable message strips. Provide graphics that comply with requirements indicated on **[Drawings] [artwork supplied on electronic media by DEN Project Manager]** for size, style, spacing, content, height, location, material, and colors.
11. Header Panel: Same material and color as changeable message strips. Provide copy that complies with requirements indicated on **[Drawings] [artwork supplied on electronic media by DEN Project Manager]** for size, style, spacing, content, height, location, material, and colors.
12. Rear-Illumination System: Provide removable and accessible fluorescent-strip fixture system with reflective interior surfaces for uniform illumination of message strips **[and header panel]** with minimum halation and without light leaks. Include lamps and internal wiring with single concealed electrical connection to building system. Coordinate electrical characteristics with power supply provided.
 - a. Ballasts: Low-temperature, high-power-factor, low-energy, fluorescent lamp ballasts that comply with Certified Ballast Manufacturers Association standards and carry its label. **[Provide exterior ballasts for exterior directories.]**
13. Width: **[As indicated on Drawings] <Insert dimension>**.
14. Height: **[As indicated on Drawings] <Insert dimension>**.
15. Mounting: **[Recessed] [Semirecessed] [Surface mounted] [As indicated on Drawings]**.
16. Mounting Height: **[As indicated on Drawings] <Insert dimension>**.

2.3 CHANGEABLE-LETTER DIRECTORIES

- A. Open-Face, Changeable-Letter Directory **<Insert drawing designation>**:
Factory-fabricated unit consisting of manufacturer's standard, **1-inch-** (25-mm-) deep perimeter frame surrounding **[fixed] [removable]** letterboard with open face.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. A-1 Visual Systems.
 - b. ADP Lemco, Inc.
 - c. Claridge Products and Equipment, Inc.
 - d. Ghent Manufacturing, Inc.
 - e. Marsh Industries, Inc.; Visual Products Group.
 - f. Nelson-Harkins Industries.
 - g. Peter Pepper Products, Inc.
 - h. Tablet & Ticket Co. (The).
 - i. Visiontron Corp.
 - j. **<Insert manufacturer's name>**.
 - k. or approved equal.

2. Aluminum Perimeter Frame: Extruded aluminum with **[clear anodic] [color anodic] [baked-enamel] [powder-coat]** finish.
 - a. Perimeter Frame Shape: **[Square] [Half round] [Quarter round]** <Insert shape>.
 - b. Perimeter Frame Corners: **[Square] [Radius]**.
 - c. Color and Gloss: **[Light bronze] [Medium bronze] [Dark bronze] [Black] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range]** <Insert color and gloss>.
3. Wood Perimeter Frame: **[Red oak] [Walnut]** with **[natural lacquered] [oiled] [stained]** finish.
 - a. Perimeter Frame Profile: **[Square] [Half round] [Quarter round]** <Insert shape>.
 - b. Perimeter Frame Corners: **[Square] [Radius]**.
4. Letterboard: Manufacturer's standard **[felt] [vinyl] [rubber]**-covered panel material, with grooves spaced at **1/4 inch** (6 mm) o.c. to receive changeable letters.
 - a. Color: **[Black] [Red] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range]** <Insert color>.
5. Letters: Molded plastic with tabs for engaging grooves in letterboard. Provide manufacturer's standard assortment of not less than **[300]** <Insert number> letters for each size, style, color, and case required; include letters, numbers, and characters. Package letters in compartmentalized carrying box.
 - a. Height: **[3/8 inch (9.5 mm)] [1/2 inch (13 mm)] [3/4 inch (19 mm)] [1 inch (25 mm)] [1-1/2 inches (38 mm)] [2 inches (50 mm)] [3 inches (75 mm)]** <Insert dimension> to top of capitals.
 - b. Style: **[Helvetica] [Gothic] [Roman] [As selected by DEN Project Manager]** <Insert style>.
 - c. Color: **[White] [Black] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range]** <Insert color>.
 - d. Case: **[All capitals] [Capitals and lowercase]**.
6. Header Panel: **[Nonilluminated; with opaque,] [Illuminated; with translucent,]** acrylic sheet panel set within overall perimeter frame; with matching frame that separates header panel from letterboard.
 - a. Graphic Content and Style: Provide header panel copy that complies with requirements indicated on **[Drawings] [artwork supplied on electronic media by DEN Project Manager]** for size, style, spacing, content, height, location, material, and colors.

- a. Perimeter Frame Profile: **[Square] [Half round] [Quarter round] <Insert shape>**.
 - b. Perimeter Frame Corners: **[Square] [Radius]**.
4. Glazed, Sliding Doors: Unframed, clear-tempered-glass doors supported on nylon or ball-bearing rollers in extruded-aluminum top and bottom track, with plastic top guide and rubber bumpers. Equip each door with ground finger pull and adjustable cylinder lock with two keys.
 - a. Number of Doors: **[Two] [Three] [As indicated on Drawings] <Insert number>**.
5. Glazed, Hinged Doors: Clear **[acrylic sheet] [tempered glass]** set in door frame equipped with full-height continuous hinge and cylinder lock with two keys.**[Provide factory-applied weather stripping on doors for exterior use.]**
 - a. Door Frame: Same material and finish as perimeter frame.
 - b. Number of Doors: **[One] [Two] [Three] [As indicated on Drawings] <Insert number>**.
6. Lift-off Cover: Clear **[acrylic sheet] [tempered glass]** set in frame that snaps into place. Fabricate frame from same material and finish as perimeter frame.
7. Header Panel: **[Nonilluminated; with opaque,] [Illuminated; with translucent,]** acrylic sheet panel set within overall perimeter frame; with matching frame that separates header panel from letterboard.
 - a. Graphic Content and Style: Provide header panel copy that complies with requirements indicated on **[Drawings] [artwork supplied on electronic media by DEN Project Manager]** for size, style, spacing, content, height, location, material, and colors.
 - b. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
8. Illumination System: Concealed top-lighting system consisting of fluorescent-strip fixtures. Include lamps and internal wiring with single, concealed electrical connection to building system. Coordinate electrical characteristics with power supply provided.
 - a. Ballasts: Low-temperature, high-power-factor, low-energy, fluorescent lamp ballasts that comply with Certified Ballast Manufacturers Association standards and carry its label.**[Provide exterior ballasts for exterior directories.]**
9. Letterboard: Manufacturer's standard **[felt] [vinyl] [rubber]**-covered panel material, with grooves spaced at **1/4 inch** (6 mm) o.c. to receive changeable letters.

- a. Color: **[Black]** **[Red]** **[As indicated by manufacturer's designations]** **[Match DEN Project Manager's sample]** **[As selected by DEN Project Manager from manufacturer's full range]** **<Insert color>**.
10. Letters: Molded plastic with tabs for engaging grooves in letterboard. Provide manufacturer's standard assortment of not less than **[300]** **<Insert number>** characters for each size, style, color, and case required; include letters, numbers, and characters. Package letters in compartmentalized carrying box.
- a. Height: **[3/8 inch (9.5 mm)]** **[1/2 inch (13 mm)]** **[3/4 inch (19 mm)]** **[1 inch (25 mm)]** **[1-1/2 inches (38 mm)]** **[2 inches (50 mm)]** **[3 inches (75 mm)]** **<Insert dimension>** to top of capitals.
 - b. Style: **[Helvetica]** **[Gothic]** **[Roman]** **[As selected by DEN Project Manager]** **<Insert style>**.
 - c. Color: **[White]** **[Black]** **[As indicated by manufacturer's designations]** **[Match DEN Project Manager's sample]** **[As selected by DEN Project Manager from manufacturer's full range]** **<Insert color>**.
 - d. Case: **[All capitals]** **[Capitals and lowercase]**.
11. Width: **[24 inches (610 mm)]** **[As indicated on Drawings]** **<Insert dimension>**.
12. Height: **[36 inches (914 mm)]** **[As indicated on Drawings]** **<Insert dimension>**.
13. Mounting: **[Recessed]** **[Semirecessed]** **[Surface mounted]**.
14. Mounting Height: **[As indicated on Drawings]** **<Insert dimension>**.

2.4 FABRICATION

- A. Fabricate directories to requirements indicated for dimensions, design, and thickness and finish of materials. Use metals and shapes of thickness and reinforcement to produce flat surfaces, free of oil canning, and to impart strength for size, design, and application indicated.
- B. Fabricate directory cabinets and doorframes with reinforced corners, mitered and welded to a hairline fit, with no exposed fasteners. Provide structural reinforcement to prevent racking and misalignment.
- C. Fabricate exterior directories with vents to permit evaporation of moisture trapped inside.
- D. Message-Strip Directories: Provide blank message strips for each carrier in entire directory.
- E. Message-Strip Directories: Provide message strips with wording and other designations for the locations where wording is indicated. Include blank message strips as needed to fill out remainder of directory.
- F. Provide hold-open arms for doors of top-hinged directories.

2.5 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.6 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, [**AA-M12C22A41, Class I, 0.018 mm**] [**AA-M12C22A31, Class II, 0.010 mm**] or thicker.
- B. Color Anodic Finish: AAMA 611, [**AA-M12C22A42/A44, Class I, 0.018 mm**] [**AA-M12C22A32/A34, Class II, 0.010 mm**] or thicker.
- C. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of **1.5 mils** (0.04 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

2.7 STAINLESS-STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 1. Run grain of directional finishes with long dimension of each piece.
 - 2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
 - 3. Directional Satin Finish: No. 4.
 - 4. Mirrorlike Reflective, Nondirectional Polish: No. 8.

2.8 COPPER-ALLOY FINISHES

- A. Buffed Finish: M21 (Mechanical Finish: buffed, smooth specular).
- B. Medium-Satin Finish: M32 (Mechanical Finish: directionally textured, medium satin).
- C. Fine-Matte Finish: M42 (Mechanical Finish: nondirectional finish, fine matte).
- D. Statuary Conversion Coating over Satin Finish: M32-C55 (Mechanical Finish: directionally textured, medium satin; Chemical Finish: conversion coating, sulfide).

1. Color: Match DEN Project Manager's sample.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine walls, with Installer present, for compliance with requirements for installation tolerances, surface conditions of wall, and other conditions affecting performance of the Work.
- B. Examine roughing-in for electrical power system to verify actual locations of connections before installation of illuminated directories.
- C. Examine walls and partitions for proper backing for directories.
- D. Examine walls and partitions for suitable framing depth if recessed directories will be installed.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Prepare recesses for directories as required by type and size of unit.

3.3 INSTALLATION

- A. General: Install directories in locations and at mounting heights indicated on Drawings, or if not indicated, at heights indicated below. Keep perimeter lines straight, level, and plumb. Provide grounds, clips, backing materials, adhesives, brackets, anchors, trim, and accessories necessary for complete installation.
 1. Mounting Height: [72 inches (1829 mm)] <Insert dimension> above finished floor to top of directory.
- B. Recessed Directories: Attach directories to wall framing with fasteners at not more than 16 inches (400 mm) o.c. Attach aluminum trim over edges of recessed directories and conceal grounds and clips.
- C. Surface-Mounted Directories: Attach directories to wall surfaces with concealed clips, hangers, or grounds fastened at not more than 16 inches (400 mm) o.c. Secure both top and bottom of directories to walls.
- D. Comply with requirements specified elsewhere for connecting illuminated directories.
 1. After installation is complete, install new fluorescent lamps.

3.4 ADJUSTING AND CLEANING

- A. Adjust directory doors to operate smoothly without warp or bind and so that contact points meet accurately. Lubricate operating hardware as recommended by manufacturer.
- B. Touch up factory-applied finishes to restore damaged or soiled areas.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 101300

SECTION 101416 - PLAQUES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes plaques.
- B. Related Requirements:
 - 1. Section 101423 "Panel Signage" for signs, with or without frames that are made of materials other than solid metal.
 - 2. **[Section 142100 "Electric Traction Elevators"] [Section 142400 "Hydraulic Elevators"] [Section 143100 "Escalators"] [Section 143200 "Moving Walks"] [Section 144200 "Wheelchair Lifts"]** for code-required conveying equipment signage.
 - 3. Section 220553 "Identification for Plumbing Piping and Equipment" for labels, tags, and nameplates for plumbing systems and equipment.
 - 4. Section 230553 "Identification for HVAC Piping and Equipment" for labels, tags, and nameplates for HVAC systems and equipment.
 - 5. Section 260553 "Identification for Electrical Systems" for labels, tags, and nameplates for electrical equipment.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ALLOWANCES

- A. Allowances for **[plaques] [plaques used for room identification]** <Insert item **description**> are specified in Section 012100 "Allowances."
- B. <Insert product or material> **[is] [are]** part of <Insert name of allowance>.

1.4 DEFINITIONS

- A. Accessible: In accordance with the accessibility standard.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
1. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regionally manufactured materials. Include statement indicating cost for each regionally manufactured material.
 - a. Include statement indicating location of manufacturer and distance to Project for each regionally manufactured material.
 2. Product Data for Credit IEQ 4.1: For adhesives, documentation including printed statement of VOC content.
 3. Laboratory Test Reports for Credit IEQ 4.1: For adhesives, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: For plaques.
1. Include fabrication and installation details and attachments to other work.
 2. Show plaque mounting heights, locations of supplementary supports to be provided by others, and accessories.
 3. Show message list, timesteps, graphic elements[, **including raised characters and Braille**], and layout for each plaque at least [**half size**] <Insert scale>.
- D. Samples for Initial Selection: For each type of plaque, exposed component, and exposed finish.
1. Include representative Samples of available timesteps and graphic symbols.
- E. Samples for Verification: For each type of plaque showing all components and with the required finish(es), in manufacturer's standard size unless otherwise indicated and as follows:
1. Plaques: [**Full-size Sample**] [**Half-size Sample**] <Insert size>.
 2. Exposed Accessories: [**Full-size Sample**] [**Half-size Sample**] <Insert size> of each accessory type.
- F. Plaque Schedule: Use same designations specified or indicated on Drawings or in a plaque or sign schedule.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For [**Installer**] [**and**] [**manufacturer**].

- B. Sample Warranty: For special warranty.

1.7 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For plaques to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 QUALITY ASSURANCE

- A. Installer Qualifications: **[Manufacturer of products] [An entity that employs installers and supervisors who are trained and approved by manufacturer].**

1.9 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of plaques that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Deterioration of finishes beyond normal weathering.
 - b. Deterioration of embedded graphic image.
 - 2. Warranty Period: Minimum **[five (5)] <Insert number>** years from date of Substantial Completion.

1.10 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PLAQUES, GENERAL

- A. Regional Materials: Plaques shall be manufactured within **500 miles (800 km)** of Project site.

2.2 PERFORMANCE REQUIREMENTS

- A. Accessibility Standard: Comply with applicable provisions in **[the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for Buildings and Facilities]** **[and] [ICC A117.1]** for signs.

2.3 PLAQUES

- A. Cast Plaque **<Insert drawing designation>**: Plaque with background texture, border, and characters having uniform faces, sharp corners, and precisely formed lines and profiles; and as follows:

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**

- a. Ace Sign Systems, Inc.
- b. Allen Markings International.
- c. APCO Graphics, Inc.
- d. A. R. K. Ramos Signage Systems.
- e. Diskey Sign Company.
- f. Erie Landmark Company; Division of Paul W. Zimmerman Foundries.
- g. Gemini Incorporated.
- h. Matthews International Corporation; Bronze Division.
- i. Metal Arts; Division of L & H Mfg. Co.
- j. Metallic Arts.
- k. Nelson-Harkins Industries.
- l. Southwell Company (The).
- m. **<Insert manufacturer's name>**.
- n. or approved equal.

2. Plaque Material: Cast **[aluminum] [brass] [bronze] [zinc] <Insert material>**.

3. Plaque Thickness: **[0.153 inch (3.89 mm)] [0.25 inch (6.35 mm)] [0.50 inch (12.7 mm)] <Insert dimension>**.

4. Finishes:

- a. Integral Metal Finish: **[Mill] [Antique oxidized] [Mill finish raised surface with dark oxidized background] [As indicated by manufacturer's designation] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry finishes] <Insert finish>**.
- b. Integral Aluminum Finish: **[Clear anodized] [Light bronze anodized] [Medium bronze anodized] [Match DEN Project Manager's sample] [Anodized color as selected by DEN Project Manager from full range of industry colors and color densities] <Insert finish>**.
- c. Baked-Enamel or Powder-Coat Finish: Manufacturer's standard, in color **[as indicated by manufacturer's designation] [matching DEN Project Manager's sample] [as selected by DEN Project Manager from manufacturer's full range] <Insert color>**.

- d. Overcoat: **[Manufacturer's standard baked-on clear coating] [Clear organic coating] <Insert requirement>**.
 5. Background Texture: **[Smooth] [Pebble] [Leatherette] [Matte] [Stipple] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert description>**.
 6. Integrally Cast Border Style: **[As indicated] [Square cut without border] [Square single line, polished] [Square double line, polished] [Plain bevel, brushed] [Plain bevel, polished] [Projected bevel] [Raised flat band] [Double-raised line border] <Insert description>**.
 7. Applied Frame Material, Style, and Finish: **[As indicated] <Insert description>**.
 8. Mounting: **[As indicated] [Concealed studs] [Rosette-head through fasteners] [Countersunk flathead through fasteners] [Adhesive] [Two-face tape] <Insert requirement>**.
 9. Text and Typeface: **[Accessible raised characters and Braille] [Times Roman] [typeface as indicated by manufacturer's designation] [typeface matching DEN Project Manager's sample] [typeface as selected by DEN Project Manager from manufacturer's full range] [and] [variable content as scheduled] <Insert requirement>**. [Finish raised characters to contrast with background color, and finish Braille to match background color.]
- B. Etched Plaque **<Insert drawing designation>**: Chemically etched or photochemically engraved metal sheet or plate with texture, border, and characters having uniform faces, sharp corners, and precisely formed lines and profiles; and as follows:
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. Ace Sign Systems, Inc.
 - b. Advance Corporation; Braille-Tac Division.
 - c. Allen Markings International.
 - d. APCO Graphics, Inc.
 - e. A. R. K. Ramos Signage Systems.
 - f. Diskey Sign Company.
 - g. Dixie Graphics.
 - h. Erie Landmark Company; Division of Paul W. Zimmerman Foundries.
 - i. Gemini Incorporated.
 - j. Matthews International Corporation; Bronze Division.
 - k. Metal Arts; Division of L & H Mfg. Co.
 - l. Metallic Arts.
 - m. Mohawk Sign Systems.
 - n. Nelson-Harkins Industries.
 - o. Steel Art Company.
 - p. **<Insert manufacturer's name>**.
 - q. or approved equal.
 2. Plaque Material: Sheet or plate **[aluminum] [brass] [bronze] [copper] [stainless steel] [zinc] <Insert material>**.
 3. Plaque Thickness: **[0.064 inch (1.63 mm)] [0.125 inch (3.18 mm)] [0.153 inch (3.89 mm)] [0.250 inch (6.35 mm)] <Insert dimension>**.

4. Finishes:
 - a. Integral Metal Finish: **[Mill] [Antique oxidized] [Mill finish raised surface with dark oxidized background] [As indicated by manufacturer's designation] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry finishes] <Insert finish>**.
 - b. Integral Aluminum Finish: **[Clear anodized] [Light bronze anodized] [Medium bronze anodized] [Match DEN Project Manager's sample] [Anodized color as selected by DEN Project Manager from full range of industry colors and color densities] <Insert finish>**.
 - c. Integral Stainless-Steel Finish: **[No. 4] [No. 8] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry finishes] <Insert description>**.
 - d. Baked-Enamel or Powder-Coat Finish: **Manufacturer's standard, in color [as indicated by manufacturer's designation] [matching DEN Project Manager's sample] [as selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
 - e. Overcoat: **[Manufacturer's standard baked-on clear coating] [Clear organic coating] <Insert requirement>**.
5. Integral Edge Style: **[As indicated] [Square cut, polished] [Plain bevel, brushed] <Insert description>**.
6. Applied Frame Material, Style, and Finish: **[As indicated] <Insert description>**.
7. Mounting: **[As indicated] [Concealed studs] [Rosette-head through fasteners] [Countersunk flatheads through fasteners] [Adhesive] [Two-face tape] <Insert requirement>**.
8. Text and Typeface: **[Accessible raised characters and Braille] [Times Roman] [typeface as indicated by manufacturer's designation] [typeface matching DEN Project Manager's sample] [typeface as selected by DEN Project Manager from manufacturer's full range] [and] [variable content as scheduled] <Insert requirement>**. [Finish raised characters to contrast with background color, and finish Braille to match background color.]

2.4 MATERIALS

- A. Aluminum Castings: ASTM B 26/B 26M, alloy and temper recommended by plaque manufacturer for casting process used and for type of use and finish indicated.
- B. Aluminum Sheet and Plate: [ASTM B 209](#) (ASTM B 209M), alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
- C. Aluminum Extrusions: [ASTM B 221](#) (ASTM B 221M), alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
- D. Brass Castings: ASTM B 584, **[alloy recommended by manufacturer and finisher for finish indicated] [lead-free alloy recommended by manufacturer and finisher for finish indicated] [Alloy UNS No. C85200 (high-copper yellow brass)] <Insert requirement>**.

- E. Brass Sheet (Yellow Brass): ASTM B 36/B 36M, [**alloy recommended by manufacturer and finisher for finish indicated**] [**lead-free alloy recommended by manufacturer and finisher for finish indicated**] [**Alloy UNS No. C26000 (yellow brass)**] <Insert requirement>.
- F. Bronze Castings: ASTM B 584, [**alloy recommended by manufacturer and finisher for finish indicated**] [**lead-free alloy recommended by manufacturer and finisher for finish indicated**] [**Alloy UNS No. C86500 (No. 1 manganese bronze)**] <Insert requirement>.
- G. Bronze Plate: ASTM B 36/B 36M, [**alloy recommended by manufacturer and finisher for finish indicated**] [**lead-free alloy recommended by manufacturer and finisher for finish indicated**] [**Alloy UNS No. C22000 (commercial bronze)**] <Insert requirement>.
- H. Copper Sheet: ASTM B 152/B 152M.
- I. Stainless-Steel Sheet: ASTM A 240/A 240M or ASTM A 666, [**Type 304,**] [**Type 316,**] stretcher-leveled standard of flatness.
- J. Zinc Castings: ASTM B 240, alloy and temper recommended by plaque manufacturer for type of use and finish indicated.
- K. Zinc Sheet: [**ASTM B 69**] <Insert standard>, alloy and temper recommended by plaque manufacturer for type of use and finish indicated.

2.5 ACCESSORIES

- A. Fasteners and Anchors: Manufacturer's standard as required for secure anchorage of plaques, noncorrosive and compatible with each material joined, and complying with the following:
 - 1. Use concealed fasteners and anchors unless indicated to be exposed.
 - 2. For exterior exposure, furnish [**nonferrous-metal**] [**stainless-steel**] [**or**] [**hot-dip galvanized**] <Insert requirement> devices unless otherwise indicated.
 - 3. Exposed Metal-Fastener Components, General:
 - a. Fabricated from same basic metal and finish of fastened metal unless otherwise indicated.
 - b. Fastener Heads: For nonstructural connections, use [**flathead**] [**or**] [**oval countersunk**] <Insert shape> screws and bolts with tamper-resistant [**Allen-head**] [**spanner-head**] [**or**] [**one-way-head**] <Insert slot design> slots unless otherwise indicated.
 - 4. Plaque Mounting Fasteners:
 - a. Concealed Studs: Concealed (blind), threaded studs welded or brazed to back of plaque, screwed into back of plaque, or screwed into tapped lugs cast integrally into back of plaque, unless otherwise indicated.

- b. Through Fasteners: Exposed metal fasteners matching plaque finish, with type of head indicated, installed in predrilled holes.
- B. Adhesives: As recommended by plaque manufacturer and with a VOC content of [70] <Insert value> g/L or less for adhesives used inside the weatherproofing system and applied on-site when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- C. Adhesives: As recommended by plaque manufacturer and that comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- D. Two-Face Tape: Manufacturer's standard high-bond, foam-core tape, 0.045 inch (1.14 mm) thick, with adhesive on both sides.
- E. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

2.6 FABRICATION

- A. General: Provide manufacturer's standard plaques according to requirements indicated.
 - 1. Preassemble plaques in the shop to greatest extent possible. Disassemble plaques only as necessary for shipping and handling limitations. Clearly mark units for reassembly and installation; apply markings in locations concealed from view after final assembly.
 - 2. Mill joints to a tight, hairline fit. Form assemblies and joints exposed to weather to resist water penetration and retention.
 - 3. Comply with AWS for recommended practices in welding and brazing. Provide welds and brazes behind finished surfaces without distorting or discoloring exposed side. Clean exposed welded and brazed connections of flux, and dress exposed and contact surfaces.
 - 4. Conceal connections if possible; otherwise, locate connections where they are inconspicuous.
 - 5. Provide rebates, lugs, and brackets necessary to assemble components and to attach to existing work. Drill and tap for required fasteners. Use concealed fasteners where possible; use exposed fasteners that match plaque finish.
 - 6. Castings: Fabricate castings free of warp, cracks, blowholes, pits, scale, sand holes, and other defects that impair appearance or strength. Grind, wire brush, sandblast, and buff castings to remove seams, gate marks, casting flash, and other casting marks before finishing.
- B. Surface-Engraved Graphics: Machine engrave characters and other graphic devices into panel surface indicated to produce precisely formed copy, incised to uniform depth.
 - 1. Engraved Metal: Fill engraved graphics with manufacturer's standard baked enamel.

- C. Brackets: Fabricate brackets, fittings, and hardware for bracket-mounted plaques to suit plaque construction and mounting conditions indicated. Modify manufacturer's standard brackets as required.
1. Aluminum Brackets: Factory finish brackets with baked-enamel or powder-coat finish **[to match plaque-background color] [to match DEN Project Manager's sample]** <Insert requirement> color unless otherwise indicated.
 2. Stainless-Steel Brackets: Factory finish brackets **[to match plaque background] [to match DEN Project Manager's sample] [with No. 4]** <Insert finish> finish unless otherwise indicated.

2.7 GENERAL FINISH REQUIREMENTS

- A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- C. Directional Finishes: Run grain with long dimension of each piece and perpendicular to long dimension of finished trim or border surface unless otherwise indicated.
- D. Organic, Anodic, and Chemically Produced Finishes: Apply to formed metal after fabrication but before applying contrasting polished finishes on raised features unless otherwise indicated.

2.8 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, **[Class I, 0.018 mm] [Class II, 0.010 mm]** or thicker.
- B. Color Anodic Finish: AAMA 611, **[Class I, 0.018 mm] [Class II, 0.010 mm]** or thicker.
- C. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of **1.5 mils (0.04 mm)**. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

2.9 STAINLESS-STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
1. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
 2. Directional Satin Finish: No. 4.
 3. Dull Satin Finish: No. 6.

4. Reflective, Directional Polish: No. 7.
5. Mirrorlike Reflective, Nondirectional Polish: No. 8.

2.10 CLEAR ORGANIC COATING FOR COPPER-ALLOY FINISHES

- A. Clear Organic Coating: Clear, waterborne, air-drying, acrylic lacquer called "Incralac"; specially developed for coating copper-alloy products; consisting of a solution of methyl methacrylate copolymer with benzotriazole to prevent breakdown of the film in UV light; shop applied in two uniform coats per manufacturer's written instructions, with interim drying between coats and without runs or other surface imperfections, to a total dry film thickness of **1 mil** (0.025 mm).

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of plaque work.
- B. Verify that plaque-support surfaces are within tolerances to accommodate plaques without gaps or irregularities between backs of plaques and support surfaces unless otherwise indicated.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install plaques using mounting methods indicated and according to manufacturer's written instructions.
 1. Install plaques level, plumb, true to line, and at locations and heights indicated, with plaque surfaces free of distortion and other defects in appearance.
 2. Install plaques so they do not protrude or obstruct according to the accessibility standard.
 3. Before installation, verify that plaque surfaces are clean and free of materials or debris that would impair installation.
 4. Corrosion Protection: Coat concealed surfaces of exterior aluminum in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.
- B. Plaques Used for Room Identification[**and Other Accessible Plaques**]: Install in locations on walls [**as indicated**] [**and**] [**according to accessibility standard**] <Insert requirement>.
- C. Mounting Methods:

1. Concealed Studs: Using a template, drill holes in substrate aligning with studs on back of plaque. Remove loose debris from hole and substrate surface.
 - a. Masonry Substrates: Fill holes with adhesive. Leave recess space in hole for displaced adhesive. Place plaque in position and push until flush to surface, embedding studs in holes. Temporarily support plaque in position until adhesive fully sets.
 - b. Thin or Hollow Surfaces: Place plaque in position and flush to surface, install washers and nuts on studs projecting through opposite side of surface, and tighten.
2. Through Fasteners: Drill holes in substrate using predrilled holes in plaque as template. Countersink holes in plaque if required. Place plaque in position and flush to surface. Install through fasteners and tighten.
3. Brackets: Remove loose debris from substrate surface and install bracket supports in position so that plaque is correctly located and aligned.
4. Adhesive: Clean bond-breaking materials from substrate surface and remove loose debris. Apply linear beads or spots of adhesive symmetrically to back of plaque and of suitable quantity to support weight of plaque after cure without slippage. Keep adhesive away from edges to prevent adhesive extrusion as plaque is applied and to prevent visibility of cured adhesive at plaque edges. Place plaque in position, and push to engage adhesive. Temporarily support plaque in position until adhesive fully sets.
5. Two-Face Tape: Clean bond-breaking materials from substrate surface and remove loose debris. Apply tape strips symmetrically to back of plaque and of suitable quantity to support weight of plaque without slippage. Keep strips away from edges to prevent visibility at plaque edges. Place plaque in position, and push to engage tape adhesive.
6. Shim-Plate Mounting: Provide **1/8-inch- (3-mm-)** thick, concealed aluminum shim plates with predrilled and countersunk holes, at locations indicated, and where other direct mounting methods are impractical. Attach plate with fasteners and anchors suitable for secure attachment to substrate. Attach plaques to plate using **[method specified above] <Insert requirement>**.

3.3 ADJUSTING AND CLEANING

- A. Remove and replace damaged or deformed plaques and plaques that do not comply with specified requirements. Replace plaques with damaged or deteriorated finishes or components that cannot be successfully repaired by finish touchup or similar minor repair procedures.
- B. Remove temporary protective coverings and strippable films as plaques are installed.
- C. On completion of installation, clean exposed surfaces of plaques according to manufacturer's written instructions, and touch up minor nicks and abrasions in finish. Maintain plaques in a clean condition during construction and protect from damage until acceptance by Owner.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 101416

SECTION 101419 - DIMENSIONAL LETTER SIGNAGE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Cast dimensional characters.
 - 2. Cutout dimensional characters.
 - 3. Fabricated channel dimensional characters.
 - 4. Illuminated, fabricated channel dimensional characters.
 - 5. Molded-plastic dimensional characters.
 - 6. Illuminated, molded-plastic dimensional characters.
- B. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ALLOWANCES

- A. Allowances for [**signage**] [**illuminated, fabricated channel dimensional characters**] **<Insert item description>** are specified in Section 012100 "Allowances."
- B. **<Insert product or material>** [**is**] [**are**] part of **<Insert name of allowance>**.

1.4 DEFINITIONS

- A. Illuminated: Illuminated by lighting source integrally constructed as part of the sign unit.

1.5 COORDINATION

- A. Furnish templates for placement of electrical service embedded in permanent construction by other installers.

1.6 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
1. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regionally manufactured materials. Include statement indicating cost for each regionally manufactured material.
 - a. Include statement indicating location of manufacturer and distance to Project for each regionally manufactured material.
 2. Product Data for Credit IEQ 4.1: For adhesives, documentation including printed statement of VOC content.
 3. Laboratory Test Reports for Credit IEQ 4.1: For adhesives, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: For dimensional letter signs.
1. Include fabrication and installation details and attachments to other work.
 2. Show sign mounting heights, locations of supplementary supports to be provided by others, and accessories.
 3. Show message list, typestyles, graphic elements, and layout for each sign at least [**half size**] <Insert scale>.
 4. Show locations of electrical service connections.
 5. Include diagrams for power, signal, and control wiring.
- D. Samples for Initial Selection: For each type of sign assembly, exposed component, and exposed finish.
1. Include representative Samples of available typestyles and graphic symbols.
- E. Samples for Verification: For each type of sign assembly showing all components and with the required finish(es), in manufacturer's standard size unless otherwise indicated and as follows:
1. Dimensional Characters: [**Full-size Sample**] [**Half-size Sample**] <Insert size> of [**each type of**] dimensional character.
 2. Exposed Accessories: [**Full-size Sample**] [**Half-size Sample**] <Insert size> of each accessory type.
- F. Sign Schedule: Use same designations specified or indicated on Drawings or in a sign schedule.
- G. Delegated-Design Submittal: For [**signs indicated in "Performance Requirements" Article**] <Insert sign designations>.

1. Include structural analysis calculations for signs indicated to comply with design loads; signed and sealed by the qualified professional engineer responsible for their preparation.

1.7 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For **[Installer] [and] [manufacturer]**.
- B. Sample Warranty: For special warranty.

1.8 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For signs to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.9 QUALITY ASSURANCE

- A. Installer Qualifications: **[Manufacturer of products] [An entity that employs installers and supervisors who are trained and approved by manufacturer]**.

1.10 FIELD CONDITIONS

- A. Field Measurements: Verify locations of electrical service embedded in permanent construction by other installers by field measurements before fabrication, and indicate measurements on Shop Drawings.

1.11 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of signs that fail in materials or workmanship within specified warranty period.
 1. Failures include, but are not limited to, the following:
 - a. Deterioration of finishes beyond normal weathering.
 - b. Separation or delamination of sheet materials and components.
 2. Warranty Period: Minimum **[Five (5)] <Insert number>** years from date of Substantial Completion.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419

"Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 DIMENSIONAL LETTER SIGNS, GENERAL

- A. Regional Materials: Dimensional letter signs shall be manufactured within **500 miles (800 km)** of Project site.

2.2 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design sign structure and anchorage of **[rooftop]** **[dimensional character]** **<Insert description>** sign type(s) **<Insert drawing designation of sign(s)>** to withstand design loads **[as indicated on Drawings]** **<Insert loads>**.
- B. Thermal Movements: For exterior **[fabricated channel dimensional characters]** **<Insert item>**, allow for thermal movements from ambient and surface temperature changes.
1. Temperature Change: **[120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces]** **<Insert temperature change>**.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.3 DIMENSIONAL CHARACTERS

- A. Cast Characters **<Insert drawing designation>**: Characters with uniform faces, sharp corners, and precisely formed lines and profiles, and as follows:
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
- ACE Sign Systems, Inc.
 - Allen Markings International.
 - APCO Graphics, Inc.
 - A. R. K. Ramos Signage Systems.
 - ASI Sign Systems, Inc.
 - Diskey Sign Company.
 - Gemini Incorporated.
 - Matthews International Corporation; Bronze Division.
 - Metal Arts; Division of L & H Mfg. Co.
 - Metallic Arts.

- k. Seton Identification Products.
 - l. Southwell Company (The).
 - m. **<Insert manufacturer's name>**.
 - n. or approved equal.
 2. Character Material: Cast **[aluminum] [brass] [bronze] [zinc] <Insert material>**.
 3. Character Height: **[As indicated] <Insert dimension>**.
 4. Thickness: **[As indicated] [Manufacturer's standard for size of character] <Insert dimension>**.
 5. Finishes:
 - a. Integral Metal Finish: **[Mill] [Antique oxidized] [As indicated by manufacturer's designation] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry finishes] <Insert finish>**.
 - b. Integral Aluminum Finish: **[Clear anodized] [Light bronze anodized] [Medium bronze anodized] [Match DEN Project Manager's sample] [Anodized color as selected by DEN Project Manager from full range of industry colors and color densities] <Insert finish>**.
 - c. Baked-Enamel or Powder-Coat Finish: Manufacturer's standard, in color **[as indicated by manufacturer's designation] [matching DEN Project Manager's sample] [as selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
 - d. Overcoat: **[Manufacturer's standard baked-on clear coating] [Clear organic coating] <Insert requirement>**.
 6. Mounting: **[As indicated] [Concealed studs] [Projecting studs] [Rosette-head through fasteners] [Countersunk flathead through fasteners] <Insert requirement>**.
 7. Typeface: **[Times Roman] <Insert requirement>**.
- B. Cutout Characters **<Insert drawing designation>**: Characters with uniform faces; square-cut, smooth[, **eased**] edges; precisely formed lines and profiles; and as follows:
 1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. ACE Sign Systems, Inc.
 - b. APCO Graphics, Inc.
 - c. A. R. K. Ramos Signage Systems.
 - d. ASI Sign Systems, Inc.
 - e. Charleston Industries, Inc.
 - f. Diskey Sign Company.
 - g. Gemini Incorporated.
 - h. InPro Corporation.
 - i. Matthews International Corporation; Bronze Division.
 - j. Metal Arts; Division of L & H Mfg. Co.
 - k. Metallic Arts.
 - l. Nelson-Harkins Industries.
 - m. Southwell Company (The).

- n. Steel Art Company.
 - o. **<Insert manufacturer's name>**.
 - p. or approved equal.
2. Character Material: Sheet or plate **[aluminum] [brass] [bronze] [copper] [stainless steel] [zinc] [acrylic] [acrylic with laminated aluminum facing] [acrylic with laminated brass facing] [acrylic with laminated bronze facing] [acrylic with laminated stainless-steel facing] <Insert material>**.
 3. Character Height: **[As indicated] <Insert dimension>**.
 4. Thickness: **[As indicated] [Manufacturer's standard for size of character] [0.125 inch (3.18 mm)] [0.25 inch (6.35 mm)] <Insert dimension>**.
 5. Finishes:
 - a. Integral Metal Finish: **[Mill] [Antique oxidized] [As indicated by manufacturer's designation] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry finishes] <Insert finish>**.
 - b. Integral Aluminum Finish: **[Clear anodized] [Light bronze anodized] [Medium bronze anodized] [Match DEN Project Manager's sample] [Anodized color as selected by DEN Project Manager from full range of industry colors and color densities] <Insert finish>**.
 - c. Integral Stainless-Steel Finish: **[No. 4] [No. 8] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry finishes] <Insert description>**.
 - d. Integral Acrylic Color: **[As indicated by manufacturer's designation] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors] <Insert color>**.
 - e. Baked-Enamel or Powder-Coat Finish: **Manufacturer's standard, in color [as indicated by manufacturer's designation] [matching DEN Project Manager's sample] [as selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
 - f. Overcoat: **[Manufacturer's standard baked-on clear coating] [Clear organic coating] <Insert requirement>**.
 - g. Painted Edges: **Paint edges of acrylic characters with laminated metal facing as recommended in writing by manufacturer.**
 6. Mounting: **[As indicated] [Concealed studs] [Projecting studs] [Rosette-head through fasteners] [Countersunk flathead through fasteners] [Concealed, painted aluminum back bar or bracket assembly] [Concealed, stainless-steel back bar or bracket assembly] [Adhesive] <Insert requirement>**.
 7. Typeface: **[Times Roman] <Insert requirement>**.
- C. Fabricated Channel Characters **<Insert drawing designation>**: **[Metal face and side returns] [Open face with metal side returns] [Translucent face with metal side returns]**, formed free from warp and distortion; with uniform faces, sharp corners, and precisely formed lines and profiles; internally braced for stability and for securing fasteners; and as follows.

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. ACE Sign Systems, Inc.
 - b. Allen Industries, Inc.; Architectural Division.
 - c. APCO Graphics, Inc.
 - d. A. R. K. Ramos Signage Systems.
 - e. ASI Sign Systems, Inc.
 - f. Diskey Sign Company.
 - g. Gemini Incorporated.
 - h. Metallic Arts.
 - i. Nelson-Harkins Industries.
 - j. Poblocki Sign Company, LLC.
 - k. Steel Art Company.
 - l. **<Insert manufacturer's name>**.
 - m. or approved equal.

2. **Illuminated Characters: [Backlighted] [Frontlighted] character construction with [fluorescent tube] [fiber-optic] [LED] [neon tube] <Insert requirement> lighting including transformers, insulators, and other accessories for operability, with provision for servicing and concealing connections to building electrical system. Use tight or sealed joint construction to prevent unintentional light leakage. Space lamps apart from each other and away from character surfaces as needed to illuminate evenly.**
 - a. **Power: [As indicated on electrical Drawings] [120 V, 60 Hz, 1 phase, 15 A] <Insert requirement>**.
 - b. **Weeps: Provide weep holes to drain water at lowest part of exterior characters.[Equip weeps with permanent baffles to block light leakage without inhibiting drainage.]**

3. **Character Material: Sheet or plate [aluminum] [brass] [bronze] [copper] [steel] [stainless steel] [zinc] <Insert material>**.
4. **Material Thickness: [As indicated] [Manufacturer's standard for size and design of character] [0.100 inch (2.54 mm)] [0.032 inch (0.81 mm)] [Nominal 0.048 inch (1.21 mm) thick for face and 0.030 inch (0.76 mm) thick for returns] [0.050 inch (1.27 mm) thick for face and 0.031 inch (0.79 mm) thick for returns] <Insert dimension(s)>**.
5. **Translucent Face Sheet: Acrylic sheet, [thickness as indicated] [manufacturer's standard thickness for size of character] [0.125 inch (3.18 mm) thick] [0.25 inch (6.35 mm) thick] <Insert dimension>, and with integral color [matching DEN Project Manager's sample] [as selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
6. **Character Height: [As indicated] <Insert dimension>**.
7. **Character Depth: [As indicated] <Insert dimension>**.
8. **Finishes:**
 - a. **Integral Metal Finish: [Mill] [Antique oxidized] [As indicated by manufacturer's designation] [Match DEN Project Manager's sample]**

- [As selected by DEN Project Manager from full range of industry finishes] <Insert finish>.
- b. Integral Aluminum Finish: [Clear anodized] [Light bronze anodized] [Medium bronze anodized] [Match DEN Project Manager's sample] [Anodized color as selected by DEN Project Manager from full range of industry colors and color densities] <Insert finish>.
 - c. Integral Stainless-Steel Finish: [No. 4] [No. 8] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry finishes] <Insert description>.
 - d. Baked-Enamel or Powder-Coat Finish: Manufacturer's standard, in color [as indicated by manufacturer's designation] [matching DEN Project Manager's sample] [as selected by DEN Project Manager from manufacturer's full range] <Insert color>.
 - e. Overcoat: [Manufacturer's standard baked-on clear coating] [Clear organic coating] <Insert requirement>.
9. Mounting: [As indicated] [Manufacturer's standard for size and design of character] [Projecting studs] [Concealed, painted aluminum back bar or bracket assembly] [Concealed, stainless-steel back bar or bracket assembly] <Insert requirement>.
- a. Hold characters at [2-inch (51-mm) distance] [manufacturer's recommended distance] [distance as selected by DEN Project Manager] <Insert dimension> from wall surface.
10. Typeface: [Times Roman] <Insert requirement>.
- D. Molded-Plastic Characters <Insert drawing designation>: [Injection molded] [or] [thermoformed] characters having uniform faces and profiles, and as follows:
1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. ACE Sign Systems, Inc.
 - b. ASI Sign Systems, Inc.
 - c. Diskey Sign Company.
 - d. Gemini Incorporated.
 - e. Metallic Arts.
 - f. <Insert manufacturer's name>.
 - g. or approved equal.
 2. **Illuminated Characters:** Characters with concealed [fluorescent tube] [fiber-optic] [LED] [neon tube] lighting including transformers, insulators, and other accessories; with provision for servicing and concealing connections to building electrical system. Space lamps apart from each other and away from character surfaces as needed to illuminate evenly.
 - a. Power: [As indicated on electrical Drawings] [120 V, 60 Hz, 1 phase, 15 A] <Insert requirement>.

- b. Weeps: Provide weep holes to drain water at lowest part of exterior characters. [**Equip weeps with permanent baffles to block light leakage without inhibiting drainage.**]
3. Color: Manufacturer's standard [**integral color**] [**painted finish**] process, in color [**as indicated by manufacturer's designation**] [**matching DEN Project Manager's sample**] [**as selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
4. Typeface: [**Times Roman**] <Insert requirement>.

2.4 DIMENSIONAL CHARACTER MATERIALS

- A. Aluminum Castings: ASTM B 26/B 26M, alloy and temper recommended by sign manufacturer for casting process used and for type of use and finish indicated.
- B. Aluminum Sheet and Plate: [ASTM B 209](#) (ASTM B 209M), alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
- C. Aluminum Extrusions: [ASTM B 221](#) (ASTM B 221M), alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
- D. Brass Castings: ASTM B 584, [**alloy recommended by manufacturer and finisher for finish indicated**] [**lead-free alloy recommended by manufacturer and finisher for finish indicated**] [**Alloy UNS No. C85200 (high-copper yellow brass)**] <Insert requirement>.
- E. Brass Sheet (Yellow Brass): ASTM B 36/B 36M, [**alloy recommended by manufacturer and finisher for finish indicated**] [**lead-free alloy recommended by manufacturer and finisher for finish indicated**] [**Alloy UNS No. C26000 (yellow brass)**] <Insert requirement>.
- F. Bronze Castings: ASTM B 584, [**alloy recommended by manufacturer and finisher for finish indicated**] [**lead-free alloy recommended by manufacturer and finisher for finish indicated**] [**Alloy UNS No. C86500 (No. 1 manganese bronze)**] <Insert requirement>.
- G. Bronze Plate: ASTM B 36/B 36M, [**alloy recommended by manufacturer and finisher for finish indicated**] [**lead-free alloy recommended by manufacturer and finisher for finish indicated**] [**Alloy UNS No. C22000 (commercial bronze)**] <Insert requirement>.
- H. Copper Sheet: ASTM B 152/B 152M.
- I. Stainless-Steel Sheet: ASTM A 240/A 240M or ASTM A 666, [**Type 304,**] [**Type 316,**] stretcher-leveled standard of flatness.
- J. Zinc Castings: ASTM B 240, alloy and temper recommended by sign manufacturer for type of use and finish indicated.

- K. Zinc Sheet: [**ASTM B 69**] <Insert standard>, alloy and temper recommended by sign manufacturer for type of use and finish indicated.
- L. Acrylic Sheet: ASTM D 4802, category as standard with manufacturer for each sign, Type UVF (UV filtering).
- M. Paints and Coatings for Sheet Materials: Inks, dyes, and paints that are recommended by manufacturer for optimum adherence to surface and are UV and water resistant for colors and exposure indicated.

2.5 ACCESSORIES

- A. Fasteners and Anchors: Manufacturer's standard as required for secure anchorage of signage, noncorrosive and compatible with each material joined, and complying with the following:
 - 1. Use concealed fasteners and anchors unless indicated to be exposed.
 - 2. For exterior exposure, furnish [**nonferrous-metal**] [**stainless-steel**] [**or**] [**hot-dip galvanized**] <Insert requirement> devices unless otherwise indicated.
 - 3. Exposed Metal-Fastener Components, General:
 - a. Fabricated from same basic metal and finish of fastened metal unless otherwise indicated.
 - b. Fastener Heads: For nonstructural connections, use [**flathead**] [**or**] [**oval countersunk**] <Insert shape> screws and bolts with tamper-resistant [**Allen-head**] [**spanner-head**] [**or**] [**one-way-head**] <Insert slot design> slots unless otherwise indicated.
 - 4. Sign Mounting Fasteners:
 - a. Concealed Studs: Concealed (blind), threaded studs welded or brazed to back of sign material, screwed into back of sign assembly, or screwed into tapped lugs cast integrally into back of cast sign material, unless otherwise indicated.
 - b. Projecting Studs: Threaded studs with sleeve spacer, welded or brazed to back of sign material, screwed into back of sign assembly, or screwed into tapped lugs cast integrally into back of cast sign material, unless otherwise indicated.
 - c. Through Fasteners: Exposed metal fasteners matching sign finish, with type of head indicated, installed in predrilled holes.
- B. Adhesives: As recommended by sign manufacturer and with a VOC content of [**70**] <Insert value> g/L or less for adhesives used inside the weatherproofing system and applied on-site when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- C. Adhesives: As recommended by sign manufacturer and that comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- D. Two-Face Tape: Manufacturer's standard high-bond, foam-core tape, 0.045 inch (1.14 mm) thick, with adhesive on both sides.
- E. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

2.6 FABRICATION

- A. General: Provide manufacturer's standard sign assemblies according to requirements indicated.
 - 1. Preassemble signs and assemblies in the shop to greatest extent possible. Disassemble signs and assemblies only as necessary for shipping and handling limitations. Clearly mark units for reassembly and installation; apply markings in locations concealed from view after final assembly.
 - 2. Mill joints to a tight, hairline fit. Form assemblies and joints exposed to weather to resist water penetration and retention.
 - 3. Comply with AWS for recommended practices in welding and brazing. Provide welds and brazes behind finished surfaces without distorting or discoloring exposed side. Clean exposed welded and brazed connections of flux, and dress exposed and contact surfaces.
 - 4. Conceal connections if possible; otherwise, locate connections where they are inconspicuous.
 - 5. Internally brace signs for stability and for securing fasteners.
 - 6. Provide rebates, lugs, and brackets necessary to assemble components and to attach to existing work. Drill and tap for required fasteners. Use concealed fasteners where possible; use exposed fasteners that match sign finish.
 - 7. Castings: Fabricate castings free of warp, cracks, blowholes, pits, scale, sand holes, and other defects that impair appearance or strength. Grind, wire brush, sandblast, and buff castings to remove seams, gate marks, casting flash, and other casting marks before finishing.
- B. Brackets: Fabricate brackets, fittings, and hardware for bracket-mounted signs to suit sign construction and mounting conditions indicated. Modify manufacturer's standard brackets as required.
 - 1. Aluminum Brackets: Factory finish brackets with baked-enamel or powder-coat finish **[to match sign-background color] [to match DEN Project Manager's sample] <Insert requirement>** color unless otherwise indicated.
 - 2. Stainless-Steel Brackets: Factory finish brackets **[to match sign background] [to match DEN Project Manager's sample] [with No. 4] <Insert finish>** finish unless otherwise indicated.

2.7 GENERAL FINISH REQUIREMENTS

- A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- C. Directional Finishes: Run grain with long dimension of each piece and perpendicular to long dimension of finished trim or border surface unless otherwise indicated.
- D. Organic, Anodic, and Chemically Produced Finishes: Apply to formed metal after fabrication but before applying contrasting polished finishes on raised features unless otherwise indicated.

2.8 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, [**Class I, 0.018 mm**] [**Class II, 0.010 mm**] or thicker.
- B. Color Anodic Finish: AAMA 611, [**Class I, 0.018 mm**] [**Class II, 0.010 mm**] or thicker.
- C. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of **1.5 mils** (0.04 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

2.9 STAINLESS-STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 1. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
 - 2. Directional Satin Finish: No. 4.
 - 3. Dull Satin Finish: No. 6.
 - 4. Reflective, Directional Polish: No. 7.
 - 5. Mirrorlike Reflective, Nondirectional Polish: No. 8.

2.10 CLEAR ORGANIC COATING FOR COPPER-ALLOY FINISHES

- A. Clear Organic Coating: Clear, waterborne, air-drying, acrylic lacquer called "Incralac"; specially developed for coating copper-alloy products; consisting of a solution of methyl methacrylate copolymer with benzotriazole to prevent breakdown of the film in UV light; shop applied in two uniform coats per manufacturer's written instructions, with interim drying between coats and without runs or other surface imperfections, to a total dry film thickness of **1 mil** (0.025 mm).

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of signage work.
- B. Verify that sign-support surfaces are within tolerances to accommodate signs without gaps or irregularities between backs of signs and support surfaces unless otherwise indicated.
- C. Verify that electrical service is correctly sized and located to accommodate signs.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install signs using mounting methods indicated and according to manufacturer's written instructions.
 - 1. Install signs level, plumb, true to line, and at locations and heights indicated, with sign surfaces free of distortion and other defects in appearance.
 - 2. Before installation, verify that sign surfaces are clean and free of materials or debris that would impair installation.
 - 3. Corrosion Protection: Coat concealed surfaces of exterior aluminum in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.
- B. Mounting Methods:
 - 1. Concealed Studs: Using a template, drill holes in substrate aligning with studs on back of sign. Remove loose debris from hole and substrate surface.
 - a. Masonry Substrates: Fill holes with adhesive. Leave recess space in hole for displaced adhesive. Place sign in position and push until flush to surface, embedding studs in holes. Temporarily support sign in position until adhesive fully sets.
 - b. Thin or Hollow Surfaces: Place sign in position and flush to surface, install washers and nuts on studs projecting through opposite side of surface, and tighten.
 - 2. Projecting Studs: Using a template, drill holes in substrate aligning with studs on back of sign. Remove loose debris from hole and substrate surface.
 - a. Masonry Substrates: Fill holes with adhesive. Leave recess space in hole for displaced adhesive. Place spacers on studs, place sign in position, and push until spacers are pinched between sign and substrate, embedding the

- stud ends in holes. Temporarily support sign in position until adhesive fully sets.
- b. Thin or Hollow Surfaces: Place spacers on studs, place sign in position with spacers pinched between sign and substrate, and install washers and nuts on stud ends projecting through opposite side of surface, and tighten.
3. Through Fasteners: Drill holes in substrate using predrilled holes in sign as template. Countersink holes in sign if required. Place sign in position and flush to surface. Install through fasteners and tighten.
 4. Back Bar and Brackets: Remove loose debris from substrate surface and install backbar or bracket supports in position so that signage is correctly located and aligned.
 5. Adhesive: Clean bond-breaking materials from substrate surface and remove loose debris. Apply linear beads or spots of adhesive symmetrically to back of sign and of suitable quantity to support weight of sign after cure without slippage. Keep adhesive away from edges to prevent adhesive extrusion as sign is applied and to prevent visibility of cured adhesive at sign edges. Place sign in position, and push to engage adhesive. Temporarily support sign in position until adhesive fully sets.
 6. Two-Face Tape: Clean bond-breaking materials from substrate surface and remove loose debris. Apply tape strips symmetrically to back of sign and of suitable quantity to support weight of sign without slippage. Keep strips away from edges to prevent visibility at sign edges. Place sign in position, and push to engage tape adhesive.

3.3 ADJUSTING AND CLEANING

- A. Remove and replace damaged or deformed characters and signs that do not comply with specified requirements. Replace characters with damaged or deteriorated finishes or components that cannot be successfully repaired by finish touchup or similar minor repair procedures.
- B. Remove temporary protective coverings and strippable films as signs are installed.
- C. On completion of installation, clean exposed surfaces of signs according to manufacturer's written instructions, and touch up minor nicks and abrasions in finish. Maintain signs in a clean condition during construction and protect from damage until acceptance by Owner.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 101419

SECTION 101423 - PANEL SIGNAGE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Panel signs.
2. Illuminated panel signs.
3. Room-identification signs.
4. Field-applied, vinyl-character signs.

B. Related Requirements:

1. Section 015000 "Temporary Facilities and Controls" for temporary Project identification signs and for temporary information and directional signs.
2. Section 015639 "Temporary Tree and Plant Protection" for temporary protection-zone signage.
3. Section 101300 "Directories" for building directories.
4. Section 101426 "Post and Panel/Pylon Signage" for freestanding signs.
5. **[Section 142100 "Electric Traction Elevators"] [Section 142400 "Hydraulic Elevators"] [Section 143100 "Escalators"] [Section 143200 "Moving Walks"] [Section 144200 "Wheelchair Lifts"]** for code-required conveying equipment signage.
6. Section 220553 "Identification for Plumbing Piping and Equipment" for labels, tags, and nameplates for plumbing systems and equipment.
7. Section 230553 "Identification for HVAC Piping and Equipment" for labels, tags, and nameplates for HVAC systems and equipment.
8. Section 260553 "Identification for Electrical Systems" for labels, tags, and nameplates for electrical equipment.
9. Section 265100 "Interior Lighting" for illuminated, self-luminous, and photoluminescent exit sign units.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ALLOWANCES

- A. Allowances for **[signage] [room-identification signs]** <Insert item description> are specified in Section 012100 "Allowances."
- B. <Insert product or material> **[is] [are]** part of <Insert name of allowance>.

1.4 DEFINITIONS

- A. Accessible: In accordance with the accessibility standard.
- B. Illuminated: Illuminated by lighting source integrally constructed as part of the sign unit.

1.5 COORDINATION

- A. Furnish templates for placement of sign-anchorage devices embedded in permanent construction by other installers.
- B. Furnish templates for placement of electrical service embedded in permanent construction by other installers.

1.6 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regionally manufactured materials. Include statement indicating cost for each regionally manufactured material.
 - a. Include statement indicating location of manufacturer and distance to Project for each regionally manufactured material.
 - 2. Product Data for Credit IEQ 4.1: For adhesives, documentation including printed statement of VOC content.
 - 3. Laboratory Test Reports for Credit IEQ 4.1: For adhesives, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: For panel signs.
 - 1. Include fabrication and installation details and attachments to other work.

2. Show sign mounting heights, locations of supplementary supports to be provided by others, and accessories.
 3. Show message list, typestyles, graphic elements[, **including raised characters and Braille**], and layout for each sign at least [**half size**] <Insert scale>.
 4. Show locations of electrical service connections.
 5. Include diagrams for power, signal, and control wiring.
- D. Samples for Initial Selection: For each type of sign assembly, exposed component, and exposed finish.
1. Include representative Samples of available typestyles and graphic symbols.
- E. Samples for Verification: For each type of sign assembly showing all components and with the required finish(es), in manufacturer's standard size unless otherwise indicated and as follows:
1. Panel Signs: [**Full-size Sample**] [**Not less than 12 inches (300 mm) square, including corner**] <Insert size>.
 2. Room-Identification Signs: [**Full-size Sample**] <Insert size>.
 3. Field-Applied, Vinyl-Character Signs: [**Full-size Sample of characters on glass**] <Insert requirement>.
 4. Variable Component Materials: [**Full-size Sample**] [**8-inch (200-mm) Sample**] <Insert size> of each base material, character (letter, number, and graphic element) in each exposed color and finish not included in Samples above.
 5. Exposed Accessories: [**Full-size Sample**] [**Half-size Sample**] <Insert size> of each accessory type.
- F. Sign Schedule: Use same designations specified or indicated on Drawings or in a sign schedule.
- G. Delegated-Design Submittal: For [**signs indicated in "Performance Requirements Article**] <Insert sign designations>.
1. Include structural analysis calculations for signs indicated to comply with design loads; signed and sealed by the qualified professional engineer responsible for their preparation.
- 1.7 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For [**Installer**] [**and**] [**manufacturer**].
 - B. Sample Warranty: For special warranty.
- 1.8 CLOSEOUT SUBMITTALS
- A. Maintenance Data: For signs to include in maintenance manuals.

- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.9 QUALITY ASSURANCE

- A. Installer Qualifications: **[Manufacturer of products] [An entity that employs installers and supervisors who are trained and approved by manufacturer].**

1.10 FIELD CONDITIONS

- A. Field Measurements: Verify locations of **[anchorage devices] [and] [electrical service]** embedded in permanent construction by other installers by field measurements before fabrication, and indicate measurements on Shop Drawings.

1.11 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of signs that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
 - a. Deterioration of finishes beyond normal weathering.
 - b. Deterioration of embedded graphic image.
 - c. Separation or delamination of sheet materials and components.
2. Warranty Period: Minimum **[five (5)] <Insert number>** years from date of Substantial Completion.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PANEL SIGNS, GENERAL

- A. Regional Materials: Panel signs shall be manufactured within **500 miles (800 km)** of Project site.

2.2 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design sign structure and anchorage of **[rooftop illuminated panel]** **<Insert description>** sign type(s) **<Insert drawing designation of sign(s)>** to withstand design loads **[as indicated on Drawings]** **<Insert loads>**.
- B. Thermal Movements: For exterior signs, allow for thermal movements from ambient and surface temperature changes.
 - 1. Temperature Change: **[120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces]** **<Insert temperature change>**.
- C. Accessibility Standard: Comply with applicable provisions in **[the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for Buildings and Facilities]** **[and]** **[ICC A117.1]** for signs.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.3 SIGNS

- A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - 1. Ace Sign Systems, Inc.
 - 2. Advance Corporation; Braille-Tac Division.
 - 3. Allen Industries, Inc.
 - 4. Allen Markings International.
 - 5. APCO Graphics, Inc.
 - 6. ASE, Inc.
 - 7. ASI Sign Systems, Inc.
 - 8. Best Sign Systems Inc.
 - 9. Bunting Graphics, Inc.
 - 10. Clarke Systems.
 - 11. Diskey Sign Company.
 - 12. Fossil Industries, Inc.
 - 13. InPro Corporation.
 - 14. Mohawk Sign Systems.
 - 15. Nelson-Harkins Industries.
 - 16. Poblocki Sign Company, LLC.
 - 17. Seton Identification Products.
 - 18. Supersine Company (The); Division of Stamp-Rite, Inc.
 - 19. Vista System.
 - 20. Vomar Products, Inc.
 - 21. **<Insert manufacturer's name>**.
 - 22. or approved equal.

- B. Panel Sign **<Insert drawing designation>**: Sign with smooth, uniform surfaces; with message and characters having uniform faces, sharp corners, and precisely formed lines and profiles; and as follows:
1. Basis-of-Design Product: **[Indicated on Drawings] <Insert manufacturer's name; product name or designation>**.
 2. Illuminated Panel Sign: Backlighted construction with **[fluorescent tube] [fiber-optic] [LED] [neon tube] <Insert requirement>** lighting including transformers, insulators, and other accessories for operability, with provision for servicing and concealing connections to building electrical system. Use tight or sealed joint construction to prevent unintentional light leakage. Space lamps apart from each other and away from sign surfaces as needed to illuminate evenly.
 - a. Power: **[As indicated on electrical Drawings] [120 V, 60 Hz, 1 phase, 15 A] <Insert requirement>**.
 - b. Weeps: Provide weep holes to drain water at lowest part of exterior signs.**[Equip weeps with permanent baffles to block light leakage without inhibiting drainage.]**
 3. Solid-Sheet Sign**[and Returns][, Returns, and Back]: [Aluminum] [Brass] [Bronze] [Copper] [Steel] [Stainless-steel] [Acrylic] [Fiberglass] [PVC] <Insert material>** sheet with finish specified in "Surface Finish and Applied Graphics" Subparagraph below and as follows:
 - a. Thickness: **[As indicated] [Manufacturer's standard for size of sign] [0.060 inch (1.52 mm)] [0.080 inch (2.03 mm)] [0.125 inch (3.18 mm)] [0.25 inch (6.35 mm)] <Insert dimension>**.
 - b. Surface-Applied Graphics: Applied **[vinyl film] [baked enamel or powder coat] [paint] [photo image] <Insert requirement>**.
 - c. Etched and Filled Graphics: Sign face etched or routed to receive enamel-paint infill.
 - d. Inset, Cutout Characters: Sign face routed to receive push-through acrylic graphics **[flush with] [slightly projecting from]** the sign panel.
 4. Laminated Aluminum-Sheet Sign: Aluminum sheet laminated to both sides of **[acrylic] [phenolic] <Insert material>** core sheet**[with painted edges]**.
 - a. Composite-Sheet Thickness: **[As indicated] [Manufacturer's standard for size of sign] [0.125 inch (3.18 mm)] [0.25 inch (6.35 mm)] <Insert dimension>**.
 - b. Surface-Applied Graphics: Applied **[vinyl film] [paint] [photo image] <Insert requirement>**.
 5. Laminated-Sheet Sign: **[Photopolymer] [Sandblasted polymer] <Insert material>** face sheet with raised graphics laminated**[over subsurface graphics]** to **[acrylic] [phenolic] <Insert material>** backing sheet to produce composite sheet.

- a. Composite-Sheet Thickness: **[As indicated] [Manufacturer's standard for size of sign]** [0.125 inch (3.18 mm)] [0.25 inch (6.35 mm)] **<Insert dimension>**.
 - b. Surface-Applied Graphics: Applied [vinyl film] [paint] [photo image] **<Insert requirement>**.
 - c. Subsurface Graphics: **[Reverse halftone or dot-screen image] [Reverse etch image] [Snap-in changeable insert beneath removable face sheet] [Slide-in changeable insert]** **<Insert requirement>**.
6. Composite Phenolic-Core Sign: Solid phenolic panel core with integral subsurface graphic image covered with integral, polymeric face layer.
- a. Composite-Sheet Thickness: **[As indicated] [Manufacturer's standard for size of sign]** [0.5 inch (12.7 mm)] [1 inch (25.4 mm)] **<Insert dimension>**.
7. Laminated Polycarbonate-Sheet Sign: Polycarbonate face sheet laminated to each side of [phenolic] **<Insert material>** base sheet to produce composite sheet.
- a. Composite-Sheet Thickness: **[As indicated] [Manufacturer's standard for size of sign]** [0.125 inch (3.18 mm)] [0.25 inch (6.35 mm)] **<Insert dimension>**.
 - b. Surface-Applied Graphics: Applied [vinyl film] [paint] [photo image] **<Insert requirement>**.
 - c. Subsurface Graphics: **[Reverse halftone or dot-screen image] [Reverse etch image]** **<Insert requirement>**.
8. Engraved Plastic-Laminate Sign: Plastic-laminate face laminated to contrasting phenolic core to produce composite sheet.
- a. Composite-Sheet Thickness: **[As indicated] [Manufacturer's standard for size of sign]** [0.125 inch (3.18 mm)] [0.25 inch (6.35 mm)] **<Insert dimension>**.
 - b. Engraved Graphics: Characters engraved through plastic-laminate face sheet to expose contrasting phenolic core.
 - c. Plastic-Laminate Color and Pattern: **[As indicated by manufacturer's designation] [As selected by DEN Project Manager from manufacturer's full range]** **<Insert color and pattern>**.
 - d. Core Color: Manufacturer's standard [dark color] **<Insert color>**.
9. Sign-Panel Perimeter: Finish edges smooth.
- a. Edge Condition[, **Vertical Edges**][, **Horizontal Edges**]: **[As indicated] [Square cut] [Beveled] [Bullnosed]** **<Insert requirement>**.
 - b. Corner Condition in Elevation: **[As indicated] [Square] [Rounded to radius indicated]** **<Insert requirement>**.
10. Frame: **[Entire perimeter] [Horizontal retainers] [Vertical retainers] [to hold changeable sign panel]** **<Insert description>**.

- a. Material: **[Aluminum] [Brass] [Bronze] [Steel] [Stainless steel] [PVC] <Insert material>**.
 - b. Material Thickness: **<Insert dimension>**.
 - c. Frame Depth: **[As indicated] <Insert dimension>**.
 - d. Profile: **[Square] [Beveled] [Rounded] <Insert requirement>**.
 - e. Corner Condition in Elevation: **[Square] [Mitered] [Rounded to radius indicated] <Insert requirement>**.
 - f. Finish and Color: **[Mill] [Painted, matte black color] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert requirement>**.
11. Mounting: **[As indicated] [Manufacturer's standard method for substrates indicated] [Surface mounted to wall] [Projecting from wall] [Suspended] [Aluminum bracket] [Stainless-steel bracket] <Insert requirement> with [concealed anchors] [countersunk flathead through fasteners] [adhesive] [two-face tape] [hook-and-loop tape] [or] [magnetic tape]**.
12. Surface Finish and Applied Graphics:
- a. Integral Metal Finish: **[Mill] [Antique oxidized] [As indicated by manufacturer's designation] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry finishes] <Insert finish>**.
 - b. Integral Aluminum Finish: **[Clear anodized] [Light bronze anodized] [Medium bronze anodized] [Match DEN Project Manager's sample] [Anodized color as selected by DEN Project Manager from full range of industry colors and color densities] <Insert finish>**.
 - c. Integral Stainless-Steel Finish: **[No. 4] [No. 8] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry finishes] <Insert description>**.
 - d. Integral **[Acrylic] [Fiberglass] [PVC] Sheet Color: [As indicated by manufacturer's designation] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors] <Insert color>**.
 - e. Baked-Enamel or Powder-Coat Finish and Graphics: Manufacturer's standard, in color **[as indicated by manufacturer's designation] [matching DEN Project Manager's sample] [as selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
 - f. Painted Finish and Graphics: Manufacturer's standard, factory-applied **[exterior-grade sign paint] [acrylic polyurethane] <Insert requirement>**, in color **[as indicated by manufacturer's designation] [matching DEN Project Manager's sample] [as selected by DEN Project manager from manufacturer's full range] <Insert color>**.
 - g. Photo-Image Graphics: Manufacturer's standard **[black-and-white] [multicolor], [600-dpi] <Insert value> halftone or dot-screen image**.
 - h. Overcoat: **[Manufacturer's standard baked-on clear coating] <Insert requirement>**.
13. Text and Typeface: **[Accessible raised characters and Braille] [Times Roman] [typeface as indicated by manufacturer's designation] [typeface matching DEN Project Manager's sample] [typeface as selected by DEN Project**

- Manager from manufacturer's full range] [and] [variable content as scheduled] <Insert requirement>.[Finish raised characters to contrast with background color, and finish Braille to match background color.]**
14. Flatness Tolerance: Sign panel shall remain flat or uniformly curved under installed conditions as indicated and within a tolerance of plus or minus [1/16 inch (1.5 mm)] <Insert dimension> measured diagonally from corner to corner.
- C. Room-Identification Sign <Insert drawing designation>: Sign with smooth, uniform surfaces; with message and characters having uniform faces, sharp corners, and precisely formed lines and profiles; and as follows:
1. Basis-of-Design Product: [Indicated on Drawings] <Insert manufacturer's name; product name or designation>.
 2. Laminated-Sheet Sign: [Photopolymer] [Sandblasted polymer] <Insert material> face sheet with raised graphics laminated[over subsurface graphics] to [acrylic] [phenolic] <Insert material> backing sheet to produce composite sheet.
 - a. Composite-Sheet Thickness: [As indicated] [Manufacturer's standard for size of sign] [0.125 inch (3.18 mm)] [0.25 inch (6.35 mm)] <Insert dimension>.
 - b. Surface-Applied Graphics: Applied [vinyl film] [paint] [photo image] <Insert requirement>.
 - c. Subsurface Graphics: [Reverse halftone or dot-screen image] [Reverse etch image] [Snap-in changeable insert beneath removable face sheet] [Slide-in changeable insert] <Insert requirement>.
 - d. Color(s): [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert requirement>.
 3. Sign-Panel Perimeter: Finish edges smooth.
 - a. Edge Condition: [As indicated] [Square cut] [Beveled] [Bullnosed] <Insert requirement>.
 - b. Corner Condition in Elevation: [As indicated] [Square] [Rounded to radius indicated] <Insert requirement>.
 4. Frame: [Aluminum] <Insert material>.
 - a. Material Thickness: <Insert dimension>.
 - b. Frame Depth: [As indicated] [Convex-curved frame to receive removable face sheet and changeable subsurface graphics] <Insert dimension>.
 - c. Profile: [Square] [Beveled] [Rounded] <Insert requirement>.
 - d. Corner Condition in Elevation: [Square] [Mitered] [Rounded to radius indicated] <Insert requirement>.
 - e. Finish and Color: [Mill] [Painted, matte black color] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert requirement>.

5. Mounting: [**Manufacturer's standard method for substrates indicated**] [**Surface mounted to wall**] with [**concealed anchors**] [**countersunk flathead through fasteners**] [**adhesive**] [**two-face tape**] [**hook-and-loop tape**] [**or**] [**magnetic tape**].
6. Text and Typeface: [**Accessible raised characters and Braille**] [**Times Roman**] [**typeface as indicated by manufacturer's designation**] [**typeface matching DEN Project Manager's sample**] [**typeface as selected by DEN Project Manager from manufacturer's full range**] [**and**] [**variable content as scheduled**] <Insert requirement>.[**Finish raised characters to contrast with background color, and finish Braille to match background color.**]

2.4 FIELD-APPLIED, VINYL-CHARACTER SIGNS

- A. Field-Applied, Vinyl-Character Sign <Insert drawing designation>: Prespaced characters die cut from [**3- to 3.5-mil (0.076- to 0.089-mm)**] <Insert dimensions> thick, weather-resistant vinyl film with release liner on the back and carrier film on the front for on-site alignment and application.

1. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - a. Allen Markings International.
 - b. APCO Graphics, Inc.
 - c. ASI Sign Systems, Inc.
 - d. Best Sign Systems Inc.
 - e. Mohawk Sign Systems.
 - f. Nelson-Harkins Industries.
 - g. Seton Identification Products.
 - h. <Insert manufacturer's name>.
 - i. or approved equal.
2. Size: [**As indicated**] [**As scheduled**] <Insert requirement>.
3. Substrate: [**As indicated**] [**As scheduled**] [**Glass**] [**Doors**] [**Walls**] <Insert substrate>.
4. Text and Font: [**As indicated**] [**As scheduled**] <Insert requirement>.

2.5 PANEL-SIGN MATERIALS

- A. Aluminum Sheet and Plate: **ASTM B 209** (ASTM B 209M), alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
- B. Aluminum Extrusions: **ASTM B 221** (ASTM B 221M), alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
- C. Brass Sheet (Yellow Brass): ASTM B 36/B 36M, [**alloy recommended by manufacturer and finisher for finish indicated**] [**lead-free alloy recommended by manufacturer and finisher for finish indicated**] [**Alloy UNS No. C26000 (yellow brass)**] <Insert requirement>.

- D. Bronze Plate: ASTM B 36/B 36M, [**alloy recommended by manufacturer and finisher for finish indicated**] [**lead-free alloy recommended by manufacturer and finisher for finish indicated**] [**Alloy UNS No. C22000 (commercial bronze)**] <Insert requirement>.
- E. Copper Sheet: ASTM B 152/B 152M.
- F. Steel Materials:
1. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, [**G90 (Z275)**] <Insert coating **designation**> coating, either commercial or forming steel.
 2. Steel Sheet: [**Uncoated, cold-rolled, ASTM A 1008/A 1008M, commercial steel, Type B, exposed**] [or] [**electrolytic zinc-coated, ASTM A 879/A 879M, Coating Designation 08Z (24G), with steel-sheet substrate according to ASTM A 1008/A 1008M, commercial steel, exposed**].
 3. Steel Members Fabricated from Plate or Bar Stock: ASTM A 529/A 529M or ASTM A 572/A 572M, **42,000-psi (290-MPa)** minimum yield strength.
 4. For steel exposed to view on completion, provide materials having flat, smooth surfaces without blemishes. Do not use materials whose surfaces exhibit pitting, seam marks, roller marks, rolled trade names, or roughness.
- G. Stainless-Steel Sheet: ASTM A 240/A 240M or ASTM A 666, [**Type 304,**] [**Type 316,**] stretcher-leveled standard of flatness.
- H. Acrylic Sheet: ASTM D 4802, category as standard with manufacturer for each sign, Type UVF (UV filtering).
- I. Polycarbonate Sheet: ASTM C 1349, Appendix X1, Type II (coated, mar-resistant, UV-stabilized polycarbonate), with coating on both sides.
- J. Fiberglass Sheet: Multiple laminations of glass-fiber-reinforced polyester resin with UV-light stable, colorfast, nonfading, weather- and stain-resistant, colored polyester gel coat, and with manufacturer's standard finish.
- K. PVC Sheet: Manufacturer's standard, UV-light stable, PVC plastic.
- L. Plastic-Laminate Sheet: NEMA LD 3, general-purpose HGS grade, **0.048-inch (1.2-mm)** nominal thickness.
- M. Vinyl Film: UV-resistant vinyl film of nominal thickness indicated, with pressure-sensitive, permanent adhesive on back; die cut to form characters or images as indicated and suitable for exterior applications.
- N. Paints and Coatings for Sheet Materials: Inks, dyes, and paints that are recommended by manufacturer for optimum adherence to surface and are UV and water resistant for colors and exposure indicated.

2.6 ACCESSORIES

- A. Fasteners and Anchors: Manufacturer's standard as required for secure anchorage of signage, noncorrosive and compatible with each material joined, and complying with the following:
1. Use concealed fasteners and anchors unless indicated to be exposed.
 2. For exterior exposure, furnish [**nonferrous-metal**] [**stainless-steel**] [**or**] [**hot-dip galvanized**] <Insert requirement> devices unless otherwise indicated.
 3. Exposed Metal-Fastener Components, General:
 - a. Fabricated from same basic metal and finish of fastened metal unless otherwise indicated.
 - b. Fastener Heads: For nonstructural connections, use [**flathead**] [**or**] [**oval countersunk**] <Insert shape> screws and bolts with tamper-resistant [**Allen-head**] [**spanner-head**] [**or**] [**one-way-head**] <Insert slot design> slots unless otherwise indicated.
 4. Sign Mounting Fasteners:
 - a. Concealed Studs: Concealed (blind), threaded studs welded or brazed to back of sign material or screwed into back of sign assembly, unless otherwise indicated.
 - b. Projecting Studs: Threaded studs with sleeve spacer, welded or brazed to back of sign material or screwed into back of sign assembly, unless otherwise indicated.
 - c. Through Fasteners: Exposed metal fasteners matching sign finish, with type of head indicated, installed in predrilled holes.
 5. Inserts: Furnish inserts to be set by other trades into concrete or masonry work.
- B. Adhesives: As recommended by sign manufacturer and with a VOC content of [**70**] <Insert value> g/L or less for adhesives used inside the weatherproofing system and applied on-site when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- C. Adhesives: As recommended by sign manufacturer and that comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- D. Two-Face Tape: Manufacturer's standard high-bond, foam-core tape, **0.045 inch** (1.14 mm) thick, with adhesive on both sides.
- E. Hook-and-Loop Tape: Manufacturer's standard two-part tape consisting of hooked part on sign back and looped side on mounting surface.
- F. Magnetic Tape: Manufacturer's standard magnetic tape with adhesive on one side.
- G. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

2.7 FABRICATION

- A. General: Provide manufacturer's standard sign assemblies according to requirements indicated.
1. Preassemble signs and assemblies in the shop to greatest extent possible. Disassemble signs and assemblies only as necessary for shipping and handling limitations. Clearly mark units for reassembly and installation; apply markings in locations concealed from view after final assembly.
 2. Mill joints to a tight, hairline fit. Form assemblies and joints exposed to weather to resist water penetration and retention.
 3. Comply with AWS for recommended practices in welding and brazing. Provide welds and brazes behind finished surfaces without distorting or discoloring exposed side. Clean exposed welded and brazed connections of flux, and dress exposed and contact surfaces.
 4. Conceal connections if possible; otherwise, locate connections where they are inconspicuous.
 5. Internally brace signs for stability and for securing fasteners.
 6. Provide rebates, lugs, and brackets necessary to assemble components and to attach to existing work. Drill and tap for required fasteners. Use concealed fasteners where possible; use exposed fasteners that match sign finish.
- B. Surface-Engraved Graphics: Machine engrave characters and other graphic devices into panel surface indicated to produce precisely formed copy, incised to uniform depth.
1. Engraved Metal: Fill engraved graphics with manufacturer's standard baked enamel.
 2. Engraved Opaque Acrylic Sheet: Fill engraved graphics with manufacturer's standard enamel.
 3. Face-Engraved Clear Acrylic Sheet: Fill engraved copy with manufacturer's standard enamel. Apply manufacturer's standard opaque background color coating to back face of acrylic sheet.
 4. Engraved Plastic Laminate: Engrave through exposed face ply of plastic-laminate sheet to expose contrasting core ply.
- C. Subsurface-Applied Graphics: Apply graphics to back face of clear face-sheet material to produce precisely formed image. Image shall be free of rough edges.
- D. Subsurface-Engraved Graphics: Reverse engrave back face of clear face-sheet material. Fill resulting copy with manufacturer's standard enamel. Apply opaque manufacturer's standard background color coating over enamel-filled copy.
- E. Shop- and Subsurface-Applied Vinyl: Align vinyl film in final position and apply to surface. Firmly press film from the middle outward to obtain good bond without blisters or fishmouths.
- F. Signs with Changeable Message Capability: Fabricate signs to allow insertion of changeable messages as follows:

1. For snap-in changeable inserts beneath removable face sheet, furnish one suction or other device to assist in removing face sheet. Furnish initial changeable insert. **[Subsequent changeable inserts are by Owner] [Furnish two blank inserts for each sign for Owner's use] <Insert requirement>**.
 2. For slide-in changeable inserts, fabricate slot without burrs or constrictions that inhibit function. Furnish initial changeable insert. **[Subsequent changeable inserts are by Owner] [Furnish two blank inserts for each sign for Owner's use] <Insert requirement>**.
 3. For frame to hold changeable sign panel, fabricate frame without burrs or constrictions that inhibit function. Furnish initial sign panel. **[Subsequent changeable sign panels are by Owner] <Insert requirement>**.
- G. Brackets: Fabricate brackets, fittings, and hardware for bracket-mounted signs to suit sign construction and mounting conditions indicated. Modify manufacturer's standard brackets as required.
1. Aluminum Brackets: Factory finish brackets with baked-enamel or powder-coat finish **[to match sign-background color] [to match DEN Project Manager's sample] <Insert requirement>** color unless otherwise indicated.
 2. Stainless-Steel Brackets: Factory finish brackets **[to match sign background] [to match DEN Project Manager's sample] [with No. 4] <Insert finish>** finish unless otherwise indicated.

2.8 GENERAL FINISH REQUIREMENTS

- A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- C. Directional Finishes: Run grain with long dimension of each piece and perpendicular to long dimension of finished trim or border surface unless otherwise indicated.
- D. Organic, Anodic, and Chemically Produced Finishes: Apply to formed metal after fabrication but before applying contrasting polished finishes on raised features unless otherwise indicated.

2.9 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, **[Class I, 0.018 mm] [Class II, 0.010 mm]** or thicker.
- B. Color Anodic Finish: AAMA 611, **[Class I, 0.018 mm] [Class II, 0.010 mm]** or thicker.
- C. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of **1.5 mils (0.04 mm)**. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

2.10 METALLIC-COATED STEEL FINISHES

- A. Surface Preparation: Clean surfaces of oil and other contaminants. Use cleaning methods that do not leave residue. After cleaning, apply a conversion coating compatible with the organic coating to be applied over it. Clean welds, mechanical connections, and abraded areas and apply galvanizing repair paint, complying with SSPC-Paint 20, to comply with ASTM A 780/A 780M.
- B. Factory Prime Finish: After cleaning and pretreating, apply an air-dried primer compatible with the organic coating to be applied over it.
- C. Baked-Enamel or Powder-Coat Finish: After cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat to a minimum dry film thickness of 2 mils (0.05 mm).

2.11 STEEL FINISHES

- A. Surface Preparation: Remove mill scale and rust, if present, from uncoated steel, and prepare for coating according to coating manufacturer's written instructions.
 - 1. For Baked-Enamel or Powder-Coat Finish: After cleaning, apply a conversion coating compatible with the organic coating to be applied over it.
- B. Factory Prime Finish: After surface preparation and pretreatment, apply manufacturer's standard, fast-curing, lead- and chromate-free, universal primer.
- C. Baked-Enamel or Powder-Coat Finish: After cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat to a minimum dry film thickness of 2 mils (0.05 mm).

2.12 STAINLESS-STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 1. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
 - 2. Directional Satin Finish: No. 4.
 - 3. Dull Satin Finish: No. 6.
 - 4. Reflective, Directional Polish: No. 7.
 - 5. Mirrorlike Reflective, Nondirectional Polish: No. 8.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of signage work.
- B. Verify that sign-support surfaces are within tolerances to accommodate signs without gaps or irregularities between backs of signs and support surfaces unless otherwise indicated.
- C. Verify that anchor inserts are correctly sized and located to accommodate signs.
- D. Verify that electrical service is correctly sized and located to accommodate signs.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install signs using mounting methods indicated and according to manufacturer's written instructions.
 - 1. Install signs level, plumb, true to line, and at locations and heights indicated, with sign surfaces free of distortion and other defects in appearance.
 - 2. Install signs so they do not protrude or obstruct according to the accessibility standard.
 - 3. Before installation, verify that sign surfaces are clean and free of materials or debris that would impair installation.
 - 4. Corrosion Protection: Coat concealed surfaces of exterior aluminum in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.
- B. Room-Identification Signs[**and Other Accessible Signage**]: Install in locations on walls **[as indicated] [and] [according to accessibility standard] <Insert requirement>**.
- C. Mounting Methods:
 - 1. Concealed Studs: Using a template, drill holes in substrate aligning with studs on back of sign. Remove loose debris from hole and substrate surface.
 - a. Masonry Substrates: Fill holes with adhesive. Leave recess space in hole for displaced adhesive. Place sign in position and push until flush to surface, embedding studs in holes. Temporarily support sign in position until adhesive fully sets.
 - b. Thin or Hollow Surfaces: Place sign in position and flush to surface, install washers and nuts on studs projecting through opposite side of surface, and tighten.

2. Projecting Studs: Using a template, drill holes in substrate aligning with studs on back of sign. Remove loose debris from hole and substrate surface.
 - a. Masonry Substrates: Fill holes with adhesive. Leave recess space in hole for displaced adhesive. Place spacers on studs, place sign in position, and push until spacers are pinched between sign and substrate, embedding the stud ends in holes. Temporarily support sign in position until adhesive fully sets.
 - b. Thin or Hollow Surfaces: Place spacers on studs, place sign in position with spacers pinched between sign and substrate, and install washers and nuts on stud ends projecting through opposite side of surface, and tighten.
 3. Through Fasteners: Drill holes in substrate using predrilled holes in sign as template. Countersink holes in sign if required. Place sign in position and flush to surface. Install through fasteners and tighten.
 4. Brackets: Remove loose debris from substrate surface and install backbar or bracket supports in position so that signage is correctly located and aligned.
 5. Adhesive: Clean bond-breaking materials from substrate surface and remove loose debris. Apply linear beads or spots of adhesive symmetrically to back of sign and of suitable quantity to support weight of sign after cure without slippage. Keep adhesive away from edges to prevent adhesive extrusion as sign is applied and to prevent visibility of cured adhesive at sign edges. Place sign in position, and push to engage adhesive. Temporarily support sign in position until adhesive fully sets.
 6. Two-Face Tape: Clean bond-breaking materials from substrate surface and remove loose debris. Apply tape strips symmetrically to back of sign and of suitable quantity to support weight of sign without slippage. Keep strips away from edges to prevent visibility at sign edges. Place sign in position, and push to engage tape adhesive.
 7. Hook-and-Loop Tape: Clean bond-breaking materials from substrate surface and remove loose debris. Apply sign component of two-part tape strips symmetrically to back of sign and of suitable quantity to support weight of sign without slippage; push to engage tape adhesive. Keep tape strips [0.250 inch (6.35 mm)] <Insert dimension> away from edges to prevent visibility at sign edges when sign is initially installed or reinstalled. Apply substrate component of tape to substrate in locations aligning with tape on back of sign; push and rub well to fully engage tape adhesive to substrate.
 8. Magnetic Tape: Clean bond-breaking materials from substrate surface and remove loose debris. Apply tape strips symmetrically to back of sign and of suitable quantity to support weight of sign without slippage. Keep strips away from edges to prevent visibility at sign edges. Place sign in position.
 9. Shim-Plate Mounting: Provide 1/8-inch- (3-mm-) thick, concealed aluminum shim plates with predrilled and countersunk holes, at locations indicated, and where other direct mounting methods are impractical. Attach plate with fasteners and anchors suitable for secure attachment to substrate. Attach signs to plate using <Insert mounting method> method specified above.
- D. Field-Applied, Vinyl-Character Signs: Clean and dry substrate. Align sign characters in final position before removing release liner. Remove release liner in stages, and apply and firmly press characters into final position. Press from the middle outward to obtain

good bond without blisters or fishmouths. Remove carrier film without disturbing applied vinyl film.

- E. Signs Mounted on Glass: Provide opaque sheet matching sign material and finish onto opposite side of glass to conceal back of sign.

3.3 ADJUSTING AND CLEANING

- A. Remove and replace damaged or deformed signs and signs that do not comply with specified requirements. Replace signs with damaged or deteriorated finishes or components that cannot be successfully repaired by finish touchup or similar minor repair procedures.
- B. Remove temporary protective coverings and strippable films as signs are installed.
- C. On completion of installation, clean exposed surfaces of signs according to manufacturer's written instructions, and touch up minor nicks and abrasions in finish. Maintain signs in a clean condition during construction and protect from damage until acceptance by Owner.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 101423

SECTION 101426 - POST AND PANEL/PYLON SIGNAGE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Nonilluminated post and panel signs.
2. Internally illuminated post and panel signs.
3. Nonilluminated pylon signs.
4. Internally illuminated pylon signs.

- B. Related Requirements:

1. Section 015000 "Temporary Facilities and Controls" for temporary Project identification signs and for temporary informational and directional signs.
2. Section 033000 "Cast-in-Place Concrete" for concrete foundations, concrete fill in postholes, and setting anchor bolts in concrete foundations for signs.
3. Section 101416 "Plaques" for one-piece, solid-metal signs, with or without frames.
4. Section 101419 "Dimensional Letter Signage" for wall-mounted dimensional characters.
5. Section 101423 "Panel Signage" for wall-mounted sign panels.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ALLOWANCES

- A. Allowances for **[post and panel/pylon signage] [post and panel signs] [pylon signs]** <Insert item description> are specified in Section 012100 "Allowances."

- B. <Insert product or material> [is] [are] part of <Insert name of allowance>.

1.4 COORDINATION

- A. Furnish templates and tolerance information for placement of sign-anchorage devices embedded in permanent construction by other installers.

- B. Furnish templates for placement of electrical service embedded in permanent construction by other installers.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For post and panel/pylon signage.
 - 1. Include fabrication and installation details and attachments to other work.
 - 2. Show sign mounting heights, locations of supplementary supports to be provided by others, and accessories.
 - 3. Show message list, typestyles, graphic elements, and layout for each sign at least [**half size**] <Insert scale>.
 - 4. Show locations of electrical service connections.
 - 5. Include diagrams for power, signal, and control wiring.
- C. Samples for Initial Selection: For each type of sign assembly, exposed component, and exposed finish.
 - 1. Include representative Samples of available typestyles and graphic symbols.
- D. Samples for Verification: For each type of sign assembly, showing all components and with the required finish(es), in manufacturer's standard size unless otherwise indicated and as follows:
 - 1. Post and Panel Signs: [**Full-size Sample**] [**Not less than 12 inches** (300 mm) **square, including corner and post**] <Insert size>.
 - 2. Pylon Signs: [**Full-size Sample**] [**Not less than 12 inches** (300 mm) **square, including corner**] <Insert size>.
 - 3. Variable Component Materials: [**Full-size Sample**] [**8-inch** (200-mm) **Sample**] <Insert size> of each base material, character or graphic element, in each exposed color and finish not included in other Samples.
 - 4. Exposed Accessories: [**Full-size Sample**] [**Half-size Sample**] <Insert size> of each accessory type.
- E. Sign Schedule: Use same designations specified or indicated on Drawings or in a sign schedule.
- F. Delegated-Design Submittal: For [**signs indicated in "Performance Requirements Article**] <Insert sign designations>.
 - 1. Include structural analysis calculations for signs indicated to comply with design loads; signed and sealed by the qualified professional engineer responsible for their preparation.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For **[Installer] [and] [manufacturer]**.
- B. Sample Warranty: For special warranty.

1.7 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For signs to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 QUALITY ASSURANCE

- A. Installer Qualifications: **[Manufacturer of products] [An entity that employs installers and supervisors who are trained and approved by manufacturer]**.

1.9 FIELD CONDITIONS

- A. Field Measurements: Verify locations of **[anchorage devices] [and] [electrical service]** embedded in permanent construction by other installers by field measurements before fabrication, and indicate measurements on Shop Drawings.

1.10 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of signs that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Deterioration of finishes beyond normal weathering.
 - b. Deterioration of embedded graphic image.
 - c. Separation or delamination of sheet materials and components.
 - 2. Warranty Period: Minimum **[five (5)] <Insert number>** years from date of Substantial Completion.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design sign structure and anchorage of **[post and panel] [pylon]** <Insert description> sign type(s) <Insert drawing designation of sign(s)> to withstand design loads <Insert loads>.
- B. Thermal Movements: For exterior signs, allow for thermal movements from ambient and surface temperature changes.
 - 1. Temperature Change: [120 deg F (67 deg C), **ambient**; 180 deg F (100 deg C), **material surfaces**] <Insert temperature change>.
- C. Accessibility Standard: Comply with applicable provisions in [**the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for Buildings and Facilities**] [and] [ICC A117.1] for signs.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 POST AND PANEL/PYLON SIGNS

- A. **Manufacturers: Subject to compliance with requirements, provide products by one of the following:**
 - 1. Ace Sign Systems, Inc.
 - 2. Allen Industries, Inc.
 - 3. APCO Graphics, Inc.
 - 4. ASI Sign Systems, Inc.
 - 5. Bunting Graphics, Inc.
 - 6. Charleston Industries, Inc.
 - 7. Clarke Systems.
 - 8. Diskey Sign Company.
 - 9. Fossil Industries, Inc.
 - 10. Nelson-Harkins Industries.
 - 11. Poblocki Sign Company, LLC.
 - 12. Supersine Company (The); Division of Stamp-Rite, Inc.
 - 13. Vista System.
 - 14. Vomar Products, Inc.
 - 15. <Insert manufacturer's name>.
 - 16. or approved equal.
- B. Post and Panel Sign <Insert drawing designation>: Sign of [**single-panel**] [**hollow-box**] <Insert description> configuration; with smooth, uniform surfaces and

support assembly; with message and characters having uniform faces, sharp corners, and precisely formed lines and profiles; and as follows:

1. Basis-of-Design Product: **[Indicated on Drawings] <Insert manufacturer's name; product name or designation>**.
2. Illuminated Sign: Backlighted construction with **[fluorescent tube] [fiber-optic] [LED] [neon tube] <Insert requirement>** lighting including transformers, insulators, and other accessories for operability, with provision for servicing and concealing connections to building electrical system. Use tight or sealed joint construction to prevent unintentional light leakage. Space lamps apart from each other and away from sign surfaces as needed to illuminate evenly.
 - a. Power: **[As indicated on electrical Drawings] [120 V, 60 Hz, 1 phase, 15 A] <Insert requirement>**.
 - b. Weeps: Provide weep holes to drain water at lowest part of exterior signs. **Equip weeps with permanent baffles to block light leakage without inhibiting drainage.**
3. Solid-Sheet Sign Panels[and Returns][, Returns, and Back]: **[Aluminum] [Brass] [Bronze] [Copper] [Stainless-steel] [Acrylic] [Fiberglass] [Polycarbonate] <Insert material>** sheet with finish specified in "Sign-Panel-Face Finish and Applied Graphics" Subparagraph below and as follows:
 - a. Thickness: **[As indicated] [Manufacturer's standard for size of sign] [0.060 inch (1.52 mm)] [0.080 inch (2.03 mm)] [0.125 inch (3.18 mm)] [0.25 inch (6.35 mm)] <Insert dimension>**.
 - b. Surface-Applied Graphics: Applied **[vinyl film] [baked enamel or powder coat] [paint] [photo image] <Insert requirement>**.
 - c. Etched and Filled Graphics: Sign face etched or routed to receive enamel-paint infill.
 - d. Inset, Cutout Characters: Sign face routed to receive push-through acrylic graphics **[flush with] [slightly projecting from]** the sign panel.
4. Laminated, Aluminum-Sheet Sign Panels: Aluminum sheet laminated to both sides of **[acrylic] [phenolic] <Insert material>** core sheet **[with painted edges]**.
 - a. Composite-Sheet Thickness: **[As indicated] [Manufacturer's standard for size of sign] [0.125 inch (3.18 mm)] [0.25 inch (6.35 mm)] <Insert dimension>**.
 - b. Surface-Applied Graphics: Applied **[vinyl film] [paint] [photo image] <Insert requirement>**.
5. Composite, Phenolic-Core Sign Panels: Solid phenolic panel core with integral subsurface graphic image covered with integral, polymeric face layer.
 - a. Composite-Sheet Thickness: **[As indicated] [Manufacturer's standard for size of sign] [0.125 inch (3.18 mm)] [0.25 inch (6.35 mm)] <Insert dimension>**.

6. Single-Panel Sign Frame: [Entire perimeter] [Horizontal retainers] [Vertical retainers] <Insert description>.
 - a. Material: [Aluminum] [Brass] [Bronze] [Steel] [Stainless steel] <Insert material>.
 - b. Material Thickness: <Insert dimension>.
 - c. Frame Depth: [As indicated] <Insert dimension>.
 - d. Profile: [Square] [Beveled] [Rounded] <Insert requirement>.
 - e. Corner Condition in Elevation: [Square] [Mitered] [Rounded to radius indicated] <Insert requirement>.
 - f. Finish and Color: [Mill] [Black baked enamel or powder coat] [Match sign-panel face] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert requirement>.

7. Hollow-Box Sign Frame: Entire perimeter framed with formed-aluminum sheet or extruded-aluminum, hollow-box-type frame with vertical edges attached to supports with aluminum fittings. Close top and bottom edges of panels with manufacturer's standard welded seams or extrusions.
 - a. Hollow-Box Depth: [2 inches (50 mm)] [6 inches (150 mm)] [Same depth as posts] <Insert requirement>.
 - b. Profile: [Square] [Beveled] [Rounded] <Insert requirement>.
 - c. Corner Condition in Elevation: [Square] [Mitered] [Rounded to radius indicated] <Insert requirement>.
 - d. Finish and Color: [Mill] [Black baked enamel or powder coat] [Match sign-panel face] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert requirement>.

8. Sign-Frame Mounting: [Between posts] [Over posts] [As indicated] <Insert description>.
9. Multiple-Message Bars and Inserts: Fixed message bars capable of receiving changeable messages in the form of slide-in, [aluminum] [acrylic-sheet] <Insert material> changeable inserts. [Provide initial messages as indicated.]
10. Posts: [Aluminum] [Steel] <Insert material>.
 - a. Shape: [Round] [Square] [Rectangular] [Semicircular].
 - b. Size: [2-inch (50-mm) diameter] [3-inch (75-mm) diameter] [4-inch (100-mm) diameter] [2 by 2 inches (50 by 50 mm)] [3 by 3 inches (75 by 75 mm)] [4 by 4 inches (100 by 100 mm)] [2 by 4 inches (50 by 100 mm)] [1-3/4 by 3 inches (44 by 75 mm)] <Insert dimension(s)>.
 - c. Installation Method: [Direct burial] [Baseplate] [Sleeve] [Reverse sleeve] <Insert requirement>.
 - d. Finish and Color: [Mill] [Black baked enamel or powder coat] [Match sign-panel face] [Match sign-panel frame] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert requirement>.

11. Sign-Panel-Face Finish and Applied Graphics:

- a. Integral Metal Finish: **[Mill] [Antique oxidized] [Mill finish raised surface with dark oxidized background] [As indicated by manufacturer's designation] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry finishes] <Insert finish>**.
 - b. Integral Aluminum Finish: **[Clear anodized] [Light bronze anodized] [Medium bronze anodized] [Match DEN Project Manager's sample] [Anodized color as selected by DEN Project Manager from full range of industry colors and color densities] <Insert finish>**.
 - c. Integral Stainless-Steel Finish: **[No. 4] [No. 8] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry finishes] <Insert description>**.
 - d. Integral **[Acrylic] [Fiberglass] [Polycarbonate]** Sheet Color: **[As indicated by manufacturer's designation] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from full range of industry colors] <Insert color>**.
 - e. Baked-Enamel or Powder-Coat Finish and Graphics: Manufacturer's standard, in color **[as indicated by manufacturer's designation] [match DEN Project Manager's sample] [as selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
 - f. Painted Finish and Graphics: Manufacturer's standard, factory-applied **[exterior-grade sign paint] [acrylic polyurethane] <Insert requirement>**, in color **[as indicated by manufacturer's designation] [matching DEN Project Manager's sample] [as selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
 - g. Photo-Image Graphics: Manufacturer's standard **[black-and-white] [multicolor], [600-dpi] <Insert value>** halftone or dot-screen image.
 - h. Overcoat: **[Manufacturer's standard baked-on clear coating] <Insert requirement>**.
12. Text and Typeface: **[Times Roman] [typeface as indicated by manufacturer's designation] [typeface matching DEN Project Manager's sample] [typeface as selected by DEN Project Manager from manufacturer's full range] [and] [variable content as scheduled] <Insert requirement>**.
- C. Pylon Sign **<Insert drawing designation>**: Sign with smooth, uniform surfaces and support assembly; with message and characters having uniform faces, sharp corners, and precisely formed lines and profiles; and as follows:
1. Basis-of-Design Product: **[Indicated on Drawings] <Insert manufacturer's name; product name or designation>**.
 2. Illuminated Sign: Backlighted construction with **[fluorescent tube] [fiber-optic] [LED] [neon tube] <Insert requirement>** lighting including transformers, insulators, and other accessories for operability, with provision for servicing and concealing connections to building electrical system. Use tight or sealed joint construction to prevent unintentional light leakage. Space lamps apart from each other and away from sign surfaces as needed to illuminate evenly.
 - a. Power: **[As indicated on electrical Drawings] [120 V, 60 Hz, 1 phase, 15 A] <Insert requirement>**.

- b. Weeps: Provide weep holes to drain water at lowest part of exterior signs.
3. Solid-Sheet Sign Panels[**and Returns**][, **Returns, and Back**]: [**Aluminum**] [**Brass**] [**Bronze**] [**Copper**] [**Stainless-steel**] [**Acrylic**] [**Fiberglass**] [**Polycarbonate**] <Insert material> sheet with finish specified in "Sign-Panel-Face Finish and Applied Graphics" Subparagraph below and as follows:
 - a. Thickness: [**As indicated**] [**Manufacturer's standard for size of sign**] [**0.060 inch (1.52 mm)**] [**0.080 inch (2.03 mm)**] [**0.125 inch (3.18 mm)**] [**0.25 inch (6.35 mm)**] <Insert dimension>.
 - b. Surface-Applied Graphics: Applied [**vinyl film**] [**baked enamel or powder coat**] [**paint**] [**photo image**] <Insert requirement>.
 - c. Etched and Filled Graphics: Sign face etched or routed to receive enamel-paint infill.
 - d. Inset, Cutout Characters: Sign face routed to receive push-through acrylic graphics [**flush with**] [**slightly projecting from**] the sign panel.
4. Laminated, Aluminum-Sheet Sign Panels: Aluminum sheet laminated to both sides of [**acrylic**] [**phenolic**] <Insert material> core sheet[**with painted edges**].
 - a. Composite-Sheet Thickness: [**As indicated**] [**Manufacturer's standard for size of sign**] [**0.125 inch (3.18 mm)**] [**0.25 inch (6.35 mm)**] <Insert dimension>.
 - b. Surface-Applied Graphics: Applied [**vinyl film**] [**paint**] [**photo image**] <Insert requirement>.
5. Composite, Phenolic-Core Sign Panels: Solid phenolic panel core with integral subsurface graphic image covered with integral, polymeric face layer.
 - a. Composite-Sheet Thickness: [**As indicated**] [**Manufacturer's standard for size of sign**] [**0.125 inch (3.18 mm)**] [**0.25 inch (6.35 mm)**] <Insert dimension>.
6. Single-Panel Sign Frame: [**Entire perimeter**] [**Horizontal retainers**] [**Vertical retainers**] <Insert description>.
 - a. Material: [**Aluminum**] [**Brass**] [**Bronze**] [**Steel**] [**Stainless steel**] <Insert material>.
 - b. Material Thickness: <Insert dimension>.
 - c. Frame Depth: [**As indicated**] <Insert dimension>.
 - d. Profile: [**Square**] [**Beveled**] [**Rounded**] <Insert requirement>.
 - e. Corner Condition in Elevation: [**Square**] [**Mitered**] [**Rounded to radius indicated**] <Insert requirement>.
 - f. Finish and Color: [**Mill**] [**Black baked enamel or powder coat**] [**Match sign-panel face**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert requirement>.

7. Hollow-Box Sign Frame: Entire perimeter framed with formed-aluminum sheet or extruded-aluminum, hollow-box-type frame with vertical edges attached to supports with aluminum fittings. Close top and bottom edges of panels with manufacturer's standard welded seams or extrusions.
 - a. Hollow-Box Depth: [2 inches (50 mm)] [6 inches (150 mm)] [**Same depth as external pylon frame**] <Insert requirement>.
 - b. Profile: [**Square**] [**Beveled**] [**Rounded**] <Insert requirement>.
 - c. Corner Condition in Elevation: [**Square**] [**Mitered**] [**Rounded to radius indicated**] <Insert requirement>.
 - d. Finish and Color: [**Mill**] [**Black baked enamel or powder coat**] [**Match sign-panel face**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert requirement>.
8. Sign-Frame Mounting: [**Between pylon supports**] [**Over pylon supports**] [**As indicated**] <Insert description>.
9. Multiple-Message Bars and Inserts: Fixed message bars capable of receiving changeable messages in the form of slide-in, [aluminum] [acrylic-sheet] <Insert material> changeable inserts. [Provide initial messages as indicated.]
10. Pylon Structure: [**Internal**] [**External**] frame.
 - a. Pylon Shape: [**Rectangular**] [**Square**] [**Triangular**] [**Circular**] <Insert requirement>.
 - b. External-Frame Finish and Color: [**Mill**] [**Black baked enamel or powder coat**] [**Match sign-panel face**] [**Match sign-panel frame**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert requirement>.
11. Sign-Panel-Face Finish and Applied Graphics:
 - a. Integral Metal Finish: [**Mill**] [**Antique oxidized**] [**Mill finish raised surface with dark oxidized background**] [**As indicated by manufacturer's designation**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry finishes**] <Insert finish>.
 - b. Integral Aluminum Finish: [**Clear anodized**] [**Light bronze anodized**] [**Medium bronze anodized**] [**Match DEN Project Manager's sample**] [**Anodized color as selected by DEN Project Manager from full range of industry colors and color densities**] <Insert finish>.
 - c. Integral Stainless-Steel Finish: [**No. 4**] [**No. 8**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry finishes**] <Insert description>.
 - d. Integral [**Acrylic**] [**Fiberglass**] [**Polycarbonate**] Sheet Color: [**As indicated by manufacturer's designation**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry colors**] <Insert color>.
 - e. Baked-Enamel or Powder-Coat Finish and Graphics: Manufacturer's standard, in color [**as indicated by manufacturer's designation**] [**match**

- DEN Project Manager's sample] [as selected by DEN Project Manager from manufacturer's full range] <Insert color>.**
- f. Painted Finish and Graphics: Manufacturer's standard, factory-applied **[exterior-grade sign paint] [acrylic polyurethane] <Insert requirement>**, in color **[as indicated by manufacturer's designation] [matching DEN Project Manager's sample] [as selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
 - g. Photo-Image Graphics: Manufacturer's standard **[black-and-white] [multicolor], [600-dpi] <Insert value>** halftone or dot-screen image.
 - h. Overcoat: **[Manufacturer's standard baked-on clear coating] <Insert requirement>**.
12. Text and Typeface: **[Times Roman] [typeface as indicated by manufacturer's designation] [typeface matching DEN Project Manager's sample] [typeface as selected by DEN Project Manager from manufacturer's full range] [and] [variable content as scheduled] <Insert requirement>**.

2.3 MATERIALS

- A. Aluminum Sheet and Plate: **ASTM B 209 (ASTM B 209M)**, alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
- B. Aluminum Extrusions: **ASTM B 221 (ASTM B 221M)**, alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
- C. Brass Sheet (Yellow Brass): **ASTM B 36/B 36M, [alloy recommended by manufacturer and finisher for finish indicated] [lead-free alloy recommended by manufacturer and finisher for finish indicated] [Alloy UNS No. C26000 (yellow brass)] <Insert requirement>**.
- D. Bronze Plate: **ASTM B 36/B 36M, [alloy recommended by manufacturer and finisher for finish indicated] [lead-free alloy recommended by manufacturer and finisher for finish indicated] [Alloy UNS No. C22000 (commercial bronze)] <Insert requirement>**.
- E. Copper Sheet: **ASTM B 152/B 152M**.
- F. Steel Materials:
 - 1. Metallic-Coated Steel Sheet: **ASTM A 653/A 653M, [G90 (Z275)] <Insert coating designation>** coating, either commercial or forming steel.
 - 2. Steel Sheet: **[Uncoated, cold-rolled, ASTM A 1008/A 1008M, commercial steel, Type B, exposed] [or] [electrolytic zinc-coated, ASTM A 879/A 879M, Coating Designation 08Z (24G), with steel sheet substrate according to ASTM A 1008/A 1008M, commercial steel, exposed]**.
 - 3. Hot-Rolled, Structural-Steel Shapes: **ASTM A 36/A 36M or ASTM A 529/A 529M**.
 - 4. Steel Members Fabricated from Plate or Bar Stock: **ASTM A 529/A 529M or ASTM A 572/A 572M, 42,000-psi (290-MPa) minimum yield strength**.
 - 5. Steel Tubing or Pipe: **ASTM A 500, Grade B**.

6. Bolts for Steel Framing: ASTM A 307 or **ASTM A 325** (ASTM A 325M) as necessary for design loads and connection details.
 7. For steel exposed to view on completion, provide materials having flat, smooth surfaces without blemishes. Do not use materials whose surfaces exhibit pitting, seam marks, roller marks, rolled trade names, or roughness.
- G. Stainless-Steel Sheet: ASTM A 240/A 240M or ASTM A 666, [**Type 304,**] [**Type 316,**] stretcher-leveled standard of flatness.
- H. Acrylic Sheet: ASTM D 4802, category as standard with manufacturer for each sign, Type UVF (UV filtering).
- I. Fiberglass Sheet: Multiple laminations of glass-fiber-reinforced polyester resin with UV-light stable, colorfast, nonfading, weather- and stain-resistant, colored polyester gel coat, and with manufacturer's standard finish.
- J. Polycarbonate Sheet: ASTM C 1349, Appendix X1, Type II (coated, mar-resistant, UV-stabilized polycarbonate), with coating on both sides.
- K. Vinyl Film: UV-resistant vinyl film of nominal thickness indicated, with pressure-sensitive, permanent adhesive on back; die cut to form characters or images as indicated and suitable for exterior applications.
- L. Paints and Coatings for Sheet Materials: Inks, dyes, and paints that are recommended by manufacturer for optimum adherence to surface and are UV and water resistant for colors and exposure indicated.

2.4 ACCESSORIES

- A. Fasteners and Anchors: Manufacturer's standard as required for secure anchorage of signage, noncorrosive and compatible with each material joined, and complying with the following:
1. Use concealed fasteners and anchors unless indicated to be exposed.
 2. For exterior exposure, furnish [**nonferrous-metal**] [**stainless-steel**] [**or**] [**hot-dip galvanized**] <Insert requirement> devices unless otherwise indicated.
 3. Exposed Metal-Fastener Components, General:
 - a. Fabricated from same basic metal and finish of fastened metal unless otherwise indicated.
 - b. Fastener Heads: For nonstructural connections, use [**flathead**] [**or**] [**oval countersunk**] <Insert shape> screws and bolts with tamper-resistant, [**Allen-head**] [**spanner-head**] [**or**] [**one-way-head**] <Insert slot design> slots unless otherwise indicated.
 4. Inserts: Furnish inserts to be set by other trades into concrete or masonry work.
- B. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.
- C. Anchoring Materials:

1. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107/C 1107M. Provide grout specifically recommended by manufacturer for interior and exterior applications.
2. Anchoring Cement: Factory-packaged, nonshrink, nonstaining, hydraulic-controlled expansion cement formulation for mixing with water at Project site to create pourable anchoring, patching, and grouting compound.
 - a. Water-Resistant Product: At exterior locations, provide formulation that is resistant to erosion from water exposure without needing protection by a sealer or waterproof coating and that is recommended by manufacturer for exterior use.

2.5 FABRICATION

- A. General: Provide manufacturer's standard sign assemblies according to requirements indicated.
 1. Preassemble signs in the shop to greatest extent possible. Disassemble signs only as necessary for shipping and handling limitations. Clearly mark units for reassembly and installation, in locations concealed from view after final assembly.
 2. Mill joints to tight, hairline fit. Form joints exposed to weather to resist water penetration and retention.
 3. Comply with AWS for recommended practices in welding and brazing. Provide welds and brazes behind finished surfaces without distorting or discoloring exposed side. Clean exposed welded and brazed joints of flux, and dress exposed and contact surfaces.
 4. Conceal fasteners and anchors unless indicated to be exposed; locate exposed fasteners where they will be inconspicuous.
 5. Internally brace signs for stability and for securing fasteners.
- B. Sign Message Panels: Construct sign-panel surfaces to be smooth and to remain flat under installed conditions within a tolerance of plus or minus $1/16$ inch (1.5 mm) measured diagonally from corner to corner.
 1. Coordinate dimensions and attachment methods to produce message panels with closely fitting joints. Align edges and surfaces with one another in the relationship indicated.
 2. Increase panel thickness or reinforce with concealed stiffeners or backing materials as needed to produce surfaces without distortion, buckles, warp, or other surface deformations.
 3. Continuously weld joints and seams unless other methods are indicated; grind, fill, and dress welds to produce smooth, flush, exposed surfaces with welds invisible after final finishing.
- C. Post Fabrication: Fabricate posts designed to withstand wind pressure indicated for Project location and of lengths required for installation method indicated for each sign.

1. Aluminum Posts: Manufacturer's standard **0.125-inch- (3.18-mm-)** thick, extruded-aluminum tubing unless otherwise indicated, with brackets or slots to engage sign panels. Include post caps, fillers, spacers, junction boxes, access panels, reinforcement where required for loading conditions, and related accessories required for complete installation.
 2. Steel Posts: Fabricate from minimum **[0.120-inch- (3.05-mm-)] <Insert dimension>** thick steel tubing unless otherwise indicated. Include post caps, fillers, spacers, junction boxes, access panels, reinforcement where required for loading conditions, and related accessories required for complete installation.
 - a. Hot-dip galvanize post assemblies after fabrication according to ASTM A 123/A 123M.
 3. Direct Burial: Fabricate posts **36 inches (910 mm)** longer than height of sign to permit direct burial or embedment in concrete foundations or concrete-filled postholes.
 4. Baseplates: Fabricate posts with baseplates welded to bottom of posts. Drill holes in baseplate for anchor-bolt connection.
 - a. Provide **[preset] [drilled-in-place]** anchor bolts of size required for connecting posts to concrete foundations.
 5. Sleeves: Fabricate posts **[12 inches (300 mm)] <Insert dimension>** longer than height of sign to permit embedment in sleeves cast in concrete foundations or concrete-filled postholes. Provide sleeves by manufacturer, sized to receive outside diameter of posts. Size sleeves for direct embedment in concrete foundations or concrete-filled postholes and to prevent sign movement, but not less than **[24 inches (610 mm)] [36 inches (910 mm)] <Insert dimension>** for embedment.
 6. Reverse Sleeves: Provide inserts by sign manufacturer, sized for close fit inside posts. Size inserts for direct embedment in concrete foundations and to attach signposts securely and prevent sign movement, but of a height not less than one-third of post height plus **36 inches (910 mm)** for embedment.
 - a. Provide through bolts to fasten posts to inserts.
- D. Pylon Fabrication: Fabricate pylon signs with integral base consisting of channels, angles, plates, or other fittings. Design and fabricate pylon and anchorage to withstand wind pressure indicated for Project location. Detail anchorage so that water can drain out of assembly without obstruction. Drill holes in members for anchor-bolt connection. Provide anchor bolts of size required for connecting base to concrete foundations.
1. Internal Frames: Manufacturer's standard internal steel framing system and anchorage, modified as required for Project requirements. Provide welded construction. Cut, drill, and tap units to receive hardware, bolts, and similar items.
 - a. Hot-dip galvanize steel framing system after fabrication according to ASTM A 123/A 123M.

2. External Frames: Manufacturer's standard external [**aluminum**] [**steel**] framing system and anchorage for direct attachment of sign message panels, modified as required for Project requirements. Provide welded construction using mitered joints. Cut, drill, and tap units to receive hardware, bolts, and similar items.
 - a. Hot-dip galvanize steel framing system after fabrication according to ASTM A 123/A 123M.

2.6 GENERAL FINISH REQUIREMENTS

- A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- C. Directional Finishes: Run grain with long dimension of each piece and perpendicular to long dimension of finished trim or border surface unless otherwise indicated.
- D. Organic, Anodic, and Chemically Produced Finishes: Apply to formed metal after fabrication but before applying contrasting polished finishes on raised features unless otherwise indicated.

2.7 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, [**Class I, 0.018 mm**] [**Class II, 0.010 mm**] or thicker.
- B. Color Anodic Finish: AAMA 611, [**Class I, 0.018 mm**] [**Class II, 0.010 mm**] or thicker.
- C. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of **1.5 mils** (0.04 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

2.8 METALLIC-COATED STEEL FINISHES

- A. Surface Preparation: Clean surfaces of oil and other contaminants. Use cleaning methods that do not leave residue. After cleaning, apply a conversion coating compatible with the organic coating to be applied over it. Clean welds, mechanical connections, and abraded areas and apply galvanizing repair paint, complying with SSPC-Paint 20, to comply with ASTM A 780/A 780M.
- B. Factory Prime Finish: After cleaning and pretreating, apply an air-dried primer compatible with the organic coating to be applied over it.
- C. Baked-Enamel or Powder-Coat Finish: After cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat to a minimum dry film thickness of **2 mils** (0.05 mm).

2.9 STEEL FINISHES

- A. Surface Preparation: Remove mill scale and rust, if present, from uncoated steel, and prepare for coating according to coating manufacturer's written instructions.
 - 1. For Baked-Enamel or Powder-Coat Finish: After cleaning, apply a conversion coating compatible with the organic coating to be applied over it.
- B. Factory Prime Finish: After surface preparation and pretreatment, apply manufacturer's standard, fast-curing, lead- and chromate-free, universal primer.
- C. Baked-Enamel or Powder-Coat Finish: After cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat to a minimum dry film thickness of **2 mils** (0.05 mm).

2.10 STAINLESS-STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 1. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
 - 2. Directional Satin Finish: No. 4.
 - 3. Dull Satin Finish: No. 6.
 - 4. Reflective, Directional Polish: No. 7.
 - 5. Mirrorlike Reflective, Nondirectional Polish: No. 8.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of signage work.
- B. Verify that sign-support surfaces are within tolerances to accommodate signs.
- C. Verify that anchor inserts are correctly sized and located to accommodate signs.
- D. Verify that electrical service is correctly sized and located to accommodate signs.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install signs using installation methods indicated and according to manufacturer's written instructions.
1. Install signs level, plumb, and at locations and heights indicated, with sign surfaces free of distortion and other defects in appearance.
 2. Install signs so they do not protrude or obstruct according to accessibility standard.
 3. Before installation, verify that sign components are clean and free of materials or debris that would impair installation.
 4. Corrosion Protection: Coat concealed surfaces of exterior aluminum in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.

3.3 INSTALLING POSTS

- A. Vertical Tolerance: Set posts plumb within a tolerance of [1/16 inch in 3 feet (2 mm in 1 m)] <Insert dimensions>.
- B. Direct-Burial Method:
1. Excavation: Excavate posthole to dimensions indicated. Reconstruct subgrade that is not firm, undisturbed, or compacted soil, or that is damaged by freezing temperatures, frost, rain, accumulated water, or construction activities by excavating an additional [12 inches (300 mm)] <Insert dimension>, backfilling with satisfactory soil or well-graded aggregate, and compacting to original subgrade elevation.
 2. Setting in Earth: Set post in position, support to prevent movement, and backfill with satisfactory soil or well-graded aggregate as recommended in writing by manufacturer. Place and compact backfill in 6-inch (150-mm) lifts, compacting each lift.
 3. Setting in Cast-in-Place Concrete: Set post in position, support to prevent movement, and place concrete [in posthole] [or] [for concrete foundation] as indicated.
 4. Setting in Preformed Hole in Concrete Foundation: Form or core drill holes in concrete foundation not less than 3/4 inch (20 mm) larger than outside dimension of post for installing posts in concrete. Set post in position, shim to prevent movement, and fill annular space between post and hole with [nonshrink, nonmetallic grout] [or] [anchoring cement], mixed and placed to comply with manufacturer's written instructions.
 - a. Cover anchorage joint in concrete foundations with flange of same metal and finish as post, [welded to post after placing anchoring material] [attached to post with set screws].
 - b. Leave anchorage joint exposed with [1/8-inch (3-mm) anchoring material sloped away from post] [anchoring material flush with adjacent surface].

C. Baseplate Method:

1. Preset Anchor Bolts: Set post baseplate in position over anchor bolts projecting from concrete foundation, shim and support post to prevent movement, place washers and nuts, and tighten. Fill shim space with nonshrink, nonmetallic grout, mixed and placed to comply with manufacturer's written instructions.
2. Drilled-in-Place Anchor Bolts: Set post baseplate in position over concrete foundation, locate and drill anchor holes, shim and support post to prevent movement, place washers and anchor bolts, and tighten. Fill shim space with nonshrink, nonmetallic grout, mixed and placed to comply with manufacturer's written instructions.

D. Sleeve Method: Set post in position in sleeve and support post to prevent movement, fill annular space between post and sleeve with **[nonshrink, nonmetallic grout] [or] [anchoring cement]**, mixed and placed to comply with manufacturer's written instructions.

1. Cover anchorage joint with flange of same metal and finish as post, **[welded to post after placing anchoring material] [attached to post with set screws]**.
2. Leave anchorage joint exposed with **[1/8-inch (3-mm) anchoring material sloped away from post] [anchoring material flush with adjacent surface]**.

E. Reverse-Sleeve Method: Set post in position over the projecting insert and support post to prevent movement, drill posts and inserts for through bolts, and install and tighten through bolts.

3.4 INSTALLING PYLONS

A. Vertical Tolerance: Install pylons plumb within a tolerance of **[1/16 inch in 3 feet (2 mm in 1 m)] <Insert dimensions>**.

B. Attachment with Preset Anchor Bolts: Set pylon base in position over anchor bolts projecting from concrete foundation, shim and support pylon to prevent movement, place washers and nuts, and tighten. Fill shim space with nonshrink, nonmetallic grout, mixed and placed to comply with manufacturer's written instructions.

C. Attachment with Drilled-in-Place Anchor Bolts: Set pylon base in position over concrete foundation, locate and drill anchor holes, shim and support pylon to prevent movement, place washers and anchor bolts, and tighten. Fill shim space with nonshrink, nonmetallic grout, mixed and placed to comply with manufacturer's written instructions.

3.5 ADJUSTING AND CLEANING

A. Remove and replace damaged or deformed signs and signs that do not comply with specified requirements. Replace signs with damaged or deteriorated finishes or components that cannot be successfully repaired by finish touchup or similar minor repair procedures.

- B. Remove temporary protective coverings and strippable films as signs are installed.
- C. On completion of installation, clean exposed surfaces of signs according to manufacturer's written instructions, and touch up minor nicks and abrasions in finish. Maintain signs in a clean condition during construction and protect from damage until acceptance by Owner.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 101426

SECTION 102113 - TOILET COMPARTMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Steel toilet compartments configured as **[toilet enclosures] [entrance screens] [and] [urinal screens]**.
2. Stainless-steel toilet compartments configured as **[toilet enclosures] [entrance screens] [and] [urinal screens]**.
3. Plastic-laminate-faced toilet compartments configured as **[toilet enclosures] [entrance screens] [and] [urinal screens]**.
4. Phenolic-core toilet compartments configured as **[toilet enclosures] [entrance screens] [and] [urinal screens]**.
5. Solid-polymer toilet compartments configured as **[toilet enclosures] [entrance screens] [and] [urinal screens]**.

B. Related Sections:

1. Section 055000 "Metal Fabrications" for supports that attach **[ceiling-hung compartments] [floor-and-ceiling-anchored compartments] [and] [post-to-ceiling screens]** to overhead structural system.
2. **[Section 061000 "Rough Carpentry"] [Section 061035 "Miscellaneous Rough Carpentry"]** for **[blocking] [overhead support of floor-and-ceiling-anchored compartments] [and] [overhead support of post-to-ceiling screens]**.
3. Section 102800 "Toilet, Bath, and Laundry Accessories" for toilet tissue dispensers, grab bars, purse shelves, and similar accessories.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

1. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

1. Product Data for Credit IEQ 4.4: For particleboard, documentation indicating that product contains no urea formaldehyde.
2. Laboratory Test Reports for Credit IEQ 4: For **[adhesives] [and] [composite wood products]**, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

C. Shop Drawings: For toilet compartments. Include plans, elevations, sections, details, and attachments to other work.

1. Show locations of cutouts for compartment-mounted toilet accessories.
2. Show locations of reinforcements for compartment-mounted grab bars.
3. Show locations of centerlines of toilet fixtures.
4. Show **[ceiling grid and]** overhead support or bracing locations.

D. Samples for Initial Selection: For each type of unit indicated. Include Samples of hardware and accessories involving material and color selection.

E. Samples for Verification: For the following products, in manufacturer's standard sizes unless otherwise indicated:

1. Each type of material, color, and finish required for units, prepared on **6-inch-** (152-mm-) square Samples of same thickness and material indicated for Work.
2. Each type of hardware and accessory.

1.4 INFORMATIONAL SUBMITTALS

A. Product Certificates: For each type of toilet compartment, from manufacturer.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For toilet compartments to include in maintenance manuals.

B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

A. Comply with requirements in GSA's CID-A-A-60003, "Partitions, Toilets, Complete."

B. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84, or another standard acceptable to authorities having jurisdiction, by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: [25] [75] [200] or less.
2. Smoke-Developed Index: 450 or less.

- C. Regulatory Requirements: Comply with applicable provisions in [the U.S. **Architectural & Transportation Barriers Compliance Board's "Americans with Disabilities Act (ADA) and Architectural Barriers Act (ABA) Accessibility Guidelines for Buildings and Facilities"**] [and] [ICC/ANSI A117.1] for toilet compartments designated as accessible.

1.7 PROJECT CONDITIONS

- A. Field Measurements: Verify actual locations of toilet fixtures, walls, columns, ceilings, and other construction contiguous with toilet compartments by field measurements before fabrication.

1.8 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Aluminum Castings: ASTM B 26/B 26M.
- B. Aluminum Extrusions: [ASTM B 221](#) (ASTM B 221M).
- C. Brass Castings: ASTM B 584.
- D. Brass Extrusions: ASTM B 455.
- E. Steel Sheet: Commercial steel sheet for exposed applications; mill phosphatized and selected for smoothness.
1. Electrolytically Zinc Coated: ASTM A 879/A 879M, [01Z](#) (03G).
 2. Hot-Dip Galvanized: ASTM A 653/A 653M, either hot-dip galvanized or galvanized.
- F. Stainless-Steel Sheet: ASTM A 666, Type 304, stretcher-leveled standard of flatness.
- G. Stainless-Steel Castings: ASTM A 743/A 743M.
- H. Zamac: ASTM B 86, commercial zinc-alloy die castings.

2.2 STEEL UNITS <Insert drawing designation>

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Accurate Partitions Corporation.
 2. All American Metal Corp.
 3. American Sanitary Partition Corporation.
 4. Ampco, Inc.
 5. Bradley Corporation; Mills Partitions.
 6. Flush Metal Partition Corp.
 7. General Partitions Mfg. Corp.
 8. Global Steel Products Corp.
 9. Hadrian Manufacturing Inc.
 10. Knickerbocker Partition Corporation.
 11. Metpar Corp.
 12. Rockville Partitions Incorporated.
 13. Sanymetal; a Crane Plumbing company.
 14. Shanahan's Limited.
 15. <Insert manufacturer's name>.
 16. or approved equal.
- B. Toilet-Enclosure Style: [**Overhead braced**] [**Floor anchored**] [**Ceiling hung**] [**Floor and ceiling anchored**].
- C. Entrance-Screen Style: [**Overhead braced**] [**Floor anchored**] [**Ceiling hung**] [**Floor and ceiling anchored**].
- D. Urinal-Screen Style: [**Wall hung, flat panel**] [**Wall hung with integral flanges**] [**Wall hung, wedge shaped**] [**Floor anchored**] [**Overhead braced**] [**Post to ceiling**].
- E. Door, Panel, and Pilaster Construction: Seamless, metal facing sheets pressure laminated to core material; with continuous, interlocking molding strip or lapped-and-formed edge closures; corners secured by welding or clips and exposed welds ground smooth. [**Provide with no-sightline system.**] Exposed surfaces shall be free of pitting, seam marks, roller marks, stains, discolorations, telegraphing of core material, or other imperfections.
1. Core Material: Manufacturer's standard sound-deadening honeycomb of resin-impregnated kraft paper in thickness required to provide finished thickness of **1 inch** (25 mm) for doors and panels and **1-1/4 inches** (32 mm) for pilasters.
 2. Grab-Bar Reinforcement: Provide concealed internal reinforcement for grab bars mounted on units.
 3. Tapping Reinforcement: Provide concealed reinforcement for tapping (threading) at locations where machine screws are used for attaching items to units.
- F. Urinal-Screen Construction:
1. Flat-Panel Urinal Screen: Matching panel construction.

2. Integral-Flange, Wall-Hung Urinal Screen: Similar to panel construction, with integral full-height flanges for wall attachment, and maximum **1-1/4 inches** (32 mm) thick.
 3. Wedge-Shaped, Wall-Hung Urinal Screen: Similar to panels, V-shaped, fabricated for concealed wall attachment, and maximum **6 inches** (152 mm) wide at wall and minimum **1 inch** (25 mm) wide at protruding end.
- G. Facing Sheets and Closures: **[Electrolytically coated steel] [Hot-dip galvanized-steel] [Electrolytically coated or hot-dip galvanized-steel]** sheet with nominal base-metal (uncoated) thicknesses as follows:
1. Pilasters, Braced at Both Ends: Manufacturer's standard thickness, but not less than **0.036 inch** (0.91 mm).
 2. Pilasters, Unbraced at One End: Manufacturer's standard thickness, but not less than **0.048 inch** (1.21 mm).
 3. Panels: **[Manufacturer's standard thickness, but not less than 0.030 inch (0.76 mm)] [0.036 inch (0.91 mm)]**.
 4. Doors: Manufacturer's standard thickness, but not less than **0.030 inch** (0.76 mm).
 5. Flat-Panel Urinal Screens: Thickness matching the panels.
 6. Integral-Flange, Wall-Hung Urinal Screens: Manufacturer's standard thickness, but not less than **0.030 inch** (0.76 mm).
 7. Wedge-Shaped, Wall-Hung Urinal Screens: Manufacturer's standard thickness, but not less than **0.036 inch** (0.91 mm).
- H. Pilaster **[Shoes] [and] [Sleeves (Caps)]**: Stainless-steel sheet, not less than **0.031-inch** (0.79-mm) nominal thickness and **3 inches** (76 mm) high, finished to match hardware.
- I. Urinal-Screen Post: Manufacturer's standard post design of **[material matching the thickness and construction of pilasters] [or] [1-3/4-inch- (44-mm-) square, aluminum tube with satin finish] <Insert requirement>**; with shoe **[and sleeve (cap)]** matching that on the pilaster.
- J. Brackets (Fittings):
1. Stirrup Type: Ear or U-brackets; **[chrome-plated zamac] [clear-anodized aluminum] [stainless steel] [chrome-plated brass]**.
 2. Full-Height (Continuous) Type: Manufacturer's standard design; **[stainless steel] [aluminum]**.
- K. Steel-Sheet Finish: Immediately after cleaning and pretreating, apply manufacturer's standard baked-on finish, including thermosetting, electrostatically applied, and powder coatings. Comply with coating manufacturer's written instructions for applying and baking. Apply **[one color] [two colors]** in each room.
1. Color: **[As indicated by manufacturer's designations] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.

2.3 STAINLESS-STEEL UNITS <Insert drawing designation>

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Accurate Partitions Corporation.
 2. All American Metal Corp.
 3. American Sanitary Partition Corporation.
 4. Ampco, Inc.
 5. Bradley Corporation; Mills Partitions.
 6. Flush Metal Partition Corp.
 7. General Partitions Mfg. Corp.
 8. Global Steel Products Corp.
 9. Hadrian Manufacturing Inc.
 10. Knickerbocker Partition Corporation.
 11. Metpar Corp.
 12. Rockville Partitions Incorporated.
 13. Sanymetal; a Crane Plumbing company.
 14. Shanahan's Limited.
 15. Weis-Robart Partitions, Inc.
 16. <Insert manufacturer's name>.
 17. or approved equal.
- B. Toilet-Enclosure Style: [**Overhead braced**] [**Floor anchored**] [**Ceiling hung**] [**Floor and ceiling anchored**].
- C. Entrance-Screen Style: [**Overhead braced**] [**Floor anchored**] [**Ceiling hung**] [**Floor and ceiling anchored**].
- D. Urinal-Screen Style: [**Wall hung flat panel**] [**Wall hung with integral flanges**] [**Wall hung, wedge shaped**] [**Floor anchored**] [**Overhead braced**] [**Post to ceiling**].
- E. Door, Panel, and Pilaster Construction: Seamless, metal facing sheets pressure laminated to core material; with continuous, interlocking molding strip or lapped-and-formed edge closures; corners secured by welding or clips and exposed welds ground smooth. [**Provide with no-sightline system.**] Exposed surfaces shall be free of pitting, seam marks, roller marks, stains, discolorations, telegraphing of core material, or other imperfections.
1. Core Material: Manufacturer's standard sound-deadening honeycomb of resin-impregnated kraft paper in thickness required to provide finished thickness of **1 inch** (25 mm) for doors and panels and **1-1/4 inches** (32 mm) for pilasters.
 2. Grab-Bar Reinforcement: Provide concealed internal reinforcement for grab bars mounted on units.
 3. Tapping Reinforcement: Provide concealed reinforcement for tapping (threading) at locations where machine screws are used for attaching items to units.
- F. Urinal-Screen Construction:
1. Flat-Panel Urinal Screen: Matching panel construction.

2. Integral-Flange, Wall-Hung Urinal Screen: Similar to panel construction, with integral full-height flanges for wall attachment, and maximum **1-1/4 inches** (32 mm) thick.
 3. Wedge-Shaped, Wall-Hung Urinal Screen: Similar to panels, V-shaped, fabricated for concealed wall attachment, and maximum **6 inches** (152 mm) wide at wall and minimum **1 inch** (25 mm) wide at protruding end.
- G. Facing Sheets and Closures: Stainless-steel sheet of nominal thicknesses as follows:
1. Pilasters, Braced at Both Ends: Manufacturer's standard thickness, but not less than **0.038 inch** (0.95 mm).
 2. Pilasters, Unbraced at One End: Manufacturer's standard thickness, but not less than **0.050 inch** (1.27 mm).
 3. Panels: **[Manufacturer's standard thickness, but not less than 0.031 inch (0.79 mm)] [0.038 inch (0.95 mm)]**.
 4. Doors: Manufacturer's standard thickness, but not less than **0.031 inch** (0.79 mm).
 5. Flat-Panel Urinal Screens: Thickness matching the panels.
 6. Integral-Flange, Wall-Hung Urinal Screens: Manufacturer's standard thickness, but not less than **0.031 inch** (0.79 mm).
 7. Wedge-Shaped, Wall-Hung Urinal Screens: Manufacturer's standard thickness, but not less than **0.038 inch** (0.95 mm).
- H. Pilaster **[Shoes] [and] [Sleeves (Caps)]**: Stainless-steel sheet, not less than **0.031-inch** (0.79-mm) nominal thickness and **3 inches** (76 mm) high, finished to match hardware.
- I. Urinal-Screen Post: Manufacturer's standard post design of **[material matching the thickness and construction of pilasters] [or] [1-3/4-inch- (44-mm-) square, aluminum tube with satin finish] <Insert requirement>**; with shoe**[and sleeve (cap)]** matching that on the pilaster.
- J. Brackets (Fittings):
1. Stirrup Type: Ear or U-brackets; **[chrome-plated zamac] [clear-anodized aluminum] [stainless steel] [chrome-plated brass]**.
 2. Full-Height (Continuous) Type: Manufacturer's standard design; **[stainless steel] [aluminum]**.
- K. Stainless-Steel Finish: **[No. 4 bright, directional polish] [Manufacturer's standard textured finish] <Insert finish>** on exposed faces. Protect exposed surfaces from damage by application of strippable, temporary protective covering before shipment.
- 2.4 PHENOLIC-CORE UNITS **<Insert drawing designation>**
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Accurate Partitions Corporation.
 2. American Sanitary Partition Corporation.

3. Ampco, Inc.
 4. Bobrick Washroom Equipment, Inc.
 5. Bradley Corporation; Mills Partitions.
 6. Flush Metal Partition Corp.
 7. General Partitions Mfg. Corp.
 8. Global Steel Products Corp.
 9. Knickerbocker Partition Corporation.
 10. Metpar Corp.
 11. Partition Systems Incorporated of South Carolina.
 12. Rockville Partitions Incorporated.
 13. Sanymetal; a Crane Plumbing company.
 14. Shanahan's Limited.
 15. Tex-Lam Manufacturing, Inc.
 16. Weis-Robart Partitions, Inc.
 17. Young Group Ltd. (The); Fabricated Products Division; DesignRite Partitions.
 18. <Insert manufacturer's name>.
 19. or approved equal.
- B. Toilet-Enclosure Style: [**Overhead braced**] [**Floor anchored**] [**Ceiling hung**] [**Floor and ceiling anchored**].
- C. Entrance-Screen Style: [**Overhead braced**] [**Floor anchored**] [**Ceiling hung**] [**Floor and ceiling anchored**].
- D. Urinal-Screen Style: [**Wall hung**] [**Floor anchored**] [**Overhead braced**] [**Post to ceiling**].
- E. Door, Panel[, **Screen**], and Pilaster Construction: Solid phenolic-core panel material with melamine facing on both sides fused to substrate during panel manufacture (not separately laminated), and with eased and polished edges[**and no-sightline system**]. Provide minimum **3/4-inch-** (19-mm-) thick doors and pilasters and minimum **1/2-inch-** (13-mm-) thick panels.
- F. Pilaster [**Shoes**] [**and**] [**Sleeves (Caps)**]: Fabricated from stainless-steel sheet, not less than **0.031-inch** (0.79-mm) nominal thickness and **3 inches** (76 mm) high, finished to match hardware.
- G. Urinal-Screen Post: Manufacturer's standard post design of [**monolithic phenolic urinal screen cut out at bottom to form a post**] [**material matching the thickness and construction of pilasters**] [**or**] [**1-3/4-inch-** (44-mm-) **square, aluminum tube with satin finish**] <Insert requirement>; with shoe[**and sleeve (cap)**] matching that on the pilaster.
- H. Brackets (Fittings):
1. Stirrup Type: Ear or U-brackets, [**chrome-plated zamac**] [**clear-anodized aluminum**] [**stainless steel**] [**chrome-plated brass**].
 2. Full-Height (Continuous) Type: Manufacturer's standard design; [**stainless steel**] [**aluminum**].

- I. Phenolic-Panel Finish:
 1. Facing Sheet Finish: [**One color and pattern**] [**Two colors and patterns**] in each room.
 2. Color and Pattern: [**As indicated by manufacturer's designations**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color and pattern>, with manufacturer's standard [**dark color core**] [**through-color core matching face sheet**].

2.5 SOLID-POLYMER UNITS <Insert drawing designation>

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Accurate Partitions Corporation.
 2. Ampco, Inc.
 3. Bradley Corporation; Mills Partitions.
 4. Comtec Industries/Capitol Partitions.
 5. General Partitions Mfg. Corp.
 6. Global Steel Products Corp.
 7. Hadrian Manufacturing Inc.
 8. Knickerbocker Partition Corporation.
 9. Metpar Corp.
 10. Partition Systems Incorporated of South Carolina.
 11. Rockville Partitions Incorporated.
 12. Santana Products, Inc.
 13. Sanymetal; a Crane Plumbing company.
 14. Weis-Robart Partitions, Inc.
 15. <Insert manufacturer's name>.
 16. or approved equal.
- B. Toilet-Enclosure Style: [**Overhead braced**] [**Floor anchored**] [**Ceiling hung**] [**Floor and ceiling anchored**].
- C. Entrance-Screen Style: [**Overhead braced**] [**Floor anchored**] [**Ceiling hung**] [**Floor and ceiling anchored**].
- D. Urinal-Screen Style: [**Wall hung**] [**Floor anchored**] [**Overhead braced**] [**Post to ceiling**].
- E. Door, Panel[, **Screen**], and Pilaster Construction: Solid, [**high-density polyethylene (HDPE)**] [**or**] [**polypropylene (PP)**] panel material, not less than **1 inch** (25 mm) thick, seamless, with eased edges, [**no-sightline system**,] and with homogenous color and pattern throughout thickness of material.
 1. Integral Hinges: Configure doors and pilasters to receive integral hinges.
 2. Heat-Sink Strip: Manufacturer's standard continuous, [**extruded-aluminum**] [**or**] [**stainless-steel**] strip fastened to exposed bottom edges of solid-polymer components to prevent burning.

3. Color and Pattern: [**One color and pattern**] [**Two colors and patterns**] in each room [**as indicated by manufacturer's designations**] [**as selected by DEN Project Manager from manufacturer's full range**] <Insert color and pattern>.
- F. Pilaster [**Shoes**] [**and**] [**Sleeves (Caps)**]: Manufacturer's standard design; [**polymer**] [**or**] [**stainless steel**].
1. Polymer Color and Pattern: [**Matching pilaster**] [**Contrasting with pilaster, as indicated by manufacturer's designations**] [**Contrasting with pilaster, as selected by DEN Project Manager from manufacturer's full range**] <Insert color and pattern>.
- G. Urinal-Screen Post: Manufacturer's standard post design of [**material matching the thickness and construction of pilasters**] [**or**] [**1-3/4-inch- (44-mm-) square, aluminum tube with satin finish**] <Insert requirement>; with shoe[**and sleeve (cap)**] matching that on the pilaster.
- H. Brackets (Fittings):
1. Stirrup Type: Ear or U-brackets, [**chrome-plated zamac**] [**clear-anodized aluminum**] [**stainless steel**] [**chrome-plated brass**].
 2. Full-Height (Continuous) Type: Manufacturer's standard design; [**polymer or extruded aluminum**] [**polymer**] [**extruded aluminum**] [**stainless steel**].
 - a. Polymer Color and Pattern: [**Matching panel**] [**Contrasting with panel, as indicated by manufacturer's designations**] [**Contrasting with panel, as selected by DEN Project Manager from manufacturer's full range**] <Insert color and pattern>.
- I. Overhead Cross Bracing for Ceiling-Hung Units: As recommended by manufacturer and fabricated from solid polymer.

2.6 ACCESSORIES

- A. Hardware and Accessories: Manufacturer's standard design, heavy-duty operating hardware and accessories.
1. Material: [**Chrome-plated zamac**] [**Clear-anodized aluminum**] [**Stainless steel**] [**Chrome-plated brass**].
 2. Hinges: Manufacturer's standard [**paired, self-closing type that can be adjusted to hold doors open at any angle up to 90 degrees**] [**continuous, cam type that swings to a closed or partially open position**] [**continuous, spring-loaded type**] [**integral hinge for solid-polymer doors**] <Insert requirement>.
 3. Latch and Keeper: Manufacturer's standard [**recessed**] [**surface-mounted**] latch unit designed for emergency access and with combination rubber-faced door strike and keeper. Provide units that comply with regulatory requirements for accessibility at compartments designated as accessible.

4. Coat Hook: Manufacturer's standard combination hook and rubber-tipped bumper, sized to prevent in-swinging door from hitting compartment-mounted accessories.
 5. Door Bumper: Manufacturer's standard rubber-tipped bumper at out-swinging doors[**and entrance-screen doors**].
 6. Door Pull: Manufacturer's standard unit at out-swinging doors that complies with regulatory requirements for accessibility. Provide units on both sides of doors at compartments designated as accessible.
- B. Overhead Bracing: Manufacturer's standard continuous, extruded-aluminum head rail with antigrip profile and in manufacturer's standard finish.
- C. Anchorages and Fasteners: Manufacturer's standard exposed fasteners of stainless steel or chrome-plated steel or brass, finished to match the items they are securing, with theft-resistant-type heads. Provide sex-type bolts for through-bolt applications. For concealed anchors, use stainless steel, hot-dip galvanized steel, or other rust-resistant, protective-coated steel.

2.7 FABRICATION

- A. Overhead-Braced Units: Provide manufacturer's standard corrosion-resistant supports, leveling mechanism, and anchors at pilasters to suit floor conditions. Provide shoes at pilasters to conceal supports and leveling mechanism.
- B. Floor-Anchored Units: Provide manufacturer's standard corrosion-resistant anchoring assemblies with leveling adjustment nuts at pilasters for structural connection to floor. Provide shoes at pilasters to conceal anchorage.
- C. Ceiling-Hung Units: Provide manufacturer's standard corrosion-resistant anchoring assemblies with leveling adjustment nuts at pilasters for connection to structural support above finished ceiling. Provide assemblies that support pilasters from structure without transmitting load to finished ceiling. Provide sleeves (caps) at tops of pilasters to conceal anchorage.
- D. Floor-and-Ceiling-Anchored Units: Provide manufacturer's standard corrosion-resistant anchoring assemblies with leveling adjustment at tops and bottoms of pilasters. Provide shoes and sleeves (caps) at pilasters to conceal anchorage.
- E. Urinal-Screen Posts: Provide manufacturer's standard corrosion-resistant anchoring assemblies with leveling adjustment at[**tops and**] bottoms of posts. Provide shoes[**and sleeves (caps)**] at posts to conceal anchorage.
- F. Door Size and Swings: Unless otherwise indicated, provide **24-inch-** (610-mm-) wide, in-swinging doors for standard toilet compartments and **36-inch-** (914-mm-) wide, out-swinging doors with a minimum **32-inch-** (813-mm-) wide, clear opening for compartments designated as accessible.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. General: Comply with manufacturer's written installation instructions. Install units rigid, straight, level, and plumb. Secure units in position with manufacturer's recommended anchoring devices.
1. Maximum Clearances:
 - a. Pilasters and Panels: **1/2 inch** (13 mm).
 - b. Panels and Walls: **1 inch** (25 mm).
 2. Stirrup Brackets: Secure panels to walls and to pilasters with no fewer than **[two brackets attached] [three brackets attached at midpoint and]** near top and bottom of panel.
 - a. Locate wall brackets so holes for wall anchors occur in masonry or tile joints.
 - b. Align brackets at pilasters with brackets at walls.
- B. Overhead-Braced Units: Secure pilasters to floor and level, plumb, and tighten. Set pilasters with anchors penetrating not less than **1-3/4 inches** (44 mm) into structural floor unless otherwise indicated in manufacturer's written instructions. Secure continuous head rail to each pilaster with no fewer than two fasteners. Hang doors to align tops of doors with tops of panels, and adjust so tops of doors are parallel with overhead brace when doors are in closed position.
- C. Floor-Anchored Units: Set pilasters with anchors penetrating not less than **2 inches** (51 mm) into structural floor unless otherwise indicated in manufacturer's written instructions. Level, plumb, and tighten pilasters. Hang doors and adjust so tops of doors are level with tops of pilasters when doors are in closed position.
- D. Ceiling-Hung Units: Secure pilasters to supporting structure and level, plumb, and tighten. Hang doors and adjust so bottoms of doors are level with bottoms of pilasters when doors are in closed position.
- E. Floor-and-Ceiling-Anchored Units: Secure pilasters to supporting construction and level, plumb, and tighten. Hang doors and adjust so doors are level and aligned with panels when doors are in closed position.
- F. Urinal Screens: Attach with anchoring devices to suit supporting structure. Set units level and plumb, rigid, and secured to resist lateral impact.

3.2 ADJUSTING

- A. Hardware Adjustment: Adjust and lubricate hardware according to hardware manufacturer's written instructions for proper operation. Set hinges on in-swinging doors to hold doors open approximately 30 degrees from closed position when

unlatched. Set hinges on out-swinging doors[**and doors in entrance screens**] to return doors to fully closed position.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 102113

SECTION 102226.13 - ACCORDION FOLDING PARTITIONS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Manually operated, accordion folding partitions.
2. Manually operated, fire-rated accordion folding partitions.
3. Electrically operated, accordion folding partitions.
4. Electrically operated, fire-rated accordion folding partitions.

- B. Related Sections:

1. Section 055000 "Metal Fabrications" for supports that attach supporting tracks to overhead structural system.
2. Section 083513 "Folding Doors" for small-size, non-acoustically rated, fire-rated, and non-fire-rated accordion folding doors.
3. Section 087100 "Door Hardware" for hardware to the extent not specified in this Section.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. NIC: Noise Isolation Class.
- B. NRC: Noise Reduction Coefficient.
- C. SAA: Sound Absorption Average.
- D. STC: Sound Transmission Class.

1.4 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design accordion folding partitions, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. Retain first paragraph below with "Seismic Qualification Certificates" Paragraph in "Informational Submittals" Article for projects requiring seismic design. IBC and ASCE/SEI 7 establish criteria for buildings subject to earthquake motions. Verify requirements of authorities having jurisdiction. Seismic Performance: Accordion folding partitions shall withstand the effects of earthquake motions determined according to **[ASCE/SEI 7] <Insert requirement>**.
- C. Acoustical Performance: Provide accordion folding partitions tested by a qualified testing agency for the following acoustical properties according to test methods indicated:
 - 1. Sound-Transmission Requirements: Accordion folding partition assembly tested in a laboratory for sound transmission loss performance according to ASTM E 90, calculated according to ASTM E 413, and rated for not less than the STC value indicated.
 - 2. Noise Reduction Requirements: Accordion folding partition assembly, identical to partition tested for STC, tested for sound-absorption performance according to ASTM C 423, and rated for not less than the **[NRC] [or] [SAA]** value indicated.
 - 3. Acoustical Performance Requirements: Installed accordion folding partition assembly, identical to partition tested for STC, tested for NIC according to ASTM E 336, determined by ASTM E 413, and rated for **[not less than the NIC value indicated] [10 dB less than STC value indicated] <Insert value>**.
- D. Fire Resistance: Provide fire-rated accordion folding partition assemblies with fire-resistance ratings indicated.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Certificates for **[Credit MR 6] [Credit MR 7]**: Chain-of-custody certificates certifying that accordion folding partitions comply with forest certification requirements. Include evidence that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
 - 2. Product Data for Credit IEQ 4.4: For composite wood and agrifiber products used in accordion folding partitions, documentation indicating that products contain no urea formaldehyde.

3. Laboratory Test Reports for Credit IEQ 4: For [**composite wood and agrifiber products**] [**and**] [**accordion folding partitions**], documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
1. Indicate storage and operating clearances. Indicate location and installation requirements for hardware and track, blocking, and direction of travel.
 2. Indicate facing-material seam locations if any.
 3. Wiring Diagrams: For power, signal, and control wiring.
- D. Samples for Initial Selection: For each type of exposed material, facing material, and finish indicated.
1. Include similar Samples of accessories involving color selection.
- E. Samples for Verification: For each type of exposed material, facing material, and finish indicated, prepared on Samples of size indicated below:
1. Textile: Full width by not less than **36-inch-** (914-mm-) long section of [**fabric**] [**carpet**] from dye lot to be used for the Work, with specified treatments applied. Show complete pattern repeat.
 2. Facing Material: Manufacturer's standard-size unit, not less than **3 inches** (75 mm) square.
 3. Edge Material: Not less than full width by **3 inches** (75 mm) long.
 4. Hardware: Manufacturer's standard exposed door-operating device.
- F. Delegated-Design Submittal: For accordion folding partitions indicated to comply with performance requirements and design criteria, including analysis data and calculations signed and sealed by the qualified professional engineer responsible for their preparation.
1. Design Calculations: Calculate requirements for seismic restraints.
- 1.6 INFORMATIONAL SUBMITTALS
- A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
1. Suspended ceiling components.
 2. Structural members to which suspension systems will be attached.
 3. Size and location of initial access modules for acoustical tile.
 4. Items penetrating finished ceiling, including the following:
 - a. HVAC ductwork, outlets, and inlets.

- b. Speakers.
- c. Sprinklers.
- d. Smoke detectors.
- e. Access panels.
- f. <Insert item>.

5. Plenum [fire] [smoke] [and] [acoustical] barriers.

B. Setting Drawings: For embedded items and cutouts required in other work[, **including support-beam, mounting-hole template**].

C. Qualification Data: For [manufacturer] [Installer] [and] [testing agency].
Retain first paragraph below if required by seismic criteria applicable to Project. Coordinate with Sections specifying seismic controls. See SEI/ASCE 7 for certification requirements for equipment and components.

D. Seismic Qualification Certificates: For accordion folding partitions, accessories, and components, from manufacturer.

E. Product Certificates: For each type of accordion folding partition, from manufacturer.

F. Material Certificates: For each textile dye lot, signed by manufacturers.

G. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for each accordion folding partition.

H. Field quality-control reports.

I. Warranty: Sample of special warranty.

1.7 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For accordion folding partitions to include in maintenance manuals. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:

- 1. Facing materials and finishes for exposed trim and accessories. Include precautions for cleaning materials and methods that could be detrimental to finishes and performance.
- 2. Seals, hardware, track, carriers, and other operating components.
- 3. Electric operator.

B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A qualified manufacturer that is certified for chain of custody by an FSC-accredited certification body.
- B. Installer Qualifications: An employer of workers trained and approved by manufacturer.
- C. Fire-Test-Response Characteristics: Provide partitions with finishes meeting the following as determined by testing identical products by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:
 - 1. Surface-Burning Characteristics: As determined by testing per ASTM E 84.
 - a. Flame-Spread Index: **[25 or less]**
 - b. Smoke-Developed Index: 450 or less.
 - 2. Fire Growth Contribution: Meeting acceptance criteria of local code and authorities having jurisdiction when tested according to **[NFPA 265]** **[or]** **[NFPA 286]**.
- D. Fire-Rated Assemblies: Provide fire-rated accordion folding partitions with the following characteristics as determined by testing identical products by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:
 - 1. Fire-Rated Door Assemblies: Comply with NFPA 80, based on testing according to UL 10B.
 - 2. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification or label certification by a testing agency acceptable to authorities having jurisdiction that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.
- E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- F. Preinstallation Conference: Conduct conference at **[Project site]** **[location and time as determined by DEN Project Manager]** **<Insert location>**.

1.9 PROJECT CONDITIONS

- A. Field Measurements: Verify actual dimensions of accordion folding partition openings by field measurements before fabrication.

1.10 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of accordion folding partitions that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
 - a. Faulty operation of accordion folding partitions.
 - b. Deterioration of metals, metal finishes, and other materials beyond normal wear.
2. Warranty Period: Minimum **[two (2)] [five (5)] <Insert number>** years from date of Substantial Completion.
3. Warranty Period for Pantographic Frames, Trolleys, and Tracks: Minimum **[Ten (10)] <Insert number>** years from date of Substantial Completion.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 GENERAL

- A. General Requirements for Accordion Folding Partitions: Partitions shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.2 ACCORDION FOLDING PARTITION <Insert drawing designation>

- A. Accordion Folding Partition: Accordion folding frame with **[pantograph] [or] [hinged]** sections designed for horizontal extension and retraction, covered with decorative facing material, reinforced for hardware attachment, supported by overhead suspension system, and equipped with manufacturer's standard air-release method to prevent billowing.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Cornell Iron Works, Inc.](#)
 - b. [Curtition](#); a division of T&C Industries, Inc.
 - c. [Holcomb & Hoke Mfg. Co., Inc.](#)
 - d. [Hufcor, Inc.](#)
 - e. [KWIK-WALL Company.](#)
 - f. [Moderco Inc.](#)
 - g. [Modernfold, Inc.](#); a DORMA Group company.
 - h. [Panelfold Inc.](#)
 - i. [Won-Door Corporation.](#)
 - j. [Woodfold Mfg., Inc.](#)

- k. **<Insert manufacturer's name>**.
 - l. or approved equal.

- B. Partition Type: **[Single fixed jamb partition] [Single sliding jamb partition] [Bi-parting partition with fixed jambs] [Bi-parting partition with sliding jambs] [Double-end-post partition in one accordion section] [Double-end-post partition in two accordion sections] [As indicated on Drawings] <Insert description>** with the following hardware:
 - 1. Lead Post Latching Hardware: **[Latch on one side] [Latch on one side with coin-slot release on opposite side] [Latch on both sides] <Insert requirement>** secured to **[recessed jamb striker] [surface jamb striker] [meeting post striker] <Insert requirement>**.
 - 2. Lead Post Locking Hardware: Key-operated lock cylinder[, **keyed to master key system,**] operable from **[latch side] [both sides]** of post.
 - 3. Lead Post Locking Hardware: Deadlock to receive cylinder, operable from **[latch side] [both sides]** of post. See Section 087100 "Door Hardware" and Section 087111 "Door Hardware (Descriptive Specification)" for lock cylinder and keying requirements.
 - 4. Meeting Post: **[Attached] [Floating]**, with meeting/closing arrangement as indicated on Drawings.
 - 5. Intermediate Post: For intersecting partition on **[one side] [both sides]** of partition.
 - 6. Storage-End Hardware: **[Anchor post, secured to opening jamb] [Sliding jamb within storage pocket] [Same as lead post, secured to recessed jamb striker] [Same as lead post, secured to surface jamb striker] [Same as lead post, secured to fixed jamb on pocket door] <Insert requirement>**.
 - 7. Pendant Pull: Near top of lead post in addition to standard pull handle/latch **[for units more than 10 feet (3 m) high or 20 feet (6 m) wide, or both] <Insert requirement>**.
 - 8. Foot Bolt: On **[lead] [attached meeting] [and] [intermediate]** post(s) where indicated; secured to post without interference with seals.

- C. STC Rating: **[30] [35] [40] [45] <Insert STC rating>**.

- D. Sound Absorption: **[NRC] [or] [SAA]** not less than **<Insert NRC or SAA rating>**.

- E. Dimensions:
 - 1. Stack Width (Stored): Maximum **[8-1/2 inches (216 mm)] [12-1/2 inches (318 mm)] <Insert dimension>**.
 - 2. Width When Extended: Maximum **[5 inches (127 mm)] [7 inches (178 mm)] <Insert dimension>**.
 - 3. Total Stack Depth (Stored): Maximum **[38 inches (965 mm)] <Insert dimension>**.

- F. Electric Controls: **[Remote-control station] [two remote-control stations] [obstruction-detection device] [and] [emergency release mechanism] <Insert item>**.

- G. Facing Material: [**Carpet wall covering**] [**Woven fabric**] [**Vinyl-coated fabric**] [**Vinyl film**] [**Plastic-laminate**] [**Wood-veneer**] [**Paint**] [**Owner-furnished material**] <Insert material or requirement>.
1. Color/Pattern: [**Match DEN Project Manager's samples**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert manufacturer's name and designation for color and pattern>.

2.3 FIRE-RATED ACCORDION FOLDING PARTITION <Insert drawing designation>

- A. Fire-Rated Accordion Folding Partition: Accordion folding frame with pantograph sections designed for horizontal extension and retraction, covered with decorative facing material, reinforced for hardware attachment, supported by overhead suspension system, and equipped with manufacturer's standard air-release method to prevent billowing.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. [Cornell Iron Works, Inc.](#)
- b. [Modernfold, Inc.](#); a DORMA Group company.
- c. [Won-Door Corporation](#).
- d. <Insert manufacturer's name>.
- e. or approved equal.

- B. Partition Type: [**Single sliding jamb partition**] [**Bi-parting partition with sliding jambs**] [**As indicated on Drawings**] <Insert description> with the following hardware:

1. Lead Post Latching Hardware: [**Latch on one side**] [**Latch on one side with coin-slot release on opposite side**] [**Latch on both sides**] <Insert requirement> secured to [**recessed jamb striker**] <Insert requirement>.
2. Lead Post Locking Hardware: Key-operated lock cylinder[, **keyed to master key system,**] operable from [**latch side**] [**both sides**] of post.
3. Lead Post Locking Hardware: Deadlock to receive cylinder, operable from [**latch side**] [**both sides**] of post. See Section 087100 "Door Hardware" and Section 087111 "Door Hardware (Descriptive Specification)" for lock cylinder and keying requirements.
4. Storage-End Hardware: [**Sliding jamb within storage pocket**] <Insert requirement>.
5. Pendant Pull: Near top of lead post in addition to standard pull handle/latch [**for units more than 10 feet (3 m) high or 20 feet (6 m) wide, or both**] <Insert requirement>.
6. Foot Bolt: On lead post; secured to post to avoid interference with seals.

- C. Fire Rating: [**3/4 hour**] [**1 hour**] [**1-1/2 hours**] [**3 hours**] <Insert fire rating>.

- D. STC Rating: [**30**] [**40**] [**44**] <Insert STC rating>.

- E. Sound Absorption: **[NRC] [or] [SAA]** not less than **<Insert NRC or SAA rating>**.
- F. Dimensions:
 - 1. Stack Width (Stored): Maximum **[11-1/2 inches (292 mm)] <Insert dimension>**.
 - 2. Width When Extended: Maximum **[13-3/4 inches (349 mm)] <Insert dimension>**.
 - 3. Total Stack Depth (Stored): Maximum **[38 inches (965 mm)] <Insert dimension>**.
- G. Electric Controls: **[Remote-control station] [two remote-control stations] [obstruction-detection device] [and] [emergency release mechanism] <Insert item>**.
- H. Facing Material: **[Vinyl film] [Paint] <Insert material or requirement>**.
 - 1. Color/Pattern: **[Match DEN Project Manager's samples] [As selected by DEN Project Manager from manufacturer's full range] <Insert manufacturer's name and designation for color and pattern>**.

2.4 COMPONENTS

- A. Posts and Seals: Provide types of posts and seals that produce accordion folding partitions complying with performance requirements.
 - 1. Posts: Steel or aluminum; formed with deep-nesting and interlocking interfaces and fabricated to ensure rigidity of accordion folding partition.
 - 2. Perimeter Seals: Manufacturer's standard vinyl, neoprene, or woven silica vertical seals, horizontal top and bottom seals, and closures for lead posts and jambs. **[Seals and closures at fire-rated partitions shall be identical to products tested for fire rating indicated and shall form an effective smoke and draft seal.]**
- B. Hardware: Manufacturer's standard manually operated pulls, latches, locks, and bolts as required to operate accordion folding partitions; with decorative, protective finish.
- C. Trim: Manufacturer's standard with decorative, protective finish.
- D. Tiebacks: As required to maintain accordion folding partitions in stacked position; with manufacturer's standard finish.

2.5 SUSPENSION SYSTEMS

- A. Suspension Tracks: Steel or aluminum **[mounted directly to overhead structural support,] [with adjustable steel hanger rods for overhead support,]** designed for type of operation, size, and weight of accordion folding partition indicated. Size track to support partition operation and storage without damage to suspension system, accordion folding partitions, or adjacent construction. Limit track deflection to no more than **0.10 inch (2.54 mm)** between bracket supports. Provide a continuous system of track sections and accessories to accommodate configuration and layout indicated for partition operation and storage.

1. Track: **[Surface mounted] [Recessed]**.
 - a. Head Closure Trim: Integral with track for protecting overhead surfaces; **[with factory-applied, decorative, protective finish] [primed for field finish]**.
 - b. Head Closure Trim and Track Channel Pocket: For protecting overhead surfaces and enclosing overhead track opening; **[with factory-applied, decorative, protective finish] [primed for field finish]**.
 - B. Carriers: Trolley system as required for size and weight of partition and for easy, quiet operation; with **[four-wheel] [six-wheel] [12-wheel] [manufacturer's standard]** ball-bearing carriers at lead post and **[two-wheel] [manufacturer's standard]** ball-bearing carriers at intermediate panel supports.
 1. Wheels: **[Nylon] [Steel] [Manufacturer's standard]**.
 - C. Track Switches and Accessories: Manufacturer's standard switches as required for type of operation, storage, track configuration, and layout indicated.
 - D. Aluminum Finish: Mill finish or manufacturer's standard, factory-applied, decorative finish unless otherwise indicated.
 - E. Steel Finish: Factory-applied, corrosion-resistant, protective coating unless otherwise indicated.
- 2.6 ELECTRIC OPERATORS
- A. General: Factory-assembled electric operation system of size and capacity recommended and provided by accordion folding partition manufacturer for partition specified; with electric motor and factory-rewired motor controls, speed reducer, chain drive, remote-control stations, control devices, and accessories required for proper operation. Include wiring from motor control to motor. Coordinate operator wiring requirements and electrical characteristics with building electrical system.
 - B. Comply with NFPA 70.
 - C. Motor Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, within installed environment, with indicated operating sequence, and without exceeding nameplate rating or considering service factor; complying with NEMA MG 1. **[Also comply with the following:]**
 1. Voltage: **[120 V] [208-220 V] [NEMA standard voltage selected to operate on nominal circuit voltage to which motor is connected] <Insert voltage>**.
 2. Horsepower: **[1/4] [1/3] [3/4] [Manufacturer's standard] <Insert number>**.
 3. Efficiency: **[Standard] [Premium]**.
 4. Enclosure: **[Open dripproof] [Totally enclosed] [Manufacturer's standard]**.
 5. Duty: Continuous duty at ambient temperature of **105 deg F (40 deg C)** and at altitude of **3300 feet (1005 m)** above sea level.
 6. Service Factor: 1.15 for open dripproof motors; 1.0 for totally enclosed motors.

7. Phase: **[Single] [Polyphase]**.

D. Control Equipment: Complying with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6.

1. Remote-Control Station: For partitions indicated, provide manufacturer's standard key-operated, constant-pressure, three-position control station labeled "Open," "Close," and "**[Off] [Stop]**." Provide two keys per station.
2. Obstruction-Detection Device: For partitions indicated, provide automatic safety sensor indicated, that causes operator to immediately **[shut off motor] [stop and reverse direction]**.
 - a. Sensor Edge: Contact-pressure-sensitive safety edge along partition's leading edge.
3. Limit Switches: Provide each partition with adjustable switches, interlocked with motor controls and set to automatically stop accordion folding partition at fully extended and fully stacked positions.
4. Safety Interlocks: Provide each partition with safety interlocks to prevent operation of accordion folding partition under the following conditions:
 - a. On partition, to prevent operation when partition is extended and locked.
 - b. On storage pocket door, to prevent partition operation if door is not in fully open position.
 - c. On partition, at location of convergence by another partition, to prevent operation if crossing partitions are in place.
5. Emergency Release Mechanism: For partitions indicated, provide quick disconnect-release of electric-motor drive system, permitting manual operation in event of operating failure.

2.7 WOOD MATERIALS, GENERAL

- A. Certified Wood: Fabricate products with wood-based components produced from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."
- B. Composite Wood and Agrifiber Products: Fabricate products with composite wood and agrifiber products that do not contain urea formaldehyde.
- C. Composite Wood and Agrifiber Products: Fabricate products with composite wood and agrifiber products that comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.8 FACING MATERIALS

- A. General: Provide facing materials with appropriate backing that comply with indicated fire-test-response characteristics, and that are factory attached to accordion folding partitions with concealed fasteners.
1. Factory-apply facing material free of air bubbles, wrinkles, blisters, and other defects; **[in one-piece, seamless;] [with vertical invisible seams complying with Shop Drawings for location;]** and with no gaps or overlaps. Tightly secure and conceal raw and selvage edges of facing material for finished appearance. Horizontal butted edges or seams are not permitted.
 2. Where facing material with directional or repeating pattern, directional weave, or matching grain is indicated, mark facing-material top and attach facing material in same direction.
- B. Carpet Wall Covering: Manufacturer's standard **[nonwoven, needle-punched carpet with fibers fused to backing]**, from same dye lot, treated to resist stains.
- C. Woven Fabric: Manufacturer's standard **[100 percent polyolefin]** woven fabric, from same dye lot, treated to resist stains.
- D. Vinyl-Coated Fabric: Manufacturer's standard mildew-resistant, washable, vinyl-coated fabric wall covering; complying with CFFA-W-101-D for **[Type II] [or] [Type III]**; Class A.
1. Total Weight: **<Insert weight>**.
 2. Antimicrobial Treatment: Additives capable of inhibiting growth of bacteria, fungi, and yeasts.
- E. Vinyl Film: Manufacturer's standard vinyl film laminated to partition substrate.
- F. Plastic Laminate: High-pressure decorative laminate; NEMA LD 3, Grade HGS.
- G. Wood Veneer: Genuine wood veneer; clear, vertical grain, straight, and kiln dried; of wood species indicated, laminated to **[noncombustible] [fire-retardant-treated wood]** core with moisture-resistant adhesive.
1. Wood Species and Finish: **[Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] [Cherry] [Maple] [Poplar] [Red oak] <Insert species> with [transparent finish] [transparent finish over stain] [wood finish as specified in Section 099300 "Staining and Transparent Finishing."] <Insert finish>**.
- H. Paint: Manufacturer's standard baked enamel.
- I. Owner-Furnished Material: **<Insert description or requirement>**.

2.9 STORAGE POCKET DOORS

- A. Storage Pocket Door **<Insert drawing designation>**: Full height at end of partition runs to conceal stacked partition[; **of same materials, finish, construction, thickness, and acoustical qualities as partition**] **<Insert requirement>**; complete with operating hardware[**and acoustical seals at soffit, floor, and jambs**]. Hinges in finish to match other exposed hardware.
1. Pocket-door manufacturer's standard method to secure storage pocket door in closed position.
 2. Rim Lock: Key-operated lock cylinder[, **keyed to master key system,**] to secure storage pocket door in closed position. Include two keys per lock.
 3. Rim Lock: Deadlock to receive cylinder, to secure storage pocket door in closed position. See Section 087100 "Door Hardware" and Section 087111 "Door Hardware (Descriptive Specification)" for lock cylinder and keying requirements.
- B. Electric Interlock: Provide each pocket door for an electrically operated, accordion folding partition with electric interlocks to prevent operation of accordion folding partition if pocket door is not in fully open position.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine flooring, structural support, and opening, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of accordion folding partitions.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Comply with ASTM E 557 except as otherwise required by accordion folding partition manufacturer's written installation instructions. Install accordion folding partitions level and plumb, with tight joints and uniform appearance, and free of deformation and surface and finish irregularities.
- B. Install accordion folding partitions and accessories after other finishing operations, including painting, have been completed.

3.3 ADJUSTING

- A. Adjust accordion folding partitions to operate smoothly, without warping or binding. Lubricate hardware and other moving parts.
1. Fire-Rated Accordion Folding Partitions: Verify that operations are functional and comply with requirements of authorities having jurisdiction.

- B. Adjust storage pocket doors to operate smoothly and easily, without binding or warping. Check and readjust operating hardware. Confirm that latches and locks engage accurately and securely without forcing or binding.
- C. Adjust electric interlocks to properly control operation of electrically operated, accordion folding partitions.

3.4 FIELD QUALITY CONTROL

- A. NIC Testing: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections.
- B. Testing Methodology: Perform testing of installed accordion folding partition for noise isolation according to ASTM E 336, determined by ASTM E 413, and rated for not less than NIC indicated. Adjust and fit partitions to comply with NIC test method requirements.
- C. Testing Extent: Testing agency shall randomly select **[one] <Insert number>** accordion folding partition installation(s) for testing.
- D. Accordion folding partitions will be considered defective if they do not pass tests and inspections.
- E. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of repaired, replaced, or additional work with specified requirements.
- F. Prepare test and inspection reports.

3.5 CLEANING

- A. Clean soiled surfaces of accordion folding partitions, to remove dust, loose fibers, fingerprints, adhesives, and other foreign materials according to manufacturer's written instructions.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain accordion folding partitions.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 102226.13

SECTION 102238.13 - OPERABLE GLASS-PANEL PARTITIONS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes manually operated, glass-panel partitions.
- B. Related Requirements:
 - 1. Section 055000 "Metal Fabrications" for supports that attach supporting tracks to overhead structural system.\
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. STC: Sound Transmission Class.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager] <Insert location>**.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.

2. Certificates for Credit MR 7: Chain-of-custody certificates certifying that operable glass-panel partitions comply with forest certification and chain-of-custody requirements. Include statement indicating cost for each certified wood product.
- C. Shop Drawings: For operable glass-panel partitions.
1. Include plans, elevations, sections, details, [**numbered panel installation sequence,**] and attachments to other work.
 2. Indicate stacking and operating clearances. Indicate location and installation requirements for hardware and track, blocking, and direction of travel.
- D. Samples for Initial Selection: For each type of exposed material, finish, covering, or facing.
1. Include Samples of accessories involving color selection.
- E. Samples for Verification: For each type of exposed material, finish, covering, or facing, prepared on Samples of size indicated below:
1. Panel Edge Material: Not less than **3 inches** (75 mm) long.
 2. Glass: Units **12 inches** (300 mm) square.
 3. Hardware: One of each exposed door-operating device.
- F. Delegated-Design Submittal: For operable glass-panel partitions.
1. Include design calculations for seismic restraints.

1.6 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Partition track, track supports and bracing, switches, turning space, and storage layout.
 2. Suspended ceiling components.
 3. Structural members to which suspension systems are attached.
 4. Size and location of initial access modules for acoustical tile.
 5. Items penetrating finished ceiling, including the following:
 - a. Lighting fixtures.
 - b. HVAC ductwork, outlets, and inlets.
 - c. Speakers.
 - d. Sprinklers.
 - e. Smoke detectors.
 - f. Access panels.
 - g. **<Insert item>**.
 6. Plenum acoustical barriers.

- B. Setting Drawings: For embedded items and cutouts required in other work[, **including support-beam, mounting-hole template**].
- C. Qualification Data: For qualified [**Installer**] [**manufacturer**] [**and**] [**vendor**].
- D. Retain "Seismic Qualification Certificates" Paragraph below if required by seismic criteria applicable to Project. See ASCE/SEI 7 for certification requirements for equipment and components. Seismic Qualification Certificates: For operable glass-panel partitions, tracks, accessories, and components, from manufacturer. Include seismic capacity of partition assemblies to remain in vertical position during a seismic event and the following:
 - 1. Basis for Certification: Indicate whether certification is based on analysis, testing, or experience data, according to ASCE/SEI 7.
 - 2. Detailed description of partition anchorage devices on which the certification is based and their installation requirements.
- E. Product Certificates: For each type of operable glass-panel partition.
- F. Product Test Reports: For each operable glass-panel partition, for tests performed by a qualified testing agency.
- G. Sample Warranty: For manufacturer's special warranty.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For operable glass-panel partitions to include in maintenance manuals.
 - 1. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
 - a. Panel finish and finishes for exposed trim and accessories. Include precautions for cleaning materials and methods that could be detrimental to finishes and performance.
 - b. Seals, hardware, track, track switches, carriers, and other operating components.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A qualified manufacturer that is certified for chain of custody by an FSC-accredited certification body.
- B. Vendor Qualifications: A vendor that is certified for chain of custody by an FSC-accredited certification body.

- C. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Protectively package and sequence panels in order for installation. Clearly mark packages and panels with numbering system used on Shop Drawings. Do not use permanent markings on panels.

1.10 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of operable glass-panel partitions that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Faulty operation of operable glass-panel partitions.
 - b. Deterioration of metals, metal finishes, and other materials beyond normal use.
 - 2. Warranty Period: Minimum [**two (2)**] <Insert number> years from date of Substantial Completion.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design seismic bracing of tracks to structure above.
- B. Seismic Performance: Operable glass-panel partitions shall withstand the effects of earthquake motions determined according to [**ASCE/SEI 7**] <Insert requirement>.
 - 1. The term "withstand" means "the partition panels will remain in place without separation of any parts from the system when subjected to the seismic forces specified."

- C. Acoustical Performance: Provide operable glass-panel partitions tested by a qualified testing agency for the following acoustical properties according to test methods indicated:
1. Sound-Transmission Requirements: Operable glass-panel partition assembly tested for laboratory sound-transmission loss performance according to ASTM E 90, determined by ASTM E 413, and rated for not less than the STC indicated.
- D. Fire-Test-Response Characteristics: Provide wood-framed panels complying with one of the following as determined by testing identical products by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:
1. Surface-Burning Characteristics: Comply with ASTM E 84 or UL 723; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - a. Flame-Spread Index: **[25]** <Insert value> or less.
 - b. Smoke-Developed Index: **[450]** <Insert value> or less.

2.2 OPERABLE GLASS PANELS

- A. Operable Glass Panels: [**Frameless aluminum**] [**Aluminum-framed**] [**Wood-framed**] glass-panel partition system, including panels, [**seals**,]suspension system, operators, and accessories.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Hufcor, Inc.](#)
 - b. [KWIK-WALL Company.](#)
 - c. [Moderco Inc.](#)
 - d. [Modernfold, Inc.; a DORMA Group company.](#)
 - e. [NanaWall Systems, Inc.](#)
 - f. <Insert manufacturer's name>.
 - g. or approved equal.
- B. Panel Operation: Manually operated, [**individual**] [**paired**] [**continuously hinged**] panels.
- C. Panel Construction: As required to support panel from suspension components and with reinforcement for hardware attachment. Fabricate panels with tight hairline joints and concealed fasteners. Fabricate panels so finished in-place partition is rigid; level; plumb; aligned, with tight joints and uniform appearance; and free of bow, warp, twist, deformation, and surface and finish irregularities.
1. Factory-Glazed Fabrication: Glaze operable glass panels in the factory where practical and possible for applications indicated. Comply with manufacturer's written instructions and with requirements in Section 088000 "Glazing."

- D. Glass and Glazing: Glass type <Insert description> as specified in Section 088000 "Glazing."
- E. Glass and Glazing: As follows:
1. Safety Glass Standard for Partition Panels: Provide glass products complying with testing requirements in 16 CFR 1201, Category II, or ANSI Z97.1, Class A.
 2. Safety Glass Standard for Pass Doors: Provide glass products complying with testing requirements in 16 CFR 1201, Category II.
 3. Glass: **[Manufacturer's standard] [Custom]** safety glass and glass assemblies as indicated and complying with **[the following] [requirements in Section 088000 "Glazing" and as follows]**:
 - a. Tempered Glass: ASTM C 1048, Kind FT (fully tempered), Type I (transparent flat glass), **[Class 1 (clear)] [Class 2 (tinted)]**, Quality-Q3.
 - b. Tempered Patterned Glass: ASTM C 1048, Kind FT (fully tempered), Type II (patterned flat glass), Class 1 (clear), Form 3 (patterned); and of quality, finish, and pattern specified.
 - c. Laminated Glass: ASTM C 1172, with **[clear] [colored] [patterned] [graphic]** <Insert requirement> interlayer.
 - 1) Annealed Float Glass: ASTM C 1036, Type I (transparent flat glass), **[Class 1 (clear)] [Class 2 (tinted)]**, Quality-Q3.
 - 2) Patterned Glass: ASTM C 1036, Type II (patterned and wired flat glass), Class 1 (clear), Form 3 (patterned); and of quality, finish, and pattern specified.
 - d. Insulating-Glass Units: Factory-assembled units consisting of sealed lites of glass as indicated, separated by a dehydrated interspace, qualified according to ASTM E 2190, and complying with other requirements specified.
 - 1) Spacer: **[Manufacturer's standard spacer construction and material] [Aluminum with mill or clear anodic finish] [Aluminum with black, color anodic finish] [Aluminum with bronze, color anodic finish] [Aluminum with powdered-metal paint finish in color selected by DEN Project Engineer] [Galvanized steel] [Stainless steel]** <Insert material>.
 - e. Glass Thickness: **[Manufacturer's standard thickness for indicated requirements] [As indicated]** <Insert dimension>.
 - f. Glass Vertical Edge: **[Polished] [Manufacturer's standard, permanently adhered edge trim]** <Insert description>.
 4. Glazing System: **[Manufacturer's standard factory-glazing system] [Manufacturer's standard factory-glazing system that produces acoustical seal] [Manufacturer's standard factory-glazing system as indicated]** <Insert requirements>.

- F. Dimensions: Fabricate operable glass-panel partitions to form an assembled system of dimensions indicated and verified by field measurements.
1. Panel Width: [**Standard widths**] [**Equal widths**] [**As indicated**].
- G. STC: Not less than [**36**] [**44**] <Insert number>.
- H. Panel Weight: [**6 lb/sq. ft. (29.3 kg/sq. m)**] [**8 lb/sq. ft. (40 kg/sq. m)**] <Insert value> maximum.
- I. Panel Frame Thickness: Maximum [**1-7/8 inches (48 mm)**] [**3 inches (76 mm)**] <Insert dimension>.
- J. Panel Frame Materials:
1. Certified Wood: Wood for operable glass-panel partitions shall be certified as "FSC Pure"[or "**FSC Mixed Credit**"] according to FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship," and to FSC STD-40-004, "FSC Standard for Chain of Custody Certification."
 2. Recycled Content of Operable Glass-Panel Partitions:
 - a. Recycled Content of Aluminum: Postconsumer recycled content plus one-half of preconsumer recycled content not less than <Insert number> percent by weight.
 - b. Recycled Content of Glass: Postconsumer recycled content plus one-half of preconsumer recycled content not less than <Insert number> percent by weight.
 3. Aluminum: Alloy and temper recommended by aluminum producer and finisher for type of use, corrosion resistance, and finish indicated; **ASTM B 221** (ASTM B 221M) for extrusions; manufacturer's standard strengths and thicknesses for type of use.
 - a. Frame Reinforcement: Manufacturer's standard steel or aluminum.
 4. Wood Frame: Clear, vertical-grain, straight, kiln-dried[, **fire-retardant-treated**] wood as follows:
 - a. Species: [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] [**Cherry**] [**Hemlock**] [**Maple**] [**Meranti**] [**Poplar**] [**Red oak**] <Insert species>.
- K. Panel Closure: [**Manufacturer's standard unless otherwise indicated**] <Insert requirement>.
- L. Hardware: Manufacturer's standard as required to operate operable glass-panel partition and accessories; with decorative, protective finish.
1. Hinges: [**Manufacturer's standard**] [**Concealed (invisible)**] <Insert type>.
 2. Floor Lock: [**Thumb-turn**] [**Key**] actuated.

M. Panel Frame Finishes:

1. Exposed Metal: **[Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range]** as follows:
 - a. Aluminum: **[Clear anodized] [Light bronze anodized] [Medium bronze anodized] [Dark bronze anodized] [Black anodized] [Baked powder coating, black color] <Insert finish and color>**.
 - b. Metal-Clad Aluminum: **[Satin stainless steel] [Polished stainless steel] [Satin brass] [Polished brass] [Satin bronze] [Polished bronze] <Insert finish>**.
2. Wood Finish: **[Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range]**, as follows:
 - a. Type: **[Transparent finish] [Transparent finish over stain] <Insert finish>** over wood variety indicated.
3. Wood Finish: **[As specified in Section 099300 "Staining and Transparent Finishing."]** **<Insert description.>**

2.3 SEALS

- A. General: Provide seals that produce operable glass-panel partitions complying with performance requirements and the following:
1. Manufacturer's standard seals unless otherwise indicated.
 2. Seals made from materials and in profiles that minimize sound leakage.
 3. Seals fitting tight at contact surfaces and sealing continuously between adjacent panels and between operable glass-panel partition perimeter and adjacent surfaces, when operable glass-panel partition is extended and closed.

2.4 SUSPENSION SYSTEMS

- A. Tracks: Steel or aluminum **[mounted directly to overhead structural support,] [with adjustable steel hanger rods for overhead support,]** designed for operation, size, and weight of operable glass-panel partition indicated. Size track to support partition operation and storage without damage to suspension system, operable glass-panel partitions, or adjacent construction. Limit track deflection to no more than **0.10 inch (2.54 mm)** between bracket supports. Provide a continuous system of track sections and accessories to accommodate configuration and layout indicated for partition operation and storage.
1. Panel Guide: Aluminum guide on both sides of the track to facilitate straightening of the panels; finished with factory-applied, decorative, protective finish.
 2. Head Closure Trim: As required for acoustical performance; **[with factory-applied, decorative, protective finish] [primed for field finish]**.

- B. Carriers: Trolley system as required for configuration type, size, and weight of partition and for easy operation; with ball-bearing wheels.
1. Multidirectional Carriers: Capable of negotiating intersections without track switches.
- C. Track Intersections, Switches, and Accessories: As required for operation, storage, track configuration, and layout indicated for operable glass-panel partitions, and compatible with partition assembly specified. Fabricate track intersections and switches from steel or aluminum.
1. Curve-and-Diverter Switches: Allow radius turns to divert panels to an auxiliary track.
 2. L Intersections: Allow panels to change 90 degrees in direction of travel.
 3. T Intersections: Allow panels to pass through or change 90 degrees to another direction of travel.
 4. X Intersections: Allow panels to pass through or change travel direction full circle in 90-degree increments, and allow one partition to cross track of another.
 5. Multidirectional Switches: Adjustable switch configuring track into L, T, or X intersections and allowing panels to be moved in all pass-through, 90-degree change, and crossover travel direction combinations.
 6. Center carrier stop.
- D. Aluminum Finish: Mill finish or manufacturer's standard, factory-applied, decorative finish unless otherwise indicated.
- E. Steel Finish: Manufacturer's standard, factory-applied, corrosion-resistant, protective coating unless otherwise indicated.

2.5 ACCESSORIES

- A. Pass Doors: Swinging door built into and matching panel **[materials,] [construction,] [acoustical qualities,]** finish and thickness, complete with frames and operating hardware. Hinges finished to match other exposed hardware.
1. Accessibility Standard: Fabricate doors to comply with applicable provisions in **[ICC A117.1] [and] [the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for Buildings and Facilities] <Insert requirements of authorities having jurisdiction>**.
 2. Single Pass Door: **[36 by 80 inches (914 by 2032 mm)] [36 by 84 inches (914 by 2134 mm)] <Insert dimensions>**.
 3. Double Pass Door: **[72 by 80 inches (1829 by 2032 mm)] [72 by 84 inches (1829 by 2134 mm)] <Insert dimensions>**.
 4. Pass-Door Hardware: Equip pass door with the following:
 - a. Door Seals: **[Mechanically operated floor seal on panels containing pass doors] [Sweep floor seals]**.
 - b. Panic hardware.
 - c. Concealed door closer.

- d. Latchset: Passage set.
 - e. Lock: Key-operated lock with cylinder[, **keyed to master key system,**] operable from both sides of door. Include two keys per lock.
 - f. Lock: Deadlock to receive cylinder, operable from both sides of door. See [**Section 087100 "Door Hardware"**] [**Section 087111 "Door Hardware (Descriptive Specification)"**] for lock cylinder and keying requirements.
- B. Storage Pocket Door: Full height at end of partition runs to conceal stacked partition; of same frame material, finish, thickness, and acoustical qualities as panels; complete with operating hardware[**and acoustical seals at soffit, floor, and jambs**]. Hinges in finish to match other exposed hardware.
- 1. Manufacturer's standard method to secure storage pocket door in closed position.
 - 2. Rim Lock: Key-operated lock cylinder[, **keyed to master key system,**] to secure storage pocket door in closed position. Include two keys per lock.
 - 3. Rim Lock: Deadlock to receive cylinder, to secure storage pocket door in closed position. See [**Section 087100 "Door Hardware"**] [**Section 087111 "Door Hardware (Descriptive Specification)"**] for lock cylinder and keying requirements.
- C. Vertical Edge Trim: Manufacturer's standard [**transparent**] [**thin aluminum astragal**] trim to protect vertical edges of glass in frameless panels.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine flooring, structural support, and opening, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of operable glass-panel partitions.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Comply with ASTM E 557 except as otherwise required by operable glass-panel partition manufacturer's written installation instructions.
- B. Install operable glass-panel partitions and accessories after other finishing operations, including painting, have been completed in area of partition installation.
- C. Install panels from marked packages in numbered sequence indicated on Shop Drawings.
- D. Broken, cracked, chipped, deformed, or unmatched panels are not acceptable.

- E. Broken, cracked, deformed, or unmatched gasketing or gasketing with gaps at butted ends is not acceptable.
- F. Light-Leakage Test: Illuminate one side of partition installation and observe vertical joints and top and bottom seals for voids. Adjust partitions for alignment and full closure of vertical joints and full closure along top and bottom seals.

3.3 ADJUSTING

- A. Adjust operable glass-panel partitions, hardware, and other moving parts to function smoothly, and lubricate as recommended by manufacturer.
- B. Adjust [**pass doors**] [**and**] [**storage pocket doors**] to operate smoothly and easily, without binding or warping.
- C. Verify that safety devices are properly functioning.

3.4 MAINTENANCE SERVICE

- A. Maintenance Service: Beginning at Substantial Completion, maintenance service shall include [**three**] [**six**] [**nine**] [**12**] months' full maintenance by manufacturer's authorized service representative. Include quarterly preventive maintenance, repair, or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper operable-partition operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain operable glass-panel partitions.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 102238.13

SECTION 102238.13 - OPERABLE GLASS-PANEL PARTITIONS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes manually operated, glass-panel partitions.
- B. Related Requirements:
 - 1. Section 055000 "Metal Fabrications" for supports that attach supporting tracks to overhead structural system.\
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. STC: Sound Transmission Class.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager] <Insert location>**.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.

2. Certificates for Credit MR 7: Chain-of-custody certificates certifying that operable glass-panel partitions comply with forest certification and chain-of-custody requirements. Include statement indicating cost for each certified wood product.
- C. Shop Drawings: For operable glass-panel partitions.
1. Include plans, elevations, sections, details, [**numbered panel installation sequence,**] and attachments to other work.
 2. Indicate stacking and operating clearances. Indicate location and installation requirements for hardware and track, blocking, and direction of travel.
- D. Samples for Initial Selection: For each type of exposed material, finish, covering, or facing.
1. Include Samples of accessories involving color selection.
- E. Samples for Verification: For each type of exposed material, finish, covering, or facing, prepared on Samples of size indicated below:
1. Panel Edge Material: Not less than **3 inches** (75 mm) long.
 2. Glass: Units **12 inches** (300 mm) square.
 3. Hardware: One of each exposed door-operating device.
- F. Delegated-Design Submittal: For operable glass-panel partitions.
1. Include design calculations for seismic restraints.

1.6 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Partition track, track supports and bracing, switches, turning space, and storage layout.
 2. Suspended ceiling components.
 3. Structural members to which suspension systems are attached.
 4. Size and location of initial access modules for acoustical tile.
 5. Items penetrating finished ceiling, including the following:
 - a. Lighting fixtures.
 - b. HVAC ductwork, outlets, and inlets.
 - c. Speakers.
 - d. Sprinklers.
 - e. Smoke detectors.
 - f. Access panels.
 - g. **<Insert item>**.
 6. Plenum acoustical barriers.

- B. Setting Drawings: For embedded items and cutouts required in other work[, **including support-beam, mounting-hole template**].
- C. Qualification Data: For qualified [**Installer**] [**manufacturer**] [**and**] [**vendor**].
- D. Retain "Seismic Qualification Certificates" Paragraph below if required by seismic criteria applicable to Project. See ASCE/SEI 7 for certification requirements for equipment and components. Seismic Qualification Certificates: For operable glass-panel partitions, tracks, accessories, and components, from manufacturer. Include seismic capacity of partition assemblies to remain in vertical position during a seismic event and the following:
 - 1. Basis for Certification: Indicate whether certification is based on analysis, testing, or experience data, according to ASCE/SEI 7.
 - 2. Detailed description of partition anchorage devices on which the certification is based and their installation requirements.
- E. Product Certificates: For each type of operable glass-panel partition.
- F. Product Test Reports: For each operable glass-panel partition, for tests performed by a qualified testing agency.
- G. Sample Warranty: For manufacturer's special warranty.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For operable glass-panel partitions to include in maintenance manuals.
 - 1. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
 - a. Panel finish and finishes for exposed trim and accessories. Include precautions for cleaning materials and methods that could be detrimental to finishes and performance.
 - b. Seals, hardware, track, track switches, carriers, and other operating components.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A qualified manufacturer that is certified for chain of custody by an FSC-accredited certification body.
- B. Vendor Qualifications: A vendor that is certified for chain of custody by an FSC-accredited certification body.

- C. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Protectively package and sequence panels in order for installation. Clearly mark packages and panels with numbering system used on Shop Drawings. Do not use permanent markings on panels.

1.10 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of operable glass-panel partitions that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Faulty operation of operable glass-panel partitions.
 - b. Deterioration of metals, metal finishes, and other materials beyond normal use.
 - 2. Warranty Period: Minimum [**two (2)**] <Insert number> years from date of Substantial Completion.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design seismic bracing of tracks to structure above.
- B. Seismic Performance: Operable glass-panel partitions shall withstand the effects of earthquake motions determined according to [**ASCE/SEI 7**] <Insert requirement>.
 - 1. The term "withstand" means "the partition panels will remain in place without separation of any parts from the system when subjected to the seismic forces specified."

- C. Acoustical Performance: Provide operable glass-panel partitions tested by a qualified testing agency for the following acoustical properties according to test methods indicated:
1. Sound-Transmission Requirements: Operable glass-panel partition assembly tested for laboratory sound-transmission loss performance according to ASTM E 90, determined by ASTM E 413, and rated for not less than the STC indicated.
- D. Fire-Test-Response Characteristics: Provide wood-framed panels complying with one of the following as determined by testing identical products by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:
1. Surface-Burning Characteristics: Comply with ASTM E 84 or UL 723; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - a. Flame-Spread Index: **[25]** <Insert value> or less.
 - b. Smoke-Developed Index: **[450]** <Insert value> or less.

2.2 OPERABLE GLASS PANELS

- A. Operable Glass Panels: [**Frameless aluminum**] [**Aluminum-framed**] [**Wood-framed**] glass-panel partition system, including panels, [**seals**], suspension system, operators, and accessories.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. [Hufcor, Inc.](#)
 - b. [KWIK-WALL Company.](#)
 - c. [Moderco Inc.](#)
 - d. [Modernfold, Inc.; a DORMA Group company.](#)
 - e. [NanaWall Systems, Inc.](#)
 - f. <Insert manufacturer's name>.
 - g. or approved equal.
- B. Panel Operation: Manually operated, [**individual**] [**paired**] [**continuously hinged**] panels.
- C. Panel Construction: As required to support panel from suspension components and with reinforcement for hardware attachment. Fabricate panels with tight hairline joints and concealed fasteners. Fabricate panels so finished in-place partition is rigid; level; plumb; aligned, with tight joints and uniform appearance; and free of bow, warp, twist, deformation, and surface and finish irregularities.
1. Factory-Glazed Fabrication: Glaze operable glass panels in the factory where practical and possible for applications indicated. Comply with manufacturer's written instructions and with requirements in Section 088000 "Glazing."

- D. Glass and Glazing: Glass type <Insert description> as specified in Section 088000 "Glazing."
- E. Glass and Glazing: As follows:
1. Safety Glass Standard for Partition Panels: Provide glass products complying with testing requirements in 16 CFR 1201, Category II, or ANSI Z97.1, Class A.
 2. Safety Glass Standard for Pass Doors: Provide glass products complying with testing requirements in 16 CFR 1201, Category II.
 3. Glass: **[Manufacturer's standard] [Custom]** safety glass and glass assemblies as indicated and complying with **[the following] [requirements in Section 088000 "Glazing" and as follows]**:
 - a. Tempered Glass: ASTM C 1048, Kind FT (fully tempered), Type I (transparent flat glass), **[Class 1 (clear)] [Class 2 (tinted)]**, Quality-Q3.
 - b. Tempered Patterned Glass: ASTM C 1048, Kind FT (fully tempered), Type II (patterned flat glass), Class 1 (clear), Form 3 (patterned); and of quality, finish, and pattern specified.
 - c. Laminated Glass: ASTM C 1172, with **[clear] [colored] [patterned] [graphic]** <Insert requirement> interlayer.
 - 1) Annealed Float Glass: ASTM C 1036, Type I (transparent flat glass), **[Class 1 (clear)] [Class 2 (tinted)]**, Quality-Q3.
 - 2) Patterned Glass: ASTM C 1036, Type II (patterned and wired flat glass), Class 1 (clear), Form 3 (patterned); and of quality, finish, and pattern specified.
 - d. Insulating-Glass Units: Factory-assembled units consisting of sealed lites of glass as indicated, separated by a dehydrated interspace, qualified according to ASTM E 2190, and complying with other requirements specified.
 - 1) Spacer: **[Manufacturer's standard spacer construction and material] [Aluminum with mill or clear anodic finish] [Aluminum with black, color anodic finish] [Aluminum with bronze, color anodic finish] [Aluminum with powdered-metal paint finish in color selected by DEN Project Engineer] [Galvanized steel] [Stainless steel]** <Insert material>.
 - e. Glass Thickness: **[Manufacturer's standard thickness for indicated requirements] [As indicated]** <Insert dimension>.
 - f. Glass Vertical Edge: **[Polished] [Manufacturer's standard, permanently adhered edge trim]** <Insert description>.
 4. Glazing System: **[Manufacturer's standard factory-glazing system] [Manufacturer's standard factory-glazing system that produces acoustical seal] [Manufacturer's standard factory-glazing system as indicated]** <Insert requirements>.

- F. Dimensions: Fabricate operable glass-panel partitions to form an assembled system of dimensions indicated and verified by field measurements.
1. Panel Width: **[Standard widths]** **[Equal widths]** **[As indicated]**.
- G. STC: Not less than **[36]** **[44]** **<Insert number>**.
- H. Panel Weight: **[6 lb/sq. ft. (29.3 kg/sq. m)]** **[8 lb/sq. ft. (40 kg/sq. m)]** **<Insert value>** maximum.
- I. Panel Frame Thickness: Maximum **[1-7/8 inches (48 mm)]** **[3 inches (76 mm)]** **<Insert dimension>**.
- J. Panel Frame Materials:
1. Certified Wood: Wood for operable glass-panel partitions shall be certified as "FSC Pure"[or "**FSC Mixed Credit**"] according to FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship," and to FSC STD-40-004, "FSC Standard for Chain of Custody Certification."
 2. Recycled Content of Operable Glass-Panel Partitions:
 - a. Recycled Content of Aluminum: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert number>** percent by weight.
 - b. Recycled Content of Glass: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert number>** percent by weight.
 3. Aluminum: Alloy and temper recommended by aluminum producer and finisher for type of use, corrosion resistance, and finish indicated; **ASTM B 221 (ASTM B 221M)** for extrusions; manufacturer's standard strengths and thicknesses for type of use.
 - a. Frame Reinforcement: Manufacturer's standard steel or aluminum.
 4. Wood Frame: Clear, vertical-grain, straight, kiln-dried[, **fire-retardant-treated**] wood as follows:
 - a. Species: **[Match DEN Project Manager's sample]** **[As selected by DEN Project Manager from manufacturer's full range]** **[Cherry]** **[Hemlock]** **[Maple]** **[Meranti]** **[Poplar]** **[Red oak]** **<Insert species>**.
- K. Panel Closure: **[Manufacturer's standard unless otherwise indicated]** **<Insert requirement>**.
- L. Hardware: Manufacturer's standard as required to operate operable glass-panel partition and accessories; with decorative, protective finish.
1. Hinges: **[Manufacturer's standard]** **[Concealed (invisible)]** **<Insert type>**.
 2. Floor Lock: **[Thumb-turn]** **[Key]** actuated.

M. Panel Frame Finishes:

1. Exposed Metal: **[Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range]** as follows:
 - a. Aluminum: **[Clear anodized] [Light bronze anodized] [Medium bronze anodized] [Dark bronze anodized] [Black anodized] [Baked powder coating, black color] <Insert finish and color>**.
 - b. Metal-Clad Aluminum: **[Satin stainless steel] [Polished stainless steel] [Satin brass] [Polished brass] [Satin bronze] [Polished bronze] <Insert finish>**.
2. Wood Finish: **[Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range]**, as follows:
 - a. Type: **[Transparent finish] [Transparent finish over stain] <Insert finish>** over wood variety indicated.
3. Wood Finish: **[As specified in Section 099300 "Staining and Transparent Finishing."]** <Insert description.>

2.3 SEALS

- A. General: Provide seals that produce operable glass-panel partitions complying with performance requirements and the following:
1. Manufacturer's standard seals unless otherwise indicated.
 2. Seals made from materials and in profiles that minimize sound leakage.
 3. Seals fitting tight at contact surfaces and sealing continuously between adjacent panels and between operable glass-panel partition perimeter and adjacent surfaces, when operable glass-panel partition is extended and closed.

2.4 SUSPENSION SYSTEMS

- A. Tracks: Steel or aluminum **[mounted directly to overhead structural support,] [with adjustable steel hanger rods for overhead support,]** designed for operation, size, and weight of operable glass-panel partition indicated. Size track to support partition operation and storage without damage to suspension system, operable glass-panel partitions, or adjacent construction. Limit track deflection to no more than **0.10 inch (2.54 mm)** between bracket supports. Provide a continuous system of track sections and accessories to accommodate configuration and layout indicated for partition operation and storage.
1. Panel Guide: Aluminum guide on both sides of the track to facilitate straightening of the panels; finished with factory-applied, decorative, protective finish.
 2. Head Closure Trim: As required for acoustical performance; **[with factory-applied, decorative, protective finish] [primed for field finish]**.

- B. Carriers: Trolley system as required for configuration type, size, and weight of partition and for easy operation; with ball-bearing wheels.
1. Multidirectional Carriers: Capable of negotiating intersections without track switches.
- C. Track Intersections, Switches, and Accessories: As required for operation, storage, track configuration, and layout indicated for operable glass-panel partitions, and compatible with partition assembly specified. Fabricate track intersections and switches from steel or aluminum.
1. Curve-and-Diverter Switches: Allow radius turns to divert panels to an auxiliary track.
 2. L Intersections: Allow panels to change 90 degrees in direction of travel.
 3. T Intersections: Allow panels to pass through or change 90 degrees to another direction of travel.
 4. X Intersections: Allow panels to pass through or change travel direction full circle in 90-degree increments, and allow one partition to cross track of another.
 5. Multidirectional Switches: Adjustable switch configuring track into L, T, or X intersections and allowing panels to be moved in all pass-through, 90-degree change, and crossover travel direction combinations.
 6. Center carrier stop.
- D. Aluminum Finish: Mill finish or manufacturer's standard, factory-applied, decorative finish unless otherwise indicated.
- E. Steel Finish: Manufacturer's standard, factory-applied, corrosion-resistant, protective coating unless otherwise indicated.

2.5 ACCESSORIES

- A. Pass Doors: Swinging door built into and matching panel **[materials,] [construction,] [acoustical qualities,]** finish and thickness, complete with frames and operating hardware. Hinges finished to match other exposed hardware.
1. Accessibility Standard: Fabricate doors to comply with applicable provisions in **[ICC A117.1] [and] [the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for Buildings and Facilities] <Insert requirements of authorities having jurisdiction>**.
 2. Single Pass Door: **[36 by 80 inches (914 by 2032 mm)] [36 by 84 inches (914 by 2134 mm)] <Insert dimensions>**.
 3. Double Pass Door: **[72 by 80 inches (1829 by 2032 mm)] [72 by 84 inches (1829 by 2134 mm)] <Insert dimensions>**.
 4. Pass-Door Hardware: Equip pass door with the following:
 - a. Door Seals: **[Mechanically operated floor seal on panels containing pass doors] [Sweep floor seals]**.
 - b. Panic hardware.
 - c. Concealed door closer.

- d. Latchset: Passage set.
 - e. Lock: Key-operated lock with cylinder[, **keyed to master key system,**] operable from both sides of door. Include two keys per lock.
 - f. Lock: Deadlock to receive cylinder, operable from both sides of door. See [**Section 087100 "Door Hardware"**] [**Section 087111 "Door Hardware (Descriptive Specification)"**] for lock cylinder and keying requirements.
- B. Storage Pocket Door: Full height at end of partition runs to conceal stacked partition; of same frame material, finish, thickness, and acoustical qualities as panels; complete with operating hardware[**and acoustical seals at soffit, floor, and jambs**]. Hinges in finish to match other exposed hardware.
- 1. Manufacturer's standard method to secure storage pocket door in closed position.
 - 2. Rim Lock: Key-operated lock cylinder[, **keyed to master key system,**] to secure storage pocket door in closed position. Include two keys per lock.
 - 3. Rim Lock: Deadlock to receive cylinder, to secure storage pocket door in closed position. See [**Section 087100 "Door Hardware"**] [**Section 087111 "Door Hardware (Descriptive Specification)"**] for lock cylinder and keying requirements.
- C. Vertical Edge Trim: Manufacturer's standard [**transparent**] [**thin aluminum astragal**] trim to protect vertical edges of glass in frameless panels.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine flooring, structural support, and opening, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of operable glass-panel partitions.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Comply with ASTM E 557 except as otherwise required by operable glass-panel partition manufacturer's written installation instructions.
- B. Install operable glass-panel partitions and accessories after other finishing operations, including painting, have been completed in area of partition installation.
- C. Install panels from marked packages in numbered sequence indicated on Shop Drawings.
- D. Broken, cracked, chipped, deformed, or unmatched panels are not acceptable.

- E. Broken, cracked, deformed, or unmatched gasketing or gasketing with gaps at butted ends is not acceptable.
- F. Light-Leakage Test: Illuminate one side of partition installation and observe vertical joints and top and bottom seals for voids. Adjust partitions for alignment and full closure of vertical joints and full closure along top and bottom seals.

3.3 ADJUSTING

- A. Adjust operable glass-panel partitions, hardware, and other moving parts to function smoothly, and lubricate as recommended by manufacturer.
- B. Adjust [**pass doors**] [**and**] [**storage pocket doors**] to operate smoothly and easily, without binding or warping.
- C. Verify that safety devices are properly functioning.

3.4 MAINTENANCE SERVICE

- A. Maintenance Service: Beginning at Substantial Completion, maintenance service shall include [**three**] [**six**] [**nine**] [**12**] months' full maintenance by manufacturer's authorized service representative. Include quarterly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper operable-partition operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain operable glass-panel partitions.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 102238.13

SECTION 102600 - WALL AND DOOR PROTECTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Wall guards.
2. Impact-resistant handrails.
3. Bed locators.
4. Corner guards.
5. Impact-resistant wall coverings.
6. Door protection systems.

- B. Related Sections:

1. Section 055000 "Metal Fabrications" for [metal angle corner guards] [pipe guards] [wheel guards].
2. Section 087100 "Door Hardware" for metal armor, kick, mop, and push plates.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Provide handrails capable of withstanding the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:

1. Uniform load of 50 lbf/ft. (0.73 kN/m) applied in any direction.
2. Concentrated load of 200 lbf (0.89 kN) applied in any direction.
3. Uniform and concentrated loads need not be assumed to act concurrently.

1.4 ACTION SUBMITTALS

- A. Product Data: Include construction details, material descriptions, impact strength[, **fire-test-response characteristics**], dimensions of individual components and profiles, and finishes for each impact-resistant wall protection unit.

1. Include data substantiating that materials comply with requirements.

B. LEED Submittals:

1. Certificates for **[Credit MR 6] [Credit MR 7]**: Chain-of-custody certificates certifying that wood rails comply with forest certification requirements. Include evidence that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
2. Product Data for Credit IEQ 4.1: For adhesives, documentation including printed statement of VOC content.
3. Product Data for Credit IEQ 4.4: For particleboard, documentation indicating that products contain no urea formaldehyde.
4. Laboratory Test Reports for Credit IEQ 4: For **[adhesives] [and] [composite wood products]**, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

C. Shop Drawings: For each impact-resistant wall protection unit showing locations and extent. Include sections, details, and attachments to other work.

1. For installed products indicated to comply with design loads, include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

D. Samples for Initial Selection: For each type of impact-resistant wall protection unit indicated.

1. Include similar Samples of accent strips and accessories involving color selection.

E. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below. **[Include Samples of accent strips to verify color selected.]**

1. **[Wall] [and] [Corner] Guards: 12 inches** (300 mm) long. Include examples of joinery, corners, **[end caps,] [top caps,]** and field splices.
2. Handrails: **12 inches** (300 mm) long. Include examples of joinery, corners, and field splices.
3. Impact-Resistant Wall Covering: **6 by 6 inches** (150 by 150 mm) square.
4. Door-Surface Protection: **6 by 6 inches** (150 by 150 mm) square.
5. Door**[-Edge] [and] [-Frame] Protectors: 12 inches** (300 mm) long.
6. Door-Knob and -Lever Protectors: Full-size unit of each type.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified **[Installer] [testing agency]**.

- B. Material Certificates: For each impact-resistant plastic material, from manufacturer.
- C. Material Test Reports: For each impact-resistant plastic material.
- D. Warranty: Sample of special warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For each impact-resistant wall protection unit to include in maintenance manuals.
 - 1. Include recommended methods and frequency of maintenance for maintaining optimum condition of plastic covers under anticipated traffic and use conditions. Include precautions against using cleaning materials and methods that may be detrimental to plastic finishes and performance.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. **[Wall-Guard] [and] [Handrail] Covers:** Full-size plastic covers of maximum length equal to **[2] <Insert number>** percent of each type, color, and texture of units installed, but no fewer than **[two, 8-foot- (2.4-m-)] <Insert number and size>** long units.
 - 2. **Bed-Locator Covers:** Full-size plastic covers equal to **[2] <Insert number>** percent of each type, color, and texture of units installed, but no fewer than **[two] <Insert number>** units.
 - 3. **Corner-Guard Covers:** Full-size plastic covers of maximum length equal to **[2] <Insert number>** percent of each type, color, and texture of units installed, but no fewer than **[two, 4-foot- (1.2-m-)] <Insert number and size>** long units.
- B. Include mounting and accessory components. Replacement materials shall be from same production run as installed units.

1.8 QUALITY ASSURANCE

- A. Installer Qualifications: An employer of workers trained and approved by manufacturer.
- B. Source Limitations: Obtain impact-resistant wall protection units from single source from single manufacturer.

- C. Product Options: Drawings indicate size, profiles, and dimensional requirements of impact-resistant wall protection units and are based on the specific system indicated. Refer to Section 014000 "Quality Requirements."
- D. Revise subparagraph below to suit Project.
 - 1. Do not modify intended aesthetic effects, as judged solely by DEN Project Manager, except with DEN Project Manager's approval. If modifications are proposed, submit comprehensive explanatory data to DEN Project Manager for review.
- E. Surface-Burning Characteristics: Provide impact-resistant, plastic wall protection units with surface-burning characteristics as determined by testing identical products per ASTM E 84, NFPA 255, or UL 723 by UL or another qualified testing agency.
- F. Regulatory Requirements: Comply with applicable provisions in **[the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines]** [and] [ICC/ANSI A117.1].
- G. Preinstallation Conference: Conduct conference at **[Project site]** [location and time as determined by DEN Project Manager] <Insert location>.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Store impact-resistant wall protection units in original undamaged packages and containers inside well-ventilated area protected from weather, moisture, soiling, extreme temperatures, and humidity.
 - 1. Maintain room temperature within storage area at not less than 70 deg F (21 deg C) during the period, plastic materials are stored.
 - 2. Keep plastic sheet material out of direct sunlight.
 - 3. Store plastic wall protection components for a minimum of 72 hours, or until plastic material attains a minimum room temperature of 70 deg F (21 deg C).
 - a. Store corner-guard covers in a vertical position.
 - b. Store **[wall-guard]** **[bed-locator]** [and] **[handrail]** covers in a horizontal position.

1.10 PROJECT CONDITIONS

- A. Environmental Limitations: Do not deliver or install impact-resistant wall protection units until building is enclosed and weatherproof, wet work is complete and dry, and HVAC system is operating and maintaining temperature at 70 deg F (21 deg C) for not less than 72 hours before beginning installation and for the remainder of the construction period.

1.11 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of impact-resistant wall protection units that fail in materials or workmanship within specified warranty period.
1. Failures include, but are not limited to, the following:
 - a. Structural failures.
 - b. Deterioration of plastic and other materials beyond normal use.
 2. Warranty Period: Minimum **[five (5)] <Insert number>** years from date of Substantial Completion.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. PVC Plastic: ASTM D 1784, Class 1, textured, chemical- and stain-resistant, high-impact-resistant PVC or acrylic-modified vinyl plastic with integral color throughout; **[extruded] [and] [sheet]** material, thickness as indicated.
1. Impact Resistance: Minimum **[25.4 ft-lbf/in. (1356 J/m)] <Insert value>** of notch when tested according to ASTM D 256, Test Method A.
 2. Chemical and Stain Resistance: Tested according to **[ASTM D 543] [ASTM D 1308] <Insert test standard>**.
 3. Self-extinguishing when tested according to ASTM D 635.
 4. Flame-Spread Index: 25 or less.
 5. Smoke-Developed Index: 450 or less.
- B. Polycarbonate Plastic Sheet: ASTM D 6098, S-PC01, Class 1 or 2, abrasion resistant; with a minimum impact-resistance rating of **15 ft-lbf/in. (800 J/m)** of notch when tested according to ASTM D 256, Test Method A.
- C. Aluminum Extrusions: Alloy and temper recommended by manufacturer for type of use and finish indicated, but with not less than strength and durability properties specified in **ASTM B 221 (ASTM B 221M)** for Alloy 6063-T5.
- D. Stainless-Steel Sheet: ASTM A 240/A 240M.
- E. Brass: ASTM B 249/B 249M for extruded shapes and ASTM B 36/B 36 M for sheet.

- F. Solid Wood: Clear hardwood lumber of species indicated, free of appearance defects, and selected for compatible grain and color.
 - 1. Certified Wood: Fabricate products from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."
- G. Particleboard: ANSI A208.1, Grade M-2[.], **made with binder containing no urea formaldehyde.], that complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."**
- H. Fasteners: Aluminum, nonmagnetic stainless-steel, or other noncorrosive metal screws, bolts, and other fasteners compatible with items being fastened. Use security-type fasteners where exposed to view.
- I. Adhesive: As recommended by impact-resistant plastic wall protection manufacturer and with a VOC content of [70] **<Insert value>** g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- J. Adhesive: As recommended by impact-resistant plastic wall protection manufacturer and that complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.2 WALL GUARDS

- A. Crash Rail **<Insert drawing designation>**: Heavy-duty assembly consisting of continuous snap-on plastic cover installed over concealed retainer system; designed to withstand impacts.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Floor Products Co., Inc.
 - b. Arden Architectural Specialties, Inc.
 - c. Balco, Inc.
 - d. Construction Specialties, Inc.
 - e. IPC Door and Wall Protection Systems; Division of InPro Corporation.
 - f. Korogard Wall Protection Systems; a division of RJF International Corporation.
 - g. Musson Rubber Company.
 - h. Pawling Corporation.
 - i. Tepromark International, Inc.
 - j. WallGuard.com.
 - k. **<Insert manufacturer's name>**.
 - l. or approved equal.

2. Cover: Extruded rigid plastic, minimum **0.100-inch** (2.5-mm) wall thickness; **[as follows:] [in dimensions and profiles indicated on Drawings.]**
 - a. Profile: **[Flat] [Convex] <Insert description>**.
 - 1) Dimensions: Nominal **[6 inches high by 1 inch deep** (150 mm high by 25 mm deep)] **[8 inches high by 1 inch deep** (200 mm high by 25 mm deep)] **<Insert dimensions>**.
 - 2) Surface: **[Uniform] [Uniform with coextruded accent inlay strip in contrasting color] [Grooved] <Insert description>**.
 - a) Accent Inlay Strip: Nominal **[2 inches** (50 mm)] **<Insert dimension>** high by length of rail.
 - b. Color and Texture: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and texture>**.
 3. Continuous Retainer: Minimum **0.080-inch-** (2.0-mm-) thick, one-piece, extruded aluminum.
 4. Retainer Clips: Manufacturer's standard impact-absorbing clips designed for heavy-duty performance.
 5. Bumper: Continuous rubber or vinyl bumper cushion(s).
 6. End Caps and Corners: Prefabricated, injection-molded plastic; **[matching color] [contrasting with color] <Insert color>** cover; field adjustable for close alignment with snap-on cover.
 7. Accessories: Concealed splices and mounting hardware.
 8. Mounting: **[Surface mounted directly to wall] [Reveal mounted on bumper cushion(s)] [Extended mounting on injection-molded plastic mounting brackets]**.
- B. Bumper Rail **<Insert drawing designation>**: Assembly consisting of continuous snap-on plastic cover installed over concealed, continuous retainer; designed to withstand impacts.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Floor Products Co., Inc.
 - b. Arden Architectural Specialties, Inc.
 - c. Balco, Inc.
 - d. Boston Retail Products.
 - e. Construction Specialties, Inc.
 - f. IPC Door and Wall Protection Systems; Division of InPro Corporation.
 - g. Korogard Wall Protection Systems; a division of RJF International Corporation.
 - h. Musson Rubber Company.
 - i. Pawling Corporation.
 - j. WallGuard.com.
 - k. **<Insert manufacturer's name>**.

- a. Profile: [**Half-round profile, nominal 1-1/8 inches high by 1-1/8 inches deep** (30 mm high by 30 mm deep)] [**Rounded bullnose profile, nominal 2 inches high by 1 inch deep** (50 mm high by 25 mm deep)] <Insert profile and dimensions>.
 - b. Color and Texture: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color and texture>.
3. Retainer: Minimum **0.0625-inch-** (1.6-mm-) thick, one-piece, extruded aluminum.
 4. End Caps and Corners: Prefabricated, injection-molded plastic; color matching cover; field adjustable for close alignment with snap-on cover.
 5. Accessories: Concealed splices and mounting hardware.
 6. Mounting: [**Surface mounted directly to wall**] [**Reveal mounted on bumper cushions**].
- D. Wood Chair Rail with Bumper <Insert drawing designation>: Assembly consisting of continuous sculpted, solid-wood rail, with continuous bumper insert installed in continuous recessed retainer.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Floor Products Co., Inc.
 - b. Arden Architectural Specialties, Inc.
 - c. Construction Specialties, Inc.
 - d. IPC Door and Wall Protection Systems; Division of InPro Corporation.
 - e. Korogard Wall Protection Systems; a division of RJF International Corporation.
 - f. Pawling Corporation.
 - g. <Insert manufacturer's name>.
 - h. or approved equal.
 2. Wood Rail: [**3-1/2 inches high by 7/8 inch deep** (89 mm high by 22 mm deep)] [**5-1/2 inches high by 1-1/2 inches deep** (140 mm high by 38 mm deep)] [**Size and profile indicated on Drawings**] <Insert dimensions>.
 - a. Wood Species: [**Red oak**] [**Maple**] [**Ash**] [**Beech**] <Insert species>.
 - b. Finish: [**Clear**] [**Stained**].
 - c. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
 3. Bumper: Extruded [**rigid plastic**] [**flexible vinyl**], minimum **0.078-inch** (2.0-mm) wall thickness; [**as follows:**] [**in dimensions and profiles indicated on Drawings.**].
 - a. Profile: [**Half-round profile, nominal 2 inches high by 1 inch deep** (50 mm high by 25 mm deep)] [**Small rounded profile, nominal 1-1/8 inches high by 1-1/8 inches deep** (30 mm high by 30 mm deep)] <Insert profile and dimensions>.

- b. Color and Texture: **[As indicated by manufacturer's designations]** **[Match DEN Project Manager's sample]** **[As selected by DEN Project Manager from manufacturer's full range]** **<Insert color and texture>**.
 - c. End Caps and Corners: Prefabricated, injection-molded plastic; color matching bumper; field adjustable for close alignment with snap-on bumper.
 4. Retainer: Minimum **0.0625-inch-** (1.6-mm-) thick, one-piece, extruded aluminum.
 - a. Finish: **[Mill]** **[Brass colored]**.
 5. Accessories: Concealed splices and mounting hardware.
 6. Mounting: Surface mounted directly to wall.
 - E. Wood Chair Rail **<Insert drawing designation>**: Assembly consisting of continuous sculpted, solid-wood rail.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Construction Specialties, Inc.
 - b. IPC Door and Wall Protection Systems; Division of InPro Corporation.
 - c. Pawling Corporation.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
 2. Rail: **[3-1/2 inches high by 7/8 inch deep]** (89 mm high by 22 mm deep) **[5-1/2 inches high by 1-1/2 inches deep]** (140 mm high by 38 mm deep) **[As indicated on Drawings]** **<Insert dimensions>**.
 - a. Wood Species: **[Red oak]** **[Maple]** **[Ash]** **[Bamboo]** **<Insert species>**.
 - b. Finish: **[Clear]** **[Stained]**.
 - c. Color: **[As indicated by manufacturer's designations]** **[Match DEN Project Manager's sample]** **[As selected by DEN Project Manager from manufacturer's full range]** **<Insert color>**.
 3. Accessories: Concealed splices and mounting hardware.
 4. Mounting: Surface mounted directly to wall.
 - F. Opaque-Plastic Chair Rail **<Insert drawing designation>**: Assembly consisting of continuous snap-on cover installed over continuous retainer.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Construction Specialties, Inc.
 - b. IPC Door and Wall Protection Systems; Division of InPro Corporation.
 - c. Korogard Wall Protection Systems; a division of RJF International Corporation.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.

2. Cover: Extruded rigid plastic, minimum **0.070-inch** (1.8-mm) wall thickness; **[as follows:] [in dimensions and profiles indicated on Drawings.]**
 - a. Profile: **[Rounded bullnose profile, nominal 2 inches high by 1 inch deep** (50 mm high by 25 mm deep)] **[Half-round profile, nominal 1-1/8 inches high by 1-1/8 inches deep** (30 mm high by 30 mm deep)] **<Insert profile and dimensions>**.
 - b. Color and Texture: **[As indicated by manufacturer's designations]** **[Match DEN Project Manager's sample]** **[As selected by DEN Project Manager from manufacturer's full range]** **<Insert color and texture>**.
 3. Retainer: Minimum **0.060-inch-** (1.5-mm-) thick, one-piece, extruded aluminum.
 4. Bumper: Continuous rubber or vinyl bumper cushion(s).
 5. End Caps and Corners: Prefabricated, injection-molded plastic; color matching cover; field adjustable for close alignment with snap-on cover.
 6. Accessories: Concealed splices and mounting hardware.
 7. Mounting: **[Surface mounted directly to wall]** **[Reveal mounted on bumper cushions]**.
- G. Transparent-Plastic Chair Rail **<Insert drawing designation>**: Consisting of clear polycarbonate plastic sheet.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Floor Products Co., Inc.
 - b. IPC Door and Wall Protection Systems; Division of InPro Corporation.
 - c. wallProtex.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
 2. Height: **[3 inches** (75 mm) **nominal]** **[4 inches** (100 mm) **nominal]** **[As indicated on Drawings]** **<Insert dimension>**.
 3. Mounting: Surface mounted using flat-head countersunk screws through factory-drilled mounting holes.
- H. Rub Strip **<Insert drawing designation>**: Consisting of minimum **[0.040-inch-** (1.0-mm-)] **[0.060-inch-** (1.5-mm-)] **<Insert dimension>** thick, plastic sheet wall-covering material.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Floor Products Co., Inc.
 - b. Construction Specialties, Inc.
 - c. IPC Door and Wall Protection Systems; Division of InPro Corporation.
 - d. Korogard Wall Protection Systems; a division of RJF International Corporation.
 - e. Pawling Corporation.
 - f. Tepromark International, Inc.

- g. <Insert manufacturer's name>.
 - h. or approved equal.
- 2. Height: [8 inches (200 mm) nominal] <Insert dimension>.
 - 3. Color and Texture: [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and texture>.
 - 4. Mounting: Surface mounted with adhesive or double-faced adhesive tape.

2.3 HANDRAILS

- A. Impact-Resistant Plastic Handrails <Insert drawing designation>: Assembly consisting of snap-on plastic cover installed over continuous retainer.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Floor Products Co., Inc.
 - b. Arden Architectural Specialties, Inc.
 - c. Balco, Inc.
 - d. Construction Specialties, Inc.
 - e. IPC Door and Wall Protection Systems; Division of InPro Corporation.
 - f. Korogard Wall Protection Systems; a division of RJF International Corporation.
 - g. Kwalu, LLC.
 - h. Musson Rubber Company.
 - i. Pawling Corporation.
 - j. Tepromark International, Inc.
 - k. WallGuard.com.
 - l. <Insert manufacturer's name>.
 - m. or approved equal.
 - 2. Cover: Minimum [0.078-inch- (2.0-mm-)] [0.100-inch- (2.5-mm-)] <Insert dimension> thick, extruded rigid plastic; [as follows:] [in dimensions and profiles indicated on Drawings.]
 - a. Single Handrail: Cylindrical tube profile cover with continuous retainer; with mounting brackets supporting bottom of rail.
 - 1) Tube Diameter: <Insert dimension>.
 - b. Bumper Rail: Cover with [flat] [sculpted with contoured thumb recess on] <Insert description> front side; with 1-1/2-inch- (38-mm-) diameter gripping surface and finger recess on back side; supported by concealed, continuous retainer and extended mounting brackets.
 - 1) Bumper-Rail Dimensions: Nominal [5-1/2 inches high by 1-1/2 inches deep (140 mm high by 38 mm deep)] [5-1/2 inches high by 2 inches deep (140 mm high by 50 mm deep)] <Insert dimensions>.

- 2) Bumper Surface: **[Smooth]** **[Smooth with coextruded accent inlay strip in contrasting color]** **[Grooved]** **<Insert description>**.
 - 3) Accent Inlay Strip: Nominal **[2 inches (50 mm)]** **<Insert dimension>** high by length of rail.
- c. Double Handrail with Bumper-Rail Profile: Two tubes mounted above and below nominal, flat-faced bumper rail; each tube with **1-1/2-inch-** (38-mm-) diameter gripping surface and finger recess on back side; supported by concealed, continuous retainer and extended mounting brackets.
- 1) Bumper-Rail Dimensions: Nominal **[4 inches high by 1-1/2 inches deep (100 mm high by 38 mm deep)]** **<Insert dimensions>**.
 - 2) Bumper Surface: **[Smooth]** **[Smooth with coextruded accent inlay strip in contrasting color]** **[Grooved]** **<Insert description>**.
 - 3) Accent Inlay Strip: Nominal **[2 inches (50 mm)]** **<Insert dimension>** high by length of rail.
- d. Color and Texture: **[As indicated by manufacturer's designations]** **[Match DEN Project Manager's sample]** **[As selected by DEN Project Manager from manufacturer's full range]** **<Insert color and texture>**.
3. Retainer: Minimum **0.080-inch-** (2.0-mm-) thick, one-piece, extruded aluminum.
 4. Mounting Bracket: Extended mounting on **[injection-molded plastic]** **[anodized-aluminum]** **<Insert description>** mounting brackets.
 5. End Caps and Corners: Prefabricated, injection-molded plastic; **[matching color]** **[contrasting with color]** **<Insert color>** cover; field adjustable for close alignment with snap-on cover.
 6. Accessories: Concealed splices, cushions, and mounting hardware.
- B. Combination Wood-Plastic Bumper Handrail **<Insert drawing designation>**: Assembly consisting of solid-wood handrail mounted above plastic bumper rail, both mounted on continuous retainer; with reveal between handrail and bumper serving as thumb recess on front side; with **1-1/2-inch-** (38-mm-) diameter gripping surface and finger recess on back side.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Floor Products Co., Inc.
 - b. Arden Architectural Specialties, Inc.
 - c. Construction Specialties, Inc.
 - d. IPC Door and Wall Protection Systems; Division of InPro Corporation.
 - e. Pawling Corporation.
 - f. WallGuard.com.
 - g. **<Insert manufacturer's name>**.
 - h. or approved equal.
 2. Wood Handrail: **1-1/2 inches (38 mm)** in diameter; with matching end caps and corners.

- a. Wood Species: **[Red oak] [Maple] [Ash] [Beech] <Insert species>**.
 - b. Finish: **[Clear] [Stained]**.
 - c. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
 3. Bumper: Extruded rigid plastic, minimum **[0.078-inch- (2.0-mm-)] [0.100-inch- (2.5-mm-)]** wall thickness; **[as follows:] [in dimensions and profiles indicated on Drawings.]**
 - a. Profile: **[Flat] [Convex] <Insert profile>** profile, nominal **[4 inches high by 1 inch deep (100 mm high by 25 mm deep)] <Insert profile and dimensions>**.
 - b. Accent Inlay Strip: Nominal **[2 inches (50 mm)] <Insert dimension>** high by length of rail.
 - c. Color and Texture: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and texture>**.
 - d. End Caps and Corners: Prefabricated, injection-molded plastic; color matching bumper; field adjustable for close alignment with snap-on bumper.
 4. Retainer: Minimum **0.0625-inch- (1.6-mm-)** thick, one-piece, extruded aluminum.
 5. Reveal: Extruded rigid plastic or vinyl over aluminum retainer.
 - a. Color: **[Brass] [Chrome] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
 6. Accessories: Concealed splices, cushion(s), and mounting hardware.
- C. Wood Handrail with Bumper **<Insert drawing designation>**: Assembly consisting of continuous sculpted, solid-wood handrail, with bumper insert installed in continuous retainer recessed into the face of the wood.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Floor Products Co., Inc.
 - b. Arden Architectural Specialties, Inc.
 - c. Construction Specialties, Inc.
 - d. IPC Door and Wall Protection Systems; Division of InPro Corporation.
 - e. Korogard Wall Protection Systems; a division of RJF International Corporation.
 - f. Pawling Corporation.
 - g. Tepromark International, Inc.
 - h. WallGuard.com.
 - i. **<Insert manufacturer's name>**.
 - j. or approved equal.
 2. Wood Handrail: **[As indicated on Drawings] <Insert dimensions>** with **1-1/2-inch- (38-mm-)** diameter gripping surface.

- a. End Caps, Returns, Corners, and Mounting Brackets: Solid wood that matches rail.
 - b. Wood Species: [Red oak] [Maple] [Ash] [Beech] [Bamboo] <Insert species>.
 - c. Finish: [Clear] [Stained].
 - d. Color: [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.
3. Bumper: Extruded [rigid plastic] [flexible vinyl], minimum 0.078-inch (2.0-mm) wall thickness; [as follows:] [in dimensions and profiles indicated on Drawings].
- a. Profile: [Half-round profile, nominal 2 inches high by 1 inch deep (50 mm high by 25 mm deep)] [Small rounded profile, nominal 1-1/8 inches high by 1-1/8 inches deep (30 mm high by 30 mm deep)] <Insert profile and dimensions>.
 - b. Color and Texture: [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and texture>.
 - c. End Caps and Corners: Prefabricated, injection-molded plastic; color matching bumper; field adjustable for close alignment with snap-on bumper.
4. Retainer: Minimum 0.0625-inch- (1.6-mm-) thick, one-piece, extruded aluminum.
- a. Finish: [Mill] [Brass colored].
5. Accessories: Concealed splices and mounting hardware.
- D. Solid-Wood Handrail <Insert drawing designation>: Assembly consisting of continuous sculpted, solid-wood handrail.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Floor Products Co., Inc.
 - b. Arden Architectural Specialties, Inc.
 - c. Construction Specialties, Inc.
 - d. IPC Door and Wall Protection Systems; Division of InPro Corporation.
 - e. Korogard Wall Protection Systems; a division of RJF International Corporation.
 - f. Pawling Corporation.
 - g. Tepromark International, Inc.
 - h. WallGuard.com.
 - i. <Insert manufacturer's name>.
 - j. or approved equal.
 2. Handrail: [5-1/2 inches high by 1-1/2 inches deep (140 mm high by 38 mm deep)] [As indicated on Drawings] <Insert dimensions> with 1-1/2-inch- (38-mm-) diameter gripping surface.

- a. End Caps, Returns, Corners, and Mounting Brackets: Solid wood that matches rail.
- b. Wood Species: [Red oak] [Maple] [Ash] [Beech] <Insert species>.
- c. Finish: [Clear] [Stained].
- d. Color: [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.

2.4 BED LOCATORS

A. Bed Locators <Insert drawing designation>: Assembly consisting of continuous snap-on plastic cover installed over continuous retainer; with two bed-locator end caps and mounting hardware; cover designed to spring back when hit.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Floor Products Co., Inc.
 - b. Arden Architectural Specialties, Inc.
 - c. Construction Specialties, Inc.
 - d. IPC Door and Wall Protection Systems; Division of InPro Corporation.
 - e. Korogard Wall Protection Systems; a division of RJF International Corporation.
 - f. Pawling Corporation.
 - g. WallGuard.com.
 - h. <Insert manufacturer's name>.
 - i. or approved equal.
2. Cover: Extruded rigid plastic, minimum [0.078-inch (2.0-mm)] <Insert dimension> wall thickness.
 - a. Profile: Large rounded [angled] [bullnose] profile, nominal 4 inches high by 2 inches deep (100 mm high by 50 mm deep).
 - b. Color and Texture: [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and texture>.
3. Retainer: Minimum 0.080-inch- (2.0-mm-) thick, one-piece, extruded aluminum.
4. Bed-Locator End Caps: Prefabricated, injection-molded plastic; color matching cover; field adjustable for close alignment with snap-on cover.
5. Mounting Type: [Surface mounted on 1/2-inch- (13-mm-) thick cushion spacers] [Extended mounting on injection-molded plastic mounting brackets] [Extended mounting on aluminum mounting brackets].

2.5 CORNER GUARDS

A. Surface-Mounted, Resilient, Plastic Corner Guards <Insert drawing designation>: Assembly consisting of snap-on plastic cover installed over continuous retainer;

including mounting hardware; fabricated with 90- or 135-degree turn to match wall condition.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Floor Products Co., Inc.
 - b. Arden Architectural Specialties, Inc.
 - c. Balco, Inc.
 - d. Construction Specialties, Inc.
 - e. IPC Door and Wall Protection Systems; Division of InPro Corporation.
 - f. Korogard Wall Protection Systems; a division of RJF International Corporation.
 - g. Musson Rubber Company.
 - h. Pawling Corporation.
 - i. Tepromark International, Inc.
 - j. WallGuard.com.
 - k. <Insert manufacturer's name>.
 - l. or approved equal.
 2. Cover: Extruded rigid plastic, minimum [0.078-inch (2.0-mm)] [0.100-inch (2.5-mm)] <Insert dimension> wall thickness; [as follows:] [in dimensions and profiles indicated on Drawings.]
 - a. Profile: Nominal [2-inch- (50-mm-) long leg and 1/4-inch (6-mm) corner radius] [3-inch- (75-mm-) long leg and 1/4-inch (6-mm) corner radius] [3-inch- (75-mm-) long leg and 1-1/4-inch (32-mm) corner radius] <Insert dimensions>.
 - b. Height: [4 feet (1.2 m)] [8 feet (2.4 m)] <Insert dimension>.
 - c. Color and Texture: [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and texture>.
 3. Retainer: [Minimum 0.060-inch- (1.5-mm-) thick, one-piece, extruded aluminum] [One-piece extruded plastic].
 4. Retainer Clips: Manufacturer's standard impact-absorbing clips.
 5. Top and Bottom Caps: Prefabricated, injection-molded plastic; color matching cover; field adjustable for close alignment with snap-on cover.
- B. Flush-Mounted, Resilient, Plastic Corner Guards <Insert drawing designation>:
Assembly consisting of snap-on plastic cover that is flush with adjacent wall surface, installed over continuous retainer; including mounting hardware; fabricated with 90- or 135-degree turn to match wall condition; full wall height.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Floor Products Co., Inc.
 - b. Arden Architectural Specialties, Inc.
 - c. Balco, Inc.

- d. Construction Specialties, Inc.
 - e. IPC Door and Wall Protection Systems; Division of InPro Corporation.
 - f. Korogard Wall Protection Systems; a division of RJF International Corporation.
 - g. Pawling Corporation.
 - h. WallGuard.com.
 - i. **<Insert manufacturer's name>**.
 - j. or approved equal.
2. Cover: Extruded rigid plastic, minimum [0.078-inch (2.0-mm)] [0.100-inch (2.5-mm)] **<Insert dimension>** wall thickness; **[as follows:] [in dimensions and profiles indicated on Drawings.]**
- a. Profile: Nominal [2-inch- (50-mm-) **long leg and 1/4-inch (6-mm) corner radius**] [3-inch- (75-mm-) **long leg and 1/4-inch (6-mm) corner radius**] [3-inch- (75-mm-) **long leg and 1-1/4-inch (32-mm) corner radius**] **<Insert dimensions>**.
 - b. Height: [4 feet (1.2 m)] [8 feet (2.4 m)] **<Insert dimension>**.
 - c. Color and Texture: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and texture>**.
3. Retainer: Minimum 0.060-inch- (1.5-mm-) thick, one-piece, extruded aluminum.
4. Retainer Clips: Manufacturer's standard impact-absorbing clips.
5. Aluminum Cove Base: Nominal [4 inches (100 mm)] [6 inches (150 mm)] **<Insert dimension>** high.
- C. Fire-Rated, Resilient, Plastic Corner Guards **<Insert drawing designation>**: Assembly consisting of snap-on plastic cover that is flush with adjacent wall surface, installed over continuous retainer and intumescent fire barrier; including mounting hardware; fabricated with 90- or 135-degree turn to match wall condition; full wall height.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Arden Architectural Specialties, Inc.
 - b. Balco, Inc.
 - c. Construction Specialties, Inc.
 - d. IPC Door and Wall Protection Systems; Division of InPro Corporation.
 - e. Pawling Corporation.
 - f. WallGuard.com.
 - g. **<Insert manufacturer's name>**.
 - h. or approved equal.
 2. Fire Rating: [1 hour] [2 hours] [**Same rating as wall in which corner guard is installed**]; UL listed and labeled according to UL 2079.
 3. Cover: Extruded rigid plastic, minimum [0.078-inch (2.0-mm)] [0.100-inch (2.5-mm)] **<Insert dimension>** wall thickness; **[as follows:] [in dimensions and profiles indicated on Drawings.]**

- a. Leg: Nominal [2 inches (50 mm)] [3 inches (75 mm)].
 - b. Corner Radius: [1/4 inch (6 mm)] [1-1/4 inches (32 mm)].
 - c. Color and Texture: [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and texture>.
4. Retainer: Minimum 0.070-inch- (1.8-mm-) thick, one-piece, extruded aluminum.
 5. Aluminum Cove Base: Nominal [4 inches (100 mm)] [6 inches (150 mm)] <Insert dimension> high.
- D. Surface-Mounted, Opaque-Plastic Corner Guards <Insert drawing designation>:
Fabricated from PVC plastic, acrylic-modified vinyl sheet or opaque polycarbonate sheet; with formed edges; fabricated with 90- or 135-degree turn to match wall condition.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Floor Products Co., Inc.
 - b. Arden Architectural Specialties, Inc.
 - c. Balco, Inc.
 - d. Boston Retail Products.
 - e. Construction Specialties, Inc.
 - f. IPC Door and Wall Protection Systems; Division of InPro Corporation.
 - g. Korogard Wall Protection Systems; a division of RJF International Corporation.
 - h. Kwalu, LLC.
 - i. Musson Rubber Company.
 - j. Pawling Corporation.
 - k. Tepromark International, Inc.
 - l. WallGuard.com.
 - m. wallProtex.
 - n. <Insert manufacturer's name>.
 - o. or approved equal.
 2. Wing Size: Nominal [3/4 by 3/4 inch (20 by 20 mm)] [1-1/8 by 1-1/8 inches (30 by 30 mm)] [2-1/2 by 2-1/2 inches (65 by 65 mm)] <Insert dimensions>.
 3. Mounting: [Countersunk screws through factory-drilled mounting holes] [Adhesive] [Double-faced adhesive foam tape].
 4. Color and Texture: [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and texture>.
- E. Surface-Mounted, Transparent-Plastic Corner Guards <Insert drawing designation>:
Fabricated from clear polycarbonate plastic sheet; with formed edges; fabricated with 90- or 135-degree turn to match wall condition.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. American Floor Products Co., Inc.
 - b. Arden Architectural Specialties, Inc.
 - c. Balco, Inc.
 - d. Construction Specialties, Inc.
 - e. IPC Door and Wall Protection Systems; Division of InPro Corporation.
 - f. Korogard Wall Protection Systems; a division of RJF International Corporation.
 - g. Musson Rubber Company.
 - h. Pawling Corporation.
 - i. Tepromark International, Inc.
 - j. WallGuard.com.
 - k. wallProtex.
 - l. **<Insert manufacturer's name>**.
 - m. or approved equal.
2. Wing Size: Nominal [**3/4 by 3/4 inch** (20 by 20 mm)] [**1-1/8 by 1-1/8 inches** (30 by 30 mm)] [**2-1/2 by 2-1/2 inches** (65 by 65 mm)] **<Insert dimensions>**.
 3. Thickness: Minimum [**0.050 inch** (1.3 mm)] [**0.075 inch** (1.9 mm)] [**0.100 inch** (2.5 mm)] **<Insert dimension>**.
 4. Mounting: [**Countersunk screws through factory-drilled mounting holes**] [**Corner clips**].
- F. Surface-Mounted, Metal Corner Guards **<Insert drawing designation>**: Fabricated from one-piece, formed, or extruded metal with formed edges; with 90- or 135-degree turn to match wall condition.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Floor Products Co., Inc.
 - b. Arden Architectural Specialties, Inc.
 - c. Balco, Inc.
 - d. Boston Retail Products.
 - e. Construction Specialties, Inc.
 - f. IPC Door and Wall Protection Systems; Division of InPro Corporation.
 - g. Korogard Wall Protection Systems; a division of RJF International Corporation.
 - h. Pawling Corporation.
 - i. Tepromark International, Inc.
 - j. WallGuard.com.
 - k. **<Insert manufacturer's name>**.
 - l. or approved equal.
 2. Material: Stainless steel, [**Type 304**] [**Type 430**].
 - a. Thickness: Minimum [**0.0500 inch** (1.3 mm)] [**0.0625 inch** (1.6 mm)] [**0.0781 inch** (2.0 mm)] **<Insert dimension>**.
 - b. Finish: [**Directional satin, No. 4**] [**Bright annealed**].

3. Material: Extruded aluminum, minimum **0.0625 inch** (1.6 mm) thick, with clear anodic finish.
4. Material: Brass sheet, minimum **0.0500 inch** (1.3 mm) thick, with **[buffed, smooth specular] [fine satin]** finish.
5. Wing Size: Nominal **[1-1/2 by 1-1/2 inches** (38 by 38 mm)] **[2-1/2 by 2-1/2 inches** (65 by 65 mm)] **[3-1/2 by 3-1/2 inches** (90 by 90 mm)] **<Insert dimensions>**.
6. Corner Radius: **[1/8 inch** (3 mm)] **[3/4 inch** (19 mm)] **<Insert dimension>**.
7. Mounting: **[Flat-head, countersunk screws through factory-drilled mounting holes] [Oval head, countersunk screws through factory-drilled mounting holes] [Double-faced, adhesive foam tape] [Adhesive]**.

2.6 END-WALL GUARDS

- A. Surface-Mounted, Resilient, Plastic End-Wall Guard **<Insert drawing designation>**: Assembly consisting of snap-on plastic cover installed over **[continuous retainer] [continuous retainer at each corner, with end of wall covered by semirigid, impact-resistant sheet wall covering]**; including mounting hardware.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Floor Products Co., Inc.
 - b. Arden Architectural Specialties, Inc.
 - c. Balco, Inc.
 - d. Construction Specialties, Inc.
 - e. IPC Door and Wall Protection Systems; Division of InPro Corporation.
 - f. Korogard Wall Protection Systems; a division of RJF International Corporation.
 - g. Pawling Corporation.
 - h. WallGuard.com.
 - i. **<Insert manufacturer's name>**.
 - j. or approved equal.
 2. Cover: Extruded rigid plastic, minimum **[0.078-inch** (2.0-mm)] **[0.100-inch** (2.5-mm)] wall thickness; **[as follows:] [in dimensions and profiles indicated on Drawings.]**
 - a. Profile: Nominal **[2-inch-** (50-mm-) **long leg and 1/4-inch** (6-mm) **corner radius] [3-inch-** (75-mm-) **long leg and 1/4-inch** (6-mm) **corner radius] [3-inch-** (75-mm-) **long leg and 1-1/4-inch** (32-mm) **corner radius] <Insert dimensions>**.
 - b. Height: **[4 feet** (1.2 m)] **[8 feet** (2.4 m)] **<Insert dimension>**.
 - c. Color and Texture: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and texture>**.
 3. Retainer: Minimum **0.060-inch-** (1.5-mm-) thick, one-piece, extruded aluminum.
 4. Top and Bottom Caps: Prefabricated, injection-molded plastic; color matching cover; field adjustable for close alignment with snap-on cover.

- B. Flush-Mounted, Resilient, Plastic End-Wall Guard **<Insert drawing designation>**: Assembly consisting of snap-on plastic cover that is flush with adjacent wall surface and that covers entire end of wall, installed over **[continuous retainer] [continuous retainer at each corner, with end of wall covered by semirigid, impact-resistant sheet wall covering]**; including mounting hardware.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Floor Products Co., Inc.
 - b. Arden Architectural Specialties, Inc.
 - c. Balco, Inc.
 - d. Construction Specialties, Inc.
 - e. IPC Door and Wall Protection Systems; Division of InPro Corporation.
 - f. Korogard Wall Protection Systems; a division of RJF International Corporation.
 - g. Pawling Corporation.
 - h. WallGuard.com.
 - i. **<Insert manufacturer's name>**.
 - j. or approved equal.
 2. Cover: Extruded rigid plastic, minimum **[0.078-inch (2.0-mm)] [0.100-inch (2.5-mm)] <Insert dimension>** wall thickness; **[as follows:] [in dimensions and profiles indicated on Drawings.]**
 - a. Profile: Nominal **[2-inch- (50-mm-) long leg and 1/4-inch (6-mm) corner radius] [3-inch- (75-mm-) long leg and 1/4-inch (6-mm) corner radius] [3-inch- (75-mm-) long leg and 1-1/4-inch (32-mm) corner radius] <Insert dimensions>**.
 - b. Height: **[4 feet (1.2 m)] [8 feet (2.4 m)] <Insert dimension>**.
 - c. Color and Texture: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and texture>**.
 3. Retainer: Minimum **0.060-inch- (1.5-mm-)** thick, one-piece, extruded aluminum.
 4. Aluminum Cove Base: Nominal **[4 inches (100 mm)] [6 inches (150 mm)] <Insert dimension>** high.
- C. Fire-Rated, Resilient, Plastic End-Wall Guard **<Insert drawing designation>**: Assembly consisting of snap-on plastic cover that is flush with adjacent wall surface and that covers entire end of wall, installed over continuous retainer and intumescent fire barrier; including mounting hardware; full wall height.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Balco, Inc.
 - b. IPC Door and Wall Protection Systems; Division of InPro Corporation.
 - c. Pawling Corporation.
 - d. WallGuard.com.

- e. **<Insert manufacturer's name>**.
 - f. or approved equal.
 2. Fire Rating: [1 hour] [2 hours] [**Same rating as wall in which end guard is installed**]; UL listed and labeled according to UL 2079.
 3. Cover: Extruded rigid plastic, minimum [0.078-inch (2.0-mm)] [0.100-inch (2.5-mm)] **<Insert dimension>** wall thickness; [as follows:] [in dimensions and profiles indicated on Drawings.]
 - a. Leg: Nominal [2 inches (50 mm)] [3 inches (75 mm)] **<Insert dimension>**.
 - b. Corner Radius: [1/4 inch (6 mm)] [1-1/4 inches (32 mm)] **<Insert dimension>**.
 - c. Color and Texture: [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] **<Insert color and texture>**.
 4. Retainer: Minimum 0.070-inch- (1.8-mm-) thick, one-piece, extruded aluminum.
 5. Aluminum Cove Base: Nominal [4 inches (100 mm)] [6 inches (150 mm)] **<Insert dimension>** high.
- D. Surface-Mounted, Metal, End-Wall Guards **<Insert drawing designation>**: Fabricated from one-piece, formed, or extruded metal that covers entire end of wall; with formed edges.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Floor Products Co., Inc.
 - b. **<Insert manufacturer's name>**.
 - c. or approved equal.
 2. Material: Stainless steel, [Type 304] [Type 430].
 - a. Thickness: Minimum [0.0500 inch (1.3 mm)] [0.0625 inch (1.6 mm)] [0.0781 inch (2.0 mm)] **<Insert dimension>**.
 - b. Finish: [Directional satin, No. 4] [Bright annealed].
 3. Material: Extruded aluminum, minimum 0.0625 inch (1.6 mm) thick, with clear anodic finish.
 4. Material: Brass sheet, minimum 0.0500 inch (1.3 mm) thick, with [buffed, smooth specular] [fine satin] finish.
 5. Wing Size: Nominal [1-1/2 by 1-1/2 inches (38 by 38 mm)] [2-1/2 by 2-1/2 inches (65 by 65 mm)] [3-1/2 by 3-1/2 inches (90 by 90 mm)] **<Insert dimensions>**.
 6. Corner Radius: [1/8 inch (3 mm)] [3/4 inch (19 mm)] **<Insert dimension>**.
 7. Mounting: [Flat-head, countersunk screws through factory-drilled mounting holes] [Oval head, countersunk screws through factory-drilled mounting holes] [Double-faced, adhesive foam tape] [Adhesive].

2.7 IMPACT-RESISTANT WALL COVERINGS

- A. Impact-Resistant Sheet Wall Covering **<Insert drawing designation>**: Fabricated from plastic sheet wall-covering material.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Floor Products Co., Inc.
 - b. Arden Architectural Specialties, Inc.
 - c. Balco, Inc.
 - d. Construction Specialties, Inc.
 - e. IPC Door and Wall Protection Systems; Division of InPro Corporation.
 - f. Korogard Wall Protection Systems; a division of RJF International Corporation.
 - g. Kwalu, LLC.
 - h. Pawling Corporation.
 - i. Tepromark International, Inc.
 - j. WallGuard.com.
 - k. **<Insert manufacturer's name>**.
 - l. or approved equal.
 2. Size: **[48 by 96 inches (1219 by 2438 mm) for sheet] [48 by 120 inches (1219 by 3048 mm) for roll] [As indicated] <Insert dimensions>**.
 3. Sheet Thickness: **[0.022 inch (0.56 mm)] [0.028 inch (0.7 mm)] [0.040 inch (1.0 mm)] [0.060 inch (1.5 mm)] [0.080 inch (2.0 mm)] [0.093 inch (2.4 mm)] [0.125 inch (3.0 mm)] <Insert dimension>**.
 4. Color and Texture: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and texture>**.
 5. Height: **[Full wall] [Wainscot] [As indicated] <Insert dimension>**.
 6. Trim and Joint Moldings: Extruded rigid plastic that matches sheet wall covering color.
 7. Mounting: Adhesive.
- B. Prelaminated, Impact-Resistant Wall Panels **<Insert drawing designation>**: Rigid wall panels consisting of impact-resistant plastic sheet wall covering material factory laminated to high-impact-resistant core, with moisture-resistant vapor barrier factory laminated to reverse side of panel for stability.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Floor Products Co., Inc.
 - b. Construction Specialties, Inc.
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.
 2. Composition: **[0.028-inch- (0.70-mm-) thick plastic sheet laminated to 3/8-inch- (9.5-mm-) thick, particleboard core] [0.04-inch- (1.02-mm-) thick plastic sheet**

laminated to 3/8-inch- (9.5-mm-) thick, particleboard core] <Insert description>.

3. Sheet Size: [48 by 96 inches (1219 by 2438 mm)] [48 by 108 inches (1219 by 2743 mm)] [48 by 120 inches (1219 by 3048 mm)] [As indicated] <Insert dimensions>.
4. Height: [Full wall] [Wainscot] [As indicated] <Insert dimension>.
5. Sheet Edge: [Square] [Beveled].
6. Trim and Joint Moldings: Extruded rigid plastic that matches sheet wall covering color.
7. Color and Texture: [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and texture>.
8. Mounting: Adhesive.

2.8 DOOR PROTECTION SYSTEMS

A. General: Comply with BHMA A156.6.

1. For fire-rated doors, provide door protection systems that are UL listed and labeled.

B. Protection Plates: Fabricated from extruded rigid plastic, of thickness indicated.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Floor Products Co., Inc.
 - b. Construction Specialties, Inc.
 - c. IPC Door and Wall Protection Systems; Division of InPro Corporation.
 - d. Korogard Wall Protection Systems; a division of RJF International Corporation.
 - e. Kwalu, LLC.
 - f. Pawling Corporation.
 - g. Tepromark International, Inc.
 - h. WallGuard.com.
 - i. <Insert manufacturer's name>.
 - j. or approved equal.

C. Full-Height Door-Surface Protection <Insert drawing designation>: Minimum [0.040-inch (1.0-mm)] [0.060-inch (1.5-mm)] [0.080-inch (2.0-mm)] <Insert dimension> wall thickness; with 90-degree bend for door-edge protection.

1. Color and Texture: [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and texture>.
2. Mounting: [Adhesive] [Countersunk screws through factory-drilled mounting holes] [Double-faced adhesive foam tape].

- D. Armor Plates <Insert drawing designation>: Minimum [0.040-inch (1.0-mm)] [0.060-inch (1.5-mm)] [0.080-inch (2.0-mm)] <Insert dimension> wall thickness; beveled four sides.
1. Size: [32 inches (813 mm)] [36 inches (914 mm)] [40 inches (1016 mm)] [42 inches (1067 mm)] <Insert dimension> high by door width, with allowance for frame stops.
 2. Color and Texture: [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and texture>.
 3. Mounting: [Adhesive] [Countersunk screws through factory-drilled mounting holes] [Double-faced adhesive foam tape].
- E. Kick Plates <Insert drawing designation>: Minimum [0.040-inch (1.0-mm)] [0.060-inch (1.5-mm)] [0.080-inch (2.0-mm)] <Insert dimension> wall thickness; beveled four sides.
1. Size: [8 inches (203 mm)] [10 inches (254 mm)] [12 inches (305 mm)] <Insert dimension> high by door width, with allowance for frame stops.
 2. Color and Texture: [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and texture>.
 3. Mounting: [Adhesive] [Countersunk screws through factory-drilled mounting holes] [Double-faced adhesive foam tape].
- F. Mop Plates <Insert drawing designation>: Minimum [0.040-inch (1.0-mm)] [0.060-inch (1.5-mm)] [0.080-inch (2.0-mm)] <Insert dimension> wall thickness; beveled four sides.
1. Size: [4 inches (102 mm)] [6 inches (152 mm)] <Insert dimension> high by 1 inch (25 mm) less than door width.
 2. Color and Texture: [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and texture>.
 3. Mounting: [Adhesive] [Countersunk screws through factory-drilled mounting holes] [Double-faced adhesive foam tape].
- G. Stretcher Plates <Insert drawing designation>: Minimum [0.040-inch (1.0-mm)] [0.060-inch (1.5-mm)] [0.080-inch (2.0-mm)] <Insert dimension> wall thickness; beveled four sides.
1. Size: [6 inches (152 mm)] [8 inches (203 mm)] <Insert dimension> high by door width, with allowance for frame stops.
 2. Color and Texture: [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and texture>.
 3. Mounting: [Adhesive] [Countersunk screws through factory-drilled mounting holes] [Double-faced adhesive foam tape].
- H. Push Plates <Insert drawing designation>: Minimum [0.040-inch (1.0-mm)] [0.060-inch (1.5-mm)] [0.080-inch (2.0-mm)] <Insert dimension> wall thickness; beveled four sides.

1. Size: [12 inches high by 4 inches wide (305 mm high by 102 mm wide)] [16 inches high by 4 inches wide (406 mm high by 102 mm wide)] <Insert dimensions>.
 2. Color and Texture: [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and texture>.
 3. Mounting: [Adhesive] [Countersunk screws through factory-drilled mounting holes] [Double-faced adhesive foam tape].
- I. Door-Edge Protection <Insert drawing designation>: Fabricated from extruded rigid plastic, minimum [0.040-inch (1.0-mm)] [0.060-inch (1.5-mm)] <Insert dimension> wall thickness; formed to fit over door edge without mortising.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Floor Products Co., Inc.
 - b. Construction Specialties, Inc.
 - c. IPC Door and Wall Protection Systems; Division of InPro Corporation.
 - d. Korogard Wall Protection Systems; a division of RJF International Corporation.
 - e. Kwalu, LLC.
 - f. Pawling Corporation.
 - g. WallGuard.com.
 - h. <Insert manufacturer's name>.
 - i. or approved equal.
 2. Shape: [L] [U].
 3. Color and Texture: [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and texture>.
 4. Mounting: [Adhesive] [Countersunk screws through factory-drilled mounting holes] [Double-faced adhesive foam tape].
- J. Door-Frame Protector <Insert drawing designation>: Fabricated from extruded rigid plastic, minimum [0.040-inch (1.0-mm)] [0.050-inch (1.3-mm)] [0.060-inch (1.5-mm)] <Insert dimension> wall thickness; formed to fit entire doorframe profile.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Floor Products Co., Inc.
 - b. Construction Specialties, Inc.
 - c. IPC Door and Wall Protection Systems; Division of InPro Corporation.
 - d. Korogard Wall Protection Systems; a division of RJF International Corporation.
 - e. Kwalu, LLC.
 - f. Pawling Corporation.
 - g. WallGuard.com.
 - h. <Insert manufacturer's name>.
 - i. DEN Project Manager.

2. Height: [36 inches (914 mm)] [48 inches (1219 mm)] <Insert dimension>.
 3. Color and Texture: [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and texture>.
 4. Mounting: [Adhesive] [Countersunk screws through factory-drilled mounting holes] [Double-faced adhesive foam tape].
- K. Door-Frame Protector <Insert drawing designation>: Assembly consisting of snap-on plastic cover installed over continuous retainer; formed to fit doorframe on opposite side of door swing.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Construction Specialties, Inc.
 - b. IPC Door and Wall Protection Systems; Division of InPro Corporation.
 - c. Korogard Wall Protection Systems; a division of RJF International Corporation.
 - d. Pawling Corporation.
 - e. WallGuard.com.
 - f. <Insert manufacturer's name>.
 - g. or approved equal.
 2. Cover: Extruded rigid plastic, minimum 0.080-inch (2.0-mm) wall thickness; in dimensions and profiles indicated.
 - a. Height: [36 inches (914 mm)] [48 inches (1219 mm)] <Insert dimension>.
 - b. Corner Radius: [1/4 inch (6 mm)] [1-1/4 inches (32 mm)].
 - c. Color and Texture: [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and texture>.
 3. Retainer: Minimum 0.080-inch- (2.0-mm-) thick, one-piece, extruded aluminum.
- L. Door[-Knob] [-Lever] Protector <Insert drawing designation>: Fabricated from injection-molded plastic, minimum 0.060-inch (1.5-mm) wall thickness.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Floor Products Co., Inc.
 - b. Construction Specialties, Inc.
 - c. IPC Door and Wall Protection Systems; Division of InPro Corporation.
 - d. Korogard Wall Protection Systems; a division of RJF International Corporation.
 - e. Pawling Corporation.
 - f. WallGuard.com.
 - g. <Insert manufacturer's name>.
 - h. or approved equal.

2. Color and Texture: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and texture>**.
3. Mounting: Countersunk screws through factory-drilled mounting holes.

2.9 FABRICATION

- A. Fabricate impact-resistant wall protection units to comply with requirements indicated for design, dimensions, and member sizes, including thicknesses of components.
- B. Preform curved semirigid, impact-resistant sheet wall covering in factory for radius and sheet thickness as follows:
 1. Sheet Thickness of **0.040 Inch** (1.0 mm): **24-inch** (610-mm) radius.
 2. Sheet Thickness of **0.060 Inch** (1.5 mm): **36-inch** (914-mm) radius.
 3. **<Insert thickness and radius>**.
- C. Assemble components in factory to greatest extent possible to minimize field assembly. Disassemble only as necessary for shipping and handling.
- D. Fabricate components with tight seams and joints with exposed edges rolled. Provide surfaces free of wrinkles, chips, dents, uneven coloration, and other imperfections. Fabricate members and fittings to produce flush, smooth, and rigid hairline joints.
- E. Miter corners and ends of wood handrails for returns.

2.10 METAL FINISHES

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
 1. Remove tool and die marks and stretch lines, or blend into finish.
 2. Grind and polish surfaces to produce uniform finish, free of cross scratches.
 3. Run grain of directional finishes with long dimension of each piece.
 4. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
- B. Protect finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and wall areas, with Installer present, for compliance with requirements for installation tolerances[, **fire rating**,] and other conditions affecting performance of work.

- B. Examine walls to which impact-resistant wall protection will be attached for blocking, grounds, and other solid backing that have been installed in the locations required for secure attachment of support fasteners.
 - 1. For impact-resistant wall protection units attached with adhesive or foam tape, verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Complete finishing operations, including painting, before installing impact-resistant wall protection system components.
- B. Before installation, clean substrate to remove dust, debris, and loose particles.

3.3 INSTALLATION

- A. General: Install impact-resistant wall protection units level, plumb, and true to line without distortions. Do not use materials with chips, cracks, voids, stains, or other defects that might be visible in the finished Work.
 - 1. Install impact-resistant wall protection units in locations and at mounting heights indicated on Drawings or, if not indicated, at heights indicated below:
 - a. Crash Rails: **<Insert dimension>** above finished floor.
 - b. Bumper Rails: **<Insert dimension>** above finished floor.
 - c. Rub Rails: **<Insert dimension>** above finished floor.
 - d. Chair Rails: **<Insert dimension>** above finished floor.
 - e. Handrails: **<Insert dimension>** above finished floor.
 - f. Bed Locators: **<Insert dimension>** above finished floor.
 - g. **<Insert product and location>**.
 - 2. Provide splices, mounting hardware, anchors, and other accessories required for a complete installation.
 - a. Provide anchoring devices to withstand imposed loads.
 - b. Where splices occur in horizontal runs of more than **20 feet** (6.1 m), splice aluminum retainers and plastic covers at different locations along the run, but no closer than **12 inches** (305 mm).
 - c. Adjust **[end]** **[and]** **[top]** caps as required to ensure tight seams.
- B. Impact-Resistant Wall Covering: Install top and edge moldings, corners, and divider bars as required for a complete installation.

3.4 CLEANING

- A. Immediately after completion of installation, clean plastic covers and accessories using a standard, ammonia-based, household cleaning agent.
- B. Remove excess adhesive using methods and materials recommended in writing by manufacturer.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 102600

SECTION 102800 - TOILET, BATH, AND LAUNDRY ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Public-use washroom accessories.
 - 2. Public-use shower room accessories.
 - 3. Private-use bathroom accessories.
 - 4. Healthcare accessories.
 - 5. Warm-air dryers.
 - 6. Childcare accessories.
 - 7. Underlavatory guards.
 - 8. Custodial accessories.
- B. Owner-Furnished Material: **<Insert product>**.
- C. Related Sections:
 - 1. Section 088300 "Mirrors" for frameless mirrors.
 - 2. Section 093000 "Tiling" for ceramic toilet and bath accessories.
- D. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include the following:
 - 1. Construction details and dimensions.
 - 2. Anchoring and mounting requirements, including requirements for cutouts in other work and substrate preparation.
 - 3. Material and finish descriptions.
 - 4. Features that will be included for Project.
 - 5. Manufacturer's warranty.
 - 6. Include data substantiating that materials comply with requirements.

- B. Samples: Full size, for each accessory item to verify design, operation, and finish requirements.
 - 1. Approved full-size Samples will be returned and may be used in the Work.
- C. Product Schedule: Indicating types, quantities, sizes, and installation locations by room of each accessory required.
 - 1. Identify locations using room designations indicated.
 - 2. Identify products using designations indicated.

1.4 INFORMATIONAL SUBMITTALS

- A. Warranty: Sample of special warranty.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For toilet and bath accessories to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 QUALITY ASSURANCE

- A. Source Limitations: For products listed together in the same Part 2 articles, obtain products from single source from single manufacturer.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

1.7 COORDINATION

- A. Coordinate accessory locations with other work to prevent interference with clearances required for access by people with disabilities, and for proper installation, adjustment, operation, cleaning, and servicing of accessories.
- B. Deliver inserts and anchoring devices set into concrete or masonry as required to prevent delaying the Work.

1.8 WARRANTY

- A. Special Mirror Warranty: Manufacturer's standard form in which manufacturer agrees to replace mirrors that develop visible silver spoilage defects and that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Minimum [fifteen (15)] <Insert number> years from date of Substantial Completion.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Stainless Steel: ASTM A 666, Type 304, 0.031-inch (0.8-mm) minimum nominal thickness unless otherwise indicated.
- B. Brass: ASTM B 19, flat products; ASTM B 16/B 16M, rods, shapes, forgings, and flat products with finished edges; or ASTM B 30, castings.
- C. Steel Sheet: ASTM A 1008/A 1008M, Designation CS (cold rolled, commercial steel), 0.036-inch (0.9-mm) minimum nominal thickness.
- D. Galvanized-Steel Sheet: ASTM A 653/A 653M, with G60 (Z180) hot-dip zinc coating.
- E. Galvanized-Steel Mounting Devices: ASTM A 153/A 153M, hot-dip galvanized after fabrication.
- F. Fasteners: Screws, bolts, and other devices of same material as accessory unit and tamper-and-theft resistant where exposed, and of galvanized steel where concealed.
- G. Chrome Plating: ASTM B 456, Service Condition Number SC 2 (moderate service).
- H. Mirrors: ASTM C 1503, Mirror Glazing Quality, clear-glass mirrors, nominal 6.0 mm thick.
- I. ABS Plastic: Acrylonitrile-butadiene-styrene resin formulation.

2.2 PUBLIC-USE WASHROOM ACCESSORIES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. A & J Washroom Accessories, Inc.
 2. American Specialties, Inc.
 3. Bobrick Washroom Equipment, Inc.
 4. Bradley Corporation.
 5. GAMCO Specialty Accessories; a division of Bobrick Washroom Equipment, Inc.

6. Tubular Specialties Manufacturing, Inc.
7. **<Insert manufacturer's name>**.
8. or approved equal.

B. Toilet Tissue (Roll) Dispenser **<Insert drawing designation>**:

1. Basis-of-Design Product: **<Insert manufacturer's name; product name or designation>**.
2. Description: **[Roll-in-reserve dispenser with hinged front secured with tumbler lockset] [Single-roll dispenser] [Double-roll dispenser] [Double-roll dispenser with shelf] <Insert description>**.
3. Mounting: **[Recessed] [Partition mounted serving two adjacent toilet compartments] [Surface mounted]**.
4. Operation: **[Noncontrol delivery with standard spindle] [Noncontrol delivery with theft-resistant spindle] [Spindleless with tension-spring controlled delivery] [Spindleless with tension-spring controlled delivery and self-locking device extending through core that prevents core removal until roll is empty] [Eccentric-shaped, molded-plastic spindle revolves one-half revolution per dispensing operation for controlled delivery; core cannot be removed until roll is empty] <Insert description>**.
5. Capacity: Designed for **[4-1/2- or 5-inch- (114- or 127-mm-)] [5-inch- (127-mm-)] <Insert dimension>** diameter tissue rolls.
6. Material and Finish: **[Stainless steel, No. 4 finish (satin)] [Chrome-plated zinc alloy (zamac) or steel] [Satin-finish aluminum bracket with plastic spindle] [ABS plastic, gray] <Insert material and finish>**.

C. Combination Toilet Tissue Dispenser **<Insert drawing designation>**:

1. Basis-of-Design Product: **<Insert manufacturer's name; product name or designation>**.
2. Description: Combination unit with double-roll toilet tissue dispenser and the following:
 - a. Removable sanitary-napkin waste receptacle with self-closing, disposal-opening cover.
 - b. Seat-cover dispenser with minimum capacity of **[500] [1000] <Insert number>** single or half-fold seat covers.
3. Mounting: **[Recessed] [Surface mounted] [Partition mounted, dual access with two tissue rolls per compartment] [Partition mounted, dual access with two tissue rolls per compartment and with one side that mounts flush with partition of accessible compartment]**.
4. Toilet Tissue Dispenser Capacity: **4-1/2- or 5-inch- (114- or 127-mm-)** diameter tissue rolls.
5. Toilet Tissue Dispenser Operation: **[Noncontrol delivery with theft-resistant spindles] <Insert description>**.
6. Material and Finish: **[Stainless steel, No. 4 finish (satin)] <Insert material and finish>**.
7. Lockset: Tumbler type.

- D. Toilet Tissue (Folded) Dispenser **<Insert drawing designation>**:
1. Basis-of-Design Product: **<Insert manufacturer's name; product name or designation>**.
 2. Description: Folded-tissue dispenser with cover hinged at bottom.
 3. Mounting: Surface mounted.
 4. Minimum Capacity: **[1250] <Insert number>** single-fold tissues.
 5. Material and Finish: **[Stainless steel, No. 4 finish (satin)] <Insert material and finish>**.
 6. Lockset: Tumbler type.
 7. Refill Indicators: Pierced slots at front.
- E. Toilet Tissue (Jumbo-Roll) Dispenser **<Insert drawing designation>**:
1. Basis-of-Design Product: **<Insert manufacturer's name; product name or designation>**.
 2. Description: **[One-roll unit] [Two-roll unit with sliding panel to expose other roll]**.
 3. Mounting: Surface mounted.
 4. Capacity: **[9- or 10-inch- (228- or 254-mm-)] <Insert dimension(s)>** diameter rolls.
 5. Material and Finish: **[Stainless steel, No. 4 finish (satin)] [ABS plastic, gray] <Insert material and finish>**.
 6. Lockset: Tumbler type.
 7. Refill Indicator: Pierced slots at front.
- F. Paper Towel (Folded) Dispenser **<Insert drawing designation>**:
1. Basis-of-Design Product: **<Insert manufacturer's name; product name or designation>**.
 2. Mounting: **[Recessed] [Semirecessed] [Deck mounted, recessed] [Surface mounted]**.
 3. Minimum Capacity: **[400 C-fold or 525 multifold towels] [600 C-fold or 800 multifold towels] [400 single-fold towels] <Insert capacity>**.
 4. Material and Finish: **[Stainless steel, No. 4 finish (satin)] [ABS plastic, gray] <Insert material and finish>**.
 5. Lockset: Tumbler type.
 6. Refill Indicators: Pierced slots at sides or front.
- G. Paper Towel (Roll) Dispenser **<Insert drawing designation>**:
1. Basis-of-Design Product: **<Insert manufacturer's name; product name or designation>**.
 2. Description: Lever-actuated mechanism permits controlled delivery of paper rolls in preset lengths per stroke.
 3. Mounting: **[Recessed] [Semirecessed] [Surface mounted]**.
 4. Minimum Capacity: **[8-inch- (203-mm-) wide, 800-foot- (244-m-) long roll] <Insert capacity>**.
 5. Material and Finish: **[Stainless steel, No. 4 finish (satin)] [ABS plastic, gray] <Insert material and finish>**.

6. Lockset: Tumbler type.
- H. Waste Receptacle <Insert drawing designation>:
1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.
 2. Mounting: [Open top, recessed] [Self-closing disposal-opening cover, recessed] [Semirecessed] [Surface mounted] [Wall mounted for corner installation] [Freestanding] [Undercounter] <Insert description>.
 3. Minimum Capacity: <Insert gal. (L)>.
 4. Material and Finish: [Stainless steel, No. 4 finish (satin)] <Insert material and finish>.
 5. Liner: [Reusable vinyl liner] <Insert liner description>.
 6. Lockset: Tumbler type for waste-receptacle.
- I. Combination Towel (Folded) Dispenser/Waste Receptacle <Insert drawing designation>:
1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.
 2. Description: Combination unit for dispensing C-fold or multifold towels, with removable waste receptacle.
 3. Mounting: [Surface mounted] [Surface mounted with stainless-steel collar] [Recessed] [Recessed with projecting receptacle] [Semirecessed].
 - a. Designed for nominal [4-inch (100-mm)] [6-inch (150-mm)] wall depth.
 4. Minimum Towel-Dispenser Capacity: [600 C-fold or 800 multifold paper towels] <Insert capacity>.
 5. Minimum Waste-Receptacle Capacity: [4 gal. (15 L)] [12 gal. (45.4 L)] <Insert value>.
 6. Material and Finish: [Stainless steel, No. 4 finish (satin)] <Insert material and finish>.
 7. Liner: [Reusable, vinyl waste-receptacle liner] <Insert liner description>.
 8. Lockset: Tumbler type for towel-dispenser compartment[and waste receptacle].
- J. Combination Towel (Roll) Dispenser/Waste Receptacle <Insert drawing designation>:
1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.
 2. Description: Combination unit for dispensing preset length of roll paper towels, with removable waste receptacle.
 3. Mounting: [Recessed] [Semirecessed] [Surface mounted].
 4. Minimum Towel-Dispenser Capacity: [8-inch- (203-mm-) wide, 800-foot- (244-m-) long roll] <Insert capacity>.
 5. Minimum Waste Receptacle Capacity: [8 gal. (30 L)] [12 gal. (45.4 L)] [15 gal. (56.8 L)] <Insert value>.
 6. Material and Finish: [Stainless steel, No. 4 finish (satin)] <Insert material and finish>.

7. Liner: **[Reusable, vinyl waste-receptacle liner]** <Insert liner description>.
 8. Lockset: Tumbler type for towel dispenser compartment[**and waste receptacle**].
- K. Multipurpose Soap/Towel Dispenser Unit <Insert drawing designation>:
1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.
 2. Description: Combination unit for dispensing soap in [liquid or lotion] [lather] form and folded towels.
 3. Mounting: **[Recessed, designed for nominal 4-inch (100-mm) wall depth]** **[Surface mounted with stainless-steel collar]**.
 4. Minimum Soap-Dispenser Capacity: **[80 oz. (2.36 L)]** <Insert value>.
 5. Minimum Towel-Dispenser Capacity: **[600 C-fold or 800 multifold towels]** **[1000 single-fold towels]** <Insert capacity>.
 6. Material and Finish: **[Stainless steel, No. 4 finish (satin)]** <Insert material and finish> for unit body and soap valve.
 7. Lockset: Tumbler type.
- L. Liquid-Soap Dispenser <Insert drawing designation>:
1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.
 2. Description: Designed for dispensing soap in [liquid or lotion] [lather] form.
 3. Mounting: **[Deck mounted on vanity]** **[Deck mounted on lavatory]** **[Horizontally oriented, recessed]** **[Horizontally oriented, surface mounted]** **[Vertically oriented, surface mounted]**.
 4. Capacity: <Insert oz. (mL)>.
 5. Materials: <Insert requirements for valve and reservoir materials and finishes>.
 6. Lockset: Tumbler type.
 7. Refill Indicator: Window type.
- M. Grab Bar <Insert drawing designation>:
1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.
 2. Mounting: Flanges with **[concealed]** **[exposed]** fasteners.
 3. Material: Stainless steel, **0.05 inch** (1.3 mm) thick.
 - a. Finish: Smooth, No. 4 finish (satin)[**on ends and slip-resistant texture in grip area**].
 4. Outside Diameter: **[1-1/4 inches (32 mm)]** **[1-1/2 inches (38 mm)]**.
 5. Configuration and Length: **[As indicated on Drawings]** **[Straight, 36 inches (914 mm) long]** <Insert configuration and length>.
- N. Vendor <Insert drawing designation>:
1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.

2. Type: **[Sanitary napkin] [Sanitary napkin and tampon] [Condom]**.
 3. Mounting: **[Fully recessed, designed for 4-inch (100-mm) wall depth] [Semirecessed] [Surface mounted]**.
 4. Capacity: **<Insert description>**.
 5. Operation: **[No coin (free)] [Single coin (25 cents)] [Two coin (50 cents)] <Insert description>**.
 6. Exposed Material and Finish: **[Stainless steel, No. 4 finish (satin)] <Insert material and finish>**.
 7. Lockset: Tumbler type with separate lock and key for coin box.
- O. Sanitary-Napkin Disposal Unit **<Insert drawing designation>**:
1. Basis-of-Design Product: **<Insert manufacturer's name; product name or designation>**.
 2. Mounting: **[Recessed] [Partition mounted, dual access] [Surface mounted]**.
 3. Door or Cover: Self-closing, disposal-opening cover **[and hinged face panel with tumbler lockset]**.
 4. Receptacle: Removable.
 5. Material and Finish: **[Stainless steel, No. 4 finish (satin)] [ABS plastic, gray] <Insert material and finish>**.
- P. Seat-Cover Dispenser **<Insert drawing designation>**:
1. Basis-of-Design Product: **<Insert manufacturer's name; product name or designation>**.
 2. Mounting: **[Surface mounted] [Recessed] [Partition mounted, dual access]**.
 3. Minimum Capacity: **[250] [500] <Insert number>** seat covers.
 4. Exposed Material and Finish: **[Stainless steel, No. 4 finish (satin)] [ABS plastic, gray] <Insert material and finish>**.
 5. Lockset: Tumbler type.
- Q. Fold-Down Purse Shelf **<Insert drawing designation>**:
1. Basis-of-Design Product: **<Insert manufacturer's name; product name or designation>**.
 2. Description: Hinged unit with spring-loaded shelf that automatically returns to vertical position.
 3. Nominal Size: **[15 inches (381 mm) long by 5-1/2 inches (140 mm) wide] <Insert dimensions>**.
 4. Material and Finish: **[Chrome-plated, cast-zinc alloy (zamac) with stippled finish on tray or stainless steel, No. 4 finish (satin)] [Chrome-plated, cast-zinc alloy (zamac) with stippled finish on tray and bright chrome finish on edges] [Stainless steel, No. 4 finish (satin)]**.
- R. Mirror Unit **<Insert drawing designation>**:
1. Basis-of-Design Product: **<Insert manufacturer's name; product name or designation>**.
 2. Frame: **[Stainless-steel angle, 0.05 inch (1.3 mm) thick] [Stainless-steel channel] [Stainless steel, fixed tilt] [Stainless steel, adjustable tilt]**.

- a. Corners: **[Manufacturer's standard] [Mitered and mechanically interlocked] [Welded and ground smooth]**.
 3. Integral Shelf: **5 inches** (127 mm) deep.
 4. Hangers: Produce rigid, tamper- and theft-resistant installation, using method indicated below.
 - a. One-piece, galvanized-steel, wall-hanger device with spring-action locking mechanism to hold mirror unit in position with no exposed screws or bolts.
 - b. Wall bracket of galvanized steel, equipped with concealed locking devices requiring a special tool to remove.
 5. Size: **[As indicated on Drawings] <Insert dimensions>**.
- S. Facial Tissue Dispenser **<Insert drawing designation>**:
1. Basis-of-Design Product: **<Insert manufacturer's name; product name or designation>**.
 2. Mounting: **[Wall mounted, recessed] [Surface mounted]**.
 3. Nominal Depth: **[2-1/4 inches** (57 mm)] **[4 inches** (102 mm)] **<Insert dimension>**.
 4. Capacity: **[150] <Insert number>** double-ply tissues.
 5. Material and Finish:
 - a. Dispenser Face: **[Stainless steel, No. 4 finish (satin)] [Stainless steel, No. 7 finish (polished)] <Insert material and finish>**.
 - b. Cabinet: **[Steel with corrosion-resistant finish] <Insert material and finish>**.

2.3 PUBLIC-USE SHOWER ROOM ACCESSORIES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. A & J Washroom Accessories, Inc.
 2. American Specialties, Inc.
 3. Bobrick Washroom Equipment, Inc.
 4. Bradley Corporation.
 5. GAMCO Specialty Accessories; a division of Bobrick Washroom Equipment, Inc.
 6. Tubular Specialties Manufacturing, Inc.
 7. **<Insert manufacturer's name>**.
 8. or approved equal.
- B. Shower Curtain Rod **<Insert drawing designation>**:
1. Basis-of-Design Product: **<Insert manufacturer's name; product name or designation>**.
 2. Description: **[1-inch** (25.4-mm) **OD; fabricated from nominal 0.0375-inch-** (0.95-mm-) **thick stainless steel] [1-1/4-inch** (32-mm) **OD; fabricated from nominal 0.05-inch-** (1.3-mm-) **thick stainless steel]**.

3. Mounting Flanges: [**Stainless-steel flanges designed for exposed fasteners**] **<Insert requirements>**.
4. Finish: [**No. 4 (satin)**] **<Insert finish>**.

C. Shower Curtain **<Insert drawing designation>**:

1. Basis-of-Design Product: **<Insert manufacturer's name; product name or designation>**.
2. Size: Minimum [**6 inches** (152 mm)] [**12 inches** (305 mm)] wider than opening by **72 inches** (1828 mm) high.
3. Material: [**Vinyl, minimum 0.006 inch** (0.15 mm) **thick, opaque, matte**] [**Duck, minimum 8 oz.** (227 g), **white, 100 percent cotton**] [**Nylon-reinforced vinyl, minimum 10 oz.** (284 g) **or 0.008-inch-** (0.2-mm-) **thick vinyl, with integral antibacterial agent**] **<Insert material>**.
4. Color: [**White**] [**Green**] [**As selected from manufacturer's full range**] **<Insert color>**.
5. Grommets: Corrosion resistant at minimum **6 inches** (152 mm) o.c. through top hem.
6. Shower Curtain Hooks: Chrome-plated or stainless-steel, spring wire curtain hooks with snap fasteners, sized to accommodate specified curtain rod. Provide one hook per curtain grommet.

D. Folding Shower Seat **<Insert drawing designation>**:

1. Basis-of-Design Product: **<Insert manufacturer's name; product name or designation>**.
2. Configuration: [**L-shaped seat, designed for wheelchair access**] [**Rectangular seat**] [**Triangular, corner-type seat**] [**Stainless-steel seat designed to fold into recessed-mounted, stainless-steel wall box**].
3. Seat: [**Phenolic or polymeric composite of slat-type or one-piece construction in color as selected by DEN Project Manager**] [**White vinyl padded seat**] [**Stainless steel, No. 4 finish (satin); 0.05-inch** (1.3-mm) **minimum nominal thickness; with single-piece, pan-type construction and edge seams welded and ground smooth**] **<Insert description>**.
4. Mounting Mechanism: [**Stainless steel, No. 4 finish (satin)**] **<Insert description>**.
5. Dimensions: **<Insert dimensions>**.

E. Soap Dish **<Insert drawing designation>**:

1. Basis-of-Design Product: **<Insert manufacturer's name; product name or designation>**.
2. Description: [**With**] [**Without**] washcloth bar.
3. Mounting: [**Recessed**] [**Surface mounted**].
4. Material and Finish: [**Stainless steel, No. 4 finish (satin)**] **<Insert material and finish>**.

2.4 PRIVATE-USE BATHROOM ACCESSORIES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Basco, Inc.
 2. Bobrick Washroom Equipment, Inc.
 3. Franklin Brass by Liberty Hardware Manufacturing Corporation; a Masco company.
 4. GAMCO Specialty Accessories; a division of Bobrick Washroom Equipment, Inc.
 5. Ginger; a Masco company.
 6. Seachrome Corporation.
 7. Tubular Specialties Manufacturing, Inc.
 8. **<Insert manufacturer's name>**.
 9. or approved equal.
- B. Toilet Tissue Dispenser **<Insert drawing designation>**:
1. Basis-of-Design Product: **<Insert manufacturer's name; product name or designation>**.
 2. Description: **[Single-roll dispenser] [Double-roll dispenser] [Single-roll dispenser with hood] [Double-roll dispenser with hood] <Insert description>**.
 3. Mounting: **[Recessed] [Surface mounted]**.
 4. Capacity: Designed for **4-1/2- or 5-inch-** (114- or 127-mm-) diameter tissue rolls.
 5. Material and Finish: **[Solid brass, polished] [Polished brass-plated zinc alloy (zamac)] [Polished chrome-plated brass] [Polished chrome-plated zinc alloy (zamac)] [Stainless steel, No. 4 finish (satin)] [Stainless steel, No. 7 finish (polished)] <Insert material and finish>**.
- C. Shower Curtain Rod **<Insert drawing designation>**:
1. Basis-of-Design Product: **<Insert manufacturer's name; product name or designation>**.
 2. Outside Diameter: **[1 inch (25.4 mm)] [1-1/4 inches (32 mm)]**.
 3. Mounting: Flanges with **[exposed] [concealed]** fasteners.
 4. Rod Material and Finish: **[Solid brass, polished] [Polished chrome-plated brass] [Stainless steel, No. 4 finish (satin)] [Stainless steel, No. 7 finish (polished)] <Insert material and finish>**.
 5. Flange Material and Finish: **[Polished brass-plated zinc alloy (zamac)] [Polished chrome-plated brass] [Polished chrome-plated zinc alloy (zamac)] [Stainless steel, No. 4 finish (satin)] [Stainless steel, No. 7 finish (polished)] <Insert material and finish>**.
 6. Accessories: Integral chrome-plated brass glide hooks.
- D. Soap Dish **<Insert drawing designation>**:
1. Basis-of-Design Product: **<Insert manufacturer's name; product name or designation>**.
 2. Description: **<Insert description>**.

3. Mounting: **[Recessed] [Surface mounted]**.
4. Material and Finish: **[Solid brass, polished] [Polished brass-plated zinc alloy (zamac)] [Polished chrome-plated brass] [Polished chrome-plated zinc alloy (zamac)] [Stainless steel, No. 4 finish (satin)] [Stainless steel, No. 7 finish (polished)] <Insert material and finish>**.

E. Medicine Cabinet **<Insert drawing designation>**:

1. Basis-of-Design Product: **<Insert manufacturer's name; product name or designation>**.
2. Mounting: **[Recessed, for nominal 4-inch (100-mm) wall depth] [Surface mounted]**.
3. Size: **[18 by 24 inches (460 by 610 mm)] <Insert dimensions>**.
4. Door: **[Framed mirror door concealing storage cabinet equipped with continuous hinge and spring-buffered, rod-type stop and magnetic door catch] <Insert description>**.
5. Shelves: **[Three, adjustable] <Insert requirements>**.
6. Material and Finish:
 - a. Cabinet: **[Stainless steel, No. 4 finish (satin)] [Steel with corrosion-resistant finish]**.
 - b. Mirror Frame: **<Insert material and finish>**.
 - c. Door: **<Insert material and finish>**.
 - d. Hinge: **<Insert material and finish>**.
 - e. Shelves: **<Insert material and finish>**.

F. Facial Tissue Dispenser **<Insert drawing designation>**:

1. Basis-of-Design Product: **<Insert manufacturer's name; product name or designation>**.
2. Mounting: **[Wall mounted, recessed] [Surface mounted]**.
3. Depth: **[2-5/8 inches (67 mm)] [4 inches (102 mm)] <Insert dimension>**.
4. Material and Finish:
 - a. Dispenser Face: **[Polished chrome-plated brass] [Polished brass-plated zinc alloy (zamac)] [Polished chrome-plated steel] [Stainless steel, No. 4 finish (satin)] [Stainless steel, No. 7 finish (polished)] <Insert material and finish>**.
 - b. Cabinet: **[Steel with corrosion-resistant finish] <Insert material and finish>**.

G. Robe Hook **<Insert drawing designation>**:

1. Basis-of-Design Product: **<Insert manufacturer's name; product name or designation>**.
2. Description: **[Double] [Single]-prong unit**.
3. Material and Finish: **[Solid brass, polished] [Polished brass-plated zinc alloy (zamac)] [Polished chrome-plated brass] [Polished chrome-plated zinc alloy (zamac)] [Stainless steel, No. 4 finish (satin)] [Stainless steel, No. 7 finish (polished)] <Insert material and finish>**.

- H. Toothbrush and Tumbler Holder <Insert drawing designation>:
1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.
 2. Description: <Insert description>.
 3. Material and Finish: [Solid brass, polished] [Polished brass-plated zinc alloy (zamac)] [Polished chrome-plated brass] [Polished chrome-plated zinc alloy (zamac)] [Stainless steel, No. 4 finish (satin)] [Stainless steel, No. 7 finish (polished)] <Insert material and finish>.
- I. Towel Bar <Insert drawing designation>:
1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.
 2. Description: [3/4-inch- (19-mm-) square tube with rectangular end brackets] [3/4-inch- (19-mm-) round tube with circular end brackets] <Insert description>.
 3. Mounting: Flanges with [concealed] [exposed] fasteners.
 4. Length: [18 inches (457 mm)] [24 inches (610 mm)] [30 inches (762 mm)] <Insert dimension>.
 5. Material and Finish: [Stainless steel, No. 4 finish (satin)] [Stainless steel, No. 7 finish (polished)] [Polished aluminum] <Insert material and finish>.
- J. Towel Pin <Insert drawing designation>:
1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.
 2. Description: Projecting minimum of [3 inches (75 mm)] [5 inches (127 mm)] from wall surface.
 3. Material and Finish: [Polished brass-plated zinc alloy (zamac)] [Polished chrome-plated brass] [Stainless steel, No. 4 finish (satin)] [Stainless steel, No. 7 finish (polished)] <Insert material and finish>.
- K. Towel Ring <Insert drawing designation>:
1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.
 2. Description: Pin projecting approximately 2-1/2 inches (63 mm) from wall with [square] [circular] [oval] [trapezoidal] ring.
 3. Pin Material and Finish: [Solid brass, polished] [Polished brass-plated zinc alloy (zamac)] [Polished chrome-plated brass] [Polished chrome-plated zinc alloy (zamac)] [Stainless steel, No. 4 finish (satin)] [Stainless steel, No. 7 finish (polished)] <Insert material and finish>.
 4. Ring Material and Finish: [Matching pin] [Clear plastic].
- L. Towel Shelf <Insert drawing designation>:
1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.

2. Description: Surface-mounted, guest-towel shelf with four [3/8-inch- (9-mm-) diameter] [5/16-inch- (8-mm-) square] stainless-steel tubes mounted in support arms.
 - a. Towel Bar: [1/4-inch- (6-mm-) diameter] [5/16-inch- (8-mm-) square] stainless-steel towel bar below shelf.
3. Length: [18 inches (457 mm)] [24 inches (610 mm)] <Insert dimension>.
4. Material and Finish: [Polished brass-plated, stainless-steel] [Polished chrome-plated, stainless-steel] [Stainless steel, No. 7 finish (polished)] <Insert material and finish>.

M. Towel Rack <Insert drawing designation>:

1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.
2. Description: [Surface-mounted, guest-towel unit with approximately 1/4-inch- (6-mm-) diameter wire rings welded to upright wire bracket] <Insert description>.
3. Capacity: [Two] [Three] [Four] <Insert number> sets of bath towels, hand towels, and washcloths.
4. Nominal Height: [11 inches (279 mm)] [17 inches (432 mm)] [21 inches (533 mm)] <Insert dimension>.
5. Material and Finish: [Polished brass-plated zinc alloy (zamac)] [Polished chrome-plated zinc alloy (zamac)] <Insert material and finish>.

N. Retractable Clothesline <Insert drawing designation>:

1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.
2. Description: Surface-mounted [rectangular] [circular] housing with minimum 72-inch- (1829-mm-) long, retractable, spring-actuated, synthetic clothesline and remote retention bracket.
3. Material and Finish [Chrome-plated brass] [Stainless steel, No. 7 finish (polished)].

O. Bottle Opener <Insert drawing designation>:

1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.
2. Description: Surface-mounted unit with [standard] [vandal-resistant] fasteners.
3. Material and Finish: [Stainless steel, No. 4 finish (satin)] [Stainless steel, No. 7 finish (polished)] [Chrome-plated steel].

2.5 WARM-AIR DRYERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. A & J Washroom Accessories, Inc.
2. American Dryer, Inc.
3. American Specialties, Inc.
4. Bobrick Washroom Equipment, Inc.
5. Bradley Corporation.
6. Excel Dryer Corporation.
7. GAMCO Specialty Accessories; a division of Bobrick Washroom Equipment, Inc.
8. Tubular Specialties Manufacturing, Inc.
9. World Dryer Corporation.
10. **<Insert manufacturer's name>**.
11. or approved equal.

B. Warm-Air Dryer **<Insert drawing designation>**:

1. Basis-of-Design Product: **<Insert manufacturer's name; product name or designation>**.
2. Mounting: **[Recessed] [Semirecessed] [Surface mounted]**.
3. Operation: **[Touch-button] [Electronic-sensor]** activated with timed power cut-off switch.
 - a. Operation Time: **[30 to 40] [80] <Insert number(s)>** seconds.
4. Cover Material and Finish: **[Steel, with white enamel finish] [Cast iron, with enamel finish in color selected by DEN Project Manager] [Chrome-plated steel] [Stainless steel, No. 4 finish (satin)] [Molded plastic, gray] [Molded plastic, white] <Insert material and finish>**.
5. Electrical Requirements: **[115 V, 13 A, 1500 W] [115 V, 15 A, 1725 W] [115 V, 20 A, 2300 W] [208-240 V, 9-10 A, 1900-2300 W] <Insert electrical requirements>**.

2.6 CHILDCARE ACCESSORIES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. American Specialties, Inc.
2. Brocar Products, Inc.
3. Diaper Deck & Company, Inc.
4. GAMCO Specialty Accessories; a division of Bobrick Washroom Equipment, Inc.
5. Koala Kare Products; a division of Bobrick Washroom Equipment, Inc.
6. SSC, Inc.
7. Tubular Specialties Manufacturing, Inc.
8. **<Insert manufacturer's name>**.
9. or approved equal.

B. Diaper-Changing Station **<Insert drawing designation>**:

1. Basis-of-Design Product: **<Insert manufacturer's name; product name or designation>**.

2. Description: **[Horizontal] [Vertical]** unit that opens by folding down from stored position and with child-protection strap.
 - a. Engineered to support a minimum of **[250-lb (113-kg)] <Insert value>** static load when opened.
3. Mounting: **[Surface mounted, with unit projecting not more than 4 inches (100 mm) from wall when closed] [Semirecessed, with unit projecting not more than 1 inch (25 mm) from wall when closed]**.
4. Operation: By pneumatic shock-absorbing mechanism.
5. Material and Finish: **[HDPE in manufacturer's standard color] [HDPE with plastic-laminate insert in color selected by DEN Project Manager] [Stainless steel, No. 4 finish (satin), with replaceable insulated polystyrene tray liner and rounded plastic corners] [Stainless steel, No. 4 finish (satin), exterior shell with rounded plastic corners; HDPE interior in manufacturer's standard color] <Insert requirements>**.
6. Liner Dispenser: Built in.

C. Diaper-Pack Vendor **<Insert drawing designation>**:

1. Basis-of-Design Product: **<Insert manufacturer's name; product name or designation>**.
2. Mounting: **[Surface mounted] [Recessed]**.
3. Minimum Capacity: **[100] <Insert number>** diaper packs.
4. Coin Operation: Coin slot preset for **[one U.S. dollar, adjustable up in 25-cent increments] <Insert requirements>**.
5. Material and Finish: **[Stainless steel, No. 4 finish (satin)] <Insert material and finish>**.

D. Child-Protection Seat **<Insert drawing designation>**:

1. Basis-of-Design Product: **<Insert manufacturer's name; product name or designation>**.
2. Description: Unit that opens by folding down from stored position and with child-protection strap.
 - a. Engineered to support a minimum of **[80-lb (36-kg)] [150-lb (68-kg)] <Insert value>** static load when opened.
3. Mounting: Surface mounted, with unit projecting not more than **[4-1/2 inches (114 mm)] [6 inches (152 mm)]** from wall when closed.
4. Material and Finish: **[HDPE in manufacturer's standard color] <Insert requirements>**.

2.7 UNDERLAVATORY GUARDS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Plumberex Specialty Products, Inc.
2. Truebro by IPS Corporation.
3. **<Insert manufacturer's name>**.
4. or approved equal.

B. Underlavatory Guard **<Insert drawing designation>**:

1. Basis-of-Design Product: **<Insert manufacturer's name; product name or designation>**.
2. Description: Insulating pipe covering for supply and drain piping assemblies that prevent direct contact with and burns from piping; allow service access without removing coverings.
3. Material and Finish: Antimicrobial, molded plastic, white.

2.8 CUSTODIAL ACCESSORIES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. A & J Washroom Accessories, Inc.
2. American Specialties, Inc.
3. Bobrick Washroom Equipment, Inc.
4. Bradley Corporation.
5. GAMCO Specialty Accessories; a division of Bobrick Washroom Equipment, Inc.
6. Tubular Specialties Manufacturing, Inc.
7. **<Insert manufacturer's name>**.
8. or approved equal.

B. Utility Shelf **<Insert drawing designation>**:

1. Basis-of-Design Product: **<Insert manufacturer's name; product name or designation>**.
2. Description: With exposed edges turned down not less than **1/2 inch** (13 mm) and supported by two triangular brackets welded to shelf underside.
3. Size: [**16 inches** (406 mm) **long by 6 inches** (152 mm) **deep**] **<Insert dimensions>**.
4. Material and Finish: Not less than nominal **0.05-inch-** (1.3-mm-) thick stainless steel, No. 4 finish (satin).

C. Mop and Broom Holder **<Insert drawing designation>**:

1. Basis-of-Design Product: **<Insert manufacturer's name; product name or designation>**.
2. Description: [**Unit with shelf, hooks, holders, and rod suspended beneath shelf**] **<Insert description>**.
3. Length: [**36 inches** (914 mm)] **<Insert dimension>**.
4. Hooks: [**Three**] **<Insert number>**.
5. Mop/Broom Holders: [**Four**] **<Insert number>**, spring-loaded, rubber hat, cam type.

6. Material and Finish: Stainless steel, No. 4 finish (satin).
 - a. Shelf: Not less than nominal 0.05-inch- (1.3-mm-) thick stainless steel.
 - b. Rod: Approximately 1/4-inch- (6-mm-) diameter stainless steel.

D. Paper Towel (Folded) Dispenser <Insert drawing designation>:

1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.
2. Mounting: [Recessed] [Semirecessed] [Surface mounted].
3. Minimum Capacity: [400 C-fold or 525 multifold towels] [600 C-fold or 800 multifold towels] [400 single-fold towels] <Insert capacity>.
4. Material and Finish: [Stainless steel, No. 4 finish (satin)] [ABS plastic, gray] <Insert material and finish>.
5. Lockset: Tumbler type.
6. Refill Indicators: Pierced slots at sides or front.

E. Paper Towel (Roll) Dispenser <Insert drawing designation>:

1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.
2. Description: Lever-actuated mechanism permits controlled delivery of paper rolls in preset lengths per stroke.
3. Mounting: [Recessed] [Semirecessed] [Surface mounted].
4. Minimum Capacity: [8-inch- (203-mm-) wide, 800-foot- (244-m-) long roll] <Insert capacity>.
5. Material and Finish: [Stainless steel, No. 4 finish (satin)] [ABS plastic, gray] <Insert material and finish>.
6. Lockset: Tumbler type.

F. Liquid-Soap Dispenser <Insert drawing designation>:

1. Basis-of-Design Product: <Insert manufacturer's name; product name or designation>.
2. Description: Designed for dispensing soap in [liquid or lotion] [lather] form.
3. Mounting: [Deck mounted on vanity] [Deck mounted on lavatory] [Horizontally oriented, recessed] [Horizontally oriented, surface mounted] [Vertically oriented, surface mounted].
4. Capacity: <Insert oz. (mL)>.
5. Materials: <Insert requirements for valve and reservoir materials and finishes>.
6. Lockset: Tumbler type.
7. Refill Indicator: Window type.

2.9 FABRICATION

- A. General: Fabricate units with tight seams and joints, and exposed edges rolled. Hang doors and access panels with full-length, continuous hinges. Equip units for concealed anchorage and with corrosion-resistant backing plates.

- B. Keys: Provide universal keys for internal access to accessories for servicing and resupplying. Provide minimum of [six] <Insert number> keys to Owner's representative.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install accessories according to manufacturers' written instructions, using fasteners appropriate to substrate indicated and recommended by unit manufacturer. Install units level, plumb, and firmly anchored in locations and at heights indicated.
- B. Grab Bars: Install to withstand a downward load of at least 250 lbf (1112 N), when tested according to ASTM F 446.

3.2 ADJUSTING AND CLEANING

- A. Adjust accessories for unencumbered, smooth operation. Replace damaged or defective items.
- B. Remove temporary labels and protective coatings.
- C. Clean and polish exposed surfaces according to manufacturer's written recommendations.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 102800

SECTION 104413 - FIRE VALVE AND EXTINGUISHER CABINETS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

- 1. Fire protection cabinets for the following:
 - a. Portable fire extinguishers.
 - b. Fire hose valves.
 - c. Fire hoses and racks.

- B. Related Sections:

- 1. Section 101400 "Signage" for directional signage to out-of-sight fire extinguishers and cabinets.
- 2. Section 104416 "Fire Extinguishers."
- 3. Section 211100 "Facility Fire-Suppression Water-Service Piping" for hose systems, racks, and valves.
- 4. Section 265100 "Interior Lighting" for fire extinguisher location lights.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 REFERENCE STANDARDS

- A. International Building Code (IBC) with the Denver Amendments
- B. International Fire Code (IFC) with the Denver Amendments
- C. National Fire Protection Association (NFPA): NFPA
- D. NFPA 14 Installation of Standpipe and Hose Systems.
- E. NFPA 10 – Fire Extinguishers – Portable
- F. Note: The most stringent interpretations shall apply. All appendices and annexes shall apply.

1.4 REGULATORY REQUIREMENTS

- A. Conform to Denver Building code with all applicable amendments and NFPA 14 for standpipe and hose system.
- B. Equipment and Components: Bear UL or F M Global label or marking.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for fire protection cabinets.
 - 1. Fire Protection Cabinets: Include roughing-in dimensions, details showing mounting methods, relationships of box and trim to surrounding construction, door hardware, cabinet type, trim style, and panel style.
 - 2. Include data substantiating that materials comply with requirements.
 - 3. Show location of knockouts for hose valves.
- B. Shop Drawings: For fire protection cabinets. Include plans, elevations, sections, details, and attachments to other work.
- C. Samples for Initial Selection: For each type of fire protection cabinet indicated.
- D. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below:
 - 1. Size: **6 by 6 inches** (150 by 150 mm) square.
- E. Product Schedule: For fire protection cabinets. Coordinate final fire protection cabinet schedule with fire extinguisher schedule to ensure proper fit and function. [**Use same designations indicated on Drawings.**]

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For fire protection cabinets to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Fire-Rated, Fire Protection Cabinets: Listed and labeled to comply with requirements in ASTM E 814 for fire-resistance rating of walls where they are installed.
- B. Conform to NFPA 14 for hose systems.

- C. Comply with all requirements of Owner's Insurance Underwriter.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- E. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager] <Insert location>**.
 - 1. Review methods and procedures related to fire protection cabinets including, but not limited to, the following:
 - a. Schedules and coordination requirements.
- F. Manufacturer: Company specializing in manufacturing the products specified in this section with minimum five (5) years' documented experience.
- G. Installer: Company specializing in performing the work of this Section with minimum five (5) years' documented experience.
 - 1. Coordinate valve and fire extinguisher cabinet sizes and locations with wall construction contractor and plumbing contractor to achieve proper fit of cabinets, pipe connections, wall conditions, flush mounting, and other requirements of Project.

1.8 COORDINATION

- A. Coordinate size of fire protection cabinets to ensure that type and capacity of fire extinguishers indicated are accommodated.
- B. Coordinate size of fire protection cabinets to ensure that type and capacity of fire hoses, hose valves, and hose racks indicated are accommodated.
- C. Coordinate sizes and locations of fire protection cabinets with wall depths.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B.

- B. Stainless-Steel Sheet: ASTM A 666, Type 304.
- C. Tempered Break Glass: ASTM C 1048, Kind FT, Condition A, Type I, Quality q3, 1.5 mm thick.

2.2 VALVE AND EXTINGUISHER CABINETS

- A. General: Provide cabinets to house fire department valves and extinguishers as indicated.
- B. Construction: Manufacturer's standard enameled steel or stainless steel box, with trim, frame, door, and hardware to suit cabinet type, trim style, and door style indicated. Weld all joints and grind smooth. Miter and weld perimeter doorframes.
- C. Cabinet type, suitable for mounting conditions indicated, of the following types:
 - 1. Fire Extinguisher Cabinets (Recessed):
 - a. Type: Larsen "Architectural" series, Model 2712-R, stainless steel finish.
 - b. Door Style: Stainless steel 5/16 inch flat trim fully recessed; key door locks to DEN Master Key System.
 - c. Glazing: Clear tempered breakaway glass.
 - d. Interior Dimensions: 27 inches by 12 inches by 8 inches; interior capacity sufficient for one 10-pound fire extinguisher.
 - e. Provide one 10-pound fire extinguisher with each fire extinguisher cabinet.
 - 2. Fire Extinguisher Cabinets (Surface Mounted):
 - a. Type: Larsen "Architectural" series, Model 2717-SM, steel with white baked enamel finish.
 - b. Door Style: Steel with baked enamel finish and breakaway glazing; key door locks to DEN Master Key System.
 - c. Glazing: Clear tempered breakaway glass.
 - d. Interior Dimensions: 30-1/2 inches by 15-1/2 inches by 8 inches; interior capacity sufficient for one 10-pound fire extinguisher.
 - 3. Fire Valve Cabinets (Recessed):
 - a. Type: Larsen, Model T-VCSS4016-R, stainless steel finish.
 - b. Door Style: Stainless steel 5/16 inch flat trim fully recessed; key door locks to DEN Master Key System.
 - c. Glazing: Clear tempered d breakaway glass.
 - d. Interior Dimensions: 40 inches by 16 inches by 8 inches; interior capacity sufficient for one 10-pound fire extinguisher and one 2-1/2 inch fire department valve with cap and chain.
 - e. Provide one 10-pound fire extinguisher with each fire valve cabinet.
 - 4. Fire Valve Cabinets (Surface Mounted):
 - a. Type: Larsen Model T-VC4016-SM, steel with white baked enamel finish.

- b. Door Style: Steel with white baked enamel finish and breakaway glazing; key door locks to DEN Master Key System.
 - c. Glazing: Clear tempered breakaway glass.
 - d. Interior Dimensions: 43-1/2 inches by 19-1/2 inches by 8-1/2 inches; interior capacity sufficient for one 10-pound fire extinguisher and one 2-1/2 inch fire department valve with cap and chain.
 - e. Provide one 10-pound fire extinguisher with each fire valve cabinet.
- D. Door Material and Construction: Manufacturer's standard door construction, of material indicated, coordinated with cabinet types and trim styles selected.
1. Enameled Steel: Manufacturer's standard finish, hollow steel door construction with tubular stiles and rails.
 2. Stainless steel, ASTM A 167, AISI type 302/304 alloy (for use in all public areas).
 3. Door Glazing: Tempered breakaway glass shall conform to the requirements of Section 088000 "Glazing".
- E. Door Hardware: Provide manufacturer's standard door operating hardware of proper type for cabinet type, trim style, and door material and style indicated. Provide either lever handle with cam action latch, or door pull, exposed or concealed, and friction latch. Provide continuous full height hinge permitting door to open 180 degrees. Key door locks per DEN Master Key System (Best Series Cam Locks).

2.3 FIRE PROTECTION CABINET <Insert drawing designation>

- A. Cabinet Type: Suitable for fire [extinguisher] [extinguisher and hose valve] [hose, rack, valve, and extinguisher] [hose, rack, and valve] [hose valve].
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Fire End & Croker Corporation; <Insert product name or designation>.
 - b. J. L. Industries, Inc., a division of Activar Construction Products Group; <Insert product name or designation>.
 - c. Kidde Residential and Commercial Division, Subsidiary of Kidde plc; <Insert product name or designation>.
 - d. Larsen's Manufacturing Company; <Insert product name or designation>.
 - e. Modern Metal Products, Division of Technico Inc.; <Insert product name or designation>.
 - f. Moon-American; <Insert product name or designation>.
 - g. Potter Roemer LLC; <Insert product name or designation>.
 - h. Watrous Division, American Specialties, Inc.; <Insert product name or designation>.
 - i. <Insert manufacturer's name; product name or designation>.
 - j. or approved equal.
- B. Cabinet Construction: [Nonrated] [1-hour fire rated] [2-hour fire rated].
1. Fire-Rated Cabinets: Construct fire-rated cabinets with double walls fabricated

from **0.0428-inch-** (1.1-mm-) thick, cold-rolled steel sheet lined with minimum **5/8-inch-** (16-mm-) thick, fire-barrier material. Provide factory-drilled mounting holes.

- C. Cabinet Material: **[Steel] [Stainless-steel]** sheet.
1. Shelf: Same metal and finish as cabinet.
- D. Recessed Cabinet: Cabinet box recessed in walls of sufficient depth to suit style of trim indicated.
1. Trimless with Concealed Flange: Surface of surrounding wall finishes flush with exterior finished surface of cabinet frame and door, without overlapping trim attached to cabinet. Provide recessed flange, of same material as box, attached to box to act as **[plaster stop] [drywall bead]**.
 2. Trimless with Hidden Flange: Flange of same metal and finish as box overlaps surrounding wall finish and is concealed from view by an overlapping door.
 3. Exposed Flat Trim: One-piece combination trim and perimeter door frame overlapping surrounding wall surface with exposed trim face and wall return at outer edge (backbend).
- E. Semirecessed Cabinet: Cabinet box partially recessed in walls of sufficient depth to suit style of trim indicated; with one-piece combination trim and perimeter door frame overlapping surrounding wall surface with exposed trim face and wall return at outer edge (backbend). Provide where walls are of insufficient depth for recessed cabinets but are of sufficient depth to accommodate semirecessed cabinet installation.
1. Square-Edge Trim: **1-1/4- to 1-1/2-inch** (32- to 38-mm) backbend depth.
 2. Rolled-Edge Trim: **[2-1/2-inch** (64-mm)] **[4-inch** (102-mm)] **[4-1/2-inch** (114-mm)] **<Insert dimension>** backbend depth.
- F. Surface-Mounted Cabinet: Cabinet box fully exposed and mounted directly on wall with no trim. Provide where walls are of insufficient depth for semirecessed cabinet installation.
- G. Cabinet Trim Material: **[Steel sheet] [Stainless-steel sheet] [Same material and finish as door]**.
- H. Door Material: **[Steel sheet] [Stainless-steel sheet]**.
- I. Door Style: **[Fully glazed, frameless, backless, acrylic panel] [Fully glazed panel with frame] [Horizontal duo panel with frame] [Vertical duo panel with frame] [Center glass panel with frame] [Solid opaque panel with frame] [Flush opaque panel, frameless, with no exposed hinges]**.
- J. Door Glazing: **[Clear float glass] [Tempered float glass (clear)] [Tempered float glass (bronze tint)] [Break glass] [Tempered break glass] [Mirror glass]** .
- K. Door Hardware: Manufacturer's standard door-operating hardware of proper type for cabinet type, trim style, and door material and style indicated.

1. Provide [**projecting lever handle with cam-action latch**] [**projecting door pull and friction latch**] [**recessed door pull and friction latch**] [**manufacturer's standard**].
2. Provide [**continuous hinge, of same material and finish as trim,**] [**concealed hinge**] [**pivot hinge**] [**manufacturer's standard hinge**] permitting door to open 180 degrees.

L. Accessories:

1. Mounting Bracket: Manufacturer's standard steel, designed to secure fire extinguisher to fire protection cabinet, of sizes required for types and capacities of fire extinguishers indicated, with plated or baked-enamel finish.
2. Break-Glass Strike: Manufacturer's standard metal strike, complete with chain and mounting clip, secured to cabinet.
3. Lettered Door Handle: One-piece, cast-iron door handle with the word "FIRE" embossed into face.
4. Door Lock: [**Cam lock that allows door to be opened during emergency by pulling sharply on door handle**] [**Cylinder lock, keyed alike to other cabinets**].
5. Identification: Lettering complying with authorities having jurisdiction for letter style, size, spacing, and location. Locate [**as indicated**] [**as directed by DEN Project Manager**] <Insert location>.
 - a. Identify fire extinguisher in fire protection cabinet with the words "[**FIRE EXTINGUISHER**] <Insert identification>."
 - 1) Location: Applied to [**cabinet door**] [**cabinet glazing**] [**location indicated on Drawings**].
 - 2) Application Process: [**Silk-screened**] [**Engraved**] [**Etched**] [**Decals**] [**Pressure-sensitive vinyl letters**].
 - 3) Lettering Color: [**Red**] [**Black**] [**White**].
 - 4) Orientation: [**Vertical**] [**Horizontal**] [**As indicated on Drawings**].
6. Alarm: Manufacturer's standard alarm that actuates when fire protection cabinet door is opened and that is powered by [**batteries**] [**low voltage, complete with transformer**].

M. Finishes:

1. Manufacturer's standard baked-enamel paint for the following:
 - a. Exterior of cabinet [**door**] [**trim**] [, **door, and trim**] except for those surfaces indicated to receive another finish.
 - b. Interior of cabinet[**and door**].
2. Steel: [**Factory primed for field painting**] [**Baked enamel or powder coat**].
3. Stainless Steel: [**No. 2B**] [**No. 4**] [**No. 6**] [**No. 7**] [**No. 8**].

- 2.4 SECURITY FIRE PROTECTION CABINET <Insert drawing designation>
- A. Cabinet Type: Suitable for fire [extinguisher] [extinguisher and hose valve] [hose, rack, valve, and extinguisher] [hose, rack, and valve] [hose valve].
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. J. L. Industries, Inc., a division of Activar Construction Products Group; <Insert product name or designation>.
 - b. Larsen's Manufacturing Company; <Insert product name or designation>.
 - c. Potter Roemer LLC; <Insert product name or designation>.
 - d. <Insert manufacturer's name; product name or designation>.
 - e. or approved equal.
- B. Cabinet Construction: [Nonrated] [1-hour fire rated] [2-hour fire rated].
1. Fire-Rated Cabinets: Construct fire-rated cabinets with double walls lined with minimum 5/8-inch- (16-mm-) thick, fire-barrier material.
- C. Cabinet Material: [0.0677-inch- (1.7-mm-) thick steel] [0.0966-inch- (2.5-mm-) thick steel] [0.0781-inch- (2.0-mm-) thick, stainless-steel] sheet.
1. Shelf: Same metal and finish as cabinet.
- D. Recessed Cabinet: Cabinet box recessed in walls of sufficient depth to suit style of trim indicated.
1. Exposed Flat Trim: One-piece combination trim and perimeter doorframe overlapping surrounding wall surface with exposed trim face and wall return at outer edge (backbend).
- E. Semirecessed Cabinet: Cabinet box partially recessed in walls of sufficient depth to suit style of trim indicated; with one-piece combination trim and perimeter doorframe overlapping surrounding wall surface with exposed trim face and wall return at outer edge (backbend). Provide where walls are of insufficient depth for recessed cabinets but are of sufficient depth to accommodate semirecessed cabinet installation.
1. Square-Edge Trim: 1-1/4- to 1-1/2-inch (32- to 38-mm) backbend depth.
 2. Rolled-Edge Trim: 2-1/2-inch (64-mm) backbend depth.
- F. Surface-Mounted Cabinet: Cabinet box fully exposed and mounted directly on wall; with no trim. Provide where walls are of insufficient depth for semirecessed cabinet installation.
- G. Cabinet Trim Material: [Steel sheet] [Stainless-steel sheet] [Same material and finish as door].
- H. Door Material: [0.0966-inch- (2.5-mm-) thick steel] [0.0781-inch- (2.0-mm-) thick, stainless-steel] [0.1094-inch- (2.8-mm-) thick, stainless-steel] sheet.

- I. Door Style: Solid opaque panel with frame.
- J. Door Hardware: Manufacturer's standard door-operating hardware of proper type for cabinet type, trim style, and door material and style indicated, and as follows:
1. Recessed door pull.
 2. Continuous Hinge: Same material and finish as trim, permitting door to open 180 degrees.
 3. Mechanical Deadlock: Lockbolt retracted and extended by five-tumbler **[paracentric]** **[mogul]** cylinder; keyed one side.
 - a. Lockbolt: 1-1/2 inches high by 3/4 inch (38 mm high by 19 mm) thick; 5/8-inch (16-mm) throw.
 4. Mechanical Deadlock: As specified in Section 087163 "Detention Door Hardware."
 5. Mechanical Snaplatch: Automatic snaplatch when closed; latchbolt retracted by five-tumbler **[paracentric]** **[mogul]** cylinder; keyed one side.
 - a. Lockbolt: 1 inch high by 7/16 inch (25 mm high by 11 mm) thick; 5/16-inch (8-mm) throw.
 6. Mechanical Snaplatch: As specified in Section 087163 "Detention Door Hardware."
- K. Accessories:
1. Mounting Bracket: Manufacturer's standard steel, designed to secure fire extinguisher to security fire protection cabinet, of sizes required for types and capacities of fire extinguishers indicated, with plated or baked-enamel finish.
 2. Identification: Lettering complying with authorities having jurisdiction for letter style, size, spacing, and location. Locate **[as indicated]** **[as directed by DEN Project Manager]** <Insert location>.
 - a. Identify fire extinguisher in security fire protection cabinet with the words "**[FIRE EXTINGUISHER]** <Insert identification>."
 - 1) Location: Applied to **[cabinet door]** **[location indicated on Drawings]**.
 - 2) Application Process: **[Silk-screened]** **[Engraved]** **[Etched]** **[Decals]** **[Pressure-sensitive vinyl letters]**.
 - 3) Lettering Color: **[Red]** **[Black]** **[White]**.
 - 4) Orientation: **[Vertical]** **[Horizontal]** **[As indicated on Drawings]**.
 3. Keys to Door Locks: Three per lock.
- L. Finishes:
1. Manufacturer's standard baked-enamel paint for the following:
 - a. Exterior of cabinet **[door]** **[trim]** [, **door, and trim]** except for those surfaces

- indicated to receive another finish.
b. Interior of cabinet[**and door**].

2. Steel: [**Factory primed for field painting**] [**Baked enamel or powder coat**].
3. Stainless Steel: No. 4 finish.

2.5 FABRICATION

- A. Fire Protection Cabinets: Provide manufacturer's standard box (tub) with trim, frame, door, and hardware to suit cabinet type, trim style, and door style indicated.
1. Weld joints and grind smooth.
 2. Provide factory-drilled mounting holes.
 3. Prepare doors and frames to receive locks.
 4. Install door locks at factory.
- B. Cabinet Doors: Fabricate doors according to manufacturer's standards, from materials indicated and coordinated with cabinet types and trim styles selected.
1. Fabricate doorframes with tubular stiles and rails and hollow-metal design, minimum **1/2 inch** (13 mm) thick.
 2. Fabricate doorframes of one-piece construction with edges flanged.
 3. Miter and weld perimeter doorframes.
- C. Cabinet Trim: Fabricate cabinet trim in one piece with corners mitered, welded, and ground smooth.

2.6 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces of fire protection cabinets from damage by applying a strippable, temporary protective covering before shipping.
- C. Finish fire protection cabinets after assembly.
- D. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.7 FACTORY FINISHING OF HOSE VALVE AND EXTINGUISHER CABINETS - GENERAL

- A. Painted Finishes: Provide painted finish to comply with requirements indicated below for extent, preparation, and type.
- B. Extent of Painted Finish: Apply painted finish to both concealed and exposed surfaces

of cabinet components, except where other than a painted finish is indicated.

- C. Color: Provide color or color matches indicated, or, if not otherwise indicated, as selected by DEN Project Manager from manufacturer's standard colors.
- D. Preparation: Clean surfaces of dirt, grease, and loose rust or mill scale.
- E. Baked Enamel Finish: Immediately after cleaning and pretreatment, apply cabinet manufacturer's standard baked enamel finish system to the following surfaces:
 - 1. Interior of cabinet.
 - 2. Exterior of cabinet, except for those surfaces indicated to receive another finish.
- F. Stainless Steel Finish: AISI No. 4 polished finish. Furnish with paper masking (for use in all public areas).

2.8 STEEL FINISHES

- A. Surface Preparation: Remove mill scale and rust, if present, from uncoated steel, complying with **[SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning"] [or] [SSPC-SP 8, "Pickling"] <Insert surface preparation method>.** **[After cleaning, apply a conversion coating suited to the organic coating to be applied over it.]**
- B. Factory Prime Finish: Apply manufacturer's standard, fast-curing, lead- and chromate-free, universal primer immediately after surface preparation and pretreatment.
- C. Baked-Enamel or Powder-Coat Finish: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for applying and baking to achieve a minimum dry film thickness of **2 mils (0.05 mm)**.
 - 1. Color and Gloss: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and gloss>.**

2.9 STAINLESS-STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 1. Run grain of directional finishes with long dimension of each piece.
 - 2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
 - 3. Directional Satin Finish: No. 4.
 - 4. Dull Satin Finish: No. 6.
 - 5. Reflective, Directional Polish: No. 7.

- 6. Mirrorlike Reflective, Nondirectional Polish: No. 8.
- C. Bright, Cold-Rolled, Unpolished Finish: No. 2B.

PART 3 - EXECUTION

3.1 DELIVERY, STORAGE, AND HANDLING

- A. Deliver and store cabinets, extinguishers and other equipment in shipping containers, with labeling in place, under provisions of Division 01.

3.2 EXAMINATION

- A. Examine roughing-in for hose **[valves]** **[racks]** and cabinets to verify actual locations of piping connections before cabinet installation.
- B. Examine walls and partitions for suitable framing depth and blocking where **[recessed]** **[semirecessed]** **[recessed and semirecessed]** cabinets will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PREPARATION

- A. Prepare recesses for **[recessed]** **[and]** **[semirecessed]** fire protection cabinets as required by type and size of cabinet and trim style.

3.4 INSTALLATION

- A. General: Install fire protection cabinets in locations and at mounting heights indicated **[or, if not indicated, at heights indicated below:]** **[or, if not indicated, at heights acceptable to authorities having jurisdiction.]**

- 1. Fire Protection Cabinets: **[54 inches (1372 mm)]** **<Insert dimension>** above finished floor to top of cabinet.

- B. Fire Protection Cabinets: Fasten cabinets to structure, square and plumb.

- 1. Unless otherwise indicated, provide recessed fire protection cabinets. If wall thickness is not adequate for recessed cabinets, provide semirecessed fire protection cabinets.
- 2. Provide inside latch and lock for break-glass panels.
- 3. Fasten mounting brackets to inside surface of fire protection cabinets, square and plumb.
- 4. Fire-Rated, **[Hose and Valve]** **[Hose-Valve]** Cabinets:

- a. Install cabinet with not more than **1/16-inch (1.6-mm)** tolerance between

- pipe OD and knockout OD. Center pipe within knockout.
- b. Seal through penetrations with firestopping sealant as specified in Section 078413 "Penetration Firestopping."

- C. Identification: Apply **[decals]** **[vinyl lettering]** at locations indicated.

3.5 ADJUSTING AND CLEANING

- A. Remove temporary protective coverings and strippable films, if any, as fire protection cabinets are installed unless otherwise indicated in manufacturer's written installation instructions.
- B. Adjust fire protection cabinet doors to operate easily without binding. Verify that integral locking devices operate properly.
- C. On completion of fire protection cabinet installation, clean interior and exterior surfaces as recommended by manufacturer.
- D. Touch up marred finishes, or replace fire protection cabinets that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by fire protection cabinet and mounting bracket manufacturers.
- E. Replace fire protection cabinets that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 104413

SECTION 104416 - FIRE EXTINGUISHERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes portable, [**hand-carried**] [**wheeled**] fire extinguishers[**and mounting brackets for fire extinguishers**].
- B. Owner-Furnished Material: [**Hand-carried**] [**Wheeled**] fire extinguishers.
- C. Related Sections:
 - 1. Section 104413 "Fire Valve and Extinguisher Cabinets."
 - 2. Section 211100 "Facility Fire-Suppression Water-Service Piping" for hose systems, racks, and valves.
 - 3. Section 233813 "Commercial-Kitchen Hoods" for fire extinguishing systems provided as part of commercial-kitchen exhaust hoods.
- D. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include rating and classification, material descriptions, dimensions of individual components and profiles, and finishes for fire extinguisher[**and mounting brackets**].
 - 1. Include data substantiating that materials comply with requirements.
- B. Product Schedule: For fire extinguishers. Coordinate final fire extinguisher schedule with fire protection cabinet schedule to ensure proper fit and function.[**Use same designations indicated on Drawings.**]

1.4 INFORMATIONAL SUBMITTALS

- A. Warranty: Sample of special warranty.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For fire extinguishers to include in maintenance manuals.

1.6 QUALITY ASSURANCE

- A. NFPA Compliance: Fabricate and label fire extinguishers to comply with NFPA 10, "Portable Fire Extinguishers."
- B. Fire Extinguishers: Listed and labeled for type, rating, and classification by an independent testing agency acceptable to authorities having jurisdiction.
 - 1. Provide fire extinguishers approved, listed, and labeled by FMG.
- C. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager] <Insert location>**.
 - 1. Review methods and procedures related to fire extinguishers including, but not limited to, the following:
 - a. Schedules and coordination requirements.

1.7 COORDINATION

- A. Coordinate type and capacity of fire extinguishers with fire protection cabinets to ensure fit and function.

1.8 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace fire extinguishers that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Failure of hydrostatic test according to NFPA 10.
 - b. Faulty operation of valves or release levers.
 - 2. Warranty Period: Minimum **[six (6)] <Insert number>** years from date of Substantial Completion.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 PORTABLE, HAND-CARRIED FIRE EXTINGUISHERS

- A. Fire Extinguishers: Type, size, and capacity for each [**fire protection cabinet**] [**mounting bracket**] [**fire protection cabinet and mounting bracket**] indicated.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Amerex Corporation.
 - b. Ansul Incorporated; Tyco International Ltd.
 - c. Badger Fire Protection; a Kidde company.
 - d. Buckeye Fire Equipment Company.
 - e. Fire End & Croker Corporation.
 - f. J. L. Industries, Inc.; a division of Activar Construction Products Group.
 - g. Kidde Residential and Commercial Division; Subsidiary of Kidde plc.
 - h. Larsen's Manufacturing Company.
 - i. Moon-American.
 - j. Pem All Fire Extinguisher Corp.; a division of PEM Systems, Inc.
 - k. Potter Roemer LLC.
 - l. Pyro-Chem; Tyco Safety Products.
 - m. **<Insert manufacturer's name>**.
 - n. or approved equal.
 2. Valves: Manufacturer's standard
 3. Handles and Levers: Manufacturer's standard.
 4. Instruction Labels: Include pictorial marking system complying with NFPA 10, Appendix B[**and bar coding for documenting fire extinguisher location, inspections, maintenance, and recharging**].
- B. Stored-Pressure Water Type **<Insert drawing designation>**: UL-rated 2-A, **2.5-gal.** (9.5-L) nominal capacity, with water in stainless-steel container; with pressure-indicating gage.
- C. Stored-Pressure Antifreeze Water Type **<Insert drawing designation>**: UL-rated 2-A, **2.5-gal.** (9.5-L) nominal capacity, with water and approved antifreeze solution mixed for temperatures as low as **minus 40 deg F** (minus 40 deg C) in stainless-steel container; with pressure-indicating gage.
- D. Stored-Pressure Water-Mist Type **<Insert drawing designation>**: UL-rated 2-A:C, **2.5-gal.** (9.5-L) nominal capacity, with water in enameled-steel container; with pressure-indicating gage.
- E. Pressurized, AFFF-Foam Type **<Insert drawing designation>**: UL-rated [**2-A:10-B, 1.6-gal.** (6-L)] [**3-A:20-B, 2.5-gal.** (9.5-L)] nominal capacity, with AFFF foam in stainless-steel container; with pressure-indicating gage.

- F. Pressurized, FFFP-Foam Type <Insert drawing designation>: UL-rated 3-A:20-B, 2.5-gal. (9.5-L) nominal capacity, with FFFP foam in stainless-steel container; with pressure-indicating gage.
- G. Wet-Chemical Type <Insert drawing designation>: UL-rated 2-A:1-B:C:K, [1.6-gal. (6-L)] [2.5-gal. (9.5-L)] nominal capacity, with potassium [acetate] [citrate] [carbonate]-based chemical in stainless-steel container; with pressure-indicating gage.
- H. Regular Dry-Chemical Type <Insert drawing designation>: UL-rated <Insert capacity> nominal capacity, with sodium bicarbonate-based dry chemical in manufacturer's standard enameled container.
- I. Regular Dry-Chemical Type in Steel Container <Insert drawing designation>: UL-rated [2-B:C, 1-lb (0.4-kg)] [10-B:C, 2.5-lb (1.1-kg)] [10-B:C, 5-lb (2.3-kg)] [40-B:C, 5.5-lb (2.5-kg)] [40-B:C, 6-lb (2.7-kg)] [60-B:C, 10-lb (4.5-kg)] [120-B:C, 20-lb (9.1-kg)] nominal capacity, with sodium bicarbonate-based dry chemical in enameled-steel container.
- J. Regular Dry-Chemical Type in Aluminum Container <Insert drawing designation>: UL-rated [2-B:C, 1-lb (0.4-kg)] [10-B:C, 2.5-lb (1.1-kg)] [10-B:C, 5-lb (2.3-kg)] [40-B:C, 5.5-lb (2.5-kg)] [60-B:C, 10-lb (4.5-kg)] [120-B:C, 20-lb (9.1-kg)] nominal capacity, with sodium bicarbonate-based dry chemical in enameled-aluminum container.
- K. Regular Dry-Chemical Type in Brass Container <Insert drawing designation>: UL-rated [40-B:C, 6-lb (2.7-kg)] [60-B:C, 10-lb (4.5-kg)] [120-B:C, 20-lb (9.1-kg)] nominal capacity, with sodium bicarbonate-based dry chemical in chrome-plated brass container.
- L. Multipurpose Dry-Chemical Type in Steel Container <Insert drawing designation>: UL-rated [1-A:10-B:C, 2.5-lb (1.1-kg)] [2-A:10-B:C, 5-lb (2.3-kg)] [3-A:40-B:C, 5-lb (2.3-kg)] [3-A:40-B:C, 6-lb (2.7-kg)] [4-A:60-B:C, 10-lb (4.5-kg)] [20-A:120-B:C, 20-lb (9.1-kg)] nominal capacity, with monoammonium phosphate-based dry chemical in enameled-steel container.
- M. Multipurpose Dry-Chemical Type in Aluminum Container <Insert drawing designation>: UL-rated [1-A:10-B:C, 2.5-lb (1.1-kg)] [2-A:10-B:C, 5-lb (2.3-kg)] [3-A:40-B:C, 5-lb (2.3-kg)] [3-A:40-B:C, 6-lb (2.7-kg)] [4-A:60-B:C, 10-lb (4.5-kg)] [20-A:120-B:C, 20-lb (9.1-kg)] nominal capacity, with monoammonium phosphate-based dry chemical in enameled-aluminum container.
- N. Multipurpose Dry-Chemical Type in Brass Container <Insert drawing designation>: UL-rated [2-A:10-B:C, 5-lb (2.3-kg)] [3-A:40-B:C, 6-lb (2.7-kg)] [4-A:60-B:C, 10-lb (4.5-kg)] [4-A:80-B:C, 10-lb (4.5-kg)] [20-A:120-B:C, 20-lb (9.1-kg)] nominal capacity, with monoammonium phosphate-based dry chemical in chrome-plated brass container.
- O. Purple-K Dry-Chemical Type in Aluminum Container <Insert drawing designation>: UL-rated [10-B:C, 2.5-lb (1.1-kg)] [30-B:C, 5-lb (2.3-kg)] [120-B:C, 20-lb (9.1-kg)]

nominal capacity, with potassium bicarbonate-based dry chemical in enameled-aluminum container.

- P. Purple-K Dry-Chemical Type in Brass Container <Insert drawing designation>: UL-rated [80-B:C, 10-lb (4.5-kg)] [120-B:C, 20-lb (9.1-kg)] nominal capacity, with potassium bicarbonate-based dry chemical in chrome-plated brass container.
- Q. Carbon Dioxide Type <Insert drawing designation>: Used for all electrical and mechanical rooms. Minimum of one for each room located per NFPA 10 and applicable codes.
1. 5 pound capacity, 5BC UL rating.
 2. UL-rated [5-B:C, 5-lb (2.3-kg)] [10-B:C, 10-lb (4.5-kg)] [10-B:C, 15-lb (6.8-kg)] [10-B:C, 20-lb (9.1-kg)] nominal capacity, with carbon dioxide in [manufacturer's standard enameled-metal] [enameled-steel] [enameled-aluminum] container.
- R. Dry-Powder Type <Insert drawing designation>: [FMG-approved,]UL-rated Class D, 30-lb (13.6-kg) nominal capacity, with [sodium chloride] [copper]-based powder in enameled-steel container; with pressure-indicating gage.
- S. Halon Type <Insert drawing designation>: UL-rated [5-B:C, 2.5-lb (1.1-kg)] [10-B:C, 5-lb (2.3-kg)] nominal capacity, in enameled-steel container; with pressure-indicating gage.
- T. Clean-Agent Type in Aluminum Container <Insert drawing designation>: UL-rated [1-B:C, 1.4-lb (0.6-kg)] [2-B:C, 2.5-lb (1.1-kg)] [5-B:C, 5-lb (2.3-kg)] nominal capacity, with HCFC Blend B agent and inert material in enameled-aluminum container; with pressure-indicating gage.
- U. Clean-Agent Type in Brass Container <Insert drawing designation>: UL-rated [1-A:10-B:C, 11-lb (5-kg)] [2-A:10-B:C, 15.5-lb (7-kg)] nominal capacity, with HCFC Blend B agent and inert material in chrome-plated brass container; with pressure-indicating gage.
- V. Clean-Agent Type in Steel Container <Insert drawing designation>: UL-rated [5-B:C, 4.75-lb (2.2-kg)] [1-A:10-B:C, 10-lb (4.5-kg)] [2-A:10-B:C, 14-lb (6.4-kg)] nominal capacity, with HFC blend agent and inert material in enameled-steel container; with pressure-indicating gage.

2.2 MOUNTING BRACKETS <Insert drawing designation>

- A. Mounting Brackets: Manufacturer's standard[galvanized] steel, designed to secure fire extinguisher to wall or structure, of sizes required for types and capacities of fire extinguishers indicated, with plated or [red] [black] baked-enamel finish.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Amerex Corporation.
 - b. Ansul Incorporated; Tyco International Ltd.

- c. Badger Fire Protection; a Kidde company.
- d. Buckeye Fire Equipment Company.
- e. Fire End & Croker Corporation.
- f. J. L. Industries, Inc.; a division of Activar Construction Products Group.
- g. Larsen's Manufacturing Company.
- h. Potter Roemer LLC.
- i. **<Insert manufacturer's name>**.
- j. or approved equal.

B. Identification: Lettering complying with authorities having jurisdiction for letter style, size, spacing, and location. Locate as indicated by DEN Project Manager.

1. Identify bracket-mounted fire extinguishers with the words "FIRE EXTINGUISHER" in red letter decals applied to mounting surface.

- a. Orientation: [**Vertical**] [**Horizontal**].

2.3 WHEELED FIRE EXTINGUISHERS **<Insert drawing designation>**

A. Wheeled Fire Extinguishers: Type, size, and capacity for locations indicated, complete with carriage.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Amerex Corporation.
- b. Ansul Incorporated; Tyco International Ltd.
- c. Badger Fire Protection; a Kidde company.
- d. Buckeye Fire Equipment Company.
- e. Fire End & Croker Corporation.
- f. Modern Metal Products; Division of Technico Inc.
- g. Moon-American.
- h. Pyro-Chem; Tyco Safety Products.
- i. **<Insert manufacturer's name>**.
- j. or approved equal.

2. Carriage: Fabricated from enameled-steel pipe, complete with hanger assembly, long-range nozzle, hose, and [**semipneumatic solid-rubber tires**] [**wide-rim wheels**].

- a. Hose: [**15 feet** (4.6 m)] [**50 feet** (15.2 m)] [**100 feet** (30.5 m)].

B. Pressurized, FFFP-Foam Type: UL-rated 20-A:160-B, **33-gal.** (125-L) nominal capacity, with FFFP foam in stainless-steel container.

C. Regular Dry-Chemical Type: UL-rated [**160-B:C, 50-lb** (23-kg)] [**240-B:C, 150-lb** (68-kg)] [**160-B:C, 250-lb** (113-kg)] nominal capacity, with sodium bicarbonate-based dry chemical in [**regulated**] [**stored**] [**direct**]-pressure, enameled-steel container.

- D. Multipurpose Dry-Chemical Type: UL-rated [20-A:160-B:C, 30-lb (13.6-kg)] [30-A:160-B:C, 50-lb (23-kg)] [40-A:240-B:C, 125-lb (57-kg)] [40-A:160-B:C, 250-lb (113-kg)] nominal capacity, with monoammonium phosphate-based dry chemical in [regulated] [stored] [direct]-pressure, enameled-[steel] [aluminum] [steel or -aluminum] container.
- E. Carbon Dioxide Type: UL-rated [20-B:C, 50-lb (23-kg)] [20-B:C, 100-lb (45-kg)] nominal capacity, with carbon dioxide in [manufacturer's standard enameled-metal] [enameled-steel] [enameled-aluminum] container.
- F. Dry-Powder Type: [FMG-approved,]UL-rated Class D, [sodium chloride-based powder, 150-lb (68-kg)] [copper-based powder, 250-lb (113-kg)] nominal capacity, in regulated-pressure, enameled-steel container; with pressure-indicating gage.
- G. Clean-Agent Type: UL-rated [4-A:40-B:C, 65-lb (29-kg)] [10-A:80-B:C, 150-lb (68-kg)] nominal capacity, with HCFC Blend B agent and inert material in stored-pressure, enameled-steel container; with pressure-indicating gage.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine fire extinguishers for proper charging and tagging.
 - 1. Remove and replace damaged, defective, or undercharged fire extinguishers.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install fire extinguishers[and mounting brackets] in locations indicated and in compliance with requirements of authorities having jurisdiction.
 - 1. Mounting Brackets: [54 inches (1372 mm)] <Insert dimension> above finished floor to top of fire extinguisher.
- B. Mounting Brackets: Fasten mounting brackets to surfaces, square and plumb, at locations indicated.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 104416

SECTION 105113 - METAL LOCKERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Standard metal lockers.
 - 2. Heavy-duty metal lockers.
 - 3. Athletic metal lockers.
 - 4. Open-front athletic metal lockers.
 - 5. Coin-operated metal lockers.
 - 6. Locker benches.
- B. Related Section:
 - 1. Section 105116 "Wood Lockers" for wood-faced and plastic-laminate-faced lockers.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of metal locker[**and bench**].
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For metal lockers. Include plans, elevations, sections, details, and attachments to other work.
 - 1. Show locker trim and accessories.
 - 2. Include locker identification system and numbering sequence.
- C. Samples for Initial Selection: For units with factory-applied color finishes.

- D. Samples for Verification: For **[metal lockers]** **[and]** **[locker benches]**, in manufacturer's standard sizes.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer.
- B. Warranty: Sample of special warranty.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For adjusting, repairing, and replacing locker doors and latching mechanisms to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Full-size units of the following metal locker hardware items equal to **[10]** **<Insert number>** percent of amount installed for each type and finish installed, but no fewer than **[five (5)]** **<Insert number>** units:
 - a. Locks.
 - b. Identification plates.
 - c. Hooks.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.
- B. Source Limitations: Obtain metal lockers^[, **locker benches,**] and accessories from single source from single manufacturer.
- C. Regulatory Requirements: Where metal lockers^{[**and benches]**} are indicated to comply with accessibility requirements, comply with **[the U.S. Architectural & Transportation Barriers Compliance Board's "Americans with Disabilities Act (ADA) and Architectural Barriers Act (ABA) Accessibility Guidelines for Buildings and Facilities"]** **[and]** **[ICC/ANSI A117.1]**.
- D. Preinstallation Conference: Conduct conference at **[Project site]** **[location and time as determined by DEN Project Manager]****<Insert location>**.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Do not deliver metal lockers until spaces to receive them are clean, dry, and ready for their installation.
- B. Deliver [**master and control keys**] [**combination control charts**] to Owner by registered mail or overnight package service[.], **addressed as follows:**
 - 1. **<Insert name and address of Owner's representative>**.

1.9 PROJECT CONDITIONS

- A. Field Measurements: Verify actual dimensions of recessed openings by field measurements before fabrication.

1.10 COORDINATION

- A. Coordinate sizes and locations of [**concrete**] [**concrete masonry**] [**wood**] bases for metal lockers.
- B. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of work specified in other Sections to ensure that metal lockers can be supported and installed as indicated.

1.11 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal lockers that fail in materials or workmanship, excluding finish, within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures.
 - b. Faulty operation of latches and other door hardware.
 - 2. Damage from deliberate destruction and vandalism is excluded.
 - 3. Warranty Period for Knocked-Down Metal Lockers: Minimum [**two (2)**] **<Insert number>** years from date of Substantial Completion.
 - 4. Warranty Period for All-Welded Metal Lockers: [**Lifetime**] [**Minimum ten (10) years**] **<Insert years>** from date of Substantial Completion.

1.12 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B, suitable for exposed applications.
- B. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B; with **A60** (ZF180) zinc-iron, alloy (galvannealed) coating designation.
- C. Expanded Metal: ASTM F 1267, Type II (flattened), Class I, **3/4-inch** (19-mm) steel mesh, with at least 70 percent open area.
- D. Stainless-Steel Sheet: ASTM A 666, Type 304.
- E. Plastic Laminate: NEMA LD 3, Grade HGP.
- F. Extruded Aluminum: **ASTM B 221** (ASTM B 221M), alloy and temper recommended by aluminum producer and manufacturer for type of use and finish indicated.
- G. Steel Tube: ASTM A 500, cold rolled.
- H. Particleboard: ANSI A208.1, Grade M-2.
- I. Fasteners: Zinc- or nickel-plated steel, slotless-type, exposed bolt heads; with self-locking nuts or lock washers for nuts on moving parts.
- J. Anchors: Material, type, and size required for secure anchorage to each substrate.
 - 1. Provide nonferrous-metal or hot-dip galvanized anchors and inserts on inside face of exterior walls[, **and elsewhere as indicated,**] for corrosion resistance.
 - 2. Provide toothed-steel or lead expansion sleeves for drilled-in-place anchors.

2.2 STANDARD METAL LOCKERS

- A. Products: Subject to compliance with requirements, provide one of the following:
 - 1. Art Metal Products; [**Artisan Silent**] [**Magnum Student K.D. Corridor**] [**Standard K.D.**] [**Standard Quiet**] [**Quiet II**] Lockers.
 - 2. ASI Storage Solutions Inc.; Traditional Collection.
 - 3. DeBourgh Mfg. Co.; Worley Lockers.
 - 4. General Storage Systems Ltd.; Decor Tri-Lok [**Corona**] [**Eclipse**] [**Eclipse II**] [**Smart Line**] [**Titan**] [**Titan II**].
 - 5. Hadrian Manufacturing Inc.; Emperor Lockers.
 - 6. List Industries Inc.; [**Classic Line of Superior KD**] [**Marquis Student Quiet KD**] [**Standard Quiet KD**] [**Whisper Quiet KD**] Lockers.
 - 7. Lyon Workspace Products, LLC; Standard Lockers.
 - 8. Penco Products, Inc.; [**Guardian**] [**Vanguard**] Lockers.

9. Republic Storage Systems Company; **[Designer] [Quiet] [Single Point] [Standard]** Lockers.
 10. Shanahan's Manufacturing Limited; Deluxe Series Lockers.
 11. Tensco Corp.; Tensco Lockers.
 12. **<Insert manufacturer's name; product name or designation>**.
 13. or approved equal.
- B. Locker Arrangement: **[Single tier] [Double tier] [Triple tier] [Box] [Two person] [Duplex] [16 person] [As indicated on Drawings] <Insert configuration>**.
- C. Material: **[Cold-rolled] [Metallic-coated]** steel sheet.
- D. Body: Assembled by riveting or bolting body components together. Fabricate from unperforated steel sheet as follows:
1. Tops, Bottoms, and Intermediate Dividers: **0.024-inch** (0.61-mm) nominal thickness, with single bend at sides.
 2. Backs and Sides: **0.024-inch** (0.61-mm) nominal thickness, with full-height, double-flanged connections.
 3. Shelves: **0.024-inch** (0.61-mm) nominal thickness, with double bend at front and single bend at sides and back.
- E. Frames: Channel formed; fabricated from **0.060-inch** (1.52-mm) nominal-thickness steel sheet; lapped and factory welded at corners; with top and bottom main frames factory welded into vertical main frames. Form continuous, integral door strike full height on vertical main frames.
1. Cross Frames between Tiers: Channel formed and fabricated from same material as main frames; welded to vertical main frames.
 2. Frame Vents: Fabricate face frames with vents.
- F. Doors: One piece; fabricated from **0.060-inch** (1.52-mm) nominal-thickness steel sheet; formed into channel shape with double bend at vertical edges and with right-angle single bend at horizontal edges.
1. Doors less than **12 inches** (305 mm) wide may be fabricated from **0.048-inch** (1.21-mm) nominal-thickness steel sheet.
 2. Doors for box lockers less than **15 inches** (381 mm) wide may be fabricated from **0.048-inch** (1.21-mm) nominal-thickness steel sheet.
 3. Reinforcement: Manufacturer's standard reinforcing angles, channels, or stiffeners for doors more than **15 inches** (381 mm) wide; welded to inner face of doors.
 4. Stiffeners: Manufacturer's standard full-height stiffener fabricated from **0.048-inch** (1.21-mm) nominal-thickness steel sheet; welded to inner face of doors.
 5. Sound-Dampening Panels: Manufacturer's standard, designed to stiffen doors and reduce sound levels when doors are closed, of die-formed metal with full perimeter flange and sound-dampening material; welded to inner face of doors.
 6. Door Style: **[Unperforated panel.] [Vented panel as follows:]**

- a. Louvered Vents: No fewer than **[six louver openings at top and bottom for single-tier] [three louver openings at top and bottom for double-tier] [two louver openings at top and bottom, or three louver openings at top or bottom, for triple-tier]** <Insert configuration> lockers.
 - b. Security Vents: Manufacturer's standard, stamped horizontal or vertical.
 - c. Perforated Vents: **[Manufacturer's standard shape and configuration]** <Insert shape and configuration>.
 - d. Concealed Vents: Slotted perforations in top and bottom horizontal return flanges of doors.
- G. Hinges: Welded to door and attached to door frame with no fewer than two factory-installed rivets per hinge that are completely concealed and tamper resistant when door is closed; fabricated to swing 180 degrees[; **self-closing**].
1. Knuckle Hinges: Steel, full loop, five or seven knuckles, tight pin; minimum **2 inches** (51 mm) high. Provide no fewer than three hinges for each door more than **42 inches** (1067 mm) high.
 2. Continuous Hinges: Manufacturer's standard, steel, full height.
- H. Projecting Door Handle and Latch: Finger-lift latch control designed for use with either built-in combination locks or padlocks; positive automatic latching, chromium plated; pry and vandal resistant.
1. Latch Hooks: Equip **[doors 48 inches** (1219 mm) **and higher with three latch hooks]** **[and] [doors less than 48 inches** (1219 mm) **high with two latch hooks]**; fabricated from **0.105-inch** (2.66-mm) nominal-thickness steel sheet; welded or riveted to full-height door strikes; with resilient silencer on each latch hook.
 2. Latching Mechanism: Manufacturer's standard, rattle-free latching mechanism and moving components isolated to prevent metal-to-metal contact, and incorporating a prelocking device that allows locker door to be locked while door is open and then closed without unlocking or damaging lock or latching mechanism.
- I. Recessed Door Handle and Latch: Stainless-steel cup with integral door pull, recessed so locking device does not protrude beyond face of door; pry and vandal resistant.
1. Multipoint Latching: Finger-lift latch control designed for use with built-in combination locks, built-in key locks, or padlocks; positive automatic latching and prelocking.
 - a. Latch Hooks: Equip **[doors 48 inches** (1219 mm) **and higher with three latch hooks]** **[and] [doors less than 48 inches** (1219 mm) **high with two latch hooks]**; fabricated from **0.105-inch** (2.66-mm) nominal-thickness steel sheet; welded or riveted to full-height door strikes; with resilient silencer on each latch hook.
 - b. Latching Mechanism: Manufacturer's standard, rattle-free latching mechanism and moving components isolated[**with vinyl or nylon**] to prevent metal-to-metal contact, and incorporating a prelocking device that

allows locker door to be locked while door is open and then closed without unlocking or damaging lock or latching mechanism.

2. Single-Point Latching: Nonmoving latch hook **[designed to engage bolt of built-in combination or cylinder lock] [with steel padlock loop that projects through recessed cup and is finished to match metal locker body]**.
 - a. Latch Hook: Equip each door with one latch hook, fabricated from **0.105-inch** (2.66-mm) nominal-thickness steel sheet; welded midway up full-height door strike; with resilient silencer.
- J. Door Handle and Latch for **[Box] [16-Person]** Lockers: Stainless-steel strike plate with integral pull; with steel padlock loop that projects through metal locker door.
- K. Combination Padlocks: **[Key-controlled, three-number dialing combination locks; capable of five combination changes] [Provided by Owner]**.
- L. Built-in Combination Locks: Key-controlled, three-number dialing combination locks; capable of at least five combination changes made automatically with a control key.
 1. Bolt Operation: **[Manually locking deadbolt] [or] [automatically locking spring bolt]**.
- M. Cylinder Locks: Built-in, flush, cam locks with five-pin tumbler keyway, keyed separately and master keyed. Furnish two change keys for each lock and **[two] <Insert number>** master keys.
 1. Key Type: **[Flat] [Grooved]**, with minimum **2- by 2.68-inch** (51- by 68.3-mm) **key head for accessible lockers]**.
 2. Bolt Operation: **[Manually locking deadbolt] [or] [automatically locking spring bolt]**.
- N. Equipment: Equip each metal locker with identification plate and the following unless otherwise indicated:
 1. Single-Tier Units: Shelf, one double-prong ceiling hook, and two single-prong wall hooks.
 2. Double-Tier Units: One double-prong ceiling hook and two single-prong wall hooks.
 3. **[Triple-Tier] [Box]** Units: One double-prong ceiling hook.
 4. Coat Rods: As indicated on Drawings.
 5. Coat Rods: For each compartment of **[single-tier] [double-tier] [and] [triple-tier]** metal lockers.
 6. Coat Rods: In lieu of ceiling hook for metal lockers **24 inches** (610 mm) high or more.
 7. Coat Rods: In lieu of ceiling hook for metal lockers **18 inches** (457 mm) deep or more.
- O. Accessories:

1. Legs: **6 inches** (152 mm) high; formed by extending vertical frame members, or fabricated from **0.075-inch** (1.90-mm) nominal-thickness steel sheet; welded to bottom of locker.
 - a. Closed Front and End Bases: Fabricated from **0.036-inch** (0.91-mm) nominal-thickness steel sheet.
 2. Continuous Zee Base: Fabricated from [**0.060-inch** (1.52-mm)] [**0.075-inch** (1.90-mm)] [**manufacturer's standard thickness, but not less than 0.060-inch** (1.52-mm)] nominal-thickness steel sheet.
 - a. Height: [**4 inches** (102 mm)] **<Insert dimension>**.
 3. Continuous Sloping Tops: Fabricated from [**0.036-inch** (0.91-mm)] [**0.048-inch** (1.21-mm)] [**manufacturer's standard thickness, but not less than 0.036-inch** (0.91-mm)] nominal-thickness steel sheet.
 - a. Closures: [**Vertical**] [**Hipped**]-end type.
 - b. Sloping-top corner fillers, mitered.
 4. Individual Sloping Tops: Fabricated from **0.024-inch** (0.61-mm) nominal-thickness steel sheet.
 5. Recess Trim: Fabricated from **0.048-inch** (1.21-mm) nominal-thickness steel sheet.
 6. Filler Panels: Fabricated from [**0.036-inch** (0.91-mm)] [**0.048-inch** (1.21-mm)] [**manufacturer's standard thickness, but not less than 0.036-inch** (0.91-mm)] nominal-thickness steel sheet.
 7. Boxed End Panels: Fabricated from **0.060-inch** (1.52-mm) nominal-thickness steel sheet.
 8. Finished End Panels: Fabricated from **0.024-inch** (0.61-mm) nominal-thickness steel sheet.
 9. Center Dividers: Fabricated from **0.024-inch** (0.61-mm) nominal-thickness steel sheet.
- P. Finish: [**Baked enamel**] [**or**] [**powder coat**].
1. Color(s): [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] [**Two colors, with door one color and frame and body another color; as selected by DEN Project Manager from manufacturer's full range**].

2.3 HEAVY-DUTY METAL LOCKERS

- A. Products: Subject to compliance with requirements, provide one of the following:
1. Art Metal Products; [**Bulldog**] [**Champ**] Corridor Lockers.
 2. DeBourgh Mfg. Co.; Sentry Corridor/Personnel Lockers.
 3. List Industries Inc.; Marquis Protector.

4. Lyon Workspace Products, LLC; **[All-Welded] [Integrated Frame]** Lockers.
 5. Penco Products, Inc.; **[All-Welded] [All-Welded Defiant SPL]** Lockers.
 6. **<Insert manufacturer's name; product name or designation>**.
 7. or approved equal.
- B. Locker Arrangement: **[Single tier] [Double tier] [Triple tier] [As indicated on Drawings]** **<Insert configuration>**.
- C. Material: Cold-rolled steel sheet.
- D. Body: Assembled by welding body components together. Fabricate from unperforated steel sheet with thicknesses as follows:
1. Tops, Bottoms, and Sides: **0.060-inch** (1.52-mm) nominal thickness.
 2. Backs: **0.048-inch** (1.21-mm) nominal thickness.
 3. Shelves: **0.060-inch** (1.52-mm) nominal thickness, with double bend at front and single bend at sides and back.
- E. Frames: Channel formed; fabricated from **0.060-inch** (1.52-mm) nominal-thickness steel sheet; lapped and factory welded at corners; with top and bottom main frames factory welded into vertical main frames. Form continuous, integral door strike full height on vertical main frames.
1. Cross Frames between Tiers: Channel formed and fabricated from same material as main frames; welded to vertical main frames.
- F. Doors: One piece; fabricated from **0.075-inch** (1.90-mm) nominal-thickness steel sheet; formed into channel shape with double bend at vertical edges and with right-angle single bend at horizontal edges.
1. Reinforcement: Manufacturer's standard reinforcing angles, channels, or stiffeners for doors more than **15 inches** (381 mm) wide; welded to inner face of doors.
 2. Door Style:
 - a. Louvered Vents: No fewer than **[six louver openings at top and bottom for single-tier] [three louver openings at top and bottom for double-tier] [two louver openings at top and bottom, or three louver openings at top or bottom, for triple-tier]** **<Insert configuration>** lockers.
 - b. Security Vents: Manufacturer's standard, stamped horizontal or vertical.
 - c. Perforated Vents: **[Manufacturer's standard shape and configuration]** **<Insert shape and configuration>**.
- G. Hinges: Welded to door and attached to door frame with no fewer than two factory-installed rivets per hinge that are completely concealed and tamper resistant when door is closed; fabricated to swing 180 degrees[; **self-closing**].

1. Knuckle Hinges: Steel, full loop, five or seven knuckles, tight pin; minimum **2 inches** (51 mm) high. Provide no fewer than three hinges for each door more than **42 inches** (1067 mm) high.
 2. Continuous Hinges: Manufacturer's standard, steel, full height.
- H. Recessed Door Handle and Latch: Stainless-steel cup with integral door pull, recessed so locking device does not protrude beyond face of door; pry and vandal resistant.
1. Multipoint Latching: Finger-lift latch control designed for use with built-in combination locks or padlocks; positive automatic latching and prelocking.
 - a. Latch Hooks: Equip [**doors 48 inches** (1219 mm) **and higher with three latch hooks**] [**and**] [**doors less than 48 inches** (1219 mm) **high with two latch hooks**]; fabricated from **0.120-inch** (3.04-mm) nominal-thickness steel sheet; welded to full-height door strikes; with resilient silencer on each latch hook.
 - b. Latching Mechanism: Manufacturer's standard, rattle-free latching mechanism and moving components isolated to prevent metal-to-metal contact, and incorporating a prelocking device that allows locker door to be locked while door is open and then closed without unlocking or damaging lock or latching mechanism.
 2. Single-Point Latching: Nonmoving latch hook [**designed to engage bolt of built-in combination or cylinder lock**] [**with steel padlock loop that projects through recessed cup and is finished to match metal locker body**].
 - a. Latch Hook: Equip each door with one latch hook, fabricated from **0.120-inch** (3.04-mm) nominal-thickness steel sheet; welded midway up full-height door strike; with resilient silencer.
- I. Combination Padlocks: [**Key-controlled, three-number dialing combination locks; capable of five combination changes**] [**Provided by Owner**].
- J. Built-in Combination Locks: Key-controlled, three-number dialing combination locks; capable of at least five combination changes made automatically with a control key.
1. Bolt Operation: [**Manually locking deadbolt**] [**or**] [**automatically locking spring bolt**].
- K. Equipment: Equip each metal locker with identification plate and the following unless otherwise indicated:
1. Single-Tier Units: Shelf, one double-prong ceiling hook, and two single-prong wall hooks.
 2. Double-Tier Units: One double-prong ceiling hook and two single-prong wall hooks.
 3. Triple-Tier Units: One double-prong ceiling hook.
 4. Coat Rods: As indicated on Drawings.
 5. Coat Rods: For each compartment of [**single-tier**] [**double-tier**] [**and**] [**triple-tier**] metal lockers.

6. Coat Rods: In lieu of ceiling hook for metal lockers **24 inches** (610 mm) high or more.
7. Coat Rods: In lieu of ceiling hook for metal lockers **18 inches** (457 mm) deep or more.

L. Accessories:

1. Legs: **6 inches** (152 mm) high; formed by extending vertical frame members, or fabricated from **0.075-inch** (1.90-mm) nominal-thickness steel sheet; welded to bottom of locker.
 - a. Closed Front and End Bases: Fabricated from **0.036-inch** (0.91-mm) nominal-thickness steel sheet.
2. Continuous Zee Base: Fabricated from, [**0.060-inch** (1.52-mm)] [**0.075-inch** (1.90-mm)] [**manufacturer's standard thickness, but not less than 0.060-inch** (1.52-mm)] nominal-thickness steel sheet.
 - a. Height: [**4 inches** (102 mm)] **<Insert dimension>**.
3. Continuous Sloping Tops: Fabricated from **0.048-inch** (1.21-mm) nominal-thickness steel sheet, with a pitch of approximately 20 degrees.
 - a. Closures: [**Vertical**] [**Hipped**]-end type.
4. Recess Trim: Fabricated from **0.048-inch** (1.21-mm) nominal-thickness steel sheet.
5. Filler Panels: Fabricated from **0.048-inch** (1.21-mm) nominal-thickness steel sheet.
6. Boxed End Panels: Fabricated from **0.048-inch** (1.21-mm) nominal-thickness steel sheet.

M. Finish: [**Baked enamel**] [**or**] [**powder coat**].

1. Color(s): [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] [**Two colors, with door one color and frame and body another color; as selected by DEN Project Manager from manufacturer's full range**].

2.4 ATHLETIC METAL LOCKERS

A. Products: Subject to compliance with requirements, provide one of the following:

1. All-Welded, Athletic Metal Lockers:
 - a. Art Metal Products; [**Box**] [**Bulldog Athletic**] [**Champ Athletic**] [**Turn-Handle Athletic**] Lockers.
 - b. DeBourgh Mfg. Co.; [**P.E.**] [**Physical Education**] [**Sentry**] [**Sophomore**] [**Varsity**] Lockers.

- c. List Industries Inc.; **[Gym Class] [Gym Class II] [Intramural] [Jr. Varsity] [Marquis Champion] [Varsity]** Lockers.
 - d. Lyon Workspace Products, LLC; **[All-Welded Expanded Metal] [Integrated Frame All-Welded]** Lockers.
 - e. Penco Products, Inc.; All-Welded Lockers.
 - f. Republic Storage Systems Company; All-Welded Ventilated Lockers.
 - g. **<Insert manufacturer's name; product name or designation>**.
 - h. or approved equal.
2. Knocked-Down, Athletic Metal Lockers:
- a. Art Metal Products; HDV Lockers.
 - b. ASI Storage Solutions Inc.; Competitor Collection.
 - c. General Storage Systems Ltd.; **[Heavy-Duty] [Mod-U-Vent] [Mod-U-Vent II]** Ventilated Locker.
 - d. Hadrian Manufacturing Inc.; Gladiator Lockers.
 - e. List Industries Inc.; HDV Lockers.
 - f. Lyon Workspace Products, LLC; Expanded Metal Lockers.
 - g. Penco Products, Inc.; Invincible II Lockers.
 - h. Republic Storage Systems Company; Heavy Duty Ventilated Lockers.
 - i. Shanahan's Manufacturing Limited; Pinnacle Lockers.
 - j. **<Insert manufacturer's name; product name or designation>**.
 - k. or approved equal.
- B. Locker Arrangement: **[Single tier] [Double tier] [Triple tier] [Box] [As indicated on Drawings]** **<Insert configuration>**.
- C. Material: **[Cold-rolled] [Metallic-coated]** steel sheet.
- D. Body: Assembled by **[welding] [or] [riveting or bolting]** body components together. Fabricate from unperforated steel sheet with thicknesses as follows:
1. Tops and Bottoms: **0.060-inch** (1.52-mm) nominal thickness, with single bend at edges.
 2. Backs: **0.048-inch** (1.21-mm) nominal thickness.
 3. Shelves: **0.060-inch** (1.52-mm) nominal thickness, with double bend at front and single bend at sides and back.
- E. Unperforated Sides: Fabricated from **[0.048-inch (1.21-mm)] [0.060-inch (1.52-mm)]** nominal-thickness steel sheet.
- F. Perforated Sides: Fabricated from **0.060-inch** (1.52-mm) nominal-thickness steel sheet with manufacturer's standard diamond perforations.
- G. Expanded-Metal Sides: Fabricated from **0.090-inch** (2.28-mm) nominal-thickness expanded metal; welded to **0.105-inch** (2.66-mm) nominal-thickness steel angles or **0.060-inch** (1.52-mm) nominal-thickness steel channel frames.
- H. Frames: Channel formed; fabricated from **0.060-inch** (1.52-mm) nominal-thickness steel sheet or **0.097-inch** (2.45-mm) nominal-thickness steel angles; lapped and factory

welded at corners; with top and bottom main frames factory welded into vertical main frames. Form continuous, integral door strike full height on vertical main frames.

1. Cross Frames for **[Double-Tier] [Triple-Tier]** Lockers: Channel formed and fabricated from same material as main frames; welded to vertical main frames.
- I. Reinforced Bottoms: Structural channels, formed from **[0.060-inch (1.52-mm)] [0.075-inch (1.90-mm)]** nominal-thickness steel sheet; welded to front and rear of side-panel frames.
- J. Perforated Doors: One piece; fabricated from **0.075-inch (1.90-mm)** nominal-thickness steel sheet with manufacturer's standard diamond perforations; formed into channel shape with double bend at **[vertical edges and with right-angle single bend at horizontal edges] [and] [latch point (bottom) and right-angle single bend at remaining edges for box lockers]**.
 1. Reinforcement: Manufacturer's standard reinforcing angles, channels, or stiffeners for doors more than **15 inches (381 mm)** wide; welded to inner face of doors.
- K. Expanded-Metal Doors: Fabricated from **0.090-inch (2.28-mm)** nominal-thickness expanded metal; welded to **0.105-inch (2.66-mm)** nominal-thickness steel angle frame; with **0.090-inch (2.28-mm)** nominal-thickness, steel sheet lock panel backed by **0.060-inch (1.52-mm)** nominal-thickness steel sheet retainer welded to door frame.
- L. Hinges: Welded to door and attached to door frame with no fewer than two factory-installed rivets per hinge that are completely concealed and tamper resistant when door is closed; fabricated to swing 180 degrees; **self-closing**.
 1. Knuckle Hinges: Steel, full loop, five or seven knuckles, tight pin; minimum **2 inches (51 mm)** high. Provide no fewer than three hinges for each door more than **42 inches (1067 mm)** high.
 2. Continuous Hinges: Manufacturer's standard, steel; side or top mounted as required by locker configuration.
 3. Hinges: Manufacturer's standard, steel continuous or knuckle type.
- M. Recessed Door Handle and Latch: Stainless-steel cup with integral door pull, recessed so locking device does not protrude beyond face of door; pry and vandal resistant.
 1. Multipoint Latching: Finger-lift latch control designed for use with built-in combination locks, built-in cylinder locks, or padlocks; positive automatic latching and prelocking.
 - a. Latch Hooks: Equip **[doors 48 inches (1219 mm) and higher with three latch hooks] [and] [doors less than 48 inches (1219 mm) high with two latch hooks]**; fabricated from **0.120-inch (3.04-mm)** nominal-thickness steel sheet; welded to full-height door strikes; with resilient silencer on each latch hook.
 - b. Latching Mechanism: Manufacturer's standard, rattle-free latching mechanism and moving components isolated to prevent metal-to-metal

contact, and incorporating a prelocking device that allows locker door to be locked while door is open and then closed without unlocking or damaging lock or latching mechanism.

2. Single-Point Latching: Nonmoving latch hook [**designed to engage bolt of built-in combination or cylinder lock**] [**with steel padlock loop that projects through recessed cup and is finished to match metal locker body**].
 - a. Latch Hook: Equip each door with one latch hook, fabricated from **0.120-inch (3.04-mm)** nominal-thickness steel sheet; welded midway up full-height door strike; with resilient silencer.
- N. Projecting Turn-Handle and Latch: Steel handle welded to manufacturer's standard, three-point, cremone-type latching mechanism consisting of steel rods or bars that engage main locker frame at top and bottom of door, and center latch that engages strike jamb; with steel padlock loop.
- O. Door Handle and Latch for Box Lockers: Stainless-steel strike plate with integral pull; with steel padlock loop that projects through metal locker door.
- P. Combination Padlocks: [**Key-controlled, three-number dialing combination locks; capable of five combination changes**] [**Provided by Owner**].
- Q. Built-in Combination Locks: Key-controlled, three-number dialing combination locks; capable of at least five combination changes made automatically with a control key.
 1. Bolt Operation: [**Manually locking deadbolt**] [**or**] [**automatically locking spring bolt**].
- R. Cylinder Locks: Built-in, flush, cam locks with five-pin tumbler keyway, keyed separately and master keyed. Furnish two change keys for each lock and [**two**] <Insert number> master keys.
 1. Key Type: [**Flat**] [**Grooved**], [**with minimum 2- by 2.68-inch (51- by 68.3-mm) key head for accessible lockers**].
 2. Bolt Operation: [**Manually locking deadbolt**] [**or**] [**automatically locking spring bolt**].
- S. Equipment: Equip each metal locker with identification plate and the following unless otherwise indicated:
 1. Single-Tier Units: Shelf, one double-prong ceiling hook, and two single-prong wall hooks.
 2. Double-Tier Units: One double-prong ceiling hook and two single-prong wall hooks.
 3. Triple-Tier Units: One double-prong ceiling hook.
 4. Coat Rods: As indicated on Drawings.
 5. Coat Rods: For each compartment of [**single-tier**] [**double-tier**] [**and**] [**triple-tier**] metal lockers.

6. Coat Rods: In lieu of ceiling hook for metal lockers **24 inches** (610 mm) high or more.
7. Coat Rods: In lieu of ceiling hook for metal lockers **18 inches** (457 mm) deep or more.

T. Accessories:

1. Legs: **6 inches** (152 mm) high; formed by extending vertical frame members, or fabricated from **0.075-inch** (1.90-mm) nominal-thickness steel sheet; welded to bottom of locker.
 - a. Closed Front and End Bases: Fabricated from **0.048-inch** (1.21-mm) nominal-thickness steel sheet.
2. Continuous Zee Base: **4 inches** (102 mm) high; fabricated from **0.075-inch** (1.90-mm) nominal-thickness steel sheet.
3. Continuous Sloping Tops: Fabricated from **0.048-inch** (1.21-mm) nominal-thickness steel sheet, with a pitch of approximately 20 degrees.
 - a. Closures: **[Vertical] [Hipped]**-end type.
4. Recess Trim: Fabricated from **0.048-inch** (1.21-mm) nominal-thickness steel sheet.
5. Filler Panels: Fabricated from **0.048-inch** (1.21-mm) nominal-thickness steel sheet.
6. Boxed End Panels: Fabricated from **0.060-inch** (1.52-mm) nominal-thickness steel sheet.

U. Finish: **[Baked enamel] [or] [powder coat]**.

1. Color(s): **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] [Two colors, with door one color and frame and body another color; as selected by DEN Project Manager from manufacturer's full range]**.

2.5 OPEN-FRONT ATHLETIC METAL LOCKERS

A. Products: Subject to compliance with requirements, provide one of the following:

1. All-Welded, Open-Front Athletic Metal Lockers:
 - a. DeBourgh Mfg. Co.; **[All Sport] [Open Front with Security Compartment]** Lockers.
 - b. List Industries Inc.; **[All-Star] [All-Star Jr.] [MVP] [Rookie] [Touchdown]** Lockers.
 - c. Lyon Workspace Products, LLC; **[Collegiate] [Deluxe Collegiate]** Lockers.
 - d. Penco Products, Inc.; Stadium Lockers.
 - e. **<Insert manufacturer's name; product name or designation>**.
 - f. or approved equal.

2. Knocked-Down, Open-Front Athletic Metal Lockers:
 - a. ASI Storage Solutions Inc.; Pro Collection.
 - b. Hadrian Manufacturing Inc.; Gladiator Open Front Hockey Lockers.
 - c. Lyon Workspace Products, LLC; [**Collegiate**] [**Deluxe Collegiate**] Lockers.
 - d. Penco Products, Inc.; Stadium Lockers.
 - e. Republic Storage Systems Company; MVP Lockers.
 - f. <Insert manufacturer's name; product name or designation>.
 - g. or approved equal.
- B. Locker Arrangement: Open front, with [seat/shelf] [seat/footlocker] [upper shelf] [upper shelf with security box] [and] [full-width security compartment] [configuration as indicated on Drawings].
- C. Material: [**Cold-rolled**] [**Metallic-coated**] steel sheet.
- D. Body: Assembled by [**welding**] [**or**] [**riveting or bolting**] body components together. Fabricate from unperforated steel sheet with thicknesses as follows:
 1. Tops and Bottoms: 0.060-inch (1.52-mm) nominal thickness, with single bend at edges.
 2. Backs: 0.048-inch (1.21-mm) nominal thickness.
 3. Shelves: 0.060-inch (1.52-mm) nominal thickness, with double bend at front and single bend at sides and back.
- E. Unperforated Sides: Fabricated from 0.060-inch (1.52-mm) nominal-thickness steel sheet.
- F. Perforated Sides: Fabricated from 0.060-inch (1.52-mm) nominal-thickness steel sheet with manufacturer's standard diamond perforations. Perforations shall not occur [above upper shelf] [at security compartment] [**or**] [at seat/footlocker].
- G. Expanded-Metal Sides: Fabricated from 0.090-inch (2.28-mm) nominal-thickness expanded metal; welded to 0.105-inch (2.66-mm) nominal-thickness steel angles or 0.060-inch (1.52-mm) nominal-thickness steel channel frames.
- H. Frames: Channel formed; fabricated from 0.060-inch (1.52-mm) nominal-thickness steel sheet or 0.105-inch (2.66-mm) nominal-thickness steel angles; lapped and factory welded at corners; with top and bottom main frames factory welded into vertical main frames.
- I. Reinforced Bottoms: Structural channels, formed from 0.075-inch (1.90-mm) nominal-thickness steel sheet; welded to front and rear of side-panel frames.
- J. Seats/Shelves: Full width of metal locker; channel formed; fabricated from 0.075-inch (1.90-mm) nominal-thickness steel sheet; with stiffeners for reinforcement.
- K. Seats/Footlockers: Enclosure full width of bottom of metal locker; fabricated from cold-rolled steel sheet.

1. Seat/Lid: **0.075-inch** (1.90-mm) nominal-thickness steel sheet; channel formed and reinforced with stiffeners; with manufacturer's standard, steel continuous hinge that is completely concealed and tamper resistant when seat/lid is closed; with padlock hasp.
 2. Front Panel: **0.075-inch** (1.90-mm) nominal-thickness steel sheet; channel formed at top edge; with minilouvers for ventilation; recessed for padlock loop.
 3. Sides: **[Integral part of unperforated] [Unperforated bottom portions of perforated] [0.060-inch** (1.52-mm) **nominal-thickness steel sheet inside expanded-metal]** sides.
- L. Security Boxes: Consisting of partition extending from upper shelf to top of metal locker, fabricated from **0.060-inch** (1.52-mm) nominal-thickness steel sheet; with channel-formed, **0.060-inch** (1.52-mm) nominal-thickness, steel sheet door frame, and door fabricated from **0.075-inch** (1.90-mm) nominal-thickness steel sheet with right-angle single bend at edges; with manufacturer's standard, steel continuous hinge that is completely concealed and tamper resistant when door is closed; fabricated to swing 180 degrees.
1. Single-Point Latching: Stainless-steel strike plate with integral pull; with steel, nonmoving latch hook **[designed to engage bolt of built-in combination or cylinder lock] [with steel padlock loop that projects through door and is finished to match metal locker body]**.
- M. Security Compartments: Full width of metal locker, with door fabricated from **0.075-inch** (1.90-mm) nominal-thickness steel sheet.
- N. Combination Padlocks: **[Key-controlled, three-number dialing combination locks; capable of five combination changes] [Provided by Owner]**.
- O. Built-in Combination Locks: Key-controlled, three-number dialing combination locks; capable of at least five combination changes made automatically with a control key.
1. Bolt Operation: **[Manually locking deadbolt] [or] [automatically locking spring bolt]**.
- P. Cylinder Locks: Built-in, flush, cam locks with five-pin tumbler keyway, keyed separately and master keyed. Furnish two change keys for each lock and **[two <Insert number> master keys]**.
1. Key Type: **[Flat] [Grooved]**, with minimum **2- by 2.68-inch** (51- by 68.3-mm) **key head for accessible lockers]**.
 2. Bolt Operation: **[Manually locking deadbolt] [or] [automatically locking spring bolt]**.
- Q. Equipment: Equip each metal locker with identification plate and the following unless otherwise indicated:
1. Two single-prong wall hooks bolted to locker back.
 2. Coat rod and two rod holders.

R. Accessories:

1. Continuous Sloping Tops: Fabricated from **0.048-inch** (1.21-mm) nominal-thickness steel sheet, with a pitch of approximately 20 degrees.
 - a. Closures: **[Vertical] [Hipped]**-end type.
2. Recess Trim: Fabricated from **0.048-inch** (1.21-mm) nominal-thickness steel sheet.
3. Filler Panels: Fabricated from **0.048-inch** (1.21-mm) nominal-thickness steel sheet.
4. Boxed End Panels: Fabricated from **0.060-inch** (1.52-mm) nominal-thickness steel sheet.

S. Finish: **[Baked enamel] [or] [powder coat]**.

1. Color(s): **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] [Two colors; as selected by DEN Project Manager from manufacturer's full range]**.

2.6 COIN-OPERATED METAL LOCKERS

A. Products: Subject to compliance with requirements, provide one of the following:

1. American Locker Security Systems, Inc.; **[Ambassador] [Statesman]** Locker.
2. Secura Coin Locker; Secura Coinlock.
3. Shanahan's Manufacturing Limited; **[President] [Senator]** Series.
4. Tiffin Metal Products; Sentinel Locker.
5. **<Insert manufacturer's name; product name or designation>**.
6. or approved equal.

B. Steel Lockers: Fabricated from cold-rolled steel sheet with thicknesses as follows:

1. Tops, Bottoms, Sides, and Shelves: **0.024-inch** (0.61-mm) nominal thickness.
2. Backs: **0.036-inch** (0.91-mm) nominal thickness.
3. Frames: **0.060-inch** (1.52-mm) nominal thickness.
4. Doors: **0.060-inch** (1.52-mm) nominal thickness.
5. Exposed Ends of Nonrecessed Lockers: **0.060-inch** (1.52-mm) nominal thickness.

C. Stainless-Steel Lockers: Fabricated from stainless-steel sheet with thicknesses and finishes as follows:

1. Tops, Bottoms, Sides, Backs, and Shelves: **0.025 inch** (0.64 mm) thick, with No. 2B finish.
2. Frames: **0.062 inch** (1.59 mm) thick, with No. 3 or No. 4 finish.
3. Doors: **0.062 inch** (1.59 mm) thick, with manufacturer's standard patterned finish.
4. Exposed Ends of Nonrecessed Lockers: **0.062 inch** (1.59 mm) thick, with No. 3 or No. 4 finish.

- D. Body: Assembled by welding or riveting body components to frames using manufacturer's standard aluminum or stainless-steel rivets; flanged for double thickness at back vertical corners; back ventilated.
- E. Frames: Channel formed; lapped and welded at corners; with top, bottom, and cross frames welded into vertical main frames. Form continuous, integral door strike full height on vertical main frames, and equip frames with resilient bumpers to cushion door closing.
1. Cross Frames between Tiers: Channel formed and fabricated from same material as main frames; welded to vertical mainframe.
- F. Doors: One piece; formed into channel shape at vertical edges and flanged at right angles at horizontal edges; fabricated to swing 180 degrees. Brace or reinforce inner face of doors with manufacturer's standard reinforcing angles, channels, or stiffener panels.
- G. Hinges: Manufacturer's standard, **[full-loop, five- or seven-knuckle type; tight pin; minimum 2-1/2 inches (64 mm) high] [or] [continuous type]**, of same material as door; **self-closing**. Weld hinge to inside of doorframe and attach hinge to door with factory-installed fasteners that are completely concealed and tamper resistant when door is closed.
1. Provide at least three hinges for each door more than **42 inches (1067 mm)** high.
- H. Projecting Door Handle: Manufacturer's standard; stainless steel; pry and vandal resistant.
- I. Built-in, Coin-Operated Locks: Self-contained units mounted on interior of door with replaceable lock cylinders keyed separately and master keyed. Mount instruction decals on both faces of door. Furnish one change key for each lock and one master key.
1. Bolt Operation: **[Manually locking deadbolt] [or] [automatically locking spring bolt]**.
 2. Lock Type: Fee **[return/deposit] [collect/pay]**.
 3. Fee Type: **[Token] [Coin, one quarter] [Coin, two quarters]**.
 4. Coin Box: Manufacturer's standard housing or stainless-steel cash box with stainless-steel flanged cover set into base of lock channel frame. Furnish with removable cylinder and key, and master code changer key.
- J. Finish: **[Baked enamel] [or] [powder coat]**.
1. Color(s): **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] [Two colors, with door one color and frame and body another color; as selected by DEN Project Manager from manufacturer's full range]**.

2.7 KEYLESS LOCKS

- A. Built-in, Card-Operated Locks: Self-contained units mounted on interior of door with replaceable lock cylinders keyed separately and master keyed. Mount instruction decals on both faces of door. Furnish one change card key for each lock and one master card key.
1. Bolt Operation: **[Manually locking deadbolt] [or] [automatically locking spring bolt]**.
- B. Digital Keypad Locks: Battery-powered electronic keypad with reprogrammable manager and owner codes that override access. Three consecutive incorrect code entries shall disable lock for three minutes.
1. Designed for permanently assigned access via entry of user's four-digit code.
 2. Designed for shared or temporary access by multiple users, with user-defined code to lock and unlock. Provide LED indicator to show when lock is in use.

2.8 LOCKER BENCHES

- A. Provide bench units with overall assembly height of **[17-1/2 inches (445 mm)] <Insert dimension>**.
- B. Bench Tops: Manufacturer's standard one-piece units, with rounded corners and edges.
1. Size: Minimum **9-1/2 inches wide by 1-1/4 inches thick** (241 mm wide by 32 mm thick) **[except provide minimum 20-inch- (508-mm-) wide tops where accessible benches are indicated]**.
 2. Laminated clear hardwood with one coat of clear sealer on all surfaces and one coat of clear lacquer on top and sides.
 3. Plastic laminate over particleboard core, with two steel tubes running full length of top and positioned to receive pedestal fasteners.
 - a. Color: **[Match metal lockers] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range]**.
 4. Extruded aluminum with clear anodic finish.
- C. Fixed Pedestals: Manufacturer's standard supports, with predrilled fastener holes for attaching bench top and anchoring to floor, complete with fasteners and anchors, and as follows:
1. Tubular Steel: **1-1/2-inch- (38-mm-) diameter steel tubing threaded on both ends, with standard pipe flange at top and bell-shaped cast-iron base; with baked-enamel or powder-coat finish; anchored with exposed fasteners.**

- a. Color: **[Match metal lockers] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range]**.
2. Tubular Steel: **1-1/4-inch-** (32-mm-) diameter steel tubing, with **0.1265-inch-** (3.2-mm-) thick steel flanges welded at top and base; with **[baked-enamel] [zinc-plated]** finish; anchored with exposed fasteners.
 - a. Color: **[Match metal lockers] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range]**.
- D. Freestanding Pedestals: Manufacturer's standard supports, with predrilled fastener holes for attaching bench top, complete with fasteners, and as follows:
 1. Aluminum: **1/8-inch-thick by 3-inch-wide** (3-mm-thick by 76-mm-wide) channel or **1/4-inch-thick by 3-inch-wide** (6-mm-thick by 76-mm-wide) bar stock, shaped into **[trapezoidal] [inverted-T]** form; with nonskid pads at bottom.
 - a. Finish: **[Clear] [Black] [Gold]** anodic finish.
 2. Stainless Steel: **1/8-inch-thick by 3-inch-wide** (3-mm-thick by 76-mm-wide) channel or **1/4-inch-thick by 3-inch-wide** (6-mm-thick by 76-mm-wide) bar stock, shaped into trapezoidal form; with nonskid pads at bottom. Add finish.

2.9 FABRICATION

- A. Fabricate metal lockers square, rigid, and without warp and with metal faces flat and free of dents or distortion. Make exposed metal edges safe to touch and free of sharp edges and burrs.
 1. Form body panels, doors, shelves, and accessories from one-piece steel sheet unless otherwise indicated.
 2. Provide fasteners, filler plates, supports, clips, and closures as required for complete installation.
- B. Fabricate each metal locker with an individual door and frame; individual top, bottom, and back; and common intermediate uprights separating compartments. Factory weld frame members of each metal locker together to form a rigid, one-piece assembly.
- C. Knocked-Down Construction: Fabricate metal lockers using nuts, bolts, screws, or rivets for **[nominal assembly at Project site] [preassembly at plant prior to shipping]**.
- D. All-Welded Construction: Factory preassemble metal lockers by welding all joints, seams, and connections; with no bolts, nuts, screws, or rivets used in assembly of main locker groups. Factory weld main locker groups into one-piece structures. Grind exposed welds flush.
- E. Accessible Lockers: Fabricate as follows:

1. Locate bottom shelf no lower than **15 inches** (381 mm) above the floor.
 2. Where hooks, coat rods, or additional shelves are provided, locate no higher than **48 inches** (1219 mm) above the floor.
- F. Hooks: Manufacturer's standard ball-pointed type, aluminum or steel; zinc plated.
- G. Coat Rods: Fabricated from [**1-inch-** (25-mm-)] [**3/4-inch-** (19-mm-)] diameter steel, [**chrome finished**] [**nickel plated**].
- H. Identification Plates: Manufacturer's standard, etched, embossed, or stamped [**aluminum**] [**plastic**] plates, with numbers and letters at least **3/8 inch** (9 mm) high.
- I. Continuous Base: Formed into channel or zee profile for stiffness, and fabricated in lengths as long as practical to enclose base and base ends of metal lockers; finished to match lockers.
- J. Continuous Sloping Tops: Fabricated in lengths as long as practical, without visible fasteners at splice locations; finished to match lockers.
1. Sloping-top corner fillers, mitered.
- K. Individual Sloping Tops: Fabricated in width to fit one locker frame in lieu of flat locker tops; with integral back; finished to match lockers. Provide wedge-shaped divider panels between lockers.
- L. Recess Trim: Fabricated with minimum **2-1/2-inch** (64-mm) face width and in lengths as long as practical; finished to match lockers.
- M. Filler Panels: Fabricated in an unequal leg angle shape; finished to match lockers. Provide slip-joint filler angle formed to receive filler panel.
- N. Boxed End Panels: Fabricated with **1-inch-** (25-mm-) wide edge dimension, and designed for concealing fasteners and holes at exposed ends of nonrecessed metal lockers; finished to match lockers.
1. Provide one-piece panels for double-row (back-to-back) locker ends.
- O. Finished End Panels: Designed for concealing unused penetrations and fasteners, except for perimeter fasteners, at exposed ends of nonrecessed metal lockers; finished to match lockers.
1. Provide one-piece panels for double-row (back-to-back) locker ends.
- P. Center Dividers: Full-depth, vertical partitions between bottom and shelf; finished to match lockers.
- 2.10 STEEL SHEET FINISHES
- A. Factory finish steel surfaces and accessories except stainless-steel and chrome-plated surfaces.

- B. Baked-Enamel Finish: Immediately after cleaning, pretreating, and phosphatizing, apply manufacturer's standard thermosetting baked-enamel finish. Comply with paint manufacturer's written instructions for application, baking, and minimum dry film thickness.
- C. Powder-Coat Finish: Immediately after cleaning and pretreating, electrostatically apply manufacturer's standard, baked-polymer, thermosetting powder finish. Comply with resin manufacturer's written instructions for application, baking, and minimum dry film thickness.

2.11 STAINLESS-STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 1. Run grain of directional finishes with long dimension of each piece.
 - 2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine walls, floors, and support bases, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install level, plumb, and true; shim as required, using concealed shims.
 - 1. Anchor locker runs at ends and at intervals recommended by manufacturer, but not more than **36 inches** (910 mm) o.c. Using concealed fasteners, install anchors through backup reinforcing plates, channels, or blocking as required to prevent metal distortion.
 - 2. Anchor single rows of metal lockers to walls near top [**and bottom of lockers**] [**of lockers and to floor**].
 - 3. Anchor back-to-back metal lockers to floor.

- B. Knocked-Down Metal Lockers: Assemble with standard fasteners, with no exposed fasteners on door faces or face frames.
- C. All-Welded Metal Lockers: Connect groups together with standard fasteners, with no exposed fasteners on face frames.
- D. Equipment and Accessories: Fit exposed connections of trim, fillers, and closures accurately together to form tight, hairline joints, with concealed fasteners and splice plates.
 - 1. Attach hooks with at least two fasteners.
 - 2. Attach door locks on doors using security-type fasteners.
 - 3. Identification Plates: Identify metal lockers with identification indicated on Drawings.
 - a. Attach plates to each locker door, near top, centered, with at least two aluminum rivets.
 - b. Attach plates to upper shelf of each open-front metal locker, centered, with a least two aluminum rivets.
 - 4. Attach recess trim to recessed metal lockers with concealed clips.
 - 5. Attach filler panels with concealed fasteners. Locate filler panels where indicated on Drawings.
 - 6. Attach sloping-top units to metal lockers, with closures at exposed ends.
 - 7. Attach boxed end panels with concealed fasteners to conceal exposed ends of nonrecessed metal lockers.
 - 8. Attach finished end panels with fasteners only at perimeter to conceal exposed ends of nonrecessed metal lockers.
- E. Fixed Locker Benches: Provide no fewer than two pedestals for each bench, uniformly spaced not more than **72 inches** (1830 mm) apart. Securely fasten tops of pedestals to undersides of bench tops, and anchor bases to floor.
- F. Freestanding Locker Benches: Place benches in locations indicated on Drawings.

3.3 ADJUSTING, CLEANING, AND PROTECTION

- A. Clean, lubricate, and adjust hardware. Adjust doors and latches to operate easily without binding. [**Verify that integral locking devices operate properly.**]
- B. Protect metal lockers from damage, abuse, dust, dirt, stain, or paint. Do not permit use during construction.
- C. Touch up marred finishes, or replace metal lockers that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by locker manufacturer.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 105113

SECTION 105500 - POSTAL SPECIALTIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. USPS-approved horizontal mail receptacles.
2. Private-delivery horizontal mail receptacles.
3. Private postal-facility horizontal mail receptacles.
4. Vertical mail receptacles.
5. USPS-approved cluster box units (CBUs).
6. Neighborhood delivery and collection box units (NDCBUs).
7. USPS-approved parcel lockers.
8. USPS-approved collection boxes.
9. Private collection boxes.
10. Data distribution boxes.
11. Mail chutes.
12. Accessories:
 - a. Directory for mail receptacles.
 - b. Key keeper.
 - c. Key cabinet.
 - d. Mail-sorting collection unit.
 - e. Letter drops.
 - f. Package depository.

- B. Related Sections:

1. **[Section 087100 "Door Hardware"] [Section 087111 "Door Hardware (Descriptive Specification)]** for lock cylinders for postal specialties that are keyed to building keying system and for letter slots in doors.
2. Section 101300 "Directories" for mailbox directories.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of postal specialty. [**Include electrical characteristics.**]
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For postal specialties. Include plans, elevations, sections, details, and attachments to other work.
 - 1. Include identification sequence for compartments.
 - 2. Include layout of identification text.
 - 3. Include setting drawings, templates, and installation instructions for anchor bolts and other anchorages installed as part of the work of other Sections.
- C. Samples for Initial Selection: For units with factory-applied color finishes.
- D. Samples for Verification: For each type of exposed finish required, prepared on **6-by-6-inch** (150-by-150-mm) square Samples.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Plans and details of mail chutes, drawn to scale, on which the following items in the vicinity of mail chutes are shown and coordinated with mail chutes, using input from Installers of the items involved:
 - 1. Ceiling suspension assembly members.
 - 2. Ductwork, piping, and their supporting members.
 - 3. Partition-assembly bracing.
 - 4. **<Insert item>**.
- B. Qualification Data: For qualified Installer.
- C. Product Certificates: For each type of postal specialty required to comply with USPS regulations, signed by product manufacturer. [**Include written approval by Postmaster General.**]
- D. Other Informational Submittals: Final USPS local postmaster approval for installed postal specialties to be served by USPS.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For postal specialties and finishes to include in maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Key Blanks: **[50]** <Insert number> for every <Insert number> locks or fraction thereof, for each type of compartment-door lock installed.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: A firm experienced in installing postal specialties and whose installations have been given final approval by local postmasters authorizing use by USPS.
- B. Source Limitations for Each Type of Postal Specialty: Obtain from single source from single manufacturer. **[For USPS-approved products, use only those included on current lists of USPS manufacturers and models.]**
- C. Preinstallation Conference: Conduct conference at **[Project site]** **[location and time as determined by DEN Project Manager]**<Insert location>.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver lock keys to Owner by registered mail or overnight package service with a record of each corresponding lock and key number.
- B. Deliver combination-lock combinations to Owner by registered mail or overnight package service with a record of each corresponding lock and combination.

1.9 COORDINATION

- A. Coordinate layout and installation of mail chutes and attachments to structure with other construction that passes above ceilings, penetrates ceilings, or is supported by them in the vicinity of mail chutes; including light fixtures, HVAC ductwork and equipment, fire-suppression system and other piping, and partition assemblies.
- B. Coordinate layout and installation of **[recessed]** **[and]** **[semirecessed]** postal specialties with wall construction.
- C. Templates: Obtain templates for installing postal specialties and distribute to parties involved.

1.10 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of postal specialties that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
 - a. Structural failures.
 - b. Faulty operation of hardware[**including electrical components**].
 - c. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
 - d. **<Insert failure modes>**.
2. Warranty Period: Minimum [**five (5)**] **<Insert number>** years from date of Substantial Completion.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Aluminum: Manufacturer's standard alloy and temper for type of use and finish indicated, and as follows:
 1. Sheet and Plate: [ASTM B 209](#) (ASTM B 209M).
 2. Extruded Shapes: [ASTM B 221](#) (ASTM B 221M).
- B. Steel Sheet: Cold rolled, ASTM A 1008/A 1008M, Commercial Steel (CS), Type B, exposed matte finish where exposed.
- C. Metallic-Coated Steel Sheet: Galvanized-steel sheet, ASTM A 653/A 653M, [G60](#) (Z180) coating designation, extra smooth where exposed; or electrolytic zinc-coated steel sheet, ASTM A 879/A 879M, Coating Designation [08Z](#) (24G).
- D. Stainless-Steel Sheet: ASTM A 666, Type 304.
- E. Brass Sheet: ASTM B 36/B 36M, manufacturer's standard copper alloy.
- F. Zinc Sheet or Plate: ASTM B 69, manufacturer's standard sheet or plate and zinc alloy.
- G. Die-Cast Aluminum: ASTM B 85, manufacturer's standard aluminum alloy.
- H. Die-Cast Brass: ASTM B 176, manufacturer's standard copper alloy.
- I. Die-Cast Zinc: ASTM B 86, manufacturer's standard zinc alloy.
- J. Steel Anchor Bolts, Nuts, and Washers: ASTM F 1554, Grade 36 or 55, hot-dip galvanized.

- K. Stainless-Steel Anchor Bolts, Nuts, and Washers: ASTM A 193/A 193M, Grade B8M, Type 316.
- L. Bituminous Coating: Cold-applied asphalt emulsion complying with ASTM D 1187.

2.2 USPS-APPROVED HORIZONTAL MAIL RECEPTACLES

- A. Front-Loading, USPS-Approved Horizontal Mail Receptacles **<Insert drawing designation>**: Consisting of multiple compartments with fixed, solid compartment backs, enclosed within recessed wall box. Provide access to compartments for distributing incoming mail from front of unit by unlocking master lock and swinging side-hinged master door to provide accessibility to entire group of compartments. Provide access to each compartment for removing mail by swinging compartment door. Comply with **[USPS-STD-4C] [USPS-STD-4B+]**.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Eagle Mailboxes.
 - b. American Postal Manufacturing Co.; Division of Postal Products Unlimited, Inc.
 - c. Auth-Florence Manufacturing; a Florence company.
 - d. Bommer Industries, Inc.
 - e. Jensen Industries.
 - f. Salsbury Industries.
 - g. Security Manufacturing Corporation.
 - h. **<Insert manufacturer's name>**.
 - i. or approved equal.
 - 2. Mail Delivery: **[USPS] [Private]**.
 - 3. Compartments: **[Number and size as follows:] [As indicated on Drawings, of the following sizes:] [As indicated on Drawings.]**
 - a. Type I: A group of mail receptacles in single-column configuration with single master door, **[three] <Insert number up to eight>** mail compartments not less than **3 inches high by 12 inches wide by 15 inches deep** (76 mm high by 305 mm wide by 381 mm deep), one outgoing mail collection compartment prepared for master-door lock, and one parcel compartment **15 inches high by 12 inches wide by 15 inches deep** (381 mm high by 305 mm wide by 381 mm deep).
 - b. Type II: A group of mail receptacles in double-column configuration with double master door, **[three] <Insert number up to 16>** mail compartments not less than **3 inches high by 12 inches wide by 15 inches deep** (76 mm high by 305 mm wide by 381 mm deep), one outgoing mail collection compartment prepared for master-door lock, and **[one] [two]** parcel compartment(s): **[15 inches high by 12 inches wide by 15 inches deep** (381 mm high by 305 mm wide by 381 mm deep)] **[and] [18 inches high by 12 inches wide by 15 inches deep** (457 mm high by 305 mm wide by 381 mm deep)].

- c. Type III: A group of mail receptacles in double-column configuration with single master door, **[three]** <Insert number up to 16> mail compartments not less than **3 inches high by 12 inches wide by 15 inches deep** (76 mm high by 305 mm wide by 381 mm deep), one outgoing mail collection compartment prepared for master-door lock, and **[one]** **[two]** parcel compartment(s): **[15 inches high by 12 inches wide by 15 inches deep** (381 mm high by 305 mm wide by 381 mm deep)] **[and]** **[18 inches high by 12 inches wide by 15 inches deep** (457 mm high by 305 mm wide by 381 mm deep)].
 - d. Type VI (No Parcel Compartment): A group of mail receptacles in single-column configuration with single master door, **[three]** <Insert number up to nine> mail compartments not less than **3 inches high by 12 inches wide by 15 inches deep** (76 mm high by 305 mm wide by 381 mm deep), and one outgoing mail collection compartment prepared for master-door lock.
 - e. Type VIII (No Parcel Compartment): A group of mail receptacles in double-column configuration with double master door, **[three]** <Insert number up to 19> mail compartments not less than **3 inches high by 12 inches wide by 15 inches deep** (76 mm high by 305 mm wide by 381 mm deep), and one outgoing mail collection compartment prepared for master-door lock.
4. Compartments: **[Number and size as follows:]** **[Number as indicated on Drawings, of the following sizes:]** **[Number and size as indicated on Drawings.]**
- a. Type A: Provide <Insert number> compartments with inside dimensions not less than **5 inches high by 6 inches wide by 15 inches deep** (127 mm high by 152 mm wide by 381 mm deep).
 - b. Type B: Provide <Insert number> compartments with inside dimensions not less than **5 inches high by 12-1/2 inches wide by 15 inches deep** (127 mm high by 318 mm wide by 381 mm deep).
 - c. Type C: Provide <Insert number> compartments with inside dimensions not less than **10-1/2 inches high by 6 inches wide by 15 inches deep** (267 mm high by 152 mm wide by 381 mm deep).
 - d. Type D: Provide <Insert number> compartments with inside dimensions not less than **10-1/2 inches high by 12-1/2 inches wide by 15 inches deep** (267 mm high by 318 mm wide by 381 mm deep).
 - e. Type E: Provide <Insert number> compartments with inside dimensions not less than **16 inches high by 12-1/2 inches wide by 15 inches deep** (406 mm high by 318 mm wide by 381 mm deep).
5. Front-Loading Master Door: Fabricated from extruded aluminum and braced and framed to hold compartment doors; prepared to receive master-door lock.
- a. Master-Door Lock: Door prepared to receive lock provided by local postmaster.
 - b. Master-Door Lock: Cylinder lock keyed to building keying system; with **[two]** **[three]** <Insert number> keys. Provide cylinders specified in Section 087100 "Door Hardware."

6. Compartment Doors: Fabricated from extruded aluminum. Equip each with lock and tenant identification as required by cited standard. **[Provide mail slot in the compartment with master-door lock.]**
 - a. Compartment-Door Locks: Comply with USPS-L-1172C, PSIN O910, for locks and keys, or equivalent as approved by USPS; with three keys for each compartment door. Key each compartment differently.
 - b. Compartment-Door Locks: Five-pin tumbler, cylinder **[cam]** **[spring-latch-type]** locks capable of at least 1000 key changes; with **[two]** **[three]** **<Insert number>** keys for each compartment door. Key each compartment differently.
 - c. Compartment-Door Locks: Removable core locks, furnished by Owner and installed as Work of this Section.
 - d. Compartment-Door Locks: Spring-latch-type lock designed to accommodate cylinders keyed to building keying system; with **[two]** **[three]** **<Insert number>** keys for each compartment door. Provide cylinders specified in Section 087100 "Door Hardware."
 - e. Compartment-Door Locks: Three-digit, single-dial, combination locks with spring latch and automatic throw off. Set each compartment with different combination.
 7. Frames: Fabricated from extruded aluminum or aluminum sheet; ganged and nested units, with cardholder and blank cards for tenant's identification within each compartment.
 8. Snap-on Trim: Fabricated from same material and finish as compartment doors.
 9. Concealed Components and Mounting Frames: Aluminum or steel sheet with manufacturer's standard finish.
 10. Exposed Aluminum Finish: Finish surfaces exposed to view as follows:
 - a. Anodic Finish: **[Clear]** **[Brass]** **[Dark bronze]** **[As indicated by manufacturer's designations]** **[As selected by DEN Project Manager from manufacturer's full range]** **<Insert color>**.
 - b. Baked-Enamel or Powder-Coated Finish: **[Silver]** **[Black]** **[Medium bronze]** **[Dark bronze]** **[Gold]** **[Color as indicated by manufacturer's designations]** **[Color as selected by DEN Project Manager from manufacturer's full range]** **<Insert color>**.
- B. Rear-Loading, USPS-Approved Horizontal Mail Receptacles **<Insert drawing designation>**: Consisting of multiple compartments enclosed within recessed wall box. Provide access to compartments for distributing incoming mail from rear of unit with accessibility to entire group of compartments. Provide access to each compartment for removing mail by swinging compartment door. Comply with **[USPS-STD-4C]** **[USPS-STD-4B+]**.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Eagle Mailboxes.
 - b. American Postal Manufacturing Co.; Division of Postal Products Unlimited, Inc.

- c. Auth-Florence Manufacturing; a Florence company.
 - d. Bommer Industries, Inc.
 - e. Jensen Industries.
 - f. Salsbury Industries.
 - g. Security Manufacturing Corporation.
 - h. <Insert manufacturer's name>.
 - i. or approved equal.
2. Mail Delivery: **[USPS] [Private]**.
3. Compartments: **[Number and size as follows:] [As indicated on Drawings, of the following sizes:] [As indicated on Drawings.]**
 - a. Type IV: A group of mail receptacles in single-column configuration with a rear-access cover, **[three] <Insert number up to eight>** mail compartments not less than **3 inches high by 12 inches wide by 15 inches deep** (76 mm high by 305 mm wide by 381 mm deep), one outgoing mail collection compartment, and one parcel compartment **15 inches high by 12 inches wide by 15 inches deep** (381 mm high by 305 mm wide by 381 mm deep).
 - b. Type V: A group of mail receptacles in double-column configuration with a rear-access cover, **[three] <Insert number up to 16>** mail compartments not less than **3 inches high by 12 inches wide by 15 inches deep** (76 mm high by 305 mm wide by 381 mm deep), one outgoing mail collection compartment, and **[one] [two]** parcel compartment(s) **[15 inches high by 12 inches wide by 15 inches deep** (381 mm high by 305 mm wide by 381 mm deep)] **[and] [18 inches high by 12 inches wide by 15 inches deep** (457 mm high by 305 mm wide by 381 mm deep)].
 - c. Type VII (No Parcel Compartment): A group of mail receptacles in single-column configuration with a rear-access cover, **[three] <Insert number up to nine>** mail compartments not less than **3 inches high by 12 inches wide by 15 inches deep** (76 mm high by 305 mm wide by 381 mm deep), and one outgoing mail collection compartment.
 - d. Type IX (No Parcel Compartment): A group of mail receptacles in double-column configuration with a rear-access cover, **[three] <Insert number up to 19>** mail compartments not less than **3 inches high by 12 inches wide by 15 inches deep** (76 mm high by 305 mm wide by 381 mm deep), and one outgoing mail collection compartment.
4. Compartments: **[Number and size as follows:] [Number as indicated on Drawings, of the following sizes:] [Number and size as indicated on Drawings.]**
 - a. Type A: Provide **<Insert number>** compartments with inside dimensions not less than **5 inches high by 6 inches wide by 15 inches deep** (127 mm high by 152 mm wide by 381 mm deep).
 - b. Type B: Provide **<Insert number>** compartments with inside dimensions not less than **5 inches high by 12-1/2 inches wide by 15 inches deep** (127 mm high by 318 mm wide by 381 mm deep).

- c. Type C: Provide <Insert number> compartments with inside dimensions not less than 10-1/2 inches high by 6 inches wide by 15 inches deep (267 mm high by 152 mm wide by 381 mm deep).
 - d. Type D: Provide <Insert number> compartments with inside dimensions not less than 10-1/2 inches high by 12-1/2 inches wide by 15 inches deep (267 mm high by 318 mm wide by 381 mm deep).
 - e. Type E: Provide <Insert number> compartments with inside dimensions not less than 16 inches high by 12-1/2 inches wide by 15 inches deep (406 mm high by 318 mm wide by 381 mm deep).
5. Rear-Loading Cover: **[Not required] [Lift-off rear cover fabricated from extruded aluminum or aluminum sheet, finished to match front of unit].**
6. Rear-Loading Door: Side hinged, fabricated from extruded aluminum or aluminum sheet, finished to match front of unit; with full-length, stainless-steel piano hinge on one side and **[positive-latching] [locking]** mechanism on the other.
 - a. Rear-Door Lock: Door prepared to receive lock provided by local postmaster.
 - b. Rear-Door Lock: Cylinder lock keyed to building keying system; with **[two] [three]** <Insert number> keys. Provide cylinders specified in Section 087100 "Door Hardware."
 - c. Retain option in first subparagraph below to enable one compartment to serve as outgoing mail receptacle. Insert additional door requirements to suit Project.
7. Compartment Doors: Fabricated from extruded aluminum. Equip each with lock and tenant identification as required by cited standard. **[Provide one compartment with outgoing mail slot.]**
 - a. Compartment-Door Locks: Comply with USPS-L-1172C, PSIN O910, for locks and keys, or equivalent as approved by USPS; with three keys for each compartment door. Key each compartment differently.
 - b. Compartment-Door Locks: Five-pin tumbler, cylinder **[cam] [spring-latch-type]** locks capable of at least 1000 key changes; with **[two] [three]** <Insert number> keys for each compartment door. Key each compartment differently.
 - c. Compartment-Door Locks: Removable core locks, furnished by Owner and installed as Work of this Section.
 - d. Compartment-Door Locks: Spring-latch-type lock designed to accommodate cylinders keyed to building keying system; with **[two] [three]** <Insert number> keys for each compartment door. Provide cylinders specified in Section 087100 "Door Hardware."
 - e. Compartment-Door Locks: Three-digit, single-dial, combination locks with spring latch and automatic throw off. Set each compartment with different combination.
8. Frames: Fabricated from extruded aluminum or aluminum sheet; ganged and nested units, with cardholder and blank cards for tenant's identification behind each compartment.

9. Snap-on Trim: Fabricated from same material and finish as compartment doors.
10. Concealed Components and Mounting Frames: Aluminum or steel sheet with manufacturer's standard finish.
11. Exposed Aluminum Finish: Finish surfaces exposed to view as follows:
 - a. Anodic Finish: **[Clear] [Brass] [Dark bronze] [As indicated by manufacturer's designations] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
 - b. Baked-Enamel or Powder-Coated Finish: **[Silver] [Black] [Medium bronze] [Dark bronze] [Gold] [Color as indicated by manufacturer's designations] [Color as selected by DEN Project Manager from manufacturer's full range] <Insert color>**.

2.3 PRIVATE-DELIVERY HORIZONTAL MAIL RECEPTACLES

- A. Front-Loading, Private-Delivery Horizontal Mail Receptacles **<Insert drawing designation>**: Consisting of multiple compartments with fixed, solid compartment backs, enclosed within recessed wall box. Provide access to compartments for distributing incoming mail from front of unit by unlocking master lock and swinging side-hinged master door to provide accessibility to entire group of compartments. Provide access to each compartment for removing mail by swinging compartment door.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Postal Manufacturing Co.; Division of Postal Products Unlimited, Inc.
 - b. Auth-Florence Manufacturing; a Florence company.
 - c. Bommer Industries, Inc.
 - d. Salsbury Industries.
 - e. Security Manufacturing Corporation.
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
 2. Front-Loading Master Door: Fabricated from extruded aluminum and braced and framed to hold compartment doors; with master-door lock and concealed, full-length, stainless-steel piano hinge on one side. Fabricate master door to remain open while mail is deposited.
 - a. Master-Door Lock: Manufacturer's standard five-pin tumbler, cylinder lock; with **[two] [three] <Insert number>** keys.
 - b. Master-Door Lock: Cylinder lock keyed to building keying system; with **[two] [three] <Insert number>** keys. Provide cylinders specified in Section 087100 "Door Hardware."
 3. Compartments and Doors: Manufacturer's standard compartments with extruded aluminum doors. Equip each with lock, tenant identification, and concealed,

full-length, flush hinge on one side. Provide one compartment prepared for master-door lock[**and with outgoing mail slot**].

- a. Compartments: **[Number and size as follows:] [As indicated on Drawings, of the following sizes:] [As indicated on Drawings.]**
 - 1) Size 1: Provide **<Insert number>** compartments with inside dimensions not less than **3 inches high by 6 inches wide by 15 inches deep** (76 mm high by 152 mm wide by 381 mm deep).
 - 2) Size 2: Provide **<Insert number>** compartments with inside dimensions not less than **5 inches high by 3-1/2 inches wide by 15 inches deep** (127 mm high by 89 mm wide by 381 mm deep).
 - 3) Size 3: Provide **<Insert number>** compartments with inside dimensions not less than **5 inches high by 7-1/2 inches wide by 15 inches deep** (127 mm high by 191 mm wide by 381 mm deep).
 - 4) Size 4: Provide **<Insert number>** compartments with inside dimensions not less than **10-1/2 inches high by 3-1/2 inches wide by 15 inches deep** (267 mm high by 89 mm wide by 381 mm deep).
 - 5) Size 5: Provide **<Insert number>** compartments with inside dimensions not less than **10-1/2 inches high by 7-1/2 inches wide by 15 inches deep** (267 mm high by 191 mm wide by 381 mm deep).
 - b. Tenant Identification: **2-inch-wide by 5/8-inch-** (51-mm-wide by 16-mm-) high, clear-plastic cardholder set in recessed slot in face of compartment door. Provide cardboard strip and self-adhesive numbers.
 - c. Tenant Identification: Laminated, black plastic tabs, engraved with identification and adhesively applied to face of compartment door.
 - d. Tenant Identification: Identification engraved into face of compartment door.
4. Compartments and Doors: Manufacturer's standard compartments with ornamental doors fabricated from solid, die-cast **[brass] [zinc]**. Equip each with **[glass window,]** lock, nameplate, and two hinges.
- a. Compartments: **[Number and size as follows:] [As indicated on Drawings, of the following sizes:] [As indicated on Drawings.]**
 - 1) Size 1: Provide **<Insert number>** compartments **15 inches** (381 mm) deep with doors **5 inches high by 3-1/2 inches wide** (127 mm high by 89 mm wide).
 - 2) Size 2: Provide **<Insert number>** compartments **15 inches** (381 mm) deep with doors **6 inches high by 5-1/2 inches wide** (152 mm high by 140 mm wide).
 - 3) Size 3: Provide **<Insert number>** compartments **15 inches** (381 mm) deep with doors **6 inches high by 11 inches wide** (152 mm high by 279 mm wide).
5. Compartment-Door Locks: Five-pin tumbler, cylinder **[cam] [spring-latch-type]** locks capable of at least 1000 key changes; with **[two] [three] <Insert number>** keys for each compartment door. Key each compartment differently.

6. Compartment-Door Locks: Removable core locks, furnished by Owner and installed as Work of this Section.
 7. Compartment-Door Locks: Spring-latch-type lock designed to accommodate cylinders keyed to building keying system; with **[two] [three] <Insert number>** keys for each compartment door. Provide cylinders specified in Section 087100 "Door Hardware."
 8. Compartment-Door Locks: Three-digit, single-dial, combination locks with spring latch and automatic throw off. Set each compartment with different combination.
 9. Frames: Fabricated from **[extruded aluminum or aluminum sheet] [brass sheet] [zinc sheet or plate]**; ganged and nested units, with cardholder and blank cards for tenant's identification behind each compartment.
 10. Snap-on Trim: Fabricated from same material and finish as compartment doors.
 11. Concealed Components and Mounting Frames: Aluminum or steel sheet with manufacturer's standard finish.
 12. Exposed Aluminum Finish: Finish surfaces exposed to view as follows:
 - a. Anodic Finish: **[Clear] <Insert color>**.
 - b. Baked-Enamel or Powder-Coated Finish: **[Black] [Dark bronze] [Gold] [Medium bronze] [Silver] [Color as indicated by manufacturer's designations] [Color as selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
 13. Brass Finish: **[Buffed finish, lacquered] [Hand-rubbed finish, lacquered] [Brushed satin, lacquered] <Insert finish>**.
 14. Zinc Finish: Manufacturer's standard powder-coated finish, **[tan] <Insert color>**.
- B. Rear-Loading, Private-Delivery Horizontal Mail Receptacles **<Insert drawing designation>**: Consisting of multiple compartments enclosed within recessed wall box. Provide access to compartments for distributing incoming mail from rear of unit with accessibility to entire group of compartments. Provide access to each compartment for removing mail by swinging compartment door.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Postal Manufacturing Co.; Division of Postal Products Unlimited, Inc.
 - b. Auth-Florence Manufacturing; a Florence company.
 - c. Bommer Industries, Inc.
 - d. Salisbury Industries.
 - e. Security Manufacturing Corporation.
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
 2. Rear-Loading Cover: **[Not required] [Lift-off rear cover fabricated from extruded aluminum or aluminum sheet, finished to match front of unit]**.
 3. Rear-Loading Door: Side hinged, fabricated from extruded aluminum or aluminum sheet, finished to match front of unit; with full-length, stainless-steel piano hinge on one side and **[positive-latching] [locking]** mechanism on the

- other. Fabricate rear-loading door to open not less than 90 degrees and to remain open while mail is deposited.
- a. Rear-Door Lock: Manufacturer's standard five-pin tumbler, cylinder lock; with **[two]** **[three]** **<Insert number>** keys.
 - b. Rear-Door Lock: Cylinder lock keyed to building keying system; with **[two]** **[three]** **<Insert number>** keys. Provide cylinders specified in Section 087100 "Door Hardware."
 - c. Retain one of two "Compartments and Doors" subparagraphs below.
4. Compartments and Doors: Manufacturer's standard compartments with doors fabricated from extruded aluminum. Equip each with lock, tenant identification, and concealed, full-length, flush hinge on one side. Provide one compartment prepared for master-door lock **[and with outgoing mail slot]**.
- a. Compartments: **[Number and size as follows:] [As indicated on Drawings, of the following sizes:] [As indicated on Drawings.]**
 - 1) Size 1: Provide **<Insert number>** compartments with inside dimensions not less than **3 inches high by 6 inches wide by 15 inches deep** (76 mm high by 152 mm wide by 381 mm deep).
 - 2) Size 2: Provide **<Insert number>** compartments with inside dimensions not less than **5 inches high by 3-1/2 inches wide by 15 inches deep** (127 mm high by 89 mm wide by 381 mm deep).
 - 3) Size 3: Provide **<Insert number>** compartments with inside dimensions not less than **5 inches high by 7-1/2 inches wide by 15 inches deep** (127 mm high by 191 mm wide by 381 mm deep).
 - 4) Size 4: Provide **<Insert number>** compartments with inside dimensions not less than **10-1/2 inches high by 3-1/2 inches wide by 15 inches deep** (267 mm high by 89 mm wide by 381 mm deep).
 - 5) Size 5: Provide **<Insert number>** compartments with inside dimensions not less than **10-1/2 inches high by 7-1/2 inches wide by 15 inches deep** (267 mm high by 191 mm wide by 381 mm deep).
 - b. Tenant Identification: **2-inch-wide by 5/8-inch-** (51-mm-wide by 16-mm-) high, clear-plastic cardholder set in recessed slot in face of compartment door. Provide cardboard strip and self-adhesive numbers.
 - c. Tenant Identification: Laminated, black plastic tabs, engraved with identification and adhesively applied to face of compartment door.
 - d. Tenant Identification: Identification engraved into face of compartment door.
5. Compartments and Doors: Manufacturer's standard compartments with ornamental doors fabricated from solid, die-cast **[brass]** **[zinc]**. Equip each with **glass window,** lock, nameplate, and two hinges.
- a. Compartments: **[Number and size as follows:] [As indicated on Drawings, of the following sizes:] [As indicated on Drawings.]**

- 1) Size 1: Provide **<Insert number>** compartments **15 inches** (381 mm) deep with doors **5 inches high by 3-1/2 inches wide** (127 mm high by 89 mm wide).
 - 2) Size 2: Provide **<Insert number>** compartments **15 inches** (381 mm) deep with doors **6 inches high by 5-1/2 inches wide** (152 mm high by 140 mm wide).
 - 3) Size 3: Provide **<Insert number>** compartments **15 inches** (381 mm) deep with doors **6 inches high by 11 inches wide** (152 mm high by 279 mm wide).
6. Compartment-Door Locks: Five-pin tumbler, cylinder [**cam**] [**spring-latch-type**] locks capable of at least 1000 key changes; with [**two**] [**three**] **<Insert number>** keys for each compartment door. Key each compartment differently.
 7. Compartment-Door Locks: Removable core locks, furnished by Owner and installed as Work of this Section.
 8. Compartment-Door Locks: Spring-latch-type lock designed to accommodate cylinders keyed to building keying system; with [**two**] [**three**] **<Insert number>** keys for each compartment door. Provide cylinders specified in Section 087100 "Door Hardware."
 9. Compartment-Door Locks: Three-digit, single-dial, combination locks with spring latch and automatic throw off. Set each compartment with different combination.
 10. Frames: Fabricated from [**extruded aluminum or aluminum sheet**] [**brass sheet**] [**zinc sheet or plate**]; ganged and nested units, with cardholder and blank cards for tenant's identification behind each compartment.
 11. Snap-on Trim: Fabricated from same material and finish as compartment doors.
 12. Concealed Components and Mounting Frames: Aluminum or steel sheet with manufacturer's standard finish.
 13. Exposed Aluminum Finish: Finish surfaces exposed to view as follows:
 - a. Anodic Finish: [**Clear**] **<Insert color>**.
 - b. Baked-Enamel or Powder-Coated Finish: [**Black**] [**Dark bronze**] [**Gold**] [**Medium bronze**] [**Silver**] [**Color as indicated by manufacturer's designations**] [**Color as selected by DEN Project Manager from manufacturer's full range**] **<Insert color>**.
 14. Brass Finish: [**Buffed finish, lacquered**] [**Hand-rubbed finish, lacquered**] [**Brushed satin, lacquered**] **<Insert finish>**.
 15. Zinc Finish: Manufacturer's standard powder-coated finish, [**tan**] **<Insert color>**.

2.4 PRIVATE POSTAL-FACILITY HORIZONTAL MAIL RECEPTACLES

- A. Standard, Rear-Loading Horizontal Mail Receptacles **<Insert drawing designation>**: Consisting of multiple compartments with open backs, enclosed within recessed, modular wall box, with approximate overall module dimensions of **30 inches high by 23-1/2 inches wide by 15-1/2 inches deep** (762 mm high by 596 mm wide by 394 mm deep); for installation between studs spaced **24 inches** (610 mm) o.c. Provide access to compartments for distributing incoming mail from rear of unit with accessibility to entire group of compartments. Provide access to each compartment for removing mail by swinging compartment door.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Salsbury Industries.
 - b. Security Manufacturing Corporation.
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.
 2. Compartments: Provide **[10] [20] [30] <Insert number>** equal-sized compartments within each module.
 3. Compartments: Provide number and size, and number of modules as indicated on Drawings.
 4. Compartment Doors: Fabricated from extruded **[or die-cast]** aluminum. Equip each with lock, tenant identification, and concealed, full-length, flush hinge on one side.
 - a. Tenant Identification: Identification engraved into **[face of compartment door] [self-adhesive placards]**.
 - b. Compartment-Door Locks: Five-pin tumbler, cylinder **[cam] [spring-latch-type]** locks capable of at least 1000 key changes; with **[two] [three] <Insert number>** keys for each compartment door. Key each compartment differently.
 5. Frames: Fabricated from aluminum or cold-rolled steel sheet; ganged and nested units, with cardholder and blank cards for tenant's identification behind each compartment.
 6. Trim: Fabricated from same material as compartment doors.
 7. Concealed Components and Mounting Frames: Aluminum or steel sheet with manufacturer's standard finish.
 8. Exposed Aluminum Finish: Finish surfaces exposed to view with **[silver powder coat on doors, black on trim] [gold powder coat on doors and trim] [silver powder coat on doors and trim] <Insert finish>**.
- B. Rack-Ladder, Rear-Loading Horizontal Mail Receptacles **<Insert drawing designation>**: Consisting of multiple compartments with open backs, enclosed within recessed, modular wall box, with approximate overall module dimensions of **12 inches high by 23-1/2 inches wide by 15-1/2 inches deep** (305 mm high by 596 mm wide by 394 mm deep); for installation between rack ladders. Provide access to compartments for distributing incoming mail from rear of unit with accessibility to entire group of compartments. Provide access to each compartment for removing mail by swinging compartment door.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Salsbury Industries.
 - b. Security Manufacturing Corporation.
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.

2. Compartments: Provide one within each module and number of modules as indicated on Drawings.
3. Compartments: Provide **[two] [four] [eight] [12] <Insert number>** equal-sized compartments within each module and number of modules as indicated on Drawings.
4. Compartments: Provide number and size, and number of modules as indicated on Drawings.
5. Compartment Doors: Fabricated from extruded aluminum. Equip each with lock, tenant identification, and concealed, full-length, flush hinge on one side.
 - a. Tenant Identification: Identification engraved into **[face of compartment door] [self-adhesive placards]**.
 - b. Compartment-Door Locks: Five-pin tumbler, cylinder **[cam] [spring-latch-type]** locks capable of at least 1000 key changes; with **[two] [three] <Insert number>** keys for each compartment door. Key each compartment differently.
6. Frames: Fabricated from aluminum or cold-rolled steel sheet; ganged and nested units, with cardholder and blank cards for tenant's identification behind each compartment.
7. Trim: Fabricated from same material as compartment doors.
8. Concealed Components and Mounting Frames: Aluminum or steel sheet with manufacturer's standard finish.
9. Rack Ladders: Aluminum or steel with manufacturer's standard finish.
 - a. Height of Rack Ladders: **[Two] [Three] [Four] [Five] [Six]** modules high.
 - b. Provide two rack ladders for first column of modules and one ladder for each additional, adjacent column of modules.
10. Exposed Aluminum Finish: Finish surfaces exposed to view with **[silver powder coat on doors, black on trim] <Insert finish>**.

2.5 VERTICAL MAIL RECEPTACLES

- A. USPS-Approved Vertical Mail Receptacles **<Insert drawing designation>**: Consisting of three to seven compartments enclosed within wall box; with inside dimensions of each compartment not less than **15 inches high by 5 inches wide by 6 inches deep** (381 mm high by 127 mm wide by 152 mm deep). Provide access to compartments for distributing incoming mail from front of unit by unlocking master lock and tilting inner compartments forward as a group. Provide access to each compartment for removing mail by swinging compartment door. Comply with USPS-STD-4B+.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Eagle Mailboxes.
 - b. Auth-Florence Manufacturing; a Florence company.
 - c. Bommer Industries, Inc.
 - d. Salisbury Industries.

- e. Security Manufacturing Corporation.
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
2. Mounting: **[Recessed] [Semirecessed with mounting frame] [Surface mounted with mounting frame] [As indicated on Drawings]**.
 3. Mail Delivery: **[USPS] [Private]**.
 4. Compartments: Provide **[three] <Insert number up to seven>**.
 5. Compartments: Provide number as indicated on Drawings.
 6. Compartment Doors and Frames: Fabricated from striated, extruded aluminum. Equip each compartment door with lock, slot in face of door to receive tenant identification, and concealed, full-length, flush hinge on one side. **[Provide one double-wide compartment with outgoing mail slot.]**
 - a. Tenant Identification: **[Cardboard name and number tab] [Laminated, black plastic tabs, engraved with identification]**.
 - b. Compartment-Door Locks: Five-pin tumbler, cylinder **[cam] [spring-latch-type]** locks capable of at least 1000 key changes; with **[two] [three] <Insert number>** keys for each compartment door. Key each compartment differently.
 - c. Compartment-Door Locks: Removable core locks, furnished by Owner and installed as Work of this Section.
 - d. Compartment-Door Locks: Spring-latch-type lock designed to accommodate cylinders keyed to building keying system; with **[two] [three] <Insert number>** keys for each compartment door. Provide cylinders specified in Section 087100 "Door Hardware."
 7. Frames: Fabricated from aluminum or cold-rolled steel sheet; ganged and nested units, with cardholder and blank cards for tenant's identification within each compartment.
 8. Concealed Components and Mounting Frames: Aluminum or steel sheet with manufacturer's standard finish.
 9. Exposed Aluminum Finish: Finish surfaces exposed to view as follows:
 - a. Anodic Finish: **[Clear] [Gold] [As indicated by manufacturer's designations] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
 - b. Baked-Enamel or Powder-Coated Finish: **[Aluminum] [Black] [Brass] [Dark bronze] [Gold] [Green] [Ivory] [Medium bronze] [Silver] [Color as indicated by manufacturer's designations] [Color as selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
- 2.6 USPS-APPROVED CLUSTER BOX UNITS (CBUs) **<Insert drawing designation>**
- A. General: Consisting of multiple compartments enclosed within freestanding, pedestal-mounted enclosure. Provide access to compartments for distributing incoming mail from front of unit by unlocking master lock and swinging pair of side-hinged master doors to provide accessibility to entire group of compartments.

Provide access to each compartment for removing mail by swinging compartment door. Comply with USPS-B-1118F.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Auth-Florence Manufacturing; a Florence company.
 - b. Jayco Industries.
 - c. Salisbury Industries.
 - d. Security Manufacturing Corporation.
 - e. **<Insert manufacturer's name>**.
 - f. or approved equal.

- B. Compartment Enclosure: Fabricated from aluminum sheet with aluminum mounting pedestal and weather-protection hood, with the following number and size of compartments:
 1. Type I: Provide eight compartments **12 inches wide by 3 inches high by 15 inches deep** (305 mm wide by 76 mm high by 381 mm deep), one outgoing mail compartment **12 inches wide by 3 inches high by 15 inches deep** (305 mm wide by 76 mm high by 381 mm deep), one parcel compartment **12 inches wide by 10 inches high by 15 inches deep** (305 mm wide by 254 mm high by 381 mm deep), and another parcel compartment **12 inches wide by 13-1/2 inches high by 15 inches deep** (305 mm wide by 343 mm high by 381 mm deep).
 2. Type II: Provide 12 compartments **12 inches wide by 3 inches high by 15 inches deep** (305 mm wide by 76 mm high by 381 mm deep), one outgoing mail compartment **12 inches wide by 3 inches high by 15 inches deep** (305 mm wide by 76 mm high by 381 mm deep), and one parcel compartment **12 inches wide by 10 inches high by 15 inches deep** (305 mm wide by 254 mm high by 381 mm deep).
 3. Type III: Provide 16 compartments **12 inches wide by 3 inches high by 15 inches deep** (305 mm wide by 76 mm high by 381 mm deep), one outgoing mail compartment **12 inches wide by 3 inches high by 15 inches deep** (305 mm wide by 76 mm high by 381 mm deep), one parcel compartment **12 inches wide by 10 inches high by 15 inches deep** (305 mm wide by 254 mm high by 381 mm deep), and another parcel compartment **12 inches wide by 13-1/2 inches high by 15 inches deep** (305 mm wide by 343 mm high by 381 mm deep).
 4. Type IV: Provide 13 compartments **12 inches wide by 4-3/4 inches high by 15 inches deep** (305 mm wide by 121 mm high by 381 mm deep), one outgoing mail compartment **12 inches wide by 4-3/4 inches high by 15 inches deep** (305 mm wide by 121 mm high by 381 mm deep), and one parcel compartment **12 inches wide by 10 inches high by 15 inches deep** (305 mm wide by 254 mm high by 381 mm deep).

- C. Compartment Doors and Frames: Fabricated from one-piece extruded aluminum or aluminum sheet. Equip each compartment door with lock, tenant identification, and concealed, full-length, flush hinge on one side. Provide outgoing mail slot with weather protection flap.
 1. Tenant Identification: Number **[engraved into face]** **[applied into recess]** of compartment door.

2. Compartment-Door Locks: Comply with USPS-L-1172C, PSIN O910, for locks and keys, or equivalent as approved by USPS; with three keys for each compartment door. Key each compartment differently.
 3. Parcel-Locker-Door Locks: Two-key security system in which control key provides access to parcel-locker key, which opens compartment and is retained once opened.
- D. Pedestal: Aluminum, with same finish as compartment enclosure and attached with theft-resistant fasteners.
- E. Exposed Aluminum Finish: Finish surfaces exposed to view with powder-coated finish in [**postal gray (light gray)**] [**color as selected by DEN Project Manager from manufacturer's full range of colors**] <Insert color>.
- 2.7 NEIGHBORHOOD DELIVERY AND COLLECTION BOX UNITS (NDCBUs) <Insert drawing designation>
- A. General: Consisting of multiple compartments, with inside dimensions of each compartment not less than **5 inches high by 6 inches wide by 15 inches deep** (127 mm high by 152 mm wide by 381 mm deep), enclosed within freestanding, pedestal-mounted enclosure. Provide access to compartments for distributing incoming mail from rear of unit by side-hinged rear door with accessibility to entire group of compartments. Provide access to each compartment for removing mail by swinging compartment door.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Bommer Industries, Inc.
 - b. Jayco Industries.
 - c. Jensen Industries.
 - d. <Insert manufacturer's name>.
 - e. or approved equal.
- B. Compartment Enclosure: Fabricated from aluminum sheet with integral weather protection hood, with [**eight equal-sized compartments (Type I)**] [**12 equal-sized compartments (Type II)**] [**16 equal-sized compartments (Type III)**] [**compartments of number and size as indicated on Drawings**] <Insert description>.
- C. Compartment Doors and Frames: Fabricated from one-piece extruded aluminum or aluminum sheet. Equip each compartment door with lock, tenant identification, and concealed, full-length, flush hinge on one side. [**Provide top left compartment with outgoing mail slot.**]
1. Tenant Identification: Number engraved into face of compartment door.
 2. Compartment-Door Locks: Dustproof, five-pin tumbler, cylinder cam locks capable of at least 1000 key changes; with [**three**] <Insert number> keys for each compartment door. Key each compartment differently.

- D. Rear-Loading Door: Fabricated from aluminum sheet, with full-length, stainless-steel piano hinge on one side and three-point latching mechanism on the other. Fabricate rear-loading door to open not less than 90 degrees and to remain open while mail is deposited.
1. Rear-Door Lock: Door prepared to receive lock furnished by local postmaster.
 2. Rear-Door Lock: Cylinder lock with **[two] [three] <Insert number>** keys. Provide cylinders specified in Section 087100 "Door Hardware."
- E. Pedestal: **[Same material and finish as compartment enclosure and attached with theft-resistant fasteners] [As indicated on Drawings].**
- F. Exposed Aluminum Finish: Finish surfaces exposed to view as follows:
1. Anodic Finish: **[Clear] <Insert color>**.
 2. Baked-Enamel or Powder-Coated Finish: **[Black] [Dark bronze] [Gold] [Medium bronze] [Color as selected by DEN Project Manager from manufacturer's full range] <Insert color>**.

2.8 USPS-APPROVED PARCEL LOCKERS

- A. Front-Loading, USPS-Approved Indoor Parcel Lockers **<Insert drawing designation>**: Consisting of single or multiple compartments enclosed within a larger enclosure of type indicated below. Provide access to compartments for distributing incoming parcels from front of unit. Provide access to each compartment for removing parcels by swinging compartment door. Comply with **[USPS-STD-4C] [USPS-STD-4B+ or USPS-B-1116A construction, adapted for larger-sized, interior, parcel compartments]**.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Eagle Mailboxes.
 - b. American Postal Manufacturing Co.; Division of Postal Products Unlimited, Inc.
 - c. Auth-Florence Manufacturing; a Florence company.
 - d. Bommer Industries, Inc.
 - e. Jensen Industries.
 - f. Salsbury Industries.
 - g. Security Manufacturing Corporation.
 - h. **<Insert manufacturer's name>**.
 - i. or approved equal.
 2. Enclosure Type: **[Recessed] [Freestanding]**.
 3. Mail Delivery: **[USPS] [Private]**.
 4. Compartments: **[Number and size as follows:] [As indicated on Drawings, of the following sizes:] [As indicated on Drawings.]**

- a. Type X, Parcel Only (No Master Door): Single parcel receptacle [15 inches high by 12 inches wide by 15 inches deep (381 mm high by 305 mm wide by 381 mm deep)] [18 inches high by 12 inches wide by 15 inches deep (457 mm high by 305 mm wide by 381 mm deep)].
 - b. Type X, Parcel Only (No Master Door): A group of parcel receptacles in single-column configuration without a master door; [one] [two] compartment(s) 18 inches high by 12 inches wide by 15 inches deep (457 mm high by 305 mm wide by 381 mm deep)[and] [one compartment 15 inches high by 12 inches wide by 15 inches deep (381 mm high by 305 mm wide by 381 mm deep)].
 - c. Type XI, Parcel Only: A group of parcel receptacles in single-column configuration with single master door prepared for master-door lock; [one] [two] [compartment(s) 15 inches high by 12 inches wide by 15 inches deep (381 mm high by 305 mm wide by 381 mm deep)] [and] [one] [two] [compartment(s) 18 inches high by 12 inches wide by 15 inches deep (457 mm high by 305 mm wide by 381 mm deep)].
5. Compartments: Fabricated from aluminum sheet with number and size [as follows:] [as indicated on Drawings.]
- a. Type I: Provide one box with two compartments, one on top of the other, each compartment with inside dimensions of 12 inches wide by 14 inches high by 15 inches deep (305 mm wide by 356 mm high by 381 mm deep).
 - b. Type II: Provide one box with four compartments, side by side, two on top and two on bottom, each compartment with inside dimensions of 12 inches wide by 14 inches high by 15 inches deep (305 mm wide by 356 mm high by 381 mm deep).
6. Front-Loading Master Door: Fabricated to hold compartment doors; prepared to receive master-door lock provided by local postmaster.
7. Compartment Doors and Frames: Fabricated from [same material and finish as adjacent mail receptacles] [extruded aluminum] [aluminum sheet] [metallic-coated steel sheet] [aluminum or metallic-coated steel sheet]. Equip each compartment door with lock, identification, and concealed, full-length, spring-loaded, flush hinge on right side.
- a. Compartment Identification: Black, sequential numbers [engraved into] [stamped onto] recess in face of compartment door.
 - b. Compartment-Door Locks: Dual lock security system in which master lock provides access to customer lock (USPS-L-1172C, PSIN O910) and parcel-locker key opens compartment and is retained once opened.
 - c. Compartment-Door Locks: Two-key security system in which control key provides access to parcel-locker key, which opens compartment and is retained once opened.
8. Exposed Aluminum Finish: Finish surfaces exposed to view as follows:
- a. Anodic Finish: [Clear] [Brass] [Dark bronze] [As indicated by manufacturer's designations] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.

- b. Baked-Enamel or Powder-Coated Finish: **[Silver] [Black] [Medium bronze] [Dark bronze] [Gold] [Color as indicated by manufacturer's designations] [Color as selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
 9. Metallic-Coated Steel Finish: Finish surfaces exposed to view with baked-enamel or powder-coated finish; **[color as indicated by manufacturer's designations] [color as selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
- B. Rear-Loading, USPS-Approved Indoor Parcel Lockers **<Insert drawing designation>**: Consisting of single or multiple compartments enclosed within recessed wall box. Provide access to compartments for distributing incoming parcels from rear of unit with accessibility to entire group of compartments. Provide access to each compartment for removing parcels by swinging compartment door. Comply with **[USPS-STD-4C] [USPS-STD-4B+ or USPS-B-1116A construction, adapted for larger-sized, interior, parcel compartments]**.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Eagle Mailboxes.
 - b. American Postal Manufacturing Co.; Division of Postal Products Unlimited, Inc.
 - c. Auth-Florence Manufacturing; a Florence company.
 - d. Bommer Industries, Inc.
 - e. Jensen Industries.
 - f. Salsbury Industries.
 - g. Security Manufacturing Corporation.
 - h. **<Insert manufacturer's name>**.
 - i. or approved equal.
 2. Mail Delivery: **[USPS] [Private]**.
 3. Compartments: **[Number and size as follows:] [As indicated on Drawings, of the following sizes:] [As indicated on Drawings.]**
 - a. Type XII, Parcel Only: A group of parcel receptacles in single-column configuration with a rear-access cover; **[one] [two] [compartment(s) 15 inches high by 12 inches wide by 15 inches deep (381 mm high by 305 mm wide by 381 mm deep)] [and] [one] [two] [compartment(s) 18 inches high by 12 inches wide by 15 inches deep (457 mm high by 305 mm wide by 381 mm deep)]**.
 4. Compartments: Fabricated enclosure with number and size **[as follows:] [as indicated on Drawings.]**
 - a. Type I: Provide one box with two compartments, one on top of the other, each compartment with inside dimensions of **12 inches wide by 14 inches high by 15 inches deep (305 mm wide by 356 mm high by 381 mm deep)**.

pedestal-mounted enclosure. Provide access to compartments for distributing incoming mail from front of unit by unlocking master lock and swinging pair of side-hinged master doors to provide accessibility to entire group of compartments. Provide access to each compartment for removing mail by swinging compartment door. Comply with USPS-B-1116A.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Auth-Florence Manufacturing; a Florence company.
 - b. Jayco Industries.
 - c. Salsbury Industries.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
2. Compartment Enclosure: Fabricated from aluminum sheet with aluminum mounting pedestal and weather-protection hood, with the following number and size of compartments:
 - a. Type I: Provide one box with two compartments, one on top of the other, each compartment with inside dimensions of **12 inches wide by 14 inches high by 15 inches deep** (305 mm wide by 356 mm high by 381 mm deep).
 - b. Type II: Provide one box with four compartments, side by side, two on top and two on bottom, each compartment with inside dimensions of **12 inches wide by 14 inches high by 15 inches deep** (305 mm wide by 356 mm high by 381 mm deep).
3. Compartment Doors and Frames: Fabricated from one-piece extruded aluminum or aluminum sheet. Equip each compartment door with lock, tenant identification, and concealed, full-length, flush hinge on one side. Provide outgoing mail slot with weather protection flap.
 - a. Locker Identification: Number **[engraved into face] [applied into recess]** of compartment door.
 - b. Door Locks: Two-key security system in which control key provides access to parcel-locker key, which opens compartment and is retained once opened.
4. Pedestal: Aluminum, with same finish as compartment enclosure and attached with theft-resistant fasteners.
5. Exposed Aluminum Finish: Finish surfaces exposed to view with powder-coated finish in **[postal gray (light gray)] [color as selected by DEN Project Manager from manufacturer's full range of colors] <Insert color>**.

2.9 USPS-APPROVED COLLECTION BOXES

- A. USPS-Approved, Front-Loading **[Collection] [Receiving]** Boxes **<Insert drawing designation>**: Consisting of single compartment with fire-resistant cushion bottom, enclosed within wall box, with **[mail slot] [hopper door]** to receive mail. Provide

access to compartment for collecting mail from front of unit. Comply with USPS Publication 16.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Auth-Florence Manufacturing; a Florence company.
 - b. Bommer Industries, Inc.
 - c. Jayco Industries.
 - d. Security Manufacturing Corporation.
 - e. U.S. Chutes; Division of USC Group.
 - f. **<Insert manufacturer's name>**.
 - g. or approved equal.
2. Mail Collection: **[USPS] [Private]**.
3. Mounting: **[Recessed] [Semirecessed] [Surface mounted]**.
4. Type: **[Collection box] [Receiving box for mail chutes]**.
5. Height: Sized to match height of **[four] [five] [six] [seven] <Insert number>** horizontal mail receptacles.
6. Height: **[As indicated on Drawings] <Insert dimension>**.
7. Compartment Door and Frame: Fabricated from **[1/4-inch- (6-mm-)] [minimum 1/8-inch- (3-mm-)]** thick aluminum, with opening not less than **12 by 20 inches (305 by 508 mm)** and not more than **18 by 30 inches (457 by 762 mm)**. Equip door with lock and concealed, full-length, flush hinge on one side.
 - a. Door Lock: Door prepared to receive lock provided by local postmaster.
 - b. Text cited in first subparagraph below is for USPS; revise to suit Project.
 - c. Identification: Engrave face of compartment door with **1-inch- (25-mm-)** high letters as follows: "U.S. MAIL LETTER BOX" on two lines at top or bottom of unit.
 - d. Door Style: **[Set door within face frame] [Extend door full width and height of unit, with no exposed frame]**.
8. Mail Slot: Fabricated from **1/4-inch- (6-mm-)** thick aluminum, with **11-inch-wide by 1-1/4-inch- (279-mm-wide by 32-mm-)** high opening, protected by inside hood and hinge flap, and with inside baffle to prevent removal of mail from box.
9. Hopper Door: Fabricated from **1/4-inch- (6-mm-)** thick aluminum, with opening that allows a bundle measuring **6-1/2 inches wide by 11-1/2 inches long by 4 inches high (165 mm wide by 292 mm long by 102 mm high)** to be deposited, and with inside baffle to prevent removal of mail from box. Equip door with door pull and concealed, full-length bottom hinge.
 - a. Identification: Engrave face of hopper door with **1-inch- (25-mm-)** high letters as follows: "LETTERS AND LETTER MAIL TIED IN BUNDLES."
 - b. Door Style: **[Set door within face frame] [Extend door full width and height of unit, with no exposed frame]**.
10. Exposed Materials: Fabricated from **[stainless-steel-clad] [brass-clad]** extruded or sheet aluminum.

11. Concealed Components and Mounting Frames: Aluminum or steel sheet with manufacturer's standard finish.
 12. Schedule-Card Holder: Provide recessed or surface-mounted holder for pick-up schedule card in center of bottom front portion of unit. Fabricate of same material and finish as front of unit.
 13. Mailbag Hooks: Provide two aluminum or stainless-steel hooks at exterior front edge of bottom of surface-mounted units, spaced **15 to 17-1/2 inches** (381 to 445 mm) apart, for supporting mailbags.
 14. Mailbag Rack: Provide internal rack system for supporting mailbags within unit.
- B. USPS-Approved, Rear-Loading Collection Boxes **<Insert drawing designation>**: Consisting of single compartment with fire-resistant cushion bottom, enclosed within recessed wall box, with **[mail slot] [hopper door]** to receive mail. Provide access to compartment for collecting mail from rear of unit. Comply with USPS Publication 16.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Auth-Florence Manufacturing; a Florence company.
 - b. Bommer Industries, Inc.
 - c. Jayco Industries.
 - d. **<Insert manufacturer's name>**.
 - e. or approved equal.
 2. Mail Collection: **[USPS] [Private]**.
 3. Height: Sized to match height of **[four] [five] [six] [seven]** horizontal mail receptacles.
 4. Height: **[As indicated on Drawings] <Insert dimension>**.
 5. Compartment Frame and Front Panel: Fabricated from **[1/4-inch- (6-mm-)] [minimum 1/8-inch- (3-mm-)]** thick aluminum.
 - a. Identification: Engrave face of front panel with **1-inch- (25-mm-)** high letters as follows: "U.S. MAIL LETTER BOX" on two lines at top or bottom of unit.
 6. Mail Slot: Fabricated from **1/4-inch- (6-mm-)** thick metal plate, with **11-inch-wide by 1-1/4-inch- (279-mm-wide by 32-mm-)** high opening, protected by inside hood and hinge flap, and with inside baffle to prevent removal of mail from box.
 7. Hopper Door: Fabricated from **1/4-inch- (6-mm-)** thick metal plate, with opening that allows a bundle measuring **6-1/2 inches wide by 11-1/2 inches long by 4 inches high** (165 mm wide by 292 mm long by 102 mm high) to be deposited, and with inside baffle to prevent removal of mail from box. Equip door with door pull and concealed, full-length bottom hinge.
 - a. Identification: Engrave face of hopper door with **1-inch- (25-mm-)** high letters as follows: "LETTERS AND LETTER MAIL TIED IN BUNDLES."
 - b. Door Style: **[Set door within face frame] [Extend door full width and height of unit, with no exposed frame]**.
 8. Rear-Loading Enclosure: Lift-off rear cover fabricated from same material and finish as front of unit.

9. Rear-Loading Door: Side hinged, with opening not less than **12 by 20 inches** (305 by 508 mm) and not more than **18 by 30 inches** (457 by 762 mm), fabricated from same material and finish as front of unit; with full-length, stainless-steel piano hinge on one side and positive-latching mechanism on the other. Fabricate rear-loading door to remain open while mail is collected.
 - a. Rear-Door Lock: Door prepared to receive lock provided by local postmaster.
10. Exposed Materials: Fabricated from extruded or sheet aluminum.
11. Concealed Components and Mounting Frames: Aluminum or steel sheet with manufacturer's standard finish.
12. Schedule-Card Holder: Provide recessed or surface-mounted holder for pick-up schedule card in center of bottom front portion of unit. Fabricate of same material and finish as front of unit.
13. Mailbag Hooks: Provide two aluminum or stainless-steel hooks at exterior front edge of bottom of surface-mounted units, spaced **15 to 17-1/2 inches** (381 to 445 mm) apart, for supporting mailbags.
14. Mailbag Rack: Provide internal rack system for supporting mailbags within unit.

C. Finish surfaces exposed to view as follows:

1. Aluminum Finish: Finish surfaces exposed to view as follows:
 - a. Anodic Finish: **[Clear] [Black] [Gold] [Dark bronze] [Light bronze] [Medium bronze] [As indicated by manufacturer's designations] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
 - b. Baked-Enamel or Powder-Coated Finish: **[Black] [Gold] [Dark bronze] [Medium bronze] [Silver] [Color as indicated by manufacturer's designations] [Color as selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
2. Brass Finish: **[Buffed finish, lacquered] [Hand-rubbed finish, lacquered] [Brushed satin, lacquered] <Insert finish>**.
3. Stainless-Steel Finish: No. 4.

2.10 PRIVATE COLLECTION BOXES

- A. Private, Horizontal, Front-Loading Collection Boxes **<Insert drawing designation>**: Consisting of single compartment of same depth as horizontal mail receptacles, enclosed within wall box, with slot in top of front to receive mail. Provide access to compartment for collecting mail from front of unit.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Auth-Florence Manufacturing; a Florence company.
 - b. Bommer Industries, Inc.

- c. **<Insert manufacturer's name>**.
 - d. or approved equal.
 2. Height: Sized to match height of **[four] [five] [six] [seven]** horizontal mail receptacles.
 3. Mounting: **[Recessed] [Semirecessed] [Surface mounted]**.
 4. Compartment Door and Frame: Fabricated from extruded aluminum or aluminum sheet that is **[full height of unit including] [in portion of unit below]** mail slot, and equipped with lock and concealed, continuous side hinge.
 - a. Door Lock: Door prepared to receive lock provided by local postmaster.
 - b. Identification: Engrave face of compartment door with **1-inch-** (25-mm-) high letters as follows: **"[LETTERS] [OUTGOING MAIL] [OFFICE] <Insert text>."**
 5. Aluminum Finish: Finish surfaces exposed to view as follows:
 - a. Anodic Finish: **[Clear] <Insert color>**.
 - b. Baked-Enamel or Powder-Coated Finish: **[Black] [Dark bronze] [Gold] [Medium bronze] [Color as indicated by manufacturer's designations] [Color as selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
- B. Private, Horizontal, Rear-Loading Collection Boxes **<Insert drawing designation>**: Consisting of single compartment of same depth as horizontal mail receptacles, enclosed within recessed wall box, with slot in top of front to receive mail. Provide access to compartment for collecting mail from rear of unit.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Auth-Florence Manufacturing; a Florence company.
 - b. Bommer Industries, Inc.
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.
 2. Height: Sized to match height of **[four] [five] [six] [seven]** horizontal mail receptacles.
 3. Rear-Loading Cover: **[Not required] [Lift-off rear cover fabricated from extruded aluminum or aluminum sheet, finished to match front of unit]**.
 4. Rear-Loading Door: Side hinged, fabricated from extruded aluminum or aluminum sheet, finished to match front of unit; with continuous hinge on one side and **[positive-latching] [locking]** mechanism on the other.
 - a. Rear-Door Lock: Door prepared to receive lock provided by local postmaster.
 - b. Rear-Door Lock: Cylinder lock keyed to building keying system; with **[two] [three] <Insert number>** keys. Provide cylinders specified in Section 087100 "Door Hardware."

5. Exposed Materials: Fabricated from extruded or sheet aluminum.
 6. Concealed Components and Mounting Frames: Aluminum or steel sheet with manufacturer's standard finish.
 7. Identification: Engrave front of unit below mail slot with **1-inch-** (25-mm-) high letters as follows: "[**LETTERS**] [**OUTGOING MAIL**] [**OFFICE**] <Insert text>."
 8. Aluminum Finish: Finish surfaces exposed to view as follows:
 - a. Anodic Finish: [**Clear**] <Insert color>.
 - b. Baked-Enamel or Powder-Coated Finish: [**Black**] [**Dark bronze**] [**Gold**] [**Medium bronze**] [**Color as indicated by manufacturer's designations**] [**Color as selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
- C. Vertical Collection Boxes <Insert drawing designation>: Consisting of single compartment enclosed within wall box, with slot in top of front to receive mail. Provide access to compartment for collecting incoming mail from front of unit.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Auth-Florence Manufacturing; a Florence company.
 - b. Bommer Industries, Inc.
 - c. Jensen Industries.
 - d. Salsbury Industries.
 - e. Security Manufacturing Corporation.
 - f. <Insert manufacturer's name>.
 - g. or approved equal.
 2. Mounting: [**Recessed**] [**Semirecessed**] [**Surface mounted**].
 3. Size: [**Same height as adjacent vertical mail receptacles**] [**8-3/4 inches wide by 19 inches high by 6-1/2 inches deep** (222 mm wide by 483 mm high by 165 mm deep)] [**15 inches wide by 19 inches high by 6-1/2 inches deep** (381 mm wide by 483 mm high by 165 mm deep)] <Insert dimensions>.
 4. Compartment Door and Frame: Fabricated from aluminum, with opening for mail. Equip door with lock and concealed, full-length, flush hinge on one side. Set door within face frame.
 - a. Door Lock: Door prepared to receive lock provided by local postmaster.
 - b. Door Lock: Cylinder lock keyed to building keying system; with [**two**] [**three**] <Insert number> keys. Provide cylinders specified in Section 087100 "Door Hardware."
 - c. Identification: Engrave face of compartment door with **1-inch-** (25-mm-) high letters as follows: "[**LETTERS**] [**OUTGOING MAIL**] [**OFFICE**] <Insert text>."
 5. Exposed Materials: Fabricated from extruded or sheet aluminum.
 6. Concealed Components and Mounting Frames: Aluminum or steel sheet with manufacturer's standard finish.
 7. Aluminum Finish: Finish surfaces exposed to view as follows:

- a. Anodic Finish: **[Clear]** <Insert color>.
 - b. Baked-Enamel or Powder-Coated Finish: **[Aluminum]** **[Black]** **[Brass]** **[Dark bronze]** **[Gold]** **[Green]** **[Ivory]** **[Medium bronze]** **[Silver]** **[Color as indicated by manufacturer's designations]** **[Color as selected by DEN Project Manager from manufacturer's full range]** <Insert color>.
- D. Private, Pedestal-Mounted Collection Boxes <Insert drawing designation>: Consisting of single compartment enclosed within freestanding, pedestal-mounted enclosure, with slot in top of front of unit to receive mail. Provide access to compartment for collecting mail from **[front]** **[or]** **[rear]** of unit through door equipped with concealed, continuous side hinge and lock.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Auth-Florence Manufacturing; a Florence company.
 - b. Salisbury Industries.
 - c. <Insert manufacturer's name>.
 - d. or approved equal.
 2. Compartment Enclosure: Fabricated from extruded aluminum or aluminum sheet with integral weather-protection hood.
 3. Pedestal: **[Same material and finish as parcel locker and attached with theft-resistant fasteners]** **[As indicated on Drawings]**.
 4. Aluminum Finish: Finish surfaces exposed to view as follows:
 - a. Anodic Finish: **[Clear]** <Insert color>.
 - b. Baked-Enamel or Powder-Coated Finish: **[Blue]** **[Gray]** **[White]** **[Color as indicated by manufacturer's designations]** **[Color as selected by DEN Project Manager from manufacturer's full range]** <Insert color>.
- E. Private, Curbside Collection Boxes <Insert drawing designation>: Consisting of single compartment enclosed within curved-top, freestanding enclosure with four legs **and casters**. Fabricate enclosure from welded and riveted steel. Provide hopper door with door pull in top of unit to receive packages, with opening size not less than **4-1/2 inches high by 15-1/2 inches wide** (114 mm high by 394 mm wide). Provide access to compartment for collecting packages from bottom of front of unit through door equipped with concealed, continuous bottom hinge and lock.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Charnstrom, W. A. Company.
 - b. Salisbury Industries.
 - c. Security Manufacturing Corporation.
 - d. <Insert manufacturer's name>.
 - e. or approved equal.
 2. Door Lock: **[Five-pin tumbler cylinder]** **[Hasp for padlock]**.

3. Snorkel: Provide rear-mounted, drive-by attachment with opening not less than **12 inches wide by 3 inches high** (305 mm wide by 76 mm high).
4. Steel Finish: Baked-enamel or powder-coated finish; **[gray] [white] [color as indicated by manufacturer's designations] [color as selected by DEN Project Manager from manufacturer's full range] <Insert color>**.

2.11 DATA DISTRIBUTION BOXES

- A. Data Distribution Boxes **<Insert drawing designation>**: Consisting of multiple compartments enclosed within enclosure.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Salsbury Industries.
 - b. Security Manufacturing Corporation.
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.
 2. Enclosure Configuration: **[Freestanding] [Recessed in wall] [Recessed in wall and installed between rack ladders]**.
 3. Compartment Access: Provide access to compartments as follows:
 - a. For Distributing Incoming Mail from Front of Unit: Mail slot in each compartment door.
 - b. For Distributing Incoming Mail from Rear of Unit: Open backs **[with aluminum cover finished to match front of unit]**.
 - c. For Removing Mail: Unlocking and swinging compartment door.
 4. Compartments: **[Number and size as follows:] [As indicated on Drawings, of the following sizes:] [As indicated on Drawings.]**
 - a. Size 1: Provide **<Insert number>** compartments with inside dimensions not less than **5 inches high by 12-1/2 inches wide by 15 inches deep** (127 mm high by 318 mm wide by 381 mm deep).
 - b. **<Insert compartment description>**.
 5. Compartment Doors: Equip each with lock and concealed, continuous hinge.
 - a. Door Locks: Five-pin tumbler, cylinder **[cam] [spring-latch-type]** locks capable of at least 1000 key changes; with **[two] [three] <Insert number>** keys for each compartment door. Key each compartment differently.
 - b. Door Locks: Three-digit, single-dial, combination locks with spring latch and automatic throw off. Set each compartment with different combination.
 6. Concealed Components and Mounting Frames: Aluminum or steel sheet with manufacturer's standard finish.
 7. Exposed Materials: Fabricated from steel sheet or aluminum with powder-coat finish.

8. Rack Ladders: Aluminum or steel with manufacturer's standard finish.
9. Powder-Coated Finish: [**Silver**] [**Silver with black trim**] [**Silver with slate trim**] [**Sandalwood with sand trim**] [**Color as indicated by manufacturer's designations**] [**Color as selected by DEN Project Manager from manufacturer's full range**] <Insert color>.

2.12 MAIL CHUTES

- A. General: Factory assembled and fabricated with tight joints, overlaps in direction of mail flow, and free of ledges. Provide transition sections so all sections of chutes are connected and overlap at least **2 inches** (51 mm). Fabricate mail chutes so joint sections comply with same dimensions with no reduction in chute size. Provide removable panels for access to concealed portions of chutes that exceed **5 feet** (1.5 m) in length. [**Comply with USPS Publication 16.**]
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. U.S. Chutes; Division of USC Group.
 - b. <Insert manufacturer's name>.
 - c. or approved equal.
 2. Mail Collection: [**USPS**] [**Private**].
 3. Inside Dimensions: [**8 inches wide by 2 inches deep** (203 mm wide by 51 mm deep)] [**14 inches wide by 3 inches deep** (356 mm wide by 76 mm deep)] [**14 inches wide by 7 inches deep** (356 mm wide by 178 mm deep)] <Insert dimensions>.
 4. Mounting: [**Recessed**] [**Semirecessed**] [**Surface mounted**] [**As detailed**].
- B. Exposed Front Panels: Continuous, one-piece frames and covers fabricated from **0.125-inch-** (3.2-mm-) thick, [**stainless-steel-clad**] [**brass-clad**] extruded aluminum, and retaining removable transparent material as follows, for not less than 3/4 of length of front of chute on each floor:
 1. Transparent Material: [**Manufacturer's standard glazing**] <Insert requirement>, complying with USPS Publication 16.
- C. Concealed Front Panels: Consisting of continuous, one-piece frames retaining **0.0269-inch-** (0.7-mm-) thick, metallic-coated steel sheet panels. Extend concealed front panels from top of ceiling fasciae to bottom of floor collar above.
- D. Sides and Backs: Continuous, one-piece, **0.125-inch-** (3.2-mm-) thick aluminum sheet extending from floor to ceiling on each floor and extending **54 inches** (1372 mm) above finish flooring at top story.
- E. Floor and Ceiling Fasciae and Lock Band: Manufacturer's standard, matching material and finish of front frames and covers. Provide lock band with locking device and keyed lock that prevents key removal if locking device is not secured.

- F. Mail Slots: Same material and finish as chute; not less than **4-3/4 inches wide by 1/2 inch high** (121 mm wide by 13 mm high) with device designed to guide mail into inside opening of same size located **2-1/2 inches** (64 mm) below mail slot. Provide mail slots on each floor.
1. Inscribe the words "[**U.S. MAIL**] <Insert text>" on face of mail slots.
- G. Finish surfaces exposed to view as follows:
1. Aluminum Finish: Finish surfaces exposed to view as follows:
 - a. Anodic Finish: [**Clear**] [**Black**] [**Dark bronze**] [**Medium bronze**] [**As indicated by manufacturer's designations**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
 - b. Baked-Enamel or Powder-Coated Finish: [**Color as indicated by manufacturer's designations**] [**Color as selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
 2. Brass Finish: [**Buffed finish, lacquered**] [**Hand-rubbed finish, lacquered**] [**Brushed satin, lacquered**] <Insert finish>.
 3. Stainless-Steel Finish: No. 4.

2.13 ACCESSORIES

- A. Directory for Mail Receptacles <Insert drawing designation>: Surface-mounted, front-opening unit, with clear glass or plastic window.
1. Framed, Top-Mount Unit for Horizontal Mail Receptacles: Fabricate directory as framed, horizontal unit with modular sections having a [**24-name capacity (3 modules)**] [**32-name capacity (4 modules)**] [**40-name capacity (5 modules)**]; of same material[, size,] and finish as adjacent mail receptacles; mounted above mail receptacles[**as indicated on Drawings**].
 2. Framed, Side-Mount Unit for Horizontal Mail Receptacles: Fabricate directory as framed, horizontal unit with [**50-name capacity, 28 inches** (711 mm)] [**60-name capacity, 33-3/8 inches** (848 mm)] [**70-name capacity, 38-3/4 inches** (984 mm)] high; of same material and finish as adjacent mail receptacles; mounted along side of mail receptacles[**as indicated on Drawings**].
 3. Framed, Side-Mount Unit for Vertical Mail Receptacles: Fabricate directory as framed, vertical unit with modular sections having a [**40-name capacity (1 module)**] [**80-name capacity (2 modules)**] [**120-name capacity (3 modules)**] [**160-name capacity (4 modules)**] [**200-name capacity (5 modules)**]; of same size, material, and finish as adjacent vertical mail compartment doors unless otherwise indicated.
 4. Insert Units for Vertical Mail Receptacles: Fabricate directory as modular inserts having a [**40-name capacity (1 module)**] [**80-name capacity (2 modules)**] [**120-name capacity (3 modules)**] [**160-name capacity (4 modules)**] [**200-name capacity (5 modules)**]; of same size, material, and finish as adjacent vertical mail compartment doors unless otherwise indicated.
 5. Provide name strips made of **1/4-inch-** (6-mm-) high label tape.

- B. Key Keeper **<Insert drawing designation>**: Consisting of single compartment with door; interior compartment size not less than **[4-3/4 inches wide by 2-1/4 inches high by 1-1/2 inches deep]** (121 mm wide by 57 mm high by 38 mm deep) **<Insert dimension>**.**[USPS approved.]**
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Auth-Florence Manufacturing; a Florence company.
 - b. Bommer Industries, Inc.
 - c. Jensen Industries.
 - d. Knox Company.
 - e. Salsbury Industries.
 - f. Security Manufacturing Corporation.
 - g. **<Insert manufacturer's name>**.
 - h. or approved equal.
 2. Mounting: **[Recessed] [Surface mounted]**.
 3. Style: Compartment door **[set within face frame] [extending full width and height of unit, with no exposed frame]**.
 4. Type of Operation: **[Loose key in box] [Retractor reel with minimum 20-inch-(508-mm-) long chain] [Push button, 24-V switch in box]**.
 5. Mail Delivery: **[USPS] [Private]**.
 6. Door Lock: Door prepared to receive lock furnished by local postmaster.
 7. Door Lock: Five-pin tumbler, cylinder cam lock capable of at least 1000 key changes; with **[two] [three] <Insert number>** keys.
 8. Door Lock: Cylinder lock keyed to building keying system; with **[two] [three] <Insert number>** keys. Provide cylinders specified in Section 087100 "Door Hardware."
 9. Exposed Material and Finish: Exposed surfaces fabricated from same material and finish as adjacent mail receptacles.
 10. Exposed Material and Finish: Steel, **[aluminum] [brass]** powder-coated finish.
 11. Exposed Material and Finish: Stainless steel, brushed finish.
 12. Exposed Material and Finish: Aluminum, as follows:
 - a. Anodic Finish: **[Clear] [Brass] [Dark bronze] [As indicated by manufacturer's designations] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
 - b. Baked-Enamel or Powder-Coated Finish: **[Black] [Dark bronze] [Medium bronze] [Gold] [Color as indicated by manufacturer's designations] [Color as selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
- C. Key Cabinet **<Insert drawing designation>**: Wall-mounted,**[metallic-coated]** steel cabinet with pivoting, key-holding panels and side-hinged door equipped with five-pin tumbler, cylinder door lock and concealed, full-length flush hinge. Finish cabinet, panels, and door with baked-enamel or powder-coated finish. Provide key control system consisting of key-holding hooks, labels, two sets of key tags with self-locking key holders, key-gathering envelopes, and temporary and permanent markers.

1. Capacity: Keys for [**150 percent of the number of**] <Insert number> mail-receptacle locks.
 2. Cross-Index System: Consisting of index cards for recording key information. Include three receipt forms for each key-holding hook.
 3. Baked-Enamel or Powder-Coated Finish: [**Color as indicated by manufacturer's designations**] [**Color as selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
- D. Mail-Sorting Collection Unit <Insert drawing designation>: Consisting of **1/4-inch-** (6-mm-) thick, metal faceplate and through-the-wall hopper door(s) allowing receipt and separation of mail.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Bommer Industries, Inc.
 - b. Security Manufacturing Corporation.
 - c. U.S. Chutes; Division of USC Group.
 - d. <Insert manufacturer's name>.
 - e. or approved equal.
 2. Hopper Doors: [**One**] [**Two**] [**Three**] door(s), with door pull for each and with opening size not less than <Insert dimensions>.
 - a. Engrave doors with **1-inch-** (25-mm-) high letters as follows: "[**STAMPED MAIL**] [**METERED MAIL**] <Insert text>."
 - b. Identification: Engrave unit at top with **2-inch-** (51-mm-) high letters as follows: "[**U.S. MAIL**] [**UNITED STATES MAIL**] <Insert text>."
 3. Exposed Material and Finish: Exposed surfaces fabricated from same material and finish as adjacent mail receptacles.
 4. Aluminum Finish: Finish surfaces exposed to view as follows:
 - a. Anodic Finish: [**Clear**] [**Black**] [**Dark bronze**] [**Light bronze**] [**Medium bronze**] [**As indicated by manufacturer's designations**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
 - b. Baked-Enamel or Powder-Coated Finish: [**Black**] [**Dark bronze**] [**Gold**] [**Medium bronze**] [**Color as indicated by manufacturer's designations**] [**Color as selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
 5. Brass Finish: [**Buffed finish, lacquered**] [**Hand-rubbed finish, lacquered**] [**Brushed satin, lacquered**] <Insert finish>.
 6. Stainless-Steel Finish: No. 4.
- E. Letter Drops (Through Wall) <Insert drawing designation>: Consisting of **11-inch-wide by 3-1/2-inch-** (279-mm-wide by 89-mm-) high, top-hinged, spring-loaded flap that pivots inward, held in place by **1-inch-** (25-mm-) wide face frame. Fabricated from **1/4-inch-** (6-mm-) thick aluminum or steel, with exposed surfaces finished to match adjacent mail receptacles.

1. Sleeve: Provide[**metallic-coated**] steel wall sleeve for full depth of wall.
 2. Finished Frame: Provide finished face frame on back side of wall opening.
 3. Identification: Engrave face of swinging flap with **1-inch- (25-mm-)** high letters as follows: "[**U.S. MAIL**] [**LETTERS**] [**OUTGOING MAIL**] <Insert text>."
 4. Exposed Material and Finish: [**Exposed surfaces fabricated from same material and finish as adjacent mail receptacles**] <Insert material and finish>.
- F. Package Depository (Through Wall) <Insert drawing designation>: Consisting of **1/4-inch- (6-mm-)** thick, aluminum or steel face plate and through-the-wall hopper door[**with hinged baffle**] allowing receipt of packages; fabricated from **1/4-inch- (6-mm-)** thick aluminum or steel.
1. Hopper Door: Equipped with door pull and concealed, full-length bottom hinge; with opening size [**not less than 15 inches wide by 6-1/2 inches high** (381 mm wide by 165 mm high)] [**as indicated on Drawings**] <Insert dimensions>.
 2. Sleeve: Provide[**metallic-coated**] steel wall sleeve for full depth of wall.
 3. Slowdown: Provide steel slowdown ramp on back side of wall opening.
 4. Identification: Engrave face of hopper door with **1-inch- (25-mm-)** high letters as follows: "[**BOOK DEPOSITORY**] <Insert text>."
 5. Finish: Exposed surfaces finished same as mail receptacles.
 6. Aluminum Finish: Finish surfaces exposed to view as follows:
 - a. Anodic Finish: [**Clear**] [**As indicated by manufacturer's designations**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
 - b. Baked-Enamel or Powder-Coated Finish: [**Dark bronze**] [**Gold**] [**Color as indicated by manufacturer's designations**] [**Color as selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
 7. Steel Finish: Finish surfaces exposed to view with baked-enamel or powder-coated finish; [**color as indicated by manufacturer's designations**] [**color as selected by DEN Project Manager from manufacturer's full range**] <Insert color>.

2.14 FABRICATION

- A. Form postal specialties to required shapes and sizes, with true lines and angles, square, rigid, and without warp, and with metal faces flat and free of dents or distortion. Make exposed metal edges and corners free of sharp edges and burrs and safe to touch. Fabricate doors of postal specialties to preclude binding, warping, or misalignment.
- B. Preassemble postal specialties in shop to greatest extent possible to minimize field assembly.
- C. Mill joints to a tight, hairline fit. Cope or miter corner joints. Form joints exposed to weather to exclude water penetration.

- D. Drill or punch holes required for fasteners and remove burrs. Use security fasteners where fasteners are exposed. If used, seal external rivets before finishing.
- E. Weld in concealed locations to greatest extent possible without distorting or discoloring exposed surfaces. Remove weld spatter and welding oxides from exposed surfaces.
- F. Fabricate tubular and channel frame assemblies with manufacturer's standard welded or mechanical joints. Provide subframes and reinforcement as required for a complete system to support loads.
- G. Fabricate rack ladders to support indicated number of units to form a column of units.
- H. Where dissimilar metals will contact each other, protect against galvanic action by painting contact surfaces with bituminous coating or by applying other permanent separation as recommended by manufacturers of dissimilar metals.

2.15 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.16 COPPER-ALLOY FINISHES

- A. Buffed Finish, Lacquered: M21-O6x (Mechanical Finish: buffed, smooth specular; Coating: clear organic coating as specified below).
- B. Hand-Rubbed Finish, Lacquered: M31-M34-O6x (Mechanical Finish: directionally textured, fine satin; Mechanical Finish: directionally textured, hand rubbed; Coating: clear organic coating as specified below).
- C. Brushed Satin Finish, Lacquered: M32-O6x (Mechanical Finish: directionally textured, medium satin; Coating: clear organic coating as specified below).
- D. Clear Organic Coating: Clear, waterborne, air-drying, acrylic lacquer specially developed for coating copper-alloy products, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of 1 mil (0.025 mm). It consists of a solution of methyl methacrylate copolymer with benzotriazole to prevent breakdown of the film in UV light, and is called "Incralac."

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions[, **with Installer present,**] for compliance with requirements for roughing-in openings, clearances, and other conditions affecting performance of the Work.
- B. Examine walls and other adjacent construction for suitable conditions where units will be installed.[**Examine locations of electrical connections.**]
- C. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install postal specialties level and plumb, according to manufacturer's written instructions and roughing-in drawings.
 - 1. Where dissimilar metals will be in permanent contact with each other, protect against galvanic action by painting contact surfaces with bituminous coating or by applying other permanent separation as recommended by manufacturer for this purpose.
 - 2. Where aluminum will contact grout, concrete, masonry, or wood, protect against corrosion by painting contact surfaces with bituminous coating.
 - 3. Final acceptance of postal specialties served by USPS depends on compliance with USPS requirements.
- B. Horizontal Mail Receptacles: Install horizontal mail receptacles with center of tenant-door lock cylinders and bottom of compartments at the maximum and minimum heights above finished floor established by USPS and manufacturer's written instructions.
 - 1. Install removable-core and keyed-in door lock cylinders as required for each type of cylinder lock.
 - 2. Install and align two rack ladders for the first column of mail receptacles and one rack ladder for each additional adjacent column of mail receptacles.
- C. Vertical Mail Receptacles: Install vertical mail receptacles with center of master lock cylinder not more than **48 inches** (1219 mm) and not less than **30 inches** (762 mm) above finished floor.
- D. Pedestal-Mounted Postal Specialties: Anchor units with **1/2-inch-** (13-mm-) diameter, [**galvanized**] [**stainless**]-steel anchor bolts with hooked ends.
- E. Collection Boxes: Install collection boxes with [**centerline of mail slots**] [**handle of hopper doors**] not more than **48 inches** (1219 mm) above finished floor.

- F. Receiving Boxes: Install receiving boxes with bottom of unloading door not less than **30 inches** (762 mm) above finished floor.
 - 1. Install receiving boxes with exterior of box bottom not more than **20 inches** (508 mm) above finished floor.
- G. Freestanding Data Distribution Boxes: Locate freestanding data distribution boxes at locations indicated[**or, if not indicated, as directed by DEN Project Manager**].
- H. Rack-Ladder Data Distribution Boxes: Install and align two rack ladders for the first column of data distribution boxes and one rack ladder for each additional adjacent column of data distribution boxes.
- I. Mail Chutes: Mount chutes with bottom ends extending **1 inch** (25 mm) into receiving boxes. Attach chutes with straps, collars, and sleeves. Do not penetrate chute with fasteners.
 - 1. Comply with USPS Publication 16 for installation.
 - 2. Install chutes with centerline of mail slots not more than **48 inches** (1219 mm) above finished floor.
- J. Key Keeper: Install [**horizontally**] [**vertically**] [**as indicated on Drawings**].

3.3 FIELD QUALITY CONTROL

- A. Arrange for USPS personnel to examine and test postal specialties served by USPS after they have been installed according to USPS regulations.
- B. Obtain written final approval of postal specialties to be served by USPS. Obtain this approval from USPS postmaster that authorizes mail collection for the served installation.

3.4 ADJUSTING, CLEANING, AND PROTECTION

- A. Remove temporary protective coverings and strippable films, if any, as postal specialties are installed unless otherwise indicated in manufacturer's written installation instructions.
- B. Adjust doors, hardware, and moving parts to function smoothly, and lubricate as recommended by manufacturer. Verify that integral locking devices operate properly.
- C. Touch up marred finishes or replace postal specialties that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by postal specialty manufacturer.
- D. Replace postal specialties that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

- E. On completion of postal specialty installation, clean interior and exterior surfaces as recommended by manufacturer.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to assist Contractor and train Owner's maintenance personnel to adjust, operate, and maintain postal specialties.
 - 1. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days advance notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 105500

SECTION 107500 - FLAGPOLES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes **[ground-mounted] [wall-mounted] [and] [roof-mounted]** flagpoles made from **[aluminum] [copper alloy (bronze)] [fiberglass] [stainless steel] [and] [steel]**.
- B. Owner-Furnished Material: Flag[s].
- C. Related Sections:
 - 1. Section 076200 "Sheet Metal Flashing and Trim" for counterflashing flashing at roof-mounted flagpoles.
 - 2. Section 264113 "Lightning Protection for Structures" for connecting wall- and roof-mounted metal flagpoles to lightning protection system.
 - 3. Section 265600 "Exterior Lighting" for site lighting fixtures.
- D. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Flagpole assemblies, including anchorages and supports, shall withstand the effects of gravity loads, and the following loads and stresses within limits and under conditions indicated according to the following design criteria:
 - 1. Seismic Loads: **<Insert seismic criteria>** according to **[SEI/ASCE 7] <Insert requirement>**.
 - 2. Wind Loads: **<Insert wind speed and exposure factor>** according to **[NAAMM FP 1001, "Guide Specifications for Design of Metal Flagpoles."]** **[SEI/ASCE 7] <Insert requirement>**.
 - 3. Base flagpole design on **[polyester] [nylon or cotton]** flags of maximum standard size suitable for use with flagpole or flag size indicated, whichever is more stringent.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, operating characteristics, fittings, accessories, and finishes for flagpoles.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For flagpoles. Include plans, elevations, details, and attachments to other work. Show general arrangement, jointing, fittings, accessories, grounding, anchoring, and support.
 - 1. Include section, and details of foundation system for ground-mounted flagpoles.
 - 2. Include details of **[wall-mounted]** **[and]** **[roof-mounted]** connections and mountings.
- C. Samples for Verification: For each type of exposed finish required, in manufacturer's standard sizes.
- D. Delegated-Design Submittal: For flagpole assemblies indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
 - 1. Include loads, point reactions, and locations for attachment of flagpoles to building's structure.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified professional engineer.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For flagpoles to include in operation and maintenance manuals.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Source Limitations: Obtain **[each type of flagpole]** **[flagpole]** as complete unit, including fittings, accessories, bases, and anchorage devices, from single source from single manufacturer.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. General: Spiral wrap flagpoles with heavy paper and enclose in a hard fiber tube or other protective container.

1.9 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. American Flagpole; a Kearney-National Inc. company.
2. Atlantic Fiberglass Products, Inc.
3. Baartol Company.
4. Concord Industries, Inc.
5. Eder Flag Manufacturing Company, Inc.
6. Ewing Flagpoles.
7. Lingo Inc.; Acme Flagpole Company Division.
8. Millerbernd Manufacturing Company.
9. Morgan-Francis; Division of Original Tractor Cab Co., Inc.
10. PLP Composite Technologies, Inc.
11. Pole-Tech Company Inc.
12. U.S. Flag & Flagpole Supply, LP.
13. USS Manufacturing Inc.
14. **<Insert manufacturer's name>**.
15. or approved equal.

2.2 FLAGPOLES **<Insert drawing designation>**

- A. Flagpole Construction, General: Construct flagpoles in one piece if possible. If more than one piece is necessary, comply with the following:

1. Fabricate shop and field joints without using fasteners, screw collars, or lead caulking.
2. Provide flush hairline joints using self-aligning, snug-fitting, internal sleeves.
3. Provide self-aligning, snug-fitting joints.

- B. Exposed Height: **[20 feet (6 m)] [25 feet (7.5 m)] [30 feet (9 m)] [35 feet (11 m)] [40 feet (12 m)] [45 feet (13.5 m)] [50 feet (15 m)] [60 feet (18 m)] [70 feet (21 m)] [80 feet (24 m)]**
<Insert height>.

- C. Aluminum Flagpoles: Provide **[cone]** **[entasis]**-tapered flagpoles fabricated from seamless extruded tubing complying with ASTM B 241/B 241M, Alloy 6063, with a minimum wall thickness of **3/16 inch** (4.8 mm).
- D. Copper-Alloy (Bronze) Flagpoles: Provide **[cone]** **[entasis]**-tapered flagpoles fabricated from seamless pipe or tube complying with ASTM B 43 or **ASTM B 135** (ASTM B 135M), Alloy UNS C23000 (red brass, 85 percent copper).
- E. Fiberglass Flagpoles: Provide **[cone]** **[entasis]**-tapered flagpoles fabricated from polyester resin reinforced with woven glass-fiber roving with 75 percent of glass fibers parallel to length of flagpole.
- F. Stainless-Steel Flagpoles: Provide **[cone]** **[entasis]**-tapered flagpoles fabricated from pipe, tube, or plate complying with ASTM A 312/A 312M, ASTM A 269, or ASTM A 666, **[Alloy UNS S30400]** **[Alloy UNS S31603]**.
- G. Steel Flagpoles: Provide **[cone-tapered]** **[stepped-sectional]** flagpoles fabricated from standard-weight, seamless steel pipe complying with ASTM A 53/A 53M, Type S, Grade B or steel tube complying with ASTM A 513.
- H. Metal Foundation Tube: Manufacturer's standard corrugated-steel foundation tube, not less than **0.064-inch-** (1.6-mm-) nominal wall thickness. Provide with **3/16-inch** (4.8-mm) steel bottom plate and support plate; **3/4-inch-** (19-mm-) diameter, steel ground spike; and steel centering wedges welded together. Galvanize steel after assembly. Provide loose hardwood wedges at top of foundation tube for plumbing pole.
1. Provide flashing collar of same material and finish as flagpole.
 2. Provide steel ground protectors extending **12 inches** (300 mm) aboveground and **6 inches** (150 mm) belowground for steel flagpoles where flashing collars are not provided.
- I. Sleeve for **[Fiberglass]** **[Aluminum]** Flagpole: **[Fiberglass]** **[or]** **[PVC pipe]** foundation sleeve, made to fit flagpole, for casting into concrete foundation.
1. Provide flashing collar of same material and finish as flagpole.
- J. Cast-Metal Shoe Base: For anchor-bolt mounting; provide with anchor bolts.
1. Provide units made from **[aluminum]** **[steel]** with **[same finish and color as flagpoles]** **<Insert finish and color>**.
 2. Provide ground spike at grade-mounted flagpoles.
 3. Provide connector to building's lightning protection system conductor at roof-mounted flagpoles.
- K. Hinged Baseplate: Cast-metal tilting hinged base and anchored plate joined by permanently secured pivot rod. Provide with stainless-steel screws for securing tilting base to anchored plate when not tilted; provide with anchor bolts.
1. Finish base to match flagpole.
 2. Provide aluminum base or aluminum flashing collar finished to match flagpole.

3. Provide ground spike at grade-mounted flagpoles.
 4. Provide connector to building's lightning protection system conductor at roof-mounted metal flagpoles.
- L. Pivoting Tilt Base: Steel baseplate with channel or rectangular tube uprights, pivot bolt, and locking device for tilting flagpole. Provide tilting flagpole with steel counterweight box and weights, or provide with internal counterweight. Provide base with anchor bolts.
1. Finish base to match flagpole.
 2. Provide ground spike at grade-mounted flagpoles.
 3. Provide connector to building's lightning protection system conductor at roof-mounted metal flagpoles.
- M. Vertical Wall Mount: **[Cast-aluminum] [Cast-copper-alloy (bronze)]** mounting bracket complete with **[escutcheon,]** mounting plate and through-wall anchorage.
1. Provide units with same finish as flagpole.
 2. Provide units with **[gold anodic] [bronze powder-coated] [black powder-coated]** finish.
- N. Outrigger Wall Mount: **[Aluminum] [Copper-alloy (bronze)]** mounting bracket complete with **[escutcheon,]** mounting plate and through-wall anchorage.
1. Provide units with same finish as flagpole.
 2. Provide units with **[gold anodic] [bronze powder-coated] [black powder-coated]** finish.
- O. Braced Roof Mount: Roof-mounted flagpole socket and either rod or tubular braces with turnbuckles and mounting bases. Provide as a complete assembly with anchor bolts and connector for lightning protection system.
1. Provide braces, turnbuckles, and connectors **[made from same metal and]** with same finish as flagpoles.

2.3 FITTINGS

- A. Finial Ball **<Insert drawing designation>**: Manufacturer's standard flush-seam ball, sized as indicated or, if not indicated, to match flagpole-butt diameter.
1. **0.063-inch** (1.6-mm) spun aluminum, **finished to match flagpole** **[with gold anodic finish]**.
 2. **20-oz.** (0.70-mm) copper with 23-karat gold leaf finish.
 3. Spun stainless steel, finished to match flagpole.
 4. Spun copper alloy, finished to match flagpole.
- B. Finial Eagle **<Insert drawing designation>**: Manufacturer's standard, sized **[as indicated] [as standard with manufacturer for flagpole size indicated] <Insert size>**.

1. Cast aluminum[, **finished to match flagpole**] [**with gold anodic finish**].
 2. **20-oz.** (0.70-mm) copper with 23-karat gold leaf finish.
- C. Internal Halyard, Winch System <**Insert drawing designation**>: Manually operated winch with control stop device and removable handle, stainless-steel cable halyard, and concealed revolving truck assembly with plastic-coated counterweight and sling. Provide flush access door secured with cylinder lock. Finish truck assembly to match flagpole.
1. Halyard Flag Snaps: Provide two [**chromium-plated bronze**] [**stainless-steel**] [**bronze**] [**nylon**] swivel snap hooks per halyard.
 - a. Provide with neoprene or vinyl covers.
 2. Plastic Halyard Flag Clips: Made from injection-molded, UV-stabilized, acetal resin (Delrin). Clips attach to flag and have two eyes for inserting both runs of halyards. Provide two flag clips per halyard.
 - a. Product: Subject to compliance with requirements, provide "Quiet Halyard" flag clasp by Lingo.
- D. Internal Halyard, Cam Cleat System <**Insert drawing designation**>: [**5/16-inch-** (8-mm-) **diameter, braided polypropylene**] <**Insert type**> halyard; cam cleat; and concealed revolving truck assembly with plastic-coated counterweight and sling. Provide flush access door secured with cylinder lock. Finish truck assembly to match flagpole.
1. Halyard Flag Snaps: Provide two [**chromium-plated bronze**] [**stainless-steel**] [**bronze**] [**nylon**] swivel snap hooks per halyard.
 - a. Provide with neoprene or vinyl covers.
 2. Plastic Halyard Flag Clips: Made from injection-molded, UV-stabilized, acetal resin (Delrin). Clips attach to flag and have two eyes for inserting both runs of halyards. Provide two flag clips per halyard.
 - a. Product: Subject to compliance with requirements, provide "Quiet Halyard" flag clasp by Lingo.
- E. External Halyard <**Insert drawing designation**>: Ball-bearing, nonfouling, revolving truck assembly of cast metal with continuous [**5/16-inch-** (8-mm-) **diameter, braided polypropylene halyard**] <**Insert type**> and **9-inch** (228-mm) cast-metal cleats with fasteners. Finish exposed metal surfaces to match flagpole.
1. Provide [**one halyard and one cleat**] [**two halyards and two cleats**] at each flagpole.
 2. Provide cast-metal cleat covers, finished to match flagpole, secured with cylinder locks.
 3. Provide halyard covers consisting of a **2-inch** (50-mm) channel, **60 inches** (1500 mm) long, finished to match flagpole.

4. Halyard Flag Snaps: Provide two [**chromium-plated bronze**] [**stainless-steel**] [**bronze**] [**nylon**] swivel snap hooks per halyard.
 - a. Provide with neoprene or vinyl covers.
5. Plastic Halyard Flag Clips: Made from injection-molded, UV-stabilized, acetal resin (Delrin). Clips attach to flag and have two eyes for inserting both runs of halyards. Provide two flag clips per halyard.
 - a. Product: Subject to compliance with requirements, provide "Quiet Halyard" flag clasp by Lingo.

2.4 MISCELLANEOUS MATERIALS

- A. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107.
- B. Drainage Material: Crushed stone, or crushed or uncrushed gravel; coarse aggregate.
- C. Sand: ASTM C 33, fine aggregate.
- D. Elastomeric Joint Sealant: [**Multicomponent nonsag urethane**] [**Single-component nonsag urethane**] [**Single-component neutral- and basic-curing silicone**] [**Single-component neutral-curing silicone**] joint sealant complying with requirements in Section 079200 "Joint Sealants" for Use NT (nontraffic) and for Use M, G, A, and, as applicable to joint substrates indicated, for Use O.
- E. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

2.5 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.6 ALUMINUM FINISHES

- A. Natural Satin Finish: AA-M32, fine, directional, medium satin polish; buff complying with AA-M20; seal aluminum surfaces with clear, hard-coat wax.
- B. Clear Anodic Finish: AAMA 611, [**AA-M12C22A41, Class I, 0.018 mm**] [**AA-M12C22A31, Class II, 0.010 mm**] or thicker.
- C. Color Anodic Finish: AAMA 611, [**AA-M12C22A42/A44, Class I, 0.018 mm**] [**AA-M12C22A32/A34, Class II, 0.010 mm**] or thicker.

1. Color: [**Light bronze**] [**Medium bronze**] [**Dark bronze**] [**Black**] <Insert color>.
 2. Color: [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from full range of industry colors and color densities**].
- D. Gold Anodic Finish: AAMA 611, AA-M32C22A43 Class I, 0.018 mm or thicker; gold color.
- E. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of **1.5 mils** (0.04 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
1. Color and Gloss: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color and gloss>.
- F. High-Performance Organic Finish: Two-coat fluoropolymer finish complying with [**AAMA 2604**] [**AAMA 2605**] and containing not less than [**50**] [**70**] percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
1. Color and Gloss: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color and gloss>.

2.7 STEEL FINISHES

- A. Flagpole Interior Finish: Apply one coat of bituminous paint on interior of flagpole or otherwise treat to prevent corrosion.
- B. Galvanized Finish: Hot-dip galvanize after fabrication to comply with ASTM A 123/A 123M.
- C. Surface Preparation: Remove mill scale and rust, if present, from uncoated steel, complying with [**SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning"**] [or] [**SSPC-SP 8, "Pickling"**] <Insert surface preparation method>.[**After cleaning, apply a conversion coating suited to the organic coating to be applied over it.**]
- D. Polyurethane Enamel Finish: Immediately after cleaning, apply manufacturer's standard primer and two-coat, high-gloss, high-build polyurethane-enamel finish.
1. Color: [**As indicated by manufacturer's designations**] [**Match DEN Project Manager's sample**] [**As selected by DEN Project Manager from manufacturer's full range**] <Insert color>.
- E. Baked-Enamel or Powder-Coat Finish: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for applying and baking to achieve a minimum dry film thickness of **2 mils** (0.05 mm).

1. Color and Gloss: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color and gloss>**.

2.8 STAINLESS-STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 1. Run grain of directional finishes with long dimension of each piece.
 2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
 3. Directional Satin Finish: No. 4.

2.9 COPPER-ALLOY FINISHES

- A. Buffed Finish, Lacquered: M21-O6x (Mechanical Finish: buffed, smooth specular; Coating: clear organic, air drying, as specified below).
 1. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of **1 mil** (0.025 mm).
- B. Medium Satin Finish, Lacquered: M32-O6x (Mechanical Finish: medium satin; Coating: clear organic, air drying, as specified below).
 1. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of **1 mil** (0.025 mm).
- C. Statuary Conversion Coating over Satin Finish: M31-C55 (Mechanical Finish: directionally textured, fine satin; Chemical Finish: conversion coating, sulfide).
 1. Color: Match DEN Project Manager's sample.

2.10 FIBERGLASS FINISHES

- A. Fiberglass: UV-light stable, hard, high-gloss gel coat or high-gloss, high-build polyurethane or polyester coating.
 1. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, including foundation; accurate placement, pattern, orientation of anchor bolts, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Prepare uncoated metal flagpoles that are set in foundation tubes by painting below-grade portions with a heavy coat of bituminous paint.
- B. Foundation Excavation: Excavate to neat clean lines in undisturbed soil. Remove loose soil and foreign matter from excavation and moisten earth before placing concrete. Place and compact drainage material at excavation bottom.
- C. Provide forms where required due to unstable soil conditions and for perimeter of flagpole base at grade. Secure and brace forms to prevent displacement during concreting.
- D. Place concrete, as specified in [**Section 033000 "Cast-in-Place Concrete"**] [**Section 033053 "Miscellaneous Cast-in-Place Concrete."**] Compact concrete in place by using vibrators. Moist-cure exposed concrete for not less than seven days or use nonstaining curing compound.
- E. Trowel exposed concrete surfaces to a smooth, dense finish, free of trowel marks, and uniform in texture and appearance. Provide positive slope for water runoff to perimeter of concrete base.

3.3 FLAGPOLE INSTALLATION

- A. General: Install flagpoles where shown and according to[**Shop Drawings and**] manufacturer's written instructions.
- B. Ground Set: Place [**foundation tube,**] [**sleeve,**] center, and brace to prevent displacement during concreting. Place concrete. Plumb and level [**foundation tube**] [**sleeve**] and allow concrete to cure. Install flagpole, plumb, in [**foundation tube**] [**sleeve**].
 - 1. Foundation Tube: Place tube seated on bottom plate between steel centering wedges and install hardwood wedges to secure flagpole in place. Place and compact sand in foundation tube and remove hardwood wedges. Seal top of foundation tube with a 2-inch (50-mm) layer of elastomeric joint sealant and cover with flashing collar.

- C. Baseplate: Cast anchor bolts in concrete foundation. Install baseplate on washers placed over leveling nuts on anchor bolts and adjust until flagpole is plumb. After flagpole is plumb, tighten retaining nuts and fill space under baseplate solidly with nonshrink, nonmetallic grout. Finish exposed grout surfaces smooth and slope 45 degrees away from edges of baseplate.
- D. Mounting Brackets and Bases: Anchor brackets and bases securely through to structural support with fasteners as indicated on Shop Drawings.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 107500

SECTION 013516 - ALTERATION PROJECT PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes special procedures for alteration work.

1.3 DEFINITIONS

- A. Alteration Work: This term includes remodeling, renovation, repair, and maintenance work performed within existing spaces or on existing surfaces as part of the Project.
- B. Consolidate: To strengthen loose or deteriorated materials in place.
- C. Design Reference Sample: A sample that represents the Architect's prebid selection of work to be matched; it may be existing work or work specially produced for the Project.
- D. Dismantle: To remove by disassembling or detaching an item from a surface, using gentle methods and equipment to prevent damage to the item and surfaces; disposing of items unless indicated to be salvaged or reinstalled.
- E. Match: To blend with adjacent construction and manifest no apparent difference in material type, species, cut, form, detail, color, grain, texture, or finish; as approved by Architect.
- F. Refinish: To remove existing finishes to base material and apply new finish to match original or as otherwise indicated.
- G. Repair: To correct damage and defects, retaining existing materials, features, and finishes. This includes patching, piecing-in, splicing, consolidating, or otherwise reinforcing or upgrading materials.
- H. Replace: To remove, duplicate, and reinstall entire item with new material. The original item is the pattern for creating duplicates unless otherwise indicated.
- I. Replicate: To reproduce in exact detail, materials, and finish unless otherwise indicated.
- J. Reproduce: To fabricate a new item, accurate in detail to the original, and from either the same or a similar material as the original, unless otherwise indicated.

- K. Retain: To keep existing items that are not to be removed or dismantled.
- L. Strip: To remove existing finish down to base material unless otherwise indicated.

1.4 COORDINATION

- A. Alteration Work Subschedule: A construction schedule coordinating the sequencing and scheduling of alteration work for entire Project, including each activity to be performed, and based on Contractor's Construction Schedule. Secure time commitments for performing critical construction activities from separate entities responsible for alteration work.
 - 1. Schedule construction operations in sequence required to obtain best Work results.
 - 2. Coordinate sequence of alteration work activities to accommodate the following:
 - a. Owner's continuing occupancy of portions of existing building.
 - b. Owner's partial occupancy of completed Work.
 - c. Other known work in progress.
 - d. Tests and inspections.
 - 3. Detail sequence of alteration work, with start and end dates.
 - 4. Utility Services: Indicate how long utility services will be interrupted. Coordinate shutoff, capping, and continuation of utility services.
 - 5. Use of elevator and stairs.
 - 6. Equipment Data: List gross loaded weight, axle-load distribution, and wheelbase dimension data for mobile and heavy equipment proposed for use in existing structure. Do not use such equipment without certification from Contractor's professional engineer that the structure can support the imposed loadings without damage.
- B. Pedestrian and Vehicular Circulation: Coordinate alteration work with circulation patterns within Project building(s) and site. Some work is near circulation patterns [and adjacent to restricted areas] <Insert item of concern>. Circulation patterns cannot be closed off entirely and in places can be only temporarily redirected around small areas of work.[Access to restricted areas may not be obstructed.] Plan and execute the Work accordingly.

1.5 PROJECT MEETINGS FOR ALTERATION WORK

- A. Preliminary Conference for Alteration Work: Before starting alteration work, [conduct] [Architect will conduct] [Construction Manager will conduct] conference at [Project site] <Insert location>.
 - 1. Attendees: In addition to representatives of Owner,[Construction Manager,] Architect, and Contractor,[Owner's insurer,] testing service representative, specialists, and chemical-cleaner manufacturer(s) shall be represented at the meeting.
 - 2. Agenda: Discuss items of significance that could affect progress of alteration

work, including review of the following:

- a. Alteration Work Subschedule: Discuss and finalize; verify availability of materials, specialists' personnel, equipment, and facilities needed to make progress and avoid delays.
 - b. Fire-prevention plan.
 - c. Governing regulations.
 - d. Areas where existing construction is to remain and the required protection.
 - e. Hauling routes.
 - f. Sequence of alteration work operations.
 - g. Storage, protection, and accounting for salvaged and specially fabricated items.
 - h. Existing conditions, staging, and structural loading limitations of areas where materials are stored.
 - i. Qualifications of personnel assigned to alteration work and assigned duties.
 - j. Requirements for extent and quality of work, tolerances, and required clearances.
 - k. Embedded work such as flashings and lintels, special details, collection of waste, protection of occupants and the public, and condition of other construction that affects the Work or will affect the work.
3. Reporting: [Record] [Architect will record] [Construction Manager will record] conference results and distribute copies to everyone in attendance and to others affected by decisions or actions resulting from conference.
- B. Coordination Meetings: Conduct coordination meetings specifically for alteration work at [weekly] [monthly] <Insert interval> intervals. Coordination meetings are in addition to specific meetings held for other purposes, such as progress meetings and preinstallation conferences.
1. Attendees: In addition to representatives of Owner,[Construction Manager,] Architect, and Contractor, each specialist, supplier, installer, and other entity concerned with progress or involved in planning, coordination, or performance of alteration work activities shall be represented at these meetings. All participants at conference shall be familiar with Project and authorized to conclude matters relating to alteration work.
 2. Agenda: Review and correct or approve minutes of previous coordination meeting. Review other items of significance that could affect progress of alteration work. Include topics for discussion as appropriate to status of Project.
 - a. Alteration Work Subschedule: Review progress since last coordination meeting. Determine whether each schedule item is on time, ahead of schedule, or behind schedule. Determine how construction behind schedule will be expedited with retention of quality; secure commitments from parties involved to do so. Discuss whether schedule revisions are required to ensure that current and subsequent activities are completed within the Contract Time.
 - b. Schedule Updating: Revise Contractor's Alteration Work Subschedule after each coordination meeting where revisions to schedule have been made or recognized. Issue revised schedule concurrently with report of each meeting.

- c. Review present and future needs of each entity present, including review items listed in the "Preliminary Conference for Alteration Work" Paragraph in this article and the following:
 - 1) Interface requirements of alteration work with other Project Work.
 - 2) Status of submittals for alteration work.
 - 3) Access to alteration work locations.
 - 4) Effectiveness of fire-prevention plan.
 - 5) Quality and work standards of alteration work.
 - 6) Change Orders for alteration work.
3. Reporting: Record meeting results and distribute copies to everyone in attendance and to others affected by decisions or actions resulting from each meeting.

1.6 MATERIALS OWNERSHIP

- A. Historic items, relics, and similar objects including, but not limited to, cornerstones and their contents, commemorative plaques and tablets, antiques, and other items of interest or value to Owner that may be encountered or uncovered during the Work, regardless of whether they were previously documented, remain Owner's property.
 1. Carefully dismantle and salvage each item or object in a manner to prevent damage and protect it from damage, then promptly deliver it to Owner where directed[at Project site] <Insert location>.

1.7 INFORMATIONAL SUBMITTALS

- A. Alteration Work Subschedule:
 1. Submit alteration work subschedule within [seven] [30] <Insert number> days of date established for[commencement of alteration work] <Insert requirement>.
- B. Preconstruction Documentation: Show preexisting conditions of adjoining construction and site improvements that are to remain, including finish surfaces, that might be misconstrued as damage caused by Contractor's alteration work operations.
- C. Alteration Work Program: Submit [30 days] <Insert time> before work begins.
- D. Fire-Prevention Plan: Submit [30 days] <Insert time> before work begins.

1.8 QUALITY ASSURANCE

- A. Specialist Qualifications: An experienced firm regularly engaged in specialty work similar in nature, materials, design, and extent to alteration work as specified in each Section and that has completed a minimum of [five] <Insert number> recent projects with a record of successful in-service performance that demonstrates the firm's qualifications to perform this work.

1. Field Supervisor Qualifications: Full-time supervisors experienced in specialty work similar in nature, material, design, and extent to that indicated for this Project. Supervisors shall be on-site when specialty work begins and during its progress. Supervisors shall not be changed during Project except for causes beyond the control of the specialist firm.
 - a. Construct new mockups of required work whenever a supervisor is replaced.
 - B. Title X Requirement: Each firm conducting activities that disturb painted surfaces shall be a "Lead-Safe Certified Firm" according to 40 CFR 745, Subpart E, and use only workers that are trained in lead-safe work practices.
 - C. Alteration Work Program: Prepare a written plan for alteration work for whole Project, including each phase or process and protection of surrounding materials during operations. Show compliance with indicated methods and procedures specified in this and other Sections. Coordinate this whole-Project alteration work program with specific requirements of programs required in other alteration work Sections.
 1. Dust and Noise Control: Include locations of proposed temporary dust- and noise-control partitions and means of egress from occupied areas coordinated with continuing on-site operations and other known work in progress.
 2. Debris Hauling: Include plans clearly marked to show debris hauling routes, turning radii, and locations and details of temporary protective barriers.
 - D. Fire-Prevention Plan: Prepare a written plan for preventing fires during the Work, including placement of fire extinguishers, fire blankets, rag buckets, and other fire-control devices during each phase or process. Coordinate plan with Owner's fire-protection equipment and requirements. Include fire-watch personnel's training, duties, and authority to enforce fire safety.
 - E. Safety and Health Standard: Comply with ANSI/ASSE A10.6.
- 1.9 STORAGE AND HANDLING OF SALVAGED MATERIALS
- A. Salvaged Materials:
 1. Clean loose dirt and debris from salvaged items unless more extensive cleaning is indicated.
 2. Pack or crate items after cleaning; cushion against damage during handling. Label contents of containers.
 3. Store items in a secure area until delivery to Owner.
 4. Transport items to Owner's storage area [on-site] [off-site] [designated by Owner] [indicated on Drawings].
 5. Protect items from damage during transport and storage.
 - B. Salvaged Materials for Reinstallation:
 1. Repair and clean items for reuse as indicated.
 2. Pack or crate items after cleaning and repairing; cushion against damage during

- handling. Label contents of containers.
3. Protect items from damage during transport and storage.
 4. Reinstall items in locations indicated. Comply with installation requirements for new materials and equipment unless otherwise indicated. Provide connections, supports, and miscellaneous materials to make items functional for use indicated.
- C. Existing Materials to Remain: Protect construction indicated to remain against damage and soiling from construction work. Where permitted by Architect, items may be dismantled and taken to a suitable, protected storage location during construction work and reinstalled in their original locations after alteration and other construction work in the vicinity is complete.
- D. Storage: Catalog and store items within a weathertight enclosure where they are protected from moisture, weather, condensation, and freezing temperatures.
1. Identify each item for reinstallation with a nonpermanent mark to document its original location. Indicate original locations on plans, elevations, sections, or photographs by annotating the identifying marks.
 2. Secure stored materials to protect from theft.
 3. Control humidity so that it does not exceed 85 percent. Maintain temperatures 5 deg F (3 deg C) or more above the dew point.
- E. Storage Space:
1. Owner will arrange for limited on-site location(s) for free storage of salvaged material. This storage space [includes] [does not include] security[and climate control] for stored material.
 2. Arrange for off-site locations for storage and protection of salvaged material that cannot be stored and protected on-site.
- 1.10 FIELD CONDITIONS
- A. Survey of Existing Conditions: Record existing conditions that affect the Work by use of [measured drawings] [preconstruction photographs] [and] [preconstruction videotapes] <Insert requirement>.
1. Comply with requirements specified in Section 013233 "Photographic Documentation."
- B. Discrepancies: Notify Architect of discrepancies between existing conditions and Drawings before proceeding with removal and dismantling work.
- C. Owner's Removals: Before beginning alteration work, verify in correspondence with Owner that the following items have been removed:
1. <Insert items to be removed by Owner>.
- D. Size Limitations in Existing Spaces: Materials, products, and equipment used for performing the Work and for transporting debris, materials, and products shall be of sizes that clear surfaces within existing spaces, areas, rooms, and openings, including

temporary protection, by [12 inches (300 mm)] <Insert dimension> or more.

PART 2 - PRODUCTS - (Not Used)

PART 3 - EXECUTION

3.1 PROTECTION

- A. Protect persons, motor vehicles, surrounding surfaces of building, building site, plants, and surrounding buildings from harm resulting from alteration work.
1. Use only proven protection methods, appropriate to each area and surface being protected.
 2. Provide temporary barricades, barriers, and directional signage to exclude the public from areas where alteration work is being performed.
 3. Erect temporary barriers to form and maintain fire-egress routes.
 4. Erect temporary protective covers over walkways and at points of pedestrian and vehicular entrance and exit that must remain in service during alteration work.
 5. Contain dust and debris generated by alteration work, and prevent it from reaching the public or adjacent surfaces.
 6. Provide shoring, bracing, and supports as necessary. Do not overload structural elements.
 7. Protect floors and other surfaces along hauling routes from damage, wear, and staining.
 8. Provide supplemental sound-control treatment to isolate demolition work from other areas of the building.
- B. Temporary Protection of Materials to Remain:
1. Protect existing materials with temporary protections and construction. Do not remove existing materials unless otherwise indicated.
 2. Do not attach temporary protection to existing surfaces except as indicated as part of the alteration work program.
- C. Comply with each product manufacturer's written instructions for protections and precautions. Protect against adverse effects of products and procedures on people and adjacent materials, components, and vegetation.
- D. Utility and Communications Services:
1. Notify Owner, Architect, authorities having jurisdiction, and entities owning or controlling wires, conduits, pipes, and other services affected by alteration work before commencing operations.
 2. Disconnect and cap pipes and services as required by authorities having jurisdiction, as required for alteration work.
 3. Maintain existing services unless otherwise indicated; keep in service, and protect against damage during operations. Provide temporary services during interruptions to existing utilities.

- E. Existing Drains: Prior to the start of work in an area, test drainage system to ensure that it is functioning properly. Notify Architect immediately of inadequate drainage or blockage. Do not begin work in an area until the drainage system is functioning properly.
1. Prevent solids such as adhesive or mortar residue or other debris from entering the drainage system. Clean out drains and drain lines that become sluggish or blocked by sand or other materials resulting from alteration work.
 2. Protect drains from pollutants. Block drains or filter out sediments, allowing only clean water to pass.
- F. Existing Roofing: Prior to the start of work in an area, install roofing protection[as indicated on Drawings].

3.2 PROTECTION FROM FIRE

- A. General: Follow fire-prevention plan and the following:
1. Comply with NFPA 241 requirements unless otherwise indicated.[Perform duties titled "Owner's Responsibility for Fire Protection."]
 2. Remove and keep area free of combustibles, including rubbish, paper, waste, and chemicals, unless necessary for the immediate work.
 - a. If combustible material cannot be removed, provide fire blankets to cover such materials.
- B. Heat-Generating Equipment and Combustible Materials: Comply with the following procedures while performing work with heat-generating equipment or combustible materials, including welding, torch-cutting, soldering, brazing, removing paint with heat, or other operations where open flames or implements using high heat or combustible solvents and chemicals are anticipated:
1. Obtain Owner's approval for operations involving use of[open-flame or] welding or other high-heat equipment.[Use of open-flame equipment is not permitted.] Notify Owner [at least 72 hours] <Insert requirement> before each occurrence, indicating location of such work.
 2. As far as practicable, restrict heat-generating equipment to shop areas or outside the building.
 3. Do not perform work with heat-generating equipment in or near rooms or in areas where flammable liquids or explosive vapors are present or thought to be present. Use a combustible gas indicator test to ensure that the area is safe.
 4. Use fireproof baffles to prevent flames, sparks, hot gases, or other high-temperature material from reaching surrounding combustible material.
 5. Prevent the spread of sparks and particles of hot metal through open windows, doors, holes, and cracks in floors, walls, ceilings, roofs, and other openings.
 6. Fire Watch: Before working with heat-generating equipment or combustible materials, station personnel to serve as a fire watch at each location where such work is performed. Fire-watch personnel shall have the authority to enforce fire safety. Station fire watch according to NFPA 51B, NFPA 241, and as follows:

- a. Train each fire watch in the proper operation of fire-control equipment and alarms.
 - b. Prohibit fire-watch personnel from other work that would be a distraction from fire-watch duties.
 - c. Cease work with heat-generating equipment whenever fire-watch personnel are not present.
 - d. Have fire-watch personnel perform final fire-safety inspection each day beginning no sooner than [30 minutes] <Insert time> after conclusion of work[in each area] to detect hidden or smoldering fires and to ensure that proper fire prevention is maintained.
 - e. Maintain fire-watch personnel at[each area of] Project site until [60 minutes] [two hours] <Insert time> after conclusion of daily work.
- C. Fire-Control Devices: Provide and maintain fire extinguishers, fire blankets, and rag buckets for disposal of rags with combustible liquids. Maintain each as suitable for the type of fire risk in each work area. Ensure that nearby personnel and the fire-watch personnel are trained in fire extinguisher and blanket use.
- D. Sprinklers: Where sprinkler protection exists and is functional, maintain it without interruption while operations are being performed. If operations are performed close to sprinklers, shield them temporarily with guards.
1. Remove temporary guards at the end of work shifts, whenever operations are paused, and when nearby work is complete.

3.3 PROTECTION DURING APPLICATION OF CHEMICALS

- A. Protect motor vehicles, surrounding surfaces of building, building site, plants, and surrounding buildings from harm or spillage resulting from applications of chemicals and adhesives.
- B. Cover adjacent surfaces with protective materials that are proven to resist chemicals selected for Project unless chemicals being used will not damage adjacent surfaces as indicated in alteration work program. Use covering materials and masking agents that are waterproof and UV resistant and that will not stain or leave residue on surfaces to which they are applied. Apply protective materials according to manufacturer's written instructions. Do not apply liquid masking agents or adhesives to painted or porous surfaces. When no longer needed, promptly remove protective materials.
- C. Do not apply chemicals during winds of sufficient force to spread them to unprotected surfaces.
- D. Neutralize alkaline and acid wastes and legally dispose of off Owner's property.
- E. Collect and dispose of runoff from chemical operations by legal means and in a manner that prevents soil contamination, soil erosion, undermining of paving and foundations, damage to landscaping, or water penetration into building interior.

3.4 GENERAL ALTERATION WORK

- A. Have specialty work performed only by qualified specialists.
- B. Ensure that supervisory personnel are present when work begins and during its progress.
- C. Record existing work before each procedure (preconstruction), and record progress during the work. Use digital preconstruction documentation [photographs] [or] [video recordings]. Comply with requirements in Section 013233 "Photographic Documentation."
- D. Perform surveys of Project site as the Work progresses to detect hazards resulting from alterations.
- E. Notify Architect of visible changes in the integrity of material or components whether from environmental causes including biological attack, UV degradation, freezing, or thawing or from structural defects including cracks, movement, or distortion.
 - 1. Do not proceed with the work in question until directed by Architect.

END OF SECTION 013516

SECTION 111300 - LOADING DOCK EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Dock levelers.
2. Truck levelers.
3. Truck restraints.
4. Light-communication systems.
5. Dock bumpers.
6. Dock lifts (scissors lifts).
7. Dock seals.
8. Dock shelters.
9. Transparent-strip door curtains.

B. Related Sections:

1. **[Section 033000 "Cast-in-Place Concrete"] [Section 033053 "Miscellaneous Cast-in-Place Concrete"]** for concrete work for recessed loading dock equipment.
2. Section 055000 "Metal Fabrications" for **[curb angles at edges of recessed pits] [and] [loading dock platform edge channels]**.
3. Section 083323 "Overhead Coiling Doors" for coiling and other overhead doors electrically interlocked to dock levelers.
4. Section 083613 "Sectional Doors" for coiling and other overhead doors electrically interlocked to dock levelers.
5. Section 221119 "Domestic Water Piping Specialties" for pit drains for loading dock equipment permanently installed in pits.
6. Section 265100 "Interior Lighting" and Section 265600 "Exterior Lighting" for dock lighting fixtures.
7. Division 26 Sections for electrical wiring and connections for loading dock Equipment.

- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Operating Range: Maximum amount of travel above and below the loading dock level.
- B. Working Range: Recommended amount of travel above and below the loading dock level for which loading and unloading operations can take place.

1.4 REFERENCES

- A. American National Standards Institute (ANSI):
 - 1. Z53.1 - Safety Color Code for Marking Physical Hazards.
- B. American Society of Mechanical Engineers (ASME):

 - 1. 20-70 - American Softwood Lumber Standard.

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for loading dock equipment. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
 - 1. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For loading dock equipment. Include plans, elevations, sections, large-scale details, and attachments to other work.

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 2. Provide location template drawings for items supported or anchored to permanent construction.
 3. Furnish roughing in drawings for electrical service well in advance of concrete work.
 4. Material test reports from a qualified independent testing agency indicating compliance of dock levelers with requirements of ANSI MH 14.1 for determining rated capacity indicated.
 5. Wiring Diagrams: For power, signal, and control wiring.
- C. Samples for Initial Selection: For each type of dock[-seal] [and] [-shelter] fabric indicated.
- D. Samples for Verification: For each type of dock[-seal] [and] [-shelter] fabric indicated.
- 1.6 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For qualified Installer.
 - B. Welding certificates.
 - C. Product Test Reports: Based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency; indicate compliance of dock levelers with requirements in MH 30.1 for determining rated capacity, which is based on comprehensive testing within last two years of current products.
 1. Submittal Form: According to MH 30.1, Appendix A.
 - D. Warranty: Sample of special warranty.
- 1.7 CLOSEOUT SUBMITTALS
- A. Operation and Maintenance Data: For loading dock equipment to include in operation and maintenance manuals.
 1. Include name, address, and telephone number of the manufacturer's nearest authorized service representative.
 - B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.8 QUALITY ASSURANCE

- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation and maintenance of the types of units required for this Project.
 - 1. Maintenance Proximity: Not more than **[two (2)] <Insert number>** hours' normal travel time from Installer's place of business to Project site.
- B. Dock Leveler Standard: Comply with applicable requirements of ASME/ANSI MH14.1 for construction and operation of dock levelers and dockboards.
- C. Hydraulic Dock Lift Standards: Comply with applicable requirements of CS 202 for construction and operation of hydraulic dock lifts (scissor lifts).
- D. Source Limitations: Obtain each loading dock Equipment component as a complete unit produced by a single manufacturer, including necessary accessories, fittings, and anchorages.
- E. Welding Qualifications: Qualify procedures and personnel according to the following:
 - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 - 2. AWS D1.3, "Structural Welding Code - Sheet Steel."
- F. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- G. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]<Insert location>**.
 - 1. Inspect and discuss electrical roughing-in, equipment bases, and other preparatory work specified elsewhere.
 - 2. Review sequence of operation for each type of loading dock equipment.
 - 3. Review coordination of interlocked equipment specified in this Section and elsewhere.
 - 4. Review required testing, inspecting, and certifying procedures.
 - 5. **<Insert requirement>**.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Store and handle dock **[seals] [shelters] [seals and shelters]** in a manner to avoid significant or permanent damage to fabric or frame.
 - 1. Comply with manufacturer's written instructions for minimum and maximum temperature requirements for storage.

1.10 PROJECT CONDITIONS

- A. Field Measurements: Verify actual dimensions of construction contiguous with loading dock equipment, including [**recessed pit dimensions**] [**slopes of driveways**] [**and**] [**heights of loading docks**], by field measurements before fabrication.

1.11 WARRANTY

- A. Special Warranty for Dock Levelers: Manufacturer's standard form, executed by manufacturer, in which manufacturer agrees to repair or replace dock-leveler components that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
 - a. Structural failures including cracked or broken structural support members, load-bearing welds, and front and rear hinges.
 - b. Faulty operation of operators, control system, or hardware.
 - c. Deck plate failures including cracked plate or permanent deformation in excess of **1/4 inch** (6 mm) between deck supports.
 - d. Hydraulic system failures including failure of hydraulic seals and cylinders.
 - e. **<Insert failure modes>**.
2. Warranty Period for Structural Assembly: Minimum [**ten (10)**] **<Insert number>** years from date of Substantial Completion.
3. Warranty Period for Hydraulic System: Minimum [**five (5)**] **<Insert number>** years from date of Substantial Completion.
4. Warranty shall be for unlimited usage of leveler for the specified rated capacity over the term of the warranty.

1.12 MAINTENANCE SERVICE

- A. Initial Maintenance Service: Beginning at Substantial Completion, provide [**twelve (12)**] **<Insert number>** months' full maintenance by skilled employees of loading dock equipment Installer. Include [**monthly**] [**quarterly**] preventive maintenance, repair, or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper loading dock equipment operation at rated speed and capacity. Provide parts and supplies the same as those used in the manufacture and installation of original equipment.
- B. Continuing Maintenance Proposal: From Installer to Owner, in the form of a standard [**yearly**] **<Insert time period>** maintenance agreement, starting on date initial maintenance service is concluded. State services, obligations, conditions, and terms for agreement period and for future renewal options.

1.13 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to

satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Steel Plates, Shapes, and Bars: ASTM 36/A 36M.
- B. Rolled-Steel Floor Plate: ASTM A 786/A 786M, rolled from steel plate complying with ASTM A 572/A 572M, Grade 55 (380).
- C. Steel Tubing: ASTM A 500, cold formed.
- D. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.
- E. Wood: DOC PS 20 dimension lumber, select structural grade, kiln dried.
- F. Pressure-Treated Wood: DOC PS 20 dimension lumber, select structural grade, kiln dried, and pressure treated with waterborne preservatives to comply with AWPA C2.

2.2 RECESSED DOCK LEVELERS <Insert drawing designation>

- A. General: Recessed, hinged-lip-type dock levelers designed for permanent installation in concrete pits preformed in the edge of loading platform; of type, function, operation, capacity, size, and construction indicated; and complete with controls, safety devices, and accessories required.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Beacon Industries, Inc.
 - b. Blue Giant Equipment Corporation.
 - c. Chalfant Dock Equipment.
 - d. DLM, Inc.
 - e. Ellis Industries, Inc.
 - f. Flexon, Inc.
 - g. Kelly Company, Inc.
 - h. McGuire, W. B. Co., Inc.; Division of Overhead Door Corporation.
 - i. Nordock Inc.
 - j. NOVA Technology International, L.L.C.
 - k. Pentalift Equipment Corporation.
 - l. Pioneer Loading Dock Equipment.
 - m. Poweramp; Division of Systems, Inc.
 - n. Rite-Hite Corporation.
 - o. Rol-Lift Corporation.
 - p. Rotary Products Inc.
 - q. Serco Engineering Corp.

- r. SPX Dock Products - Kelley.
 - s. SPX Dock Products - Serco.
 - t. Vestil Manufacturing Company.
 - u. **<Insert manufacturer's name.>**
 - v. or approved equal.
- B. Standard: Comply with MH 30.1[, **except for structural testing to establish rated capacity**].
- C. Rated Capacity: Capable of supporting total gross load of **<Insert capacity>** without permanent deflection or distortion.
- D. Platform: Not less than [3/16-inch- (5-mm-)] [1/4-inch- (6-mm-)] [3/8-inch- (9.5-mm-)] **<Insert dimension>** thick, nonskid steel plate.
1. Platform Size: **[As indicated on Drawings] <Insert size>**.
 2. Frame: **[Manufacturer's standard] [Clean-pit type, designed to support leveler at sides of pit, with no side-to-side supports at front of pit floor]**.
 3. Toe Guards: Equip open sides of dock leveler over range indicated with metal toe guards.
 - a. Toe-Guard Range: Entire upper **[operating] [working]** range.
- E. Hinged Lip: Not less than [1/2-inch- (13-mm-)] [5/8-inch- (16-mm-)] [3/4-inch- (19-mm-)] [1-inch- (25-mm-)] **<Insert dimension>** thick, nonskid steel plate.
1. Hinge: Full width, piano-type hinge with heavy-wall hinge tube[**and greased fittings**], with gussets on lip and ramp for support.
 2. Safety Barrier Lip: Designed to protect material-handling equipment from an accidental fall from loading platform edge of the dock leveler when the leveler is not in use.
- F. Function: Dock levelers shall compensate for differences in height between truck bed and loading platform.
1. Vertical Travel: Operating range above platform level of sufficient height to enable lip to extend and clear truck bed before contact with the following minimum working range:
 - a. Above Adjoining Platform: [12 inches (305 mm)] [18 inches (457 mm)] [**As indicated on Drawings] <Insert dimension>**.
 - b. Below Adjoining Platform: [12 inches (305 mm)] [14 inches (356 mm)] [**As indicated on Drawings] <Insert dimension>**.
 2. Automatic Vertical Compensation: Floating travel of ramp with lip extended and resting on truck bed shall compensate automatically for upward or downward movement of truck bed during loading and unloading.
 3. Automatic Lateral Compensation: Tilting of ramp with lip extended and resting on truck bed shall compensate automatically for canted truck beds of up to 4 inches (102 mm) over width of ramp.

4. Lip Operation: Manufacturer's standard mechanism that automatically extends and supports hinged lip on ramp edge with lip resting on truck bed over dock leveler's working range, allows lip to yield under impact of incoming truck, and automatically retracts lip when truck departs.
 - a. Length of Lip Extension: [16 inches (406 mm)] [18 inches (457 mm)] [20 inches (508 mm)] [As indicated on Drawings].
 5. Automatic Ramp Return: Automatic return of unloaded ramp, from raised or lowered positions to stored position, level with platform, as truck departs.
 6. Interlock: Leveler will not operate while [overhead door is in closed position] [leveler night lock is engaged] [truck restraint is not engaged] [inflatable dock seal is not inflated] [and] [inflatable dock shelter is not inflated] <Insert equipment and condition>.
- G. Mechanical Operating System: Manual control; counterbalance and spring operation. Spring-operated raising and walk-down lowering of unloaded ramp. Equip leveler with an upward-biased-spring counterbalancing mechanism controlled by a hold-down device. Ramp raises to top limit of operating range by operating recessed control handle in ramp to disengage hold-down device. Ramp lowers below platform level with lip retracted by operating auxiliary, recessed control handle to release support legs.
1. Free-Fall Protection: Manufacturer's standard protection system to limit free fall of loaded ramps with front edge supported by truck bed.
- H. Hydraulic Operating System: Electric control from a remote-control station; fully hydraulic operation. Electric-powered hydraulic raising and hydraulic lowering of ramp. Equip leveler with a packaged unit including a unitized, totally enclosed, nonventilated electric motor, pump, manifold reservoir, and valve assembly of proper size, type, and operation for capacity of leveler indicated. Include means for lowering ramp below platform level with lip retracted behind dock bumpers. Provide a hydraulic velocity fuse connected to main hydraulic cylinder to limit loaded ramp's free fall to not more than 3 inches (76 mm).
1. Remote-Control Station: [Weatherproof single] [Single]-button station of the constant-pressure type, enclosed in NEMA ICS 6, [Type 4] [Type 12] <Insert type> box. Ramp raises by depressing and holding button; ramp lowers at a controlled rate by releasing button.
 2. Remote-Control Station with Emergency Stop: [Weatherproof multibutton] [Multibutton] control station with an UP button of the constant-pressure type and an emergency STOP button of the momentary-contact type, enclosed in NEMA ICS 6, [Type 4] [Type 12] <Insert type> box. Ramp raises by depressing and holding UP button; ramp lowers at a controlled rate by releasing UP button. All ramp movement stops, regardless of position of ramp or lip, by depressing STOP button. Normal operation resumes by engaging a manual reset button or by pulling out STOP button.
 - a. Dual-Panel Control Station: Remote-control station for operating side-by-side dock levelers.

- L. Integral Molded-Rubber Dock Bumpers: Fabricated from [4-inch- (102-mm-)] [6-inch- (152-mm-)] <Insert dimension> thick, heavy molded-rubber compound reinforced with nylon, rayon, or polyester cord; with Type A Shore durometer hardness of 80, plus or minus 5, when tested according to ASTM D 2240. Provide two dock bumpers for each recessed dock leveler, attached to face of loading dock with expansion bolts.
- M. Integral Laminated-Tread Dock Bumper: Fabricated from [4-1/2-inch- (114-mm-)] [6-inch- (152-mm-)] <Insert dimension> thick, multiple, uniformly thick plies cut from fabric-reinforced rubber tires. Laminate plies under pressure on not less than two 3/4-inch- (19-mm-) diameter, steel supporting rods that are welded at one end to 1/4-inch- (6-mm-) thick, structural-steel end angle and secured with a nut and angle at the other end. Fabricate angles with predrilled anchor holes and sized to provide not less than 1 inch (25 mm) of tread plies extending beyond the face of closure angles.
- N. Accessories:
1. Curb Angles: 3-by-3-by-1/4-inch (76-by-76-by-6-mm) galvanized-steel curb angles for edge of recessed leveler pit, with 1/2-inch- (13-mm-) diameter by 6-inch- (152-mm-) long concrete anchors welded to angle at 6 inches (152 mm) o.c.
 2. Self-Forming Pan: Manufacturer's standard prefabricated, self-forming steel form system for poured-in-place construction of concrete pit.
 3. Night Locks: Manufacturer's standard means to prevent extending lip and lowering ramp when overhead doors are locked.
 4. Side and rear weatherseals.
 5. Foam insulation under dock-leveler platform.
 6. [Abrasive skid-resistant] [Smooth] surface.
 7. <Insert accessory>.
- O. Finish: [Paint] [Hot-dip galvanize] dock levelers after assembly[and testing].
1. Toe Guards: Paint [yellow] [orange] <Insert color> to comply with ANSI Z535.1.

2.3 EDGE-OF-DOCK LEVELERS <Insert drawing designation>

- A. General: Surface-mounted, hinged-lip-type, edge-of-dock levelers designed for permanent installation on face of loading dock platform; of type, function, operation, capacity, size, and construction indicated; and complete with controls, safety devices, and accessories required.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Beacon Industries, Inc.
 - b. Blue Giant Equipment Corporation.
 - c. Chalfant Dock Equipment.
 - d. DLM, Inc.
 - e. Ellis Industries, Inc.
 - f. Flexon, Inc.
 - g. Kelly Company, Inc.

- h. McGuire, W. B. Co., Inc.; Division of Overhead Door Corporation.
 - i. Nordock Inc.
 - j. NOVA Technology International, L.L.C.
 - k. Pentalift Equipment Corporation.
 - l. Pioneer Loading Dock Equipment.
 - m. Poweramp; Division of Systems, Inc.
 - n. Rol-Lift Corporation.
 - o. Rotary Products Inc.
 - p. Serco Engineering Corp.
 - q. Vestil Manufacturing Company.
 - r. **<Insert manufacturer's name>**.
 - s. or approved equal.
- B. Standard: Comply with MH 30.1[, **except for structural testing to establish rated capacity**].
- C. Rated Capacity: Capable of supporting total gross load of **<Insert capacity>** without permanent deflection or distortion.
- D. Platform Ramp Width: [66 inches (1676 mm)] [72 inches (1829 mm)] [78 inches (1981 mm)] [84 inches (2134 mm)] [**As indicated on Drawings**] **<Insert dimension>**.
- E. Hinged Lip: Not less than [3/8-inch- (9.5-mm-)] [7/16-inch- (11-mm-)] [1/2-inch- (13-mm-)] **<Insert dimension>** thick, nonskid steel tread plate.
- 1. Hinge: Full width, piano-type hinge with heavy-wall hinge tube[**and greased fittings**], with gussets on lip and ramp for support.
- F. Function: Dock levelers shall compensate for differences in height between truck bed and loading platform.
- 1. Vertical Travel: Operating range above platform level of sufficient height to enable lip to extend and clear truck bed before contact with the following minimum working range:
 - a. Above Adjoining Platform: [5 inches (127 mm)] [6 inches (152 mm)] [**As indicated on Drawings**] **<Insert dimension>**.
 - b. Below Adjoining Platform: [5 inches (127 mm)] [**As indicated on Drawings**] **<Insert dimension>**.
 - 2. Automatic Vertical Compensation: Floating travel of ramp with lip extended and resting on truck bed shall compensate automatically for upward or downward movement of truck bed during loading and unloading.
 - 3. Automatic Lateral Compensation: Tilting of ramp with lip extended and resting on truck bed shall compensate automatically for canted truck beds of up to 3 inches (76 mm) over width of ramp.
 - 4. Lip Operation: Manufacturer's standard mechanism that automatically extends and supports hinged lip on ramp edge with lip resting on truck bed over dock leveler's working range, allows lip to yield under impact of incoming truck, and automatically retracts lip when truck departs.

- a. Length of Lip Extension: [15 inches (381 mm)] [17 inches (432 mm)] [**As indicated on Drawings**] <Insert dimension>.
5. Automatic Ramp Return: Automatic return of unloaded ramp, from raised or lowered positions to stored position, level with platform, as truck departs. Leveler shall be capable of retracting to stored position while truck is at loading dock.
- G. Mechanical Operating System: Manual control; counterbalance and spring operation. Spring-operated raising and walk-down lowering of unloaded ramp. Equip leveler with a torsion-spring counterbalancing mechanism controlled by a hold-down device.
 1. Lever Handle: Self-storing lever handle for raising unloaded ramp with minimal lifting force by pulling lever back to extend lip and pushing lever forward to lower ramp and lip.
 2. Removable Lifting Handle: For raising unloaded ramp by lifting action.
- H. Hydraulic Operating System: Electric control from a remote-control station; fully hydraulic operation. Electric-powered hydraulic raising and hydraulic lowering of ramp. Equip leveler with a packaged unit including a unitized, totally enclosed, nonventilated electric motor, pump, manifold reservoir, and valve assembly of proper size, type, and operation for capacity of leveler indicated. Provide a hydraulic velocity fuse connected to main hydraulic cylinder to limit loaded ramp's free fall to not more than 3 inches (76 mm).
 1. Remote-Control Station: [**Weatherproof single**] [**Single**]-button station of the constant-pressure type, enclosed in NEMA ICS 6, [**Type 12**] <Insert type> box. Ramp and lip raise to vertical position and extend to truck bed by depressing and holding button.
- I. Construction: Fabricate dock-leveler frame, platform supports, and lip supports from structural- and formed-steel shapes. Weld platform and hinged lip to supports. Fabricate entire assembly to withstand deformation during both operating and stored phases of service. Chamfer lip edge to minimize obstructing wheels of material-handling vehicles.
 1. Cross-Traffic Support: Manufacturer's standard method of supporting ramp at platform level in stored position with lip retracted. Provide a means to release supports to allow ramp to descend below platform level.
 2. Maintenance Strut: Integral strut to positively support ramp in up position during maintenance of dock leveler.
- J. Integral Molded-Rubber Dock Bumpers: Fabricated from [4-inch- (102-mm-)] [6-inch- (152-mm-)] <Insert dimension> thick, heavy molded-rubber compound reinforced with nylon, rayon, or polyester cord; with Type A Shore durometer hardness of 80, plus or minus 5, when tested according to ASTM D 2240. Provide two dock bumpers for each recessed dock leveler, attached to face of loading dock with expansion bolts.
- K. Integral Laminated-Tread Dock Bumper: Fabricated from [4-1/2-inch- (114-mm-)] [6-inch- (152-mm-)] <Insert dimension> thick, multiple, uniformly thick plies cut from fabric-reinforced rubber tires. Laminate plies under pressure on not less than two

3/4-inch- (19-mm-) diameter, steel supporting rods that are welded at one end to **1/4-inch-** (6-mm-) thick, structural-steel end angle and secured with a nut and angle at the other end. Fabricate angles with predrilled anchor holes and sized to provide not less than **1 inch** (25 mm) of tread plies extending beyond the face of closure angles.

L. Accessories:

1. Self-forming pan.
2. Cast-in-place design.
3. Run-off guards.
4. Ramp approach plate.
5. **<Insert accessory>**.

M. Dock-Leveler Finish: Painted in manufacturer's standard color.

2.4 TOP-OF-DOCK LEVELERS **<Insert drawing designation>**

A. General: Surface-mounted, hinged-lip-type, top-of-dock levelers designed for permanent installation on top edge of loading dock platform without concrete pit; of type, function, operation, capacity, size, and construction indicated; and complete with controls, safety devices, and accessories required.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Beacon Industries, Inc.
 - b. Pioneer Loading Dock Equipment.
 - c. **<Insert manufacturer's name>**.
 - d. or approved equal.

B. Standard: Comply with MH 30.1[, **except for structural testing to establish rated capacity**].

C. Rated Capacity: Capable of supporting total gross load of **<Insert capacity>** without permanent deflection or distortion.

D. Platform Width: [**72 inches** (1829 mm)] [**As indicated on Drawings**] **<Insert dimension>**.

E. Hinged Lip: Not less than [**3/8-inch-** (9.5-mm-)] [**7/16-inch-** (11-mm-)] thick, nonskid steel plate.

1. Hinge: Full width, piano-type hinge with heavy-wall hinge tube[**and greased fittings**], with gussets on lip and ramp for support.

F. Function: Dock levelers shall compensate for differences in height between truck bed and loading platform.

1. Vertical Travel: Operating range above platform level of sufficient height to enable lip to extend and clear truck bed before contact with a minimum working

- range of [10 inches (250 mm)] <Insert dimension> above and [4 inches (102 mm)] <Insert dimension> below adjoining platform level.
2. Automatic Vertical Compensation: Floating travel of ramp with lip extended and resting on truck bed shall compensate automatically for upward or downward movement of truck bed during loading and unloading.
 3. Lip Operation: Manufacturer's standard mechanism that automatically extends and supports hinged lip on ramp edge with lip resting on truck bed over dock leveler's working range, allows lip to yield under impact of incoming truck, and automatically retracts lip when truck departs.
 - a. Length of Lip Extension: [15 inches (381 mm)] [As indicated on Drawings] <Insert dimension>.
 4. Automatic Ramp Return: Automatic return of unloaded ramp, from raised or lowered positions to stored position, level with platform, as truck departs. Leveler shall be capable of retracting to stored position while truck is at loading dock.
- G. Mechanical Operating System: Manual control; counterbalance and spring operation. Spring-operated raising and walk-down lowering of unloaded ramp. Equip leveler with a torsion-spring counterbalancing mechanism controlled by a hold-down device.
1. Removable Lifting Hook: For raising unloaded ramp by lifting action and pushing forward to lower ramp and lip.
- H. Hydraulic Operating System: Electric control from a remote-control station, fully hydraulic operation. Electric-powered hydraulic raising and hydraulic lowering of ramp. Equip leveler with a packaged unit including a unitized, totally enclosed, nonventilated electric motor, pump, manifold reservoir, and valve assembly of proper size, type, and operation for capacity of leveler indicated.
1. Remote-Control Station: [Weatherproof single] [Single]-button station of the constant-pressure type, enclosed in NEMA ICS 6, [Type 12] <Insert type> box. Ramp and lip raise to vertical position and extend to truck bed by depressing and holding button.
- I. Construction: Fabricate dock-leveler frame, platform supports, and lip supports from structural- or formed-steel shapes. Weld platform and hinged lip to supports. Fabricate entire assembly to withstand deformation during both operating and stored phases of service. Chamfer lip edge to minimize obstructing wheels of material-handling vehicles.
- J. Integral Molded-Rubber Dock Bumpers: Fabricated from [4-inch- (102-mm-)] [6-inch- (152-mm-)] <Insert dimension> thick, heavy molded-rubber compound reinforced with nylon, rayon, or polyester cord; with Type A Shore durometer hardness of 80, plus or minus 5, when tested according to ASTM D 2240. Provide two dock bumpers for each recessed dock leveler, attached to face of loading dock with expansion bolts.
- K. Integral Laminated-Tread Dock Bumper: Fabricated from [4-1/2-inch- (114-mm-)] [6-inch- (152-mm-)] <Insert dimension> thick, multiple, uniformly thick plies cut from fabric-reinforced rubber tires. Laminate plies under pressure on not less than two

3/4-inch- (19-mm-) diameter, steel supporting rods that are welded at one end to **1/4-inch-** (6-mm-) thick, structural-steel end angle and secured with a nut and angle at the other end. Fabricate angles with predrilled anchor holes and sized to provide not less than **1 inch** (25 mm) of tread plies extending beyond the face of closure angles.

- L. Dock-Leveler Finish: Painted in manufacturer's standard color.

2.5 VERTICAL-STORING DOCK LEVELERS <Insert drawing designation>

- A. General: Recessed, hinged-lip-type, vertical-storing dock levelers designed for permanent installation in shallow concrete pits preformed in the edge of loading platform; of type, function, operation, capacity, size, and construction indicated; and complete with controls, safety devices, and accessories required.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Blue Giant Equipment Corporation.
- b. McGuire, W. B. Co., Inc.; Division of Overhead Door Corporation.
- c. Nordock Inc.
- d. Pentalift Equipment Corporation.
- e. Poweramp; Division of Systems, Inc.
- f. Rite-Hite Corporation.
- g. Rol-Lift Corporation.
- h. SPX Dock Products - Kelley.
- i. SPX Dock Products - Serco.
- j. <Insert manufacturer's name>.
- k. or approved equal.

- B. Standard: Comply with MH 30.1[, **except for structural testing to establish rated capacity**].

- C. Rated Capacity: Capable of supporting total gross load of <Insert capacity> without permanent deflection or distortion.

- D. Platform: Not less than [**3/16-inch-** (5-mm-)] [**1/4-inch-** (6-mm-)] thick, nonskid steel plate.

1. Platform Size: [**As indicated on Drawings**] <Insert size>.

- E. Hinged Lip: Not less than [**1/2-inch-** (13-mm-)] [**5/8-inch-** (16-mm-)] thick, nonskid steel plate.

1. Hinge: Full width, piano-type hinge with heavy-wall hinge tube[**and greased fittings**], with gussets on lip and ramp for support.

- F. Function: Dock levelers shall compensate for differences in height between truck bed and loading platform.

1. Vertical Travel: Operating range above platform level of sufficient height to enable lip to extend and clear truck bed before contact with the following minimum working range:
 - a. Above Adjoining Platform: [6 inches (152 mm)] [10 inches (250 mm)] [12 inches (305 mm)] [As indicated on Drawings] <Insert dimension>.
 - b. Below Adjoining Platform: [6 inches (152 mm)] [As indicated on Drawings] <Insert dimension>.
 2. Automatic Vertical Compensation: Floating travel of ramp with lip extended and resting on truck bed shall compensate automatically for upward or downward movement of truck bed during loading and unloading.
 3. Automatic Lateral Compensation: Tilting of ramp with lip extended and resting on truck bed shall compensate automatically for canted truck beds of up to 4 inches (102 mm) over width of ramp.
 4. Lip Operation: Manufacturer's standard mechanism that automatically extends and supports hinged lip on ramp edge with lip resting on truck bed over dock leveler's working range, allows lip to yield under impact of incoming truck, and automatically retracts lip when truck departs.
 - a. Length of Lip Extension: [16 inches (406 mm)] [18 inches (457 mm)] [20 inches (508 mm)] [As indicated on Drawings] <Insert dimension>.
- G. Hydraulic Operating System: Electric control from a remote-control station; fully hydraulic operation. Electric-powered hydraulic raising and hydraulic lowering of ramp. Equip leveler with a packaged unit including a unitized, totally enclosed, nonventilated electric motor, pump, manifold reservoir, and valve assembly of proper size, type, and operation for capacity of leveler indicated. Provide a hydraulic velocity fuse connected to main hydraulic cylinder to limit loaded ramp's free fall to not more than 3 inches (76 mm). Provide mechanical lock that prevents leveler from lowering without hydraulic pressure.
1. Remote-Control Station: [Weatherproof single] [Single]-button station of the constant-pressure type, enclosed in NEMA ICS 6, [Type 12] <Insert type> box. Ramp lowers at a controlled rate.
 2. Remote-Control Station with Emergency Stop: [Weatherproof multibutton] [Multibutton] control station with an UP button of the constant-pressure type and an emergency STOP button of the momentary-contact type, enclosed in NEMA ICS 6, [Type 12] <Insert type> box. Ramp raises by depressing and holding UP button; ramp lowers at a controlled rate by releasing UP button. All ramp movement stops, regardless of position of ramp or lip, by depressing STOP button. Normal operation resumes by engaging a manual reset button or by pulling out STOP button.
 - a. Master Panel: Control panel with integral fused disconnecting means for operating dock leveler, dock door, and truck restraints.
 3. Independent Lip Operation: Electric-powered hydraulic raising and lowering of lip, controlled independent of raising and lowering of ramp.

- H. Construction: Fabricate dock-leveler frame, platform supports, [**run-off guards,**] and lip supports from structural- or formed-steel shapes. Weld platform and hinged lip to supports. Fabricate entire assembly to withstand deformation during both operating and stored phases of service. Chamfer lip edge to minimize obstructing wheels of material-handling vehicles.
- I. Integral Molded-Rubber Dock Bumpers: Fabricated from [4-inch- (102-mm-)] [6-inch- (152-mm-)] <Insert dimension> thick, heavy molded-rubber compound reinforced with nylon, rayon, or polyester cord; with Type A Shore durometer hardness of 80, plus or minus 5, when tested according to ASTM D 2240. Provide two dock bumpers for each recessed dock leveler, attached to face of loading dock with expansion bolts.
- J. Integral Laminated-Tread Dock Bumper: Fabricated from [4-1/2-inch- (114-mm-)] [6-inch- (152-mm-)] <Insert dimension> thick, multiple, uniformly thick plies cut from fabric-reinforced rubber tires. Laminate plies under pressure on not less than two 3/4-inch- (19-mm-) diameter, steel supporting rods that are welded at one end to 1/4-inch- (6-mm-) thick, structural-steel end angle and secured with a nut and angle at the other end. Fabricate angles with predrilled anchor holes and sized to provide not less than 1 inch (25 mm) of tread plies extending beyond the face of closure angles.
- K. Accessories:
1. Interlock: Leveler will not operate while [**overhead door is in closed position**] [**and**] [**truck restraint is not engaged**].
 2. Curb Angles: 3-by-3-by-1/4-inch (76-by-76-by-6-mm) galvanized-steel curb angles for edge of recessed leveler pit, with 1/2-inch- (13-mm-) diameter by 6-inch- (152-mm-) long concrete anchors welded to angle at 6 inches (152 mm) o.c.
 3. <Insert accessory>.
- L. Finish: [**Paint**] [**Hot-dip galvanize**] dock levelers after assembly [**and testing**].

2.6 TRUCK LEVELERS <Insert drawing designation>

- A. General: Two-cylinder, hydraulic ramp designed to raise and lower end of truck at loading dock. Equip leveler with a packaged unit including a unitized electric motor, pump, manifold reservoir, and valve assembly of proper size, type, and operation for capacity indicated. Provide manufacturer's standard means for limiting loaded ramp's free fall.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Advance Lifts, Inc.
 - b. Autoquip Corporation.
 - c. Beacon Industries, Inc.
 - d. Pentalift Equipment Corporation.
 - e. Poweramp; Division of Systems, Inc.
 - f. Rite-Hite Corporation.
 - g. SPX Dock Products - Serco.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Beacon Industries, Inc.
 - b. Blue Giant Equipment Corporation.
 - c. Chalfant Dock Equipment.
 - d. DLM, Inc.
 - e. Ellis Industries, Inc.
 - f. Flexon, Inc.
 - g. Kelly Company, Inc.
 - h. McGuire, W. B. Co., Inc.; Division of Overhead Door Corporation.
 - i. Nordock Inc.
 - j. NOVA Technology International, L.L.C.
 - k. Pentalift Equipment Corporation.
 - l. Pioneer Loading Dock Equipment.
 - m. Poweramp; Division of Systems, Inc.
 - n. Rite-Hite Corporation.
 - o. Rol-Lift Corporation.
 - p. Serco Engineering Corp.
 - q. SPX Dock Products - Kelley.
 - r. SPX Dock Products - Serco.
 - s. Vestil Manufacturing Company.
 - t. **<Insert manufacturer's name>**.
 - u. or approved equal.

- B. Standard: Comply with MH 30.3.

- C. Rated Capacity: Capable of supporting total gross load of **<Insert capacity>** without permanent deflection or distortion.

- D. Operating Range: Capable of restraining rear-impact guards within a range from:
 1. Vertical: [**12 inches** (305 mm)] [**30 inches** (762 mm)] [**As indicated on Drawings <Insert dimension>**] above driveway.
 2. Horizontal: [**12 inches** (305 mm)] [**As indicated on Drawings <Insert dimension>**] in front of dock bumpers.

- E. Power Operating System: Manufacturer's standard electromechanical or hydraulic unit.
 1. Remote-Control Station: Single-button station of the constant-pressure type, enclosed in NEMA ICS 6, [**Type 12 <Insert type>**] box. Restraint is engaged by depressing and holding button; restraint is released by releasing button.
 2. Interlock: Leveler will not operate while truck restraint is not engaged.

- F. Mechanical Operating System: Restraint operates by use of a lifting rod or hook to raise engagement device.

- G. Rear-Impact-Guard Sensor: Detects presence of rear-impact guard[**and automatically returns to stored position if rear-impact guard is not engaged**].

- H. Caution Signs: Exterior, surface mounted; designed to inform both dock attendant and truck driver; with sign copy as follows. Provide one sign at each truck-restraint location.
1. Sign Copy in Forward and Reverse Text: **[Manufacturer's standard text permitting truck movement with green light]** <Insert text>.
 2. Interior Sign Copy: **[Manufacturer's standard text permitting truck movement with green light]** <Insert text>.
- I. Light-Communication System: Red and green illuminated signal-light sets, with lens approximately 4 inches (102 mm) in diameter, designed to indicate status to both dock attendant and truck driver. Equip system with steel control panel located at interior of dock that **[includes illuminated lights indicating]** **[indicates]** status of exterior signal lights. Provide signal-light set and control panel at each location indicated for light-communication system. Enclose exterior signal-light sets in steel or plastic housing with sunshade.
1. Manual Operation: System is activated by push button or switch located on **[interior]** **[truck-restraint]** control panel.
 2. Automatic Operation: System is activated automatically by **[limit switch]** **[photoelectric sensor]** **[magnetic switch]** mounted on overhead door track. Provide on-off switch located on **[light-communication system]** **[truck-restraint]** control panel.
 3. Automatic Operation: System is activated automatically when device engages rear-impact guard. Provide on-off switch located on truck-restraint control panel.
 4. Mounting: **[Wall]** **[Driveway]** **[Pit]**.
- J. Alarm: **[Audible]** **[Visual]** **[Audible and visual]** system indicating that rear-impact guard is not engaged, with manual reset.
- K. Accessories: **[Interlock to dock leveler]** **[Key switch]** <Insert accessory>.
- L. Truck-Restraint Finish: **[Painted]** **[Hot-dip galvanized]**.

2.8 LIGHT-COMMUNICATION SYSTEMS

- A. General: Provide communication system consisting of signal-light sets, caution signs, alarms, and controls for each location indicated.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Beacon Industries, Inc.
 - b. Nordock Inc.
 - c. Rite-Hite Corporation.
 - d. SPX Dock Products - Kelley.
 - e. SPX Dock Products - Serco.
 - f. Vestil Manufacturing Company.
 - g. **<Insert manufacturer's name>**.
 - h. or approved equal.

- B. Caution Signs: Surface mounted; designed to inform both dock attendant and truck driver; with sign copy as follows:
1. Exterior Sign Copy in Forward and Reverse Text: **[Manufacturer's standard text permitting truck movement with green light]** <Insert text>.
 2. Interior Sign Copy: **[Manufacturer's standard text permitting truck movement with green light]** <Insert text>.
- C. Signal-Light Sets: Red and green illuminated signal-light sets, with lens approximately 4 inches (102 mm) in diameter, designed to indicate status to both dock attendant and truck driver. Equip system with steel control panel that **[includes illuminated lights indicating] [indicates]** status of exterior signal lights; located at interior of dock. Provide signal-light set and control panel at each location indicated for light-communication system. Enclose signal lights in steel or plastic housing, with exterior signal-light sets equipped with sunshade.
1. Manual Operation: Lights are activated by push button or switch located on **[interior signal-light enclosure] [control panel]**.
 2. Automatic Operation: Lights are activated automatically by **[limit switch] [photoelectric sensor] [magnetic switch]** mounted on overhead door track. Provide on-off switch located on control panel.

2.9 DOCK BUMPERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. American Floor Products Company, Inc.
 2. Beacon Industries, Inc.
 3. Chalfant Dock Equipment.
 4. Durable Corporation.
 5. Ellis Industries, Inc.
 6. Flexon, Inc.
 7. Hugger Dock Equipment Company; Division of Columbus Foam Products, Inc.
 8. Pawling Corporation; Architectural Products Division.
 9. Pentalift Equipment Corporation.
 10. Pioneer Loading Dock Equipment.
 11. Rite-Hite Corporation.
 12. Rol-Lift Corporation.
 13. SPX Dock Products - Kelley.
 14. SPX Dock Products - Serco.
 15. Super Seal Mfg. Ltd.
 16. Tennessee Mat Company, Inc.
 17. Vestil Manufacturing Company.
 18. **<Insert manufacturer's name>**.
 19. or approved equal.
- B. Laminated-Tread Dock Bumper **<Insert drawing designation>**: Fabricated from multiple, uniformly thick plies cut from fabric-reinforced rubber tires. Laminate plies

under pressure on not less than two **3/4-inch-** (19-mm-) diameter, steel supporting rods that are welded at one end to **1/4-inch-** (6-mm-) thick, structural-steel end angle and secured with a nut and angle at the other end. Fabricate angles with predrilled anchor holes and sized to provide not less than **1 inch** (25 mm) of tread plies extending beyond the face of closure angles.

1. Thickness: [4-1/2 inches (114 mm)] [6 inches (152 mm)] [**As indicated on Drawings**] <Insert dimension>.
 2. Horizontal Style: [6 inches (152 mm)] [10 inches (250 mm)] [12 inches (305 mm)] high by [length indicated on Drawings] <Insert dimension>.
 3. Vertical Style: 8 inches (203 mm) wide by [20 inches (508 mm) high] [24 inches (610 mm) high] [36 inches (914 mm) high] [height indicated on Drawings] <Insert dimension>.
- C. Molded-Rubber Bumpers <Insert drawing designation>: Fabricated from molded-rubber compound reinforced with nylon, rayon, or polyester cord; with Type A Shore durometer hardness of 80, plus or minus 5, when tested according to ASTM D 2240; of size and configuration indicated. Fabricate units with not less than two predrilled anchor holes.
1. Configuration: [T shape] [Inverted-L shape] [Square] [Rectangular] [**As indicated on Drawings**] <Insert configuration>.
 2. Thickness: [2 inches (50 mm)] [3 inches (76 mm)] [4 inches (102 mm)] [6 inches (152 mm)] [**As indicated on Drawings**] <Insert dimension>.
- D. Extruded-Rubber Bumpers <Insert drawing designation>: Fabricated from ASTM D 2000, extruded synthetic rubber with Type A Shore durometer hardness of 75, plus or minus 5, when tested according to ASTM D 2240; of size and configuration indicated. Furnish units with predrilled anchor holes and concealed, flat, steel mounting bar.
1. Configuration: [**Flat or ribbed, with 2-inch** (50-mm) **nominal thickness and 9-inch** (229-mm) **height**] [4-1/2-inch- (114-mm-) **wide base and 4-inch** (102-mm) **depth with half-oval shape that compresses and returns to original shape**] [**As indicated on Drawings**] <Insert configuration>.
- E. Steel-Face, Laminated-Tread Bumpers <Insert drawing designation>: Fabricated from multiple, uniformly thick plies cut from fabric-reinforced rubber tires and with **3/8-inch** (9.5-mm) steel faceplate of same size as rubber surface. Laminate plies under pressure on not less than two **3/4-inch-** (19-mm-) diameter, steel supporting rods that are welded at one end to **1/4-inch-** (6-mm-) thick, structural-steel end angle and secured with a nut and angle at the other end. Fabricate angles with predrilled anchor holes and sized to provide not less than **1 inch** (25 mm) of tread plies extending beyond the face of closure angles. Weld face plate to two steel support brackets, which shall extend back to and engage **3/4-inch-** (19-mm-) diameter support rods in elongated holes, allowing steel face to float on impact.
1. Thickness: [4-1/2 inches (114 mm)] [6 inches (152 mm)] [**As indicated on Drawings**] <Insert dimension>.
 2. Horizontal Style: [6 inches (152 mm)] [10 inches (250 mm)] [12 inches (305 mm)] high by [length indicated] <Insert dimension>.

3. Vertical Style: **8 inches** (203 mm) wide by [**20 inches** (508 mm) **high**] [**24 inches** (610 mm) **high**] [**36 inches** (914 mm) **high**] [**height indicated**] **<Insert dimension>**.

F. Anchorage Devices: Hot-dip galvanized-steel anchor bolts, nuts, washers, bolts, sleeves, cast-in-place plates, and other anchorage devices as required to fasten bumpers securely in place and to suit installation type indicated.

2.10 DOCK LIFTS **<Insert drawing designation>**

A. General: Built-in, scissors-type, single-leg, hydraulic dock lift of capacity, size, and construction indicated; complete with controls, safety devices, and accessories required.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Advance Lifts, Inc.
- b. Autoquip Corporation.
- c. Beacon Industries, Inc.
- d. Blue Giant Equipment Corporation.
- e. ECOA Industrial Products, Inc.
- f. Equipment Company of America.
- g. Nordock Inc.
- h. Pentalift Equipment Corporation.
- i. Rol-Lift Corporation.
- j. SPX Dock Products - Kelley.
- k. SPX Dock Products - Serco.
- l. Vestil Manufacturing Company.
- m. **<Insert manufacturer's name>**.
- n. or approved equal.

B. Standard: MH 29.1.

C. Rated Capacity: Lifting capacity of not less than [**8000 lb** (3629 kg) **with 6500-lb** (2948-kg)] [**indicated on Drawings**] **<Insert load>** axle load at ends and [**5000-lb** (2268-kg)] [**indicated on Drawings**] **<Insert load>** axle load at sides.

D. Platform: [**Nonskid, safety-tread**] [**Smooth-surface**] heavy steel deck plate.

1. Platform Size: [**As indicated on Drawings**] **<Insert size>**.
2. Platform Guarding: [**Bevel toe guards**] [**Toe sensor**] [**Indicator bar**] [**Skirts**] [**Enclosure**] to comply with requirements in MH 29.1.
3. [**Removable**] [**Fixed**] Handrails: Equip lift with handrails on two sides of platform with a single, removable chain across each end. Provide handrails not less than **39 inches** (991 mm) high with midrail and **4-inch-** (102-mm-) high kick plate at bottom.[**Mount rail sockets flush with platform surface.**]

E. Bridge: [**Nonskid, safety-tread steel**] [**High-tensile aluminum**] plate.

1. Hinged Bridge: Hinged, throw-over bridge bolted to full-length, heavy-duty, piano-type hinge welded to toe guard at end of platform. Provide bridge complete with heavy-duty lifting chains. Chamfer edge of bridge to minimize obstructing wheels of material-handling vehicles.
 2. Size: [18 inches (457 mm) long by 60 inches (1524 mm) wide] [18 inches (457 mm) long by 72 inches (1829 mm) wide] [As indicated on Drawings] <Insert size>.
 3. Locations: [Ends] [Sides] [As indicated on Drawings].
- F. Function: Dock lifts shall compensate for differences in height between truck bed and loading platform.
1. Vertical Travel: Maximum of [60 inches (1524 mm)] <Insert height> from a lowered height of [12 inches (305 mm)] <Insert height> for a total raised height of [72 inches (1829 mm)] <Insert total height>.
 2. Travel Speed: Nominal raising speed of [8 fpm (0.04 m/s)] [10 fpm (0.05 m/s)] [12 fpm (0.06 m/s)] <Insert speed>.
 3. Vertical Travel and Travel Speed: [As indicated on Drawings.]
 4. Hinged Throw-Over Bridges Operation: [Manual] [Manual-assist bridge winch] [Automatic powered].
- G. Hydraulic Operating System: Self-contained, electric, hydraulic power unit for raising and lowering lift; of size, type, and operation needed for capacity of lift indicated; controlled from a remotely located push-button station.
1. Power Unit: Consisting of continuous-duty motor, high-pressure gear pump, valve manifold, oil-line filters, and oil reservoir.
 - a. Equip manifold with relief valve, check valve, pressure-compensated flow-control valve, and solenoid valve and with provisions for lowering lift manually if power fails.
 - b. Equip reservoir, valve manifold, and pressure line with oil-line filters.
 2. Cylinders: Equip lift with not less than two heavy-duty, high-pressure, hydraulic, ram-type cylinders. Rams shall be manufacturer's standard, either direct-displacement plunger or rod-and-piston type with positive internal stops. Cylinder rods shall be chrome plated and polished.
 - a. Rate of Descent Protection: Pressure-compensated flow control or hydraulic velocity fuse to limit down speed for each cylinder.
 3. Remote-Control Station: Multibutton control station of the constant-pressure type with UP and DOWN push buttons. Controller shall consist of magnetic motor starter with three-pole adjustable overloads and 24-V control transformer with 4-A, fused secondary prewired to terminal strips and enclosed in NEMA ICS 6, [Type 12] <Insert type> box.
 - a. Upper-Travel-Limit Switch: Equip unit with manufacturer's standard, adjustable, upper-travel-limit switch.

- H. Construction: Fabricate lift from structural-steel shapes rigidly welded and reinforced for maximum strength, safety, and stability. Design assembly to withstand deformation during both operating and stored phases of service. Provide mounting brackets and removable lifting eyes for ease of installation.
1. Scissors Mechanism: Fabricate leg members from heavy, steel-formed tube or plate members to provide maximum strength and rigidity.
 2. Scissors Configuration: [**Single leg**] [**Multiple width**] [**Multiple length**].
 3. Bearings: Pivot points with permanently lubricated antifriction bushings or sealed ball-bearings for minimum maintenance.
 4. Maintenance Leg: Removable, safety maintenance leg or hinged, safety maintenance bars.
 5. Mounting: [**Surface**] [**Pit**].
- I. Dock Lift Finish: [**Painted**] [**Hot-dip galvanized**].
1. Toe Guards: Paint [**yellow**] [**orange**] <Insert color> to comply with ANSI Z535.1.

2.11 FOAM-PAD DOCK SEALS <Insert drawing designation>

- A. General: Dock seals consisting of fabric-covered foam pads designed to compress **4 to 5 inches** (102 to 127 mm) under pressure of truck body to form an airtight seal at jambs and head of loading dock openings; of type, size, and construction indicated.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Beacon Industries, Inc.
 - b. Blue Giant Equipment Corporation.
 - c. Chalfant Dock Equipment.
 - d. DLM, Inc.
 - e. Ellis Industries, Inc.
 - f. Fairborn U.S.A., Inc.
 - g. Flexon, Inc.
 - h. Hugger Dock Equipment Company; Division of Columbus Foam Products, Inc.
 - i. McGuire, W. B. Co., Inc.; Division of Overhead Door Corporation.
 - j. Nordock Inc.
 - k. NOVA Technology International, L.L.C.
 - l. Pentalift Equipment Corporation.
 - m. Pioneer Loading Dock Equipment.
 - n. Rite-Hite Corporation.
 - o. Rotary Products Inc.
 - p. Serco Engineering Corp.
 - q. SPX Dock Products - Kelley.
 - r. SPX Dock Products - Serco.
 - s. Super Seal Mfg. Ltd.
 - t. Vestil Manufacturing Company.
 - u. <Insert manufacturer's name>.

- v. or approved equal.
- B. Door Opening Size: **[As indicated on Drawings]** <Insert width and height>.
- C. Stationary Head Pad: **[8 inches (203 mm)] [12 inches (305 mm)] [18 inches (457 mm)] [24 inches (610 mm)]** high and same depth as jamb pads[; **beveled**]; sized for opening width.
- D. Adjustable Head Pad: **[18 inches (457 mm)] [24 inches (610 mm)] [30 inches (762 mm)]** high and same depth as jamb pads; sized for opening width; with manufacturer's standard hardware and tension spring or counterweight mechanism for adjusting height of pad.
- E. Jamb Pads: **[Square] [Beveled; tapered to reduce opening width]**.
1. Nominal Size: **[12 inches (305 mm)] [As indicated on Drawings]** <Insert size> wide and sized for opening height.
- F. Construction: Consisting of single- or double-ply, coated, fabric-covered, urethane-foam core with supporting frame. Fabricate jamb and head pads of same depth and sized for opening width.
1. **[Pressure-Treated]** Wood Support Frame: Factory painted; with steel mounting hardware.
2. Steel Support Frame: Steel channel frame of manufacturer's standard weight, shape, and finish; with steel mounting hardware.
3. Tapered Side Panels: Taper side panels to angle required to accommodate sloped loading dock approach grades and make sealing edge of dock shelter parallel to back edge of truck. Taper for **[declined] [inclined]** approach.
4. Cover Fabric: Vinyl-coated nylon or polyester with minimum total weight of **[22 oz./sq. yd. (746 g/sq. m)] [40 oz./sq. yd. (1356 g/sq. m)]**.
- a. Color: **[Black] [Green] [Blue] [Brown] [Tan] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range]** <Insert color>.
5. Cover Fabric: Neoprene-coated nylon with minimum total weight of **[16 oz./sq. yd. (543 g/sq. m)] [40 oz./sq. yd. (1356 g/sq. m)] [45 oz./sq. yd. (1526 g/sq. m)]**.
- a. Color: **[Black] [Green] [Blue] [Brown] [Tan] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range]** <Insert color>.
6. Cover Fabric: Hypalon-coated nylon with minimum total weight of **[16 oz./sq. yd. (543 g/sq. m)] [40 oz./sq. yd. (1356 g/sq. m)]**.
- a. Color: **[Black] [Green] [Blue] [Brown] [Tan] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample]**

**[As selected by DEN Project Manager from manufacturer's full range]
<Insert color>.**

7. Cover Fabric: Manufacturer's proprietary cover fabric complying with the following minimum requirements:
 - a. Tearing strength of not less than **[300 by 300 lbf (1334 by 1334 N)] <Insert value>** when tested according to ASTM D 2261.
 - b. Abrasion resistance of not less than **[6000] <Insert number>** cycles when tested according to FED-STD-191A-5306.
 - c. Tensile strength of not less than **[1200 by 1200 lbf (5338 by 5338 N)] <Insert value>** when tested according to FED-STD-191A-5100.1.
 - d. Cold resistance to **minus 40 deg F** (minus 40 deg C) when tested according to FED-STD-191A-5874.
 - e. Color: **[Black] [Green] [Blue] [Brown] [Tan] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>.**
8. Guide Strips: **4-inch-** (102-mm-) wide, coated, nylon guide strips on jamb pads.
9. Pleated Protectors: On face of jamb pads of overlapping layers of coated fabric attached to base fabric; **[4-inch (102-mm)] [8-inch (203-mm)] [16-inch (406-mm)]** wear exposure.

2.12 INFLATABLE DOCK SEALS **<Insert drawing designation>**

- A. General: Inflatable dock seals consisting of one-piece jamb[, **sill,**] and header seals designed to inflate by motor/blower and compress against truck bodies to form airtight seals at loading dock openings; of type, size, and construction indicated.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Air Locke Dock Seal; Division of O'Neal Tarpaulin Co.
 - b. Pentalift Equipment Corporation.
 - c. SPX Dock Products - Kelley.
 - d. SPX Dock Products - Serco.
 - e. Super Seal Mfg. Ltd.
 - f. **<Insert manufacturer's name>.**
 - g. or approved equal.
- B. Door Opening Size: **[As indicated on Drawings] <Insert width and height>.**
- C. Head Members: **[One] [Two] <Insert number>.**
- D. Jamb Members: **[One] [Two] <Insert number>.**
- E. Construction: Fabricate header seal full width over jamb seals. Mount seals on pressure-treated wood frame with hot-dip galvanized-steel mounting hardware. Inflate

seals by use of 1/2-hp motor/blower with on-off switch, mounted above header seal in galvanized-steel hood. Provide bottom of header and jamb seals with grommets to allow for release of moisture and excess air.

1. Fabric: Neoprene-coated nylon with minimum total weight of **14 oz./sq. yd.** (475 g/sq. m).
 - a. Color: **[Black] [Gray] [Blue] [Brown] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
2. Fabric: Manufacturer's proprietary fabric complying with the following minimum requirements:
 - a. Tearing strength of not less than **[110 by 85 lbf (489 by 378 N)] <Insert value>** when tested according to ASTM D 2261.
 - b. Abrasion resistance of not less than **[490] <Insert number>** cycles when tested according to FED-STD-191A-5306.
 - c. Tensile strength of not less than **[500 by 440 lbf (2224 by 1957 N)] <Insert value>** when tested according to FED-STD-191A-5100.1.
 - d. Cold resistance to **minus 40 deg F** (minus 40 deg C) when tested according to FED-STD-191A-5874.
 - e. Color: **[Black] [Gray] [Blue] [Brown] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.

2.13 FRAME-TYPE DOCK SHELTERS <Insert drawing designation>

- A. General: Dock shelters designed to form a seal with sides and top of truck body while leaving entire width and height of truck's rear opening unobstructed; of type, size, and construction indicated.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Beacon Industries, Inc.
 - b. Chalfant Dock Equipment.
 - c. DLM, Inc.
 - d. Ellis Industries, Inc.
 - e. Fairborn U.S.A., Inc.
 - f. Flexon, Inc.
 - g. Hugger Dock Equipment Company; Division of Columbus Foam Products, Inc.
 - h. McGuire, W. B. Co., Inc.; Division of Overhead Door Corporation.
 - i. Nordock Inc.
 - j. NOVA Technology International, L.L.C.
 - k. Pentalift Equipment Corporation.
 - l. Pioneer Loading Dock Equipment.
 - m. Rite-Hite Corporation.

- n. Rotary Products Inc.
 - o. SPX Dock Products - Kelley.
 - p. SPX Dock Products - Serco.
 - q. Super Seal Mfg. Ltd.
 - r. Vestil Manufacturing Company.
 - s. <Insert manufacturer's name>.
 - t. or approved equal.
- B. Door Opening Size: **[As indicated on Drawings]** <Insert width and height>.
- C. Rigid-Frame Type: Fabricated from translucent, **[fabric-covered]** **[fiberglass]** side and top panels attached to fixed supporting framework. Provide head and side curtains with built-in flexible stays, wind straps between head curtain and side frame, pleated protectors on head curtain, and a yellow aim patch on side curtains. Slope head frame from center for drainage. Provide replaceable, fabric-covered, tapered, foam-bottom pads and protective steel bumpers of size and type required for application shown.
- D. Flexible-Frame Type: Fabricated from fabric-covered side and top panels attached to retractable supporting framework with independent spring-tension extension arms. Provide head and side curtains with built-in flexible stays, pleated protectors on head curtain, and a yellow aim patch on side curtains. Provide replaceable, fabric-covered, tapered, foam-bottom pads of size and type required for application shown.
- E. Head-Pad Height: **[12 inches (305 mm)] [18 inches (457 mm)] [24 inches (610 mm)] [30 inches (762 mm)]**.
- F. Construction: Fabricate framework, pads, bumpers, fabric for curtains and panels, and other components to sizes and shapes indicated or required to fit door opening sizes shown and allow for not less than **18 inches (457 mm)** of truck-body penetration when truck is docked.
- 1. Wood Framework: Factory painted, mechanically fastened together using nails and lag bolts or metal connectors to form a rigid assembly.
 - 2. Steel Framework: Zinc-plated steel tubing of size and thickness standard with manufacturer, with joints welded.
 - 3. Top and Side Panels: White, translucent fiberglass, **0.045 inch (1.1 mm)** thick, weighing **6 oz./sq. ft. (1831 g/sq. m)**.
 - 4. Top and Side Panels: White, translucent vinyl, weighing **14 oz./sq. ft. (4272 g/sq. m)**.
 - 5. Tapered Side Panels: Taper side panels to angle required to accommodate sloped loading dock approach grades and make sealing edge of dock shelter parallel to back edge of truck. Taper for **[declined]** **[inclined]** approach.
 - 6. Cover Fabric: Vinyl-coated nylon with minimum total weight of **[22 oz./sq. yd. (746 g/sq. m)] [40 oz./sq. yd. (1356 g/sq. m)]**.
- a. Color: **[Black]** **[Green]** **[Blue]** **[Brown]** **[Tan]** **[As indicated by manufacturer's designations]** **[Match DEN Project Manager's sample]** **[As selected by DEN Project Manager from manufacturer's full range]** <Insert color>.

7. Cover Fabric: Polyurethane-coated nylon with minimum total weight of **25 oz./sq. yd.** (848 g/sq. m).
 - a. Color: **[Black] [Green] [Blue] [Brown] [Tan] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
8. Cover Fabric: Neoprene-coated nylon with minimum total weight of **[16 oz./sq. yd.** (543 g/sq. m)] **[40 oz./sq. yd.** (1356 g/sq. m)] **[45 oz./sq. yd.** (1526 g/sq. m)].
 - a. Color: **[Black] [Green] [Blue] [Brown] [Tan] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
9. Cover Fabric: Hypalon-coated nylon with minimum total weight of **[16 oz./sq. yd.** (543 g/sq. m)] **[40 oz./sq. yd.** (1356 g/sq. m)].
 - a. Color: **[Black] [Green] [Blue] [Brown] [Tan] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
10. Cover Fabric: Manufacturer's proprietary cover fabric complying with the following minimum requirements:
 - a. Tearing strength of not less than **[300 by 300 lbf** (1334 by 1334 N)] **<Insert value>** when tested according to ASTM D 2261.
 - b. Abrasion resistance of not less than **[6000]** **<Insert number>** cycles when tested according to FED-STD-191A-5306.
 - c. Tensile strength of not less than **[1200 by 1200 lbf** (5338 by 5338 N)] **<Insert value>** when tested according to FED-STD-191A-5100.1.
 - d. Cold resistance to **minus 40 deg F** (minus 40 deg C) when tested according to FED-STD-191A-5874.
 - e. Color: **[Black] [Green] [Blue] [Brown] [Tan] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
11. Pleated Protectors: Overlapping layers of same fabric as cover.

G. Accessories:

1. Buffer flaps.
2. Bottom filler curtain.
3. Bottom seal pads.
4. **<Insert accessory>**.

2.14 INFLATABLE DOCK SHELTERS <Insert drawing designation>

- A. General: Inflatable dock shelters designed to inflate by motor/blower and compress against truck bodies to form airtight seals at loading dock openings; of type, size, and construction indicated.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. air Locke Dock Seal; Division of O'Neal Tarpaulin Co.
 - b. Nordock Inc.
 - c. Pentalift Equipment Corporation.
 - d. Rite-Hite Corporation.
 - e. SPX Dock Products - Kelley.
 - f. SPX Dock Products - Serco.
 - g. Super Seal Mfg. Ltd.
 - h. <Insert manufacturer's name>.
 - i. or approved equal.
- B. Door Opening Size: [As indicated on Drawings] <Insert width and height>.
- C. Rigid Canopy: Consisting of rigid canopy, fabric-covered header curtain, and one-piece inflatable header and jamb seals. Fabricate canopy from white, translucent plastic attached to rigid support framework.
- D. Rigid Canopy and Sides: Consisting of rigid canopy and sides, fabric-covered header curtain, and one-piece, inflatable header and jamb seals. Fabricate canopy and sides from white, translucent plastic attached to rigid support framework.
- E. Construction: Fabricate header seal full width over jamb seals. Mount seals on pressure-treated wood frame with hot-dip galvanized-steel mounting hardware. Provide header curtain with built-in flexible stays and two yellow aim patches. Slope canopy frame from center for drainage. Provide two protective steel bumpers of size and type required for application shown. Inflate seals by use of a 1/2-hp motor/blower with on-off switch, mounted under canopy frame. Provide bottom of header and jamb seals with grommets to allow for release of moisture and excess air.
1. Shape and Size: Fabricate framework, fabric for curtains, and other components to sizes and shapes indicated or required to fit door opening sizes shown and allow for not less than **12 inches** (305 mm) of truck-body penetration when truck is docked.
 2. Wood Framework: Fasten members together mechanically using nails and lag bolts or metal connectors to form a rigid assembly.
 3. Steel Framework: Zinc-plated steel tubing of size and thickness standard with manufacturer, with joints welded.
 4. Fabric: [**Polyurethane**] [**Vinyl**]-coated nylon with minimum total weight of **14 oz./sq. yd.** (475 g/sq. m).

- a. Color: **[Black] [Green] [Blue] [Brown] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.
5. Fabric: Manufacturer's proprietary fabric complying with the following minimum requirements:
- a. Tearing strength of not less than **[110 by 85 lbf (489 by 378 N)] <Insert value>** when tested according to ASTM D 2261.
 - b. Abrasion resistance of not less than **[490] <Insert number>** cycles when tested according to FED-STD-191A-5306.
 - c. Tensile strength of not less than **[500 by 440 lbf (2224 by 1957 N)] <Insert value>** when tested according to FED-STD-191A-5100.1.
 - d. Cold resistance to **minus 40 deg F** (minus 40 deg C) when tested according to FED-STD-191A-5874.
 - e. Color: **[Black] [Green] [Blue] [Brown] [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range] <Insert color>**.

2.15 TRANSPARENT-STRIP DOOR CURTAINS <Insert drawing designation>

- A. General: Door curtains consisting of overlapping strips suspended from top of opening to form a sealed door curtain. Provide strips of length required to suit opening height and with sufficient number in unit to close opening width with overlap indicated.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Floor Products Company, Inc.
 - b. Chalfant Dock Equipment.
 - c. Chase Doors.
 - d. Flexon, Inc.
 - e. Hugger Dock Equipment Company; Division of Columbus Foam Products, Inc.
 - f. Pawling Corporation; Architectural Products Division.
 - g. Rotary Products Inc.
 - h. Super Seal Mfg. Ltd.
 - i. Verilon Vinyl.
 - j. Vestil Manufacturing Company.
 - k. **<Insert manufacturer's name>**.
 - l. or approved equal.
- B. Strip Material: Curved, clear, transparent, extruded PVC. Fabricate strips for manufacturer's standard method of attachment to overhead mounting system indicated.
1. Standard Grade: Designed to withstand temperature range of **0 to plus 150 deg F** (minus 18 to plus 66 deg C).

2. Low-Temperature Grade: USDA accepted, designed to withstand temperature range of **minus 30 to plus 150 deg F** (minus 34 to plus 66 deg C).
 3. Strip Width and Thickness: **6 inches** (152 mm) wide and **0.060 inch** (1.5 mm) thick.
 4. Strip Width and Thickness: **8 inches** (203 mm) wide and **0.080 inch** (2 mm) thick.
 5. Strip Width and Thickness: **12 inches** (305 mm) wide and **0.120 inch** (3 mm) thick.
 6. Strip Width and Thickness: **16 inches** (406 mm) wide and **0.160 inch** (4 mm) thick.
 7. Overlap: [**None**] [**One-third**] [**One-half**] [**Two-thirds**] [**Three-quarters**] [**Full**].
- C. Header Mounting: Consisting of an angle bolted or welded to opening lintel; equip angle with permanently attached mounting pins and a steel-angle or -plate retaining strip attached to angle with wing nuts.
- D. Wall Surface Mounting: Consisting of a steel plate bolted to side of lintel; equip plate with permanently attached, threaded, mounting pins and steel-angle or -plate retaining strip attached to plate with wing nuts.
- E. Wall Surface Mounting: Consisting of steel pipe attached to side of lintel by manufacturer's standard, winged-U-type suspension brackets.
- F. Wall Surface Mounting: Consisting of a rigid, vinyl wall-mounting unit bolted to side of lintel above opening; equip unit with a similarly formed, rigid, vinyl retainer attached to unit with wing nuts.

2.16 GENERAL FINISH REQUIREMENTS

- A. Finish loading dock equipment after assembly and testing.

2.17 STEEL FINISHES

- A. Galvanizing: Hot-dip galvanize components as indicated to comply with the following:
1. ASTM A 123/A 123M for iron and steel loading dock equipment.
 2. ASTM A 153/A 153M or ASTM F 2329 for iron and steel hardware for loading dock equipment.
- B. [**Galvanized-Steel**] [**and**] [**Steel**] Finish: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat in manufacturer's standard color.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of loading dock equipment.

- B. Examine roughing-in for electrical systems for loading dock equipment to verify actual locations of connections before equipment installation.
- C. Examine walls and floors of pits for suitable conditions where recessed loading dock equipment is to be installed. Pits shall be plumb and square and properly sloped for drainage from back to front of loading dock.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Coordinate size and location of loading dock equipment indicated to be attached to or recessed into concrete or masonry, and furnish anchoring devices with templates, diagrams, and instructions for their installation.
 - 1. Coordinate delivery of anchoring devices to Project site to avoid delaying progress.
- B. Set curb angles in concrete edges of dock-leveler recessed pits with tops flush with loading platform. Fit exposed connections together to form hairline joints.
- C. Set curb angles in concrete edges of truck-leveler recessed pits with tops flush with driveway. Fit exposed connections together to form hairline joints.
- D. Place self-forming pan system for [**recessed dock**] [**edge-of-dock**] levelers in proper relation to loading platform before pouring concrete.
- E. Clean recessed pits of debris.

3.3 INSTALLATION

- A. General: Install loading dock equipment, including [**motors**] [**pumps**] [**control stations**] [**wiring**] [**safety devices**] [**light-communication systems**] [**and**] [**accessories**] as required for a complete installation. Comply with manufacturer's detailed instructions for installing loading dock Equipment.
 - 1. Rough-in electrical connections.
- B. Hydraulic Dock Lifts: Coordinate forming the pit for hydraulic dock lifts to ensure that the depth is adequate to accommodate the lift in proper relationship to the loading platform. Attach the lift securely to the pit floor according to the manufacturer's directions.
- C. Recessed Dock Levelers: Attach dock levelers securely to loading dock platform, flush with adjacent loading dock surfaces and square to recessed pit.
- D. [**Edge**] [**Top**]-of-Dock Levelers: Attach dock levelers to loading dock platform in a manner that complies with requirements indicated for arrangement and position relative to top of platform.

1. Weld anchor holes in contact with continuous embedded loading dock edge channel. Weld or bolt bumper blocks to face of loading dock.
- E. Truck Levelers: Attach truck levelers securely to driveway construction with expansion anchors and bolts.
- F. Truck Restraints: Attach truck restraints in a manner that complies with requirements for arrangement and height required for device to engage vehicle rear-impact guard.[**Interconnect control panel and signals with dock leveler.**]
1. Wall-Mounted Units: Weld truck restraints to steel [**curb angle**] [**edge channel**] [**mounting plate**] embedded in loading dock edge.
 2. Wall-Mounted Units: Anchor truck restraints to face of loading dock with expansion anchors and bolts.
 3. Driveway-Mounted Units: Anchor truck restraints to driveway with expansion anchors and bolts.
 4. Pit-Mounted Units: Anchor truck restraints to concrete pit with expansion anchors and bolts.
- G. Dock Bumpers: Attach dock bumpers to face of loading dock in a manner that complies with requirements indicated for spacing, arrangement, and position relative to top of platform and anchorage.
1. Welded Attachment: Plug-weld anchor holes in contact with steel inserts and fillet weld at other locations.
 2. Bolted Attachment: Attach dock bumpers to preset anchor bolts embedded in concrete or to cast-in-place inserts or threaded studs welded to embedded-steel plates or angles. If preset anchor bolts, cast-in-place inserts, or threaded studs welded to embedded-steel plates or angles are not provided, attach dock bumpers by drilling and anchoring with expansion anchors and bolts.
 3. Screw Attachment: Attach dock bumpers to wood construction with lag bolts as indicated.
- H. Dock Lifts: Attach dock lifts securely to [**loading platform**] [**floor of recessed pit**] [**surface of driveway**].
- I. Dock Seals: Attach dock-seal support frames securely to building structure in proper relation to openings, dock bumpers, and dock levelers to ensure compression of dock seals when trucks are positioned against dock bumpers.
- J. Dock Shelters: Attach dock shelters securely to building structure in proper relation to openings, dock bumpers, and dock levelers to ensure an effective seal of dock-shelter curtains with sides and top of truck body when trucks are positioned against dock bumpers.
- K. Transparent-Strip Door Curtains: Attach door-curtain mounting system to lintel with screw anchors or toggle bolts. Mount curtain strips to achieve overlap indicated.

3.4 ADJUSTING

- A. Adjust loading dock equipment to function smoothly and safely, and lubricate as recommended by manufacturer.
- B. Test [**dock levelers**] [**lifts**] [**dock levelers and lifts**] for vertical travel within operating range indicated.
- C. After completing installation of exposed, factory-finished loading dock equipment, inspect exposed finishes and repair damaged finishes.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain loading dock equipment.
 - 1. Test and adjust controls and safeties. Replace damaged or malfunctioning controls and Equipment
 - 2. Train the Owner's maintenance personnel on procedures and schedules related to start up and shutdown, troubleshooting, servicing, and preventive maintenance.
 - 3. Review data in operating instructions and maintenance manuals.
 - 4. Schedule training with Owner, through DEN Project Manager, with at least seven (7) days' advanced notice.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 111300

SECTION 112600 - UNIT KITCHENS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes factory-fabricated and -assembled unit kitchens with **[metal]** **[laminate-clad]** **[wood]** cabinets, countertops, fixtures, appliances, and accessories.
- B. Related Sections:
 - 1. **[Section 231123 "Facility Natural-Gas Piping"] [Section 231126 "Facility Liquefied-Petroleum Gas Piping"]** for gas connections to unit kitchen appliances.
 - 2. Section 233113 "Metal Ducts" for ducted extensions and fans for **[exhaust hoods]** **[and]** **[range hoods]** of unit kitchens.
- C. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 ACTION SUBMITTALS

- A. Product Data: Include construction details, material descriptions, dimensions of individual components and profiles, finishes, furnished specialties, and accessories. Include rated capacities, operating characteristics, and utility requirements of appliances.
 - 1. Include data substantiating that materials comply with requirements.
- B. LEED Submittals:
 - 1. Product Data for Credit EA 1.4: For appliances, documentation indicating that products are ENERGY STAR rated.
 - 2. Certificates for **[Credit MR 6]** **[Credit MR 7]**: Chain-of-custody certificates indicating that cabinets **[and countertops]** comply with forest certification requirements. Include evidence that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
 - 3. Product Data for Credit IEQ 4.4: For adhesives and composite wood products, documentation indicating that products contain no urea formaldehyde.

4. Laboratory Test Reports for Credit IEQ 4: For **[adhesives] [and] [composite wood products]**, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
 - C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
 1. Wiring Diagrams: For power, signal, and control wiring.
 - D. Samples for Initial Selection: For units with factory-applied color finishes.
 - E. Samples for Verification: For each type of exposed finish required, in sets for each color, texture, and pattern specified, showing the full range of variations expected in these characteristics, prepared on Samples of size indicated below:
 1. Metal finish for cabinets **[and countertops]**, **8 by 10 inches** (200 by 250 mm).
 2. Wood finish for cabinets, **8 by 10 inches** (200 by 250 mm).
 3. Plastic laminate for **[cabinets] [countertops] [cabinets and countertops]**, **8 by 10 inches** (200 by 250 mm).
 4. Solid surfacing for countertops, **6 inches** (150 mm) square.
 5. One full-size unit of each type of exposed hardware.
- 1.4 INFORMATIONAL SUBMITTALS
- A. Product Certificates: For each type of unit kitchen, from manufacturer.
 - B. Manufacturer Certificate: Signed by manufacturer certifying that units comply with requirements.
 - C. Warranty: Sample of special warranty.
- 1.5 CLOSEOUT SUBMITTALS
- A. Maintenance Data: For unit kitchen appliances to include in maintenance manuals.
 - B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".
- 1.6 QUALITY ASSURANCE
- A. Manufacturer Qualifications: A qualified manufacturer that fabricates unit kitchens **[and their components]**.
 - B. Source Limitations: Obtain unit kitchens from single source from single manufacturer.

- C. Product Options: Drawings indicate size, profiles, and dimensional requirements of unit kitchens and are based on the specific system indicated. Other manufacturers' products complying with requirements may be considered. Refer to Division 01 Section "Substitutions."
- D. Regulatory Requirements: Where unit kitchens are indicated to comply with accessibility requirements, comply with **[the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines] [ICC/ANSI A117.1] [HUD's "Fair Housing Accessibility Guidelines"] [and] <Insert regulation>**.
- E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
1. Built-in Refrigerators: Listed and labeled for recessed installation. Mount label to be visible after installation of unit; include electrical rating, type of refrigerant, and minimum installation clearances.
 2. Refrigerated Unit Kitchens[**and Wet Bars**]: Listed and labeled for entire unit as a single integrated system. Mount label to be visible after installation of unit; include electrical rating, type of refrigerant, and minimum installation clearances.
- F. **[Wood] [Laminate-Clad]** Cabinet Fabrication Standard:
1. KCMA A161.1. Provide cabinets with KCMA's "Certified Cabinet" seal affixed to a semiexposed location of each unit and showing compliance with standard.
 2. AWI 400B, Custom grade.
 3. Either fabrication standard above.
- G. Appliance Standards:
1. Refrigerators and Freezers: UL 250 or AHAM ER-1.
 2. Electric Ranges: UL 858 or AHAM HRF-1.
 3. Microwave Ovens: UL 923.
 4. Gas-Burning Appliances: ANSI Z21 Series, and certified by CSA International, UL, or another testing and inspecting agency acceptable to authorities having jurisdiction.
- 1.7 DELIVERY, STORAGE, AND HANDLING
- A. Deliver factory-assembled units, individually factory packaged and protected. Label with manufacturer's name, product name, and model number.
1. Deliver unit kitchens only after utility roughing-in is complete and construction in spaces to receive unit kitchens is substantially complete and ready for installation.

1.8 PROJECT CONDITIONS

- A. Environmental Limitations: Do not deliver or install unit kitchens until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
- B. Field Measurements: Verify actual dimensions of construction contiguous with unit kitchens by field measurements before fabrication.

1.9 COORDINATION

- A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of work specified in other Sections to ensure that unit kitchens can be supported and installed as indicated.
- B. Roughing-in Drawings: Obtain and distribute to the parties involved roughing-in drawings for plumbing, mechanical, and electrical service connections for installing unit kitchens. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing services to comply with indicated requirements.
- C. Coordinate wiring requirements and current characteristics of unit kitchens with building electrical system.
- D. Coordinate layout and installation of plumbing, mechanical, and electrical services for unit kitchens.

1.10 WARRANTY

- A. General Warranty: Special warranty specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.
- B. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace hermetically sealed refrigerator compressor system of unit kitchens that fail within specified warranty period.
 - 1. Warranty Period: Minimum **[five (5)]** <Insert number> years from date of Substantial Completion.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Acme Kitchenettes Corp.
 2. Cervitor Kitchens, Inc.
 3. Dwyer Kitchens.
 4. Kitchen Systems, Inc.
 5. **<Insert manufacturer's name>**.
 6. or approved equal.

2.2 MATERIALS

- A. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B, suitable for exposed applications.
- B. Porcelain-Enamel-Finished Steel Sheet: ASTM A 424, enameling-grade steel, uncoated thickness indicated; with exposed face and edges coated with primer, ground coat, and color cover coat; and concealed face coated with primer and ground coat; acid resistant.
- C. Stainless-Steel Sheet: ASTM A 240/A 240M, Type 304.
- D. Certified Wood: Fabricate cabinets[**and countertops**] from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."
- E. Composite Wood Products: Products shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- F. Medium-Density Fiberboard: ANSI A208.2, [**Grade 130**] **<Insert grade>** [, **made with binder containing no urea-formaldehyde resin**].
- G. Particleboard: ANSI A208.1, [**Grade M-2**] [**Grade M-2, made with binder containing no urea-formaldehyde resin**].
- H. Veneer-Faced Panel Products (Hardwood Plywood): HPVA HP-1, Type I[, **made with materials containing no urea formaldehyde**].
- I. Solid Wood: Clear hardwood lumber of species indicated, free of defects, selected for compatible grain and color, and kiln dried to 7 percent moisture content.
- J. High-Pressure Decorative Laminate: NEMA LD 3.

- K. Solid-Surfacing Material: Homogenous solid sheets fabricated from reacted monomers and resins, mineral fillers, and pigments; in thickness indicated; complying with ISSFA-2.
- L. Adhesives: Do not use adhesives that contain urea formaldehyde.
- M. Adhesives shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.3 METAL CABINETS

- A. Steel Base Cabinets: Fabricate frames and sides from [0.036-inch (0.91-mm)] [0.030-inch (0.76-mm)] nominal-thickness, cold-rolled steel sheet; welded and reinforced with internal gussets and bracing; with baked-enamel finish.
 - 1. Door and Drawer Fronts: [0.036-inch (0.91-mm)] [0.030-inch (0.76-mm)] nominal-thickness, cold-rolled steel sheet, textured or smooth; welded, reinforced, and sound-deadened; with baked-enamel finish.
 - 2. Door and Drawer Fronts: 0.038-inch- (0.95-mm-) thick, stainless-steel sheet; welded, reinforced, and sound deadened.
- B. Stainless-Steel Base Cabinets: Fabricate frames and sides from 0.038-inch- (0.95-mm-) thick, stainless-steel sheet; welded and reinforced with internal gussets and bracing.
 - 1. Door and Drawer Fronts: 0.038-inch- (0.95-mm-) thick, stainless-steel sheet; welded, reinforced, and sound deadened.
- C. Undercounter Storage Cabinet: Same material and finish as base cabinets, with adjustable shelf and drawer or with two drawers.
- D. Wall Cabinets: Same material and finish as base cabinets, with flush double bottoms and adjustable shelves.
 - 1. Wall Shields: Fabricated from [textured, cold-rolled steel sheet with baked-enamel finish, color to match cabinets] [textured, cold-rolled steel sheet with baked-enamel finish, color to match countertop] [stainless-steel sheet]. Provide wall shields for back wall[and side walls] between countertop splash and wall cabinets.
- E. Shelves: Manufacturer's standard rolled-front shelves, [fixed,] [adjustable,] of same material and finish as cabinets.
- F. Wire Pulls: [Brushed-chrome] [Polished-chrome] [Brushed-brass] [Polished-brass] <Insert metal and type of finish> finish.

2.4 LAMINATE-CLAD CABINETS

- A. Framed-Style Base Cabinets:

1. Face Frames: **3/4-inch-** (19-mm-) thick plywood or solid wood.
 2. Back Panels: **3/8-inch-** (10-mm-) thick particleboard with melamine bonded to inside surface.
 3. Top, Bottom, and End Panels: **3/8-inch-** (10-mm-) thick particleboard with melamine bonded to both sides.
 4. Door and Drawer Fronts: **3/4-inch-** (19-mm-) thick, medium-density fiberboard with **16-mil-** (0.4-mm-) thick vinyl film (Thermofoil) bonded to exposed surfaces and melamine bonded to inside surfaces.
 5. Door and Drawer Fronts: **5/8-inch-** (16-mm-) thick particleboard with melamine bonded to both sides.
 6. Drawers: Four sided, with **1/2-inch-** (13-mm-) thick particleboard fronts, backs, and sides, and **1/4-inch-** (6-mm-) thick particleboard bottom.
 7. Shelves: **5/8-inch-** (16-mm-) thick particleboard with melamine bonded to both sides and PVC edges.
- B. Frameless-Style Base Cabinets:
1. Back Panels: **1/4-inch-** (6-mm-) thick plywood or particleboard with melamine bonded to inside surface.
 2. Top and Bottom Panels: **3/4-inch-** (19-mm-) thick particleboard with melamine bonded to both sides.
 3. End Panels: **5/8-inch-** (16-mm-) thick particleboard with melamine bonded to both sides.
 4. Door and Drawer Fronts: **3/4-inch-** (19-mm-) thick plywood with Grade HGS high-pressure decorative laminate bonded to front and edges, and Grade CLS high-pressure decorative laminate bonded to inside surface.
 5. Door and Drawer Fronts: **5/8-inch-** (16-mm-) thick particleboard with melamine bonded to both sides.
 6. Door and Drawer Fronts: **5/8-inch-** (16-mm-) thick particleboard with melamine bonded to both sides. Provide continuous bevel edge at tops and bottoms of doors and bottom of drawer fronts in **[wood-grain laminate] [solid wood]**.
 7. Drawers: Four sided, with **1/2-inch-** (13-mm-) thick particleboard fronts, backs, and sides, and **1/4-inch-** (6-mm-) thick particleboard bottom.
 8. Shelves: **3/4-inch-** (19-mm-) thick particleboard with melamine bonded to both sides and PVC edges.
- C. Wall Cabinets: Same material and finish as base cabinets, with adjustable shelves.
1. Wall Shields: Fabricated from **[high-pressure decorative laminate of grade and color to match cabinets] [high-pressure decorative laminate of grade and color to match countertop] [stainless-steel sheet]**. Provide wall shields for back wall **[and side walls]** between countertop splash and wall cabinets.
- D. Scribe Strips for Recessed Cabinets: Same material, finish, and color as cabinet.
- E. Wire Pulls: **[Brushed-chrome] [Polished-chrome] [Brushed-brass] [Polished-brass]** **<Insert metal and type of finish>** finish.

2.5 WOOD CABINETS

- A. Base Cabinets: **[Birch] [Maple] [Oak] [Cherry] [Ash]**.
1. Face Frames: **3/4-inch-** (19-mm-) thick, hardwood-veneer plywood or solid wood.
 2. Back Panels: **3/8-inch-** (10-mm-) thick particleboard with melamine bonded to inside surface.
 3. Top, Bottom, and End Panels: **3/8-inch-** (10-mm-) thick particleboard with melamine bonded to both sides.
 4. Shelves: **5/8-inch-** (16-mm-) thick particleboard with melamine bonded to both sides and PVC edges.
 5. Door and Drawer Fronts: **5/8-inch-** (16-mm-) thick, hardwood-veneer plywood with matching hardwood edges.
 6. Door and Drawer Fronts: **3/4-inch-** (19-mm-) thick, solid wood stiles and rails, with solid wood center panels.
- B. Wall Cabinets: Same material and finish as base cabinets, with adjustable shelves.
1. Wall Shields: Fabricated from **[high-pressure decorative laminate of grade and color to match countertop] [stainless-steel sheet]**. Provide wall shields for back wall[**and side walls**] between countertop splash and wall cabinets.
- C. Scribe Strips for Recessed Cabinets: Same material, finish, and color as cabinet.
- D. Wire Pulls: **[Brushed-chrome] [Polished-chrome] [Brushed-brass] [Polished-brass]** **<Insert metal and type of finish>** finish.

2.6 COUNTERTOPS

- A. Countertop and Integral Sink: Seamless, one-piece countertop and sink with integral embossed drainboard and backsplash[**and side splashes**].
1. Stainless Steel: **0.038-inch-** (0.95-mm-) thick sheet bonded to **3/4-inch** (19-mm) plywood.
 2. Porcelain-Enamel-Finished Steel: **0.0677 inch** (1.7 mm) thick.
 3. Solid-Surfacing Material: Minimum **1/2 inch** (13 mm) thick.
- B. Countertop[**for Drop-in Sink**]: Seamless, one-piece countertop with integral backsplash[**and side splashes**].
1. Stainless Steel: **0.038-inch-** (0.95-mm-) thick sheet bonded to **3/4-inch** (19-mm) plywood.
 2. High-Pressure Decorative Laminate: Grade HGS, bonded to **3/4-inch** (19-mm) plywood.
 3. High-Pressure Decorative Laminate: Grade HGP, post formed, bonded to **3/4-inch** (19-mm) particleboard with Grade BKL unfinished backing sheet bonded to reverse side.

- C. Countertop[**for Undercounter-Mounted Sink**]: Seamless, one-piece countertop with integral backsplash[**and side splashes**]; fabricated from **1/2-inch-** (13-mm-) thick, solid-surfacing material.

2.7 FIXTURES

- A. Stainless-Steel Drop-in Sinks: [0.050 inch (1.27 mm)] [0.038 inch (0.95 mm)] thick; seamless; single compartment.
- B. Porcelain-Enamel-Finished Steel Drop-in Sinks: **0.043 inch** (1.09 mm) thick; seamless; single compartment.
- C. Undercounter-Mounted Sinks: Solid-surfacing material; seamless; single compartment.
- D. Supplies: [**NPS 3/8** (DN 12)] [**NPS 1/2** (DN 15)] chrome-plated copper with stops.
- E. Sink Faucet: Single-lever control; [**polished chrome-plated mixing**] [**European-style, pull-out spray**] faucet with limited-swing spout and aerator.
- F. Sink Faucet: Separate hot and cold controls[**with wrist-blade handles**]; polished chrome-plated mixing faucet with limited-swing [**spout**] [**gooseneck spout**] and aerator.
- G. Sink Outlet with Disposer: **3-1/2-inch-** (89-mm-) diameter outlet.
- H. Sink Outlet without Disposer: **3-1/2-inch-** (89-mm-) diameter outlet with stainless-steel cup strainer and **1-1/2-inch-** (38-mm-) diameter tailpiece.
- I. Drain Piping: **NPS 1-1/2** (DN 40) chrome-plated cast-brass trap, tubular brass waste to wall, and wall escutcheon.
- J. Bar Sink Outlet: **2-inch-** (51-mm-) diameter outlet with stainless-steel grid strainer.
- K. Disposers: Continuous-feed, household, food-waste disposers. Include 115-V ac, 1725-rpm, 1/2-hp motor with overload protection and reset button; three-conductor, grounded power cord; wall switch; corrosion-resistant chamber with jam-resistant, cutlery- or stainless-steel grinder or shredder; **NPS 1-1/2** (DN 40) outlet; quick-mounting, stainless-steel sink flange; antisplash guard; and combination cover/stopper.
- L. Hot-Water Dispensers: Household type with instant on-off control; insulated, corrosion-resistant-metal storage tank that is open to atmosphere; electric, 115-V ac, heating element; three-conductor, grounded power cord; chrome-plated faucet or spout; removable strainer; thermostat control for water temperature up to **190 deg F** (88 deg C); thermal-overload protection; and minimum **1/2-gal.** (1.9-L) tank capacity dispensing approximately **60 cups** (240 mL) of water per hour.

2.8 APPLIANCES

- A. ENERGY STAR Rating: Provide appliances that qualify for the EPA/DOE ENERGY STAR product labeling program.
- B. Built-in Refrigerators: Fabricated with one-piece seamless steel or ABS plastic inner liner; refrigerator compartment with slide-out or removable shelves and meat tray; adjustable automatic temperature control; door with magnetic gaskets and storage shelves; interior light; closed compartment for **25-lb** (11-kg) minimum storage of prefrozen food and two ice cube trays; 115-V ac.
1. Minimum Capacity: [3.2 cu. ft. (0.091 cu. m)] [5.5 cu. ft. (0.156 cu. m)] [6.0 cu. ft. (0.169 cu. m)] **<Insert dimensions>**.
 2. Defrost System: [Automatic defrost timer] [Push button or manual].
 3. Compressor: Cushion-mounted, self-oiling, and hermetically sealed compressor; fan or gravity cooled.
 4. Finish Panel: Manufacturer's standard door trim kit with filler panel or integral finish panel; match material and finish of base cabinets.
- C. Freestanding, Upright Refrigerator-Freezers: Two-door combination unit with one-piece seamless steel or ABS plastic inner liner; automatic defrost; closed freezer compartment with two adjustable shelves[**and two ice cube trays**]; full-width vegetable crisper; dairy compartment; interior light; adjustable automatic temperature control; door with magnetic gaskets and storage shelves; 115-V ac, with three-conductor, grounded power cord.
1. Minimum Capacity: [12-cu. ft. (0.340-cu. m) **refrigerator capacity with 100-lb (45-kg) freezer capacity**] [14-cu. ft. (0.396-cu. m) **refrigerator capacity with 125-lb (57-kg) freezer capacity**] **<Insert refrigerator and freezer capacities>**.
 2. Icemaker: Built-in automatic unit.
 3. Finish Panel: Manufacturer's standard door trim kit with filler panel or integral finish panel; match material and finish of base cabinets.
- D. Automatic Icemakers: Built-in undercounter unit; capable of producing [22 lb (10 kg) **of ice per day; with 12-lb (5.4-kg)**] [35 lb (15.9 kg) **of ice per day; with 26-lb (11.8-kg)**] [50 lb (22.6 kg) **of ice per day; with 35-lb (15.9-kg)**] storage bin; 115-V ac, with three-conductor, grounded power cord; with plumbed water supply.
- E. Electric Cooktops: Porcelain-enamel-finished steel; coil-element burners with removable rings and reflector bowls, infinitely adjustable heating controls, and individual signal lights; with wiring terminated at factory-installed junction box.
1. Cooktop Burner: One element rated at [900 W; 115] [1250 W; 208/240]-V ac.
 2. Cooktop Burners: One element rated at 550 W and one element rated at 950 W; 115-V ac.
 3. Cooktop Burners: Two elements, each rated at 1250 W; [115] [208/240]-V ac.
 4. Cooktop Burners: Two elements rated at 1250 W and one element rated at 2100 W; 208/240-V ac.

- F. Built-in Electric Ovens: Porcelain-enamel-finished steel exterior surfaces; coil-element burners with removable rings and reflector bowls, infinitely adjustable heating controls, and individual signal lights. Oven interior fabricated from one-piece porcelain-enamel-finished steel with rounded corners, with "Bake" and "Broil" oven elements, automatic heat control, signal light, and removable wire oven rack; textured baked-enamel- or porcelain-enamel-finished steel oven door; 208/240-V ac, with wiring terminated at factory-installed junction box.
1. Cooktop Burners: Three elements, each rated at 1250 W.
 2. Oven Elements: [**1500 W bake; 2000 W broil**] [**Manufacturer's standard**].
- G. Gas Cooktops: Porcelain-enamel-finished steel; surface burners with removable cast-iron grates, lift-out burner bowls, and 115-V ac electronic ignition; with wiring terminated at factory-installed junction box, and burner control panel mounted at front of unit.
1. Cooktop Burners: Two elements, each rated at [8000 Btu/h (8440 kJ)] [**10,000 Btu/h (10 550 kJ)**] for natural gas.
- H. Built-in Gas Ovens: [**Stainless-steel**] [**Porcelain-enamel-finished steel**] exterior surfaces; surface burners with removable cast-iron grates, lift-out burner bowls, and 115-V ac electronic ignition; with wiring terminated at factory-installed junction box. Oven interior fabricated from porcelain-enamel-finished steel with rounded corners; removable wire oven rack, automatic heat control, and combination surface burner and oven control panel mounted above oven door at front of unit.
1. Cooktop Burners: Three elements, each rated at 5000 Btu/h (5275 kJ) for natural gas.
 2. Cooktop Burners: Four elements, each rated at 9000 Btu/h (9495 kJ) for natural gas.
 3. Oven Burner: Rated at [9000 Btu/h (9495 kJ)] [**18,000 Btu/h (18 990 kJ)**] for natural gas.
- I. Freestanding Microwave Ovens: [**0.7-cu. ft. (0.020-cu. m) capacity with 600 W**] [**0.8-cu. ft. (0.023-cu. m) capacity with 700 W**] <Insert capacity and power> cooking power; electronic touch controls, variable power control, digital clock timer, interior light, turntable, and tempered glass door; 115-V ac, with three-conductor, grounded power cord.
- J. Built-in Microwave Ovens with Exhaust Hood: Undercabinet mounted, minimum **1.0-cu. ft. (0.028-cu. m)** capacity with 800-W cooking power; electronic touch controls, variable power control, digital clock timer, interior light, turntable, tempered glass door, and exhaust hood with integral light and two-speed fan control; 115-V ac, with three-conductor, grounded power cord.
1. Exhaust Hood: Recirculating, nonventing type, with replaceable charcoal filter.
 2. Exhaust Hood: Ventilating type, with permanent washable filter. Provide exhaust duct and [**wall**] [**roof**] cap and shutter. See Section 233113 "Metal Ducts."

- K. Built-in Microwave/Convection Ovens with Exhaust Hood: Undercabinet mounted, minimum **1.0-cu. ft.** (0.028-cu. m) capacity with 800-W cooking power; electronic touch controls, variable power control, digital clock timer, interior light, turntable, convection rack, tempered glass door, and exhaust hood with integral light and two-speed fan control; 115-V ac, with three-conductor, grounded power cord.
1. Exhaust Hood: Recirculating, nonventing type, with replaceable charcoal filter.
 2. Exhaust Hood: Ventilating type, with permanent washable filter. Provide exhaust duct and **[wall] [roof]** cap and shutter. See Section 233113 "Metal Ducts."
 3. Retain first paragraph below if ducted exhaust hood is required; retain second paragraph if recirculating hood is required. Verify acceptability of recirculating hoods with authorities having jurisdiction.
- L. Ventilating Exhaust Hoods: Undercabinet mounted, **24 inches** (610 mm) wide, **[stainless] [baked-enamel]** steel; two-speed fan control, permanent washable filter, and built-in lighting; 115-V ac, with wiring terminated at factory-installed junction box.
1. Provide exhaust duct and **[wall] [roof]** cap and shutter. See Section 233113 "Metal Ducts."
- M. Recirculating, Nonventilating Exhaust Hoods: Undercabinet mounted, **24 inches** (610 mm) wide, **[stainless] [baked-enamel]** steel; two-speed fan control, replaceable charcoal filter, and built-in lighting; 115-V ac, with wiring terminated at factory-installed junction box.
- N. Dishwashers: Built-in undercounter unit, **[18 inches (457 mm) wide] [24 inches (610 mm) wide] [width as indicated]**; multiple wash cycles, coated roll-out racks, detergent dispenser, and insulated cavity walls and door; 115-V ac, with wiring terminated at factory-installed junction box.
- O. Automatic Coffeemakers: Stainless steel, with capacity for three pots of coffee; automatic brewing, nonstick warmer plates, and lighted on-off switch; 115-V ac, with three-conductor, grounded power cord; designed for permanent installation in countertop, with plumbed water supply. Provide glass coffee decanters in number to match capacity.

2.9 ACCESSORIES

- A. Hardware: Manufacturer's standard concealed adjustable hinges; steel drawer slides with nylon rollers; metal, plastic, or chrome-plated pulls as indicated; and catches and rubber bumpers on doors and drawers. Furnish plated steel for concealed hinges, and chromium-plated metal or satin-finished stainless steel for exposed hardware.
- B. Locks: Brass-cylinder type; furnish two keys per lock. Provide **[where indicated] [on base cabinet doors] [on refrigerator]**.
- C. Fluorescent Light Fixtures: Surface mounted to underside of overhead cabinet; with 15-W lamp, on-off switch, grounded convenience receptacle, and translucent plastic lens.

- D. Protective Panels: Manufacturer's standard panels to enclose plumbing under countertop, of same material and finish as cabinets.
- E. Cutlery Drawers: Concealed drawer in undercounter storage compartment with pull-out divided tray.
- F. Cutting Boards: Pull-out hardwood board.
- G. Heat Shields: Minimum **12 inches high by 24 inches** (305 mm high by 610 mm) wide, **0.025-inch-** (0.64-mm-) thick stainless steel over **1/4-inch-** (6-mm-) thick board insulation.

2.10 FABRICATION

- A. General: Factory fabricate and assemble unit kitchens, with base cabinets[, **sink,**] [, **refrigerator,**] and countertop shipping as a one-piece assembly. Securely fasten components, fixtures, and appliances together.
 - 1. Provide manufacturer's standard hardware including concealed, adjustable plated-steel hinges; steel drawer slides with nylon rollers; and catches and rubber bumpers on doors and drawers. Unless otherwise indicated, provide chromium-plated metal or satin-finished stainless steel for exposed hardware.
- B. Accessible Units: Fabricate unit kitchens to comply with accessibility regulations as follows:
 - 1. Standard, Accessible Countertops: Fabricate unit kitchens with one-piece countertop located at height of **34 inches** (864 mm) above floor.
 - 2. Adjustable, Accessible Countertops: Fabricate unit kitchens with two-piece countertop that allows countertop over sink, including backsplash, side splashes, and sink assembly, to be adjusted between **29 and 36 inches** (735 and 915 mm) above finished floor.
 - 3. Removable, Accessible Cabinets: Fabricate cabinet under sink to allow removal for future accessibility conversion. Fabricate cabinet to allow access to plumbing and electrical connections after conversion.
 - 4. Knee and Toe Clearance: Provide minimum **30-inch-** (760-mm-) wide open space beneath countertop with a minimum clear height of **27 inches** (685 mm) above floor for first **8 inches** (205 mm) of depth, then reduce clearance at a rate of **1 inch** (25 mm) in depth for each **6 inches** (150 mm) in height, to a minimum clear height of **9 inches** (230 mm) above floor at a depth of **11 inches** (280 mm).
 - 5. Pipe Enclosure Panels: Provide manufacturer's standard panels to enclose plumbing under countertop, of same material and finish as cabinets. Install panel to prevent exposure of sharp or abrasive surfaces under countertop.
 - 6. Operable Parts: Locate operable parts no higher than **48 inches** (1219 mm) and no lower than **15 inches** (380 mm) above floor. Provide operable parts that do not require tight grasping, pinching, or twisting of the wrist and that operate with a force of not more than **5 lbf** (22.2 N).
 - 7. Range or Cooktop: Provide top surface **34 inches** (865 mm) above floor, with controls that do not require reaching across burners. Provide knee and toe

clearance beneath range or cooktop; insulate underside of cooktop to prevent burns, shocks, or abrasions.

8. Refrigerator/Freezer: Provide 50 percent of freezer space no higher than 54 inches (1370 mm) off floor.
9. Oven: Provide work surface adjacent to one side of bottom-hinged doors. Locate controls on front panel.

2.11 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

2.12 FINISHES

- A. Steel Finishes: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
 1. Baked-Enamel Finish: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-enamel finish consisting of prime coat and thermosetting topcoat.
 - a. Color and Gloss: As indicated by manufacturer's designations.
 - b. Color and Gloss: Match DEN Project Manager's sample.
 - c. Color and Gloss: As selected by DEN Project Manager from manufacturer's full range.
 2. Porcelain-Enamel Finish: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, acid-resistant porcelain-enamel finish consisting of ground coat and cover coat.
 - a. Color and Gloss: As indicated by manufacturer's designations.
 - b. Color and Gloss: Match DEN Project Manager's sample.
 - c. Color and Gloss: As selected by DEN Project Manager from manufacturer's full range.
- B. Stainless-Steel Finishes: Remove tool and die marks and stretch lines, or blend into finish. Grind and polish surfaces to produce uniform, directionally textured, polished finish indicated, free of cross scratches. Run grain with long dimension of each piece. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
 1. Bright, Directional Polish: No. 4 finish.
- C. Wood Finishes: Factory finished with manufacturer's standard stain, sealer, and clear finish coat. Defer only final touchup until after installation.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine walls and floors, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- C. Examine walls and partitions for proper backing for unit kitchens.
- D. Examine roughing-in for electrical power **[plumbing] [and] [mechanical]** system(s) to verify actual locations of connections before installation of unit kitchens.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install level, plumb, and true; shim as required, using concealed shims. Provide fasteners, clips, backing materials, brackets, anchors, fillers, scribes, trim, and accessories necessary for complete installation.
 - 1. Anchor unit kitchens at ends and at intervals recommended by manufacturer, but not more than **36 inches** (910 mm) o.c. Install anchors through backup reinforcing plates, channels, or blocking as required to prevent material distortion; use concealed fasteners.
 - 2. Freestanding Ranges: Install anti-tip anchors at locations recommended by manufacturer.
- B. Comply with requirements specified in Section 221116 "Domestic Water Piping," Section 221316 "Sanitary Waste and Vent Piping," and Section 221123 "Domestic Water Pumps" for connecting unit kitchens to **[plumbing] [and] [mechanical]** system(s).
- C. Comply with requirements for connecting unit kitchens to electrical power system.

3.3 FIELD QUALITY CONTROL

- A. Testing: Test, adjust, and verify operation of each appliance, plumbing fixture, and component of the unit kitchen. Repair or replace any item found to be defective or operating below rated capacity.

3.4 ADJUSTING AND CLEANING

- A. Verify that operating parts work freely and fit neatly and that clearances are adequate to properly and freely operate appliances.

- B. Clean, lubricate, and adjust hardware. Adjust doors and latches to operate easily without binding. [**Verify that locking devices operate properly.**]
- C. After completing unit kitchen installation, remove protective coverings if any.
- D. Repair or replace damaged parts, dents, buckles, abrasions, and other defects affecting appearance or serviceability. Touch up factory-applied finishes to restore damaged or soiled areas.

3.5 UNIT KITCHEN SCHEDULE

A. Unit Kitchen <Insert drawing designation>:

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Acme Kitchenettes Corp.; <Insert product name or designation>.
 - b. Cervitor Kitchens, Inc.; <Insert product name or designation>.
 - c. Dwyer Kitchens; <Insert product name or designation>.
 - d. Kitchen Systems, Inc.; <Insert product name or designation>.
 - e. <Insert manufacturer's name; product name or designation>.
 - f. or approved equal.
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. <Insert manufacturer's name>.
 - b. or approved equal.
3. Cabinets: [Steel, with matching door and drawer fronts] [Steel, with laminate-clad door and drawer fronts] [Stainless steel] [Framed-style laminate clad] [Frameless-style laminate clad] [Wood].
 - a. Wall Cabinets: [Required] [Not required].
 - 1) Wall Shields: [High-pressure decorative laminate] [Stainless steel] on back[and sides].
 - b. Color: [As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range].
4. Countertop for Integral Sink: [Stainless steel] [Porcelain-enamel-finished steel] [Solid-surfacing material].
5. Countertop: [Stainless steel] [High-pressure decorative laminate] [Post-formed, high-pressure decorative laminate].
 - a. Drop-in Sink: [Stainless] [Porcelain-enamel] steel.
6. Countertop: Solid-surfacing material.

- a. Undercounter Sink: **[Stainless] [Porcelain-enamel]** steel.
 - b. Color: **[As indicated by manufacturer's designations] [Match DEN Project Manager's sample] [As selected by DEN Project Manager from manufacturer's full range]**.
7. Fixtures:
- a. Sink Faucet: **[Single-lever control, swing spout] [Single-lever control, European style with pull-out spray] [Separate hot and cold controls, swing spout] [Separate hot and cold controls, gooseneck spout]**.
 - b. Disposer.
 - c. Hot-water dispenser.
8. Appliances:
- a. Refrigerator: **[Built in] [Freestanding]**.
 - b. Automatic icemaker.
 - c. Cooktop: **[Electric] [Gas]**.
 - d. Built-in Oven: **[Electric] [Gas]**.
 - e. Freestanding Range: **[Electric] [Gas]**.
 - f. Microwave Oven: **[Freestanding] [Built in with exhaust hood] [Built-in microwave/convection with exhaust hood]**.
 - g. Exhaust Hood: **[Ventilating] [Recirculating, nonventilating]** type.
 - h. Dishwasher.
 - i. Automatic coffeemaker.
9. Accessories: **[Locks] [fluorescent light fixture] [cutlery drawer] [cutting board] [and] [heat shields]**.

PART 4 - MEASUREMENT

4.1 METHOD OF MEASUREMENT

- A. No separate measurement shall be made for work under this Section.

PART 5 - PAYMENT

5.1 METHOD OF PAYMENT

- A. No separate payment will be made for work under this Section. The cost of the work described in this Section shall be included in the Lump Sum Contract price.

END OF SECTION 112600

SECTION 114000 - FOODSERVICE EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Fabricated equipment.
2. Food waste machines.
3. Cooking equipment.
4. Self-contained refrigeration equipment.
5. Walk-in refrigeration equipment.
6. Powered food-preparation equipment.
7. Warewashing equipment.
8. Serving equipment.
9. Utility distribution systems.

- B. Owner-Furnished Equipment: Where indicated, Owner will furnish equipment for installation by Contractor.

- C. Related Sections:

1. Section 055000 "Metal Fabrications" for custom equipment supports.
2. Division 06 Sections for wood casework and plastic-laminate substrates.
3. Section 233813 "Commercial-Kitchen Hoods" for ventilation hoods.
4. Refer to Division 23 Sections for related HVAC work including supply and exhaust fans; exhaust ductwork; service roughing-ins; drain traps; atmospheric vents; valves, pipes, and fittings; fire-extinguishing systems; and other materials required to complete food service equipment installation.
5. Refer to Division 21 and Division 26 Sections for connections to fire alarm systems, wiring, disconnects, and other electrical materials required to complete food service equipment installation.

- D. Allowances: Furnish food service equipment under the allowances indicated as specified in Section 012100 "Allowances."

- E. Alternates: Refer to Division 01 Section 012300 "Alternates" for description of Work in this Section affected by Alternates.

1.3 DEFINITIONS

- A. Terminology Standard: Refer to NSF 2, "Food Equipment" or other applicable NSF standards for definitions of food service equipment and installation terms not otherwise defined in this Section or in other referenced standards.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include the following:
 - 1. Manufacturer's model number.
 - 2. Accessories and components that will be included for Project.
 - 3. Clearance requirements for access and maintenance.
 - 4. Utility service connections for water, drainage, power, and fuel; include roughing-in dimensions.
 - 5. Include data substantiating that materials comply with requirements.
- B. Shop Drawings: For fabricated equipment not manufactured as standard production and catalog items by manufacturers.
 - 1. Include plans, elevations, sections, roughing-in dimensions, fabrication details, utility service requirements, and attachments to other work.
- C. Wiring Diagrams: Details of wiring for power, signal, and control systems and differentiating between manufacturer-installed and field-installed wiring.
- D. Piping Diagrams: Details of piping systems and differentiating between manufacturer-installed and field-installed piping.
- E. Samples for Initial Selection: For units with factory-applied color finishes showing the full range of colors available for exposed products with color finishes.
- F. Samples for Verification: For each factory-applied color finish required, in manufacturer's standard sizes, but minimum as follows:
 - 1. 4-inch- square or 6-inch- long sections of linear shapes and of same thickness and material indicated for work. Where finishes involve normal color and texture variations, include Sample sets showing the full range of variations expected. .

1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: For foodservice facilities.
 - 1. Indicate locations of foodservice equipment and connections to utilities.
 - 2. Key equipment using same designations as indicated on Drawings.
 - 3. Include plans and elevations; clearance requirements for equipment access and maintenance; details of equipment supports; and utility service characteristics.
 - 4. Include details of seismic bracing for equipment.

- B. Product Certificates: Signed by manufacturers of refrigeration systems or their authorized agents certifying that systems furnished comply with requirements and will maintain operating temperatures indicated in the areas or equipment that they will serve.
- C. Maintenance Data: Operation, maintenance, and parts data for food service equipment to include in the maintenance manuals specified in Division 01. Include a product schedule as follows:
- D. Product Schedule: For each food service equipment item, include item number and description indicated in Contract Documents, manufacturer's name and model number, and authorized service agencies' addresses and telephone numbers.
- E. Warranty: Samples of special warranty.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For foodservice equipment to include in emergency, operation, and maintenance manuals. In addition to items specified in [**Section 017700 "Closeout Procedures"**] [**Section 017823 "Operation and Maintenance Data,"**] include the following:
 - 1. Product Schedule: For each foodservice equipment item, include the following:
 - a. Designation indicated on Drawings.
 - b. Manufacturer's name and model number.
 - c. List of factory-authorized service agencies including addresses and telephone numbers.
- B. As-Built Plans: Submit complete as-built plans of all Work, including interface with other Work, in accordance with requirements as specified in Section 013300 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: Engage an experienced installer to perform work of this Section who has specialized in installing food service equipment, who has completed installations similar in design and extent to that indicated for this Project, and who has a record of successful in-service performance.
- B. Manufacturer Qualifications: Engage a firm experienced in manufacturing food service equipment similar to that indicated for this Project and with a record of successful in-service performance.
- C. Source Limitations: Obtain each type of food service equipment through one source from a single manufacturer.
- D. Product Options: Drawings indicate food service equipment based on the specific products indicated. Other manufacturers' equipment with equal size and performance

characteristics may be considered. Refer to Section 016630 "Substitutions."

- E. NSF Standards: Provide equipment that bears NSF Certification Mark or UL Classification Mark certifying compliance with applicable NSF standards.
- F. BISSC Standards: Provide bakery equipment that complies with BISSC/Z50.2.
 - 1. Provide BISSC-certified equipment[, **with certification verified by a third-party agency**].
- G. UL Certification: Provide electric and fuel-burning equipment and components that are evaluated by UL for fire, electric shock, and casualty hazards according to applicable safety standards, and that are UL certified for compliance and labeled for intended use.
- H. Steam Equipment: Provide steam-generating and direct-steam heating equipment that is fabricated and labeled to comply with ASME Boiler and Pressure Vessel Code.
- I. Regulatory Requirements: Install equipment to comply with the following:
 - 1. ASHRAE 15, "Safety Code for Mechanical Refrigeration."
 - 2. NFPA 17, "Dry Chemical Extinguishing Systems."
 - 3. NFPA 17A, "Wet Chemical Extinguishing Systems."
 - 4. NFPA 54, "National Fuel Gas Code."
 - 5. NFPA 70, "National Electrical Code."
 - 6. NFPA 96, "Ventilation Control and Fire Protection of Commercial Cooking Operations."
 - 7. **<Insert applicable code>**.
- J. Listing and Labeling: Provide electrically operated equipment or components specified in this Section that are listed and labeled.
- K. The Terms "Listed" and "Labeled": As defined in the National Electrical Code, Article 100.
- L. Listing and Labeling Agency Qualifications: A "Nationally Recognized Testing Laboratory" (NRTL) as defined in OSHA Regulation 1910.7.
- M. AGA Certification: Provide gas-burning appliances certified by the American Gas Association (AGA).
- N. ASME Compliance: Fabricate and label steam-generating and closed steam-heating equipment to comply with ASME Boiler and Pressure Vessel Code.
- O. ASHRAE Compliance: Provide mechanical refrigeration systems complying with the American Society of Heating, Refrigerating and Air-Conditioning Engineers' ASHRAE 15, "Safety Code for Mechanical Refrigeration."
- P. ANSI Standards: Comply with applicable ANSI standards for electric-powered and gas-burning appliances; for piping to compressed-gas cylinders; and for plumbing fittings, including vacuum breakers and air gaps, to prevent siphonage in water piping.

- Q. SMACNA Standard: Where applicable, fabricate food service equipment to comply with the Sheet Metal and Air Conditioning Contractors National Association's (SMACNA) "Kitchen Equipment Fabrication Guidelines," unless otherwise indicated.
- R. Seismic Restraints: Comply with SMACNA's "Kitchen Ventilation Systems and Food Service Equipment Fabrication and Installation Guidelines," Appendix A, "Seismic Restraint Details," unless otherwise indicated.
- S. Preinstallation Conference: Conduct conference at **[Project site] [location and time as determined by DEN Project Manager]<Insert location>**.
1. Comply with requirements of Section 013119 "Project Meetings."
- T. Preinstallation Conference: Conduct conference at Project site to comply with requirements of Section 013119 "Project Meetings." Review methods and procedures related to food service equipment including, but not limited to, the following:
1. Review access requirements for equipment delivery.
 2. Review equipment storage and security requirements.
 3. Inspect and discuss condition of substrate and other preparatory work performed by other trades.
 4. Review structural loading limitations.
 5. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.

1.8 PROJECT CONDITIONS

- A. Field Measurements: Verify actual dimensions of construction contiguous with foodservice equipment by field measurements before fabrication. Indicate measurements on Coordination Drawings.

1.9 COORDINATION

- A. Coordinate foodservice equipment layout and installation with other work, including layout and installation of lighting fixtures, HVAC equipment, and fire-suppression system components.
- B. Coordinate locations and requirements of utility service connections.
- C. Coordinate sizes, locations, and requirements of the following:
1. Overhead equipment supports.
 2. Equipment bases.
 3. Floor depressions.
 4. Insulated floors.
 5. Floor areas with positive slopes to drains.
 6. Floor sinks and drains serving foodservice equipment.
 7. Roof curbs, equipment supports, and penetrations.

8. <Insert requirements>.

1.10 WARRANTY

- A. General Warranty: The special warranty specified in this Article shall not deprive the Owner of other rights the Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by the Contractor under requirements of the Contract Documents.
- B. Refrigeration Compressor Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace compressors that fail in materials or workmanship within specified warranty period.
 - 1. Failure includes, but is not limited to, the following:
 - a. Inability to maintain set temperature.
 - b. Breakage.
 - c. Faulty operation
 - 2. Warranty Period: Minimum [five (5)] <Insert number> years from date of Substantial Completion.

1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Construction waste shall be managed in accordance with provisions of Section 017419 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that Section.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Stainless-Steel Sheet, Strip, Plate, and Flat Bar: ASTM A 666, Type 304, stretcher leveled, and in finish specified in "Stainless-Steel Finishes" Article.
- B. Stainless-Steel Tube: ASTM A 554, Grade MT-304, and in finish specified in "Stainless-Steel Finishes" Article.
- C. Zinc-Coated Steel Sheet: ASTM A 653, G115 coating designation; commercial quality; cold rolled; stretcher leveled; and chemically treated.
- D. Zinc-Coated Steel Shapes: ASTM A 36, zinc-coated according to ASTM A 123 requirements.
- E. Plastic Laminate: Complying with NEMA LD 3 and NSF 35 requirements; NSF certified for end-use application indicated; 0.050 inch thick for horizontal and vertical surfaces and 0.042 inch thick for post-formed surfaces; smooth texture; and easily cleanable.

1. Color: As selected by DEN Project Manager from manufacturer's full range of colors.
- F. Plywood and Lumber: Provide plywood and lumber as specified in Division 06 Sections.
- G. Sealant: ASTM C 920; Type S, Grade NS, Class 25, Use NT. Provide elastomeric sealant NSF certified for end-use application indicated. Provide sealant that, when cured and washed, meets requirements of Food and Drug Administration's 21 CFR, Section 177.2600 for use in areas that come in contact with food.
1. Color: As selected by DEN Project Manager from manufacturer's full range of colors.
 2. Backer Rod: Closed-cell polyethylene, in diameter larger than joint width.
- H. Tempered Glass: ASTM C 1048, Kind FT (fully tempered), Condition A (uncoated surfaces), Type I (transparent), Class 1 (clear), Quality q3 (glazing select). Provide products complying with ANSI Z97.1, manufactured by horizontal (roller-hearth) process, and 6 mm thick, unless otherwise indicated. Provide exposed safety edges, if any, seamed before tempering.
- I. Plastic: Except for plastic laminate, provide plastic materials and components complying with NSF 51.
- J. Sound Dampening: NSF-certified, nonabsorbent, hard-drying, sound-deadening coating. Provide coating compounded for permanent adhesion to metal in 1/8-inch thickness that does not chip, flake, or blister.
- K. Gaskets: NSF certified for end-use application indicated; of resilient rubber, neoprene, or PVC that is nontoxic, stable, odorless, nonabsorbent, and unaffected by exposure to foods and cleaning compounds.

2.2 FABRICATION, GENERAL

- A. Fabricate food service equipment according to NSF 2 requirements. Factory assemble equipment to greatest extent possible.
- B. Plastic-Laminate and Wood Casework: Fabricate according to requirements specified in Division 6 Section "Interior Architectural Woodwork."
- C. Welding: Use welding rod of same composition as metal being welded. Use methods that minimize distortion and develop strength and corrosion resistance of base metal. Provide ductile welds free of mechanical imperfections such as gas holes, pits, or cracks.
1. Welded Butt Joints: Provide full-penetration welds for full-joint length. Make joints flat, continuous, and homogenous with sheet metal without relying on straps under seams, filling in with solder, or spot welding.
 2. Grind exposed welded joints flush with adjoining material and polish to match adjoining surfaces.

3. Where fasteners are welded to underside of equipment, finish reverse side of weld smooth and undepressed.
 4. Coat unexposed stainless-steel welded joints with suitable metallic-based paint to prevent corrosion.
 5. After zinc-coated steel is welded, clean welds and abraded areas and apply SSPC-Paint 20, high-zinc-dust-content, galvanizing repair paint to comply with ASTM A 780.
- D. Fabricate field-assembled equipment prepared for field-joining methods indicated. For metal butt joints, comply with referenced SMACNA standard, unless otherwise indicated.
- E. Where stainless steel is joined to a dissimilar metal, use stainless-steel welding material or fastening devices.
- F. Form metal with break bends that are not flaky, scaly, or cracked in appearance; where breaks mar uniform surface appearance of material, remove marks by grinding, polishing, and finishing.
- G. Sheared Metal Edges: Finish free of burrs, fins, and irregular projections.
- H. Provide surfaces in food zone, as defined in NSF 2, free from exposed fasteners.
- I. Cap exposed fastener threads, including those inside cabinets, with stainless-steel lock washers and stainless-steel cap (acorn) nuts.
- J. Provide pipe slots on equipment with turned-up edges and sized to accommodate service and utility lines and mechanical connections.
- K. Provide enclosures, including panels, housings, and skirts, to conceal service lines, operating components, and mechanical and electrical devices including those inside cabinets, unless otherwise indicated.
- L. Seismic Restraints: Fabricate to comply with referenced SMACNA standard, unless otherwise indicated.

2.3 STAINLESS-STEEL EQUIPMENT

- A. Edges and Backsplashes: Provide equipment edges and backsplashes indicated complying with referenced SMACNA standard, unless otherwise indicated.
- B. Apply sound dampening to underside of metal work surfaces, including sinks and similar units. Provide coating with smooth surface and hold coating 1 inch back from open edges for cleaning.
- C. Tables: Fabricate with reinforced tops, legs, and reinforced undershelves or cross bracing to comply with referenced SMACNA standard, unless otherwise indicated, and as follows:
1. Tops: Minimum 0.0781-inch- thick stainless steel, unless otherwise indicated.

2. Legs: 1-5/8 inch OD, minimum 0.0625-inch- thick stainless steel with stainless-steel gusset and adjustable insert bullet-type feet with minimum adjustment of 1 inch up or down without exposing threads, unless otherwise indicated.
 3. Undershelves: Minimum 0.625-inch- thick stainless steel, unless otherwise indicated.
 4. Top and Undershef Reinforcement: Provide minimum 0.0781-inch- thick, stainless-steel reinforcing, unless otherwise indicated.
 5. Cross Bracing: 1-1/4 inch OD, minimum 0.0625-inch- thick stainless steel, unless otherwise indicated.
- D. Sinks: Fabricate of minimum 0.0781-inch- thick stainless steel with fully welded, 1-piece construction. Construct 2 sides and bottom of sink compartment from 1 stainless-steel sheet with ends welded integral and without overlapping joints or open spaces between compartments. Provide double-wall partitions between compartments with 1/2-inch- radius rounded tops that are welded integral with sink body. Cove horizontal, vertical, and interior corners with 3/4-inch radius. Pitch and crease sinks to waste for drainage without pooling. Seat wastes in die-stamped depressions without solder, rivets, or welding.
1. Wastes: 2-inch nickel-plated bronze, rotary-handle waste assembly with stainless-steel strainer plate and nickel-plated brass, connected overflow.
 2. Drainboards: Minimum 0.0781-inch- thick stainless steel, pitched to sink at 1/8 inch/12 inches of length. Reinforce drainboards with minimum 0.0781-inch- thick stainless steel, unless otherwise indicated.
 3. Legs: 1-5/8 inch OD, minimum 0.0625-inch- thick stainless steel with stainless-steel gusset welded to 0.1094-inch- thick, stainless-steel support plate. Provide adjustable insert bullet-type feet with minimum adjustment of 1 inch up or down without exposing threads, unless otherwise indicated.
 4. Drainboard Braces: 1 inch OD, minimum 0.0625-inch- thick stainless steel, unless otherwise indicated.
 5. Cross Bracing: 1-1/4 inch OD, minimum 0.0625-inch- thick stainless steel, unless otherwise indicated.
- E. Wall Shelves and Overshelves: Fabricate to comply with referenced SMACNA standard, unless otherwise indicated, and with minimum 0.0625-inch- thick, stainless-steel shelf tops.
- F. Drawers: Provide lift-out type, 1-piece, die-stamped drawer pan fabricated from 0.050-inch- thick stainless steel with inside corners radiused. Support drawer pan with 0.0625-inch- thick, stainless-steel channel frame welded to drawer front. Provide 1-inch- thick, double-wall front fabricated from 0.0625-inch- thick stainless steel and with integral recessed pull. Fill void in drawer front with semirigid fiberglass sound dampening. Mount drawers on NSF-certified, full-extension, stainless-steel drawer slides that have minimum 100-lb load capacity per pair, ball-bearing rollers, and positive stop. Mount drawer slides for self-closing on drawer housing as indicated.

2.4 EXHAUST HOOD FABRICATION

- A. General: Fabricate hoods indicated from minimum 0.050-inch- thick stainless steel, unless otherwise indicated. Comply with NFPA 96 and requirements of authorities having jurisdiction.
 - 1. Refer to Division 21 and Division 23 Sections for duct, fan, damper, and fire-extinguishing system requirements.
- B. Grease Removal: Provide removable, stainless-steel, baffle-type grease filters with spring-loaded fastening. Provide minimum 0.0781-inch- thick, stainless-steel filter frame and removable collection basins or troughs.
- C. Light Fixtures: Provide NSF-certified fixtures with lamps, vapor-tight sealed lenses, and wiring in stainless-steel conduit on hood exterior.
- D. Exhaust-Duct Collars: Minimum 0.0625-inch- thick stainless steel.

2.5 STAINLESS-STEEL FINISHES

- A. General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations relative to applying and designating finishes.
 - 1. Remove or blend tool and die marks and stretch lines into finish.
 - 2. Grind and polish surfaces to produce uniform, directional textured, polished finish indicated, free of cross scratches. Run grain with long dimension of each piece.
- B. Concealed Surfaces: No. 2B finish (bright, cold-rolled, unpolished finish).
- C. Exposed Surfaces: No. 4 finish (bright, directional polish).
- D. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
- E. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipment.

2.6 FABRICATED EQUIPMENT

- A. Stainless-Steel Sinks: **<Insert drawing designation>**.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert manufacturer's name; product name or designation>**.
 - b. or approved equal.
 - 2. Description: **[One] [Two] [Three] [Four]**-compartment sink(s). Fabricate units of welded stainless steel, sound deadened.

- a. Bowls: Stainless steel, Type 304, [0.078 inch (1.98 mm)] [0.062 inch (1.59 mm)] thick.
 - b. Integral Drainboards: Stainless steel, Type 304, [0.078 inch (1.98 mm)] [0.062 inch (1.59 mm)] thick.
 - c. Body: Stainless steel, [Type 304, 0.078 inch (1.98 mm)] [Type 304, 0.062 inch (1.59 mm)] [Type 430, 0.062 inch (1.59 mm)] thick.
 - 1) Back Splash: [Manufacturer's standard height] [13 inches (330 mm)] [18 inches (457 mm)] <Insert height>.
 - 2) Side Splash: [Manufacturer's standard height] [13 inches (330 mm)] [18 inches (457 mm)] <Insert height>.
 - d. Legs and Feet: Stainless-steel tubing legs with adjustable bullet feet.
 - e. Accessories:
 - 1) Faucets and Spouts: <Insert requirements>.
 - 2) Prerinse Faucet: <Insert requirements>.
 - 3) Vacuum breaker.
 - 4) Lever waste[with overflow].
 - 5) Basket strainer.
 - 6) Continuous waste.
 - 7) Scrap trough.
 - 8) Control bracket for food waste disposer controls.
 - 9) Scrap block and hole.
 - 10) Stainless-steel pot rack.
 - 11) <Insert requirements>.
 3. Stainless-Steel Sheet: ASTM A 240/A 240M, austenitic stainless steel, type as indicated.
 4. Fabrication: Prepare sink for installation of the following equipment items:
 - a. Water heater.
 - b. Food waste disposer; weld disposer cone or collar into sink.
 - c. Undercounter dishwasher.
 - d. <Insert equipment>.
 5. Stainless-Steel Finish: [Directional satin finish, No. 4] <Insert finish>.
- B. Stainless-Steel Tables: <Insert drawing designation>.
1. Products: Subject to compliance with requirements, provide the following [provide one of the following]:
 - a. <Insert manufacturer's name; product name or designation>.
 - b. or approved equal.
 2. Description: [Flat-countertop] [Prep] [Equipment-stand] [Mixer-stand] [Dish] <Insert description> table.

- a. Tops: Stainless steel, [Type 304, 0.078 inch (1.98 mm)] [Type 304, 0.062 inch (1.59 mm)] [Type 430, 0.062 inch (1.59 mm)] thick, reinforced and sound deadened.
 - 1) Back Splash: [Manufacturer's standard height] [1-1/2 inches (38 mm)] [5 inches (127 mm)] <Insert height>.
 - 2) Edge: [Bullnose on four sides] [Bullnose on front edge, straight on sides and back] [Marine edge] <Insert requirements>.
 - b. [Welded] [Adjustable] Undershelf: [Stainless steel, Type 304, 0.050 inch (1.27 mm) thick] [Metallic-coated steel, 0.052-inch (1.32-mm) nominal thickness].
 - c. Crossbracing: [Stainless-steel] [Metallic-coated steel] tubing, [bolted] [welded] to legs.
 - d. Cabinet:
 - 1) Body: Stainless steel, Type 430, 0.050 inch (1.27 mm) thick.
 - 2) Doors: [Sliding] [Hinged], stainless steel, Type 304, 0.038 inch (0.95 mm) thick.
 - 3) Drawers: [Stainless-steel drawer and faceplate] [Galvanized-steel drawer and stainless-steel faceplate] [Stainless-steel front and liner] [Stainless-steel front and galvanized-steel liner] <Insert requirements>.
 - e. Sink: Stainless steel, Type 304, 0.078 inch (1.98 mm) thick, welded into tabletop and including the following:
 - 1) Faucet and Spout: <Insert requirements>.
 - 2) Vacuum breaker.
 - 3) Leverwaste[with overflow].
 - 4) Basket strainer.
 - 5) Tail piece.
 - 6) <Insert requirements>.
 - f. Legs: [Stainless-steel] [Metallic-coated steel] tubing.
 - g. Feet: [Stainless-steel adjustable bullets] [Plastic adjustable bullets] [Stainless-steel, flanged, adjustable bullets] [Casters] <Insert requirements>.
 - h. Accessories:
 - 1) Control panel.
 - 2) Control bracket for food waste disposer controls.
 - 3) Aluminum pan rack slides, [six] [three] slides each.
 - 4) Urn trough.
 - 5) Spice bins.
 - 6) <Insert requirements>.
3. Materials:

- a. Stainless-Steel Sheet: ASTM A 240/A 240M, austenitic stainless steel, type as indicated.
 - b. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B; with minimum **G90 (Z275)** coating.
 4. Fabrication: Prepare table for installation of the following equipment items:
 - a. Food waste disposer; weld disposer cone or collar into sink.
 - b. Heat lamp.
 - c. **<Insert equipment>**.
 5. Stainless-Steel Finish: [**Directional satin finish, No. 4**] **<Insert finish>**.
- C. Stainless-Steel Shelf Units: **<Insert drawing designation>**.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert manufacturer's name; product name or designation>**.
 - b. or approved equal.
 2. Description: [**Table mounted, single deck**] [**Table mounted, double deck**] [**Wall mounted**] **<Insert description>**. Fabricate units of stainless steel, [**Type 304, 0.062 inch (1.59 mm)**] [**Type 304, 0.050 inch (1.27 mm)**] [**Type 430, 0.050 inch (1.27 mm)**] thick.
 3. Stainless-Steel Sheet: ASTM A 240/A 240M, austenitic stainless steel, type as indicated.
 4. Stainless-Steel Finish: [**Directional satin finish, No. 4**] **<Insert finish>**.
- D. Pot Racks: **<Insert drawing designation>**.
 1. Products: Subject to compliance with requirements, provide the following] [provide one of the following:
 - a. **<Insert manufacturer's name; product name or designation>**.
 - b. or approved equal.
 2. Description: [**Wall mounted**] [**Ceiling hung**] [**Corner**] **<Insert description>**. Fabricate units of [**stainless steel**] [**painted, cold-rolled steel**].
 - a. Bars: [**Double**] [**Single**].
 - b. Hooks: [**18**] **<Insert number>** per unit.
 3. Materials:
 - a. Stainless-Steel Sheet: ASTM A 240/A 240M, austenitic stainless steel, Type 304.
 - b. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B, suitable for exposed applications.
 4. Finishes:

- a. Stainless Steel: **[Directional satin finish, No. 4]** <Insert finish>.
- b. Cold-Rolled Steel: Powder-coat painted finish.

E. Stainless-Steel Hand Sinks: <Insert drawing designation>.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. <Insert manufacturer's name; product name or designation>.
 - b. or approved equal.
2. Description: **[Lavatory]** <Insert description> sink. Fabricate units of stainless steel, Type 304, **[0.050 inch (1.27 mm)]** **[0.038 inch (0.95 mm)]** thick.
 - a. Operation: **[Electronic]** **[Knee valve]** **[Foot pedal]** **[Wrist handle]** **[Handle]** <Insert description>.
 - b. Faucet and Spout: <Insert requirements>.
 - c. Accessories:
 - 1) Chrome-plated tail piece and P trap, **NPS 1-1/2 (DN 40)**, with **[0.045-inch (1.1-mm)]** <Insert dimension> minimum wall thickness.
 - 2) Strainer basket with metal post.
 - 3) Liquid soap dispenser, **[splash]** **[deck]** mounted.
 - 4) Liquid soap and towel dispenser.
 - 5) Towel dispenser.
 - 6) Tubular wall supports.
 - 7) Skirt assembly for support.
 - 8) Side splashes.
 - 9) <Insert requirements>.
3. Stainless-Steel Sheet: ASTM A 240/A 240M, austenitic stainless steel, type as indicated.
4. Stainless-Steel Finish: **[Directional satin finish, No. 4]** <Insert finish>.

F. Floor **[Troughs]** **[Water Receptacles]**: <Insert drawing designation>.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. <Insert manufacturer's name; product name or designation>.
 - b. or approved equal.
2. Description: **[4-inch (102-mm)]** **[2-inch (50-mm)]** <Insert dimension> nominal depth excluding tailpiece.
 - a. Body: Stainless steel, Type 304, **0.078 inch (1.98 mm)** thick.
 - b. Grate: **[Stainless-steel bar, Type 304]** **[Fiberglass]**.
 - c. Waste Connection: **NPS 3 (DN 80)**.
3. Materials:
 - a. Stainless-Steel Sheet: ASTM A 240/A 240M, austenitic stainless steel, type as indicated.

- b. Stainless-Steel Bars: ASTM A 276, austenitic stainless steel, type as indicated.
- 4. Stainless-Steel Finish: **[Directional satin finish, No. 4] <Insert finish>**.

2.7 FOOD WASTE MACHINES

A. Food Waste Disposer Units: **<Insert drawing designation>**.

- 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert manufacturer's name; product name or designation>**.
 - b. or approved equal.
- 2. Description: **[3] [5] [7]** hp, with dual-direction shredding elements, and the following:
 - a. **[Stainless-steel] [Corrosion-resistant]** housing.
 - b. Flow control.
 - c. Solenoid valve.
 - d. Vacuum breaker.
 - e. Fixed nozzle.
 - f. Control Panel:
 - 1) Autoreversing and internal timed water flush.
 - 2) Stainless-steel mounting bracket.
 - g. Prerinse: Backsplash mounted with hot- and cold-water mixing valve and with **[stainless-steel] [corrosion-resistant]** exposed metal parts and the following:
 - 1) Wall support bracket.
 - 2) Flexible, **3/8-inch** (10-mm) metal-encased hose with a minimum length of **29 inches** (737 mm) and supported by spiral spring.
 - 3) Spray-head assembly with lockable lever handle.
 - h. Accessories:
 - 1) Collar adaptor for **[sink] [trough]**.
 - 2) Cone with adaptor ring.
 - a) Size: **[12 inches (305 mm)] [15 inches (381 mm)] [18 inches (457 mm)]**.
 - 3) Cone cover in size that matches cone.
 - 4) Silver accumulator.
 - 5) **<Insert requirements>**.
 - i. Electrical Service: Equip unit for connection to **[service indicated on Drawings] <Insert requirements>**.

B. Food Waste Pulper and Water Extractor Systems: **<Insert drawing designation>**.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert manufacturer's name; product name or designation>**.
 - b. or approved equal.
2. Description: Stainless-steel pulper unit, extractor unit, and control panel with water-level control and push-button start.
 - a. Capacity: Not less than [600 lb (272 kg)] [700 lb (318 kg)] [900 lb (408 kg)] **<Insert value>** of waste per hour.
 - b. Accessories:
 - 1) Feed trough connection.
 - 2) Feed tray.
 - 3) Feed hood assembly.
 - 4) Under-dish-table lid.
 - 5) Remote Water Extractor:
 - a) Dam, to prevent siphoning of water from pulper tank.
 - b) Remote piping system, [**overhead**] [**below floor**].
 - 6) **<Insert requirements>**.
 - c. Electrical Service: Equip unit for connection to [**service indicated on Drawings**] **<Insert requirements>**.

C. Food Waste Grinder and Water Extractor Systems: **<Insert drawing designation>**.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert manufacturer's name; product name or designation>**.
 - b. or approved equal.
2. Description: Stainless-steel construction; with off and on controls on unit, food waste hopper, silver saver, internal disposer, removable water extraction auger with internal water sprays, and discharge chute.
 - a. Capacity: Not less than [600 lb (272 kg)] [700 lb (318 kg)] **<Insert value>** of waste per hour.
 - b. Accessories:
 - 1) Reel rinse unit with spray valve.
 - 2) Recirculation water pump.
 - 3) Trough mount.
 - 4) **<Insert requirements>**.
 - c. Electrical Service: Equip unit for connection to [**service indicated on Drawings**] **<Insert requirements>**.

- D. Undercounter Food Waste Grinder and Water Extractors: **<Insert drawing designation>**.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert manufacturer's name; product name or designation>**.
 - b. or approved equal.
 2. Description: Stainless-steel, undercounter, cleanable assembly including the following:
 - a. Capacity: Not less than [600 lb (272 kg)] [700 lb (318 kg)] **<Insert value>** of waste per hour.
 - b. Separate water-extractor and disposer units.
 - 1) Disposer: Corrosion-resistant housing, dual-direction shredding elements.
 - c. Piping between disposer and water extractor.
 - d. Vacuum breaker.
 - e. Solenoid valve.
 - f. Flow control.
 - g. Time-delayed relay.
 - h. Control Panel:
 - 1) Autoreversing and internal timed water flush.
 - 2) Stainless-steel mounting bracket.
 - i. Prerinse: Backsplash mounted with hot- and cold-water mixing valve and with **[stainless-steel] [corrosion-resistant]** exposed metal parts and the following:
 - 1) Wall support bracket.
 - 2) Flexible, **3/8-inch** (10-mm) metal-encased hose with a minimum length of **29 inches** (737 mm) and supported by spiral spring.
 - 3) Spray-head assembly with lockable lever handle.
 - j. Accessories:
 - 1) Cone with adaptor ring.
 - a) Size: [**12 inches** (305 mm)] [**15 inches** (381 mm)] [**18 inches** (457 mm)].
 - 2) Cone cover in size that matches cone.
 - 3) Silver sorter.
 - 4) Trough collar connection.
 - 5) **<Insert requirements>**.
 - k. Electrical Service: Equip unit for connection to **[service indicated on Drawings] <Insert requirements>**.

2.8 COOKING EQUIPMENT

A. Ranges: <Insert drawing designation>.

1. Products: Subject to compliance with requirements, provide one of the following:

- a. <Insert manufacturer's name; product name or designation>.
- b. or approved equal.

2. Description:

a. Top Configuration:

1) Open-Burner Unit:

- a) Standard Burners: [Four] [Six] [Eight] [Four, step-up type] <Insert requirements>.
- b) [Wok] [Saute] Head: <Insert requirements>.

2) Griddle: [Flat] [Raised].

3) Radiant Broiler: <Insert requirements>.

b. Base Configuration:

1) Standard Oven(s): [One] [Two].

2) Convection Oven(s): [One] [Two].

3) Storage Base: One.

c. Accessories:

- 1) [High] [Double-deck] back shelf.
- 2) Stainless-steel sides.
- 3) Stainless-steel back.
- 4) Legs for curb base.
- 5) Toe Base: 4 inches (102 mm) high.
- 6) Casters: <Insert requirements>.
- 7) Oven Rack(s): [One] <Insert number> for each oven.
- 8) <Insert requirements>.

d. Electrical Service: Equip unit for connection to [service indicated on Drawings] <Insert requirements>.

e. Gas Service: [Natural] [Liquefied propane] gas.

B. Deep Fat Fryers: <Insert drawing designation>.

1. Products: Subject to compliance with requirements, provide one of the following:

- a. <Insert manufacturer's name; product name or designation>
- b. or approved equal.

2. Description: **[Electric fryer, solid-state controls] [Electric, programmable computer controls] [Gas fryer]** <Insert description>.
 - a. Oil Capacity: **[40 lb (18 kg)] [85 lb (39 kg)]** <Insert value>.
 - b. Accessories:
 - 1) Stainless-steel sides.
 - 2) Stainless-steel fry tank.
 - 3) Stainless-steel fry tank cover.
 - 4) Casters: <Insert requirements>.
 - 5) Automatic basket lifts.
 - 6) Single Fry Baskets: <Insert quantity>.
 - 7) Twin Fry Baskets: <Insert quantity>.
 - 8) Triple Fry Baskets: <Insert quantity>.
 - 9) Quick gas-service disconnect and flexible hose.
 - 10) <Insert requirements>.
 - c. Electrical Service: Equip unit for connection to **[service indicated on Drawings]** <Insert requirements>.
 - d. Gas Service: **[Natural] [Liquefied propane]** gas.
- C. Steam Jacketed Kettles: <Insert drawing designation>.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. <Insert manufacturer's name; product name or designation>.
 - b. or approved equal.
 2. Description: Stainless steel, Type 304.
 - a. Type: **[Stationary] [Tilting]**.
 - b. Steam Source: **[Electrically heated, self-contained] [Direct]**.
 - 1) **[Maximum] [Operating]** Steam Pressure: **[50 psig (345 kPa)] [25 psig (172 kPa)]** <Insert value>.
 - c. Capacity: **[10 quarts (9.5 L)] [20 gal. (76 L)]** <Insert value>.
 - d. Accessories:
 - 1) Basket insert.
 - 2) Lift-off cover.
 - 3) **[Single] [Double]**-pantry water filler.
 - 4) Tangent Drawoff: **[2 inches (50 mm)] [3 inches (76 mm)]** <Insert requirements>.
 - 5) Disc Strainer: **1/8 inch (3 mm), [perforated] [solid]**.
 - 6) Interior Finish: **[Manufacturer's standard] [Stainless steel, Type 316]**.
 - 7) Cold-water jacket cooling.
 - 8) Steam trap assemblies.
 - 9) Kettle brush kit.

- 10) **<Insert requirements>**.
 - e. Electrical Service: Equip unit for connection to **[service indicated on Drawings] <Insert requirements>**.
 3. Stainless-Steel Sheet: ASTM A 240/A 240M, austenitic stainless steel, type as indicated.
 4. Stainless-Steel Finish: **[Directional satin finish, No. 4] <Insert finish>**.
- D. Ovens: **<Insert drawing designation>**.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert manufacturer's name; product name or designation>**.
 - b. or approved equal.
 2. Description: **[Electric convection] [Gas convection] [Rotisserie] <Insert description>**.
 - a. **[Single deck] [Double deck] [Single deck with open stand] <Insert requirements>**.
 - b. Accessories:
 - 1) Oven Rack(s): **[One] <Insert number>** per oven chamber.
 - 2) Stainless-steel drip pan.
 - 3) Down-draft flue diverter.
 - 4) Stacking kit.
 - 5) **<Insert requirements>**.
 - c. Electrical Service: Equip unit for connection to **[service indicated on Drawings] <Insert requirements>**.
 - d. Gas Service: **[Natural] [Liquefied propane]** gas.
- E. Microwave Ovens: **<Insert drawing designation>**.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert manufacturer's name; product name or designation>**.
 - b. or approved equal.
 2. Description: 1200-W cooking power.
 - a. Electrical Service: Equip unit with plug and cord for 120-V service.
- F. Coffee Urns: **<Insert drawing designation>**.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert manufacturer's name; product name or designation>**.
 - b. or approved equal.

2. Description: **[Single]** **[Twin]** **[Triple]** urn.
 - a. Capacity: **[3 gal. (11 L)]** **[6 gal. (23 L)]** **[10 gal. (38 L)]** per liner.
 - b. Type: **[Electric]** **[Gas]** **[Steam]** heated.
 - c. Agitator: **[Automatic]** **[Push button]**.
 - d. Spray Arm: **[With]** **[Without]** bypass.
 - e. Timer: **[Digital]** **[Electromechanical]**.
 - f. Accessories:
 - 1) Fill/Dispense: **<Insert requirements>**.
 - 2) Multiple Faucet: **<Insert requirements>**.
 - 3) Filtering: **[Permanent, stainless-steel, woven-wire cloth]** **[Disposable filter paper]**.
 - 4) Finish: **[Manufacturer's standard]** **[Brass body and trim]** **[Copper body and brass trim]** **<Insert finish>**.
 - 5) **<Insert requirements>**.
3. Electrical Service: Equip unit for connection to **[service indicated on Drawings]** **<Insert requirements>**.
4. Gas Service: **[Natural]** **[Liquefied propane]** gas.
5. Operating Steam Pressure: **[As indicated on Drawings]** **<Insert pressure>**.

2.9 SELF-CONTAINED REFRIGERATION EQUIPMENT

A. **[Refrigerators]** **[Freezers]**: **<Insert drawing designation>**.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert manufacturer's name; product name or designation>**.
 - b. or approved equal.
2. Description: **[Reach-in]** **[Roll-in]** **[Pass-through]** type.
 - a. Exterior Finish: Stainless steel.
 - b. Interior Finish: **[Stainless steel]** **[Manufacturer's standard]**.
 - c. Doors: **[Full length]** **[Half length]** **[In configuration shown on Drawings]**.
 - d. Accessories:
 - 1) Casters.
 - 2) Stainless-steel back with rear louvers.
 - 3) Re-hinging feature for doors.
 - 4) Hinged glass doors and fluorescent fixtures.
 - 5) Tray Slides: For **<Insert description>** sheet pans.
 - 6) **[Chrome-Plated]** **[Stainless-Steel]** Shelves: **<Insert quantity>**.
 - 7) Loading Rack: **<Insert requirements>**.
 - 8) Transfer Carriage: **<Insert requirements>**.
 - 9) **<Insert requirements>**.

- e. Electrical Service: Equip unit with plug and cord for **[service indicated on Drawings]** **<Insert requirements>**.
- B. Undercounter **[Refrigerators]** **[Freezers]**: **<Insert drawing designation>**.
- 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert manufacturer's name; product name or designation>**.
 - b. or approved equal.
 - 2. Description: Compact unit with rear-mounted, self-contained refrigeration system.
 - a. Accessories:
 - 1) Stainless-steel top with backsplash.
 - 2) Stainless-steel back panel.
 - 3) Casters: **[6 inches (152 mm)] [4 inches (102 mm)] [3-1/2 inches (89 mm)]** high.
 - 4) Utility Base: **6 inches (152 mm)** high.
 - 5) Shelves: **<Insert description and quantity>**.
 - 6) Stacking kit.
 - 7) **<Insert requirements>**.
 - b. Electrical Service: Equip unit with plug and cord for **[service indicated on Drawings]** **<Insert requirements>**.
- C. Merchandiser Refrigeration Units: **<Insert drawing designation>**.
- 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert manufacturer's name; product name or designation>**.
 - b. or approved equal.
 - 2. Description: **[Curved-glass, self-contained refrigerator]** **[Sliding-glass, self-contained refrigerator]** **[Sliding-glass, self-contained freezer]** **<Insert description>**.
 - a. Exterior Finish: **[Manufacturer's standard]** **[Stainless steel]** **<Insert requirements>**.
 - b. Interior Finish: **[Manufacturer's standard]** **[Stainless steel]** **[White]** **<Insert requirements>**.
 - c. Accessories:
 - 1) Door locks.
 - 2) Fluorescent Light Fixtures: **<Insert quantity>**.
 - 3) Base: **<Insert requirements>**.
 - 4) Casters: **<Insert requirements>**.
 - 5) Legs: **<Insert requirements>**.
 - 6) Chrome-Plated Shelves: **<Insert quantity>**.
 - 7) **<Insert requirements>**.

- d. Electrical Service: Equip unit with plug and cord for **[service indicated on Drawings]** **<Insert requirements>**.

D. Ice-Making Machine: **<Insert drawing designation>**.

- 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert manufacturer's name; product name or designation>**.
 - b. or approved equal.
- 2. Description: **[Undercounter]** **[Freestanding]** units.
 - a. Production: Ice **[cubes]** **[cubes, dice]** **[cubes, half dice]** **[flakes]** **[chipelets (compacted flake ice)]**.
 - b. Capacity: **<Insert lb (kg)>** per 24-hour period.
 - c. Accessories:
 - 1) Storage Bin: **<Insert requirements>**.
 - a) Storage Capacity: **<Insert lb (kg)>**.
 - 2) Stainless-steel stand and legs.
 - 3) Water filter.
 - 4) **<Insert requirements>**.
 - d. Electrical Service: Equip unit for connection to **[service indicated on Drawings]** **<Insert requirements>**.

2.10 WALK-IN REFRIGERATION EQUIPMENT

A. Walk-in Refrigeration Units: **<Insert drawing designation>**.

- 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. **<Insert manufacturer's name; product name or designation>**.
 - b. or approved equal.
- 2. Description: **[Cooler]** **[Freezer]** **[Two-compartment unit, with cooler and freezer compartments]** **<Insert description>**.
 - a. Wall and Ceiling Panels: Interlocking insulating panels.
 - b. Floors: **[Insulated floor panels]** **[Field installed; provide manufacturer's standard insulated floor screed]** **<Insert requirements>**.
 - c. Doors:
 - 1) Hinges: **[Two per door]** **[Self-closing and spring loaded; three per door]** **<Insert requirements>**.
 - 2) Latch: **[Edge-mounted, positive-type latch with cylinder lock]** **<Insert requirements>**.

- 3) Include safety-release handle that opens door from inside when door is locked.
 - d. Door Accessories:
 - 1) Vision port.
 - 2) Pressure relief port.
 - 3) Threshold: Stainless steel, factory installed.
 - 4) Antic condensate heater at freezer doors.
 - 5) **<Insert requirements>**.
