Article 5, Urban Neighborhood Context
Division 5.1 Neighborhood Context Description

DIVISION 5.1 NEIGHBORHOOD CONTEXT DESCRIPTION

SECTION 5.1.1 GENERAL CHARACTER
The Urban Neighborhood Context is primarily characterized by single-unit and two-unit residential uses. Small-scale multi-unit residential uses and commercial areas are typically embedded in residential areas. Single-unit residential structures are typically Urban House forms. Multi-unit building forms are typically Row House forms embedded with other residential building forms. Commercial buildings are typically Shop front and General forms that may contain a mixture of uses within the same building. Single- and two-unit residential uses are primarily located along local and residential arterial streets. Multi-unit residential uses are primarily located along local streets, residential and mixed use arterials, and main streets. Commercial uses are primarily located along mixed-use arterial or main streets but may be located at or between intersections of local streets.

SECTION 5.1.2 STREET, BLOCK AND ACCESS PATTERNS
The Urban Neighborhood Context consists of a regular pattern of block shapes surrounded by an orthogonal street grid. Orthogonal streets provide a regular pattern of pedestrian and vehicular connections through this context and there is a consistent presence of alleys. Block sizes and shapes are consistent and primarily include detached sidewalks (though attached sidewalks are also found), tree lawns where provided for by detached sidewalks, street and surface parking, and landscaping in the front setback.

SECTION 5.1.3 BUILDING PLACEMENT AND LOCATION
Residential buildings typically have consistent, moderate front setbacks, shallow side setbacks and consistent orientation. Commercial buildings typically have consistent orientation and shallow front setbacks with parking at the rear and/or side of the building.

SECTION 5.1.4 BUILDING HEIGHT
The Urban Neighborhood Context is characterized by low scale buildings except for some mid-rise commercial and mixed use structures, particularly at nodes or along arterial streets.

SECTION 5.1.5 MOBILITY
There is a balance of pedestrian, bicycle and vehicle reliance with greater access to the multi-modal transportation system.
