

2019 Storm Drainage Master Plan Update

Authorization

The Denver Storm Drainage Master Plan is prepared in compliance with D.R.M.C. Sec 56-110 requiring City Council adoption no less than every five (5) years. The previous master plan was adopted October 2014.

Purpose

The Storm Drainage Master Plan evaluates citywide flood risk and uses the most up-to-date regional data and trusted engineering standards in developing recommendations for deficient stormwater systems.

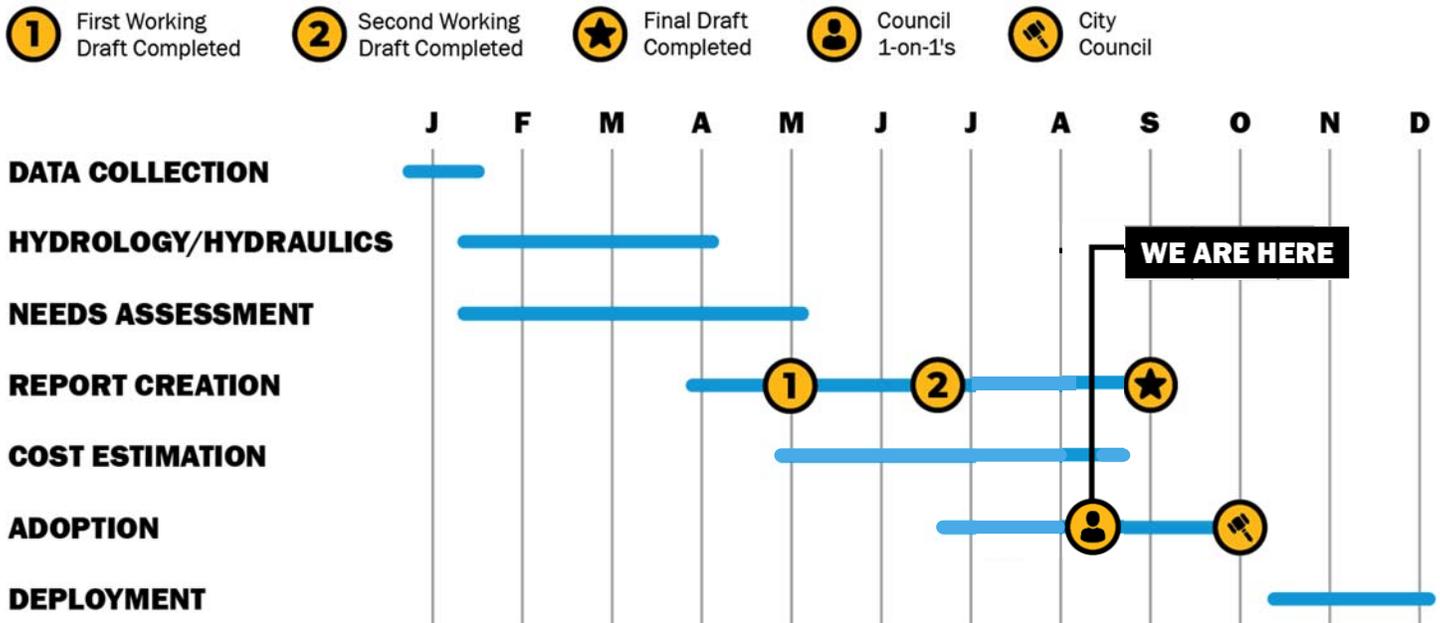

Goals

- Update the 2014 Master Plan with current data and information, using latest industry standards
- Create a host website where information can be easily accessed, understood, and applied by various users
- Create an interactive GIS-based map with an Address Search to show individual's flood risk
- Build a dynamic stormwater tool that can be functional in project designs to save time and money
- Update the master plan cost modeling to be accurate and reliable
- Adoption by City Council
