Vendor/Contractor Name (including any "DBA"):
Mile High Flood District (Urban Drainage and Flood Control District)

Type and Scope of services to be performed:

The Mile High Flood District (aka Urban Drainage and Flood Control District) and the City and County of Denver are working together to design approximately 7,900 linear feet of improvements to the existing levee which are needed to reduce the risk of river flooding in the Globeville/ Utah Junction drainage basin, and to comply with the Federal Emergency Management Agency (FEMA) freeboard requirements.

The Globeville Levee project was identified as a key project to reduce flood risk in the Globeville/Utah Junction basin. The Globeville Stormwater System Study identified that the height of the existing levee located along the west side of the South Platte River, next to the existing trail, is approximately 2 feet lower than the 3 feet minimum freeboard required by the Federal Emergency Management Agency (FEMA) in most locations, and identified a spill location during a 100-year storm even just south of 38th Street on the west bank of the river, south and upstream of the existing levee. The GSSS evaluated options and provided recommendations for reducing the risk of river flooding to avoid floodplain re-designation from this spill. This IGA will support the design work necessary to complete the final construction plans for the levee improvements, needed to meet FEMA requirements.
